TICKET. November 14. ACCOUNT. November 15.

THE fact of this being a broken week, owing to the incidence of the Stock Exchange holiday on Thursday, November 1st, has imposed no check upon the expansion of business. Many of the markets are, comparatively speaking, active, and money continues to flow steadily into investment stocks. Concurrently with this, a buoyant tone has developed amongst oil shares, while in other speculative sections more interest has been taken in the leading shares than has recently been apparent. At the same time, certain of the former favourites—e.g., Courtaulds and tobacco shares—have not yet resumed their former place in the speculative running, and the mining markets, while showing a firm tone, fail to attract much public business.

Dealings started on Monday in the new 5 per cent. stock offered by the Union of South Africa at 93½. There was a long string of buying orders waiting for execution upon the commencement of dealings, and the price from ½ premium advanced to 1½ premium. The War Loan is better, and a fair amount of buying caused a recovery of part of the interest deducted from the price last week. Newly-issued scrip stocks are remarkably hard; the Nigeria Fours lag a little behind the rest. One or two new loans are expected next week.

The foreign market refused to be damped by the qualifications voiced by President Poincaré in connection with the Reparations Conference, in which America is expected to join. French bonds, Rio Tintos, and other inter-Bourse descriptions have been good, and Paris, as the House has it, put on its buying boots earlier in the week. Mexican Government bonds stand out with falls that are disappointing to holders of the various securities. The South American groups show no especial change. A feature of strength was provided by the Austrian scrip, which rose abruptly on the closing of the latest Finland loan lists, the argument being that Austrian Sixes are cheaper than the new Finnish bonds, the price of which latter, by the way, opened at 3 discount on the news that underwriters were left with 68 per cent. of their obligations.

Home Railway stocks were little affected by the carry-over on Monday, the contangoes showing the position of the speculative account to be much the same this time as it was a fortnight ago. Undergrounds are still the centre of interest. The early closing of the London electric companies' subscription lists for the 4 per cent. stock, offered at 95½, came as something of a surprise. It showed that the temper and the appetite of the public are still strongly in favour of gilt-edged securities, even in such cases as those where a less yield than 5 per cent. is offered, and premiums of about 100 per cent. have been established on both classes of stock.

Canadian Pacifics and American shares have been better, Canadas going over 160. Argentine Railways moved somewhat erratically, but narrowly, the feature of strength in this market being provided by United of Havana stock. Antofagasta gave way from the recent best.

Rubber shares are inclined to be better. Another period of three months started on Thursday in this week under the Stevenson restriction scheme, whereby the price for the raw stuff throughout that period is governed by the average which obtained in the three months that ended last Wednesday. This is 2.994d per lb, and the existing 60 per cent. output proportion remains in force. The oil market displayed pronounced strength. Various rumours are afloat to account for the buoyancy of Shells and Royal Dutch. One of the favourite reports is that there may be a merger between the Royal Dutch-Shell group and the Standard Oil Company of America, but this may be no more than talk.

Shipping shares are better, with the exception of Indo-China deferred, which fell back after their recent sharp recovery. After being dull and heavy, the insurance market took a turn for the better, and there has also been a little buying in the banking market, although the foreign banks are heavy in price. Sudan Plantations, which dipped to 5½ on the reduction in the dividend, recovered rather more than 10s of the fall. Other Egyptians have come in for quiet attention. The textile, tobacco, hotel, and stores shares are no more than quiet, interest in them having subsided to a noticeable extent. Shares in W. H. Chaplin and Co., the wine and spirit merchants, were introduced into the market on Tuesday on the basis of 20s 6d, and the price went better afterwards.

Vickers, together with a number of allied shares, iron, steel and engineering, assumed better prices on the Government scheme for assistance of unemployment during the winter. Becker notes fell from a nominal 70 to about half that price on the announcement that a receiver and manager had been appointed. Charles Marsden debentures also dropped for similar reasons from about 70 to some 20 points lower. The newspaper market rallied after a turn of being dull.

The Kaffir market has developed few points of interest, although there has been a little professional activity in West Springs, Robinson Deep "B," and a few other of the moderately-priced shares. Rhodesians are uninteresting. A brisk rise in De Beers reflected the better tone from Paris, plus a hope that a dividend may be declared next month, after the three years of absence from the dividend list which De Beers

deferred have undergone. With the price of tin going up fairly regularly, a handful of improvements occurred in Malayan Tin shares, though the Cornishmen and West Africans continue to be neglected. Russo-Asiatics rallied in sympathy with the generally firmer tone. Mexicans, together with shares in the Indian group, are somewhat stagnant.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

Government of the Republic of Finland 6 per Cent. Loan of 1923.—This is an offer of £1,000,000 6 per cent. bonds at 90. The present issue is part of an authorised total of £4,000,000, of which the equivalent of about £2,000,000 has already been issued in the U.S.A. The balance will be issued in Sweden. The bonds will be the direct obligation of the Government of Finland, which has undertaken that it will not during the currency of the present loan create a charge on any of its assets without giving to the holders of the present loan the benefit *pari passu* of a like charge. The bonds are to be redeemed during a period of 40 years from November 1, 1923, by means of an accumulative sinking fund, commencing on November 1, 1924, sufficient to repay the whole of the loan by November 1, 1963. On November 1, 1933, or on November 1st in any subsequent year, the Government has the right to redeem the whole of the bonds then outstanding at par, subject to six months' notice. Payment of both principal and interest will be made in London in sterling, exempt from all Finnish taxes. The only loan of the Government of Finland quoted on the Stock Exchange, London, is the 4½ per cent. Government Railway Loan, maturing 1965, of which there is outstanding £1,657,540 of the original issue of £1,800,000. This is now quoted at approximately 70½, which shows a yield of £6 12s per cent. if redemption is reckoned as in 1965. It should be noted, however, that in 1923 this loan has been as low as 55 and as high as 71½. It is perhaps only fair to add that this low price was on account of a difference of opinion between the Finnish Government and various British financial houses over the treatment of certain bondholders. It is stated that the underwriters have to take up 60 per cent. of the new loan. The credit of Finland, judged by its National accounts, on the whole is good, but holders of these bonds must be prepared to face sagging prices until the loan is completely placed with "permanent" investors.

London Electric Railway and City and South London Railway.—These are further issues at 95½ of 4½ per cent. redeemable second debenture stock, 1942-72, the amount in the former case being £2,356,000 (the balance of a total authorised issue of £5,606,000), and in the latter case £3,769,000 (the balance of a total authorised issue of £6,519,000). Both the issues are guaranteed as to principal and interest by the British Government under the provisions of the Trade Facilities Acts, 1921 and 1922. The stocks are repayable at par on June 30, 1972, but they may be redeemed at par at the option of the respective companies on or after July 1, 1942, on three months' notice. The proceeds of the London Electric Railway Co.'s issue will be applied (amongst other objects) to the construction and equipment of an extension of the Hampstead section of the London Electric Railway from its present terminus at Charing Cross to Kennington with an interchange station at that point with the City and South

London Railway; the construction of a new central station at Piccadilly circus, and the alteration and enlargement of the station at Leicester square. The proceeds of the City and South London Railway Co.'s issue will be used mainly in the construction and equipment of a south-westerly extension of that company's railway from Clapham Common to North Morden. The interest on the second debenture stock of each company is a "revenue liability" of that company, and is secured by the balance of its earnings remaining after payment of interest upon its first debenture stock; and the "common fund," established under the London Electric Railway Companies' Facilities Act, 1915. Being issued under the Trade Facilities Act, both stocks automatically take their place among gilt-edged securities.

Mondego Valley Tin Syndicate, Limited.—Authorised capital £12,500, divided into 250,000 ordinary shares of 1s each, of which 120,000 have been issued as fully-paid in part satisfaction of the purchase consideration, and 130,000 have been issued at an average premium of 50 per cent. The company was formed in June, 1923, to acquire mining claims in Portugal. A part of the published statement reads ".....the consideration for the sale being the sum of £7,000, payable as to £1,000 in cash and £6,000 in 120,000 fully-paid shares of the company." Application is to be made to the London Stock Exchange for permission to deal in the shares of the company. We should imagine, however, that the outside investing public will require much more information than that vouchsafed in the published notice before becoming interested in the undertaking.

COMPANY MEETINGS, &c.

BENGAL-NAGPUR RAILWAY COMPANY, LIMITED.

RECORD GROSS EARNINGS.

IMPROVED PROSPECTS.

The sixty-fifth ordinary general meeting of the shareholders in the Bengal-Nagpur Railway Company, Limited, was held, on the 1st instant, at 132 Gresham House, Old Broad street, London, E.C., Mr Robert Miller (the chairman) presiding.

The secretary (Mr R. C. F. Volkers, C.I.E.) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen, the report of the directors on the accounts of the undertaking for the year 1922-23 sets forth in detail the results of the working of the undertaking for the year; but before asking you to approve and adopt the report, together with the accounts and balance-sheet which accompany it, I propose, according to my usual custom, to touch on the more salient points and to add for your information such remarks on the future prospects of the undertaking as may be of interest to you.

REVENUE.

The gross earnings for the year were Rs. 762 lakhs, which gives an average of Rs. 539 per mile per week, and Rs. 6 per train mile. These figures are the highest on record for the undertaking. The corresponding figures last year for gross earnings were Rs. 677 lakhs, and the increase during the year was, therefore, Rs. 93 lakhs, or just Rs. 7 lakhs short of the increase anticipated in my address to you last year. This improvement in gross earnings is largely the result of the extinction as from March 31, 1922, of the Freight Tax Act of 1917, under the operation of which, as I explained to you last year, the Government raised revenue by taxing goods conveyed by railways and river steamers. This revenue, so far as it accrued from railway traffic, was legitimate railway gross earnings, or, to put it accurately, it was revenue which railways could and would have earned had they been permitted to revise their tariffs, which, however, was not possible so long as the Freight Tax Act of 1917 continued in operation.

Passenger traffic shows a slight decrease in numbers, though the total receipts are in excess of the figures of the previous year, being Rs. 208 lakhs, as compared with Rs. 189 lakhs. This is due to a revision of the passenger tariff.

Goods traffic shows an improvement both in tonnage and in freight, the figures for public traffic being in volume 8,246,443 tons and in freight Rs. 462,96,863, as compared with 7,611,308 tons and Rs. 392,90,312, the corresponding figures for the previous year.

The increase in tonnage, which works out to slightly over 8 per cent., results from brisker traffic in general merchandise and coal for the public. The increase in earnings, which works out to 17.83 per cent., results mainly from the introduction of a revised classification of goods for freight on the extinction of the Freight Tax Act of 1917. Trade during the period did not show much signs of revival, and even at the present time trade everywhere continues more or less stagnant. At any rate, the strong revival which we are anxiously looking out for has not yet set in.

EXPENSES.

The working expenses during the year were Rs. 488,51,981, absorbing 64.21 per cent. of gross earnings, as compared with Rs. 484,29,146, absorbing 71.53 per cent. of gross earnings, the corresponding figures of the previous year. Compared with the increase in gross earnings, the increase of Rs. 44 lakhs in working expenses is a negligible figure. It is, however, necessary for me to say that it has cost an effort—a great effort—to keep the figure of working expenses practically stationary during the year. It has not been achieved except by practising the strictest economy in every direction, and though it will be the earnest endeavour of the administration of the railway to continue to practise rigid economy till such time as the heavy capital expenditure that is being incurred in improving the line, so as to enable it to carry more traffic, begins to give a return in the shape of gross earnings,

there is a point which, I fear, has already been reached where the continued repressing of working expenses would impair efficiency.

CURRENT YEAR'S PROSPECTS.

As regards the prospects of the railway during the current year, the returns received to date show some improvement in gross earnings. Up to the end of September our receipts have increased by £50,000 as compared with the receipts for the same period last year. It has to be remembered that the railway began its existence as a pioneer line, and the point I wish to make clear to you is that there was at first no traffic worth the name in the greater part of the vast tract of country through which the railway was carried. The railway has thus had to make its traffic, nursing its first beginnings by low rates and fostering it till it has now reached in freight the very creditable sum of upwards of £5,000,000 sterling per annum.

In the continued upward progress of its traffic it is necessary for the railway to continue its rôle of a pioneer line. The country which it traverses is rich in minerals; in fact, it is no exaggeration to say that it contains more mineral wealth than the rest of India taken together. It abounds in iron ore of excellent quality. It possesses two important coalfields, Jheriah and Ramgarh-Bokharo, which have for some time been in active working; two others, South Karanpura and Talchir, which have been proved, but not yet opened out, and yet another two, Ghordeva and Ib, which still have to be proved to be of practical commercial value, but which are not without some promise. Then it contains an almost inexhaustible supply of limestone of the finest quality, which is in great demand at the iron and steel works, and also vast quantities of manganese.

EXTENSIONS.

A branch is under construction, and is now nearing completion, from Amda to Jamda, with an extension to Gua, to enable the growing demand for iron ore to be met. The Gurumashini branch is being extended with the same object to Onlajori. The Bokharo-Ramgarh branch of the railway is being extended westward to the South Karanpura coalfield.

The Hsela Chandil Chord, which I mentioned last year as being about to be begun, is in process of construction. It will furnish an outlet independent of the Bokharo-Ramgarh branch for that portion of the output of the South Karanpura coalfield to destinations south and west.

The line from Kapilas Road Station, near Cuttack, to the Talchir coalfield has also been begun.

Then we have acquired from the Panposh-Raipura Branch Line Company and incorporated in the undertaking their short line of 14 miles to the extensive limestone hills north of Panposh, and we are proceeding to provide extensions to the vicinity of quarries about to be opened out to enable the limestone to be transported to Bengal, where it is in great demand by iron and steel works and for building purposes.

Further, we look forward to being in a position at no distant date to complete the Raipur-Vizianagram direct route to the sea at Vizagapatam from the Central Provinces as soon as work on the harbour has been actively begun.

IMPROVEMENTS.

At the same time, we are improving the main line at considerable cost, so as to enable it to deal effectually with existing traffic, as well as with the traffic which the new lines under construction will create. During the course of the last three years we have been doubling sections of our single line towards Calcutta and Nagpur. This work will be completed during the current year. We have been improving our station yards, and adding to our rolling stock, and we have introduced a system of train control over the greater part of the railway. The great advantages of train control have already become evident, and with more experience they will continue to increase.

VIZAGAPATAM HARBOUR.

With regard to Vizagapatam Harbour, we have put forward proposals to Government for raising the required capital on the basis of figures which show that the scheme would be remunerative by itself, irrespective of the increased traffic which the railway would secure by the construction of the harbour. We have every hope that the Government of India will see their way to assist in carrying out this most important work at no distant date.

Generally, the railway has been maintained up to its usual good standard, and your board are fully alive to looking well forward to the future, and providing for it.

With these remarks I beg to move: "That the report of the directors, together with the accounts and balance-sheet appended thereto, be approved and adopted."

Sir Charles Stewart-Wilson, K.C.I.E., seconded the motion, which was carried unanimously.

DIVIDEND AND BONUS.

The Chairman, then moved: "That the sanction of the company be and is hereby given to the declaration by the board of a final dividend at the rate of 15s, together with a bonus of 10s per £100 ordinary stock, for the financial year ended March 31, 1923, in addition to the guaranteed interest and interim dividend already paid for such period, such amounts to be paid to the members on the register on December 31, 1923, with the half-year's guaranteed interest at the rate of 3½ per cent. per annum then payable, less English income-tax on the whole amount."

This resolution was seconded by Mr A. Brereton, C.S.I., and unanimously approved.

The retiring directors (Mr Robert Miller and Sir Charles Stewart-Wilson, K.C.I.E.) were unanimously re-elected, and the auditors (Messrs Gérard Van de Linde and Son and Messrs W. B. Peat and Co.) were reappointed.

ANGLO-DUTCH PLANTATIONS OF JAVA, LIMITED.

POSITION REVIEWED—PROPOSED NEW ISSUE.

The thirteenth ordinary general meeting of the Anglo-Dutch Plantations of Java, Limited, was held, on the 30th ultimo, at the Cannon street Hotel, London, the Hon. C. H. Strutt (the chairman) presiding.

Mr. Percy H. Bradford, the representative of the secretaries (Messrs Francis Peek and Co., Limited), read the notice convening the meeting and the auditors' report.

The Chairman, in the course of an exhaustive statement, said: The past year has been one of extraordinary interest to your directors. Questions of considerable magnitude have engaged their attention, and have necessitated a considerable amount of thought in endeavouring to come to a right conclusion as to the best course to adopt.

When we issued the extra shares to you in August, 1920, I told you that we should want the whole of the cash at our disposal properly to develop our Anglo-Dutch property. This has proved to be the case. Before we have completed every outlay desirable to bring the estates to the highest pitch of perfection we shall more than have exhausted the cash at our disposal. The purchases of the tea estates outside our own territory were carried out, not

because we did not perceive that our funds would be required for our original estates, but because a certain position has arisen in Java which gave us an opportunity which we thought, in the interests of the shareholders, we could not refuse to take.

The whole of our new estates have been purchased, at an average, under £26 per acre, and it is thought that they will be brought into first-rate condition at about £30 an acre. We do not think it is possible in Java or elsewhere to plant up and bring a fresh tea estate into bearing under a cost of £70. We have always disliked being looked upon as being mainly a rubber company, and it seemed to us an opportunity not to be missed that we should level up our tea, so that in our company we should have two main and large products which we believe the world will always require.

THE DIVIDEND.

We have been criticised in a few quarters because we have not squeezed out an additional 1 per cent. dividend. To have done this would have suited the directors very well, but we did not consider it sound finance. The year, though better than 1921, was not a favourable year for our products, and so our Eastern balance-sheet only shows small profits, but in our Anglo-Dutch accounts we have made some £80,000 profit on the sale of our investments. It would, obviously, be very unsound finance to divide this windfall among our shareholders in one swoop. We have taken from it a considerable sum, but instead of placing the balance to reserve, as would be done in most companies not so well provided with reserves as our own, we have increased our carry-forward, thereby expressing our opinion that this profit may be used for future dividends without any compunction.

At the end of 1921 we had liquid £1,100,000. We have spent £600,000 on new estates, including three further estates bought this year, and nearly £300,000 on dividends, including taxes, besides the excess development expenditure over revenue, so that it is obvious that more capital is necessary.

RUBBER AND TEA.

The position of the rubber market is very different from what it was when I addressed you last year. We obtained a satisfactory average for our sales in 1922, but that was largely owing to the forward sale at 2s 8d per lb. In September, 1922, we published in the newspapers, for the benefit of our shareholders, the fact that

we had made an arrangement with the General Rubber Company of New York for the sale of our rubber from October, 1922, until the end of 1924. The basis of that contract was a maximum and minimum price—8d being the minimum and 1s 4d the maximum. We are, however, receiving the London market price for rubber we deliver ex factory on the estates. It is sufficiently obvious that, apart from the maximum and minimum, our obtaining the same price ex our own factories in Java as if we sold in London must always be a substantial advantage to us.

To return for a moment to the accounts, we provide a reserve, which this year amounts to £9,000, in order that each area of rubber when it is 30 years old will return us the exhausted capital value, and after that date the rubber trees will stand in our books at nothing. We commence these reserves when the trees are six years old.

TEA, COFFEE, CINCHONA, &c.

I quite admit that the profits from rubber were last year far larger than from tea, but this year, with the purchase of our new estates, tea assumes at any rate equal prominence with rubber. Our aim has always been that our plantations should by 1930 produce 10,000,000 lb of rubber on an unrestricted basis. Now, our representative fairly hopes to reach 10,000,000 lb of tea by 1926—(hear, hear)—and estimates that from 1923 onwards the profit from tea will be larger than from rubber. You must remember that up to the end of 1922 we have taken into our accounts no profits from our new tea estates. We are, therefore, quite as much a tea-producing as a rubber-producing company.

The new tea estates of 13,442 acres, of which 12,830 acres are in bearing, were purchased, as I have already said, a long way below the costs of bringing them into production. Mr Wilde, an Indian and Straits planter of great reputation, whom we asked to visit the estates, has given us a valuable report. It is very satisfactory to find from Mr Wilde's able report that he valued the new estates, which cost £441,691, at £711,333.

There are two unsatisfactory points connected with tea. The first is that the English tax on Java tea is higher than that on colonial tea; the second is the low price which Java is valued at on the world's markets compared with Indian and Ceylon.

Mr Hammond is fairly sanguine about the growth of coffee on our estates. I think this is partially due to the change of climate which seems to be occurring, at any rate temporarily, in that part of the world. Later the climate has been much more satisfactory, rain continuing until the end of July, so that the prospects of coffee seem much better.

The profit on quinine was considerably smaller than the price for the year warrants, but we have every hope that this year we shall make a considerably larger profit.

SUMATRA.

Our intention is to go ahead very slowly with our fine land in Sumatra. We have thousands of acres of good soil at a high altitude which we believe will soon prove to be a fine asset. The labour difficulty, however, at the present moment is a great one.

I told you last year that we had received permits to prospect for oil over some 145,000 acres. We have also lodged applications for some further permits. There have been sufficient indications of oil to make it advisable to have a full geological survey of the area. We shall try to enter into an exploitation arrangement with the Government for working the oil if discovered in sufficient quantities.

NEW ISSUE.

Your directors were of the opinion that they should not stop the development of the old estates on account of the fresh purchases, nor did they think it right, now that the foundations are also firm and secure, to deprive shareholders in the immediate future of the full benefit of dividends which are fairly earned by these estates. We therefore had to consider what was the best mode of raising fresh capital. The choice practically lay between issuing shares at a premium at the present moment or debentures with an option of a future conversion. We certainly think that the old shareholders should have their advantages reduced now as little as possible by the introduction of fresh capital. Some of them may not be able to invest further, and if the money can be raised—as it no doubt can—on a 5 per cent. debenture, with the option we are now suggesting, their dividend will not be prejudiced to the same extent as it would have been had we immediately increased the number of the shares. We directors consider, though we may be biased, that a debenture on all our culture estates is in itself a gilt-edged security.

We shall offer to the shareholders for subscription at par £1 of debenture stock for every four shares held by them. In many instances the quantity of stock to which shareholders will be entitled will be quite small, and we shall, therefore, give them the opportunity of applying on a separate form for an excess quantity which may be available in case some shareholders do not take advantage of the offer. We have little doubt that the rights to

apply for the debentures are of value, and the renunciation forms should have a value for those who wish to sell those rights. The payment for the stock will be called in easy amounts—10 per cent. on application, 10 per cent. on allotment, and the rest in larger sums next year; but payment in full can be made if desired at 3 per cent. discount. The debentures will be repayable by the company at par between January 1, 1929, and January 1, 1934, at which later date they must be definitely redeemed if there be any stock still in existence. The stock can be converted on December 31, 1926, December 31, 1927, or December 31, 1928, at the rate of three new shares for every £5 debenture stock; that is, on the basis of 33s 4d per share—a very favourable price for the shareholders—but why not? Of course, dividends and interest will not both be paid on the shares or debentures converging the same period.

In conclusion, he said: We must remember that we are not dependent upon the fluctuations of one industry, but we shall have tea, rubber, coffee, cinchona, kapok, sisal, with electric power and railways, and two factories besides dealing with rice and tapioca, which we confidently expect will produce satisfactory profits. Notwithstanding the depression that has taken place in Java, largely from want of fresh capital, we have not hesitated to go forward, and we think now we see our reward at hand.

Mr W. H. Dunkes seconded the resolution for the adoption of the report and accounts, and it was unanimously adopted.

PRESENTATION TO CHAIRMAN.

On the proposition of Mr Samuel Gardner, seconded by Sir William Mills, the chairman was presented with his portrait in oils (by Mr Oswald Birley) as a mark of the esteem of the shareholders.

In acknowledging the compliment, the Chairman paid a warm tribute to Mr Hammond for his work on behalf of the company.

RUBBER SECURITIES, LIMITED.

IMPROVED RESULTS.

The fourteenth ordinary general meeting of Rubber Securities, Limited, was held, on the 30th ultimo, at 7 Martin's Lane, London, E.C.

Mr W. Arthur Addinsell (the chairman) presided, and in moving the adoption of the report and accounts, said:—The accounts now presented show improvement upon those submitted last year. This improvement was, in the main, effected by the scheme for the restriction of the output of rubber in Ceylon, Malay States, and the Straits Settlements, which came into force on November 1, 1922. The resultant higher prices for the raw material have enabled rubber-producing companies again to earn profits, and their financial position has accordingly been considerably strengthened. A number of the companies in which this company is interested have resumed the payment of dividends.

The general improvement in conditions has also had the effect of partly eliminating the heavy depreciation of £44,656 shown in our investments last year. The market value based on the latest dealings at June 30, 1923, of the securities appearing in the balance-sheet at £90,599 was £76,898. I have had the investments valued this morning, and they show a further deficit of £235. On the other hand, they have appreciated nearly £31,000 since June 30, 1922.

This present depreciation is mainly in four companies: Holyrood Rubber, Rubber Estates of Krian, Ratanui Rubber Estate, and Tanah Datar Rubber Estate. They are all in a sound financial position, moderately capitalised, and economically worked; so that, with the further improvement which is bound to come sooner

or later in the rubber industry, this depreciation should ultimately disappear.

With one exception these remarks apply to all the other rubber companies in which our funds are invested. This one exception is the Kebonso Rubber Estates. This company is now reconstructing its share capital with a view to raising further funds for the cultivation of coffee. Our interest in that concern is under £1,000.

THE RUBBER MARKET.

As regards the rubber market, we have of late years been forced to realise that over the greater period of each year the market price of rubber is dominated, not by the pressure of producers and importers to sell or the stimulant of buying by consumers, but by speculative operations.

There are those who will argue that the speculator is a valuable asset to any market, but I maintain that where rubber is concerned, over a long period, prices would not be subject to such severe fluctuations as we are now accustomed to if the market was governed purely by the factors of supply and demand.

During the last fortnight we have witnessed a fall in the price of spot rubber from round about 1s 3d to 1s 1½d per lb. The excuse is that it is due to heavy liquidation on the part of the outside speculator.

The restriction scheme is, I suggest, operating to the satisfaction of its sponsors, and I think it can be taken for granted that, so long as the scheme is in force, we shall not find rubber sinking to the very low level of prices which prevailed in the early part of last year.

Unless the conditions of the restriction enactment are altered, it would seem that producers must look for an average of something between 1s 3d and 1s 6d per lb for their produce, at any rate for the next year or so. Stocks in London have decreased appreciably, and it would appear that there is no great supply of rubber awaiting shipment in the East.

We are told that the Americans, as purchasers of raw rubber, have for all practical purposes been out of the market for many months past, but, if there is to be continuity of increase in the output of motor cars, then the consumption during the first half of the coming year must be something in advance of what might be expected from the buying operations of the past few months.

Rubber cannot be purchased in its raw state to-day, and put on the road in the form of tyres to-morrow. Therefore, I think that the future holds out something more than the present position of the market indicates, and that we can confidently look for an increase in the demand from the consumer—which demand must, I think, raise prices early in the New Year to a higher level than those ruling to-day.

It goes without saying that Rubber Securities, Limited, will participate in the long overdue revival, and I am not without hope that when we meet next year it will be your pleasure to authorise the payment of a dividend.

Mr Thomas A. Gallie seconded the motion, which was unanimously adopted.

Reports and Notices.

The London office of the National City Company has received cable advice from its head office in New York that the National City Company and associated bankers have offered \$5,000,000 Canadian Pacific 4 per cent. coupon consolidated debentures at the price of 79½, New York terms. The debentures are secured by a first charge on the entire undertaking, subject to certain priorities. Field-Marshal the Right Hon. Earl Haig, O.M., K.T., has joined the Edinburgh board of directors of the Royal Insurance Company, Limited.

Owing to the increase in his work as assistant manager of the London and Scottish Assurance Corporation, Limited, Mr Louis I. Jarvis has relinquished the title of secretary, and the board have appointed Mr F. S. Goggs to that position.

In future the business of the West End branch of the Liverpool and London and Globe Insurance Company, Limited, will be conducted from their new premises on the site adjoining the present temporary building. The new address is:—Globe Buildings, 57 Charing Cross (Admiralty Arch Approach), London, S.W. 1.

Mr. Douglas Christopherson has been appointed a director of the Consolidated Gold Fields of South Africa, Limited, and New Consolidated Gold Fields, Limited, in place of Sir Leigh Hoskyns, Bart., deceased, and he will act as resident director of the latter company in South Africa.

BANKS.

COMMERCIAL BANK OF SPANISH AMERICA.—The report for the year ended June 30, 1923, shows that the net profit amounted to £38,644, against £55,291 in the preceding year. With the £302 brought in there is £38,946 available. The sum of £3,300 goes to staff pension fund, and £35,000 to contingency account, leaving £466 to be carried forward.

NATIONAL BANK OF AUSTRALASIA, LIMITED.—The directors of the bank offer for tender to all shareholders registered on November 15, 1923, 8,109 fully-paid £10 shares representing fractional shares, and unapplied for shares, in the recent issue on May 16, 1923. The tender price has been fixed at £15, and will be payable £2 on application, and the balance £13 per share, not later than January 15, 1924. The allotment of these shares will be at the discretion of the board of directors, but regard will be paid to the existing holdings of ordinary shares and/or fully-paid shares. All shares allotted will rank for dividend as from October 1, 1923, and all premiums received in respect of this issue will be credited to the bank's reserve fund.

WEINER BANKVEREIN (VIENNA).—The Wiener Bankverein (Vienna) is offering for subscription in Vienna to existing shareholders in the proportion of one new for five old shares, 1,000,000 new shares at Kr.140,000 each, having the right to dividend from January 1, 1924. The Banque Belge pour l'Etranger, Moorgate, E.C. 2, is authorised to receive and transmit subscriptions to Vienna. Applications must be supported by the deposit of old shares, listed in duplicate in numerical order. The subscription closes in Vienna on November 7, and applications should be in the hands of the Banque Belge pour l'Etranger not later than November 6th.

RAILWAYS.

ARGENTINE GREAT WESTERN.—The report for year ended June 30, 1923, states that, under the working agreement, this company has received from the Buenos Ayres and Pacific Railway Company and has distributed the following amounts in respect of the year to June 30, 1923:—

Interest on first debenture stock.....	£68,000
Interest on second debenture stock.....	£68,000
Interest on 5% debenture stock.....	£180,000
Interim dividend of 2½% on preferred and ordinary stocks.....	£106,250

The Buenos Ayres and Pacific Railway Company, having paid 7 per cent. for the year ended June 30 last on its ordinary stock, has, in accordance with the working agreement, paid to this company the sum of £148,750, with which amount the directors propose to pay a balance dividend of 3½ per cent. on the preferred and ordinary stocks, making, with the above-mentioned interim dividend, 6 per cent. for the year on both stocks.

CORDOBA CENTRAL.—The results of working for the year ended June 30, 1923, as compared with those of the previous year, were as under:—

	1921-22.	1922-23.
Gross traffic receipts.....	2,635,390	3,071,699
Working expenses.....	2,245,303	2,274,393
Net receipts.....	390,087	797,306
Percentage of working expenses.....	85.20	74.04

The report points out that expenditure on the maintenance of the permanent way and rolling-stock shows an increase, but there were reductions in the cost of locomotive running, viz., £162,278—principally due to the lower price of fuel—and in traffic expenses, viz., £53,559.

RUBBER, &c.

BATAK RABIT ESTATE.—The report for year ended June 30, 1923, shows that the net profit was £8,400, against £5,268 in preceding year. The ordinary dividend is 12½ per cent., against 5 per cent. The sum of £7,989 is carried forward, against £8,964 brought in. The crop harvested for the year amounted to 350,979 lbs. The standard production allowed to the company under the Export of Rubber (Restriction) Enactment,

1922, is 478,107 lbs. Of this, the amount allowed to be exported at the minimum rate of duty was fixed at 65 per cent. for the month of July, and at 60 per cent. for the three months from August 1st. It is expected that from November 1st the rate will again be raised to 65 per cent., and if that rate should continue, the company's production for the financial year to June 30, 1924, would be 304,793 lbs.

BATU TIGA (SELANGOR).—We are officially informed that the company has entered into an agreement to purchase an estate in Selangor comprising 873 acres of rubber, of which 756 acres will be ready for tapping in 1924. The estate was inspected and valued by an independent valuing agent, who valued it at £44,000, against an agreed purchase price of £36,000. The purchase money has been found by the sale of part of the company's investments at a price substantially higher than they stood in the company's books. On completion of the purchase the planted area of the company's estates will be as follows:—Tapped, 1,923 acres; ready for tapping, 1924, 1,131 acres; immature, 342 acres; total planted with rubber, 3,396 acres. The issued capital of the company being £125,325, the above area stands in the books at £37 per acre.

PULLANGODE RUBBER ESTATE.—Improved results have been achieved by this company for the year ended June 30, 1923. The net profit amounted to £6,932, against a net loss of £1,843 for the year ended June 30, 1922. The ordinary dividend is 5 per cent., against nothing for preceding year, and £1,587 is carried forward, against a debit of £3,095 brought into the accounts. The crop, which was estimated at 200,000 lbs of dry rubber, amounted to 253,991 lbs. Of this quantity 228,440 lbs have been sold at an average net price of 1s 1½d per lb, and the balance 25,551 lbs has been estimated to realise 1s net per lb, on which basis the net proceeds of the crop amount to £14,365, as against a working outlay of £6,470, the estate working account thus showing a credit balance of £7,895 3s 7d carried to profit and loss account.

SINGAPORE UNITED.—The net profit secured for the year ended June 30, 1923, was £12,031, against a net loss of £3,961 for the preceding year. No dividend was paid for 1921-22, but this year a 5 per cent. distribution is being made. The restricted output of dry rubber during the year was 688,144 lbs, as compared with 610,166 lbs in the previous year. Of this output 408,422 lbs has been sold in London at an average gross price of 3s 3½d per lb, and 198,594 lbs in Singapore at an average gross price of 10.08d per lb. The net price realised of 1s 0.97d per lb, compares with 7.60d per lb last year. The report further states that advice has just been received from Singapore that the Colonial Government has expropriated 409 acres of the company's land for the purpose of the new Singapore Naval Base. The Collector of Land Revenue awarded \$225,000, say £26,250, as compensation. As the board did not consider the sum adequate, they appealed to the Court, with the result that the award of the Collector has been upheld.

TANGOEL RUBBER ESTATES.—The report for year ended June 30, 1923, shows that the crop of rubber was 267,463 lbs, as against 225,383 lbs in previous year. The net loss for the year is £1,848, against a net profit of £2,887 in preceding year. After payment of taxes there is a credit balance of £5,959. The dividend is 5 per cent., against nothing in preceding year. The sum of £2,129 is carried forward, against £7,808 brought into the accounts. The report adds that "the estate is reported upon as being in a satisfactory state of upkeep, and the supply of labour for tapping, as well as cultivation, is sufficient. The work of terracing and drainage to prevent wash is being carried out, and diseases as they appear are treated as required. The quality of the manufactured rubber continues to be excellent."

TELOGOREJO UNITED PLANTATIONS.—We are informed that the issue to the householders of 50,000 shares at the price of £2 each has been over-subscribed, and letters of allotment will be posted early next week.

MISCELLANEOUS.

BRITISH NORTH BORNEO COMPANY.—The total receipts for 1922 amounted to £390,900, as compared with £404,348 for 1921. Expenditure amounted to £249,158, against £256,881. The dividend is 3½ per cent. for the year, as compared with 3 per cent. for preceding year. Profit for 1922 is £141,742, as against £147,466. The report points out that trade continued in a depressed state throughout 1922.

CANADIAN GENERAL ELECTRIC.—A scheme is put forward whereby the General Electric Company of New York is to acquire a controlling interest in the common stock of the Canadian General Electric Company. Existing stockholders of the latter company will be afforded an opportunity of transferring their stock on the basis of receiving for each \$100 share \$62.50 in cash (New York terms) and one new 7 per cent. preference share of \$50, par value, in the Canadian Company. Subject to the necessary amount of Canadian stock being so transferred, the General Electric Company will subscribe for \$2,000,000 common stock of the Canadian Company direct from its treasury.

GEORGE H. HIRST AND CO., LIMITED.—The fourth annual report and balance-sheet for year ended August 31, 1923, shows that, after providing amply for depreciation and corporation profits tax, a net profit remains of £35,469, against £47,298 for previous year, to which has to be added the balance brought forward from last year, making £56,493. The fixed dividend on the preference and preferred ordinary shares to August 31, 1923, has been paid, leaving available £36,107, which is recommended to be appropriated as follows:—Final dividends on the preferred shares of 6d per share (making 10½ per cent. for the year), and 9 3½d per share on the deferred ordinary shares (making 4 per cent. for the year, against 12 per cent. in preceding year) are recommended, leaving to be carried forward a balance of £24,107. Freehold

and leasehold land, mills, and motive plant have been written down to £104,310. Plant, machinery, motor wagons, &c., and book debts are slightly lower, whilst stock-in-trade is higher at £65,858. Sundry creditors, including provision for corporation profits tax stands at £47,646. Goodwill, investments, and reserve fund remain as last year.

INVERESK PAPER COMPANY (1922), LIMITED.—The gross profit for the period September 20, 1922, to September 30, 1923, amounted to £67,518, and after providing for depreciation, debenture interest, income-tax, &c., the balance available is £36,315. The directors recommend the payment of a dividend of 10 per cent. on the ordinary shares, and the transfer of £10,000 to the reserve fund, leaving £11,368 to be carried forward. In September, 1922, Messrs G. Haswell, Veitch, and Co. offered £150,000 6½ per cent. first mortgage debenture stock at 95, and £25,000 8 per cent. cumulative preference shares of £1 each at par. The report points out that, after charging the reserve account with the preliminary expenses and discount on the debenture stock issue, the directors have transferred the whole balance in reduction of the value of the heritable property and plant and machinery. The report states that the buildings and plant have been maintained in an efficient state during the year, and the directors are of opinion that the results obtained are satisfactory under the present general trade conditions.

LONDON MARITIME INVESTMENT.—The report of this company just issued for the year ended September 30, 1923, shows that net profits have been well maintained, as they amounted to £57,062, against £60,015, and the ordinary dividend is unchanged at 8 per cent. The reserve fund stands at £192,500, and is invested in British Government securities. The report adds that a valuation of the company's investments as at September 30, 1923, shows that the capital and reserve fund are more than intact.

WORKMAN, CLARK, AND CO., LIMITED.—The scheme authorised by the debenture stockholders has now been carried into effect, and the prior lien debenture stock has been issued to the bank as security for such advances as the company may require up to £300,000. All the former directors, except the technical directors, have retired, and Colonel Sir William Charles Wright, K.B.E., C.B., Mr Peter MacCullum Lang, and Mr J. H. Stephens, of Messrs Lescher, Stephens, and Co., chartered accountants, have been appointed to the board. Negotiations are in progress with other gentlemen—whose services should be of considerable value to the company—which it is hoped to bring to a satisfactory conclusion before long. Contracts for two new ships have been obtained during the past few weeks. The question of whether any action should be taken against any of the late directors is, in accordance with the undertaking given at the debenture holders' meeting, being carefully considered by the new board in co-operation with the trustees for the debenture holders.

THE CORN TRADE.

Mark Lane, Friday Evening.

Agricultural operations were hampered by further rains over most parts of the United Kingdom, and a spell of fine dry weather would be welcome. Field work, however, is fairly well advanced, particularly in southern and eastern parts of the country. Offerings of native wheat were somewhat restricted, and many samples come forward in a damp condition. Best milling qualities, however, are in request, and realise from 8s 9d to 9s 3d per 112 lbs, free on rail. Imported grades were in moderate request at generally steady rates, the inquiry being chiefly for North American grades. No. 1 Northern Manitoba ex ship quoted 48s to 47s 3d as to position, Rosafé 62 1/2 lbs 46s 9d, Barusso 62 1/2 lbs 45s, choice white Karachi landed 44s, all per 480 lbs. In the floating and forward cargo section, Manitoba qualities were in fair request at generally steady rates, but other descriptions move off slowly. Steamers of No. 1 Northern Manitoba, small cargoes November sold at 44s 9d to 45s net, and larger steamers shipment from Pacific ports January 42s 7 1/2d, February 43s 1 1/2d, soft white Pacific and white Western ditto combined afloat 44s 3d, all per 480 lbs. Flour quiet, and prices were reduced for London made. London standard straight run now quoted at 37s, patents 39s to 40s, town household 35s per sack, delivered in. All English country straights 30s to 31s per sack, delivered to London stations. Imported quietly steady, and Australian quoted 32s 9d per 280 lbs, ex store. Russian wheat is now offering more freely, and shows fine quality, while realising slightly more money than Canadian. Maize cargoes dull for Plate descriptions, but a cargo of Bessarabian f.a.q. early November sold at 36s per 480 lbs, while steamers of Dan-Bess-Kustendji barley afloat changed hands at 27s 9d c.i.f. per 400 lbs. Millers' offers quiet, and occasionally the turn easier. Broad bran quoted 7s-7s 3d, ordinary ditto 6s 3d-6s 6d, middlings 8s 3d, bags included, ex mill; light oats 5s 9d, powdered oat husks 5s 9d, feed oatmeal 9s 3d, ground oats 13s 3d, free on rail, all per cwt. Barley: English in fair demand for best samples. Prices fully steady. Malt descriptions range from 9s 6d-13s 6d, and grinding sorts 8s 3d-8s 9d per 112 lbs, free on rail. Imported firm, and Canadian again dearer. Californian quoted 39s-44s, Chilean brewing 38s 6d-43s 6d per 448 lbs ex store. Persian ex ship 26s, Algerian/Tunisian ditto 28s 6d, No. 4 Canadian Western 28s, ditto landed 29s 3d, all per 400 lbs. Maize steady. Plate ex ship 35s 6d, landed 37s, No. 2 white flat African ex ship 37s, No. 6 yellow ditto 35s 9d, all per 480 lbs. Oats: English steady at 8s 3d-10s 2d per 112 lbs, free on rail, as to sample. Imported generally quiet. Plate ex ship f.a.q.

22s, landed 23s 3d, No. 2 Canadian Western ex ship 27s, landed 28s, No. 3 ditto landed 27s, Algerian/Tunisian ditto 23s, New Zealand A grade landed 38s-40s, B grade 36s per 320 lbs. Oat-

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report dated November 1st is as follows:—Pig-iron: The pig-iron market is quietly firm, and makers are very comfortably situated with regard to orders. The prospects are that present prices will be retained meanwhile. Scotland is our best customer for Cleveland iron at present. The demand for East Coast hematite pig-iron is not quite so good, but the price is fairly steady. Current quotations are as follows:—No. 3 Cleveland G.M.B., 100s per ton; E.C. Hematite, Mixed Numbers, 100s per ton. Manufactured iron and steel: Steel makers are hoping for an early settlement of the Boilermakers' strike, which still blocks the way. Steel ship plates, £9 15s; steel ship angles, £9 5s; iron bars, £12; steel rails, £9 10s net. Iron ore: There is not much buying, as stocks appear still to be fairly heavy. Best Bilbao Rubio ore is quoted 23s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—Conditions in the iron and steel trades have been a little more active this week, but there is no appearance as yet of a substantial revival of buying. Prices of common pig-iron have been advanced, and some users would like to place forward contracts. Makers, however, are not prepared to sell very far ahead at prices which barely cover the cost of consumption, and buying for immediate use remains on a meagre scale. Conditions in bar and hoop iron, which have been acutely depressed for a long period, have bucked up considerably of late, owing to the receipt of good orders from the holders of railway rolling stock and from abroad. In the home market things remain stagnant. There is rather more inquiry for crude steel, and the output of the large furnaces tends to increase, but the recovery is tardy, and a good many people have made up their minds that not much improvement is likely to be experienced this year. Prices of billets are somewhat firmer, and certain of the makers are refusing business at the current low quotations, feeling that they will get better rates by waiting. The tonnage of acid steel going into consumption is increasing steadily. The rolling mills are running about half time, except those producing "cold" strip, which are overwhelmed with work. Forges generally are slack. The call for crucible quality steels leaves much to be desired, and the position of engineers' small tools appears to be going from bad to worse. Business in these high-grade materials is extremely patchy, orders being small in value, and no one has work assured for any considerable length of time. The electro-plate branches are fairly busy on orders for the Christmas season trade, and the output of table cutlery is on a large scale. Collieries are working up to the average of the past month. A good tonnage of steam coal is going abroad, and railways are specifying heavily. The house coal department is also fairly busy. Slack fuels, however, are quiet and coke is steady, with not much in stock. Quotations per ton at pits are:—Best hand-picked branch, 31s; Silvestones, 27s; Yorkshire hards, 20s; best Tyne hards, 24s 6d; rough slacks, 11s; smalls, 7s; blast furnace coke, 24s.

Our Glasgow correspondent writes:—The moderate improvement in the steel and iron position which was manifested a few weeks ago continues to be maintained, but the change for the better still leaves a good deal in those relations to be desired. Probably the most satisfactory feature is the increased demand which in the last few days has set in for Scotch pig-iron, and not only for it but also for Cleveland and Midland brands, the direct dealings in which have run into several thousands of tons. Official returns show that during October six vessels of 12,019 tons were launched from yards on the Clyde, making 91 boats of 167,241 tons for the ten months. For the corresponding ten months of 1922, 107 vessels of 343,788 tons were put into the river. The engineering shops are

fairly well employed, and so are bridge builders, and corrugated heavy sheet makers who, at £79 10s, are charging an advance of 12s 6d a ton. Crown bars are called £12; heavy steel rails, £8 15s; light sections (blooms), £10; joists, £9 10s. In tubes, an active business is passing, while a lot of miscellaneous sections are rather poorly off.

Our Cardiff correspondent writes:—There has been a marked contrast this week between the current market and the 1924 contract prices. For spot positions the market has been very weak. A succession of gales extending over several weeks have impeded the movements of shipping, disorganised colliery stems, and considerably diminished the supply of empty wagons. Collieries have consequently lost a great deal of time, and the few exporters in a position to command spot or prompt tonnage have been able to buy best Admiralties at less than 27s per ton, and second Admiralties at less than 26s per ton. The situation, however, improved towards the end of the week, and tonnage promises to be as plentiful during the next few days as it has been scarce during the past week. For next year's contracts the tendency of prices has been slightly towards higher figures. The leading depot firms have hitherto been holding off, but this week two or three of them are reported to have covered themselves for a portion of their next year's requirements in the neighbourhood of 27s for best steam large and 26s for second-class steam coals. Costs during the next few months will be appreciably less than they have been during the past four months. The joint audit for July and August has brought down the general wage rate from 41.47 per cent. on the 1915 standard rates to 28.66 per cent. The general wage rate has thus somewhat unexpectedly been brought back practically to the minimum of 28 per cent. on the 1915 standard rates. This heavy decrease, however, was partly due to the big loss of output in August and partly to a further fall in the average f.o.b. price. The production in August was nearly 600,000 tons less than that of a normal full working month, and the effect of this decrease was a rise of nearly 1s per ton in the cost of production. The coal owners, however, have not allowed the audit results to affect the wages they are paying to the lower-paid men under the subsistence wage allowance. Current market quotations are as follows:—Best Admiralties, 27s to 28s; second Admiralties, 26s to 27s; best drys, 27s to 27s 6d; Black Veins, 26s to 27s; Western Valleys, 25s 6d to 26s; Eastern Valleys, 23s 6d to 25s; best bunker smalls, 17s to 18s; ordinary cargo smalls, 15s to 16s; anthracite big vein large, 40s to 47s 6d; machine-made cobbles, 52s 6d to 55s; French nuts, 57s 6d to 62s 6d; stove nuts, 54s to 56s 6d; rubbly culm, 14s 6d to 15s 6d; inland blast furnace coke at ovens, 30s to 35s; coke for export, 42s 6d to 50s; patent fuel, 20s to 32s; pitwood, ex ship, 28s 9d to 29s 3d. There is no abnormal activity in the tinplate export trade, but demand is steadily improving, and prices are slowly hardening. Employment is better than it has been for some months, and there is a demand for skilled labour.

MANCHESTER, November 1.

The larger inquiry in the market has been well maintained, and in certain quarters a fairly encouraging business has again been done. Towards the close of the week, however, buyers have displayed rather less enterprise, and there has been some disposition to adopt a waiting policy pending the publication of the important report on the American cotton crop. Fair contracts have been put through in light fabrics for India, and there has been further buying of stock lots of grey shirtings, most of the business being for Calcutta. Demand for China continues healthier, but dealers on the other side are rather slow in raising limits, and numerous bids cannot be entertained. Many manufacturers have met with fairly encouraging support from the smaller markets East and West, and quotations have been more firmly held than for a long time back. Here and there idle looms are being restarted, and in certain descriptions there is more difficulty in securing early delivery. American yarns for home use have been distinctly stiffer in quotation, and business tends to improve. Steady buying continues to take place in Egyptian yarns, and full rates have had to be paid for anything wanted. An increased inquiry has been met with in bundle yarns for India, and rather more business has been offering for China.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Cable advices from the colonies report a good demand for wool, active buying on foreign account being mainly responsible for the firmness of values. Good 64's topmaking wool in Australia is still costing about 52d, clean, Bradford, but selling prices here continue to show a big discrepancy when allowance is made for conversion costs. A general quotation for good 64's tops is about 5s to 5s 1d, but sales are reported at under 5s, and spinners do not appear to be in a position to pay more. The real centre of activity is in crossbreds, and a considerable turnover is being done in practically all descriptions. Topmakers have advanced their quotations about 1d, and the general opinion is that values will continue to harden. Wool is being taken up very freely in London, and the new season in New Zealand will open this month under very favourable conditions from the growers' standpoint. The spinning section of the industry shows a slight improvement, some fair orders having been booked recently. The bulk of the new business is in crossbreds, the price factor being all-important. Botanics are meeting more inquiry, but it is still impossible to make prices fit in with the cost of production. Several firms are now in a position to run full time, though at prices ruling during the last few weeks much of the business is bound to prove unprofitable. Some expansion in demand is noted in the piece goods trade, both home and export markets having taken more interest recently. Botany cloths are slow, but some fair orders have been accepted in crossbreds. Home-grown wools are moving steadily, and at very firm prices. The mohair market is steady, and as regards alpaca, some big weights of inferiors have been sold at Liverpool at prices showing a slight advance on recent sales.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The attendance at the London sales this week has been well maintained, each day's sale passing off satisfactorily. On the whole the catalogues have been good, there being a creditable show of both merinos and crossbreds, though there might have been larger quantities of the former shown. Prices have remained very steady, though it is evident that the somewhat erratic movement of Continental exchanges has had its effect upon the buying on French account. At the same time, a fair amount of wool is being taken for export, and Germany would buy considerable quantities of merinos were it not for the mark being practically worthless.

Up to 31d has again been paid for Queensland new clip grease combing, and very good figures are still being paid for scoured merinos. A line of fatty New Zealand merinos has sold up to 53d for scoured combing, a price which testifies eloquently to the existence of a healthy demand for this class of staple. The price paid was indeed a splendid one, there being no less than 14 lots of the clip—Murchison—which sold at 50d and upwards. Another New Zealand merino clip marked Glenholme realised up to 53d for scoured combing, while Brancott made up to 28d for grease combing.

Large weights of crossbreds have been catalogued every day, and these continue to sell exceedingly well. Home trade competition is still of the best, and if anything prices are a little firmer than on the opening night. It speaks volumes for the healthy state of the Bradford trade when an average quantity of 8,000 bales per day of crossbred wool can be catalogued and absorbed with such freedom. Confidence in the future of this class of raw material is evidently very strong. In addition to home trade support, France is also buying. Medium crossbreds still show the most rise. B.A.W.R.A. wools are being absorbed with just as much freedom as direct offerings, and prices for greasy, scoured, and slipped descriptions could scarcely be improved.

FUR SALES.

The London Fur Trade Association (Incorporated) states that the October raw fur skin sales were well attended, although the number of foreign buyers was rather smaller than usual, there

THE BANK OF TAIWAN, LIMITED.

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kluang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

being fewer Germans and Italians present than in the preceding sales. The English trade was fully represented, as also French and American interests. The results must be considered as fairly satisfactory, taking into account the greatly increased quantities of goods offered, and, as is usual at this time of the year, the indifferent quality and stale condition of many of the skins. The general state of trade caused by continual political unrest and the chaotic condition of some of the foreign exchanges necessarily led to a reaction from the high prices realised in the May sales. We have, therefore, to record a decline in the values of some of the staple articles, and, on the other hand, slight advances in certain furs.

VEGETABLE OILS AND OILSEEDS.

Linseed, both old and new, has continued a steady market, and values have been sustained at about last week's level, without, however, a great amount of business done. Reports of frost in Argentina have had a steadying effect on the values of new crop, from which a second outturn is predicted should weather conditions be propitious. Some little buying has been done for January-February shipment up to £16 5s. The oil product has been steady at £4 1/2, naked, ex Hull mill, for spot, despite offers of cheap Dutch and Belgian oil. Egyptian cottonseed has taken an easier turn, and blacks can be bought well under £11 for November shipment.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR BERMUNDSEY CORRESPONDENT.)

The hide market remains steady to firm, and prices this week show little alteration. Best ox sold from 63d to 83d at the Bermundsey sales on Thursday, seconds making 63d to 73d. Best cows remained unsold, seconds making 63d to 63d. The demand for calfskins was quiet, the extreme heavies and lights failing to obtain buyers. Medium weights made from 63d to 11d. Wool skins were firmer, selling from 5s 3d to 10s 9d, and hogs from 2s 9d to 13s 6d each. Trade in imported hides is rather quieter, 7d to 7 1/2d having been paid for Argentine ox. Stocks of frigorifics are increasing at origin, and are estimated to be within the region of 75,000 hides. Dry hides are selling freely, both here and on the Continent, prices being slightly in buyers' favour. Cables from the U.S.A. report the Chicago market as steady, with best heavy packers still making 15 cents.

The boot trade is also better, the wet weather having stimulated the demand from retailers. Overseas orders are still coming along, and all round the prospects are better.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 2.

SUGAR.—Quiet absorption both on grocery and manufacturing account continue in force, and the market developed a somewhat depressed tone. Cautious buying on the part of the trade coincides with distinct signs of increasing supplies soon becoming available, while the premium on spot and near at hand parcels becomes lessened. Prices, without exception, were marked down, and British descriptions claimed a large share of trade doing. The latest estimate by Mr. F. O. Licht regarding European out-turn of 5,105,000 tons, against last season of 4,500,000, shows some reduction on preliminary estimate with Germany, given as 1,250,000 tons. Of British refined, Messrs Tate and Lyle's white sugars, on spot, reduced 1s per cwt, and yellows 6d, with granulated second half, November delivery, 9d down. Cubes now quoted 58s 6d to 59s 6d; crushed, 56s; granulated-stoved, also fine and coarse grain, 56s 1/2d; No. 1, 55s 10 1/2d; No. 2, also London and T.L., 55s 7 1/2d; second half, November, 55s 6d; first half December, 54s 6d; second ditto, 53s 6d; January, 53s 6d; February-March, 53s; yellow crystals, spot, 50s 7 1/2d. Of imported, Dutch granulated, spot, quoted 55s; white Java, 51s 9d to 52s 4 1/2d, as to quality; May-June, steamer, 22s 9d, c.f. and i., London; white Egyptian, spot, 55s. Of Dutch granulated for shipment, W.S.R., prompt, sellers, 28s; cubes, 30s 9d; H.U.M. granulated, prompt, 28s, f.o.b. Amsterdam and Rotterdam. Czecho granulated, November-December, 24s 4 1/2d, f.o.b. Hamburg. Belgian sugars for shipment largely nominal. The market for raw refining kinds furnishes very little matter for comment, only small quantities being on offer from time to time, and the general position is somewhat nominal. White terminal market proved easier, and business proceeded rather slowly. November delivery sold, 24s 1/2d to 24s; December, 24s 1 1/2d to 23s 6d; March, 23s 9 1/2d to 23s 3d; May, 24s to 23s 7 1/2d; August, 23s 6d. Cuban stock, 132,000 tons. Liquid glucose, spot, 32s per cwt.

COFFEE.—With steady inquiries and only small available supplies on hand, the market continues very firm, with prices in some cases again slightly dearer. Colombian fine bold colour, sold, 112s 6d to 113s 6d; Maragogipe, 118s to 119s; medium sizes of washed San Paulo, 85s to 85s 6d; smalls, 84s.

COCOA.—Only quiet trading ensued in spot parcels on about former terms. Fine Accra, sold, 30s 6d to 31s. Forward market for Accra, after improving, relapsed on increased selling orders, and the market remains disturbed by the uncertainty attaching to defective beans under the new conditions imposed by the U.S.A. Government, while paucity of buying on German account is felt. F/F quality, December-February, sold up to 27s 9d, and lat. r down to 21s 6d, f.o.b. terms. English cocoa butter quiet at 1s 2 1/2d per lb in one ton lots.

TEA.—52,800 packages Indian were offered in auction this week, and good competition prevailed at full prices for most qualities, though a somewhat quieter tone set in later. Pekoe, sold, 1s 5 1/2d to 1s 9d; broken orange, 1s 7d, and up to 3s 4 1/2d for fine-t. Nearly 14,000 packages Ceylon were soon disposed of to a good demand, at prices showing no quotable change. With regard to new season's China, business in low-priced Monings up to 1s per lb is on a liberal scale, while Keemun fannings up to 9d also attracted buyers. Moning siftings are sought after. There is a much better feeling respecting the better Keemuns, and sales resulted at 1s 5d to 1s 9d per lb in b.o. Panyongs are scarce. Lapsang souchongs are not up to last season upon the point of quality, being less "tarry" in liquor. Fair quantities of comm. n Monings, together with leaf Java teas, have been taken on Dutch account recently. 4,000 packages Java and Sumatra offered, met a quiet demand at 3d to 3 1/2d per lb decline. Pekoe, sold, 1s 4 1/2d to 1s 5 1/2d; broken ditto, 1s 5d to 1s 6 1/2d; orange, 1s 6 1/2d; broken orange, 1s 3 1/2d to 1s 6d per lb in bond.

FRUIT (Dried).—The market for currants remained steady, and a moderate demand was experienced. Pyrgos, quarter cases, quoted 42s; ditto, Amalia, 46s; Parais, 50s; new Vostizza, 65s to 69s; finest, 72s. Sultanias engaged more active support, and general steadiness characterised the market. Smyrna, new crop, quoted 56s to 73s; fine, 80s to 85s. Raisins continue a firm market, with fair inquiries. Valencia, half boxes, 60s to 66s; quarters, 75s to 135s; Cape, first grade, 50s; seconds, 47s. Dates steady, at recent level of prices, with a moderate demand. First-tide Hallowee, now cleared, and second ditto, quoted 24s 6d; Khredrowie, first-tide, quoted 20s; -lar, ditto, 16s; ditto, second-tide, 14s 6d, landed terms, London. Genuine natural figs, in bags, quoted 36s to 39s; layers, in boxes, 95s to 105s, with very few boxes now on offer. Evaporated Fruits.—There has been a steady business proceeding at about late rates. Californian apricots, choice, quoted 66s; extra ditto, 72s; fancy, 92s to 100s; Oregon plums, 60/70, quoted 46s; Californian ditto, 30/40, at 82s to 84s; 40/50, 60s per cwt.

CANNED GOODS.—General trade is quiet, and almost without exception there is no new feature to record, and which is usually associated with this period of the year. Of sardines, finer qualities remain scarce, but ample supplies of undergrades are on offer. Portuguese quarters quoted 2s 6d to 3s; ditto, 12 oz, 5s to 5s 6d; 18 oz, 9s 6d to 11s; French nominal, 18 oz, 16s 6d; quarters of good quality, 9s per doz tins. Only a small movement was in force regarding lobster at about late rates. Fancy halves, 150s to 155s; seconds, 145s. Salmon held for previous rates, despite general demand marking some falling off. 1 lb flat reds, labelled, quoted 53s 6d; ditto, tall, 41s to 42s; 1 lb flat pink, 24s 6d; ditto, tall, 23s; and cases of 96 1/2 lbs, 28s to 30s per case. Canned fruits received fair attention, the lower-priced descriptions being largely favoured, and prices ruled quite steady. Singapore pines of fair quality, on spot, quoted 5s 6d; Californian apricots, 7s to 11s; peaches, 8s to 12s; pears, 12s to 14s. Tomatoes in moderate request. Spanish threes quoted 6s 3d; and Italian, ditto, 6s 6

STRINGENCY increased in the early part of the week, owing to the absence of maturing Treasury bills in the hands of the market, and on Wednesday, in spite of extensive purchases of December Treasuries, through which relief was afforded, a small amount had to be borrowed from the Bank of England at $4\frac{1}{2}$ per cent. for a week. On Thursday supply had become adequate again, in spite of the low level to which the Other deposits had been reduced, as

shown by the Bank return, through the transfer of nearly 7 millions to the Public deposits. How the Treasury had been able, in the course of the first three days of the week, to pay off, apparently, about two millions of Ways and Means Advances, make large purchases of early December Treasury bills (as it was believed to have done), and at the same time add 7 millions to its balance, was a puzzle that exercised those who specialise on the mysteries of the Bank return. The recent Austrian loan instalment, however, was believed to have put some money into the Exchequer, and it is possible that Treasury bill payments in excess of maturities may account for most of the movement, which will have been quickly reversed. Discount rates hardened slightly, three months' bank bills being quoted at $3\frac{1}{8}$ - $3\frac{1}{4}$ per cent. There was less pressure for money at the end of the week, but the discount market was apprehensive owing to the continued weakness of the New York exchange.

	Nov. 9, 1923.	Nov. 2, 1923.	Oct. 26, 1923.	Oct. 19, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills)	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	..

The Bank return showed a decrease of £69,000 in the Reserve, owing to a corresponding expansion in the note circulation. Government securities increased by only £585,000, though the Exchequer return had shown the creation of Ways and Means Advances for the Bank to the extent of $2\frac{1}{2}$ millions, and Other declined by £370,000. Public deposits had expanded by nearly 7 millions, and Other deposits were $6\frac{1}{2}$ millions lower at 101 millions. Currency notes outstanding were increased this week by £1,088,100 to £282,343,000, which includes £1,437,300 for notes called in but not yet cancelled. The fiduciary issue is £231,455,700, or £38,728,100 below the maximum.

The monthly statement of average weekly balances of the London Clearing Banks for October, printed in full on a later page, shows an increase of over £20 millions in deposits, but the October figure is still well below the average for July, as may be seen from the appended table, which summarises the totals for the nine English banks:—

	Dec., 1922.	June, 1923.	July, 1923.	August, 1923.	Sept., 1923.	Oct., 1923.
Capital and reserves	1160	1163	1163	1163	1163	1163
Acceptances	728	738	738	727	727	789
Deposits (incl. undivided profits, &c.)	1,684.7	1,637.7	1,638.0	1,611.2	1,609.6	1,629.2
Total liabilities	1,873.5	1,827.8	1,828.1	1,798.2	1,798.6	1,824.4
Coin, notes, balance at bank, and cheques in course of collection	253.0	240.7	236.6	231.0	230.2	236.6
Money at call	106.0	113.3	104.4	92.4	102.5	101.2
Investments	384.5	355.5	322.5	327.7	351.2	359.7
Discounts	298.3	270.8	276.4	264.7	260.4	274.7
Loans and advances	732.7	746.9	747.3	747.7	744.3	745.9
Cover for accept., premises, &c.	99.0	100.6	100.9	97.7	100.0	106.3
Total assets	1,873.5	1,827.8	1,828.1	1,798.2	1,798.6	1,824.4

Acceptances have also risen substantially, and are at the highest point recorded since March of this year. The increase in deposits has been balanced principally by an increase of over £14 millions in discounts, presumably owing to increased holdings of Treasury bills. The cash item has also risen by £6½ millions. Advances have risen slightly, but there were small reductions in money at call and in investments.

At their meeting on Thursday the directors of the Bank of England decided to recommend to the Court of Proprietors in April next that the Rt. Hon. Montagu Collet Norman be re-elected as Governor for the ensuing year, 1924-25, and Mr Cecil Lubbock as Deputy-Governor. When Mr H. A. Trotter resigned from the deputy-governorship two years ago, it was thought likely that Mr Norman would again be invited to retain the governorship for another year, it being customary for the Deputy-Governor to hold office for two years before going to the chair. Next year will be Mr Norman's fifth term of office, but the need for continuity of control is just as obvious at the present as it was during the difficult war period, when the late Lord Cunliffe held office for a similar period, and the City will doubtless

welcome the extension of Mr Norman's governorship—a post which he has held with such conspicuous success.

THE STOCK MARKETS.

The prospect of an early General Election has already depressed the majority of Stock Exchange markets, and substantial falls have occurred in gilt-edged stocks, newly-issued scrip stocks giving way with the rest. The foreign market is weak, and home rails have been flat, both prior charges and ordinary stocks losing ground. Foreign rails have fallen, but Grand Trunk Pacific debentures have been an exception with a rise of several points. The oil share market has been one of the brighter sections under the lead of Royal Dutch and Shells, but industrials as a whole have been irregular. The higher price of gold has helped the Kaffir market, and advances in tin shares have followed the rise in the price of the metal.

THE COMMODITY MARKETS.

The most important features of the commodity markets this week have been the rise in cotton values, and the better outlook in the iron and steel industries. American and Egyptian cotton have advanced over 2d per lb, and quotations for yarn and cloth have experienced corresponding increases. There is a general feeling of confidence over the position of raw wool; spinners report more favourable conditions, and it is stated that machinery is better employed, while some increase in demand on home account in the piece goods trade is welcome news. Jute is in demand and dearer. Copra is firmer, a stimulating factor in the situation being found in the increased interest shown by America owing to shortage of cotton oil. The position in the coal market at Cardiff has been very quiet this week; our correspondent mentions that one of the largest French shipping companies has reduced its requirements of coal owing to increased consumption of fuel oil. Confidence is said to be returning to the pig-iron market; it is pointed out that, although the boiler-makers' strike is still unsettled, there are a good number of inquiries for steel. Our Glasgow correspondent, in describing activity in iron and steel trade circles, states that prospects are more encouraging than any experienced since the beginning of the year, while our Sheffield correspondent reports further progress in the recovery of trade. Tin made a notable improvement, and copper advanced a little.

FOREIGN EXCHANGES.

In the foreign exchange market dealings have again been limited by political uncertainty, and the feeling has been one of still more pronounced depression. In particular the dollar rate has attracted attention by a fall from \$4.46½ at the close of the 2nd to \$4.42 yesterday morning. During the early part of the week quotations were moderately well maintained, but on Wednesday they began to weaken, and on Thursday fell away rapidly. Beyond the extreme uncertainty of the international outlook, the pressure of autumn purchases and the aftermath of the inflation scare, no new factors have appeared to account for this movement. Forward rates have widened slightly to ½ cent over spot, as compared with ¼ cent a week ago. Strangely enough, Amsterdam, instead of as usual following the dollar, moved in our favour, and even after a slight reaction yesterday stood at 11.52½ florins, as compared with 11.52½ a week ago, the reaction probably of events across the frontier in Germany. Stockholm, however, moved down from 16.97½ to 16.82½, Helsingfors from 166½ to 166, Switzerland from 25.11 to 25.02½, and Vienna from 317,500 to 313,500. The Paris rate has fluctuated with reports as to the attitude of M. Poincaré towards the proposed expert inquiry, being above 78 on Saturday last, recovering to 77 in the early part of the week, rising again to 78.25 on the 7th, and then after a new recovery moving up again to 78.35 yesterday morning on the news of the declaration of a dictatorship in Bavaria. The Brussels quotation has as usual followed these movements, and stood yesterday morning at 90.75, as compared with 90.15 on the 2nd, after having been 90.85 at one time on the 7th. Forward quotations which last week were 5 centimes per month above spot in both centres, have widened in Paris to 10 centimes and in Brussels to 6 centimes above. The lira, as usual of late, has been rather more steady, being quoted yesterday morning at 100½, as compared with 100½ a week ago, having varied

during the week between 99½ and 100½. The mark quotation has now, of course, little value as an indication. In many centres it is no longer quoted. In London from 4,000 millions on the 2nd it moved up rapidly to a figure as high as 50,000 millions at one time on the 6th. After that there was a sharp recovery to 6,000 millions at the close of Thursday, but on Friday morning the news of the new revolution brought up the rate again to 15,000 millions. In Germany itself the official rate on the 6th was 1,900 millions! The issue of gold loan currency appears to have been badly mismanaged, and the "renten mark," which was to appear on November 15th, again becomes problematical in view of events in Bavaria. In Dantzig the new transitional gulden pound currency has been successfully introduced, and preparations are actually in hand for the permanent gulden currency to be introduced at the beginning of January. Warsaw remains at 7½ millions, and there would seem to be some probability that the rot in Polish currency has at last been stopped. In Copenhagen, energetic exchange measures would seem to be having some effect, although the rate has again depreciated from 25.95 to 26.27½. In Christiania, however, the kroner continues rapidly to fall in value, and has now reached the exceptional figure of 30.87½, as compared with 29.77½ a week ago. Madrid shows a slight tendency towards improvement, being 33.57½, as compared with 33.61. Prague, at 152, shows an appreciation of ¾ krone, and Bucharest has moved down from 935 to 895. In the East the rupee has appreciated from 1s 4 45-64d to 1s 4 4½d, and Yokohama from 2s 2 2½d to 2s 2 3½d. In the silver market, although the heavy purchases in connection with the recent Bombay "corner" have ceased, a moderate demand from China and small offerings have kept prices steady, and although there is some uncertainty as to the Indian position, preparations for the Chinese New Year are already beginning to influence the forward market. Hong Kong is ½d lower at 2s 3½d, Shanghai ½d lower at 3s 1d. In South America, Rio has depreciated from 4½d to 4 1½d. Buenos Ayres, on the other hand, is rather dearer at 38 1½d, as compared with 38 ¾d, Montevideo, also at 38 1½d, is ½d dearer. Valparaiso has also appreciated from 38.70 to 38.50 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 3rd:—

EXPENDITURE.	Min. £	REVENUE.	Min. £
Supply Services	6,358	From Revenue	10,900
Interest, &c., on Debt	8,319	Amount borrowed	4,307
Sinking Fund	500	Taken from Exchequer balances	106
Sundries	136		
	15,313		15,313

Revenue at £10,900,100, compares with £14,046,800 in corresponding period. Customs receipts amounted to £1,959,000, against £2,165,000, and Excise yielded £1,343,000, against £1,481,000. Property and Income-tax produced a revenue of £3,916,000, and Super-tax £360,000, against a combined total of £5,892,000 in the preceding year. The total expenditure amounted to £15,312,800, against £16,171,700 in corresponding period. The week's operations increased the National Debt by £4,306,900, and caused the following changes:—

	Min. £	National Savings Certificates	Min. £
Treasury Bills	+ 1,794		350
Bank of England Advances ..	+ 2,500		187
Public Departments Advances	+ 550		
	+ 4,844		537

The floating debt was increased by £4,855,000 to £814,701,500.

FINANCIAL YEAR, 1923-24 (April 1 to November 3, 1923).

Total 444,453,732	Total 444,453,732

ESTIMATES for YEAR 1923-24.

£	£
Ordinary Expenditure 801,013,000	Ordinary Receipts .. 778,500,000
Special Expenditure .. 15,603,000	Special Receipts 40,000,000
Total 816,616,000	Total 818,500,000
	Surplus 1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the meetings of the following companies:—Argentine Great Western Railway, Bahia Blanca and North-Western Railway, British North Borneo Company, London Maritime Investment, Erinoid, Sudan Plantations, Tangoel Rubber Estates, and North Anantapur Gold Mines. At the meeting of the British North Borneo Company Sir West Ridgeway said that while, on the whole, the rubber restriction policy had been satisfactory, "the result had been by no means so successful as anticipated." Lord Kysant, at the London Maritime Investment Company's meeting, complained of the effects of heavy taxation on trade, but endorsed the Premier's pronouncement against currency inflation.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

NEW FEATURES IN THE EUROPEAN CRISIS.

A WEEK during which the European problem appeared in some respects to be growing blacker and blacker ends with at least some signs of better promise. The internal position of Germany, it is true, is moving from bad to worse with alarming rapidity, and Ludendorff's abortive coup in Bavaria is a warning that there is a certain amount of explosive material about among the ruins of Germany's economic life. But the attitude adopted by the United States towards M. Poincaré's proposed restrictions on the scope of the experts' committee has produced visible effect in Paris, and this impression of modification of French policy is confirmed by the reports concerning the second interview of M. Jusserand with Mr Hughes at Washington. It is illustrated also in the trend of Paris discussions of the subject, which is to explain that M. Poincaré's phrase about the committee's discussions being restricted to the possibility of "reparations actuelles" has been interpreted too narrowly. What M. Poincaré meant, we are now told, is that to decide to-day what Germany may be able to pay twenty or thirty years hence is impossible; and that, since the Treaty empowers the Reparation Commission to declare, if it thinks fit, a moratorium up to 1930, an expert investigation as to what and how Germany can pay in this seven years' interval might have useful results. This new and liberal interpretation of the word "actuelle" is highly significant, and changes the whole aspect of the discussion. There is another influence arising across the Atlantic, which, as it grows, can hardly fail to affect French opinion deeply. In fact, a line of thought and action has suddenly developed in the United States which may profoundly modify the whole European situation. It is typically American, and is concerned, not with political, but with humanitarian considerations. It consists of the project of an American organisation, on the lines of the Hoover relief mission in Russia, to save and feed Germans. According to Washington cables these efforts will be planned on a scale no smaller than that involved in the case of the Russian famine. Twenty million dollars is mentioned as an initial sum which President Coolidge contemplates for purchases of food to be administered in relief of the German population by American organisation. Obviously this line of action will commend itself to the American public in two ways. It will appeal strongly to the humanitarian sentiment which is among their most notable characteristics. Whether we can take part in Europe's politics or not, Americans will argue, we can at least show ourselves able to "do something to help." Apart from this support on moral grounds, President Coolidge may be assured of the support of the farmers, whose products, now very low in price, may, as was the case when relief was sent to Russia, rise in market value as the result of large Government purchases for feeding Germany. In Europe the effect of this new

So far as can be estimated, the adverse balance of Hungarian trade in the three years 1920-22 totalled over £35,000,000, converting korona to sterling at the mean rate for each year. Put in another way, the excess of imports amounted in 1920 to 156 per cent., in 1921 to 93 per cent., and in 1922 to 83 per cent. of the total exports. As regards 1923, the adverse balance for the first six months came to roughly 80 millions paper, and although sales on account of the excellent harvest should reduce external indebtedness in the current half-year, it is unsafe to conclude that the future balance of trade is assured, much less that an export surplus for reparation purposes is on the way to being established.

It has to be borne in mind that the Treaty of Trianon left Hungary deficient in many essential commodities. The present level of importation of coal, textiles, timber, paper, chemicals, iron and salt, which together form the bulk of the total, cannot well be curtailed without strangling industry and lowering intolerably the standard of existence. Stability can only be attained by expansion of exports, and such an expansion can only be seriously looked for in the direction of agricultural produce. Lacking labour with natural aptitude for industrial processes, and compelled to rely largely on imported raw materials, Hungary has only succeeded in securing foreign markets for some few factory products, such as agricultural machinery, through the enforced acceptance by the workers of a real wage whose continuance cannot be expected.

Estimates of future agricultural production are notoriously unreliable. The following figures of production of the principal cereals expressed as percentages of the 1913 level for the same territory are at first sight encouraging:—

	Wheat.	Rye.	Barley.	Oats.	Maize
	%	%	%	%	%
1921	72	72	65	71	53
1922	60	67	63	73	55
1923 (estimated) ..	91	100	74	84	75

Against these figures, however, must be set the consideration that climatic conditions this year have been exceptionally favourable. Nature in 1923 has chosen to play gracious lady in a naughty world, but there is no warrant for expecting on like scale a repetition of her performance. Moreover, the fall in the acreage down to these cereals has continued practically without interruption since the war.

To some extent, no doubt, production could be improved by increased machinery and supplies of fertilisers; more scientific methods of cultivation could do much, while sowings could be largely increased. These are mechanical steps to the end. The crux of the matter, however, is the soul of the peasant. If post-war Hungary is to survive, the peasant must work long and hard in order that his brother in the towns may eat. As things stand, it is doubtful if he will accept this burden. Landless, oppressed, enduring in sullen discontent a mediævalism which has taken from him even the hope of self-betterment, he may maintain production on the average at about 80 per cent. of the pre-war level, but this will not save Hungary. That the country can be saved at all without a sweeping measure of land reform, or except by the conscious determination of a nation of peasant proprietors, is an illusion which few but Hungarian landlords could be found to share.

DIARY OF THE IMPERIAL CONFERENCE.

Monday, October 15th.—Lord Salisbury, Chairman of the National and Imperial Defence Committee, addressed the Conference on matters connected with the military, naval, and air defences of the Empire, Lord Derby (Secretary of State for War), Mr Amery (First Lord of the Admiralty), and Sir Samuel Hoare (Secretary of State for Air) being present during the address and the debate which followed. Although it was decided by the Conference that the publication of any detailed report of this sitting would be inadvisable, it may be surmised that the main lines of Lord Salisbury's address would in part follow those of the Imperial Defence Committee's special report on the relations of the Navy and Air Force, which

was published shortly before the adjournment of Parliament. A subsequent and final report of the Committee has been drawn up, but its contents have not been made public up to the present.

Tuesday, October 16th.—The Imperial Economic Conference, after a discussion opened by Mr Bridgeman (Home Secretary), decided that a committee be appointed to explore the possibilities of arriving at a common Empire policy in the matter of workmen's compensation laws as far as these apply to non-resident workmen, to seaman, and to nationals of foreign countries. In making its recommendations the committee will take into account any reciprocity granted in this respect by foreign countries to nationals of Great Britain and the Dominions. Subsequently, a statement was made by Lord Salisbury with regard to the work of the Department of Scientific and Industrial Research. Lord Salisbury outlined the work of the Department in verifying the different commercial and industrial standards of the Empire, and conducting specialised research into problems affecting both the Government and the trading community as a whole, and instanced fruit, power, alcohol, and flax as suitable subjects for co-operation in imperial research. The Conference, while appreciative of the work accomplished by the Imperial Institute, decided that the whole question of co-ordinating and publishing the results of scientific inquiries undertaken in the different parts of the Empire was of such crucial importance as to merit special consideration by an *ad hoc* committee, which was accordingly set up.

At the afternoon session, Sir Laming Worthington-Evans (Postmaster-General) made a statement on the position of the Empire's mail, cable, and wireless services. Its tenour showed that the hard work carried out since the war would shortly bear fruit in a mail and cable service equal, or almost equal, to that of pre-war days, while in certain cases, such as the West Indian Islands, new developments were in contemplation. From the debate which followed it would seem that most of the Dominions desire greater facilities than are at present available, and it was resolved, firstly, that representatives of the Dominions and India should be associated with the Imperial Communication Committee when questions of interest to them were under consideration; secondly, that all possible support should be given to the State-owned Atlantic cable route; and thirdly, that companies within the Empire should be given preference in any development of the Empire's wireless systems.

Wednesday, October 17th.—The Imperial Conference continued its investigations into Imperial Defence, after hearing a statement made by Mr Amery. No details of this sitting have been published beyond the fact that Mr Amery's decision to send certain warships for an extended cruise in Dominion waters was accorded general approval by the various Prime Ministers.

In the afternoon, Sir Halford Mackinder, Chairman of the Imperial Shipping Committee, made a statement to the Imperial Economic Conference regarding the work of that committee since its formation in the autumn of 1920. It was mentioned that the Brussels International Conference on shipping matters had adopted rules in the matter of bills of lading based on the Canadian system. Sir Halford also submitted a series of recommendations connected with the improvement of communications, by sea and air, with Australia and New Zealand. Mr Graham (Canadian Minister of Railways) voiced the difficulties of the Dominions arising from the discrepancy in bulk between their exports and imports.

Thursday, October 18th.—The Economic Conference continued its discussion of the work of the Imperial Shipping Committee, and adopted a resolution thanking that committee for its services to the Empire. The debates throughout this week have revealed the importance attached by all the Dominions to the pressing need for an improved system of Imperial communication. This question has so far proved the most prominent feature of the Economic Conference's deliberations.

The afternoon was devoted to committee work by both the Imperial Conference and the Economic Conference, members of the former meeting at the Admiralty for the elucidation of various technical points arising out of Wednesday's discussion.

as in 1903. In the early years of the 20th century Germany was for the first time challenging our industrial supremacy; articles "made in Germany" were flooding our markets; the German cartels were beginning to feel their strength and to sell more cheaply for export than at home—the later international understanding between the British and German steel industries not having come into force at that date. It was a severe shock to Great Britain to realise that Germany was doing almost as large a trade in manufactured exports as ourselves, and the first inclination was to attribute it to her tariff policy instead of to the true causes—the development of her very substantial resources of coal, ore, potash, &c., the growth of her industrial population, and the improvement in her technique.

It would be foolish to pretend that foreign competition has not been a disturbing element in the recent trade situation. The import of foreign goods has been fitful and often at prices which have caused a sudden break in confidence here, and because of the hesitating and uncertain outlook in the commercial world it has played a part quite disproportionate to its volume. But the great variation of prices which has obtained for short periods when exchanges have been on the move has been a symptom of world disturbance, and would have affected British industries even though the goods had been put on external markets and not in Great Britain at all. Moreover, neither the fixed 33½ per cent. of the Safeguarding of Industries Act nor a standing tariff would have prevented these ups and downs exercising a disturbing influence at home. The most striking illustration of the nervousness in trade circles is that of the woollen trade, the figures of which were quoted by us last week; but the figures are so remarkable that they are worth repeating:—

TRADE IN WORSTED and WOOLLEN TISSUES (in Million Sq. Yds.).

	Imports Retained at Home.	Exports.
1913	76	220
Average of 1920, 1921, and 1922 ..	9.9	189
1923—First quarter	4.5	54
Second quarter	4.3	48
Third quarter	6.3	57
Nine months' total	15.1	159

The trouble with the wool trade is not that French goods are being sold in great volume instead of British goods in this country, but that our purchasing power at home is itself deplorably low.

To-day our import of manufactures of all kinds is smaller than before the war. If we recalculate recent trade at 1913 prices, we find that for the first nine months of the year our imports under this head—which incidentally includes such manufactures as copper, lead and tin—which were £128 millions in the first nine months of 1913, amounted to £95 millions in 1922, and about £112 millions in 1923. If we take only trade with Europe, we cannot give figures of the volume of trade. But, taking values, we find that in spite of depreciated currencies on the Continent, we have done much better in selling our goods to them than they have done in selling to us.

	Imports from Europe.	Exports to Europe.
Jan.-June.	Mln. £	Mln. £
1914	148	88
1921	163	119
1922	142	134
1923	173	139

Thus, imports from Europe have risen by £25 millions, or 17 per cent.; our exports to Europe have risen by 51 millions, or 58 per cent. The figures for Germany and France are even more striking:—

	France.		Germany.	
	Imports from.	Exports to.	Imports from.	Exports to.
Jan.-June.	Mln. £	Mln. £	Mln. £	Mln. £
1914	24	14	39½	19
1921	31	24½	12	7
1922	25½	28½	12	14
1923	30	31	17	21

In both these cases an adverse balance before the war has been converted into a favourable balance. Considering that

prices are up by, say, 70 per cent., the figures mean that France is buying more in quantity than before the war—Germany less. But the progress in sales to Germany is very remarkable when it is considered that a depreciated currency tends to check imports and encourage exports.

The explanation was clearly stated by Sir Herbert Hambling in his address to the Institute of Bankers last Wednesday. "Even in the matter of the temporary competition arising out of depreciated exchanges there is unquestionably much exaggeration. This competition only arises when the exchange of a country is quoted at less than its true internal value, and the mere fact that an exchange is depreciated does not, in itself, have the effect of subsidising the exports of the country concerned. In point of fact, it is quite conceivable that an exchange might be badly depreciated, and yet, for some reason or other, be quoted at more than its internal value. In that event, instead of that country's exports being subsidised, they would be penalised." Sir Herbert might have added that when depreciation reaches a certain point the resulting demoralisation destroys economical production, as shown by the high costs experienced in Russia and latterly in Germany.

If we take a more general view of trade, we also find that though the world's purchasing power is reduced, we have more than maintained our share of exports. Mr McKenna has recently pointed out that, comparing 1922 with 1912, Great Britain claims 17.3 per cent. of the world's exports as compared with 13.8 per cent. before the war, and it is to be remembered that the year of comparison—1912—was a boom year for British exports. It is such facts as these that will make it difficult to persuade the country that foreign competition in the home market is the cause of our industrial depression.

The business world is by no means pleased at the prospect of an early election. The retail trades have already protested against spoiling the Christmas trade by a December election, while the Stock Exchange is experiencing a sag in prices, since a radical change in our fiscal system would ultimately cause a great readjustment of values of all kinds. Speaking generally, shipping and shipbuilding firms would be prejudiced, while some manufactures would benefit. But whether it is producer A who would profit and producer B who would lose no one can foretell while the programme remains vague, and probably would not be settled until the tariff itself is in draft. But the prospect of an election is causing an even greater disadvantage than this, for it means that for the next two or three months one of the great political parties will go about the country crying "Stinking fish" at a time when one of the most essential elements is confidence. With British industry in a state of convalescence a course of faith healing is one of the best means by which the recovery could be achieved. America has repeatedly shown us what can be done by "talking prosperity."

It is, however, as true in 1923 as it was in 1903 that opposition to the policy of trade restriction will fail completely if it is purely negative and attempts to make it appear that all is well with our economic situation. A timely reminder of this truth is contained in Mr Spender's "Life of Sir Henry Campbell-Bannerman."* The student of modern politics will find in the later chapters of this admirable biography much that will clarify current politics, but there is nothing more important than C.-B.'s insistence that Liberalism must have a positive and not a merely negative outlook. "Poverty must be made poorer by the taxation of its food; but to pretend that it was not poverty and to cloak it up in fine words was a dangerous make-believe which was least of all likely to impress the workers who knew the facts from their own lives. If the poor got it into their heads that Free-traders stood for merely 'letting well alone,' then they would very likely turn to Mr Chamberlain." And again, speaking of the 1905-6 winter campaign: "All through these speeches runs the idea that it was necessary not merely to combat Mr Chamberlain's heresies, but to set up against them a constructive policy of social reform, linked to a foreign policy which would enable the world to be at peace. To conjure 'a new spirit out of the abyss of European militarism,' to

* "The Life of the Rt. Hon. Sir Henry Campbell-Bannerman, G.C.B." By J. A. Spender. (London) Hodder and Stoughton. In two volumes. 42s net.

relieve the burden of taxation by economy, to use State action wisely to redress the inequalities of opportunity, to cure intemperance, grapple with the land system, to banish sectarianism and concentrate upon real education, to make the Liberal party the living and active instrument of these reforms was throughout this winter the burden of his appeal." To a very large extent this is still the programme of Liberalism, though the emphasis is changed, and in particular the vague phrase of redressing inequalities of opportunity is steadily taking shape in the formulation of more definite social programmes. But that this programme was not mere empty words is proved by the long catalogue of social legislation passed between 1906 and 1913. This is not the place to comment in general upon that impressive list, which includes such permanent steps forward as the initiation of Trade Boards in sweated industries and the introduction of Old Age Pensions. But it is timely to recall that two of the legislative changes of this period are largely responsible for the fact that three years of unexampled unemployment in a country whose own natural resources are quite inadequate to maintain its great population, have been endured without social disruption, and that actual distress has been less than in pre-war depressions when the percentage of unemployment was much lower than it is to-day. The first of these is unemployment insurance.† In pre-war days this scheme was limited to three major groups of trades; but the machinery of its administration was in existence all over the country, and when in emergency it was extended to practically the whole industrial population, the apparatus of administration was in readiness with ten years' experience behind it. The system has been subjected to much criticism, sometimes petty and sometimes well founded; but if anyone considers for a moment the chaos and confusion that would have been witnessed if we had had to maintain our unemployed through the machinery of the boards of guardians, or alternatively through an improvised system of national relief, he will realise how much we owe to the fortunate circumstances that, on the one hand, the machinery of distribution was in existence, and, on the other, the arrangements were ready for collecting the greater part of the necessary funds with a minimum of friction from employers and those workers who continued in employment. The other principle was the development of our income-tax system by differentiating between earned and unearned incomes, and its graduation up to a very high figure by the addition of super-tax. By these changes, and by three or four years' practice of their operation in peace time, we forged a fiscal instrument which enabled us, and still enables us, to place the burden of taxation where it can best be borne, and to raise an unexampled revenue by this means. The sound position of our public finance, which is the admiration of the world, is largely the reflection of deep-rooted British financial traditions; but it is no exaggeration to say that it is equally due to the fact that we had perfected our Inland Revenue machine before the war, whereas France and Germany and most of the countries of Europe are still struggling to create, or, at all events, to make, the necessary improvements in their fiscal apparatus.

We may add, in conclusion, that it would be a great mistake if the Liberal party attempt to make inflation the *via media* between trade restriction and a Capital Levy, and we hope that Sir Alfred Mond's speech this week does not foreshadow that this is going to be Mr Lloyd George's battlecry. Nor do we think that much political capital is to be gained by raising the Bolshevik menace. What is required is to expound a sane policy of social and industrial improvement centring largely upon the improvement of industrial relations. This policy must aim primarily at the difficulty so clearly stated by Sir Herbert Hambling, who emphasises the point that recovery must depend upon reducing costs and getting rid of the policy of "ca' canny," both among employers and workpeople, and substituting a policy of co-operative effort. Our ability to regain our trade depends on the concrete production which is yielded by every shilling in wages paid and every pound of capital invested.

† In an article on October 27th we called our readers' attention to an official history of this movement since its inception, recently published by the Ministry of Labour.

THE COST OF NATIONAL DEFENCE.

A POINT of great interest in the budgetary position of the various countries is the expenditure incurred for purposes of national defence.* While differences between the accounting systems adopted make it practically impossible to compare the cost of the defence services in the different countries of the world with any approach to accuracy, it is nevertheless possible from the following table to obtain some idea of the variations in this respect in each separate country over the last three years:—

COST OF NATIONAL DEFENCE.
(In Millions.)

Country.	Currency.	1921(1921-22)	1922(1922-23)	1923(1923-24)
Belgium	Francs ..	..	653.7	645.3
British India	Rupees ..	777.3	721.0	650.5
Canada	\$	23.8	20.3	17.6
Czecho-Slovakia ..	Kc	3,366.9	3,361.1	3,000.0
Denmark	Kroner ..	65.7	60.0	47.7
Finland	F. Marks ..	374.4	395.9	402.6
France	Francs ..	..	6,998.4	5,373.4
Italy	Lira	..	2,687.0	3,076.5
Netherlands	Florins ..	119.8	121.7	105.3
Norway	Kroner ..	62.3	54.0	46.9
Poland	P. Marks ..	61,033	152,849	2,554,512
S. Africa	£	1.5	1.3	1.1
Sweden	Kronor ..	230.7	184.2	149.9
Switzerland	Francs ..	130.8	79.7	..
United Kingdom ..	£	202.0	150.4	131.6
United States	\$	789.9	599.7	568.8

The figures represent gross expenditure in all cases save Belgium, Denmark, Sweden, and the United Kingdom.

Currency fluctuations affect the comparative value of these returns to no small extent. The case of Poland is perhaps the most outstanding example of this, and, indeed, the depreciation of the Polish mark continues merrily, thereby rendering all estimates practically valueless. It is particularly difficult to reduce these figures to a stable currency basis, especially in the case of current estimates. In the following table, however, an attempt is made to indicate the price level in the different countries, and to reduce defence expenditure to pre-war price levels. Although the result is at best a mere approximation, the figures do throw some further light on the totals we have given above:—

	Price Level.*			Defence Expenditure Reduced to Pre-War Price Level. (Millions.)
	1922 (1922-23).	1923 (1923-24).	Period 1923.	
Belgium	367	476	Jan.-July	Francs 178.1
British India	180	177	Ap.-June	Rupees 420.5
Canada	165	168	"	\$ 12.3
Czecho-Slovakia ..	1,299	1,012	"	Crowns 258.7
Denmark	184	203	"	Kroner 32.6
Finland	1,140	1,158	Dec., 1922	F. Marks 3.5
France	327	410	Jan.-June	Francs 2,140.2
Italy	581	568	June	Lira 557.2
Netherlands	155	150	Jan.-May	Florins 78.5
Norway	226	235	July	Kroner 23.9
Poland	137,575	1,076,997	Jan.-June	P. Marks 111.1
South Africa	128	126	April	£ 1.0
Sweden	173	164	June	Kronor 106.5
United Kingdom ..	158	160	Ap.-June	£ 95.2
United States	156	151	July	\$ 384.5

* 1913 = 100, save in the case of Belgium, British India, Czecho-Slovakia, Finland, and Poland, where 1914 = 100.

It would appear that the real burden of national defence has on the whole been reduced more in the current year as compared with the preceding year than would at first sight appear from a consideration of the Budget returns given in our first table. At the same time expenditure on armaments in Poland and in Czecho-Slovakia actually seems to have increased in terms of goods and services. Though the latter country is in so many respects a stronghold of economic sanity, its budgetary position is this year far from satisfactory, and it is doubtful whether any real solution will be forthcoming until less is spent upon armaments.

Whatever may be the ultimate consequences of the Washington Conference, the principal maritime Powers

* Cf. "Statistical Inquiry into National Armaments. Part II. Budget Expenditure on National Defence, 1921-23." Geneva: League of Nations.

of Europe and America seem to be spending less on their naval defence, as the following table shows:—

	NET NAVY EXPENDITURE. (Millions.)		
	1921 (1921-22).	1922 (1922-23).	1923 (1923-24).
Great Britain	£ .. 75.98	.. 64.88	.. 58.00
United States	\$.. 476.3	.. 347.6	.. 320.4
France	Francs	1,189.6	1,028.2
Italy	Lira	611.1	770.6
Netherlands	Florins .. 41.94	.. 48.49	.. 40.53

Of course, the satisfactory consequences of a limitation in the number of capital ships may ultimately be counter-balanced, in part at least, by an increase in submarine construction, while a restriction of naval armaments may merely encourage a more intensive competition in the air. Indeed, the decisions of the Washington Conference serve to emphasise still further the need for a general limitation of armaments.

The "Statistical Inquiry into National Armaments" carried out by the League of Nations, helps to bring out the crushing burden of defence which is still borne by most of the European States, though there is on the whole a fairly noticeable improvement in the estimates for the current year when compared with the figures for the two preceding years. Be this as it may, the reduction is most noticeable in the case of the United Kingdom, the British Dominions, the United States, France (at least as far as current estimates go!) and the ex-neutral countries. For the most part, this diminution coincides with an improvement in the general budgetary position and it cannot be too often emphasised that, of all the factors upon which the restoration of sound finance in all countries depends, none is so important as the limitation of armaments.

THE MOTOR CAR INDUSTRY.

(BY A CORRESPONDENT.)

THE casual visitor to Olympia this week would naturally imagine that the motor car industry was in a very flourishing condition. But the vast throngs which have been crowding the Motor Show are no indication of the true state of affairs, because this annual event has come to be regarded as a social function. Sales are the only criterion, and so far as these are concerned the show has to a large extent proved unsatisfactory. In last Saturday's papers there appeared the somewhat amazing statement that one firm of motor car manufacturers—not makers of a cheap car, but one varying between £350 and £500—had booked orders on the opening day of the show to the extent of £500,000. Such a statement must be accepted with great reserve, as this figure would represent the sale of well over a thousand cars, obviously an impossible figure. The only explanation of such a statement is that the whole of the agents' provisional orders for 1924 had been included, but even then the figure seems quite incredible. Most makers are complaining that orders are below last year, and that was a very poor season.

The most striking feature of the motor car industry during the last twelve months has been the almost sensational reduction in prices, and to-day many cars are being sold actually below the pre-war standard. The fact of the matter is that a number of the small cars to-day are being sold at actual cost price, or only very slightly above it. The manager of one of the largest concerns in the country, which recently reduced its prices to an amazingly low figure, told me how this had been done. Last year's actual net production charges were worked out, and to arrive at the selling price 2½ per cent. was added. The idea is to try and squeeze out many of the other makers so as to leave the small car market, greater by far than the large and expensive car market, in the hands of only a few makers. The hope is, too, that by a huge turnover the profits may be brought up to a reasonable standard, as the sale is a quick one and the turnover of capital rapid. At the present moment most of the makers are in for a huge gamble, and only by selling a very large number of cars can they hope to continue in the business. Some of the firms are in a very precarious

condition, and nothing but a miracle can save a good many from closing down within the next few months. That this miracle will happen is extremely doubtful, and next year I think that we shall see a large number of firms which are making small cars—and incidentally cutting prices to a ridiculous extent—in a very serious financial position.

It is quite true that the small car is cheaper than it was before the war, while in addition a good many accessories are included which before were counted as extras. But quality is suffering greatly, and however handsome the modern small car may look it bears little resemblance to its pre-war relation so far as quality and finish are concerned. This was, of course, inevitable. Wages are higher than they were before the war, so is the cost of raw materials. These two together amount to about 40 per cent. increase. A certain saving has been effected by organising the works and eliminating waste, but even so this only amounts to a small fraction of the reduced selling price. The present low prices mean greatly reduced value, and while the present-day car may look when new as good as one made a few years ago, the materials used in its manufacture are inferior. This means that the useful life of the car is probably reduced by 50 per cent. Thus the present-day car, which appears so amazingly cheap, is really not such a bargain as it at first appears. It does represent, of course, extraordinarily good value for money. But it is not to be supposed that when one pays £200 for a car which in 1913 cost £225 that one is actually receiving better value for money, because the 1913 car was made of much better materials and was much better finished.

There has been very little reduction in the price of large cars, and quality has been well maintained. But the market for models costing anything up to £3,000—a Rolls-Royce is shown at Olympia costing £2,925—is a very small one, and there is nothing like the rivalry that exists between the makers of the smaller powered outfits. Besides this, a purchaser who is paying perhaps £2,000 or more for a car does not study price to the same extent as does the man who is paying, possibly with a struggle, £200 or £250. Thus there has been practically no reduction in the price of the larger cars.

In order to induce the man of moderate means to invest in a car, the instalment system of payment is being introduced by many firms. Take, for instance, one well-known make selling at £265. To become the happy—or otherwise—possessor of this car one has only to pay £50 down, followed by 24 monthly instalments of £10 17s. Another car selling at £475 requires a deposit of £75 and 24 monthly instalments of £19 12s. I understand that the scheme is being taken up on a big scale, but from the purchaser's point of view it seems a very risky proceeding, because in addition to the monthly instalments there are all the running costs to be taken into account. This is a plan which may be satisfactory from the maker's point of view, but it is hardly a plan to be advocated for the comparatively poor motorist.

There has been a slight improvement in our export trade during the present year, but the figure is still a very low one. During the nine months ending on September 30th last the value of motor cars, chassis, and parts exported amounted to £2,635,563, an increase of £687,459 on the corresponding period of last year. Imports have also been considerably heavier. For the first nine months of this year imports amounted to £5,007,000, an increase of £507,503 over 1922. The value of re-exported cars amounted to £459,094, compared with £957,046 in 1921 and £170,827 in 1922. The following table shows the imports and exports for the first nine months of 1923:—

Gross imports of foreign cars, &c.....	5,007,000
Foreign cars, &c., re-exported	459,094
Net imports	4,547,906
Exports of British cars	2,635,563
Excess of net imports over exports	1,912,343

The reductions which have been made of late in the price of tyres were really long overdue, especially in view of the fact that rubber was so cheap. Prices are now just about what they were in 1914, but apart from this the present-day tyre is vastly superior to what it was before the war.

Then nearly all tyres were made of canvas and rubber; to-day cord and rubber are employed almost exclusively. This means that the life of an average tyre is 10,000 miles instead of the 4,000 to 5,000 miles which was thought to be excellent with the older form.

The price of petrol has fallen below its pre-war price, being now 1s 6½d a gallon, compared with 1s 8d in July, 1914. Its fluctuations during the past few years are interesting. In July, 1914, it was 1s 8d a gallon; in May, 1915, it advanced to 2s 10d; while in September, 1917, it was 4s. In the following December it dropped 6d a gallon, and remained at this till immediately after the Armistice, when it was reduced to 2s 10½d, but after that rose again till in October, 1920, it was 4s 0½d. Then again the price was gradually reduced to 3s 5½d, 2s 11½d, 2s 5½d, 1s 8½d, and a few weeks ago to 1s 6½d.

THE DUNDEE JUTE TRADE.

CONSIDERING that the Dundee jute trade is a comparative youngster among our textile industries, it has achieved a remarkable position. The first tentative imports of the fibre from India were made by the East India Company in the very early years of last century. But the difficulty of dealing with the substance, which was much more intractable than any of the other textile materials, led to delay in due appreciation of its value.

In 1822, however, a small shipment was landed at Dundee, where a considerable trade was then carried on in spinning and weaving flax and hemp. It was found that the new material would require different machinery and different treatment from the two older ones. That this required time is shown by the fact that seven years later (in 1829) shipments of raw jute from Calcutta only amounted to 18 tons.

Progress afterwards was rapid, for in the five years to 1833 Calcutta exported an average of 2,360 tons per year. Every succeeding lustrum showed great advances, and by the five years ended with 1863 Indian exports of jute had reached an average of 48,486 tons per year. The subsequent development of the trade will best be shown by a statement of United Kingdom imports and re-exports of the raw material:—

U.K. IMPORTS and RE-EXPORTS of RAW JUTE.

5 Year Averages.	Thousand Tons.			Thousand £.			Imports Value £ Per Ton.
	Imports.	Re-Exports.	Net Imports.	Imports.	Re-Exports.	Net Imports.	
1857-62 ..	44.8	2.7	42.1	742	67	675	166
1863-67 ..	85.6	16.1	69.5	1,677	311	1,366	196
1868-72 ..	145.2	25.8	119.4	2,818	504	2,314	194
1873-77 ..	197.9	44.6	153.3	3,097	713	2,384	156
1878-82 ..	245.1	59.6	185.5	3,761	937	2,824	153
1883-87 ..	300.7	85.1	215.6	3,608	1,174	2,434	120
1888-92 ..	333.5	105.1	228.4	4,470	1,461	3,009	134
1893-97 ..	337.4	107.9	229.5	4,153	1,396	2,757	123
1898-02 ..	333.1	113.5	219.6	4,244	1,512	2,732	127
1903-07 ..	322.4	114.3	208.1	5,937	2,175	3,762	183
1908-12 ..	328.3	111.1	217.2	6,900	2,076	3,825	181
1913-17 ..	266.6	83.5	183.1	7,253	2,313	4,940	271
1918-22 ..	183.4	21.1	162.3	8,774	1,051	7,723	471

It will be seen that along with a great growth of imports there went a rapid development of the re-export trade, until in the most active years about one-third of the imports were re-shipped to markets abroad.

In the year 1913 re-exports reached 129,829 tons, valued at nearly 3½ millions sterling. The principal customers for these shipments were France (44,820 tons), Germany (27,226 tons), Belgium (19,026 tons), and Holland (11,857 tons). Clearly this was a very valuable trade, and it is to be regretted that since the beginning of the war re-exports have fallen off seriously. After the Armistice year (1918) they never rose above 37,744 tons, and for 1922 were only 8,106 tons.

The net imports (or amount of jute retained for manufacture in this country) have also greatly fallen off. In the best days of the industry (the late 'eighties and middle 'nineties) they were 228,000 to 229,000 tons per annum. A steady decline then ensued for a decade, and a slight revival just before the war failed to bring net imports up to the high levels previously touched. It is but right, however, to say that the five years' average to 1922 covers very wide fluctuations. In 1921 net imports were only 83,656 tons, while in 1922 they were 140,783 tons.

The general decline in consumption of the raw material since the 'eighties is, of course, due to vigorous competition from manufacturers in our Indian Empire. Perhaps the best way of illustrating this will be to give British exports of bags and sacks (which include bags of other materials than jute prior to the year 1920), contrasting with them the Indian exports of jute bags:—

EXPORTS OF JUTE BAGS.					
From U.K. ("Jute and Other Materials" prior to 1920).			From India.		
1,000 Dozs.	1,000 £		1,000 Dozs.	1,000 £	
1855.....	407	233			
1860.....	624	294			
1865.....	1,138	696			
1870.....	2,477	914			
1875.....	3,680	1,264	1,605		
1880.....	5,029	1,452	4,365		
1885.....	3,569	780	5,313		
1890.....	2,678	649	8,229	1,453	
1895.....	2,226	443	14,187	2,362	
1900.....	2,334	538	16,909	2,958	
1905.....	2,863	637	19,444	4,052	
1910.....	3,698	784	30,364	5,738	
1915.....	4,242	1,331	33,130	8,396	
1920.....	3,115	2,709	28,561	18,578	
1922.....	2,552	962			

In 1875, it will be noted, India exported less than half the quantity that we did, but by 1885 she had overtaken us, and in 1915 shipped about eight times as much as ourselves.

It was the same in piece goods and other jute manufactures. After the 'eighties, India rapidly overhauled us and drew ahead. Our manufacturers, however, have apparently retained the lead in high-grade goods, though whether they will always do so is another matter. For instance, the above table shows that in 1890 our exports of bags were worth about 4s 9d per dozen, and those of India 3s 6d. In 1915, of course, both values were considerably higher because of the rise in value of the raw material. Our exports were worth about 6s 3d per dozen bags, and India's 5s. In both years our goods were 1s 3d per dozen dearer than the Indian. But this meant, by reason of the general increase in values, that while in 1890 India's goods were 27 per cent. cheaper than ours, in 1915 they were only 20 per cent. cheaper. This seems to indicate a gradual, if slight, improvement in the quality of Indian bags.

Whether the same process is at work in other goods is uncertain, but undoubtedly Dundee is at present devoted to the production of articles of distinctly higher type than those in which Indian manufacturers shine.

The next table shows how our foreign trade in jute goods of all classes has fared since the year immediately preceding the war, though the change in methods of calculating quantities makes the figures of volume unreliable:—

OVERSEAS TRADE IN JUTE GOODS.						
	Exports.				Net Imports	
	Piece Goods.	Bags.	Other Goods.	Total.	Exports	Imports
	Min Yds.	1,000 £	1,000 £	1,000 £	1,000 £	1,000 £
1913.....	173.5	3,066	1,225	4,291	1,273	3,018
1914.....	134.7	2,555	1,143	3,698	1,010	2,688
1915.....	109.2	2,050	1,331	3,381	824	2,557
1916.....	119.6	3,132	1,458	4,590	5,034	650
1917.....	126.3	3,711	1,404	5,115	3,849	1,266
1918.....	32.0	1,101	673	1,774	3,034	1,556
1919.....	111.0	4,886	2,888	7,774	4,369	1,031
1920.....	150.0*	6,704	2,709†	9,413	4,989	5,348
1921.....	72.0*	2,226	667†	2,893	2,060	1,161
1922.....	138.0*	3,051	962†	4,013	1,451	2,808

* Square yards in 1920 and after; linear yards in former years. † Of jute only in 1920, and subsequently. Of jute and other materials in earlier years.

War demands enormously swelled our imports, the last year of the struggle making them actually larger than the exports. Since 1918 an excess of exports has again been established, but from the last two years' results it seems likely that in future imports will bear a larger proportion to exports than they did before the world catastrophe.

In the years 1919 and 1920 raw jute imports rose in value to the enormous height of 56s 7d and 60s per cwt respectively. Putting aside abnormal years such as these, let us examine the years 1913 and 1922, when imports of the raw material were worth 26s 4d and 28s 8d per cwt respectively. It will be seen from the table that in 1913 the excess of exports over imports was considerably greater than in 1922, though not so much so as to

cause any serious misgiving about our position in the latter year. Still, comparison of the two years shows that exports had declined and net imports had risen.

In the exports the decline was entirely accounted for by bags, which had gone down more than 25 per cent. in value. We may add that as regards quantities, the drop had been much more severe at 44 per cent.

For the last two years, however, it may be said that the trade has done tolerably well on the whole. In that period the excess of exports over imports has been raised from £1,161,000 to £2,808,000. What are the prospects for the current year? Here are the records for the nine months to September:—

JUTE MANUFACTURES (Nine Months to September).

	1921.	1922.	1923.
	£	£	£
Imports	2,004,959	1,705,327	2,571,087
Re-exports	345,810	493,340	615,275
Net imports	1,659,149	1,211,987	1,955,812
British exports	2,336,887	2,865,491	3,145,926
Excess of exports	677,738	1,653,504	1,190,114

It is clear that the export excess for 1923 is not likely to be so good as in 1922. This is brought about by a recovery of imports after the slump in 1922, British exports being higher than a year ago and very much better than in 1921.

BRITISH PORTS AND ROAD FACILITIES.

ALLEGED delay, congestion, and high costs have formed the ground for recent severe criticism of British ports by various Scandinavian shipping bodies, including the Sviriges Redareforening, the Dansk Dampskibsrederiforening, and the Norges Rederforbund, and is also under consideration by the Baltic and White Sea Conference. Other criticism dealing with the very bad road approaches of the London docks has, moreover, been unanimously voiced at a meeting of the London Chamber of Commerce under the chairmanship of Lord Kylsant, when it was decided to send a strong deputation to the Government. And Liverpool, too, seems now to have become aware of certain defects in her road approaches, for the chairman of the Mersey Docks and Harbour Board, Mr Thomas Rome, pointed out a few days ago that if Liverpool did not get better means of communication by road she would be in as bad a position as London. The great developments in the Dock Estate at the north end of the city would enable Liverpool to maintain her high position, but better road communications to the neighbouring industrial districts were absolutely essential. This outward road traffic last year amounted to over 9,000,000 tons.

Road approaches are, of course, one of the chief links, and often the weakest link, in the chain of port traffic. London in this respect is probably worse off than any other British port. At the meeting on October 23rd of the London Chamber of Commerce, Lord Kylsant said that, notwithstanding the addition of a large new dock, costing £4,000,000, and other considerable improvements effected by the Port of London Authority, and the growth and expansion in the port itself, the approaches to the docks had remained in the same unsatisfactory condition. Owing to congestion, there had been a tendency to build docks further from the city—e.g., at Tilbury, 25 miles from the Bank of England—instead of adopting the wiser course, as it seemed to him, of improving the approaches to the existing docks. Moreover, the P.L.A. already owned sufficient land for another large dock near the King George V. dock. The bottle-neck at Aldgate Pump, in particular, was strongly condemned. Mr E. C. Grenfell, M.P. for the City, made the interesting suggestion that probably not one per cent. of the people in London ever saw the docks or a ship in them. In the other great maritime cities of Britain the docks were often one of the chief features, and congestion like that in London would not be tolerated. The Government should attend to this matter at once, because a scheme was ready, and could be put in hand immediately.

Meantime, the criticism from the Scandinavian ship-owners is sufficiently serious. The following figures are given by the Norwegian Shipping Federation:—

EXPENSES IN DISCHARGING FROZEN MEAT.

	London.	Antwerp.	Rotterdam.
	£ s d	£ s d	£ s d
Tons	430	366	413
Discharging expenses	92 7 5	41 11 11	79 7 2
Per ton	0 4 3½	0 2 3½	0 3 10
Harbour expenses	265 8 10	89 13 1	135 15 9
Per ton	0 12 4.	0 4 10½	0 6 7
Total costs	357 15 5	131 5 0	215 2 11
Per ton	0 16 7½	0 7 1½	0 10 5

The discharging occupied respectively four, one, and three days. The question of the heavy demurrage charges on goods held up has been a fruitful source of dispute and also of litigation for some time past, and it has been emphasised at the Baltic and White Sea Conference and elsewhere that owners' interests are very inadequately protected under the charter parties at present used, particularly in the timber trade at Hull. It would seem that the law, as laid down by the House of Lords in the famous "Lizzie" cases requires some amendment; for that decision made it practically impossible for owners to claim demurrage arising out of congestion or due to merchants being unable to receive cargo when ready to be discharged.

The Swedish Shipping Federation says that conditions at British ports generally have been very unsatisfactory for many years, since owners have had to bear most of the losses incurred. Railway companies, largely responsible for certain docks, are not, it is alleged, free from blame, and scarcity of lighters is another fault, encouraging the lightermen to push their demands. The whole question of dock labour is, indeed, one that needs serious attention. Another weakness is undoubtedly the lack of central and unified control of ports and port approaches. The example of Hull in this respect may be commended. At this port all the various interests concerned are represented in one co-ordinating body the Hull and District Railway and Traders Joint Committee, which is claimed to be in effect a local industrial and commercial parliament. It would seem desirable, however, that labour interests should also be represented. The Swedish shipowners further suggest that increased wharf and quay space, more lighters, better rail and road facilities, an efficient method of dealing with labour questions, and a more effective system of information or intelligence service are urgently needed. It is finally urged that the International Shipping Federation should take up these questions, and do its utmost to bring about the necessary improvements. Similar complaints and suggestions are made by the Danish ship-owners.

BREWERY PROFITS AND SHARE MOVEMENTS.

"We are slowly getting prohibition in this country by the process of heavy taxation" is a complaint commonly heard from many people interested in the brewery trade. What truth there may be in this view may be difficult to determine. But from the profits recorded by representative brewery undertakings this slow process of strangulation cannot be very unpleasant to the sufferers.

According to the estimates of the United Kingdom Alliance—an association in favour of prohibiting "traffic in intoxicating liquors"—the consumption of alcohol in the United Kingdom "and the expenditure on such liquors during 1922 showed a decline of about 12 per cent. on the consumption and expenditure in the year 1921. Spirits showed a reduction of 8.8 per cent., and beer of 14.1 per cent. in standard barrelage, and 15.3 per cent. in the bulk barrelage as actually sold. Wine, on the other hand, showed a rise of 12 per cent." The secretary of this body points out that two factors contributed to this decline. The first was the prevailing unemployment, and the second was the continuance of high prices at which spirits and beer were sold. We learn from the same source that the amount spent on intoxicating liquors in the United Kingdom during 1922 was £354,131,000, as

against £402,726,000 in 1921, and £166,000,000 in 1913. The following table showing the *per capita* estimated consumption of alcoholic liquors in the United Kingdom in 1922 is given:—

	1913.	1921.	1922.
Beer (bulk gallons)	28.7	23.9	20.1
Beer (standard gallons)	27.8	18.5	15.8
Spirits (proof gallons)	7.0	3.9	3.6
Wine (gallons)	2.5	2.4	2.6

Of course, in regarding these figures, it must also be taken into consideration that the brewery industry has a considerable export business, and against the decline in home consumption must be set off possibly larger profits from economies of working, or perhaps increased exports.

The financial years of brewery companies end, and accounts are published on, such varied dates that it is difficult to find a group of undertakings of any size showing accounts for similar periods. Thus while Whitbread and Co. can publish their accounts for the year ended June 30, 1922, on July 23rd, the accounts of the Cannon Brewery Co. for the year ended December 31, 1922, are dated March 9, 1923. On account of these vagaries, we are compelled to omit from our group several of the most important concerns. These, however, are dealt with separately in the *Economist* as the figures are issued.

We have selected the companies comprising the following group, showing net profits and the amounts placed annually to reserve in the last three years. Figures for 1914-15 are appended for comparative purposes:—

Company.	1914-15.		1920-21.		1921-22.		1922-23.	
	Net Profit.	To R's'v. &c.	Net Profit.	To R's'v. &c.	Net Profit.	To R's'v. &c.	Net Profit.	To R's'v. &c.
A. Guinness	£1,511,678	588,000	£1,729,803	519,407	£2,985,755	235,000	£2,730,026	235,000
Barclay, Perkins	81,073	40,000	160,682	50,000	176,964	25,000	160,683	25,000
Bass, Ratcliff	256,789	50,000	403,515	100,000	386,063	100,000	389,223	100,000
Bent's	43,443	16,000	39,058	2,000	38,868	2,000	41,570	2,000
Boddington's	45,381	2,500	71,107	5,000	70,731	5,000	68,339	5,000
Cannon	159,341	22,000	157,439	10,000	157,240	10,000	201,822	10,000
Chester's	53,373	25,000	84,622	22,500	104,219	32,500	111,679	32,500
Huggins and Co.	20,406	5,000	58,924	10,000	32,464	10,000	34,972	10,000
Mitchells & Butlers ..	208,533	57,000	430,089	100,000	412,801	100,000	404,471	75,000
Newcastle	56,067	15,468	113,990	46,566	61,999	31,000	30,793	19,600
Watney, Combe	233,211	..	281,524	..	614,614	100,000	690,718	200,000
Whitbread	75,680	..	161,339	..	177,788	..	175,085	..
William Hancock	37,836	3,000	56,116	10,000	45,137	10,000	42,399	..
Total	2,882,811	820,968	5,748,208	875,473	5,204,643	660,500	5,082,050	689,200

Total profits of these concerns taken over a period of years show that for the year 1914-15 earnings were £2,882,811, out of which reserves obtained £820,968. For the inflationary period, 1919-20, profits climbed to £6,262,208, reserve allocations amounting to £1,795,747. The rest of the story is told in our table given above. It will, however, be observed that Guinness' highest figures were reached in 1920-21. Profits for Bent's Brewery are approximate figures, arrived at by estimating the amount required for debenture interest. Among prominent undertakings which issue accounts difficult for the financial student to read, might be mentioned those of the Cannon Brewery Company. Profits are obscured by the fact that payments for interest on debenture stocks and deposits, income and corporation profits tax, and dividend on preference shares are all shown together as one item. And it is not until we turn to the Stock Exchange Intelligence that we find the rate of interest which is payable on the preference shares. Thus here again we have to show approximate figures of net profits. It is perhaps remarkable to find that two such excellent companies as Mitchells and Butlers, and Whitbread and Co., cannot see their way clear to divulge what sums have been placed to reserves. But perhaps on this point it would be wise to deal with each company separately. Mitchells and Butlers show profits "after making all provision and reserves," and in the balance-sheet we find reserves given as £550,000; Whitbread and Co. make no mention of reserve allocations in their accounts, although a dividend of 10 per cent. is paid on the ordinary capital; neither can we find a clearly reserve item in the balance-sheet. It is true that sundry creditors amounting to £233,317 include reserves for taxation.

The following table shows dividend distribution from 1913. This will probably convey a better picture of the

progress of the brewing industry in this country than the previous table. These are figures which those engaged in many other industries will probably regard with envy:—

Company.	Dividends.											
	1912-3	1914-5	1915-6	1916-7	1917-8	1918-9	1919-20	1920-1	1921-2	1922-3		
Arthur Guinness ..	16½	14	16	16	16½	16	20	25	29	24		
Barclay, Perkins ..	10	10	12	14	15	16	11½	11½	11½	11½		
Bass, Ratcliff	5	5	nil	10	15	40	40	10	10	10

Boddington's	6	6	6	9	10	15	15	15	15	15		
Cannon Brewery	7	16	16	16	11	12	15	15	14	14		
Chester's	8	11	10	11	20	28	36	36	32	32		
Huggins and Co.	..	nil	5	nil	15	15	20	20	20	20		
Mitchells and Butlers ..	15	15	15	15	12½	15	10	10	10	10		
Newcastle Brewries ..	6	8	10	10	15	15	17½	12½	12½	5		
Watney, Combe	nil	nil	nil	8	16	24	24	24	32	16(b)		
Whitbread and Co.	2	2	2	7	7	10	7	10	10	10		
Wm. Hancock	8	6	6	6	12½	15	15	13	10	10		

† Bonus paid tax free. ‡ Free of tax. (a) Also 20% in War Loan. (b) On increased capital. (c) Paid on an ordinary capital of £2,040,000, against an ordinary capital of £1,360,000 in 1918. (d) Paid on an ordinary capital of £2,691,180, against £1,345,599 in previous year. (e) Ordinary capital increased from £200,000 to £400,000. Final dividend of 12½% paid on the £400,000. * Also distribution of fully paid shares through capitalisation of reserves. (f) 5% of this is paid free of income-tax. (g) 7½% of this is paid free of income-tax.

It may be that Barclay, Perkins and Co., Limited, will take steps to revise their capital arrangements, although the ordinary shares are privately held. In 1911 the authorised and paid-up capital was reduced from £2,820,000 to £730,200 by writing off £99 per ordinary and £6 per preference share. On the existing ordinary capital of £10,200 dividends for a total of £102,000 were paid for the year ended March 31, 1923.

In the next table we show the quotations of the most important public issues of these concerns at intervals over a period of years, together with the present yield based on recent dividends:—

Company.	Share.	Price July 27, 1914.	Price Sept. 30, 1921.	Price Sept. 30, 1922.	Price Nov. 8, 1923.	Present Yield.

† £10 shares. ‡ On a capital of £5,000,000. § On a capital of £7,500,000. ¶ On deferred Stock amounting to £798,353. ** On deferred Stock amounting to £1,592,706. †† Paid free of income tax.

Guinness have now an ordinary capital of £7,500,000, against £5,000,000 shown in the previous year; the footnotes to our table show to which capital the prices refer. Messrs. Watney, Combe, Reid have doubled their deferred stock capital. It will be noted that on the deferred capital of £796,353 the price was 31½ on July 27, 1914. The present price on the doubled capital is 18½, which is illustrative of the wonderful prosperity brewery concerns have recently enjoyed. But it is only fair to add that this concern was reconstructed in 1906 and a drastic writing down of capital took place. Boddington's Brewery have split their £10 ordinary and preference shares into £1 shares, which should improve their marketability. There has been a rather pronounced rise in the ordinary shares of Huggins and Co.

Some interesting sidelights are thrown on brewery accounts in the speech made by the chairman of Watney, Combe, Reid, and Co. at the annual meeting held on August 13th last. This gentleman said:—"We mention in our report that during the year we have reduced our prior charges by £72,000. Mr Spyer calls our attention to the fact that the £36,000 of debenture stock purchased does not appear in the balance-sheet or in the profit and loss account. He is perfectly right; the £36,000 of debenture stock was purchased out of the ordinary income. Mr Spyer also asks how our Government securities are valued. They are not valued at all when the amount in

our books is less than the market value. As a matter of fact, if we were to realise our Government securities to-day there would be an appreciation of over £30,000. You will observe also that our sundry creditors stand high, the reason being that we owe the Government for both income-tax and corporation profits tax due on January 1st last. Under an arrangement we have not paid them, pending the settlement of our claim for repayment of excess profits duty." The chairman of Mitchells and Butlers dealt at some length this year with the general policy of the brewery industry in his annual speech. For our particular purpose we should have preferred a survey dealing more closely with past and future financial results.

DIARY OF THE IMPERIAL CONFERENCE.

FRIDAY, NOVEMBER 2ND.—The Imperial Economic Conference adopted the Report of the Committee on Co-operation in Financial Assistance to Imperial Development. A contribution is to be made by the Imperial Government up to 75 per cent. of the interest charges for approved works of public utility undertaken in the Dominions within the next three years, and certified to be in anticipation of normal expenditure. The Conference recommended the resolutions of the Empire Forestry Conference to the respective Governments for their favourable consideration. Approval was given to a resolution for the setting up of a committee to supervise the laboratory work of the Imperial Institute, on which the Department of Overseas Trade, the Scientific and Industrial Research Department, and the Royal Society would be represented. A representative of the Treasury is to be added to the governing body and the new managing committee. The respective Governments will be asked to obtain legislative sanction for specified contributions to the upkeep of the Institute. A resolution urging co-operation in research and the free exchange of scientific information between the different parts of the Empire was also adopted.

MONDAY, NOVEMBER 5TH.—No meetings were held, the Dominion Prime Ministers attending the funeral of Mr Bonar Law.

TUESDAY, NOVEMBER 6TH.—The Economic Conference discussed the advisability of appointing a permanent Imperial Economic Committee. This question is dealt with in another column. The Imperial Conference was engaged upon matters incidental to the concluding business of its sessions.

WEDNESDAY, NOVEMBER 7TH.—The Economic Conference adopted the Report of its Food and Materials Committee, which described as impracticable any system of subsidies, import licences, or price stabilisation as applied to foodstuffs, but recommended the closest co-operation between authorities and producers' organisations, with a view to improving marketing methods. Sir Philip Lloyd-Graeme announced the British Government's decision to extend preferential treatment to tobacco, apples, canned salmon, fruit juices, and honey from the Dominions. Further reference to these proposals will be found among our "Notes of the Week." The Conference approved the Report of the Oversea Settlement Committee, recommending the further development of settlement by nomination, either on the part of persons already in the Dominions, or by churches and other societies in this country. The principle was reaffirmed that in Government contracts preference should be given, whenever possible, to Empire-produced materials. Resolutions were also adopted dealing with the circulation of information regarding aeronautics.

THURSDAY, NOVEMBER 8TH.—The Imperial Conference held its final meeting. An official report of its proceedings is to be issued shortly. The establishment of a permanent Advisory Economic Committee was definitely decided upon by the Economic Conference, Canada dissenting. The Report of the Committee on Imperial Exchanges, also adopted, rejected Mr Darling's Empire Currency Bill scheme as being impracticable, while the Dominions maintained separate fiscal and political systems. Imperial Exchange difficulties will disappear, the

Committee believed, when an effective gold standard is restored, and all Empire currencies are convertible into gold. The present difficulties would be lessened if each note-issuing authority were to accumulate sterling assets to be drawn upon to redress a temporary excess of payments in one direction, and central banks were formed where these do not already exist.

Notes of the Week.

More Preferences.—A new dose of preference has been announced this week. It is not a very potent dose, but is worth recording as a minor addition to the treatment which Mr Baldwin prescribes for our economic ills. The new preference proposals affect six articles of consumption, wines, tobacco, apples, canned salmon, fruit juices, and honey. As regards wine, the proposals are as follows:—(1) To double the existing preference of 2s a gallon on the duty of 6s a gallon on wines of a strength exceeding 30 deg. The rate of duty on such wines coming from the Empire would thus become 2s a gallon against the foreigner's 6s. (2) To increase from 30 to 50 per cent. the preference on the surtax of 12s 6d a gallon on sparkling wine. On tobacco the preference is to be increased from one-sixth to one-fourth of the duty charged on foreign imports. With the wine proposals Australia is the Dominion principally concerned. In the first nine months of the present year the British Board of Trade returns show that we imported from Australia 390,504 gallons of wine in casks and bottles, valued at £102,248, whereas our total imports of wine in that period were 9,105,403 gallons, valued at £4,030,291. Of these, 4,388,358 gallons came from Portugal and 1,984,149 gallons from France. The present seems scarcely the most auspicious moment for a petty attempt to aim a blow at trade which is very important to two Allies. Of unmanufactured tobacco, our nine months' imports have been over 108 million lbs, about three-fifths of which came from America, and no part of the British Empire sent enough to qualify for special entry in the trade returns. The proposals in relation to the other four articles of consumption call for separate consideration, for in each case a duty is to be created, where no duty at present exists, in order to give preference. On foreign apples a duty of 5s per cwt, on foreign canned salmon a duty of 10s per cwt, on foreign fruit juices a duty of 6d per gallon, on foreign honey a duty of 10s per cwt is to be imposed, while imports of these products from the Empire are to come in free. There are several essential points about these proposals. The first is that, since they involve new duties on food, they are clearly outside Mr Bonar Law's pledge. Secondly, in each case the Empire can only provide us with a small proportion of our requirements, and the duty will certainly raise prices. Thirdly, they represent mere futile tinkering with the Preference question. Finally, since the Budget is a long way off, their publication now merely disturbs markets and creates present irritation, whereas the good effects which their sponsors presumably think they will produce are distant. Mr Baldwin's tactics seem to be as weak as his economics.

Agriculture and Protection.—Mr Baldwin has quickly found himself impaled on the horns of the dilemma which confronts each successive champion of Protection in this country. Were he to include in his programme taxes on wheat and meat he would court certain defeat at the hands of the great urban population. Were he to exclude them, he would at once arouse the hostility of agriculture. He has chosen the line of less powerful resistance, and excluded them; and the inevitable consequence of agricultural opposition has followed instantly. On Tuesday, at a meeting of the Central and Associated Chambers of Agriculture, a resolution was passed protesting against the "unequal" treatment of agriculture foreshadowed in the Prime Minister's Manchester speech—the speech in which he threw over taxes on wheat and meat. In moving the resolution, Lord Strachie said that "agricultural interests must not be sacrificed to the interests of the manufacturer, and this, it would seem, would happen if the suggestions of the

Prime Minister were carried out." In supporting the motion, Lord Bledisloe dotted the i's and crossed the t's of this statement, while a subsequent speaker described Mr Baldwin's protection proposals as "the greatest betrayal agriculture had ever had." On the same day a letter in the *Times*, signed by Mr Christopher Turnor and three other agricultural experts, spoke of "this overwhelming catastrophe to our greatest industry," and said: "A tariff for all that the farmer has to buy and unrestricted dumping of all that he has to sell, means a final or mace blow to him, and semi-starvation to the families of three-quarters of a million agricultural workers." This panicky letter posed the question, "Where are the Conservative rural members of Parliament?" If they are in their constituencies, they will bring back to the approaching session plenty of food for thought. We recommend for their consideration Lord Bledisloe's remark that no system of Protection had ever been devised that would benefit both urban industries and British agriculture. It is, of course, an economic fact that the agricultural community is most prosperous when food prices are high and the prices of manufactured goods low, and most depressed when, as at present, the position is reversed. Can Mr Baldwin wonder at the rural consternation caused by a programme which on the one hand contains measures that will raise the prices of manufactured goods, and on the other hand promises that food shall not be dearer? In fully-Protectionist America the bitter complaint of the farmers is that while prices of their products are depressed, the prices of other products that they have to buy are high. Slowly but steadily in the great agricultural areas of the United States is developing a demand for lower tariffs. Further, realisation is growing there, as we trust it will here also, that a tariff system which imposes burdens on the farmer restricts the purchasing power of an important section of the community, or, in other words, curtails the home demand for the goods which other industries produce.

An Imperial Economic Committee.—At Tuesday's sitting of the Imperial Economic Conference discussion took place on the advisability of appointing a permanent Imperial Economic Committee to sit in London. Mr Bruce, Prime Minister of Australia, introduced the proposal that such a committee should be formed, and suggested that it should comprise representatives of the Governments taking part in the Imperial Conference and responsible to those Governments. The function of the Committee, he suggested, would be to consider and advise upon any commercial or economic matters, outside the purview of the Imperial Shipping Committee, which might be referred to it by any of the constituent Governments. "Many suggestions," said Mr Bruce, "were to be put forward as to how to foster Imperial trade, and if there was no committee of this character to give an authoritative opinion upon them they would pass into the ordinary ring of party politics." Sir Philip Lloyd-Greame welcomed the proposal on behalf of the British Government, and laid stress on the advisability of the Committee including unofficial as well as official members. The proposal, however, met with the opposition of Canada, on whose behalf Mr Graham expressed the view that "the organisation already existing was probably sufficient to deal with all the problems which would have to be faced when the Conference was over." In view of the Canadian opposition, the resolution was adjourned, but passed on Thursday—Canada dissenting. Mr Graham's opposition may be taken to reflect the suspicion with which popular opinion in the Dominions views the establishment in London of any permanent Imperial body in *liaison* with a British Government department, and one would not be surprised to find Mr Bruce taken to task by the Australian Press for supporting it. The British Government, it has been known for some time, is strongly in favour of such *liaison* machinery; and its welcome of Mr Bruce's proposal is probably the more cordial because it regards the establishment of machinery for commercial and economic *liaison* as a possible forerunner of the establishment of similar machinery in connection with Imperial foreign policy. It will be remembered that while Mr Bruce was on his way to the present Conference the Australian Press commented with marked disfavour on pro-

posals to establish arrangements of the latter kind. It is an important matter for conjecture whether Mr Bruce's enthusiasm for commercial *liaison* indicates a favourable attitude towards a similar system in connection with foreign policy. If such a system is to be established, the proposal will have to come from the Dominions, for it is unlikely that the British Government, much as they are believed to favour it, would take the first step in view of the strong prejudices known to exist in some quarters of the Empire.

The Stock Exchange and an Election.—A Stock Exchange correspondent writes:—Members of the London Stock Exchange are often taken to task for their apparent indifference to matters of political moment. Some Stock Exchange men are, of course, members of both Houses, that in Westminster and the other in Throgmorton street. In the earliest days of Tariff Reform Stock Exchange men escorted, in their hundreds, Mr Joseph Chamberlain from St Swithin's lane to the Guildhall. But it must be allowed that neither politics nor politicians are very popular. With the ordinary City man the politician has the name of being unpractical, and politics harmonise with business, by venerable Stock Exchange tradition, as amicably as water mixes with oil. The prospect of an early General Election is one that finds no favour in the House to-day. The prevailing note in all the discussions which take place around the subject is one of mild expostulation, reaching at times to an exasperated demand of why an election should be considered necessary to-day. For more than a month, at this time last year, the stock markets were ruffled and handicapped by the General Election restlessness, which was brought officially to a head on November 15th. Lloyds and insurance brokers drove a thriving business in policies of two kinds: one, for insurance against risk of a Labour Government; the other, against the risk of a second election being fought within three months after the first. This time it is already considered certain that the premiums asked to cover the first-named risk—that of a Labour Government coming into power—will be a good deal higher than they were a year ago. The Stock Exchange takes the same view. The chances of the Labour party adding to their successes of last November at the polls are openly admitted to be considerable. Investors are not apprehensive, but uneasy. This can be seen by the Stock Exchange member in the dull tone which has begun to spread throughout the purely investment markets, including those for Home Railway stocks of all kinds. People have not started, in any numbers, to sell their sound stocks, but prospective buyers announce that they prefer to await political developments. Put quite frankly, a Capital Levy is materialising as a figure of fear as well as of speech. This reacts favourably upon speculative stocks. There might be a levy upon gilt-edged investments, but what Government would worry itself with Dunlops, West Springs, tin-mining shares? That is the argument. Besides, amongst industrials, the possibility of a levy is deemed less than the chance of Protection. And Protection, with its known certainty of high prices to consumers and big profits for the producer, would benefit those companies which at present are subject to competition from abroad. Consequently, two broad lines of market movement are already developing: dulness and declining interest as regards investment stocks; increased attention and rising prices in the Kaffir market, in oil shares, and in similar areas. Over all there broods the Stock Exchange sense of quiet exasperation at the choice of the present time for introduction of a General Election fever, when industry and business require tranquillity and peaceableness. Nobody denies the obvious need for doing all that is possible in order to stimulate trade and to reduce unemployment. The questions that surround Free-trade and Protection are acknowledged to be of national moment. But Stock Exchange men maintain that even these questions are not of such paramount importance as to justify the country being plunged into the vortex of uncertainty, acrimony, and business impediment such as swirls around an appeal to the country. Clients are "put off" from buying; an undesirable element of anxiety is introduced. Prices are dull; the tendency is likely to be intensified as the political tide rises, and, despite the adventitious aid which neglect of investment may temporarily lend to

speculation, the advent of a General Election is anticipated with the less enthusiasm, because, to the ordinary man of business, it now appears to be unnecessary.

India in Transition.—British India is slowly passing from British bureaucratic centralisation to native popular and quasi-Federal self-government. The statement of its "Moral and Material Progress for 1922-23," written by Professor Rushbrook Williams, and just published by H.M. Stationery Office (Cmd. 1,961, 2s 6d), describes very ably, among other changes, the rise and subsidence of the "non-co-operation movement," which has delayed and imperilled the transition. Starting from the Tolstoyan doctrine that modern civilisation is fatal to individual freedom, Mr Gandhi, the ascetic Hindu leader, developed the policy of "passive resistance," which he had successfully adopted some 25 years earlier against legislation affecting Indian immigrants in South Africa, into a policy of boycotting the Indian Government, its services, its law courts, and its education, and subsequently of reverting to the products of native labour—especially hand-labour—in substitution for machine-made foreign cloth. He gained the support of the Hindus easily; that of the Muslims he obtained by his endorsement of the "Khilafat movement" against any reduction of the status of Turkey by the treaties of peace. In 1920 he captured the Indian National Congress; but the moderate or National Liberals deserted him, and the Indian Government met the movement by refraining from repression (except of seditious utterances), and by conciliating the moderates through the redress of grievances and the progress of constitutional reforms. Mr Gandhi's power over his followers culminated in the raising of a force of National Volunteers, and in June, 1921, of ten million rupees for their support, and he developed "non-co-operation" into a prospective policy of "civil disobedience," to be carried out without resort to violence. But he could not control the violence of his followers, and the Moplah rising in August, 1921, reopened the breach between Muslims and Hindus, and in March, 1922, the Chauri Chaura riots widened it. Meanwhile, the good work of the Central Legislature, the Duke of Connaught's appeals to the Indian people during his visit, the treatment of the grievances created by General Dyer's action at Amritsar, and other concessions to native aspirations, contrasted strongly with the impotence of the non-co-operators. While the propertied classes became increasingly alienated from them, Mr Gandhi's campaign against caste evils and alcoholism was unsuccessful, his hold on his followers was weakened by his postponement of "civil disobedience" at the Bardoli congress in February, 1922, and, when the danger of an outbreak made it necessary to arrest him, they were left leaderless. Loyalty to the British rule was strengthened by the sympathy of the Prince of Wales with Indian democracy, by the Government's declaration in favour of maintaining Turkey, by the further concessions to native aspirations after State railways and fiscal reform, and by the failure of the militant Sikh religionists to terrorise the Executive Government. The limitations of the non-co-operation movement by its new promoters lost them support: the lawyers returned to the courts, the students to the colleges, the Hindus drew further apart from the Muslims, the extremists from the moderates, and its weakness was not lessened (as might have been expected) either by the doubts as to the Indianisation of the services set up by the O'Donnell Report and Mr Lloyd George's speech in August, 1922, nor by the repression a little later of the Akali movement in the Punjab, nor even by the enactment under the Viceroy's reserved powers of the Princes' Protection Bill and the salt tax, in spite of their rejection in the Assembly. The Gaya Nationalist Congress at the end of 1922 not only emphasised the division between Muslims and Hindus, but made a new rift between "the classes" and "the masses" of India. Mr Gandhi's efforts for moral reform have been nullified by his followers and his own political ineptitude. It remains to be seen whether the enthusiasm he aroused will prove to have initiated a national awakening.

Approved Societies and Panel Doctors.—We have received in the form of a pamphlet the letter which was addressed to the Minister of Health on November 1st by the Emergency Committee of the Approved Societies. It is a strong, even a heated, protest against the offer recently made by the Minister to the British Medical Association of a Royal Commission on the whole panel system, and a capitation fee to panel doctors of 8s 6d per insured person per annum for five years. We cannot go through the details of the Approved Societies' case. What it amounts to is that the Insurance Fund—of which each society holds the portion applicable to its own members—will not stand the payment of 8s 6d for medical benefit without cutting into the provision for sickness, maternity, and other benefits which the societies look after. The sufficiency of the fund is a matter for actuaries, not for outsiders, and can only be examined by means of the machinery offered by the Minister to the doctors. The impression made upon us by this polemical letter of the Approved Societies is that the panel system, with its recurring disputes over capitation fees, needs inquiring into very badly. There can be no peace while the Approved Societies on the one hand, and the doctors on the other, are organised as for war, and the Minister of Health standing with outstretched arms between them is hard put to it to keep them from one another's throats. The Societies fight like wild cats—quite properly, from their point of view, as trustees of the insured persons—for money to meet their sickness, maternity, and other benefits, and for preserving the solvency of their funds. The doctors fight, if not like wild cats, at least like high-bred game-cocks, for a capitation fee which will not degrade the medical service which they are anxious to supply. If any better system could be substituted for the present method of paying doctors so much a head per insured person—well or ill—with the periodical disputes to which it gives rise, the public would be grateful and the Ministry of Health would hold services of thanksgiving. The position of the Ministry at present is clearly impossible. The most hopeful suggestion of an alternative system is that of Sir John Collie, M.D., in the *Times* of Wednesday. Sir John Collie, who has had a wide experience of public medical service, suggests payment according to the actual number of "cases" treated. It would obviously not do at all to pay by visits, for this would tend to multiply the number of unnecessary visits. There is a lot of human nature in man, even when he is a medical practitioner. But if payments were made by average "cases," then it would be to the interest of the doctors to cure their patients in the shortest possible time. Long illnesses, extending into months, could be allowed for as two or three cases. Sir John Collie states that of all the systems tried in Germany before the war—and our National Insurance Act was "made in Germany"—the "case" system worked with the least friction.

Inter-Imperial Remittances.—At Thursday's meeting of the Imperial Economic Conference a resolution, framed by the Committee on Inter-Imperial Exchanges, was adopted by the Conference, as follows:—"(1) The Committee, having considered their terms of reference, have unanimously resolved that, arising as they do from the suspension of an effective gold standard, the difficulties of inter-Imperial exchange will disappear when the currencies of Great Britain and the Dominions affected are again made convertible into gold; (2) that it is neither necessary nor desirable to adopt complicated plans for a new instrument of credit, such as Empire Currency Bills, which involve difficult and disputable constitutional and financial questions; (3) that where difficulties have arisen in regard to the exchanges between certain parts of the Empire and between such parts of the United Kingdom (a) the position can be ameliorated if the note-issuing authorities were to accumulate sterling assets and undertake to exchange their local currencies for sterling and *vice versa*; (b) this measure might be further developed and assisted by the creation of central banks and by mutual co-operation, as recommended by the Genoa Conferences. In some cases the bank charges for buying and selling sterling appear to be unduly high, and should be capable of reduction."

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that there is still a little barley unharvested in many different parts of the country, but generally harvest is finished except on high farms in the north-west and in Wales. Progress has been slow during the very wet weather of October, and crops harvested during the past month have not been carted in good condition. In the midlands, and the east and south of England, about three-fourths of the potatoes have been lifted, but in the north and in Wales this work is not so forward. The weather has been very unfavourable, and the crop is being stored in dirty condition. On the whole the quality is fairly good, but the tubers are generally small. The yield per acre is estimated at 5.7 tons, or half a ton less than the ten years' average, and nearly 1½ tons less than last year. On this estimate the total production in England and Wales will be about 2,667,000 tons, against 4,012,000 tons in 1922, and 3,160,000 tons the ten years' average. Mangolds are now being pulled, but the conditions have been unfavourable for this work, which is backward. A yield of 12.7 tons per acre is anticipated, as compared with a ten years' average of 12.4 tons, which would give a total crop of 10,960,000 tons, or very slightly more than last year. The wet weather of October has delayed autumn cultivation and sowing, which are not so forward as is usual at the end of October. Light lands have worked well, and good seedbeds have been obtained, but heavy lands have often been too wet for satisfactory tillage. Most of the winter oats have now been sown, but much drilling of wheat remains to be done. Such crops as are showing above ground have germinated well. On the whole the land is fairly free from weeds, though weeds have grown rapidly on stubbles which are still unploughed. There has been plenty of grass in the pastures during the past month, but owing to the wet weather it has been of poor quality, and in many districts cattle have required dry food to keep them in condition. On the whole, however, cattle and sheep have done fairly well, though there are reports of foot-rot amongst sheep, and in Wales and the north-west of England cattle have suffered from the wet. In practically all districts the supplies of winter keep are expected to prove sufficient for the winter, any shortage of roots or straw being made up by the good supplies of hay. With potato and root lifting in progress there is a demand for casual labour, but in several districts there are men not fully employed.

Control of the British Cement Industry.—Through the differences of various interests, the British cement industry attains without cost considerable publicity. If yesterday can be regarded as the iron age, to-morrow may be rightly called the cement decade. A new era in road construction is in front of us, and an arrow points to cement as its principal need. Building of to-day is tending toward iron skeleton structure and larger demands for cement, while harbour developments the world over are mainly based on the use of cement for constructional purposes. An obviously inspired paragraph informs us, amongst other interesting details, that "Although this country has produced for nearly 100 years, perhaps, the best cement in the world, the progress of the industry, as compared with other countries, has been practically stationary. Take the United States; the official returns show that the output of cement in 1892 amounted to 500,000 barrels. In 1902 the output had reached a total of 17,000,000, whilst 20 years later it had reached 115,000,000 barrels. The figures for the current year are not yet available, but it is calculated that the output will exceed 140,000,000 barrels." British progress is certainly not comparable with this. Our exports of cement for the nine months ended September 30, 1913, were 587,353 tons, while our imports were 79,164 tons. For the corresponding nine months of 1921, 1922, and 1923 exports were 231,282, 278,582, and 389,309 tons respectively, and imports were for similar periods in these three years 79,343, 96,849, and 112,386

tons respectively; re-exports were negligible. We presume that the differences between the contending parties are not really very grave. At least, that is what one must read into the official communique issued by the Associated Portland Cement Manufacturers, Limited. The secretary of this undertaking, writing to us, points out that "My directors have for long been aware that considerable purchases of the ordinary shares of the company have been made by a financial group, with whom they have for some time been in friendly communication, but the total holding of such group, which has been disclosed to us, can in no sense be described as affording control of our company, even if such has been the object of the group." The two most prominent companies in the cement industry are the Associated Portland Cement and the British Portland Cement companies. The former has assets to the amount of nearly £10½ millions, and the latter assets to just over £4½ millions. The following table shows how shareholders have fared during the past four years, and also illustrates the fluctuations in share quotations during this period. We have added details of another cement undertaking—the Aberthaw and Bristol Channel:—

Name of Company.	Dividends % Years.				Highest Prices, Years 1918 to 1922.		Lowest Prices, Years 1918 to 1922.		Price, Nov. 7, 1923.

† Free of income-tax.

Profits of the Associated Portland Cement for the year ended December 31, 1922, after payment of debenture interest and depreciation, amounted to £463,763, as compared with £456,569 for the previous year. In the company's last report, issued in April of this year, the directors pointed out that the demand for Portland cement in the home markets was disappointing, owing to depression in the building and constructional trades, but it was stated that an increased tonnage was exported notwithstanding difficulties experienced in various overseas markets. It is, therefore, reasonable to assume that with anything like a revival of trade profits will be largely increased. Last year there was available for distribution amongst ordinary shareholders £338,103, after paying preference dividends. Five per cent. was distributed on the ordinary shares, and a balance of £227,440 was carried forward. The ordinary capital consists of 2,257,215 shares of £1 each. As a 5 per cent. dividend on this represents a little over £100,000, prospects of higher dividends are a speculative possibility.

American Cotton Crop.—Our Manchester correspondent writes:—Late last week the Agricultural Bureau of the United States Government published a sensational report on the cotton crop which has resulted in a striking advance in prices. The quotation for the January position of American futures in the Liverpool market at noon on Friday of last week was about 17d, and since then there has been a rise to over 19d. The Government report gave the condition of the crop on October 25th as 47.8 per cent., against 49.5 per cent. a month earlier. A feature of the statement was the decline in the yield per acre on the month from 137.7 lbs to 128.9 lbs. In the circumstances the indicated crop has been reduced from 11,015,000 bales on September 25th to 10,248,000 bales. Last spring the acreage under cotton in the United States amounted to 38,000,000 acres, and was a record. According to the authorities, however, 2,000,000 acres have been abandoned. It is now possible with some degree of accuracy to forecast supplies and consumption this season. With linters the crop for 1923-24 will be rather less than 11,000,000 bales. The carry-over at the end of last July was 2,500,000 bales. Last season the consumption was 12,600,000 bales. Owing to the uncertain industrial conditions throughout the world and the marked rise in prices, it is rather difficult to estimate the

probable requirements of users, but the consumption this season may be put down at 12,000,000 bales. It is, therefore, probable that supplies throughout the world on July 31st next (the end of the season) will not be more than 1,500,000 bales. The position for users is certainly very serious, and many people believe that values will be distinctly higher next year. Spinners are experiencing increasing difficulty in securing adequate deliveries of the higher grades, and a premium has to be paid for the better qualities. There is every likelihood of another large crop of Egyptian cotton. The Alexandria General Produce Association has estimated the output this season at 5,960,000 cantars. This is considered a rather conservative figure, and some private authorities are of opinion that the production will not be far behind last year, when the crop was 6,684,000 cantars.

Shipping Freight Index.—Recovery in the level of shipping freights made further progress during October, our index recording a rise of over 5 points, which brings it to 125.49, the highest figure since last May. It will be seen that the only main group which showed a decline in the month was South America:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913) ..	100	100	100	100	100	100	100

June "	131.77	111.04	124.56	125.50	133.90	118.84	124.27
July "	132.42	107.20	118.67	122.44	126.10	114.83	120.28
August "	124.79	109.11	114.33	117.70	117.51	115.73	116.53
September "	129.83	112.36	116.28	117.77	118.44	124.63	119.88
October "	133.66	125.46	114.03	119.38	124.40	136.05	125.49

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec.		Index No.	Inc. or Dec.
Home trade	140.61	+ 4.45	S. America—outwards ..	106.60	+ .34
Bay—outwards	151.37	+ 11.92	" homewards	121.46	— 4.84
homewards	140.33	— .	India—outwards	116.02	— 53
Mediterranean—outwards ..	125.12	+ .87	" homewards	122.75	+ 3.75
homewards	103.97	+ 1.31	Far East, &c.	124.40	+ 5.96
North America	125.46	+ 13.10	Australia	136.05	+ 11.42

A noteworthy feature in October has been heavy chartering from the Black Sea and North Pacific ports, routes not included in our index. The effect, however, has been to stiffen rates on other markets from which tonnage has been diverted. The East has been firm, with a sharp rise in rates from Australia; inquiries for bottoms to carry ore are expanding; and rates from North American ports are more in shipowners' favour. As regards the River Plate, the glut of tonnage for immediate loading continues, the average freight on which our index is based including, however, more remunerative fixtures for January's shipment. The relation of the index to the average for 1913 may be seen from the following table:—

Month.	1920.	1921.	1922.	1923.
January	545.42	.. 194.59	.. 131.60	.. 114.05
February	593.90	.. 164.54	.. 135.76	.. 112.73
March	588.24	.. 162.17	.. 135.53	.. 115.23

Including its affiliated institution the Nationale Bankvereeniging, Utrecht, the Rotterdamsche Bankvereeniging is represented in about 100 places in the Netherlands.

The recent course of shipping freights corroborates the general conclusion of the *Economist* that, in spite of political unsettlement in Europe, world trade is showing some signs of recovery.

The Rise in Tin Shares.—For the second time during the current year the shares of tin-producing companies have been in demand at advancing prices on the strength of the condition of the metal market. It is true that the current quotation for tin—about £214—goes against the best of £234 in March, but the former figure compares with under £180 in July. The difference is, of course, all gain. At over £200 per ton there are very few companies which cannot make profits, while in the case of the undertakings occupying a more favoured position the margin is very large. The Far-Eastern concerns were dealt with in a comparatively recent "Note." There are several points of interest at the moment in connection with the Nigerian producers. Several of the more important producers have lately introduced mechanical appliances and effected improvements in working methods, thereby increasing their outputs and reducing expenses. Appended is a schedule of results for the past six months. The figures represent tons of tin concentrates, generally of about 70 per cent. :—

	May.	June.	July.	Aug.	Sept.	Oct.
Bisichi	40	40	53	60	56	70
Ex-Lands	35	30	30	35	40	40
Jantar	26	32	32	32	27½	..
Keff Consolidated	30	30	30	35	40	40
Mongu	30	35	40	40	40	40
Naraguta	40	40	50	50	50	..
Northern Nigeria (Bauchi) ..	61½	70	60	85	75	80
Rayfield	40	42	48	50	50	46
Ropp	98	101	91	128	90	123

Of these companies, only two have declared dividends during the current year—the Ex Lands, 15 per cent. in June; the Ropp, 25 per cent. final for 1922 in April, and 15 per cent. interim early this month. An improved showing in the distribution of profits would doubtless stimulate the expansion of public interest in the share market. Such may be expected in the event of the price of the metal remaining high for the rest of the year.

The Price of Tin.—The forecast made in the *Economist* early in August in regard to tin has turned out to be correct. Three months ago standard cash tin stood at about £185, and early this week the value went over £215. There has thus been an improvement of more than £30 per ton, with prospects still good, which is a very satisfactory development for the tin mining companies, tin at anything over £200 per ton being a paying proposition to all concerns interested in winning the metal. At the end of August last the world's visible supply stood at 16,225 tons, representing a decline of 1,881 tons on the month. The cash price on August 31st rose to £192, during the following month the market went over £200, and last month there was a steady upward movement, cash standard tin finishing at £207 10s, and three months at £204. The return published at the beginning of the present month showed that there had been an increase of 934 tons in the world's visible supply at 18,384 tons, but this had no effect on the upward movement, as it was quickly realised that the apparent increase in the visible supply is really a decrease, paradoxical as this may sound,

because of the transfer of 3,000 tons from the Federated Malay States Government's holdings to the surplus available for market purposes. At the close of June the visible supply of tin amounted to 17,176 tons. It is now 18,834 tons. In the meantime, the State-owned stocks have been considerably reduced, and the actual position of statistical tin is remarkably strong. The East has been selling freely again this week, and the tin offered is being quite easily absorbed. The Federated Malay States Government is entitled to dispose of 500 tons per month; thus by the close of 1923 fully 4,000 tons will have been marketed, and the way this large extra quantity of tin has been digested with values rising all the time affords ample evidence of the splendid position of the consuming industries. In October the total supplies came to 9,279 tons and the Straits shipments were 6,527 tons. The monthly deliveries aggregated 8,345 tons, no fewer than 5,540 tons being for the United States, and the market has had a very firm appearance, with active support from dealers and large sales recorded on American account. The backwardation of close on £3 per ton that was seen in forward tin late in October and early this month not only completely disappeared, but a moderate premium was established on the cash position, which is not at all remarkable, seeing that the total tin stocks in the United Kingdom are down to 2,833 tons, and in very firm hands. The Welsh tinplate mills are well covered as far as orders are concerned, and splendid news is to hand from the United States, where the works are running nearly to their full capacity. The output so far this year has exceeded all previous records, and it is perfectly obvious that the United States tin users must make further purchases in the near future to cover their winter requirements.

The Greek Currant Crop.—Burlumi's annual report on currants states that the crop of 1922-23 was estimated at about 115,000 tons, and was distributed as follows:—

United Kingdom.....	61,000 tons	against 58,000 tons in 1921-2.
United States and Canada..	7,500 "	" 23,000 "
Holland and Germany	11,000 "	" 13,100 "
France and other parts of the world	500 "	" 900 "
	80,000 "	" 95,000 "

The falling off of the export to America was due principally to the large stock carried over in the States at the end of the 1921-2 season, and the competition of Californian raisins, which were much cheaper than currants. The Privileged Company received during the season 1922-3 in their warrant stores about 4,000 tons, all withdrawn before the season. In their retention stores the company received 24,000 tons, making 31,000 tons with the certificates in circulation on August 22, 1922. The land tax in kind at the rate of 35 per cent. on the exported quantities absorbed 27,000 tons, and certificates representing 7,000 tons have been carried over to the season 1923-4. At the beginning of the year growers suggested several measures to be taken by the Government to stimulate the export to America, and relieve the market of the surplus of production. Finally, it was decided that the Government should buy a quantity from 10,000 to 15,000 tons at fixed prices from 2,800 to 3,000 drachmæ per thousand Venetian pounds, according to quality, which would be sold to the home manufacturers of wine and spirits. The loss to the Government was to be met by the surplus of the drachmæ, which the Government secured on the exported currants exchange. In fact, the Government was controlling up to last May the exchange of exported currants, and paid successively 99, 138, and 155 drachmæ for every pound sterling, while on the free market the pound went up from 100 to 400 drachmas. A convention was signed between the Government, the National Bank of Greece, and the Privileged Company, for the execution of this scheme, and when prices dropped down to the Convention's limits, the Privileged Company received for account of the Government in its stores, the quantity of 19,907,972 Venetian pounds (9,355 tons). The clearances for home consumption in the United Kingdom for the year ended August, 1923, amounted to 59,307 tons, against 60,265 tons in 1922, and 58,895 tons in 1921. The stock of currants in the United Kingdom as returned by the Board of Trade at the end of August, 1923, was 6,550 tons, against

5,600 tons in 1922, and 9,980 tons in 1921. Australian currants of about 4,000 tons, imported between May and June, and consumed yearly in the United Kingdom, are included in the Board of Trade returns. The production of Australian currants is increasing yearly in the Murray Valley of the Commonwealth, and will be in future an important competitor to the Greek currants, which have lost their natural monopoly. The privilege of the Chartered Company created in 1905 comes to an end in July, 1925. It is doubtful whether the shareholders of the company will care for a renewal of its privilege, and it is more doubtful whether the growers and the Greek Government will consent to this renewal. Conditions in the currant trade have changed since 1905. The crops have been greatly reduced. From 185,000 tons produced in 1905, and 183,000 tons in 1903, they went down to 95,000 tons in 1923, and practically there is no over-production. When normal conditions prevail in Germany, and this country begins to import its usual supply of currants, the quantity produced will hardly be sufficient to cover the demands of universal consumption. Retention, however, may continue for some time in order to absorb low qualities, and provide the wine and spirits home manufacturers with raw materials at low prices. The crop of 1923 has been estimated by the Privileged Company and the Government at 95,000 tons, and the retention quantum for the season 1923-24 was fixed at 15 per cent. in kind and 20 per cent. cash.

Mersey Docks and Harbour.—The accounts of the Mersey Docks and Harbour Board for the year ended July 1, 1923, show a surplus of revenue over expenditure of £48,672, after allowing £100,000 for sinking fund. In spite of the fact that income was £225,000 lower owing to reductions in rates, dues, rents, &c., total receipts only fell by £120,500. Rates and dues show an increase of £20,500, but the warehouse surplus shows a reduction of £132,700, of which about one-half of this is caused by reduction of rates and charges and about one-half by less goods being warehoused. The estimated weight of goods passing through the port of Liverpool during 1922-23 was 13,200,000, an increase of 1,200,000 tons over the previous year. The tonnage of vessels paying dues in the year ended July 1st last was 18,079,579 tons, and the rates and dues received on vessels and goods amounted to £2,412,600. In the previous year the tonnage was 15,822,684 tons, and the revenue £2,402,900. The largest revenue from rates and dues was in 1919-20, when the tonnage was 16,521,373 tons, and the revenue £2,498,800. This tonnage, however, included approximately 2 million tons for Royal Naval vessels, &c., applicable to previous years. The tonnage paying dues reached its maximum in 1913-14 with a total of 19,086,672 tons. Revenue in that year was £1,569,100. Expenditure on revenue account has increased by 66 per cent. since the year 1914, while income shows an expansion of 58 per cent.

American Tobacco Fusion.—Subject to the approval of the stockholders of both companies, writes our New York correspondent, plans have been completed whereby the American Tobacco Company will take over the manufacturing properties of the Tobacco Products Corporation, including trade marks, supplies, plants and equipment, leased or owned, for a period of 99 years. The deal calls for the payment of approximately \$12,000,000 in cash to the Tobacco Products Corporation, in addition to a guaranteed payment of \$2,500,000 annually to the latter company. Under the terms of the proposed contract, only the manufacturing establishments of the Tobacco Products Corporation will be affected. In other words, that corporation will retain its interest in the United Cigar Stores Company of America, in which it holds 290,000 shares, as well as its interest in the Tobacco Products Export Corporation and Stephano Brothers, so that there will be no affiliation between the American Tobacco Company and the United Cigar Stores Company, or any other subsidiary of the Tobacco Products Corporation. The United Cigar Stores, it is understood, will continue to carry on business as heretofore, and be free to handle the output of any other manufacturer. This transaction, if consummated, as seems likely, is one of the largest under-

taken in the domestic tobacco industry in recent years without public financing. It is figured that the payment of about \$12,000,000 in cash by the American Tobacco Company will permit retirement of the \$4,000,000 7 per cent. notes and \$8,000,000 7 per cent. preferred stock of the Tobacco Products Corporation. In that event there would be left no security issue ahead of the 448,000 7 per cent. class A shares of the latter corporation. The American Tobacco Company's guarantee of \$2,500,000 annually will provide all but \$500,000 of the \$3,000,000 required to meet the 7 per cent. dividend on the Tobacco Products class A shares.

Joshua Hoyle and Sons.—The report of Joshua Hoyle and Sons, Limited, for the year ended September 29th last, which the directors describe as "one of extreme difficulty," shows a substantial recovery in profits, as may be seen from the summary table below:—

Year ended Sept. 30.	1919-20.	1920-21.	1921-22.	1922-23.
Profit.....	£ 289,507	£ 108,837	£ 110,697	£ 193,167
Brought forward	39,249	88,476	48,486	15,652
	328,756	197,313	159,183	208,819
Debtenture interest	..	..	52,531	79,371
Preference dividend	52,315	52,315	52,500	53,375
Ordinary dividend	97,931	96,512	18,499	30,500
	(25%)	(124%)	(24%)	(5%)
Renewals and reserves, &c.	90,034	..	20,000	27,390
Carried forward	88,476	48,486	15,653	18,183
	* Free of tax.			

Although profits have increased by over £82,000, it will be seen that last year's total is well below that of the year 1919-20—a boom year in the cotton trade—on the strength of which the directors thought fit to double the ordinary capital. There is now an authorised capital of £5,000,000, of which £1,800,000 has been issued, £1,000,000 in the form of 7 per cent. preference shares and the balance in ordinary shares. At the end of 1920-21 an issue of £1,500,000 7 per cent. debenture stock was made. After payment of debenture interest, the net profit for 1922-23 is less than £114,000, as compared with £58,000 for the previous year. The dividend is increased from 2½ per cent., free of tax, to 5 per cent., less tax, and £27,400 is transferred to renewals and reserve fund, raising it to £200,000. The first drawing for redemption of debentures was made in November last, and the sum of £17,200 was redeemed. The balance-sheet shows a decrease of £228,300 in creditors, and of £127,097 in debtors and cash. Stock-in-trade has been reduced by £241,700, but still stands at the high figure of £1,222,000. The property item has been increased by £118,300 to £2,160,100. The report mentions that the company's position regarding taxation has not yet been definitely agreed, but full provision for liability to date has been made.

Grindlay and Co. to be Absorbed.—It is announced that an agreement has been concluded, subject to Treasury sanction, for the acquisition by the National Provincial and Union Bank of England, Limited, of the partners' interests in the business of Messrs Grindlay and Co., 54 Parliament street. In order to carry out this arrangement, Messrs Grindlay and Co. will be converted into a private limited liability company under the name of Grindlay and Co., Limited, the shares of which will be held by the National Provincial and Union Bank of England, Limited. Messrs Grindlay and Co. were established in 1828 as East India Army agents and bankers, and it is understood that under the new régime the army agency side of the business will be maintained and developed. It has offices in Bombay, Calcutta, and Simla, and at December 31st last the balance-sheet showed deposits of £1,844,100, while investments stood at £862,400 and discounts and advances at £806,700.

Amalgamated Zinc.—The general body of shareholders in this undertaking will doubtless learn with some surprise that the company is practically at the end of its tether, so far as operations at Broken Hill are concerned. From the cabled summary of the report to June 30th last it appears that while current contracts should provide deliveries of tailings until the end of December, when

these are exhausted it will probably not be found advisable to continue work at the present centre. In view of this position, search has been made for a fresh field. "Proposals now under consideration," the directors observe, "suggest more favourable possibilities than have propositions examined hitherto." It is significant that the bulk of the half-year's profit of £27,000 was due to excess of realisations over valuations in respect of past periods. The two dividends paid absorbed considerably more than the actual surplus, reducing the carry-forward to £15,800. The liquid assets exceed the liabilities by £184,700, irrespective of shares in other companies standing at £425,300. These items more than cover the present market valuation of the capital.

A Motor Trade Rumour.—A rumour has been in circulation this week at the Motor Show that Mr Ford has bought up the Morris Cowley and Morris Oxford motor enterprise. We are unable to say whether there is any truth in the various stories current, which are supported by the assertion that the sale of Ford pleasure vehicles in Great Britain has dropped heavily in the last eighteen months as the result of the popularity of the Morris cars. But the rumour is of interest as it calls attention to the fact that the British motor industry seems at last to be within sight of making a success of mass production, and of challenging the supremacy in this field of the Ford vehicles. It has yet to be shown whether Mr Morris will succeed in reaching the output figures at which he has been said to be aiming, and his efforts will be of particular interest because his cars are produced by assembling the products of a number of firms, each making its part on mass production lines rather than by the more centralised systems of Mr Ford, or of the other competitor in this line, M. Citroën, of France. On sentimental grounds we should regret to see the control pass to America, but it is quite possible that the assistance of the Ford commercial organisation in this and other countries, and the great resources of capital which the association would bring, might assure success and provide an even greater market for this product of the British motor industry. This would not be the first, nor will it be the last, example of profitable association between British and American enterprise. We may add that in view of the possibilities of the British market the price suggested in the rumours to which we have referred seems to us very inadequate.

Pre-War Debts.—It will be recalled that a breach of relations took place between the French and Belgian Clearing Offices on the one hand, and the German Clearing Office on the other, whose duty it was to settle the question of pre-war debts. This breach proved prejudicial to the interests of British subjects residing in France and Belgium, who settle their debts through the French and Belgian Clearing Offices. The Board of Trade states that meetings of the officials of the three countries interested, presided over by Mr Egerton Grey, the Controller of the British Clearing Office, have just been held in London, in order to procure a resumption of relations between the offices concerned, and the normal operation of the mixed

arbitral tribunals, which had also been suspended. At these meetings France was represented by M. Alphand, the Director of the French Clearing Office, and MM. Jaudon, Labat, and Fliniaux; Belgium by MM. Colard and Challes, and Germany by Dr. Lothholz, Dr. Göppert, Dr. Fuchs, and Dr. von Friedberg. The negotiations have enabled relations to be resumed under conditions which are considered acceptable by all parties.

Italian Bank Deposits.—In an article on foreign banks in our issue of October 20th, we stated that the deposits of the Banca Commerciale Italiana had declined from 790 million lire to 767 millions. These figures do not include current accounts. Total deposit and current accounts amount to over 5,698 millions, as shown on page 666 of the same issue. This compares with 6,005 millions at the end of 1921.

The Governors of Birkbeck College have opened a fund for the provision of a memorial to the late Dr George Armitage-Smith, Principal of the College from 1896 to 1918. Further particulars of the memorial which it is proposed to provide may be obtained from the Clerk to the Governors, Birkbeck College, E.C. 4, to whom subscriptions may be forwarded.

UNITED STATES.—IMMIGRATION QUOTAS—JUDGE GARY ON THE TRADE OUTLOOK—COTTON GINNING—STOCKS AND BONDS.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 29.

IMMIGRATION has been so heavy in the past few months that some of the more important quotas are likely to become exhausted next month. Advices already received indicate that an unusually large number of immigrants will reach this country on November 1st, and many others are expected to arrive shortly after that date. It is practically certain that one of the countries whose quotas will have been filled during November will be the United Kingdom—a fact that will be much regretted in official quarters and elsewhere, because most of the immigrants from that country are skilled workmen who are urgently needed in many industries in the United States. As is well known, 20 per cent. of the total quota allowed to any nationality under the present immigration law, which is really only an emergency measure that has been kept in force from year to year since its enactment, may be admitted into this country during any one month. Since July 1st, when the present immigration year began, numerous countries have used up their full 20 per cent. quota each month, and November will be the fifth month. Indications, therefore, are that in the remaining seven months of the fiscal year, after November, comparatively few immigrants will arrive, unless Congress should take steps to increase the quotas, at least temporarily—a development that seems, at present, quite unlikely. The shortage of labour in numerous American industries, or at least the limited supply available, is one of the main factors responsible for abnormally high wages which employers are compelled to pay, and which have contributed in forcing production, construction and other costs to levels that cannot be maintained indefinitely if this country is to enjoy real and general prosperity.

Few men in the United States is better qualified to express an opinion on business and industrial conditions and prospects than is Judge Gary, chairman of the United States Steel Corporation. In addressing the American Iron and Steel Institute, of which he is president, at its meeting here last week, he remarked that there are now, as always, some hindrances to the natural progress and prosperity in the United States. Those patent to every one, at present, he said, are the turbulent conditions in other countries; the "unreasonably high and burdensome taxes, national, State and municipal; the high costs of production, in some lines unconscionable; and the high

costs of living, measurably, though not altogether, brought about by those who complain the most. But there are many reasons for confidence in the economic future of this country," he added, "outside of those which are basic and permanent, including our enormous wealth and immense yearly income which increases as the years go by." Concerning the European situation, Judge Gary declared that the full cost of the war was not yet known. "We know the great seas are not wide enough to separate us from the influences of disaster to Europe. We are affected in our finances, our commerce, our industries, our civic, political, and social life, and our morals. The whole structure of civilisation has been shaken. If the European atmosphere and conditions dominated our affairs," he said, "our business men might be depressed and somewhat doubtful of the future; but fortunately they do not. We are, or at least we may be, independent of all other nations so far as business progress and prosperity are concerned. If we properly conserve and utilise our natural resources and legitimately manage our private and public affairs, availing ourselves of the opportunities that are presented, we may and will continuously and adequately prosper." While there will be temporary interruptions, recessions, and fluctuations, "the current of prosperity in the United States is so strong," he remarked, "that even though it may occasionally be modified by unnatural or unreasonable obstructions, it will result in an accumulation of volume and force which will soon be overwhelming and stronger than ever before." For the current calendar year, the iron and steel industry in this country, he said, will show considerable profit, though not as much as the capital invested should produce. New orders are not up to productive capacity, but, together with those heretofore accumulated, have resulted in large shipments. In some lines, he pointed out, the demand for immediate consumption has been, and still is, in excess of the ability to supply. He described the outlook as good. Inquiries for iron and steel are unusually large, many of them urgent. Purchases for railroad and general building purposes, for oil development and production, for the automobile trade, and many other lines are very heavy in the aggregate, and from appearances may be expected to increase materially in volume during the next six months, unless something unforeseen and unwarranted occurs. "The actual purchasing necessities of our commodities are very great at present," he declared, "and there is plenty of money to pay for whatever is needed."

The latest Census Bureau report shows that up to October 18th 6,400,579 bales of lint cotton had been ginned, as against 6,978,321 at the corresponding date a year ago. The cotton market construed the exhibit as extremely bullish, and as indicating an exceptionally short crop, with the result that prices last week soared to a new high record for this year, spot cotton reaching 31.75 cents a pound. But the October ginning report this year, at least, is not a reliable barometer in estimating the probable size of the yield. Throughout the greater part of the belt the crop was late, unfavourable weather recently has delayed picking, and in many sections muddy roads have doubtless retarded deliveries. On the other hand, the ginning report contains some striking features that do not encourage hopes of even a moderate sized crop. For instance, the census returns show that east of the Mississippi River only 2,633,873 bales had been ginned up to October 18th, representing a decrease of nearly 600,000 bales, or approximately 25 per cent., from a year ago. In Arkansas the ginnings were about one-half what they were at that date last year.

Production of passenger automobiles and motor trucks in this country during September totalled 327,365, as compared with 344,991 in August, and 207,026 in September of 1922, according to figures compiled from reports filed with the Department of Commerce by practically all manufacturers. The decrease, amounting to 5.2 per cent. from August, was seasonal, but the returns for last month represent an increase of 58 per cent. over September of last year. For the first nine months of this year the combined output of automobiles and trucks was 3,029,982 cars, as against 1,880,051 in the like period of 1922, or an increase of 61 per cent.

Although the stock market has been inactive, daily transactions totalling only 600,000 or 700,000 shares, and

price fluctuations have shown great irregularity, the general trend has been downwards. Last week twenty leading industrials, on the average, fell to a new low level for this year, namely, \$85.76 a share, while the average price of an equal number of representative rails dropped to \$77.65 a share, as compared with the record low for 1923 of \$76.78 reached early in August. Persistent bear pressure was largely responsible for the continued weakness, but further heavy liquidation to establish losses for income-tax purposes was an important contributory factor. Developments, both here and in Europe, which ordinarily would govern the course of prices, seemed to have little effect upon the market as a whole. The prospect of an Allied economic conference, with the United States participating, was warmly welcomed in financial circles and elsewhere, but the enthusiasm which early reports created has been chilled somewhat by cabled advices concerning the reservations and conditions attached to the French acceptance of the proposal. Bonds are becoming more active, and show a firmer tendency, reflecting easier money conditions.

FRANCE.—REPARATIONS—IRON AND STEEL OUTPUT.

(FROM OUR CORRESPONDENT.)

PARIS, November 7.

FRENCH opinion is undoubtedly now hardening towards the recognition of the fact that this country can never expect to receive in liquid cash the 52 per cent. of the total debt of 132,000,000,000 gold marks, to which it has been agreed she is entitled. The vast proportion of "C" bonds included in this sum, which may or may not be mobilisable to any practical extent, form one obstacle. Apart from that, the actual value of the 132 milliards must necessarily be recognised as far below that of the nominal figure. No less an authority than M. Bokanowski, the *rapporteur* of the Finance Commission of the Chamber, estimates that the present value of the total German debt must be taken as in the neighbourhood of 50,000,000,000 gold marks. Assuming this to be approximately accurate, and basing the distribution of this amount on the Spa agreement, the proportion of this sum that would come to France would be 26 milliards, to Great Britain 14 milliards, to Italy 5 milliards, and to Belgium 4 milliards. Germany is also at present liable for the repayment of the money which was advanced to Belgium by the various other Allies during the war, namely, 2½ milliards by France, 2 milliards by Great Britain, 700,000,000 gold marks by the United States. Adding these sums to the shares of the present value of the principal debt that would come to each of them, therefore, the total amounts that would have to be paid by Germany would be as follows: to France 28½ milliards gold marks, to Great Britain 13 milliards, to Italy 10 milliards, to Belgium 4 milliards, to the United States 700,000,000. Belgium, it may be mentioned, has already received more than 1,000,000,000 gold marks from Germany, under her priority rights.

In a scheme that has been suggested here for bringing about a settlement, at one and the same time, of both the reparations and the inter-Allied debts problems, it is proposed that, so far as Germany's future payments are concerned, this milliard shall be regarded as available to be added to the sum to be paid to Great Britain, which would thus receive (1) the 11 milliards due to her under the Spa agreement, (2) the two milliards to reimburse the advances she made to Belgium, and (3) an extra milliard, arising from the circumstance referred to above, making in all 14 milliards, which would be equivalent to the total sum claimed by Lord Curzon in Paragraph 46 of his letter to Comte de Saint-Aulaire, and which would represent the British debt to America. As the United States Government has agreed to accept a reduction of nearly one-third in the amount owing to it by Great Britain, it is assumed that that country would also be willing to agree to a similar reduction in the amounts owing by France and Italy. In that case the French debt to the United States would be reduced from about 15 milliards to 10, and that of Italy from about 7½ milliards to 5. Under these arrangements, then, France would receive, as the present

Fixed Deposit Rates will be quoted upon application.
On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

value of the debt owing to it by Germany, 28½ milliards, and would hand over to the United States 10 milliards, leaving 18½ milliards to meet part of the cost of her pensions and the reconstruction of her devastated area. Great Britain would receive 14 milliards, which, as she has herself suggested, she would hand over to the United States. Italy would receive 5 milliards, and would also utilise it to cancel her debt to the United States, while Belgium would receive and retain 3 milliards. Under such an arrangement the United States would receive 29,700,000,000 gold marks, or more than all the other creditors of Germany put together, therefore it is unlikely any objections would be raised from America, provided she is prepared to make the same proportionate reduction to France and Italy as she has already agreed to make to Great Britain.

Supposing such a settlement were arrived at, what would be the position of France *vis à vis* her own financial situation? She would receive from Germany 18½ milliards of gold marks, or, at the present rate of exchange, 74,000,000,000f, and it is considered by experts here who have gone into the figures that with this sum she would be able to make both ends meet, presuming she is able to balance her budget in the future by the increased yield from existing taxation, and that the franc remains steady (or, if it improves, that this improvement would be compensated for by an equivalent rise in the Rente). France needs money from Germany chiefly for pensions, which represent a capital value at present of just under 33 milliards, and for reconstruction purposes, for the completion of which she still requires to find another 40 milliards. These two sums represent approximately the 18½ milliards of gold marks which she would receive from Germany supposing the plan set forth above is carried out. Experts will doubtless find much to criticise in the plan in question, but it at any rate affords a basis for discussion, while the mere fact that it is put forward here proves that France is far from being as insistent on obtaining the impossible as she is often asserted to be. What and how Germany can pay remains, of course, to be seen, but the remark made by a French commentator, in discussing the suggestions set forth above, appears to be well justified: "It is unthinkable that a country of 60,000,000 inhabitants, like Germany, with its industrial organisation intact and freed from internal debt, cannot support a burden of 55 milliards of gold marks, when France, with a population of 40,000,000, and ten of its greatest industrial departments ravaged by war, is actually carrying on under a burden of nearly 100,000,000,000 gold marks of debt."

According to the latest available report of the Comité des Forges, the number of blast furnaces in operation on October 1st was 111, as compared with 109 on September 1st, 77 on April 1st, and 116 on January 1st. Sixty others were ready to operate on the same date, while 48 others were under repair or construction. The total number shut down through want of coke is now only five, as compared with those in effective operation on January 1st. The output of cast iron in September amounted to 481,874 tons, or a decrease of 4,376 tons as compared with the figure for December last, the last normal month before the occupation of the Ruhr. The output of steel during September, which amounted to a total of 446,480 tons, showed a drop of 5,884 tons, as compared with that for August, but was still 31,883 tons more than in December, 1922. The figures for the libera-

ted portion of Lorraine alone for September show a total output of 173,018 tons of iron (as against 175,000 in August, 155,000 in July, and 219,137 in December), and of 149,568 tons of steel (as against 149,000 tons in August, 133,000 tons in July, and 147,914 tons in December, 1922).

GERMANY.—BUSINESS CRISIS—CURRENCY—FINANCES—BOURSE—PRICES—TRUST LEGISLATION.

(FROM OUR CORRESPONDENT.)

BERLIN, November 6.

CONDITIONS go rapidly worse. They already closely resemble those of Russia on the eve of the Bolshevik revolution, Russia's national questions being here replaced by secessionist movements, and the open war with Germany replaced by the veiled war with France. The sufferings of large classes in the town, including for the first time for years a great part of the industrial working class, have become almost unbearable, and also, for the first time, there is a general tendency to indulge in disorder. Now when the rapid upward price movement is about to be countered by payment of wages in stable currency, as workmen long ago demanded, there is the threat, already partly realised, of no wages at all. Unemployment is increasing at such a breakneck pace that figures compiled a few weeks back are of no use as a guide; but it is probable that over a million persons are at present wholly without work. The contrast from conditions a little over a year ago when there were only 20,000 unemployed is very marked; and as the currency depreciation was even then rapid the change must be ascribed mainly to the Ruhr trouble, and to its effect on business in unoccupied territory. The number of unemployed in the Ruhr, Essen town excluded, on the 2nd was 339,923. Already six weeks ago (on September 29th) 500,000 out of about 5,000,000 trades union members were wholly workless, and 1,790,000 were working short time. Emigration is very rapidly increasing; in the first half of 1923 emigrants numbered 40,000. It is nevertheless characteristic that only 12 bankruptcies were recorded in October—so much did the rapid mark depreciation facilitate the payment of debts.

The situation created by the withdrawal of the three Socialist ministers from the Cabinet has not yet been cleared up. A misfortune is that the Empowering Law of October 13th, creating the economic dictatorship, has lapsed under the clause restricting its operation to a Cabinet of the same party composition as when it was passed. The law enabled Dr Stresemann to put through rapidly some necessary measures which the Reichstag would have taken weeks to pass. As long as the currency continues declining, ordinary legislative procedure is for certain important purposes wholly ineffective. The decrees issued under the dictatorship remain valid law; but they cannot be revoked or amended without Reichstag sanction. No one believes in a resumption of work on the Ruhr under satisfactory conditions. The provisional agreement between the French Commission and Ruhr industry, as reported here in newspapers, gives very little hope. The payment of coal tax up to October 31st of 15,000,000 dollars, less the value of products seized instead of tax by the French, will be a heavy burden; the payment of the later coal tax at the rate of 10 French francs per ton is apparently meant as a protection for the French metallurgical industry. The German Government will not compensate the works for the contracted for Reparation deliveries; it can only acknowledge the debt, but such an acknowledgment will not finance the delivering concerns.

The mark has for a couple of days been stable at around

420 milliards to the dollar, which is about 1-300th of the last-reported value of the Soviet rouble. In April this year the rouble was depreciated 7,000 times more than the mark. The new mark stability is due to the fact that New York quotations, long nominal, have ceased, so that there is no strong foreign influence working against the official exchange rates at which alone business here may be done. The public attitude towards the paper mark is best illustrated by experience with the provisional gold loan currency. At first this currency, which is in dollar denominations, maintained parity, nothing more, with the American dollar. Later, citizens being forbidden to invest their depreciating marks in dollars, rushed to invest them in gold loan currency; so that this wholly unsecured currency, whose only claim to stability lies in an official promise not to inflate it, rose to 300 and even temporarily to 400 milliard marks when the dollar stood at only 65 milliards. Naturally this disparity hung together with the limited supply of gold loan currency. The gold loan soon ceased to circulate, being used for hoarding. The Government countered by forbidding dealings in gold loan at other than the official exchange; and now the loan currency is at its dollar parity again. Up till a week ago the total circulation of gold loan currency was 300,000,000 gold marks; but now the issue of a further 300,000,000 gold marks, also in the form of Treasury bills, at 6 per cent., due 1932 is announced, which will not directly circulate, but against which private holders who have the other necessary qualifications will be allowed to issue their own emergency currency. The Cabinet has authorised the use, until November 30th, of foreign currency in home trade, and has withdrawn the prohibition against quoting gold mark prices in retail trade. A later declaration promises the stabilisation of the paper mark by conversion at a fixed rate into a stable currency. This was the original plan when the Rentenbank project was broached. It is, of course, not possible to fix the conversion rate until the maximum paper mark circulation is known, and this will be known only when inflation has actually ceased owing to the supplying of credit to the State in future by the Rentenbank.

Yet one more Bill reforming taxation is before the Reichswirtschaftsrat. Under this Bill a new property tax assessment will be made on December 31st this year, and if necessary repeated year by year, instead of as now every three years. The assessment will for the first time be in gold marks; the exemption limit 2,000 gold marks. The succession and legacy tax will also be in gold marks. The minimum rate is to be 3, maximum rate 70, per cent. A Reichswirtschaftsrat resolution demands a complete reform of taxation on the gold mark basis. The present system does not in general recognise gold assessments and rates, but only valorises paper mark rates according to the mark's gold exchange. The Reichsbank is stated on one day (November 3rd) to have put into circulation 3,692,000 million marks of new money. Taking the note circulation at 1 at the end of 1913, it was 524,330,557 on October 23rd. The statement for October 23rd shows an increase of commercial bills by 123,284 billions to 152,826 billions; Treasury bills by 510,400 billions to 678,179 billions; circulation by 400,980 billions to 524,330 billions. As a result of the increase in the maximum lending capacity of the Darlehns-Kassen, the advances, which rose enormously in the preceding week, declined by 1,087 billions to 4,528 billions, while the bank's holding of Darlehnskassenscheine rose by 73,957 to 79,620 billions, the total of outstanding Darlehns loans jumping from 5,663 billions to 79,620 billions.

The Bourse boom last week again made a record, the multiplication of prices beating all previous figures. The *Frankfurter Zeitung's* index number for home dividend-payers rose from 11,945,000,000,000 to 158,900,000,000,000. Stocks average 5,811,997,000-fold as much as at the beginning of 1922. Newspapers are quoting stocks in units of a milliard. The question of gold loan payments for stocks is being considered. The Berlin Bourse is in an extraordinary condition. Owing to the brokerage and banking congestion, the paper mark yield of a stock sale is credited only four days later, when as a rule the depre-

ciation has gone much further. As a result of this and of certain other influences there are very few sellers. The meagre supply of sellable stocks is rationed, and often no quotation rates are issued at all. Gold loan was yesterday rationed to \$100 per broker. The closing of the Berlin Bourse is discussed in newspapers, the grounds urged being the fact that the paper mark, which is still the necessary medium of transactions, is entirely useless as a standard for measuring values. The Prussian Trade Ministry is stated to be against this step. Bonds are also hardly being offered at all, and only a fraction of them receive official quotations; the long list of municipal bonds no longer appears in the Press at all. Yesterday the only Federal and State bonds quoted were:—War Loan, 10 milliards; Federal Fours, 60 milliards; Forced Loan, 40 millions; Savings and Premium, 10 milliards; Prussian Fours, 70 milliards; Prussian 3½ per Cents., 8 milliards; Hamburg Staats-Rente 4½ per Cents., 1919, "B," 8 milliards.

The price rise last week was exceptionally rapid, and it continued after the dollar exchange rise came to a standstill. By the 1st instant much the highest gold prices experienced in Germany were recorded, the wholesale index number ("Frankfurter Zeitung's" 1 in 1914) being 49,071,500,000 against a gold (dollar) appreciation of 30,952,400,000. This high gold price level—about 60 per cent. more than in 1914—has probably been exceeded by now. The last American index shows a rise of about 34 per cent. The index number for minerals was (despite the abolished coal tax and a cut in Steel Syndicate rates) 89,978,000,000, or, in gold, nearly three times as much as in 1914; for textiles and leather 43,293,000,000, food 41,028,400,000, miscellaneous goods 33,398,000,000, and industrial finished goods 41,682,300,000. The index for all commodities showed 20 at the beginning of 1920, 42 at the beginning of 1922, 2,054 at the beginning of 1923, 6,425 at the beginning of April, 3,063,358 at the beginning of September, 182,953,500 at the beginning of October, 2,664,100,000 October 18th, and 49,071,500,000 at the beginning of November. The index number for ten home-produced commodities was 38,667,300,000; for ten imported commodities 55,552,400,000. The gold mark railway rates, also the new gold mark fares, are very high; and it seems that Germany (housing omitted) is about the dearest European country at present, though there have been a few cuts in gold prices as the result of the abolition of the coal tax. Makers of hand tools and other small steel and iron articles have reduced their prices by on an average 1 gold mark per kilogramme. The Steel Syndicate's prices, now quoted in gold marks, have also been cut, the new prices, in gold marks per metric ton (for occupied territory) being: Ingots 151.40, blooms 173, billets 184.70, slabs 198.70, structural forms 218.30, bar-iron 219, hoop iron 273, wire rods 232.10, thick sheets (5 mm and over) 246.90, thin do. (under 1 mm) 344.80. The official cost-of-living index number for October 29th (1 in 1914) was 13,671,000,000, having risen 349 per cent. in the preceding week.

The Cabinet's last act under the expiring Empowering Law was to issue a decree regulating industrial combines. This measure is a curiosity, because, though Germany has long had more combines, mostly in the loose cartel form, than other European countries, they aroused very little opposition, and Socialists almost approved of them as possible nuclei of publicly owned industries. Before the war the only complaint was that the heavy raw-material producers overcharged the manufacturing consumer, and this complaint has been heard again of late; but probably the independent negotiations of the big Western combinations with France were an influence with the Government. The new decree enacts that all cartels and similar combinations must be effected by written instruments (so making possible closer inspection of the so-called "Interessengemeinschaften," which are at present mostly verbal), and it creates a Cartels Court, with power to declare void the agreement constituting a cartel, to release individual members from such an agreement, and to release a consumer from an oppressive buying contract with a cartel. The Court consists of a judge and four assessors, one of whom is a judicial officer, one each a representative of the conflicting interests, and the fourth an independent expert.

NORWAY.—SCANDINAVIAN MONETARY UNION—PRICES—LABOUR TROUBLES—OLD AGE INSURANCE.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, November 3.

FOR fifty years a monetary union has existed between the three Scandinavian countries, Sweden, Denmark, and Norway. To the three peoples, geographically and nationally so near related, the union has proved a great convenience; the coins and the paper money have circulated indiscriminately in any one of the three countries. As in so many other arrangements, the war proved more or less destructive to this state of things. Partly as a consequence of different monetary policies in the three countries, and partly from economical forces, very soon after the outbreak of the war there were symptoms of breakdown in the arrangement, and gradually the value of the silver and other currency, as well as of the bank notes, became different as measured by sterling and dollars. To begin with, the Norwegian krone stood highest—i.e., had the greatest sterling and dollar value of the three Scandinavian kroner. Before long this order was reversed, the Swedish krona appreciating, while the Danish and Norwegian kroner depreciated, the Norwegian krone most. The consequence was that the Danish and Norwegian silver coins went to Sweden, where they were exchanged at great profit. Export prohibition followed, but this could not prevent smuggling, which took place on a very large scale. Naturally, while Norway—as well as Denmark—was depleted of silver currency, and had to content itself with paper kroner, Sweden was flooded with silver coins from other countries. To put up with this would, of course, involve the Swedish national bank in a great loss, and that bank therefore—as is its undoubted right—claims that the two other countries shall receive back their money and give it Swedish money at the current rate. Large sums are involved, and Norway alone will lose several millions which have been appropriated, in the main, by the smugglers.

A commission has been appointed to consider the matter, consisting of the directors of the national banks of the three countries and other experts. This commission is sitting at Christiania, and they have already sent out a communiqué stating some results of their deliberations. They are proposing to the Legislatures of each country that the monetary union be altered so as to enable each country to mint fractional currency—possibly perforated—for circulation only in the country of origin, and also to permit the perforation or any other suitable alteration of the currency already in circulation, thereby limiting its circulation to the country concerned.

The Statistical Central Bureau has published its calculations of the cost of living as at October 15th. There has been an insignificant fall; the total is put at 229, which is due to foodstuffs having gone down from 218 points in September to 217 in October. According to *Farmand*, wholesale prices have advanced a little for the same period, viz., from 233 to 234, or 1.2 per cent. The number of unemployed has undergone no material change lately, but there are labour troubles ahead. There has been a strike at the saw mills for about seven weeks, and during the last two weeks the workers of the chocolate mills—a very important industry—and also of some other industries, have struck work. The Official Conciliator has proposed terms of conciliation, which have been generally accepted by the employers but rejected by the workpeople. The Union of Employers, through their board, have decided on a lock-out, the people in several important branches, as the pulp and paper industries, having received notice for the 15th inst. If the lock-out takes effect, it will embrace about 16,000 men, which, added to the 4,000 striking, will raise the number to 20,000 persons.

The Storting has before it a plan for Old Age Insurance for the whole nation. While there is no diversity of opinion as to the desirability of such a plan, the manner in which it should be carried through is the subject of differing views. But at all events, any plan that may be agreed upon will be too expensive to put into operation for the present, and will, therefore, be of a somewhat academic character.

Letters to the Editor.

TRIANGULAR TRADE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your article in last week's *Economist* on "Fiscal Heresies," you refer to the triangular nature of trade. Many convinced Free-traders are, I think, not a little concerned over this difficulty—that in the present chaotic conditions of the exchanges, the purchase of raw material by Germany from India (to take the example given), and the export by Germany of manufactured goods to the English markets, might go on for a considerable time without the triangle being made complete by the third process of English exports to India. The two-sided nature of the trade would not be notified by the barometer of the exchanges, since these fluctuate to a degree not known in pre-war days, owing to speculation and other forces. It is surely possible for credits to be established here in Germany's favour by the said sale of goods, and the proceeds remitted to India in payment of the raw materials without the marked effect on the exchanges that would ordinarily ensue, and in that way the rectification by the English exports is delayed. In the interval an English industry might be permanently damaged. Such a result is rendered more probable if reparations, which are a tribute and not trade, are demanded.—Yours faithfully, J. F. DUNN.

4 Copthall chambers, London, E.C. 2, November 6th, 1923.

Our correspondent is right in recalling that there are more elements in the balance of trade than mere physical imports and exports, which practically never balance for any country. Imports and exports only balance if we include shipping and other services and coupons among our exports and scrip among our imports. If we are foolish enough to do so, we may even include foreign paper currencies among our imports; and, in fact, this is what has been happening in the last few years, for England and America have sent to Germany large quantities of goods against paper marks. If it had not been so, it is difficult to see how Germany could have lived. The figures of our trade balance with Germany, which are quoted in a leading article, show how small is the amount of goods we have taken from Germany in proportion to what we have sent, and how large is the margin that has been filled by speculation in marks or investments in Germany. But if, and when, reparations are paid, the balance would be on the other side, for the payments can only be made to the extent that Germany's exports in the widest sense exceed her imports. The result might be achieved either by increased exports or by diminished purchases. The former would compete severely with Great Britain, but not necessarily through a depreciated exchange. Ordinarily an export tends to increase the value of the currency of the country exporting; but in the case of reparation exports this would not happen, for even if reparation funds were raised by taxation and not by inflation, the mark exchange would not be improved, for the funds so raised would be transferred to foreign holders, and no purchase of marks would be involved.—ED. *Economist*.]

Books and Publications.

BANKING IN AMERICA.

No study could be more stimulating and instructive to bankers and bank officials than that of the methods by which their brethren and rivals in the United States organise and carry on their business, and this investigation* of the subject by Mr Minty, of the London Joint City and Midland Bank's statistical office, seems to be in every way an excellent guide to this fascinating labyrinth. It is written, as the author explains in his preface, "from the point of view of an English bank officer anxious to give a practical description to English bank officers of the way in which the work is put through in an American bank." Sir Drummond Fraser, in the introduction that he contributes, enumerates the long list of distinctions achieved by Mr Minty—among many other things he was the first student to take the degree of B.Com. in two years, while pursuing his daily work at the bank—and adds that "his trained mind has grasped essentials, while his patient research in the past has borne fruit in his microscopic presentation of detail. He has a sense of perspective which enables him to put the high lights on the essence of the whole system. And his outcropping sense of

* "American Banking Methods," by Leonard Le Marchant Minty, B.Sc. Econ., &c., &c. With an Introduction by Sir D. Drummond Fraser, K.B.E., M.Com. P. S. King and Son. 15s.

humour makes him recognise the relative values of the facts he presents." With praise so emphatic already earned from one whose qualifications as a judge of a book on banking can hardly be excelled, this volume begins its career as confident as Carpentier of a quick and easy success, and the mere layman can scarce venture to criticise. We may, however, suggest to Mr Minty that in his description of the capital of American banks and trust companies he has omitted any mention of the important question of the liability of stockholders. In the case of national banks, we believe that the stock is fully paid up, but that there is a reserve liability of \$100 on each \$100 share. This is a detail which does not in any way affect the practical working of the banks, but as a matter of practical interest to students of the British and American systems, it might be given a line or two in later editions. And is Mr Minty quite accurate in saying that, in the pre-Federal Reserve system days, "there were no American banking institutions maintaining branches in foreign countries," and that "this was remedied by the provisions of Section 25, which allows national banks to open foreign branches"? He is right, of course, with regard to national banks, but, as he shows himself on a later page "this disability did not apply to trust companies and banks incorporated under State law"; the Guaranty Trust, which had a branch in London many years before 1913, is surely a "banking institution," to say nothing of the many private banking firms which were so closely affiliated to American firms that they were, in effect, branch-partners. Again, he not only quotes an American delegate at a Bankers' Convention as speaking of "the Baring failure of 1890," but himself writes of "Barings at the time of its failure"; but there never was a Baring failure, and it is not well to use ugly words where they are inappropriate.

Apart from the mass of technical detail which can only be appreciated and understood by the bank officers for whose instruction it is intended, the chief impression left by the book is wonder at the extent to which all kinds of American banking institutions are tied and bound by official regulations, as compared with the complete freedom with which English bankers are left to conduct their business in the light of their own prudence and knowledge. Concerning the limitations on the freedom of the national banks, Mr Minty is not very clear, except with regard to inter-locking directorates and amalgamations. He refers, among the evils remedied by the Federal Reserve system, to the "inability of the national banks to legally make loans upon real estate," and says that it was remedied by the setting up of the Federal Farm Loan system; but in a footnote to a later page it is stated that "a national banking association," which appears to be the same thing as a national bank, may hold real estate "such as shall be mortgaged to it in good faith by way of security for debts previously contracted," which seems to open a very obvious door to those who want to evade the restriction. But in the case of a trust company organised under the banking laws of the State of New York, we learn that "it is prohibited, except by permission of the Superintendent of Banks, from acquiring and holding for more than five years any real estate, except for the purpose of building its own offices. Nor may it lend a sum more than one-tenth of its capital stock and surplus to any single individual or corporation. It may not lend on real estate on which there is a prior mortgage, lien, or encumbrance, if the prior mortgage or encumbrance exceeds one-tenth of the capital stock of the trust company or two-thirds of the appraised value of such real estate. It may not directly or indirectly invest more than 10 per cent. of its stock in any one private concern. On the other hand, the capital of every trust company must be invested in bonds and mortgages on real property within the State of New York, otherwise unencumbered, not exceeding 60 per cent. of the value thereof, as evidenced by an abstract of title, or certificate and opinion of title of counsel thereon. There are many other precise limitations contained in the Banking Law of New York, which limit the general powers.....In every department the manual containing the State Law has to be consulted from time to time."

With control so strict, evasion is inevitably ingenious and vigorous. The Bank Act tries to make it illegal for one national bank to acquire another by amalgamation

and keep its main office open. "This is circumvented by taking premises and removing the main office to them. One account is transferred to the new main office—which, in fact, may not comprise more than a desk, a ledger, and a clerk—and the fact that the main office has been transferred is duly advertised. The new main office is then closed, and the real main office of the amalgamating bank becomes a branch of the consolidated concern." But what a demoralising waste of energy is involved by endeavours to control a business that can only be healthy if left free!

Apart from this most essential difference between the American and English systems, perhaps the most notable are the strong aversion in the United States to the principle of working through branches, and the common use by banks in America of clerks specially trained as bond salesmen. "They are paid a fixed salary and a commission on their sales. In many respects they are a kind of commercial traveller who, instead of selling ties, underwear, or handkerchiefs, sells stocks and bonds." Such a system seems quite impossible, at first sight, to be worked by English bank officials; but perhaps it is better than leaving the uneducated public to the touting share-pusher.

THE LABOUR SITUATION IN THE MINES.*

THERE is no chapter in our industrial history which is more worthy of study than the events of the last six years in the mining industry. The wage agreement of 1921 may one day prove to have the most far-reaching effects upon our whole wage system. But for the two years of its existence it has had to encounter and live down considerable prejudice, from the fact that it came as the result of a great defeat. This agreement, however, will be a central topic of industrial politics for probably years to come, and it is therefore important that the public should have an adequate account of its origin and the events which led up to it. This need is largely met by Mr Cole's book on the labour situation in the mines during and after the war. Mr Cole has played so great a part in Labour thought in recent years that it is not to be expected that he can altogether fill the rôle of impartial historian. For example, in the chapter on the Sankey Commission, he does not show a very sympathetic understanding of the employers' case, and though he has made every effort to be impartial, the brevity with which he states the opposing point of view leaves a one-sided impression. But, in any case, his book is an important contribution, for it is written with a considerable amount of inside knowledge of the movements that occurred on the Labour side in the critical events which he narrates; and he shows that sound sense of proportion which we believe he shares with the great masses of the workpeople of this country, in recognising that the tragedy of 1921 was essentially a consequence of the economic dislocation of the Great War, and not an episode in a desperate class struggle.

A TEXTBOOK OF ECONOMIC HISTORY.*

THE author of this book, besides being a Professor of Political Economy at Williams College, has been a Professor at Tokyo, and United States Minister to Greece from 1914 to 1921. He ought, therefore, to have a fairly cosmopolitan outlook. Yet his book shows a curious lack of any sense of connection between the various events in the various parts of the world which it describes. Beginning with the year 1763, it records (somewhere) pretty well all the important events in the economic history of Great Britain and the United States, and to a less extent also of France and Germany. Professor Droppers seems, however, never to have decided whether his narrative shall start from the big economic changes of the century which affected all of the countries with whose affairs he deals; or whether he will describe the sequence of events country by country. Consequently the reader is plunged in somewhat confusing fashion from accounts of the rise of cotton, woollen and iron industries generally, to a picture of

* "Outlines of Economic History in the Nineteenth Century." By Garrett Droppers, Ph.D. The Ronald Press Company. New York. 1923.

France before the Revolution; while a chapter on France under the Second Empire leads on without any apparent connection to one on the effect of investment in India. Moreover, even within this plan, the arrangement is sometimes rather bewildering. We were surprised, for instance, to find in the chapter on the rise of the cotton industry no mention of so important an invention as Whitney's cotton gin. But having noted this omission, we came upon it rather awkwardly housed among the effects of American Independence.

There are a very great many facts in this book, and so far as we can judge amid such profusion they are accurately stated. But there is not much else, nor is there any apparent unity underlying the facts, which are indeed, as it were, flung in rapid succession at the reader's head. Dogmatism, and economy of discussion accompany the author even on the occasions when he is tempted aside from the path of concrete events. Consequently the book reads like a student's note book. The following is typical:—"In the year 1810 a committee was appointed by Parliament, known as the Bullion Committee, the purpose of which was to examine the causes of the depreciation of bank notes. Their report is very famous, and their conclusion was that the depreciation was caused by an excessive issue of paper money. That, however, was not Tooke's opinion, and it is probable that the opinion of Tooke was more nearly correct." Not ours to reason why!

ALCOHOL.*

No one to-day defends the unchecked consumption of alcohol as a beverage, for within the personal knowledge of everyone of us there are the saddest examples of its evil effects. Investigators into the conditions of the poor in our towns have stated that something like a half of the existing poverty is due to preventable causes, of which the abuse of alcohol is the chief. Its effect upon crime and the close connection between alcoholism and lunacy, and even mortality, is established by masses of evidence. On the other hand, alcohol undoubtedly has its uses. It can be absorbed into the body as a food without impairing the processes of digestion, and the energy derived from its oxidation can be used for the normal processes of the body—circulation, respiration, muscular work, and the preservation of body temperature. At the same time, when muscular work has to be done the human machine consuming alcohol as fuel works more slowly and at greater expense of energy than with other foods. Alcohol can replace sugar in cases of diabetes, and in a number of other cases is of great value as a medicine. Alcohol in moderation may not merely produce a more convivial social relation, but contribute to recuperation, for what is commonly regarded as its stimulating effect is really due to the fact that it moderates a sometimes excessive activity of the higher nerve centres. As the doses increase, this paralysing effect tends to become intoxication, but at the outset it merely produces an absence of worry and a freer flow of conversation by relaxing the inhibitions imposed by the controlling apparatus of the brain.

These and many other questions are discussed and illustrated from numerous experiments described in an extremely interesting book by Professor Starling, who has undertaken the important task of giving an account of the action of alcohol upon man in the light of the most recent scientific knowledge. Professor Starling in his exposition has been very successful in maintaining an unbiased attitude. But he frankly allows his own outlook to escape in a few lines in his preface, where he says:—

"I cannot pretend to foretell what will be the effect on the unbiased reader of the evidence here presented. As regards myself, it has convinced me that in a civilised society such as ours the abolition of all alcoholic beverages from among our midst, even if carried out by universal consent, would be a mistake and contrary to the permanent interest of the race. If it were enforced by legislation against the wishes and convictions of a large proportion of the members of the community, I believe it would be little short of a calamity."

We may, however, doubt whether the decision will

* "The Action of Alcohol on Man" By Ernest H. Starling. Longmans, Green, and Co. 12s 6d net.

drawn upon the balances brought forward to pay dividends, but in no case has a definite reserve fund been debited.

In the next table we show the ratio to total ordinary and preference capital of net profits and of amounts carried to reserves, &c. :—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1922.	£	£	£
Third quarter....	205,481,600	12,120,153	5.9
Fourth quarter... 1923.	268,105,000	24,228,719	9.1
First quarter....	406,793,000	40,276,870	9.9
Second quarter....	396,675,400	38,945,778	9.8
	1,277,055,000	115,571,520	9.1
Third quarter....	195,420,900	17,317,482	8.9

The ratio of profits to capital in the past quarter is a little lower than the average for 1921, but that of amounts reserved shows a considerable improvement.

The average rates paid on debenture, preference and ordinary capital in each quarter since the beginning of 1920 have been as follows :—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1920.	1921.	1922.	1923.	1920.	1921.	1922.	1923.	1920.	1921.	1922.	1923.
1st quarter	4.25	4.43	4.70	4.61	5.1	5.0	5.3	5.7	10.3	10.3	8.5	9.3
2nd quarter	4.40	4.61	5.00	5.08	5.0	5.6	5.0	5.4	13.7	12.6	8.8	9.9
3rd quarter	4.12	4.45	5.21	4.90	4.9	5.0	4.5	4.3	14.2	9.7	7.6	7.8
4th quarter	4.43	4.52	4.83	..	5.3	5.1	5.6	..	11.6	7.6	8.6	..

The average dividend distributed on ordinary capital in the past quarter was at the modest rate of 7.8 per cent., and very little higher than that distributed in the corresponding period of 1922, when profits were so much smaller, the explanation being that very much larger amounts have been retained in the balance-sheets, as the foregoing figures have shown.

The final table gives the average rates paid by each of the groups, together with the average rate of ordinary dividend shown in our article a year ago :—

	Debenture Capital.	Rate of Interest.	Preference Capital.	Rate of Dividend.	Ordinary Capital.	Rate of Dividend.
Breweries	10,981,931	3.3	11,810,745	4.9	20,534,691	16.1
Gas	913,709	5.0	145,815	6.4	2,324,233	8.8
Hotels, restaurants, &c.	1,425,156	4.3	735,000	5.7	1,401,079	9.9
Iron, coal, and steel	5,897,625	7.0	4,609,125	4.2	11,603,193	9.7
Land, mortgage, &c.	4,763,371	4.6	3,032,955	3.5	4,750,722	6.6
Rubber, &c.	628,986	6.4	542,335	2.7	7,246,346	5.4
Shipping	48,244	4.5	2,225,000	3.1	7,544,540	6.3
Shops and stores	193,400	6.0	394,975	6.3	1,055,250	14.8
Tea	2,810,420	4.0	60,000	6.0	248,822	24.4
Telegraphs, &c.	5,979,718	4.8	11,910,188	3.2	10,302,796	10.2
Textiles	1,015,080	4.7	1,431,980	9.4	16,933,607	7.3
Trust companies	197,349	4.7	102,984	8.0	4,929,982	6.4
Waterworks	14,778,928	5.4	31,794,966	4.3	35,400,009	4.3
Miscellaneous	49,633,877	4.9	71,306,148	4.3	124,114,774	7.8

Six groups show a reduction in the average rate of ordinary dividend, including the textile group, whose profits increased substantially. The land, mortgage, &c., group, on the other hand, pays a slightly higher rate, though aggregate profits were much lower. In neither year, however, did the company whose figures were responsible for the drop in total profits pay an ordinary dividend.

REVOLT OF THE PANEL DOCTORS.

If the dispute of the "Panel Doctors versus the Approved Societies, the Ministry of Health intervening," be not speedily settled, the country will be required to face the wholesale resignation of most of the 13,000 panel doctors who are charged with the medical service of fourteen million people under the National Insurance Acts. The *British Medical Journal*, the official mouthpiece of the powerful Association which is standing behind the panel doctors, declares war in definite terms: "The profession must now decide once and for all whether it will submit to approved society domina-

tion, or whether it will take this opportunity of making its freedom sure.....The only course now open is for the profession to show that no service can be secured under the Acts, whatever the exact terms, until the professional position has been re-established. This means that every insurance practitioner should at once send to the secretary of his Panel Committee his resignation from the service, to take effect on January 1st next." It is expected that the notices of resignation will be secured by October 30th, and seeing that the panel doctors are now very tightly organised and that the British Medical Association is in control of their side of the controversy, there is at least some danger that these expectations will be realised. The Conference of panel doctors on Thursday unanimously accepted the advice of the Association to proceed with the resignation policy.

It is a lamentable business, though when one comes to examine the details of the dispute and to go through the history of the working of the National Insurance Acts, one cannot help feeling that the stand which the doctors are making should not have surprised either the Ministry of Health or the approved societies. The issue now is almost exactly the same as the issue in 1911-12, when Mr Lloyd George was compelled to give way to doctors incomparably less well organised than they are now. Primarily it was not then, and is not now, a dispute over fees, though an attempt to reduce fees now has occasioned the dispute. Then, as now, it was a refusal by the doctors to be controlled by the approved (friendly) societies. As a result of the settlement in 1912, the control over the medical services under the Act was vested by statute in district Insurance Committees representative of all parties concerned. The friendly societies—which expanded into approved societies—were charged with the organisation and collection of insurance cards and payments, the paying out of cash benefits (sickness, maternity, and so on), and the general financial administration. As time has passed the power and influence of the approved societies have gone up, and those of the district Insurance Committees gone down. The societies, as purse holders, have accumulated large reserves against the Insurance Fund's liabilities under the Acts, and for additional benefits—reserves which the doctors erroneously regard as "surpluses"—and have gained the ear of the Ministry of Health, with which they are intimately associated in the financial administration. It was inevitable that they should do so. The district Insurance Committees, which were supposed to look after the medical service, have fallen so completely out of the picture that they are playing no part at all in the present dispute. The approved societies, taking perhaps a too strictly business view, want to get the medical service placed upon the lowest scale of fees which will attract the necessary number of doctors; the doctors object strongly to this rather narrow and sordid view of their functions, and declare further that the approved societies have nothing to do with the determination of their fees, and that interposition by them is an impertinence; the Ministry of Health has tried to hold the balance and keep the peace between the powerful and pushing approved societies and the suspicious and resentful organisation of doctors. So far the Ministry seems to have made rather a mess of things. At any rate, its assumption of authority to lay down terms to the doctors has precipitated the revolt. The doctors look upon the Ministry as being so much under the thumb of the approved societies as to have lost status as an impartial arbitrator.

The solution of the trouble is fairly obvious. It was brought about by an attempt on the part of the approved societies to have the fees of doctors reduced. The Ministry has fixed a scale of fees which it considers a just compromise between the societies and the doctors. The doctors decline to accept the Ministry's scale of fees, but have offered to accept the award of impartial arbitrators. The Ministry has rejected arbitration because the Minister regards "his position as that of an arbitrator with the added responsibility of his Ministerial duty." The doctors reply by threatening resignation of their appointments on the panel. It is clearly necessary to remove the whole question of fees out of the heated atmosphere of suspicion

Courtaulds, in the textile list, spurted at first upon the idea that Protection would be good for the company, but the rise brought in a good many shares, and the price promptly gave way. Coats fell sharply on disappointment at the dividend and bonus being no more than those of a year ago. A few of the motor prices improved, because of the excellent business which, according to the newspapers, has been done at the Motor Show. Dunlops rose to 9s 3d bid. Lively dealings in *Daily Mail* debenture have taken place between 3½ premium and a point higher. Newspaper shares are lower. There is not much doing in the tobacco group. Aerated Breads gave way on the reduction in the dividend, but the fall tempted bargain-hunters, and there was some recovery. Other catering, hotel, and stores shares are little changed on the week. Illumination stocks and shares remain steady. Hudson's Bays have weakened.

The Kaffir Market keeps good, in consequence of the high price at which gold now stands owing to the movement of the New York rate of exchange. Moreover, the end-December dividends are anticipated with a good deal of optimism, and this is helping the market, though public support is comparatively slender. Rhodesians also are dependent upon their professional and semi-professional supporters for activity. A dramatic rise in the price of tin brought about sympathetic advances in the shares of Malayan tin companies, while a few West Africans also improved, and the Cornish issues, more particularly Geevors, advanced briskly. Indian mines recovered a trifle after their recent weakness. In Mexican and Russian mining shares there is not much business doing.

NEW ISSUES.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Peninsular and Oriental Steam Navigation Company.

Incorporated by Royal Charter in 1840. Paid-up capital amounts to £6,632,518, and there is a debenture stock (not including the present issue) of £4,987,560. This is an issue of £3,500,000 5 per cent. debenture stock at 98. At the time of the previous issue in 1922 of a similar amount of 5½ per cent. debenture stock, the right was reserved to issue further stock, but not exceeding £3,500,000, to rank *pari passu*. The whole of the £7,000,000 of stock is secured as a floating charge on the undertaking and assets, ranking next after the 3½ per cent. debenture stocks, of which £1,487,560 is outstanding. On and after October 1, 1930, the company may redeem the whole or part of the stock at par, and any stock not previously redeemed will be repaid at par in 1940. The proceeds of the issue will be applied to the general purposes of the company, and more especially to the construction of new vessels, in replacement of those destroyed by enemy action during the war, and to build others to meet the growing re-

quirements of the business. The interest on the outstanding 5½ per cent. debenture stock and the 5 per cent. debenture stock now issued will amount to £367,500 per annum. The cash dividend distributed in respect of the last ten years, for which the accounts have been completed, on the preferred and deferred stocks, after payment of interest on the then existing debenture stock, has averaged £537,652 per annum. During the same period the accounts show that the reserve, insurance, and contingent funds have been increased by £4,202,192. The existing 5½ per cent. debenture stock is quoted at 103 ex interest, at which price the yield works out at £5 2s 6d per cent. The new issue is evidently based on this quotation. This is an excellent security, and much useful information is given in the prospectus. This issue was well received.

The Tata Power Company, Limited.—Incorporated in 1919 under the Indian Companies Act, 1913. Authorised share capital 90 million Rs., equivalent to £2,000,000, taking the rupee at 15 to the £. The issued share capital is £1,742,320. During the week two separate issues of debenture stock of this undertaking have been brought before the public. It is to be hoped that investors have not confused the issue guaranteed by the British Government with that of the "B" mortgage debenture stock. The first and more important issue is that of an offer of £1,000,000 of 4½ per cent. guaranteed "A" mortgage debenture stock, 1929-48, at 97. Principal and interest is guaranteed by the British Government under the Trade Facilities Acts. The stock will be repayable between 1929 and 1948 by the operation of a cumulative sinking fund, to be applied in purchasing stock at or under par, or in redemption of the stock at par by drawings, each £100 of stock being given a distinctive number for this purpose. The company may also redeem any outstanding stock at par on or after May 15, 1934. The stock will also be secured by a first specific mortgage on the lands and fixed assets of the company, and a first floating charge on other assets, including uncalled capital, and the company may not create any mortgage or charge ranking in priority to, or *pari passu* with, the stock. As this issue is guaranteed by the British Government the merits of the Tata Power Company as a business undertaking are of secondary importance, and obviously this guaranteed stock ranks amongst gilt-edged securities. The second issue has been effected by means of an "offer for sale." This consists of £750,000 7½ per cent. "B" mortgage debenture stock at 96½. The stock forms part of a total authorised issue of £1,000,000, and will be secured by a specific mortgage upon the electric licence, lands, buildings, and fixed plant and machinery of the company and a floating charge upon its other assets, present and future, ranking immediately after similar charges upon the first-mentioned issue have been met. The trust deed will provide for the establishment of an annual cumulative sinking fund, commencing in the year 1929, of 2 per cent. on the amount of stock at any time issued, to be applied annually in redeeming stock by purchase or by drawings at par. The company reserves the right, subject to the previous redemption of the 4½ per cent. first mortgage debenture stock, to redeem all or any of the "B" debenture stock at par on any interest date after November 1, 1938, on giving three months' notice. Stock not previously redeemed is to be paid off at par on November 1, 1950. This enterprise is not yet completed, but its revenue is estimated at £400,000 per annum. Interest and sinking fund on the "A" debentures are estimated to absorb £80,000, leaving £320,000 available for the interest and sinking fund, amounting to £71,250 per annum on the present issue. But investors should realise that estimates of profits and actual profits earned are often two very different things.

Dominion of New Zealand.—County of Southland Electric Power Board 5 per Cent. Debentures.—Issue of £750,000 bonds to bearer, at the price of £99 per cent., principal and interest being unconditionally guaranteed by the Government of New Zealand. The issue represents the balance of £1,500,000 which the board has power to borrow and of which £750,000 was issued in August, 1921. The principal will be repaid at par on September 15, 1954, but the board has the right to redeem the debentures at par on or after September 15, 1936. The loan will provide additional funds for the erection and equipment of the County of Southland Electric Power Station, most of the plant for which, it is stated, has been or will be purchased in this country. A good 5 per cent. security.

Hall and Co., Limited.—Authorised share capital, £400,000, divided into 200,000 6 per cent. cumulative preference and 200,000 ordinary shares, all of £1 each. Of these, 75,000 preference and 110,000 ordinary shares have been already issued. This is an issue of 35,000 6 per cent. cumulative preference shares of £1 each at par. The company carries on a coal and builders' material, &c., business, with head office at Croydon. The foundation of the business dates back to 1835, and it is now represented at most of the principal towns served by the Brighton section of the Southern Railway. For the five years 1919-23, 15 per cent. has been paid on the ordinary shares, and the last three annual reports have shown average net profits of £33,833 per annum. The dividend on the pre-

FOREIGN MANUFACTURERS' POSITION.

The foreign manufacturer is in exactly the opposite position. He has the output in his own country reserved to him. At the

same time, he can enter the English market without let or hindrance, and free also of taxation. On the face of it, his cost of production is bound to be lower, and, in addition, he can job off surplus stocks in this country instead of at home, and so keep his own market clean.

I wish, therefore, to put the following conundrums to the shareholders and employees of the company: Are these conditions fair to producers in this country? Do they not divert production and employment to foreign countries? From our point of view, so long as we manufacture in England we can only sell in England. If we were to transfer the whole of our production to France we could sell both in France and in England, and so reduce the cost of production. Other Continental countries would also be open to us, since France has tariffs with which to bargain. Ours is not an isolated case. The same conditions apply to all our customers, and so intensify the evil.

The stereotyped reply to such conundrums is that it does not matter what the foreigner does, because imports are paid for by exports. Exports of some sort do pay for imports, but is it a healthy sign that our principal export should consist of coal?—an irreplaceable raw material which the foreigner has not got in the same quantity or quality, and has to have in order to compete with us. Under present conditions England is becoming a country in which to sell, not to manufacture, but without production no country can exist except possibly as a holiday centre.

UNFAIR COMPETITION.

At present Erinoid is doing very well because we have a unique material to sell, but unfair competition from abroad is depressing every industry, and that will ultimately react on our trade here.

I am sorry to have detained you so long, but I feel this complex question is not a political issue, but a serious business question of importance to capital and vital to employees of all grades in this country. I think producers ought to state their case whenever possible, and not leave it to those producers who only produce political speeches, on which there is neither a tariff nor a tax.

The Chairman concluded by moving the adoption of the report and accounts and the payment of a dividend at the rate of 4 per cent., less income-tax at 4s 9d.

Mr P. M. Bright, J.P., seconded the resolution, which, after the chairman had replied to a few questions, was passed unanimously.

The election of Mr C. E. Cleeve as a director was confirmed; Mr F. W. Beck, the retiring director, was re-elected, and Messrs Woodhouse and Wilkinson were reappointed auditors.

A hearty vote of thanks to the chairman, the directors, and the managers concluded the proceedings.

ARGENTINE GREAT WESTERN RAILWAY COMPANY, LIMITED.

DIVIDEND POSITION—AN INTERESTING COMPARISON.

The ordinary general meeting of the Argentine Great Western Railway Company, Limited, was held, on the 6th instant, at Winchester House, London, the Rt. Hon. Viscount St Davids (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: You know that the preferred stock ranks for dividend with the first preference stock of the Buenos Ayres and Pacific, which is a cumulative stock, that the ordinary stock ranks for dividend with the second preference stock of the Pacific, which is a non-cumulative stock, that when the Pacific on its ordinary stock pays more than 5 per cent. and up to 6 per cent., both the preferred stock and the ordinary stock rank for dividend with the Pacific ordinary stock up to that extent. Well, the result of this

perhaps rather cumbrous system of dividend has been that over a period of 15 years the average dividend of this company works out at 4.37 per cent., and I venture to say that that, on the whole, is a bigger average dividend than the stockholders would have received if this company had been running on its own. At any rate, we are able to congratulate ourselves to-day that for the first time for 15 years we have got back to a dividend of 6 per cent., and we all hope we shall stay there.

There is one thing we mention in the report about which I think I ought to say a word, and that is the new workshops and running shed. These are practically the same on the Argentine Great Western as they were 25 years ago. At present the workshops are quite inadequate. In 1898 the total number of locomotives in service was 58; to-day it is 199. Much of the movement of materials, lifting of engines, &c., has to be done by manual labour, being a slow, costly and dangerous method. With proper lifting and transporting appliances less labour would be necessary, and there would be less danger of accidents. In the running shed the average number of engines dealt with per day in 1898 was nine. To-day the average number dealt with is from 40 to 50, and, owing to the small size of the shed, three-fourths of the work has to be done outside in the open air, where the men are exposed to all kinds of weather. The total estimated cost is £416,000. It was proposed to spread this over five years, but it may be necessary to accelerate completion.

The new policy which we explained to you last year of our putting in quite small branch lines and sidings has been a very successful one. The longest of those branch lines is only 21 miles, and some of the sidings are less than a mile, but you may take it that, as a whole, those branches and sidings pay from the day they are put in—not in themselves, but in the long haul over the Argentine Great Western and Pacific main lines.

Comparing our position with that of 20 years ago, I may say that at that time we had 329 miles of line; we now have 989 miles, or more than treble. Our capital expenditure then was £4,819,000; now it is £13,374,000. The dividends and interest we distributed were £220,000; now they are £571,000. We carried then 412,000 tons of goods, whereas now we carry 2,094,000 tons—a fivefold increase. Then we carried 482,000 passengers; we now carry over 3,000,000.

The Rt. Hon. Lord Lawrence of Kingsgate seconded the resolution, which was carried unanimously, and a vote of thanks to the chairman and directors terminated the proceedings.

BAHIA BLANCA AND NORTH-WESTERN RAILWAY COMPANY, LIMITED.

QUESTION OF THE TRANSFER OF LINE.

The annual meeting of the Bahia Blanca and North-Western Railway Company, Limited, was held, on the 5th inst., at Winchester House, London, the Viscount St Davids presiding.

The Chairman, in moving the adoption of the report, said: I think there is only one thing in which you are particularly interested, and that is to know how the matter of the transfer of this line from the Pacific Company to the Buenos Ayres Great Southern is progressing. If, after we had approved it, the transfer had been sent straight to the Argentine Congress, the matter might have been disposed of a long time ago, but, unfortunately for the speed of the transfer, there was a great question as to the law on the subject, the question being whether the executive power—that is, the President of the Argentine—had the power of approving the transfer or whether it had to go to Congress. For some time the lawyers had an open mind on the question, and eventually they decided that the transfer had to go to Congress. It was sent to Congress, but it was only sent just at the very end of the session,

when it was impossible for it to be taken. Congress does not meet again until May 24th, and therefore this question of the transfer of the line cannot come before it until some time after that date. That is how the matter stands. For my part, I have always considered that it would be a good thing for the Argentine that this line should be in the hands of the Southern. I have always considered that, and it only remains to be seen whether the Argentine Congress takes that view. I hope it will.

As regards the events of the past year, we had a very good harvest on the Bahia Blanca line, and I am sure you will be interested to hear—although we do not keep the accounts of the Pacific and the Bahia Blanca separately—that, from the tonnage carried on the Bahia Blanca line, one can have very little doubt that the Pacific last year did very well out of it. It was about time the Pacific should do well out of the line, as they had had several very unsuccessful years under the lease.

With regard to the present year, the crop prospects are quite excellent. I have often pointed out that the crops cannot be said to be safe until the middle of December; but at the present time the weekly reports are exceedingly good. That, at any rate, is very gratifying to us. The outlook at the moment as far as crops are concerned could hardly be better than it is. I need not point out to you that if we have two really good harvests on the Bahia Blanca line in succession, after the bad years they have experienced for some time, it ought to lead to the permanent development of the district, which we all of us wish to see.

The report was unanimously adopted.

LONDON MARITIME INVESTMENT COMPANY, LIMITED.

EMINENTLY SOUND POSITION.

CAPITAL AND RESERVE FUND MORE THAN INTACT.

The twenty-sixth annual general meeting of the proprietors of the London Maritime Investment Company, Limited, was held, on the 8th instant, at Winchester House, Old Broad street, London, E.C.

The Right Hon Lord Kysant, G.C.M.G. (chairman of the company) presided.

The secretary (Mr O. A. Hall) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—The report and accounts for the year ended September 30, 1923, have been in your hands for some days. I presume you will, as usual, take them as read. (Agreed.) The accounts set out clearly the financial position of the company, but I will refer briefly to one or two outstanding features.

The result of the year's working shows a net profit of £57,062, which, with the balance brought forward from the preceding year, makes a total available sum of £62,083. The dividend upon the 5 per cent. preference stock absorbs £19,054, and, after adding £7,471 to the reserve fund, the directors recommend the payment of a final dividend on the ordinary stock of 4 per cent., less income-tax, making, with the interim dividend, a total for the year of 8 per cent., less tax.

SUBSTANTIAL RESERVE FUND.

You will notice that the reserve fund now amounts to £192,500, and that this sum is separately invested entirely in British Government securities. We realise that a slightly better revenue return would accrue from this fund if we adopted the policy of placing the money in ordinary investments, but in the case of an investment company such as ours we think that any such advantage is more than compensated for by having—quite apart from the other investments of the company—a substantial reserve fund invested in gilt-edged securities, which, owing to their comparatively non-fluctuating character, are readily realisable. Some, no doubt, would consider our policy in this respect too conservative, but we are convinced that, in the long run, such a reserve fund adds permanent stability and strength to this investment company, and is in the best interests of our stockholders.

The company has no debenture liability. A valuation of the company's investments shows that the capital and reserve fund are more than intact. After 26 years' working this is a satisfactory state of affairs, and indicates that your company is in an eminently sound position.

DETRIMENTAL EFFECTS OF HEAVY TAXATION.

Business men realise the enormous difficulties which confront the Chancellor of the Exchequer in these abnormal times. Experience in recent years, however, has shown, in a more acute form than ever before, the detrimental effects of heavy taxation on trade, commerce and shipping, resulting in the discouragement of energy, enterprise, and initiative, the full play of which qualities is especially needed in the work of reconstituting our commercial life after the upheaval caused by the war.

At the same time, I trust British Governments will always adhere to the safe and sound financial policy they have hitherto pursued. In this connection I welcome the Prime Minister's recent pro-

nouncement that he will have nothing to do with quack panaceas—such as currency inflation.

THE TRADE OUTLOOK.

The inevitable recovery in the shipping industry, in which your company is largely interested, may be delayed. Although the volume of world trade has undoubtedly been expanding, it is still less than it was in 1914, while the number of steamers of all nationalities afloat is very much greater than it was nine years ago.

The general world situation is extremely difficult and complex, and depends for any permanent improvement upon circumstances largely beyond our power to influence. To a great extent, therefore, we are compelled to await events and developments, but whatever effort is within our own sphere we can and should put forward. Especially should we, as business men, prepare by all possible means for improved times, so as to be ready to take advantage of every opportunity that may arise for development and progress.

I now beg to move: "That the report and accounts for the year ended September 30, 1923, as submitted, be received and adopted, and that the dividend as recommended therein be declared and paid."

Mr Arthur A. Baumann seconded the resolution, which was carried unanimously.

On the motion of the Chairman, seconded by Mr George Dodd, Mr Arthur A. Baumann, the retiring director, was re-elected.

The auditors (Messrs Fookes Hickman and Co.) were reappointed, and a vote of thanks was accorded to the chairman and directors, on the motion of Mr Teuson.

The proceedings then terminated.

SUDAN PLANTATIONS SYNDICATE, LIMITED.

CHAIRMAN'S CONFIDENCE IN THE FUTURE.

MR ECKSTEIN ON HIS VISIT TO SUDAN.

The 16th ordinary general meeting of the Sudan Plantations Syndicate, Limited, was held, on the 8th inst., at Winchester House, Old Broad street, London. Mr F. Eckstein (the chairman of the company) presided.

The secretary having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: I would like to say at once that the outstanding feature of our last year's operations was good progress all round.

The erection of buildings for our staff proceeded, large new areas were prepared for cultivation, 40 new gins were added to our factory at Wad Medani, and last, but not least, the new pumping installation at Wad el Nau was completed, and all the work necessary for the doubling this year of our area under cotton in the Gezira was carried through.

On the other hand, our profit and loss account may perhaps not be quite up to your expectations. Gentlemen, this should not disquiet you. After a lengthy stay in the Sudan at the beginning of this year, I have returned with unshaken confidence in the soundness and ultimate success of our undertaking. We are working on right lines in a country whose future is bound up with steady progress in agricultural development. No one, in my opinion, is more convinced of this than that very efficient Government in Khartoum.

BALANCE-SHEET ITEMS.

Following our usual practice, let us first examine the balance-sheet. On the debit side you will find the share capital increased by £150,000, thus making it now £450,000. These new shares, which we offered to you at a moderate premium, were all taken up with the exception of 175 shares, arising mostly through fractions—which we disposed of in the open market at the then ruling price. Our share premium account has consequently risen from £411,211 14s 6d to £636,744 5s 7d. Hosh reserve account is raised by £40,000 to £80,000. The other items do not require any explanation, except the profit and loss account, to which I will refer presently.

On the credit side you will find rather heavy increases all round, owing to our policy of rapid development.

The first item we used to call concession and land account. This year we have done away with the word concession and substituted the heading "Zeidab Station" and land account. The reason for this change is that the Sudan Government, having satisfied themselves that we have complied with all the terms of the concession, have now signed the deeds entitling us to the freehold of the property. This, I am convinced, will please you as it pleases your board.

Zeidab Development is practically unchanged but Zeidab pumping station is increased by £4,333, and will be further increased this year. In explanation I must tell you that the irrigation water

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

supply at this station is obtained by two separate but adjoining pumping installations. Each unit consists of two 30-inch centrifugal pumps driven by two steam engines of about 300 horse-power each. In view of the highly satisfactory oil fuel consumption results at Hosh, we felt it advisable to replace one steam pumping set by a Diesel oil engine installation. This will cost us about £20,000 to £25,000—against which outlay we anticipate a considerable saving in our fuel bill.

It is obvious that any saving such as this in costs of production would be of considerable importance, and particularly so in the event of any future decline in cotton prices. Wad el Nau pumping station is now finished, and figures at £177,312 14s 6d. Pumping is in full swing.

Gezira area development, canalisation, buildings and furniture, ginning factories, light railways, all show substantial increases.

The stock of cotton remaining unsold on June 30th has been valued on a conservative basis.

Our total shipments for the past year, inclusive of 241 bales purchased locally, amounted to 12,266 bales, of which 6,890 bales, including the whole Zeidab crop, had been sold by June 30th. To-day I am happy to inform you that the remaining 5,376 bales have all been disposed of at prices exceeding our valuation. A new entry is Sadani Concession, £1,000.

We have taken an option on two estates, comprising about 22,000 acres, situated in the former German East African Colony. A certain amount of cotton was grown by the former owners, and we are having the property examined by an expert. At this stage we are unable to say whether this venture will prove profitable or not; in any case, our risk is very small.

Two further new items refer to the new Kassala Cotton Company. From a circular which was sent to all shareholders in January last you will have seen that in this new company, of which I have more to say later on, your syndicate subscribed 250,000 6 per cent. preference shares of £1 each, now is paid up, and 500,000 ordinary shares of 1s.

Now, you will notice that instead of the 500,000 shares, only 475,000 figure in our balance-sheet. The reason of this is that during my absence in the Sudan and before the shares were dealt in my colleagues passed a resolution placing at my disposal 25,000 shares at par, these shares to be distributed between myself and two of my colleagues who assisted me in the long negotiations with the Sudan Government, which resulted in the formation of this company. In passing this resolution, your board stipulated that you should be fully acquainted with these facts. I am naturally grateful to the board for what they have done, but I also desire to have your approval, which I feel sure you will not withhold.

British Government securities and cash at the end of our financial year amounted to close on £829,000, which is comfortable and satisfactory, but necessary and wanted in the near future. To carry out all the operations necessary to the entire fulfilment of our programme further funds will be required.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss account, you will see that our income from all sources amounted to £203,829, whilst the outgoings, in which we included, as usual, a bonus to our staff and a sum to the staff provident fund, were £118,748, leaving us with a net profit of £85,081.

In connection with our expenditure, I feel bound to point out that heavy outlay is now incurred, and that this outlay will be still greater owing to our having to train a considerable British staff in anticipation of the completion of the Makwar dam and the consequent increased area which we shall have to deal with all at once.

Regarding the Makwar dam, the Sudan Government have notified us that they expect to finish this in July, 1925. A definite notification will not be given to us until July next year, viz., 1924, but we have to be prepared for such a contingency.

In July we paid you an interim dividend of 7½ per cent., and we now propose to pay you a final dividend of 10 per cent., making 17½ per cent. in all, and to add £6,331 11s 8d to our carry forward.

When addressing you last year I said, in connection with the 50 per cent. increase of our capital:—"You will readily understand that it is difficult for your board to maintain the same standard of dividends in the immediately following year."

Gentlemen, this exactly has happened, but to-day I think I can say that, subject to crop results, we shall certainly hope to do better during the current season, as we have a considerably larger area under cotton.

STATIONS' RESULTS.

Let me now tell you what our stations have done.

Zeidab.—I ventured to forecast last year a profitable result of our operations there. This, I am happy to say, has come true. We had a good crop, and realised it at good prices. For the coming year the prospects are likewise promising. We have already picked something like 9,000 kantars, and the first shipment is on the way. Last year we had 4,317 feddans under cotton.

ton. This year, including water tenants, we have a somewhat larger area.

Tayiba has also done well. From 1,680 feddans we gathered 7,457 kantars, or nearly 4½ kantars per feddan.

This year we have 1,765 feddans under cotton, but the crop has suffered somewhat from heavy rains, necessitating a good deal of re-sowing.

Barakat yielded 8,186 kantars from 2,006 feddans, just slightly over four kantars per feddan, which is quite satisfactory.

Hosh.—At the time of our meeting last year the crops at this station promised to be extraordinarily good, but, unfortunately, later on we suffered rather badly from an insect pest called thrips, which reduced the expected yield very considerably. However, we managed to pick 23,392 kantars, equal to 3½ kantars per feddan.

In addition to these stations, we have this year the new areas served by the Wad el Nau pumping station, and extending roughly to 10,000 feddans, which means that our cotton area in the Gezira is doubled. These additions augur well for the future, and speak highly for the activities of our staff in the Sudan.

According to our latest cables, it is too early to express an opinion regarding the new crop, but this much appears certain, we shall have to deal this year with a rather late crop, which in itself is never quite satisfactory.

CHAIRMAN'S VISIT.

As mentioned before, I spent the early part of this year in the Sudan, and you might probably like to hear something of my work there and of the impressions I formed.

I left England towards the end of last year, and arrived towards the middle of January at Port Sudan, where I was met by our managing director, Mr Alexander MacIntyre, and our manager, Mr H. Poyntz-Wright. We stayed two days at Port Sudan inspecting the harbour, its shipping facilities, and a ginning factory belonging to the Government, and we selected some plots of land suitable for warehousing cotton in the future.

We then motored to Suakin, and again from there to Tokar, which I was most anxious to see, it being a large cotton area, producing cotton of very fine quality. But what interested me even more was the fact that the conditions under which cotton is grown in Tokar are similar to those ruling at Kassala. In both places cotton is planted after the annual flood, and thereafter receives no further watering. I think I saw everything I wished to see, and my thanks are due for the great courtesy and assistance I received from all the Government officials there. From Tokar I returned to Suakin, and went by train to Zeidab, our most northerly station. In company with our senior inspector there, I visited the whole estate, and renewed my acquaintance with all our officials.

The crop at Zeidab, consisting of American cotton of an early maturing kind, was nearly gathered, and, as I have already told you, was very satisfactory; so I left in good heart for Khartoum, where I paid my respects to his Excellency the Governor-General and other officials. After two days I left for Barakat, which is the headquarters of our syndicate's operations.

PUMPING STATIONS.

After my arrival there I lost no time in visiting all our stations, where picking was in full swing, and where I heard for the first time no complaints as regards lack of labour. I have already dealt with the results of our various stations, and so I wish to say a word or two about our two latest pumping stations.

First I want to mention Hag Abdulla. Two years ago I saw only a big hole in the ground; now I found a complete pumping installation equipped in the most modern style, throwing out water at the rate of four tons per second, and enabling us to irrigate something like 6,000 acres of cotton on the Hosh area. The plant was working without a hitch, and does not give us an anxious moment.

Next I visited the new Wad el Nau pumping station. Here a year earlier there had not been even a hole in the ground. On my arrival I found very near completion a most perfect installation, and as good as any to be seen in the whole of Africa, and it is certainly a monument of quick work well done. The three pumps are capable of delivering six tons per second, 360 tons per minute, which is equal to 80,000 gallons. The maximum head is 25 metres, and the rising main is 6 feet diameter and 2,170 feet long, and is capable of irrigating 10,000 feddans of cotton land.

Barakat pumping station is an old installation and not satisfactory, but it will not be needed much longer. Tayiba pumping station was working well.

KASSALA COTTON COMPANY.

After a week's stay at Barakat, I left with Mr MacIntyre and Mr Hewison, Director of Agriculture, for Kassala. This trip took nearly a fortnight, half of which was spent at Kassala and the Gash Delta. I am satisfied that you are interested in a very promising concern, but for results you must have patience.

The new company will plant their first crop in 1924, but works such as digging channels have already started.

It may interest you to hear that during the past year something like 13,000 kantars of good cotton was picked in the Kassala Province.

Whilst at Kassala we had the privilege of meeting his Excellency the Governor-General and several members of his Council, and consequently were enabled to have useful and helpful conferences regarding future developments there.

We left Kassala full of confidence in the future, and returned via Khartoum to Barakat, where I spent another most interesting fortnight inspecting chiefly the outlying areas of the 300,000 acres scheme.

We propose to divide these 300,000 acres into 20 stations of about 15,000 acres, and each block will be self-contained. We are now in the midst of carrying out this programme, and have actually completed so far about five blocks.

We have also to build and erect four new ginning factories, two of which we hope to complete during the coming year.

RESEARCH.

Another matter of considerable interest is an agreement come to between the Sudan Government and your syndicate, by which it is intended to reorganise our present research work. Sir John Russell, the famous Principal of Rothamstead, and Mr Leake, Cotton Expert to the Indian Government, are on their way to the Sudan for the purpose of investigation and making recommendations in this respect. We are all greatly looking forward to the report of these gentlemen, which, I have no doubt, will prove to be of the utmost value to us and to the Government.

Lord Lovat, K.T., seconded the resolution, which was carried unanimously.

A further resolution was passed as an extraordinary resolution making certain alterations in the articles of association.

The meeting terminated with a hearty vote of thanks to the chairman and directors.

BRITISH NORTH BORNEO (CHARTERED) COMPANY.

COMPANY'S SOUND POSITION.

The eighty-first half-yearly meeting of the British North Borneo (Chartered) Company was held, on the 6th instant, at River Plate House, Finsbury circus, London, the Right Hon. Sir West Ridgeway, G.C.B., G.C.M.G., K.C.S.I., the president of the company, presiding.

The secretary (Mr A. C. Pearson) read the notice convening the meeting, and a report reviewing the progress made by the various branches of the administration, particularly trade, industries, development, medical, land and education, &c.

The President then addressed the meeting, and, in moving the adoption of the report and accounts, said that the progress report just read showed how seriously the world-wide stagnation of trade had affected the company's industries. With regard to rubber, the restriction policy had been on the whole satisfactory, but the result had been by no means so successful as anticipated. So far as Borneo was concerned, however, the resulting rise in price had been very welcome, and had sufficed to enable the companies in their territory to keep their heads above water, and in some cases to pay a dividend.

The timber industry showed healthy development, the special problem here being that of markets. Tobacco had been handicapped by poor prices, and low prices had also exercised a depressing influence on the coal industry. All the industries of Borneo had, as a fact, suffered from the prevalent world-wide depression, and he thought the shareholders should congratulate themselves that they had stood the storm so well during the last few years.

As to their financial resources, the net revenue of 1922 was only about £5,700 less than in 1921. Owing to the improved prospects, especially in the rubber industry, the board felt that they were entitled to recommend a dividend of 3½ per cent., instead of 3 per cent. Their position to-day was undoubtedly sound. Apart from the value of the territory and the railway, telegraphs and other works and buildings, their fluctuating assets amounted to about a million pounds, and on the other side of the accounts there was a reserve of over £300,000, which was more than sufficient to cover any possible loss which might arise from the sale at any time of any of their investments. That reserve did not exist in cash, but was available for writing down the book value of their assets if at any time it was considered necessary to do so. Owing to the improvement in the rubber industry the various companies to which they had made advances were gradually repaying them, and the company was beginning to feel some slight benefit from the improved position. Advances made to the companies so far in the current year had been more than covered by repayments.

The report was adopted, after some discussion.

TANGOEL RUBBER ESTATES, LIMITED.

ESTATES SATISFACTORY CONDITION—"ALL-IN" COST REDUCED.

The annual general meeting of the shareholders of the Tangoel Rubber Estates, Limited, was held, on the 7th instant, at the registered office, Fenchurch House, 5 Fenchurch street, London, Mr Walter Hilliers (the chairman) presiding.

The representative of the secretaries (Messrs Rowley Davies and Co., Limited) having read the notice convening the meeting and the report of the auditors,

The Chairman said: As you will have seen, the state of upkeep is satisfactory, and, as the same applies to the conditions generally obtaining on the estate, there is nothing more to say on the subject.

The "all-in" cost has been reduced by about 3d a pound as against last year, and this, taking all circumstances into consideration, is satisfactory, especially so as the reduction has not been effected at any sacrifice to the estate itself or to the staff.

We have again agreed to join the restriction scheme, although, as you know, the property being situated in the Dutch East Indies, we are not obliged to do. It should be remembered that our joining the scheme entails a rather heavy sacrifice in crop, which, for an estate of this size, means a severe handicap on its profit-earning capacity and its cost of production.

Taxation in this country, as well as in Java, has again absorbed an altogether too large proportion of the profits, but we have a claim for a refund of a good part of the money paid in Java, and we think we should be successful.

The forward sale of 60 tons of our production, to be delivered in monthly quantities from January to December, 1924, at an equivalent of 1s 7d per lb London (including secondary grades), might be considered, in comparison with present values, as satisfactory. I now beg to move: "That the directors' and auditors' reports and audited balance-sheet and accounts to June 30, 1923, as circulated to the shareholders, be taken as read, and that the same be and are hereby adopted, and that a dividend of 5 per cent. on the share capital of the company be declared and paid forthwith to the shareholders on the books of the company at this date."

Mr G. A. FitzAdam-Ormiston seconded the motion, which was unanimously adopted.

Mr Lucas proposed a cordial vote of thanks to the chairman and directors, and also to the staff in the East, for their services during the past year.

Mr J. E. Beckingham seconded the motion, which was unanimously accorded, and, the chairman having acknowledged the compliment, the proceedings terminated.

NORTH ANANTAPUR GOLD MINES, LIMITED.

PROMISING NEW INTERESTS.

The sixteenth ordinary general meeting of the North Anantapur Gold Mines, Limited, was held, on the 6th instant, at 6 Queen street place, London, Mr V. Herbert Smith (the chairman) presiding.

The secretary (Mr W. L. Bayley, F.C.I.S.), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The profit for the year amounted to £17,922, out of which dividends were paid amounting to 4s 6d per share on the preference and 6d per share on the ordinary shares, both less income-tax. There remains a credit balance of £3,538 to carry forward, subject to corporation profits tax.

In the last report shareholders were advised of the discovery of ancient workings on gold-bearing quartz reefs in the Gooty Taluk, some 35 miles from the Anantapur goldfields. Prospecting licences have been acquired, and the limited amount of exploratory work already carried out warrants the more extended programme of exploitation which it has been decided to undertake. Inspection of this area by a mining engineer from the Kolar goldfield confirms the opinion that the outlay is amply justified. In the report you are advised that payable copper ore has been encountered at the Sideshur area, Chota Nagpur, North-East India, and subsequent advice from that field intimates that payable ore has been struck at a second section of the property, which still further improves the position and prospects.

In regard to the gold mining property in Sumatra, in which the company is interested through the Continental and General Exploration Company, Limited, ore of high gold value has been met with on one of the main reefs, and the outlook at this area can also be regarded with satisfaction. The exploratory operations are being conducted with vigour, and the further results are looked forward to with keen interest. At the close of the financial year the company held 15,392 shares of £1 each, 10s per share paid, in the Anglo-Canadian Explorers, Limited.

The directors of the Anglo-Canadian Explorers increased the capital so that further properties could be acquired. The nominal capital was increased from £65,000 to £125,000, and your directors decided to subscribe for a further 10,000 shares, of which 5,392 shares had been allotted at June 30th last. The various enterprises in which this company is associated appear to possess great potentialities, and we have good reason to anticipate that before long some of these will prove financial successes.

The Hon. Lionel Holland seconded the resolution, which, after Mr Arthur Taylor had given details of the developments carried out during the year, was carried unanimously.

GOVERNMENT RETURNS, &c.

PUBLIC INCOME AND EXPENDITURE.

RECEIPTS INTO AND ISSUES OUT OF THE EXCHEQUER.

British South Africa	Norway
Sweden	Germany
	Netherlands
	Belgium
	Switzerland
	U.S. America
	Egypt
	Kenya
	British India
	Other countries
Total declared value of imports	Total declared value of exports

Messrs Samuel Montagu and Co. write on November 7th as follows:—

GOLD.

The Indian and Continental demand not being on a large scale, it is probable that the greater part of the moderate supplies available this week will be sent to the United States of America.

SILVER.

The market has shown a steady tone, in consequence of bear covering and some inquiry from China, not always at a price high enough to lead to business. Supplies from America have been fairly free, but other suppliers have been rather reluctant in view of the speculative position of affairs consequent upon the "corner" in Bombay. At this season of the year, when preparations for the Chinese New Year (February 1924) loom on the horizon, dealers are slow to sell for forward delivery, lest the stock in Bombay should be held tightly and be not available for possible China requirements. The situation, however, by no means begets confidence. We are advised from New York that the undelivered silver against U.S. Government purchases under the Pittman Act for the period ending October 23, 1923, amounted to approximately 5,400,000 ounces.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Oct. 15, 1923.	Oct. 22, 1923.	Oct. 31, 1923.
Notes in circulation	17,927	17,948	18,082
Silver coin and bullion in India	9,747	9,768	9,902
Silver coin and bullion out of India	2,432	2,432	2,432
Gold coin and bullion in India	5,748	5,748	5,748
Gold coin and bullion out of India	5,748	5,748	5,748
Securities (Indian Government)	5,748	5,748	5,748
Securities (British Government)	5,748	5,748	5,748

No silver coinage was reported during the week ending 31st ult. The stock in Shanghai on the 3rd inst. consisted of about 26,000,000 ounces in sycee and 35,000,000 dollars (no advice received regarding number of bars), as compared with about 27,000,000 ounces in sycee, 38,000,000 dollars, and 1,770 silver bars on the 27th ultimo.

Tronoh		

£223,311; leaving a net profit of £470,848, against £345,475. The dividend is raised from 10 to 12½ per cent., free of income-tax. The reserve fund now stands at £1,620,000. A bonus of 10 per cent. is being paid to the staff on their salaries as at June 30, 1923. The sum of £112,600 is carried forward.

RAILWAYS.

ARGENTINE NORTH-EASTERN.—The results for the year ended June 30, 1923, compare with those for the previous financial year as follows:—

Description.	Year Ended June 30, 1922.	Year Ended June 30, 1923.	Difference.	Per Cent.
	£ s d	£ s d	£ s d	
Receipts	561,470 15 3	571,181 9 6	+ 9,710 14 3	+ 1.73
Expenses ..	487,160 1 8	445,880 8 6	- 41,279 13 2	- 8.47
Net profit ..	74,310 13 7	125,301 1 0	+ 50,990 7 5	+ 68.62

The ratio of expenses to receipts was 78.06, as compared with 86.76 last year.

INSURANCE.

CALEDONIAN INSURANCE COMPANY, LIMITED.—The company's new Act of Parliament will come into operation on 13th instant. The Act provides for the conversion as from that date of each of the existing £25 shares, £5 paid, into five £5 shares £1 paid, and shareholders are requested to forward their existing certificates to be exchanged for certificates of the new denomination. The shareholders are also informed that for the purpose of providing additional funds for extension of the company's business the directors will issue on the 30th instant 21,500 new shares of £5 each, having £1 paid up. The issue price will be £7 per share, of which £1 will represent capital and £6 premium. These shares are to be offered to the shareholders on the register as at 13th instant in the proportion of one new share for every existing five £5 shares of the new denomination. The price will be payable on or before December 31st next.

RUBBER, &c.

ANGLO-SUMATRA.—The report and accounts for year ended May 31, 1923, show that this company has had a good year. The ordinary shareholders are to receive 20 per cent., against 5 per cent. in preceding year. The net loss was £10,220 for the year ended May 31, 1922, but for the year 1922-23 a net profit of £9,919 has been secured.

BURIT KAJANG.—For the year ended June 30, 1923, this company has secured a net profit of £12,342, against a net loss of £4,561 for the preceding year. The ordinary shareholders receive 5 per cent., against nothing for preceding year. The sum of £3,000 is transferred to income-tax reserve, £5,000 to general reserve, and £13,819 is carried forward, against £15,727 brought into the accounts. The rubber crop amounted to 645,536 lbs, against 655,540 lbs in preceding year. The average net price secured for all grades was 1s 1.62d per lb, against 7.89d per lb for year 1921-2.

JONG-LANDOR.—The following statement of yield and sale average for the past seven years is presented with the report for year ended June 30, 1923:—1916-17, 665,031 lbs sold, at 2s 8½d per lb (average); 1917-18, 613,197 lbs, at 2s 1½d; 1918-19, 564,325 lbs, at 1s 10d; 1919-20, 663,950 lbs, at 2s 2d; 1920-21, 570,879 lbs at 10½d; 1921-22, 715,920 lbs, at 8½d; 1922-23, 594,147 lbs at 1s 2½d. The net profit has risen from £2,225 for 1921-22 to £12,172 for 1922-23, and the ordinary dividend has been raised from 5 per cent. to 12½ per cent.

TANJONG MALIM RUBBER.—The profit for the year ended June 30, 1923, after providing £6,000 for taxes, amounts to £21,399, as compared with £18,790, to which has to be added the balance brought forward from last year, £52,373, making a total of £73,772. The ordinary dividend is 10 per cent., against nothing in previous year. The sum of £23,784 is carried forward, against £52,373 brought into the accounts. The yield of rubber during the year was 1,325,210 lbs, being 61,690 lbs in excess of the combined amounts exportable free up to October 31, 1922, and exportable under licence for the period subsequent to that date. The company's standard production has been fixed, inclusive of the additional planted area of 60 acres recently purchased, at 1,919,658 lbs. Of the whole crop 951,037 lbs were sold in Singapore, and 374,173 lbs were shipped to Europe. The average gross price of the exportable allowance, taking a small quantity unsold at an estimated figure, was 1s 0.46d per lb.

MISCELLANEOUS.

ARGENTINE IRON AND STEEL.—It is announced that the scheme of reorganisation has had to be abandoned. As a result of this, the trustees for the debenture-holders have taken further steps in the debenture-holders' action, and have obtained an order authorising the receiver and manager to complete existing contracts, and pay any urgent liabilities incurred since April 20th last, but not to enter into new contracts without the leave of the Court.

AUSTRALIAN MERCANTILE, LAND, AND FINANCE.—The net profit for the year ended June 30, 1923, amounted to £202,263 (against £169,855 for the preceding year). A sum of £25,000 has been transferred to equalisation reserve (against £50,000). The total dividend and bonus has been raised from 10 per cent. to 12½ per cent., free of income-tax. The sum of £64,763 is added to £9,859 brought in, increasing the amount to be carried forward to £74,622, which is subject to provisions for taxation (estimated to cost £8,000).

CAPE ELECTRIC TRAMWAYS.—The net profits of this company for the year ended June 30, 1923, have been well maintained, as they amount to £51,855, as compared with £47,933. The ordinary

dividend is 6 per cent., free of income-tax, the same as the previous year. The sum of £20,000 is put to reserve, against £18,000 in previous year, and £14,865 is carried forward, against £12,483 brought into the accounts. During the year 1922-23 the tramways carried 32,094,580 passengers, with gross receipts of £408,753, as against 31,283,916 passengers, with gross receipts of £414,570 in 1921-22.

HOTEL CECIL.—The report for the year ended August 31, 1923, shows an improvement on the preceding year. Net profits at £51,320 compare with £39,780, and the ordinary dividend has been raised from 4 per cent. to 6 per cent. The sum of £26,485 is carried forward, against £24,165 brought into the account.

IMPERIAL AND FOREIGN CORPORATION.—For the ten months to June 30, 1922, during which conditions were affected by the process of reorganisation, the gross revenue amounted to £37,895, which, after deducting establishment charges, £13,815, left a trading profit of £24,080, converted, after charging £71,312 interest on loans, into a net loss of £47,232 for this period. The operations for the following year to June 30, 1923, showed a gross revenue of £84,725, which, after deducting establishment charges, £13,553, left a trading profit of £71,173, reduced, by reason of the continued heavy interest charges on loans, amounting to £67,723, to a net profit of £3,450. The result for the 22 months was, therefore, a balance, being loss, of £43,783 to be carried to the balance-sheet.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Cold but drier weather conditions prevailed during the week, which enabled farmers to push ahead with field work, though in some districts excessive moisture has rendered operations difficult. So far there is little evidence of any large reduction in acreage under cereals. Official returns now place the total yield of wheat in England and Wales at 7,070,000 qrs. Native wheat experienced a fair demand both here and at provincial markets, and prices maintained a firm level, suitable milling samples being a shade better at 9s to 9s 9d per 112 lbs, free on rail, while inferior ranged down to 7s 9d. Imported descriptions remain firm for near at hand parcels, and there was a fair inquiry, especially for Canadian qualities. No. 1 Northern Manitoba quoted 48s 6d ex ship arrived, and 48s further distant, Rosafé 62½ lbs ex ship 47s 3d, Barusso 62½ lbs 46s, choice white Karachi landed 45s, and Persian ditto 42s 9d, all per 496 lbs. The cargo section ruled generally quiet, but with offers sparingly made; late rates were maintained. Steamers of No. 1 Northern Manitoba, November shipment, sold at 44s 3d to 44s 9d net, two cargoes Barusso 62½ lbs January-February at 41s 6d to France, white Western Pacific, also soft white Pacific early January 45s 6d, part cargoes of Australian November 45s 6d, December 45s 4½d, and January 44s 10½d per 480 lbs, all to Ireland. Maize cargoes firmer on reserved sellers and decreasing Argentine stocks, while European descriptions are sparingly offered. A steamer of Gal. Foxanian November-December sold at 35s 9d, and a sailer of No. 6 yellow African afloat 36s 6d per 480 lbs. Barley cargoes firmer, and a steamer of Black Sea November sold 28s 3d per 400 lbs. Flour steady. London standard straight run quoted at 37s, patents 39s-40s, town households 35s per sack delivered in. All-English country straights 30s-31s delivered to London stations. Imported steady. Manitoba patents range from 36s 6d-39s 6d as to sample, Minnesota 38s 6d-40s 6d, Australian 32s 9d, all per 280 lbs ex store. Millers' offals steadier. Broad bran quoted 7s 3d, ordinary ditto 6s 6d, middlings 8s 3d, bags included, ex mill, light oats 5s 9d, powdered oat husks 5s 9d, feed oatmeal 9s 3d, ground oats 13s 3d, free on rail all per cwt. Barley, English, steady, and malting descriptions range from 9s 6d-13s 9d, with feeding sorts 8s 3d-8s 9d per 112 lbs, free on rail as to sample. Imported tends firmer. Californian 39s-44s, Chilean brewing 38s 6d-43s 6d per 448 lbs ex store. Persian ex ship 36s, Danubian ditto 29s, Algerian-Tunisian 28s 6d, No. 4 Canadian Western 29s ex ship, ditto landed 30s 3d, all per 400 lbs. Maize again dearer. Plate ex ship 36s 9d, landed 38s, No. 2 white flat African ex ship 37s 6d, No. 6 yellow ditto 36s 6d, all per 480 lbs. Oats, English, quietly steady, and prices range from 8s 4d-10s 2d per 112 lbs free on rail as to sample. Imported firm. Plate f.a.q. ex ship 22s 3d, landed 23s 6d, No. 2 Canadian Western ex ship 26s 9d, landed 28s 6d, No. 3 ditto landed, old, 27s 6d, new 27s 3d, Algerian-Tunisian landed 23s 3d, New Zealand "A" grade landed 38s-40s, "B" grade ditto 36s per 320 lbs. Oatmeal in fair demand at easier prices. London made flaked, also rolled, oats 17s 6d, medium and fine cut 17s 6d, coarse and medium pinhead 17s, ordinary Scottish oatmeal 17s, American 16s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated November 8th, is as follows:—Pig-iron: The feeling seems to prevail that we have touched the bottom of the recent depression and confidence is slowly returning, and, after all, this is always a prelude to buying on any extensive scale. Inquiries are in the market for the first quarter of next year. No. 3 Cleveland G.M.B. is quoted 100s per ton. East Coast hematite makers are receiving more orders, and the current price for mixed numbers is 100s per ton. Manufactured iron and steel: Although the boilermakers' strike is still unsettled, there are a good number of inquiries for steel. Steel ship plates, £9 15s; steel ship angles, £9 5s; iron bars, £12; heavy steel rails, £9 10s. Iron ore: Best Bilbao Rubio has been a shade lower, but most sellers still ask 23s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—Further progress of the recovery of trade can be reported this week, and a reduction of 500 in the number of unemployed is a distinctly favourable sign. The men and women in receipt of out-of-work relief to-day is 10,000 below the figures of November last year. The improvement taken in the aggregate is only slight, and the production at many firms is below the profit-making level. A great amount of plant is idle. The severity of price-cutting has not abated, and a good deal of work is being taken at unremunerative prices, merely to keep the operatives employed. The lighter and finished trades are improving much more than the heavy branches. Local firms do not expect to benefit from the big railway contracts which are given out until the new year, as some time will be occupied in arranging terms. The large steel makers have been making representations to the Government with the object of securing the placing

of contracts for the two new cruisers at the earliest date, and also to bring pressure upon the railway companies to hurry up their renewals and new construction plans. The latest information from the Ruhr is to the effect that our steel makers have little to fear from the disposal of the stocks in that district which are being released. The quantity has been exaggerated, and much of the finished material is unsuitable for the British market. A stock of about a thousand tons of tool and other special steels from surplus war stocks has just been sold for export, and will no longer constitute competition with the makers. The huge quantities of steel and tools left over from the war purchases have been a considerable factor in creating the depression in the trades concerned. Prices are firm, especially in the scrap department, and people are confident of a considerable increase of trade activity before long. The plate and cutlery branches are very busy except on expensive goods. The fuel market is maintaining its strength fairly well, in spite of several adverse circumstances, and there is a disposition to book forward for coke. Gas and railway companies are taking heavy tonnages. House coal is in moderate demand. Prices are firm all round. Quotations per ton at pits are:—Best hand-picked branch, 32s 6d; best Silkstone, 26s 6d; South Yorkshire hards, 20s to 21s 6d; good rough slacks, 11s 6d to 12s; smalls, 7s to 9s; blast furnace coke, 24s.

Our Glasgow correspondent (writing on Thursday) says:—This has been a comparatively active business week in iron and steel trade circles, and the prospects are more encouraging than any experienced since the beginning of the year. The best evidence of improvement is afforded in the fact that on Monday several steel works in mid-Lanark that have been standing idle for months are to get in motion on contracts just booked, mainly on home account and moderately on export order. It is reliably stated that Messrs Beardmore, Limited, have secured lines for a number of thousand tons of steel rails, and other firms have secured substantial engagements in ship and boiler plates, and in thick and thin sheets, which will keep them running full well into 1924. Steel bridge-builders have also added to their commitments, and their outlook is most promising, from the extent of the projects that are emerging in and around the city in connection with non-employment developments, some of which, however, will not be taken in hand for a month or so at least. Rumour has it that Clyde shipbuilders have booked orders for 15,000 tons of new work, which is to be proceeded with at Whiteinch and Clydebank. Rather more animation is observable at Fairfield and at Messrs Scott and Co.'s engineering and shipbuilding works at Greenock. There is also more passing in Scotch pig-iron. Foreign shipments this week include close upon 7,000 tons of named brands for the Pacific Coast of the United States, and it is said that a fair number of inquiries are on circuit. Scotch foundry No. 1 is unchanged at £5 5s a ton and No. 3 at £5 f.o.t. makers' works. Bar iron in rather better request at fully late rates. Messrs Yarrow's yard at Scotstoun, which have been closed since 1921, is about to be reopened, having acquired an order for a shallow craft steamer for Chinese waters.

Our Cardiff correspondent writes:—On the Cardiff coal market this week conditions have been stagnant and reactionary. Current business has been extremely slight, and with stemming arrangements still disorganised in consequence of bad weather, collieries have, in a large number of cases, found it extremely difficult to prevent stoppages. The number of lost days is increasing, and the output is consequently declining. Shippers have been able to obtain substantial concessions for spot tonnage, and even for contracts the position is not so strong as it was two or three weeks ago. The Cie. Generale Transatlantique of France has turned down all the tenders it has received for the supply of between 300,000 and 400,000 tons over next year. The requirements of this big shipping company, now owning about 100 vessels, have been reduced, owing to the increased consumption of fuel oil for bunkering purposes. Its consumption of South Wales steam coals during the past two years has averaged nearly half-a-million tons per annum, but the amount required for next year is at least 20 per cent. less. The prices tendered approximated those at which quite a large number of contracts had already been placed, but they were above those at which supplies could be obtained for prompt shipment, and the Transatlantique directorate in Paris has decided to hold off in the belief that it will be able to buy at lower figures. Its policy so far seems to be justified by the fact that coals have been sold to South America during the past few days at prices at least from 3d to 6d per ton less than those obtained for the bulk of the contracts already concluded. The current approximate quotations are as follows:—Best Admiralties, 27s to 28s; second Admiralties, 26s to 27s; best drys, 26s 6d to 27s; black veins, 26s to 27s; Western Valleys, 25s 6d to 26s; Eastern Valleys, 23s 6d to 25s; best bunker smalls, 17s to 18s; ordinary cargo smalls, 15s to 16s; anthracite big vein large, 40s to 45s 6d; machine-made cobbles, 52s 6d to 55s; French nuts, 57s 6d to 62s 6d; stove nuts, 54s to 56s 6d; rubble culm, 14s 6d to 15s 6d; inland blast-furnace coke at ovens, 30s to 35s; coke for export, 42s 6d to 50s; patent fuel, 29s to 32s; pitwood, ex ship, 28s 6d to 29s. In the iron and steel industry the position is slightly improved, and the stabilisation agreement, under which minimum prices are fixed for tinplates and steel bars, has been renewed for another year. Prices are firm, and the volume of the export trade increasing.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The course of trade at the London sales and the strong demand for merino wool in the colonies reflect the general feeling of confidence in the raw material position. In this centre, however, it is impossible to do anything with merinos as world values are much too high for users. Quotations for merino tops are practically unchanged, average 64's still being quoted at about 5s, with warp 64's at 5s 1d or a little more. At these prices it is impossible to replace stocks, for good 64's topmaking wool continues to sell freely in Australia on a basis of 52d, clean, delivered Bradford. Interest is almost entirely centred on crossbreds, and the heavy buying of wool in recent months seems to have left the trade still unsatisfied. A good steady business is passing in practically all descriptions, and although quotations do not show much change as compared with those ruling a week ago, the market is certainly against the buyer, and prices show a hardening tendency. Surplus stock of South America low crossbreds are being shipped from the United States to this country, and to the Continent, but these are having little effect on the Bradford market. Cables from Buenos Ayres, however, report a very firm market, with prices on a high level. The new selling season opens in New Zealand next week, and it is expected that a general demand will place values on a very firm basis. Spinners report rather more favourable conditions, and some moderate business has been booked in both botanics and crossbreds, though the prices obtainable leave much to be desired in many cases. Machinery is better employed, and the outlook generally appears to be somewhat brighter. Some increase in demand on home account is reported in the piece goods trade, wholesale fabric buyers still giving a decided preference to the cheaper cloths.

COLONIAL WOOL. (FROM A CORRESPONDENT.)

The wool auctions in London are being continued under very satisfactory conditions. Perhaps the prices paid for scoured merinos, chiefly medium and faulty wools, have not been quite so extreme recently as during the opening week, and a few more withdrawals have taken place. This is largely the result of excessive limits being put on the offerings, but, all the same, the auctions have gone well, competition being well sustained throughout the week. We do not think French buyers are quite so keen as they were, and it is quite probable that the economic conditions on the Continent are exerting some influence upon their attitude. We understand that manufacturing conditions in France are not so brisk as they were, which is by no means surprising. Sooner or later what is happening on the Continent will tell to the disadvantage of France, and in many important business circles the attitude of France towards Germany is regarded as being very unfavourable for the development of business throughout Europe. Crossbreds are figuring prominently in the offerings every day, and full justice is being done to them, particularly by the home trade, while French representatives continue to absorb fair weights of the shorter stapled medium and fine classes. The British Australian Wool Realisation Association is offering some very acceptable fine crossbreds and comebacks, and these are making prices fully on a parity with what the combed article is

worth in Bradford. Several firms hitherto well known as makers of merino tops in a large way of business are now purchasing crossbreds, which surely indicates the trend of trade. A remarkable feature is the attention paid to New Zealand shipland half-bred lambs, and 28d has been paid several times during the series for this description.

THE COTTON TRADE.

MANCHESTER, November 8.

The event of importance in the market this week has been the rise in values. American and Egyptian cotton have advanced over 2d per lb, and quotations in yarn and cloth have been put up to a corresponding extent. It has been exceedingly difficult for spinners and manufacturers to secure adequate advances, but the tone of the market continues healthier, and a considerable business has been done in stock lots. Cloth for China has been in increased request, and more lines have been booked in shirtings and sheetings. Operations for India have been rather irregular, but buying has not yet been at a standstill. Shippers to the Near Eastern and South American outlets have wanted goods, and moderate contracts have been arranged. Numerous manufacturers are more favourably situated than a month ago, and the recent appreciation in values has been a blessing for holders of stocks. American yarns have been stiff at the higher figures, and a very fair business has been done. Egyptian spinners have been in active demand at dearer prices.

VEGETABLE OILS AND OILSEEDS.

The feature of the market is the continued firmness of linseed, both in near positions and for forward shipment. A good trade has been done in old Plate crop by crushers, who are also interesting themselves again in the new seed, which will commence shipment late in December. The abnormally high official estimates of the yield of the new Plate linseed are discounted at the moment, but there is no disposition on the part of buyers to commit themselves far ahead. Linseed oil has been in good demand on consumptive account, and prices are rather firmer at £41 10s per ton, naked, ex Hull mill. Egyptian cottonseed has firmed up smartly.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market has fallen quiet again, and nearly all hides offered at the Bermondsey auctions on Thursday failed to find buyers, as only one class of best ox sold at 73½d per lb. Cows were unaltered at 67½d to 7d, seconds making 6d to 6½d per lb. Best calf sold from 7½d to 12½d, alterations being unimportant. Wool skins sold from 5s 3d to 11s each, and hogs from 2s 9d to 14s per lb. Hides are getting in bad condition, and tanners insist that they must get their raw material at less money if they are to make a profit on their leather. The demand for imported hides has fallen away somewhat, and few frigorifics are being sold either to this country or the Continent, Germany having dropped out of the market. Dry hides are selling in the cheaper grades at firm prices. Cables from the U.S.A. report the Chicago position as very weak, with best native steers now selling at 14½c, and native cows at 10½c—a drop of a cent. on the latter.

OVERSEAS PRODUCE MARKETS.

SUGAR.—There is a generally better tone about the market, with more disposition shown to purchase both on grocery and manufacturing account at the lower level of prices ruling recently for refined descriptions. British makes continue to be favoured owing to the absence of foreign in competing quantities. Supplies of the useful white Javas have become very much reduced, and in a sense may be termed as practically cleared. Parcels of continental are arriving, but only in small quantities so far, and which is partially accounted for by lack of sufficient freightage from Hamburg owing

to political trouble there, and thus consignments from Czechoslovakia are held up. The statistical barometer shows a tendency to favour the seller at the moment, as reliable report from Holland speak of a substantial reduction in their crop as from previous estimates, and nearer 200,000 tons final output is indicated than the 300,000 tons forecasted. It would seem that the world's product on will be easily absorbed, providing prices are not unduly driven up and check consumptive requirements. Russia is still calculated to figure as an importer instead of an exporter, as in pre-war days, and will look to Poland also the Baltic regions for certain supplies. Invaluable stocks are small with regard to the U.K. Of British refined, Messrs Tate and Lyle's cubes quoted 58s 6d to 59s 6d; crushed, 56s; granulated, fine and coarse gr in, also stoved, 56s 1½d. No. 1, 55s 10½d; No. 2, also London and T.L., 55s 7½d; ditto second half November, 55s 6d; second half December, 55s; January, 54s 6d; February-March, 54s 6d; yellow crystals, spot, 50s 7½d. Glebe K, granulate, 55s 1½d; London and Greenock, 54s 9d. English produced granulated, 54s 9d, ex works, Norfolk. White Java, spot, 52s 6d. Dutch sugars for shipment largely nominal in absence of definite offers. Czechoslovak granulated, November-December, 25s 9d, f.o.b., Hamburg. Belgian more or less nominal. Raw refining knds steady, and sparingly offered. Mauritius cryst ls to arrive, sellers, 28s, c.f. and i., U.K. White terminal market dealer, with moderate transactions. December, sold, 24s 6d to 25s 3d; March, 24s 3d to 25s 1½d; May, 24s 6d to 24s 4½d, 25s 4½d, and 25s 1½d cwt. Cuban receipts last week 7,522 tons, against 6,327 last year; exports, 53,459, against 57,455, and stocks 86,266 tons, against 172,269 last year. Java exports for last month will probably amount to 193,000 tons to all parts. Liquid glucose, spot, 32s cwt.

COFFEE.—Spot market firm, and there is a good demand, especially for all mild sorts, and which are in limited supply. Futures, December, quoted 59s 3d; March, 57s per cwt.

COCOA dull, unaltered on spot. Accra, F/F quality, December-February, 2 s 6d per cwt, f.o.b.

TEA.—14,000 packages Ceylon offered in auction met a fair demand, and all really fine teas realised about steady rates but inferior were easy. Pekoe, sold, 1s 5d to 1s 11d; broken ditto, 1s 5d to 2s 1d; orange, 1s 6½d to 1s 11d; broken orange, 1s 7½d to 2s 1½d per lb in bond. The larger quantity of 65,000 packages Indian offered in auction met a generally quieter demand at easier rates. Really fine teas, however, fairly steady. Pekoe, sold, 1s 4½d to 1s 8d; broken ditto, 1s 4½d to 1s 11d; orange, 1s 6d to 2s 1d; broken orange, 1s 5½d to 2s 6½d; finest, 3s 1d per lb in bond. 14,000 packages Ceylon offered in auction met a fair demand, and all really fine teas realised about steady rates, but inferior were easy. Pekoe, sold, 1s 5d to 1s 11d; broken ditto, 1s 5d to 2s 1d; orange, 1s 6½d to 1s 11d; broken orange, 1s 7½d to 2s 1½d per lb in bond. 2,500 packages Java and Sumatra offered met a good demand at easier rates, though generally above valuations. Pekoe sold, 1s 3½d to 1s 5½d; broken ditto, 1s 1d to 1s 5½d; Pekoe souchong, 1s 2½d to 1s 3½d; orange, 1s 4½d to 1s 6½d; broken orange Pekoe, 1s 2½d to 1s 6½d per lb in bond.

RICE.—All Eastern grain dull of sale, and rates nominally un-

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's,
37 Avenue de L'Opera.

THE MONEY MARKET.

MONEY has again been uncomfortably scarce, with
borrowers paying up to 3 per cent. for loans over the
night, but the market succeeded in repaying, on Wednes-
day, the small amount due to the Bank of England. A
small dividend payment on that day doubtless helped this
liquidation, but no apparent effect was produced on the
state of market supplies. Discount rates have been very
firm, owing to scarce money, the seasonal expansion in

the supply of bank bills, and the continued weakness of sterling in New York. Fine three months' paper was quoted at $3\frac{1}{16}$ - $3\frac{3}{16}$ per cent. Yesterday money was much more plentiful, but discount rates were kept steady by the Treasury bill allotment.

	Nov. 16, 1923.	Nov. 9, 1923.	Nov. 2, 1923.	Oct. 26, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses' Notice	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills)	$3\frac{1}{16}$ $\frac{1}{8}$	$3\frac{1}{16}$ $\frac{1}{8}$	$3\frac{1}{16}$ $\frac{1}{8}$	$3\frac{1}{16}$ $\frac{1}{8}$	..

The Bank return showed an increase in the Reserve, due to the return of notes from circulation, of £669,000. Government securities expanded by £830,000, while Other shrank to the extent of £180,000. Official disbursement reduced the Public deposits by $3\frac{1}{2}$ millions, and Other were thus $4\frac{1}{2}$ millions higher. Currency notes outstanding were increased this week by £652,000 to £282,995,100, which includes £1,436,100 for notes called in but not yet cancelled. The fiduciary issue is £232,109,000, or £38,074,800 below the maximum.

THE STOCK MARKETS.

The General Election is overshadowing the Stock Exchange, and there is, with one or two exceptions, a general depression. Gilt-edged and Home railway stocks have been sold on fears of the Labour Party being returned to power and imposing a capital levy, and the selling of Government stocks by nervous foreign holders has also helped the depreciation of prices. A slight recovery followed the news that the election was to be held at the earliest possible date, but quotations are still susceptible to sharp movements. The fall in the American exchange, and the consequent improvement in the price of gold, has imparted a good tone to the Kaffir market. Tin shares have also been good, and other mining shares fairly steady. Elsewhere, however, depression and uncertainty have been the keynote, and business is expected to be quiet for the next three weeks.

THE COMMODITY MARKETS.

Markets generally appear to remain fairly steady, in spite of the snap election announcement. In the Manchester cotton trade the firmer tone of the market reported last week has been well maintained, although the turnover in yarn and cloth is not quite so large. There is no indication of cheaper wool values, and our trade correspondent reports that manufacturers are beginning to face the future with more confidence; keen foreign competition continues to dominate the position. There was some inquiry for jute. Copra markets were firm on account of American demand. Rubber has been steady, although trade is quiet. Canned goods showed no change in price. Pig-iron prices are unchanged, and markets remain firm, while steel prices are distinctly firmer. Tin moved yet higher, while copper, though firm, failed to follow. The weakness in the American exchange has caused higher wheat prices. The sugar market has developed some activity—an exceptional thing at this period of the year. A better demand for tea is noticeable, and the market was firm. Linseed is in good demand, but the hide market is weaker, the reason for the latter given by our correspondent being “in sympathy with foreign conditions.”

FOREIGN EXCHANGES.

In the foreign exchange market the week has been one of great excitement, with more business than for some time past. Interest, of course, has centred on the violent movements in the dollar rate. From a closing quotation of \$4.40 $\frac{1}{2}$ on the 9th the rate moved rapidly downward, with occasional short recoveries, to as low as \$4.32 $\frac{1}{2}$ at one time on the 15th. In the afternoon of that day it recovered to a closing price of \$4.34 $\frac{3}{16}$, but at \$4.33 $\frac{1}{2}$ yesterday morning its direction was uncertain. A number of factors already well known would seem to have combined to produce this heavy depreciation. Just recently cotton and grain purchases have been exceptionally heavy even for this time of the year. In addition, the unfortunate inflationist scare, groundless as it was, continues to disturb the minds of foreign holders of London

Funds, while Election prospects, with the dangers of a Capital Levy and of Tariff Reform, are equally disturbing, although here, too, it can be confidently hoped that fears are equally groundless. On the top of these is the increasing seriousness of the European situation, and the growing desire to move funds to a place of safety, which to foreigners disturbed by inflationist and Election scares would appear to be New York rather than London. It should also not be forgotten that, for the time being, New York provides the additional attraction of higher money rates, although from American reports this may be changed in the near future. To see how rates may move is extremely difficult. It is reported from New York that the pressure of cotton bills is already less, but this relief and a reduction in American money rates may easily be counterbalanced by general uneasiness due to the more general causes referred to above. Forward rates have again widened $\frac{1}{2}$ cent to $\frac{3}{4}$ cent per month above spot. In sympathy with the dollar, Switzerland has moved down from 25 to 24.83 $\frac{1}{2}$, Vienna from 314,000 kr to 305,000 kr, Stockholm from 16.72 $\frac{1}{2}$ to 16.50, Helsingfors from 165 $\frac{3}{4}$ to 163, Copenhagen from 26.55 $\frac{1}{2}$ to 25.62 $\frac{1}{2}$, while even Christiania, where the Bank rate has this week been raised one point, has improved from 31.02 $\frac{1}{2}$ to 30.25 $\frac{1}{2}$, and Spain from 33.55 to 33.50 $\frac{1}{2}$; while Prague has moved against us from 152 to 150 $\frac{1}{2}$, and Bucharest has continued its recent rapid recovery from 900 to 820. Among neutral States the only one that has moved in our favour is Holland, where the rate, apparently in connection with the heavy movement of funds to New York, has risen from 11.54 to 11.63. Rapid as has been the depreciation of sterling, the fall in value of the franc, under the threat of the Ruhr problem and the present strain upon the Entente, has been even worse. The Paris rate, which on the 9th closed at 78.05 $\frac{1}{2}$, has, with the exception of some improvement on the 13th, continued to rise until 80.60 was reached on the 15th, while shortly after yesterday's opening it had moved up to 81.20. Brussels has risen even more rapidly, from 90.25 to 95.20, while Italy has followed more slowly, from 100.30 to 102 $\frac{1}{2}$. In Paris the forward rate remains the same at about 10 centimes per month over spot; in Brussels it has narrowed 2 centimes to 4 centimes above. The German mark, after a sharp recovery at the end of last week, rose again to 19,000 milliards, but yesterday morning, at the news of the official inauguration of the Rentenmark, steadied at 17,000 milliards. For the time being it is impossible to see what will be the fate of this new currency, which depends almost entirely on the balancing of the Budget on a gold basis, an ideal possible in any case only by cutting off all subsidies to the Ruhr, and by ignoring all reparation obligations. Warsaw, after being slightly higher, has steadied again at last week's figure of 8 millions, and there is some hope, if political troubles can be overcome, that financial stability may be obtained through Mr Hilton Young's advice and assistance. In the East, the rupee is slightly more expensive at 1s 4 $\frac{1}{2}$ d, and the yen has moved sharply, from 2s 2 13-32d to 2s 2 $\frac{3}{4}$ d. The silver market has been very firm, partly through the depreciation of sterling, partly from the concentration of supplies in India, and from preparation for the approaching Chinese New Year. Future movements would seem to depend on the American exchange and on the strength of the Bombay holders. Hong Kong having moved against us from 2s 3 $\frac{1}{2}$ d to 2s 4d, was back again yesterday at 2s 3 $\frac{1}{2}$ d, but Shanghai has risen from 3s 1 $\frac{1}{2}$ d to 3s 2d. In South America, Rio has appreciated slightly, from 4 $\frac{1}{2}$ d to 4 25-32d, while Buenos Ayres has risen sharply, from 38 $\frac{1}{2}$ d to 39 $\frac{1}{2}$ d, and Monte Video from 39d to 40 $\frac{1}{2}$ d. Valparaiso, on the other hand, has depreciated again, from 38.50 to 38.90 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 10th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	5479	From Revenue	10788
Interest, &c., on Debt	901		
Sinking Fund	250		
Burdies	933		
Added to Exchequer balances ..	237		
Reduction of debt	3888		
	10788		10788

Revenue amounted to £10,788,000, against £12,964,000 in the corresponding period. The chief cause of the decline in revenue was the lower receipts from Property and Income-tax, which amounted to £1,740,000, and from Super-tax at £440,000, against a combined total of £4,331,000 in the corresponding period. Motor vehicle duties brought in £305,000, against nothing a year ago. Customs receipts at £255,700 and Excise at £1,546,000 show little change. Expenditure at £6,663,600 is about £2,000,000 lower, mainly due to reduction in Supply Services. The week's operations reduced the National Debt by £3,888,000, and caused the following changes:—

Treasury Bills	Min. £ + 1112	Bank of England Advances ..	Min. £ — 2500
		Public Departments Advances ..	— 2050
		National Savings Certificates ..	— 250
		Sundries	— 200
	+ 1112		— 5000

The floating debt was reduced by £3,430,000 to £811,271,500.

FINANCIAL YEAR, 1923-24 (April 1 to November 10, 1923).

Total Expenditure ..	£ 451,117,315	Raised by Revenue ..	£ 442,203,790
		Net Borrowings	5,323,621
		Decrease in Balances ..	3,589,904
Total	451,117,315	Total	451,117,315

ESTIMATES FOR YEAR 1923-24.

Ordinary Expenditure ..	£ 801,013,000	Ordinary Receipts ..	£ 778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—English, Scottish and Australian Bank; London and Brazilian Bank; Dalgety and Co.; Kerr, Stuart and Co.; and Joshua Hoyle and Co. Mr Andrew Williamson, at the meeting of the English, Scottish and Australian Bank, gave an exhaustive review of the trade and industrial position in Australia, while the Hon. Edmund W. Parker, at the meeting of Dalgety and Co., reported a substantial increase in the company's earnings for the year. The chairman of the London and Brazilian Bank explained the fusion with the London and River Plate Bank.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE CASE FOR FREE TRADE.

A brief statement of the Free Trade case is presented in a Supplement to this week's issue.

THE DISSOLUTION AND THE PARTIES.

THE circumstances attending the complete transformation of the political scene are without parallel in recent history. When Parliament rose late in August for the autumn recess the Government were apparently sailing in calm waters. Their majority over all parties was stable and sufficient. Right up to the last week of October everything pointed, if not to an easy life, at least to a prolonged tenure of office. Now, three weeks later, the political storm has arisen which plunges the country into an immediate electoral campaign. The distinctive feature about the crisis is that the storm did not arise out of any public events, but was deliberately created by the Prime Minister himself. A year ago Mr Bonar Law's victory was clearly attributable to the fact that a promise of a long period of peace and quiet appealed to an electorate that was weary of legislation and experiment. In that

promise the most conspicuous feature was the pledge that no fundamental fiscal change should be undertaken. Up to August Mr Baldwin seemed to be satisfied with that pledge, for in his references to unemployment, its causes and remedies, we find up to that date no mention of the fiscal revolution which he now believes to be the only cure. The suddenness of the change is bewildering. That it arises from sincere conviction we cannot doubt; for nothing less would cause a new Prime Minister suddenly and unexpectedly to sacrifice a stable majority and the reasonable certainty of several years' tenure of office and to enter into what can only be described as a desperate gamble with the political fortunes both of himself and of his party. It may be contact with the Dominion Premiers that has pushed Mr Baldwin over the tariff brink; it may be the concentrated pressure of the “die-hard” element in the Conservative party. It may, on the other hand, be true, as some are inclined to believe, that when Mr Baldwin made his famous plunge at Plymouth he had no clear vision of the rapidity with which the inevitable political consequences would develop. But such speculations are fruitless. The die is cast, and on December 6th the country has once again to say whether it will permit the complete revolution of the fiscal system under which this country has achieved and holds its great industrial, commercial, and financial position in the world.

The Government's opponents attribute the fixation of the earliest possible election date to discreditable party tactics, and to the desire to snatch a verdict before the Free-trade parties could have time to organise and educate. With the party managers such considerations must always weigh. But, so far as Mr Baldwin is concerned, we prefer to believe that his chief motive for extreme haste was to shorten as far as possible the period of national uncertainty and disturbance. Nevertheless, we cannot but deplore and set down as reckless statesmanship the imposition on an electorate, which must have mainly forgotten the fiscal education of 1903-10, of the duty of deciding, in the space of three weeks of election turmoil, the most fundamental and intricate of national issues. Such a space of time is grotesquely inadequate to the full and calm consideration by the country even of the main facts bearing upon fiscal expediency, which we present this week in a special supplement. But we would earnestly request all those whom this issue of the *Economist* may reach to study the grounds, which are there set forth and elaborated, for our profound belief that the true interests of this country demand more insistently now than at any time in our history the maintenance of the greatest possible degree of freedom in commercial exchange.

Anyone who contemplates the international scene must admit that Mr Baldwin could hardly have chosen a less propitious moment for diverting the whole attention of the country and its rulers from foreign policy to electoral strife. While the fiscal battle rages, fundamental issues of international law and justice, which clamour for decision, move into the background, and share oblivion with such vital questions as the chances of the priceless gain of American participation in European problems, and the rapid drift of Germany into chaos. These are problems which not only brook of no delay, not only require the undivided attention of the Government, but also demand handling by a Government possessing authority and stability, not one that is testing the precarious fortunes of one of the most dubious elections of our times. All these considerations add immensely to the gravity of Mr Baldwin's decision. We can only hope that even amid the election turmoil our statesmen will at least strive to prevent themselves or the country from entirely losing sight of the great international questions which, to take a material view, bear far more directly upon the unemployment problem than Mr Baldwin's fiscal propositions.

Upon the alignment of political parties at home Mr Baldwin's tariff programme has produced effects of first-rate importance. Liberal unity, which certain followers of Mr Asquith and Mr Lloyd George had long striven in vain to promote, Mr Baldwin has instantaneously achieved. All differences between the two Liberal sections have been buried in spontaneous and unanimous support of Free Trade.

Unity has come, in the only way in which it could come, through complete and sincere agreement on the main issue which the country has to decide, and once again the Liberal Party puts itself before the electors as an alternative Government. This reunion means, for all practical purposes, the re-establishment of the three-party system. For although the differences within the Conservative Party have not been entirely healed, the dissident members will have the Conservative, and no other, label, and the only complications of the three-party system will arise in the case of a few Unionist Free-traders, and a handful of Socialists, Communists, independents and "freak" candidates. But, in the main, three clear-cut programmes will be before the country, and the electorate will not suffer anything like the confusion of group labels which bewildered so many constituencies a year ago. The correspondence between the Prime Minister and Mr Austen Chamberlain and Lord Birkenhead confirms the rumour that two ex-Ministers are not to join the Government before the election. This is a decision, the grounds for which, on the whole, reflect considerable credit on the Government, for the decision appears to be due to the determination of certain Ministers and Under-Secretaries to leave Mr Baldwin's Government if Lord Birkenhead had been included. The admission of this brilliant free-lance into the Cabinet would, perhaps, have made it easier for many of the electorate to make up their minds between the conflicting parties, for his recent speech would have stamped any Party to which he was officially admitted as one in which the motive of self-interest was regarded as more important than idealism. The country will welcome the decision as a proof that idealism and high principle are weighty influences in the Conservative Party no less than in the other two parties of the State.

BRITAIN'S ATTITUDE TOWARDS FRANCE.

IF a Frenchman who only knew England during the war were to arrive in London to-day, and were able to see beneath the surface of British public opinion, he would be profoundly shocked at the change of sentiment towards his country which has occurred. We had an opportunity the other day of overhearing the casual conversation of a group of school children, aged 10 to 13 years, who had no real memory of the war. Their remarks took for granted that France was the disturber who was causing international trouble, while towards Germany there was a sort of pity for people who were being harshly treated. Again in a recent deputation to the Prime Minister, which included men of all parties and occupations, the spokesman of organised labour observed that the leaders of the Trade Unions, who recognised gratefully that British diplomacy had been tending in the right direction, had experienced great difficulties in restraining among their followers a tendency towards violent expressions of feeling and bitterness towards France, which would have done no good, would have hampered negotiations and stimulated a corresponding feeling of resentment in France. We will only mention one other symptom. Mr Punch has through his long life shown an almost unrivalled aptitude for expressing the general trend of British middle-class opinion. Those who remember the five years' comradeship in arms between England and France and the deep-rooted feelings which grow from a common sacrifice will appreciate the significance of the following lines addressed to General Smuts which appeared last month over the initials of the Editor of *Punch* :—

Taught by a generous English foe,
You hold that wars are won in vain
If those who took the knock-out blow
Are not allowed to breathe again;
Careless of being called "pro-Hun,"
You broadly hint that decent races
Who have the enemy down and done
Do not proceed to kick their faces.

The change of opinion that these instances symbolise is so important that it is worth while to comment upon its meaning. In the first place, it does not arise in any sense from jealousy, from resentment of any of France's political achievements or any clash of material interests.

We cannot think of any important sense in which the people of this country think of the French as rivals. There have undoubtedly been matters over which French and British diplomatists have wrangled, such as oil agreements or the position in the Near East, but British opinion is too much concerned with problems nearer home to be much influenced by such considerations as these. Indeed, in the main it remains profoundly indifferent, and not to say ignorant of such issues. In as much, however, as it is often suggested that British opinion is influenced by our economic interests, we may distinguish a number of trends of thought. Proceeding from the particular to the general, it may be said first that the iron and steel trade does not consider that its trade would be vitally affected by the future of the Ruhr. If the Ruhr be united to France, and Germany breaks up, British iron masters will have to meet the competition of the united Rhineland industries. On the other hand, if the unity of Germany is maintained, it is equally certain that sooner or later the working arrangement of marrying the coal of Westphalia and the ore of Lorraine will come about. In either case the combination will restore substantially the conditions that prevailed before the war, when nearly the whole of this ore was within the German Customs Union. The severity of competition will not be substantially different either for better or for worse than that of ten years ago. For the rest there are many industries which will benefit from the restored buying power of Germany, while there are other important ones which will have to fight against its competition. It would be difficult to strike a balance between direct advantages and direct disadvantages in this respect, and in practice opinion is not formed by any nice calculation of this kind. British opinion on the economic issue is based on a much more general idea, that the condition of Germany, which is one of the three largest trading countries in the world, is holding back economic development in neighbouring countries, is throwing out the balance between production and demand in the world markets for food products and raw materials, and is thus a cause of depression in five continents, and is keeping down below the normal the volume of the world's trade. So long as this is the case the nation, which has the largest share of international commerce, and is the world's chief carrier, merchant, and banker cannot hope to have her people fully employed.

But it would be a mistake to suppose that the change in British opinion is mainly based upon economic consideration. The ideas which are blotting out the memory of the war are of a non-material kind. Among them two main thoughts may be distinguished. In the first place, the action of France outrages our sense of decency. The whole Ruhr adventure is, we think, not justified by the letter of the Treaty of Versailles; it is certainly contrary to its spirit. Popular instinct, however, is not really much influenced by—being itself largely ignorant of—diplomatic documents. It rather follows its own innate sense of what is fair and right. English people have long resisted any inclination to take what may be called a pro-German attitude, for there is only too much reason to remember the barbarities of the war in almost every English home; but two wrongs do not make a right, and we revolt against the idea, just as we did in 1914, of using force to crush the soul of a people. The other prevalent idea is that the use of force to break up Germany is bound to fail, and so far from producing a state of security in Europe, is sowing the seeds of inevitable future war. As a nation sows, so shall it also reap. The break-up of the Austro-Hungarian Empire was to a large extent a natural process, but even that was carried too far. A few years was sufficient to restore the power of Prussia when crushed by the heel of Napoleon; a divided Germany is certain to re-unite at a not distant date. The great units of the future in the continent of Europe are the Germanic peoples of central Europe and the Slavs of the east, and if crude and unregulated force is to be the governing influence in Europe, the position of France is an unenviable one. In the long run, France's existence must depend upon the support of the non-material strains of world opinion, which saved her in the Great War. True, it was the armed battalions of France which first stood in the way of the onrush of German militarism, but France would have inevitably been crushed if these other

influences had not rallied to her support. It is equally true that in the future she cannot hope for permanent security without them. To all friends of France their estrangement is the most sinister feature of the last twelve months.

THE NUMERICAL IMPORTANCE OF OUR FOREIGN TRADE.

IN view of the great importance in the coming controversy of a right understanding of the importance of Britain's foreign trade, we invited Dr A. L. Bowley to make an estimate of the proportion of the national production which was directly or indirectly exported, and of the proportion of the expenditure of the average working-class household which is spent upon imported food. He writes as follows :—

Though it is not possible to make a direct measurement of the relative importance of our home and of our foreign trade at the present date, since we are obliged to work approximately from pre-war figures, and even these are not free from ambiguity, yet it is practicable to make a rough estimate which may be sufficiently accurate for many purposes.

It would be misleading to take the gross value of exports of home-produced goods as a test, since these contain a considerable quantity of imported materials; in cases such as manufactured tobacco and refined sugar the main part of the value is due to the imports. Hence the investigation must be based on the Census of Production of 1907, the only general inquiry which distinguishes net from gross output. There the product of industry and agriculture in the United Kingdom was valued at £1,370 millions. In obtaining this total, the values of home-produced material used in manufacture and semi-finished products were only included at their first stages, and their value as materials subtracted before the product of finished goods was computed; but imported materials and semi-manufactured goods to the value of £380 millions have to be subtracted to obtain the net output (the amount divisible among workmen, employers, and others), which was therefore approximately £990 millions, the imports accounting for 28 per cent. of the greater total. At the same date the value of exported home produce was £464 millions; on the very rough assumption that these contained the same proportion of imported materials as did goods consumed at home, 28 per cent. is to be subtracted, leaving £335 millions as the value due to operations in the United Kingdom, or rather less, since the exports are valued f.o.b. and the total at the place of production, and we must also subtract about 10 per cent. for depreciation or maintenance of plant, &c. Exports increased 22 per cent. from 1907 to 1913, and in the end we may take £350 millions as an estimate of the net income accruing to persons in this country directly from production for exportation. In producing these goods, more than three million wage-earners and about 200,000 salaried persons obtained their living, and a sum in the neighbourhood of £100 millions went to employers and owners. The whole home-produced income in 1913 was approximately £2,000 millions*, of which some £1,400 millions came from industry and commerce. The total number of wage-earners was about 16 millions. The direct export trade, therefore, produced about 17 per cent. of the national income of home origin, and employed nearly 20 per cent. of the wage-earners.

To these numbers must be added the earnings of shipping, docks, some part of inland transport, and the earnings and profits of merchants, underwriters, financiers, and others. Here it is not possible to separate receipts due to exports from those due to imports, or completely external shipping trade. Since, however, the bulk of imports (80 per cent. or more) were in payment for exports and shipping services, we should credit a very large share of these earnings to the existence of exports. The earnings of shipping were estimated at £110

* To obtain the total national income, at least £200 millions from abroad should be added.

millions in 1912 by Mr C. K. Hobson. From the Census of Production we may estimate that over £100 millions was received (apart from Customs) for handling and dealing in goods from the ports to the consumer. The information available suggests that in 1913 £600 millions income (30 per cent. of the aggregate of home-produced income) depended directly or indirectly on foreign trade. The proportion can hardly be put at less than one-quarter or more than one-third.

It is not to be assumed that if this trade had been destroyed the whole of this income would have been lost and more than three million persons been permanently out of work. Given time and stability, a considerable part of production for export, with resulting exchange for imports, could be replaced by direct production for home consumption, with greater or less loss according to the home facilities for growing or manufacturing the kind of commodities formerly imported. In an estimate of the income depending in fact on foreign trade, however, this consideration is not relevant.

If it is difficult to make an estimate for 1913, it is much more difficult for 1923. The factors are as follows :—Population has increased about 5 per cent., but with the reduction of working hours (partly balanced by improved machinery), and the reduction in effective strength per 1,000 persons owing to war losses and injuries, it is probable that total production would have changed little except for unemployment. With the present unemployment, the output of industry is reduced some 10 per cent., but there has not been a similar reduction in agriculture, transport, and services. The real national income may be guessed at about 5 per cent. less than in 1913, and average real incomes as 10 per cent. less. Owing to the rise of prices the national and average money incomes are, of course, much greater. The recent monthly average of exports of home produce has been £63 millions, which would have been worth about £33 millions at pre-war prices according to the Board of Trade's reckoning; in 1913 the monthly average was £44 millions. After certain adjustments are made, we get the result that from 550,000 to 750,000 wage-earners are unemployed (including a proportion of part-time workers) owing to the diminution of exports. There has been some transference from production for export to production of goods for the home market of a kind formerly imported (e.g., woollen goods, glass, dyes), but since the quantity of imported manufactures is only 10 per cent. lower than before the war, this change cannot be of much importance. Nearly half the existing unemployment† may be attributed directly to failure of exports.

The general result of the analysis is to suggest that the part of this year's national income that arises directly or indirectly from foreign trade is little more than 25 per cent., as compared with 30 per cent. in 1913. One-twentieth of our income is lost through the failure to market goods abroad. The fact that the cost of manufacturing and handling has more than doubled, while the prices of materials and imported manufactures have increased only from 50 to 70 per cent., may be as potent in producing this result as is the actual political disorganisation of Europe.

The importance of foreign trade comes home most closely and generally to the working-class in expenditure rather than in employment; the expenditure of the richer classes is, of course, also affected, but since a considerable portion is allotted to personal services and enjoyment of amenities far removed from raw materials, and since they have a margin after necessities are provided, the price of ordinary food and clothing is not of the same importance to them. It is therefore of interest to enquire what proportion of working-class expenditure is on imported goods.

For this purpose, in which only rough results are possible, it is sufficient to take the budget used by the Ministry of Labour, which, though it dates from 1904, has been shown by investigations made during and after the war, to be still approximately typical. In allotting the expenditure between home and foreign produce, we ought to take the latter at wholesale import prices, since the handling and preparing of the goods uses home labour and capital.

† More accurately half the excess of unemployment over that in 1913.

The following table shows the result of a very rough computation :—

WORKING-CLASS BUDGET.				
Per 1,000 Units of Expenditure in 1913,				
	Imports.	Home		
	Cost.	and Duties.	Produce.	Total.
Meat	72	36	108	216
Bacon	38	12	7	57
Fish	5	2	20	27
Bread and flour	88	80	42	210
Tea	40	26	..	66
Sugar	36	21	..	57
Milk, new	..	..	75	75
Butter	44	8	70	122
Cheese	15	3	12	30
Margarine	..	..	30½	30
Eggs	21	7	28	56
Potatoes	..	..	54	54
	359	195	446	1,000

There is much that is mere guesswork in this allocation. The high cost of handling, &c., is attributable as regards 25 points to tea and sugar duties, and a large proportion of the remainder comes from millers', bakers', and butchers' charges. To these entries should be added among home produce beer, vegetables, tobacco (duty and manufacture) and fruit, and on the import side raw tobacco, and some fruit and groceries, amounting to little in the aggregate. On this computation rather more than half of food expenditure was on imported goods, but little more than a third is accountable to imports as received at the ports. The changes since 1913 have been in the direction of diminishing the proportion of imports in respect of dairy produce, and increasing duties. (Margarine having not risen in price, the increased purchases of it can hardly affect proportionate expenditure.) Further, the price of imported food has risen less than that of home produce, and less than the cost of handling. It is probable that now only 30 per cent. of expenditure on food, drink, and tobacco is ultimately due to imports valued on arrival.

Without going into further details, we may offer the following estimate for the allocation of the expenditure of a working-class family at the present date :—

	Imports,	Home		
	Prime	Produce,		
	Cost.	Duties,		
		and Handling.		Total.
Food, &c.	19	42	..	61
Clothing	3	12	..	15
Rent	0	13	..	13
Fuel, oil, &c.	½	6½	..	7
Sundries	½	3½	..	4
	23	77	..	100

If average weekly working-class family expenditure is taken as £3, then 14s is attributable to imported goods, valued on arrival. We may put it that roughly one-quarter of working-class expenditure is on imports, and that no adjustment of the figures could raise the estimate to more than 30 per cent. It may be added that imports of all kinds have considerable influence, and many reactions in keeping down the prices of home products, and that consequently the interest of the working-class consumer in foreign trade is greater than that suggested by the figures.

EGYPTIAN CURRENCY SINCE 1914.

(BY A CORRESPONDENT.)

BEFORE the outbreak of war the Egyptian currency, as reformed in 1885, was based nominally on a gold Egyptian pound, which was subdivided into one thousand milliemmes. The pound sterling, the Napoleon and the Turkish pound enjoyed the privilege of legal tender at the respective rates of 97½, 771.5 and 877.5 milliemmes. But, as the gold values of these coins were respectively 4.5, 6.7, and 8.4 per mille higher than those legalised values, the relatively stronger Napoleon and Turkish pound disappeared—usually into the melting-pot of the bazaar goldsmith. The Egyptian pound existed only as a rare curiosity, and the sovereign was left as the virtual

gold base of the currency and gold medium of exchange. The banks changed sovereigns for milliemmes and contrariwise at par.

Each year, as the cotton crop began to come forward in autumn, a tide of gold—sovereigns in general—surged into the country, reached its high point towards the change of the year, and then ebbed slowly out, frequently in the direction of India. The demand for Egyptian currency gave it a small premium (round ¼ per cent.) during the cotton season, and the ebb of the tide brought it to a similar discount in the off season.

Before 1898 there was no Egyptian paper money, but in that year the National Bank of Egypt was founded, and given the privilege of issuing notes, the cover for which was fixed, as to half, in gold deposited in Egypt, and as to the other half, in securities approved by the Egyptian Government. These notes came slowly into general circulation, but by 1914 seemed to have reached saturation level, at 2½ million Egyptian pounds. Owing to the mistrust with which they were regarded by the fellahin, they were but sparingly utilised for moving the cotton crop.

If we add that Egyptian currency was adopted from the first in the Sudan, the chief facts relating to it will have been mentioned. The only disturbance in its placid course was that due to an occasional shortage of silver, which would send subsidiary coins to a premium.

The outbreak of war led to a modification of all this. Faced with the fact that gold would not be forthcoming from London to move the cotton, the Egyptian Government released the National Bank from its obligation of paying gold against its notes, which thus became inconvertible. The notes were made legal tender, a privilege which they had not hitherto enjoyed, and further, though the moiety of gold cover was still insisted on, the important concession was made that some of this gold might be held in London. At the same time, the National Bank undertook to buy or sell exchange on London at rates based on the parity of the pound sterling with 975 milliemmes.

The effect of these measures was to set up a virtual gold exchange standard between Egypt and Great Britain, which would have been effective, if the bank had been in a position to pay out gold in London.

In 1916 the bank found itself unable to obtain more gold in London; indeed, it is doubtful to what extent the gold which figured as cover was actually so available in 1914-16, or was only "ear-marked" at the Bank of England. By 1919 the gold shown as cover had shrunk to 3.3 millions. However that may be, the bank was authorised in October, 1916, to substitute British Treasury bills for the gold cover. At the same time, the British Treasury note was made legal tender in Egypt at the par rate.

These measures coincided with the promulgation of a new decree necessitated by the changed status of Egypt. They had the effect of divorcing the Egyptian currency from gold, and of tying it to sterling. Moreover, the facts of the situation were thus recognised. It should, however, be noted that the adoption of Treasury bills as cover is not an essential of this policy. Any other securities would do as well, provided only they were quickly realisable at stable values. It is also worthy of note that the will and the power to buy and sell exchange in either direction are necessary conditions of the success of this policy. To anticipate, it will be seen that the success of the plan in the present instance depended on the fact that it was instituted at the commencement of the cotton season, when there was a heavy demand in London for Egyptian currency. Had war broken out in January, when the reverse state of affairs obtained, the event might have been far otherwise, since the bank would not have been in a position to sell sterling in London to an extensive amount.

We proceed now to examine some of the consequences of this policy. In the first place, gold (which had been prohibited from export) began to flow into the coffers of the National Bank in Egypt, where the holding of the metal rose from 2 millions in July, 1914, to 4.1 millions in November, 1915. Thereafter it fell, owing it is believed, to the necessities of the Arab campaign against

the Turks, to 2.8 millions in the end of 1916, and then rose slowly to 3.3 millions in 1918, round which figure it has since remained.

The further discussion requires an examination of the principal trade movements in Egypt during the next eight years. These are given in Table A. From the early days of the war there was a steady influx of troops into the country, up to the spring of 1916 at which time the estimated strength of the forces was between 300,000 and 400,000 of all ranks. At this period there were in the country more generals than there had been subalterns in the pre-war years. The numbers gradually diminished, but rose again in 1918 to close on 300,000 on the prosecution of the campaign in Palestine. Thereafter there was a rapid fall as demobilisation commenced. These troops made heavy demands on the country for both commodities and services, payment for which caused an ever increasing remittance of funds from this country. It is not possible to do more than estimate the amount remitted on account of these military sojourners. The recently published "Statistics of the Military Effort of the British Empire" shed only the dimmest of light on the matter. Still, with the help of the figures there given, an estimate (it cannot pretend to be more) has been formed of the amount spent in Egypt on this account :—

TABLE A.—FOREIGN TRADE OF EGYPT.

	Trade	Army	
	Balance.	Expenditure.	Total.
	(a)		
1914	+ 7.0	0.6	+ 7.6
1915	+ 7.4	10.0	+ 17.4
1916	+ 5.7	17.5	+ 23.2
1917	+ 7.1	18.0*	+ 25.0*
1918	+ 6.3	25.0*	+ 19.0*
1919	+ 28.4	12.0*	+ 40.0*
1920	+ 16.3	8.0*	+ 8.0*
1921	+ 19.1	5.0*	+ 14.0*
1922	+ 5.5	4.0*	+ 9.0*

Unit, one million pounds. (a) Exports—imports (metal coinage included). * Rounded off.

Egypt being a debtor country, there was normally a favourable balance of trade, which was equivalent to the excess of invisible imports, in the form of receipts for the interest on public and private debt, and the benefits received by inhabitants who spent the summer abroad, over the invisible exports, represented by services and goods supplied to shipping. The further item of invisible exports in the form of benefits received by civil and military sojourners has been referred to. Owing to its importance during the war, it has been indicated separately. Various considerations show that the excess amounted in 1914 to about 7.6 million pounds, and that imports of all kinds balanced exports, as they ought.

In 1918, it will be noticed, there was an unfavourable balance. This was due to a retention of much of the cotton in the country. The stock in magazine at Alexandria, at the end of that season, exceeded by some 800,000 kantars that at the end of 1916-7, which weight, at L.E.7.7, the average price of the season, represented a sum of over six million pounds.

We are now in a position to estimate the amount by which the debit foreign balance of Egypt was lessened, year by year, to 1922, and to observe its effect on the volume of paper money in circulation and on the current and deposit balances at the banks. Since, however, the total amount of the deposits is not known, we shall take those in the National Bank as being typical of all.

Owing entirely to expenditure on military account (a point Egypt would do well to bear in mind), foreign credit balances totalling some 54, swollen by interest to 60, millions had accumulated by the end of 1918. In 1919 a heavy favourable balance preceded two years when realisation of one-third of the accumulation caused adverse balances, and now in 1922 the annual balance is once more nearly attained. Army expenditure over the nine years under review comes to almost exactly 100 millions. But for this, Egyptian finance would have shown a heavy deficit.

The credit balance accumulated abroad manifested itself in investments, chiefly war loans of the Allies. These assets in London had counterbalancing liabilities in the shape of the increased issue of notes in Egypt and the increases in public and private current and deposit accounts. From the dates, it is clear that the rise in the

output of notes each year was due to the movement of crops. The lowest value in each year may be taken as representing the sum of the country's needs for currency, and—a very important point—the hoarded savings of the non-banking portion of the population.

Further details of the economic position are given in the subjoined table :—

TABLE B.—SOME DETAILS OF THE ECONOMIC SITUATION OF EGYPT.

Year.	Balance (a).	Foreign Charges (b).	Reduced Balance.	Accumulated Balance.	Note Circulation.		Bank Accounts.	Index Nos.
					Highest.	Lowest.		
1914	8	8	0	0	7.46 D.	1.84 Jy.	5.7 c)	100 (a) 100 (e)
1915	17	7	10	10	10.58 D.	5.74 Jy.	8.9	103
1916	23	7-1	17	27	20.81 N.	9.68 Jy.	14.3	126
1917	25	7-1	19	46	29.5 D.	16.17 A.	19.6	179
1918	19	7-2	14	60	44.49 D.	27.79 A.	24.4	209
1919	40	7-3	36	95	64.28 N.	36.72 A.	51.0	229
1920	8	7-5	86	86	61.60 Ja.	37.25 D.	11.3	316
1921	14	8-4	18	68	35.87 O.	29.25 A.	11.9	176
1922	9	8-3	4	64	33.90 Ja.	25.36 A.	19.1	145

The unit in cols. 2 to 8 is one million Egyptian pounds. (a) From Table A. (b) Including allowance for interest from 1916. (c) Current and deposit, public and private, accounts, December. (d) Egypt. (e) United Kingdom, Economist. Ja=January. Jy=July. A=August. O=October. N=November. D=December.

This is not the place to attempt an elaborate analysis of these figures. Suffice it to point out that so far as the bankers and foreign traders were concerned, the exchange system worked admirably, and in most of the official publications on the subject it is evident that the interests of this part of the community were predominant. Securities were bought or sold (if necessary) in London, as money was paid in there for remittance to Egypt, or vice versa. The foreign trade was, however, but one part of the story. Behind the exporters and importers lay the great mass of the people, thousands of times more numerous than the banking and external trading community, and doing a domestic trade which may be estimated at from three to five times that of the foreign trade. These people were not in the least interested in the number of milliemmes that could be obtained for a Bradbury, which none of them had seen in 1914. They were, however, vitally interested in the price of the services and commodities in which they dealt, and in seeing that they obtained adequate real wages as the reward of their exertions. It is, therefore, far from irrelevant to examine how they fared.

Had not the exchange been "pegged" at 975 in 1914, the steady outflow of goods in excess of imports would have sent Egyptian currency to a premium. As it was, this currency was tied to sterling. In consequence, the amount paid in milliemmes for these exports was greater than it would have been on a free exchange by the difference between the level of the free exchange and the pegged. In other words, since more money was manufactured to do the work than would have been necessary had a free exchange existed, there was inflation of the currency to that extent. A rise of prices necessarily took place. Economists accept the theory that, sentimental prognostics of the future apart, the rate of exchange between two countries is determined by the relation between their respective price-levels. On that theory the exchange in Egypt would have fallen to some 790 milliemmes to the pound in 1916. Had it been allowed so to fall freely, prices would not have risen nearly so high as they did later in Egypt; "profiteering," which was rampant in every direction, would have been avoided; the poor and the earners of more or less fixed salaries would not have suffered, as it is indisputable that they did suffer; the foreign balance at the credit of Egypt would not have been lessened, but the increase of national wealth would have been less unequally distributed. In actual fact, all these various evils occurred. Not till May or June of 1917, when the Index Number of prices had risen to 75 per cent. above its 1914 value, did the employees of the State receive any war bonus, and then that so tardily given was quite inadequate to meet the case. Much the same thing happened in the ranks of the industrial workers who are mostly congregated in the towns. As a result there was continual and ever-increasing discontent amongst the Government employees and in the towns generally, that went far to foster the spirit of revolution which broke out in 1919.

Other objections might be raised against the policy of fixing the exchange, which was discovered to be a mistake when it had become too late to remedy it, as is

† Some part of this should be transferred to imports, since a considerable part of the material is imported.

virtually admitted in Lord Allenby's Report on Egypt [Cmd. 957], p. 7.

These facts are worthy of consideration by the advocates of an Empire currency, who very frequently quote the "success" of the policy in the case of Egypt in support of their contentions. The lessons of Egypt (which may be reinforced by what happened in India and other countries) show that in normal circumstances, when prices are stable, no great harm can result from the adoption of the policy, but when prices are upset in the one country, the policy will bring about a similar disarrangement in a second. But in normal circumstances the ordinary means of settling foreign accounts are adequate, and the policy becomes unnecessary. So the policy may be dangerous in times of stress, while it is unnecessary in times of calm.

OVERSEAS TRADE IMPROVING.

WHEN doctors have pronounced that a patient is *in extremis*, and that life depends upon a drastic operation, the patient often disconcerts them by sudden improvement. The same is true of trade. An unexpected trade recovery disconcerted Mr Joseph Chamberlain, and now again we have, in the Trade Returns for October, signs of improvement that are hardly in keeping with Surgeon Baldwin's diagnosis and prescription. We do not propose to labour the point, because it is notoriously dangerous to attach great weight to the statistics of a single month. Nevertheless, the October returns should be recognised for what they are, namely, more satisfactory than those of recent months. Total exports in October were £16½ millions better than in August, £10½ millions better than in September, and only very slightly less in value than those recorded in May, which was the month when the last trade recovery reached its highest point. This export increase was accompanied by a large rise in imports, which, at a little less than £100 millions, were £16½ millions more than in September and £11 millions more than in August.

A summary comparison of the value figures for October and the ten months of this year and last reads as follows:—

MONTH OF OCTOBER.

	1922.	1923.	Increase or Decrease in 1923.	
	£	£	£	%
Imports	84,927,053	99,914,731	+14,987,678	+ 17.6
British exports	60,398,843	71,322,931	+10,924,088	+ 18.0
Re-exports	8,277,151	11,146,961	+ 2,869,810	+ 34.7
Total exports	68,675,994	82,469,892	+13,793,898	+ 20.0
Excess of imports over total exports	16,251,059	17,444,839	+ 1,193,780	+ 7.3

TEN MONTHS ENDED OCTOBER 31st.

	1922.	1923.	Increase or Decrease in 1923.	
	£	£	£	%
Imports	813,140,007	887,459,651	+ 74,319,644	+ 9.1
British exports	595,122,610	637,445,312	+ 42,322,702	+ 7.1
Re-exports	86,150,677	98,004,852	+ 11,854,175	+ 13.7
Total exports	681,273,287	735,450,164	+ 54,176,877	+ 8.0
Excess of imports over total exports	131,866,720	152,009,487	+ 20,142,767	+ 15.3

These comparisons with last year, as we have often explained, are vitiated by the separation of Irish Free State figures last April, and only lend themselves to cautious deductions. More useful for immediate purposes is to trace the course of trade for the past three months. Appended is an analysis of the values of imports and exports for the past three months under the main classifications:—

(In Millions of £.)

	Imports.			British Exports.		
	Aug.	Sept.	Oct.	Aug.	Sept.	Oct.
Food, drink, and tobacco ..	44.0	38.1	44.8	3.4	4.0	4.8
Raw materials and articles mainly manufactured....	22.3	23.6	30.9	10.2	9.8	11.6
Articles wholly or mainly manufactured	21.7	20.9	23.7	45.4	48.9	53.9

The most conspicuous point about the table is the rise in the exports of British manufactures and the simultaneous increase in imports of the raw material class. Details of the increase of certain staple exports in recent months will be found in the supplement to this issue.

From the October trade returns we have extracted the tables which follow, the first of which shows imports from and exports to Continental countries in the first nine months of each of the past three years, and of 1914:—

JANUARY to SEPTEMBER (000's omitted).

	IMPORTS FROM.				EXPORTS TO.			
	1914.	1921.	1922.	1923.	1914.	1921.	1922.	1923.
France	32,999	44,735	38,697	47,653	20,330	35,610	42,287	43,537
Italy	6,005	7,632	8,014	10,289	10,103	12,970	15,298	15,104
Switzerland	7,539	14,632	16,304	14,571	2,586	3,534	7,446	5,252
Spain	11,065	19,441	16,518	16,761	6,292	12,174	10,988	10,092
Portugal	2,805	4,464	4,538	4,085	3,888	5,302	5,706	6,702
Belgium	15,085	26,317	17,368	20,859	8,171	14,300	18,870	18,891
Germany	47,238	15,585	18,701	25,454	24,456	12,268	24,384	33,014
Austria	4,393	467	1,129	1,498	1,407	830	780	115
Hungary	41	221	490	2,668	221	159	115	115
Greece	1,200	1,899	1,979	2,726	2,404	4,247	2,995	2,602
Roumania	3,134	2,576	1,004	1,127	1,937	4,713	1,990	2,034
Turkey (Europe)	812	475	901	921	2,186	3,352	3,087	2,449
Russia	22,947	421	3,190	4,818	11,843	802	2,766	1,713

Total	209,833	236,773	218,214	256,492	122,078	156,877	197,181	199,220

The largest increase in imports as compared with last year is shown by France and Germany. But in the case of the latter the expansion in exports is considerably larger than the increase in imports. Our exports to Germany in the past nine months show an increase of 35 per cent., as compared with the same period of 1914, while our imports from Germany show a decline of 46 per cent. Trade with Switzerland shows a decrease both in imports and exports, and Holland has taken less and sent us more than last year.

The next table shows trade with foreign countries outside Europe:—

JANUARY to SEPTEMBER (000's omitted).

	IMPORTS FROM.				EXPORTS TO.			
	1914.	1921.	1922.	1923.	1914.	1921.	1922.	1923.

While there has been a substantial decline in imports from the United States, that country has taken over £4 millions more British goods than in the same period of last year. If allowance is made for re-exports, given in the final table, it is found that our adverse trade balance with the United States for the past nine months is £77 millions, as compared with £103½ millions in the first nine months of 1922 and £44 millions in January to September, 1914. In comparison with 1914, net imports from the United States have increased by 71 per cent., exports by 66 per cent., and the import excess by 75 per cent. Of the other figures of the table the most conspicuous are those for Argentina, which show substantial growth on each side. There has been a further increase in excess of exports

to Japan, but exports to China show a sharp fall. Trade with the Dominions is shown in the next table:—

JANUARY to SEPTEMBER (000's omitted).

The figures for the Irish Free State are now shown separately, those in the table referring to the six months April to September. Both imports and exports from the other countries in the table have increased by similar amounts. Imports from Australasia show a pronounced falling off, but there is a striking increase in imports from India and Ceylon.

The final table gives re-exports:—

RE-EXPORTS—NINE MONTHS.

(000's omitted.)

To	1914.	1918.	1919.	1920.	1921.	1922.	1923.
France	7,859	10,715	23,489	34,261	8,050	13,728	13,933
Belgium	4,888	10	9,927	15,713	6,832	8,352	6,857
Germany	13,347	...	4,135	20,174	17,352	13,643	14,308
Russia	5,419	9	2,488	3,782	821	623	1,373
Norway	631	61	3,646	3,951	1,341	1,158	1,259
Denmark	408	120	1,449	1,528	572	534	554
Netherlands	474	90	4,916	3,389	1,084	906	1,371
United States	24,525	3,119	17,408	10,411	6,676	4,744	3,682
Japan	146	770	1,147	48,501	14,919	14,650	20,966
Other countries	4,864	552	5,435	12,370	8,731	6,477	6,669
Total for foreign countries	67,096	18,821	93,000	160,267	68,042	66,336	72,596
British Possessions	9,700	3,986	5,253	20,192	9,598	11,538	14,262
Total	76,796	22,807	98,253	180,459	77,640	77,874	86,858

Here the most conspicuous figure is that for the United States, which shows an increase of over £6 millions. This year's figure, however, is below that for 1914, whereas in most other cases this year's figure is above the pre-war level.

PREFERENCE POSSIBILITIES AND DANGERS.

(BY OUR OTTAWA CORRESPONDENT.)

THE possibilities of the Preference system are worth examining in the light of trade figures recently published by the Canadian Government. The Budget of 1923, by way of increasing the British preference, granted a special discount of 10 per cent. on duties levied on British imports provided those duties exceeded 15 per cent., and provided the goods were imported direct through Canadian ports. The discount became effective on May 12th, so that it had been in operation nearly five months on September 30th. The Customs Department has published a statement showing that in these five months (May-September) the total imports under the British preference were valued at \$58,539,798, as compared with \$49,352,705 for the parallel period of 1922. Of the total imports under the preferential tariff, it is calculated that \$30,513,018 were affected by the extended preference, and that of these \$26,135,973 were actually entered under that schedule. By far the largest increase was in textile goods, which form a very big proportion of the British imports; in the five-month period they were valued at \$27,138,567, as compared with \$23,600,924 in the same period of 1922, some 20 million dollars' worth of the total being eligible for the new discount. The suggestion was conveyed in the official statement embodying these figures that the increase in the total imports made under the preferential schedules could be attributed to the extra preference given by the new discount.

But a wider study of the trade figures creates doubt about the propriety of these conclusions. It is true that there was an increase of \$9,187,093 in the value of the imports under the British preferential tariff during the months May-September, but during this period there was a total increase of imports under all tariff schedules of \$79,928,282, which means that imports not affected by the discount increased by \$70,741,624.

The increase in preferential imports for May was \$651,000, and it is probable that the discount did not seriously affect the import shipments for that month, as the orders would have been placed some time previously. In June the increase was \$3,434,055, and in July \$3,555,143. But in August the increase declined to \$738,191, and in September it was \$808,190. Normally both of the latter are months of heavy imports for the autumn and winter trade, and the inference is that while the new preferential discount gave a temporary filip to British imports, its effect has not been sustained, and the increase in British preferential imports during September and October was not materially heavier than during a month when the effects of the discount could scarcely have been operative, and can easily be attributed to the general improvement in trade which has taken place.

Indeed, the trade returns show that imports from other countries which do not enjoy any preferential privileges were increasing at a more rapid rate. During the May-September period, imports from the United States increased by no less than \$59,594,000 over the figures for the parallel period of 1922. From Germany the imports were nearly trebled, rising from \$753,195 to \$2,112,645; from China, also, they were almost trebled, from the Argentine more than trebled, and from the Dutch East Indies more than quadrupled. With this general increase in imports taking place, it was only natural that there should be a substantial increase in British imports, but the figures far from justify any sweeping deductions that the course of trade can be markedly altered by preferences of the character which can be contemplated in the present state of Canadian politics, when the two major parties are both firmly committed to the protectionist principle. With the close of the St. Lawrence navigation season, which is near at hand, the value of the new preferential discount will practically disappear, for British goods which are to gain the benefit of it must be shipped through Halifax and St. John, and this will involve for them higher railway freights to many interior points, and many importers will still find it more profitable to ship via Portland and other American ports, and waive the chance of the discount to secure lower railway freight rates.

There is also the possibility that preferential juggling and wrangling over adjustments may be provocative of very serious quarrels. Officials of the Trade and Commerce Department and the motor manufacturers of Canada have viewed with considerable alarm the proposal of the Australian Industries Protection League, to which apparently Premier Bruce has given a sympathetic reception in London, and which has been backed up by letters from well-known British advocates of Imperial preference, that goods which are to enjoy the British preference should be forced to contain at least 75 per cent. of labour or materials of British origin instead of 25 per cent., as at present. This agitation if carried to fruition would seriously impair, if it would not completely destroy, the very important export trade in motor-cars which Canada has built up since the war not only with Australia, but with other portions of the British Commonwealth. This trade has been promoted largely by the branch factories of the great American corporations like the Ford Co. and General Motors, Limited. During the last fiscal year Canada exported to Australia alone 17,000 cars of various kinds, and during the first half of the present year the number exported has already exceeded 11,000. If it reaches 22,000 by the end of the fiscal year, the number will have been quintupled in three years. It is true that most of these branch motor factories do import a large portion of their raw materials from the United States, and some of them are not much more than assembling plants, but they do use large quantities of Canadian material, which would not otherwise be utilised, and they employ mainly Canadian labour. Their activity has very materially helped places like Toronto, the Border

Cities, and Hamilton, to tide over a very bad industrial depression, and its impairment would have unfortunate reactions upon the general business conditions in these centres. The advent of these branch factories to Canadian soil has always been welcomed by governments, municipal authorities, and the public generally, and to many of them special inducements have been offered.

These Canadian-American firms have been able through their superior efficiency and organisation to invade the Australian market very successfully, and reduce the business of the domestic Australian manufacturers of motor-cars to narrow limits. It happens that most of the latter are allied to British firms, and the suspicion is strongly aroused that British interests are mainly behind this move to ruin a valuable Canadian trade with Australia. If this surmise is proven to be correct, it cannot promote what is currently termed Imperial goodwill. Canada has always been content to give the preferential privilege to British goods containing 25 per cent. of British labour and material, but if British motor manufacturers and publicists of the ultra-Imperialist brand foment an agitation in Australia and elsewhere to secure stiffer restrictions, which would hurt an important Canadian industry, they need not be surprised if reprisals are set on foot. If Mr Bruce, for instance, countenances any such measure, he need not expect any preference in Canada for Australian dried fruits, and a sharp tariff war might easily develop.

THE STOCK EXCHANGE AND THE GENERAL ELECTION.

(BY A STOCK EXCHANGE CORRESPONDENT.)

Stock Exchange markets plunged into the depths of depression upon the news that a General Election was at hand, and partially recovered when it became known that the appeal to the country was to be made within three weeks' time. For the previous flatness, the reason ascribed was that there might be a chance of the Labour Party coming into power and introducing its two planks of capital levy and nationalisation into the national platform. For the subsequent rally, the explanation was advanced that the shortness of time between now and the election must prove a bull point for the party at present in power, and that this went a good way towards removing the fear of Labour being successful. At the same time, dealings in Majorities sprang up in the Stock Exchange, the first price quoted being in the neighbourhood of 40. This infers the estimate that the Conservative Party will have a clear majority over all other parties of at least 40, although, of course, it is equally possible to sell a bear, on the basis of 35-45, as it is to buy the probabilities of a greater majority than the price indicates. To what extent the temporary slump in gilt-edged stocks has been due to actual selling or to apprehensions of such sales it is difficult to say. The Stock Exchange has been told that huge blocks of British Government stocks were turned out by foreign holders who had bought the securities when the Swiss Referendum seriously disturbed the confidence of Continental capitalists in their own securities. These capitalists, it is claimed, diverted their funds into British Government stocks, on the assumption that this country, having just announced that its full war debt to America would be discharged, thereby confirmed British Government credit as the most stable in the world. Realisations of such foreign-held stock are declared to have followed the unexpected announcement of a General Election, and the money, according to this gossip, has fled across the Atlantic for safer keeping in dollar securities. That there has been a good deal of selling in the Consol market no one can doubt, but, on the other hand, if the capital realised by these sales has really gone to America, the business must have been conducted through outside houses; the Stock Exchange market for American railway and other dollar bonds has found scarcely any increase upon its usual meagre volume of trade.

The fall in gilt-edged issues has alarmed a good many

people. First-class British Corporation stocks which have not been seen in the market for a long time past began to come in, though the quantities were comparatively small—£800 of this, £1,000 of the other, £1,500 of something else. Dealers in the Home Railway prior-charge stocks suddenly found themselves called upon to take what they had been accustomed to regard as extremely tightly-held. The two recently issued Tube 4½ per cent. debenture stocks, for which there was a rush less than a month ago, fell to 1½ discount, and the Tata Power 4½ per cent. debenture stock, also guaranteed by the British Government, fell to 2½ discount. India Government and railway stocks gave way in the general depression, but out of this welter of weakness it is impossible for anyone to say to what extent the lowering of prices came about through real selling on the one hand, and of mere apprehension on the other. At the lower prices for War Loan, Conversion and similar liquid securities, there was a good deal of support. The argument has been frequently heard this week that if there should be a capital levy, it matters little whether a man has money in gilt-edged stocks or lying at his bank, and as the slant in prices of the former led quotations to a more reasonable level than they have recently attained, the average investor was not slow to take advantage of the cheaper prices at which the stocks became available. It may be said that the immediate fear which surrounded the possible result of the General Election has now passed away. Markets will be, of course, erratic and sensitive for the next three weeks, but the Stock Exchange mind, always looking ahead, maintains that with the General Election out of the way there will be plenty of scope for an accession of business during the last few weeks of the year. With the political atmosphere rendered clearer by the Election, greater confidence can be counted upon, with a concomitant readiness on the part of the public to return to the Stock Exchange markets, unless, of course, Labour secures a majority in the polls. The more thoughtful-minded will not miss the lesson which this latest flurry in stocks has occasioned, because it is fairly obvious that, unless the Labour Party shall receive an unexpected setback, there must lurk in the background for some time to come a fear similar to that which brought about the slump last week.

It is open to debate whether or not the question of capital levy is as terrifying as people seem to think, and it may be recalled that Mr Bonar Law himself coquetted with the idea some years ago, though his opinion did not go beyond a very cautious hint that there might be something to be said for the scheme in certain conditions. Prices of industrial shares, as well as those of gilt-edged stocks, gave way sharply, though the oil market and some of the other speculative departments were held to be likely to benefit from any thrust at the purely investment stocks. Proprietors of shares in such companies as the Imperial Tobacco, British American, Coats, and others, which make huge profits through the maintenance of combination, have begun to look a little uneasily at the prospect of their companies being attacked on the score of making too much money at the expense of the customer. Although the shares in such concerns have not been specially singled out for flatness, at the same time the shareholders have felt qualms about the desirability of making further investments, in spite of the falls which occurred, in shares of companies whose enormous profits would seem to invite particular attention from the Labour Party. The flatness of Home Railway preferred and deferred ordinary stocks caused by the fear of Nationalisation was followed by a bout of bargain-hunting on the part of those who recognise that the prices carry several months of dividends, and who are prepared to risk political developments for the sake of the comparatively high yields which the stocks offer. The House is looking for a return of the Conservative Party next month, and hoping, of course, that the majority will be sufficiently substantial to obviate the risk of another appeal to the country within so short a space of time as that which has occurred since last November's election and to-day. On the point of Protection v. Free Trade, opinion is a good deal divided, and the advocates of Protection appear to be rather less vocal than usual, though this may be merely a personal impression. It is acknowledged that, were Protection to be introduced on a wider scale than

prevails at present, this would have a favourable effect upon the profits of companies able to take advantage of the opportunity for raising prices still further against their purchasers.

Notes of the Week.

The Situation in Germany.—The inglorious ending of the extreme royalist *Putsch* in Bavaria, with which General Ludendorff was unwise enough to be associated, has at least cleared the air. There seem to be signs that disunion among the royalists has directed the minds of the German people more than ever before to the very real dangers of any movement likely to help forward the disintegration of the Reich. This emphasis coincides with a subtle change in what appears to be the French official policy in the Rhineland. The Separatist experiment led, as it is, by men of very dubious respectability, has been tried, and has failed signally. A new attempt may now be made to achieve the desired result by advocating Rhenish autonomy within the Reich. This plan has certain obvious advantages from the French point of view. There has always been strong local feeling in the Rhineland, while the Berlin Government could still be made in part responsible for the sufferings of the local population, which are inevitable so long as French troops remain in the land. Moreover, the institution of home rule in the Rhineland would not necessitate a revision of German reparations, and could be brought about without any flagrant breach of the Treaty of Versailles in the sense in which it is interpreted by France. Be this at it may, however, the problem is now very much to the fore in Germany, for no stable currency is possible so long as unemployment relief has to be made to the Ruhr workers. The appointment of Herr Jarres as Minister of the Interior opens up new possibilities in this connection. He is said to be a firm believer in the "financial evacuation of the Rhineland and the Ruhr by the Reich," and when the unemployment payments from Berlin cease, as now seems more than probable, the French will be faced with a most embarrassing situation, for some two million men in the occupied territories are now out of work. The possible reaction of this new factor on the separatist or autonomist movements in the Rhineland are incalculable. The claim of Berlin is that France has in effect annexed the Ruhr, and is thus responsible for its support. Negotiations are carried on with the individual industries (and, in this connection, the provisional release of Herr Krupp von Bohlen and some of his fellow-prisoners is not without significance), and the central Government is entirely disregarded. Local currencies are being introduced, and the railways are exploited by the Franco-Belgian *régie*. The Berlin correspondent of the *Times* states that representatives of the occupied areas have refused to shoulder the burden of unemployment relief unless they are given the sovereign right of control, and this the Berlin Government has refused, as being tantamount to complete separation. The whole question is becoming increasingly serious, and the return of the ex-Crown Prince does not exactly simplify matters. For the moment it appears that Bavarian separatism is rather at a discount, while the outlook for the Hohenzollern family is probably brighter than it has been at any time since the Armistice. The Ludendorff *Putsch* has at least discredited von Kahr, though from the Hohenzollern point of view, it was not exactly well timed. The Government of the Reich, meantime, is pursuing a policy all its own. Dr. Stresemann's action on the question of allowing the ex-Crown Prince to return is likely to win a very large measure of popular support, and in any case his explanation—given in the *Times* of Thursday last—is not calculated to reassure friends of the democratic experiment in Germany. The ex-Kaiser has received 12 passports, and he, too, seems to be preparing to fish in the troubled waters. Amidst all the complications and uncertainties of the present situation, however, French action in the Ruhr seems to have begun to lead to a recrudescence of nationalism in Germany, the results of which it is at present impossible

to foresee. Meanwhile, the economic situation in Germany, which is described by our Berlin correspondent in a later column, is deteriorating with great rapidity.

Bounties for Agriculture.—The storm of protest which Mr Baldwin's Protection proposals raised in agricultural circles has driven the Government, with almost indecent haste, to offer to the farmers a *quid pro quo* in the shape of a bounty of £1 per acre on arable land, and to agricultural labourers the guarantee of a 30s wage as a condition of the farmers' subsidy. Until the full details of the plan are disclosed detailed criticism is impossible, nor can the electoral influence be foreseen of a proposal which the Leader of the Opposition in the House of Commons on Thursday described as "an insult rather than a boon." Apparently the grass-land farmer is left out in the cold. It is worth noting that in this matter of bounties for agriculture, just as in the case of the need for Protection, Mr Baldwin's conversion has been rather sudden. A year ago (October 29, 1922), in a speech at Worcester, he said: "Neither agriculture nor any other industry in this country can look to this or any other Government, whatever promises they may make, for a direct or indirect subsidy of public money." We prefer the Mr Baldwin of 1922 to the Mr Baldwin of 1923. But whether this particular bounty is open to any special objections over and above the serious general ones that attach to every proposal of this sort, we shall not know until the details are forthcoming. But one fears that its defects are likely to bear relation to the haste with which it has been conceived.

Strength of Parties.—The dissolution of Parliament having taken place yesterday, the nomination of candidates is fixed for November 26th, and polling day is December 6th. It is anticipated that at least 1,400 candidates will take the field, divided roughly as follows:—Conservatives, 500; Liberals, 450; Labour, 450. The relative strength of parties at the dissolution was as follows:—Conservatives, 346; Labour, 144; Liberals, 117; other parties, 8. In other words, the Government had a clear majority of 67 over a combination of all other parties. In view of the fact that Protection and Free-trade will be the main issue in the next Parliament, that the opposition parties will be solid in favour of the latter, and that the Conservative members will almost certainly include some Free-traders, it would appear that a net loss of so few as 25 or 30 seats at the forthcoming election would place Mr Baldwin and his colleagues in an actual minority on the main question.

Ireland and the Election.—Our Dublin correspondent writes:—The General Election in Great Britain will not be without its effects in the Free State, although it is too early yet to speculate on the manner in which Imperial Preference or Tariff Reform would touch Irish exports to the British market. But at the moment there is more concern as to the effect of the General Election on the North-East Ulster problem. A conference has been arranged between the British Government and representatives of the Irish Free State and of North-East Ulster to discuss matters arising in connection with the Boundary Commission prescribed by the Anglo-Irish Treaty. The correspondence relating to this conference contains a full admission of Ireland's rights under the Treaty in such a manner that her participation therein cannot be suggested to be, in a way, a *de facto* waiver of those rights. Now, owing to the election, this conference is suspended. In the event of a change of Government, there may be searchings of heart in North-East Ulster as to how far a Liberal, a Labour, or a Liberal-Labour Government would consider the Conservative policy of lavish subsidies to North-East Ulster while the claims of the unemployed at home are so pressing. The stubborn refusal to submit to the holding of the Boundary Commission and to the honouring by Great Britain of its Treaty obligations in the matter might yield something of its rigour if the British Exchequer proved less indulgent and accommodat- ing. And hence might be drawn the elements of a larger and more lasting settlement. There is no definite, official

news of the pending loan as yet. With a view to providing a suitable atmosphere, the Government has announced a series of "cuts" in its expenditure list. Emergency forces for the maintenance of order have been disbanded, the army reduced from some 50,000 to about 35,000, with further reductions in view, soldiers' dependents' allowances drastically curtailed, National school teachers' pay reduced by 10 per cent., and the 10s payable to Old Age Pensioners in the same proportion. In addition, all administrative expenditure and army methods of accountancy are being closely scrutinised and revised. After separating non-recurrent and emergency items from the account, the Government will probably be able to balance its next Budget. It seems probable that the prospectus for the loan will appear this month, and that the issue will be restricted to £10,000,000—which it is expected will be easily provided by the banks, Government balances, approved health societies, and charitable and ecclesiastical trustees. In this connection it should be remembered that it is only by special arrangement, terminable on March 31st next, that Irish trustees holding charitable funds invested in British securities are freed from British income-tax. It is obvious that practically all of them must seek a continuance of that immunity by reinvesting in Ireland. The loan will give them their opportunity without loss of revenue. The further capital requirements of the Government will be met later on as they arise by further issues, probably of a character more attractive to the small investor. There is a strong push being made in support of premium bonds for this very purpose, and it will not improbably succeed for the next loan. There has been some confusion in the practice of the revenue authorities in their dealings with dividends reaching Ireland in respect of Irish-held British investments on which income-tax has been deducted at the source. It has now largely ceased, but the confusion has to some extent survived in the public mind. The Minister of Finance states that it is only in a small proportion of cases that the full Irish income-tax has been deducted from such dividends—thereby putting the owner to the trouble of obtaining a refund. Such dividends are only taxable to the amount of 6d in the £, i.e., the difference between the British and the Irish rates. The necessary forms to avoid the double deduction can be obtained from Irish bankers or from the British Inspector of Foreign Dividends. It should be noted that though arrangements have been made between Great Britain and the Free State for the avoidance of double taxation there are no such arrangements between the Free State and the other Dominions as yet.

Output of Iron, Steel, and Coal in October.—After showing a decline in production for four successive months, the figures of production of pig-iron just issued by the National Federation of Iron and Steel Manufacturers show a rise in October from 558,600 tons to 592,600 tons. Since our correspondents all report a healthier tone in iron and steel centres, it is to be hoped that the reaction has now been definitely stemmed, and that the next few months will show a steady expansion in output. The production of steel ingots and castings also rose slightly from 695,100 tons in September to 702,200 tons in October. With the production for ten months now available it is possible to forecast with approximate accuracy the totals for the year. These figures compared with 1913, and each of the previous post-war years are as follows:—

	Production.—		Exports.
	Pig Iron.	Steel Ingots and Castings.	
	Tons.	Tons.	Tons.
1923 (estimated)	7,400,000	8,450,000	4,300,000
1922.....	4,902,300	5,880,600	3,397,200
1921.....	2,616,300	3,703,400	1,700,400
1920.....	8,034,700	9,067,300	3,251,200
1919.....	7,398,000	7,894,000	2,232,800
1913.....	10,260,300	7,663,900	4,969,200

Production is thus better than in any post-war year except 1920, but, unfortunately, to obtain this production, orders have in many cases had to be accepted at unremunerative prices, and the financial results are by no means as good as the production figures might indicate. Exports of iron and steel in October amounted to 388,600 tons, a figure

which has only once been surpassed since the end of the war (viz., in May 424,500 tons). Exports for the whole year may be expected to amount to about 4,300,000 tons, or 30 per cent. more than in 1920 and about 85 per cent. of the tonnage exported in 1913. In comparing figures of production and export with pre-war periods, however, it must always be remembered that the war was responsible for increasing our steel capacity by at least 50 per cent. The coal output for October averaged 5,627,000 tons per week, or, say, 24,381,000 tons for the calendar month. Exports of coal amounted to 7,433,000 tons, of which 1,708,100 tons went to France, 1,236,790 tons to Germany, and 759,900 tons to Italy. The total output for the year may be expected to amount to 275,000,000 tons, or within 12,000,000 tons of the record total of 287,412,000 tons in 1913. The export of metallurgical coke amounted to 381,400 tons, or 55,000 tons more than the previous "record" of August last.

The Government's Anglo-Persian Oil Shares.—The announcement in the House of Commons on Thursday, in reply to questions put, that the Government has received a proposal for the purchase of its holding in the Anglo-Persian Oil Company, but that it had not yet arrived at any decision, appropriately and finally quashes the "authoritative" but unauthorised statements constantly appearing in the London Press that the Government has "sold out" to the Shell Transport and Trading Company. A bid for these shares was, in fact, made by the Shell group some time ago, and is believed by some to be at the rate of £4 a share, by others to be £3 a share. It was, at any rate, a bid of an alluring nature to the Chancellor of the Exchequer, seeing that the market quotation of the shares is not much over £2½, and apparently still falling. But a decision on this question is not so simple politically as it appears financially. The oil policy of the Admiralty is, reasonably or unreasonably, laid upon the rock of Government ownership at the source of a proportion at least of the Navy's oil requirements. If Government ownership is to be given up, the Admiralty will require some guarantee that control of this important source of oil supply shall remain British. But how can such a guarantee be given by the Shell Transport and Trading Company? It cannot pledge itself for ever to remain British owned, especially as its senior partner in the combination is Dutch. The Chancellor stated that the Government will do nothing to jeopardise security of oil supply for the British Navy or merchant marine. That rather implies that the Government would not sell to the Shell group without conditions or sanctions. Moreover, the British-owned Burmah Oil Company holds 2,374,660 shares in the Anglo-Persian Oil Company, and would naturally have a preferential right to acquire the Government holding of 5,000,000 ordinary shares, 1,000 preference shares, and £199,000 debentures if the policy of selling is decided upon. It has been suggested that the Burmah Oil Company may acquire the whole of the Government's holding, and then sell half of it to the Shell group, retaining thereby control in its own hands. This course would no doubt meet with more popular approval, especially as the public has not forgiven the Royal Dutch-Shell group for its handling of the Mexican Eagle Oil Company, but whether it would appeal to the Shell group, with its ambitions centred on a monopoly of the oil fields of the East, is questionable. In view of the election, it seems likely that no decision will be taken on this important question before the new Parliament meets.

Australian Rates of Exchange.—At the annual meeting of the English, Scottish, and Australian Bank, the chairman, Mr Andrew Williamson, referred at length to the position taken up by Australian banks in the matter of the rates of exchange between Australia and this country. He pointed out that in the 1920-21 period, when, owing to abnormal conditions, exports from this side were greatly in excess of imports, "it was a necessary consequence that the cost of negotiating bills should be abnormally high," and proceeded to emphasise his point by stating that "when excessive exports take place, and make excessive calls upon those institutions which regularly finance

the moving of goods outward, thus threatening to absorb a great deal more cash than is at all convenient, or, perhaps, even safe for these institutions to provide, those calling for such exceptional accommodation cannot reasonably complain if the charges rise accordingly." Mr Williamson contended that the action of the Australian banks in refusing to negotiate bills "which was so much resented at the time by the disappointed applicants, was not only the means of preventing a disastrous slump in prices from an over-glutted market, but later, and by many of those who at the time most bitterly condemned it, was handsomely acknowledged as having saved the situation."

Betting Tax Dropped.—One of the minor effects of the sudden dissolution of Parliament is that the idea of a tax on betting transactions has been indefinitely postponed. The Committee which went out of existence with the dissolution held their last meeting on Thursday. It appears that their draft report had not gone beyond the stage of historical summary, and the net result of resolutions and amendments which this last meeting had before them was to state that a tax was practicable, although the suggestion to add the word "desirable" was defeated by a majority of four. It will be remembered that Mr Baldwin, in his Budget speech this year, laid great stress on the desirability of finding new sources of revenue. The only new source that he was able to suggest was a tax on betting, by which he professed himself to be greatly attracted. "If this hope," he added, "proves illusory, it will then be necessary to consider very seriously other alternatives." In the light of recent events one wonders whether these "other alternatives" which he then had in mind were revenue from the duties on manufactured imports, which he now wishes to shut out.

Poverty and Progress in India.—The report (Cmd. 1961) by Professor Rushbrook Williams, of which the political portion was noticed in our last week's issue, disposes of the doctrine that the poverty of the Indian masses is due to the extravagant demands of the Government. The taxation per head is small, the burden on land notably so; the administration is probably the cheapest in any civilised country; but India is not organised for wealth production, and the peasantry, who form 90 per cent. of the population, are kept poor by their thriftlessness and inefficiency, by the hindrances set up by tradition and religious prejudice—which keep women from working—and by the ease with which, in many districts, a bare living can be obtained from the soil. Population multiplies up to the means of subsistence; extravagant expenditure on family ceremonies leads to debt; the joint family system obviates the natural penalties of idleness; and there are no subsidiary industries such as sericulture or poultry farming. Yet famine, even in the poorest districts, now implies inability to purchase food rather than actual shortage; and the peasants are awakening so far as to attempt combination for collective bargaining. In the industrial centres, though labour is inefficient, the position is better; the cost of living fell last year, aided by a favourable monsoon, to 67 points above pre-war level, while wages in the cotton industry were 90 per cent. above it; indirect evidence of improvement is afforded by the increase of third-class railway travel and of the purchase of silver for ornaments and the absorption of rupees, while India takes nearly one-third of the British export of gold. The town labourers, too, are able to remit money to their villages, and efforts are being made to improve their condition. Housing is being promoted by State and private enterprise; women and children working in factories have been further protected by statute; a Workmen's Compensation Act was passed last year clear enough to be applied without litigation; and it should provide trade unions with a legitimate function other than that of promoting strikes. At present they are often organised only to deal with a particular labour dispute, and cease to exist when it is over. For lack of efficient labour leaders, they are usually directed by politicians, but are not yet exploited for political ends. Both in the cities and in the country the co-operative movement is doing excellent work—mainly in the form of

STATE EXPRESS

associations for the joint sale of produce, and the purchase of implements and fertilisers; but in Bengal it has turned to production, and is reviving craftsmanship, and in Madras the classes depressed through the caste system are forming their own societies; in Central India the associations settle disputes, and promote the consolidation of the scattered agricultural holdings. Sanitation is kept back by indifference and prejudice, and by the lack of funds for research, but British and native efforts are exerted to reduce the heavy infant mortality. Social reform is blocked by caste, which Mr Gandhi, though combating its worst evils, has always upheld, but the missionaries are doing good work in raising the "depressed" classes, and the Salvation Army is reclaiming the criminal tribes. Alcoholism, condemned by public opinion, has been encouraged by Mr Gandhi's campaign against taxed liquor; the drug habit, not thus reprobated, may be mitigated by the measures recently taken by the Government. Adult education, in which the co-operative societies are aiding, is helping to fit the natives for citizenship.

Motor Vehicle Statistics.—The total number of motor vehicles of all kinds licensed on August 31st last was 1,117,590 as compared with 962,305 on August 31, 1922, an increase of 155,285, while the total revenue was £12,184,686 against £10,379,385. Private cars have increased from 314,769 to 385,525, the former representing licence duties of £4,686,267 and the latter £5,805,428. Motor-cycles, of which there are more in use in this country than any other class of motor vehicle, have increased during this period from 377,943 to 430,138. Licence duties amounted to £908,069 and £1,019,547 respectively. Commercial goods carriers have shown a comparatively small increase, from 150,995 to 173,365, while the revenue has increased from £3,048,643 to £3,446,777. Motor hackneys numbered on August 31st last 85,965, with a revenue of £1,756,082, as compared with 77,614 and a revenue of £1,586,282 twelve months previously. Horse-drawn vehicles continue their rapid decline, as on August 31, 1922, there were 232,865 with a revenue of £181,905, whereas on the corresponding date of this year there were only 207,313 with a revenue of £160,913.

Improved Italian Trade.—An examination of the Board of Trade's returns tends to confirm the impression given by bankers and others closely connected with Italian markets that recent months have witnessed a marked advance in Italy's economic condition. Our exports of coal to that country in the first nine months of 1921 amounted to 1.9 million tons, rose to 4.6 millions in the corresponding period of 1922, and this year reached 5.8 millions. The totals for cotton piece goods in the same periods were 10.0 million square yards in 1921, 12.6 millions in 1922, and 14.8 millions in 1923. Our total trade with Italy for the first nine months of each year since 1921 has attained the following proportions:—

	1921.	1922.	1923.
	Million £.	Million £.	Million £.
Imports	6.6	8.0	10.3
Exports	13.0	15.3	15.1
Re-exports	1.1	1.3	1.5
Total trade	18.5	22.0	23.9

Whatever opinion may be held of certain aspects of Signor Mussolini's policy, it is undeniable that his administration has infused into commercial affairs an element of stability sadly lacking under previous régimes. The large harvests of the summer provided work for the greater part of the unemployed who had not already been absorbed by industry as a result of the marked improvement dating from the beginning of 1923. With the cessation of this seasonal demand there may be a tendency for the figures to rise slightly during the next two or three months, but the expansion in manufacturing continues, and ultimately, it is hoped, only a very small proportion of the population will remain without employment of some sort. This feature is the more remarkable as the stream of emigration has been sharply retarded by the United States' restrictive measures. The Ruhr invasion is a discouraging factor, partly because Germany is normally one of Italy's best customers, and partly owing to the interruption, since March or April, of coal supplies, which formerly came direct from the Ruhr to Italian factories without the necessity of unloading and reloading attaching to supplies from the United Kingdom. The possibility of Great Britain's adopting a system of import duties is causing a certain amount of anxiety in Italy, not so much among the large engineering concerns as the small fruit growers of the South, who, after a long period of depression, have begun to build up a profitable market for their wares in this country. The recent development of Southern Italy, the Cinderella of the kingdom, is given as another instance of the beneficial results following upon the establishment of a strong Government at Rome.

Wall Paper Manufacturers.—Under date of November 10, 1923, the directors of the Wall Paper Manufacturers, Limited, issue their second report this year. In March last accounts were issued for the year ended August 31, 1922. These showed profits of £701,958. In the accounts now issued figures for the year ended August 31, 1923, are given, profits showing a slight falling off at £635,681. Assets have slightly increased, rising from £6,395,767 to £6,683,743. Capital expenditure, including goodwill, now figures at £3,459,719, as against £3,428,464 a year ago. Investments are up, being now placed at £1,359,413, as compared with £1,192,781. This is an item which requires some supplementary information. We are simply told that they include "shares in subsidiary companies." Surely we might be told the method used to value these securities. Very often the auditors give us a little sidelight on this matter, but in this case we seek in vain in this direction. Stock-in-trade is down from £956,236 to £866,327. To what extent cash in hand at £292,235, as against £65,087 a year ago, may be regarded as satisfactory it is difficult to say.

De Beers Diamond.—The payment by this important consolidation of the balance of arrears on its preference shares, together with the amount due for the past half-year—referred to in a recent "Note"—gave evidence of a distinct improvement in the business. Not a few people, indeed, were inclined to hope for the declaration of a dividend at the end of this year on the deferred shares, which have received nothing since the interim distribution of 10s per share paid in December, 1920. The accounts for the year to June 30th show, however, that the total disbursed on the preference capital absorbed practically all the net profit, the carry forward of £422,600 being barely £100,000 up. Diamond sales amounted to £2,818,000, as against only £402,000 in 1921-22, when the nadir of the depression was reached. In 1919-20—a period covering the post-war boom—the sales reached the record figure of £6,750,000, but such results are not likely to be seen again. At 7,706,200 loads the stocks of blue ground and lumps on the floors indicate a substantial reduction, due, of course, to the circumstance that mining has not yet been resumed. It may be inferred that development will be undertaken again in the not very distant future. With regard to the outlook, the directors adopt a somewhat conservative attitude, observing that

while the diamond market last year showed a decided improvement, trade is still much below normal, and the present unsettled political situation in Europe renders it difficult to make any forecast as to the future." At current price of 11½, the yield on the preference shares is about 9 per cent. They may be regarded as reasonably secure.

Mount Lyell.—Our mining correspondent writes:—Once again the accounts of this well-known Tasmanian enterprise score a recovery, the net profit amounting to £151,000, as against £127,500 in the year ended September 30th, 1922, and £51,800 for 1920-21, when there was no dividend. The distribution of 1s per share recently announced is at the same rate as that of twelve months ago. The improvement in results is due to the alterations and additions to the treatment plant, albeit an increase of 5s per week in the basic wage had to be faced as from the beginning of November last year. The average price of copper was £73 12s. At £63, the directors point out, there would be no profit on the present basis of operations. The surplus of liquid assets over liabilities has increased to £737,100. In view of the fact that the output is now restricted to the higher-grade ores, it is satisfactory to find that these, at 1,000,000 tons, score an expansion, if only a small one. The chemical works continue to do well, and a ten years' agreement has been made for the sale of power to the Tasmanian Government.

Simmer and Jack.—A study of the report to June 30th last produces a somewhat unfavourable impression of the position. Although costs were reduced nearly 5s per ton to 18s 5d, the profit only rose a few thousands to £42,500, the saving being practically counterbalanced by the decline in the gold premium. Adding sundry revenue and deducting sundry expenses—in which exchange on advances figures prominently—the net surplus came out at £31,400, or not sufficient to cover the outlay on property and equipment. To permit the extraction of the scattered bodies of ore in the original mine, and the extension of operations to the claims once held by the Simmer Deep, a vigorous development policy was initiated. Nevertheless, the ore reserves have diminished nearly a quarter of a million tons to 982,000 tons, the value being also lower at 5.2 dwts. The quantity does not represent much more than a year's supply. Much depends upon the ability of the company to effect further economies in working costs. Some progress in this direction has been made since the close of the financial year—June 30th.

Labour Banks in the U.S.A.—According to the *Iron Age* Labour has definitely entered the field of finance and of the practical ownership of industries. In its annual report to the Portland convention of the American Federation of Labour, the executive council of the federation stated that there are now "practically 23 Labour banks either doing business or about ready for business. In addition, about 20 more such banks are now in process of organisation." The actual number of Labour banks in operation at the present time is 15. The fifteenth was opened at Cincinnati on October 6th, by the Brotherhood of Railway Clerks. Twenty banks probably will be in operation before the end of the present year, and 50 by the end of 1924. The present resources of these banks exceed 50,000,000 dollars. This is not a movement that has developed out of theory and on the basis of propaganda, but it is a development out of the conditions that have confronted the workers, and it brings with it the promise of complete revolution in trade union methods. Through its new banks and the investment and insurance companies by which they are backed, organised Labour is for the first time inviting real co-operation—financial co-operation—with it by the general public. The trend is looked upon as being especially significant, as it concerns the status of Labour and Capital, and, in fact, is making the words almost synonymous.

Indian Currency Reserve.—The following announcement has been issued in India by the Government of India:—The transfer has been made of £2,000,000 gold from the paper currency reserve against a corresponding transfer to the reserve of sterling securities, and will appear in the accounts of the Paper Currency Department, to be published on Saturday next. This transfer had been made in connection with the proposed sale of this quantity of gold. The gold will not be shipped abroad, but will be sold in London, against sterling payment for delivery in India from the mints at Calcutta and Bombay, the amounts offered for sale weekly being regulated according to the market conditions. The percentage of metal holding in the paper currency reserve on October 31st was 68.21, the amount of silver holding alone being Rs. 99 crores. This strong position, combined with the existing premium of gold, renders it advantageous to convert a small portion of the surplus metal holding into interest-bearing securities. The gold can be replaced at a profit as sterling approaches parity with gold, and a convenient opportunity for reversing the transaction arises.

Traders and Tariffs.—The Executive Committee of the National Association of Merchants and Manufacturers, at a meeting held on Tuesday (Sir Hugh Bell in the chair), unanimously adopted a resolution expressing its determination to initiate and support a strenuous campaign "in favour of maintaining the system of Free Trade, on which the supremacy of British trade has grown up, which has financed the late war, which provides for the payment of the National Debt, both internal and external, and which supplies commerce with necessary raw materials at the lowest possible price. The resolution further expressed belief that the imposition of tariffs on imports will restrict that exchange of commodities which constitutes trade, and that any restriction of trade must produce unemployment and not relieve it."

Transvaal Gold Output.—A notable improvement is shown in the figures of gold output in the Transvaal just issued by the Chamber of Mines. The output during October amounted to 793,842 ozs of fine gold, as compared with 739,504 ozs in September, 1923, and 778,159 ozs in October, 1922. The figures are the best recorded since March, 1916, and the total output for the ten months is over 500,000 ozs in excess of the preceding year's entire output. The following table shows the outputs for the first ten months of each year since 1917, together with the totals for each completed year:—

	1917.	1918.	1919.	1920.	1921.	1922.	1923.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

December	722,419	641,245	650,191	632,215	681,847	790,712	..
Total (12 months)	9,082,212	8,420,560	8,330,091	8,153,625	8,114,516	7,020,110	..

The following table shows the number of natives employed at the end of last month by members of the Witwatersrand Native Labour Association and Contractors:—

	Mar., 1923.	April, 1923.	May, 1923.	June, 1923.	July, 1923.	Aug., 1923.	Sept., 1923.	Oct., 1923.
Gold mines	181,473	178,337	175,591	170,865	166,443	167,600	174,406	177,047
Coal mines	14,710	15,040	15,176	15,538	16,020	16,156	16,225	16,216
Diamond	1,273	1,860	2,668	3,063	2,893	3,107	3,134	2,911
	197,456	195,237	193,435	189,526	185,356	186,863	193,765	196,174

The October total is the largest since January, the whole of the month's increase being due to natives employed at the gold mines.

Oversea Correspondence.

UNITED STATES.—STEEL CORPORATION'S EXTRA DIVIDEND—SEPTEMBER FOREIGN TRADE—GOVERNMENT COTTON REPORT—BIG BOND OFFERING—STOCK MARKET.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 5.

THE declaration, last week, of an extra dividend of ¼ of 1 per cent. on United States Steel common stock was wholly unexpected. Nevertheless, in the opinion of many observers, the really surprising fact is that a corporation which probably holds more cash in its treasury than any other industrial corporation, whose common stock has a book value of \$260 a share, and has earned, after perferred dividends, at the rate of 15 per cent. this year, should make such a meagre extra payment (25 cents a share for the past quarter), although it is spending many millions for further plant additions and betterments, despite its present enormous productive capacity and that of other steel manufacturers in this country. The extra dividend—the first declared since 1919—calls for the expenditure of only \$1,270,756 on the \$508,302,500 common stock outstanding, whereas a reserve of \$10,000,000 was set aside from last quarter's earnings for improvements and additions, making a total of \$20,000,000 thus appropriated in the last six months. But whatever criticism may be made of the United States Steel Corporation for not being more liberal with its common stockholders, the action taken further testifies to the conservative policy of its management—a policy which has been followed consistently since its inception, and which accounts largely for the exceptionally strong financial position it now occupies. It is that policy which in lean years heretofore has enabled the Steel Corporation to maintain its regular dividend rate, when many other large corporations were compelled to reduce or pass their dividends. Net earnings for the quarter ended September 30th furnished another big surprise. They totalled \$47,053,680, as against \$47,858,181 for the June quarter and \$27,468,339 for the third quarter of 1922. According to a statement issued by Judge Gary, chairman of the board, new bookings are only about one-half of the corporation's productive capacity, but inquiries, he says, are very large, and the directors "feel very confident in regard to the near future," barring unforeseen and unfavourable developments.

Total exports from the United States in September, according to Department of Commerce returns, were valued at \$380,712,000, in round figures, while imports had a value of \$253,645,000, showing an excess of exports of \$127,067,000. Grain exports amounted to only \$31,926,318, as compared with \$59,650,651 in September, 1922. Raw cotton was the main item in September export trade, shipments totalling in value \$99,415,151, or three times those of August, and more than double those of September a year ago. The value of all exports showed a gain of about \$68,000,000 over September, 1922, raw cotton accounting for 83 per cent. of the entire increase. Of all September exports, crude materials furnished 35 per cent., manufactured articles ready for consumption 33 per cent., partially manufactured goods 12 per cent., and foodstuffs of all kinds 20 per cent. Of the total imports in that month, wholly or partially manufactured goods comprised 44 per cent. in value, crude materials 31 per cent., and foodstuffs 23 per cent. Crude materials were the only group showing a decrease in imports, as compared with September of last year. The total value of all exports for the first nine months of this year amounted to \$2,939,809,000, approximately, as against \$2,904,196,000 for the like period of 1922, indicating an excess of exports to the value of \$35,613,000.

The Department of Agriculture's special cotton crop report as at October 25th, estimating this year's production at only 10,248,000 bales, or about 767,000 bales below its September forecast, was much worse than the majority of the trade had expected. That predicted yield compares with 9,761,817 bales actually harvested last year, 7,953,641 bales in 1921, an average production of

11,481,084 bales in the five years 1915 to 1919, and 14,259,231 bales for the period 1910 to 1914. Last Friday, when the report was published, prices on the New York Cotton Exchange soared \$9 to \$10 a bale in less than three hours after the forecast was announced. Options rose about 2 cents a pound, carrying December above 32½ cents, and all active months to new high levels for this season, the close on that day showing net gains ranging from 162 to 184 points. Spot cotton here touched 32.80 cents for middling upland. With last season's estimated carry-over of 2,573,000 bales, the total supply indicated for the current cotton year is 12,821,000 bales. World consumption in 1922, according to Secretary Hester, of the New Orleans Cotton Exchange, was 12,631,000 bales. On the basis of the Government's latest forecast, and including the estimate of 650,000 bales linters, the present indication is that the carry-over on July 31, 1924, will be less than 1,500,000 bales, assuming that consumption this cotton year reaches 12,000,000 bales. It is quite evident, therefore, that the cotton trade faces a crisis with respect to supplies of merchantable staple, not only because of the short crop, but because grade and quality have been damaged to an alarming degree.

Railway executives, after numerous conferences, rejected President Coolidge's suggestion that they voluntarily reduce freight rates on wheat for export. Among the main reasons given for their refusal were that the proposed reduction was impracticable and wholly unlikely to assist farmers, in whose behalf the suggestion was made. Furthermore, the carriers pointed out that Canadian and Argentine railroads would probably meet any cut that might be made by American roads, and Western railroads, it was claimed, were not in a financial position to make any downward revision. In this connection it is noteworthy, also, that Eugene Meyer, junior, managing director of the War Finance Corporation, and Frank W. Mondell, a director of that organisation, after a tour of agricultural sections in this country, have just submitted to President Coolidge a report in which they flatly reject proposals advanced by radical elements—namely, Government price-fixing for wheat, Government purchase of "surplus" wheat with a view to shipping it to foreign markets, and other nostrums prescribed by various interested parties in recent months as a panacea for the wheat situation and to relieve farmers. As a solution of the wheat problem, the report suggests that production be adjusted to American needs, if the world-market is over-supplied and American farmers cannot compete with other producing countries. Development of an improved co-operative marketing system by American farmers, aided by American bankers and business men, is recommended in the report, which also urges the adoption of either of two methods to ease the burden of taxation—namely, the abolition by constitutional amendment of the tax-exemption privilege in order to curtail the over-stimulated market for State, county, and municipal tax-exempt bond issues; or "the reduction of income surtaxes to a figure which the actuaries of the Treasury Department may determine to be the figure that would induce capital to turn from tax-exempt securities into taxable investments."

Convincing evidence of the decided change that has taken place recently in the demand for high-grade bonds at attractive prices is found in the remarkable success which attended to-day's offering of \$100,000,000 American Telephone and Telegraph Company 20-year sinking fund 5½ per cent. gold debenture bonds by a banking syndicate headed by J. P. Morgan and Co. The debentures were priced to investors for subscription at 98½ per cent., and interest to yield 5½ per cent. They are dated November 1, 1923, and are redeemable in whole or in part at the option of the company at 110 per cent. and accrued interest on any interest date on or prior to May 1, 1941, and thereafter at 100 and accrued interest. A sinking fund of \$1,000,000 annually is to be set aside in semi-annual instalments, beginning May 1, 1924. The offering, which was the largest single issue floated this year, was heavily over-subscribed.

Last week the stock market, after a prolonged period of dull trading and declining prices, suddenly became very active and buoyant. On one day transactions closely approximated 1,400,000 shares, the biggest turnover in

a full day's session since last February. Prices soared until gains ranging from \$3 to \$8 or more were recorded throughout the active list, the greatest advances occurring among industrial stocks, which had figured most prominently in speculative operations in recent months, and which had been subjected to the heaviest selling pressure in that period. The immediate cause of the market's spectacular upturn was the announcement of the extra dividend on steel common, which caught bearish operators unawares. A contributory factor was the decidedly bullish statement made by a well-known market operator who was formerly committed to the bear side, and whose prediction several months ago that prices would decline proved correct. The marked activity at rising prices was due almost entirely to a stampede of short interests whose selling for the decline in recent weeks had evidently reached extensive proportions. Trading was chiefly for the account of professional operators, comparatively little outside or public participation being in evidence. To-day, transactions fell well below the million share mark, and price movements were irregular and narrower, although the market as a whole continued firm. With the unwieldy short interest eliminated, the future course of the stock market is uncertain, especially since the violent upturn cannot be ascribed to any new developments in the economic or financial situation that would warrant a pronounced and sustained bull movement.

FRANCE.—AUTUMN SESSION—FINANCING RECONSTRUCTION—TAXATION RETURNS—PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, November 14.

WITH the assembly of the French Chambers yesterday, when the Special Autumn Session was begun, for the purpose of clearing the ground for the General Elections that are to take place in the spring, the national finances once more assumed a place of first importance in the public mind. M. Poincaré made it clear at the opening sitting that he does not intend to allow the Chamber to drag on the Government's financial programme till the end of the session, as has been too often the case in the past, but that this subject must be disposed of before any other question is dealt with. He told the House flatly that he will not tolerate the frittering away of precious time in the discussion of endless interpellations, and that for this session, at any rate, parliamentarians must adopt some regular method in their work. The discussion of the Budget of Extraordinary Expenditure, and that of Recoverable Expenditure, must be taken in hand first (the Ordinary Budget for 1924, it will be remembered, was adopted simultaneously with that for 1923, so that there will be no possibility of modifying the present taxes), and after that the new electoral law. So far as interpellations are concerned, the Premier promised to allot every Friday's sitting for the purpose of allowing deputies to let off steam for electoral or any other purposes that may seem good to them. The Premier made this programme a question of confidence in the Government, and, as might have been expected, in present circumstances, he obtained the approval of the House for his proposal.

The Government's proposals for the Budget of Recoverable Expenditure for 1924 are all concerned with the raising of money required to continue the work of reconstituting the devastated area. It is proposed to fix the amount of Credit National Bonds that may be issued during 1924 at 5,000,000,000, to issue 2,000,000,000 in Obligations de la Defense Nationale, and to provide a further milliard for the purpose of enabling *sinistrés* to issue loans against the guarantee of the State. To these sums must be added the amount necessary to enable settlements to be made in certain cases with 6 per cent. Rente, and certain Budget credits, which will bring to a total of rather over 9,000,000,000 the amount of compensation that may be paid to *sinistrés* during the coming year. This amount, although smaller than that set aside for the present year, will enable the reconstruction of buildings to be carried on at the same rate as during the present year. The proposals set forth above, the Government announce, will render accomplishable one-third of

the reconstruction work yet to be done, so that by the end of 1926 it is hoped that the damage done will be entirely repaired. Special proposals are contained in the proposals to give minor *sinistrés* priority in obtaining a settlement of their claims to compensation. In future, if the new plan is approved, these sufferers, instead of receiving settlement in ten-year bonds, will be paid off in cash so far as the money necessary for the rebuilding of dwelling-houses is concerned, provided their claims do not exceed 80,000f. They will also be given the right to receive payment in cash to the extent of another 20,000f in respect of other damages to real estate.

The Supplementary Finance Bill is to be laid before the House for the purpose of providing credits not included in the Budget for 1924, principally for the maintenance of troops, &c., in Syria and Morocco. These credits, it will be remembered, were specially reserved, when the Budget proper was passed earlier in the year, for consideration during the present session. In this connection the Government asks for credits amounting to a total of 1,445,500,000f, or 74,000,000f less than those voted in 1923 for the same services. The Finance Commission of the Chamber recommends that this total shall be reduced to 1,420,000,000f, or 96,000,000f less than those voted for the same purposes for 1923. The credits asked for in respect of military operations abroad amount to 584,000,000f, including 342,000,000f for Morocco, 218,000,000f for Syria and the Levant, and 24,000,000f for the Saar area.

The special credits, properly so called, amounting to 846 millions, are required in connection with various civil services, some of which are destined to be suppressed in the near future, while others have arisen out of the war, and will in future be incorporated in the ordinary Budget Estimates (such as the expenditure required for the Port of Strasburg). Others of these credits have been rendered necessary to facilitate the application of certain new laws. These include 119,000,000f required by the Minister of Hygiene to apply the new law in regard to assisting aged and infirm persons and for making grants to people with large families. It is understood that the Government propose to authorise the issue of loans of various kinds during the coming year to a total of 13,000,000,000f. This sum will include the nine milliards required to meet the requirements of the devastated area during the next twelve months. The balance of four milliards will be required to meet various needs of the Treasury, but whether it will take the form of further issues of Treasury bonds is not yet clear.

Taxation returns for October show that the total yield from all categories of revenue during the month was 2,469,332,800f, of which 2,331,687,400f was from normal and permanent taxation, the balance being from "exceptional resources" (including 86,153,700f from the gradually expiring special tax on war profits). The revenue from ordinary resources was 514,739,400f in excess of that for the corresponding month of last year. The effect of the Finance Minister's efforts to bring about stricter methods in the collection of taxation, as compared with those formerly in vogue, is seen in the fact that during October this year the total yield from income-tax was 469,412,200f, as compared with 231,869,400f in the corresponding month of last year, or an increase of over 100 per cent. The total yield from indirect taxation and State monopolies during October was the highest that has ever been registered in any one month, and amounted to 1,761,430,000f, or 287,806,000f more than in October, 1922. The weak spot in the whole list was the yield from Customs duties, which showed a falling off of 27,533,000f, as compared with October last year, largely owing to the high exchange rate against this country. As against this must be placed the remarkable continued growth in the yield from the tax on turnover, which is now more than justifying the rosy predictions made in regard to it by its inventor, M. Klotz, when he initiated this form of taxation. During October this tax produced over 293½ million francs, as against 208 millions in the corresponding month of October, an increase of well over 85 millions. The total yield from this tax during the first ten months of the present year has amounted to 2,447,980,000f against 1,858,019,000f during the corresponding period of last year, the only larger figures in the whole return being those for income-tax (2,752 millions) and for stamp

duties on registrations (2,832 millions). The total yield from all normal and permanent resources during the first ten months of the year has amounted to 17,430,630,800f, or 2,541,429,000f more than for the corresponding period of 1922. So far as the year has gone the yield from taxation has amply justified the optimistic views expressed by the Finance Minister at the beginning of the present financial year. To some extent, it should be stated, this result has been achieved by the manner in which the revenue authorities have speeded up collection during the current year, but the greater part of the increased yield is undoubtedly due to the substantial improvement in the economic situation of the country.

The index figure of wholesale prices in France, which has just been issued by the Statistique Générale, is returned for the month of October (on the basis of 100 for the period 1901-10) as 486, as compared with 489.7 at the end of September. The figure, as usual, comprises data drawn from the prices of 45 distinct commodities, but on this occasion, for the first time for some years, I have been unable to obtain the detailed figures that have usually appeared in this connection. The slight fall is due principally to the fact that the figure for the group of foodstuffs has fallen from 471.1 to 456.8, the decrease in prices being most marked in the sub-group comprising sugar, coffee, cocoa, &c. The figure for cereals and other vegetable foods, on the contrary, has risen from 409.7 to 416.7. The figure for the raw material group has risen slightly, from 503.7 to 509.5. The figure representing retail foodstuff prices in Paris (base 100 in 1914) rose appreciably in October, from 339 to 349, and this movement, as observation shows, is still tending upwards.

GERMANY.—POLITICS—CURRENCY—FINANCE—BOURSE—CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, November 13.

SINCE the resignation of the three Socialist Ministers, the Stresemann Cabinet has shifted in the opposite direction—to the Right. Herr Jarres, the expelled Oberbürgermeister of Duisburg, has been appointed as Minister of the Interior. He has hitherto been strongly Nationalistic, opposing the policy of agreement with France with which Dr Stresemann began, and holding that it would be better for the present to leave the Rhineland to its fate, and to maintain resistance in the rest of the Republic. The collapse of the Hitler-Ludendorff adventure has in no way bettered the situation, but has only emphasised the fissiparous tendencies prevailing everywhere, showing that while Berlin is not strong enough to act decisively against Munich, there is nowhere an opposition revolutionary party strong and united enough to upset the Berlin Government and to pursue a definite alternative policy. The ambiguous policy of Herr von Kahr fore-shadows further trouble from the direction of Munich.

General conditions go rapidly worse. The number of unemployed, which on October 1st was 1,111,560, is now unofficially put as high as 4,500,000. In the cities, for all but a small class, living conditions are becoming unbearable; hours are spent every day in obtaining food, and between prices and earnings there is now no calculable relation at all. Owing to the stopping of central heating in flat-houses, hundreds of thousands of families heat only one room, and that insufficiently. The lack of fats and meat aggravates the situation. While it is hard to see anything like a sudden political collapse approaching—this on the ground that no party of strength worth mentioning considers that a collapse would better things—there is a prospect of rapid disintegration, which is likely to place before the Allied countries a very much harder problem than that of dealing with an organised and prosperous, even if defiant, Germany.

The "Rentenmark" is to be out on the 15th. A Government communiqué repeats the promise that from that date, the paper mark inflation will cease, which means that the Rentenbank, instead of the Reichsbank, will supply state credit. The paper mark will be converted into gold loan, the conversion rate being fixed as soon as the inflation ceases. As gold loan was recently proclaimed convertible into rentenmarks, this means that

the paper mark may ultimately be represented by Rentenmarks. Copper 1 and 2 Rentenpfennigs and aluminium-bronze 5, 10, and 50 Rentenpfennigs are being coined. Views as to the stability of the new currency are not so optimistic as at first. It is feared that the Ruhr and Bavarian complications, taken together with the industrial stagnation, and possibly with further "Putschs," and possibly minor civil wars, will make it impossible to balance the Budget before the Rentenbank's credit of a mere £60,000,000 is exhausted, and that inflation, if not of the Rentenmark, then of some other currency will be inevitable.

The exchange question has become very serious. The Government proposes to repeat the so-called "Devisenabgabe," or "exchange levy," compelling delivery of an amount of foreign currency based on the assessments for the Forced Loan of last winter, and, further, to permit export of a limited quantity of sugar. Reports from London state that the foreign receipts of the Potash Syndicate are pledged as security for English coal credits. Sugar production this business year (1923-24) has fallen by 6 or 7 per cent.; the estimated figure is 1,189,000 metric tons, against 1,455,766 tons in 1922-23. The Cabinet plans the appointment of a Currency Commissioner, under whom would be concentrated all currency and exchange questions. In connection with the official exchange policy, gold prices are rising in an extraordinary but entirely fictitious way. With the aim of checking the rise in paper mark prices the Government has of late kept down the foreign exchanges to a fraction of the foreign parities. It has justified this with the plea that the foreign mark quotations are more or less nominal. Instead of quoting something near the foreign parity, drawing foreign notes and cheques from the public hands, and satisfying the business demand for exchange, the authorities hold to their own rates, get no exchange from the public, and can therefore meet only a small fraction of the demand. When London last week quoted 20 to 50 billion marks to sterling, the official rate here was under 2 billion marks. According to the price regulations the "key numbers" are only to be increased when the official exchange quotations rise, while the gold-mark basic prices are not to be raised at all. In theory this meant that paper mark prices would not rise more rapidly than the exchanges. In practice this has failed. The official exchange rate is almost wholly ignored. Persons with exchange to realise realise it on the "black bourses," getting two to five times the official rates, and sellers of all kinds of goods ignore the official rates and adapt their prices to the "black bourse" rates or even to the still higher foreign rates. Hence at the official rate meat here has cost up to 8s a pound, and newspapers which before the war cost ½d cost 5d. It follows that gold prices shown by any index based on the official exchange rates are meaningless. The official system has increased the difficulties to import of food, because while foreign money changed on the Bourse goes to the Reichsbank and ultimately to the legitimate importer, foreign money bought on the black bourses is hoarded. Probably 19-20ths of all exchange dealings are done on the black bourses. The black bourses are, of course, forbidden, and all parties using them can be punished, but the Government puts too great a strain on human nature, and after a few showy raids the recently-appointed Exchange Dictator has proved helpless. Even at the black bourse rates living here is very expensive. This is only one more proof that exchange regulation by mere decree is impracticable.

The Cabinet, having lost the constitutionally granted powers of the "Empowering Law," is resorting ever more to the 48th Article of the Constitution in order to put through its measures speedily. The Reichstag has lost practically all control over finance. Under the Empowering Law the Cabinet enacted that Federal credits should be "valorised." Formerly the Reichstag granted a paper-mark credit estimated as sufficient for a certain number of weeks or months, but owing to the price rise the credit was often exhausted in a fraction of the time intended. When "valorised" such a credit is calculated at its gold-mark value at the date of granting, and the Government has power to raise by way of credit (Treasury bills) a paper-mark sum of the same gold value. The new decree under Article 48 extends the earlier

"valorisation" decree to credits sanctioned before the old decree. The effect is that the Cabinet will not have to ask for new credits for a very long time, and a further effect is to counteract the compulsion to reform, because a new currency collapse will not compel the Cabinet to apply again to the Reichstag. The new decree is, of course, unconstitutional; Article 48 does not under any circumstances affect the matter of credits, but the last two Cabinets used Article 48 without any scruple, and against only rare newspaper protests.

Money again became plentiful at the beginning of this week, and stocks yesterday about doubled their quotations. A detailed securities index published by the *Boersen-Courier* shows that stock quotations multiplied about a thousand-fold in October. Taking the December, 1922, quotations as 100, the end of June quotations were 4,175, July 19,707, August 218,271, September 4,933,905, and October 4,907,756,100. In the last weeks the biggest rises have been in western coal and iron, electrical and chemical works.

All leading winter crops in Prussia are reported to be in better condition than at the same time in 1922. Prussian crops this year and in 1922 were (in metric tons):—

	1922.	1923.
Winter wheat	893,362	1,455,906
Spring wheat.....	168,439	250,249
Winter rye.....	3,843,836	5,487,597
Spring rye	34,551	60,815
Winter barley	89,570	149,668
Spring barley	786,278	1,125,148
Oats	2,735,270	4,202,942
Potatoes	27,155,012	22,270,705
Sugar beet	8,270,611	6,639,422

The bread-grains crop exceeded that of 1922 by 2,322,121 tons, or 46.9 per cent.

Hamburg shipping in October was: arrivals 1,002 vessels of 1,187,055 net tons, departures 1,206 vessels of 1,101,985 tons. Arrivals in the first ten months of 1923 were 11,264 vessels of 12,831,120 tons, against 12,675 vessels of 11,891,076 tons in the same months of 1913; departures 13,675 vessels of 12,978,507 tons, against 14,130 vessels of 12,123,629 tons.

AUSTRALIA.—PUBLIC FINANCE—EXPORTS AND THE CURRENCY QUESTION—WOOL PRODUCTION.

(FROM OUR CORRESPONDENT.)

MELBOURNE, September 29.

SINCE the Commonwealth 5 per cent. War Loan of £38,723,950 was redeemed, the money market in Australia has shown a hardening tendency. Conversions on account of the loan amounted to £22,578,000, and new cash was subscribed for about 8½ millions, leaving over 7 millions, which was paid out of Treasury balances, the replenishment of which by subsequent borrowings is now under consideration. Many holders of the maturing loan required this money at maturity to meet their own indebtedness or for active trading or productive employment, whilst as regards fresh subscriptions from the public, the Commonwealth Government has had to face the competition of State Governments for available supplies. Various inquiries, involving public display of some of the unsatisfactory methods of Government expenditure during the last few years, have not tended to attract support. So far as it is necessary for the Commonwealth Government to lean upon banking resources to complete the adjustment of its finances after redeeming the loan on September 15th it comes into competition with private borrowers, from whom the banks have experienced an active demand for accommodation for some time past. Since September 15th the three principal State Governments have raised their rates of interest for sales of their securities at the Treasuries by ¼ per cent., and Victoria is now offering 5 to 5½ per cent., according to currency, New South Wales 5½ per cent., and Queensland 5½ per cent., these rates being free of both Federal and State income-taxes.

With the opening of the export season the question of currency arrangements is again under discussion. Gold production at the mines is exportable at a premium, and is therefore not available for enlarging Australian stocks in the pre-war fashion. The Australian Government note issue, which at one time exceeded 59 millions sterling,

has been reduced to about 52 millions, of which at the end of August the public held a little over 22 millions, and the banks a little under 30 millions. As banking liabilities within Australia are now on a larger scale than a few years ago, the ratio of Government notes and coin has declined, while the amount is inelastic. This situation is thus calculated to produce some stiffness in the financing of the wool and wheat export season, especially as wool transactions run into substantial figures at the prices ruling at the Australian auction sales.

Messrs Dalgety and Co.'s annual wool statistical returns for Australia and New Zealand show an estimated net production of 2,501,442 bales (or 815,637,076 lbs) for 1922-23, against 2,574,136 bales (or 850,067,796 lbs) for 1921-22, and 2,155,086 bales (or 718,021,757 lbs) for 1920-21. Oversea shipments, which include Bawra wool, amounted to 2,967,872 bales during 1922-23, against 3,484,076 bales during 1921-22, but these figures include wool from preceding season's clips in each case. The total quantity sold in Australia and New Zealand during 1922-23 was 2,409,281 bales, at an average of £22 9s 8d per bale, against £15 8s 1d for 1921-22, and £15 12s 7d for 1920-21. These figures compare with an average of £13 4s 11d in 1913-14.

NEW ZEALAND.—PUBLIC FINANCE—AGRICULTURE AND INDUSTRY—BANKING AND CURRENCY.

(FROM OUR CORRESPONDENT.)

AUCKLAND, N.Z., October 8.

THE latest revenue returns, made up to August 31st, are satisfactory. The revenue for the five months ending August 31st showed a net increase of £874,574, compared with the corresponding period of last year, the principal increases being in customs, income-tax, and railways. This is accompanied by a slight decrease in expenditure for the same period. The Finance Minister announces that the revenue is still increasing, while the policy of economy is still producing results in reduced expenditure. That this is not merely propaganda, intended to help Mr Massey, the Premier, during his trip to Europe and America (with the possible floating of new loans), is shown by the fact that the Government has already made a considerable reduction in taxation. The income-tax, which acted in such a crushing manner on large industrial companies, has been reduced, and will probably be reduced further next year; even the postage rate, which a few months ago was 2d, has now been reduced to 1d—this, though apparently a trifling matter, is a most hopeful sign, and indicative of the confidence in the future which animates the Government. The Finance Minister asserts that New Zealand is one of the few countries which lately has been able to balance its budget.

The farming industry, the mainstay of New Zealand, shows a tendency to improve, but the last few years have been trying ones for industrial concerns, though the Government reduction of company taxation gives a more hopeful outlook. In fact, some of the best judges consider the general financial and commercial outlook better today than at any time since the signing of the armistice. Increased values of live stock (both sheep and cattle) have greatly benefited external trade. Nevertheless, the bad effects of former years still continue to make themselves felt, as is shown by the financial collapse of several farmers' co-operative trading companies, though this was to some extent due to unsound business methods.

The moratorium on mortgages will be lifted at the close of the present year, unless further extended, which is believed to be very unlikely. The tax on debentures has lately been raised from 3s to 4s 6d in the £. The reduction in the rate of income-tax payable by companies has already resulted in lowering of the rate of interest on mortgages from 6½ per cent. to 6 per cent.; it is considered extremely unlikely that it will fall further.

Banking returns for the quarter ending September 30, 1923, show, for the first time since 1920, an excess of deposits over advances, the exact excess being £1,112,108. The note circulation, which had attained a maximum of £7,617,298 in 1920, has now been reduced to £6,354,510, while the amount of coin and bullion in the same three-years' period has been increased by nearly £200,000. ENGLISH FINANCE THROUGH FRENCH EYES.*

If intelligent foreign opinion can be relied as a forecast of the verdict of posterity, the historian of the future will have very little fault to find with England's after-war monetary policy, at least up to the end of 1922. Monsieur Bonnet, general secretary of the Suez Canal Company, has written its history with that lucid simplicity that seems so natural to French prose, and has decided that our efforts to restore health to our finances, our currency and our general economic conditions, have been well and successfully planned and carried out, and set an example that is worthy of imitation by France. He has made a careful study of our banking figures, our Budgets, our trade returns, and the columns of the *Economist*, and the result is a review of the subject that will be highly instructive to the vast majority of those Englishmen who have the good sense to peruse it. To anybody who is familiar with the traps and pitfalls of banking and official figures, and the difficulty of drawing conclusions from their variations, the success with which M. Bonnet has steered his course through all these "chiffres—un peu barbafrats peut-être"—as he calls them, cannot fail to secure a remarkable achievement. In the view of this disinterested foreign observer, the report of the Cunliffe Committee, though in some respects a disappointing document, gave this country the right lead by laying stress on the need for balancing the Budget at the earliest possible moment, for an active policy of debt redemption, for gradual reduction of paper currency, and for determined effort for the maintenance of the gold standard by the use

* "La Politique Monétaire Anglaise d'Après-Guerre. Les Principes—Les Applications—Les Effets." Par George-Edgar Bonnet. (Paris) Société du Recueil Sirey, 22 Rue Soufflot.

of the Bank rate weapon. For the series of economic achievements by which we balanced our Budget, redeemed large masses of debt, and lowered our cost of production to a point at which we could compete once more in the markets of the world, he gives us all the credit that we deserve, and perhaps rather more; for these measures were merely dictated by the most obvious common sense, and have only appeared remarkable because common sense has been far from common in this distracted period. With regard to the dear money policy which put Bank rate up to 7 per cent., M. Bonnet examines the criticisms that it aroused, but thinks that they were misplaced, because the high Bank rate in his view definitely contributed to the change of atmosphere which checked expansion of credit. That it did not actually reduce purchasing power as measured by bank deposits he shows from the banking figures, and he explains this by observing that the joint stock banks were pulled in two ways—between the counsels of the Government, and the demands of the merchants and producers, and "it was not easy for them suddenly to reverse the engines after being—perhaps imprudently, but often at the instance of public authority itself—committed to the policy of almost unlimited advances." On the question whether the deflation policy produced, as is now so often urged, the acute depression from which British trade has suffered since 1920, M. Bonnet argues with a good deal of force that deflation was the effect rather than the cause of depression. He shows that the total purchasing power at the disposal of the community was not very different in the middle of 1922 from its total in the middle of 1919. In 1922 there was definite deflation, and, as he points out, this diminution took place during a time of successive reductions in Bank rate, while the rises of 1920 coincided with a development of inflation. He therefore has to look for some cause other than money rates for the trade crisis, and the deflation that accompanied it. He records that the crisis began in the Far East. "It was in Japan, and then in all the Far East, that the collapse began.....Asia not only stopped the numerous orders that she was placing in England, but cancelled the bargains already made. It was war between the buyers who wanted to repudiate their contracts, and the British industrials, who till then worked without regard for cost of production because they believed that they could always sell at a profit. At the same time, Continental Europe, ruined but, nevertheless, beginning to produce again, checked her demands for food, copper, iron, leather, rubber. Accumulated stocks were thrown on the market.Almost in a day the majority of industrials, merchants, farmers, found themselves plunged, from a prosperity which seemed boundless, in the poverty in which they had been preceded by rentiers, pensioners, officials, victims of inflation." And then the public, seeing a pause in the rise of prices, which it had ended by believing to be eternal, suddenly stopped buying. "Deflation, therefore, was not the initial cause of the economic collapse which would have happened, apart from any monetary considerations." Deflation was in great measure the consequence of the commercial crisis. "Deflationist action was only one manifestation of the general effort accomplished by England to restore her economic position. This effort, realised in the domain of industry, as in that of public finance, should be maintained. Let us recognise that it has been carried out with rare courage and tenacity." M. Bonnet's appreciation is pleasant. Would he still speak so favourably now, when he saw us threatened by one party with a tariff and by another with a levy on capital, by way of cure for our economic ills?

WAGES OF STATE EMPLOYEES.*

It is not generally realised that, even though the war factories have been dismantled, the State is still the employer of nearly half a million workpeople; and it is evident that the methods adopted for fixing the remuneration of so large a body of workers must play an important part in influencing wage remuneration generally. At one period before the war there was a tendency to regard State employment as being to some extent on a different

plane to ordinary industrial remuneration, and attention was directed to the fact of regularity and permanence as the leading features of employment even in the case of State servants engaged in engineering or other purely industrial tasks. But under the stress of war and post-war conditions, the conditions of Government employment have become steadily commercialised, and the most interesting conclusion from an exhaustive study of this subject by Mr Colston Shepherd is the persistent influence of demand and supply in fixing Government wages and the gradual approximation to commercial standards. To some extent the dilution of Government work by unskilled labour during the war, and the enormous numbers of temporary workpeople taken on, together with the insistent demand for economy since the war, has produced these results. But the truth is, of course, that there is no alternative ethical standard for fixing wages of State servants other than that which determines the standard of living in general. This level of wage may best be obtained by collective bargaining, and the last three years have witnessed the rapid development of this principle in the relation of the Government to its employees. The necessity of observing the supremacy of Parliament and the problem of finding some arbitrary authority between the two sides when the employers are themselves high Government officials is a problem of particularly interesting constitutional practice. It is interesting to note Mr Shepherd's conclusion on these points. "The separation of governmental functions has taken place without any real detracting from the authority or even the dignity of the Government and its Departments. Ministerial responsibility and Treasury control remain, the latter without its offensive autocracy and aloofness. The reins are still held ultimately by Parliament, and the removal of wage questions from the political to the industrial sphere renders less formidable the danger of political pressure of the type exerted in the early years of this century by postal officials." The Government has at all events faithfully followed the principles of the Whitley Report in dealing with its own employees.

HOUSE PROPERTY MANAGEMENT FOR WOMEN.

In a little pamphlet of 36 pages, Miss Upcott describes the progress of the movement initiated by the late Miss Octavia Hill many years ago, for training women to manage house property. This is an excellent ground for women to cover, and Miss Upcott is well fitted by experience to show the way. In 1916 the Association of Women House Property Managers was formed. Its members now have the management of over 6,000 tenements in London alone. In Edinburgh the work is carried on by the Housing Department of the Edinburgh Social Union, and in Manchester by the Manchester Housing Company. The association provides trained women who undertake the collection of rents, the ordering and supervision of all repairs, both inside and out, the keeping of all accounts, including payment of rates and taxes, and generally to deal with all matters relating to house property management. We see no reason why Miss Octavia Hill's mantle should not be borne along to witness yet greater developments.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
November 28.

ACCOUNT.
November 29.

The General Election is the all-prevailing influence in the Stock Exchange markets. It caused, through fears of the Labour Party being returned to power, heavy falls in gilt-edged and Home Railway stocks. The weakness was communicated to many other departments round the House. The selling of War Loan and similar stocks by foreign holders, who reinvested in dollar securities, assisted in the drop in the value of the pound sterling, and led to a rise in the price of gold, the metal, which, in its turn, reacted favourably upon shares in the South African and Indian gold-producing companies. Recovery followed the flatness, but markets remain in a highly sensitive condition, and business is expected to be quiet during the next three weeks.

After a drop to an eighth below par, the War Loan rallied a trifle, and set the pace for other issues in the Consol market. Quotations are, however, susceptible to sharp movements, owing, in part, to the increased narrowness of the market by reason of public business having fallen off to a marked extent. New issue prices gave way with those for existing stocks. The new Nigeria scrip, for instance, fell to 3½ discount, the new Electric Railway debenture stocks to 1½ discount, the Tata Power Government-guaranteed debentures to 3 discount. The P. and O. 5 per cent. debenture, offered at 98, and substantially over-subscribed, opened at 5s discount. No doubt a good deal of the fall is due to the uncertainty which surrounds the issue of the General Election, and the slump went out of proportion to the actual volume of stock sold.

Dealings in "Majorities" have started in the Stock Exchange. The price began at 35, and rose 5 points before falling to the neighbourhood of 20 and getting back to 30. The quotation represents the net majority which the Conservative Party may have above all other parties in the new House of Commons.

Fresh flatness in the franc caused French issues to be put down, and the tendency amongst foreigners is heavy, as a whole. The new Finland scrip fell to 4 discount, while Austrian Sixes, after a slant to 8½, regained a point or two. South American bonds are irregular, with Brazilians a firmer market. There has been a little buying, said to come from New York, of Brazilian loans. Greeks are mostly down.

Home Railway stocks are lower on the week, though the worst prices offered an opportunity, that was not neglected, to bears of the stocks and to a few buyers attracted by the dividend outlook. Undergrounds maintained a firm front, though the early part of the week saw abrupt falls in Metropolitan and Districts. American Rails are better, and Canadian Pacifics have improved, in company with nearly everything else that has any relation to the American dollar. Leopoldinas are a strong feature amongst Brazilians. Argentine railways gave way, because the recent traffics are considered disappointing. Grank Trunk Pacific 4 per cent. debenture, after a rise to 42, fell back several points.

Dormant is the only appropriate description to apply to rubber shares. The commodity is higher, but this is owing to the American rate of exchange, and the improvement is therefore considered to carry no particular significance. There is vague talk about the possibility of Dutch rubber-growing

interests joining in the restriction scheme undertaken voluntarily by so many of the British rubber companies, but it may be that the wish is father to the thought. Oil shares displayed robust strength in the face of the general welter of weakness, though when the bears had satisfied their books, and a little Continental selling started, the list gave way and the market became listless and lower.

Textiles were weakened by the slight disappointment felt at Coats not increasing their final dividend and bonus. Tobacco shares are dull, on political considerations. The hope that monopoly companies may benefit from Protection is offset by the consideration that the Labour Party might regard the huge profits made by combinations of any kind with an unflattering eye. Iron and steel shares move narrowly, and, on balance, towards lower levels. Guest Keens have been supported, on the scheme just formulated for the absorption of D. Davis and Son and the Consolidated Cambrian Collieries; both the latter companies' shares benefited by the proposals.

Banking shares show heaviness, in consequence of the drop in gilt-edged stocks, and there has been more inclination to sell than to buy the leading insurance issues. London and Brazilian banks are better. Low temperatures have had a substantial advance on the anticipation of news as to developments said to be pending. Cements went back after their spurt. Newspaper shares are generally easier. The new Daily Mail Trust debentures fell to 2½ premium before recovering half a point. Electric lighting shares, for once in a way, have drooped. Bournemouth and Poole, however, amongst the provincial shares, are better on the new capital proposals. Motor shares have fallen into neglect, and Egyptians, together with various land shares, failing to attract fresh buyers, have tended to sag. Egyptian banks, nevertheless, are better on the week.

The Kafir market is one of the few good markets round the Stock Exchange. The Central Mining Corporation, with a bonus of 2s per share in addition to its 6s per share dividend, both free of tax, makes a good start to the winter dividend season, and, with the price of gold rising, the Cape has been buying its favourites, thus encouraging a modest amount of support on this side. So far, the home public are keeping wisely to the best-class shares. Rhodesians failed to participate in the strength of Kafirs, but diamonds and copper shares threw off some of their recent weakness, and exhibit a stronger tone. The rise in tin has caused modest improvements in shares of the companies which operate in Malaya and Nigeria, the Cornish group being uncertain in tendency. Indian mining shares, as already mentioned, benefited by the rise in the price of gold. A few Mexicans came into favour, while Russians remain without noticeable movement.

NEW ISSUES.

1917	1,219,993,903			585,436,853

City of Auckland 5 per cent. 1945 Loan.—Issue of £250,000 in debentures of £100 each at £99 per cent. The principal will be repaid at par on January 1, 1945, in London. The proceeds of this loan will be devoted to providing further funds for existing tramways, for street improvements, and other purposes. Subject to existing loan, this issue is a direct obligation of the City of Auckland, and is secured on property with an annual rateable value of £1,659,066 and revenues of £1,239,211—these figures referring to the year ended March 31, 1923. The total debt of the city is £4,972,930, "covered by an annual charge for interest of £246,651." The price of issue is evidently based on current yields from existing City of Auckland debentures. A good security.

Quebec Power Company.—Incorporated under the laws of the Province of Quebec, Canada. Authorised capital \$10 million, of which \$5,946,000 has been issued. This is a very complicated document, and certainly is not suitable for the busy man who usually wishes to have the figures and facts of a public issue placed before him succinctly. The Quebec Power Company is an undertaking formed in 1915 for the purpose of co-ordinating hydro-electric production and distribution in Quebec City and district. By the process of exchange, it has acquired a controlling interest in the Quebec Railway, Light, Heat, and Power Company. This latter company has bonds outstanding to the amount of \$13,307,200, and possesses common shares to the amount of \$10,000,000. The majority of the Quebec Power Company's combined preference and common shares are, in turn, owned by the Shawinigan Water and Power Company. This is an offer for sale of £300,000 series "A" 30-year 6 per cent. first mortgage sinking fund debenture stock of the Quebec Power Company at 95 per cent. It is stated that applications on the terms of the prospectus have already been received for £150,000, and these will be accepted in full. This stock represents the equivalent at the rate of exchange of \$4.86½ to the pound of \$1,460,000, and is part of an issue of \$5,000,000, of which \$3,540,000 in the form of series "A" 30-year 6 per cent. first mortgage sinking fund gold bonds has already been placed in Canada and the United States. The principal is due October 1, 1953, but the company reserves the right to redeem the whole or any part of the stock (series "A") on any interest date at a premium of 10 per cent. up to and including October 1, 1928, thereafter at a premium of 7½ per cent. up to and including October 1, 1939, thereafter at a premium of 5 per cent. up to and including October 1, 1943, thereafter at a premium of 2½ per cent. up to and including October 1, 1948, and thereafter at a premium of 1 per cent. before the due date of the debenture stock. The security behind these bonds should be carefully studied. They are a first specific charge upon "the lands, buildings, and fixed plant and securities in other companies.....and as a floating charge upon the remainder of the property and assets of Quebec Power Company." It should be understood that the controlled company has already pledged its assets by issues of bonds for \$13,307,200. This is possibly an excellent investment, but the intricate financial dealings mentioned make it difficult for the ordinary investor to determine how he would stand in various circumstances which might arise. We are informed that the issue was over-subscribed.

The Danube Navigation Company, Limited.—Authorised capital £1,200,000, of which £824,300 has been issued. There are also 5½ per cent. 10-year first mortgage debentures for £300,000. The company was formed in 1920 for the purpose of acquiring interests in the principal navigation companies operating on the Danube. A statement advertised in public Press to comply with Stock Exchange regulation informs us, among other details, that "the company has agreed to lend the sum of £300,000 to the Erste Donau Dampfschiffahrts Gesellschaft of Vienna, and the specific security which has been received by the Danube Navigation Company, Limited, for this loan is a first charge upon the Austrian Company's colliery situated at Pecs, the value of which has been estimated by the Austrian Company at the equivalent of £3,000,000, in addition to which the Austrian Company guarantees the redemption of the loan with all its other assets, and has undertaken that so long as the loan is outstanding it will not mortgage either its property as a whole or any of the more important items of such property." The service of the more important items of such property.—(1) By an assignment to the trustees of the security received from the Erste Donau Dampfschiffahrts Gesellschaft above referred to; (2) a floating charge upon the remainder of the Danube Navigation Company's assets; (3) an unconditional guarantee of Messrs Furness, Withy, and Co., Limited, both as to capital and interest. This debenture issue has been purchased from the company at 99 per cent., and is apparently a well-secured investment.

The York Town and Blackwater Gas Company.—Authorised share capital £100,000, of which £54,937 has been issued. The loan capital is £50,000, of which £23,750 has been issued. This is an offer for sale by tender of £20,000 5 per cent. preference stock, the minimum price of issue being £83 per £100, at which price the yield would be £6 os. 6d. per cent. The net revenue of the company for the year ended December 31, 1922, was £7,192. Interest on existing debenture stock amounts to £1,322, and as the dividends on preference stock issued and now being issued will require only £1,075, it will be seen that a substantial margin remains as security. A good investment, but regard must be paid to the narrow market for such a small issue.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of all new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

ENGLISH, SCOTTISH, AND AUSTRALIAN BANK LIMITED.

MR ANDREW WILLIAMSON ON AUSTRALIA'S TRADE AND INDUSTRIES. VERY SATISFACTORY RESULTS—INCREASED DIVIDEND.

The annual general meeting of the English, Scottish and Australian Bank, Limited, was held, on the 14th instant, at the head office, 5 Gracechurch street, London. Mr Andrew Williamson (the chairman) presided.

The London manager and secretary (Mr E. M. Janion) having read the notice convening the meeting and the auditors' report.

The Chairman said: Gentlemen, before I proceed to the ordinary business of our meeting I desire to express our deep regret at the loss we have sustained through the death of Mr John Annan Bryce, which took place in June of this year, after a very brief illness. Mr Bryce had been a director of the bank for over 14 years. His wide business experience, his strong, clear mind, and his high personal character made him a very valuable director, and his kindly courteous disposition made co-operation with him as a colleague a real pleasure. We all deeply deplore his death. I would also take this opportunity of expressing, on behalf of the board and of the shareholders of this bank, how sincerely we regret another death which took place about the same time—namely, that of Sir Denison Miller, the Governor of the Commonwealth Bank. Sir Denison filled that important post from the formation of the bank down to the time of his death. He had our confidence and respect, and we deplore his death, which will be a loss not only to his own bank but to Australia.

CHANGE IN CAPITAL ACCOUNT.

At the extraordinary general meeting which immediately followed our last annual general meeting, a resolution, you will remember, was carried, and duly confirmed at a subsequent general meeting, by which each of the shares of the authorised capital of the bank was divided into five shares of £5 each, with £2 10s paid up. In January of this year the unissued balance of the authorised capital was offered to the shareholders in shares of £5 each, £2 10s called up, for subscription at par, in the proportion of one new share to every eight held. This favourable offer was generally taken advantage of by the shareholders, and after the balance of the shares unallotted, and the shares representing the fractions arising from the allotments, had been sold in the market, the paid-up capital amounted to £1,500,000, at which it now stands. The premium of £18,150 is 9d realised by the sale of the unallotted shares has, as mentioned in the report, been carried to the reserve fund.

It is provided in the articles of association that so long as more than one half of the original issue of £982,296 of the deferred inscribed deposit stock is outstanding, the holders of that stock shall have the right to be represented on the board by two directors. The amount of this stock as shown by the present balance-sheet is £467,500, and is thus less than one-half of the original issue of £982,296, and the holders accordingly cease to have the right to be represented on the board, and the two deferred inscribed deposit stockholders' directors, Lord Knutsford and Sir Frederick Young, go out of office at the close of this meeting. To fill the two vacancies thus caused the board have appointed Lord Knutsford and Sir Frederick Young, subject to the approval of this meeting, and a resolution to that effect will in due course be submitted to you. In addition to their general personal qualifications as able men of the highest character and wide experience, their special knowledge of the affairs of the bank, acquired during their period of office now closing, makes their appointment the more desirable. Sir Frederick Young much regrets his absence from our meeting to-day owing to his being called away from England on important private affairs.

IMPORTS AND EXPORTS.

On the occasion of our last meeting, when briefly reviewing the trade conditions of 1921-22, I pointed out that the good yield of Australian primary products, chiefly wool, wheat, and butter, and the prices they commanded, had increased the buying power of Australia, and enabled importers to proceed with the realisation of their stocks, which had been brought down to nearer a normal level, and that prices then indicated a hardening tendency. During the year 1922-23, embraced in our accounts, imports have again been on a large scale, and, owing to less favourable weather conditions during part of the year, satisfactory realisation has been more difficult, and the sale of textiles has rather hung fire, with the result that large stocks have again been accumulated in first hands.

Fortunately, good rains fell at a most opportune time, and the very satisfactory prices ruling, especially for wool, encourage the belief that the buying power of the community will be well maintained and will in due time result in the satisfactory disposal of accumulated stocks, as well as of the current exports to Australia, which have for some months been on a substantial scale.

The official statistics of the Commonwealth show for the year to June 30, 1923:—

Imports to the value of	£131,808,673
Exports to the value of	117,913,083

Or excess of imports over exports of £13,895,590

whereas in the previous year there was an excess of exports of £24,780,000, a difference of nearly £30,000,000. On the other hand, Australian funds in London were increased during the year by the payment through the banks here of £5,331,618, being a distribution (by way of return of capital) of 10s per share to the shareholders of the British Australasian Wool Realisation Association. The heavy disproportion of the funds of the Australian banks in London, as compared with the funds in Australia, to which I referred at our last meeting, was gradually adjusted by the movement of trade between the two countries, and the heavy exports to Australia, which are still proceeding, have prevented any undue accumulation of money here—indeed, the position at the present time is rather the other way, but that will be rectified in due course through the wool-selling season in Australia, now begun with the resulting flow of a steady stream of bills to London.

BALANCE-SHEET ITEMS.

I will now briefly review the accounts for the past year. The accounts submitted at last meeting for the year to June 30, 1922, were the first to cover a full year of the working of the three banks as one institution, and thus the accounts now submitted, viz., those to June 30, 1923, being on exactly the same basis, afford a fair comparison of the figures.

I will first take the balance-sheet, and will be glad if you will look at the figures on the printed statement of accounts which you have in your hands. You will thus be better able to follow my remarks. The authorised capital is unchanged at £3,000,000, but now in the form of 600,000 shares of £5 each. The paid-up capital of £1,500,000 is greater by £180,112 10s.

The reserve fund, which stood in last year's balance-sheet at £1,315,000, has increased to £1,450,000, by the allocation made at our last annual meeting. To this has been added the premium on the new issue of shares, amounting to £18,150 9d, and the further sum of £15,000, out of the profits of last year, as required by our articles of association, bringing this fund up to £1,483,150 9d. Out of the profits of last year we recommend that the further sum of £136,840 18s 3d be added, bringing the fund up to the round figure of £1,620,000 (or £120,000 more than our paid-up capital of £1,500,000). The vital importance of steadily building up this fund is, I know, fully realised by you. It is a self-denying ordinance which brings its own certain reward. It is a sure measure of the stability of the bank and guarantee of the confidence of its customers.

The only change in our perpetual stocks is a decrease of £50,000 in our deferred inscribed deposit stock, as explained in the report. Our deposits at interest show an increase of £761,226, and stand at £13,382,621, notwithstanding that there has been a considerable decrease in Government deposits during the year, and our current accounts have increased by £668,133, spread over the various branches, and appear in the balance-sheet at £11,820,150. The deposit and current accounts together show an increase of £1,420,359, and a combined total this year of £25,202,780.

Notes in circulation at the merely nominal figure of £1,287 are £41 down.

Bills payable, rebate on bills, and other liabilities amounted to £1,755,055, or an increase of £18,011, and do not call for any special comment.

ASSETS.

On the assets side we have cash and bullion at £4,972,780, or an increase of £261,978. Cash at bankers and at short notice, £1,771,690, an increase of £371,190, or together £6,744,470, showing an increase over last year of £633,169, and exhibiting a strong cash position, being 11s 4½d in the £ of our current accounts, and

5s 4d in the £ against our current accounts and our deposits at interest.

Our investments, consisting of British and Colonial Government securities at or below market value on June 30, 1923, stand at £1,329,147, or an increase of £98,323. Our cash and investments together amount to no less than 13s 7½d in the £ of our current accounts.

Bills receivable at £3,596,466 show a decrease of £203,040, accounted for by the ordinary fluctuation of trade. Advances and other assets, after making provision for bad and doubtful debts and contingencies, show an increase of £1,362,622, and stand at £20,313,043, arising from a healthy expansion of our business. Our advances are made with great care and are widely spread.

The last item, bank premises and furniture, has been reduced since last balance-sheet by £14,719, and stands at £792,932, and this will be further reduced by the allocation now proposed of £59,498 out of the profits of the past year for the purchase and cancellation of deferred inscribed deposit stock. On the other hand, we have been singularly fortunate in securing the ground and building adjoining our chief office in Melbourne, which places us now in possession of a compact block with extensive frontages to both Collins street and Queen street, and providing all the necessary space for extension of our banking premises there sufficient to meet our needs for many years to come. This will entail an expenditure of fully £60,000, which, however, will be spread over the next two years.

PROFIT AND LOSS ACCOUNT.

Turning now to the profit and loss account, you will be able to follow the figures better if you will look at the first page of the report.

The profits for the year, after making full provision for bad and doubtful debts and contingencies, amount to £1,251,197, against £1,094,685 in the previous year, or an increase of £156,511.

Expenses of management in London and Australia, including directors' and auditors' fees, &c., £557,038, are less than in the previous year by £9,286, while income and other taxes at £223,311 are £40,425 higher. Deducting these, which together amount to £780,349, the net profits amount to £470,847, or an increase in net profits of £125,373. Of the expenses of management, salaries and wages account for £420,000. Our branches during the year have increased by 23, and now number 355, extending over all the States of the Commonwealth. Taxation, as you see, is a burden that presses very heavily upon us.

ALLOCATIONS.

Coming now to the appropriation of the net profits of £470,847, an interim dividend was paid in May last of 5 per cent., free of income-tax, absorbing £65,994; there has been added to reserve, as required by our articles, £15,000, leaving for further appropriation £389,853. Of this, we now propose to carry to reserve fund £136,849 18s 3d, making, with the £15,000 just referred to, and with £18,150 9d, the premium on issue of new shares, £170,000 for the year, and bringing this fund up to £1,620,000; to the English, Scottish, and Australian Bank officers' guarantee and provident fund, £35,000; to the payment of a final dividend of 7½ cent., making 12½ per cent. for the year free of British income-tax, £112,500; to the purchase and cancellation of deferred inscribed deposit stock in accordance with our articles of association, £59,498; and finally to the payment of a special bonus of 10 per cent. to the staff in the service at June 30th last, in view of their good and efficient work, especially in carrying out all the detail work of the amalgamation of the three banks, absorbing £40,500. An unappropriated balance is left of £5,505 7s 2d, which, with the accumulated balance brought forward from last year, leaves at credit of profit and loss account at June 30, 1923, an accumulated balance of £112,599 to be carried forward.

The result of the operations of the combined banks for the past year, as this brief review of the accounts shows, has been very satisfactory, the more so when we remember that the year was not free from anxiety and difficulty, and this fully demonstrates the wisdom of the amalgamation of the three banks.

The increase of the dividend from a 10 per cent. to a 12½ per cent. level will, I am sure, be gratifying to the shareholders. Our increased dividend of 12½ per cent. tax free, is only equal to 6 per cent. tax free on our combined paid-up capital and reserve fund, and correctly to ascertain the return on the shareholders' total capital employed in earning the profits you must take these two together.

AUSTRALIAN BANKS' FUNCTIONS.

An important function of the Australian banks is to facilitate the free exchange of commodities between Australia and the United Kingdom, as well as other parts of the world. At times we have heavy demands upon us to provide cash in Australia required to pay producers there for wool, wheat, butter, fruit, metals, and other primary products for shipment to this side. At other times

we have equally heavy calls upon us to provide cash here to pay the exporter in this country for the large range of manufactured articles that have to be shipped from here to meet the requirements of the Australian population. The problem that is ever exercising the minds of the management of the banks both in Australia and here is how best to ensure that there shall always be adequate cash in each place at the time that such is wanted fully to meet the legitimate demands of sound trade as they arise. Of the many services which the banks render to the community, this is one of the most essential, and one which calls for skill and experience on the part of the managers.

The rates charged by the banks are regulated on the basis of a fair remuneration for the employment of their capital, and to a large extent by the fundamental law of supply and demand, or, in other words, by the balance of trade for the time being between here and Australia, though it has always been our endeavour to keep rates as steady as possible, because nothing so hampers traders in their dealings as unstable exchange rates, as such tend to upset the most careful calculations, and possibly to turn an estimated profit on a contract into an actual loss.

EFFECT OF ABNORMAL CONDITIONS.

During the 1920-21 period, when, in consequence of abnormal conditions arising from the war, exports from this side were greatly in excess of imports, and were rushed out in unexpected volume, it was a necessary consequence that the cost of negotiating bills should be abnormally high. When excessive exports take place, and make excessive calls upon those institutions which regularly finance the moving of goods outward, thus threatening to absorb a great deal more cash than is at all convenient, or, perhaps, even safe for these institutions to provide, those calling for such exceptional accommodation cannot reasonably complain if the charges rise accordingly. It is interesting and pertinent for me to state, in connection with the stringency of 1920-21, that while in no single instance did we refuse to negotiate bills drawn under our credits, the action of our ourselves and other banks in doing so in the case of other applications, which was so much resented at the time by the disappointed applicants, was not only the means of preventing a disastrous slump in prices from an over-glutted market, but later, and by many of those who at the time most bitterly condemned it, was handsomely acknowledged as having saved the situation. The movements in exchange constitute generally a useful index as to the course of trade, and are, at times, a check on over-trading.

The comparison sometimes made between the Bank rates and the outside rates given by merchants leads nowhere. The banks are there as the permanent institutions on which the trade permanently leans. The outside sources, whose lower rates are sometimes compared, to the disadvantage of the banks, are only occasionally available, and cannot be relied upon as a regular channel. To suggest that the institutions that provide the large amount of capital thus made available for the regular conduct and smooth working of the trade between the two countries should reduce their rates to the level of these occasional outside channels is obviously unreasonable.

SUGGESTION FOR CONTROL OF CREDIT.

As you may remember, when addressing you last year I advocated a plan for Australia as a temporary expedient to meet a temporary deadlock. I then said: "In such circumstances the alternative which presents the most natural and sound method to relieve a situation which is most prejudicial to the best interests of Australia seems to be for the Commonwealth Notes Board (the issuing authority) to issue notes to the banks in Australia against deposit by them in London of cash or its equivalent. There would be no inflation in this, as such issue of notes would be secured by cash found for pound on this side. This would greatly assist the free flow of the export trade of Australia."

That is a method that I think might wisely be had recourse to in times of exceptional stringency, when the balance of trade may be exceptionally disturbed.

It should never be forgotten that control of credit is quite as essential as control of currency. Scheme after scheme may be ingeniously devised for controlling currency, but until you can devise a scheme that will also control credit, the present methods of sound banking, supplemented in times of exceptional stringency by some such facilities as I have already suggested, will, I believe, be found to work more smoothly, more effectively, and more fairly than any of the schemes yet suggested.

Since these observations were written the findings of the Imperial Economic Conference on the question of inter-Imperial exchanges have been announced, and in the main confirm what I have said, though they cover a wider range.

WOOL INDUSTRY.

Of all the industries of Australia, the most important is, at the present time, and probably for a long time to come, will continue to be, wool, and it is a matter of solid satisfaction that the position

of that industry at the present time is an exceedingly strong one.

The official statistics which have recently been received show the value of the 1922-23 shipments of wool, including tops, to have reached the record value of £57,141,611, testifying to the vast importance to Australia of the wool industry. It must be noted that a portion of this record total represents Bawra wool, which will not appear again. Exact figures are not available, but this item probably represents about £5,000,000.

At the time of our last meeting the price of merino was on a high level, being quite 50 per cent. above the price ruling the year previously, though even then a great improvement had taken place.

The very satisfactory level of prices, from the point of view of the grower, reached in November of last year has, with more or less slight fluctuations, been fully maintained in the case of merino wool, and in the case of crossbred wool shows a further rise of about 20 per cent., with a continuing upward tendency.

STRONG STATISTICAL POSITION.

The statistical position of wool of all kinds at the present time is a very strong one. The world consumption has outrun the total world production. The consumption last year has been estimated by Sir Arthur Goldfinch as 3,300,000,000 lb, and the total production of the wool at 2,800,000,000 lb, or an excess of consumption over production of 500,000,000 lb, equal to 1,500,000 Colonial bales. To meet that deficiency, at the end of last year there were only 913,000 bales of unsold Bawra wool, of which only 76,235 were merino. The total Australian production for the year ended June 30, 1923, was 1,918,002 bales, but during the present year there is certain to be a heavy shortage in the Australian clip (about three-quarters of which is merino), a shortage estimated at fully 250,000 bales. On the basis of last year's estimate of world supply and world demand, this would make an apparent shortage of 1,750,000 Colonial bales. To make sure that the shortage is not over-stated, cut this figure down and call it only 1,500,000 bales, and let us see what that means. The only extra supply available to be drawn on to meet the deficiency is what remains of the stocks of wool held by Bawra. The figures published by the association show that the total stocks of wool held by them on the 1st of last month amounted to only 433,000 bales, of which only 1,900 bales were merino. Since then 74,000 bales have been sold in Liverpool and Hull, and during the London sales now current 60,000 bales are listed for sale, bringing the remaining stocks of Bawra down to 299,000 bales. It is probable that by the end of March, or very shortly thereafter, the whole of the stocks of Bawra will have been disposed of.

We will then have to face the position that with the world production of wool over 1,000,000 bales short of the world consumption, the increase in the demand is still growing more rapidly than is the supply—in fact, for some years the world production of wool has been diminishing. It is computed that there are 84,000,000 sheep less in the world to-day than there were in 1913.

This shortage of supply is most marked in the case of merino wool, in which Australia is chiefly concerned. What this means to Australia needs no emphasis. When I tell you that within the last generation the number of sheep in Australia has gone down from 105,000,000 to a little over 80,000,000, it will be realised that there is room for very substantial further extension of the industry in the Commonwealth.

I have, as usual, dealt at some length with the wool position, the finance in connection with which closely concerns all Australian banks, and the strong present position and the bright outlook as regards the market for wool are matters for congratulation.

WHEAT.

The export of wheat and flour from Australia comes next in importance to that of wool. The estimate of the 1922-23 crop of 100,000,000 bushels, which I mentioned at our last annual meeting, very closely approximated the actual figures, which were 109,446,549 bushels. The exports during the last three years, in quantity and value, have been as follows:—

To June 30, 1921, 84,500,000 bushels, value £39,400,000; to June 30, 1922, 112,000,000 bushels, value £34,100,000; to June 30, 1923, 44,700,000 bushels, value £12,991,550; and for these years the average price of wheat was respectively 8s 11½d., 5s 8½d., and 5s 4½d per bushel. The preliminary estimate for the wheat crop for the current year is about 114,000,000 bushels.

BUTTER.

The export of butter from Australia for the last three years has been:—

For year to June 30, 1921, 92,421,000 lbs, value £11,067,104; for year to June 30, 1922, 127,579,800 lbs, value £7,987,558; for year to June 30, 1923, 78,975,387 lbs, value £6,133,864; and the average price for the respective years was about 2s 4½d, 1s 3d, and 1s 6½d per lb.

HARRISONS & CROSFIELD, Ltd.,

FROZEN MEAT.

The cattle industry of Australia is still suffering severely from the depression in the frozen meat trade (especially frozen beef), and seems likely to continue more or less in this deplorable state so long as subjected to the unrestricted competition of the foreign beef trusts and the continued practical closure of the markets of the Continent of Europe through the political and economic chaos at present prevailing. Hopes are entertained that, by a process called the Linley Process, chilled beef can be shipped from Australia to this country, and if it is found that this can be done successfully, on a large scale it should prove of great benefit to this important industry, the maintenance of which is of serious concern to the whole Empire.

METALS.

As regards metals, while the situation is by no means one of unrelieved gloom, the position, as a whole, is not encouraging. For the 12 months just ended the output of copper was approximately 14,000 tons, against 45,000 tons in 1913, and the present price of copper leaves little or no margin of profit.

The production of lead for the year ended September 30th was approximately 115,000 tons, and the present price of £29 to £30 a ton should leave a good profit.

The production of zinc is increasing, and that industry is flourishing. The output of the Electrolytic Zinc Company in Tasmania for the year to September 30th last was just over 33,000 tons, and has since risen, and is now at the rate of 43,000 tons a year.

COTTON.

As to cotton, I need add little to what I said on this subject last year. This industry is still in an early stage of development. There is no doubt, however, that good cotton can be grown over extensive areas in Australia, and if, as we sincerely hope will be the case, the higher cost of labour, compared with other cotton-producing countries, is so counterbalanced by superior efficiency as to enable Australian cotton to compete successfully in the world's markets, then a great additional industry will be established in the Commonwealth.

IMMIGRATION.

The question of immigration, so vital to the true welfare, and even ultimate safety, of Australia, has been receiving the consideration it deserves from the Imperial Conference recently in session here. As Mr Bruce, the Prime Minister of Australia, effectively stated, the great needs of Australia are summed up in three words—"men, money, markets." Given the men and the capital necessary for development, and assured of markets for the produce, it would be difficult to set a limit to the wealth that Australia would produce.

Taking Australia as a whole, the outlook for primary products is encouraging, and the prospects for the internal trade of the country are good.

EXCHANGE OF VISITS.

During the past year we arranged that the assistant general manager in Australia, Mr Ernest O'Sullivan, should pay a visit to this country. Mr O'Sullivan was with us for several months, and we found his visit of great benefit. Such visits of the principal executive officers are most advantageous. Not only are we thus able to go into important matters in detail in a way we could not do equally satisfactorily by correspondence, but a personal relationship and mutual understanding is established which is of the greatest value in the conduct of the business and correspondence. It was a pleasure to the board and the management here to have this opportunity of close personal intercourse with Mr O'Sullivan, whose ability and devotion to the best interests of the bank are fully appreciated. Arrangements have been made for our manager in London, Mr Janion, to visit Australia in 1924; he hopes to sail about the end of December, and will probably be away about six months. In his presence I will not say all I would wish about him, but I will content myself with observing that he has the whole-hearted esteem and confidence of his board.

Mr Joseph Grieve retired in September of this year, after being in the service of the bank in London for over 30 years. The whole time he has been with us Mr Grieve has given unqualified satisfaction to the board and management. He has been second in command of the London office for many years previous to his retirement. Throughout he has served the bank faithfully and well. A man of the highest character, of great ability, and of a charming disposition, we part from him with sincere regret, and

we hope he will long be spared thoroughly to enjoy his well-earned leisure.

He is succeeded in his post of assistant manager in London by Mr A. A. Shipston. Mr Shipston was in the service of the London Bank for 31 years, and at the time of the amalgamation was second in command of the London office of that bank. After the amalgamation he was appointed sub-manager here of this bank, and he has more than justified the appointment. He deservedly possesses the full confidence of board, management, and staff.

TRIBUTE TO MANAGEMENT AND STAFF.

I am glad to have this opportunity of cordially acknowledging how much we all owe to the energy, capacity, and devotion of our management and staff here and in Australia during the past year. Mr Wren, in Australia, not only exhibits to his whole staff the ideal of what a general manager should be, but also possesses the still rarer quality of inspiring them all with his own enthusiasm, and obtains from the whole of his staff willing service of the best quality.

To one and all in London and in Australia I wish in your name, and that of the board, to express our appreciation, and our thanks for their excellent work during the past year. On this occasion, owing to the very special work entailed in carrying out the details of the amalgamation, we have decided to mark our appreciation in tangible form by the bonus to which I have already referred.

I will now move the following resolution, which I will ask Mr Paterson, the deputy chairman, to second:—

"That the report and statement of accounts now submitted be and are hereby adopted; and that the amount available for distribution be applied as therein recommended."

Mr John Paterson, deputy chairman, seconded the resolution.

The Chairman then said that before putting the resolution to the meeting he would give any shareholder who wished to ask a question or to make any comments an opportunity of doing so.

SHAREHOLDERS' VIEWS AND QUESTIONS.

Sir Frederick Dutton said that he would be glad if the chairman would tell him the reason for the substantial increase in income-tax. The income-tax in this country being at a lower rate than in the previous year, he presumed that the increase arose in regard to Australia.

Mr F. Tomkinson, after congratulating the chairman on his address, said: With regard to the position of the bank, he was very glad that the chairman had emphasised a point which he himself had raised on a previous occasion, long before it had been brought to notice. That point was that their dividend of 12½ per cent. was really equal to only 6 per cent., because they must take into account the reserve. They had a reserve equal to the capital, and he considered that to be an important point in view of the present tendency of legislation. A certain section of the people, who did not understand, or did not wish to understand, might otherwise say, "Here is an institution paying a huge dividend." The chairman, in his desire to make himself quite clear, had pointed that out, and he (the speaker) desired to emphasise it.

With regard to immigration, he thought it would be rather interesting if the chairman could tell them whether the authorities in Australia were more willing at the present time to receive immigrants than they had been.

CHAIRMAN'S REPLY.

The Chairman, in reply, said that the increase in the item of income-tax was explained by the fact that they had increased profits on which to pay, and, further, the average of three years had to be taken into account. With regard to the question of immigration, which Mr Tomkinson had referred to, he thought that undoubtedly there was very much more disposition on the part of the authorities on the other side. One difficulty with regard to the matter had been expressed forcibly by Mr Bruce, when he said that they must be careful not to overdo immigration with a rush; otherwise they might get men on to farms and engaged in cultivation of fruit before they were quite sure that their products would find a market. A market was quite as important an element as anything else in the question of immigration.

The resolution was then put to the meeting and carried unanimously.

THE DIRECTORATE.

The Chairman next proposed: "That the Hon. Sir Arthur Lawley, G.C.S.I., be re-elected a director of the bank."

The Right Hon. Viscount Knutsford seconded the resolution, and it was unanimously approved.

On the motion of the Chairman, seconded by Mr S. M. Ward, it was also unanimously agreed "That the Hon. Sir John A. Cockburn, K.C.M.G., be re-elected a director of the bank."

The Chairman then moved: "That the appointment of the Right Hon. Viscount Knutsford and Sir Frederick W. Young as ordinary directors by way of addition to the board on their vacation of office as representatives of the holders of deferred inscribed deposit

stock—such right of representation now having lapsed—be, and the same is hereby approved and confirmed."

This resolution was seconded by the Hon. Sir John A. Cockburn, K.C.M.G., and unanimously adopted, and was responded to by Lord Knutsford.

On the proposition of Mr J. M. Laine, seconded by Captain Slack, Messrs Turquand, Youngs, and Co., and Messrs Price, Waterhouse, and Co. were reappointed auditors.

VOTE OF THANKS TO THE BOARD.

Mr Robert Ward, in moving "That a hearty vote of thanks be accorded to the chairman, the deputy-chairman, and the directors for their conduct of the affairs of the bank, and that they all be warmly congratulated on the result of the year's working," said: A year ago we had a very interesting and satisfactory meeting. The profits were larger than they had ever been before, and I ventured to suggest that the shareholders, pleased as they were, would be like the fat boy and would be looking for more. The board have evidently borne that suggestion in mind, and we have to-day a dividend of 12½ per cent., which is highly satisfactory. It is gratifying to know, and to see by the figures, that we have had an extremely good year, and that our staff has behaved with skill and experience, all tending to the success which we have met to-day to celebrate. I think the board is to be commended upon recommending this very important addition to our reserve fund. We live in perilous times, and it is a very satisfactory thing to know that we have something up our sleeve.

Then I think the board deserve to be congratulated upon recognising the value of our staff. The labourer is worthy of his hire, and I am personally very pleased indeed to see that our board have recognised the efficiency of our staff, and given them this generous bonus of 10 per cent.

Mr W. P. Waddell seconded the vote, and it was unanimously accorded.

The Chairman briefly acknowledged the compliment, and assured the meeting that they gave great care and attention to the affairs of the bank. It was a pleasure to do so, and all the greater pleasure when they had the hearty support of the shareholders, which they always did have.

VOTE OF THANKS TO MANAGER AND STAFFS.

Mr F. Tomkinson: The important duty has been entrusted to me of proposing, "That the thanks of the shareholders are due to Mr Wren, the general manager in Australia; Mr Janion, the manager in London; Mr O'Sullivan, the assistant general manager in Australia; Mr Shipston, the assistant manager in London, and to the executive officers and the staff at home and in Australia for the valuable services they have rendered to the bank during the past year." With the report in your hands, and after the speech which you have heard, no word from me is required to emphasise this resolution. Without the work—the able work—of the gentlemen whose names I have just read you would not get the 12½ per cent. dividend which you are going to receive.

Our London manager, Mr Janion, is present, and therefore one does not like to say anything about him, but I know a good deal about banking in this City, and can assure you that geniality and courtesy count for a great deal, and those qualities are found in no one more than in Mr Janion. The same remark applies, I am sure, to Mr Wren, the general manager in Australia. Mr O'Sullivan I had the pleasure of meeting the day before he sailed, and I could not but think what an asset it was to our bank to have such a man travelling about to the various branches.

Mr Edward Ambrose seconded this vote of thanks, and it was cordially approved.

MR JANION'S RESPONSE.

Mr E. M. Janion (London manager and secretary), in acknowledging the compliment, said: I do not wish to make a speech, gentlemen, but I should like to thank you very much, both the chairman for the remarks which he made, in the first place, about the staff, and Mr Tomkinson and Mr Ambrose for the kind resolution which they proposed and seconded, and which you so cordially passed. We are only doing our duty here, but I should like to say that we could not do it in more pleasant circumstances. The feeling of goodwill and team-work on the part of every one, from the chairman down to the junior clerk, I think is very fully exemplified in our service, and it all tends to enthusiasm and good work. You have spoken too kindly about me, but I appreciate it very much, and, in thanking you, I do so, not only for myself, but also for the whole of the staff in Australia and here.

VOTE OF THANKS TO THE CHAIRMAN.

Mr Andrew Cunningham: Gentlemen,—Will you allow me in a few words to express a sincere and grateful vote of thanks to Mr Williamson for his conduct in the chair to-day and for his very able, interesting, and comprehensive speech, to which, I am sure, we have all listened with great pleasure and satisfaction? I will tell you a fact which, perhaps, is not known to you or not realised by you, and it is that the price of our shares to-day,

£6 2s 6d for the £2 10s share, represents a premium of nearly 150 per cent., and, as a matter of fact, the shares stand very much higher to-day than ever before in the whole history of the bank. I most heartily congratulate Mr Williamson on the very handsome contribution he has made to that splendid result.

Mr F. W. Turner, in seconding the vote, said that the speech which the chairman had made that day was of a most valuable character: it might almost be called a compendium of the whole of the trade between this country and Australia. He very much appreciated all that the chairman had done and said, and heartily seconded the resolution.

The vote of thanks was passed with acclamation, and, the chairman having briefly acknowledged the compliment, the proceedings terminated.

DALGETY AND CO., LIMITED.

GOOD RESULTS—INCREASED EARNINGS.

COMPANY'S SOUND FINANCIAL POSITION.

The thirty-ninth annual general meeting of Dalgety and Co., Limited, was held, on the 15th instant, at the offices, 65-68 Leadenhall street, London, E.C.

The Hon. Edmund W. Parker (the chairman) presided.

The secretary (Mr H. E. Davison) having read the notice convening the meeting and the auditors' report,

The Chairman said that the results of the year's operations might be regarded as satisfactory, marking, as they did, a substantial increase in the earnings of the company as compared with the preceding year. Both Australia and New Zealand had combined to bring this about, their New Zealand branches having made a gratifying contribution to their revenues. The various activities of the company had been well maintained throughout the year, and they had enjoyed their fair proportion of the available business associated in one way or another with the primary products of Australia and New Zealand.

WOOL INDUSTRY.

Their largest and best-known staple product—namely, wool—showed the moderate increase of about 27,000 bales in the production of Australia and New Zealand during the past season as compared with that for 1921-22. Actual exports, however, showed a falling off of over 500,000 bales, due to the fact that shipments

included a very large quantity of the "Bawra" stocks, as well as unsold "free" wool brought over from the previous season. The market had displayed various fluctuations from sale to sale, but, taking the year's movements as a whole, values showed a very satisfactory appreciation over those current during the preceding year. The result had been that, although the total sales in the Colonial markets during the past season were reduced by no less than 284,858 bales, the actual money return showed an increase of more than £12,500,000 over 1921-22. That this fine result had been achieved in spite of unsatisfactory—not to say adverse—trade conditions, especially in Central and Eastern Europe, was a striking confirmation of his statement last year that the world's demand for wool to-day was appreciably in excess of the present production, and that all qualities and descriptions would be required and would realise remunerative prices for some time to come. An important development which confirmed this view had taken place recently in the shape of a much improved demand at higher prices for medium and low crossbreds—and if maintained and extended, as seemed probable, this would mean a substantial addition to the proceeds of the New Zealand clip—the sale of which was now beginning. Adverse seasonal conditions had seriously prejudiced the current season's production, and it was estimated that the 1923-24 clip from Australia and New Zealand would show a falling off of about 200,000 bales—a very serious matter in view of the fact that supplies were even now barely sufficient for requirements. The liquidation of the old stocks of Australian and New Zealand wool held by "Bawra" was proceeding steadily and satisfactorily, and its completion might be expected early in the new year, and the question arose as to what was likely to be the effect on the market when these supplies had disappeared and buyers were compelled to satisfy their requirements from the reduced production of the present season.

WHEAT AND DAIRY PRODUCE.

The Australian wheat harvest was one of the disappointments of the past year, both as to quantity and price. The surplus available for export was reduced by the dry season to about 1,500,000 tons, as compared with 2,500,000 tons in the preceding year, and unfortunately prices were materially lower. The outlook for the ensuing harvest was for a time distinctly gloomy, but widespread rains in the agricultural areas had since vastly improved the prospects, and if the weather continued favourable a much larger quantity of wheat and other cereals would be garnered this season.

The level of values, so far as could be judged at present, looked like being only a moderate one.

The dry season naturally checked the production of dairy produce in Australia, but, thanks to a much higher range of prices, the value of the exports from the Commonwealth reached about £7,500,000. In New Zealand, on the other hand, there was a substantial increase in the output, and with the help of the favourable market conditions the value of butter and cheese exported from the Dominion during the year reached a sum of £18,000,000. Thus New Zealand had now developed into the greatest dairy produce exporting country in the world, and it might safely be said that it was far from having reached the limit of its possibilities in this important industry.

Frozen meat filled a prominent position in the exports from Australia and New Zealand, but it could not be said that the period under review had fulfilled the expectations generally entertained with regard to it. Certainly, mutton and lamb had, on the average, realised satisfactory prices, despite sundry fluctuations and periods of dulness, but beef showed no recovery from the depression to which he referred a year ago, and current prices on this side were still unremunerative so far as the Australian and New Zealand export cattle breeders were concerned.

COTTON.

Cotton production in Australia had come into prominence during the last two years, and very sanguine expectations had been entertained with regard to it. Up to the present, practically the whole of the production was confined to Queensland, and, unfortunately, the last crop was seriously prejudiced by the dry season. A total of some 30,000 bales was expected—as compared with 5,000 bales in 1922—but from latest advices the impression was that this year's output would not reach anything like the quantity named. If labour conditions in Australia were less difficult it would be reasonable to expect a large expansion in the growth of this article, for the potentialities in that respect were very great.

The banking position so far as it affected the transfer of funds between this country and Australia and New Zealand had not been altogether satisfactory, but imports into Australia and New Zealand, taken together, continued to be appreciably in excess of exports, and this was bringing about a better adjustment of the finances of the Australasian banking institutions, and would, it was hoped, lead to easier conditions for the exporters from those countries.

Referring to the Queensland Land Act Amendment Act of 1920, the chairman said that the London Chamber of Commerce had passed a resolution drawing attention to the breach of contract between the Crown and the pastoral lessees. Unless steps were taken to do justice to the parties affected, the credit of the State of Queensland must be impaired and the flow of capital thither for development purposes would inevitably be checked. A great wrong had been done, and the time had come when it should be righted.

BUILDING PROGRAMME.

Dealing with the balance-sheet, he specially mentioned the large increase under the head of premises, remarking that in a sound and progressive business such as theirs the demand for new and better accommodation would probably be continuous, and it was a healthy sign that such should be the case. The period under review had had to bear the cost of their new London premises, and they now had to provide for the expenditure of considerable sums upon building requirements at various branches. This important building programme implied the absorption of a considerable amount of working capital, which, in order to carry on their business properly, must be replaced, and it was for this reason that the directors were recommending that £50,000 be appropriated out of profits to writing down cost of premises. The reserve fund now stood at £1,000,000, being equal to the paid-up ordinary share capital, and it was invested in gilt-edged securities, which showed at to-day's market rates a satisfactory margin over their book values.

The latest cable advices indicated that at the moment the general position in Australia was only fair to middling, and, although in New Zealand the prospects were better, it was obvious that there was nothing to justify a departure from their normal policy of caution and judicious conservatism.

The report and accounts were unanimously adopted, and a final dividend was declared on the ordinary shares, making 10 per cent. for the year, together with a bonus of 5 per cent., both free of English income-tax.

COMPANY'S STRONG POSITION.

Mr W. Wiseman, in returning thanks for the re-election of his firm as auditors, said that the accounts of the company were in admirable order. It must be a matter of great satisfaction to the shareholders to know the strong financial position of the company, because if they took the creditors on the balance-sheet as £2,750,000, and then added the terminable debentures of £357,000, the total outside liabilities amounted to about £3,100,000. Against that

they had cash £1,200,000, investments £600,000, and an investment reserve of £1,000,000. Almost, therefore, they had cash immediately in hand or available to pay off the whole outside liabilities. That, he thought, would be agreed, from the financial standpoint, was an admirable position.

On the motion of Mr G. H. Gladman, seconded by Mr H. G. Jellard, it was resolved: "That the best thanks of the meeting be given to the chairman, the board of directors, the local boards of advice, and the staff for the services rendered to the company during the year."

The Chairman, in reply, said that the directors and the staff would continue to do their very best to promote the interests of the company.

The proceedings then terminated.

THE LONDON AND BRAZILIAN BANK, LIMITED. FUSION WITH LONDON AND RIVER PLATE BANK APPROVED.

An extraordinary general meeting of this company was held, on the 13th inst., in London for the purpose of considering resolutions providing for its fusion with the London and River Plate Bank, Limited.

Mr W. Douro Hoare, C.B.E., who presided, said that the consent of the committee appointed by H.M. Treasury on bank amalgamations had been received. The shares of both banks would now become fully-paid £5 shares in a combined bank to be called "Bank of London and South America, Limited," and it was hoped that in the River Plate and Brazil, as well as in other Republics, it would be known, as the two old banks were at present, as the "Banco de Londres," thus maintaining the old and valued traditions of both banks. The total issued capital of the combined bank would be £3,540,000 in 708,000 shares of £5 each fully paid, of which the London and Brazilian Bank shareholders would receive for the transfer of their business and assets 300,000 fully-paid £5 shares, or £1,500,000, leaving 408,000 fully-paid £5 shares, or £2,040,000, in the hands of the existing River Plate Bank shareholders. The reserves of the two banks added together—namely, £3,600,000, would become the reserve of the combined bank. Shareholders would derive great benefit by having their shares fully paid, as they would become a much more marketable security. It was intended at once to apply for a Stock Exchange quotation for the 300,000 shares allotted to the London and Brazilian Bank shareholders, while the 408,000 shares in the combined bank allotted to the London and River Plate Bank shareholders would not have a quotation at present on the Stock Exchange.

In these days of large operations and large figures the advantage of a close connection with powerful friends was inestimable, and he was hopeful that the public would appreciate the advantage of dealing with a concern like the combined bank, which would be able to handle large operations for them in the best possible way to the advantage of their customers and the South American trade generally. Every one of the bank's customers would receive every reasonable and proper facility, while the extended ramifications over South America would be of great advantage to them. The continuance of the board and management ensured their old traditions being fully maintained in every way. With branches operating at 40 places in America and Europe, they would be able to use their resources in one place or another to meet the seasonal demands of each place, thus fostering trade and helping British trade, which was so important just now. The board had made it a condition of the fusion that no member of the staff should suffer by it. The whole of the directors had been invited to join the board of the combined bank, and had expressed their willingness to accept the invitation. The 6 per cent. interim dividend which was paid on October 30th was for the period February 1st to July 31st. To bring the accounts up to September 30th, when the fusion took effect, a further dividend for the two months at the rate of 6 per cent. per annum would be declared, payable shortly after the confirmatory meeting, always, of course, assuming that the resolutions were passed by the shareholders.

The resolutions submitted were passed by a large majority.

KERR STUART, AND CO., LIMITED. GOOD YEAR—ISSUE TO SHAREHOLDERS.

The thirteenth annual general meeting of this company was held, on the 12th inst., in London, Mr H. Langham Reed (chairman and managing director) presiding.

The Chairman said that in their last report the directors referred to the outlook as fair, and they were glad now to point out that anticipations had been somewhat more than fulfilled. At the time of the grouping of the British railways into four large systems it looked as if the firms manufacturing locomotives and rolling stock were going to lose their best customers in the home market, as the smaller companies which had not their own manufacturing

facilities ordered their requirements from these firms. The directors of the grouped railway companies had taken a very broad and generous view of the situation, and had decided to place large orders in the near future with private firms. Kerr Stuart, and Co. were manufacturing wagons for the home market to their full capacity, and their output was booked ahead for some time. In other departments they had a considerable amount of work in hand, including orders for smokeless fuel retorts, a business which showed every sign of increasing very rapidly in the near future.

They held a controlling interest in the Peninsular Locomotive Company, Limited, an Indian company of which they had been appointed managing agents for a period of thirty years. The Government of India, in pursuance of their expressed policy of making India as far as possible independent of outside sources in the supply of railway materials, had decided to give a general undertaking that tenders would be invited annually in India for all locomotives and boilers required by the Government. The Government estimated that their average annual requirements would be 160 locomotives and 160 additional boilers in 1923 and 1924, and thereafter 400 locomotives and 400 boilers per annum. In anticipation of the situation which might be created by the receipt of large orders for the Peninsular Locomotive Company, it was desirable that Kerr, Stuart and Co. should be possessed of ample cash resources. The board had received offers for the whole of the £70,000 unissued share capital, but had decided that the shareholders should first be given the opportunity of taking up these shares at 21s per share. Generally speaking, each shareholder would have the right to apply for three new shares for each completed ten shares of his present holding.

The report and accounts were unanimously adopted, and a final dividend, making 12½ for the year, less income-tax, on the ordinary shares was declared.

JOSHUA HOYLE AND SONS, LIMITED. INCREASED PROFITS DESPITE DIFFICULTIES.

The ordinary general meeting of Joshua Hoyle and Sons, Limited, was held, on the 15th inst., at India Mill, Bacup, L.-Col. J. Craven Hoyle, T.D., D.L. (the chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said that during his experience of 39 years, and from what knowledge he had gained of the earlier history of the firm, the past twelve months had been a period of the greatest anxiety since the establishment of the firm. The effect of the political unrest in Europe, the Near and Far East, had meant that certain markets had been closed, and with the remainder competition had been of a serious nature. They were also still suffering from severe taxation, both national and local, and that fact was having a serious effect on trade and employment, inasmuch as the directors had been compelled to temporarily close two mills and transfer the goods made at those mills to other mills of the company, in order to reduce the overhead charges and enable the rest of the mills to run full time.

The experience of the past twelve months had demonstrated to the board, and he felt certain, with the knowledge of the result of the year's working, to the shareholders also, the soundness of the policy adopted by the board in building up the firm of Joshua Hoyle and Sons into its present position. Through their now varied productions they had been in the happy position that where certain branches of the trade had been quiet other branches had been profitably employed.

KANSALLIS-OSAKE-PANKKI

(National Joint Stock Bank).

ESTABLISHED 1889.

Head Office: HELSINKI (Helsingfors),
FINLAND.

Capital and Reserves - Fmk. 252,000,000
Deposits and Cheque Accounts
(30/6/23) - Fmk. 1,587,000,000

129 BRANCHES AT ALL IMPORTANT BUSINESS CENTRES IN FINLAND.

Telegraphic Address: Kansallispankki.

The work of centralisation had been continued with very satisfactory results both in working and economy.

Sir Wm. E. Berry, Bart. (deputy-chairman), in seconding the motion, said he thought they were all entitled to congratulate themselves upon the showing they had made during the year. To have increased the profits of the company from £110,000 last year to £193,000 this year showed that the management of the business must be sound.

Mr Walter Pilling (managing director), in supporting the resolution, said they had heard a great deal about the control of cotton. He did not want it, as he was satisfied that Joshua Hoyle and Sons could weather the storm successfully. Whether it was a question of wages, taxation, or whatever else, he thought every help should be given to the cotton trade, in order to put it in the position it originally held, namely, the cheapest producer in the world.

The report was adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills dated from Nov. 19-Nov. 24 were opened on Nov. 16, 1923, and the total amount applied for was £46,275,000. For bills at three months, dated Monday to Friday, at £99 3s 4d, about 65 per cent., above in full; Saturday, at £99 3s 7d, above in full. The amounts allotted were as follows:—In bills at 3 months, £3 5s 9 3/4; in bonds nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
1923.				
Oct. 5.....	35,000,000	61,220,000	£ s d 3 1 4 25	nil
Oct. 12.....	35,000,000	61,565,000	3 1 5 61	nil
Oct. 19.....	35,000,000	51,135,000	3 0 7 85	nil
Oct. 26.....	35,000,000	50,275,000	3 1 8 33	nil
Nov. 2.....	35,000,000	51,350,000	3 1 6 63	nil
Nov. 9.....	35,000,000	53,200,000	3 3 8 13	nil
Nov. 16.....	35,000,000	46,275,000	3 5 9 32	nil

Tenders will be received on Nov. 23, 1923, for Treasury Bonds and Bills to be issued to the maximum amount of £45,000,000. The amount of Treasury Bonds issued will not exceed £4,000,000.

York from London. The United Kingdom imports and exports of gold during the month of October, 1923, were as follows:—Imports, £3,419,951; exports, £6,151,627.

SILVER.

The market has shown unusual strength this week. It is rather difficult to account for this, for factors which in this market may be regarded light and transitory have possibly had considerable weight in the Far East. Such a factor has been the dollar exchange, which, though discomfiting, has been known here to be owing to causes which may be but passing. Though its recent movement has been only about 1 per cent., without doubt the suggestion of an apparent falling off in the future demand for sterling has influenced Indian prices to a much larger percentage. The locking up of so large a proportion of the world's visible stock in Bombay has also been a factor. The degree of firmness with which this is being held is possibly better known there than here. The liquidation of such a stock in a reasonable time is rather doubted in this market, as rising rates for money in India might make carrying difficult. Another factor just now is the approaching Chinese New Year. Stocks have been running down at Shanghai, but very large reinforcements are on the way to China from different quarters, amounting to over 5,000,000 ounces. There are also 3,000,000 ounces on the way to India. In fact, nearly all the world's supplies are going Eastward, and that for a very good reason—there is nowhere else where the surplus over trade requirements can go. Yesterday's prices—33½d for cash and 32½d for two months' delivery—were peak prices, the former since November 9, 1922, and the latter since April 30, 1923. To-day a natural reaction took place to 32½d and 32½d respectively. The level of prices for the present may be rather higher than earlier in the year so long as China stocks decrease.

SAN FRANCISCO.—Oct.—Ore treated, 9,553 tons; lead concentrates produced, 2,150 tons; zinc concentrates produced, 2,525 tons. Estimated net smelter return on lead, \$117,400; United States currency, on zinc, \$38,810. Total net smelter return, \$156,210; operating expenses, \$46,715; estimated operating profit, \$109,495; capital expenditure, \$11,750.

SOUTH AMERICAN COPPER.—During Oct. 3,982 tons of ore were produced for smelting; 3,546 tons of ore, with about 1,100 tons of flux added, were smelted, producing 518 tons of matte, assaying 24 per cent. copper.

ZINC CORPORATION.—Oct.—Lead concentrator treated 15,758 tons of ore, producing 3,355 tons of lead concentrates, assaying 66½ per cent. lead and 5,275 tons of zinc middlings.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The estimated gross production of crude oil for the month of October was 61,833 barrels, equal to approximately 8,800 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 9,600 tons.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED.—A cablegram has been received from Burma reporting that the production of crude oil by this company and the Rangoon Oil Company, Limited, for the month of October amounted to 61,467 barrels.

GENERAL PETROLEUM COMPANY OF TRINIDAD.—Estimated gross production of crude oil for the week ending October 31st was 5,470 barrels, equal to approximately 781 tons.

STEAUA ROMANA (BRITISH), LIMITED.—The approximate fields' gross production for the month of October was 18,320 tons.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during October amounted to 106,376 barrels, or approximately 15,196 tons, including:—St Heleas Petroleum

Company, Limited, 48,473 barrels (6,925 approx. tons); Kern Trinidad Oilfields, Limited, 5,096 barrels (728 approx. tons); Kern Romana, Limited, 3,892 barrels (556 approx. tons).

The London financial agents of the Mexican Eagle Oil Company, Limited, are advised that the production for the week ended October 27, 1923, was 164,000 barrels.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, November 7, 1923, amounted to 888 tons.

Reports and Notices.

Mr Lionel N. de Rothschild, O.B.E., M.P., has joined the board of the Alliance Assurance Company, Limited.

Mr A. de V. Leigh, M.B.E., M.A., has been appointed secretary of the London Chamber of Commerce in succession to the late Mr Charles E. Musgrave.

William L. Sleight, Esq., D.L., J.P., chairman of the Edinburgh board of the General Accident Fire and Life Assurance Corporation, Limited, has been elected Lord Provost of the City of Edinburgh.

We are informed that the total new business transacted by the National Mutual Life Association of Australasia, Limited, for the year ending September 30, 1923, amounted to £5,883,000. This is an increase of £575,000 over the previous year's figures.

Mr George Ernest Clark (son of Sir George S. Clark, the former chairman of the company) has joined the board of Workman, Clark and Co., Limited.

The Eastern Company of Transport and Insurance, Limited, announce that they have opened an insurance department at 25 Budge row, E.C. 4.

We are informed that a controlling interest in the Denaby and Cadeby Main Collieries, Limited, of Yorkshire, has recently been jointly acquired by Wm. France Fenwick and Co., Limited, and the Constructive Finance Company, Limited, of London.

Mr A. F. Harrison, of the City of London Electric Lighting Company, Limited, has been elected president of the Chartered Institute of Secretaries. Mr J. W. Slack, of Radiation, Limited, and Mr Henry Clark, of the Union Corporation, Limited, have been elected vice-presidents, and Mr R. B. Pilcher, of the Institute of Chemistry, has been elected treasurer for the ensuing year. Mr Alderman F. J. Barthorpe has been appointed the institute representative on the council of the London Chamber of Commerce for the ensuing year.

RAILWAYS.

NORTH-WESTERN OF URUGUAY.—The results of the working of the railway as compared with the corresponding period in 1921-22 are as follows:—

	1921-22.	1922-23.	Difference.	
	£	£	£	Per Cent.
Gross earnings	75,075	75,926	+ 851	1.13
Working expenses	61,939	57,522	- 4,417	7.13
Net profit	13,136	18,404	+ 5,268	40.11

INSURANCE.

LANCASHIRE AND CHESHIRE INSURANCE.—The accounts for January 1, 1922, to June 30, 1923, show in the general section a considerable reduction of business, the net premium income for the period being £325,260, as compared with £767,639 for 1921. The net marine premium income for 18 months amounted to £50,917, as compared with £49,591 for the previous twelve months. The claim figures shown in the accounts not only include claims paid, but all claims of which the company had received definite advice. The marine underwriting balance carried forward, namely £39,445, is approximately 80 per cent. of the premium income for the whole 18 months period. Miscellaneous securities, which appeared in the last balance-sheet "at cost," have been written down to the extent of £58,457, and all the company's investments are now taken at market value.

UNITED INSURANCE (AUSTRALIA).—We are informed that the balance of the profit and loss account for the year ending September 30, 1923, is £74,839. A dividend of 10 per cent. has been declared, and 5,000 unallotted shares are being issued at £5 each, appropriating £25,000, from profit and loss for payment of same. To the reserves £15,000 has been added and the balance of £2,339 carried to contingent account. The capital of the company is £1,000,000 of which £350,000 will be paid up. The total assets amount to £809,818.

RUBBER, &c.

KELANTAN ESTATES.—The report for year ended June 30, 1923, shows that this company has had a better year. Net profits amount to £8,485, against a net loss of £6,776 in preceding year. No dividend is being paid on the ordinary shares, and £2,959 is carried forward. Production of rubber increased from 364,023 lbs to 502,147 lbs. Cost of production was 7.925d per lb, delivered at Singapore, against 11.448d per lb for preceding year.

MORIS PLANTATIONS.—For the year ended June 30, 1922, this company had a net loss of £2,124, and paid no dividend on its ordinary shares. The year ended June 30, 1923, was a better one, as a net profit of £1,943 was secured, and the ordinary shareholders are to receive a dividend of 3 per cent. The sum of £65 goes forward, against £222 brought into the accounts.

SUNGEI SIPUT PLANTATIONS.—The report for the year ended June 30, 1923, reveals a net profit of £1,534, against a net loss of £2,464 in the preceding year. No dividend is being paid on the ordinary shares, but the debit balance has been reduced from £2,521 to £987. The output of dry rubber during the year was 173,481 lbs. Of the rubber produced, 35,000 lbs were sold in London at an average gross price of 1s 2.29d per lb, and 126,695 lbs were sold locally in the East at an average gross price of 9.05d per lb. The expenditure upon development during the year amounted to £1,590 7s 6d. There was no expenditure upon buildings and machinery.

TANDJONG RUBBER.—Some interesting particulars of the working results of this company are contained in the report just issued for the financial year ended June 30, 1923. The average net sale price, including the estimated value of the unsold portion of the crop, was 1s 2.63d per lb, as compared with 8.37d for the previous year. The cost of production, free on board at port of shipment, including depreciation, commission to staff and London administration, was 8.23d per lb, as compared with 8.86d for the previous year. The financial results secured show a notable improvement, the net profit having increased from £1,443 for year 1921-22 to £27,922 for 1922-23, and the ordinary dividend at 10 per cent. compares with nothing for preceding year, and £25,370 is carried forward, against £22,448 brought in.

MISCELLANEOUS.

BRITISH AUTOMATIC CO.—The accounts for the year to September 3, 1923, show a net profit of £65,820, after making provision for corporation profits tax, as compared with £59,158 in the previous year. To this has been added £9,471, brought forward last year, making £75,291 to be dealt with. The cost of machines and fittings purchased during the year, amounting to £23,628, has been written off. The ordinary dividend is maintained at 10 per cent., less tax. A balance of £11,662 is carried forward.

BURBERRY'S, LIMITED.—The net profit for the year ended March 31, 1923, amounted to £91,708, against £67,194 in preceding year. Adding £29,694 brought in, there is £121,402 available. Of this sum £26,180 is utilised to put to reserve, against investments, and £95,221 is carried forward. The report states that, owing to the large amount still due to the company's bankers, it is not proposed at present to pay a dividend on the preference shares, but it is hoped, at a comparatively early date, to reduce this amount to a figure which will admit of a payment being made. It will be noted with satisfaction that the large sum due to the company's creditors in connection with commitments incurred in 1920, which amounted to £541,000, has now been entirely discharged. The figures disclosed in the balance-sheet also show a substantial reduction in the ordinary liabilities of the company, which, in spite of lost markets, is maintaining its trade both at home and abroad. Having regard to the estimated present values of the freehold and leasehold premises and fixed plant, the directors has not considered it necessary to charge any depreciation in arriving at the profits for the year.

HORDEN COLLIERIES.—Improved results have been secured by this company for year ended September 30, 1923, the net profit amounting to £330,903, against £171,782 for preceding year. The ordinary dividend has been raised from 8 per cent., free of income-tax, to 15 per cent., free of income-tax. The sum of £100,000 has been put to reserve account, and £52,346 is carried forward. The report contains some interesting particulars, as follows:—The acute depression in the shipbuilding industry, emphasised by the continued boiler makers' dispute, has seriously affected the consumption of steel, with a consequent reduced local demand for fuel by the steel and engineering trades. On the other hand, the unusually large demand for export has continued during the year. The quantity of coal drawn during the year is again the largest in the history of the company. Under the national agreement the men's wages have increased materially during the period under review. It is satisfactory to report that all questions relating to special taxation have been agreed and settled. Adequate provision has been made for ordinary taxation.

NEW ZEALAND AND AUSTRALIAN LAND.—This company has enjoyed greater prosperity during the year ended March 31, 1923. The net profit at £246,198 compares with £59,962. The dividend is 6 per cent., free of income-tax, as against 5 per cent., free of income-tax, in the preceding year. The sum of £67,000 has been transferred to contingency fund. The sum of £23,373 is to be carried forward, subject to corporation profits tax.

ROVER CO.—The results for the year ended August 31, 1923, show that, including £25,000 paid as compensation to the late managing director, and after writing down stocks by £59,105, there was a loss for the year of £36,752, against a net profit in the preceding year of £146,754. The directors propose to bring back to the profit and loss account £50,000 placed to reserve for equalisation of dividends in 1919, which, with the balance brought in, gives a total of £100,252. From this the past year's loss is written off, leaving £63,500, out of which the board recommend the payment of a dividend of 5 per cent., as against 10 per cent. in preceding year, and carry forward £23,687, against £50,252 brought into the accounts.

SLATERS, LIMITED.—The report and accounts just issued for year ended September 30, 1923, show an improvement on the preceding year. The ordinary shareholders are to receive 6 per cent., against 5 per cent. The net profits amount to £22,263, against £9,777, and

£9,621 is carried forward, against £3,791 brought in. The directors express the hope that the operations of the company in the financial year 1923-1924 may show even better results.

SOUTH WALES COLLIERY AMALGAMATION.—The directors of Guest, Keen, and Nettlefolds, Limited, announce that they have made an offer on behalf of that company to the ordinary shareholders of Consolidated Cambrian, Limited, and D. Davis and Sons, Limited, the well-known South Wales colliery proprietors. The offer of Guest, Keen, and Nettlefolds, Limited, is, in the one case, to allot two Guest, Keen ordinary shares for every five Consolidated Cambrian ordinary shares of £1 each, and in the other to allot one Guest, Keen ordinary share for every five ordinary shares (5s each) in D. Davis and Sons, Limited. The new shares so allotted will rank for Guest, Keen dividend as from January 1, 1924.

TRINIDAD LEASEHOLDS.—The net profit of this company for year ended June 30, 1923, amounted to £127,993, against £54,244 in preceding year. The ordinary shareholders are to receive 10 per cent., against nothing in preceding year, while £41,749 goes forward, against £18,681 brought in to the accounts. The report states that working costs per ton of oil show a marked reduction on the previous year. Receipts from fuel oil sales increased considerably, and production of oil at 144,045 tons shows an increase of 12,629 tons on preceding year. Purchases of oil from other companies at 123,797 tons was 56,042 tons in excess of previous year.

TRIUMPH CYCLE.—The net profit secured for year ended August 31, 1923, is £41,546, against £36,482 in preceding year. The ordinary shareholders again receive 10 per cent., free of income-tax. The sum of £10,000 is put to reserve fund, and £2,500 goes to pension fund. The sum of £20,076 goes forward, against £17,501 brought into accounts.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Unsettled and stormy weather has prevailed during the week, with heavy rainfalls in some parts of the country. A fairly extensive area, however, has been seeded, and early sown winter wheat and oats above ground appear healthy. English wheat was in moderate demand, but prices ruled steady, best milling samples ruling at 8s 9d to 9s 6d, with inferior down to 8s per 112 lbs, free on rail. Imported generally quiet, but Canadian descriptions maintain a steady level. No. 1 Northern Manitoba quoted 48s to 48s 6d, Barusso 62½ lbs 46s, and choice white Karachi landed 45s 6d, all per 496 lbs. A quiet tone prevailed in the floating and forward section, but holders were reserved, and required full to firmer rates respecting North American grades. This resulted in rather more inquiry for white descriptions. Steamers of No. 2 Northern Manitoba, January shipment, sold at 43s 3d, and part cargoes of Australian December at 45s 9d, ditto January 45s 3d per 480 lbs. Maize cargoes dearer, while reservedly offered. Sailer of No. 6 yellow African loading sold at 37s, Plate steamers arrived sold 36s, afloat 36s 1½d to 36s 3d, loading 36s 6d, per 480 lbs. Barley cargoes firm and sparingly offered, and a part cargo of Dan.-Bess.-Kustendji afloat sold 28s 6d, per 400 lbs. Flour firmer, with a better demand. London standard straight was advanced to 37s 6d, patents 39s 6d to 40s 6d, town house-holds 35s 6d per sack delivered in. All-English country straights 30s 6d to 32s per sack delivered at London stations. Imported steady. Manitoba patents range from 36s 6d to 39s 6d, Minnesota 38s 6d to 40s 6d, and Australian 32s 9d to 33s 6d, all per 280 lbs, ex store. Millers' offals tend firmer. Broad bran quoted at 7s 6d, ordinary 6s 9d-7s, middlings 8s 3d, bags included, ex mill, light oats 5s 9d, powdered oat husks 5s 9d, feed oatmeal 9s 3d, ground oats 13s 1d, free on rail, all per cwt. Barley, English fully steady malting descriptions, quoted at 9s 6d-13s 9d, with feeding kinds 8s 3d-8s 9d, as to sample per 112 lbs, free on rail. Imported very firm. Californian 39s-44s 6d, Chilean brewing 38s 6d-44s per 448 lbs, ex store. Persian ex ship 26s 9d, Danubian 29s 6d, Algerian-Tunisian 28s 6d, No. 4 Canadian Western 29s, all ex ship per 400 lbs. Maize firm. Plate ex ship 37s 3d, landed 38s 9d, No. 6 yellow African ex ship 37s 3d, all per 480 lbs. Oats, English, quiet at 8s 4d-10s 2d per 112 lbs, free on rail as to sample. Imported maintained for spot and near at hand parcels. Plate, ex ship, f.a.q., 22s 3d, landed 23s 6d, No. 2 Canadian feed landed 26s, No. 2 Canadian Western ex ship 26s 9d, landed 28s 6d,

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent writes on November 15th as follows:—Pig-iron: The coming General Election is rather disturbing the course of business. This will, however, only be of short duration, and the undertone remains quite firm and hopeful. Pig-iron prices are unchanged at 100s per ton for No. 3 Cleveland

G.B.B. and 100s per ton for East Coast hematite mixed numbers. Manufactured iron and steel: Prices of steel are distinctly firmer, with more inquiry about. Steel ship plates, £9 15s; steel ship angles, £9 5s; iron bars, £12; steel rails, £9 10s. Iron ore: The inquiry for ore is still quiet. Other two blast furnaces, it is hoped, will shortly be restarted. Some business has been done over the first half of next year, and the tendency is toward higher prices. Iron ore freights have advanced.

Our Sheffield correspondent writes:—Business in the steel trade continues to expand, and each week sees some increase in the amount of plant occupied. Several idle furnaces producing basic steel have been lighted, and preparations are in hand to deal with the large railway contracts which are now under consideration. The outlook is certainly improving, and manufacturers are regaining confidence. There is still, however, much slackness and unemployment, and the absence of work from the shipbuilding industry is being felt. The Board of Trade returns for October record increases in the export of pig-iron, galvanised and tinned sheets, but the statistics reveal a very unsatisfactory state of affairs in various engineering branches, rails and railway material. The motor industry, too, is doing very little abroad. A considerable tonnage of crude mild steel was imported during the month, chiefly from Belgium, France and Luxembourg. The coal trade maintains its strength on the whole, although the consumption of slacks has fallen off, and the house coal demand has been below the average. Stocks of fuel at collieries is light. The export demand keeps up fairly well, and prices are firm. Current quotations at pits are:—Best hand-picked branch, 31s 6d; best silkstone, 27s 6d; Yorkshire steams, 21s; Tyne do., 24s; rough slacks, 11s 6d; smalls, 5s to 8s.

Our Glasgow correspondent, writing on Thursday, says:—The marked improvement in the positions of the steel and iron trades noticed last week has made further progress. The shipbuilding situation is the turn better, and gives sign of development. Rumour has it that several colonial shipping undertakings are arranging for Clyde yards laying down at once keels for from three to four

large oil tankers. Some new work has been secured for first-class vessels at Dalmeir (Beardmore's) and Dumbartonshire, Whiteinch, and Renfrew yards speak of more vigorous times being ahead. Amongst other large and remunerative lines just given out is one for a big number for the home Government, of motor lorries, which will entail several months' constructive operations. The Canadian Pacific coastal service is about to be substantially strengthened. Locomotive engines are more numerous in placement, and engineers are pleased with the outlook in that department. There is also more doing in Diesel and general equipment oil engines, for which the West of Scotland is acquiring an expanding renown. Bridge (steel) builders are very busy, as are tube makers, pipe fitters, most descriptions of machinery builders, &c. Scotch pig-iron keeps steady to strong at for No. 1 foundry, £5 5s. and for No. 3 £5 per ton. Scotch hematite ranks for £5 5s. f.o.t. steel works. The larger size of black sheets are in constant request, and it is announced that some Glasgow firms, including Messrs. Braby, Petershill road, are laying down plant for the increasing of their sheet-making capacity. Coals are a trifle easier, owing to falling off of German demand.

CUMBERLAND IRON.

A considerable change has come over the iron and steel trades during the past few days. The demand for hematite pig-iron has increased substantially, consumers having apparently determined that, whether or not they have obtained contracts in their own industries, prospects of work is such as to compel them to make provision for likely needs. And the consequence is that for the first time this year, smelters have now at command quite a fair volume of forward business. The immediate result, of course, has been an appreciation of values. Bessemer mixed numbers have this month risen by 5s per ton to £5 15s per ton, delivered at

EXPORTS OF PRODUCE AND MANUFACTURES OF THE UNITED KINGDOM

(Value F.O.B.).

	Month Ended October 31.		Ten Months Ended October 31.	
	1922.	1923.	1922.	1923.

wanted in some parts." Total Java shipments last month reached 154,817 tons, against 122,333 tons at corresponding period last year, including 19,064 tons against 1,032 tons to U.K.-Continent. Port Said for orders, 2,428 tons against 6,673 tons; British India, 36,792 tons against 29,932 tons; Japan, 43,714 tons against 37,128 tons; Singapore, &c., 15,664 tons against 47,478 tons; Hong Kong, 31,935 tons against nil; New Zealand, 4,735 tons against nil. U.K. consumption last month totalled 109,711 tons against 148,683 tons at same time last year. A cargo of Mauritius crystals, afloat, sold, 29s c.f. and i., U.K.; 2,000 tons, Madras cane-jaggery, sold, November-December, 19s; new crop, 18s to 18s 3d, c.f. and i., London.

COFFEE.—The market maintained a firm tone, as supplies on offer remain small, and a steady demand prevailed, mostly on home-trade account. Fair to fine bold coloury Colombian, sold, 95s 6d to 108s, and fine peas, 109s. Futures firmer, but trade was conducted slowly.

COCOA steady, with a moderate spot demand, and good to fine Accra, on spot, sold, 30s to 31s; Accra, F/F quality, January-March, quoted 26s 9d, f.o.b. terms.

TEA.—Indian auctions embraced some 53,125 packages, and apart from medium qualities meeting a rather quiet market, there was a better demand, and general tone ruled firm. Fine and finest broken orange Pekoe, sold, 2s 5d to 3s 2d per lb in bond. 13,170 packages Ceylon catalogued met a good demand with regard to the finer qualities at steady rates, but inferior proved a quiet market, and trend of values favoured the buyer. Pekoe, sold, 1s 4d to 1s 10d; broken orange, 1s 6d to 2s 0d. New season's China steady, but general trade quiet. Fine Keemun, however, were inquired for in the region of 2s, while Moning sittings met a fair scale at 5d to 5 1/2d per lb. 4,800 packages Java and Sumatra were brought to auction, and aroused strong competition, especially all leaf teas, and prices were dearer, being 1/4 to 1/2 lb higher in the case of common grades. Pekoe, sold, 1s 3 1/2d to 1s 6 1/2d; broken ditto, 1s 3 1/2d to 1s 5 1/2d; Pekoe souchong, 1s 2d to 1s 5 1/2d; orange Pekoe, 1s 4d to 1s 7 1/2d; broken ditto, 1s 2 1/2d to 1s 7d per lb.

RICE generally firm, but quiet. Two stars, November-December, 14s 4 1/2d; No. 3 ditto, to Levant, 14s 6d; No. 1 garden Siam, to Continent, 15s 6d. Japanese peas, spot, 23s; afloat, 20s; February-March, 20s 9d per cwt. Rangoon beans quiet, steady.

SPICE.—Pepper quietly steady. Fair black Singapore L.S., December-February, quoted 4 1/2d; Lampung ditto, 4 1/2d; Muntok, January-March, 6 1/2d. Zanzibar cloves, November-January, 1s 4d value; January-March, 1s 4 1/2d per lb. Tapioca slow, at late rates. Sago flour, December-February, Liverpool, sold, 15s per cwt. Dedicated coconut quiet at previous rates.

JUTE reservedly offered and firm, with fair inquiries. First grade, October-November, continent, sold, 23 1/2s; November-December, 23 1/2s to 23 1/2s; December-January, 23 1/2s to 24 1/2s; January-February, 24 1/2s to 24 1/2s per ton. Hessians, 10-oz, spot, 28s; November-December, 27s 6d; 8-oz, spot, 24s; November-December, 21s 6d 100 yds. A twills, November-December, 81s; B ditto, 73s; sugar, 83s per 100 bags.

HEMP.—Manila steady, but at the same time slow. J grade, January-March, quoted 31 1/2s; K, 25 1/2s; L, 25 1/2s; M, 23 1/2s per ton. African sisal unaltered.

SHELLAC steady. T.N., spot, 31s; December, 31s; March, 30s 6d to 31s paid.

COPRA.—All Eastern markets cabled very firm on sustained American inquiry, and with prominent Continental crushers operating, the market again ruled dearer. F.M.S., Straits, August-October, Rotterdam, quoted 28 1/2s 6d; October-November, sold, 28 1/2s; October-December at 28 1/2s 3d to 28 1/2s 9d. Ceylon, October-November quoted 30. Dutch E.I., October-December, 28 6s 3d. Cebu, October-November, 27 1/2s. South Sea, October-December, 27 1/2s. Palm kernels firm. December-February, Liverpool, quoted 19 10s ton.

RUBBER steady as a rule, but general trade proceeded quietly. Standard plantation, crepe and sheet spot, also November delivery, sold, 1s 2 1/2d to 1s 2 3/4d; December, 1s 2 1/2d to 1s 2 3/4d; January-March, 1s 3d to 1s 2 1/2d and 1s 3 1/4d; April-June, 1s 3 1/2d to 1s 3 3/4d. To New York, standard estate sheet, December-January, quoted 1s 2 1/2d lb, c.f. and i. Wild slow unaltered.

FRUIT (Dried).—The market for currants remained steady, with moderate inquiries in force. Pyrgos, 1-cases, quoted, 41s; 2-bags, 39s; Amalia, 46s; Patras, 50s; new Vostizza, 65s to 69s; finest, 72s. Sultan came in for fair patronage, and new Smyrna, quoted, 53s to 56s; good, 62s to 66s; fine, 78s to 85s; Valencia raisins very firm, and there is a good general inquiry at 70s to 125s. Cape, first grade, 50s to 55s. Dates steady, at recent rates. Hallowee, second-tide, quoted, 24s 6d; Khredrowie, 18s 6d; Siam, 14s 6d, landed terms, London. Figs remained steady. Genuine natural, in bags, 37s to 39s; layers, in boxes, 95s to 105s. Evaporated fruits formed a steady, quiet market. Californian choice apricots, quoted, 66s; extra ditto, 72s; fancy, 92s to 100s; Californian plums, 30/40, quoted, 82s to 84s; 40/50, 65s; French plums, quarter-cases, 32s 6d to 60s per cwt.

CANNED GOODS.—In the majority of cases there was very little alteration, and the market can only be described as just steady. Of sardines, Portuguese quarters quoted 2s 6d to 3s; ditto, 12-oz, 5s to 5s 6d; 18-oz, 9s 6d to 11s per dozen tins. Lobster quoted 150s to 155s for fancy halves. Salmon, 8-lb flat reds, quoted, labelled, 53s 6d; ditto, tall, 41s to 42s; 8-lb flat pink, 24s 6d; ditto, tall, 24s; cases of 96 1/2-lbs, 27s to 29s per case.

CANNED FRUITS.—Singapore pines, fair quality, spot, 5s 6d; Californian apricots, 7s to 11s; ditto, peaches, 8s to 12s; pears, 12s 6d to 14s. Tomatoes continued in request, regarding new arrivals, and Spanish threes quoted 6s 6d; Italian ditto, 6s 6d per dozen tins. Meats steady, but with only a moderate trade doing.

OLSEEDS.—Linseed irregular, but firmer on balance, with a good business. Indian: Bold Bombay, November, sold, 23 1/2s; small Bombay, ditto, 22 1/2s; Calcutta, afloat, 22 1/2s 6d; October-November, 22 1/2s. Plate, afloat, 21 10s; December-January, sold, 17 1/2s; January-February, 17 1/2s; April-May

quoted 17 7s 6d. Rapeseed firmer. Toria, November-December, 17 1/2s 6d; real bold Ferozepore, ditto, 17 1/2s; Jamba, 13 1/2s. Cottonseed firmer, with a good demand for Egyptian. Egyptian black, November, 11 1/2s 6d. Sakellaris, 11 10s to 11 8s 9d, Hull. Bombay, November-December, sellers, 19 1/2s; December-January, 19 10s. Gingly seed firm. East African, October-November, 24s 2d 6d. Chinese, October-November, 25 10s. Groundnuts steady. Coromandel, machine-dried, December-January, 23 1/2s; Chinese decorticated, f.a.q., December-January, 22 1/2s 6d; East African, afloat, 23 1/2s. Soya beans dearer. Manchurian, November-December, 12 1/2s. Castor-seed firmer. Bombay, October-November, 23 1/2s; Hull, 23 1/2s, Continent, per ton.

OILS.—Linseed firmer, but irregular. Spot, net, naked, 42s 3d; November-December, 41s 3d; January-April, 38s 6d; May-August, 35s 6d. Rape firm. Crude, spot, 39s; refined 42s. Cotton dearer. Crude Egyptian, spot, 39s; Bombay, 38s; common edible, 44s; deodorised (in barrels), 48s. China-wood quiet. Hankow, spot (barrils), 92s 6d; November-December, 92s. Cocanut firm. Ceylon, spot, 46s; November-December, 45s 6d; Cochin, ditto, quoted 50s. Soya steady. Oriental, barrels, November-December, 37s 6d. Cod firm. English, spot, 37s. Groundnuts firm. English, crushed, naked, spot, 49s; deodorised, barrels, 56s. Turpentine irregular. American, spot, 73s 3d; December, 73s 6d; January-April, 75s 3d. Rosin quiet. American, grade B, 13s 3d; F, 13s 3d; G, 16s 3d; H to I, 13s 6d; WG, 15s; WW, 10s per cwt. French nominal. Petroleum steady. American standard, white, spot, 1rd; and water white, 1s per gallon. Castor-oil firmer. First pressure, spot, quoted 54s; second pressure, 53s; and pharmaceutical, 59s per cwt, Hull, with London, 2s cwt extra.

METALS.—Tin: Market opened the week with a firmer tone, due to good buying orders, though some irregularity was noticeable at times. Standard, cash, sold at 215 1/2s to 217 1/2s to 217 1/2s, and three months 215 1/2s to 217 1/2s to 216 1/2s 6d. Eastern cables reported sales in the East, on the basis of 216 1/2s, c.i.f. Rates further hardened, though the upward movement was arrested by the middle of the week, due to selling pressure. Offers, however, were well absorbed, and a good business resulted, including standard, cash, at 222 to 220 7s 6d, and three months 221 to 222 to 220 5s, while finally at 220 10s. Further sales occurred in the East at 222 1/2s, c.i.f. Values subsequently eased, and a good business transpired in standard, cash, at 217 to 217 1/2s to 216 1/2s to 217 1/2s 6d. At the final meeting the tendency was in seller's favour, while some irregularity was noticeable. Standard, cash, sold at 217 7s 6d to 218 5s, and three months 219 to 217 to 218 12 1/2d. English ingots quoted at 218 5s to 218 1/2s. Copper: Disclosed firmer features at the commencement, with a good demand for all positions. Later, however, prices were subject to slight fluctuations, and with buyers less in evidence, values gave way, though fairly steady on balance. On Wednesday, Standard cash sold at 66 1/2s to 66 3/4s, and three months 66 1/2s to 66 3/4s. At Thursday's market the tendency ruled in favour of buyers, and a good business occurred. Standard cash sold at 62 1/2s to 62 1/2s 6d, and three months 63 1/2s to 62 1/2s 9d. Values further gave way on the following day, while a large business transpired at the lower range of prices. Standard, cash, sold at 61 1/2s to 61 5s to 61 6s 3d, and three months at 62 1/2s to 61 1/2s 3d. Electro, 67 1/2s to 68 1/2s; best selected, 66 1/2s to 66 5s; strong sheets, 69s; wire bars, 68 1/2s per ton. Lead easier, at 30 5s to 27 5s, as to position. Spelter easier, at 32 7s 6d to 32 1/2s 6d, according to position. Aluminium, home trade, 115s; export, 120s. Antimony firm. English regulus, special brands, 42 to 42 1/2s.

TALLOW.—Messrs Colchesters and Woolner write on November 14th as follows:—The tallow market was steady during the week, and prices are mostly 6d dearer to-day. Prices quoted for shipment from South America as well as from Australia are above those current here, consequently spot goods are in request. Shipments of tallow from Australasia during October amounted to 1,300 tons, against 5,700 tons during the same month last year. At auction to-day 1,129 casks tallow were offered, and 706 were sold. Quotations are:—Australian mutton: Fine, 46s; good to fair, 44s 6d to 43s; dull to dark, 39s to 36s 6d; hard, 44s. Australian beef: Fine, 43s; good to fair, 41s 6d to 39s 6d; dull to dark, 37s to 36s; sweet, 43s 6d. Present shipment from Australasia: good mixed, 41s 3d. Present shipment from South America, 41s to 39s. The market letter is unchanged. Town tallow, 36s 6d per cwt. Rough fat, per 8 lbs, 2d; melted stuff, 27s 6d per cwt. Quotations are:—Town, 36s, net cash, naked, ex works. Country: Frail casks, 36s; home melted, shipping casks, net, f.o.b., good coloured, 39s; fair to dull, 37s

purchases of bills by one of the big banks, and a

AN unexpected spasm of stringency disturbed the equilibrium of the money market in the middle of the week. Funds had been scarce on Monday and Tuesday, but on Wednesday, in spite of a helpful demand for Treasury bills maturing in the neighbourhood of February 1st, a small amount had to be borrowed from the Bank of England at $4\frac{1}{2}$ per cent. Stringency continued on Thursday morning, but in the afternoon relief came through purchases of bills by one of the big banks, and cynics

bill brokers observed that there was sure to be ease and plenty on Friday, so that the Treasury bills might be comfortably placed. Discount rates were very little affected by the monetary spasm, and though the volume of Bank bills still showed a seasonal expansion, $3\frac{3}{8}$ per cent. was the best rate that could be secured for three months' paper.

	Nov. 23, 1923.	Nov. 16, 1923.	Nov. 9, 1923.	Nov. 2, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills)	$3\frac{3}{8}$	$3\frac{3}{8}$	$3\frac{3}{8}$	$3\frac{3}{8}$	..

The Bank return showed an increase of £415,000 in the Reserve, owing to the return of £335,000 in notes from circulation, and an increase of £80,000 in the stock of gold. Other securities rose by £2,674,000, while Government securities declined by £380,000. There was thus an increase of $2\frac{1}{2}$ millions in the deposits, of which over $2\frac{1}{2}$ millions went to Public and the balance to Other. There was a reduction this week of £1,793,200 to £281,201,900 in currency notes outstanding, which includes £1,434,800 for notes called in but not yet cancelled. The fiduciary issue is £230,317,100, or £39,866,700 below the maximum.

THE STOCK MARKETS.

The tempting prices to which many gilt-edged and other high-class investment securities fell last week have brought in buyers, and a greater part of last week's decline has been made good. Home Railway debentures and preferences have improved, and in the Foreign market quite a number of rises have been recorded, though business has been on a small scale. Home Railway deferred stocks have come into a little speculative favour on dividend prospects. Rubber shares have been quiet, but the Oil market has been animated by a sharp rise in Mexican Eagles. Industrials generally are quiet, but Kaffirs have been better on hopes of good dividends for the current half-year, and the advance in the price of tin has kept tin-mining shares firm.

THE COMMODITY MARKETS.

The signs on the industrial horizon are distinctly better this week, as viewed through the commodity markets. An improvement in the volume of trade and in the level of prices is recorded at Cardiff. There is a better demand for pig-iron, and it is expected that more furnaces will be working shortly. Prices of manufactured iron and steel are firm, in anticipation of the resumption of work by the boilermakers next week. Tin again improved, and copper kept firm. The raw cotton situation remains strong. In the Manchester cotton trade, prices continue to go against buyers, and inquiry has been on a considerable scale. The demand for wool is being well maintained, and with strong foreign competition, values are very firm. Wheat prices reflect the fluctuation in exchange. The sugar market continues to harden, while considerable competition is manifested for Indian tea on arrival. Rubber received support, and a firm tone ensued. Continued strength is recorded in cotton seed and cotton oils. The hide market is weak, but the boot trade is improving, both home and export trade being better.

FOREIGN EXCHANGES.

The movements of the dollar rate have again formed the centre of interest in an exciting and busy week on the foreign exchange market. From a closing rate of \$4.32 on the 16th, quotations continued to move down to as low as \$4.25 $\frac{1}{2}$ at one time on the 19th, the lowest sterling rate since the end of January, 1922. From that point there was a sharp recovery by the end of the day to \$4.31 $\frac{1}{2}$, after which with considerable fluctuations the rate moved up to \$4.40 $\frac{1}{2}$ on the 22nd. This was not maintained, the closing rate for the day being \$4.37 $\frac{1}{2}$, and the quotation early yesterday morning \$4.37 $\frac{1}{2}$. The pressure of cotton bills is now said to be much less, and left to itself, the rate might be expected to show a rapid recovery. Unfortu-

nately, election influences and continued trouble on the Continent are likely to continue to exert their depressing influence. Forward quotations on the week have again widened $\frac{1}{4}$ to $\frac{1}{2}$ cent per month above spot. Another puzzling feature this week is that the Dutch guilder, after having last week moved unexpectedly in our favour, has reacted again with exceptional sharpness down to as low as 11.48 on the 22nd, and even yesterday morning stood only at 11.50 $\frac{1}{2}$. It is possible that the purchase of dollars from Holland on German account may now have died down again, but certainly the rate has also been influenced by certain special transactions, the nature of which is at present undisclosed. Among other currencies that usually move with the dollar, the Swiss rate has risen from 24.92 $\frac{1}{2}$ to 25.07 $\frac{1}{2}$, and Stockholm from 16.49 $\frac{1}{2}$ to 16.60 $\frac{1}{2}$. Vienna, however, is 305,000, as compared with 307,500 a week ago. Among the Entente countries, Paris, after being as high as 82.40 on the 17th, shared the recovery of sterling, and was down as low as 79 at one time on the 22nd. Since then it has reacted on reports of Germany's unfavourable attitude towards the last note on the subject of military control, and yesterday morning was quoted at 80.90. Brussels has had a similar movement, being down to 91 on the 22nd, and yesterday morning up again to 94.45. Forward rates in Paris have widened one centime to 11 centimes per month above spot, and in Brussels 4 centimes to 6 centimes above. Italy has, as usual, recently moved in narrower limits, and at 101 $\frac{1}{2}$ is better than last week's figure of 102 $\frac{3}{4}$, although well above the figure of 99 quoted at one time on the 19th. The Berlin rate has continued to mount rapidly to 40,000 milliards, as compared with 20,500 milliards a week ago. The rentenmark has now been formally issued, but at rates based on the purely artificial Berlin exchange quotations, and the opportunities for illegitimate profits which were given by this foolish policy has caused the further issue of rentenmark notes to be suspended for the time being. The whole currency situation remains chaotic, with proposals for independent issues on a stable basis from all parts of the country. Salvation from this disorder remains, of course, dependent on a settlement with France, as even the large foreign loan which is now being discussed can do little against the active hostility of France. Among other exchanges, Madrid, after some improvement, has depreciated again to 33.61 $\frac{1}{2}$, as compared with 33.52 $\frac{1}{2}$ a week ago. Christiania for the first time for some weeks past shows some improvement from 29.82 $\frac{1}{2}$ to 29.65 $\frac{1}{2}$, Copenhagen, after the definite announcement of its exchange regulation proposals, and the suggestion of a loan abroad, has moved down sharply from 25.62 $\frac{1}{2}$ to 25.21. In Warsaw, depreciation has again started after its recent comparative steadiness, the rate having moved up to 10 $\frac{1}{2}$ millions, as compared with 8 $\frac{1}{2}$ millions a week ago. Prague, after some fluctuations, is at 150, the same as a week ago, while Bucharest, after its recovery to 820 last week, is back again at 905. In the East the rupee, after rising to over 15 5d, has reacted again slightly, and stood yesterday at 15 4 31-32d, as compared with 15 4 59-64d a week ago. The yen also moved against us earlier in the week, but reacted with the dollar to 2s 2 $\frac{3}{4}$ d yesterday as compared with 2s 2 $\frac{1}{4}$ d on the 16th. Silver has been firm, with a slight hardening of price on buying from India and China, but not much business has been done. Shanghai at 3s 3d is unchanged, as also is Hong Kong at 2s 3 $\frac{3}{4}$ d. In South America, Rio, after an improvement, weakened again somewhat, and stood yesterday at 4 27-32d, as compared with 4 26-32d a week ago. Buenos Ayres, on the other hand, has moved down from 39 $\frac{1}{2}$ d to 39d, and Monte Video less rapidly, from 40 $\frac{3}{4}$ d to 40 $\frac{1}{4}$ d. Valparaiso has again depreciated from 38.90 to 39.70.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 17th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	7610	From Revenue	14,982
Interest, &c., on Debt	4119		
Sinking Fund	777		
Sundries	677		
Added to Exchequer balances ..	171		
Reduction of debt	1568		
	14,982		14,982

Revenue is about £3 millions lower than in corresponding period a year ago at about £15 millions. Excise receipts

at £6,749,000 compare with £9,934,000. Estate, &c., duties at £1,880,000 compare with £620,000. Property and Income-tax yielded £2,204,000, and Super Tax £260,000, against a combined total of £3,025,000 in the corresponding period. Nothing came in from Special Receipts, against £1,040,900 a year ago. The week's operations reduced the National Debt by £1,568,000, and caused the following changes:—

	Min. £		Min. £
Treasury Bills	+ 3712	Public Departments Advances ..	5450
Unemployment Insurance	+ 220	National Savings Certificates ..	050
	+ 3932		5500

The floating debt was reduced by £1,755,000 to £809,516,500.

FINANCIAL YEAR, 1923-24 (April 1 to November 17, 1923).

	£		£
Total Expenditure ..	464,360,429	Raised by Revenue ..	457,185,540
		Net Borrowings	3,755,621
		Decrease in Balances ..	3,419,268
Total	464,360,429	Total	464,360,429

ESTIMATES FOR YEAR 1923-24.

	£		£
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Wall Paper Manufacturers, Australian Mercantile Land and Finance Company, Lancashire and Cheshire Insurance Corporation, and the Hotel Cecil. At the Wall Paper Manufacturers meeting, Mr Edgar Smith advocated a programme of capital expenditure on factories and plants for all industries as a means of decreasing unemployment, and Mr R. H. Caird, at the Australian Mercantile Land and Finance meeting severely criticised the Queensland financial policy.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an analysis of British imports of manufactured goods, with special reference to tariff possibilities.

THE CASE FOR FREE TRADE.

A brief statement of the Free Trade case was presented in a supplement to last week's issue. This supplement is now available in pamphlet form, price 3d. per copy. Terms for quantities by arrangement.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

PROSPERITY AND PROTECTION.

AN argument that is being very freely used by the supporters of Mr Baldwin's Protectionist policy runs something like this: "In America, in France, and in Italy, all Protectionist countries, business and employment are active. In Great Britain, under Free Trade, we have 1,300,000 unemployed." From this more or less accurate statement our Protectionist friends jump to the conclusion that the lack of unemployment in, say, the United States is the result of the tariff system, while the existence of grave unemployment here is caused by the freedom accorded to imports of foreign products. To the illogical mind this conclusion may look sound or even obvious; but it is, in fact, wholly fallacious, and could hardly fail to be otherwise, because it tacitly pre-supposes a similarity of fundamental economic circumstances in the position of the two countries which does not exist. As a matter of fact, the contrast between lack of unemployment in the

United States and the serious unemployment here has about as much to do with the question of Protection and Free Trade as the man in the moon.

Let us examine first the main features of the economic position of the United States; and in doing so let us remember that if it were fair for Protectionists to draw arguments from the present position in that country, it would be equally fair for Free Traders to draw arguments on their side from the existence only 18 months ago of over six millions of unemployed in the United States. The area of its territories is 25 times that of the British Isles; its population 118 millions, against our 47. The bearing of these figures upon productive and consumptive capacity is vital. Within its three million square miles of territory are produced the vast bulk of the food and raw materials required by its people. The immense consuming power of a home population $2\frac{1}{2}$ times as large as ours makes the home market of a vast importance, beside which the importance of foreign trade is a comparatively slight matter. It has been estimated that something like 90 per cent. of the total trade of the United States is in the home market, and this trade, let it be remembered, is carried on between a large number of constituent States under conditions of free and unhampered exchange. The United States is the finest example that history has yet provided of a great Free Trade unit, nearly self-dependent. If Protectionist theories are sound, why should not the Northern cotton mills of New England have Protection against the goods made by cheap negro labour in the Southern mills? And why has no one attempted to cut up the United States into 20 tariff zones?

The contrast with the position of Great Britain could hardly be sharper. The fundamental occupation of Great Britain, as we showed in our Supplement last week, consists of exporting manufactured goods to pay for the food and raw materials which we, unlike the United States, cannot produce at home, and therefore must purchase abroad. Tariffs or no tariffs, exports always must be the life-blood of this country's economic life; with the United States they are of secondary importance. Tariffs or no tariffs, we, with the necessity for huge exports to pay for the food and raw materials that we cannot produce, must feel acutely every change in the purchasing power of foreign markets. It was just these unique and fundamental features of Great Britain's position which led Cobden and every generation of his disciples up to the present day to realise clearly that, while universal Free Trade might be an unattainable ideal, Great Britain in any case could not afford to abandon it, whatever other nations could afford to do. The United States, on the other hand, with almost all her food and raw materials within her own borders, may regard, and is regarding now, the depression in external markets with comparative equanimity. Add to all these considerations two more main facts. First, that the United States gained an enormous accretion of wealth through the war, and secondly, that her present labour supply is far below what it would normally have been now had not immigration practically ceased during the war, and since then been controlled under a severe quota system. When all these various facts are taken into consideration, the idea that American lack of unemployment is the magic result of Protection, or that similar lack of unemployment will therefore follow here if we adopt Protection, will at once be banished by all fair commentators from their political stock-in-trade. For Protectionists to attribute America's present prosperity and good standard of living to the Fordney Tariff is about as reasonable as for a Free Trader to claim that the collapse of the German mark is caused by Protection. The cognate argument that because Protection "seems to suit" the United States, therefore it would suit Great Britain, is on a par with the argument that because a particular drug may be good for tuberculosis, it will therefore cure a broken leg.

There is another argument relating to the United States—a dual one—that is, we regret to hear, being employed by advocates of Protection. It is that the Fordney Tariff is shutting out British goods from United States markets, and that we must have tariffs here in order to bargain with America. With regard to that, there are three main things to be said. In the first place, British exports to America, and our balance of trade with America, have been far better in the first nine months of this year than in the

corresponding period of 1922, as the following official figures show:—

FIRST NINE MONTHS.					
	1921.		1922.		1923.
	Min. £.		Min. £.		Min. £.
Imports	213.4		157.7		141.2
Re-exports	14.8		14.6		20.9
Net imports	198.6		143.1		120.3
Exports	32.6		40.2		44.3
Balance	166.0		102.9		76.0

This satisfactory increase in both exports and re-exports is naturally not the result of the Fordney tariff, but of the American trade boom. Secondly, as we pointed out last week, even if we adopted a tariff, it would not be an effective weapon to beat down the American tariff wall; for how many cases are there in history where a tariff war has not finally left duties on a higher level than when it began? And lastly, in these dark days, when the common desire of all thinkers of all parties is to obtain America's friendly co-operation in solving Europe's grave problems, the institution of a tariff war between London and Washington is a horror that sane people would refuse to tolerate. So much for "American prosperity" and its relation to the British fiscal question.

Let us turn next to France and Italy. Both these countries have shared, as Great Britain has shared, in the improvement of world trade since the depth of the 1921 depression. In the former, the unemployment statistics are inadequate; in the latter, the latest available estimate figures, whether reliable or not, show very substantial unemployment. In France, however, it is probably true that unemployment is negligible in comparison with the British figures. In Great Britain to-day the number of workers in employment is not far short of those in employment before the war, the major part of the present total of unemployed being accounted for by increase in population. In France, on the contrary, as may be seen from an article in the Trade Supplement which is contained in this issue, there has been a decline in the working population, which, together with the large number of men still under arms, goes far towards accounting for the existence of few idle hands. Three other main factors have tended towards the same end, namely, the special demand for labour and materials for the reconstruction of the devastated areas; secondly, inflationary finance, which both in France and in Italy, has written down the war debt at the cost of reducing the standard of living of the wage earners and plunging the middle classes into poverty, and has momentarily relieved the French public from facing the taxation that they must sooner or later bear; thirdly, the course of currency depreciation, which while it lasts (and it is still lasting) confers trade and industrial advantage, but which, when it either ceases or goes out of hand, as in Germany, brings crisis in its train. The French, and the Italians in lesser degree, are still living in a financial fools' paradise, but the standard of living of the wage earner, as we showed last week, is far below that of the wage earner here. Neither country has as yet balanced its budget, though Italy is now taking strong steps to secure equilibrium; neither has met its debts, or attempted to pay for the war. We in Great Britain have made great sacrifices for a sound financial policy, but, in spite of the sacrifice, the standard of living of the British wage earner remains the highest in Europe and, while nemesis is in store for the French and Italian worker, the British worker may anticipate, in proportion to the success achieved in settling Europe, a sustained trade recovery based on sound foundations—unless, of course, the imposition of a tariff here comes to upset this calculation. It must also be remembered that France approaches far more nearly to America's independence of foreign trade than Great Britain.

We have said enough to show that the "prosperity" argument based on the present position of the United States, France, and Italy is wholly irrelevant to the present fiscal controversy in Great Britain. If they were relevant, the Protectionist would have to be prepared to argue equally on the position in Protectionist countries in general, not merely the three that are dinned into our ears. Protectionists cannot pick and choose. The pages of our series of Trade Supplements over recent months have testified to the fluctuating fortunes of Protectionist countries in general. Many of the facts and figures there set out are worthy of study. It is worth noticing, for instance, that Spain, with a new and heightened tariff, is stagnant and depressed. Hungary, again, although she has paid no reparations, is in a desperate state, mainly because she has tried to surround herself with a tariff wall, create unsuitable industries, and keep her food at home, instead of living by exchanging the goods which she is best able to produce for those goods which other countries are more fitted to supply. After studying the main facts which we have put forward, the honest enquirer into fiscal truth must admit that an argument of "protection and misery" would be hardly less absurd than that of "protection and prosperity." Both are fallacious, and both are entirely irrelevant to the discussion of the fiscal needs of a country in the unique economic position occupied by Great Britain.

THE PARTY PROGRAMMES.

THE leaders of the three great political parties put out their manifestoes on Monday and Tuesday of this week. Their issue was prompt, but even so the country was left with only sixteen or seventeen days in which to decide between their merits. The minimum amount of time allowed by the law between dissolution and polling-day is usually just sufficient to give the country an opportunity of making up its mind, when the issues at stake are those of general policy. But in this case, when a new issue—or an antique one revived—has suddenly been produced without preparatory discussion, that time is clearly inadequate, and recognising though we do the domestic and international reasons which lie behind Mr Baldwin's policy of haste, we consider that, if this great fundamental issue of fiscal policy had to be raised now, it would have been the course of sounder statesmanship to afford the country a longer time for consideration. As it is, with only twelve days to go, the heavy artillery of all parties has only just begun its full barrage, while in hosts of constituencies this week-end will see the first real beginnings of the task of electoral education. The party programmes may be roughly summarised as follows, the parties being given in order of their strength in the House of Commons at the dissolution:—

CONSERVATIVE.

1. To seek European settlement through the League of Nations.
2. Unemployment the vital question, to be tackled by tariffs to protect home industries suffering from foreign imports; tariffs to be used in order to negotiate for a reduction of foreign tariffs.
3. Limited Imperial Preference. No duties on wheat, flour, oats, meat (including bacon and ham), cheese, butter, or eggs.
4. Agriculture. A bounty of £1 per acre on all holdings of arable land exceeding one acre.
5. Out of revenue from the tariff, tea and sugar duties to be reduced.
6. Reorganisation of old-age, health, and unemployment insurance.

LABOUR.

1. Tariffs no remedy for unemployment.
2. Government unemployment schemes inadequate. Labour demands "work or maintenance."
3. Agriculture. Regulating minimum wages, credit and insurance facilities for farmers and smallholders, and encouragement of co-operative methods of production and marketing.
4. "Re-equipping the Land Valuation Department, securing to the community the economic rent of land, and facilitating the acquisition of land for public use."
5. A strengthened League of Nations; immediate calling of an International Conference (including Germany on equal terms) to deal with reparations and debts, and the resumption of free economic and diplomatic relations with Russia.
6. Capital levy on fortunes above £5,000, the proceeds to be earmarked for debt redemption.
7. Nationalisation of railways and public services.
8. Equality of education; control of drink traffic; "generous provision" for the aged people, widowed mothers, the sick and disabled. Slums to be abolished.

LIBERAL.

1. Earnest endeavour to co-operate with America in restoration of economic health in Europe. Strong support of the

The New York Trust Company

Capital, Surplus & Profits - \$27,500,000

COMPLETE INTERNATIONAL BANKING FACILITIES

100 Broadway

New York City

League of Nations with a view to enlarging its scope and power.

2. Maintenance of Free-trade.
3. Unemployment. Capital levy would be disastrous. Tariffs are no cure for unemployment. The Liberal policy is a bold use of national credit for promoting enterprises of permanent value.
4. Retrenchment in public expenditure.
5. To remodel the Insurance Acts.
6. Co-operation between employers and employed, based on partnership.
7. Political, legal and economic equality between men and women.
8. Old-age pensions. Thrift disqualification to be removed.
9. Agriculture. Cultivators should have opportunity of becoming owners of their own land by reasonable system of land purchase. Small holdings and allotments to be developed. Better housing.
10. Social. Housing to be taken in hand as a national problem. Local option.
11. Rating and land reform.

The first impression of many foreign observers would probably be surprise that the programmes of all the parties are confined well within the bounds of constitutionalism. That is a point which we are too apt to overlook, because we have learnt to take it for granted; but it is obviously a matter of supreme national importance. The next impression gained by a reader unacquainted with our politics might well be that, if the two questions of fiscal policy and the capital levy be set aside, the gulf between the remaining portions of the respective programmes is not so wide as other countries are accustomed to see. On the two points mentioned—namely, fiscal policy and the capital levy—the policies reveal deep cleavage, Conservatives having both the other parties in vigorous opposition to tariffs, and Labour having the other two strongly opposed to the capital levy. The tariff issue, of course, dwarfs all others. Mr Baldwin's sudden raising of it is the sole cause of the Election. Having set out in a Supplement to the *Economist* last week the main grounds for our profound belief in the vital necessity for maintaining the greatest possible degree of freedom in our markets, we do not propose to re-argue the main question here. As regards the proposal which ranks next in the public notice, we, for our part, have never said that it is impossible to carry out some carefully considered measure of levy on capital. It is also not beyond the bounds of possibility that some years hence some such measure might be seriously considered by the wealthy sections of this country as an alternative to a long period of very high taxation, provided the proceeds were earmarked for debt, and consequently tax, reduction. But under present conditions it is impossible to regard it otherwise than as a dangerous proposal, which, instead of curing, might very seriously aggravate our present difficulties. The other plank in the Labour platform most strenuously opposed by the other two parties is, of course, nationalisation of railways and other industries in connection with public services. The Liberals, on their part, sketch a policy of co-operation between Capital and Labour. Coming to the other branches of the party proposals, we find that all pledge their support, with varying emphasis, to the League of Nations, the Liberals making it most

unequivocally the key to foreign policy and European settlement. In home affairs all wish to assist agriculture, the Conservatives by bounties on arable land, the other parties by other measures. All, it should be noticed, accept the Health and Unemployment Insurance and Old-age Pensions schemes, and all profess the desire to re-organise them. All, again, adumbrate measures for immediate relief work for unemployed, while Labour demands the right to "work or maintenance." In their different ways Liberal and Labour both aim at Land Reform and attempts to solve the housing problem.

The choice before the electors is certainly less confusing than a year ago, when, owing to party splits, the number of programmes and manifestoes was considerably greater. The great majority of intelligent electors will presumably give their votes in accordance with their fiscal views. Free Traders, who fear the capital levy and dislike "nationalisation" of important industries, and object to a party whose existence is based on class distinction, may vote this time in substantial numbers for the Liberal party, whose programme contains nothing to frighten the moderate Conservative, and whose reunion places it in a position to offer to the country a strongly manned alternative Government. One omission common to all the party programmes is, in our view, decidedly unfortunate. It is the failure to insert any proposals for securing, whether by proportional representation or by the alternative vote or by any other device, that the Government returned to power at a General Election shall really represent, as far as it can be ascertained, the views and wishes of the majority of the electorate. The late Government held a majority in the House of Commons, but received a minority of votes at the polls. Should this anomaly between the popular vote and Parliamentary representation be made more glaring at the coming Election—as seems possible in view of the large number of three-cornered contests—a very dangerous and telling argument will be presented to those sections—at present weak and ineffective—who wish to discredit and upset the system of Parliamentary government.

THE ALLIES AND GERMANY.

CONCENTRATION upon the General Election at home has unfortunately diverted from the critical developments both in Germany and at Paris, the public attention which would in calmer times have been bestowed upon them. In Germany, as any one who reads the article from our Berlin correspondent on a later page will realise, economic chaos is deepening with rapidity, unemployment is moving by leaps and bounds to enormous proportions, and it may be feared that the country may be nearing the critical point where organised production will cease, as it ceased in Russia. Moreover, the danger of a political break-up is by no means over. It is true that Ludendorff's attempt to seize power in Bavaria and dominate Germany from there failed ignominiously; but the significant point about its failure was that his defeat was brought about by the

Catholics, whose aim may be taken to be a separate Bavaria, or probably in the long run unity with Austria as a German Catholic State—aims in which the influence of the Vatican cannot be left out of account. Meanwhile in Paris the *Entente* has been very near to breaking point, and has been saved by an eleventh hour concession by M. Poincaré to a strong stand by the British Government, supported effectively by the firm attitude adopted by the Italian Government. The Allied dissensions which have now been surmounted concerned the terms of the note to be dispatched to Berlin in reference to the Allied military missions, and Herr Stresemann's refusal to vouch for their safety. The story may be briefly recapitulated.

One of the most important sections of the Treaty of Versailles was that which dealt with the permanent control of Germany's armaments. At the time of the Armistice, it was a comparatively easy matter to insist that so much German war material should be handed over to the Allies, and that the German army should be demobilised until it had been reduced to a certain maximum figure. It was much harder to ascertain what margin of war material remained in Germany's possession, or to what extent persons nominally outside the German military organisation were being kept in, or put into, training. The notable success with which the Prussian Government and people had circumvented Napoleon's attempts at restriction a century ago suggested the necessity of taking this time more effective measures, and accordingly, under the Versailles Treaty, two standing inter-Allied Commissions were set up—one to control Germany's land forces and the other her forces in the air. The vital point in regard to these Commissions was that their power to act depended (and will again depend, if they are to be once more effective) upon the psychological ascendancy of the Allies over Germany, and upon the German nation's continued conscious acceptance of the fact of defeat, and not upon the possession of material force upon the spot. Even after the separation from Germany of Alsace-Lorraine, the Polish Provinces, the Saar Basin, and Upper Silesia, and the military occupation of the Rhineland, and the Trans-Rhenane bridge-heads, the vastly greater part of the area of Germany remained (and remains) under the physical control of German civil and military authorities; and in this great area, which was the province of the inter-Allied Commissions of control, the latter operated in virtue of their countries' prestige and not in virtue of their own force and numbers. Consequently, when German feeling was aroused to fever-heat by the French occupation of the Ruhr, the task of this handful of inter-Allied officers (or, at any rate, of the French and Belgian members) became impossible. The German Government declined any longer to guarantee their security, and the Allied Governments accepted the situation by allowing the work of the Commissions to fall into abeyance. Presumably, France imagined that the occupation of Germany's "arsenal" in the Ruhr was a substitute of a (from her point of view) more effective kind. Meanwhile, Germany has become full of arms (at any rate, of small-arms) and of armed men, and the recent *Hittler Putsch* has revealed the dangerous possibilities of the situation, both for Europe and for Germany herself. The danger, from the French point of view, was underlined by the return of the Crown Prince to his estate in Silesia. The French Government accordingly demanded the reimposition of military control, and, failing satisfaction, it was evidently M. Poincaré's plan to take drastic material sanctions by the seizure of further points in German territory. Here, however, he was confronted by a diplomatic difficulty. It was not open to him to obtain a nominal inter-Allied mandate for this purpose by the simple process of out-voting Great Britain with the aid of Belgium. The arrangement regarding control was not on all fours with that regarding Reparations. After a predecessor of M. Poincaré's had taken separate sanctions, beyond the bridge-heads, by the temporary occupation of Frankfurt, the British Government had persuaded France (at the Conference of San Remo) to agree that, in future, sanctions for the disarmament clauses of the Treaty should only be taken by the Allies acting in unanimity. The existence of this pledge appears to have had a decisive influence upon the Franco-British negotiations of the past week, and to have resulted in

the draft finally adopted for the inter-Allied Note to Germany representing substantially the British rather than the French point of view. In its final form the Note reiterates and reserves the paper rights of the Allies to exercise control, without announcing a date at which control will be resumed or the practical steps that will be taken if it be obstructed. The two Commissions preserve "full latitude in deciding what are the operations whose execution appears to them for the time being realisable and necessary.....The Allied Governments have decided that the operations of control must be resumed without delay on the conditions which will be communicated to the German Government.....The Allies reserve the right to take the measures which may appear proper to them to secure the execution of the Treaty." These clauses must be interpreted in the light of the two facts that no date is mentioned, and that Allied unanimity is requisite. The Note regarding the return of the Crown Prince is equally innocuous. The Allies point out to the Berlin Government how dangerous this personage's presence in Germany is, and they take note of his formal renunciation of the Prussian and Imperial Crowns, as well as of the Berlin Government's declared decision not to permit the repatriation of the ex-Kaiser. But the ex-Crown Prince is not told to go. Such was the language which the Allies (acting under pressure from France and Italy of a kind very similar to that which in the present case is being exercised by Great Britain) held towards Mustafa Kemal Pasha in the initial stages of his career!

Lord Crewe has scored a very important success in securing the deletion from the Allied Note of the "sanctions" which M. Poincaré sought to insert. It is true that abandonment of allied military and munition control increases the danger of civil war, and, possibly, a year or so hence, of armed resistance. Armament control is, in fact, a much more serious matter than the question of the ex-Crown Prince. But the right of control has not been abandoned, and it was quite impossible for our Government to be a party to the restoration of control on M. Poincaré's original terms, which would have meant British agreement to leave Germany at the mercy of unlimited French occupation. Had Lord Crewe failed to persuade France into the path of accommodation, a definite rupture of the *Entente* could hardly have been avoided. It is too early yet to gauge the degree of significance attaching to the first example that we have seen for a very long time of any concession by the French Government to British policy and opinion. M. Poincaré has drawn back before the menace of isolation, and the signs of a new grouping of European forces. Another influence that weighed with him was probably the desire to arrange a joint note before a new Government could be installed in Great Britain. His first concession may create certain embarrassments for M. Poincaré at home. It has eased, but by no means removed, the delicacy of the position of Mr Baldwin and Lord Curzon. The joint Allied Note has not committed this country, as far as can be judged at present, to any new departure of policy. On this our Government is to be congratulated. But events move quickly, and further grave decisions may be called for during the next fortnight. Mr Baldwin's position in the face of a possible renewal of crisis is weakened by the diversion of public opinion in Great Britain to other matters, and his own uncertainty of continuance in office. With an election proceeding here, the main duty of the Government in the next fortnight is clear, namely, to mark time as far as possible, and in any case not to take any irrevocable decision on matters of first importance, until it is known whether they or others are the people upon whom the responsibility for foreign policy will rest after the electors' verdict has been given.

THE WORKMEN'S COMPENSATION ACT, 1923.

Two arduous days out of the four days of the Autumn Session, before Parliament was dissolved, were given by the Prime Minister to the Workmen's Compensation (No. 2) Bill which had been introduced in the summer by the Home Secretary. The Labour Party had put forward a Bill of their own based on the report of the Holman Gregory Committee of some three years ago. But Mr.

Bridgeman rightly held that wages and prices had changed so much since 1920 that the report of the Committee could not now be safely adopted as a basis for legislation. Hence the Government's No. 2 Bill, which now, after considerable amendment, has become an Act; it is an adaptation of the principal Act of 1906 to the circumstances of the present day. It comes into force on January 1st as an amending supplement to the Act of 1906. It is a piece of legislation by reference which has to be read in conjunction with the principal Act, and also with the agreement as regards premiums and claims which was recently arrived at between the Home Secretary and the Accident Offices' Association. We will endeavour to make clear the chief effects of the Amending Act upon the liability of employers, and upon the compensation payable to workmen for accidents.

There is a considerable extension in the liability of employers. It is true that the War Addition Acts, which raised the maximum weekly benefits for incapacitated workmen from 20 shillings to 35 shillings, are repealed as from the end of this year, and a maximum weekly benefit of 30 shillings substituted for the 35 shillings fixed in 1919. But, on the other hand, the maximum of £300, allowed to a widow and dependants upon the accidental death of a workman in the course of his employment, has been raised to £600 by applying a sliding scale to children. The maximum for a widow without children is still £300, but the children get an additional maximum compensation of £300. The minimum compensation to a widow of £150 has been raised to £200, so that in place of a possible compensation to a widow and children of £150 to £300, the new Act allows a possible compensation from £200 to £600.

It is also provided that a workman, who has suffered death or total disablement by an act which was contrary to regulations or orders, but was, nevertheless, "for the purpose and in connection with his employer's trade or business," shall not be debarred from compensation for himself or his surviving dependants. It has been found in ordinary everyday working that men have broken regulations or orders in perfect good faith, and with the best intentions—because a grave emergency had arisen which demanded action—and having suffered accidents were denied compensation as by law established. They will still be denied compensation unless the result of their unauthorised action is death or total disablement. There must be some check upon disobedience to regulations and orders, however well intentioned.

Considerable numbers of men and women who were excluded from the principal Act will come under the new Act. The principal Act, with certain exceptions, included all manual workers and non-manual workers up to a wage limit of £250 a year. That wage limit has been raised to £350 a year, so that many clerks, shop assistants, and others who are paid something between £250 and £350 will become eligible for workmen's compensation. There have also been additions to those styled "workmen." Shore fishermen have been included, provided that they are not remunerated "wholly or mainly" by shares in the working of fishing vessels. The Act also includes persons engaged in plying for hire with any vehicle or vessel for which they pay a fixed sum and share in the earnings; persons who are casually employed other than for the employer's trade or business, "if employed for the purposes of any game or recreation, and engaged or paid through a club"; and persons employed in ships who are not seamen or apprentices, but who come within the definition of workmen. Here in these provisions we get workmen's compensation for certain shore fishermen, golf caddies, taxi-drivers, and purser's clerks on board ship.

The Act makes no reference to insurance, because the insurance of their liabilities by employers is voluntary. Still, it is widely taken advantage of, and is very necessary in the interests of workmen who might, if uninsured, lose the compensation legally due to them by the bankruptcy of an employer. The Home Office, therefore, officially recognises insurance as highly desirable, and in order that a system might be entered upon under which premiums might be regularly adjusted to risks, and expenses kept down, the Home Secretary made an agreement in the summer with the Accident Offices' Association.

That agreement provides that the compensation paid to insured workmen, together with reasonable medical and legal expenses, shall amount to not less than 60 per cent. of the premiums paid by employers during each of the next three years. The claims basis after those three years is to be 61½ per cent. of the premiums, or such percentage between 60 and 62½ as may be agreed upon. The adjustment of premiums to achieve these results is to be made by rebates or by additional charges at renewals. This agreement is a pleasing example of our practical English methods of administration. Logically, insurance should be made compulsory, and be under strict State supervision; we who have learned that strict logic makes a sorry mess of human affairs leave insurance voluntary, but, by an agreement with the insurance offices, make it so attractive that employers have little excuse for carrying their liabilities uninsured.

THE COMMERCIAL CLAUSES OF THE TURKISH PEACE TREATY.

(FROM A LEGAL CORRESPONDENT.)

We think it possible that the section of the mercantile community which before the war had interests in Turkey may not have fully grasped the significance of some of the commercial clauses contained in the Treaty of Peace signed at Lausanne in July last, and may have been apt to assume that they were substantially the same as those contained in the Treaty of Versailles with Germany. It was to be expected that a negotiated Peace would differ in its terms from a dictated one, but the difference in the case of the Turkish Treaty extends far beyond political questions of territory, disarmament, and so forth, and is manifest even in the arrangements for the resumption of commercial intercourse and the liquidation of pre-war engagements.

In particular we wish to draw attention to one clause (Article 75) permitting the reintegration of certain contracts. Article 73 enumerates certain contracts which may be summarised as contracts relating to the sale and leasing of land, mortgages, pledges, and liens, constitution of companies, and family status, and contracts with organs of central or local government. Article 74 refers to insurance contracts, for which special provision is made in an annex. Article 75 reads as follows:—

Contracts other than those specified in Articles 73 and 74 and other than concessionary contracts, which were entered into between persons who subsequently became enemies, shall be considered as having been annulled as from the date on which the parties became enemies.

Nevertheless, either of the parties to the contract shall have power, within three months from the coming into force of the present Treaty, to require the execution of the contract, on condition of paying, where the circumstances demand it, to the other party compensation calculated according to the difference between the conditions prevailing at the time when the contract was concluded, and those prevailing at the time when its maintenance is required. In default of agreement between the parties, this compensation shall be fixed by the mixed Arbitral Tribunal. (The italics are ours.)

The seat of the mixed Arbitral Tribunal is to be at Constantinople (Article 93).

The effect of Article 75 would appear to be that in the case of the majority of commercial contracts, e.g., sale of goods, agency, charter-parties, guarantees, employment (Insurance contracts are the subject of special provisions contained in an annex), which had not been completely fulfilled upon the outbreak of war with Turkey, either party can, within three months of the ratification of the Treaty, demand the restoration and fulfilment of the contract on conditions of paying such compensation as may be adjudged by the Tribunal to represent the difference in the conditions prevailing in 1914 and 1923 respectively. Thus the rule of the common law to the effect that all such contracts are dissolved by the outbreak of war is abrogated, and many persons may shortly find themselves called upon to resume the performance of contracts which they had consigned to oblivion, and in place of which they may have made fresh arrangements. It is true that a claim for compensation can be made before the mixed Arbitral Tribunal, but—for an Englishman—it's a long, long way to Constanti-

nople, which is the seat of the new Tribunal, and, however excellent it may be, the prospect of litigation upon the far off, unremembered things of 1914 is not pleasing to the average business man.

Contrast the Treaty of Peace with Germany. Article 299 (a) declares dissolved contracts between enemies as from the date of the outbreak of war, except as to debts or other pecuniary obligations arising thereunder, and excluding insurance contracts (for which special provisions are made) and a group of contracts substantially the same as those enumerated above in Article 73 of the Turkish Treaty. Then follows the clause dealing with reintegration, Article 299 (b) :—

Any contract of which the execution shall be required in the general interest, within six months from the date of the coming into force of the present Treaty, by the Allied or Associated Governments, of which one of the parties is a national, shall be excepted from dissolution under this article (299).

When the execution of the contract thus kept alive would, owing to the alteration of trade conditions, cause one of the parties substantial prejudice, the mixed Arbitral Tribunal provided for by Section VI. shall be empowered to grant to the prejudiced party equitable compensation.

In this case, the demand for reintegration must be made by a Government, that Government must be one of the Allied Governments, and the reintegration must be "in the general interest," presumably, of the Allies as a whole, or, at any rate, of the one whose national is concerned, and not merely in the private interest of the party concerned. Moreover, the mixed Arbitral Tribunal sits in London.

Legal advice and interpretations given *in vacuo*, and without reference to particular sets of facts, are of little use, and it is not suggested that these remarks can be of any greater value than to warn persons who had pre-war contractual relations with Turkey that it behoves them to examine their legal position under the Treaty very carefully, if they have not already done so. The Treaty has not yet been ratified by Great Britain.

THE INDUSTRIAL SHARE MARKET.

ALTHOUGH the market for industrial shares on the Stock Exchange has recently shown signs of marking out a course for itself, it has not been able to withstand the general depression of the last few weeks, despite arguments put forward to explain how the various party programmes, if carried out, would benefit or penalise particular industries or groups of companies. A week or two ago, for example, a small buying movement set in for shares in such companies as were thought to be likely to benefit directly from the imposition of protective tariffs. The number of securities so affected, however, was small, and the movement rapidly dwindled. Then, again, a certain nervousness has been exhibited by holders of shares in some of the large combines, on the ground that, in the event of success at the polls by the Labour party, particular attention would be devoted to companies thought to be making excessive profits at the expense of the consumer. The volume of selling caused by alarms of this nature has, however, been small, and in the past few weeks the general trend of the industrial share market has been gently in a downward direction, in sympathy with the investment department, which has been disgruntled by the approach of a General Election.

A glance back over the past year, however, shows that prices during the first few months were moving steadily upward, the highest point being reached in the early summer. The spurt given to certain branches of British trade by the French occupation of the Ruhr favourably affected several classes of industrial shares, and it was not until it became clear that the sudden prosperity of the iron, coal, and steel and other industries was only temporary that prices began to react. From the table below, which we have compiled from the monthly figures of security values published by the *Bankers' Magazine*, it will be seen that the highest point was reached by general commercial and industrial shares

in June, by the iron, coal, and steel group in April, and by shipping shares in January, the last-named having fallen continuously from that month until August :—

	38 Commercial and Industrial.	14 Iron, Coal, and Steel.	5 Shipping.	10 British and Indian Funds.
Par value	100	100	100	100
December, 1921	170	94	138	81
October, 1922	225	107	153	94
November, "	227	112	150	91
December, "	229	120	162	91
January, 1923	236	124	166	92
February, "	238	125	165	92
March, "	244	123	164	93
April, "	260	126	163	95
May, "	262	119	163	94
June, "	264	114	160	94
July, "	245	110	151	91
August, "	244	107	148	92
September, "	248	111	151	93
October, "	243	108	151	93

The movements in industrial shares, it will be seen, have been much wider than the variations of Government stocks, which reached their highest point in April. In the series of tables which follow we show the highest and lowest prices of the past two years, together with the latest prices of five groups of industrial concerns. The first gives 12 representative securities in the iron, coal, and steel group :—

IRON, COAL, and STEEL.

	Amount Quoted.	Latest Full Year's Dividend.	Prices.					
			Year 1922.		Year 1923 to end of October.		Present	
			Hgst.	Lwst.	Hgst.	Lwst.		
	£	%						
Armstrong, Whitworth (£1)	5,512,500	20 a)	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Babcock and Wilcox (£1)	4,297,656	nil	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Baldwins (£1)	4,150,736	nil	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2

Vickers (£1)	12,315,633	5	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2

† Free of income-tax. a On old capital.

In very few cases is the latest price much better than the lowest level reached this year, nor has the general level of prices this year been much better than it was in 1922. Five of the companies have paid no dividend in their last financial year.

The next table shows the movements of six shipping stocks :—

SHIPPING.

	Amount Quoted.	Latest Full Year's Dividend.	Prices.					
			Year 1922.		Year 1923 to End of October.		Present.	
			Hght.	Lwst.	Hght.	Lwst.		
	£	%						
Cunard Steamship (£1)	4,456,189	7 1/2	1 1/2	7/8	1 1/2	1 1/8	1 1/2	1 1/2

† Free of income-tax.

Here, again, present prices are practically at the lowest level of the year, but this is considerably better than the bottom point of last year.

The next table gives similar figures for textile shares :—

TEXTILE.

	Amount Quoted.	Latest Full Year's Dividend.	Prices.				Present.
			Year, 1922.		Year 1923 to End of October.		
			Hgst.	Lwst.	Hgst.	Lwst.	
Amalgamated Cotton Mills Trust (£1)	£ 4,650,000	% nil	2 1/2	2 1/4	2 1/2	2 1/4	2 1/2
Blanchers (£1)	2,371,086	20	2 1/2	2 1/4	2 1/2	2 1/4	2 1/2
Bradford Dyers (£1)	1,356,477	35	2 1/2	2 1/4	2 1/2	2 1/4	2 1/2
British Cotton & Wool Dyers (5s)	774,165	15	2 1/2	2 1/4	2 1/2	2 1/4	2 1/2
Calico Printers (£1)	2,010,736	12 1/2	2 1/2	2 1/4	2 1/2	2 1/4	2 1/2
Coats, J. and P. (£1)	14,750,000	17 1/2	2 1/2	2 1/4	2 1/2	2 1/4	2 1/2
English Sewing Cotton (£1) ..	2,000,000	20	2 1/2	2 1/4	2 1/2	2 1/4	2 1/2
Fine Cotton Spinners (£1) ..	3,675,000	12 1/2	2 1/2	2 1/4	2 1/2	2 1/4	2 1/2

In most cases present prices of the shares in this table are higher than the lowest touched this year. An

exception is J. and P. Coats, the repetition of whose dividend of 17 1/2 per cent. was apparently not quite up to market expectations.

The motor manufacturing group makes a dismal showing :—

MOTOR MANUFACTURING.

	Amount Quoted	Last Full Year's Dividend.	Prices.				Present.	
			Year 1922.		Year 1923 to End of October.			
			Hgst.	Lwst.	Hgst.	Lwst.		
	£	%						
Austin Motor, 6% cum. B pref. (£1)	1,000,000	nil	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Birmingham Small Arms (£1)	2,815,172	nil	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Cossie's Motors (£1)	1,101,960	nil	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Dennis Brothers (1913) (£1)	50,825	13	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Humber, Limited (£1)	292,884	10	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Napier, D. (£1)	546,000	nil	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
R H Royce (£1)	787,176	10	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Rover Co. (£1)	1,050,000	8	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
S.T.D. Motors (£1)	1,390,177	nil	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Vauxhall Motors (10s)	300,000	nil	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2

Six of the ten companies have made no dividend distribution in their last financial year. The motor industry, as a whole, has by no means emerged from the depths of depression into which it was plunged in the early post-war years, partly by unsound finance and partly by adverse economic conditions. Some of the companies are beginning to show less unfavourable results, but with one or two exceptions the list has no attractions for the investor.

Our next table gives a miscellaneous list of industrial securities not coming within any of the previous categories, and includes some of the most popular stocks in the industrial market :—

MISCELLANEOUS

Rover Company ..	14	11	0	9	8	3	5	14	3

† Free of income-tax.

The range of yields at the end of last month cannot be described as high. There is, of course, a very substantial reduction in comparison with October, 1921, and in many cases with this time last year. The yields on the two shipping securities, however, are now a little higher than they were a year ago. An increase in yield is also shown by Fine Cotton Spinners and Imperial Tobacco shares.

THE RUBBER TRADE IN AMERICA.

(BY A NEW YORK CORRESPONDENT.)

In an article in the *Economist* in August commenting on the results of nine months' experience of restriction it was pointed out that the demand for motor tyres had been over-estimated by American manufacturers, and that consequently there had been an excess production, which was not being absorbed by the public. Stress was also laid on the fact that restriction had placed the market in the power of speculators to far too great an extent, and that a premature bull movement had been encouraged in London, which did not appear to be justified by conditions here.

At that time spot rubber was worth 1s 3 1/4d per lb, and a premium of about 1d was readily paid for future deliveries. It has recently fallen to 1s 1 1/4d, and is now slightly higher, but it is not considered here that the decline has yet sufficiently discounted the outlook.

The bull movement was undertaken in the belief that American manufacturers would be forced to buy heavily at an early date, largely because of the increase in motor-car and truck construction. The argument appeared plausible, seeing that America uses about 70 to 75 per cent. of the world's consumption, and rather more than 80 per cent. of this is required for tyres. The output of cars and trucks in 1922 was 2,577,300, while for the seven months, January to July, this year, 2,354,000 were manufactured, and it is now estimated that the total for the current year may amount to about 4,000,000. Quite a number of the market operators here were also misled by similar reasoning, for once again it has been shown that such statistics are an unreliable guide. What the speculators did not realise is that, in spite of such a large increase in output, the number of cars in actual use has not increased in anything like the same proportion, mainly because most of the new ones can only be sold provided the manufacturer or his dealer will accept the buyer's old car in part payment. For these there is little demand, and their accumulation in the manufacturers' and dealers' hands is now proving a serious inconvenience. That, in addition to normal annual obsolescence, the number of old cars thus laid up is exceptionally heavy is clearly shown by the fact that licence registrations on July 1st had only increased by some 700,000 over December 31, 1922.

Again, the wearing quality of tyres is always being improved, with a consequent increased mileage life, assisted by excellent roads, so that the factors on which it was argued that a substantial increase in rubber consumption would take place have proved illusory. Recent detailed investigations by the Rubber Association of America show that sales of tyres may almost be said to be confined to equipment for new cars, and that the older ones require unexpectedly small replacements.

Undoubtedly there is a substantial increase in motor transport, but it is dangerous to permit oneself to be guided too far by any branch of statistics connected with rubber without an understanding of the underlying facts. For instance, about 60 per cent. of the motor output is accounted for by Fords, the tyres for which contain only a small quantity of rubber, and the most popular of the remainder are of the light types, only comparatively few heavy cars being manufactured nowadays.

It may frankly be admitted now that this market allowed itself to be misled over the effect to be expected from restriction. It was, of course, apparent from the first that such an immense Governmental interference between sellers and buyers would afford tempting opportunities for speculators, but it was hoped that these activities would be kept within more reasonable bounds than has been the case. Here we were faced with what appeared to be a large increase in consumption, and, apparently, a 40 per cent. reduction in the British production, which led many to believe that within a short period the existing heavy accumulation of stocks would be exhausted, and, temporarily at all events, there might even be a shortage of supply. All these anticipations have been falsified: there has, in the circumstances mentioned, been very little, if any, increased consumption, while production, as measured by total shipments from the East, appears to be even

larger than before restriction! No satisfactory explanation of the latter fact has yet been forthcoming, and we are left to guess that it is to be accounted for partly by smuggling and partly by stocks concealed in the East, but principally by a great increase in production from the Netherlands Indies, which the Growers' Association had not apparently expected.

The fact is that the trade is disappointed with the present and the outlook for the future, finding its principal occupation in arguing over statistics of shipments and stocks, production, and consumption, from which a surprising variety of conclusions can be drawn—all more or less reliable or unreliable. It appears sufficient to say that there is probably about the same visible supply to-day as existed at the commencement of restriction, though its ownership and situation have changed, and that the world's consumption has only, at the best, slightly increased this year as compared with 1922. If this view is even approximately correct, there seems no logical reason why prices should not revert to those of the immediate pre-restriction period of about 7d to 10d per lb. But any such argument can perhaps best be met by pointing out that those levels were equally illogical with 1s 6d in January and present levels. Of course, the explanation is that prices are mainly influenced by current sentiment, and the "long" or "short" position of market operators.

After all the discussions, *pro* and *con.*, over restriction which excited so much interest here some months ago, the subject seems now to be forgotten, and consumers are quite content to believe that there will always be plenty of rubber available for their requirements; they certainly cannot be scared again. Undoubtedly, restriction helped to save the growers from a critical situation, and assisted the larger manufacturers here by appearing to establish a kind of "datum line" of 1s 3d, below which prices were hardly expected to decline more than a few pence per lb. For it should always be borne in mind that manufacturers are not so much concerned to secure their requirements at low prices as they are in hoping that the markets will not afterwards decline materially below their average purchase cost.

Unfortunately, that is the situation they are now facing. With a few unimportant exceptions, consumers unexpectedly find themselves saddled with stocks sufficient for about three to five months' requirements at prices materially higher than present quotations, and, to add to their difficulties, their sales of manufactured goods are unusually slow, and drastic price-cuts have had to be met, so that profits are at or close to the vanishing point, and substantial inventory depreciation must be provided for. This situation has become apparent at the most difficult period of the year, when the all-important question of financing 1924 will depend on the results of 1923.

It must be confessed that the outlook for the future is not too bright. Quite apart from the European economic difficulties, 1924 is a Presidential Election year, and political conditions exercise a much more direct influence on business here than anything to which the British are accustomed. No country is so quick as America to respond to favourable or unfavourable factors and sentiment, and each movement is carried to extremes, sometimes to bewildering degrees. At present the watchword is "Caution," and bankers, with the bitter lessons of 1920 and 1921 fresh in their memories, are putting on the brakes on industrial financing, notwithstanding the abundance and comparative easiness of money. The tyre manufacturing industry is probably looked on with a more doubtful eye than any other business of similar importance, and a glance at Stock Exchange valuations of their stocks shows pretty clearly how the public regards their prospects, for even the largest and most important corporations' issues are now selling at about, or even below, 1921 records. These companies are now more than ever under the direct or indirect control of Wall Street, and it is known that their operations, including particularly their buying of rubber and other raw materials, are closely watched and limited to the requirements for such goods as they can dispose of to the public.

In short, the rubber manufacturer, like all other business men, is being quietly warned to put his house in order, if he is likely to require financial facilities in the coming

months: a small inventory and a respectable cash balance will have to be shown before he has any chance of securing a loan.

These conditions are likely to have a marked effect on rubber prices, for, instead of substantial seasonal buying, the manufacturer will only be interested on a hand-to-mouth basis. This may prevent such wide fluctuations as rubber has been accustomed to, and to that extent may work for stability, but it can hardly be construed into a bull point when coupled with the other conditions mentioned.

Notes of the Week.

Protection and the Iron and Steel Trade.—Of all the points brought forward by Lord Birkenhead in his speech on Tuesday, his singularly incomplete statement about the iron and steel industry was one of the most misleading. He stated, and repeated as though it were an argument, that whereas in the days of Cobden Great Britain produced two-thirds of the iron and steel production of the world, by 1914 Great Britain had been far surpassed both by the United States and by Germany. As an appeal to ignorance the argument employed in such a statement would be hard to beat. In the "hungry forties" the iron age was only just beginning. The population of the United States was 17 millions, against 118 millions to-day, and had only begun to open up the great territories of America. The industrialisation of Germany also belongs to a much later date. Indeed, the invention (made in this country) which made it possible to use in steelmaking the great ore resources of Lorraine, on which Germany's metallurgical industry has been built up, was not perfected until 1880. Revolution in the means of transport and the progress of science, which fortunately is an international possession, have produced an unexampled increase in the world's white population, and to pretend that the slow increase in Britain's production is due to Free Trade, while the discovery and rapid development of some of the world's chief natural resources is due to Protection, is childish. As a matter of fact, the situation of the iron and steel trade is one of the strongest cases for Free Trade. In America the overwhelming proportion of iron and steel production is consumed at home; in Germany before the war much the greater part of her production was consumed in the home market also. But in the case of Great Britain at least one-half of our output is exported, while one-half of the remainder is used in machinery, ships, &c., which are also sent abroad, while a further amount is used in our own ships, whose activity depends upon foreign trade. In spite of our lower production, nearly half of which is produced from imported ores, we have held the lead in the direct export of iron and steel products, except for the years immediately before the war. To-day we have regained the lead. In 1922 the foreign trade in iron and steel products of the chief iron and steel producing nations was as follows:—

AVERAGE MONTHLY FIGURES in THOUSAND TONS.			
	Imports.	Exports.	Net
Great Britain.....	73.5	283.4	209.9
United States.....	46.6	161.5	114.9
Germany.....	155.1	209.7	54.6
France.....	64.3	164.0	99.7

The figures for the current year to date are complicated by the Ruhr occupation, and are not representative or, in the case of Germany, reliable. But as far as they go they show that Germany has a slight surplus of imports. France has a net export of 108,000 tons, the United States 97,000 tons, and Great Britain 230,000 tons. Britain can only maintain her steel industry by cheap production. The home market alone is totally inadequate to occupy the trade and permit full and economical production. The industry is doomed unless it can sell at the world's prices. Freedom to import cheap semi-finished goods is an important means of securing cheap production here, not merely on account of the material actually used, but also because it ensures that the prices of our goods at all stages of production are on a competitive level.

The Fallacy of Making the Foreigner Pay.—Tariff supporters frequently state that if goods come into a country over a tariff wall, the tax on them will be borne by the foreign exporter. Now, if the price of the goods remains the same after the imposition of the tax, as it was before (or is no higher than it would have been if the tariff did not exist) then it can fairly be said that any duty received by the Government has come out of the foreigner's pocket. But it is precisely such a price that the home manufacturer claims has been unprofitable to him; it is such a price that he demands protection against; it is such a price that he says has produced unemployment and bad trade. So if the price does remain the same as it would have been in any circumstance he does not appear to have gained any advantage, and Protection, from his point of view, has failed, and he has only the satisfaction that the revenue has gained, and the foreigner has "borne the duty." Analysis has shown that there are certain sets of circumstances in which theoretically the whole burden may be thrown upon the foreigner. In such a case the foreigner may "swallow" the tax and continue to supply at the old price. But it is a case which is hard to find in actual past experience, and which is equally hard to pick out as probable in future. Experience almost universally shows that protective duties do succeed in giving some measure of protection at least—that is, that they raise prices by the amount, or a substantial part of the amount of the duty. By the enjoyment of this higher price, the home industry, on the two inconsistent assumptions that none of its expenses are raised by the effect of protective duties on its machinery, materials, or wages, and that the volume of demand for goods at the higher price will not be diminished, will gain business and "relieve" unemployment. The home consumer will pay this higher price, and the foreigner receives the higher price, less the duty going to the Government. If the price is higher by the whole amount of the duty, the foreigner then bears nothing. But experience shows that the price frequently may not rise by the whole difference, so that the foreigner will "bear" something. In what sense? Assume a million articles, half imported, have been sold at £1 each, giving 1s profit to the home manufacturer, and that a 5s tax is put on, and the price rises to only 23s, at which price the public will take 900,000. Assume 700,000 are made at home now at a net cost of 18s 6d, instead of 19s. The home manufacturer formerly had as profit 500,000 at 1s = £25,000. He has now 700,000 at 4s 6d (i.e., 23s price, 18s 6d cost), or £157,500 profit, and also claims the satisfaction of "relieving" unemployment. The foreigner has received a net price of 23s minus 5s = 18s, and has, therefore, "borne" a tax of 2s on 200,000 articles, or £20,000. The Government receives 5s on 200,000 articles = £50,000, the foreigner bears £20,000 of it, but the consumer pays an additional 3s on the whole 900,000 articles, £135,000 in all.

The protected manufacturers make an extra.....	£	132,500
The Government get	£	50,000
		182,500
Paid by the consumer.....	£	135,000
Borne by the foreigner	£	20,000
Saving on overhead charges, 6d on 500,000, equals ..	£	12,500
And 1s 6d on 200,000, equals	£	15,000
		182,500

This is the ordinary sense in which the foreigner "pays the duty." It may be said that the foreigner's burden is the loss of export of 300,000 articles, but at any rate these are balanced by exports from this country, so that exporting industries here may suffer as much new unemployment as the relief in the protected trade, and may also lose in overhead charges upon their smaller trade all that the protected trade has gained. If it be said that the increased profit shown to the employer will allow of increased wages being paid to those already in employment, there is no evidence that there are increased real wages if prices of articles the worker buys are to rise by 15 per cent. as in this case. No one denies the possibility of diverting employment into particular channels by Protection. What has to be proved is that the total volume of employment is increased.

Tariff Change and Unemployment.—A correspondent writes:—What is needed to cure unemployment is a remedy which will work quickly; would Customs duties on foreign goods meet this need even if in the long run they were effective? Here German tariff history is instructive and discouraging. The tariff of 1879, which brought Germany back to Protection—though its primary aim was to increase the revenue of the central Government—was introduced into the Reichstag on December 15, 1878, and passed on April 3, 1879. It evoked protests from Oldenburg, the Hanse Towns, the chambers of commerce throughout Germany—which speak with greater authority than their British counterparts—and a meeting of representatives of 72 German cities condemned it by 68 votes to four. Had the great towns and industrial districts possessed their fair share of Parliamentary representation, it would certainly have been thrown out, but it was carried by a coalition of the great ironmasters and the representatives of the agricultural regions. It came into operation on January 1, 1880. Some time later the reports of 85 chambers of commerce on its effects were collated by a German Free Trade Association. These were summarised by our own Board of Trade in a Blue Book (1882, Vol. LXII. c. 3,111.). With few and unimportant exceptions they announced "an obstinate stagnation in all branches of trade." Most of them attributed this to the new tariff. The markets were glutted with foreign goods imported before the new duties shut them out; these goods were not cleared off till six months after it became operative; wages had not risen, or had gone down, while the cost of living had gone up. The ports and frontier districts were the greatest sufferers, but the depression was specially marked in great manufacturing districts—Silesia (with two minor exceptions), Westphalia, and the Rhineland. Nor is the history of the next tariff reform more encouraging. On November 20, 1901, when the commercial treaties based on the tariff of 1879 were expiring, an amended and more Protective tariff was introduced. It was strongly opposed in the Reichstag and the country; but it was referred to a Committee which reported in October, 1902. The tariff was then debated—and obstructed—for nearly two months in the Reichstag; and, as it contained 946 items, its opponents found plenty to say. At last it was passed through, after a 19 hours' sitting, by an unprecedented application of the closure. The treaties based on it had a very unfavourable reception in the German Press, and their apologists were unconvincing and occasionally ludicrous. No doubt both these tariffs were overweighted by duties on food, but their progress was not clogged by these alone. These facts should be pondered by Mr Baldwin and his supporters who are preaching Protection as a quick remedy for unemployment.

Investments and Our Trade Balance.—Certain readers have written to us inquiring why the item "Interest on Investments" appears on both sides of the National Trade Balance-Sheet, printed on page 3 of the *Economist's* Free Trade Supplement last week. The balance-sheet in question ran as follows:—

THE NATIONAL TRADE BALANCE-SHEET, 1922.			
	Imports.	Exports.	
	Million £.	Million £.	
Bullion	44	58	
Merchandise	1,008	824	
Interest on investments	25	200	
Shipping payments	30	140	
Commissions†	..	30	
Balance of miscellaneous services ..	..	10	
Available for investment abroad	155	..	
	1,262	1,262	

* Interest payments on debt to U.S.A.

† Earned abroad by bankers, brokers, insurance companies, &c.

It was explained last week that, "in the third line, 'interest on investments,' the £25 millions entered on the import side represent interest payments on the British debt to the United States, while the £200 millions entered under exports is the official estimate of the income derived from British investments in overseas countries." The reason why receipts from abroad paid to holders of foreign securities residing in Great Britain are included with exports of merchandise and bullion, shipping earnings, &c., on the credit side of the balance-sheet is

that, in all these cases, an obligation is set up on the part of people *outside* in favour of others *inside* Great Britain. When we ship cotton goods to the value of £100,000 to Buenos Ayres, the buyer in Argentina becomes indebted to us to the tune of £100,000. If, on the other hand, our investors some years ago subscribed £1,250,000 to an issue by the Argentine Railway of bonds carrying annual interest at 8 per cent., the railway in question will be liable to remit £100,000 in interest (8 per cent. of £1,250,000) to this country every year. The effect is the same in both cases—an addition of £100,000 to the credit side of our trade balance. Similarly, shipping payments, bankers' commissions, and all other items included on the "export" side represent amounts due to us from abroad, and are all parts of the national income. The payment of £25 millions interest on our debt to the United States operates in the opposite way, and affects our trade balance exactly as would a payment of £25 millions for goods imported into Great Britain.

The Irish Loan.—Our Dublin correspondent writes:—On Saturday the prospectus of the first Irish Free State loan will be in the hands of the public. There is a general expectation that the issue will be fully subscribed, if not oversubscribed, at once; and it is probable that every necessary step has been taken to make the issue an immediate success. The actual yield on the issue price is a small fraction above 5½ per cent., so that holders of British Government securities can re-invest at a slight increase of annual income. The realisable capital value of the new stock will be sustained by, *inter alia*, the heavy sinking fund. Rumour, in responsible quarters, alleges that the Irish banks will take at least half of the new issue, and, as was pointed out last week, the "approved societies," Government departmental balances, and Irish Free State charitable trust funds, apart from the general public, will easily absorb the balance. As to the subsequent buoyancy or otherwise of the new stock in the stock market, it is well to note that suitable Irish trustee securities are not very numerous—at least this is the explanation given for Dublin Corporation 3½ per Cent. standing a few months back as high as 72 (it is now about 67-68). If Dublin Corporation 3½ stock only yields approximately 4½ per cent. (or at the higher quotation about 4½ per cent.) the Irish Free State Government stock should clearly go to a premium. Ireland has abundant resources, and no prior debt, in which respect she compares favourably as a borrower with her sister Dominions. The Government sees its way to carry on with a loan of these restricted dimensions, and before any further issue is forthcoming the results of the pacification of the country and of the Government economy campaign will have made themselves felt. The zeal of the new *régime* for economy and efficiency has just been signalled by an order issued by the Local Government Department dissolving the Dublin Board of Guardians, and appointing a single official in their place. This decision is almost as much based upon the inefficiency of the existing system as of the guardians themselves who worked it. It is understood that the Department expects, while rendering improved service all round, to save something like £30,000 per annum of the rate-payers' money. This stringent action of the administration is something of a portent, and it indicates a tendency most interesting and significant to students of political science.

Russia's Monetary Experiment.—More than a year has now passed since Soviet Russia introduced the experiment of a double paper currency, and in view of the inevitable search for currency remedies in other countries, it is of special importance to examine the results of the Russian innovation. In October, 1922, a Soviet decree established a new currency, called "tchervonetz," which did not supplant, but went into circulation together with the Soviet rouble. The new tchervonetz is equal to 10 gold roubles, or to about one English pound. This new currency, however, writes our Warsaw correspondent, is a paper money, and the difference between the Soviet rouble and this unit consists in the fact that the issue of tchervonetz is strictly limited, and that it is based not on State, but on commercial credit. According to Article 3 of

the Decree of October 11th, the notes must be covered as to 25 per cent. of their value by gold, precious metals, or foreign stable currencies (pounds, dollars, Swiss francs, &c.), and the remaining 75 per cent. must consist of commercial bills and merchandise, which may be easily sold. The tchervonetz are to a certain extent legal tender in relations with the Treasury; they are receivable for taxes and public dues fixed in gold, but there is no compulsion to receive them in payment of private debts. Legally, a debt contracted in tchervonetz is repayable in roubles, according to the exchange, quoted on the bourse. Only credits granted by the Gosbank (the former Imperial State Bank) in tchervonetz must be repaid in the same currency. According to Article 8, loans may be granted to the Government by the issue department of the Gosbank, which has the exclusive control of the circulation of the tchervonetz, but these credits must have a cover of at least 50 per cent. in precious metals. The remaining 50 per cent. must consist of securities bearing interest. Various safeguards were devised to prevent the total replacement of the Soviet rouble by the tchervonetz. The smallest note which is issued has a value of 10 gold roubles, so that the public in its daily transactions with the retail traders can only make use of the Soviet rouble. The tchervonetz is reserved for more important dealings. It has been created with the purpose of supplying the wholesale trade and the industry with the necessary currency. The sale of tchervonetz by the Gosbank to private persons is restricted, and by this measure the displacement of the Soviet rouble is also prevented. The fact that Soviet Russia has succeeded in creating a stable paper standard must be considered as an achievement of the greatest importance. During the whole year the exchange value of the tchervonetz has fluctuated no more than the best currencies. This stability of the tchervonetz had a very favourable influence on the extension of its circulation. The wholesale trade is making more and more use of these new notes, and in all transactions the tchervonetz has become the standard in which all prices are expressed and contracts fixed. The extension of the circulation of the tchervonetz had a detrimental influence on the Soviet rouble, whose depreciation has been certainly hastened by the introduction of the new notes. Though the financial situation of Russia is to-day much better than a year ago, and though the process of inflation is subject to some check, the fall of the Soviet rouble is becoming more rapid. During the second half of 1922 the depreciation was smaller than during the first six months of this year. In July and August the pace of the decline was again quickened. Without energetic measures for bringing the Budget towards equilibrium, the monetary reform must have failed, because it deprives the Government of a great part of revenues which it is able to obtain by the use of the printing press. The Commissariat of Finances has succeeded in making itself partly independent of this source. In January, 1922, the issue of paper roubles covered 90 per cent. of the expenditure; in July, 1922, 62 per cent.; in January of this year, 38 per cent. Since August the issue of Soviet roubles has been fixed at 15 million gold roubles monthly, and half of the monthly amount printed during the first six months of this year. Under such conditions the more rapid depreciation of the Soviet rouble can be supported by the social organism. The advantages of a stable standard, which has been created by the introduction of the tchervonetz, are so great that they outweigh completely the inconvenience which has been caused by the hastened fall of the Soviet rouble. The monetary experiment undertaken by Russia a year ago must be considered as a great step forwards in the direction of a return to normal and stable conditions.

Chinese Finance and Trade.—Civil war and the consequent exactions of the soldiery, and of brigands, river and coast pirates, and local authorities, have not overcome the business ability of the Chinese merchant, though the situation is growing worse. This was the position as described by Commercial Secretary to the British Legation, writing from Shanghai last June, in the report just issued by the Department for Overseas Trade; and it seems no better to-day. Yet the crops have been good in many districts, money is fairly plentiful, and markets bare of

stocks, so that any approach towards peace would bring a rapid revival of trade. But all official salaries are greatly in arrear, the Central Government's railways are heavily indebted to foreign creditors, and only loans from the native banks have kept it going. The unsecured debt and the foreign loans receiving preferential treatment amount to about \$800 millions; the Customs and Salt surpluses and the yield of the increased import duties are estimated at \$82 millions. But the Salt surplus of \$48 millions has been absorbed by current Government expenditure and debts, and the proposed Customs surtax will at most provide \$25 millions annually—too little for the service of a funding loan. Yet the Maritime Customs have produced a revenue which, if the famine relief tax is left out, exceeds the record total of 1921 by more than \$4 millions Haikwan taels. Of the net Salt revenue, the illicit seizures by local authorities and the sum released to the Central Government have left only \$6,728,000 to meet secured obligations and other claims. Currency reform has made no progress, and the copper coinage is depreciated, chiefly through over-issue, while the cost of living goes up. Railway construction, except on the Lung-Hai line, is suspended; the Government lines are deteriorating and working inefficiently and at a loss; a contrast is afforded by the Shanghai-Nanking railway, which is under foreign control. Harbour improvements are contemplated at Shanghai, and have been effected at other Treaty Ports, and preliminary steps have been taken to prepare for the conservation of the Yang-tse. The few roads built are ill-kept, and on the Chefoo-Weihsien road a monopoly of motor transport checks traffic. Shipping has experienced a very difficult year, owing to political disturbances and intermittent trade. Native industries with modern methods, which of late years have developed largely, suffer from relatively inefficient management and from labour difficulties, set up chiefly by the rise in the cost of living; the cotton trade, which had developed rapidly, has suffered severely. Silk spinning has done better, and shipbuilding, when it recovers, will hold its own against foreign competition. Coal mining has been specially hampered by the civil warfare and interruption of transport, but coal exports show a notable increase. Foreign trade has reached a record value, though last year was bad for the traders. Probably much of the goods entered had been in bond since their arrival in 1921. Imports direct from Great Britain and the United States fell off; Japan and Germany substantially increased their totals. Germany was not far behind her pre-war figure, but her recent troubles have checked her recovery. Very full particulars are given of imports and exports, and it is noted that the development of trade and industry wherever foreign settlements offer some security presages a more general revival when order is restored elsewhere. British manufacturers are recommended to sell their goods through British rather than Chinese firms, and to study the market by sending out personal representatives rather than through correspondence.

Employment in October.—The monthly review of the labour market conducted by the *Ministry of Labour Gazette*, shows that on the whole there was little change in the unemployment position during October. The Trade Union unemployment percentage declined, the percentage of insured workers unemployed remained stationary, and there was a slight rise in the total number of registered unemployed, namely from 1,285,000 at October 1st to 1,296,000 at October 29th. Recent movements in the Trade Union percentage are shown below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.								
	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	0.3	1.0	2.4	2.9	6.9	16.8	13.7
February ..	2.0	0.3	0.9	2.8	1.6	8.5	16.3	13.1
March	1.9	0.3	1.2	2.9	1.1	10.0	16.3	12.3
April	1.7	0.3	0.9	2.8	0.9	17.6*	17.0	11.3
May	1.9	0.4	0.9	2.1	1.1	22.2*	16.4	11.3
June	1.9	0.4	0.7	1.7	1.2	23.1*	15.7	11.1
July	1.9	0.4	0.6	2.0	1.4	16.7	14.6	11.1
August	2.0	0.5	0.5	2.2	1.6	1.3	14.4	11.4

November ..	2.0	1.1	0.5	2.9	3.7	15.9	14.2	..
December ..	2.6	1.4	1.2	3.2	6.0	16.5	14.0	..

* Excluding coal miners.

Here, it will be seen, we had reached at the end of October the lowest percentage recorded in any month since March, 1921. Of all workers coming under the Unemployment Insurance Act the unemployed percentage at the end of October was unchanged at 11.7. October saw improvement in the coal-mining industry, tinplate and steel sheet manufacture, and in the pottery trade, but a slight decline in iron and steel manufacture, which is curious in view of the increase in the output both of pig-iron and steel ingots and castings in October, to which we drew attention in our last issue.

Cost of Living.—According to the retail price index number published by the Ministry of Labour, the cost of living for an average working class family remained stationary during October at 75 per cent. above the level of July, 1914. Movements month by month in recent years are shown below:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914. (Food, Rent, Clothing, Fuel, and Light, &c.)							
	1918.	1919.	1920.	1921.	1922.	1923.	
January 1st..	85.90	120	125	165	92	78	%
February ..	90	120	130	151	88	77	%
March ..	90	115	130	141	86	76	%
April ..	90.95	110	132	133	82	74	%
May ..	95.100	105	141	128	81	70	%
June ..	100	105	150	119	80	69	%
July ..	100-105	105-110	152	119	84	69	%
August ..	110	115	155	122	81	71	%
September ..	110	115	161	120	79	73	%
October ..	115-120	120	164	110	78	75	%
November ..	120-125	125	176	103	80	75	%
December ..	120	125	169	99	80	..	%

The index number for retail food prices alone moved up one point in October from 72 per cent. to 73 per cent. above the pre-war level. As regards individual October movements in retail food prices, October saw a further rise in the price of eggs, while fish and milk were on the average slightly dearer at November 1st than at October 1st. On the other hand, there was a fall in the average price of bread of about ¼d per 4 lbs, and of nearly 1d per lb in bacon, while potatoes, meat and flour also became slightly cheaper.

Emergency Banking in Hamburg.—According to the Department of Overseas Trade, an organisation has been established in Hamburg, under the name of the "Hamburgische Bank von 1923," for the purpose of providing means of payment in money of fixed value. It is a purely emergency measure which the Hamburg merchants, banks, insurance offices, &c., have taken in order to deal with the present difficulties. It was constituted on the 24th ult., and the capital of 12 million gold marks (£600,000) was guaranteed by the following day, 25 per cent. being paid up immediately. The bank will issue notes on the strength of actual cash credit balances in New York. Bills in respect of such balances will only be accepted from first-class houses. The wording of the notes is:—

This note is issued for gold marks, against gold credits which have passed into the possession of the bank and remain at the bank as cover. The face value of the note may be disposed of by transfer. By a gold mark is to be understood one 4-20th part of the U.S.A. dollar.

The notes are being employed for the payment of wages at the port. A charge of 1½ per cent. is being made by the bank, and is explained by the fact that the issue is of an emergency character, and may be withdrawn at an early date. Authority has been received from Berlin to issue notes and coins. It is thought that this authority is liable to be withdrawn should the Hamburg mark be found to interfere with the Rentenmark, but doubt has been expressed as to whether Hamburg would, in this event, submit to Berlin. As regards the clauses in the statutes which authorise the bank to engage in commercial transactions, it is stated that for the present the bank's activity is confined to the exchange of gold mark notes against deposits and credits in sound foreign currency. It may eventually discount bills, and possibly advance money against good commercial securities up to one-third of the capital.

Japanese Trade and Finance.—Cabled advices from Tokyo state that as time goes on confidence is steadily gaining ground in financial circles there. Considerable business activity is caused by immediate replacement needs, and the Stock Exchange has resumed business with a cheerful tone. No large scale reconstruction plans have as yet been set on foot, so that at the moment there is no abnormal demand for financial accommodation, and with the banks still maintaining their cautious attitude, floating credit is abundant. The second Government estimate of the rice crop is 58 million koku, showing a decrease of 2 million koku as compared with the first estimate, and this poor prospect is said to be responsible for a hard undertone in forward transactions. The raw silk market is reported to be rather weak. On November 15th the note issue of the Bank of Japan was 1,269 million yen, as compared with 1,063 million yen a year ago, discounts and advances being 477 million yen, against 189 millions. Japanese exports in October were 136 million yen, and imports 142 millions. Thus there was a small import excess as compared with a large export balance in October, 1922, when imports were 105 million yen and exports 161 millions.

Tin and Tinplate.—Mr Stanley Baldwin has stated that French, Belgian, and German steelmakers, because of their resources and equipment, can undersell British steel by £2 per ton. This conveys the impression that trade is languishing; but actual facts put quite another complexion on matters. The official figures show that the British imports of iron and steel are about 40 per cent. under those for 1913, while exports are only 15 per cent. less, and this week the price of tinplate bars has been reduced to £8 18s 9d per ton, less the usual rebate of 7s 6d. The iron and steel trades generally are well engaged, and the state of the tinplate trade, which consumes large quantities of steel, can be gauged by the fact that the minimum selling price has been raised to 23s 6d per base box, with contracts actually fixed for the first quarter of 1924 at a little over this figure. All the works are well booked up ahead, and with stocks down to about 275,000 boxes the outlook is very favourable. The activity in the tinplate industry has led to renewed buying of tin, and during the last few days the market has ruled strong and active, with the Welsh tinplate makers prominent among purchasers. Prices, both for cash and three months' standard tin, have been over £225, which compares with £207 cash and £204 three months at the end of last month, and £199 for both positions at the close of September. The East has been selling freely, with further sales of the Government-owned tin; but all the metal offered has been easily absorbed, and the outlook for the commodity is very healthy, sentiment both here and in the United States being decidedly bullish, thus confirming previous forecasts that the metal would work to a higher level in the closing months of the year. The recent break in the exchange attracted American buying, and this week Straits tin afloat to New York has been sold at £226 10s, c.i.f., with Eastern sales recorded late in the week at £228. The brisk demand from consumers in a rising market confirms the theory that users everywhere are only lightly covered, and although the Straits shipments for November will probably turn out on a full scale, there will be no difficulty about absorbing all the tin that is offered right up to the close of the year. Statistically, the commodity is remarkably sound, and with the home stocks round about 3,000 tons, or less than half the usual pre-war average, when tin was very steady about £230, well-informed opinion considers the position as good. Quite recently there was a setback to a little below £215, but the market quickly recovered from this temporary depression, and this week there has been a very steady upward movement, with a moderate premium established on the forward position, with actual sales of standard three months over £225. The movement is not based on speculative support, although some influential buying has been witnessed from time to time; but consumers are beginning to realise that there may be some shortage over the next few months if the activity in the tinplate trade continues, and obviously with any reasonable prospects of a change for the better in the Continental position, there is ample room for an

expansion in the European takings. The American buying on a good scale at this time of the year is a very promising sign, and there is bound to be competition for supplies, thus helping the market to maintain a hard undertone for the rest of the year.

Cotton Trade Control.—Our Manchester correspondent writes:—During the past fortnight several meetings have been held in Manchester of the Joint Committee of Cotton Employers and trade union officials which was formed early last month for the purpose of discussing whether any practical steps could be formulated for the betterment of the industry. The Committee is understood to have centred its attention upon proposals for controlling production in the spinning branch of the trade according to the state of demand. The idea has seemed to be that mills should be recommended to curtail output to a certain extent. Those firms that have orders to execute and want to run machinery to a larger extent than the amount stipulated would be compelled to pay levies. The fund created would be used to compensate the workpeople for loss of wages. A system of this kind was in force during the war, when it was necessary to restrict the consumption of raw cotton owing to the smaller imports from abroad. The new scheme, however, has not by any means met with general support. At the end of last week there was a special meeting in Manchester of spinners engaged on Egyptian cotton, when it was decided to oppose any form of control and the payment of levies by that section. This decision has blocked all progress for the time being, and at the meeting of the Joint Committee last Monday it was officially announced that it had been found impossible to formulate any system of control which would cover the whole trade. Further suggestions are being made, and the Conference adjourned in order that the representatives of the employers might consult their respective associations especially as to whether it would be possible to proceed on the lines of sectional control. The general opinion in Lancashire trade circles, however, is that no tangible scheme will result from the discussions which are now taking place. It is realised that the opposition is of considerable weight, and without unanimity a proposal of this kind cannot be carried through successfully. In the meantime the trade position is improving, and drastic action such as suggested is not likely to be necessary.

The Mexican Eagle Incident.—One of those unpleasant incidents which occur every now and then in the Stock Exchange marked the opening of the week in the oil market. It arose in connection with Mexican Eagles. The price started on Monday morning in the neighbourhood of 20s 3d. It is well known that a good many shares were picked up on that basis. Buyers paid 20s 6d or thereabouts for quite a number of Mexican Eagles as soon as the market opened. Shortly afterwards a statement was exhibited in the market from the London agents of the Mexican Eagle Company, giving particulars of an important find of oil, and with details showing that it had been made upon one of the newer fields belonging to the company. The immediate result was a violent rise in the price of the shares. It jumped to 23s, and, on the following day to 24s. Jobbers who had sold Mexican Eagles early on Monday morning at about 20s 6d were caught out, for they had no chance of getting the shares back before the advance occurred. They were faced with the necessity for cutting heavy losses, and it was no doubt due to the fact that some of them elected to do so which led to Mexican Eagles going up in the manner that they did. Stock Exchange jobbers are too well accustomed to take the rough with the smooth for them to complain about making a loss where they anticipate a profit, but, in this particular case, a strong suspicion arose that leakage had occurred in the transmission of the news, and that the information was utilised for the benefit of people who acted before the notice was posted in the Stock Exchange and the news became generally known. The sore feeling which prevailed would probably have gone no farther than expressions of opinion had not some people desired to pursue the matter further. Precedents can be quoted to show what has happened in the past when false news was deliberately spread, and it may be that there are cases

when authentic information, as in this particular instance, has leaked out in advance of official notification, and the Stock Exchange Committee's action has been sought. To trace such leakage to its source is not an easy matter, as anyone may see. Stockbrokers and bankers would need considerable proof of justification for such a serious matter as disclosure of principals' names would be. That the oil market should have lost much money through the use, by outsiders, of a leakage of news is the harder when it is considered that the loss has benefited an unsportsmanlike gamble, but the Stock Exchange spirit is against any admission of its members not being sporting enough to accept the loss without making any fuss about it. The onlooker would fain see the affair threshed out, and have the guilty parties, if there are any, brought to book, their profits attached, and their names published. But at the same time the difficulties of securing these desirable ends are clearly considerable, and the whole business will require the exercise of a good deal of tact on the part of those who deal with it.

India Rubber, Gutta Percha's Year.—A year ago the directors of the India Rubber, Gutta Percha and Telegraph Works Company, Limited, had to present accounts showing a loss of £94,406 on the twelve months' working. The two main causes of this loss were stated then to be (1) further depreciation in stock value and (2) intense foreign competition. The report for the year ended August 31st last shows a marked improvement in affairs, and it would be interesting to know if the intense foreign competition has been overcome or if other markets have been found where foreign competition cannot penetrate. It is perhaps of interest to recall that the foreign competition was mainly over the tyre section of the business. The gross profit of the company amounted to £311,150, which compares favourably with £176,855 in 1913. It is perhaps only fair to add that these profits include refunds of payments made for Excess Profits Duty. But it is unfortunate that the amount derived from this source is not given. The following table shows results over a number of years:—

September 30.	1913.	1915.	1918.	1919.	1920.	1921.*	1922.*	1923.*

* To August 31.

It is proposed to pay a dividend of 5 per cent., free of tax, which will absorb £37,500. Incidentally the ordinary capital is now £750,000, as against £500,000 in 1919. Reserves are now £180,000, including £39,278 shown in our table above. It is good to see this well-managed undertaking once again on the path to prosperity, and we congratulate the directors on the results achieved in a period of trade depression.

Consolidated Gold Fields.—Our mining correspondent writes:—The expectation that this Kaffir finance undertaking would be able to declare a dividend in respect of the year to June 30th proved well founded; but the amount of the distribution—6 per cent., less tax—was not such as to arouse enthusiasm. The accounts indicate that while a slightly higher percentage could have been provided at a pinch, the pinch would have been a tight one. After disbursement of the £90,750 required to cover the 6 per cent., the carry-forward will stand at the increased figure of £41,750. For each of the two preceding years there was no dividend on the ordinary shares; in respect of 1918, 1919, and 1920 the shareholders received 7½ per cent., tax free. The foregoing remarks have reference to the Old—the holding—company. The “New”—the operating

company—last year secured a substantially larger revenue than in either of the two preceding periods, but depreciation once again required a large appropriation. The balance-sheet shows a further expansion in the portfolio, and some noteworthy changes in the cash items. Appended is a summary of the accounts for each of the past three years:—

	Year Ended June 30—		
	1921.	1922.	1923.
	£	£	£
Receipts and profits	429,980	379,380	460,230

Cash	239,510	246,200	119,320
Creditors	259,910	137,650	166,200
		* Deficit.	

The company has, of course, in recent years considerably expanded its field of operations—this being, indeed, the reason for the formation of the “New” concern. In regard to the South African interests, the outstanding feature consists in the almost dramatic change which has come over the position of the Robinson Deep, whose “B” shares have lately been the medium of an active speculation. The prospects of the Sub Nigel have also improved. An interest has been acquired in the Cam and Motor. As regards America, important measures have been taken by the Trona Corporation for the disposal of its output. Good progress is being made by the South American Gold and Platinum Company in the erection of its hydro-electric plant. As indicated a year ago, a large interest has been acquired in an important group of claims on the Comstock lode, California. Following upon its participation in the Trinidad Leaseholds, the Gold Fields has gone into the Roumanian oil industry.

Castner-Kellner Alkali.—Again we have to chronicle further advance in profits for the year ended September 30th last of the Castner-Kellner Alkali Company. The report vouchsafes no information as to the year's trading, or as to the reason for the improvement, but from the table below it will be seen that in the past few years there have been considerable fluctuations in earnings:—

	Profit.	Debtenture Interest.	Renewal and Depreciation.	Reserve Carry Forward.	Dividend.
	£	£	£	£	%
1905	52,358	10,153	23,205	1,000	18,000 .. 4
1909	134,154	9,313	35,000	26,841	63,000 .. 14
1910	164,554	8,986	32,500	44,318	78,750 .. 17½
1911	178,853	8,789	32,500	47,564	90,000 .. 20

1914	174,150	8,275	32,500	21,917	116,458 .. 15½
1915	260,805	8,056	50,000	52,749	150,000 .. 22
1916	262,208	7,706	50,000	23,252	181,250 .. 20
1917	263,322	7,648	50,000	45,078	200,000 .. 20
1918	261,339	7,598	50,000	48,819	200,000 .. 20
1919	190,655	7,598	50,000	51,876	130,000 .. 13
1920	283,854	7,598	60,000	48,132	220,000 .. 22
1921	153,086	7,512	50,000	13,706	130,000 .. 13
1922	249,225	7,436	nil	55,494	200,000 .. 20
1923	272,990	7,351	nil	101,331	200,000 .. 20

No addition is made to the depreciation reserve account, which at £737,500 is considered to be ample by the directors. Our figures of “Reserve and Carry Forward” include a sum of £75,000 “to be carried to a suspense account.” A year ago we drew attention to the fact that the balance-sheet might have shown a more liquid position. This is again noticeable this year. Debtors and debit accounts are £169,272, while creditors and credit accounts are £678,782. Cash at bankers and in hand amount to £49,224. A detailed analysis of the balance-sheet is given on another page.

Malayan Tin Results.—The annual statements of several of the British Malayan tin mining companies have been issued this week. As the period covered embraces the early

part of the current year, when the price of tin ruled high, the financial outcome of operations naturally shows a great advance upon that of the two preceding sessions. Thus the Malayan Tin Dredging—which also benefited from the starting up of a new dredger—secured a profit of £36,500, as against no more than £3,100 for 1921-22 and £20,700 in 1920-21. Last year's dividends—2s per share—represent only £18,000, or the same as paid for 1920-21, £25,400 being written off and £20,000 placed to reserve. The reason for the conservatism of the directors in the distribution of profits is to be found in the financial position; indeed, it is intimated that the completion of the No. 6 dredger will entail "financial arrangements." The second undertaking—the Southern Perak—is a subsidiary of the first. It did not commence tin-mining operations until September, 1922; and, as usual in such cases, various difficulties had to be overcome. Still, the company secured a profit of £14,700, out of which the shareholders received two distributions of 1s each. Costs absorbed rather less than half the revenue, the profit being 17 cents per cubic yard. Both undertakings have secured additions to their ground. The third concern is the Pahang Consolidated, which differs from the others in that its yield is principally derived from lode mining. During the war period, and the post-war boom, the shareholders received substantial dividends, the rate on the participating preference shares ranging from 12 to the maximum of 15 per cent., and on the ordinary from 15 to 20 per cent. For both 1920-21 and 1921-22 only the fixed preference dividend was paid, but in respect of the year ended July 31st last 7 per cent. has been declared. The profit figures at £45,100, as against very small amounts in each of the two preceding financial sessions, the improvement being due to the recovery in the price of tin, supplemented by a reduction in working costs. Said two factors, as regards 1923 compared with 1922, more than offset a decline in both the tonnage of ore treated and the percentage of tin won. These results are the more satisfactory in view of the fact that during the first four months of the past year operations were curtailed. As usual, development in the various properties has been attended with mixed results, but in the principal mine the upper levels have furnished good supplies of ore, while the indications at depth are favourable. An increased yield has been secured from alluvial deposits. Although the Chen-deriang secured nearly 400 tons of black tin, its net profit did not reach £1,000. Of course, there is no dividend.

Scotch Whisky Trade.—An Edinburgh correspondent writes:—Although, judging from the profits declared by the distillers and bigger distributing houses in the Scotch whisky trade, a very fair degree of prosperity is being enjoyed, there is too good reason to fear that the industry is hastening towards one of its periodical crises. The consumption at home under the influence of the paralysing spirit duty of 72s 6d per proof gallon is steadily dwindling, and is now down to, approximately, 11,000,000 proof gallons per annum, as compared with well over twice that quantity before the war. The exports in the same period have declined from over 10,000,000 gallons to 6,500,000 gallons per annum. Some idea of the change that has taken place in the statistical position may be gleaned from an examination of the figures of the last eight years. If those eight years be divided into two equal periods it will be seen that, whereas in the period 1916-19, which included one year in which spirits were being produced both for munitions and potable purposes, two during which spirits were being produced almost solely for munitions, and one when the output was for potable and commercial purposes only, the production amounted to 82,889,000 proof gallons, which had increased in the next period, viz., 1920-1923, by 20,631,000 gallons to 103,521,000 proof gallons, practically the whole of which was for potable purposes. The removals from bond in the same periods showed a movement in the diametrically opposite direction with fluctuations of an even more violent nature, the total for the second period being only 75,373,000 proof gallons, as against 115,072,550 proof gallons in the first period, showing a decline of no less than 39,698,550 proof gallons. The net result was that in the first period of four years the production was 32,182,000 proof gallons less than the removals, but in the second period it has ex-

ceeded the removals by 28,147,460 gallons, raising the stock in bond in Scotland to 110,261,000 proof gallons, a quantity practically the same as that held in bond in 1913. Despite those figures, the distilling season 1923-24, which runs from October to June, opened with quite a rush by bonders to place filling orders, the North of Scotland Malt Distillers' Association having recommended its members to adhere to last year's flat opening price of 5s 6d per proof gallon, less allowances. The first impression was that there would be another bumper year's output of somewhere between 27,000,000 and 29,000,000 proof gallons, but subsequent experience has shown that bonders were not so keen to place orders for the second or third-rate whiskies even at a price substantially lower than that recommended by the association. The result is that the producers of those second and third-rate whiskies are still anxiously looking for orders, knowing that those already booked will only take up a proportion of their output. The above remarks apply more particularly to the Highland distillers. The producers of the other three categories of malt whisky have had widely varying experiences. The Islay distillers are well booked up for the season, the Lowland malt distillers fully up to, if not in excess of, last season, and the Campbeltown distillers very indifferently indeed. The outlook for the malt whisky distilling industry beyond the current season is not too good. Everything points to the conclusion that the stocks in bond are now as large as is consistent with safety, and with the market prices of matured and maturing malt whiskies now definitely on the downgrade, it is doubtful if bonders will be so ready in the latter part of the current season to place filling orders unless there is a substantial improvement in the consumption.

THE Free Trade Union announces that, owing to the General Election, the Free Trade Conference proposed to be held on November 28th has been cancelled.

THE Universities Committee of the Imperial War Relief Fund for combating disease and distress in the war-stricken areas of Europe and Asia appeals for simple gifts of necessities, which should be addressed to the committee at 71 Southwark Bridge road, London, S.E. 1.

VISCOUNT BURNHAM, C.H., will deliver an address on "The West Indies" before the Royal Society of Arts (Dominions and Colonies Section), on Tuesday, November 27th. The chair will be taken at half-past four o'clock by Lord Askwith, chairman of the council of the society.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, Northumberland avenue, W.C. 2, on Tuesday, November 27th, at 4 p.m., at which a paper on "The Gambia, Our Oldest West African Colony" (with lantern illustrations), will be read by Captain C. H. Armitage, C.M.G., D.S.O., Governor of the Colony. The Right Hon. Sir Frederick Lugard, G.C.M.G., C.B., D.S.O., will preside.

Oversea Correspondence.

UNITED STATES.—FEDERAL RESERVE BOARD RESTRICTS BRANCH BANKING—COMMODITY PRICES—COTTON GINNING—SEPTEMBER RAILROAD EARNINGS—BUILDING ACTIVITIES.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 12.

DURING October commodity prices, on the average, showed another small increase. Bradstreet's Index Number for November 1st was \$13.1378, representing an advance of only three-tenths of 1 per cent. over October 1st, and of 2.4 per cent. over August 1st, but a decline of 1.5 per cent. from November 1st of last year. As compared with the low point of June 1, 1921, the net gain in the general price-level is 23 per cent., while the increase over August 1, 1914, is 50 per cent. The present index number, however, is still 37 per cent. below the peak of February, 1920. The irregular price movement last

month is shown by the fact that eight of 13 groups of commodities declined, and the remaining five advanced. Twenty-seven individual staples worked out higher, while 36 went lower. The slight net gain indicated by the November 1st index number was caused largely by seasonal advances in some foodstuffs, notably provisions, and a rise in textiles, chiefly cotton and cotton goods. Breadstuffs, live-stock, and oils made small gains. Among commodities showing declines were hides and leather, metals, fruits, chemicals, naval stores, coal and coke, and building materials.

October witnessed a substantial increase in building activities throughout this country. Preliminary returns received by Bradstreet's from 156 cities reveal a heavy gain in building permits and values, as compared with the preceding month and with October a year ago. The total value of new buildings for which permits were granted in those cities last month amounted to \$243,768,024, as against \$207,523,357 at the same cities in September, and \$195,571,468 in October, 1922.

Railroad earnings for the month of September made another excellent showing, although not so good as in August. Net operating income of the 194 Class I. carriers totalled \$92,238,400, representing an annual return at the rate of 4.46 per cent. on their tentative property valuation as fixed by the Interstate Commerce Commission for rate-making purposes, including additions and betterments up to January 1, 1923. In August the same roads earned \$98,343,200, or 4.94 per cent., and in September of last year only \$58,677,600, or 2.90 per cent. In making comparison with September a year ago account should be taken of the fact that the shopmen's and coal-miners' strikes, then in progress, adversely affected earnings. Statistics compiled by the Bureau of Railway Economics show that carriers in the Eastern district had a net operating income in September equivalent to 3.93 per cent. annually on their valuation, those in Southern territory 5.20 per cent., and in the Western district 4.86 per cent. Twenty-two railroads were operated at a loss, as against 16 which reported operating deficits in August. Gross earnings of all the Class I. railroads in September totalled \$545,502,700, an increase of \$44,620,000, or 9 per cent., over the same month of last year, while operating expenses of \$415,983,000 were \$7,070,600, or about 2 per cent. greater. For the first nine months of this year net operating income of the roads aggregated \$718,949,000, or an annual return at the rate of 5.27 per cent. on their valuation, as compared with \$529,470,000, or about 3.96 per cent., for the like period of 1922. In the Eastern district the total was \$377,353,000, or 5.84 per cent.; in the Southern district \$96,049,700, or 6.21 per cent., and in the Western \$245,545,000, or 4.35 per cent.

At a meeting of the American Railway Association, held here last week, and attended by executives of 94 railroads whose mileage comprises about 95 per cent. of that of all Class I. carriers, it was decided to continue in 1924 the programme of intensive development which was planned for this year, and which has been carried out with such remarkable success. Figures made public by the association show that record-breaking expenditures for equipment and supplies were made this year. The total reached \$1,059,440,000. In addition there will be carried over into 1924 appropriations, made this year for capital expenditures, amounting to \$243,804,000, or a grand total of \$1,732,516,836 expended or authorised for capital improvements during 1922 and 1923. Such expenditures this year for increased facilities, plus those for fuel, materials, and supplies used in current operation and maintenance, totalled more than \$3,100,000,000. That sum did not include direct outlays by the carriers for labour, but went to the country's industries. As the railway association correctly points out, such an enormous expenditure was into 1924 appropriations, made this year for capital expansion of business in the United States, and to the greater employment of industrial labour, which, in turn, was a primary factor in increasing domestic demand for all kinds of products.

The latest report of the Census Bureau, showing that only 7,554,578 bales of lint cotton were ginned to November 1st, fully confirms statements heretofore made that the cotton

situation is most acute; it is even more critical than the Department of Agriculture's last estimate of a total crop of 10,248,000 bales indicated. If that forecast by the Government is to prove correct, Texas, Arkansas, Oklahoma and Missouri, according to a competent authority, must actually produce 5,866,000 bales. In view of all the circumstances, it is extremely doubtful that the actual harvest will reach the Government's forecast of 10,248,000 bales.

Under a new ruling made by the Federal Reserve Board in Washington, and effective February 1, 1924, branch banking activities of State banks which are now members of the Federal Reserve system, as well as of those which become members after that date, will be greatly restricted. State banks already in the system will not be permitted to establish additional branches or offices thereafter outside of the corporate limits of the city or town in which the parent bank is located, or territory contiguous thereto, and similar restrictions will be imposed on all banks applying for membership. The ruling does not affect national banks, whose operation of branches is already limited by Federal law. After an exhaustive study of this problem, the board concluded, in substance, that the unlimited operation of branches gives to banks organised under liberal State charters such competitive advantages over "unit banks" which are members of the Federal Reserve system as to impair considerably the latter banks' usefulness, if not ultimately result in their extinction. "The good of the system cannot be observed," the board remarks, "by the operation within it of a group whose activities must essentially endanger the very existence of another group. A house divided against itself cannot stand." The action of several large banks in withdrawing from the Federal Reserve system and reorganising as State institutions, to secure advantages resulting from the establishment of branches, has caused some concern lately, and probably impressed upon the board the necessity of adopting the policy indicated. The new ruling is considered by the board to offer "as fair and reasonable a basis of compromise as is practicable under the present laws, both State and national." It does not give national banks facilities equal to those of the member banks operating under the laws of certain States, the board explains; but it does relieve national banks from the competition of State banks operating from headquarters in remote localities. The ruling, in the board's opinion, goes as far as the present national and State banking laws permit in producing a condition of equitable adjustment. "Complete equity" in the matter, the Federal Reserve Board says, "can be established only by the modification of either State or national laws, or perhaps both." The board, it may be observed, has always urged amendments to the National Banking Act, and to the Federal Reserve Act, with a view to broadening the powers of national banks.

Among the new securities placed on the investment market here for subscription during the past few days was a block of the capital stock of the Mercubank of Vienna, Austria, consisting of 100,000 shares recently acquired by two New York banking houses.

FRANCE.—FINANCIAL POSITION—FOREIGN TRADE
—RENTS.

(FROM OUR CORRESPONDENT.)

PARIS, November 21.

THE Minister of Finance, M. de Lasteyrie, was optimistic when he appeared before the Finance Commission of the Chamber last Thursday. He was able to announce that the ordinary Budget for the current year has been balanced by the yield from taxation, and that, so far as present indications go, there is good reason to believe that an equally satisfactory result will be achieved in regard to the Budget for the coming year. In spite of the diminution in the yield from some of the "exceptional resources," which was naturally to be expected, in view of the coming expiration of the special tax on war profits and the revenue from the long drawn liquidation of war stocks, the revenue for the first ten months of the present year (plus the recovery of overdue assessments for 1922) has been over 2½ milliards more than that for the corresponding period of last year. Of this total increase, no less than 933,000,000 is in respect of revenue from income-tax. The yield from taxation, the Minister announced, will amount this year to 21 milliards, plus about two milliards from exceptional resources.

Another source of satisfaction was the fact that the recent issue of Treasury bonds was taken up to the extent of 6,040 millions. This, added to the 4,440 millions of fresh money obtained by the previous issue last spring, has given the Treasury a total of 10,480 millions of francs of available cash, in addition to the sum received from taxation. Referring to the advances made to the Treasury by the Bank of France, the Minister explained that these have been reduced from 26,600 millions in 1920 to 23,200 millions, while the total amount of notes in circulation has been reduced from 39,645 millions in 1920 to 37,848 millions at the present date. This latter figure is an advance on the total of 36,847 millions, to which the note circulation had been reduced in 1922, but this "slight increase," the Minister explained, would be speedily got rid of in view of the money now available.

French critics of M. de Lasteyrie do not take quite the optimistic view expressed by the Minister himself, and are questioning whether the Treasury will not again find itself unable this year to reduce the advances made to it by the Bank of France by the two milliards per annum by which it was stipulated they must be diminished under the law of December 29, 1920, until the 27 milliards at which they then stood have been completely paid off. In 1921 the two milliards was duly reimbursed, but last year the Treasury found it impossible to reduce the total by more than half the legal amount. It was then announced that this partial compliance with the law must be regarded as purely exceptional. The question has been raised as to whether even a single milliard can this year be paid off, in view of the suspicion that always prevails, owing to the curious manner in which the French national accounts are kept, that a good deal of the money now available on paper may possibly have been already absorbed by other claims. Last year, when the Treasury had to make a fresh arrangement with the Bank of France, under which it arranged to pay off one milliard, instead of two, the total advances on November 23rd stood at 22,600 millions, the legal limit at that date being 25 milliards. On November 15th this year, when the legal limit stood at 24 milliards, the total advances stood at 22,900 millions, or within 1,100 millions of the limit, as compared with 2,400 millions last year, so that at present the Treasury would appear to be in a less satisfactory position than 12 months ago on this particular account.

The French foreign trade returns for the first ten months of 1923 have been issued this week. The figures for the month of October, which are included in these returns, are the highest both for imports and exports for several years past, but leave the trade balance against this country at practically the same negligible figure as for many months past. The increase in imports in October was principally in raw materials, which rose from 1,651,500,000 in September to nearly two milliards, and in foodstuffs (604,000,000 in September, against 721,000,000 in October). Exports of manufactured goods rose on the

month from 1,380 millions to 1,518 millions, of raw materials from 683 to 826 millions, and of foodstuffs from 222 to nearly 300 millions, the balance of the increase in exports being in postal parcels.

The detailed figures for the ten months, as compared with those for the corresponding period of 1922 and 1913, both in value and in tonnage, are as follows:—

IMPORTS.	First Ten Months of					
	1913.		1922.		1923.	
	Value in 1,000's frs.	1,000 Metric Tons.	Value in 1,000's frs.	1,000 Metric Tons.	Value in 1,000's frs.	1,000 Metric Tons.
Foodstuffs.....	1,439,169	4,376	4,632,561	4,098	5,949,862	4,556
Raw materials.....	4,032,801	30,778	10,641,560	36,333	16,163,223	38,983
Manufactured goods.....	1,360,334	1,272	3,294,593	1,384	3,507,589	1,242
Totals.....	6,832,304	36,426	18,568,714	41,815	25,620,674	44,781
*Coal.....	482,850	18,893	1,504,509	23,480	2,980,053	25,084
EXPORTS.						
Foodstuffs.....	667,095	1,157	1,450,303	734	2,533,857	1,058
Raw materials.....	1,522,691	14,777	4,652,738	15,378	7,378,496	16,280
Manufactured goods.....	3,002,026	1,884	10,197,207	2,080	13,140,696	2,454
Postal parcels.....	447,138	28	1,076,236	21	1,323,201	25
Totals.....	5,638,950	17,846	17,376,484	18,213	24,376,250	19,817

From these data it will be seen that the adverse trade balance against this country, which was equivalent in 1913 to a deficit of 21.2 per cent. in the exports, has been reduced to a deficit of 5.1 per cent., and this in spite of the fact that a large proportion of the imports have had to be paid for during the past ten months in francs at between 70 and 80 to the £, whereas in 1913 the franc was at par. The other side of the exchange factor is, of course, that France has been able during the past two or three years largely to increase her exports by reason of the depreciation of the franc in which her export prices are quoted. Striking features of the latest returns are (1) that whereas raw materials formed over 16 milliards of the imports out of a total of 25½ milliards, this category of merchandise figures in the exports for the same period for 7,378 millions only, out of a total of 24,376 millions, the rest being made up of manufactured goods (13 milliards), foodstuffs (2½ milliards), and postal parcels (1,323 millions); and (2) that, whereas the value of imported manufactured products has risen only from 1,360 millions in 1913 to 3,507 millions in 1923, the value of exported manufactured goods has risen during the same period from 3,002 millions to 13,140 millions. Further, whereas the tonnage of imported coal has increased since 1913 by only about 33 per cent., the French have had during the first ten months of this year to pay over 500 per cent. more for the coal they have imported. The tables given above do not, of course, include the value of the French "invisible" exports comprised in the money spent by foreign tourists here, which, it is held, would more than wipe out the "visible" deficit rendered apparent from the trade returns.

The new rent law which is now being discussed by the Senate is designed to put an end to the anarchy that has prevailed between landlords and tenants since the beginning of the war. During the war there was in this country what was for all practical purposes a complete moratorium in regard to the payment of rent. This was inevitable, in view of the fact that practically every male householder was mobilised, and that business was largely at a standstill. It was subsequently laid down as a principle that, so far as pre-war leases were concerned, the war years should not be calculated as part of the term of the lease. With the Armistice, a series of temporary laws came into force progressively, all designed to protect the tenant, by prolonging temporarily his lease, or giving him fixity of tenure for the time being, and to safeguard the interests of the landlord by giving him powers to increase within certain limits the rent payable, in view of his increased taxation and other liabilities. This series of laws was passed to tide over the interval until matters had settled down to such an extent that a new general law affecting rents could safely be drafted. This law, it is considered, may now be regarded as practically possible. Proposals were approved by the Chamber last session, and are now being considered by the Upper House. In a report on the Bill that has just been presented to the Senate, it is recommended that in future, so far as the Department of the Seine is concerned, rents shall not exceed their pre-war figure by more than 70 per cent. in the case of holdings

then below 3,000f per annum, or 80 per cent. in the case of holdings rented before the war above 3,000f. For the rest of France the base figure, it is proposed, shall be fixed at 1,500f a year, and that property owners shall be allowed similar percentages of increase. In the event of owners having expended money in improvements, they should be allowed, it is proposed, to add a proportionate amount to the limits set forth above, while tenants whose rents have been increased above the limits suggested should have legal right to reduction to those limits.

GERMANY.—POLITICS—NEW CURRENCY AND
PRICES—REICHSBANK—FINANCES—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 20.

CONDITIONS and prospects get worse every day. The Stresemann Cabinet is being angrily attacked by the Socialists, ostensibly on the old ground that it upholds military rule in Socialist Saxony and Thuringia, while tolerating the Bavarian secession, but in reality because the Cabinet is considered to have moved to the right, in anti-Labour direction. A Cabinet resignation may come any hour. The provisional Rentenmark currency reform has not slackened the social strain, and unemployment is still increasing. The last detailed figures (for October 31st and therefore far below the present truth) show 11.51 per cent. of fully unemployed in the textiles branch, 38.56 in the tobacco, 21.26 in the wood branches, 19.02 among printers, and 18.9 among the metal workers (including heavy iron and steel). In the textiles branch over 62 per cent. of the employed are working short time, metal branch 51 per cent., printers 52 per cent., wood workers 33 per cent. The cause of this is not the currency collapse. In some measure it is the enormous price rise associated with the gold calculation system and the currency reform. The main cause is the persistent wreckage operations of the French. French policy in occupied territory seems now to be directed exclusively to wreckage; its aim is no longer merely to compel surrender to demands by starving the local population, but the actual extermination of this population. The negotiations for resumption of work have broken down only because the French insisted on terms which by their very nature make resumption impossible. The best way to characterise the situation on the Ruhr is to report that the French commander, General Degoutte, announces in a proclamation his intention to prevent unemployment by putting employers who discharge men into gaol for five years. The Stresemann Cabinet is reported to be considering a scheme for giving occupied territory a measure of self-government in regulation of economic questions; but this, if put through, will only shift the nominal burden. As long as the French continue their policy of destruction, the Ruhr will not work, and neither a local government nor the Republic will be able to support the workless. The position as regards foreign credits is not yet fully clear. Although such credits may relieve the immediate strain, the adoption of a policy of international support with the mere aim of preventing starvation is not politically advisable; it will only have the effect of postponing the ultimate radical settlement of Peace Treaty questions, which is inevitable if general disorder and starvation in Central Europe are not to be the rule.

The provisional currency reform, the issue of the Rentenmark, was realised on the 15th by payment of a part of official salaries—for the first week 30 per cent.—in the new currency. Rentenmarks have also been sold to certain classes of traders, mainly food dealers, to enable them to get supplies from farmers, who have practically repudiated the paper mark. Although nearly a week has passed, the general public has hardly seen the Rentenmark; but whether this is due to hoarding, as was the case with the gold loan currency, is not yet clear. An official rate of conversion into Rentenmarks for paper marks has not yet been declared; in theory the Rentenmark is held to be equal in value to a gold mark, and it is so accepted by all State institutions. Its paper mark exchange is therefore to-day (the dollar being 4,200 milliards paper marks) 1,000,000,000,000 paper marks, which is also the multiplication rate for "valorised" taxes, for railway and other gold mark charges. It is not yet known whether the

THE MERCANTILE
BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised £3,000,000

Paid Up Capital 1,050,000

Reserve Fund and Undivided Profits 1,352,105

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

Rentenmark will be excluded from occupied territory. The big banks are accepting Rentenmark accounts, and allowing interest at 4 per cent. a year at one day's notice of withdrawal, 6 per cent. for deposit accounts at one month's notice. The post-cheque system conducted by the post offices will be converted from a paper mark to a Rentenmark basis. The Rentenmark notes so far issued are in denominations of 1, 5, 10, 50, 100, 500, and 1,000 Rentenmarks. Reichsbank Rentenmark bank credits will henceforth be granted to private individuals accompanied with the so-called "stable value clause," or "gold clause," compelling the borrower to pay back an equivalent gold value—in other words, admitting the possibility of a drop in the Rentenmark's gold value. This was insisted on by the Rentenbank as the ultimate creditor, while the Reichsbank was content to set Rentenmark and gold mark on the same basis.

The prospects of the maintenance of the Rentenmark's stability are difficult to judge. The Rentenbank expresses its intention to check any assault from the credit-taking Government's side, and Herr Stresemann says truly that (at least for the moment) the Republic is under a sort of financial control by the Rentenbank. The Rentenbank has issued a statement confirming this; the bank will do everything possible to maintain stability; it demands from the Government estimates in gold with justification of every item, but it admits that it has granted credit of an additional 100,000,000 Rentenmarks (for Ruhr support, the Government having postponed the date at which support is to cease) for partly "political" and "patriotic" reasons. In fact, it seems harder to abandon the Ruhr to complete starvation and anarchy than it is to resume inflation. The Rentenbank, however, adds that this is the last time. The Cabinet has appointed Dr Hjalmar Schacht, a prominent private banking man, as "Currency Commissary," with an advisory voice in the Cabinet. A decree subjects the Rentenmark and the earlier "stable" provisional currencies to the existing exchange regulations. The buying of foreign currency with any of these is subjected to the same limitations as is buying with paper marks. Lending any of the stable monies on security of foreign currencies is forbidden; stable money credits to persons outside Germany may be given only with sanction of the Reichsbank, and stable money exceeding a value of £10 sterling may not be sold to persons abroad.

To decide what precisely is meant by stability of the Rentenmark is rather a puzzle. Stability of this currency as against any foreign currency of stable gold value can at present neither be affirmed nor denied. No direct dealing is done; if the Rentenmark is assumed, according to official doctrine, to be a full gold mark, the gold mark itself has a wholly arbitrary value in paper marks, and the latter alone have any kind of foreign exchange. Until to-day the Government held the dollar at around 2,500 milliards, on the basis of which the paper mark was officially held to be depreciated to the 1-600,000,000th; but this rate has to-day been changed, the dollar being, without any reason, put up, as stated, to 4,200 milliards. The qualification "without any reason" raises the whole questions of the new currency's stability. The Berlin official valuations of the paper mark are neither based on supply and demand on the Bourse, nor on any real paper mark exchange abroad, nor on the buying power of the paper mark at home. In fact, all recent Berlin paper mark valuations have been far above buying power parity, about 400 to 500 per cent. above it. Even at the "boot-

legger" or "black Bourse" rate (at which practically all dealing is done) the cost of necessities is 100 to 200 per cent. over the cost in England. Thus, while the Rentenmark has no foreign exchange, it is, through Government action, already depreciated to at most half of its value at home, and if quoted abroad on the basis of its buying power in Germany, it would have a depreciated quotation. What will be the solution of this anomaly no one can see. The cause of the anomaly is not merely the fact that the Government fixes an arbitrary rate, but that it does this at a time when it is creating buying power more rapidly than ever; turning out, that is, Rentenmarks each with (officially) a billion times the buying power of a paper mark, and acting as if inflation had ceased, and as if, therefore, the foreign exchanges should not be put up, or only put up slowly. The operation of this is visible in the fact that in the last few days Germans have apparently been able to pay easily the amazing paper-mark prices demanded in the shops, while foreigners with good money have been frightened off by demands for the equivalent (at official rate) of 12s a lb for inferior tea. This condition resembles, but goes far beyond, that prevailing in Soviet Russia, where, with the cessation of any regular exchange for the rouble, the gold cost of living at the actual practised exchange rose extremely high. The right exchange of sterling to-day on a price parity basis is probably at least 60 billion marks.

The Reichsbank has opened dollar deposit accounts, which are to replace the "account mark" (*Kontomark*) accounts recently instituted. Payments in in good currencies are "valorised" in dollars, and payments out are made either in dollars or in paper marks. The limit for Darlehns loans has been raised to three trillion marks. The Reichsbank's weekly statement for October 31st came out late (only yesterday), and therefore gives no idea of totals to-day. Circulation on the 31st was 2,496,822,909,038,875,000 marks; commercial bills discounted, 1,058,129,855,323,196,000 marks; Treasury bills, 6,578,650,938,818,348,000 marks; advances, 41,787,531,788,485,000 marks. Outstanding Darlehns advances totalled 14,874 million marks. The finances are still heavily burdened by cost of support of the Ruhr. Whether the Government, assuming no resumption of work, will have the nerve really to cease further payments after the new 100 million Rentenmark is exhausted is doubtful; if not, the Rentenmark must be considered in danger. The repayment of the 26 per cent. to exporters under the English Reparations Recovery Act has finally ceased. Apart from that, it is impossible to see how Germany can export, as long as currencies received for exports must be delivered to the Reichsbank in exchange for a fraction in paper marks of their value. A provisional stable-currency Budget for the 4½ months between the introduction of the Rentenmark and the end of the financial year (March 31st next) is being drawn up. Postal rates are to be put on a gold mark basis, the internal letter rate being 10 gold pfennigs, as before the war. Taxes on consumption have also been put on a gold basis, being payable in paper marks according to the multiplier day by day fixed according to the dollar exchange. This system is far superior to the earlier system of merely multiplying the paper mark rates at long intervals; but through artificially holding down the foreign exchanges, and therewith the multiplier, the State loses, all the more so because its expenditure does not follow the official, but the "bootlegger" rate, and something more. Henceforth the sugar tax is 35 per cent. of the producer's price, or, at 42 gold marks per 200 metric lb, 14.70 gold marks, against 14 marks tax on a price of 24.73 marks before the war; salt tax, 45 per cent. of the wholesale price, or at a gold price of 1.64 gold marks, 0.74 gold mark tax (before the war 12 marks); matches, 60 per cent. of producer's price, or 1 gold pfennig per box, against 1.5 pfennig before the war. The floating debt on October 31st was 7,019,640,169,000,000,000 marks, against 46,844,781,000,000,000 marks at the close of September. The October third decade financial report established yet one more record, revenue from taxes being less than one-thousandth of expenditure. Taxes yielded 5,908,178,601 million marks, funded debt (increase gold loan) yielded 47,947,298,782 millions, floating debt

borrowings 6,499,671,137,673 millions, expenditure 6,553,521,615,256 millions, of which 2,036,704,787,983 millions loss on railways and 245,348,814,945 millions loss on posts. These astronomical figures have no absolute meanings; the fact of moment is the ever lower ratio of revenue to expenditure.

AUSTRIA.—POLITICAL SITUATION—STATE FINANCE —INDUSTRY—BANKS—MONEY AND STOCKS.

(FROM OUR CORRESPONDENT.)

VIENNA, November 1.

THE General Elections, anticipated with so much anxiety, have taken place without bringing any essential change in the structure of the two leading political parties—the Christian Socialists and the Social Democrats. The Pan-Germanist party, on the other hand, has suffered heavy losses as the Nationalist ideas propagated by them do not meet with approval in Austria at present, and they had to give up a number of their constituencies to the two above-mentioned parties. The candidates of some smaller parties (Democratic party, Jewish party, &c.) had practically no electors. Thus the bourgeois parties will continue to have the majority in Parliament, whilst in the Vienna Municipal Council the Social Democrats will remain in power. For many people the result of the elections was a disillusion because one had expected a greater reduction in the Social Democrat votes, owing to this party's hostile attitude towards the Geneva Reconstruction programme and its policy of heavy taxation. The Social Democrats, however, were able to increase the number of their followers by cleverly taking advantage of the argument that the Christian Socialists, when in power, would abolish the "Tenants' Protection Act," which would cause an enormous increase in rents. At any rate, there is no necessity for the Chancellor, Dr Seipel, to resign, although his Cabinet might undergo some slight alteration.

The reconstruction of the State finances is making good headway, inasmuch as new sources of revenues have been created by repeated increases in taxes, tariffs, and fares. The various State monopolies and enterprises have finally succeeded in understanding the commercial principle that at least the cost of the upkeep must be covered. Telephone fees will soon be increased 100 per cent., postages 60-70 per cent., and great increases in goods tariffs and fares are at present under consideration; also the reduction in the number of superfluous officials has made good progress. The improvement obtained in the Budget is shown by the fact that the deficit for July, which was anticipated to be 299.8 milliard kronen, amounted in reality to only 85.9 milliard kronen.

Industries in general are fully occupied owing to the lack of German competition on the home market and abroad. The number of unemployed has again diminished from 79,956 to 77,923 in the whole of Austria. Only some branches of industries have difficulties in the supply of dyes, chemicals, and other German products which they require as raw materials. Also Austrian trade generally has become brisker, although the deficit of the balance of trade has not been reduced, imports having increased more than exports. During the first eight months of this year goods were imported to a value of 956.5 million gold kronen, whilst the exports amounted only to a value of 593 million gold kronen, so that the import excess amounts to 363.5 million gold kronen. A

thorough change of these conditions cannot be expected until Austria's import of coal can be reduced by the development of water-power generated electricity. In this respect it is interesting to note that negotiations are in course at present with a strong Italian group with a view to expedite the carrying through of the Styrian water-power scheme.

Although money became much cheaper on the Stock Exchange recently, and week-to-week money was offered at $\frac{3}{8}$ per cent. (at the beginning of October the rate was 2-2½ per cent.), industries and trades suffer under the high rates of interest charged by banks for overdrafts and credits. The blame for this is mainly on account of the policy of the National Bank, which observes too great a severity in discounting drafts, as is proved by the following figures: in the year 1912 the former Austro-Hungarian Bank held in its portefeuille, for Vienna alone, bills up to an amount of 115 million gold kronen; on October 7, 1923, the National Bank's holding of bills for the whole of Austria (not only for Vienna) amounted to only 950 milliard paper kronen = 66 million gold kronen. The banks, however, are treated much more indulgently by the National Bank, which by this policy forces industries and trades to apply in most cases to the banks instead of obtaining credits direct from the National Bank. The banknote circulation on October 23rd amounted to 6,136 milliard paper kronen.

Since the middle of August a gradual decline in all quotations on the Vienna Stock Exchange has set in, which became more accentuated during the last fortnight; the depreciation in some securities amounted to 40-50 per cent. The reason for this slump is to be found partly in a certain over-speculation, partly in the critical situation of Germany, and partly in the fact that the Vienna market has been over-burdened with new issues; the depreciation of the Polish mark and the limited absorbing capability of the Budapest market have had the effect that many companies of the neighbouring Succession States have tried to place their issues on the Vienna market; a part of these issues has been offered to the public at too high prices, and remained, therefore, unsold in the market.

In the middle of this month sterling began to fall because the repeated rumours about the possibility of an inflation policy on the part of the British Government has caused many people to sell their English money or bills or to convert them into dollars. Besides, the complete breakdown of the German mark and the progressive depreciation of the Polish mark have influenced the money market; Polish capital continually tries to purchase large amounts of high-valued currencies on the Vienna market.

On October 1st the rate of exchange was 322,000 kronen to the £, and on the 30th 318,500 kronen to the £.

CANADA.—GENERAL CONDITIONS—PLENITUDE OF MONEY—BETTER TRADE PROSPECTS—THE SOUTHWARD EXODUS—GOVERNMENT AND AMERICAN SHIPOWNERS—GRAIN PRICES—SIX ROYAL COMMISSIONS.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 5.

THE *Financial Post* of Toronto in its issue of November 2nd indulges in a very optimistic survey of the financial and economic condition of Canada. It puts the value of the 1923 field crops at \$1,000,000,000, which is \$40,000,000 more than in 1922, and the yield of the produce of factories, forests, mines, and fisheries at \$2,100,000,000, an increase of \$215 millions. In addition, there has been an increment of 85 million dollars in the value of livestock and poultry. It also calculates that during the month of November there will be available for distribution dividends totalling at least 50 million dollars, and the balance of the principal of the maturing Federal loan, which was not converted. The Ontario Government, encouraged by Mr Fielding's success with his domestic loan, has just come to the Canadian public for another 40 million dollars, and apparently is having no difficulty in raising it. But the *Financial Post* estimates that, apart from these public loans, there will be, without taking any account of the gains of the year's industry, at least 140 million dollars available for investing and spending. As a substantial

proportion of this, as well as the crop money, will pass to the retail trade, and into commercial circulation, it forecasts a stimulus to business during the closing months of the year.

But it is difficult to reconcile the evidence of prosperity put forward by the *Financial Post* with the further evidence of the continuance of the southward exodus to the United States. The *Mail and Empire* of Toronto quotes figures from the U.S. Immigration Department, showing that from January 1st to September 30th no fewer than 110,000 Canadians paid the headtax necessary to enter the United States. But it is a notorious fact that thousands enter the U.S. as transients, and never return, and many more slip through the wide gaps in the long frontier which the immigration officials cannot close. The total volume of emigration to the United States from Canada in the first nine months of 1923 cannot be far short of 150,000, and as the rate of exodus for September, when outdoor work is plentiful, was double that for January, the prospects are that before the year closes Canada will have lost 200,000 people to her neighbour. The rate of immigration has been increasing, but the total number of immigrants for the year will not exceed 120,000, and the outflow is not therefore made good. There are subsidiary evidences of stagnation or decline in population.

Faced with the imminence of a serious grain blockade at the head of the Great Lakes, and deluged with a rain of protests from the Winnipeg Grain Exchange and the Western farmers, the Federal Government have virtually capitulated to the American shipowners, and agreed for all practical purposes that the regulations to which the latter objected will not be enforced. Indeed, the American shipowners have actually managed to secure from the Board of Grain Commissioners a guarantee that they will be indemnified against any proceedings which might be taken against their boats for violation of the law. The balance of the American vessels has now come into the trade, and shipments down the Lakes are very heavy. One result of the new agreement is that rates from Fort William to Buffalo, which, through scarcity of bottoms, had been forced up to 6½ cents per bushel, have swiftly dropped down to 3½; but it is calculated that the policy of the Government which conferred for the time being a monopoly on the Canadian shipowners must have cost the Western farmers several million dollars. The weather has been extremely favourable for threshing operations, and on Friday, October 26th, a total of 183 million bushels had been delivered by the farmers at country elevators, which is 19 million bushels more than at the corresponding date last year.

Although the buying demand from Europe is still weak, wheat prices have been kept up by unexpectedly heavy purchases on American account. American millers have found that consumers in Europe prefer Canadian to American flour on account of the former's sharper quality; indeed, they have lost to Canadian mills their hold upon the German and Polish markets. Their natural course is to improve the quality of their flour by importing a certain proportion of hard Canadian wheat. But agrarian representatives in Congress have begun to press for the utilisation of the powers of tariff alteration conferred upon the President in order that the duty on wheat may be increased, and the millers, fearful that political exigencies might force President Coolidge to such a course, have been anticipating their future needs by heavy purchases before the duty is raised.

There have been this summer no fewer than five Royal Commissions peregrinating the country to investigate different problems which demanded solution, and now a sixth has been added in the shape of a Commission on Agricultural Credits, which will have a solitary member, President Tory of Alberta University. The King Government, if it is to survive the next general election, must strengthen itself in the prairie provinces, and as it has exasperated them by its failure to give adequate tariff reductions and a workable wheat board, the surmise is that it has made up its mind to father a comprehensive scheme of agricultural credits for the placation of the Western farmers. The Grain Commission has wandered far and wide and spent some time in the United States investigating marketing conditions and methods of shipment. It has lately been sitting at Montreal and other

points in Eastern Canada, and complaints have been freely made to it that British steamers were continuing their discriminatory rates in favour of American as against Canadian flour, and it was also charged that in the course of transit through American ports inferior American wheat was not infrequently substituted for high-grade Canadian wheat. The personnel of this Commission has not aroused much confidence, and there is little expectation that any drastic changes will be recommended by it. It will probably not publish any report until some estimate of the results of the Alberta wheat pool, which began receiving grain on October 29th, are available. Its operations should help to disclose whether the grievances of the farmers about the handling of grain are serious. The Pulpwood Commission has been sitting in the Maritime Provinces, and so far from discovering any demand for an embargo upon the export of pulpwood, it has uncovered an almost unanimous opposition to it.

Letters to the Editor.

DO TARIFFS RESTRICT TRADE?

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with some care the Free-trade supplement to your issue last week.

The underlying argument running through the whole is a suggestion that those who advocate a tariff advocate the restriction of imports.

As I understand it, the case for a tariff is founded upon the conviction that it is possible to control the quality of imports without reducing the quantity; indeed, it is even claimed that the experience of other countries supports the belief that the direct result of control of quality actually tends to increase the quantity of imports.

If a piece of machinery is made in this country with the assistance of a protective tariff, instead of being imported from abroad, wages are paid at every stage of its production, and material acquired. Instead of the finished machine, the importation would take the form of food for the workers, cotton wool or hides for their clothes, which, *ex hypothesi*, in the absence of the wages they could not purchase, and, therefore, would not be imported; ore and other raw materials for the manufacture of the machine; and, if sufficiently fortunate, possibly some article of luxury, such as furs, out of the profits.

The purchase of the commodities required by the wage-earners, and of the steel or other parts of the machine, would again provide employment in other industries, with an aggregate increase in purchasing power and increase in velocity of circulation of currency, which might greatly exceed in advantage to the community the value of the machine itself, while the volume of imports might, under the conditions stated, remain unaltered.

Those in favour of a tariff believe that any increase in home production resulting from Protection would encourage mass production and result in reduced costs. This view seems to be borne out by the experience in other countries, and, indeed, in this country also by the experience of the development of mass production in the manufacture of motor-cars under the cover of a protective tariff.

The unlimited capacity for expansion of instruments of production, assisted by the present lamentable abundance of unemployed workers, and with ample capital available for any industry offering reasonable security, will always create home competition, which will drive profits down to the lowest acceptable level, a phenomenon upon which J. Stuart Mill lays particular stress. It is argued, therefore, that increased production to meet an increased home demand would actually reduce the cost and price of those commodities, and where they are at present the subject of export, by reducing the price the volume of their export would tend to increase. This, in turn, would be followed by an increase in the volume of imports of food and the almost unlimited range of raw materials and other commodities which the country could import with advantage.

Speaking as a manufacturer, were I able to increase production by 25 per cent., I could certainly reduce the selling price to a substantial extent, and so secure orders for export which under present conditions are out of reach.

There may be other over-riding arguments against the adoption of a tariff, but the above, at all events, appears to be supported by much actual evidence, and are in no way met by a bare assertion, unsupported by actual experience, that tariffs necessarily imply a reduction in imports, and so in the total of the country's foreign trade.—Yours faithfully,

W. PETER RYLANDS.

Warrington, November 19th, 1923.

[The argument that a tariff can be used to make other countries send us raw materials instead of manufactures is one which Sir Peter Rylands suggests can be supported by him, but until such evidence is forthcoming the fact that Great Britain's foreign trade per head is much higher than that of any Protectionist country holds the field. Moreover, it is clear that every tariff cannot have this effect. Otherwise, since the Protectionists' ideal seems to be only to buy raw materials, there would be a very small market for manufactures anywhere in the world, and we should only have the home market for finished goods. We venture to suggest, however, that the effect of tariffs would be precisely the opposite to that which Sir Peter Rylands suggests. In our issue of last week we pointed out that the basis of the Free Trade argument is that international exchange of goods is a mutual benefit, and if Germany is able to supply this country with wire rods more cheaply than our own producers can do, it will improve our ability to sell wire goods in the world market, the total volume of foreign trade will be increased, and Germany's demand increased more than if she made some less effective contribution to the total of the world's volume of production. Or, again, if we prevented the import of copper bars, and only allowed copper ore into this country, and so raised the real cost in labour of the production of copper commodities, the world's trade would be reduced and not increased. An interference with the form which international exchange would naturally take must reduce its profitability to both sides and reduce it in volume. We may add that there is a substantial amount of import of manufactures, which would not merely change its form, but would disappear altogether if it were restricted by a sufficiently high tariff. For example, French silk goods are imported because of the skill and taste of the French manufacturer, and we should not be likely to replace such goods, if prohibited from coming in, by buying a corresponding value of silk yarns. The study of our imported manufactures shows that they largely consist of goods of this kind, and to stop them coming in means that we forgo these particular advantages of foreign trade. Finally, we would refer Sir Peter Rylands to two practical considerations, first, that the chief causes of the world depression of trade is the reduced buying power of Germany and Central Europe. This cannot be revived merely by the revival of export of raw products of these regions, but can only come when European industries are once more normal. Secondly, that an analysis of our imports of manufactures, which we give in our Trade Supplement this week, shows that, even if the argument was sound, the margin for a change of quality of our imports is very small indeed.—ED., *Economist*.]

PROTECTION AND TRADE CYCLES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The reference, in your issue of November 3rd, to the "periodical revivals" of the "Protectionist movement," reminded me of the fact that many years ago, when studying some back numbers of your journal (beginning with the year 1878), I had come to the conclusion that the Protectionist movement had a periodicity with a wave length coincident with that of the "trade cycle."

The years 1877-79 were probably the worst ever known to British trade, the percentage of unemployment rising to 11.7 per cent. (Return Cd. 1954, dated 1909, page 223.) Your commercial summaries for the years 1877 and 1878 contain references to the "incessant discussions" of the proposals to reduce the "commercial dis-

stress" by "a revised Protection under the guise of Reciprocity."

Trade improved, and in 1882 the unemployment percentage was only 2.3 per cent. The commercial summaries for the years 1879-81 contain references to the dying out of the heresy (or panacea).

Trade became bad again in the middle of the Eighties, the unemployment percentage rising to 10.5 per cent. in 1886. The summary for the year 1885 contains the sentence: "The badness of trade has afforded the Protectionists among us a fresh opportunity for urging their peculiar remedies, and they have taken full advantage of it."

From 1886, however, the unemployment percentage fell, reaching 2.0 per cent. in 1889, to be followed by a fresh rise to 8.2 per cent. in 1894. The commercial summaries of this period contain no reference to a Protectionist revival (largely because the popular mind was occupied with the remedy of bimetallism), but in your issue of July 28, 1894, the following sentence occurs, "The *Spectator*, when, last week, it spoke of the eclipse of Free-trade, was, we cannot help thinking, too pessimistic..... The grasshoppers of Protection are noisy enough, but they must not make us ignore the thousands of self-possessed and convinced Free-traders....."

The unemployment percentage fell to 2.1 per cent. in 1899, and rose again to 7.4 per cent. in 1904, a suitable stage being thus provided for the "Tariff Reform" movement of comparatively modern times. The unemployment index fell, and rose again to 10.9 per cent. in 1908. This was a kind of adventitious fall in trade, but a resuscitation of Protection might have been expected, had not the need for it been so recently shown unnecessary.

And what is a poor Conservative who knows the above facts to do in December, 1923? E. G. PEAKE.

Dublin, November 13th, 1923.

IMPERIAL PREFERENCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Without quibbling unduly about definitions, it seems to me that our particular brand of Free Trade is widely different from that of Adam Smith. The difficulty is that Great Britain stands almost alone in her allegiance to the principles of Free Trade, and even we ourselves do not consistently follow those principles. The practical result is that no trade is less free than ours, opposed, as it is, by high tariffs all over the world, and by unfair competition and dumping; and we, too, have high duties on many important foodstuffs, tea, sugar, coffee, &c., to say nothing of tobacco, bringing in a revenue of, I believe, over £50,000,000 per annum. It must be admitted that Free-traders in the past have not been particularly happy in their predictions and objections. For precisely the same reasons for which they now oppose Imperial preference—or partly on the same grounds—they vigorously opposed the introduction of factory legislation, with all that this implies for the workers. They predicted utter ruin for the U.S.A. as a result of the McKinley tariff, and we are indebted to them for the income-tax! Moreover, Free Trade has been discredited in practically all civilised countries except Britain. Does not practical experience constitute a better and more reliable guide in this great fiscal controversy than vague theory and worn-out shibboleths? Is it not possible to clearly ascertain whether or no conditions are better in protectionist countries than in Free-trade Britain, and if so, whether or no this superiority is partly attributable to protection of the home market? It is, of course, most difficult in all economic and social phenomena to precisely analyse the profound and complex causes at work, and nicely to apportion effects to their appropriate causes, with due regard to long periods and short periods; but it should not be insuperably difficult.

There are several further points I would like to raise, but your valuable space is limited and I must be brief.

Assuming a rise in prices following the adoption of Imperial preference, it would be grossly unfair and unscientific to attribute the rise entirely to a tariff. Probably a great part of it would be due to profiteering and exploitation by dealers and middlemen. You, yourself, have instanced a glaring example of this in the case of

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

ALL INSURANCE

EXCEPT MARINE

Head Office

10, FLEET ST. LONDON E.C.4

ESTABLISHED 1836

General Manager W. J. WORKMAN, F.I.A.

West Indian sugar. In any case a rise in prices need not be wholly bad, and one would infer from your recent article on inflation and deflation that it might be beneficial. Besides, is cheap food the only thing that matters? Have the Free Traders no other appeal but that of the stomach? Surely no appeal to the electorate could be based on more grossly material grounds. And what is the use of cheap food if one has not the means to buy it at any price, owing to chronic unemployment?

With regard to your remarks on a wheat tariff (p. 547), in view of the great amount of good wheat land which has gone out of cultivation, and of the possibilities of agricultural science, it would surely be a long time before really poor land had to be used. And would the landlords, even then, get all the benefit in the form of rent? Presumably this latter assumption is based on Ricardo's (or Anderson's) rent theory, which I venture to think is a very different thing from "economic law well understood" that you speak of. It is still more difficult to see how the workers in the towns would suffer a fall in the standard of living. There is not space to argue the matter at length, but such a conclusion is contrary to the teaching not only of Sismondi and others, but also of Adam Smith. A wheat tariff would be of inestimable benefit to agriculture, and ultimately also to the towns, home and Imperial supplies being free.

It seems hardly wise to belittle and decry the comparatively small proportion of our food and raw material obtained from the Empire. This would rapidly increase under preference, and is it not rather rash to assume that foreign countries will always be able and willing to supply Britain with cheap food and raw material? The example of American cotton is not encouraging, and the general trend of world economics and politics is still less encouraging.

A more statesmanlike and far-sighted policy is to develop Imperial resources under the stimulating influence of preference, and thus draw nearer to real Free Trade, to Adam Smith's great ideal (quoted on the title page of the *Economist*). Home and Imperial trade is the only real Free Trade possible for Britain. Imperial preference aims at developing this, and reducing the false and one-sided kind. The great issue is not Free Trade or Protection, but true Free Trade or false Free Trade.—Yours faithfully,

November 13th, 1923.

W. G. CASS.

[Our correspondent will find light thrown on the points that he raises in the pages of our Supplement.—ED. *Econ.*]

EGYPTIAN CURRENCY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It is impossible to leave unchallenged the article in your last week's number on "Egyptian Currency Since 1914." Passing by the inadequacy of the historical exposition, the main purpose of the article reveals itself in the concluding two paragraphs. It is an attempt to discredit the Egyptian exchange mechanism (which has been a model to the world as well as a boon to Egypt), on the ground that a fixed par exchange has prevented such an appreciation of the Egyptian £ as would have counteracted (the real word should have been concealed) the rise in prices.

The argument is purely casuistry. If it were true, it would be much more applicable to the case of the United

States. The States had an even greater balance of trade in her favour than had Egypt, and she had par exchange. Her currency ought, therefore, to have appreciated (as, of course, it did), and that appreciation ought to have counteracted, or concealed, the rise of prices in the States.

The following figures show that it did nothing of the sort. The course of prices in the U.S.A. and in Great Britain were absolutely parallel, although the one country had the appreciated currency and the other had not.

COURSE OF PRICES.

	Egypt.	America. U.S.A.	Great Britain.
1914.....	100	98	85
1915.....	103	101	108
1916.....	128	127	135
1917.....	176	177	175
1918.....	211	194	192
1919.....	231	206	205
1920.....	316	226	251
1921.....	173	147	155
1922.....	145	149	151

The real point to note in connection with the figures for Egypt is that they turn mainly on one factor, cotton (not on many, as in the case of U.S.A. or Great Britain), and that during 1919 and 1920 the fluctuations in cotton prices were phenomenal and unprecedented.

With regard to the remainder of the argument ("Since more money was manufactured to do the work," &c.), your correspondent would do well to turn to the speeches of the chairman of the National Bank of Egypt. These annual speeches reiterate with particular emphasis the statement that the bank had no control over the currency, that the demand for it was automatic, as much so in Egypt as it was, and is, in Great Britain to-day. Now, the chief attribute of an automatic currency—one which rises and falls with the volume of interchange or with the community's needs for currency—is that it is of necessity neutral in its effect on prices. It is neither redundant nor deficient, and therefore neither appreciates nor deflates prices. The whole of your correspondent's arguments fall to the ground as pure casuistry, simply because he does not grasp this simple cardinal principle of currency history.—I am, &c., WM. A. SHAW, Litt.D.

Books and Publications.

CURRENTS OF AMERICAN OPINION.*

THOSE who never look deeper than the actions of Governments are never safe political prophets, for it is only by gauging the strength and direction of currents of opinion opposed to those supporting the action of the day that we can foresee the trend of future policy. But such an assessment of unofficial thought is peculiarly difficult in the case of the United States, which is a group of varied centres of opinion rather than a single unit, and this difficulty perhaps explains why the attempt is rarely made in this country. A little brochure by Mr R. R. Bowker serves, however, to remind us there are those in the United States who boldly stand four-square against the prevailing international outlook, or rather absence of outlook. The brochure contains two essays. The first expounds shortly and concisely the familiar theme that economic peace is the one safe and sane foundation for any association of nations which is to last. Economic peace can be based only on economic freedom, and America has a mission to undo the mischief that she did when her writers of the early nineteenth century propounded protectionism, and not only saddled it upon the United States, but also sent back to Germany an apostle of the same doctrine in the person of Friedrich List.

The second of Mr Bowker's essays is even more interesting. It contains an attempt to reconstruct the Covenant of the League of Nations in a form acceptable to and in accordance with the susceptibilities of the American people. The proposed Covenant restricts its membership to sovereign nations and self-governing dominions, "whose law-making power is vested in the

people, or in their representatives." The Assembly of the League is not based upon equal representation, but provides that every member State shall have one representative, plus additional representatives up to a maximum of five in proportion to population. Voting would be by representatives except in the case of modifying the terms to the Covenant itself, or of altering the mutual obligations of different nations, and in these exceptional cases voting would be by nations, *self-governing dominions voting as part of the sovereign nation of which they are a constituent*. This device for meeting the "six votes to one" agitation in the United States is instructive and worthy of consideration. It is arguable whether the occasions mentioned are those in which the voting strength of the British Empire should be reduced. But it is clearly a subject for study to consider in what cases, if any, it is appropriate that the British Empire should act as a unit, as it did at Washington in December, 1921, rather than as half a dozen distinct and independent nations, as it does at Geneva. The draft Covenant suggests, but does not dictate, that these representatives should be elected either by the national Parliament or by popular vote. The Council is more definitely a second chamber rather than an executive body, and its constitution meets the objections of those who dislike the present Council on the grounds that it is a slightly modified form of the Supreme Council of the Allies, by giving a right to representation on the Council to all nations of given population, and by providing that the minor nations shall be grouped, either voluntarily or by the Assembly itself, into units of the given population, each of which would elect a member of Council. This plan, which would prevent the danger of Europe over-riding the wishes of other continents, is clearly a more lasting and sound basis for the constitution of the Council than the present one. The draft Covenant provides that all mandates shall be received, not as at present from the hands of the Treaty-making powers, but from the League itself, and lays down much stricter regulations for assuring freedom of trade in these regions than the present Covenant. The mandate is made terminable, and the Assembly will consider at stated intervals whether the beneficiary should or should not receive full self-government. The draft Covenant is in accordance with American opinion in laying down that conscription is a threat to the peace of the world, and that disarmament proposals, if approved by two-thirds of the Assembly, should become compulsory. In Article 10 the draft limits itself to saying that the nations will respect the territorial integrity of other nations—omitting the word "preserve," but the author explains that there remains the mutual obligation to intervene if any nation commits a breach of the Covenant by failing to respect the integrity of another member. The author clearly anticipates that force may need to be used to support the Covenant, for in the clause relating to sanctions he suggests that "the Covenant nations agree, subject to any authorisation under their representative constitution, to support each other in the financial and economic and other measures which may be taken under this Article. This is much stronger than the present Covenant with regard to military measures, for the Council can now only recommend to the respective Governments what steps should be taken. The draft includes a clause for American consumption or the freedom of the seas, and the protection of private property on land and sea in time of war. But as the clause naturally excepts contraband, which is not defined, the proposal does not solve the real issue in this question.

Mr Bowker makes the interesting suggestion that the present Covenant may ultimately stand in relation to the final Covenant in the same relation as the articles of federation stand in relation to the constitution of the United States. Mr Bowker modestly disclaims any importance for this essay, and is anxious to clear himself of any charge of presumption in tackling so large and important a task as putting into actual form the opinion of the United States. But in any case his essay is interesting to Europe because discussion of the Covenant on this side of the Atlantic has centred round particular applications, and no one has had time or detachment to outline or draft a new Covenant in final form. The critics of the League have no interest in the matter; its supporters, who are constantly

on the defensive against attacks from all quarters, for the moment find their only safety in holding fast to its every word and comma.

INTERNATIONAL LABOUR OFFICE INQUIRY INTO PRODUCTION.*

At their session in Genoa in June, 1920, the Governing Body of the International Labour Office decided that a special inquiry should be made over a wide area into the state of production. It was hoped apparently that a comprehensive inquiry would yield information which might be useful in solving the main economic problem which then seemed to require solution, namely, that of removing obstacles in the way of an intensification of production, with a view to increasing the supply of goods for which there was an unsatisfied demand. By June, 1920, the level of prices had already passed its highest point, and it soon came to be realised that the intensification of production was no longer the chief question. The change in the economic situation was not, however, considered to call for the abandonment of the projected inquiry, since "it is, for example, still a matter of importance to ascertain to what extent the reduction of the working day affects output, but the problem is not merely one of yield or quantities; it is now bound up in view of the crisis of the marketing as also of the crisis of the exchanges, with the new problem of the breach of equilibrium between wages costs in the various countries."

The International Labour Office cast its net very wide. In a questionnaire addressed to Governments it asked for statistics of production, consumption, stocks, strikes and lock-outs, unemployment, and other matters; and requested to be furnished with documents and other information bearing on various aspects of the economic depression, on the loss of efficiency among those engaged in the war, the effect upon output of the reduction in hours of labour, and other problems. It is stated that 27 Governments replied, some at considerable length, and about 1,000 volumes of annexes accompanied the replies. A second questionnaire was despatched to organisations of employers and workers, asking for statistical and other information bearing upon changes in production since the war; output per worker, output per hour and per week, &c.; wages, the health, housing, and nutrition of workers; strikes and lock-outs, &c. A third questionnaire was sent to co-operative organisations.

It is evident that the replies should constitute a mine of information upon conditions of production in many countries. The results are to be summarised in four volumes, of which this is the first. Apart from some introductory statistical chapters dealing generally with the relation between price movements, production, and employment in a number of countries during and since the war, this volume is devoted to setting out the method of the inquiry, the text of the questionnaires, and the list of Governments and unofficial organisations to which they were sent, together with the replies (covering about 200 pages) to certain of the questions which made inquiry as to sources of information. Among these 200 pages the statistician who has to deal with international comparisons may find much useful information as to the particulars that are available relating to output, stocks, consumption, index numbers, unemployment, strikes and lock-outs, &c. The section dealing with index numbers is especially valuable, since it includes information as to the basis on which index numbers in different countries are compiled.

It is to be hoped that an English edition will be published of this and of the three succeeding volumes, which will deal respectively with "total production and average production per worker; the explanation of the crisis in production; and remedies, proposals, and achievements." If an English edition is published it would be desirable that the price should not be fixed to the disadvantage of the English purchaser, as it is at present to the disadvantage of the Swiss purchaser.

November 28.

ACCOUNT.
November 29.

It will be necessary for the next two or three weeks to refer to politics as the principal factor in Stock Exchange markets. A touch of relief can be found in the statement that the Christmas feeling is already beginning to pervade some of the markets. Song and play alternate with periods of more serious business. Of the latter, there is still a fair amount going on. The excitement in the oil market this week, more especially in connection with Mexican Eagles, threw an air of animation over one of the principal sections of the industrial market. The investor continues to buy the War Loan, Conversion stock and Victory bonds. Some of the recently issued stocks, the prices of which fell to tempting discounts on fears of a Labour party success at the polls, have been picked up, and at rising

* "Economic Peace and Covenant of Sovereign Peoples." By R. R. Bowker. G. P. Putnam's Sons, New York and London, Knickerbocker Press. 1923.

prices, by investors who decline to be scared by the political outlook.

At the end of next week, the usual half-yearly interest payment on the War Loan will be forthcoming, and a little speculative buying in advance of this has served to rally the price from 99½, the lowest it had touched, to about 108 higher. The new electric railway 4½ per cent. debenture stocks, issued at 95½, after being down to nearly 2 discount, are both 1½ better. Nigeria Fours, which came out at the high price of 88, dropped to 3½ discount, and have rallied to 86 for the fully-paid scrip.

Home Railway debentures and preferences are on the mend, and the purely investment markets, with Conversion leading, present a noticeably bolder front than they did a week ago. Strings of rises in Brazilian, Mexican, and Chinese Government bonds stand out amongst the features of the foreign market, though the business which caused the improvements has been of modest dimensions. Prices were marked up automatically in many cases. French issues have been moving in accordance with the rate of exchange; dispersion of the clouds which hung over continuance of the Entente led to bear repurchases of the bonds, with the natural effect. The discount on the new Finland loan is becoming less, and Austrian Sixes, from their recent low level of 81½, rose sharply to 84½.

Nationalisation is still talked of as a possibility by the Home Railway market, but its immediate fear is overpast, and most prices stand substantially better than they were a week ago. The deferred stocks are coming into a little speculative favour on dividend prospects, and the preferred issues gained ground in sympathy with the rises in prior-charge stocks. Grand Trunk Pacific debenture dipped to 35, and recovered to 41. Antofagasta and United of Havana stocks have appreciated on excellent traffics, and the Argentine Railway list, after showing acute weakness, recovered without much difficulty, upon a slender amount of support from the speculative investor.

Anglo-Dutch rights and debentures aroused a good deal of interest in the rubber market, but apart from these the rubber share list as a whole is quiescent, waiting for that winter American demand of which so much has been heard, but which has not yet arisen, in the market for the commodity. Tea shares are again higher. The oil market sensation was a rise from 20s 6d in Mexican Eagles on Monday morning to 23s on the same day, and to 24s on Tuesday, the inspiration for which was provided by a notification to the effect that a new well had been brought in on one of the properties. The oil market, however, is largely professional, and the public are apparently afraid to do much in this section at present. Guest Keens propose to take over D. Davis and Son and the Consolidated Cambrian companies, and the shares in all three concerns went better as a consequence.

Coats have partially recovered from the fall which occurred in connection with the dividend disappointment; textiles as a whole are moving narrowly and irregularly, fluctuations being confined to a few pence in most cases. Tobacco shares came into renewed favour after a spasm of nervousness had put down prices, and part of the drop has been regained. City of London Real Properties, with City and Westminster Properties, are good, on the announcement that the former company proposes to buy the latter, and, moreover, in celebration of its sixtieth year of jubilee, to distribute new shares amongst its own proprietors.

Insurance and banking shares show no particular feature, jobbers lamenting that the public seem to be neglecting their market for the time being. Shipping is in somewhat similar case. The new P. and O. debenture is better at par. Keen attention is being levelled at the prospects which lie ahead of industrial companies likely to be affected by possible Protection legislation, but in no case has any material alteration occurred in prices as a result of this. Newspaper shares have been dull, but hardened again to some extent, and amongst hotels, stores and similar issues, public interest has dwindled to a minimum. Cements, after their recent flush of excitement, went back on profit-taking. Continental Union Gas preference put on 12 points, Hudson's Bays show a good recovery, and Egyptian Land shares have moved up.

South Africans continue to be regarded with a certain amount of distrust by the public owing to the apprehension lest the substantial rise in the price of gold, due to the American exchange, shall not prove constant. Kaffirs are better, however, there being a little Cape support to reinforce the modest amount of local buying that is taking place. Dividends on the principal shares are expected to be handsome in respect of the current six months. Diamonds are better, De Beers throwing off the effect of the announcement that there will be no dividend on the deferred shares this time. Rio Tintos are also higher. Rhodesians are still ignored by the public. Indian gold-mining shares have hardened a shade because of the rise in the price of gold. The advance in tin serves to keep tin mining shares firm, but it has not proved sufficient to bring in the public as buyers of Cornish, Malayan or West African descriptions.

NEW ISSUES.

Irish Free State National Loan (5 per Cent. Registered and Inscribed Stock, 1935-1945).—This is an issue of £10,000,000 at £95 per cent. Principal is repayable at par on December 1, 1945, the Government of the Irish Free State having the option to redeem the stock in whole or in part at par on or after December 1, 1935, on giving three months' notice. Several points are worthy of note. Firstly, this is an internal loan. Secondly, it is pointed out that the stock is a "trustee investment in Saorstát Éireann, authorised by the Trustee Act, 1893." Thus we infer that the loan is of interest to Irish trustees only. The familiar paragraph appearing in the prospectuses of most Dominion Governments to the effect that they have complied with the requirements of the Colonial Stock Act, 1900, and that trustees may invest in the stock, is lacking. Of course, it may be contended (and quite rightly so) that as the loan is an internal one there is no need for such provision. At the same time, it is no doubt wished to attract the British investor. And, thirdly, we are not told how the proceeds of this borrowing are to be used. It is to be noticed that dividends will be paid without deduction of Free State income-tax, and that external holders will be exempt from Free State taxation. Both principal and interest "will be a charge on the Central Fund of the Irish Free State." A sinking fund will be formed, and "on June 1st and December 1st of each year a sum equal to 3½ per cent. on the nominal amount of the loan originally created" will be set aside. The stock now offered will be officially quoted on the Dublin and Cork Stock Exchanges. We hope in the not far distant future to see it quoted in the London Stock Exchange. Or, better still, perhaps the Irish Free State authorities, when again making an issue of stock, will provide the British public with a Free State loan with capital and interest payable and quoted in London.

Buchanan-Dewar, Limited.—Authorised share capital £7,500,000, of which £6,767,038 has been issued. This is an offer for sale of 1,250,000 6 per cent. cumulative preference shares of £1 each at £1 0s. 3d per share. The additional 3d per share, we are told, is for "stamping and procuring the registration of transfers." This is an unusual extra charge. These 6 per cent. shares form part of a total issue of 2,267,038, and rank before 2,500,000 7½ per cent. cumulative preference shares of £1 each and 2,000,000 ordinary shares of £1 each. The directors will not borrow or create debentures without the consent of preference holders. The offer for sale informs us that it has been thought desirable that the "public should be afforded an opportunity of taking a wider interest in the capital of the company." The undertaking is famous for its distilled products. Profits are given for the last four years, and it is obvious that trade depression does not affect the con-

The List of Applications will close on or before Monday, 10th December, 1923.

IRISH FREE STATE. NATIONAL LOAN

(5% Registered and Inscribed Stock, 1935-1945).

ISSUE OF £10,000,000

Price of Issue £95 per cent.

INTEREST PAYABLE 1st JUNE and 1st DECEMBER.

Two per cent. Interest payable on 1st June, 1924.

Principal repayable at par on 1st December, 1945, the Government of the Irish Free State having the option to redeem the stock in whole or in part, at par, on or after the 1st December, 1935, on giving three calendar months' notice in the *Irish Oifigiúil*.

The Governor and Company of the Bank of Ireland are authorised by the Government of the Irish Free State to offer for subscription the above amount of Stock authorised to be issued under Act of the Oireachtas, entitled the Appropriation Act, 1923 (No 23 of 1923).

Payment will be required as follows, viz.:—

£10 per cent. on application.
£20 " " allotment.
£30 " " 18th January, 1924.
£35 " " 22nd February, 1924.

Payment in full may be made after allotment, and discount at the rate of two per cent. per annum will be allowed. Where payment is made in full between two instalment dates, discount will be calculated as from the instalment date next succeeding the date of such full payment.

In case of default in the payment of any instalment at its due date, the amount previously paid will be liable to forfeiture.

In case of partial allotment the balance of the amount lodged with the application will be appropriated towards payment of the instalment due on allotment.

Applications must be for sums of £10 or multiples thereof.

The Stock is a Trustee Investment in Saorstát Éireann authorised by the Trustee Act, 1893, and trustees may invest therein even though the price at the time of investment exceeds the redemption value of £100 per cent.

The Books of the issue will be kept as separate Registers at the Head Office of the Bank of Ireland, Dublin, and at the principal Office of the same Bank at Cork, and transfer between the Registers in Dublin and the Registers in Cork will be free of charge.

Stock may be inscribed as transferable in the Stock Transfer Books, or may be registered as transferable by Deed.

Inscribed Stock will be exchangeable for Registered Stock, or vice versa, without payment of any fee.

Stock will be transferable in any sums which are multiples of a penny.

Powers of Attorney for the transfer of inscribed Stock and Deeds for the transfer of registered Stock will be free of Stamp Duty.

Dividends on Stock will be paid by warrant, which will be sent by post.

Dividends on Stock of this issue will be paid without deduction of Free State income tax, but the income derived

from such dividends will be assessable to Free State income tax in the hands of the recipients at the rates of tax appropriate to their respective incomes.

Stock of the present issue and the dividends payable from time to time in respect thereof will be exempt from all taxation of the Irish Free State, present or future, if it is shown in the manner directed by the Minister of Finance that the Stock is in the beneficial ownership of a person who is neither domiciled nor ordinarily resident in the Irish Free State.

Scrip Certificates will be issued in exchange for the Allotment letters. Fully-paid Scrip Certificates may be "Inscribed," transferable in the Stock Transfer Books, or "Registered," transferable by Deed.

A Commission of five shillings per cent. will be allowed to Bankers, Stockbrokers, and Financial Houses on allotments made in respect of applications bearing their stamp.

The Stock now offered will be officially quoted in the Dublin and Cork Stock Exchanges.

Both the Principal and Interest of this issue will be a charge on the Central Fund of the Irish Free State.

The Government of the Irish Free State undertake to set aside on 1st June and 1st December of each year a sum equal to 3½ per cent. on the nominal amount of the loan originally created. After deducting therefrom the amount required for payment of interest, the balance of the sum so set aside will be carried to a Sinking Fund which will be applied during the succeeding half-year to the purchase of the loan for cancellation if the price is at or under par; when the price is above par, it will be either so applied or otherwise invested for the benefit of the Sinking Fund under the control of the Minister for Finance.

Application Forms may be obtained from any Bank or Post Office, or from any Stockbroker in the Irish Free State, also from the Ministry of Finance, Dublin, and the High Commissioner for the Irish Free State, 15 Regent Street, London.

Instalments may be paid without additional charges through any of the Offices of the undermentioned Banks:—

BANK OF IRELAND.
BELFAST BANKING CO.
HIBERNIAN BANK.
MUNSTER AND LEINSTER BANK.
NATIONAL BANK (INCLUDING OFFICES IN GREAT BRITAIN).
NATIONAL LAND BANK.
NORTHERN BANKING COMPANY.
PROVINCIAL BANK OF IRELAND.
ROYAL BANK OF IRELAND.
ULSTER BANK.

Bank of Ireland, Dublin, 24th November, 1923.

APPLICATION FOR "INSTALMENT ALLOTMENT."

No.....

IRISH FREE STATE 5% NATIONAL LOAN, 1935-1945.

PRICE OF ISSUE £95 PER CENT.

TO THE GOVERNOR AND COMPANY OF THE BANK OF IRELAND.

In terms of the Prospectus dated the 24th November, 1923, I/we hereby apply for an Instalment Allotment of

(a) £....., say.....pounds of the above-mentioned issue.

And I/we hereby engage to pay the instalments as they shall become due on any allotment that may be made in respect of this application, as provided by the said Prospectus.

The sum of £....., being the amount of the required deposit (b) (at the rate of £10 for every £100 applied for), is enclosed herewith.

Signature

Name of Applicant, in full.....

Communications to { Name

be addressed to { Address

Date.....1923.

(a) Applications must be for not less than £10, and must be for multiples of £10.

(b) Where applications on behalf of several persons are made through one Agent at the same time, one cheque only, for the total of the deposits, is necessary. Cheques should be made payable to "bearer," not to order, and should be crossed " & Co., a/c National Loan."

Distinctly.

sumption of whisky. It must be remembered, however, that it is an important export industry, and America may have been buying heavily in the last few years. The statement of assets and liabilities is terse but informative. The future of the industry is difficult to foresee, and investors must seriously consider this aspect.

The Denaby and Cadeby Main Collieries, Limited.
—Share capital £1,400,000, all of which has been issued. This is an offer for sale of £800,000 6 per cent. first mortgage debenture stock at £98½. Applications for £250,000 of the stock have already been made. These will be accepted in full on the terms of the offer. Principal is redeemable in 1944, by means of a cumulative sinking fund of 3 per cent. per annum, to be applied annually by purchase if the stock is obtainable at or under 102 ex interest, or by drawings for redemption at 102. The first redemption will take place in 1926. Power is reserved to the company to redeem all or any of the debenture stock outstanding, at any interest date at £110 per cent., subject to six months' notice. The debenture stock is secured by a first mortgage on the present freehold property of the company and by a floating charge on the undertaking and all the property and assets of the company present and future. Although an "offer for sale," the document gives much useful information. Profits are shown from 1911, and the figures given are quite sufficient to show that interest and other services on this debenture stock are well covered. Assets and liabilities are well set out, and here good security is found for repayment of capital, total surplus assets of the company and its subsidiary, the Washington Coal Company, Limited, amounting to £1,913,030, and fixed assets representing a sum well in advance of the debenture issue. The output for the year ended June 30, 1923, amounted to 1,486,244 tons. It is stated that the tonnage available from seams being worked is estimated at 68,000,000. The proceeds of the present issue will be applied to repaying the £206,500 existing debenture stock of the company (which carries no charge on the company's assets); to liquidating sundry outstanding loans amounting to £119,892; to the payment of £300,000, being the price of the shares of the Washington Coal Company; and to the provision of further working capital. A good industrial issue.

MOUNT LYELL.—Four-weekly period ended November 14th.—Smelted Mount Lyell ore, 647 tons; North Lyell ore (direct to smelters), 255 tons; concentrates, 2,135 tons. The converter produced 343 tons of blister copper, containing 310 tons of copper, 7,432 ozs silver, 108 ozs gold. The mill treated 7,117 tons of ore, and produced 2,128 tons of concentrate. Furnace ran 13 days.

MOUNT MORGAN.—Four weeks ended November 13th.—Treated, 5,808 tons secondary prod. cts. Produced 426 tons blister copper, containing 422 tons copper and 7,074 ozs gold, including 6 tons copper and 4 ozs gold from purchased ore and secondary products. Concentrator treated 15,035 tons ore for a production of 5,332 tons of concentrate containing 284 tons copper and 3,484 ozs gold. In addition to above production have matte on hand containing 80 tons copper and 958 ozs gold.

COMPANY MEETINGS, &c.

THE WALL PAPER MANUFACTURERS, LIMITED.

SOUND AND SATISFACTORY BALANCE-SHEET.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The ordinary general meeting of the Wall Paper Manufacturers, Limited, was held on the 22nd instant, in the Connaught Rooms, 61 Great Queen street, London, Mr Edgar Smith (chairman of the company) presiding.

The secretary (Mr John T. Chasney) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen,—You have all received copies of the directors' report and of the accounts to August 31, 1923. May I assume that it is your wish that they should be taken as read.

PROFIT AND LOSS ACCOUNT.

You will see from the profit and loss account that £114,697 was brought forward from the year 1922, and that the profit for this year, after making all the usual provisions for doubtful debts, &c., and including dividends and interest on our investments, amounts to £634,868. To these two figures is added £813 received for transfer fees, making a total of £750,378.

On the other side of the account are the debenture interest for the year, an interim dividend of 2½ per cent. on the preference shares, and an interim dividend of 4 per cent. on the ordinary shares, which have been paid during the year; also a charge for income-tax. These items deducted from the £750,378 above-mentioned leave a sum of £621,173, which is the amount available for further appropriation, and which your directors propose to deal with in the manner set out in their report.

BALANCE-SHEET ITEMS.

If you will kindly turn to the balance-sheet which we present to-day, you will see that our share capital is the same as last year. The creditors stand at £562,536 against £527,360 last year, and the reserve fund at £100,000. On the other side there is a slight increase in the amount at which our land, buildings, plant, &c., stand, namely, £3,459,719, against £3,428,464 last year, an increase of £31,000. This is mainly accounted for by the reconstruction of the premises and plant destroyed by fire in previous years, and is really a reinstatement of the amount credited in reduction of this account two years ago in respect of the proceeds of the fire claims. The investments total £1,350,413, an increase of £166,000. Of this sum one million and a quarter is invested in British Government securities. Debtors are rather lower than last year at £603,067, and the bills receivable rather higher at £86,552. Cash at bankers and in hand, £202,235, shows an increase of £227,149 over last year. I think you will agree with me that this is a satisfactory balance-sheet, and your directors can assure you that it is a sound one.

THE FUTURE.

As to the future, although the profit for the past year has fallen slightly below that of the previous one, I can safely say the outlook is promising.

LANCASHIRE AND CHESHIRE INSURANCE CORPORATION, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The ordinary general meeting of the Lancashire and Cheshire Insurance Corporation, Limited, was held, on the 23rd instant, at the head office, 57 Old Broad street, London, Sir A. Trevor Dawson, Bart., R.N., chairman of the company, presiding.

The secretary (Mr C. B. Maxwell) having read the notice convening the meeting and the report of the auditors, The Chairman, in the course of his speech, said:

The general section shows that the policy of the board has resulted in a considerable reduction in net premium income, which amounted to £325,260 for the period under review, against £767,639 for 1921, and this is mainly due to the reduction in the company's commitments in casualty business, namely, employers' liability, accident, &c., transacted abroad.

You will observe that in this section we have reserved for unexpired risks £211,100, which is approximately 65 per cent. of the net premium income for the whole period of 18 months, and this in the opinion of our technical staff should be more than adequate to meet all requirements.

NEW OFFICES.

As regards the home business in the general section, you will notice on the second page of the report and accounts that in addition to the branch offices we have opened during the past 12 months 10 district offices in important centres.

It will no doubt be of interest to you to know that we have now about 1,800 agents in Great Britain and Northern Ireland.

Our motor insurance business has grown very considerably, and as it has been part of our policy to only retain small fire risks, the motor department, by its rapid growth, has become a very important and satisfactory factor in the home general section.

About 80 per cent. of the motor insurance is in respect of commercial vehicles, in which we specialise, and we attribute the satisfactory results to the agency organisation which we have built up for dealing efficiently with all new business, as is proved by the continued expansion of this department.

Arrangements have been made to take up engineering insurance, and we have secured the services of a manager for this department who has had many years successful experience in this class of business, and under his able management a substantial and profitable business will be developed.

MARINE ACCOUNT.

Turning to the marine account, you will observe that the net premiums have fallen from £49,591 in 1921 to £50,917 for the 18 months covered by the present accounts, a drop of 33½ per cent. This diminution in marine premiums is largely due to the fact that, owing to the lower purchasing power of most trading countries, the amount of shipping in commission and goods in transport is greatly reduced, and the amount of premium for marine insurance is less than the demand of the insurance market, with the result that rates are forced down to a level which is below what is necessary to provide a reasonable margin of profit.

The cost of maintaining an efficient marine department is such that the directors, on the advice of their marine underwriter, have decided to close down this department and cease transacting direct marine underwriting at our offices in the Royal Exchange.

Although the company had the advantage of war risk premium for only a limited period, our marine results on the whole have been favourable, notwithstanding that marine underwriting since the war has generally proved unprofitable. However, as a result of the policy we adopted on the cessation of hostilities, the company has to a very large extent escaped the unfortunate results

which have proved disastrous to so many concerns which endeavoured to maintain, in post-war years, a marine income commensurate with that which they obtained during the war.

Dealing with the balance-sheet, you will see that since our last meeting we have called up the balance of the uncalled capital, namely, 15s per share on 98,000 shares, namely £73,500, which has all been paid up with the exception of £8,150, which in these times may be regarded as a satisfactory response to the call.

Your directors are of opinion that the reserves set aside at the end of 1921 have been justified by results which, with a considerably smaller premium income, have enabled us again to set aside practically 100 per cent. of one year's premiums to reserve for unexpired risks, claims, &c., write down investments by over £58,000, write off office furniture £2,523, provide a new fund of £5,000 for bad debts, put the marine fund in credit to the extent of £39,445, purchase and cancel £80,000 of debentures whilst writing off £3,708 of the expenses of the issue, and still be able to carry forward a credit balance of £49,131, in addition to our capital being intact.

In conclusion, I may say that since the accounts were made up, we have disposed of a substantial interest in our American company on favourable terms, and this transaction will relieve us from any further financial obligation with regard to the American business.

Mr Charles W. Small (deputy-chairman) seconded the resolution, and it was carried unanimously.

AUSTRALIAN MERCANTILE LAND AND FINANCE COMPANY, LIMITED.

SATISFACTORY RESULTS IN A DIFFICULT YEAR.

The fifty-ninth annual general meeting of the Australian Mercantile Land and Finance Company, Limited, was held, on the 22nd instant, in London, Mr R. H. Caird (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said he thought they might congratulate themselves on the very satisfactory balance-sheet which had been submitted on the conclusion of a year which had not been free from difficulty. A dividend of 10 per cent. and a bonus of 2½ per cent. was a very good return on the increased capital. They were also able to recommend the addition of £25,000 to the equalisation reserve, bringing it up to £125,000. Shareholders might thus feel confidence in the maintenance of a steady return on their money, and if the board continued the policy of adding to the reserve whenever the company had an exceptionally good year, he thought it would have the effect of preventing undue fluctuation in the market price of the shares. The result to those who took up their proportion of the new capital must be very satisfactory, as the shares which they got at £5 now stood at well over £10 in the market, and they had meantime had a very handsome return annually on the money they invested.

CONDITIONS IN AUSTRALIA.

The company's financial year ended on June 30th, and it was only in June that rain fell in useful quantities, so that during the greater part of the year a very dry time was experienced, and even now in some parts of New South Wales and Queensland the rainfall had not been sufficient. On the other hand, the course of the wool market had been very favourable, and prices had kept on a good level. The enormous accumulation of wool in the hands of Bawra had been rapidly absorbed, and in a very few months that incubus would be a thing of the past, and instead of there being danger of too much wool, it was very likely that supplies would be deficient, especially of merino.

BUT DOES IT PAY?

This is the title of a new leaflet of particular interest to all Business Men, demonstrating as it does the Investment Value of "GLOBE" Life Assurance Policies.

A copy will be sent by return of post upon your request.

The LIVERPOOL & LONDON & GLOBE INSURANCE CO., LTD.

Head Office:— 1 Dale St., Liverpool. Chief Office:— 1 Cornhill, London, E.C.3.

Branches and Agencies throughout the World. General Manager and Secretary:—HUGH LEWIS.

Dealing with the balance-sheet, he said that, though in recent years the company had acquired the goodwill of two very prosperous business houses in Australia, each of which added largely to their turnover and profits, they had been able to write off the whole cost and avoid showing goodwill as an asset. In acquiring the business of Messrs Hill, Clark, and Co. in Sydney, and Messrs J. M. Peck and Son in Melbourne, they had not only considerably increased the company's business, but also secured the assistance of the working partners and directors. The company's sales of wool, as brokers in Australia, continued to be very satisfactory. For the year to June 30th last they had sold an aggregate of 193,240 bales, and they ranked third in the list of sellers in Australia.

In connection with their pastoral properties, they became possessed of a large interest in Bawra. They held 44,653 shares of originally £1 each; 10s of that had been paid, and would be included in next year's profit, and a further 9s. per share would be paid next February. There would ultimately be a further distribution on the final winding up of Bawra, which was apparently estimated at another 6s 6d per share, as the present market quotation was about 15s 6d.

In a recent newspaper article the aid of pastoral companies was invoked to assist the Government in the laudable effort to promote immigration and land settlement in Australia. This company had already done something in that direction, for in recent years they had cut up and disposed of, in small areas, no less than five distinct freehold properties, aggregating 191,368 acres. Great areas of Australia were peculiarly suitable for the production of fine wool, and though he admitted the necessity of increasing the rural population, he would rather see experiments in closer settlement made in districts where perhaps the best use was not being made of the land than in areas eminently suitable for the production of Australia's premier product, fine merino wool, for which there was a world-wide market.

QUEENSLAND LAND ACT.

Referring to the Queensland Land Act (Amendment Act), 1920, the Chairman said that when, under an Act of Parliament, a pastoralist took a lease from the Government, the terms of which contract were defined by the Act, he had a right to expect that these terms would not be varied during the currency of the lease by a subsequent Act. For a Government to introduce legislation to vary such terms could only be defined as breach of contract. The Queensland Premier had stated that it would be tremendously difficult if, as the result of an agitation in London, the Government were forced to pay 1 per cent. more on loans falling due, as this would mean a heavy burden on the State. He (the speaker) quite agreed with Mr Theodore that the position was difficult, but the remedy was in his hands. All he had to do was to right the wrong, and to make it plain to the world that Queensland recognised the sanctity of a contract. It was a pity to see a new country making slow progress simply for want of capital, which would be available in plenty if investors could be assured that contracts once made with the Government could be relied on, and would not be broken by fresh legislation during their currency. The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London. W.C.2.

HOTEL CECIL, LIMITED.

THE STAFF AND CHARING CROSS HOSPITAL.

The twenty-seventh ordinary general meeting of the Hotel Cecil, Limited, was held, on the 20th instant, at the Hotel Cecil, Strand, London.

Mr J. Douglas Broad, the chairman, who presided, said that the profit from trading amounted to £76,674, an increase on that of last year of £1,465. The general business during the year had been satisfactory. If the proposals of the board as to the appropriation of the profits were approved, the amount carried forward would be more than a full year's interest on the preference shares. The directors felt that the time had now arrived when they should pay the preference interest half-yearly, and that they proposed to do. Since the close of the financial year the business continued good, and showed a satisfactory increase over the previous year. In conclusion, he paid a tribute to the staff, who, he said, had, as usual, given them wholehearted support. As an instance of the right spirit displayed by the staff, he read an extract from the report issued by Mr George Verity, J.P., chairman of the Charing Cross Hospital. "I have had," Mr Verity wrote, "a striking instance of what can be done to help hospitals this current year. The staff of the Hotel Cecil, by weekly collections amongst themselves, football matches, and entertainments, have collected a sum aggregating £300, which is more than sufficient to provide the annual cost of a bed. Further than that, they have told us we can rely on these efforts being continued in future years; therefore, as a token of our thanks we have endowed a bed in their name with the following inscription: 'This bed is entirely supported by the generosity of the staff of the Hotel Cecil.' To my mind this is one of the most wonderful things which has ever happened in hospital life. It shows the real awakening of the charitable spirit, and the real wish to support an institution among those who benefit by the hospital, standing where it does, to provide aid in case of necessity when surgical or prolonged medical or casualty help is required. What one hotel staff has done other institutions in this great neighbourhood can do, and by this time next year I hope to have a row of brass plates showing beds endowed on the co-operative principle. Why not? Finally, what this would mean to me, with the anxious cost of 30 or 40 beds lifted off my shoulders, I cannot put into words. I shall look forward to reporting to you, my subscribers, this time next year the application of this principle."

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £45,000,000 in Treasury Bonds and Treasury Bills dated from Nov. 26-Dec. 1 were opened on Nov. 23, 1923, and the total amount applied for was £61,235,000. For bills at three months, dated Monday to Thursday at £99 3s 4d, above in full; Friday and Saturday, at £99 3s 6d, about 66 per cent., above in full. The amounts allotted were as follows:—In bills at 3 months, £44,000,000; in bonds £250,000.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
Oct. 12, 1923.	£ 35,000,000	£ 61,565,000	3 1 5.61	£ s d nil
Oct. 19	35,000,000	51,135,000	3 0 7.85	nil
Oct. 26	35,000,000	50,275,000	3 1 8.43	nil

Mr John George Griffiths, C.V.O. The vacancy has been filled by Sir Albert Edward Bowen, Bart.

MINES.

COLOMBIAN CORPORATION.—Having regard to rumours lately current, the up-to-date financial statement provided by the directors is welcome. It shows that whereas at the end of 1922 the company had capital resources amounting to £32,900 at the end of October, there was a debit of £43,250. The company, it may be recalled, acquired the Constanio gold-silver property and a concession for the construction of a road thereto. Largely owing to financial reasons this concession was subsequently taken over by the parent company the Oroville Dredging. The directors intimate that the road is now completed, and that the transport of the machinery can proceed. Nothing is said as to when crushing may be expected to commence, but in the report of the Consolidated Gold Fields—which is interested—this event is mentioned as likely to take place about the middle of next year.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Unsettled and colder weather conditions have prevailed during the past week, and field work was hampered by the wet condition of the soil. A large area has been placed under winter oats, which have germinated satisfactorily. Native wheat is in moderate supply, and with a steady demand prices displayed a firmer

tendency. Suitable milling grades rule at 9s 3d to 10s, with inferior down to 8s per 112 lbs, free on rail. Imported descriptions quiet, and rates barely steady. No. 1 Northern Manitoba quoted 47s 9d, ex ship, and Barusso 62½ lbs 46s 6d, ex ship, choice white Karachi landed 45s 6d all per 496 lbs. In the cargo section the tone has been somewhat unsettled owing to fluctuating American rates of exchange, but the general tendency is weak, while influenced to some extent by liberal shipments from Russia. Holders, however, continue to offer sparingly in view of the small quantity of old crop available. Steamers of No. 2 Northern Manitoba loading changed hands at 44s 9d, part cargo No. 1 ditto November 45s, Rosafe 62½ lbs arrived 45s 3d, part cargoes of ditto December also January 44s 3d per 480 lbs. Maize cargoes very firm, and sparingly offered. Plate steamers part cargoes, November-December, sold 37s 3d, Gal-Foxonian, December 15th-January 36s 9d, ditto November 37s, and November 15th-December 37s 7½d, with No. 6 yellow South African afloat at 37s 6d per 480 lbs. Flour firmer, with a fair demand. London standard straight run quoted at 38s, patents 40s to 41s, town households 36s per sack, delivered in. All English country straight 30s 6d to 32s per sack, delivered to London stations. Imported steady. Manitoba patents range from 37s to 40s, as to sample. Minnesota 39s 6d to 40s 6d, Australian 33s to 34s per 280 lbs, ex store. Millers' offals firm. Broad bran quoted 7s 6d, ordinary ditto 6s 9d to 7s, middlings 8s, bags included, ex mill. Light oats 5s 9d, powdered oat husks 6s 3d, feed oatmeal 9s 3d, ground oats 13s 3d, free on rail, all per cwt. Barley—English firm, and

malting kinds range from 10s to 15s, with feeders 8s 6d to 9s per 112 lbs, free on rail. Imported fully steady. Californian 40s to 44s 6d, Chilian brewing 38s 6d to 44s per 448 lbs, ex store. Persian, ex ship, 27s 6d, Danubian 30s, Algerian-Tunisian 29s 6d, No. 4 Canadian Western 29s 6d, all ex ship per 400 lbs. Maize firmer, while sparingly offered. Plate, ex ship, 38s 6d to 39s, landed 39s 6d, No. 6 yellow African, ex ship, 38s, Dan-Gal-Foxonian, ex ship, 37s 3d, Bessarabian 38s, ex ship, all per 480 lbs. Oats—English steady at 8s 4d to 10s 2d per 112 lbs, free on rail, as to sample. Imported very firm. Plate f.a.q., ex ship, 22s 6d, landed 23s 9d, No. 2 Canadian feed, landed, 26s, No. 2 Canadian Western, now ex ship, to arrive, 28s 3d, old landed 29s 3d, No. 3 little old landed 27s 6d, new 27s 3d, Algerian-Tunisian, landed, 27s, New Zealand A grade 38s to 40s, B grade ditto 36s to 37s, all per 320 lbs. Oatmeal moved off slowly at late rates. London-made flaked, also rolled oats, quoted 17s 6d, medium and fine cuts 17s 6d, coarse and medium pinhead 17s, ordinary Scottish oatmeal 17s 6d to 19s, American 16s to 16s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24	1922-23	1921-22	1920-21
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to November 17	392,377	461,658	301,137	353,635
11 weeks to November 17	4,469,166	4,812,158	4,036,137	4,933,881
Average price of English wheat per cwt.	s d 9 3	s d 9 11	s d 10 7½	s d 21 0

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1919 to 1922:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1923.	Cwts.	Cwts.	Cwts.	s d	s d	s d
Nov. 10	322,761	736,110	75,623	9 1	10 8	8 8
Nov. 17	392,377	646,419	72,487	9 3	10 7	8 8
1919	357,544	647,358	55,235	16 11	29 4	20 0
1920	353,635	712,425	52,246	21 0	25 1	18 7
1921	301,136	544,632	50,277	10 7	13 7	9 6
1922	461,657	471,893	80,379	9 11	11 2	9 8

IRON, STEEL, AND COAL.

Our Sheffield correspondent writes:—Signs of improvement in local trading conditions are multiplying, chief of them being a revival of buying of raw materials. Large orders have been given out for pig-iron covering the first three months of the year, and increased interest in heavy steel scrap has sent up the value of that material 10s per ton in a week. Such a movement will necessitate higher quotations for steel billets of all kinds, and a revision of the associated makers' minimum quotations will take place next week. At present all quotations, whether for pig or crude steel, are firm, while rolled steel has gone up 20s per ton. Stocks of iron and steel are low, and the country does not contain much scrap. Several further orders for railway material have been placed, and a local firm has been notified that a large contract for rails will be forthcoming in the course of a few days. Slackness continues to be acute in several important branches, but unemployment has been decreasing for several weeks and the position gets rather better day by day. Conditions in the coal trade continue strong, and quotations are firm. Coke is being exported so freely that there is no surplus output. There is a good demand for the best slacks, but other kinds are quiet. Prices per ton at pits are: Best hand-picked branch, 31s 6d; Barnsley best Silk-stones, 27s 6d; Yorkshire hards, 21s; Tyne hards, 20s; rough slacks, 11s 6d; smalls, 5s to 8s; blast furnace coke, 24s.

Our Middlesbrough correspondent's report, dated November 22nd, is as follows:—Pig-iron: There is a better demand for pig-iron, and this will be met by a gradually increasing output. It is expected that more furnaces will go in shortly. There is no reason to make any change in prices, which remain at 100s for Cleveland G.M.B. No. 3, and 101s for East Coast mixed numbers hematite. Manufactured iron and steel: Prices are firm in anticipation of the resumption of work by the boiler-makers next week. A fair number of orders have been placed. Steel ship plates, £10; steel ship angles, £9 15s; iron bars, £12; steel rails, £9 10s. Iron ore: Business has been done over the first half of next year, and prices of good ores are inclined to stiffen. Best Bilbao Rubio is now quoted 23s 6d per ton c.i.f. Tees, sellers.

Our Glasgow correspondent writes on Thursday:—Not for over a year or so has the business tone in the Scotch iron and steel trades presented so cheerful a feeling as has been in evidence this week, and not for even a longer period has the future been valued more hopefully. This, as a consequence of the happy ending of the long-drawn-out dispute in the boiler-making industry. The men, it is true, have not yet got back to their benches, but their leaders are satisfied that they will be well in harness by the middle of next week, and that it will be a long while before a seven-months' labour tussle again tarnishes the working calendar. However that may be, the outcome of what has just happened has been the placing of numerous lines of orders for ship and boiler plates and all kinds of sections with steelmakers, who, rumour says, have got their shops ready for an active start in rolling on Monday. During the

last few days prices of ship plates in the Glasgow district have been fixed ½ in and up at £9 15s per ton, delivered Scotland, and at £9 10s per ton (angle basis) and joists. In some Scotch districts the quotation is £10 per ton for sections under 7 ins, delivery in the Clyde area, and rates for tank, bridge, and ship plates are £10. Steelmakers, it is needless to say, are greatly pleased at the reconstitution of the Trade Association, which will operate in the regulation of material prices north and south of the Border, and control other business matters which have been practically neglected during the past eighteen months. Last week over 2,000 tons of raw iron were forwarded to the U.S. Pacific coast, and this week the loadings are promising well at stiffening quotations. On the week No. 1 foundry has advanced 3s 9d at £5 8s 9d, and No. 3 also 3s 9d a ton at £5 3s 9d. These are about the best prices of the year. The turmoil natural to the coming elections has had no adverse influence so far on trading and industrial affairs, but some stir is looked for ere the week closes.

Our Cardiff correspondent writes:—There has been a decided improvement this week both in the volume of trade and in the level of prices on the Cardiff market. The increased demand from the Continent continues. The breakdown of the negotiations with the Ruhr industrialists has stimulated more inquiries, particularly from France, and new credits have been arranged with British assistance for the shipment of coal to Germany. The effect of the German deal on the Cardiff market has been only sentimental, but the better buying from France and Italy has hardened prices, and best Admiralties are now quoted at from 6d to 1s higher than was the case a week ago. The French railways have placed an order for 100,000 tons of American coal at 7.25 dols. c.i.f., but it is for delivery over next year and has not influenced unfavourably the local market. The collieries are working more regularly, and a sharp increase is expected in this week's volume of trade.

The following are the current approximate quotations:—Best Admiralties, 28s to 28s 6d; second Admiralties, 27s to 28s; best drys, 26s 6d to 27s 6d; black veins, 26s to 27s; Western Valleys, 25s 6d to 26s; Eastern Valleys, 24s 6d to 25s 6d; best bunker smalls, 19s to 19s 6d; ordinary cargo smalls, 16s to 18s; anthracite big vein large, 40s to 45s; machine-made cobbles, 50s to 52s 6d; French nuts, 54s to 56s; stove nuts, 52s 6d to 55s; rubbly culm, 13s 3d to 13s 9d; coke for export, 42s 6d to 50s; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 29s to 32s; pitwood, ex ship, 29s 6d to 30s 6d.

In the iron and steel trades conditions are very active. The exports are considerably in excess of the average, particularly of tinplates and galvanised sheets, and this week the Stabilisation Prices Committee has advanced the minimum price from 23s 1½d to 23s 6d. The price of bars, however, has been reduced by 3s 9d to £8 18s 9d, less 7s 6d rebate to the tinplate manufacturers, who are participating parties in the price regulation scheme.

THE ECONOMIST.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

The market has been supplied over the past month with plentiful stocks of timber for building, packing-case, and general construction purposes, principally Finnish, and also, to a lesser extent, by Swedish and Russian shipments, and with the good supplies that were previously on the market the country can boast of a large stock for winter requirements with more to come. The steady but strong flow of Russian timber, with good supplies from Riga and Danzig, have had a very great influence on the steadying of prices; one can say more than that, they have had considerable influence in the fall of the free-on-board market for Swedish and Finnish timber to the benefit of consumers, as was inferred, in a special article in the *Economist* last summer, as likely to be the case. A feature of the softwood market, that is, wood for use in house-building and general work, at the present time, is the decline of imports of Canadian wood compared with the import from the Dominion last year. It is not a large decrease, some 17,700 loads, but it is interesting from the fact that Canada is the only one of our colonies given in the Trade Returns of sawn softwoods, and that out of a total of 3,657,640 loads she is able to respond to the amount of only 371,215 loads. We do not know Mr Baldwin's intentions regarding a tariff on sawn wood, but from what we have quoted above the prospects of building woods from our colonies to compete in any way with European supplies cannot be depended on, and, on the face of it, all tariff charges could not but fall on the consumer. Another matter calling for comment in the imports and on the question of the utilisation of our home produce in timber is that we have imported to October 31st this year nearly 900,000 more loads of pitwood than we received for the corresponding period of 1922, and 2½ million loads more than 1921, almost all from foreign countries—indeed, our colonies are represented in "Other Countries," which are credited with 451,360 loads out of a total of 3,266,258 loads! We do not imagine Mr Baldwin or his advisers would suggest a tax on foreign pitwood, but what we maintain is that railway rates on native pitwood is much too heavy to encourage the greater use of our home woods in the collieries. A Government that could bring pressure to bear on the railways to minimise the onerous railway rates on landowners, merchants, and ultimately on the people, would do much more good than meddling with costly tariffs "on this" and "on that." These heavy railway rates are not only charged on native pitwood, but also on all kinds of timber cut on this island, and are out of all proportion compared with the carriage on foreign wood.

The mahogany log market is very firm, and in the sawn hardwood market the position is a little more satisfactory than has been the case of late. Though the imports, principally American, have been heavy, the market is well sustained; stocks, though large, are, generally, in strong hands, and for holders the situation is relieved by some extent to the good demand in the States for their wood productions, and also the high ideas of American producers.

The price outlook for both building and furniture woods is promising, and is hardly likely to recede. Building work is going along fairly well, and with the many municipal and private schemes on hand the building trade ought not to look back for years, whilst unemployed relief work should make a further demand on wood and woodware. The new houses must have furniture, which must necessarily call for fresh supplies of hardwoods. Thus the weakness in the softwood trade and the quietness in hardwoods may be only of a temporary character, and both are likely to firm up at the first signs of any spurt.

VEGETABLE OILS AND OILSEEDS.

The feature of the week has been the continued strength of cotton seed and cotton oils, which have been largely influenced by an excited cotton market. Prices of Egyptian seed advanced another £1 per ton, and up to £13 6s 3d for black and £12 15s for Sakellariadis, early shipment to Hull, was readily paid. Bombay cotton seed has also been firm and dearer. Crude Egyptian cotton oil has been a steady market, and up to £40 was demanded. Linseed has continued firm, with a steady consumptive demand in near positions at about unchanged prices. A certain amount of business has again been done in the new Plate crop for January-February shipment, up to £17 7s 6d having been contracted.

HIDE, LEATHER, AND ALLIED TRADES.

• (BY OUR OWN CORRESPONDENT.)

Hides were again weaker at Thursday's Bermondsey auctions, and reductions of 4d per lb were general. Best ox made from 6½d to 8½d, and seconds from 7d to 7½d when sold. Best cows at 6½d to 6½d showed a drop of a 3d, bulls dropping by the same amount. Calf were weaker, lights not finding buyers, and heavies at 6½d to 9½d, dropping ½d. Wools were firm at 5s 6d to 11s 6d, and hogs at 3s to 15s each. Tanners are still buying imported hides at lower figures, especially frigorifics. About 35,000 ox and cows of the latter class have changed hands of late, prices ranging from 5½d to 7½d. 700 Leibig ox have changed hands by inscription, however, at 8½d. Dry hides are weaker

in sympathy with other classes, but tanners are waiting for lower prices before operating on a larger scale. The American market is cabled as weak, with best heavy packers now offering at 14 cents.

Business in leather is still improving in Bermondsey, and merchants are rather averse to the dislocation caused by the General Election. Both butts and bends have been moving off readily, and prices remain very firm. Swedish and French bends are finding favour, but American sole is conspicuous by its absence, the exchange acting as a 12 per cent. import against business.

Upper leathers are finding a better market. Carriers of the old style of waxed kip butts are busier, and there is quite a scarcity of heavy weights of both butts and splits suitable for the heavy boot section. Box calf and willow are wanted, and merchants are anxious as to the rumour that the German Government will no longer pay the 26 per cent. reparation duty on German leather imported here. Patent and suedes are being sampled for the spring trade, and there is a good demand for cheap glacé kid of which stocks are low.

The boot trade is improving, and both home and export trade better. Anxiety is, however, felt in shoe circles at the increase in the import of foreign footwear at very low prices.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 23.

SUGAR.—The market steadily hardens, and what demand arises is centred upon British refined as there is quite a dearth of supply respecting imported. Messrs Tate and Lyle's spot whites advanced, and in the case of second half December, 2s; others, 1s to 1s 6d up. Cubes now quoted 61s 6d to 62s 6d; crushed, 59s; granulated, fine, also coarse and stove, 59s 1½d; No. 1, 58s 10½d; No. 2, also London and T.L., 58s 7½d; caster, finest, 61s 4½d; A, 60s 7½d; B, 59s 3d; yellow crystals, 54s 1½d. Granulated, month forward, 58s 6d; second half December, 59s; January, 59s 6d, also February, 59s; March, 58s. White Java, spot, 56s 3d to 56s 6d as to quality. Czecho granulated ready, also November shipment, sold 28s 6d to 29s 6d, f.o.b., Hamburg. Dutch and Belgian offers of parcels for shipment very reservedly made, and then at higher figures. Raw refining kinds are very sparingly offered, and there is a good demand from both British and American refiners. The apparent scarcity of all raws forms the main foundation of the marked stability now existing, and no real relief is anticipated until something approaching a full movement of the Cuban crop takes place. Active trading ensued in the white terminal market at firmer prices, and was more pronounced in the case of near deliveries, distant showing some irregularity at times. November, sold, 28s 3d to 30s; December, 27s 6d to 29s 7½d; March, 27s 6d to 28s 3d to 28s; May, 27s 6d to 28s 1½d, and 28s; August, 27s 1½d to 26s 10½d and 27s 6d.

£2,500,000 in 6% Cumulative Preference Shares of £1 each ...	£2,267,038
£2,500,000 in 7½% Cumulative Preference Shares of £1 each ...	£2,500,000
£2,500,000 in Ordinary Shares of £1 each ...	£2,000,000
£7,500,000	£6,767,038

Neither this Company nor any of its constituent companies has any Debenture charges outstanding with the exception of the Debenture Stock of W. F. Lowrie and Co., Limited, amounting to £133,100.

The 6 per Cent. Cumulative Preference Shares rank in priority both as regards dividend and return of capital over all other Shares of the Company, but confer no further right to participate in profits or assets.

Dividends on the 6 per Cent. Cumulative Preference Shares are payable on the 1st April and the 1st October, and the Shares now offered for sale will rank for a full half-year's dividend on the 1st April, 1924.

This Company's Articles of Association provide that:—
The directors shall not raise or borrow or secure the payment or repayment of any moneys raised or borrowed for the purposes of the Company by the issue of any Debentures or Debenture Stock, or any other specific or floating security without the consent of Extraordinary Resolutions passed at separate Meetings of the holders of each class of Preference Shares.

OFFER FOR SALE

1,250,000 of the above-mentioned 6 per Cent. Cumulative Preference Shares of £1 each at the price of £1 per Share.

The Purchasers will pay an additional 3d. per Share for stamping and procuring the registration of transfers, and will be entitled to delivery of the Certificates free of all further expense.

LLOYDS BANK LIMITED, 72, Lombard-street, London, E.C.3, and Branches,
BARCLAYS BANK LIMITED, 54, Lombard-street, London, E.C.3, and Branches,

and
Messrs. ERLANGERS, 8, Crosby-square, London, E.C.3,

are authorised as Bankers, for and on behalf of Messrs. MYERS AND CO., of 19, Throgmorton-avenue, London, E.C.2, to receive applications for the purchase from them of 1,250,000 of the above-mentioned 6 per Cent. Cumulative Preference Shares at the price of £1 per Share (plus 3d. per Share, as above mentioned), payable as under:—

On Application	£0 5 0 per Share
On or before the 3rd December, 1923	0 15 3

£1 0 3

The principal Shareholders of Buchanan-Dewar, Limited (the Shares of which Company, other than the 7½ per Cent. Cumulative Preference Shares, have hitherto been held privately) have thought it desirable that the public should be afforded an opportunity of taking a wider interest in the capital of the Company. With this object in view, they have sold to Messrs. Myers and Co., the Company's Brokers, 1,250,000 Six per Cent. Cumulative Preference Shares of £1 each, being the Shares hereby offered.

The following letter has been received from Messrs. Price, Waterhouse and Co., the Auditors of the Company:—

Messrs. MYERS AND CO., 19, Throgmorton-avenue, E.C.2.

Dear Sirs,—At the request of the Directors we give you the following information regarding Buchanan-Dewar, Limited, and its Constituent Companies.

We are the Auditors of Buchanan-Dewar, Limited, and have also examined the books and audited accounts of the Constituent Companies viz.:—James Buchanan and Co., Limited, London, John Dewar and Sons, Limited, Perth (both of whose issued Ordinary Share Capitals are held by Buchanan-Dewar, Limited), and W. F. Lowrie and Co., Limited, Glasgow (whose issued Ordinary Share Capital is held as to seven-eighths thereof by James Buchanan and Co., Limited, and as to the remaining one-eighth by Buchanan-Dewar, Limited).

The combined profits of these businesses for the four years ended 31st March, 1923, after charging all expenses, including Advertising Excess Profits Duty, Corporation Profits Tax, and Interest, as well as the Preference Dividends of the Constituent Companies, but before deducting Income-tax, were as follows:—

Year to 31st March, 1920	£1,304,698
" " " 1921	1,327,263
" " " 1922	2,011,164
" " " 1923	2,302,079

The combined Assets and Liabilities of these businesses as taken from the audited Balance Sheets at 31st March, 1923, were as under:—

Land, Buildings, Plant, Machinery, Fixtures, etc. (after deducting depreciation)...	£582,207
Stocks on hand	7,091,907
Sundry Debtors	1,242,921
Investments (other than inter-Company holdings)	1,123,077
Note: These include £800,000 War and Conversion Loans	
Cash at Bank and in Hand	198,804
	£10,188,718
Less—Sundry Creditors and Loans	£2,072,803
Final Dividends at 31st March, 1923, as paid	411,783
Debenture Stock outstanding of W. F. Lowrie and Co., Limited	133,100
Preference Share Issues of Constituent Companies	910,000
	3,527,686

Yours faithfully (Signed) Net assets £6,661,030
PRICE, WATERHOUSE AND CO.

The following letter has been received from the Chairman of the Company:—

Messrs. MYERS AND CO., 19, Throgmorton-avenue, E.C.

Dear Sirs,—At your request I have to say that, in the opinion of the Directors, the profits of this Company, and of our subsidiaries combined, for the present Financial Year, will be at least equal to those of the preceding year—further, that the stocks of Whisky held by the combined Companies exceed 23,000,000 gallons, and that the present market value of these stocks is considerably in excess of the values appearing in the accounts, which are entered at cost price.

The amount required to pay the dividend on all the issued 6 per Cent. Cumulative Preference Shares is £136,022 per annum, while, as will be seen from the figures given in the letter from Messrs. Price, Waterhouse and Co., above quoted, the average net profits of the combined businesses for the past four years have been £1,736,301, while for the year ended March, 1923, they amounted to £2,302,079.

Applications for purchase should be made on the accompanying form and forwarded with a cheque for the application money to Lloyds Bank, Limited, Lombard-street, London, E.C.3, or Branches, or to Barclays Bank, Limited, Lombard-street, London, E.C.3, or Branches, or to Messrs. Erlangers, 8, Crosby-square, London, E.C.3.

If any application is not accepted in full, the surplus amount paid on application will be appropriated towards the amount payable on acceptance, and any balance will be refunded to the Applicant, and where any application is not accepted at all the amount will be returned in full. Interest at the rate of 7 per cent. per annum will be charged on amounts overdue. Failure to pay any amount due on acceptance on the due date will render the amount previously paid liable to forfeiture and will also give to Messrs. Myers & Co. the right to cancel the contract for sale and to re-sell the Shares in respect of which the default shall have been made.

A brokerage of 1½d. per Share will be paid in respect of all accepted Applications by the public bearing the stamp of a Broker, Banker or other approved Agent, except applications in relief of underwriters. The Shares now offered for sale have been transferred into the name

THE MONEY MARKET.

ANOTHER mid-week spasm of stringency obliged the market to borrow a large amount from the Bank of England on Tuesday and Wednesday, pressure being especially acute on the latter day, when borrowers paid up to 4 per cent., so as to avoid the Bank's charge of 4½ per cent. for a week. On Thursday the market found itself more freely supplied with funds, remarkably so in view of the low level of the other deposits disclosed in the

Bank return. Discount rates were easier, partly because it is a tradition of the market that the last week in November begins a downward turn for them, but chiefly owing to anticipations of extreme ease next week, due to the payment, on and after Saturday, of the War Loan dividend. Fine three months' Bank bills were wanted at $3\frac{1}{2}$ - $3\frac{5}{8}$ per cent., and a steady demand was noted, in the neighbourhood of $3\frac{1}{2}$ per cent., for six months' paper, now a very scarce article.

	Nov. 30, 1923.	Nov. 23, 1923.	Nov. 16, 1923.	Nov. 9, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills)	$3\frac{1}{2}$	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	..

The Bank return showed a decrease in the Reserve, chiefly due to the demand for notes in connection with the end of the month and the General Election, of £1,144,000. The movement in securities was mysterious, there being a decrease, in spite of borrowing by the market, of £1,367,000 in Other, while Government also showed a minute decline. Public deposits were £3,895,000 higher, presumably owing to revenue payments, and so the Other deposits were reduced by no less than £6,465,000, and stood below 100 millions. There was an increase of £378,700 to £281,580,600 in currency notes outstanding this week, which includes £1,433,700 for notes called in, but not yet cancelled. The fiduciary issue is £230,697,000, or £39,486,800 below the maximum.

THE STOCK MARKETS.

Movements in the stock markets this week have been erratic. The imminence of the election has restricted business, and talk of dearer money and a rise in Bank rate has been revived. The approaching release of £50 millions in Government interest helped to keep the price of War Loan steady, but substantial sales of Conversion Loan weakened the gilt-edged market as a whole. In the foreign market Brazilian bonds were strong, on the announcement of the proposed mission from this country, and French bonds have been steadier than of late. The feature of the home railway market has been the strength of the Underground group, while foreign rails have been fairly good. In the oil market, Anglo-Persians fell, on the halving of the dividend, and rubbers have been stagnant. In the industrial group there have been one or two bright spots, but Kaffirs, in spite of higher price of gold, which is being maintained, have been dull.

THE COMMODITY MARKETS.

A brighter outlook all round is reflected in our correspondents' reports this week. Further advances are recorded in the Manchester cotton trade; owing to the active demand for raw cotton throughout the world, fresh high records in values have been established in Liverpool and New York. All reports from the primary markets emphasise the strong demand for wool, and values continue to harden. Copra prices are higher. Wheat values have fluctuated with the New York exchange rate, but heavy Russian shipments kept prices down. Sugar is firm at recent higher level of prices, and good competition prevails for tea. Rubber is quiet, and values are easier. The improvement in the Cardiff coal market has been fully maintained this week, and the news of the settlement of the Ruhr coal problem has not yet affected business. The tone of the pig-iron market is good, more enquiry being about, while the resumption of work by boiler makers has brought brightness to steel markets. Tin has gone still higher, and copper followed in the same direction. Linseed is down on account of advices from Argentina, and raw linseed oil has fluctuated, partly in sympathy. Hide values are still declining, but the condition of hides at this season is partly responsible for this.

FOREIGN EXCHANGES.

After the excitement of the past few weeks the last seven days in the foreign exchange market have been exceptionally quiet and dull, with relatively little business. The sharp recovery in the value of sterling has not been maintained in its entirety, the rate having quietly fallen away during the week, but the quotation of \$4.35 yesterday morning, as compared with \$4.37 $\frac{1}{2}$ a week ago, is as good as could be expected until the recent scare and pressure has disappeared, and is still well above the low record of \$4.25 $\frac{3}{4}$ to which it fell on the 19th. The demand for dollars on account of autumn imports has now fallen off, and with a certain recovery of equanimity among foreign holders of sterling we may expect a further quiet recovery when the disturbance of the election is over. Forward rates at $\frac{1}{16}$ cent per month above spot has narrowed somewhat from the $\frac{1}{8}$ cent quoted a week ago. The Paris rate has moved somewhat more erratically, as usual in accordance with political expectations, having been as low as 79.40 at one time on the 26th, and as high as 81.35 on the 29th, but being quoted at 81.15 yesterday morning, as compared with a closing figure also of 81.15 a week ago. Brussels, as usual, has moved in sympathy, but at 94.40 yesterday morning is 20 centimes higher than last week's quotation. Forward rates in Paris have narrowed from 11 centimes to 6 centimes per month above spot; in Brussels they have widened from 6 centimes to 8 centimes per month above. The lira continues to maintain its relative stability, and at 100 $\frac{1}{2}$ shows a slight improvement over the rate of 101 $\frac{1}{8}$ quoted a week ago. Among neutral exchanges the chief feature has been the improvement in the Danish kroner in connection with the stabilisation credits obtained in London and New York, the rate having fallen during the week from 24.97 $\frac{1}{2}$ to 24.17 $\frac{1}{2}$. At the same time, there has been a decided improvement in Christiania from 29.65 $\frac{1}{2}$ to 28.97 $\frac{1}{2}$, while Stockholm in sympathy with the dollar has moved slightly against us from 16.62 $\frac{1}{2}$ to 16.59 $\frac{1}{2}$. Helsingfors, on the other hand, has again moved in our favour, although not so rapidly as in the preceding week from 170 to 170 $\frac{1}{2}$. Amsterdam, now that the pressure of selling from that quarter has been reduced, has appreciated still further from 11.49 to 11.45 $\frac{1}{2}$. Spain also shows a relatively sharp recovery from 33.64 to 33.46 $\frac{1}{2}$. In Central Europe the German mark shows a nominal improvement from 45,500 thousand millions to 30,000 thousand millions. The gradual issue of the Rentenmark and the replacement by it of the old paper mark would seem for the moment to be proceeding satisfactorily; but a new danger has arisen by the issue of various competitive "stable" currencies which contain the threat of a new form of inflation. The Polish mark, in spite of energetic efforts at financial reform, continues to fall away, and was quoted yesterday at 15 million, as compared with 11 million a week ago, after being considerably higher during the week. In Vienna the krone, in spite of the movement of the dollar, has reacted in our favour from 306,500 to 310,000. Prague, however, has moved slightly against us from 150 $\frac{3}{4}$ to 149 $\frac{1}{2}$. Bucharest, after some erratic movements, is quoted at 870, as compared with 915 a week ago. Athens, on the expectation of outside assistance, has brought a sharp recovery in rate from 275 on the 23rd to 230 yesterday. In the East the continued rise in the rupee quotation from 15 5-16 to 15 5 $\frac{1}{2}$ yesterday. At 2s 2 13-32d the yen shows a slight depreciation from the 2s 2 $\frac{1}{2}$ d quoted a week ago. A strong demand from China in anticipation of New Year's requirements, has kept up the price of silver, which was quoted at 33 $\frac{1}{2}$ d on the 28th. It is interesting to note that the Austrian Finance Minister announces the minting of an Austrian "shilling" of the value of 10,000 kr, which, he hopes, will give a stimulus to thrift. The Hongkong rate has been steady at 2s 3 $\frac{1}{2}$ d, but Shanghai has fallen from 3s 4d to 3s 3 $\frac{1}{2}$ d. In South America, Rio shows an improvement from 4 27-32d to 4 $\frac{1}{8}$ d, while Buenos Ayres has also appreciated from 38 $\frac{1}{8}$ d to 39 $\frac{1}{8}$ d, and Monte Video has moved up sharply from 40 $\frac{1}{2}$ d to 41d. Valparaiso, however, has depreciated again from 39.70 to 40.40.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 24th:—

EXPENDITURE.	Min. £	Receipts.	Min. £
Supply Services	6,250	From Revenue	15,010
Interest, &c., on Debt	1,357		
Sinking Fund	759		
Burdies	266		
Added to Exchequer balances ..	146		
Reduction of debt	6,232		
	15,010		15,010

Revenue compares very favourably with the corresponding period a year ago, the total receipts amounting to £15,010,000, as against £10,465,100. The chief causes of the increased revenue are a higher yield from Estate, &c., Duties at £2,760,000, as compared with £1,010,000. Excise yielded £3,549,000, as against £1,839,000. Property and Income-tax produced £974,000, and Super Tax £430,000, against a combined total of £2,062,000. Special Receipts brought in £1,505,500, against nil in the corresponding period. The week's operations reduced the National Debt by £6,231,700, and caused the following changes:—

	Min. £		Min. £
Treasury Bills	+ 3,661	Public Departments Advances ..	9,150
		National Savings Certificates ..	250
		Other Debt	482
		Post Office	10
	+ 3,661		9,892

The floating debt was reduced by £5,480,000 to £804,036,500.

FINANCIAL YEAR, 1923-24 (April 1 to November 17, 1923).

£	£
Total Expenditure .. 472,992,689	Raised by Revenue .. 472,195,570
Net Repayments 2,476,135	Decrease in Balances 3,273,254
Total 475,468,824	Total 475,468,824

ESTIMATES for YEAR 1923-24.

£	£
Ordinary Expenditure 801,013,000	Ordinary Receipts .. 778,500,000
Special Expenditure .. 15,603,000	Special Receipts 40,000,000
Total 816,616,000	Total 818,500,000
	Surplus 1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Royal Bank of Scotland, Anglo-Egyptian Bank, Consolidated Gold Fields of South Africa, Cargo Fleet Iron Company, South Durham Steel and Iron Company, London Nitrate Company, Boulder Perseverance, Western Telegraph Company, Ansell's Brewery, and Colombian Corporation. At the annual court of the Royal Bank of Scotland, the Duke of Buccleuch reported a substantial increase in profits and a higher dividend and bonus; Mr Raoul H. Foa, at the Anglo-Egyptian Bank meeting, reviewed conditions in Egypt, Sudan, and Palestine. At the meetings of the Cargo Fleet Iron and South Durham Steel and Iron Companies, Lord Furness criticised the high railway rates at home, and described the effects of the Ruhr occupation on the iron and steel industries; Mr Frank Tobin, at the London Nitrate meeting, gave an interesting review of the nitrate industry, whilst Lord Harris reviewed the wide interests of the Consolidated Goldfields. Sir John Denison-Pender, at the Western Telegraph meeting, condemned the proposed new cable from New York to Italy.

THE CASE FOR FREE TRADE.

A brief statement of the Free Trade case was presented in a supplement to our issue of November 17th. This supplement is available in pamphlet form, price 3d. per copy. Terms for quantities by arrangement.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE GREAT ISSUE.

BEFORE the next number of the *Economist* appears the verdict of the country will have been given on the fundamental issue which has been so hastily laid before it. Mr Baldwin has indicted Free Trade without laying essential details of his case before the jury, and without allowing adequate time to the defence to prepare their own. If under such circumstances the verdict of the country is a wise one, it will be a very remarkable tribute to that underlying national common sense which has so often pulled the country through, but which has seldom been put to so severe or so unfair a test. As our last word before the votes are cast, we would venture to remind our fellow members of the national jury that a prisoner is innocent until he is proved to be guilty; and that if he is to be entitled to secure the condemnation of Free Trade, Mr Baldwin has to prove, so conclusively that no doubt lingers, not only that circumstances have since the last trial changed in such a manner that repeated past verdicts of the nation should be reversed, but also that he himself has a better substitute to give to the country for the fiscal system which he would now send to the scaffold. We suggest in this case, where the system under which has been built up our financial, industrial, and maritime prestige, is on trial for its life, any voter who has the faintest doubt on this great issue is bound to give the benefit of that doubt to the existing system, and not to the shadowy substitute which Mr Baldwin proposes.

For ourselves we hold, and have faith that the electorate will hold, that Mr Baldwin has signally failed to establish either part of his case. One of the very few points on which we agree with Mr Baldwin's presentation of the tariff case is that circumstances have been changed by the war. But they have changed, in our view, in such a way as to underline every phase of the Free Trade case. Never in our history has there been a period when the economic interests of the nation so urgently demanded the greatest possible freedom to interchange commodities with other nations, or when it was so vital both to ourselves and to the rest of the world that the war-shattered countries of Europe should be restored to a position in which they could resume a proper level of exports, and help to restore to its proper volume the total of world trade in which Great Britain has maintained and even increased its proportionate share. A year ago this was an accepted commonplace even with those Conservatives who are to-day leading the campaign for trade restriction. As regards the second part of his case, namely, that he has a better system to substitute for Free Trade, it is fair to say that Mr Baldwin stakes his whole claim on the assertion that, if tariffs are imposed on imports of foreign manufactures, unemployment at home will be largely decreased. This claim is in our opinion conclusively disposed of by the analysis of unemployment figures by industries. We ourselves have shown that the great preponderance of unemployment exists in those industries which are predominantly concerned with export, and which must suffer instead of benefiting from the imposition of restrictions on the free flow of international trade. This essential point has been emphasised this week in detail and with authority by Sir Wm. Beveridge in a letter to the *Times* of November 27th. By erecting a tariff duty of sufficient magnitude it is possible in the case of a particular industry to increase employment in that industry, but to deny that a general tariff will increase unemployment in export industries (which in this country are our greatest industries) is to deny the fundamental truth that imports are paid for by exports. Anyone who studies Sir Wm. Beveridge's figures, and those which we published in our recent Supplement, must see which is likely to be the greater, the decrease in the employment in the great export industries, or the increase in employment in certain industries selected for protection against foreign imports. Neither Mr Baldwin nor his lieutenants have been able to adduce any serious argument which can shake these obvious conclusions.

In the short time that has been at our disposal since the election was sprung upon the country, we have endeavoured to place before our readers the Free Trade case in its most important aspects, and in the present issue

will be found articles concerning the interests of the coal, shipping and iron industries and also the real facts about the motor trade which have been distorted into a Protectionist argument on a thousand platforms. We cannot here attempt to re-cover that vast field of controversy, but we would submit to our readers a few main propositions.

1. The imposition of a general tariff by restricting the total volume of trade and production and raising production costs must on balance increase and not decrease unemployment.

2. The cure of unemployment lies in the settlement of Europe and the extension of world trade. Instead of restricting foreign imports we need to encourage them in order that our customers abroad may increase their power of purchasing the goods which we manufacture. What we need is more, and not less, foreign imports.

3. So far from being of assistance in lowering other countries' tariffs, the adoption of Protection here would expose British trade as an unrivalled target for retaliation by other countries, and we should certainly lose our universally favoured position in the tariff lists of other countries. Those who, like Lord Derby, persuade themselves that the adoption of tariffs here is a step towards universal Free Trade are under a delusion that is abundantly proved by history.

4. Our greatest industries, such as shipping, agriculture, textiles, iron and steel and coal, can gain nothing and stand to lose a great deal from a tariff on imports of foreign manufactures.

5. The standard of living of the wage earners, at present higher in Britain than in any other country in Europe, would be seriously endangered by a protective tariff.

6. The adoption of Protection would remove some of the most important conditions which enabled the City of London to establish a supremacy over other financial centres of the world.

7. With a tariff we should be introducing into our political life a factor which, in every other country that has tried Protection, has debased the standards of both honesty and efficiency.

8. Great Britain's abandonment of Free Trade at this juncture would remove the vital element in British power of playing a healing part in European politics.

We hope that amid the hurly-burly of political battle, these points may stand out clear in the minds of the electors. The last point above is inserted merely to recall the fact, not always remembered, that the question of British fiscal policy is not only of domestic, but of world importance. As the supporters of Professor Murray's candidature in Oxford University point out:—"A reversal by Great Britain of the principle of the open door would have political effects far beyond the economic damage it would do to our export and carrying trade; it would retard the recovery of commerce and industry throughout the world." One of the main reasons for the present deplorable state of Europe is that, instead of accepting the advice of the world experts gathered at Brussels, namely that "Each country should aim at the progressive restoration of that freedom of commerce that prevailed before the war," there has been an epidemic of heightened tariffs as part and parcel of the policy of aggressive, narrow nationalism. Britain's mission, in our view, is to cling to her traditions of the freest possible intercourse between nations, and by her example to stand as the strongest and most effective supporter of the whole policy of the League of Nations. Mr Baldwin asks us not merely to revolutionise our fiscal system in a way that cannot possibly assist in solving the unemployment question; but asks us also to say to the whole world "We have abandoned our ideals and our traditions and come to join in the contest of economic 'beggar-my-neighbour,' which is responsible for so large a part of Europe's troubles to-day." Had Free Traders been given three months, instead of three weeks, to counter Mr Baldwin's offensive, there would, in our opinion, have been no possible doubt as to the nation's verdict. Even as it is, we believe that on Thursday the country will reject Mr Baldwin's reckless invitation to sacrifice the substance of unique economic advantages and a unique position in European politics for the shadow of crude economic fallacy.

THE IRON TRADE AND PROTECTION.

WE have obtained from Sir Hugh Bell, the well-known ironmaster, the following statement of the position of the iron trade in relation to Mr Baldwin's tariff proposals:—

Of all the great manufacturing industries of this country none, in my judgment, is so much concerned to be "protected" against "protection" as the iron trade. It is not the largest, for the textile trade, by which is meant cotton, woollen, linen, silk, and other similar materials, shows a larger total. But against these have to be set, first, the large quantities of expensive raw materials which have to be paid for before there remains any surplus with which to discharge international indebtedness. And, second, the somewhat important quantities of manufactured textiles which come to us from abroad. As to these, there is something to be said later.

But in the case of iron the amount of imports, large though they be, leave an immense balance which can be used, and is used, to pay for the things we need but cannot or do not produce ourselves. Regarded in this way, it is safe to say that in normal conditions there is a surplus in the iron trade of something like £60,000,000 a year, while the similar surplus in textiles is barely half that amount. Let us turn for the moment to the nature of the imports in each case.

In each we have, to begin with, the raw material, by which we mean the actual raw cotton, or wool or silk, and the iron ores (of various kinds, including the indispensable manganese). As to these there seems to be little conflict of opinion, though what a tariff reformer who was also a Cleveland miner might say as to iron ore being a raw material is not quite clear, for at least 70 per cent. of the cost of Cleveland ironstone is paid in wages. But passing that point we find that the other imports in both cases consist substantially of two classes of goods—either very cheap articles, which can be produced abroad by very cheap labour—things like flimsy Japanese muslins may serve as an example—or very expensive goods, like fine brocades, where questions of taste are involved, or objects in which for one reason or another some other country has obtained a supremacy, of which it would not be difficult to give examples.

Let us now examine the particular case of the iron trade. Five groups are given in the Board of Trade Returns, and during the first nine months of this year £29,606,000 came in, but our exports of these same goods amounted to £122,073,800. The following table gives more particulars:—

	Imports. 9 Months, 1923. £	Exports. 9 Months, 1923. £
Iron and steel and manufactures thereof	10,297,072 ..	54,946,605
Cutlery, hardware, implements, and instruments	5,085,472 ..	5,296,781
Machinery	6,972,978 ..	33,627,815
Electrical goods and apparatus	1,640,108 ..	6,039,466
Vehicles (including locomotives, ships, and aircraft)	5,610,374 ..	22,163,188
Total	29,606,004 ..	122,073,855

But for the unfortunate dispute over wages in the boiler-making industry, the preponderance of exports would have been still greater. In the nine months of this year the export of ships amounted to only £9 millions, but in the corresponding period of last year they were valued at £24,994,000. The above figures show that, whereas we paid out £29, we received £122. In other words, while we bought £1 of goods, we sold more than £4.

Surely this is a highly satisfactory position. Yet Mr Baldwin and his Protectionist friends are willing recklessly to jeopardise the exports of these great industries by imposing a general tariff with the avowed object of raising prices, and, consequently, the cost of production.

In the first group—iron and steel manufactures thereof—at least half of the imports is raw material for the other groups. But even in this group we export £55 for every £10 we bring in. During the first nine months of this year our imports of pig-iron were £412,000, against exports of £3,200,000; of ferro-alloys £220,000, against £2 millions. The only articles of any considerable importance, as classified in the Board of Trade Returns,

which show an excess of imports over exports, are iron and steel blooms, billets and slabs, and iron bars, rods, angles, shapes, and sections. Of iron and steel blooms, &c., we imported £2,330,000, against exports of £159,000; and of iron bars, &c., £940,000, against £417,000. But are these not virtually raw materials? We imported £1,700,000 of steel sheet bars, tinplate bars, &c., but our exports were £4,200,000. Only half a million of plates and sheets came in, but over £23½ millions went out. Imports of cast and wrought tubes, pipes, &c., amounted to £600,000, but exports were £4,200,000, while in rails and railway material the imports were insignificant, compared with the exports. Considerably less wire, nails, rivets, bolts, and hollow ware came in than went out, and no imports are shown of cast-iron manufactures, anchors, chains, cables, and bedsteads, whereas the exports were substantial.

If we look at the number of persons to whom the iron trade affords employment, we find that, including those engaged in raising coal for the industry, considerably over 2,000,000 people get a livelihood out of it. There are 11½ million "insured persons," so that nearly one person out of five depends on it. A trade of this magnitude, depending largely for its prosperity on exports, cannot fail to be hurt by anything which tends to diminish imports. By its advocates, such a policy is admitted to raise prices, and so put the producers at a disadvantage. In so far as it checks imports, it also checks exports. Our workers, therefore, will not be helped, but will be burdened by it. The ironmaster and his men always prosper most by a flourishing foreign trade, and have, therefore, nothing to gain but everything to lose by any policy which tends to diminish such trade.

COAL AND TARIFFS.

THE position of coal in the economic issue that is now being debated in the country, and upon which the electors will vote next Thursday, is one of exceptional and even unique importance. There is no commodity produced in the United Kingdom that has exercised an influence more decisive in the direction of its foreign trade, or in the determination of the character of the British industrial system, than coal. It was our command over an abundant supply of cheap coal that enabled us to reverse our old channels of commerce and placed it within our power, with the aid of invention, private enterprise, and industrial skill, to transform these islands from an agricultural into one of the greatest manufacturing centres in the history of the world. In later years the far greater resources of the United States have enabled that country to take the premier position as a seat of manufacture; in the years immediately preceding the war, organisation, technique, and determination raised Germany to a position of pre-eminence in a few lines of business; but the distinctive character which coal gave to British industrial activities remains, and when coal ceases to play the part both in our home and in our foreign markets that it has played during the past century the decline of Britain as an industrial country will become inevitable.

We are dependent on foreign sources of supply for the greater part of our foodstuffs and of the raw materials of our industries. Our population has outgrown the agricultural capacity of our farms, and our native supplies of ores have either been already commercially exhausted or are in the process of exhaustion. We now obtain these supplies from the ends of the earth. We pay for them chiefly by the export of our manufactured goods, but partly by our "invisible" exports, of which the services of our mercantile marine is the greatest, and partly by the export of coal. The raw materials that we import, whether they be iron ores, cotton, grain, timber, hemp, jute, flax, &c., are commodities of relatively low value, but great bulk. Coal is the only commodity of a bulky character and of great commercial value which we now produce in quantities large enough to leave a considerable surplus available for export. In 1913 we exported as cargo and bunkers, coke, and patent fuel roughly 100 millions, out of a total output of 287 million tons; this year we are exporting at the higher rate of over 100 millions out of a

production that will probably be about 10 million tons less than that produced in the record pre-war year of 1913. This surplus provides the ships that bring in raw materials with an easily obtainable and necessary export commodity, and this make-weight export cargo enables us to bring in our foreign raw materials and foodstuffs at a cost of over-sea transport considerably less than that which would have to be charged in freights if there were no coal to export. This is one of the chief reasons why we have hitherto been able to obtain raw materials at a cost sufficiently low to enable us to hold our own as manufacturers in the competitive markets of the world.

These elementary but fundamental facts will show how imperative it is to avoid any legislative action that may interfere with, or otherwise impede, the operation of those economic forces, of which the chief driving power is the coal export trade. An import tax on imported manufactured goods is not so direct and palpable an impediment to the coal export trade as an export tax; but the effect of an import tax on manufactured goods may be not less injurious if not disastrous in some of our foreign markets than a direct export tax. In so far as the proposed tariffs on imports would be effective, even when confined to manufactured or semi-manufactured commodities, they would necessarily restrict the volume and value of the import trade, and, as imports pay for exports, one cannot be injured without the other.

It is argued that one of the benefits to this country of the new Tariff programme is that it would stimulate home manufacture and intensify the island demand for coal. This argument is fallacious. In the first place, the aggregate demand for coal would not be increased; the probabilities are that it would be reduced. Import tariffs might shift the direction of the employment of capital and labour, but they would not augment either; the probabilities are that the demand for the employment of both would diminish. The artificial direction given to industry would itself involve some loss, and the incidence of that loss would be very unequal, for the industries that were not protected, and for which protection would be useless, would be handicapped by the higher real cost of production and living—due to the effect of the tariffs on inland prices—and by a reduced earning power.

In the second place, the distribution of the export trade would be disturbed, and its volume and value contracted. The consequences to our foreign trade of such disturbance and contraction would be even more injurious indirectly than directly. There would be less demand for our coal, and consequent less employment for our shipping, but you cannot limit the volume of the trade of over-sea shipping without raising the cost of transport. Temporarily, no doubt, the increased competition for the reduced carrying trade would keep freights low, but capital in shipping, like capital in any other productive service, cannot long be employed except at a rate of profit equal to the average return on capital and proportionate to the risks involved. The shipping depression of the past three years is a convincing illustration of the havoc that can be wrought by unremunerative freights. There would be a gradual process of adjustment of freights to the more restricted conditions of our foreign trade arising from the imposition of tariffs, and, as that adjustment would leave freights at a higher level, every industry in this country that depends upon foreign sources of supply for its raw materials would be faced with higher costs of production. In their turn those higher costs would further react on exports, and thus aggravate the evil created originally by the tariffs on imported manufactures.

In the next place, the tariffs would react unfavourably on the existing organisation as well as distribution of the coal trade of the United Kingdom. The mining industry has hitherto been developed on the principles of Free Trade. Demand and supply have taken their directions entirely under economic influences. In some districts it has been developed to meet particular forms of inland requirements, and in other districts to meet the requirements of the export trade. South Wales, for instance, at present supplies less than 10 per cent. of its output for manufacturing purposes. The latest figures show that 65 per cent. was exported as cargo or bunkers, 8½ per cent. used by the collieries for the service of the mines themselves and the workmen employed in them, 4 per cent. for the production of coke, 2½ per cent. for the manufacture of patent fuel—

nearly all of which is exported—and 6 per cent. for railway purposes. Even assuming, therefore—which is a terrific assumption—that the iron and steel industries in South Wales would be able under the tariffs to produce all the blooms, billets and bars they now consume, the effect on the industry would be almost infinitesimal, and only those collieries would benefit which are now producing the cheaper low-grade forms of coal. The great majority of the South Wales collieries would be affected by the conditions in the export trade, and for the reasons already given the demand for export coal would be reduced.

On these and other grounds the new tariff policy is regarded with great apprehension in the coal trade, and particularly in the coal export districts, and it is only the alignment of party divisions that prevents the industry from protesting as strongly against the contemplated fiscal interference with the industry as it did against any and every form of interference by the Government during the period of war control.

SEA CARRIAGE UNDER FREE TRADE.

THE typical Protectionist is apparently unable to grasp the fact that every pound of goods entering and leaving this country passes by sea, and is carried in ships, of which nearly two-thirds are British. He is, moreover, incapable of seeing that any steps which may be taken, by tariffs or otherwise, to restrict imports will also restrict exports which pay for them, and that sea carriage will be reduced both ways, in goods coming to our ports, and in goods going away.

There is a further principle of great importance from the point of view of shipping. Our open ports, our free ports, have built up a very large business in the interchange of goods between the distant markets overseas and the nearer markets of the Continent. This is called our *entrepôt* trade, or Short Sea Trade; it consists to a large extent of goods brought from foreign countries and Dominions as imports into the United Kingdom, and then re-exported by merchants to the Continent. This *entrepôt* trade, which for the ten months of the current year amounted to £98 millions, is directly threatened by any tariff which restricted the volume of this trade or, by interposing delays in Customs, hampered the conduct of this trade.

Let us first consider the enormous amount of shipping, nearly two-thirds British, which lives upon the carriage of imports, exports, and re-exports to and from the United Kingdom. During the ten months to October of the present year, the ships entered with cargoes, or in ballast, at our ports aggregated 40,526,000 tons net (63.5 per cent. British), against 40,917,000 (65.7 per cent. British) for the corresponding period of 1913. The clearances of shipping during the ten months to October last were 57,125,000 tons net (58.2 per cent. British), against 56,617,000 (59.2 per cent. British) for the corresponding period of 1913. The steadiness of all these figures as between 1923 and 1913 is remarkable when one considers all the changes which have taken place in the world during the ten years which intervene. Our shipping industry is depressed because there are more ships in the world than are required to carry the trade of the world, though in actual volume the amount of cargo carried does not differ by very much from that carried before the war. It has been pointed out more than once that if the unremunerative ships of more than twelve years old were all scrapped and their material sold to the steel makers, the remaining vessels, together with the pre-war production of new modern steamers, would be able to bear the world's trade more cheaply and more remuneratively than is done at present. About ten million tons of American war-built shipping are wholly useless, and are scarcely worth scrapping for the steel content.

When one further considers the *entrepôt* trade, the trade of bringing foreign and colonial produce into this country and re-exporting it on short sea voyages, we see that the quantity and value of it count—as the politicians say—two on a division. The Annual Statement of Trade for

1922 (Vol. 1) shows that during 1922 the total value of the overseas goods re-exported was £103,695,000, of which £68,716,000 passed through East Coast ports and £34,974,000 through West and South Coast ports—the first for Northern Europe and the Baltic, and the second for France, Spain, and the Mediterranean. Seeing that all these foreign and colonial goods re-exported had first to be imported, it is plain that every ton of restriction in re-exports due to the operation of a tariff would involve a corresponding ton taken off the imports. And both these tons under Free Trade would have been carried by ships two-thirds of which are British. The correspondence between the *entrepôt* trade in 1922 and in 1913 is close. The value of the re-exports from the East Coast in 1923 and 1913 were almost identical (there was a difference of about 1 per cent.); the value of the re-exports from South and West Coast ports was £34,974,000, against £40,159,000 in 1913, the decline being due to the smaller trade which is being done by us with Central and Southern Europe.

Mr Baldwin on Wednesday made a brave effort to deal with the shipping problem in Glasgow. He pointed out that since 1914 there has been a greater proportionate increase in foreign tonnage (except that of Greece and Germany) than of British tonnage. This reminds us of the childlike calculations in proportions of Mr Baldwin's predecessor, Mr Joseph Chamberlain; Great Britain, with its huge tonnage in 1914, has naturally made a much smaller proportionate increase than have countries with a comparatively insignificant tonnage. What really is important is the continued existence of much British pre-war tonnage which is getting obsolete. There can scarcely be recovery in shipping and in shipbuilding until the old stuff is cleared out of the way. How a tariff, by reducing the employment of ships, is to accelerate the overdue scrapping of ships, Mr Baldwin neglected to explain. It is only in times of active prosperity that shipowners can afford to take off old vessels and replace them by new ones. Mr Baldwin talked of foreign discrimination against British shipping, and pulled out his tariff proposals as a "weapon with which we can defend our own trade." If Mr Baldwin will give one single example from the tariff history of the last 50 years in which the use of a "tariff weapon" by one country has really reduced the level of tariffs in another country—or caused the removal of other kinds of discrimination—we shall be delighted to hear of it. For a study of the subject proves beyond a doubt that the more busily one country forges tariff weapons, the more ardently other countries take to the forging of retaliatory weapons. There is no limit, except mutual impoverishment, to the expansion of tariff armaments, just as there is no limit, except mutual destruction, to the expansion of military armaments.

THE MOTOR TRADE AND IMPORT DUTIES.

In the showcase of the Protectionist campaign motor cars are highly conspicuous. They stand in the front row. From those who ought to know better—like Sir Robert Horne and Mr Neville Chamberlain—to the rawest of Unionist candidates, who take their facts from the Central Office, all proclaim that the touring car industry (which is protected) flourishes, and that the commercial car industry (which is not protected) is in the depths of depression. The invariable conclusion, which forms a valuable peroration, runs: "See the beneficence of Protection on the one hand, and of the maleficence of Free Imports on the other."

If it were, in fact, true—which it is not—that the McKenna duties of 33½ per cent. on imported touring cars had relieved British car makers from foreign competition, that fact by itself would not help the cause of a general protective tariff. It is quite a simple matter by means of partial protection, by a tariff on the foreign imports of a few selected industries, to benefit directly the makers of some British goods. What happens is that a few privileged manufacturers—like those of "key industries"—are favoured at the expense of the other in-

dustries of the country. It is when a general attempt is made to favour a great many industries by means of tariffs that we get the flagrant evils of a Protective system. But the claim that the industry of making touring cars has been relieved of foreign competition, and made prosperous by the retention of the McKenna duties of 1915, is not, in fact, true. There is a great deal of foreign competition, in spite of the duties, and the industry is a long way from being prosperous. Neither is it true that the depression in the industry of building commercial cars is due to foreign competition, which is declared to have resulted from the absence of a McKenna duty in this branch of the trade.

The industry of making British touring cars, though active, is unhappily not prosperous. The duties on foreign imports may have helped it, though not by very much. It is suffering from the over-production by a great many makers of types of cars for which the demand is limited. Here and there one sees evidence of real enterprise which has unfortunately not always been rewarded by the profits which it merited. For instance, the Rover Company has revolutionised the small car market with its little 8 h.p., and sold huge quantities at keen competitive prices, but for the year which ended last August the company showed a loss of £36,752 in its trading accounts. The profits for the previous year were £180,502, and the existence of a substantial reserve fund enabled a dividend to be paid for the latest year, in spite of the trading loss. The Austin Company, which has also been notable for enterprise in 20 h.p., 12 h.p., and in little 7 h.p. cars, and merited a better result, made a comparatively small profit for 1922-23 of £78,564, which was swallowed up by the great debit balance at profit and loss account of £1,805,037. With few exceptions—such as the Rolls-Royce Company, which cares nothing for foreign competition with its supreme production—British motor car manufacturers are making little profit. We have no particulars at present of the Morris Motors—which builds the extremely popular Morris-Oxford and Morris-Cowley cars—but suspect that this company cares as little as does the Rolls-Royce for foreign competition.

Now let us take the foreign competition with British touring cars, which is alleged by the Protectionist campaigners to have been removed by the beneficent McKenna duty of 33½ per cent., against foreign imports. According to the survey of the *Motor Trader*, made before any Protectionist campaign was started, "the foreign type of vehicle has found favour during the year (1922) with 50 per cent. of the year's purchasers, reckoning in the number of foreign cars assembled here." Exactly. If British purchasers want the American type or the French type of inexpensive car, they will buy it despite the McKenna duty. It is the job of a successful British motor car industry to produce the cars which the using public wants, and those who do not produce them will always scream for help against foreign competition. The Board of Trade figures for the past three years show that the retained imports (imports less re-exports) of foreign and colonial completed cars have steadily increased, and that the exports of British-made cars have been comparatively small.

COMPLETED TOURING CARS (Dutiable).

Ten months of—	Retained Imports. (Foreign and Colonial).		Exports (British).	
	Number.	Value.	Number.	Value.
1920.....	21,357	£ 6,555,665	3,103	£ 2,146,383
1921.....	3,616	£ 763,035	1,685	£ 1,418,602
1922.....	10,733	£ 1,760,008	1,083	£ 691,541
1923.....	12,775	£ 2,063,774	2,222	£ 870,496

We do not see in these figures any notable signs that the McKenna duties have preserved the home market for British makers, or that these makers have achieved much success in exporting their surplus production. We shall deal presently with the allied industries of making motor cycles and the humble push cycle, industries which care not a Birmingham pin for any foreign competitor, and sell their famous makes all over the world. Those are the tests of a truly prosperous industry, not a precarious dependence upon the partial shelter of a tariff.

Commercial cars, it is boldly alleged, are not prosperous because there is no duty to prevent the foreigner from "dumping" his products upon our unprotected

market. Everyone agrees that the commercial-car industry is depressed, and most people know the principal reason. During the war immense numbers of lorries and chassis were built, and at the end of the war immense numbers of lorries and chassis were left over. The market has been swamped ever since. There is practically no foreign competition in completed imported lorries, though it is alleged that many commercial cars are built of imported chassis and parts. Let us first take the retained imports (imports less re-exports) of completed commercial cars, and the exports of British commercial cars. The retained imports are very small, whereas the exports are not at all bad under the circumstances.

COMPLETED COMMERCIAL CARS (Not Dutiable).

Ten Months.	Retained Imports. (Foreign and Colonial).		Exports (British).	
	Number.	Value.	Number.	Value.
1920.....	8,976	£ 3,043,917	803	£ 734,174
1921.....	1,023	£ 86,071	614	£ 538,988
1922.....	673	£ 135,581	473	£ 378,460
1923.....	217	£ 40,584	740	£ 510,991

The point about imported chassis being used to build commercial cars which compete with all-British cars has some importance, though it does not establish the fact of serious foreign competition. Mr. G. M. Young, of the Albion Company, vice-president of the Association of British Motor Manufacturers, had a letter in the *Times* of Tuesday. Mr. Young claims that the "total value of commercial vehicles, chassis, and parts, together with the value of motor vehicles and parts imported subject to duty, and subsequently converted to commercial use," was £9,174,314 in 1920, £3,415,795 in 1921, and £1,704,132 in 1922. If we accept these figures, we have evidence of rapidly disappearing foreign competition in this "dumped market" of unprotected commercial cars. Mr. Young is disingenuous in the presentation of his case. He picks out all the imported chassis and parts which he can find applicable to commercial cars and adds their value to the completed cars imported, but he does not pick out the British commercial chassis and parts exported and add their value to that of the exported complete British cars. The effect of a full investigation would be at least to double the value of completed British commercial cars, chassis, and parts sold out of the country, in comparison with those in the Board of Trade returns of completed cars. It is obvious that the British commercial car industry is depressed by causes quite outside foreign competition, and that had they shared in the protection of the McKenna duties, their condition would, for all practical purposes, be the same as it is now.

We will now turn to a pair of allied industries which really understand the job of catering for the public tastes at home and abroad. We rather wonder that the Protectionists have not claimed the motor-cycle industry as a glowing example of health due to their beloved quack medicine. For here is an industry, "protected" by a McKenna import duty, which laughs at foreign competition either in the home or in export markets. But there are limits to the effrontery even of Protectionists in search of popular arguments. They are uneasily aware that if they claimed the British motor-cycle industry as the offspring of a protective tariff, even the Tariff Reform English Midlands would "laugh demnably." The truth, of course, is that motor-cycles mainly owe their unrivalled reputation all over the world to the skill and persistence of British designers and makers. It is significant that progressive motor car concerns like the Rover and Humber companies learnt their trade of meeting public requirements as cycle builders. The motor car industry might learn many useful things by studying the British motor-cycle and cycle industries. Look at these figures as evidence of how completely a really efficient British manufacturing industry is independent of the McKenna duty, which was accidentally foisted upon it.

COMPLETED MOTOR CYCLES AND TRI-CARS.

Ten Months.	Retained Imports. (Foreign and Colonial).		Exports (British).	
	Number.	Value.	Number.	Value.
1920.....	4,030	£ 261,557	18,242	£ 1,406,791
1921.....	2,026	£ 57,296	7,469	£ 613,388
1922.....	845	£ 46,334	6,417	£ 431,273
1923.....	969	£ 41,210	12,955	£ 663,789

Of what concern to an established British industry like that of motor-cycles, with its large exports, and its relatively paltry imports, is a McKenna "Protection" against the foreigner?

We will conclude with the humble "push-bike," which, until its use was made perilous by the crush upon the roads of motor vehicles, was one of the few modern inventions which was truly beneficial. Beneficial, that is, to the common man and woman. The British "push-bike" has no assistance from a protective duty, and needs none. It is known in every country where there are roads, and in many countries where there are nothing better than tracks. It ranks with the typewriter and the sewing machine as one of the rare inventions which relieve human beings of toilsome labour. And it is as much British all through now as it was in the beginning nearly 60 years ago.

COMPLETED PUSH CYCLES.

Ten Months.	Number.	Retained Imports (Foreign and Colonial).		Exports (British).	
		Value.	Number.	Value.	Number.
1920	2,527	15,029	144,913	1,387,711	
1921	770	4,931	33,242	330,548	
1922	1,176	3,809	56,676	406,770	
1923	2,577	8,539	100,725	591,799	

Here—as with motor-cycles—is the best of evidence of what even those Melancholy Midlands can do when they are left unspoiled by the debilitation of tariffs, and bend their minds and bodies to the task of establishing and maintaining a world's trade.

TARIFFS, INDIA, AND LANCASHIRE.*

(BY AN ANGLO-INDIAN CORRESPONDENT.)

IN the impending election a decision will be taken that will determine, for many years to come, the fiscal position, not only of Great Britain, but (as Lancashire voters should bear in mind) of India. If the Baldwin programme offers nothing that will effect any appreciable increase in British trade with the self-governing dominions, its effect upon our exports to India would, undoubtedly, be positively prejudicial, the scant attention given to this point showing how little the present Indian industrial and political situation is understood. Although higher revenue duties, in India as elsewhere, have been imposed to finance war debts, it is anticipating the course of fiscal history to assert that India at this stage is definitely and definitively Protectionist. But that the Baldwin policy, if endorsed by the British electorate, will commit India finally and irrevocably to Protectionist tariffs, is a logical and practical certainty inherent in India's internal political situation, and in her political and fiscal relations with this country. No Indian politician wants Imperial Preference, nor, indeed, does the executive Government of India, which, from Lord Curzon's viceroyalty to the declarations of Mr Innes, at the recent Economic Conference, has always denounced the proposal as incapable of promoting Indian interests. The first conclusion to register is, therefore, that as far as India is concerned the Baldwin proposals would lead, not towards freer trade within the empire, but towards the needless raising of new tariff barriers between the two most populous countries in that empire. For while tariffs for preferential purposes will never willingly be conceded by the Government of India or by Indian legislators, tariffs intended to protect India's infant industries, especially against British competition, have been the aim, alike of the British Executive and of Indian statesmen, for at least the last quarter of a century, and that demand has never been so strongly pressed as now.

If Great Britain has been able, over so long a period, to keep these tendencies in check, her ability to do so has rested not merely on her political ascendancy, as expressed in the vetoing powers of the Secretary of State, but on the moral authority derived from British adherence to Free Trade principles in relation to our own trade. A Protectionist Britain and a Free Trade India could only have produced in the past, and could only produce in the future, a violent political divorce. This moral authority it is now proposed to

discard. In India the only question raised by a Protectionist electoral success in this country would be, "If England has abandoned Free Trade, why should India maintain it." What would happen? Supposing the Government of India, responding to that feeling, were to submit in March next a Budget doubling the present import duties on manufactured goods entering Indian ports? Upon what grounds, and with what measure of political consistency and authority, could the Secretary for India in a Protectionist Cabinet veto such a proposal? And in such an event, to what extent will the Baldwin tariff expand "empire markets"? Of what value, moreover, will be his laudable efforts to stimulate cotton-growing in the empire if at the same time, as a result of another part of the same programme, his policy leads, as indicated above, to the closing of the gates into the greatest market for cotton manufactures in the empire, and perhaps in the world? Any politician or business man who dismissed this forecast as fantastic, or unduly alarmist, would be either short-sighted or ill-informed. The Indian movement towards high tariffs has been gathering strength ever since Nationalist ambitions took shape, and Indian fiscal autonomy, for so long a pious aspiration, will soon be an unqualified fact. In India, consequently, the Baldwin campaign is being followed with the keenest interest, inasmuch as British adhesion to Free Trade has been, to Indian Tariffists, the last fence, and hitherto the one obstacle that has proved irksomely insurmountable. But let that hiatus be removed, and Indian tariffs will mount so high and so rapidly that the Lancashire export trade to India will soon become little more than a memory.

For all practical purposes Free Trade England and Free Trade India now assure unobstructed commerce, by their fiscal policies, between five-sixths of the population of the British Commonwealth. December 6th will decide this country's decision. In India—it would not be difficult to show—the economic interests of the vast agricultural population are inseparably linked with the maintenance of Free Trade. India—politically articulate India—however, naturally looks to the Mother Country for guidance upon fiscal issues. And by our decision India will, for many reasons, have no alternative but to abide.

A LESSON FROM ENGLISH HISTORY.

"THE truth can never be confirmed enough, though doubt did ever sleep," and at the present moment it is of urgent importance to disperse the doubts that possess many minds as to the truth of the creed of Free Imports. It is probable that a very small proportion of the twenty odd millions of voters are aware that a hundred years ago a general tariff was in operation, and that the results were year by year more disastrous. Time after time Parliamentary inquiry was made into the causes of the distress which pressed so hardly upon both the agricultural classes and the operatives of the towns. Prices of wheat fluctuated from 53s in January, 1816, to 112s in June, 1817, and by the following September had fallen to 74s a quarter. The Select Committee of 1821 reported that the agricultural distress of 1820 was, like similar instances, largely consequent upon abundant harvests in the United Kingdom in the two previous years.

Year by year the Government of the country had to face a diminishing revenue, until Sir Robert Peel was so impressed by the evidence given before the Import Duties Committee of 1840, that he began to reduce the tariff. In the appendix to this committee's report the articles subject to Customs duties are grouped under six heads, as shown in the following table:—

CUSTOMS DUES UPON ARTICLES IMPORTED BY THE UNITED KINGDOM IN 1839.

	Articles.	Produce of Duties.
A. Imported in a raw state to be used in our manufactures	262	2,092,629
B. Imported partially manufactured	101	1,056,246
C. Imported manufactured	214	479,403
D. Imported for food	110	18,303,780
E. Prohibited	19	
F. Not belonging to any of the foregoing heads..	156	190,037
	862	22,122,096

No duty was received upon 147 articles. It appears, therefore, that under a tariff embracing 862 articles and producing 22 millions odd, articles of food produced over 18 millions and raw materials another two millions. Should not the exercise of common sense and a little clear thinking convince all unprejudiced electors that the experience gained by the sufferings of our forefathers sufficiently warns us from incurring the perils of a general tariff? But it is contended by the President of the Board of Trade that if we impose a tariff sufficiently "general," we shall regain certain markets that we have lost! He does not attempt to name them, probably knowing that the real reason of a decline of our exports is that the nations of Europe in particular, and of other nations in general, have not the purchasing power they enjoyed before the war.

Protective duties are also recommended to us as a means of effective bargaining with, or retaliating against, other protectionist countries. On this point of retaliatory tariffs it is well to recall Sir Robert Peel's contention that the best way to fight hostile tariffs was with free imports! In his memorable speech of July 6, 1849, in the House of Commons, he said:—

I boldly maintain that the principle of protection to domestic industry, meaning thereby legislative encouragement for the purpose of protection (duties on imports imposed for that purpose and not for revenue), is a vicious principle.....I maintain that the best way to compete with hostile tariffs is to encourage Free Imports. So far from thinking the principle of protection a salutary principle, I maintain that the more widely you extend it the greater the injury you inflict on the national wealth, and the more you cripple the national industry.

I found my opinion on these grounds: The capital of the country is the fund from which alone the industry of the country can be maintained. The industry of the country will be promoted in proportion as the capital employed in its maintenance shall be increased. The augmentation of capital must depend upon the saving from annual revenue.

Sir Robert went on to contend that the more extensive the system of protection, the greater would be the aggregate loss of annual revenue, and the greater would be the check to the augmentation of capital—that is to say, of the means by which labour is to be maintained. He continued:—

.....So far from encouraging domestic industry, you are, in the first place, by legislative interference, diverting capital from its natural and most profitable application; and you are, in the second place, by giving more for every article than it is worth, exhausting the source from which alone capital can be maintained and augmented.....The principles which should govern the commercial intercourse of nations do not differ from those which regulate the dealings of private individuals.It is the same law which determines the accumulation of wealth by the private trader and the powerful kingdom.....

The cogent argument of Sir Robert Peel, exposing and condemning the policy of protecting the home markets by imposing a tariff upon imports, is as deserving of the country's attention to-day as it was on the day when it was uttered.

THE CRISIS OF STATE CAPITALISM IN RUSSIA.

(BY A CORRESPONDENT.)

AFTER two years' experience of "State Capitalism," commonly known as the New Economic Policy, it would appear that Russia is again faced with the necessity of a thorough revision of her economic organisation.

Although the output of the industries scarcely amounts to 25-30 per cent. of the pre-war figures, they can find no market for their production. The first signs of the coming depression appeared in the spring of 1922, and by the end of that year the crisis already assumed serious proportions. Since then it was growing apace, with the result that numerous concerns had to be closed, and that unemployment rose to an extent unprecedented in Russia. Its immediate consequences for the nationalised industry have been, up to recently, partly mitigated by the intervention of the Government, whose subsidies to State trusts enabled the concerns to tide over the depression, and by an extension of advances by the banks, which permitted the industry to work for stock. In the course of the last financial

year, ending October 1, 1923, direct subsidies to nationalised industries reached about 150 million gold roubles, or about 12 per cent. of the total expenditure, and about 25 per cent. of the deficit. Large allocations to the same purpose are already being made for the current year, but it is clear that this cannot go on indefinitely. The assistance afforded the industry by the banks has already brought about an inflation of credit out of all proportion to the amount of real business done. In the case of the State Bank, for instance, loans and discounts to nationalised concerns rose from 2,381,230 tchervonetz on January 1, 1923, to 14,704,810 tchervonetz on July 1st. The excessive expansion of credit resulted in an inflation of the issue of tchervonetz bank notes and threatened to compromise the position of the new unit. Accordingly, in the course of the last few months, credits were restricted, and the crisis reached its climax. Even a forced reduction in the selling prices, which involved direct loss to the trusts, and was going on for the last month or two, proved ineffective in achieving the disposal of the goods. The crisis reached a stage, at which it became a matter of urgent concern for both Government and the Press, and was made subject to a detailed examination. This examination is well worth attention, since it throws much light on the inner working of the so-called system of State Capitalism.

It is generally admitted in all discussions on the subject that the principal cause of the crisis is the excessive rise in the costs of production and marketing. High costs in nationalised industry and trade are explained by an increase in the outlay on raw materials, enormous overhead charges, exorbitant rates of taxes and local rates, and the defective organisation of marketing, which involves too many intermediaries. With regard to raw materials, it is certainly true that of late, as the stocks originally handed over to the trusts at nominal prices became exhausted, the concerns had to buy them at current market prices, and that the latter are high. As an example, one may point to the fact that imported merino wool, expensive as it is, is about 25 per cent. cheaper than Russian, and so it is with most materials. As to overhead charges, an official calculation puts them, on the average, at twice their pre-war ratio. On the railways they are so high that they actually drive goods traffic to the road, reviving horse transport for distances of over 100 miles. Taxation, direct and indirect, often accounts for one-half of the selling prices and, in the case of such articles as salt, sugar, matches, and other articles subject to excise duties, is even much higher in proportion. On the average, it is estimated to exceed the pre-war rates tenfold. Both taxation and overhead charges have a cumulative effect on the prices of goods to the consumer, especially in the provinces, since on their way to him the article passes through numerous State trading establishments, co-operative organisations, and private middlemen. The price, accordingly, represents several times the original cost of the article, when the latter reaches the consumer. Thus, for instance, a yard of printed calico, while it travels from the centre to the provinces, increases in price at ratios varying from 2 to 17 to 1, according to distance.

As a result, while a year ago most articles of peasant consumption exchanged for approximately the same amount of grain, as before the war, now the peasant has got to pay very much more for them or to go without them. As an example, a plough now costs him four times as much grain as a year ago; nails over five times; sheet iron, salt and matches, seven times; sugar and printed calico, two to three times; and so on. Besides, this calculation is based on Moscow prices; in the provinces, where the bargain actually takes place, prices of industrial products are relatively higher still. Seeing that the peasants form the great bulk of the consumers in the Russian market, and that, to exercise a more or less normal demand for manufactured goods at such prices, they should have had increased their production of grain, &c., many times over in the course of a single year, the depression appears only natural.

These are the principal causes of the crisis, on which stress is laid in the course of the inquiry. The remedies suggested involve mainly palliatives, such as the development of export to Persia and other Eastern markets,

which, in fact, prohibitive costs make impracticable, the doing away with unnecessary intermediaries, &c. Some of the stauncher Communists point to the necessity of a return to stringent Government control, as a means to combat the "capitalistic anarchy" responsible for the crisis. Others propose to permit State trusts to import goods from abroad and to sell them along with their own products at average prices, above the cost of imported articles and below that of Russian manufacture. On the whole, however, now, after months of discussion, the solution appears no nearer than it was at the start. The reason would appear to be that, throughout the inquiry, the real issue involved has been studiously avoided, the discussion having been diverted to a sidetrack.

When seriously considered, the present crisis should certainly be looked upon as a direct result of the whole system of State Capitalism, and as such it should be treated. That system consists of the nationalisation of the key industries, including transport and foreign trade as well as, virtually, of credit, that is of all those branches of economic activities, on which every business concern, whether State or private, ultimately depends. The principal branches of industry and trade are thus put outside the pale of competition, and enjoy actual monopoly. Though being managed by their appointed Boards of Directors, on what is called "commercial principles," and being given capitalistic forms, State trusts and other nationalised concerns absolutely lack what may be called capitalistic spirit, based on the powerful stimuli of private initiative and responsibility. Having the Government, with its subsidies, to fall back upon in case of emergency, they are devoid of real stimuli to exertion, as well as of the salutary fear of immediate retribution for mismanagement. Combined into selling syndicates, and fixing selling prices as they think fit, they have the consumer entirely at their mercy, so long as he is able to pay. No effective competition of private enterprise, which, besides being confined to secondary branches, is essentially dependent on the key industries, and is charged higher rates for banking accommodation, can exercise an effective check on their monopoly. Up to the breaking point, the consumer could, to a certain extent, be made to pay for the mismanagement of State Capitalism, but sooner or later he was bound to break down. Now the crisis has come. The bulk of the consumers, the peasantry, faced with monopoly in what they buy, and robbed of the benefits of free competition for what they sell, owing to the virtual monopolisation by the Government of the grain trade, ceased to be a customer of the industry. The position is really serious, and mere palliatives are of no avail. It would appear that the only remedy for the depression would be a return to competitive conditions in all branches of industry and trade, involving the definite abandonment of State Capitalism, which is but another name for Nationalisation. The issue appears perfectly clear, and yet it is precisely the mention of this only solution that is deliberately avoided in the discussions now taking place in Russia.

THE THREE-MILE LIMIT.

DURING the past year the British Government has been engaged with two Powers—the United States of America and Russia—in discussion upon the limits within which one Power may exercise certain acts of jurisdiction upon or against foreign ships in proximity to its shores, and the nature of the jurisdiction so exercised. We do not doubt for one moment that the diplomatic interchange of views, at any rate in the American case, has been conducted on a basis of reality, and has been free from acrimony. But a feature of the discussion in Parliament and in the public Press of this country has been an outburst of Palmerstonian nationalism which is indicative of the "jumpy" state of the public nerves. The faintest suggestion that the British Government should agree by treaty to permit an officer commanding an American patrol boat even to smell the cork of a Scotch whisky bottle outside a limit of three miles from the American shores has been denounced as a betrayal of vital British interests, and an abandonment of principles as old and as eternal as the right to the Writ of Habeas Corpus.

What are the facts? As in most matters which distress the world at present, the real difficulty is a refusal to ascertain and weigh the facts. (i.) The three-mile limit has received very general, but not universal, acceptance among the nations of the world. In view of a general consensus of opinion that States were entitled to regard some undefined amount of water adjacent to their shores as within their territorial jurisdiction, Bynkershoek, a learned Dutchman, suggested in 1702 the adoption of the range of a cannon, say, three sea miles, as a limit, on the ground that territorial jurisdiction should coincide with the area over which it could normally be made effective from the shore. "Hence," said Professor Westlake, "that distance measured from low-water mark became a commonplace among authors for the width of the littoral sea, and we may say that the agreement on it as a minimum is universal: no State claims less. As a maximum the agreement is not universal." Norway claims four miles, Spain six, Sweden four. France in 1912 claimed that her neutrality in a war should be respected within six miles, and Italy as a neutral made a similar claim in 1914. The Institute of International Law, an unofficial but very responsible body composed of eminent international jurists drawn from the principal States, has voted in favour of six miles. These claims have as a rule been protested against by Great Britain and the United States, but the fact that they are maintained over long periods of time, and can form the subject of serious diplomatic discussion, shows that a belief in a universally accepted three-mile limit is erroneous.

(ii.) In addition to the jurisdiction which is accorded by international law to the territorial State over a minimum of three miles from her shores, there is a certain ancillary power, dependent on international comity rather than law, of exercising what may be described as preventive or self-defensive measures within an undefined distance extending beyond the three-mile limit. This customary concession is illustrated by the Hovering Acts, aimed at smugglers hovering within twelve miles of the shore, which were once an important part of the revenue laws both of Great Britain and of the United States, and which, though substantially repealed, have left their mark upon the revenue laws of those two countries. The great Chief Justice Marshall, of the American Supreme Court, rested the practice of anticipating outside the three-mile limit the commission of offences within it upon the principle that a nation's "power to secure itself from injury may certainly be exercised beyond the limits of its territory," and one of our own Chief Justices, Lord Russell, when arguing as Attorney-General at the Behring Sea Arbitration in 1893, asked on what principle the Hovering Acts rested, and answered his own question as follows:—

On the principle that no civilised State will encourage offences against the laws of another State, the justice of which laws it recognises. It willingly allows a foreign State to take reasonable measures of prevention within a moderate distance even outside territorial waters; but all these offences, and all offences of the same class and character relating to revenue and to trade, are measures directed against a breach of the law contemplated to be consummated within the territory.....

Although there are some authorities who base the exercise of such protective measures upon strict international law, it seems safer to rest it upon mutual tolerance and international comity. Just as family and business relationships cannot be satisfactorily regulated on a basis of strict law, so the relations of two civilised and friendly nations require a certain degree of courtesy or "give-and-take" which may not be strictly comprised within the bounds of law.

How, then, are we to apply these considerations to our present controversy with the United States? We are told in the official summary of the proceedings of the Imperial Conference that the Conference

arrived at the conclusion that, while affirming and safeguarding as a cardinal feature of British policy the principle of the three-mile limit, it was yet both desirable and practicable to meet the American request for an extension of the right of search beyond this limit for the purpose [of avoiding a serious conflict of public opinion or official action], and negotiations were at once opened with the United States Government for the conclusion of an experimental agreement with this object in view.

It is commonly reported that such an agreement has been reached, though its signature has for the present been

delayed by a technical constitutional difficulty arising from a variance between the agreement and the Prohibition Amendment of the Constitution, in that the agreement will permit British ships to carry a reasonable amount of prohibited liquor under seal into American territorial waters and out again. Assuming this difficulty to be overcome, we feel confident that the ensuing treaty will have the support of the great mass of the people of this country outside that small group who are engaged in a conspiracy to defeat the declared will of the American people embodied in an amendment of their constitution. It is not for us to scrutinise the wisdom of that amendment. So long as it remains, we must recognise it, and it would be intolerable that our Government should lend its aid and protection to the organised use of British ships and British West Indian islands for the frustration of the laws of a friendly State in the interests of commercial cupidity.

It would be an act of prudence and mutual comity for the United States to acquiesce in the carriage of prohibited liquor under seal in British ships through her territorial waters in exchange for British acquiescence in the search, within, say, twelve miles of American shores, of suspected smugglers. But in making this exchange it is in our opinion imperative to British interests to secure a reaffirmance of the three-mile limit for all but these ancillary purposes. No Power has a greater interest in limiting territorial waters to three miles than we have. We cannot afford to curtail the area of operations of our deep-sea fishing fleet, and that alone is sufficient reason why we cannot acquiesce in the Russian claim to exclude our trawlers from a twelve-mile belt off the Murmansk coast. Nor, when we reflect upon the way in which during the recent war it was possible for the merchant ships of our enemies or of neutrals carrying for them to slip in and out of the Baltic and across the Atlantic by hugging neutral coasts as long as they could, can we afford to enlarge the area of neutral territorial waters from which our navy would be excluded in time of war. A solemn affirmation by two great maritime Powers like Great Britain and the United States of the existence of the three-mile limit will help to establish the universality of a doctrine so vital to our interests.

ARGENTINE LAND COMPANIES.

BRITISH land companies operating in the Argentine are usually regarded with a considerable degree of popularity by home investors. It is true that the violent movements in the Buenos Aires exchange rates have introduced an element of risk in addition to all the normal speculative risks attaching to land companies, such as changes in climatic conditions and transport facilities. In the little group of Argentine land companies which come up in our pages yearly for review it will be observed that the principal difficulty in connection with obtaining a correct view of comparative results is on account of the varying dates covered by the accounts, and incidentally, by the degrees of alertness displayed in issuing accounts after balance-sheets have been drawn up. To some extent this is perhaps unavoidable. For instance, the Cordova Land Company presented accounts for the year ended September 30, 1923, on October 16th last, while Leach's Argentine Estates, with a balance-sheet giving figures up to March 31, 1923, did not publish until September 18th. Fortunately five companies out of eight end their year on June 30th, and issue reports during September and October.

The year, on the whole, cannot be described as satisfactory. The Argentine Land and Investment Company state that prices obtained for linseed ruled about the same, but those for wheat were somewhat lower when compared with quotations a year ago. Pastures were in good condition during the last half of 1922, beneficial rains being registered in the late winter and early spring, but districts subsequently became dry. The price of wool has been firm, with a hardening tendency. The depression in live stock continued during the greater part of the year under review, breeders being obliged to sell surplus stock at a low figure, or find good pasture for

animals with a view to their attaining the required condition and weight. The average price realised during the eleven months to August 31, 1923, for steers by the Cordova Land Company was £10 12s per head, as against £12 4s 5d per head during September. This, the company announces, "indicates a more normal condition of affairs." The average price realised per head for sheep showed a slight improvement as compared with the previous twelve months. Since July the sheep market has made further improvement.

From the accounts of eight representative British companies which we have selected, we make the following comparative statement of gross and net revenue:—

	Year Ended	1920-21.		1921-22.		1922-23.	
		Trading Rev'ue.	Net Profits.	Trading Rev'ue.	Net Profits.	Trading Rev'ue.	Net Profits.
Argentine Land and Investment.....	June 30	£ 94,030	£ 65,772	£ 125,004	£ 88,277	£ 114,211	£ 73,171
Argentine Southern Land.....	June 30	172,500	33,463	112,970	9,267	130,715	33,179
Cordova Land.....	Sept. 30	131,558	40,458	60,862	5,511	53,387	10,505
Forestal Land, Timber, and Railways.....	Dec. 31	754,335	560,261	544,857	..	136,601	113,902
Leach's Argentine Estates.....	Mar. 31	176,245	81,727	2,630	..	130,867	..
Port Madryn.....	June 30	12,157	8,312	8,618	5,676	5,570	3,359
Rio Negro.....	June 30	82,103	18,713	67,611	12,122	96,412	39,548
Tecka.....	June 30	77,951	20,731	46,268	1,234	71,289	22,073

Argentine Land is slightly down on the year, but results are better than in 1920-21. Argentine Southern accounts reveal a distinct improvement, the additional revenue mainly coming from wool sales and sundry earnings, which at £85,039 compare with £56,795 a year ago. Cordova Land is still suffering from depression. Forestal Land and Timber has probably seen the worst, and it is to be hoped that the same remarks apply to Leach's Argentine Estates. With regard to Forestal Land, the directors have just declared an interim dividend of 2½ per cent., less tax, on the ordinary shares, which have had no dividend paid on them since 1920, when 12 per cent. was distributed to the shareholders. Port Madryn continue to shed profits, but Rio Negro and Tecka are taking the upward course.

In our next table we analyse the more important assets and liabilities for the past three years:—

Name.	Year.	Liabilities.			Assets.			Total Assets.
		Capital, Debentures, & Loans.	Res'v's. and Un- & Divid. Profits.	Cred- itors.	Land & Prop- erty.	Stocks, Pro- d'ce, &c.	Invest- ments, Cash in Hand.	
Argentine L. & I.	1920-21	£ 488,075	£ 189,683	£ 68,000	£ 246,990	£ 16,063	£ 411,074	£ 745,757
	1921-22	488,075	220,929	93,975	235,746	8,220	457,618	802,979
	1922-23	627,401	99,608	121,877	244,524	11,174	447,277	848,885
Argentine Sthn.	1920-21	500,000	149,364	34,793	504,001	87,858	82,092	685,674
	1921-22	500,000	123,746	37,936	516,076	80,064	57,374	667,682
	1922-23	500,000	134,936	30,494	514,187	66,793	61,259	665,430
Cordova Land	1920-21	1,494,872	116,808	62,357	1,560,377	..	80,333	1,647,039
	1921-22	1,494,872	70,694	47,762	1,560,377	..	46,076	1,617,766
	1922-23	1,494,872	64,771	51,468	1,560,377	..	33,265	1,611,111

The capital of the Argentine Land has been reorganised and consolidated into 650,000 ordinary shares of £1 each, of which 627,401 shares have been issued; this undertaking has £242,441 outstanding on mortgage loans, as against £248,789 a year ago, and we are informed that in May last further property was acquired at a cost of £51,305. The directors of Argentine Southern Land have increased reserves by £5,000. As explained before in these columns, the Cordova Land Company includes "lands, cattle, horses, sheep, &c.," as one portmanteau item—hence the blank in our table above. The figures of the Forestal Land Timber, &c., are now almost ancient history, but are included, as any picture of Argentine land companies would be defective without them. Leach's Argentine Estates made a total loss of £238,867, after

charging depreciation, but the substantial reserve of £420,000, built up out of good harvests, has enabled this sum to be written off. Port Madryn presents some interesting changes in balance-sheet items. Lands and buildings at £59,991 compare unfavourably with £129,595 a year ago. These land deals, however, are not unusual among the companies comprising our group. Rio Negro and Tecka call for no particular comment.

In the table given below we show dividends over a period of four years, together with prices in 1922 and 1923, as compared with those in 1914. Present yields, based on recent dividends, are added:—

Name and Amount of Share.	Dividends.				Prices.			Present Yield.
	1919-20.	1920-21.	1921-22.	1922-23.	July 27, 1914.	Nov. 28, 1922.	Nov. 29, 1923.

* Free of income-tax.

† Paid on old capital.

The market for Argentine land shares has not been very active, but there has been a fair number of dealings in the ordinary shares of Forestal Land, and the price hardened on the declaration of an interim dividend. Indeed, it might be said that this company provides the one outstanding speculative feature of the group.

The future is not without bright spots. Recently in the *Economist* we gave the views of the chairman of the principal Argentine railways on future prospects in the Argentine, and these briefly summed up indicated possibilities of a good year for Argentina generally.

Notes of the Week.

The German Crisis.—Since the Stresemann Cabinet was brought to the ground at the end of last week by an adverse vote on the part of the Social-Democrats, President Ebert has been trying in vain to form a new Government. No alternative permutations and combinations of party groups capable of yielding a stable parliamentary coalition appear to remain, and in present circumstances it is hardly possible to resort to the normal constitutional outlet of a general election. The necessary funds and energy are neither of them available, and the apathetic body of the nation would probably be fought over by the two extremist parties with other than constitutional weapons. The President has therefore turned to the expedient of a "Cabinet of Work," which before now has tried over many crises in Central European parliamentary affairs. His first choice for Chancellor fell upon Dr Albert, an experienced and distinguished civil servant in the Board of Trade sphere, who seemed suitable on account both of his technical knowledge and of the interest which he had previously taken in promoting inter-party co-operation on non-partisan lines. On Tuesday, however, Dr Albert renounced the attempt as impossible, and there the situation remains. The ex-Stresemann Cabinet and the Dictator-General von Seeckt between them are carrying on the administration, while restiveness is alarmingly upon the increase, on the Nationalist as well as on the Communist side. Meanwhile, on the Friday of last week, at Düsseldorf, the French authorities reached an agreement with the German industrialists, which seems likely to give a new turn to the controversy over the Reparations problem between France and Great Britain. While the French have consented that all deliveries in kind which are provided for under this agreement shall be credited to the general Reparations account, they are proposing to earmark the proceeds of the Ruhr coal tax for the reimbursement of the costs incurred by France and Belgium in their occupation of the Ruhr. They realise, however, that the British representative on the Reparations Commission may challenge such a disposal of this asset, and that Great Britain may refuse to pass this year's accounts,

and *a fortiori* to accept any financial benefits from Franco-Belgian action which is deemed illegal by the law officers of the Crown. This is not a knot that can be untied by the Reparations Commission itself, and French opinion is already contemplating the necessity for a conference, though it is still hesitating whether it shall take the initiative in this direction (which might give France a better chance of narrowing the terms of reference) or wait for Great Britain to take the offensive. Meanwhile, the tone of the French Press towards this country has become somewhat less aggressive, notwithstanding the rather scurrilous assertions in some organs to the effect that General Bingham—the British representative on the Commission of Military Control—had been instructed to render control impossible (assertions which have drawn a *démenti* from Whitehall). The Spanish-Italian *rapprochement* appears to be taken seriously in France as an "encircling" move promoted by Great Britain, and has elicited suggestions, on the French side, for positive understandings between France and Great Britain regarding the Mediterranean and the Air. There is no slackening, however, in the French effort to detach the Rhineland from the Reich. Every day the so-called "Separatist" movement is more completely exposed for the thing it is—a mercenary and criminal movement conducted by undesirables. The breach between Dr Dorter and Herr Matthes, leading to the exclusion of the latter, has added the last touch of discredit. But unfortunately it has become apparent that this procedure is effecting its intended result—which was to reduce the real leaders and representatives of the Rhineland to despair and submission. Inside as well as outside the British zone, they are coming to terms with the French Rhineland Commissioner, M. Tirard, and inevitably the process is being hastened by the cutting off of financial aid from the Reich and the paralysis of government at Berlin.

Bradford and Roubaix and Mr Baldwin.—The following is extracted from the weekly review of foreign exchanges issued by Messrs Samuel Montagu and Co:—"The Association of French Weavers contradicts the statements which have appeared in the Press to the effect that the depreciation of the franc has enabled them to increase their normal consignment of textile goods to Great Britain. They say that in 1913 France exported to Great Britain 21.9 million lbs of fabrics, and in 1923, on the basis of the first seven months of the year, she will have exported 8.2 million lbs, or 39 per cent. of the 1913 export. In 1913 Great Britain exported to France during the same seven months 3.3 million lbs, and during the same period of 1923 1.2 million lbs, or 36 per cent. of the 1913 exports. These figures seem to show that the normal standard of trade between the two countries has been practically maintained. M. Dubrulle, of Tourcoing, stated that were all the Roubaix looms fully equipped (and only 65 per cent. of them are working at present), unemployment, signs of which are already beginning to appear, would be rife in that centre. If at present there is no unemployment in Roubaix, it is because a large number of workmen find employment in reconstruction in the devastated areas." This gives a sufficiently conclusive reply to Mr Baldwin's speech at Bradford on Thursday, when he told the manufacturers of that city that their troubles were due "to the prices at which goods are being offered, largely owing to the depreciated currency of France." "French prices in certain lines," he added, "are 18 to 20 per cent. below what you can sell at." Mr Baldwin's figures may or may not be accurate in relation to certain special lines. But, if they were true in any general sense, would the mills of Roubaix be working at only 65 per cent. of capacity, and British imports of wool fabrics be (as Mr Baldwin himself admits) only one-third of the pre-war volume? Common sense gives Mr Baldwin his answer. In the same speech Mr Baldwin was guilty of a misstatement affecting the same industry. As regards returns of imports, the Prime Minister is approximately correct. During the first nine months of 1923 we imported woollen and worsted tissues to the tune of 15.1 million square yards. Assuming a total for the year of somewhere around 20 millions, we have a comparison with 76 millions, the equivalent in square yards of the 1913

total. The ratio is thus about 26 per cent.—nearer one-fourth than one-third. In the matter of exports, Mr Baldwin has been sadly misinformed. From January to September, 1923, 159 million square yards of woollen and worsted tissues were exported. Assuming trade of roughly the same dimensions for the remaining three months, we have a total for 1923 of 212 millions, against the equivalent of 220 in 1913. The quickening of trade now noticeable may quite possibly enable us to exceed the 1913 figure before this year ends. If we take *net* export totals (i.e., exports less retained imports), the figures are still more striking, a total of 136 million square yards for the whole of 1913 being contrasted with 144 millions for nine months of 1923. In other words, our net export trade has been larger in nine months of this year than in the whole of the pre-war year. If the Prime Minister's supporters should urge that Mr Baldwin's "a little over two-thirds of the pre-war rate" referred to worsted exports only, we would venture to suggest that after saying a moment earlier, "There is nothing so misleading as statistics; they can be made to prove anything, and that is why I seldom deal with them," the Prime Minister should have taken more than ordinary care to avoid breaking his self-imposed rule by the commonest of statistical blunders: the use of selected figures covering part of a case to convey a misleading impression as to the whole.

The Irish Loan.—Our Dublin correspondent writes:—The main, almost the sole, topic of interest this week is the progress of the National Loan. Its success is assured, that is, it will most certainly be fully subscribed or over-subscribed with the assistance of the Irish banks. There are some who will consider it scarcely a success unless the whole £10,000,000 is taken up by the general public apart from the banks. The start has been auspicious, and something like half the issue already applied for by the general public, which obtained the guidance which it desired when it saw very large subscriptions from the Irish Church representative body (i.e., the Protestant Church of Ireland disestablished in 1869 by the late Mr Gladstone), and Messrs Guinness and Co. It is stated that certain of the applicants have asked for a definite and binding pledge that both interest and principal will be payable in sterling, and that the stock will receive a quotation on the London Stock Exchange. It is known that there is no intention or desire in official circles to change existing conditions as to currency—and that the intention is to pay in sterling. Probably the desired pledge will be given. It involves no loss of national dignity or prestige to undertake to repay in the currency in which the borrowing was made. Nor would such a pledge hamper or restrict the liberty of the Free State Government to set up an Irish currency hereafter if it should be deemed advisable. But it is safe to state positively that there is no responsible section of opinion in favour of experiments in currency matters. Behind the scenes, it is believed, these matters are being privately investigated—largely for information purposes, and to draft the Government brief on the subject. An Ireland which looks to remain with N.E. Ulster knows that any tampering with the currency would raise a well-nigh insuperable bar to the realisation of its hopes. Thus prudent and tenacious conservatism in financial policy may be prophesied with the utmost confidence. Public effort is likely to concentrate itself, while resisting financial experiments, in improved methods of accountancy with a view to greater economy. The Senate has just resolved unanimously to request the Government to appoint a Committee of experts to investigate and report upon improved methods of public accountancy, which might lead to more effective control of expenditure and increased efficiency of administration. The underlying idea, as explained by Sir John Keane, who proposed the resolution, was to adopt the recommendations of the National Expenditure Committee, over which Sir Herbert Samuel presided, and that the methods of accountancy obtaining in public departments should be made more closely to resemble those in large modern commercial enterprises.

Brazilian Finance and Trade.—It was announced on Wednesday that the Brazilian Government has invited four eminent British experts to visit the country with a

view to the completion of the financial restoration now in progress, the development of the national resources, especially in cotton, iron, coal, and petroleum, and the organisation of banking with special reference to foreign exchange. Public finance is represented by the Rt. Hon. Edwin Montagu, formerly Financial Secretary to the Treasury, and ex-Secretary for India; cotton growing and "development" in general by Lord Lovat; banking by Sir Charles Addis, chairman of the Hong Kong and Shanghai Bank, and exchange by Mr Hartley Withers, late editor of the *Economist*. It is hoped that the direct knowledge they will obtain of the affairs of the country and its great productive capacity will bring in fresh British capital. The possibilities of Brazilian cotton and iron are well known; petroleum is said to exist "in workable quantities"; coal is found in the south, but the reports of its quality hitherto are not encouraging. But the most urgent problems are public finance and exchange. Recurrent Budget deficits have been met by fresh borrowing and issues of paper currency, which is popularly welcomed as good for trade. President Bernardes, during his first year of office, has made strenuous efforts at retrenchment, but his Government's attempt to regulate foreign exchange has failed. Writing before the visit was announced, a correspondent says:—"The unsatisfactory position of Brazilian finance has been further accentuated by the unprecedentedly low rate of the milreis, the unsteadiness of which has for long proved a serious disadvantage to the South American Government making periodical remittances to Europe on account of its loan services. The import trade of South America generally has also been affected, and at the time of writing there seems little prospect of improved conditions, notwithstanding the promising position of the harvests and native industry. The amount of British capital invested in Brazil gives considerable interest to this state of affairs. Including Government loans and industrial capital, it is estimated that over £285,000,000 (of which Government sterling loans represent £137,012,096) has found its way into Brazil, in addition to \$271,000,000 from the United States. That no great concern for the ultimate safety of this large investment has manifested itself may be gathered from the fact that opportunities are being sought at the present time for further industrial investment in Brazil. To this end a Mission, composed of a number of commercial experts, is at present visiting the country, with a view to reporting upon its financial and commercial aspects and future opportunities for provision of capital. But this forms part only of their duty, since they are also called upon to examine into, and subsequently to explain, the difficulties impeding the sale of British goods in this important South American State, among others. It may be that the most favourable opening for British exports

would be found to lie in the direction of providing machinery (which in a number of cases is admitted free of duty) for native manufactures, which of late years have become very active; while, owing to the exchange situation, imports of European manufactured goods are being more and more restricted. The demand for agricultural implements should be also worth careful study, especially in competition with cheap American implements, and particularly ploughs and hoes, which sell very well throughout the agricultural districts. A second Mission, despatched by the French Minister of Foreign Affairs, is at the same time conducting an investigation upon its own account, devoting to each city sufficient time to enable a thorough examination of existing conditions and future possibilities for the development of business. Hitherto, it has been the policy of French capitalists, as well as for French exporters and importers, to confine their operations for the greater part to the larger cities, but it is now admitted that equally favourable opportunities exist in the interior, which have been overlooked. It is designed that these should now be additionally investigated. With a view to popularising French products, it has been decided to organise a Floating Exhibition, similar to that arranged by the Italian Government, and which, it has been said, proved a conspicuous success." We trust that the British financial experts, when they return in February, may be able to announce the success of the President's efforts at retrenchment, and to report encouragingly on the prospects of the development of the resources of Brazil and of her foreign trade.

Tariff Reform and Tariff History.—A correspondent writes:—The simple faith of the ordinary British Protectionist in the immediate efficacy of higher Customs duties is not borne out by the tariff history of Germany and the United States. To frame a "scientific tariff" may take experts months or years; its "positions" may number hundreds or thousands, both because of the specialisation of modern industry and because, to give scope for the partial exemptions to be accorded by commercial treaties, the classification of goods must be minute. No legislative assembly can discuss it properly, for lack of expert knowledge and of time. Such revision as it receives from the Legislature must be conducted by a committee, and the Minister in charge and his supporters are sure to hurry the proceedings, and to make short work of criticisms, as Count Posadowsky did during the discussions in the Select Committee of the Reichstag on the German tariff in 1902. And, even if there is no suspicion of corruption, the members of the majority can hardly help being unduly biased in favour of the representations of manufacturers who have subscribed liberally to their party's funds. It is recorded that during the passage of the American tariff in 1913, the duty on cheap cotton gloves was raised for the benefit of a single New England manufacturer, and that on certain kinds of nippers and pliers in the interest of one firm in New York State. Delays are apt to be overcome by the reciprocal combination of different interests to push their respective demands—the "log-rolling" described by Lowell as "the great danger of democratic government." And, as the German experience of 1902 demonstrated, the tariff can only be forced through the Legislature by drastic application of the closure. When it is passed, its effective operation is delayed—as in Germany and America—by the overstocking of the home market with foreign goods rushed in before it becomes law. When the commercial treaties based on it are being negotiated, the classes interested may take to heart the statement of the Russian Government in the preamble of the "autonomous tariff" of 1902: "the Ministry (of Finance) was well aware that if duties were being artificially raised on the eve of the renewal of commercial treaties merely to provide a sufficient revenue from which to make abatements, no one could be deceived as to the real value of such concessions." To put it more briefly, the threat of retaliation is discounted in advance. Finally, certain "luxury goods," such as high-class clothing material, are actually discredited by a protection which seems to suggest that they cannot compete on their own merits with their foreign rivals. Instances of this were cited both from Germany and from America during

the tariff reform controversy twenty years ago. And in the famous inquiry into British import duties in 1840, it was stated in evidence that cutlery, handkerchiefs and other articles made in England were regularly sold by pedlars in the southern seaside resorts as foreign smuggled goods—their fictitious origin giving them a special prestige.

Protectionist Evils in France.—Our Paris correspondent writes:—The Free Trade versus Protection controversy in Great Britain is naturally exciting deep interest here, where it is frankly hoped, in the interest of French exports, that no change will be made in the British fiscal system. At the same time, French opinion is unanimously in favour of the maintenance of protective tariffs in this country, both in regard to foodstuffs and manufactured goods. The incidence of the principle of Protection in this country, however, affords no elements that would enable any kind of comparison to be made as to whether a similar system of tariffs would have corresponding effects if applied in Great Britain. Representatives of English newspapers who have been investigating conditions in France during the past fortnight, for the purpose of placing before their readers evidence as to the merits or demerits of protective tariffs, as exemplified by the experience of this country, have gone back empty handed. The whole aspect of both industrial and social conditions differs so widely between the two countries that it is practically impossible to gauge what the effect on the one country would be of protective methods that are in operation in the other. What can be said is that in many cases the methods by which the French protective tariffs are applied leave much to be desired, and that reforms in many directions are urgently necessary. The worst evil connected with the application of Protection here, perhaps, is that tariff schedules can be, and only too frequently are, modified at almost a moment's notice by the mere promulgation of a Ministerial decree, and entirely free from Parliamentary control. Instances are on record in which Customs duties on certain given categories of merchandise have suddenly been doubled or quadrupled, or even raised to higher multiples, in the interests of particular classes of traders. The classic instance is that of a humble dealer in fishing appliances, who invested practically the whole of his available capital in a consignment of hooks and other goods, for which he paid an English manufacturer in advance. Before the merchandise could enter France, however, the duties on such goods were suddenly raised enormously by Ministerial decree—to a prohibitive sum, in fact, and the unfortunate dealer, who was unable to find the money to clear them from the Customs, had to allow the goods to be confiscated, with the result, it is reported, that he was ruined. The manner in which French sugar refiners have recently been enabled to manipulate the home markets against the native consumer, by taking advantage of the protective tariff, plus a dexterous use of export and import permits, is another instance of the evils of the protective system as applied in France.

The Problem of Hungary.—The success of the League of Nations' scheme for the rehabilitation of Austrian finances has proved a great encouragement to those who believe in the possibilities of international action in restoring order out of chaos in Central Europe. For some time past attention has been called to the deplorable situation in Hungary, and schemes have been propounded for dealing with that country on lines similar to those which have been applied so successfully by Dr Zimmermann and his colleagues at Vienna. Until recently, however, all proposals with this end in view have failed, owing mainly to the attitude of the Little Entente. The issue of a loan to Hungary was seen to depend on the lifting or postponement of the Reparations liens held by these States on that country in virtue of the Treaty of Trianon. Naturally enough, Czecho-Slovakia, Roumania and Jugoslavia were not prepared to sacrifice their claims while counterclaims on them still remained in full force. A second difficulty arose, too, in consequence of the suspicion which was, and is, not unnaturally felt by Hungary's neighbours on account of the extremely reactionary and chauvinistic nature of the Horthy régime and its satellite, the "Society

of Awakening Magyars." Indeed, it cannot too often be repeated that the fact that irredentism is very strong in Hungary while practically non-existent in Austria makes it somewhat dangerous to assume that the success of international action in the one case implies success in the other as well. Moreover, the social structure of rural Hungary, where large estates still predominate, is very different from that of Austria, a land of peasant proprietors. Apart from these political and social factors, however, the situation in Hungary, from an economic point of view, offers far fewer difficulties than did that of the neighbouring Republic. The modern Magyar State is predominantly agricultural, and although the existence of high tariff walls and of export prohibitions has made rural reconstruction almost impossible, it is nevertheless true that the relative absence of industries greatly simplifies the problem as compared with that of Austria, where Vienna—which is more than double the size of Budapest—owed its very existence to industry and commerce. The need for restoring Central Europe and the interdependence of the various succession States have been appreciated more and more of late, and at the Little Entente Conference, held at Sinaia (Roumania) in August last, it was decided that the States concerned were prepared to support an international scheme for the rehabilitation of Hungary, which would naturally imply an external loan, subject to certain well-defined conditions. Firstly, the application of the loan itself must be subject to proper international control at Budapest. Secondly, the Little Entente countries must have equal treatment from the Allies in the matter of the waiving or postponing of claims upon them. Most important of all, perhaps, was the demand for guarantees of good conduct by Hungary towards her neighbours, and a final and satisfactory solution of the problem of Hungarian disarmament, which, it is asserted, has hitherto been largely evaded. Thanks to this positive contribution, discussions have gone ahead rapidly, and the meeting in London this week of the Finance Committee of the League of Nations has at last led to the approval of a detailed scheme of financial reconstruction. This will next be submitted to the Reparation Commission, and it is hoped that a final solution will not now be delayed much longer.

The Stock Exchange and "Majorities."—The Stock Exchange looks forward to the issue of the General Election without undue apprehension or nervousness, writes a Stock Exchange correspondent. The shock which was felt throughout the markets when Mr Baldwin first announced his intention of appealing to the country has given place to the conviction that Labour, with its twin planks of Nationalisation and Capital Levy, stands no chance of being returned in sufficient strength for its leaders to be called upon to form a Government. On this consideration, Stock Exchange markets revived in the early part of the week, though within the past day or two, an uneasy feeling crept in on account of the estimate that the Conservative majority or, possibly, the Liberal majority, will be in either case too small to enable the Government to be carried on without another early appeal to the constituencies. Next to the fear of Labour being successful, this apprehension of an uncertain voice is feared by the Stock Exchange, and has been reflected in a decline amongst British Government securities. Men all over the country are watching very narrowly the prices, as these fluctuate day by day, of what the Stock Exchange market calls Majorities. In the Majorities there is a surprising amount of business going on. The curious part about it is that so many orders come from the provinces, where manufacturers and other business men are buying and selling Majorities in London, evidently as a hedge, or an insurance, against engagements which they have open in the course of their ordinary avocations. Both Liverpool and Manchester, for instance, are doing a considerable amount in Majorities. Some of the London dealers book as many as 25 to 30 bargains a day, and the present price is about 31. Bargains can be done in amounts that range from 6d to £10, while a well-known firm offered the other day to sell Majorities at 33, in £100 at a time. The usual practice is for dealings to be in amounts of £1. If a man buys Majorities at 31 in pounds, and the Conservative majority, above that of all

the other parties combined, should turn out to be 33, he will make £2. If the Conservative party is not returned, but should be in a minority, beneath all the other parties, of 31, he would lose his present £31, and another £31 in addition. When bargains of this kind are in £5 or £10 at a time, it is obvious that big money is quickly involved. Some of the transactions run into substantial amounts. It is, of course, a form of gambling, and as such is not recognised by the Stock Exchange Committee. Nevertheless, the House authorities have not thought it necessary to stop the traffic in Majorities, the jobbers in which, finding that there is a good deal of readiness to embark upon the speculation on the part of clients as well as men inside the House, have been making books in exactly the same way as they make books in the Stock Exchange securities with which they deal. It is equally possible to sell a bear of Majorities, as it is to buy a bull of them. No money is required to be put down at present. Cash settlement will be effected on the Monday following the day upon which the final result of the General Election is declared, and the differences, it is already obvious, will be remarkably heavy. In addition to bargains that are being done, and allowed to run, for the issue of the Election, no small amount of in-and-out speculation has sprung up. Men are buying and selling according to the fluctuations in the price of Majorities. Although these quotations are obviously a very rough guide to general opinion as to the chances of the parties, it is a fact that political organisations take a keen interest in the ups-and-downs which occur from day to day, and the closing prices are telephoned, regularly every afternoon, to several hundred committee and other political headquarters.

Cotton Short Time Abandoned.—Our Manchester correspondent writes:—As anticipated, the ballot of employers in the American spinning section of the Lancashire cotton industry with regard to the continuance of organised short time has failed to show the necessary majority in favour, and henceforward spinners will make their own arrangements as to running the factories. It may be mentioned that of the 56,000,000 spindles in Lancashire, about 40,000,000 are engaged on American cotton, and 16,000,000 on Egyptian cotton. So far back as last March the firms in the American department decided to restrict yarn output by 50 per cent., and this organised curtailment of production has gone on up to the present time. At the beginning of November the Committee of the Masters' Federation thought it desirable to consult their members as to future policy, and it was decided to take a ballot. The committee recommended spinners to vote for working not more than 24 hours per week, instead of the usual 48, but if it was thought that this restriction was too heavy it was suggested that the output should be limited to 32 hours per week. The result of the ballot shows that less than 38 per cent. were in favour of 24 hours per week, and just over 28 per cent. voted for 32 hours per week. As these two figures total less than 66 per cent., and as according to the rules of the federation no short time proposal can be put into operation unless 80 per cent. is obtained, the system of restricting output on an organised scale has come to an end. It is estimated that at the moment American yarn production is about 75 per cent. of the full capacity of the mills. The question of controlling output according to the state of trade is still being considered, and the representatives of the employers on the joint committee, appointed to deal with the depression, have been requested to continue their labours. The result of the short-time ballot, however, shows very clearly that spinning employers do not want any interference in the running of their mills, and there is less probability than ever of any practical scheme of control being accepted by the trade.

Dyeing Dispute Settled.—The dispute between Manchester merchants and dyers which has been going on for a couple of months has been settled. The trouble arose early in October, when the Piece Dyers' Association offered a reduction in charges of 10 per cent., conditional upon merchants placing all their business with members of the association. At a mass meeting of merchants held

in Manchester, it was unanimously decided to reject the new contract terms. Further negotiations between the committee of the Piece Dyers' Association and the Shipping Merchants' Committee of the Manchester Chamber of Commerce, have taken place, and after a deadlock existing for several weeks an amicable agreement has been arranged. The Piece Dyers' Association has withdrawn the new contract terms, and substituted a flat rate reduction of $7\frac{1}{2}$ per cent. on listed styles. In addition, merchants are to receive a discount varying from 1 per cent. to 5 per cent., according to the amount of business placed with members of the association. The new proposals were submitted to a mass meeting of merchants held in Manchester, on Wednesday last, when they were accepted. In trade circles the settlement is considered to be a good compromise, as the terms put forward will mean to most firms a reduction in dyeing charges of $12\frac{1}{2}$ per cent. A considerable amount of business has been held up in Manchester pending a definite settlement, and the concession granted will enable shippers to place cotton goods in outlets abroad on a cheaper basis.

Daily Mail Trust Debenture.—Upon the issue of the Daily Mail Trust 7 per cent. debenture stock, for which there was such a rush to subscribe on the part of the public, occasion was taken to point out here that the security, considered as such, rested upon a foundation that was bound to lack stability, inasmuch as it depended to some extent upon the market price of certain shares that ranked amongst the assets. Part of the shares upon which the issue is secured are privately held, and there is no market in them, but 800,000 Associated Newspapers deferred shares were taken into account in the prospectus at £7 per share, and valued at £5,600,000. There might be more justification for regarding the investment as a security upon which a debenture could rest were the shares anything but deferred. The mere word implies a speculative character, and pointed the suggestion that, while the Daily Mail debenture stock would no doubt prove a reasonably good investment, it was not worth paying a fancy price for, and that intended orders "to buy at best" should be qualified with a moderate limit. The course of the price of the shares since then has fully justified the criticism made at the time. This week Associated Newspapers deferred are down to 6, so that there is already a depreciation of £800,000, namely, £1 per share on 800,000 shares, on the total issue of £8,000,000 of the debenture stock. As the price of the shares has given way, so in due time it may recover, possibly to a higher level than that at which the 800,000 shares stand in the Daily Mail Trust prospectus. But the drop in the price, and the temporary depreciation of 10 per cent. on this item alone in the security of the stock issued by the Daily Mail Trust, is a striking evidence of the desirability that due attention should be paid by investors to assets of such unstable character. That the warning has not been lost upon the intending purchaser is clear from the decline in the price of the stock to 2 premium, comparing with $4\frac{1}{4}$ premium touched during the first scramble to buy the scrip upon the starting of a Stock Exchange market in it.

The Marconi Report.—Again shareholders of Marconi's Wireless Telegraph Company, Limited, receive a substantial distribution, ordinary shareholders obtaining 15 per cent. and preference holders 12 per cent. Net profits at £302,948 for the year ended December 31, 1922, have only slightly improved when compared with those of £275,361 for 1921. In the following summary we show the progress of the company over a number of years:—

	1913.	1917.	1918.	1919.	1920.	1921.	1922.
Gross profits ..	246,682	540,187	766,267	1,538,040	£ 83,267	554,515	557,419
Expenses	124,359	156,350	168,327	317,300	267,154	279,154	254,471
Net profit	122,323	383,837	597,940	1,220,740	267,682	275,361	302,948
Prof. dividend ..	42,500	42,500	55,000	117,500	30,000	30,000	30,000
Ord. dividend ..	150,000	244,577	305,912	617,240	391,567	397,098	412,507
To reserve	—	100,000	150,000	—	—	—	—
Balance	Dr 70,777	Dr 3,802	87,026	491,416	Dr 123,885	Dr 151,797	Dr 139,559
Brought forward ..	146,726	380,106	376,760	463,786	944,452	818,567	664,830
Carried forward ..	76,549	376,904	463,786	955,802	820,567	666,830	525,271

The increase in the amount for ordinary dividend is on account of additional ordinary capital—this item being now £2,750,000, as against £2,631,104 in the previous balance-sheet. In order to find the balance of amounts needed, dividend distribution absorbing £442,507, the floating reserve of £666,830 has been reduced to £525,271. The balance-sheet now includes the issue made last November of £1,500,000 $6\frac{1}{2}$ per cent. convertible first debenture stock, but interest charges up to December 31, 1922, only require £4,188. The make-up of the balance-sheet remains unchanged. There is one big item, "Shares in associated and other companies and patents"; this has increased from £3,237,213 to £3,543,531. The directors supplement this by stating that patents and rights figure in the accounts at £304,041, and mention that the value of shares and debts of associated and other companies are not worth less than the amounts stated. The auditors are unable to form an opinion as to the value of these shares, patents and debts, and refer readers to the directors' report. The debts referred to are returned at £2,003,353 in the balance-sheet, as against £1,584,777 in the previous accounts. With reference to this, the directors state that "some of our associated companies have also felt the severe strain resulting from the continuance of these unprecedented conditions. They have needed from us further substantial financial assistance to enable them to weather the storm." War claims are still not settled, and shareholders are informed that "your directors regret that they have again to inform you that no settlement has been made by any of the Government Departments in respect of any of the company's claims arising out of the war for services rendered during the war or in respect of the use of the company's patents and inventions since the war. No sum, therefore, in respect of any of these matters appears in the past year's accounts. Negotiations, however, are being conducted with the Chancellor of the Exchequer with a view to referring all these questions to a single arbitrator. It is hoped that it may be possible to make some more definite statement at the general meeting." We cordially re-echo this hope.

Peruvian Corporation.—The gross receipts of the Peruvian Corporation from the working of the railways and steamers for the year ended June 30th last amounted to 15,906,800 Peruvian soles, as compared with 15,777,800 soles for 1921-22, but working expenses rose from 10,697,100 soles to 11,347,100 soles, so that net receipts were over 500,000 soles lower at 4,559,700 soles. The rate of exchange of the sol improved from 21d to 22d, and the sterling equivalent of the net receipts works out at £418,000, as against £444,600 for 1921-22. The revenue account shows net income from the railways and steamers at £363,750, a decline of £23,500, but a substantially larger amount was received on guano account, and five months' arrears of the annuity was received in addition to the year's quota of £80,000. Total net revenue was £57,700 higher at £572,900, as may be seen from the following table:—

	Year to June 30.				
	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
Railway net revenue ..	£ 386,364	£ 426,391	£ 379,341	£ 387,293	£ 363,751

Year's balance	Dr 19,780	4,729	Dr 5,233	Dr 5,015	8,664
Brought forward	161,978	142,198	146,927	149,986	97,819
Carried forward	142,198	146,927	141,694	84,941	106,483

Revenue of the Perené Colony has declined from £2,500 to £1,100, the coffee harvest having been less productive than that of the previous year. The amounts written off for the past year include £10,000 for oil exploration and £23,000 for income-tax. A year ago £88,000 was charged for income-tax and £33,000 for exchange account. After payment of a dividend of 2 per cent. on the 4 per cent. preference stock (leaving 103½ per cent. in arrears), there is a balance of £8,700 to be added to the balance carried forward, in which is included £12,900, a profit on realisation of investments. The main items of the balance-sheet are summarised below:—

June 30.	Deben- tures.	Credi- tors and Bills.	Sinking Fund, Reserve, Insur'nce and Net Revenue.	Conces- sions, &c.	Rail- ways.	Invest- ments, Bills, and Cash.
	£	£	£	£	£	£
1913	5,176,000	71,769	1,253,291	12,772,305	9,700,667	253,741
1914	5,111,750	130,829	1,370,807	12,772,305	9,741,496	322,001
1915	5,043,850	101,634	1,331,057	12,772,305	9,674,848	286,810
1916	4,975,450	84,651	1,440,396	12,772,305	9,568,853	400,943
1917	4,903,800	89,112	1,596,049	12,772,305	9,526,033	540,631
1918	4,824,050	125,153	1,734,037	12,772,305	9,506,566	579,520
1919	4,739,700	120,001	1,770,044	12,772,305	9,506,566	566,685
1920	4,650,550	137,436	1,899,811	12,772,305	9,506,566	383,275
1921	4,556,300	306,257	1,929,906	12,772,305	9,509,988	289,157
1922	4,456,650	302,463	2,022,666	12,772,305	9,509,988	295,213
1923	4,351,300	232,289	2,325,579	14,389,704	7,477,035	498,699

The balance-sheet itself has been considerably condensed, the number of items having been reduced from 24 to 14. Expenditure in respect of reconstruction of railways has fallen from £4,859,700 to £3,222,700, £1,617,400 having been transferred to the property item. Investments in British Government and other securities have increased from £143,200 to £309,300, the market value of the latter being £325,000. The oil exploration account, from which £10,000 has been written off, now stands at £30,200. The report says that many difficulties have been encountered in the boring at Well No. 3 at Saman in Southern Peru. Under expert advice, the boring is still being continued, although the rate of progress is necessarily slow.

Aerated Bread Report.—A reduction in gross profits accompanied by an increase in expenditure is responsible for a decline of £17,700 in the profits for the year ended September 29th last of the Aerated Bread Company. Gross trading profit fell by over £18,000, but interest and sundry profits brought in £9,800 more, thus reducing the decline in total gross profits to £8,700. The directors mention that they have continued their policy of reducing prices charged to customers, "and the increased volume of trade shows that these reduced prices are appreciated by the public. The reductions have, however, slightly affected the company's percentage of gross profit." The table below summarises results since 1907:—

September.	Gross Profit.	Expenses.	Net Profit.	Deprecia- tion, &c.	Div.	Rate.	Carried Forward.
	£	£	£	£	£	%	£
1907-8	276,252	220,366	55,886	5,000	50,409	27½	17,376
1908-9	276,101	224,822	51,279	5,000	50,167	27½	15,458
1909-10	281,852	233,348	48,504	5,000	45,425	25	13,567
1910-11	283,695	236,203	47,492	5,000	40,883	22½	14,176
1911-12	284,519	227,801	56,718	8,239	45,424	25	17,031
1912-13	308,114	234,091	74,023	8,000	54,791	27½	31,263
1913-14	315,476	240,350	75,126	28,000	43,846	27½	28,543
1914-15	286,919	253,146	33,773	8,000	25,948	17½	25,598
1915-16	299,434	282,354	17,080	11,764	7,969	—	23,965
1916-17	289,199	303,882	Dr 14,683	8,000	—	—	1,971
1917-18	419,112	322,566	96,546	59,000	28,135	15	10,682
1918-19	587,456	435,506	151,950	62,000	80,500	30	20,132
1919-20	685,831	520,274	165,557	57,882	113,050	25	14,757
1920-21	728,376	582,381	145,995	40,000	102,637	15	14,150
1921-22	637,811	488,936	148,875	48,184	87,975	12½	14,639
1922-23	629,104	497,954	131,150	37,621	79,784	8½	19,499

* Includes special bonus to employees.

Net profits are at the lowest point since 1917-18, and as the new preference capital of £500,000 ranks for dividend for the first time, the amount available for distribution to ordinary shareholders is much reduced. The dividend is lowered from $12\frac{1}{2}$ to $8\frac{1}{2}$ per cent., and after providing £26,121 for income-tax and corporation profits tax, adding £10,000 to depreciation reserve, and transferring £1,500 to staff funds, the balance carried forward is £19,500. From the amount brought forward from the previous year £8,900 was deducted for income-tax for the

financial year 1922-23. The principal changes in the balance-sheet, apart from the increase in preference capital, are additions of £157,300 to the property items and of £199,600 to investments, which stand at £359,300 at cost, including £213,800 in British Government securities. Cash and cash assets show a further reduction of £25,800 to £34,800, which compares with £171,200 two years ago. The reserve fund stands at the low figure of £30,000, property, plant and machinery figuring at £1,157,400.

The Interoceanic Railway of Mexico.—The directors' report for the year ending last June, which will be submitted at the annual meeting next Wednesday, shows that, in contrast to the general improvement in Mexico, the company's position is less hopeful now than a year ago. The Commission then sent out at the invitation of the Mexican Government to negotiate for the return to the company of its lines, seized in 1914, found that the terms proposed were unsatisfactory, and that its journey had been in vain. The company then appointed a committee with power to prolong the moratorium of 1915, suspending the rights of the debenture holders, and to provide for the appointment of a receiver if necessary; and the moratorium, which last December had been prolonged for two months only, was extended and remains operative. The Mexican Government has made no further offer, but has intimated indirectly that it may possibly agree to purchase the company's obligations at the latest prices quoted, plus 10 per cent.; but the first debenture stock stands at about 22, and the company is not disposed to accept such an offer, as the depreciation is caused by the action of the Government. Meanwhile, as the Government has neither paid compensation nor rendered an account, the board cannot submit either a revenue account or a balance-sheet; but the balance to the debit of net revenue, composed of arrears of debenture interest, rent of the leased lines (the Southern and Eastern), and administrative and other expenses, has increased by £335,488 during the year, and is now £2,566,566. The National Railways, which manage the company's lines and are under Government control, have remitted £3,500 (against £2,000 last year) on account of expenses of administration and the moratorium; and the directors have not drawn their fees. No explanation of the delay is forthcoming, but the completion of the return of the railways to the companies owning them would be a far more effective method of attracting the foreign capital desired by President Obregon's Government than even the renewed prospect of the early fulfilment of the agreement.

Burma Corporation.—If the progress scored by this important Anglo-Indian enterprise has been slow, it is at any rate appreciable. It may be recalled that some two years ago the decision was arrived at that on financial and other grounds the ambitious expansion programme which had been drawn up required to be curtailed. In their report just issued the directors intimate that greater part of the amended reconstruction scheme has now been completed. As a result of these changes, not only has the capacity of the plant been increased, but a higher ratio of recovery has been secured at a reduced ratio of expense. The appended table contrasts the outputs of recent periods:—

	Year.	Year.	—First Half—
	1921.	1922.	1922. 1923.
Refined lead .. tons	33,690	39,210	18,920
Silver fine ozs	3,540,800	4,191,800	1,977,700
			2,266,900

For 1922 the production of lead showed an expansion of $16\frac{1}{2}$ and of silver $18\frac{1}{2}$ per cent. over the 1921 results; for the first half of 1923, as compared with the corresponding period of 1922, the expansion represents about $14\frac{1}{2}$ per cent. in each case. It may here be mentioned that with a view to abridging the time which has hitherto elapsed between the issue of the report and the holding of the meeting, the directors have decided that future accounts shall be made up to June 30th, the meeting being held in December, as before. Accordingly the statement for 1922 is supplemented by one covering the six months to June 30th. The former shows a net profit of £283,500, as against £167,400 in 1921; the financial position, how-

ever, did not permit any distribution, expenditure on capital account being heavy. In the past six months a surplus of £208,600 was realised, permitting—with a small draft upon the carry forward—a dividend of 4 annas or 4d per 10-rupee share. Another distribution is now announced in respect of the current year. If the metals produced remain at anything like their present improved prices, a final dividend of at least equal amount should be forthcoming in respect of 1923-24. Here it may be noted that an experimental zinc plant started up in June. Despite the extraction from the mine during the 18 months of nearly 300,000 tons of ore, the ore reserves, at 4,511,900 tons, score an increase of about a quarter of a million tons upon the end 1921 estimate. The average contents—22.8 ozs silver per ton, 25.3 per cent. lead, and 16.9 per cent. zinc—are on the whole much the same as previously. These statistics reflect the satisfactory outcome of work at the deepest level. Labour being so important a factor, energetic measures have been taken both to secure additional supplies of natives and to induce them to remain when secured. The directors have, however, arrived at the conclusion that quality is even more important than quantity, for they are concentrating upon raising the efficiency of the native employees. It is most unfortunate that no conclusion can be reported to the long-drawn-out negotiations for the extension of the Burma Railways to Namtu, where the smelter is situated. Meanwhile, measures are being taken to improve the capacity of the company's own line. Altogether the report is one whose perusal should prove gratifying to those interested.

The Rise in Sugar.—Sugar during the last week or two has shown a very firm undertone, and the period of stringency long foreseen has now arrived, with very little prospect of any material expansion in supplies until the Cuban new crop is marketed. The Cuban stocks are now down to 47,000 tons. Chartering has already started, with steamers taken on time charter basis for the States/West Indies trade, and tonnage has been secured to the United Kingdom and Marseilles. The imports into the United Kingdom of late have been rather better, but the port stocks of raw sugar are not much over 40,000 tons, and all prices have shown a strong upward tendency, although at mid-week the futures markets were inclined to be somewhat irregular. All home refined sugars have been put up, with an active demand at the higher level; and the assistance looked for from fresh arrivals of Continental beet sugar has failed to come up to expectations. Estimates of the new Cuban crop are less sanguine than they were, and the market is inclined to look for something like 3,500,000 tons; thus keen competition between the British and United States refiners is certain for some time to come. There is no doubt that users of the commodity have been compelled to draw on trade stocks rather freely of late both in this country and the United States. The total of all sugars held in bond here is low compared with last year, and notwithstanding the higher range of values established home refined now ready and for January-February has been well taken up. The latest reports put the Continental beet crops at about 5,100,000 tons, against an actual yield of 4,551,196 tons for the previous season. Well-informed opinion favours the view that there is little hope of any relief from the prevailing scarcity for some time to come, and firm and active markets are confidently looked for right up to the close of 1923.

Publication of Rubber Producing Costs.—One important group of rubber planting companies has decided to take a referendum of shareholders upon the question of publishing costs of production in annual reports. At the same time, it is interesting to find that the directors are putting forward in the circulars which they are issuing specific arguments against publication according to the Rubber Shareholders' Association. The association, in commenting upon this, says that "the arguments in favour of publication have been put before members of the association so recently and so clearly at the annual meeting and in subsequent circulars, that the committee feel it necessary merely to make a few comments upon the objections to the disclosure of working costs and

prices, mentioned in the Straits Rubber group circulars. The first of these is a suggestion that, unless the excess of demand over supply, or *vice versa*, is considerable, the publication of low costs tends to reduce the market price of the crop. This argument has, in the opinion of the committee, been so completely disposed of already that no further comment is required. Not conditionally, but absolutely, market price is governed by supply and demand. The second objection stated is that the publication of low costs can only act as a stimulus to increased planting and competition. This appears to be quite a reasonable argument, and a great deal might be said for it if any action taken by planting companies to-day could secure secrecy upon the whole question of the cost of producing rubber. To secure such complete secrecy, however, is impossible. Apart from all other considerations, it must be remembered that American manufacturers themselves own and manage large areas of planted rubber in the East, and know to a nicety how much it costs to produce a pound of rubber. The third objection advanced is, that the method of arriving at actual cost of production and the price realised varies to such an extent that a comparison of the figures published by different companies is futile, and the figures are entirely misleading. This is an overwhelming argument in favour of the adoption of standardised accounts throughout the rubber planting industry, as advocated by the Rubber Shareholders' Association. Standardisation of accounts would remove all misleading elements." A reply to these observations by the directors concerned should prove instructive reading.

The Inland Revenue Department.—The sixty-fifth report of the Commissioners of His Majesty's Inland Revenue for the year ended March 31, 1922 (Cmd. 1780, 4s net), shows that the gross amount of Inland Revenue duties, &c., collected, including amounts collected by other departments on behalf of the Inland Revenue, was £661,520,550, exclusive of revenue from transferred taxes in Northern Ireland from November 22, 1921. The cost of collection of these duties, including amounts borne on the votes of other departments, such as Customs and Excise, the Post Office, Office of Works, and Stationery Office, was £8,941,650, or 1.35 per cent. The Commissioners point out that the Government of Ireland Act, 1920, transferred to the Government of Northern Ireland full jurisdiction over the administration of certain Inland Revenue duties in Northern Ireland. The transferred duties were Estate Duty, Legacy Duty, Succession Duty, and other Death Duties, all Stamp Duties, and Mineral Rights Duty. From the date of transfer, November 22, 1921, the work of assessment and collection thereon was undertaken by the Government of Northern Ireland, and all revenue arising therefrom was paid into the Exchequer of Northern Ireland. The transfer of administrative functions in Southern Ireland to the Irish Provisional Government did not take place until April, 1922. The report is full of interesting statistics, although these are somewhat out of date. The net receipts from estate duties in 1921-22 were £45½ millions, of which £4,174,000, or 9.22 per cent., was received from one estate, the total number of estates liable to the duty in that year being 105,596, of which 84,544 were in England, 11,906 in Scotland, and 9,146 in Ireland. The receipts from Stamp Duties were £18,991,000, of which £4,525,000 was accounted for by stocks, shares, debentures, &c. Of the latter total, £2,908,700 was from transfers of stocks and shares, as against £3,419,600 in 1920-21 and £4,882,700 in 1919-20. Companies' share capital duty produced £2,141,500, as against £5,853,100 in the preceding year, while from cheque stamps the receipts were £2,724,700, against £3,313,300 in 1920-21 and £1,274,000 in 1917-18, the last year of the penny rate. Among the voluminous income-tax statistics it is interesting to find that the estimated number of individuals with total incomes above the exemption limit for 1922-23 is 4,750,000, as against 5,000,000 for the previous year. Of these, however, 2,500,000 are entirely relieved from tax by the operation of abatements and allowances. The gross income for 1920-21, the latest year for which the figure is available, was £3,477,058,300, as against £2,970,604,000, and the actual income £2,661,182,500 against £2,547,170,800. The actual figures for super-tax are only available up

to 1919-20. The number of persons charged in that year was 54,475, and the super-tax charged £47,600,000. For 1920-21 the estimated number was 77,000, and the super-tax £68,500,000, and for 1921-22 90,000 and £73,000,000.

FRANCE.—RUHR COAL—INTER-ALLIED DEBTS—RENTS BILL.

(FROM OUR CORRESPONDENT.)

PARIS, November 28.

THE signature last Friday by Herren Stinnes, Thyssen, and their fellow coal magnates of an agreement to allow their collieries to be worked henceforward under Allied control, is regarded here as definitely marking the end of passive resistance in the Ruhr, and as opening up the prospect of a rational settlement of the Reparations problem. The one fly in the ointment is the Franco-Belgian claim to the right to deduct the cost of their occupation of the Ruhr from the cash which is in future to be paid over to the Reparation Commission in the form of coal duties, &c. This claim was agreed to by the representative of the coal owners under the reserve that it should be subject to decision as to whether the Reparation Commission has the right to impose such a condition. The French and Belgian view is that the Commission undoubtedly has such power. The British Government, it is reported here to-day, takes the contrary view, and there were fears this morning that this fresh difference of opinion between the two principal Allied Powers might lead to the agreement sharing the fate that befel its predecessors, the Loucheur-Rathenau and Lubersac-Stinnes conventions.

The new developments in the Ruhr have caused the question of Inter-allied debts to drop somewhat into the background, but it goes without saying that this problem is still pressing for settlement, and will continue to do so, so long as there is any will on the part of the Allied Powers to deal with the Reparations question. The one question, it is insisted here, is absolutely interdependent on the other; proof of this feeling is given in the fact that, in all estimates that are now being discussed as to what this country's real share would be, in the event of any real attempt being made to settle the Reparation debt on the present basis of a payment by Germany of 132 milliards, the actual amount that would come to France is always placed, not at 68 milliards (which would be equivalent to her hitherto agreed percentage of 52 per cent. of the total), but at 26 milliards, it being assumed that the rest would be relinquished in consideration of a corresponding cancellation of the debt due by France to her Allies.

That cancellation of inter-allied debts is no new thing is emphasised in its last issue by the *Monthly Review*, issued by the American Chamber of Commerce in Paris, which sets forth several instances of the kind. During the American Revolution, for instance, the fledgling American Congress borrowed from France 18,000,000 livres (which may be assumed to have been francs, which were at that time known as livres) on which it agreed to pay interest at the rate of 5 per cent. The French King, however, was subsequently "pleased to make a present of and forgo the whole arrears of interest" on this debt. From 1793 to 1816 Great Britain financed her Allies to the extent of £58,116,887 (of which about 50 millions represented subsidies, of which nothing was repaid). The remainder consisted of loans, chiefly to Austria, whose resources had been exhausted by nearly 20 years of war, and who was obviously financially weak. Great Britain did not take the matter up seriously until 1823, nearly eight years after the war, by which time the debt and interest owing by Austria had reached nearly 20 millions sterling. The whole debt was then cancelled by agreement, with the exception of £2,500,000, which Austria agreed to pay in full settlement. Another interesting fact is that France, after the Napoleonic Wars, was called on to pay an indemnity of only £28,000,000. In spite of the circumstance that Napoleon, between 1806 and 1812, had extracted over £60,000,000 from Prussia alone, by way of

cash levies, Prussia was satisfied with £23,000,000 and Great Britain with £5,000,000 only.

The new Rent Bill, whose passage through the Chamber I referred to last week, and which was generally received both by property owners and tenants as fairly meeting the reasonable claims of both parties, has met with such drastic modification in the Senate that it is evident there will still be a good deal of controversy before it actually passes into law. The Chamber, it will be remembered, limited the power of property owners to make increases of, roughly speaking, not more than 75 per cent. on pre-war rentals. The Senate, however, decided that this limit was insufficient, and it has revised upwards, in what can only be described as a drastic manner, the stipulations laid down by the Chamber. The Bill, as sent back to the Chamber, gives property owners the power to increase all rentals up to 100 per cent. of their pre-war figure, no matter whether in Paris or elsewhere (whereas the original Bill made a sharp distinction between the base figure fixed for Paris, as compared with other parts of the country). The Bill, further, gives landlords power to pass their property taxes (but not income-tax) on to their tenants, provided the proportion to be borne by any one tenant does not exceed 10 per cent. of the new rental; to exact another 10 per cent. of the new rental if he grants a lease of three years or more; to obtain through the rent courts the right to exceed the legal limit by another 25 per cent. if he can prove that his property was let at a price below the normal in 1914, or if he has carried out substantial improvements. The revisions by the Senate mean, it is alleged, that a tenant who paid a rental of 3,475f per annum (including charges and taxes) in 1914 might be called on to pay, under the new Bill, 12,326f for the same premises, plus any additional increase the Courts might order in respect of structural and other improvements.

The Bill, on being sent back to the Chamber, was immediately passed on to the Commission on Social Legislation, which recommends that the whole of the modifications made by the Upper Chamber shall be

struck out, with the exception of that giving the property owner power to demand an increase of 10 per cent. on the new rental in cases in which the tenant is granted a lease. The object of the Senate, apparently, is to enable property owners to reimburse themselves for the undoubtedly heavy losses they suffered during the war years, when the vast majority of tenants were, in the nature of things, unable to pay rent. In view of the fact that general elections are due next spring, it is practically certain the Chamber will strenuously refuse to approve of the modifications made in the Bill by the Senate, in spite of the universal desire that the rent question shall be settled as speedily as possible in the interest of all concerned.

The Crédit Foncier announces a new issue of 800,000,000 of communal bonds, as from December 4th. The bonds, which bear interest at the rate of 6 per cent., are in denominations of 500f, and are redeemable in 70 years. The issue price is 477f for bonds issued as fully paid up, and 475f for those payable by seven instalments between now and March, 1926. The bonds are redeemable by four drawings per annum, the list of premiums including two "lots" of 1,000,000f, two of 250,000f, and four of 100,000f every year.

GERMANY.—CABINET—RUHR—CURRENCY—FINANCES—TRADE AND INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, November 27.

THE Cabinet crisis at the time of writing is not solved. The Socialists and the German-Nationals threw out the Stresemann Cabinet without having any notion of alternative governments; and since then several attempts, including one for a non-party business Cabinet under Dr Albert, have failed. The present plan is for a "bourgeois bloc," excluding necessarily the Socialists and Communists. The strengths of the chief Reichstag parties are: Socialists 173, Centre 68, German-Nationals 67, German People's Party 66, Democrats 39, Bavarian People's Party 20, Communists 15. Stresemann's so-called Great Coalition, including the People's Party and Socialists and all parties between commanded 346 out of 459 votes; after the Socialist secession it commanded only 173, or considerably less than a majority. Only by taking in the German-Nationals can a majority against the Socialists be formed. The Democrats, however, are not inclined to work with the German-Nationals, and promise at best neutrality; but negotiations to induce the German-Nationals to recognise the Constitution, to oppose the various illegal Right associations, and not to raise the question of the Prussian Cabinet are under way. The last point refers to the fact that Prussia for two years has had a Coalition Cabinet with Socialists predominating; and up till now the German-Nationals have held that if they came into a Federal Cabinet the Socialists must be thrown out of power in Prussia. With such complications, and without any very commanding personality, the prospects of a long-lived Cabinet on a Parliamentary basis are very small.

The agreement of the Stinnes group with France, which embraces, according to French estimates accepted here, about 80 per cent. of the Ruhr mines, has been very badly taken. Nobody believes that it is practicable; if work is begun in the conditions stipulated, the acute hunger crisis may be postponed for a short time; it cannot, however, be prevented if the conditions prove, as experts expect, economically impossible. Superficially (that is, ignoring possible ultimate injury to France) the French have completely succeeded in their aims; they have proved that at the slightest opposition against any demands they can apply the starvation terror, and compel any terms. Unfortunately the German surrenders so enforced do not seem destined to prevent starvation. Germany is in the hopeless condition—a condition which justifies those Germans who demand open repudiation of treaty obligations to France—that she continues responsible for, whether by aid or surrenders, the providing of livable conditions for the tormented Ruhr population, France taking no responsibility, and merely reserving to

herself the right to apply the torture. Such a condition could not exist in open war, much less in formal annexation. The policy ascribed to Herr Jarres that Berlin should formally deny responsibility for the Ruhr, that is, should tolerate an informal or formal—as is hoped temporary—French annexation, has a good deal to be said for it. The sufferings of the population could not be worse than they are; and the truth that the French Government is deliberately inflicting these sufferings without any economic aim would be more clearly brought out. The conclusion to be drawn so far is that the French in any conditions in the Ruhr can fulfil no function but that of an irritant, making Germany's recovery impossible.

The currency question continues to be in a mixed condition, and it is very dangerous to predict how things will develop. Between November 15 and 23, 340,000,000 Rentenmarks had been put into circulation, mostly in payment of official salaries, partly (to a total of 11,000,000 Rentenmarks) in exchange for paper marks or paper mark cheques. Since then Rentenmarks have been issued at the rate of 40,000,000 to 50,000,000 a day. Officially it is held that the market will soon be saturated with Rentenmarks. At present there is a tendency to hoard, against which operates the fact that Rentenmarks—being at least theoretically stable and in practice more stable than paper marks—are taken in shops at a small premium, as is the temporary "gold-loan" currency. The Rentenmark is still—officially—stable and has its full nominal gold value. This, however, is based only on certain assumptions. On the basis of the internal buying power of the Rentenmark its full value cannot be proved; on the contrary, the Rentenmark, the "gold-loan currency," and even the "calculation gold mark," are depreciated. The relations are as follows. The only currency with a foreign exchange is the paper mark; and its quotation is unreal; foreign valuations of the paper mark are nominal, and native valuations must be considered nominal because at the official rates only about 1 per cent. of the demand can be supplied. For some days past the paper mark has been officially 4,200 milliards per dollar; and as the Government insists that the Rentenmark is equal to an undepreciated goldmark, it follows that the Rentenmark is worth 1 billion paper marks, and roughly 24 U.S. cents. In fact the Rentenmark will not buy more than about 10 cents would buy in America, say 6d in England. The "calculation goldmark," which has no physical existence, and which was invented for the specific purpose of price stabilisation, has failed in its aim by being necessarily also depreciated. Commodities are priced at two or more times as many goldmarks as they would be priced in England at shillings, though the goldmark and shilling are theoretically almost the same. The newspapers are naturally full of comments on the incredible "gold" prices: an inferior kind of sausage, e.g., is priced 10 goldmarks a pound. Creditors who formerly warned debtors that if they did not pay paper mark debts immediately the debt in paper marks would be increased, now warn creditors that the goldmark price quoted holds good only for a certain time; after that a higher goldmark price must be paid. The "calculation goldmark," it will be seen, is both depreciated and unstable, in other words, there is no real goldmark pricing.

The Rentenmark necessarily depreciates at precisely the same rate as the calculation goldmark. The depreciation is due to inflation. Inflation has not ceased. Practically the whole State expenditure (all but under 1-1,000th) is, as before the introduction of the Rentenmark, raised by forcing paper money on the public. It makes no difference whether the paper money is forced in the shape of paper marks worth each one-billionth of a goldmark, or in the shape of Rentenmarks each worth one billion paper marks. In both cases the artificial buying-power in public hands goes on increasing. The Government does not seem to see that; in an official report it states with pride that a mere 340,000,000 Rentenmarks put into circulation in a given time have twice the buying power of the whole astronomical paper mark circulation. The legally-enacted convertibility into mortgage-bonds naturally cannot support the Rentenmark, because these mortgage-bonds are expressed in goldmarks, which, not being obtainable in gold, are depreciated, as above stated, by the fact that goldmark

prices are twice or more higher than they would be were payments made in physical goldmarks.

The Government has scheduled postal charges in Rentenmarks from December 1. The Finance Ministry's decade report for November 1—10, the worst so far, shows again how hopelessly the multiplier system of taxes, last revised in August, must fail. Revenue from taxes was only 55,449,076,684 million marks; expenditure 57,901,569,022,713 million marks, or well over a thousand times more. Loss on the railways in the ten days exceeded 18 trillions, on the posts 5½ trillions. The Floating Debt of discounted Treasury Bills in the ten days rose from slightly under 7 to over 56 trillions. The whole debt in mid-November was around 191 trillions. The October revenue accounts show receipts from taxation of 87,477,897,856 million marks. This is about 70 fold the September receipts; but the average dollar exchange (and therewith approximately prices) rose in the same time 250 fold, so that there was again a serious decline in real revenue. Once more the Land Levy, with 21,022 billion marks, was the chief yielder, this being due to the fact that this tax, alone of all the August new taxes, was assessed in gold. The increase of the wages tax by only 70 fold indicates, in view of the above much greater dollar appreciation, serious weakening in industry. Dr Stresemann's Finance Minister, Dr Luther, declared shortly before his resignation that the coming tax reform would be radical and drastic, and would be promulgated as an emergency measure, ostensibly under Art. 48 of the Constitution (but in reality in defiance of the Constitution).

The anti-Cartels law, now in force, has compelled certain "heavy industry" combines to moderate their selling conditions; against recalcitrant combines proceedings are being taken before the newly-constituted Cartels Court. State control of cement, one of the last of the *Zwangswirtschaft* measures, will be abolished on December 1. Business is still very bad; 25 per cent. of bootmakers have closed down their works. Trade in September (again, no values published) as compared with August, was as follows, in metric tons:—

	September.	August.
Imports	3,419,800	4,120,300
Thereof—		
Food	281,900	253,100
Raw and half-finished materials	2,983,900	3,684,000
Manufactures	152,700	182,700
Exports	1,142,600	1,074,500
Thereof—		
Food	70,100	94,800
Raw and half-finished materials	742,900	596,300
Manufactures	329,500	383,400

Coal imports fell to 1,601,913 tons. There were large coke imports, about 9½ fold those of the average month of 1922. Iron ore imports were only one quarter of the monthly average of last year. Exports of rolled iron and of iron goods were 79,783 tons, against a monthly average of 193,002 tons last year; exports of machinery 20,692 tons, against an average of 39,914 tons.

ARGENTINA.—PUBLIC EXPENDITURE—MONEY—TRADE BALANCE—CROPS—BANKING.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, October 22.

HAVING closed its ordinary sessions in September with but little accomplished, the Argentine Congress has once more followed its all-too-common practice of hurrying measures through a brief extraordinary period which, from their very nature, manifestly call for careful investigation and full discussion before they are given the force of law. Thus the deputies dealt with the 1923 Budget in a couple of sessions, reversing the Senate's attempt to cut down expenditure and returning the Bill to the latter in more or less the same shape as it was originally passed, namely with a proposed expenditure of \$600,000,000 Argentine paper. This figure will stand, if the Budget Law for the current year is finally sanctioned, and this depends now on the Senate, which, at the time of writing, is still studying the forms of taxation wherewith to raise a sum that is roughly \$300,000,000 over the estimates for 1915. Official and administrative finance is indeed far from easy as regards its working at the present moment. Generally speaking, con-

ditions in the Argentine money market seem on the surface to be more or less akin to what has prevailed for the past three months. Discounts are anything from 3½ to 8 per cent. per annum, the former with collateral guarantee and the latter single name acceptances not classed as A1, while about 5½ to 6 per cent. might be taken as a fairly average rate for first-class business. Nevertheless, there is an uneasy feeling in the air which might at any moment mean dearer money, if, indeed, this condition is not brought about by the authorisation to increase the capital of the Hypothecary National Bank by \$500,000,000, thus making the total amount of cedulas which it may issue \$1,500,000,000 nominal value in Argentine paper. There are pending \$201,000,000 in applications, which means that in the natural course of events this amount of cedulas will be marketed. And though the Bank may be trusted to be as cautious as it can, such issue will certainly depress quotations to some extent. Unfavourable also is the turn which the cattle trade has taken owing to the imposition of minimum prices on all buyers of cattle for export. It is confidently expected that this novel legislation will stultify itself, but meanwhile the effect on general trade is decidedly adverse.

The Province of Buenos Aires, having arranged a loan with the Banco de la Provincia for \$45,000,000 Argentine paper, is pressing its plans for railway extension and the subsidiary schemes, such as a large meat and produce market in Avellaneda, as fast as possible, while the City of Buenos Aires, after having prepared its budget estimates on the basis of the new taxation, which has been denounced by property owners as a land tax based on estimated unearned increment, is chagrined to find that the courts consider the dues to be unconstitutionally collected. Not even the severely reasoned statistical consideration of Argentina's financial position periodically issued by the well-known banker, Señor Tornquist, seems to cause any misgiving, though the summarised results of actual and estimated receipts and payments of a public and private nature are depressing reading. For the two years 1920-21 and 1921-22 Señor Tornquist arrives at an unfavourable trade balance, or rather a balance of payments, totalling \$270,000,000 gold.

Señor Tornquist reaffirms his belief in the urgent need for banking and currency reform and would have the Conversion Office changed into a Central Bank of Issue and Re-Discount, with a mixed capital, part private and part official, the dictation of a monetary law legalising the Argentine "peso" and thus doing away with the existing duality of the currency; and the conversion of the Banco de la Nación into an agricultural, pastoral, and industrial credit institution, its functions and its future policy in these directions being clearly defined.

Warnings such as these are, however, more than offset, as far as one can gather, by the very favourable estimates of areas sown with wheat, linseed, and oats, all of which are at present looking exceptionally well in almost every part of the agricultural districts of the Republic. The official figures and the estimated yields are as follows:—

	Hectares.	Tons.
Wheat	6,966,843	6,770,000
Linseed	2,126,546	1,930,000
Oats	1,111,775	850,000

These are big figures, and as experience has shown that in general the official calculation of areas is under the mark, expectation of a bumper yield is general.

Moreover, when weighing the favourable factors of the coming year one must not forget that Argentina's export-

able products are steadily growing in value and variety. Cotton in the north is unusually promising, and as much as 40,000 tons yield is predicted. Excellent immigration is another asset of value, and the Central European, Balkanic, and Slavonic stock now entering the country not only comes with a certain amount of capital, but, what is still more important, goes straight up country to work in some form or other on the land. The first wool sales are another cheering factor. A lot of 16,000 kilos coarse cross wool from Buenos Aires, the first official transaction of the current season, brought \$15 Argentine paper the 10 kilos, while prices for Rivers and Santa Cruz wools are naturally much higher, \$25 having been given as a reserve figure. Wheat and linseed keep extraordinarily steady at \$12.50 and \$23 Argentine paper the 100 kilos, though this is due largely to exchange, which at 38 19-32 cable gives exporters \$14 Argentine paper to the £ sterling. All quotations have been erratic during the month, with the close for sterling, dollars, and Continental currencies leaving the Argentine unit weaker than it was at the end of September.

October 23.

Uneasiness with regard to banking difficulties in a certain quarter are tempered by the belief that the Banco de la Nacion will at all costs prevent a complete collapse, but in order to render effective aid at the present moment recourse may be necessary to the emergency laws passed in August, 1914. It was then enacted that the Banco de la Nacion might at need obtain paper money from the Conversion Office against the discount by that institution of bills from the bank's portfolio. This has never yet been done, despite the difficulties which marked the first fortnight of August, 1914, and the temporary closure of one Argentine banking institution. Fortunately, Anglo-Argentine interests are perfectly well protected by the strength and sound positions maintained as a matter of course by the leading British banks working in this Republic. As a glance at their recent balance-sheets will show, they are fully able to meet all calls, and protect both their depositors and their borrowing clients of good standing without any extraneous aid whatsoever. Not only are their actual cash reserves exceptionally high, but they have also pursued during the past five years a policy of caution which has been in almost marked contradiction with that favoured by many Argentine commercial circles. That this has meant a reduction of present gains is self-evident, but it is becoming clear to the more sensible members of the Argentine commercial world that, in limiting their operations to such business as could be soundly transacted, the Anglo-Argentine banks have not only strengthened their own individual reputations, but have also placed themselves in the best position possible to render immediate and effective aid to Argentine finance and trade in general at a crisis such as the present.

POLAND.—POLITICS—RECONSTRUCTION OF THE CABINET—INFLATION—THE BUDGET FOR 1924—PLANS FOR THE FORMATION OF A NEW BANK OF ISSUE—POLISH SHARES.

(FROM OUR CORRESPONDENT.)

WARSAW, November 22.

It is difficult at the present moment to make any definite statement about the drift of Poland's home politics. Divergent forces are at work, and it is hardly possible to measure their strength. The reconstruction of the Cabinet, which took place at the end of October, has partly strengthened the position of the Government. While the most prominent leaders of the Right had hitherto refused to assume responsibility for the decisions taken by the Government, they have now entered the Cabinet. Dmowski has taken over the portfolio of the Ministry of Foreign Affairs, and Korfanty has replaced Slabinski as Vice-President of the Cabinet. Other changes are of minor importance. Korfanty now concentrates in his hands all economic affairs, while the direction of home politics is left to the President of the Cabinet, Mr Witos.

The steady depreciation of the mark contributes very much to undermine the position of the Cabinet. At the time of our last letter, a month ago, the pound was quoted at 4,300,000 marks; now, however, the exchange

has touched 10 millions. The printing press is working with steadily increasing speed. According to the last return of the Polish National Bank, the circulation was increased in October by 12,883 milliards, as compared with 4,300 milliards in September, 2,400 milliards in August, 900 milliards in July, and 800 milliards in June.

The seriousness of the situation has compelled the Government to consider what measures must be taken to meet it. Great economies have been effected, the number of officials has been reduced by 7,000, and further reductions are expected. The expenditure of the Ministry of War has been cut down in the Budget for 1924 by 269 million gold marks, or nearly one-third, and that of the Ministry of Education by 50 per cent. By these measures Mr Kucharski, the Minister of Finance, hopes to balance revenue and expenditure next year. In his Budget estimates for 1924 the ordinary and extraordinary expenditure is fixed at 1,089 million gold marks, and the revenue at 1,112 millions, so that there remains a surplus of 23 millions.

It is very doubtful if the Minister of Finance will be able to maintain expenditure within the limits of his estimates. This Budget is based on assumptions which are far from being real. So, for instance, the reduction in the budget of the Ministry of Education has been effected in the expectation that the expenditure of maintaining primary schools will be taken over by the local authorities. Nothing, however, has been done hitherto for providing them with the necessary funds, so that it is hardly possible that they will be able to fulfil the obligations with which they are charged. Finally, the Ministry of Finance will be obliged to put the necessary funds at their disposal.

Mr Kucharski's budgetary surplus has been obtained by another purely artificial expedient—by the omission of all charges resulting from Poland's foreign indebtedness. The organ of the Minister of Finance, the *Goniec Kwański*, announced that such a moratorium of one year was supported by Commander Hilton Young, though this information was promptly contradicted by the English financial adviser.

On the expectation of a balanced Budget is based Mr Kucharski's plan of opening shortly a new bank of issue. The Polish mark is to be replaced by the zloty. According to Press reports, this conception has been strongly criticised by Commander Hilton Young, who is very sceptical about the possibility of balancing the Budget during the coming year. Under such conditions the Government, in order to meet the deficit, will be obliged to resort to the printing press, so that the zloty will share the fate of the mark. The *Republika* announces that Commander Hilton Young, on leaving Warsaw, declared that he will return after the elections only if this plan of Mr Kucharski is abandoned. It seems, however, that the Government has decided to proceed to the formation of a new bank of issue, because it is considered as impossible to maintain with the present currency the wheels of economic life, and of the financial system, in motion. The Polish mark has depreciated to such an extent that the weekly wages of the employees alone absorb a very important part of the total circulation. Under such conditions the capital famine has become so severe that all over the country undertakings are obliged to close their workshops because they cannot obtain the necessary where-withals. Even at the risk that the new currency will be subject again to a new process of inflation, the necessity of replacing the mark by the zloty seems to many Polish economists to be unavoidable.

In general the financial horizon is actually very dark, and the only bright feature in the situation is the negotiations which are conducted between Mr Korfanty and representatives of the principal Polish industries for the payment of the first instalment of the capital levy in foreign currencies, and in kind. Upper Silesian industrialists have promised to pay 25 million Swiss francs, and agriculture will probably put at the disposal of the Government some 50 millions. Similar payments are to be made by the sugar and petroleum industry, by the timber trade, &c. The realisation of this plan would contribute very much to an improvement of the financial situation, making the Treasury for a certain time independent of the printing press. The near future will show whether these expectations are not far too optimistic.

DENMARK.—EXCHANGE CONFERENCE REPORT—PROPOSED MEASURES—TRADE BALANCE—INVESTMENT CONDITIONS.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, November 15.

THE report of the Exchange Conference convened by the Nationalbank has recently appeared, and public interest has been focussed on the Bill for the establishment of an Exchange Equalising Fund brought in by the Government. The Conference included 30-40 members, and the report was signed by all but three. The report contained the proposal for the Exchange Equalising Fund fully drawn up. This fund was to acquire the control of an exchange holding corresponding to £5,000,000, which amount was to be provided by co-operation of the State, the Nationalbank, and the leading private banks, for the purposes of compensating the fluctuations of the krone rate and supporting this rate.

The joint report further contains expression of the views of the Conference on several questions, e.g., the general economic policy, which ought to be adopted; the majority advocates that endeavours be made to improve the balance of trade through measures tending to reduce imports. "It must," says the report, "be the task of the Government, by temporary measures, to reduce the imports of such goods as are unnecessary to the economic life of the country, and by other temporary measures to provide that home consumption is to the greatest possible extent covered through home production."

The Conference points out that the general economic status of the country, apart from the depreciation of the krone, must be considered as good as at the outbreak of the war. Further, the report states:—"Agriculture is working satisfactorily, and in the other trades employment has been continually increasing during the last few years. The investigations of the statistical sub-committee of the Conference have proved that—apart from loss by the slump—the less favourable financial balance between this country and foreign countries is principally due to expenses connected with the reversion of Slesvig to Denmark, re-establishment of livestock, replenishment of the stocks in trade, replacements in the mercantile marine, &c. To a great extent it has been possible to defray the expenditure for this out of the earnings during the war, and the Conference therefore is of the opinion that provided such expenditure should now be practically completed, there will be a possibility of attaining an improvement of the krone in the years to come, without creating too great difficulties, if the necessary support, by the entire community, is afforded the measures, financial, technical, and others, which might be decided upon for this purpose."

The Government has adopted the proposal of the Conference as far as the Equalising Fund is concerned, and the Bill brought in has been passed by both Houses in a form which is close to that of the Conference draft. The fund is to be managed by a board of eight members, of whom two are representatives for the State, two managers of the Nationalbank, and one manager of each of the four leading private banks. According to the Act the representatives of the State and the Nationalbank have three votes each, and the representatives of the private banks one vote each. The State participates in the fund to the extent of two-fifths, the Nationalbank two-fifths, and the leading private banks one-fifth each. The board elects a chairman, who is entrusted with the administration of the business of the fund, and it has been intended that the manager of the Nationalbank, who is the exchange expert, should undertake this task. Representatives of the State, the Nationalbank, and the other banks left for London before the Bill was put before the Rigsdag, in order to conduct preliminary negotiations with an English banking house with regard to the credit required.

The agreement by the Government to adopt the Equalising Fund immediately had a favourable effect on the exchange market, and the krone rate recovered considerably. In the course of October sterling had risen from 25.50 to 26.22, while at the same time the dollar rate had increased from 562 to 568. Subsequently further rises in sterling and dollars brought the rates as high as 26.50 and 601 respectively on November 9th, but as on

the following day it was made public that the Government agreed to the main points of the proposal of the establishment of the Equalising Fund, a sharp reaction set in, and this would have been still more pronounced had not the Nationalbank taken up foreign exchange in the market in order to prevent excessive declines.

This is another proof of the susceptibility of the krone rate to psychological influences. What developments there will be while the fund is working cannot be forecast with any certainty, but banking circles and exchange experts amongst the private bankers take a rather optimistic view of the situation, without feeling quite reassured, lest the legislative powers should omit to take further steps in accordance with the views advanced by the Exchange Conference. In the report the leading banks have qualified their participation in the establishment of the fund by presuming that measures will be taken to support the fund, and the Government have been informed of this during the negotiations preceding the Bill. However, it is yet doubtful what it will be politically possible to carry through.

There is no important change in trade since my last letter. On the Stock Exchange there has been a tendency to move investments from bonds to shares, this being partially an effect of the recent Act prohibiting the export of credit association bonds issued in more than one currency. It proved that the three credit associations who had issued certain series of bonds in Danish as well as foreign currency—mostly sterling—were faced with heavy liabilities, as the bonds were exported or the coupons sent for collection abroad. Accordingly, the Government was authorised by law to prohibit the export of such bonds, a measure which does not affect the duly acquired rights of foreign holders, but which was detrimental to the market, and generally met with an unfavourable interpretation. Exchange quotations being now more steady, the bonds have appreciated, and the recent annual meetings in a number of Danish credit associations have once more confirmed the impression of the excellent security of these institutions.

In September the balance of trade was once more against Denmark, imports being 169,000,000 kr and exports 135,000,000 kr, making a deficit of 34,000,000 kr against 32,000,000 kr in August and 39,000,000 kr in July. During the first three quarters of the year imports have aggregated 1,434,000,000 kr and exports 1,148,000,000 kr, making an import surplus of 286,000,000 kr during the first nine months of the year. This amount exceeds the corresponding figure for 1922 by 83,000,000 kr, the imports for the period January-September, 1922, totalling 1,091,000,000 kr and the exports 888,000,000 kr.

As might be expected, Danish wholesale prices show a rise during October, and this is, of course, due to the exchange situation. The index figure of the *Finanstidende* early in January was 181 and in July 207. Subsequent figures are 207 for August, 202 for September, 205 for October, and 207 for November. The krone rate will be a decisive factor in future price developments, as a rise in the foreign exchange quotations will rather quickly affect the price-level. It is possible, however, that through an active discount policy the Nationalbank will endeavour to bring pressure to bear against rise of prices of goods and foreign exchange. The policy of a rise in the official rate of discount is not out of consideration, but views expressed during the last few days appear to indicate that, before coming to a decision, the bank will await the effects of the Exchange Equalising Fund as well as the result of the negotiations presumably to take place concerning further measures in support of the krone.

SWEDEN.—MONEY AND THE EXCHANGE—TRADE FIGURES—MATCH COMBINE.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, November 19.

THERE are two features which are causing anxiety and disturbance in business life at present—i.e., the heavy fall in the sterling exchange and the increased discount rate. The State Bank is from November 9th quoting a discount rate (for three months' bills) of 5½ per cent., and the

private banks have, of course, followed. The discount rate was thus increased by 1 per cent. from $4\frac{1}{2}$ per cent., which rate has been in force since July 1, 1922, when it was lowered by $\frac{1}{2}$ per cent. from 5 per cent. The motive for this step is said to be that the board of the State Bank is anxious to maintain the Swedish currency at the gold parity. Following the announcement of the increased discount rate, the official pound quotation fell from 16.90 to 16.82, but there have been declines of as much as 0.19 crowns from one day to the other. To-day the official quotation fell from 16.40 to 16.27, and in the open market it was lower still, the tendency being to get rid of sterling to prevent further losses. It is, of course, much to be regretted that such a heavy drop in the pound is taking place, and it will cause heavy losses to our exporters not only to England, but also to the Continent, as most of our exporters have sold their products to countries with depreciated values in pounds. The highest quotation for pounds during this year was 17.73, on March 1st, on November 1st it was 17.02 $\frac{1}{2}$, and to-day, November 19th, it has fallen to 16.27. This means, of course, that the margin for profit, which has by no means been great, is on the verge of disappearing.

Preliminary figures now available show that the total value of exports during September was 111.02 million crowns and of imports 126.88 million crowns, while the same figures for September, 1922, were, exports 122.63 million crowns and imports 108.90 million crowns. The increase of imports was principally coal, mineral oils, and wheat. As to the increased import of coal, it is, of course, a sign of the revival of industry. The total value of exports for the first nine months of this year is estimated at 782.22 million crowns and imports at 963.72 million crowns, thus showing an import surplus of 181.50 million crowns. For the corresponding period last year exports amounted to about the same, or 782.71 million crowns, while imports were 827.20 million crowns, thus leaving an import surplus of not more than 41.79 million crowns.

The Swedish matchmaking industry has extended its business sphere still more by the American concern, with a capital of 28 million dollars, which has been founded lately under the name of International Match Corporation. More than half of this capital is owned by the Swedish Match Company, which will have the control of the new concern. The American concern issued a bond loan of 15 million dollars sold at 94 $\frac{1}{2}$ per cent., with interest at 6 $\frac{1}{2}$ per cent., which was very quickly absorbed, parts of this bond loan being reserved for Swedish buyers connected with the Match Company. During the first nine months of this year Swedish securities amounting to a total value of 37.5 million crowns have been bought back from abroad. The timber sales are now amounting to about 850,000 standards, and as the weather has been unusually mild this autumn, shipping may not be closed for some considerable time yet.

Letters to the Editor.

CURRENCY NOTES AND INFLATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your last issue Mr Shaw revives the old doctrine that the issue of currency notes is unlike similar issues because it is "automatic."

Will he or someone else explain how the action of the bank of issue officially called the currency note account essentially differs from that of the Reichsbank? When the German Government has been unable to meet its expenses otherwise (i.e., by taxing, by borrowing from private persons or institutions, &c.), the Reichsbank has provided the necessary money by discounting German Treasury bills, and has got the means to do so by the simple process of printing additional mark notes. When the British Government from 1914 to 1920 was unable to meet its expenses otherwise, the currency note account provided the necessary money by discounting British Treasury bills, and (in the guise of a "Government department") making ways and means advances, and got the means to do so by the simple process of printing additional pound notes. Where is the difference?

All that we can claim is that we did not print on the same "kolossal" scale, and that in 1921 and 1922 our Government more than met its expenses in the other ways, so that some of the notes outstanding were redeemed, with the natural result of a rise in the value of the pound. Early this year, when the policy was on the point of restoring the gold standard here, and leading to a speedy restoration of the uniform basis of reckoning values, which had prevailed throughout almost the whole civilised world before the war, faint hearts abandoned it. Since then we have only just "balanced our Budget," and consequently have kept the amount outstanding stationary. Now, we seem in some danger of listening to those who wish to see us follow the inspiring example set by the Germans.

I gather from the newspapers that the late President of the Reichsbank to the day of his death refused to believe that the depreciation of the mark was due to excessive issue. If so, I have no doubt that he thought the issue was "automatic," and merely a proper response to the legitimate demands of trade.—Yours, &c.,
November 26th, 1923. EDWIN CANNAN.

EGYPTIAN CURRENCY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue for November 24th, Dr Wm. A. Shaw challenges the article on "Egyptian Currency" that appeared in the *Economist* of the previous week. The challenge is welcome, for the sole object of the article was to draw attention to an aspect of the currency problem that had not hitherto received sufficient notice, though it is of Imperial importance. The more open discussion, therefore, the better.

Before joining issue with Dr Shaw, however, I should like to have his definition of appreciation and depreciation in a currency, and, above all, how he measures these characteristics. He must have done so, for he asserts that one country, the U.S.A., had an appreciated, and another country, Great Britain, a depreciated currency. Yet he has quoted certain figures, which, if they show anything, show most clearly that both had a depreciated currency.

As it is, Dr Shaw has only instanced another case of the application of the argument of the article—viz., the United States, up to spring of 1919, when the exchange was "unpegged." But perhaps he will consider this to be further casuistry on my part.

On one point I am very glad to be able to agree with Dr Shaw, namely, on the automatic nature of the issue of Egyptian currency, *once the policy had been adopted*. But will he assert that, because there is apt to arise at this season of the year an automatic demand on the part of young folk for unlimited supplies of plum pudding, a policy of automatically acceding to their demand is desirable?

And in case there is any doubt on the point, I should like to make it quite clear that, so far as the administration of the policy goes, there is nothing but praise to be given to the National Bank of Egypt. But that is not the main point.
THE WRITER OF THE ARTICLE.

THE IRISH LOAN.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There is a point with reference to the new Irish loan to which I have so far seen no allusion. I refer to the nature of the currency in which it is issued.

The currency of every independent country is that of its own market, and is quite independent of that of any other country, no matter by what name that currency may be called.

The relative value of the currency of any two countries depends on their relative financial position, and may vary to any extent, notwithstanding the fact that they may bear the same name.

Ireland being now financially independent of England, its currency is the Irish pound, and not the pound sterling, and, in the absence of any statement to the contrary, it must be taken that the new loan is issued in Irish pounds and not in pounds sterling.

To-day the Irish pound is approximately equal to the pound sterling, but it in no wise follows that it will always remain so.

There are many instances of variations in the value of the pound of different markets. In the days before the union of England and Scotland the pound was the currency of both countries, and it appears at one time that the pound of both countries was the same. But the Scots pound depreciated to such a point that it became worth only a few pence in England. In the English colonies of North America the pound was the money unit, and in early days it was no doubt equal to the pound sterling. But at the time of the Revolution, if I remember right, there was not one of these colonies of which the money had not greatly depreciated in terms of the pound sterling. And the pound of each colony differed from that of the others.

The English investor should bear these facts in mind before he is tempted by the favourable terms to invest his money in the new loan.—Yours faithfully,
A. MITCHELL INNES.

Edinburgh, November 26th, 1923.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I wish to draw attention to two recent notes from your Dublin correspondent, which are apt to mislead. In that of November 17th, he states, in connection with the Free State Loan, that "it should be remembered that it is only by special arrangement, terminable on March 31st next, that Irish trustees holding charitable funds invested in British securities are freed from British income-tax. It is obvious that practically all of them must seek a continuance of that immunity by reinvesting in Ireland."

This is not, of course, true when charitable funds are invested in British 5 per cent. War Loan, or certain other British loans where income-tax is not deducted at the source.

In his note in your issue of November 24th *apropos* of the Free State Loan, it is stated "if Dublin Corporation 3 $\frac{1}{2}$ stock only yields approximately 4 $\frac{1}{2}$ per cent. (or at the higher quotation about 4 $\frac{1}{2}$ per cent.), the Irish Free State Government stock should clearly go to a premium."

The inference is not justified, because, whereas the Free State loan is issued at 95, and is redeemable at the latest in 1945, Dublin Corporation stock stands at about 67 $\frac{1}{2}$, and is redeemable in 1944.—Yours faithfully,
November 27th, 1923. Z.

MANUFACTURING COSTS AND UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The Board of Trade, in its *Journal* (October 18, 1923), published the following statistics relating to British overseas trade for the third quarter of 1923:—

VALUE IN THOUSANDS OF POUNDS (000's omitted).

	Total Imports.	Exports of United Kingdom Goods.
July-September.	£	£
1923, as declared	245,686	185,443
On basis of 1913 prices: 1923..	164,896	95,418

From a simple calculation, it follows that, whereas we are making our purchases (principally food and raw materials) at prices on the average 50.8 per cent. above 1913 prices, we are making our sales (principally manufactures) at prices on the average 92.2 per cent. above 1913 prices. And the purchasing power of our overseas customers being limited to the credit resulting to them from the sales to us of their products, it is clear that that credit will only suffice to purchase a quantity of British goods $1\frac{1}{3}\frac{2}{3}$, or a little more than three-quarters of the quantity purchased in 1913. Hence unemployment of nearly one-quarter of the men engaged in manufacturing for export.

And as regards the home trade (treated as an exchange between country and town), assuming that the prices of agricultural and manufactured products bear to each other roughly the same ratio, namely, 150.8 to 192.2, agricultural purchasing power would cover, as before, only $1\frac{1}{3}\frac{2}{3}$, or a little more than three-quarters of the quantity purchased in 1913. Hence unemployment of nearly one-quarter of the men engaged in manufacturing for home consumption.

Taking home and overseas trade together, the disparity between agricultural and manufacturing prices

would account for nearly one-quarter of the total number of men engaged in manufacture being thrown out of work. But as unemployment is never publicly attributed by any of our political or commercial chiefs to high prices of manufactures, and as such a cause has not been mentioned during the course of the present General Election, which turns upon the causes and cure of unemployment, I am compelled to conclude that the views herein expressed are wrong, and that there must be some fatal flaw in the foregoing argument. Will you, Sir, or any of your readers, point out where that flaw lies?—Yours, &c.,
C. M. LEWIS.

[Our correspondent is correct in his main contention that the high price of British manufactures—together with the impoverished state of many oversea customers—has not a little to do with the present unemployment position. As regards home trade, he is on less sure ground. Agricultural workers form much too small a proportion of the employed population to permit of internal trades being regarded as an exchange between town and country.—Ed. Econ.]

INVESTMENTS AND OUR TRADE BALANCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the national trade balance-sheet for 1922, referred to in this week's issue of your journal, there is an item on the import side which I think has a serious bearing on present trade conditions. I refer to the £155 millions available for investment abroad. How much of this sum has been relented abroad, apart from the fact that still more of the nation's savings might be following in the same direction? If this is not happening (which I believe to be the case), does it not account for a considerable volume of imports, which have to come to fill up the void, along with a corresponding decrease in exports through a smaller demand for goods from countries accustomed to borrow in our markets? Am I right in my contention?—I am, &c.,
H. BEAUMONT.

Stock Exchange, November 24th, 1923.

[Present trade figures scarcely support this view. *Ex hypothesi*, the imports in question must be received in some period subsequent to 1922, since all actual imports of that year were taken into account before striking the balance. One would reasonably expect that such a tendency as Mr Beaumont describes would have revealed itself by this time in the trade returns, which would now be recording increased imports, and reduced exports, in comparison with last year. The figures for the first ten months of 1923, as compared with the same months of 1922, show that the value of retained imports has increased by 8.6 per cent., and of British exports by 7.1 per cent. Fine comparisons are vitiated by the inclusion in the 1923 totals of seven months trade with the Irish Free State, but it is evident that the tendency is for imports and exports to increase with more or less equal step. According to the *Economist's* figures, capital issues in London for use abroad in the first nine months of each of the last three years have amounted to £68 millions in 1921, £106 millions in 1922 and £104 millions in 1923.—Ed. *Economist*.]

Books and Publications.

RECENT ECONOMIC LITERATURE—A MONTH'S SURVEY.

THE appearance of an English translation of Professor Gustav Cassel's "*Theory of Social Economy*" (2 vols., Fisher Unwin, 42s, translated by Joseph McCabe) is, undoubtedly, the most important event of the month in economic literature. Professor Cassel's earlier works on prices have had a profound effect, though whether their author would support all the theories put forward, some of which do, while others do not, acknowledge their spiritual parentage in his writings, is a very open question. He has, as happens to few economists in their life time, founded a school. His present work, actually written, for the most part, before the war, ready for publication then, but since revised and reconsidered by him, is, however, wider in its scope than anything of his hitherto available

in English. It is a general treatise, and one, as its title indicates, directed to the social rather than the strictly financial applications and implications of economic theory. It is for that reason particularly interesting and important at this moment. The first volume certainly should be widely read. In arrangement and in point of view it is fresh, realistic, and of direct bearing on immediate problems. The second, dealing mainly with monetary, price and trade fluctuations, with the whole economic significance of the trade cycle, is much more technical. One is sorry that the hideous word "conjuncture" should disfigure so many of these stimulating pages, and close them to the large number of readers who might profit by the argument, logical and clear, but find an excuse for not doing so in a sigh over the difficulty of economic "jargon."

It is one of the supreme merits of Professor Pigou, as an economic writer, that he can so completely dispense with anything of the sort. In the collection of essays he has called "*Essays in Applied Economics*" (King, 10s 6d) there is hardly a page that need present difficulties to the reader who is prepared to use his head and to exert his faculty of attention. They deal, for the most part, with subjects of urgent social concern, with housing, agriculture, wages boards, prices and wages, and deal with them all with a continuous sense of human values. About his own point of view, Professor Pigou is entirely frank; in the essay on housing, for instance, he states, quite clearly, the "major premiss" which he accepts. This essay is for that and other reasons particularly well worth study. Only two papers in the volume, those on "The Foreign Exchanges" and on "The Exchange Value of Legal Tender Money," contain any matter of a technical kind. As an introduction to their subject, and, in general, as an extremely useful up-to-date text-book on a matter as to which the older works, inevitably, are now hardly capable of helping the student who wants to understand a completely transmogrified problem, Mr H. C. Walter's "*Modern Foreign Exchange*" (Methuen, 5s) may be commended. In his preface Mr Walter says that he has endeavoured "to explain the essentials of modern exchange movements in a form which will be comprehensible to the intelligent person of average education who is not a professional economist." He has had in mind throughout "the students and the business men of whom his Manchester audiences were composed." In this effort, he has been singularly successful. His book is above all things clear. Its descriptive portions neither take too much nor too little for granted.

Good descriptive work, in a wider sense, is the substance of a work by two American professors, "*The Background of Economics*" (by Professors Merlin H. Hunter and Gordon S. Watkins. New York and London, McGraw Hill Book Company, 15s). Intended for the ordinary reader rather than the trained student, and expressly addressed to those who believe that the ideas of Christianity are not, and need not be, at variance with those of the economic order, is Mr J. A. R. Marriott's "*Economics and Ethics*" (Methuen, 10s 6d). Long experience as a lecturer and tutor has given to Mr Marriott command over a lucid and easy expository style. His pages are easy reading, but there are few places where one feels that this ease has been purchased at any conspicuous sacrifice. It may be that the whole problem is, a little artificially, simplified; that the hard edges of economic doctrine are, at times, unduly softened, in the interest of enabling the reader to feel that everything is as it should be; but against this must be set the fairness with which Mr Marriott states the view with which he does not agree. The brief section on international trade is a case in point.

Every student will welcome the appearance of the second volume of the revised edition of Palgrave's "*Dictionary of Political Economy*," edited by Henry Higgs, C.B. (Macmillan, 36s). Volume II. covers the entries under the letters F to M. Works on special subjects deserving of more than casual mention are "*The Historical Foundations of Modern Company Law*," by R. R. Fermoy (Sweet and Maxwell, 10s 6d), and from the same publishers, "*Private Custodian Trusteeship*," by L. J. Fulton (15s); from the United States, "*The Romance and Tragedy of Banking*," by T. P. Kane (in London, from Effingham Wilson, 22s 6d), the second edition of a book published by

the New York Bankers' Publishing Company; the fifth and revised edition of E. S. Mead's "*Corporation Finance*" (Appleton, 15s); "*Agricultural Organisation in the United States*," by E. West (University of Kentucky, \$3.90); and, in the admirable Carnegie Endowment Series, Br. Van der Flier's authoritative monograph on "*War Finances in the Netherlands up to 1918*" (Clarendon Press). Another work in this same series is G. D. H. Cole's "*Labour in the Coal Mining Industry*" (Clarendon Press, 10s 6d); see review, *Economist*, November 10th.

The chapters on the fiscal controversy in Mr Spender's masterly "*Life of Sir Henry Campbell-Bannerman*" (Hodder, 42s) give it a special interest at the present juncture, and the same is true of the pamphlets in the "*New Way Series*," reprints by the *Daily News*, of lectures delivered at the Liberal Summer School this summer. Directly bearing on that issue is "*Dumping: A Problem in International Trade*," by Jacob Viner (University of Chicago Press, \$2.25). A note of gratitude should be entered to the officials of H.M. Stationery Office for the preparation of the "*Guide to Current Official Statistics*," first issue, an extremely useful little handbook. Also for the "*Income Taxes in the British Dominions*," compiled in the Inland Revenue Department, 5s.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
December 12.	December 13.

Various influences have conspired to render the Stock Exchange markets erratic and jumpy during the week now ended. The General Election, casting its shadow over business enterprise, led to a moderate decline in British Government funds, owing to the impression that, whether Free Trade or Protectionist party be returned, its majority may be so small as to point the possibility of yet another election in the near future. There was also a hint of money becoming dearer before the end of the year, and talk of a rise in the Bank rate. The release of fifty million pounds for half-yearly interest on War Fives sufficed to keep the price of the War Loan tolerably steady, but Conversion Loan gave way sharply on pressure to sell two or three lines involving a fair amount of stock. This weakness affected the market as a whole. Tasmania and South Australia had no difficulty in securing a very successful issue to their offer of 5 per cent. stock at 99. The market opened at a premium in the first case and a discount in the second, owing to the greater amount of staggering in the latter than in the former.

Brazilian bonds show strength, in consequence of the announcement that a mission is on the point of proceeding to Brazil from this country, with a view to inquiring into Brazilian financial affairs and of rendering what assistance it can to those on the spot who are working for rehabilitation of Brazilian credit. French bonds have been rather less volatile than usual, though the drop in the franc led to uneasiness in the market for various other Continental bonds.

Greek bonds, exceptionally, are good. The Austrian scrip, however, keeps hard. Peruvian Corporation preference slanted rather abruptly, on sales by people who regarded the report as being disappointing, although the dividend of 2 per cent. came up to expectations.

Amongst Home Railways, the feature is the strength of the Underground group. Nothing fresh transpired to account for the buying which carried up prices here. The former rumours that the Metropolitan is to be taken over by one of the bigger brethren, and that the capital account of the Underground Electric Railways is to be reorganised, added to hopes of an increased dividend on Districts, have played their part in the advancing of prices. Steam stocks went better, on a statement, received with commendable caution, to the effect that the companies' decreased takings are much more than compensated by reductions in wages.

Grand Trunk Pacific has been a good spot, touching 47½. Brazilian Railway stocks are better, in sympathy with the rise in Brazilian Government bonds. United of Havana rose sharply, on dividend anticipations, and the Argentine Railways, while showing hesitation, have kept firm on balance. Nitrate railways are also better.

There is nothing doing in rubber shares, and changes are uninteresting. In the Oil market, professional business outweighs any public interest, and movements are largely dictated by speculative transactions. Anglo-Persians fell, on account of the halving of the dividend, though this had been partly expected, and there was a rally from the worst. The Mexican Eagle Company has published further particulars in regard to the latest well that was brought in a fortnight ago. Royal Dutch continue to be bought from Holland.

British-American Tobacco enjoyed a brisk rise, thanks to revival of the rumours that the company is about to distribute a bonus. Other tobacco shares are also firmer, the carry-over disclosing a bear position, and the same reason caused a recovery in Courtaulds. Other textiles are better for choice, though to what extent the companies will be benefited or damaged by further measures of protection is regarded in the market as an open question. The hotel list has firmed up, buying being encouraged by the prospects of the Wembley Park Exhibition attracting crowds of visitors to London next season. The approach of Christmas caused inquiries for shares in the shopping, restaurant and kindred companies. Marconis are heavy, in spite of the maintenance of the 15 per cent. dividend, holders being rendered nervous, it may be, by the latest attack made by a circulariser. Cable stocks are dull, the Western Telegraph report showing a decided diminution of earnings last year.

In the land section, Hudson Bays and Sudans hold their previous rises, and shares in the Kassala Cotton, the Sudan Plantations subsidiary, have been in request. The Brewery market is a little better. Newspaper shares are heavy. The iron and steel department shows movements that are narrow, but mostly favourable to holders. The new Denaby Colliery debentures came to market this week, and dealings started on the basis of ¾ premium. Scottish Australian Trust stock has advanced, on the increased dividend. The banking and insurance groups are better. The shipping list shows very little change.

Although the price of gold is well maintained, Kaffirs exhibit a slightly halting tendency, for which a little selling from the Cape is declared to be responsible. There is, perhaps, a mild bull account in the market, and people are trying to take their profits. Rhodesians remain sluggish. Diamonds move in accordance with the temper of Paris, and copper shares came under the same influence, business in both diamonds and copper being very limited so far as the British public's dealings are concerned. Tin, the metal, has been notably strong, and the rise in the price attracted purchasers to Malayan and West African shares, the Cornish group being left rather in the cold. Russian shares are a shade better, and the interest in Mexicans has been sporadic, with prices showing no changes of consequence on the week.

We are officially informed that Mr. Donald Dean Swift has ceased to be a member of the Stock Exchange.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

1918	1,280,959,976	1917	1,518,596,010	
1917	1,248,055,226	1916	585,436,853	

Issue of £2,000,000 Government of South Australia 5 per Cent. Registered Stock 1932-1942, and £1,150,000 Government of Tasmania 5 per Cent. Registered Stock 1932-1942.—This is an issue at 99 per cent. of the above-mentioned stocks, both being trustee investments. The loans are issued to provide funds for public works, for the settlement of discharged soldiers on the land, and for other purposes. The principal is repayable in London at par on October 1, 1942, the respective Governments having the option of redemption, in whole or in part, on or after October 1, 1932, on giving three months' notice. Debentures and stock of the Government of the State of South Australia and of the Government of the State of Tasmania issued and payable in London, the property of persons not domiciled in South Australia or Tasmania respectively, are not subject to any South Australian or Tasmanian taxes. These are two good securities, and both had an excellent reception from the investing public.

Bournemouth and Poole Electricity Supply, Limited.—Authorised share capital £800,000, of which £400,000 has been issued. This company was formed in 1897, and serves a district of about 45 square miles. It also controls the Richmond (Surrey) Electric Light and Power Company. There is a 4½ per cent. debenture stock outstanding, amounting to £187,500, and 7½ per cent. seven-year notes for £133,300, which it is intended to pay off out of the proceeds of the present issue. The company now issues 150,000 ordinary £1 shares at £1 14s each. This will raise the issued ordinary capital to £300,000, leaving £100,000 still in reserve. The preference capital outstanding amounts to £250,000, part bearing 4½ per cent. and part 6 per cent. interest. There is power to issue £150,000 new preference shares, which will carry interest not exceeding 7 per cent. The present market price of the shares is round about 38s, and what effect the fresh issue will have on existing shares remains to be seen. It is pointed out in the prospectus that profits will be larger than those for the previous year, when a 10 per cent. distribution was made. On the other hand, the new capital will need additional profits. Based on last year's dividends, the yield works out at under 6 per cent. As far as investors are concerned, the issue is not in the nature of a bargain.

The Dunstable Gas and Water Company.—Incorporated by special Act of Parliament, 1871. The accounts of the gas and water undertakings are kept separate. This is an issue of gas capital. The authorised stock capital of the gas undertaking is £34,500, of which £27,168 has been issued.

this is an offer for sale by tender of £6,500 6 per cent. irredeemable preference capital, the minimum price of issue being par. The net revenue from the gas undertaking for the year ended December 31, 1922, was £3,315. Interest on loan capital absorbs £467, and as dividends on preference capital (including that now offered) will require only £1,107, the issue is well covered. But consideration must be paid to the narrow market for such a small issue.

The Tea Share Trust.—Authorized capital £50,000, divided into shares of £1 each, of which 25,000 have been issued for cash at par. The title of the company indicates its business. The statement as published in the press, to comply with Stock Exchange regulations in connection with a share quotation, is chiefly remarkable for its brevity.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

British and Colonial Government Securities.

LOSSES ON THE DIRECTORATE.

Before I sit down I should wish to refer to the losses which the bank have sustained during the year by the death of Sir William Robertson, one of the extraordinary directors, and of Mr Charles Carlow, an ordinary director, who for some considerable time prior to his death had acted as chairman of the board. Sir William Robertson, although holding an honorary position, always manifested a warm interest in the progress of the bank, and Mr Charles Carlow, who had been a member of the board for a quarter of a century, had, as is stated in the report, rendered important services to the bank during that period. We all at this table miss his wise counsel and kindly personality, and regret his loss, not merely as a valued colleague, but as a friend.

With these remarks, I beg to propose that the report now submitted, containing a statement of the accounts and balance-sheet of the bank, be approved, and that out of the profits of the year a dividend at the rate of 12 per cent. per annum for the half-year and a bonus of 2 per cent., both under deduction of income-tax, be now declared in conformity therewith.

The report was approved, and the governor, deputy-governor, extraordinary directors, and the retiring directors were re-elected, and auditors were appointed for the ensuing year.

ANGLO-EGYPTIAN BANK, LIMITED.

CHAIRMAN ON CONDITIONS IN EGYPT, SUDAN, AND PALESTINE.

The thirty-seventh ordinary general meeting of the shareholders of the Anglo-Egyptian Bank, Limited, was held, on the 27th ultimo, at the Bank, 37 to 39 King William street, London, Mr Raoul H. Foà (the chairman) presiding.

The secretary (Mr H. H. Mallet) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Business throughout the world has been at a very low ebb, and your directors are pleased to be able to distribute the same dividend as last year. The only noticeable difference in the profit and loss account as compared with last year is that we have written nothing off our premises account. Your directors think that they have for the present made quite sufficient provision for the redemption of the leasehold premises in London, having regard to the short period during which they have possessed them, and also deem that, with very gradual additions to the provision already made, their action will be in entire consonance with the conservative policy always adopted. The freehold and leasehold properties abroad stand at very much less than their actual value. Our investments, consisting as they do almost entirely of gilt-edged British securities at short maturity, stand at cost price or market price, whichever is the lower, and thereby constitute a further inner reserve of importance.

As your bank has become the property, to the extent of 90 per cent., of a vastly more important institution, the duty of enlightening you on the world-wide, as well as on the national, influences in economics does not fall within my province, but I am glad to say that, with regard to Egypt itself, it is my pleasant task to inform you that the demand for its chief product—cotton—is more active than I have ever known it in the whole course of my experience.

EGYPT'S NEW CONSTITUTION.

It is a time-honoured custom with us that one of your directors should each year visit the different spheres of operations of your bank, and this year it fell to my lot to make an extended trip through Egypt, the Sudan, Palestine, and a portion of Trans-Jordan. Naturally, in Egypt, as you know, a new constitution has been proclaimed, and the dominance of England in that country is not what it has been for many years. To begin with, the strong and, perhaps, natural aspiration of a country to govern itself has for some time been apparent in Egypt, and England, pursuing the course which she has followed for so long, decided to allow the Egyptians to rule their own country with very little interference on her part. The first result of this has been that many Englishmen working in the Egyptian Civil Service have been replaced by Egyptians. It remains to be seen whether this change will ultimately prove beneficial to Egypt or not. In place of men of large experience who virtually dominated the activities of the various Ministries there now remain only two Englishmen of this class, and they are merely there in an advisory capacity without having a vestige of power in their hands, except that of suasion. Happily, the Egyptian fellah is a law-abiding and industrious person, and it may be that he will in time awaken to a consciousness of his responsibilities as a voter, but in the interval I fear that he will be called upon to bear a considerable amount of dominance by forces and people who ought rather to leave him to his own devices, or attempt to lead him, and certainly not to drive him.

Trade in Egypt is in the same condition as it is in most parts of the world, but Egypt has the advantage of producing as its staple source of revenue cotton, which is, and promises to be for some time, in very short supply. Under these conditions Egypt

has suffered much less than many other countries. Of course, the halcyon times of 1920 are past and reaction has set in. In that year agricultural land in Upper Egypt, to my knowledge, changed hands at £700 an acre; it is now worth anything from £100 to £150 per acre, a much more reasonable figure. Labour in price has come down very nearly to what it was before 1914. At that time a fellah working at the Shadouf in water-rising earned about 6d a day. During the war his wage rose to 3s a day, and now he gets about 10d. But the change which most struck me was the difference of attitude of the fellah to his landlord. Before the war he accepted what treatment his landlord chose to mete out to him uncomplainingly and often without seeming protest. Now the absentee landlord often has difficulty in getting his rents at all. This, I suppose, is the case in many lands.

COTTON GROWING IN THE SUDAN.

The cotton crop of Egypt is estimated this year at about 6,000,000 cantars, and I have not so far heard that the insect pests which frequently attack cotton are in great evidence.

In the Sudan I was struck by the change which has come over that land in the four years that had elapsed since my last visit to it. England has come forward and supplied large sums of money to be expended in the making of dams, the diversion of water channels, and the construction of railways. The absolute necessity of producing within the Empire itself cotton sufficient for its needs is destined to make the Sudan within a few years a very rich country. I speak of it as a whole. Of course, there are arid deserts in the centre and miasmatic swamps on the Red Sea littoral, which must of necessity remain unfruitful, but the delta between the Blue and the White Nile and the land near the River Gash—that is to say, the Kassala cotton fields—and that near the Barrak at Tokar are destined sooner or later to produce great wealth.

One of the difficulties which was foreseen on the establishment of cultivation in the Sudan was the absence of labour. However, an unexpected source of labour supply has arisen; the Felatas, a tribe of Mohammedans from the West Coast of Africa, are now settling in large numbers in various villages. They are peaceable and hardworking, and it is considered that they will go a long way to solving the problems of labour in that country.

PALESTINE.

In Palestine, unfortunately, religious and racial difficulties are retarding the advance which should, under beneficent British influence, have done much more than has been the case. The influx of Jews from Russia, Rumania, &c., has in some instances been of unqualified advantage; in others the benefits of their presence have not been so evident. They have built two new towns, one at Tel-Aviv in Jaffa, and one at Haifa, and these have sprung up amid sordid surroundings as towns which might be pointed out as examples of planning and management by any nation with pride. It is not to be forgotten that Palestine is a very small country, about the size of Wales, and a country which, although possessing a small strip of very fertile land, is, in a great part, incapable of producing large crops. If capital were forthcoming to develop railways and hotels in Palestine it would, in my opinion, become an enormous centre of pilgrimage and tourists. For it must not be forgotten that it is the cradle of three religions, and if inducements were offered whereby a stay in that country—so full of appeal to the interests of civilised humanity—existed, Palestine would be able to do as Italy has done for the last hundred years, and make a handsome living for itself out of its visitors, who are now deterred from going there because of the lack of good hotels. At present the scarcity of capital is making itself very much felt, and the development of the country hindered thereby.

The report and accounts were unanimously adopted, and a dividend of 10s per share, free of income-tax, was declared, making a total distribution of 15 per cent. for the year.

THE LONDON NITRATE COMPANY, LIMITED.
FINANCIAL POSITION "EXTREMELY SATISFACTORY."
POSITION OF NITRATE INDUSTRY.

Presiding at the thirty-sixth annual general meeting of the London Nitrate Company, Limited, at Liverpool, on Thursday, the 29th ultimo, Mr Frank Tobin, C.B.E., chairman of directors, made special reference to the balance-sheet, which showed that the assets of the company in regard to works and property had increased since last year by, roughly, £28,000, and now stood at £504,488. The reason for that was the increase of plant at Oficina Santa Laura. Another notable feature on the assets side was with reference to the stocks of nitrate and iodine, which stood at £31,596, whereas at the end of June in the preceding year they stood at no less than £103,000, showing that during the year under review they had disposed of vast quantities of their accumulated stock of nitrate.

PROFIT AND LOSS ACCOUNT.

The profit and loss account for the year under review showed that the gross profit on trading, after certain deductions, amounted to £80,411, as against £35,000 for the preceding year. On the other hand, expenses had increased as a total, due to two things, income-tax and the corporations profits tax, the figure being in regard to the taxes £13,991, as against £7,594. Whilst, owing to the incidence of taxation, the directors did not hope to influence any lessening of the income-tax, there was some hope that the corporations profits tax might be amended in some way in the future. Reviewing the work of the current year, the chairman said that, after a long period of paralysis in the nitrate industry, in June of 1922 they restarted the Oficina Santa Laura, that being their best and cheapest producing oficina. They had been for some time earning no profits, and they wanted to get to work in order to earn some as fast as they could.

NITRATE CONSUMPTION.

The Chairman said that the sale of nitrate was in the hands of a central committee, who had to fix the prices for months ahead. That gave the purchaser of nitrate great confidence, who could buy without any fear that in a few months' time the price might be higher. They had to make a very careful estimate of what the consumption of nitrate would be for the ensuing 12 months, and they would then inform the companies what they thought that amount would be, and the companies could then calculate what their own proportion of the total quantity would be, and make their arrangements for producing that quantity if they wished to do so. It was quite evident soon after the end of June, 1922, that the production of the oficinas that had started work would not suffice for the total consumption of the world, but if a company had on hand a considerable stock of nitrate, it would say to itself, "If we produce so much and take so much out of stock, we shall have enough to meet the requirements of the central committee for the ensuing 12 months." That was their position.

INCREASE OF PLANT.

At Oficina Santa Laura they did not produce as much as they delivered, the balance being taken out of stock. The figures showed on the two respective dates that their stocks of nitrate were £103,000, and were now only £31,000, and that showed how they had drawn upon their stock. However, that could not go on for ever, and they realised that they would have to produce in the

future as much as they were going to sell. With this view there was the increase of plant at Oficina Santa Laura, but that plant was not going to be used entirely for producing a bigger quantity of nitrate. What was more important was that nitrate should be produced as economically as possible, and, therefore, simply because they had added 50 per cent. to their productive capacity at Santa Laura, it did not mean that 50 per cent. more nitrate would be produced. They hoped, however, that it would bring down the cost of production, in the first place, and that, secondly, there would be some considerable economy in the way of extraction. Passing on to refer to the state of affairs at the end of June, 1923, the Chairman said during the whole of that year consumption had gone on excellently, stocks had grown smaller and smaller, and the accumulation of nitrate in Europe and elsewhere was diminishing.

THREE OFICINAS AT WORK.

As regards the London Nitrate Company, the steps they took to meet the necessity of producing more nitrate were that Oficina "Puntunchara" was restarted in July of this year, and though, owing to the difficulties of the ground, they did not expect a very great output there, it would still be profitable work and supply them with a certain quantity of nitrate. However, they found that these two oficinas were not sufficient to supply the demand, and so in November of this year Oficina "Transito" was started, with the result that they had now three oficinas at work, and had no longer to bear the burden of incurring expense and getting no result.

HOUSING AND TRANSPORT.

There were, however, two difficulties which they had to face. There was no doubt that the housing of the workmen was not what it should be, and a welfare commission had been appointed on the coast to deal with the matter, and they and all other English companies would be only too anxious to do what was reasonably desirable in regard to that important question. Then, again, labour was another difficult question which they had to face, and it was necessary that they should make things as attractive as they could and deal with the difficulties as they arose. Another difficulty which loomed in the future was that in regard to the carrying of nitrate to the ports if the consumption increased in the future. It was a fact that at present the Nitrate Railway Company in Tarapaca was not in a position to deal with more traffic.

The reason why they did not increase their plant and rolling stock was because their licence from the Government would expire comparatively early, and they did not feel justified in incurring further heavy expense with the possibility that that licence would not be renewed. As a matter of fact, application had been made to Congress for a renewal of this licence, but it was unfortunately defeated by one vote. One would have thought, as a large proportion of the revenue of the Government came from nitrate and its transport, that Congress would have seen their way clear to afford all possible facilities for increasing the traffic, and it was not perhaps too late to hope that commonsense would lead to a solution of this difficulty, which undoubtedly existed.

SOUND POSITION.

In conclusion, the Chairman said that their financial position was exceedingly satisfactory. They had to look ahead to 1926 when their debenture fell due for repayment, and the profits of the current year had enabled them to set aside £30,000 for that purpose. They would continue that policy, and he thought the debenture debt would disappear about the time that the debentures fell due or very soon afterwards. Paying a handsome tribute to the efficiency and work of the staff and agents on the coast, the Chairman said the company was most excellently served there. They had passed through an exceptionally trying time, and it had been a great comfort to the directors to know that they had been not only energetically but ably represented in all respects. The Chairman then moved a formal resolution, receiving, approving, and adopting the report and accounts, including confirmation of a dividend of 1s 6d per share, final, for the year, payable on December 6, 1923.

Lt.-Colonel Sir James Reynolds, Bart., seconded the resolution, which was carried.

On the proposition of the Chairman, seconded by Mr E. B. Orme, Mr William H. Hasler was unanimously re-elected a director of the company, and Messrs Harmood, Banner, and Son were also re-elected auditors.

WESTERN TELEGRAPH COMPANY, LIMITED. CHAIRMAN ON PROPOSED U.S. AND ITALY CABLE.

The nineteenth ordinary general meeting of the Western Telegraph Company, Limited, was held, on the 29th ultimo, at Electra House, Moorgate, London.

Sir John Denison-Pender, G.B.E., K.C.M.G. (the chairman), presided, and said that, after charging working expenses, standing interest on debenture charges, income-tax, &c., they had left £327,241, a considerably smaller amount than the accounts of the last few years had been able to show. The reasons were doubtless well known, and were the political and economic unrest and depression which prevailed in almost every country in the world. Their receipts showed a decrease of nearly £217,000, including £75,000 for loss in exchange. Their working expenses showed an increase of £67,000, but income-tax and corporation profits tax were less by £64,000, thus making a net increase in expenditure of £3,432. The working expenses had, of course, been increased by the opening of four new stations, Barbados, Maranham, Maceio, and Victoria.

The net result of the year's working was a balance of £327,000, against £547,000 for the previous twelve months. After deducting the dividends, amounting to 10 per cent., free of income tax, paid during the year, there remained £329,739 to carry forward, for he was afraid they must still look for reduced traffics compared with the last few years. The hope expressed a year ago that there were signs of improved trade in South America had not been realised, but recently, during the last few weeks, there were signs once more of improvement in their traffic returns.

ITALIAN CABLE TO U.S.

The president of the Western Union Company, before leaving America three weeks ago, had given an interview to certain newspaper correspondents, dealing with the proposed cable between New York and Italy via Azores. Reports of interviews of that kind, which necessarily went through a number of hands, were not apt to soften the asperities of an utterance, and, taking the report as published, the remarks seemed to him rather unfair both to Great Britain, and certainly to the Western Telegraph Company and to those responsible for its management. The Italians were constructing a line to the Azores, and later intended laying further cables on to South America. The latter undertaking was to be subsidised by the Italian Government. The Western Union Company would lay a cable from the Azores to New York, and desired to be also financially interested in the European portion, thus forming a competitive route to South America. It would be apparent, as a glance at the map would show, that the door was open for subsidised competition as regarded the company's South American traffic. When they had co-operated with the Western Union Company in the new cable communication between North

and South America, it would be remembered how the Americans had held them up for two years after the cable had been laid, owing to their having preferential cable rights on the coast of Brazil, rights which the American Government by their action ultimately forced the company to relinquish before they permitted the cable to be used. Their agreement for that cable with the Western Union Company provided that neither of the two companies, without the previous consent of the other, should make any traffic or working agreement, or interest itself directly or indirectly with anyone else competing with that joint route. That protected the company's interests, and he saw no reason why that agreement should be set aside.

DIVERTING SOUTH AMERICAN TRAFFIC.

If the Western Union Company was to be interested in the Italian section of that cable communication, South American traffic might be tapped and diverted to the detriment of the company's direct route. Moreover, the Italian Government had given a subsidised preferential concession. In the interests of their shareholders the board had the right to object and to take their stand on the clauses of the Barbadoes-Miami agreement. The utterance that a tribute was required had been interpreted in terms of money, and it had gone forth that the company required payment for landing rights. That was not the case; such a matter had never even been discussed. Regarding the reference as to the Azores being neutral territory, they could safely leave that to Portugal to answer. So long as the proposed cables were used solely for Italian and North American traffic the company had no grievance. They relied upon the goodwill of Portugal for support of their action. Portugal was the valued and oldest ally of Great Britain, with whom the company's associated companies had worked most amicably for half a century.

However, Mr Newcomb Carlton, who was the president of the Western Union Company, and himself had met, and they had come to an arrangement which met the views of the company and was acceptable to the Western Union Company.

The report and accounts were unanimously adopted.

CARGO FLEET IRON COMPANY, LIMITED. CLAIM AGAINST THE GOVERNMENT—PROSPECTS OF THE INDUSTRY.

The adjourned annual ordinary general meeting (for 1922) of the Cargo Fleet Iron Company, Limited, was held, on the 28th ultimo, at Middlesbrough.

The Right Hon. Lord Furness (the chairman) said: At our last ordinary annual general meeting we were unable to present the balance-sheet for the year 1922 owing to the number of matters outstanding with the Inland Revenue authorities, but these have now been disposed of, with the exception of the petition of right, which, unfortunately, it has been necessary to lodge in connection with the extension agreement.

The profit and loss account shows a credit of £95,015 2s 5d. After deducting £41,167 2s 4d for debenture interest, and £30,000 depreciation, this leaves £23,848 0s 1d, which, added to the amount of £152,845 6s 5d brought forward from 1921, gives a total of £176,693 6s 6d, which sum it is proposed to carry forward.

The report and accounts were unanimously adopted.

The annual meeting for 1923 was held after the conclusion of the adjourned annual ordinary general meeting for 1922.

The Chairman (the Right Hon. Lord Furness) said: The year ended September 30, 1923, was more satisfactory from some points of view than its predecessor. I am pleased to be able to say that we have throughout the year been able to keep two-thirds of our blast furnaces and practically the whole of our steel plant in continuous operation, thus providing nearly full-time employment for our workmen. Competition has been, and is, very keen, and prices have been too low when compared with manufacturing costs; and the lack of stability in the prices of our raw materials and the finished products we have for disposal has made trading extremely difficult.

REASON FOR LARGE CARRY FORWARD.

The credit on profit and loss account brought forward from September 30, 1922, was £176,693 6s 6d, to which is to be added the sum of £96,945 11s 6d for 1923, making a total of £273,638 18s. From this is to be deducted debenture interest, £40,989 7s 7d, and a further sum of £30,000, which has been appropriated for depreciation, leaving a balance of £202,649 10s 5d, which it is proposed to carry forward. It may appear that this is a large amount, and that a dividend should have been paid to the shareholders; but, in view of the petition of right already referred to, your directors are of opinion—especially having in mind the present condition of the steel trade—that no distribution can be considered until our large claim against the Government has been settled.

As you know, the company was heavily burdened by the excess

profits duty, and has paid in taxation generally since March, 1917, a sum exceeding £1,255,000, as mentioned in my remarks at our last meeting, and it is very unsatisfactory and disappointing to the shareholders that an agreement with the Government should have been settled by the expensive and tedious method of a petition of right.

FUTURE PROSPECTS.

In regard to future prospects, it is very difficult to believe that there can be any substantial increase in the profits of our steel products while so large a proportion of the productive plant of the country remains out of operation; and I am inclined to the opinion that any relief that will bring about a more satisfactory relationship between manufacturing and selling prices will have to result from a reduction in the cost of production, and low manufacturing costs can only be obtained by full operation.

It has been estimated that whereas in 1913 60 per cent. of the pig-iron of the country was made from home ores and 40 per cent. from foreign ores, in 1922 (when the pig-iron made amounted to only half its pre-war volume) the percentage from home ores had fallen to 55 per cent. and from foreign ores increased to 45 per cent.

If the home presses had maintained the same relative consumption—even with the reduced make of pig-iron—nearly 1,000,000 tons more of home ores would have been used.

The problem of an increased use of suitable home ores is one that can only be solved by the railway companies, as you will realise when I say that the cost of Northamptonshire rawstone is about 3s per ton in trucks, whereas the railway carriage to our works is 8s per ton in owners' wagons.

The American iron trade is dependent upon Mesaba ores. The present inclusive charge for the conveyance of iron ore from the Mesaba Mines to the works at Pittsburgh—a distance of over 1,000 miles—at the present rate of exchange is 13s 10d per ton. In contrast to this, the railroad carriage on rawstone from Northamptonshire to Tees-side—a distance of 180 miles—is no less than 8s for haulage alone. This figure does not include the provision of trucks, which must be supplied by owners, nor does it include the cost of loading or discharging, which has also to be borne at owners' expense.

The report and accounts were unanimously adopted, and the retiring directors and auditors were re-elected.

SOUTH DURHAM STEEL AND IRON COMPANY, LIMITED. SATISFACTORY RESULTS—EXPORTS AND PRICES.

The twenty-fifth annual ordinary general meeting of the South Durham Steel and Iron Company, Limited, was held, on the 28th ultimo, at Middlesbrough, the Right Hon. Lord Furness presiding.

The Chairman said: Although your company, like all other industrial undertakings, has passed through many vicissitudes since its incorporation, I think you will agree that we have reason to congratulate ourselves upon the results which have been achieved.

As I indicated last year, we were then within measurable distance of arriving at a settlement with the Government authorities of the various questions arising out of the war taxation, and I am glad to inform you that we have now made a final adjustment, which has resulted in certain reserve credits coming into the profit to September 30th last, thus making the latter total £182,109 3s. Adding the amount brought forward from the previous year, this gives a sum total of £300,171 7s 11d. Your directors recommend that a dividend of 10 per cent. per annum (less income-tax) shall be paid on the ordinary share capital. It may be commented that our reserves are very large in comparison to our capital. It is largely due to this, however, that we are able to pay a 10 per cent. dividend on our ordinary shares, when other similar companies are unable to pay a dividend at all.

We are in this happy position, simply because we have conserved our resources in the past, and also for the reason that we have invested a great proportion of these reserves in properties which supply us with raw materials essential to our requirements.

DIVERSIFYING MANUFACTURED PRODUCTS.

It is certain that new uses will have to be found for steel plates if the present and potential mills of this country are to be worked to their full capacity, which is the only way they can yield a satisfactory profit. This is a problem which is receiving the serious consideration of your directors. The branches of the steel trade that have remained busy during the present depression are those whose products do not require large investments of capital after manufacture for their final use, as in the case of steel when used for building ships, bridges, railroads, &c.

I refer in particular to the galvanised sheet and tinplate trades. The tinplate trade, as you are probably aware, is confined to South Wales, and there does not appear to be any fundamental reason why it should continue to hold the monopoly. Your directors, having come to the conclusion that the time has now arrived to

commence diversifying our manufactured products, have therefore made arrangements for the erection of a new plant for the manufacture of galvanised corrugated sheets.

I have often referred in my remarks in previous years to the vital importance of obtaining coal at a reasonable price, and it is scarcely necessary for me to point out that the success of the iron and steel industry is largely dependent upon cheap fuel—especially coke—and low costs of transport.

RUHR OCCUPATION AND ITS EFFECT.

Owing to the non-productivity of the coal mines in the Ruhr since the French occupation, the export demand for British coal and coke has surpassed all previous records, and for some time was at the rate of no less than 100 million tons of coal per annum, the prices during this particular period being at least three times their pre-war level. A slight increase in the price of steel followed the closing of the works on the Rhine; but this was not at all proportionate to the increase in fuel prices, the effect of even this small increase in steel prices being to restrict the slightly improved demand which had already asserted itself earlier in the year. Coupled with the large demand for export coal came also extra demands for coke at such high prices that the home consumer could not afford to pay.

The result was that as the increased quantities of coke were exported, many blast-furnaces were closed down; so it would appear that largely increased coke exports have the effect of reducing the output of pig-iron.

I do not in any way criticise the export of this coke, but, if this is to be permanent, then our costs of pig-iron and finished steel must inevitably increase. Therefore, until the whole of the coal mines of Europe are in operation, there cannot be stability in coal prices, and, similarly, until coal prices have reached their economic level there cannot be stability in iron and steel prices, while the demand is bound to be erratic, without much prospect of a reasonable profit.

It can be safely said that no country can hope to remain permanently in the first ranks of steel manufacture unless suitable pig-iron is produced in approximately the same weight as the finished steel products, and this figure can be taken at about 70 to 75 per cent. of the steel ingot production for the heavy and cheap steel trades.

As a result of the Treaty of Versailles, whilst the Saar remains within the French Customs' limits, the French potential production has increased—at the expense of Germany—to nearly 10,000,000 tons. It will thus be seen that Germany and France will be almost equal competitors. The fact remains that every year a market has to be found for 21,000,000 tons of Continental steel, in addition to the increased production of this country and the United States—and, unfortunately, at the present time this is impossible, owing primarily to the chaotic state of the exchanges and the prevailing universal unrest. The question of the exchanges is one of the most vital factors and one of the greatest obstacles to be overcome before we can hope for a renewal of normal trading conditions.

The report and accounts were unanimously adopted.

CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA, LIMITED SATISFACTORY YEAR—INCREASED PROFITS.

CHAIRMAN'S REVIEW OF COMPANY'S INTERESTS.

The ordinary general meeting of the Consolidated Gold Fields of South Africa, Limited, was held, at the Cannon street Hotel, London, on the 29th ultimo, Lord Harris, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and ac-

BARCLAYS BANK LIMITED.

Deposits (30th June, 1923)	£295,905,730

EVERY DESCRIPTION OF BRITISH & FOREIGN
BANKING BUSINESS TRANSACTED

counts, said:—I will deal with the accounts of the New Consolidated Gold Fields, being the operating company, first. Taking the profit and loss account, the gross profit amounted to £460,228 4s 8d, as against £379,376 11s 1d, a gratifying increase of £80,851 13s 7d. The cost of management which last year was reduced from £51,000 in the preceding year to £37,000 last, this year figures at £41,801 6s 3d. There is a balance of net profit brought down of £412,952 2s 7d, compared with £336,511 13s 11d last year. The appropriation account showed a balance at credit of profit and loss account on June 30, 1922, of £74,644. From this amount a dividend of 1½ per cent., £67,500 referred to last year, was paid to the Consolidated Gold Fields, enabling that company to pay all arrears of preference share interest to June 30, 1922, and the balance of £7,144 4s 10d carried to the credit of profit and loss account gives you a credit of £420,096 7s 5d against £225,298 3s 8d last year. Against this we have written off £182,032 19s 2d for depreciation.

Turning now to the Consolidated Gold Fields of South Africa accounts, which are the accounts actually before this meeting, these are very simple. The company owns all the shares in the New Consolidated Gold Fields, and derives its income almost entirely from that source. The latter company paid an interim dividend of 2 per cent. in November last, adding to which the final dividend of 3 per cent. gives you the £225,000 at credit of profit and loss account. There is, in addition, a comparatively small amount of interest, £2,429 16s 1d, at credit, which, together with the forward balance from last year of £18,496 2s 11d, makes £245,925 19s in all, as against £125,369 14s 6d last year.

On the debit side we have the payments made in respect of dividends on the first and second preference shares for the year, leaving £132,490 5s 9d to be carried to the balance-sheet. From the balance at credit of profit and loss account we recommend you to take a dividend of 6 per cent., less income-tax, leaving a balance of £41,740 5s 9d to be carried to the current year's profit and loss account.

INTERESTS ON THE RAND.

Turning to general subjects, and naturally taking our interests on the Rand, which are still very large, first. It is difficult to make a

comparison between the results of working during the year ended June, 1922, and the year ended last June, owing to the fact that the strike period spoilt the record for 1922. It was a year of improvement, however, giving hope for 1923, and I am glad to say that promise has been handsomely fulfilled. Larger profits with gold at 90s 1d per ounce were earned during the period ended June, 1923, than during the previous corresponding period, when gold realised 100s per ounce. It follows that this pleasing result was mainly due to decreased working costs and to the increased efficiency referred to in the manager's report, and it is satisfactory to note that a further decrease in costs took place during the quarter ended September last. During that quarter the ruling price for gold was still taken at about 90s, but that price has risen since then, so that the estimated profits for the September quarter are likely to prove higher than estimated by the increased price of such proportion of the quarter's yield as was realised in October.

The Simmer and Jack, about which I spoke somewhat hopefully at our last meeting, has emerged creditably from a troublous year.

The Robinson Deep year ended in December, 1922, so that interest centres on the results of the nine months of the current year which have elapsed since then. Exact comparison is difficult owing to the strike interruption early in 1922, but it is nevertheless interesting to note that whilst the working profits for the whole of 1922 (during which period gold realised an average of 91s 7d per ounce) were £248,003, the working profits for the first nine months of the current year amount to £311,000, in spite of the fact that gold realised only 88s 9d per ounce averaged over that period.

Turning to Sub Nigel, although the results obtained east of "C" shaft and at "E" shaft were somewhat erratic, development generally has been encouraging.

RHODESIA AND AMERICA.

As regards Rhodesia, you will have closely followed the recent almost sensational developments to which I referred at the meeting of shareholders of the Gold Fields Rhodesian Development Company the other day. The history of the Cam and Motor Mines is quite a romance, and as we have ourselves, as well as through the Gold Fields Rhodesian Company indirectly quite a considerable holding of Cam and Motor shares, we may look forward to participating in the prosperous future which the directors of that company anticipate in the shape of materially increased revenue next year.

Turning to America, you will see that our Gold Fields American Development Company, in which we and the South African Gold Trust hold all the shares, made a very satisfactory profit for the year ended January 31, 1923. The Comstock Merger Company, Inc., New York, has acquired an important group of mining claims on the Comstock lode in Nevada. In conjunction with the National Mining Corporation we secured a controlling interest in that company.

Taken altogether, this venture in Comstock looks like turning out to be a very important one, and, needless to say, a remunerative business.

We have, together with the National Mining Corporation, taken a substantial interest in oil ventures in Rumania, our principal investment being in the British Sospiro Oilfields, which owns a large shareholding in the Rumanian company of the same name.

With a view to obtaining a footing on the ground floor in the Ontario gold territory, we have taken a minor interest in the Porcupine Goldfields Development Company.

We have also taken an interest in a Derbyshire lead proposition and in an Italian concession for the exploitation of zinc and lead mines. You will see, therefore, that we have not been inactive, and, though we cannot count on all our ventures proving successful, we have every confidence that the investments selected under the best technical advice obtainable will average out successfully. In addition to the above, we have acquired substantial share interests in the Corporation for the Economic Development of Turkey, in Angola Diamonds, Mexican Corporation Notes, South American Copper Notes, and last, but not least, in Rand Mines.

With reference to our one-third interest in Devonshire House, negotiations for the sale of this property are actually in progress at this moment. I venture to say this, however, that this site, which I may without exaggeration describe as one of the finest, if not the finest, in London, is not likely to go begging much longer.

There are ahead of us some considerable possibilities. We have large interests in these new ventures, and those interests have been acquired on very reasonable terms. I hope they are going to prove profitable to you; and I will go further, although I know it is generally held in the City that I am far from being optimistic, I not only hope, but I firmly believe, they will by degrees come in as highly satisfactory dividend-payers.

Lord Brabourne seconded the resolution, which was unanimously adopted.

BOULDER PERSEVERANCE, LIMITED.

SUCCESS OF RECONSTRUCTION.

The statutory meeting of Boulder Perseverance, Limited, was held, on the 29th ultimo, at Winchester House, London, Mr C. F. Bell, F.C.I.S., the chairman, and managing director presiding.

The secretary (Mr C. F. Lupson), having read the notice convening the meeting and the certificate of the auditors,

The Chairman, in the course of his speech, said:—I would like to say how very gratifying has been the response made by the shareholders to the priority shares issue. In the circular to the shareholders of July 23rd, it was stated, "I feel confident that everyone will co-operate in the scheme," and although it was not possible to give longer time for the shareholders in our Dominions to participate, and notwithstanding that the rate of exchange militated against the French shareholders applying—it meant their paying 3s for each share—the total applications received in time for the priority shares was 849,073 (as against the 700,000 we asked for), of which 441,648 were as of right and 407,425 excess shares. The shares as of right having been allotted, there remained 258,352 shares, the result being that applications for excess shares could only receive an allotment of 65 per cent. You will bear in mind that all these applications came from shareholders in the Great Boulder Perseverance Gold Mining Company, Limited, and the underwriters were not called upon to make good any deficiency, although I am given to understand they would have been only too pleased to have been called upon to take up the whole of their underwriting, regarding it, as it undoubtedly is, as a thoroughly good and sound investment.

WORK AT THE MINE.

A few words regarding the work which Mr Williams has been, and is, carrying on at the mine. I feel I cannot do better than quote from his letter to me of September 21st. He says: "The production of ore has been increased to 5,000 tons per month. (The average last year was 3,500 tons.) Increasing roasting capacity to between 7,000 and 8,000 tons per month. Profit for six months, June-November, was estimated at £27,000. We have made June-August £15,000, and feel confident that the above-named estimate for the six months will be reached." Mr. Williams goes on to say: "We have commenced working ore on company's account, and this will be accelerated month by month until about 8,000 tons of ore can be relied upon from company's and tributaries' work. We are this month (September) commencing development work on company's account in ground we estimate will average on stopping over 10 dwts per ton. We are commencing diamond drilling to locate extensions of ore chutes at several points. We are not eliminating tributing, but bringing tribute work more into line with company's interests. We are incurring very heavy expenditure on work necessary to recondition mine and equipment. When this work is finished our working costs will be reasonable." But what I think will be the most welcome news in this letter is the following statement: "The mine, if vigorously developed, will be a good profit-making venture for many years; there are so many lodes to be prospected that the life of the mine for at least eight years may be accepted as assured, with almost the certainty that such a period will be considerably exceeded."

FINANCIAL POSITION.

A few words regarding our financial position. Apart from the new money represented in the report before you, we have £10,000 here in Government securities and £15,000 at the bank at Kalgoolie on deposit, pending the time when, after the mine has been reconditioned, development work can be proceeded with. But for the strike of Government employees on the water-works, there is no doubt a further substantial amount would have been forthcoming as the result of October working, and Mr Williams's estimate of £27,000 would probably have been reached. There are two features which will help us in the future. First, the cost of water has been reduced from 7s to 3s per 1,000 gallons; our water bill for the six months ending September 30th was £2,100, so that we shall save nearly £2,000 for the full year on this alone. The next important item is the reduction of wages obtained by the Chamber of Mines of 1s 6d a shift—i.e., about 10 per cent. of the wages bill, which for the past year was £39,000. The saving from this item is, therefore, considerable, and as the company's ore is increased it will be augmented.

Our record has been one of which the shareholders of this company have every reason to be proud, and in view of Mr Williams's statements (which we have every reason to believe are most conservative), I hope it will be my privilege for some years to meet you and render you satisfactory advices of good profits being made at the mine, as appears to-day to be more than probable.

Mr W. A. Luning said the way in which Mr Williams had reorganised the company's affairs had been extremely satisfactory, and, what was even more satisfactory to him (the speaker) as a

business man, was the extremely able and careful way in which he disclosed to the board the different workings in which he was engaged, and the most elaborate, satisfactory, and descriptive accounts he gave, showing exactly what he was doing, how the money was being spent, and what he hoped to reap from the expenditure.

A cordial vote of thanks to the chairman concluded the proceedings.

COLOMBIAN CORPORATION, LIMITED.

TRANSPORT TO CONSTANCIA MINE PERFECTED.

The third ordinary general meeting of the Colombian Corporation, Limited, was held, on the 28th ultimo, at Winchester House, Old Broad street, London, Mr Frederick W. Baker (chairman of the company) presiding.

The secretary (Mr G. E. Hounsom) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: You will notice that at December, 1922, the remaining capital resources of the corporation then stood at £32,912, as against a debit balance as at October 31, 1923, of £43,248, showing a difference against the corporation as between the two periods of £76,000.

The further delays in completing transport arrangements will, I fear, swell this adverse balance until we reach the productive stage. I am glad to be able to report, however, that the Oroville Company, who own all the ordinary shares in this corporation, have under serious consideration now the question of providing the further moneys that may be necessary to get our mill into operation.

I may mention here also that, after consultation and in agreement with our auditors, probably in next year's accounts the bulk of the items under the heading of "Expenditure in suspense" will be treated as items properly chargeable to capital, so that when the mill is in operation and the company making profits we shall, by following this course, be able to bring nearer the period when dividend distribution will be possible.

After dealing with the total receipts and expenditure of the corporation, the Chairman continued:—Turning to the position at the Constancia mine. Most of our available labour has been employed, as you know, on the completion of the Dos Bocas road; so that, beyond a certain amount of work done in the direction of retimbering and perfecting ventilation, a comparatively small amount of actual mine development has been carried out. Some considerable work has been done in the direction of completing water flumes and foundations for the mill and for the power station, so as to be in readiness for the delivery of the bulk of machinery which is now being shipped from Barranquilla. The Dos Bocas road has now been completed and is open for traffic. As you know, rather than burden this corporation with the cost of the Dos Bocas road, an arrangement was made with the Oroville Company, who have taken over the concession, and, at their own cost, completed the work. The same company have now in operation an up-to-date oil fuel steamer, with three barges, capable of handling 300 tons each trip, thus connecting the port of Barranquilla with the Dos Bocas road, so that, as far as one can judge, all transport questions in connection with the needs of the Constancia mine are now perfected—fortunately, I may add, at no cost to this corporation. The report and accounts were unanimously adopted.

ANSELL'S BREWERY, LIMITED, BIRMINGHAM.

TAXATION KEEPING UP THE PRICE OF BEER.

At the annual meeting of shareholders of Ansell's Brewery, Limited, held at the Queen's Hotel, Birmingham, on Tuesday last, the 27th ultimo, Mr Thomas Ansell, deputy-chairman, presided in the unavoidable absence of the chairman, Mr J. A. Fairhurst. Sympathetic reference was made to the resignation of Mr Edward Ansell of the chairmanship of the board, owing to ill-health. Mr Ansell, it was stated, was one of the founders of the company, and had been chairman of the board for 20 years. The secretary was instructed to write a letter of sympathy with Mr Ansell, who, writing to the chairman, mentioned that, with one exception, he had been present at each annual meeting since the formation of the original company 35 years ago. This year's report and balance-sheet, he said, seemed to be satisfactory from all points of view.

INCREASED PROFITS.

In moving the adoption of the report, the Chairman remarked that the balance-sheet showed an increased profit of, roughly, £10,000 over last year, and went on to say that the remarks he passed last year unfortunately held good to-day in regard to the impossibility of further reducing the price of beer so long as taxation is maintained at its high level. After this year's Budget the price of beer was reduced to the public by one penny per pint, or 24s per barrel, while the rebate allowed by the Government to the brewer was 20s per barrel. Even now, if that company were desirous of increasing the strength of its beers by an expenditure of 2s per barrel, the Government would receive out of that amount 1s 6d in extra beer duty, and the consumer would only benefit to the extent of 5d. The beer duty was still nearly ten and a-half times greater than it was in 1913.

The country was in the midst of a General Election, the main issues of which were Protection v. Free Trade. He was convinced that under Protection the working men of this country would have more regular work and higher wages. This, of course, meant that he would have more money with which to enjoy what he considered the four principal "B's" of life—"Bread, beef, 'baccy, and beer."

DIVIDEND OF 10 PER CENT.

The report, which showed net profits amounting to £132,786, and recommended the payment of a dividend at the rate of 10 per cent. for the year on the ordinary shares, was adopted.

Mr Harold P. Rushton, who joined the board of directors upon the purchase of Rushton's Brewery, was re-elected a director, and Mr J. A. Fairhurst was also re-elected a director.

Reference was made by the chairman and a number of shareholders to the death of Mr Joseph Ansell, who was solicitor to the company from its formation.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER

Tenders for £45,000,000 in Treasury Bonds and Treasury Bills dated from Dec. 3-Dec. 8 were opened on Nov. 30, 1923, and the total amount applied for was £52,835,000. For bills at three months, dated Monday to Saturday at £99 3s 7d, about 73 per cent., above in full. The amounts allotted were as follows:—In bills at 3 months, £44,000,000; in bonds, £900,000.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months, Average Rate.	4% Treasury Bonds, Average Price.
Oct. 19, 1923.	£5,000,000	£51,135,000	£ 8 7 8	nil
Oct. 26,	35,000,000	50,975,000	3 1 8 3/4	nil
Nov. 2,	35,000,000	61,550,000	3 1 8 3/4	nil
Nov. 9,	35,000,000	53,900,000	3 3 8 1/4	nil
Nov. 16,	35,000,000	46,275,000	3 5 9 3/4	nil
Nov. 23,	45,000,000	61,235,000	3 5 7 3/4	94 10 0
Nov. 30,	45,000,000	62,835,000	3 5 2 9/2	94 10 2

Tenders will be received on Dec. 7, 1923, for Treasury Bonds and Bills to be issued to the maximum amount of £45,000,000. The amount of Treasury Bonds issued will not exceed £4,000,000.

		British India	35,000
		Switzerland	52,000
		Norway	450
		St. Kitts Settlements	2,437
Total declared value of imports	973,031	Total declared value of exports	5,112,504

Messrs Samuel Montagu and Co. write, on November 28th, as follows:—

GOLD.

Indian and Continental demand still continues on a small scale, and it is probable that most of the fair amount of gold on offer this week will go to the United States of America. Gold valued at \$7,330,000 has arrived in New York from London. We give below figures relating to Indian trade (private account) for the month of October last:—

(In Lacs of Rupees.)

	Exports.	Imports.	Net Exports.	Net Imports.
Merchandise	2,555	2,060	495	..
Gold	1	244	..	243 1/2
Silver	31	254	..	223
Total net exports	2,586	2,308	278	..

The Russian Soviet Government is engaged in reminting the whole of the gold reserve against the tchervonetz issue (which amounted on the 1st inst. to Tch.8,693,707.7) into a tchervonetz gold coin nominally equal to 10 roubles, and containing 119.4826 grains of pure gold—equal to £1 is 1 1/2 d, or \$5.14 1/2 as compared with the mintage rate of the sovereign and the dollar. The obverse had a vigorous figure of a man sowing grain, on his left is the rising sun behind a plough, and on the right factories with smoking chimneys. The reverse has in the centre the sun's rays behind a wreath of wheat ears encircling a sickle and hammer. The rim is lettered, not milled, and, altogether, the coin is of a pleasing appearance.

SILVER.

China has been the dominating factor during the week, and considerable purchases have been made for early shipment. These consignments will reinforce the very large shipments from San Francisco and elsewhere. The steady tone of the market, arising from these purchases, has been accentuated by the firmness of the value of the U.S. dollar. China sales have been made of silver for forward delivery. The Indian bazaars have both bought and sold, and there has been some bear-covering. The amounts of silver on the way to China are so

large that it would not be unreasonable to expect a measure of redundancy when the settlements usual at the Chinese New Year are completed. In that event, it will be interesting to watch what is going to become of the speculative stock now accumulated in Bombay—whether the up-country demand will absorb it without any setback of prices, or whether difficulty will be experienced in the process of unloading. The Austrian Minister of Finance has announced that, subject to the approval of the National Assembly, the Government will shortly put into circulation a silver "shilling," of the value of 10,000 kronen. Other coin will be struck of 20,000 and of 5,000 kronen. He stated that the object was to encourage frugality and saving, and that the name of the new coin was prompted by a desire to revive an old German word universally applied to a piece of money, and to avoid any term which might be considered to possess political meaning.

NOTICES.

The Royal Bank of Canada has received notice from the Commissioners of Inland Revenue that English shareholders in the bank will be allowed relief from United Kingdom income-tax for the years ending April 5, 1921, and April 5, 1922, at the rate of 1s 9d in the £, or one-half the shareholder's "appropriate rate of United Kingdom tax," whichever is the lesser.

Barclays Bank, Limited, are establishing a local head office at Canterbury to control the branches of the bank in the East Kent district. Mr Charles Hardy, of Odsal House, Harbledown, Canterbury, has been appointed a local director. Their sub-branch at Treherbert has become a full branch, and the business transferred to new premises at 34-5 Bute street, under the management of Mr J. H. John, who is also manager of Treorchy branch.

OIL OUTPUTS.

THE UNITED BRITISH OILFIELDS OF TRINIDAD.—Combined production for the week ending November 21, 1923, amounted to 981 tons.

Reports and Notices.

The address of the Institute of Bankers has now been changed from 34 Clements-lane, E.C. 4, to 5 Bishopsgate, E.C. 2.

We are requested to insert the following corrected notice:—
"The Indemnity Mutual Marine Assurance Company, Limited, have paid up their shares in full (making £15 per share) by transferring £804,000 (£12 per share) from reserves and profit and loss account. The capital will now be £1,005,000 fully paid, the reserve will stand at £500,000, and the balance of profit and loss account about £275,000."

The following appointments have been made by the Royal Exchange Assurance, which will take effect from December 1st:—
Mr. A. G. Peters, manager of the Leeds branch; Mr. B. Leach, assistant manager of the Leeds branch; Mr. H. Simpkin, manager of the Stratford branch.

BANKS.

BANK OF MONTREAL.—The gross profits for the year ended October 31, 1923, amount to \$4,496,000, as compared with \$4,756,000 for 1922, and after payment of the usual dividend and bonus to shareholders and taxes, the balance carried forward is \$659,000, against \$558,000 the previous year. Total assets are \$692,000,000, or \$37,000,000 more than for the previous half-year. Liquid assets are \$391,000,000, against \$361,000,000 on April 30th last, and are now equal to 62.55 per cent.—of which 13.41 per cent. represents cash on hand of the bank's liabilities to the public. Holdings of Dominion and Provincial Government securities not exceeding market value are \$63,000,000, and on Canadian municipal securities and British, foreign, and Colonial public securities, other than Canadian, \$37,000,000, these figures comparing respectively with \$44,000,000 and \$35,000,000 on April 30th last. Deposits bearing interest are \$420,000,000, and non-interest bearing deposits \$158,000,000, being respectively \$7,000,000 and \$23,000,000 higher than the previous half-year.

MIDLAND BANK, LIMITED.—The shareholders of the London Joint City and Midland Bank have confirmed the resolution changing the name of the company to Midland Bank, Limited. The new title was effective as from Tuesday, November 27. Existing share certificates at present in the hands of shareholders are not being exchanged for fresh certificates bearing the new name.

ROYAL BANK OF SCOTLAND.—The report and accounts for the year ended October 13, 1923, shows that the net profits, after providing for all bad and doubtful debts, amounted to £426,225, as compared with £401,959 in preceding year. The dividend of 12 per cent. and bonus of 2 per cent., making 14 per cent. for the year, against 13 per cent., absorbed £214,000. The sum of £20,000 has been written off expenditure on bank buildings and heritable property, while £30,000 has been carried to pension reserve fund. The balance of £162,226 has been added to rest, which now amounts to £1,565,962. The report states that all the bank's investments are valued at or under the prices ruling at the date of the balance-sheet. The capital of the bank is £2,000,000. We have analysed the balance-sheet in our usual column.

RUBBER, &c.

BATU MATANG.—The financial results of this company for the year ended June 30, 1923, show an improvement, as the net profit of £2,275 compares with a net loss of £1,219 in preceding year. The sum of £600 is utilised to write off underwriting commission on debenture issue. The sum of £1,757 is carried forward (subject to corporation profits tax). The directors consider it inadvisable to recommend a dividend on the ordinary shares for the year. The output of rubber, with compulsory restriction for eight months, was 230,984 lbs, which compares with 220,920 lbs in the previous season, when voluntary restriction was in force for six months. The net average price realised for the crop was 0.148d per lb, the corresponding figure for the previous year being 7.234d.

DIASINGA RUBBER AND PRODUCE.—Improved results are shown in the report and accounts for year ended June 30, 1923. The net profit is £21,591, against a net loss of £5,404 in preceding year. The ordinary dividend is 4 per cent., against nothing in preceding year. The cost of production, free on board at port of shipment (including 1.10d for depreciation), was 8.24d per lb, as compared with 8.14d per lb for the previous year, when no depreciation was charged. The average net sale price, taking in at a valuation the portion of the crop unsold or not yet accounted for, was 15.093d per lb, as compared with 7.94d per lb in the previous year.

MISCELLANEOUS.

ANGLO-EASTERN FINANCE CORPORATION.—The directors' report and statement of accounts for the period from the incorporation of the company in September, 1922, to October 31, 1923, show a profit, after charging all fees and general expenses, of £20,084. From this the directors propose to pay a dividend of 10 per cent.—absorbing £9,325; to place £4,000 to contingency reserve account; to set aside £3,400 for income-tax, and to carry forward the balance, £3,359. The report states that to April, 1923, the subscribed capital amounted to only £31,000, the balance of the issued capital being only partially available during the closing months of the period under review. The last 62,500 shares having been allotted at a premium of 2s 6d per share, the directors have been able to write off the whole of the preliminary expenses, amounting to £3,515, and to create a reserve on share premium account of £4,296. The balance-sheet shows investments standing at £51,109, loan against security, £28,994; sundry debtors, £6,508; cash at bank, £36,893; as against sundry creditors and credit balances amounting to £13,349.

CHINESE ENGINEERING AND MINING.—The accounts for the year ended June 30, 1923, just issued, show the company has had a prosperous year. The gross profit of the Kailan Mining Administration, under which the mines of this company and those of the Lanchow Mining Company, Limited, are carried on as a joint undertaking in accordance with the agreement dated June 1, 1912, amounted to \$9,205,492, as compared with \$7,173,126. After making provision in accordance with the terms of the agreement for one year's interest on the 6 per cent. Kailan bonds, £58,320; redemption of bonds for the year to June 30, 1923, £24,000; reserve for depreciation, \$1,380,823; the proportion of profit to which the Chihli Provisional Government is entitled, £344,163, against \$246,059, and other items, there remains a net profit of \$6,109,768 as compared with \$4,593,784, this company's proportion being \$3,313,180, against \$2,528,683. The amount brought to the credit of the company's profit and loss account, including interest in China, less certain small expenses, is £422,101, against £352,296. Interest and other items bring up the total credit to £433,291, as compared with £395,168. After deducting administration and other expenses in Europe, £23,380, and exchange, £12,444, there remains a net profit of £397,467, as against £354,687. Adding the sum of £5,945 brought forward from the last account, and deducting £164,213 for income-tax and corporation profits tax, the available balance is £239,199. The ordinary shareholders are to receive a dividend of 16 per cent. for the year, free of income-tax, as against 13½ per cent., free of income-tax, in preceding year.

GOLD MINES INVESTMENT.—This Kaffir finance undertaking—whose accounts are issued with such noteworthy promptitude—did not fare so well last year as in the twelve months ended October 31, 1922. The income from dividends and investments was £20,000 down at £36,300, while only a small profit was derived from sales of investments. As a result, the net profit came out at £39,700 in place of £77,000. However, by drawing slightly upon the carry forward the directors are able to declare a dividend of 5 per cent., with bonus of like amount, making a total of 15 per cent. for the year, or the same as before. The market valuation of the capital is substantially exceeded by the quoted assets, irrespective of interests calculated to represent more than £100,000. In view of this and of the yield afforded, the shares at a little over par appear relatively undervalued.

NEW ZEALAND LOAN AND MERCANTILE AGENCY.—The report and accounts for the year ended June 30, 1923, shows that net profit secured was £92,583, against £71,143. The ordinary dividend has been raised from 2 per cent., free of income-tax, to 4 per cent., free of income-tax. The total assets are £5,226,562. The principal items towards making up this amount are cash, £366,997; money at short notice, £350,000; investments, which are fully revealed in the balance-sheet, stand at £592,786; and the report states that at the date of the balance-sheet their market value was £613,447. Secured loans and advances stand at £2,134,010. Current accounts are at £577,671.

SCOTTISH AUSTRALIAN INVESTMENT.—The net profit to June 30, 1923, is £188,138, as compared with £133,118 in preceding year. The dividend on the ordinary stock has been raised from 1½ per cent. to 15 per cent. The sum of £50,000 goes to reserve, and £86,995 is carried forward, against £46,557 brought in. Assets total £2,219,519. Cash is at £187,521, and balances at bankers £16,428. British and Indian Government securities at cost, £435,440. Freehold property is at £633,690.

TUBE INVESTMENTS.—This company has enjoyed a greater measure of prosperity during the year ended October 31, 1923. The report just issued discloses a net profit of £92,407, against £29,890 in preceding year. The ordinary shareholders are to receive a 7 per cent. distribution, against nothing in preceding year. The sum of £68,970 is put to reserve fund, making that fund £168,970. There is also a reserve fund, share premiums received, of £103,248. The sum of £10,932 is carried forward. The assets are given under three heads in the balance-sheet, the total being £1,363,530. Of this sum, £1,213,308 is under investments (cost of shares in constituent companies). Cash stands at £90,222, and loan to constituent company £60,000.

WARING AND GILLOW.—A notable recovery has been made by this company. The trading profit for year ended January 31, 1923, is £111,900, which compares with a loss of £71,300 in the preceding year. These figures were struck after allowing for depreciation, bad and doubtful debts, and contingencies. The preference dividend to January 31, 1923, absorbed £45,000, and £68,620 goes forward, against £39,018 brought in to the accounts. The directors point out that despite the general depression of trade conditions which still exist, they are able to report an increase in Turn-over, notwithstanding the very considerable reduction in prices of the individual articles sold.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Cold and frosty weather was experienced over most parts of the United Kingdom during the past week, which, however, has come as a welcome change to growers, who have lately had to work heavy land. Sowings of winter wheat and oats are now almost completed, and a fairly extensive area is under cultivation. Native wheat was somewhat sparingly offered both here and at provincial markets, consequently firm conditions prevailed. Best milling samples ruled from 9s 3d to 10s, and inferior 8s to 8s 9d per 112 lbs, free on rail. Imported descriptions move off quietly, but late rates were fairly maintained. No. 1 Northern Manitoba quoted 47s, and Barusso, 62½ lbs, 47s, both ex ship, per 406 lbs. In the floating and forward section prices disclosed slight irregularity owing to fluctuations in the dollar rate of exchange, while liberal Russian shipments imparted a quiet tendency. Steamers of white Pacific, December, sold 46s and 46s 3d, Barusso, 62½ lbs, January-February, 41s 3d, and South Russian, afloat, 45s. Maize cargoes firmer on scanty offerings, which are mostly made to the Continent. Steamers of No. 2 white flat African, afloat, sold 38s 4½d and 38s. Barley—A cargo of Dan-Bess-Kustendji, afloat, done at 32s 3d to Continent. Flour in moderate demand at late rates. London standard straight run quoted 38s, patents 40s to 41s, town households 36s per sack, delivered in. All English country straights 31s to 32s per sack, delivered to London stations. Imported quiet. Manitoba patents 36s 6d to 40s, Minnesota 30s to 40s 6d, Australian 32s 6d to 33s 6d, all per 280 lbs, ex store. Millers' offers steady. Bread bran quoted 7s 6d, ordinary ditto 6s 9d to 7s, middlings 8s 6d, fine ditto 9s 9d, bags included, ex mill, light oats 5s 9d, powdered oat husks 6s 3d, feed oatmeal 9s 3d, ground oats 13s 3d, free on rail, all per cwt. Barley—English malting descriptions firm at 10s to 15s, with feeders 8s 6d to 9s per 112 lbs, free on rail. Imported quieter. Californian 41s to 45s, Chilean Chevalier 50s to 53s per 448 lbs, landed, Persian 28s 3d, Danubian 30s 6d, Algerian/Tunisian 30s, No. 4 Canadian Western 29s 9d, all ex ship, per 400 lbs. Maize more firmly held. Plate, landed, 40s 6d, Gal/Foxanian, ex ship, 38s 3d, Bessarabian ditto 39s 3d, all per 480 lbs. Oats—English quietly steady at 8s 4d to 10s 2d per 112 lbs, free on rail, as to sample. Imported dull. Plate, f.a.q., ex ship, 22s 6d, landed 23s 6d, Canadian the turn easier, and No. 2 Western, ex ship, now quoted 26s, No. 3 ditto 24s 9d, No. 2 feed, new, landed, 24s 6d per 320 lbs. Oatmeal fully steady. London-made flaked, also rolled, oats quoted 18s, medium and fine cuts 17s 6d, coarse and medium pinhead 17s 6d, ordinary Scottish oatmeal 19s to 20s 6d, and American 16s 6d to 16s 9d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24.	1922-23.	1921-22.	1920-21.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated November 29th, is as follows:—Pig-iron: The tone of the market is good, with more inquiry about. Pig-iron consumers do not anticipate lower prices, and are in the market for further supplies. No. 3 Cleveland G.M.B. is firm at 100s, and East Coast hematite mixed numbers 101s 6d. Manufactured iron and steel: The resumption of work by the boilermakers has stiffened up the market for steel, and inquiry is good. Steel ship plates, £9 15s; steel ship angles, £9 10s; iron bars, £12; steel rails, £9. Iron ore: The market for iron ore is firmer, and business has been done well into next year. Best Bilbao Rubio ore is quoted 24s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—The increased interest shown in raw materials of late is most marked, and can only indicate early activity in the making of iron and steel. More orders for pig-iron were placed during November than in any previous month of the present year; moreover, the contracts are to cover long periods forward. The revival of interest extends to ferro-alloys and scrap, the latter material having advanced in value 1s in two months. The Lincolnshire blast and steel furnaces are on full time with no unemployment, and similar conditions obtain in South Wales, where output is being hindered from an insufficient supply of labour. Prices of steel are stiffer, but makers desire to

avoid inflating these unduly lest such action should tend to arrest the progress of trade. Improved conditions are being experienced in the more expensive tool steels, for which orders are now being received from the United States, while the home demand is picking up slightly all round. Some makers of hand tools are now on full time, and the majority of them report increased work. The export trade is better in the finished steel branches. Business is quiet in the cutlery trade with the exception of table knives, which are in brisk demand and have no foreign competition to encounter. The outstanding feature of the electro-plate branch is the unprecedented output of spoons and forks, many of which are being shipped abroad. Australia and New Zealand are the heaviest overseas buyers of cutlery, electro-plate, and steel. The position of the coal trade is strong, and prices are firmly held. Hard coal is leaving the pits as fast as it is raised, and the demand for the better qualities of slack is steadily improving, but the inferior sorts are somewhat neglected, and surplus lots can be picked up fairly cheap. The coke ovens are fully occupied. Quotations per ton at pits are: Best hand-picked branch, 31s 6d; Barnsley best Silkstones, 27s 6d; Yorkshire hards, 21s to 22s; best Tyne steams, 26s 6d; rough slacks, 12s 6d; smalls, 5s to 7s; blast furnace coke, 24s.

Our Glasgow correspondent writes on Thursday:—This has been a pleasant business week in iron and steel trades, and connections thanks to the termination of the long-drawn-out working dispute between the boilermakers and their employers. The contest extended over fully seven months, coming to an end on Monday forenoon last, one of the longest trade union differences ever experienced, and which it is hoped may never be exceeded, if approached. Managements in the various shipyards and in the marine engineering departments had appreciated the possibility of an early restart, and met the hands frankly and freely when they presented themselves at the gates on Monday, and by that evening a goodly total of finished operations was recorded. No statistics are available as to the volume of constructive work put through in the first two shifts, but authorities are agreed that the total must have been substantial. All over the country the greatest activity prevails in iron and steel sections, and as those concerned say—there is little room for immediate expansion. West of Scotland steelmakers advise that some establishments are better off to-day for orders than they have been for months. Messrs David Colville and Co. have arranged to start three rolling mills on Monday (they have been idle for a prolonged season). Beardmore's people are well off, having booked a variety of big orders—for plates and sections. It is anticipated that by Wednesday several thousands of men will be fully engaged in the Clyde Valley with a lot of hands offering for prospective shipbuilding employment. The year's operations will greatly improve under this healthy departure, and the close of December will reflect a greater tonnage improvement than was deemed possible a couple of months since. Trade is well maintained in iron and steel products. Pig-iron is asked for from foreign ports, and values are hard at last week's level—£5 8s 9d and £5 3s 9d for Nos. 1 and 3 respectively of Scotch iron. Steel

Baths, Afternoon Tea, etc., etc.

Full particulars for a Tourist Agency, or
FRENCH LINE, Compagnie Generale Transatlantique,
22, FLEET STREET, LONDON, S.W. 1.

sections are bid for at £13 for boiler plates; £ in and up, £9 15s. Black and galvanised sheets are experiencing reasonable activity on home and export accounts at recent advanced rates. Scottish aluminium is £115 per ton c.i.f. home (Glasgow). Better-classed coals are dearer by from 1s 6d to 2s per ton on the week.

Our Cardiff correspondent writes:—The improvement in the Cardiff coal market has been fully maintained this week. The news of the settlement of the Ruhr coal problem has not yet affected business in the South Wales coal trade. Ultimately, that settlement will no doubt react unfavourably on all the British coal export districts, but it has not done so yet, and there appears to be sufficient buoyancy in the Cardiff market to carry it into the New Year without any decline in prices or in the volume of trade. Best Admiralties are now ruling firmly at about 29s, and dry steams are the only coals which seem to lag.

The following are the current approximate quotations:—Best Admiralties, 28s to 29s; seconds, 27s 6d to 28s; best drys, 26s 6d to 27s; black veins, 27s to 27s 6d; Western Valleys, 26s to 27s; Eastern Valleys, 25s 6d to 26s 6d; best bunker smalls, 21s to 22s; ordinary cargo smalls, 18s to 19s; anthracite big vein large, 40s to 45s; machine-made cobbles, 50s to 52s 6d; French nuts, 54s to 56s; stove nuts, 52s 6d to 55s; rubbly culm, 13s 3d to 13s 9d; inland blast furnace coke at ovens, 30s to 35s; coke for export, 45s to 52s 6d; patent fuel, 29s to 32s; pitwood, ex ship, 29s 6d to 30s.

In the iron and steel trades demand continues active, and prices are ruling above the minima, and to the Far East shipments are increasing. The demand for other countries is also good.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—All reports from the primary markets emphasise the strong demand for wool, and as competition is general, values continue to harden. There is great activity in the New Zealand markets, and judging from the way in which crossbreds are selling, it seems almost certain that a further rise in prices will be seen in London next week, when the colonial wool sales are resumed. This expectation of higher values is causing some topmakers to adopt a protective policy, and prices are being quoted for tops, which at present are well above the market level. It is contended, however, that higher prices will have to be paid if importers are to do any good with wool bought at current rates. A very considerable amount of business has been put through in crossbred tops during the week, and prices to-day are anything from ½d to 1d up compared with those ruling a week ago. That a certain amount of speculative buying is being indulged in is generally conceded, but it is an undoubted fact that machinery consumption is increasing, and the outlook for this section of the industry is very encouraging. One of the best features of the industry is that spinners are receiving more new business, attention having been given to both merino and crossbred yarns during the last week or two. Most of the orders are for crossbreds, and prices are moving against the buyer. Some fair weights of merinos have been booked, though here the difficulty is to get users to pay more money. However, the whole tone of the yarn market is better, and spinners are beginning to show more confidence in the future. There is not much change in the piece-goods trade; demand generally is for the cheaper goods made from crossbreds, and some good business is being put through in these lines.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The wool sales in Australia, New Zealand, and South Africa are making excellent progress, cables to hand this week giving the impression that all sections of the trade are buying keenly. We have thought for weeks that it would not be long before Boston dealers would be operating moderately, because their last home clip must now be getting far seen into, and stocks of Australian merinos are known to be light. American users will need to augment their stocks very considerably, for they will need to do so in order to produce the high-class worsteds which they have hitherto put on the market. The very high-priced merinos which have recently been selling have probably nearly all gone to America, for it is impossible to conceive of the home trade paying 34d and upwards for good merinos in Australia, when at the last London sales this price was frequently in evidence for the best Victorian merinos. An occasional lot went up to 36d, but it was very much the exception, and the prices ruling for tops, yarns, and pieces in the home trade cannot but result in only a very small percentage of high-class wools being taken at more than 34d per lb. It must not be forgotten that what is bought in Australia will cost fully 2d per lb in transit to the Yorkshire mills, and when good clean scoured wool is costing 5s per lb, it is inevitable that the cost of the manufactured goods will be proportionately high. All cables report strong, active markets, and it is gratifying from the standpoint of colonial growers that they are experiencing such a good time.

Next Monday the last series of London sales for the year will commence, 160,000 bales being available. Everything seems to indicate a good time, for Yorkshire firms are still keen upon crossbreds, conditions favouring that article. Nobody need be surprised to see another all round advance compared with the previous series, though it is to be hoped that the forcing tactics then in evidence will not be brought to bear. It is now admitted that there has been very considerable buying on speculative account, big topmaking firms putting surplus capital into crossbreds rather than merinos, and this move has been the right one. All the same, it is to be hoped that every sound encouragement possible will be given to the development of business, and that there will be no repetition of what took place last season. Prices for medium and

coarse crossbreds are now very different from what they were at this time a year ago, and every advance in the raw material makes it more difficult for spinners and manufacturers to command commensurate rates. The general state of the world is too impoverished for it to be safe to adopt rushing tactics, and though the improvement which has taken place in crossbreds was long overdue, more harm than good will be done to all sections of the market if values are allowed to advance too much.

MANCHESTER, November 29.

A further advance in prices has to be recorded, and the tone of the market has been strong. Owing to the active demand for raw cotton throughout the world, fresh high records in values have been established in Liverpool and New York. Spinners and manufacturers have again been compelled to put up their quotations, and although a substantial part of the business offering has not been workable, an encouraging turnover has taken place in several directions. Bleaching, printing, and sized goods have been sold fairly freely for India, especially for Calcutta and Madras. Bids for China still lag behind, and most of the sales have been in whites and fancies. Quite a healthy trade has again been put through for Egypt. Buyers for several minor outlets have been on the look-out for stock lots. Rather more activity has been reported in home trade goods. All kinds of yarns have been distinctly dearer, and despite the difficulties met with in arranging sales a very fair business has been done. Spinners as a body continue more favourably situated, and short time in the American section has been abandoned.

CHEMICALS.

The report of Sir S. W. Royle and Co., Limited, of Manchester, dated November 28th, is as follows:—During the greater part of this month business has been fairly maintained, but recently the influence of the General Election has made itself felt, and inquiry has fallen away somewhat. Prices show little change, though the reported decision of the German Government to refuse to refund the 26 per cent. repatriation duty may later materially affect values of German products. A good steady trade has been passing in sulphate of copper for both home and export account, and makers are disinclined to sell far ahead at current rates. Green copperas has been moving freely and realising better prices. Acetates of lime remain very scarce and are commanding high figures, but the demand for acetate of soda has fallen away somewhat. A good export business has been done in arsenic, and producers are sold out for some little time ahead; home trade requirements are, however, only small. Little change can be reported in tar products, consumers generally still showing reluctance to commit themselves to forward business. Benzoles and toluoles have shown no improvement, the further expected drop in price of petrol has not materialised and prices remain unaltered. In pitch the poor inquiry has resulted in lower prices, but consumers do not seem attracted by the reductions offered. Continental users appear well covered for the time being and content to wait developments. In South Wales business is reported having been done considerably below the present quoted price. The home market for sulphate of ammonia is showing little activity, but export trade has been rather good.

VEGETABLE OILS AND OILSEEDS.

A sharp fall in Argentine options had the effect of sending down prices of linseed very rapidly, which gave consumers the chance they had been waiting for. On Wednesday they bought freely of old crop afloat and December shipment down to £19 1s 3d, and a large business was done in new crop for January-February shipment at £16 12s 6d to £16 15s. The market has since assumed a firmer tone, with sellers asking £17 for the latter position to Hull, and £17 10s for December-January. Indian linseed has been quiet. Egyptian cotton seed has been a quieter market, and, with black quoting £13 10s, buyers are not eager. Some business in soya beans is reported. Raw linseed oil has fluctuated somewhat on profit-taking and in sympathy with the seed market.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Market hides are still declining in value, although the bad condition at this season must be taken into account. Best ox hides sold from 6½d to 8½d, and seconds from 6½d to 7½d, at Thursday's Bermondsey auctions, all classes showing a fall of ½d to 1d per lb on last week's prices. Best heavy cows at 6½d showed a fall of ½d, whilst calf skins were weaker all round, best at 6d to 10½d dropping ½d per lb. The South American market is also weaker, and tanners have been tempted to make large sales, as many as 100,000 frigorifics having changed hands, of which the United States have taken about 25,000 at about 6½d to 7½d c.i.f. for ox. Dry hides are lower in price, and tanners are now picking up bargain lots freely. Cables from New York report the American packer market as weak, with best heavy steers selling at 13½ cents, as against 14 cents quoted last week.

The boot section is gradually improving, and conditions are such that work seems guaranteed up to the end of the year. Much political capital is being made out of imported leathers in the shoe districts, as, naturally, British tanners are, as a whole, deploring the fact that whilst few works are fully employed, imports of leather are increasing. Boot manufacturers, on the other hand, are very chary of any policy which will interfere with their abundant supply of material, and urge this has been the main reason why the British export of footwear has been on such a large scale for many years.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 30.

SUGAR.—The market for actual parcels remained firm at recent higher level of prices, and though trade was not quite so brisk, a fair turnover resulted in the aggregate, while British descriptions continue to claim the bulk of support owing to unprecedented scarcity of foreign varieties at this period of the year. Tenders for November delivery regarding Czecho-Slovakian sugars are unexpectedly behind hand, and reports thence question the ability as to the full completion of same. Many parcels previously sold to London houses, were purchased back, and consigned to ports other than that of London. One or two factors have crept into the situation lately, which tended to enhance scarcity, primarily being that of river navigation from Czecho-Slovakia to Hamburg, and fog interfering with shipment from Holland and Belgium. According to cable advices from New York, American interests have secured handy quantities of German 88 per cent. beetroot, and it is anticipated that shipments will begin shortly. The circulation of a report as to a much larger estimate of the Java crop, and which will not be commenced to be shipped until next May, apparently disturbed the speculative side of the article but for all actual parcels, the undertone of the market was one of firmness. French dealers, in addition to operating freely in Polish crystals, have secured certain quantities of Belgian. All raw refining kinds are very sparingly offered. Of British refined goods, Messrs Tate and Lyle's cubes quoted 63s 6d to 64s 6d; crushed, 61s; granulated, stoved, also fine and coarse grain, 61s 1½d. No. 2, also London and T.L., 60s 7½d; No. 1, 60s 9½d; caster, finest, 63s 4½d; A, 62s 7½d; B, 61s 3d; yellow crystals, 56s 1½d; granulated, month forward, 61s; January, 61s 6d; February, 61s; March, 59s 6d. Czecho, granulated, spot, 59s; white Java, sold, 58s 6d to 59s 9d, as to sample. Mauritius crystals, sold, 58s. Czecho, granulated, December, sellers, 29s; January-March, 28s 6d, f.o.b., Hamburg. Mauritius crystals for shipment quoted 33s 6d. Brazilian, basis 96 per cent., to arrive, 28s 6d; ditto, basis 80 per cent., 21s, c.f. and i. terms, U.K. White terminal market easier and somewhat unsettled, but dealings were on a fair scale. December delivery, sold, 30s to 30s 6d, 28s 6d, 29s; March, 28s 1½d to 26s 7½d; May, 27s 7½d to 27s 6d, 27s 10½d, and 26s 6d; August, 27s 1½d to 27s 3d and 26s 3d per cwt.

COFFEE.—The market, in face of continued smallness of supplies is very firm, and sustained inquiries are in force from the home trade. The export side of the article is rather quiet. Nairobi are in request, and medium sizes sold, 86s to 98s; bold, 95s 6d to 113s 6d; peas, 81s to 120s. Marangu peas, 94s; Kilimanjaro ditto, 120s. Toro, mid greenish, 86s 6d; Uganda, bold, 91s 6d.

COCOA.—Market dull, unaltered on the spot. Forward Accra opened the week firmly, with business in January-March shipment, F/F quality, at 26s 9d, but later 26s, f.o.b. terms, was accepted.

TEA.—Indian auctions during the week embraced some 55,500 packages, and with good and well-distributed competition recent rates were maintained in most instances. A good deal more tea is now selling under 1s 6d per lb in bond, and which confirms a falling-off in quality of lower priced parcels. Fine and finest broken orange pekoe sold, 2s 5½d to 3s 0½d. Ceylon auctions of 17,500 packages met with good support, and no quotable change occurred in prices. Broken orange pekoe sold, 1s 10½d to 2s 2d per lb.

RICE.—Shippers require steady prices, and there is a moderate demand. Two Stars, spot, 15s 9d; to arrive 14s 10½d; and No. 3 cleaned ditto to Levant, 15s, c.f. and i. Japanese peas, spot, 24s per cwt.

SPICE.—Pepper market irregular forward, with a fair demand. Black Singapore, January-March, quoted 4½d; Lampong, ditto, 4½d; Muntok, spot, sold, 7½d; ditto L.S., January-March, 7½d to 8½d; Zanzibar cloves, January-March, 1s 5½d per lb. Tapioca steady. Singapore flake, December-February, to Havre, quoted 32s 6d; Penang seed ditto to London, 30s. Sago flour, afloat, 17s; January-March, sellers, 16s; February-April, 16s. Desiccated coconut steady. Fine cut, spot, 43s 9d; medium, 43s; with forward positions mostly in the region of 42s per cwt, c.f. and i.

JUTE.—The market advanced under increased buying orders, though irregular, and reserve of sellers. First grade, November-December, Continent, quoted, £27; December-January, sold, £27 to £27 5s and £27; January-February, £27 17s 6d to £28 and £27 15s; February-March, £28 to £28 10s per ton.

HESSIANS.—Firm. 10-oz, December, quoted 29s 6d; 8-oz, December, sold, 23s 7½d; January-March, 23s 6d per 100 yards, A twills, December, quoted 84s 9d; B ditto, 77s 9d; sugars, December, 87s; flour, 91s; and bran bags, 56 by 28, December, 52s 6d per 100 bags.

THE BANK OF TAIWAN, LIMITED.

(Registered in Japan, 1899.)

Capital Subscribed	Y60,000,000
Capital Paid Up	Y52,500,000
Reserve	Y12,980,000

Head Office - TAIPEH, FORMOSA.
London Office - 25 OLD BROAD STREET, E.C.2

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kiukiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

HEMP.—Manila steady, but at the same time dull. J grade, January-March, quoted £33; K, £27 to £26; M, £23 10s per ton. African sisal unaltered.

SHELLAC.—Market quiet. T.N., spot, quoted 315s; December, 310s; March, 305s per cwt.

COPRA reservedly offered, both on the part of shippers and second-hands, while prices were higher. F.M.S. Straits, October-November, Rotterdam, at £29 2s 6d to £29 17s 6d; October-December, sold, £29 to £29 7s 6d to £29 5s; January-March quoted £28 17s 6d. Ceylon, November-December, quoted £30 10s; Java, ditto, £29 10s; Dutch E.I., August-October, sold, £29 15s; October-November, £29 7s 6d. Cebu, December, quoted £28 17s 6d; and South Sea Islands, £28 5s. Palm kernels firm. December-February, Liverpool, quoted £20 1s 3d; January-March, £20 2s 10s.

GAMBER firm, and very sparingly offered. Block, December-January, quoted 51s per cwt, c.f. and i. terms U.K.

RUBBER was a quiet and easier market. Standard plantation crepe and sheet, spot, and December, sold 1s 2½d to 1s 2½d; January-March, 1s 2½d to 1s 2½d; April-June, 1s 3½d to 1s 3d. To New York: Standard estate sheet, January-February, quoted 1s 2½d lb, c.f. and i. Wild sorts remain dull of sale.

FRUIT (Dried).—There is a steady demand, with a fair amount of trade doing. Of currants, Pyrgos quarter cases quoted 40s; bags, 39s; Amalia, 44s; Patras, 50s; Vostizza, 65s to 69s; finest, 72s. Sultanias: Smyrna, new crop, quoted 51s to 54s; good, 62s to 66s; fine, 80s to 85s. Valencia raisins firm for desirable qualities. Half-boxes quoted 66s to 68s; quarters, 75s to 120s; seedless, 43s to 44s. Dates: Steady demand, and market firm. Hallowee, second-tide, 25s 6d; Khredrowie, 18s; Siar, 15s 3d, landed terms, London. Figs: Genuine natural in bags, 34s to 38s; layers in boxes, 9s to 10s; pulled, 12s to 140s. Evaporated fruits remain quite steady. Californian choice apricots quoted 74s; extra, 86s; fancy, 99s to 100s; ditto plums, 30-40, quoted, 86s; 40-50 at 68s. French plums, quarter cases, 36s to 70s per cwt.

CANNED GOODS.—Considering the time of year, the market shows a good demand, especially for pine and other canned fruits. Of sardines, Portuguese quarters quoted 2s 6d to 3s; ditto, 12 oz, 5s to 5s 6d; 18 oz, 9s 6d to 11s per dozen tins. Lobster, fancy halves, quoted 145s to 150s. Salmon stocks are now on a light scale, and market firm. 1 lb flat reds, labelled, quoted 53s 6d; ditto, tall, 42s to 42s 6d; 1 lb flat, pink, 25s; ditto, tall, 24s 6d; cases of 96 ½ lbs, 28s 6d to 29s per case. Canned Fruits—Singapore pines, fair quality, spot, 5s 7½d. Californian apricots, 7s 3d to 11s; ditto, peaches, 8s 3d to 11s; pears, 12s 6d to 14s. Tomatoes, Spanish, threes, quoted 6s 6d; Italian ditto, 6s 9d per dozen tins. Meats are firmly held, in view of slight supplies on offer, and there is a fair general inquiry.

Commercial Times.—Weekly Price Current.

The prices in the following list are revised with the assistance of an eminent firm in each department.

The Economist,

WEEKLY COMMERCIAL TIMES,

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

Vol. XCVII.

SATURDAY, DECEMBER 8, 1923.

No. 4,189.

£231, c.i.f. The upward course of prices continued, despite slight fluctuations under renewed buying orders from America and a further improvement in the East. By the middle of the week standard, cash, sold up to £236 15s, and three months £237. Further sales occurred in the East at £237, c.i.f. Rates reacted on the following day, with business on a smaller scale. Standard, cash, sold at £234 5s, and three months, £237 to £237 15s to £233 10s to £233 15s. At the final session values, after opening easier, showed a marked improvement. Standard, cash, sold at £233 to £236 10s, and three months at £231 10s to £238 5s to £237 5s. English ingots quoted at £236 5s to £236 15s. Copper: Market displayed firmer features, buying orders being well in evidence, and a good business transpired. Standard, cash, opened with sales at £61 to £61 5s, and three months at £61 17s 6d, subsequently improving to £62 11s 3d for cash and £63 6s 3d for three months. At Thursday's market values moved in buyers' favour, while some irregularity was noticeable at times with regard to forward positions. Standard, cash, sold at £62 7s 6d to £62 5s, and three months £63 10s to £63 2s 6d to £63 3s 9d, while finally done at £63 1s 3d. The tendency was fully steady on following day, with a fairly good demand. Standard, cash sold at £62 6s 3d, and three months £63 to £62 17s 6d to £63 2s 6d. Electro, £67 10s to £68. Strong sheets, £95. Wire bars £68; best selected, £65 15s to £67 per ton. Lead firm at £31 to £29, as to position. Spelter steady, at £33 to £33 2s 6d, according to position. Aluminium quiet, £115; export, £120. Antimony firm. English specials, £42 to £42 10s.

TALLOW.—Messrs Colchesters and Woolner write on November 28th as follows:—The tallow market was firm during the week, and prices averaged 1s dearer to-day. Good qualities are in request at advancing prices, while lower sorts meet with fair attention at un-

changed prices. Supplies offered for shipment are on a moderate scale. At auction to-day 1,400 casks tallow were offered, and 1,198 were sold. Quotations are:—Australian mutton: Fine, 48s 9d; good to fair, 46s 6d to 44s 9d; dull to dark, 39s to 36s 6d; hard, 45s. Australian beef: Fine, 44s 6d; good to fair, 43s 6d to 39s 6d; dull to dark, 37s 6d to 36s 6d; sweet, 44s 6d. Present shipment from Australasia: Good mixed, 42s 6d. Present shipment from South America, 41s 9d to 39s 6d. The market letter is dearer: tallow 1s, stuff 1s. Town tallow, 37s 6d per cwt. Rough fat, per 8 lbs, 2½d; melted stuff, 28s 6d per cwt. Quotations are:—Town, 36s, net cash, naked, ex works. Country: Frail casks, 36s; home melted, shipping casks, net, f.o.b., good coloured, 39s; fair to dull, 37s to 36s. Bone fat: White, none; pale, none; benzine, 34s; melted stuff, 34s, f.o.b.

THE MONEY MARKET.

MONEY became extremely abundant, owing to the payment on and after December 1st of the War Loan interest, and the large creation of fresh credit that was necessitated by it. This pronounced ease was not expected to last long, but the discount market became a shade easier as the week went on, three months' bank bills being placed more readily at 3½ per cent., and occasionally a trifle below. Yesterday the Treasury Bills went as expected, and money

was still lendable in the afternoon; but the discount rate was perhaps a little steadier.

	Dec. 7, 1923.	Nov. 30, 1923.	Nov. 23, 1923.	Nov. 16, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses' Notice	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate (3 months' bills)	3½	3½	3½	3½	8

The Bank return showed a decrease in the Reserve of £991,000, in spite of an increase of £104,000 in the stock of gold, notes having gone into circulation owing to the demand for currency connected with the General Election and Christmas trade. Government securities increased by 26½ millions, presumably owing to Ways and Means Advances for the War Loan interest payment, and Other by 1½ millions, though it was understood that the market's indebtedness had been fully liquidated by Wednesday. Public deposits were reduced by 10 millions, and there was thus a total increase of 37 millions in Other. Currency notes outstanding were increased this week by £2,812,000 to £284,392,600, which includes £1,432,200 for notes called in but not yet cancelled. The fiduciary issue is £233,510,300, or £36,673,500 below the maximum.

By the death, at the age of 52, of Mr H. M. Page, a partner in the firm of Page and Gwyther, the discount market has lost a well-known and popular member. Mr Page specialised in kindheartedness, and in readiness to take any trouble to help those who were looking for work, or otherwise needed a helping hand.

THE STOCK MARKETS.

Stock Exchange markets this week have been reasonably steady in the circumstances, but the House was in subdued mood as the trend of the election results became apparent, and prices were marked down all round on Friday. The amount of War Loan interest returning for investment was comparatively small, and changes in prices in the gilt-edged market were slight. Home Railway prior charge stocks have held their recent improvement, and there has been further buying of the junior stocks in anticipation of the dividends. The foreign market has been mostly quiet, but Brazilian bonds again went better. Rubbers are lifeless, and there is little public interest in the oil market. There were no pronounced features in the industrial market, but Kaffirs were strong on the publication of good November returns, and tin shares have again improved with the rise in the metal.

THE COMMODITY MARKETS.

The event of importance in the commodity markets this week has been the break in raw cotton prices, to which we refer in other pages; in consequence, business in yarn and cloth has been disorganised. In the wool trade the strength of the raw material is a marked feature; Continental and American buyers are dominating the merino section, but Yorkshire is apparently securing crossbreds. The Cardiff coal market is busy, and prices have further advanced. The pig-iron market is firm, but there is severe competition by foreign markets. A fair amount of business is reported in steel, but prices are unchanged. Tin prices have advanced no further, while copper values were slightly easier. Rubber opened well, but the demand quickly fell away. Wheat values are inclined to dullness. The sugar and tea markets are somewhat quieter. Linseed has declined. The hide market is steady, and boot manufacturers are fairly well employed.

FOREIGN EXCHANGES.

Although business during the week in the foreign exchange market has not been very active, there has been a considerable movement in rates, especially in that of the dollar. From a closing price of \$4.33½ on the 30th, there was an upward movement until the 4th, on which day rates fluctuated sharply between quotations of \$4.33 and \$4.35½. On the 5th quotations were at one time as high as \$4.39½, and on the 6th \$4.39½. Yesterday morning, however, the natural reaction from the recent hasty movement of funds to New York, under the

influence of inflation fears, was checked by the announcement of the first election results, and the market opened with a relapse to \$4.35½. Whatever is the final result of the election, however, it is unlikely that rates will remain long on these low levels. Forward rates at ½ cent per month over spot are slightly narrower than the 1½ cent quoted a week ago. The Paris rate, from 81.12½ on the 30th, showed an improvement at the beginning of the week on the announcement of new proposals for expert inquiries by the Reparation Commission. Interruptions in telephone communications upset the market somewhat in the middle of the week, but rates moved only between 80.60 and 81.60. On the 6th they closed at 80.90, but yesterday morning election news brought a sharp reaction to 81.50. Brussels has, as usual, moved in sympathy from 94.37½ on the 30th to 94.65 yesterday. Forward rates in both centres are quoted at 6 centimes per month over spot, in Paris the same as last week, in Brussels a slight narrowing of rate as compared with last week's 8 centimes. The lira has been fairly steady, and yesterday's quotation of 100½ is much the same as a week ago. Among neutral exchanges, Amsterdam has followed the course of the dollar with a sharp movement in our favour, and a relapse yesterday morning, when the rate of 11.46½ compared with 11.44½ a week ago. Switzerland has depreciated from 24.91 to 25.07½, and Spain has jumped up sharply from 33.38½ to 35.52½. In Scandinavia, Copenhagen has lost some of its recent recovery, being quoted yesterday at 24.51, as compared with 24.10 a week ago. Stockholm has moved from 16.56½ to 16.60½, and Christiania from 29.00 to 29.22½. Autumn requirements have pressed heavily on the Finnish rate, which rose from 175½ on the 30th to as high as 178 on the 4th. The increase of 2 per cent. in the Bank rate has brought some improvement, but the quotation is still 176½. In Central Europe the German mark has improved down to 19 billions, as compared with 26 billions a week ago, the result of the stoppage of the further issue of old marks and their gradual calling in and replacement by Rentenmarks. It still, however, requires much faith to believe that the Government will succeed in restoring ordered finances within the limits of the present Rentenmark issue. Austria, following the dollar, has moved in our favour from 308,500 kr to 310,000 kr. Warsaw, on the other hand, shows a slight improvement from 16 to 15 million marks. Prague has moved slightly against us from 149½ to 149, and Bucharest has appreciated from 875 to 850, and Athens from 230 to 210. In the East, the rupee, at 1s 5d, is lower than the quotation of 1s 5½d of a week ago, as the result of a sharp drop on Thursday, due, it is suggested, to bear selling on the startling cotton movements earlier in the week. The yen has moved in our favour from 2s 2 15-32d to 2s 1½d. Silver has kept steady during the week, with some moderate Indian buying, but now that the last steamer has left for the Chinese New Year, prices show signs of some slight weakening. Hong Kong has moved down from 2s 4d to 2s 3½d, and Shanghai from 3s 4d to 3s 3d. In South America, Rio has improved considerably, apparently on the announcement of the British Financial Mission to Brazil, from 4 61-64d to 5½d, and Buenos Ayres is also better at 39½d, as compared with 39¼d, and Montevideo at 42½d as compared with 41½d, while Valparaiso, after some improvement, has moved up again from 40.40 pesos to 40.50 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 1st:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	7,210	From Revenue	12,982
Interest, &c., on Debt	32,678	Taken from Exchequer balances	27,310
Sinking Fund	516	Amount borrowed	41,190
Sundries	86		
Local Taxation Account	700		
	41,190		

Revenue was well maintained, amounting to £12,982,100, against £11,391,100. Special Receipts came in on a rather large scale, yielding £3,309,400, against £1,005,000. Property and Income-tax yielded £2,121,000 and Super-tax £360,000, against a combined total of £3,071,000. Customs produced £2,624,000, as compared with £2,781,000, and Excise £1,724,000, against £1,568,000.

The week's operations increased the National Debt by £27,210,250, and caused the following changes:—

	Min. £	National Savings Certificates	Min. £
Treasury Bills	+ 664	Telegraph Money	450
Bank of England Advances ..	+ 14,000	Sundries	140
Public Departments Advances ..	+ 13,250		
4% Treasury Bonds	+ 236		
	+ 28,150		940

The floating debt was increased by £27,890,000 to £831,926,500.

FINANCIAL YEAR, 1923-24 (April 1 to December 1, 1923).

	£		£

Ordinary Expenditure	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure..	15,603,000	Special Receipts....	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—City of London Real Property Company, New Modderfontein Gold Mining Company, Marconi Wireless Telegraph Company, Strand Hotel, Limited, Waring and Gillow, Limited, and the Aerated Bread Company. At the meeting of Marconi's Wireless Telegraph Company the chairman announced important developments in wireless telegraphy, and Mr Godfrey Isaacs said that there were good prospects of settlement of their claims against the Government early in the New Year. Mr Innes, at the meeting of City of London Real Property, outlined the capitalisation proposals and the purchase of City of Westminster Properties shares. At the meeting of New Modderfontein Gold Mining Company, Sir Evelyn Wallers, in announcing greatly improved results, stated that this was due to the much improved efficiency both of white and native labour and the reorganisation of underground working conditions.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

A VERDICT FOR FREE TRADE.

As we go to press there are still many election results to come in, but no electoral miracle in the remaining seats can change three things. The first is that Mr Baldwin has lost his majority in the House of Commons, the second that none of the three parties will have a majority over the other two combined, and third, the most important of all, that Protection is dead. It used to be claimed by the Tariff Reformer of pre-war days that two bad winters would provide the atmosphere on which this country would accept Protection. We are now in the fourth winter of severe unemployment, and it is a remarkable tribute to the underlying common-sense of the masses of the people that the lure of the experiment advertised as the only means of procuring work and wages for all should under such circumstances have been so emphatically rejected. That rejection is all the more remarkable because the excessive haste with which the election was conducted left Free Traders with insufficient time to educate an electorate that had largely forgotten the controversies of 20 years ago on the economic fallacies that were so laboriously, but effectively, exposed during the years of 1903 to 1906. After the decisive verdict of Thursday there is surely reason to expect that the Conservative Party will rid themselves of a proposal which every time they have

adopted it has proved to be a millstone about their necks. The overwhelming vote against Protection has been built up by a striking series of gains, both by the Liberal and Labour parties, and if the figures be analysed, we believe it will be found that the real sensation of the election, which has upset the forecast of Party managers, is the unexpected progress of Labour. It had been admitted on all sides that when once the issue of Free Trade and Protection had been raised, Liberals were bound to win many seats, but Conservative experts retained to the last moment their confidence that they could afford the loss of a fair number of seats to the Liberals, because they could hold their own perfectly well at the expense of Labour. That is the prediction which has been so strikingly falsified.

On the main issue, namely that the people of this country have absolutely refused to allow their rulers to tamper with the economic system under which the country has waxed great, there is cause for nothing but rejoicing. But in some other respects the election cannot be hailed as satisfactory. It is unfortunate in the extreme that at a moment when the state of Europe calls for bold handling by a British Government possessing stability and authority, the position of home politics should be plunged into doubt. Until we know what the final state of the parties is, it is of little use to speculate upon the political possibilities of the immediate future. But at the moment there appear to be three possible lines of development. On the one hand, Mr Baldwin might attempt to carry on the administration of the country for a time with an avoidance of controversial legislation, and by the help of unsatisfactory bargains or arrangements with one or another section of the Opposition. That is a method of procedure which Governments in the nineteenth century had to pursue on many occasions, and it was usually the Irish Nationalists who held the balance. To-day's circumstances are by no means comparable to those; and no one can contemplate with complacency the pursuit of this course to-day. The second alternative is the formation of a coalition, and, of course, there are three forms of coalition theoretically possible, although all appear unlikely and unpromising. The third possible course is that there should be another appeal to the country as soon as the essential financial business of next session is transacted, as it could, we imagine, be transacted fairly speedily by the help of temporary arrangements by the Party leaders. Possibly this course may prove the only practical one. But such a prospect of prolonged uncertainty at the present time is peculiarly disturbing. There are grave issues urgently calling for strong and confident handling. If they have to wait, then the chances of progress with the European problem once more recede.

Such are the troubles into which Mr Baldwin has plunged the country by his well-meaning, but hasty and unstatesmanlike procedure. That he and his party have fully reaped the reward of recklessness is a minor matter. What really matters is that where the country needed stability more perhaps than in any juncture of affairs since the war, it has been thrown into turmoil, and faced with a constitutional problem of very considerable difficulty. If we are right in assuming that another election before long is inevitable, one of the earliest tasks of the new Parliament must be to secure by legislation that in future votes cast at the polling booths are faithfully represented in the House of Commons. A year ago Party strength in the Commons was grotesquely out of keeping with the total of the Party polls. The same thing is likely to be true of the new House. To see that it will not be true of any future House should be among the first tasks of all statesmen who care for the future of representative Government.

EUROPE: THE DOMINANT ISSUE.

ALTHOUGH—or, perhaps, rather, because—public attention in Great Britain has inevitably been diverted from international affairs to internal politics, the situation on the Continent has been undergoing notable developments, to which the new Government will have to address themselves without delay. The country expects the same policy in regard to the dominant issue of our relations with France and Germany from whatever Government its votes may bring into power, and the new Government's policy will be effective in proportion as it is supported by an informed and decided public opinion. The moment is therefore opportune for reminding ourselves of events which have fallen into the second place of interest (though not of importance) during the last few days.

The reconstitution of a Government of the German Reich last week, after the interregnum which followed the defeat of Dr Stresemann, has momentarily stayed off the political crash without (unfortunately) rendering the eventuality less probable. Although a certain continuity has been secured through the acceptance of the portfolio for Foreign Affairs by Dr Stresemann, the new Finance Minister, Dr Luther, has already resigned his position, and the new Chancellor has been faced immediately with acute difficulties over the "Powers Bill," the effect of which when passed would virtually be to suspend parliamentary government during the winter months. A compromise has been reached in the end with the Social Democratic Group to the effect that, before any clause of the Bill is actually put into force, the Government shall consult a Reichstag Committee of 15 members. Since, however, the authority of this committee seems to have been left ill-defined, its appointment may create a new arena for conflict rather than avert the danger. The Left has been embittered by the drastic intervention of the Stresemann Government in Saxony or Thuringia which (whatever may have been the Government's intention) was not extended to reactionary Bavaria. It is an ominous sign that the extremists, on both wings, are gaining strength while the middle parties are losing it.

Meanwhile, France has been taking important new departures on the Reparations Commission in her attitude towards Separatism in the occupied territories, and in her economic negotiations with German industrialists and official bodies. On the Friday of last week, the Reparations Commission voted unanimously (the first unanimous vote since last January) for the appointment of two committees, on which Allied and Associated Powers exclusively were to be represented, in order to deal respectively with the Budget and currency problem in Germany, and with the export of German capital. The United States Administration has now been advised officially of this resolution, and has been asked to consider the nomination of American representatives. In view, however, of past experiences, Washington has, apparently, decided to ask for further information before committing itself. It is hard to see how the former committee could conduct any investigations on its terms of reference without taking into consideration the whole economic and financial condition of Germany—including the economic effects of the Franco-Belgian occupation of the Ruhr and the new arrangements that are arising out of it. On the other hand, by the terms of the resolution, the committees are to be constituted expressly in pursuance of Article 234 of the Treaty of Versailles, over which acute differences of interpretation have already arisen. It would be rash, therefore, to expect this resolution to produce constructive results, and while the desired inclusion of American representatives is a vital condition of success, the exclusion of Germans and neutrals weighs the balance heavily against its achievement. From the French point of view, the resolution may perhaps be regarded as a gesture intended to assist Mr Baldwin in meeting electioneering attacks upon his failure to modify the action of France, for M. Poincaré's Government are evidently anxious for Mr Baldwin's return—not because they think that his continental policy differs in fundamentals from that of Mr

Asquith, Mr Lloyd George, or Mr Macdonald, but apparently because they think that he will be less effective than any of his possible successors in carrying it out.

An equally important gesture (doubtless with the same object) was the communiqué issued in Paris last Tuesday in regard to certain relaxations of the régime in the occupied territories. "Measures of grace" are to be taken immediately in favour of persons expelled or condemned; passive resistance (and its penalties) will be considered officially at an end when work has been "effectively resumed" in the mines and factories, and when the agreements entered into with the Reich for the exploitation of the railways in the Rhineland and the Ruhr shall have been ratified by the Berlin Government and put into force; while, finally, "the regrouping of the military forces with a view to diminishing contact with the population" is reported to be already in progress. The railway convention, which was signed last Monday by French and German representatives at Mainz, and is to come into force on the 10th of this month, includes an interesting concession to the German point of view. The trucks circulating on the railways of the Ruhr and Rhineland Régie are to remain the property of the German Government, and the *quid pro quo* is that the goods traffic in the Régie area is to be operated (as before the occupation) by the German railway authorities from a centre at Magdeburg as an integral part of the goods traffic on the whole network of German railways. In effect, the Germans secure a political desideratum (the avoidance of complete separation of railway administration, which would be one step towards the independence of the Rhineland), while the French secure a better prospect than before of making their economic position in the occupied territories permanently tenable. Although the Régie traffic had somewhat improved during the past few weeks, it was still hopelessly below the normal volume, whereas, under the new convention, it is hoped to restore it to something like pre-occupation conditions. The French authorities have also been arranging for a Rhineland Bank of Issue on a gold basis, and, here again, it is contemplated that 50 per cent. of the capital will be German, the remainder being French, Belgian, and neutral. Finally, the French authorities have taken a more decided stand against that scandal of their own making, the disreputable Separatist movement, than they have done before. The Separatists have been removed by French action from Bonn and the smaller towns in the neighbourhood, and it looks as though, for the time being at any rate, their activities were to be limited to the Palatinate and to Hesse.

The motives for this pronounced change in French policy are probably complex. In the first place, the odium which France has incurred in the rest of the world by her action during the past year has probably been more serious for her than her leaders had expected. True, no other Power has been able or willing to thwart her action, but the bogeys of "isolation" and "encirclement" have lately risen before her eyes in an alarming form. A readiness to make some sacrifice at the altar of foreign opinion has noticeably been growing, and the elections in Great Britain have offered a definite occasion for experiments in this direction. In the second place, the French feel (and, unhappily, with truth) that in the end they have partly achieved their ultimate object of breaking the German national will. The activities of the Separatists become superfluous from the moment at which they have brought respectable citizens of the occupied territories to heel, and the formal independence of these territories becomes less essential in proportion as Berlin becomes more amenable to dictation from Paris. In the third place, M. Poincaré is under severe pressure to produce, if possible, some profitable result from the immense military expenditure and the loss of previous reparations receipts which have been caused by the occupation, and he is learning that German resources, plant, muscles, and brains cannot be made productive for French interests unless German wills are to some extent enlisted in this cause.

For these various reasons, it is possible that, in the next phase, we may see Frenchmen and Germans co-operating in business, even though their personal feelings and relations remain unchanged. In this case, what ought our own attitude to be? Undoubtedly, a primary consideration must be the material salvage of Germany and her people, and we ought not to oppose any developments incidentally

conducting towards this, even though it may not be advisable for us to participate in them. The paramount consideration is one of humanity. Millions of men, women, and children on the brink of starvation must be kept alive. The second is one of interest. The material restoration of the Continent (quite apart from its political corollaries) is a vital necessity for our economic life; and we shall have lost our business sense of realities if we allow our minds to be diverted from this goal by the distant spectre of a grand industrial combine against us.

Meanwhile, Mr Baldwin, his hands weakened by reverses at the polls, must remember that the fundamental issue raised by the British declaration that the Ruhr occupation is illegal still cries out for settlement. While satisfaction may be derived from the softening of the aggressiveness of French policy, and from late concessions of a sort to British and world opinion, this change cannot possibly be allowed to draw Great Britain into the position of "accomplice after the fact" in a transaction which she has through her Government and her public opinion declared to be a gross offence against international right and justice. The healing of Europe cannot be approached successfully in such a way.

THE MONROE DOCTRINE.

To achieve the right perspective for examining the Message which President Coolidge delivered to Congress on Thursday it is necessary to have a proper understanding of the meaning of the Monroe Doctrine, and its maintenance to the present time as the basis of American foreign policy. We, therefore, examine in this article some important points about President Monroe's famous declaration with which the Message to Congress of President Coolidge is in general accordance. "Our country," said Mr Coolidge, "has one cardinal principle to maintain in its policy. It is an American principle. It must be an American policy. We attend to our own affairs, our own strength, and protect the interests of our own citizens, but we recognise thoroughly our obligation to help others, reserving to the decision of our own judgment the time, the place, and the method. We realise the common bond of humanity. We know the inescapable law of service." These sentences are the keynote of the Message in relation to foreign policy. The definite refusal to come into the League of Nations was emphasised and underlined, although good wishes for its helpfulness were expressed. President Coolidge lays it down that while one of the main principles of American policy is the avoidance of permanent political alliances, another is the peaceful settlement of controversies between nations. The President, therefore, wishes to see the establishment of a World Court, which would embrace in its partnership all the important nations of the world. To the establishment of such a Court, or rather to American participation therein, he would attach the condition of definite refusal to adhere to the League of Nations. In his reference to the question of European debts, President Coolidge made no departure from the line taken by his predecessor. He stresses the sanctity of contract and refuses to contemplate release of the debtors, but does not rule out the possibility of adjustments, such as have been made in the case of the settlement with Great Britain. How closely the general line of the President's Message conforms to the spirit of the Monroe Doctrine will be appreciated if we recall the most important passages of President Monroe's historic statement.

In the discussions to which this interest [namely, the claims of Russia on the north-west coast of North America] has given rise, and in the arrangements by which they may terminate, the occasion has been judged proper for asserting as a principle, in which the rights and interests of the United States are involved, that the American continents, by the free and independent condition which they have assumed and maintained, are henceforth not to be considered as subjects for future colonisation by any European Powers. In the wars of the European Powers, in matters relating to themselves we have never taken any part, nor does it comport with our policy to do so. It is only when our rights are involved or seriously menaced that we resent injuries or make preparations for our defence. With the movements in this hemisphere we are of necessity more intimately connected, and by

causes which must be obvious to all enlightened and impartial observers. The political system of the Allied Powers is essentially different in this respect from that of America. This difference proceeds from that which exists in their respective governments. We owe it, therefore, to candour and to the amicable relations existing between the United States and those Powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of an European Power we have not interfered, and shall not interfere. But with the governments who have declared their independence and have maintained it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them or controlling in any other manner their destiny, by any European Power, in any other light than as the manifestation of an unfriendly disposition toward the United States.—President Monroe's Message to Congress, December 2, 1823.

So runs the passage in President Monroe's memorable Message to Congress, which has come to be called the Monroe Doctrine, thereby ensuring a place in history for a man of no commensurate personal distinction. It seems probable that the Message was mainly the work of his Secretary of State, John Quincy Adams. It is convenient to analyse the Message and discover in it four principles: (1) no more colonisation by European Powers on the American continents; (2) no European interference with the newly-established and newly-recognised South American Republics; (3) no extension of the political system of the Allied Powers (the Holy Alliance) to America; (4) no interference by the United States of America in purely European affairs. With the first three of these principles we have no present concern. They have received general acquiescence, and are illustrated by the abortive attempt of Napoleon the Third to establish the unhappy Maximilian upon the Mexican throne. The last principle—non-intervention in Europe—is of contemporary importance, and deserves a few remarks.

It should be understood, in the first place, that the Monroe Doctrine is an act of policy, not a rule of international law. It embodies the foreign policy of the United States during the past hundred years, and its roots go even deeper. The Pilgrim Fathers were animated by a desire to shake the European dust off their feet. Washington's famous farewell message in 1796 contains the passage:—

Europe has a set of primary interests which to us have none or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves, by artificial ties, in the ordinary vicissitudes of her politics or the ordinary combinations and collisions of her friendships or enmities.

That principle is, we believe, bred in the American bone, and any European (and so for this purpose we may describe ourselves) who fails to grasp that fact will most certainly misjudge America as many misjudged her in 1914, 1915, and 1916. The war with Spain in 1898 was no exception to the principle. What are we to say of America's entry into the world war in 1917 and her subsequent policy? There is no question that her action in 1917 involved at the time a very drastic change in policy. It is true that her neutrality had been grossly violated by the Central Powers, and that her people had been profoundly stirred by the moral issues at stake. It may have seemed possible to President Wilson and his Cabinet for America to step in, strike a decisive blow, and retire into her traditional attitude of detachment, but events were too powerful and President Wilson had grasped the vision of a more lasting contribution by his country to the welfare of the world. Whether or not he had the solid opinion of his people behind him when he set his hand to this task, we must leave to American historians to say. Either he had not, or, if he had at the time, it swung back to the Washington-Monroe policy, and America now contemplates a European welter which, as a prime and disinterested artificer of the Armistice and of the Treaty of Versailles, she cannot view with complete detachment and equanimity merely because she declined, with a perfect right to do so, to ratify the treaties of peace, and particularly the tripartite pact of 1919 guaranteeing France against unprovoked aggression by Germany. That America will ever join the League of Nations seems to us to become increasingly more improbable. That she has turned her back upon Europe for ever, and will permanently withhold the help she could give is, in our opinion, equally improbable. True to Washington, she is

unlikely to embroil herself in "the ordinary combinations and collisions of (European) friendships and enmities," but there are other ways in which she can lend a hand.

America has been a pioneer in the conclusion of international arbitration treaties, and in many other forms of international co-operation. She was a prominent member of the Hague Conferences of 1899 and 1907. Once it can be demonstrated to her people that the Permanent Court of International Justice is not the back door to the League of Nations, we believe that the late President Harding's recommendation to join the Court will be followed. Further, the action of President Coolidge is reiterating a willingness to take part in an international conference upon the Reparations question on certain conditions is another indication that we have not seen the end of the new chapter opened by President Wilson in 1917. That offer is not receiving much encouragement in certain quarters where concurrence is necessary, but day by day opinion is hardening upon the supreme need of summoning a comprehensive and powerful conference representing at least all the belligerents in the recent war together, some neutral Powers as well, as the only means of rescuing Europe from its threatened disintegration. America is waiting for that moment, and when it comes her action, or inaction, will be a matter of such moment to the world that she will be impelled by the effect of world opinion upon the minds of her own people—Monroe Doctrine or no Monroe Doctrine—to play an important and, perhaps, a decisive part. That moment may be nearer than we imagine.

OUR INDEX NUMBER.

OWING very largely to an abnormal upward movement in the price of cotton, our Index Number has increased during November by 221 points to 4541, which is the highest point recorded since October, 1921. As will be seen from the table below, each of the groups, apart from textiles, has contributed to the upward movement, but of the total increase of 221 points, textiles account for 173. The previous highest figure this year was 4440, at the end of April, and lowest 4182, at the end of July:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	%
Base (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	879	382	618	464	553	2856	116.6
" Dec., 1915	897	446	731	711	848	3634	165.1
" Dec., 1917	1286	686	1684	839	1348	5845	265.7
" Nov., 1918	1289	782	1848	908	1389	6212	282.6

* Corrected figure.

Changes in primary foodstuffs were comparatively small, the principal increases being a rise of 6½ points in rice and of 4 points in home-grown wheat. In subsidiary foodstuffs, sugar prices were substantially higher, for the reasons set forth in last week's *Economist* (p. 966). Butter was also higher, after a decline in the previous month, but for the first time for three months there was a decline in the price of tea. As already mentioned, the feature in the textiles group was the remarkable advance in cotton prices. On this matter Messrs Robt. Barbour

and Co., Limited, write as follows in their monthly circular:—

Although a crop of 10¼ million bales had been frequently suggested from private sources, the official confirmation of this, as contained in the supplementary Bureau Report published on the 2nd inst., came as a rude shock to the market, and had a most disconcerting effect. An excited scramble on all sides carried cotton prices up with a rush, and whilst in New York the maximum 200 point limit allowed for in any one day was quickly reached, after the issue of the report Liverpool followed suit, with an equivalent advance of 108 points. "The heaviest abandonment of acreage on record" was the salient point in the revised estimate of the yield, and subsequent weather advices hold out little hope of this being improved later, rather the reverse, in fact. For the time being business was reduced to very small dimensions, the advance in prices being too sudden and too rapid for customers to follow. Gradually, however, demand began to broaden out again, telegrams from India became persistent, and a large inquiry was met with, which embraced a considerable variety of makes. Stocks were freely absorbed, the bulk of transactions, indeed, being connected with cases where advantage could be given in virtue of yarn or cloth held at rates much under current quotations. As the month progressed, and no sign of reaction apparent, steady progress was made, and notwithstanding the manifold difficulties entailed by the continued advance in the raw material, a healthier tone was very noticeable, and substantial orders were booked. A great many offers have been made at prices hopelessly out of date, but Calcutta's interest in dhooties, mulls, jaconets, and light fabrics generally has been well maintained, and the other Indian markets have displayed plenty of enterprise even if a large portion of it has gone unrewarded. Egypt and the Levant, too, have shown more willingness to buy, but China, in spite of depleted stocks, still disappoints, and South America does not get much further than moderate miscellaneous lots. Egyptian cotton has made even a more sensational advance than American. In the course of the month F.G.F. Sakellaridis has put on 8d per pound, and during the same period fully middling American has advanced 4d per pound. The final spot quotations are slightly under the highest of the month and of the year, and whilst speculation is still a prominent feature in the gamble, there has also been a steady continuance of trade buying in futures, and in actual cotton.

Wool prices do not show much change, Australian being a shade lower on the month. According to Messrs Hindley and Co., a temporary shortage in America is responsible for an upward tendency in hemp prices. Flax has risen by 3 points, demand having been steadily maintained for both old and new crops. Messrs Wm. F. Malcolm and Co. report that "the Continent has again been the principal buyer, and a considerable clearance of old crop consignments in this country has been made to French and Belgian mills." A substantial rise has occurred in jute. Messrs Wigglesworth and Co., Limited, write that "consumers on this side are showing slightly increased interest in afloat and near-at-hand parcels, but business in the further forward positions is being done almost entirely by the Calcutta and London markets." In the minerals section iron is unchanged, but there has been a small reduction in steel rails. In the minor metals, the feature is a further substantial rise in tin to over £236 per ton. In the miscellaneous group changes are few and unimportant. The table below shows the changes in each commodity's index as compared with the previous month, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	78	— 1	Cotton, A	199	+ 39	Copper	52	+ 2
English	74	+ 4	Cotton, B	185	+ 57			
Flour	74	+ 1	Yarn	174	+ 32	Minerals	770	+ 14
Barley	81	— 1	Cloth	165	+ 24			
Oats	78	+ 1	Wool, Eng.	138	— 2	Baltic timber	103	..

Tea	145	— 6	Pig-iron	107	— 4	Crystals	85	..
Coffee	90	+ 7	Steel rails	75	— 4	Rubber	13	+ 3
Sugar, cane	220	+ 7	Iron bars	92	..	Miscellaneous	749	+ 5
Sugar, beet	126	+ 12	Coal, steam	134	+ 2			
Butter	100	+ 7	House coal	88	+ 2	Total	4,541	+ 221
Tobacco	116	..	Lead	129	+ 2			
			Tin	92	+ 11			
Other foods	797	+ 20						

The advance of 221 points in the total brings the increase in our Index Number over the pre-war figure to 77 per cent, which compares with 68.4 per cent. a month ago and 63.1 per cent. at the end of July last. Recent fluctuations in each group in comparison with the level prevailing at the outbreak of war may be seen from the final table,

in which the figure for the end of July, 1914, is taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec. "	233	229	209	261	230	230.9
Dec., 1921	159	180	180	164	168	169.6
June, 1922	174	192	184	149	160	171.1
Sept. "	151	194	181	150	148	163.3
Dec. "	149	200	193	152	146	166.2
Mar., 1923	143	214	191	181	144	171.2
June "	141	220	191	167	137	167.7
July "	141	215	181	160	135	163.1
August "	143	216	182	158	134	163.3
Sept. "	142	222	*197	158	134	*167.6
Oct. "	142	220	198	163	134	168.4
Nov. "	144	226	226	166	135	177.0

* Corrected figure.

The month's changes have not altered the relative positions of the five groups beyond raising textiles to the same level as other foodstuffs.

THE INSECURITY OF TRUST DEEDS.

(BY A CORRESPONDENT.)

IT must be a matter for no little gratification to debenture holders when trustees under a deed are fortunate enough to grasp the reins in time to avert a catastrophe. The past few weeks have provided several instances in which good fortune has favoured the investor. The words "good fortune" are used advisedly, for in the whole range of media for investment there is perhaps none which rests upon so slender a security as the trust deed. The due payment of interest and repayment of capital monies by successful companies are in no way dependent upon the trust deed which secures the borrowed money. The lenders have only to thank the fact that the borrowing company is trading successfully, and is as well able to pay the debenture interest as any other amounts due to its trade creditors. As soon as ill-fortune assails the company, however, the efficacy or otherwise of the trust deed is immediately put to the test. In practice it fails far oftener than it succeeds.

Some little consternation was caused recently by a disclosure to the effect that no action had been taken under one trust deed until it was too late to prevent the last of the charged property from passing out of the control of the borrowing company. In that particular instance also the debenture holders were informed that the trustees had been in complete ignorance of the financial state of their trust. This statement was not offered by way of apology or as an admission of culpability; it was published as an explanation of an unavoidable misfortune, and as such it appears to have been accepted by the debenture holders who acquiesced in subsequent resolutions designed to salvage what little remained. Another instance of belated action occurred recently, from which it appeared that certain tangible assets had been exchanged for doubtful share interests at a time when trading losses would have warned the trustees of the necessity for taking immediate control. Needless to say, the trustees were kept in ignorance of the losses, a not very difficult task for the directors of the borrowing company to accomplish. An examination of the circumstances surrounding these recent defaults confirms the view that, in the present state of affairs, the security of a trust deed is far less certain in practice than in theory.

Theoretically the debenture secured by a trust deed is one of the safest forms of investment offered to the public. The scrip is given the most comforting designations—"mortgage debenture," "secured debenture," "secured note," and so on. These "secured" titles undoubtedly appeal to the cautious investor who spurns any type of preference share but has implicit faith in a trust deed. He must be excused for believing that the mortgage debenture secures his capital and ensures a constant

interest return. The document upon which he lends his money consists either of a floating charge upon all the assets of the borrowing company or of a specific charge and legal mortgage upon one or other of the fixed assets. The prospectus upon which he advances his capital probably sets forth fully the uses and developments to which the money will be put, and the investor is content that it shall be expended in building extensions and the acquirement of fixed assets.

In practice, the security of the trust deed and the capital it represents depend far less upon the capability of the trustees. This factor is the one to which too little attention is paid, with consequent disastrous results. A floating charge is always open to serious abuse unless the closest control is maintained over the borrowing company by the representatives of the lenders, and even a fixed charge may be rendered null whenever the assets concerned are left entirely within the control of the company. Experience shows that it is only the property to which a title cannot be given under any circumstances whatever that can wholly escape frantic efforts to procure working capital in times of stress. The security provided by a deed lies not in the document itself, and still less in the personality of the directors of the borrowing company. It must be remembered that they have a trust to the shareholders, and they cannot be expected to pay regard to the lenders of money in priority to actual investors. The safety of money lent cannot be said to rest upon any other factor than the efficiency of the trustee, and this factor must continue to be one of grave doubt in numerous instances until an earnest attempt is made to introduce the overdue reforms in company law, with particular reference to Sections 84 and 93 of the principal Act. Until these reforms are effected the investing public can do little more than ensure that their interests are guarded by independent trustees who realise the gravity of their trust and endeavour to overcome the legal obstacles which obstruct their duty.

For some while past it has been customary to regard the office of trustee under a deed as a sinecure, with no particular obligation attaching to it other than the acceptance of the deed fees. This dangerous view, with its attendant risks, cannot be too greatly deplored. The true conception of the office of trustee for debenture holders endows it with a responsibility as grave as that of a company director, with the added moral charge which rests upon any administrator appointed by the court.

The investor who lends money upon the security of a debenture should always ascertain whether the proposed trustee is entirely independent of the management of the borrowing company. He need have no objection to the trustee holding a financial interest in the company, provided that interest does not clash with the trustee's duty to the debenture holders. It is, however, always inadvisable for a director of the borrowing company to accept the post, and the lender should exercise great discretion whenever he is invited to invest any person with this dual appointment. Similarly, he should avoid a debenture entrusted to a corporation or subsidiary over which the borrowing company has a control which may be exercised to the detriment of his interest.

As long as the present form of debenture deed remains in favour it is practically impossible to invest the trustee with the greater power and authority he needs. In order that he may be in a position to enforce the deed immediately occasion arises, it is obvious that he should have his finger upon the pulse of the company at all times. It is almost imperative that he should be a whole-time servant of the debenture holders, and that he should be in possession of the same amount of information as that afforded to the directors. It is true that many companies provide the trustee with copies of the minutes of the boards of directors, but in no case can it be said that he has any real control or voice in the management of the assets until the charge crystallises, and then only at a time when little can be done to save the moneys lent by his employers.

Until the charge crystallises, the trustee and the debenture holder have less voice in the conduct of the company than that accorded to the holder of a single share. Under these circumstances it is not remarkable that the practice of appointing a joint stock bank to the office of trustee is

one frequently followed, for this class of trustee is undoubtedly favoured in the matter of maintaining control over the actions of the borrowing directors, provided the bank concerned also acts as banker to the borrowing company. The appointment of the company's bankers is not open to the objection which may be raised to the appointment of other persons who are connected with the borrowers. It carries with it the requisite amount of independence, and yet it provides many opportunities for control which are not open to the ordinary trustee. It is not suggested that the company's bankers, *quâ* trustee, can be acquainted with every phase of the borrowing company's policy; it is possible, however, for them to draw the same inferences from the company's banking transactions as those which serve for the bank's own purposes. In this way the debenture holder's interests are furnished with the same degree of protection as that afforded to the banking company's interests.

Unfortunately, it cannot be said that a joint stock bank can always provide a complete safeguard. It cannot distinguish dealings in fixed assets from dealings in floating assets without considerable loss of time, and delay must always ensue before steps can be taken for enforcing the deed. At the same time the appointment of the bank must remain as the safest course until one or other of the many current postulates designed to guard the debenture are examined and given the force of statutory authority.

Until that time arrives the investor must continue to regard himself as a creditor with a security of more or less doubtful stability, and certainly with no voice in the management of the property purchased with his money. He must continue to regard the interest he receives as a charge against profits, and not an appropriation of profits—this distinction being the apparent, but perhaps not real, advantage he is said to have over the single shareholder who has the power of a vote.

THE SEA CARRIAGE BILL.

ALTHOUGH the problem at the back of the Carriage of Goods by Sea Bill has been dealt with from time to time in the *Economist*, it is opportune—now that the measure apparently awaits only formal steps to complete its passage into law—to recall in brief outline the history of the matter. It is true that the unexpected dissolution of Parliament after the Bill had weathered a stormy passage through the Lords, and had been brought to the Commons, will necessitate its reintroduction, but, as an agreed measure, its stages could be quickly repeated and completed when the new session commences. If recent and repeated resolutions from representative commercial bodies may be accepted, business men are most anxious that there should be no further delay. A short summary of the events which led to the appearance of the Bill is, however, desirable because only in the light of those events is its purpose clear. The passage of this Bill into law will, it is anticipated, end the long controversy which has existed between merchants and shipowners as to the conditions of carriage expressed in unreadably small print in bills of lading by substituting, for such of the conditions as relate to the carrier's responsibility during the voyage, a standard set of conditions to be incorporated by a few words of reference. The complaint of merchants has been that the responsibility of the carrier has been negatived by the small print conditions. If the code of rules scheduled to the Bill become compulsory conditions, shipowners will be fixed with the obligation of safe carriage as laid down in the rules.

Though the grievance on the part of traders is an old one, the pressure which has brought the passage of the Bill into law within measurable distance has not come from exporters—their concern is mostly limited to securing the lowest freight—but from importers, bankers, and underwriters. And the movement has been international in character. The form of the proposed Rules scheduled to the Bill is substantially that of the Hague Rules, 1921, a code of conditions settled and adopted at a conference of the International Law Association. On the other

hand, the *origin* of the Bill before the British Parliament is (as Sir Norman Hill has recently pointed out in a contribution to the *Revue de Droit Maritime Comparé*) to be found in a report of the Imperial Shipping Committee issued in 1921, and in pledges to introduce legislation given by the British Government following that report. The influences or interests responsible for the Bill, therefore, were not those which had worked out the Hague Rules, though, in form, the Rules scheduled to the Bill are based on the Hague Rules.

The problem, Sir Norman Hill indicates in the article referred to, was "to find means by which importers could be given the rights for which they asked, without unduly hampering the exporters in their operations, or imposing such responsibilities on the shipowners as must react uneconomically on the cost of overseas transport." The solution proposed is to attach to bills of lading by law irreducible obligations on shipowners. Exactly what these fixed obligations should be has been the subject of over two years of international discussion, and they have at last, it would appear, been adjusted. The schedule to the Bill corresponds to the terms of an international convention embodying a revised form of the Hague Rules, the latest conference upon which at Brussels took place so recently as October. Some few drafting alterations were then adopted, and their insertion will necessitate some amendments in the schedule to the British Bill, but the points are matters of detail.

In the United States a measure based on the revised Hague Rules was introduced, and is expected to be brought forward again when Congress resumes. By similar legislation in all the maritime countries bills of lading will be placed in a special position, so that parties to whom they are transferred in the course of business will be assured that they impose the legal minimum obligations on shipowners as sea carriers of goods. The work of bankers and the flow of international commerce will, it is urged, be facilitated, though at the expense of interference with freedom of contract. The original scheme of the Hague Rules, which was that these standard international conditions should be brought voluntarily into common use, was abandoned in view of pressure by certain powerful interests for legislation (pursuant to the Government pledge which had been given), making the Rules compulsorily part of the conditions of carriage contained in bills of lading. The alteration to a compulsory basis involved certain difficulties connected with bills of lading issued under charter parties, and covering cargoes carried in bulk, such as coal and timber, and the legislative proposals also gave rise to questions in relation to the coasting trade. These matters, and also certain objections taken by lawyers of eminence to the wording of the Rules, were investigated by a Joint Committee of Lords and Commons, presided over by the late Lord Sterndale, Master of the Rolls, which reported—as noted in the *Economist* of July 21st last—in favour of the Bill, subject to certain small amendments which the Committee introduced. Since then opinion has steadily consolidated in favour of the passage into law of the Bill at the earliest possible date. Having been thoroughly investigated in Committee, and having completed its stages in the Lords, the measure is not now expected to give rise when reintroduced to further contentious discussion.

So far as the international position is concerned, Scandinavian interests, which continued to press certain objections, are understood to have recently come into line, and the general expectation is that other countries will quickly follow the lead of the British Parliament, and give effect by legislation to the international convention containing the Rules. At the Imperial Economic Conference, a resolution was passed endorsing the proposals of the measure before our own Parliament, and recommending the Rules scheduled to it for adoption by the Governments and Parliaments of the Empire. The Governments of the British Dominions will, therefore, it may be assumed, carry out their part in the scheme for giving complete international effect to the revised Hague Rules. If that scheme is carried to fruition, and the Rules are construed by the Courts of all countries as a self-contained code, expressed in international business language, replacing divergent national laws, then a new departure will have been taken regarding bills of lading. The credit on which goods are carried by sea is supplied

on the security of bills of lading. Under the Rules bills of lading will become a better security to their holders. They will, as transferable documents, be placed on a footing comparable to that of bills of exchange. The accomplishment of these things will be no mean achievement.

CABLE COMPANIES' SHARES AND RESULTS.

FROM time to time periodical fits of unreason take possession of sections of the people, and cable companies to some extent must expect their securities to register this fitful unrest by fluctuations in the record of prices published by Stock Exchanges. Gas manufacturing concerns underwent similar experiences as some vivid pictures of electricity supply supplanting the use of gas seized popular imagination. In one respect—and a very important one—cable undertakings are different. Cable companies have been for years making very substantial profits and building up very large reserves. The ratio of reserve to capital can be ascertained from one of the tables below, and should be carefully studied by all holders of cable securities who suffer from "investment fright." Most cable companies tell us quite clearly how these reserves are invested, the greater part being in sound securities readily realisable. It is obvious that should wireless telegraphy progress sufficiently to make cable transmission unremunerative most cable companies could enter the new field very favourably equipped. It has been announced that the Eastern Company has already applied for a licence for the erection of wireless stations. The discord which at one time looked like developing into something more serious between the Western Telegraph Company, Limited, and Western Union Company has now been amicably smoothed over, and a working arrangement settled upon. It is perhaps here not without some significance to remark that the subject-matter of the dispute—a cable between America and Italy—is a matter of trite interest to "wireless" enthusiasts who regard Italy as the home of "wireless" foresight.

In our first table we show gross receipts, working expenses, and net receipts of six representative cable concerns for the past three years:—

	Year.	Cuba Sub-marine.	Direct Spanish.	Eastern.	Eastern Extension.	Great Northern (D'n'm'k)	Western †
Gross receipts	1920	99,154	133,757	4,381,856	2,514,825	2,081,346	2,073,498
	1921	72,532	114,407	4,124,976	2,394,325	1,517,779	1,680,049
	1922	55,900	97,110	3,489,071	2,061,544	1,329,607	1,463,174
Working expenses	1920	41,347	107,446	3,312,399	1,862,379	1,410,671	1,330,961
	1921	50,246	121,935	2,803,446	1,267,224	1,079,047	1,132,501
	1922	41,018	94,266	2,491,822	1,306,645	956,414	1,103,185
Net receipts	1920	57,807	26,311	1,069,057	652,446	640,675	742,537
	1921	22,086	Dr 7,528	1,321,530	1,127,101	438,732	547,548
	1922	14,882	3,144	997,249	754,899	363,193	359,989

† Accounts made up to June 30th.

Political unrest and industrial depression have left heavy marks on these figures. In addition it would be unwise to overlook certain remarks made by the directors of the Great Northern Telegraph Company in their report for 1922. They state: "Wireless telegraphy has in the course of the year deprived the cable companies of a certain amount of traffic. This is not accounted for by the public itself preferring the wireless service as being quicker and more reliable or—with a single exception—cheaper than the company's service, but the reason is that the Governments themselves own the wireless stations in question—costly to build and costly to work—and consequently do their utmost to improve the financial results of the working by directing the traffic *viâ* radio instead of *viâ* the privately-owned cables."

In our next table we show working expenses, also expenses for taxation purposes during the past three years:—

	Working Expenses Proper.			Excess Profits Duty, Corporation Profits Tax, Income-Tax, &c.		
	1920.	1921.	1922.	1920.	1921.	1922.
Cuba Submarine....	£ 34,284	£ 35,010	£ 31,321	£ 7,063	£ 17,836	£ 9,697
Direct Spanish	91,956	96,177	87,689	15,490	25,637	6,577
Eastern	2,918,783	2,518,101	2,194,095	324,016	285,345	237,727
Eastern Extension....	1,196,241	1,012,371	1,075,378	666,138	184,853	231,261
Great Northern	994,004	1,079,047	956,414	*416,667		
Western	1,024,425	871,793	806,474	306,536	260,708	196,711

* Reserved for extraordinary taxes.

The demands of the tax collector have played so important a part in the accounts of cable concerns in recent times that it is perhaps worth while to pay special attention to this aspect.

How the various companies distributed their profits is shown below:—

Company.	Prior Charges, Pref. Div., &c.	Ord. Dividends.			Amount 1922 Dividend.	Placed to Reserve, &c.	+ or - in Carry Forward.
	£	1920.	1921.	1922.	£	£	£
Cuba Submarine	6,000	7½	7½	7½	11,200	10,000	9,903
Direct Spanish	3,000	10½	10½	10½	6,465	Dr 4,500	2,125
Eastern	150,000	10½	10½	10½	500,000	400,000	52,751
Eastern Extension	30,096	10½	10½	10½	400,000	250,000	52,803
Great Northern		24	22	22	330,000	33,333	7,083
Western	32,747	10½	10½	10½	311,895	Dr 200,000	2,497

† Free of income-tax.

In every case it will be observed that dividends are maintained at the same rate as those for the previous year. As the question of reserves is such an important point about cable companies at present, it is well to examine the figures of the two companies which make a call upon reserves to maintain dividend rates. The Western states that this £200,000 has been "transferred from the provision on account of investment fluctuations," and it still leaves "a very large surplus provision as values stand at the present moment to meet the depreciation on the investments." This is quite in order as long as shareholders understand that they cannot eat their cake and have it as well. The Direct Spanish takes £4,500 from reserves—to quote from its report—"in spite of the fact that the traffic receipts show a considerable decrease as compared with the exceptional figures of the last few years."

In our fourth table we show the principal liabilities and assets over the past two years:—

Company.	Total Capital.	Reserves.	Book Value of Cable, &c.	Cash and Investments.
	£	£	£	£
Cuba Submarine, 1921..	220,000	124,529	232,876	142,049
1922..	220,000	120,649	231,353	131,313
Direct Spanish, 1921 ..	94,655	166,643	90,925	158,882
1922 ..	94,655	148,525	89,920	157,110
Eastern, 1921.....	9,000,000	3,069,636	11,080,159	1,737,955
1922.....	9,000,000	2,502,140	11,649,755	1,656,333
Eastern Extension, 1921	4,752,400	3,754,018	5,053,466	3,516,176
1922	4,752,400	3,083,684	5,092,695	3,975,667
Great Northern, 1921 ..	1,500,000	4,198,854	2,019,572	5,125,890
1922 ..	1,500,000	4,106,966	2,058,185	4,584,700
Western, 1921-22	3,937,625	3,097,297	4,364,325	2,408,097
1922-23	3,937,625	2,757,264	4,346,362	2,680,407

The figures of capital and reserves shown above are remarkable for a group of companies. As already mentioned, these reserves are separately invested, and the practice of directors in supplementing reports and accounts with details of investments is one to be highly commended. In the case of cable companies, at least, it will not only attract conservative investors, but companies should be able to retain the confidence of old supporters.

Our concluding table shows how prices of cable securities have fluctuated over two years, pre-war prices, current quotations and yields being added for comparative purposes:—

Name.	Prices of 1922.		Prices of 1923 (to Nov. 30).		Price July 27, 1914.	Price End of 1922.	Price Dec. 6, 1923.	Yield.
	Hght.	Lwst.	Hght.	Lwst.				£ s d
Cuba Submarine (£10)	82	7	8	7	..	8	7½	19 13 0
Direct Spanish (£5)	94	8	94	9		94	9½	15 9 6
Eastern ord. stock	196	167½	190½	160	130½	190½	167½	15 19 6
Do 3½ cum. pref.	69½	56½	71	65	77½	66½	67½	5 6 6
Do 4% irr. deb.	82½	65½	82½	79	96½	80½	81½	5 4 3
Eastern Extension (£10)	198	168	191	164	123	191	164	15 18 3
Do 4% deb. stock	83	66½	82½	78½	97½	80½	81½	4 19 0
Gr. North. (Denmark) (£10) ..	31½	26½	30½	25½	32½	29	28½	7 16 0
Western (£10)	194	168	19	16½	134	19	16½	16 1 3
Do 4% deb. stock	82	65½	81½	79	96½	80½	81½	4 19 0

† Free of income-tax.

The cable share market is still one of the steadiest amongst industrial securities, and the shares are fairly closely held. The decline in values on the ordinary shares or stocks in the past year has not been very pronounced,

and is probably mainly on account of decreased profits. If on one hand there was at one time a little depression on account of an attack upon the companies by a small publication, the Eastern group profited by the unusual accession of traffic to the Far East as a result of the Japanese earthquake and fire. Incidentally, it may be added that Sir John Denison-Pender at the annual meeting of the Western Telegraph Company, Limited, held on November 29th last, stated that during the last few weeks there were signs of improvement in traffic returns; he was afraid, however, that they must still look forward to reduced traffics.

Notes of the Week.

French Loans to Europe.—In these latter days when the finances of our French ally do not admit of payment of interest on the debt to Great Britain, it is remarkable to find the French Government interesting itself in advances to Poland, Jugo-Slavia, and Roumania. The proposals have aroused much controversy not only in the French Press, but in the Senatorial Finance Commission, where they were defended by M. Poincaré on Wednesday. The proposals, which are to be placed before the Senate without delay, involve a loan of 400 million francs to Poland and 300 millions to Jugo-Slavia. Referring to a loan of 1,000 million francs to Roumania on the security of an indeterminable quantity of oil, a correspondent writes:—This particular financial offer is the more remarkable because the French Government, having originally secured from the British a 25 per cent. interest in the oil fields of Mesopotamia under the terms of the San Remo agreement, now seeks to obtain an exclusive French interest in Roumanian State oil lands in contravention of Clause 5 of that agreement. The episode leaves little doubt that it is a Government and not a private banking affair. It is true that a private banking group ostensibly made the original offer to the Roumanian Government of a loan of 400,000,000 francs for the cession of that Government's 1 per cent. royalties, in kind, from the oil production of private companies. But this was hardly a banking proposition, as the annual value of this royalty oil would not have been equivalent to the payment of the annual interest and amortisation on the proposed advance. Presumably the French Government was to have guaranteed the loan. And when the original offer was withdrawn, and another offer of 1,000,000,000 francs was substituted, on condition that, in addition to the 1 per cent. royalties, the Roumanian Government should give a French and Roumanian company an exclusive interest in the State oil lands, the hand of M. Poincaré was unmistakably disclosed. In short, the French Government had suddenly decided that the moment was opportune to secure in part the objective of its national oil policy—French control of foreign oil supplies to ensure independence in time of war. It had but recently formed a new oil syndicate—Syndicat Française d'Etudes Pétrolifères—to unite the oil activities of French banking and commercial interests. This syndicate was to prepare the terms of oil concessions granted by the Government, of which the French interest in the Turkish Petroleum Company was to form the foundation, and this interest in the Roumanian State oil lands the superstructure. The plan, however, has been thwarted by the refusal of the Roumanian Government to consider any such oil alliance, chiefly because of a very good suspicion that the Royal Dutch were behind the French offer. The affair is complicated by the recent agreement between the Royal Dutch, Anglo-Persian, and Cowdray interests to share equally in whatever concessions can be obtained from the Roumanian State. But when French oil policy and international oil trusts are concerned, complications cannot well be avoided. At any rate, it is gratifying to learn that a French loan of this character has come to nothing.

The Irish Loan.—Our Dublin correspondent writes:—On December 6, 1921, the Anglo-Irish Treaty was signed at Downing Street. On December 6, 1923, the Government of the Irish Free State having restored order within its boundaries and having completed its organisation as the Government of an independent unit, politically and economically, is in a position to close the list of applications for its first national loan. The list was to have closed on or before Monday, the 10th instant; it is believed that this evening's returns will, if it be deemed desirable, enable the list to be closed forthwith owing to the loan having been fully subscribed by the public without the assistance of the banks. It is a notable event, which cannot be without important reactions upon the prestige and stability of the new system. The amount may not be very large, but it is a beginning, and as it is an internal loan, it constitutes a declaration of faith which will operate and continue to operate with cumulative effect. Abroad, the event will do much to wipe out the unhappy impression created by Irregulars' hysteria, which has been so completely suppressed by Government firmness. It is an internal loan, and the only official quotations will be on the Dublin and Cork Stock Exchanges. But, as was foreshadowed here last week, both payment of interest and repayment of principal will be made in sterling. That this was, and had throughout been, the intention was formally announced last week-end by the Governor and Company of the Bank of Ireland, which issued the loan on behalf of the Government. Ireland has so far no separate currency, and is not likely to be in any hurry to establish one. There can be no doubt that on the Irish exchanges there will be a free market in the new stock and that its price will be well maintained. The arrangements for the application of the sinking fund contemplate that it may go above par. The working of the sinking fund will almost certainly maintain it near par, and the effect of short-term investments, and the investment of administrative balances and of funds in the custody of the Court of Chancery when added to other factors of general popularity may well push it over the par level. The Irish Labour Party has introduced a Bill into the Dail for the nationalisation of the Irish railways, but it has little chance of success, as the Government prefers amalgamation, if not unification, of existing companies.

Trade Balance of the United States.—The Finance Division of the United States Department of Commerce has published the results of an inquiry into the balance of international payments in the Republic in 1922. In order to facilitate comparison with our own international trade figures, the results of the investigation are set out below as far as possible on the same lines as the British "balance-sheet" dealt with in our issues of November 17th and 24th. Amounts originally expressed in dollars have been converted at 4.40 to £1:—

UNITED STATES, 1922.			
	"Imports."	"Exports."	
	Million £.	Million £.	Million £.

* Interest payments on debt to U.S.A.

† Earned abroad by bankers, brokers, insurance companies, &c.

The available information does not permit the arrangement of both tables on precisely identical lines. The item in the British balance-sheet, "Available for investment

abroad," includes certain categories coming under "capital items" in that of the United States. 1922 was not a "peak" year in American trade, but it is a striking commentary on the part played by international commerce in the two countries that the United States, with a population of 118 millions to our 47 millions, should have a total less than our own. The relative proportions between amounts under "merchandise" will also be noted. As regards the prospects for 1923, Mr Herbert Hoover states:—"It is obvious that there are wide changes in progress in our international balance-sheet for the year 1923 as compared with 1922. Up to date there has been a balance against us on merchandising account instead of large balances in our favour. There has been a continued movement against us in the current items of 'invisible' exchange. On the other hand, there has been a much less movement in the export of capital. Yet there has been a continued import of gold despite this situation. The explanation of the latter possibly lies in the fact that there has been a large export of our currency which is being held and used abroad, and there are some evidences that many countries in Europe have been increasing their open balances in the United States and their investments in American securities."

The World's Wheat Supplies.—According to the calculations of the International Institute of Agriculture the wheat position in the next few months should be distinctly advantageous from the consumer's point of view. Between August 1, 1922, and July 31, 1923, the exporting countries of the world should be in a position to furnish about 570 million centals of wheat (1 cental = 100 lbs) over and above their own requirements. Canada comes easily first among the list of supply countries, with an available surplus estimated at about 221 million centals, while Argentina is expected to contribute 122 millions, the United States a little over 112 millions, Australia 55 millions, India 12 millions, and the Balkan States, Hungary, Russia, and the French North African colonies together about 48 millions. The world's requirements are more difficult to estimate. In pre-war days consumption per head in particular countries varied little from year to year, and, given the amount grown at home in any season, it was possible to arrive at a reasonably safe figure for the year's probable imports. Disturbed political and financial conditions, violent fluctuations in national trade and well-being, together with the efforts of certain Governments deliberately to restrict imports of foreign wheat, have combined to render valueless all calculations based on "normal" consumption in a post-war world. Bearing in mind, however, that home harvests last summer were almost invariably heavy, there seems every indication that import requirements will not reach those of the cereal year 1922-23, even allowing for the tendency to increased individual consumption usually evident in years of plentiful yield. Out of the 570 million centals available, the Institute concludes, the quantities required by importing countries to supplement their home production may reach 430 million centals at most, but it is improbable that this figure will be attained. A surplus of not less than 140 millions is therefore indicated. Such a state of affairs appears to rule out any prospect of a substantial rise in wheat prices for some time to come. The Year-book of the Institute for 1922, recently published,* contains a large number of statistical tables covering production, trade, prices, &c., of the main food and other crops in most countries of the world. Many Governments have rendered assistance in the preparation of the work, which affords a picture of the world's pre-war and post-war agricultural activities unapproached in the matter of authority and comprehensiveness.

The Break in Cotton Prices.—Our Manchester correspondent writes:—The cotton markets of the world have been more excited this week than for a very long time back, the feature of the trading being heavy selling, which has resulted in a striking fall in quotations. On Thursday

last week the highest price for American cotton for over two years was registered, the quotation for fully middling on the spot in Liverpool being 21.99d. On Thursday this week the figure was 19.64d. It may be pointed out that on August 1st the rate was 13.40d. The slump in values has been brought about by heavy liquidation of contracts on the part of speculators who were "long." This movement was started by some estimates of the American crop for this season being larger than recently. Many remarkable stories are being circulated in Manchester as to the activities of gamblers, and it is understood several London financial syndicates have been speculating on a free scale. Although many of the big operators got out in time, it is feared that some of the smaller people have burnt their fingers rather badly. On Wednesday next the Department of Agriculture of the United States Government will publish their final report on the cotton crop for this season. The figures to be issued will probably clear the air somewhat, and there is a possibility of steadier markets. A considerable decline has also taken place in rates for Egyptian cotton, as on November 29th the quotation for fully good fair Sakellaridis on the spot in Liverpool was 26.95d, whilst on Thursday last the figure was 23.65d. The price on July 30th was 15.25d. According to recent advices, the growth of Egyptian cotton this season will be rather less than 6,000,000 cantars, against 6,713,000 cantars in 1922-23. The wide fluctuations in cotton prices in New York and Liverpool markets have had an adverse effect upon business in Lancashire. Many spinners and manufacturers have scarcely known what to quote, and buyers have been nervous as to placing orders.

Textile Shares and Dividends.—The textile market is one which is expected in the Stock Exchange to feel a good deal of effect, direct or indirect, from the result of whatever Protectionist policy might be introduced into the country. Stock Exchange firms have been centring a good deal of attention upon this particular branch of the country's trade. The difficulty is to arrive at any definite conclusion in a case where so many different conditions are at work. Individual companies engaged in the textile industry are frequently influenced by conditions that vary in the individual cases, so that what may possibly benefit one concern cannot be held, *ipso facto*, an advantage to another occupied with almost, though not quite identical, aims. A well-known firm of Stock Exchange dealers, in a thoughtful Review which they have just sent out to their brokers, come to the conclusion that cotton textiles would not benefit in a general sense from any form of tariffs. Indeed, the firm state, any detailed scheme should, in respect of this industry, be examined "rather with a view to its effect upon trades which supply the cotton trade with its raw material other than cotton—i.e., labour, machinery, coal and chemicals. Should such an examination reveal the likelihood of a rise in the cost of these raw materials then, in a broad sense, the industry would suffer in direct proportion as these costs were increased. This will be readily understood when it is realised that a tariff imposed on imports into this country will not increase the purchasing power of our overseas' customers." This is sound reasoning, and it may be supplemented by reference to a few companies' dividends, comparing those of the present time with the distributions made in 1913. It may be that the public are fatigued, after the week's election campaign, with figures and statistics, but there is undoubtedly a keen thirst on the part of the ordinary man in the street for information, and for such guidance as he can obtain not from candidates' speeches alone, but also from figures. The cynic maintains that there is nothing more misleading than figures except facts, and while admitting that both are capable of being used loosely, it may be said that comparisons of statistics are undeniably helpful for the purpose of obtaining a comprehensive view of any situation upon which they shed light. For the year 1913 the Bleachers' Association paid 6 per cent.; for last year 20 per cent. Calico Printers' latest 12½ per cent. goes against 3½ per cent. in 1913. Bradford Dyers paid 7 per cent. then and 35 per cent. last year. English Sewing Cotton raised its distribution from 12½ to 20 per cent., and Fine Cotton Spinners from 8 per cent. to 12½ per cent. Moreover, it has to be remembered that, in some cases, the capital accounts have been greatly increased during the

* "International Year-book of Agricultural Statistics, 1922," International Institute of Agriculture, Rome. (Obtainable from Comteluro, Limited, 11 Tokenhouse yard, E.C. 2.) 8s.

period. For instance, the English Sewing Cotton company doubled its ordinary shares, and the Fine Cotton Spinners' capital of 2½ million sterling has been increased in the interval to £3,675,000. It may well be asked, in the face of these figures, whether the textile trade of the country is as sluggish as many people are protesting. When one comes to examine the position as it appears in the cases of companies issued during the war at overcapitalised figures, the result is still more interesting. Crosses and Winkworth have announced postponement of the dividend due next month upon £3,000,000 issued preference capital. John Wood and Brothers, and several others of a similar kind, are making no return to their shareholders, and the market value of their shares averages a few shillings apiece. It would require some measure of very high Protection to help concerns like these. Yet it is obvious that, in spite of bad trade and Free Trade, the best companies are doing extremely well. So well, in fact, that the consumer may well be tempted to ask whether he is not being charged too much for what he buys.

Shipping Freight Index—November.—For the third month in succession our Index of Shipping Freights registers an improvement. The index figure for November is 129.38, a rise of nearly 4 points over the previous month. The total improvement since the turning point in August of this year amounts to approximately 11 per cent. It will be observed from the following table that, with the exception of South America, the indices for the various main groups forming the index appear to be reaching a temporary equilibrium within limits of 20 to 40 per cent. above the pre-war base period:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Base (avg., 1898-1913) ..	100.00	100.00	100.00	100.00	100.00	100.00	100.00
Aug., 1913 ..	110.03	113.09	123.37	106.29	117.38	127.89	116.34
Feb., 1920 ..	814.31	529.89	757.52	744.61	587.02	712.16	690.95

Dec., 1921 ..	160.06	164.07	163.72	144.43	141.25	166.47	156.67
Sept., 1922 ..	143.00	115.60	122.48	139.48	124.52	135.31	128.40
Nov., 1922 ..	148.89	124.56	134.22	130.86	130.47	164.69	138.95
Jan., 1923 ..	132.05	126.47	124.85	120.20	142.14	150.44	132.69
Feb., " ..	149.60	116.85	123.93	117.83	134.49	144.21	131.15
Mar., " ..	163.55	124.30	130.43	125.40	125.36	135.31	134.06
Apr., " ..	142.72	133.38	137.32	133.77	134.06	124.63	134.31
May, " ..	134.91	140.03	143.05	126.99	134.48	120.18	133.27
June, " ..	131.77	111.04	124.56	125.50	133.90	118.84	124.27
July, " ..	132.42	107.20	118.67	122.44	126.10	114.83	120.28
Aug., " ..	124.79	109.11	114.33	117.70	117.61	115.73	116.53
Sept., " ..	128.85	112.36	116.28	117.77	117.44	124.63	118.88
Oct., " ..	133.66	125.46	114.03	119.38	124.40	136.05	125.49
Nov., " ..	141.24	135.32	114.64	122.68	124.49	137.89	129.38

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Ino. or Dec.		Index No.	Ino. or Dec.
Home trade ..	135.43	- 5.18	S. America—Outwards ..	108.98	+ 2.38
Bay—Outwards ..	176.14	+ 24.77	Homewards ..	120.30	- 1.16
" Homewards ..	150.00	+ 9.67	India—Outwards ..	117.60	+ 1.58
Mediterranean—Outwards ..	131.40	+ 6.28	Homewards ..	127.77	+ 5.02
Homewards ..	119.05	+ 15.08	Far East, &c. ..	124.49	+ .09
North America ..	135.32	+ 9.86	Australia ..	137.98	+ 1.93

It will be seen that the only groups which have not shared in the general improvement are the home trade, South America, and the Far East. In the case of the River Plate, homewards, while indications for January and February loading are distinctly better, the average rate for November has been depressed by the acceptance of a few abnormally low freights by ready vessels, particularly from the lower ports. The index for the Far East would have shown a marked improvement but for the weakness in the rates offering for nitrates from the Chilean coast to Europe included in that group. The feature of wheat chartering from Australia has been a strong demand at improved rates for Japan, this business not coming within the index. The relation of the index to the average for 1913 may be seen from the following table:—

Month.	1913 = 100.	1920.	1921.	1922.	1923.
January ..	545.42	..	194.59	..	131.60
February ..	593.90	..	164.54	..	135.76
March ..	588.24	..	162.17	..	135.53

December ..	240.79	..	134.66	..	117.39
Mean for year ..	438.52	..	158.40	..	122.02

Recovery in New Zealand.—Economic recovery in New Zealand, writes our Christchurch correspondent, follows close upon a revival of export prices, and the present outlook is encouraging for all classes of the community, with the possible exception of the secondary manufacturers who are threatened by the importation of heavy stocks of such commodities as boots and woollen goods. The prospect of a favourable season with higher prices for most Dominion products acts generally, however, as a very effective tonic. The banking position as disclosed by the latest returns is very strong and deposits are higher now than they have been since the boom years 1919 and 1920. The advances also have ceased their rapid fall, and the current quarter's returns will probably show them to have increased once more. The following summary table shows clearly the stress and recovery of the last few years:—

September Quarter.	Deposits. Mln. £	Advances. Mln. £
1919 ..	45.4	30.1
1920 ..	53.1	39.0
1921 ..	43.4	48.0
1922 ..	42.0	43.0
1923 ..	43.9	42.8

The general expectation of a good export season is reinforced by lower rates of taxation, and generally by a lowered overdraft rate, so that conditions are generally favourable. Many important businesses, however, especially the co-operative or quasi co-operative meat companies, and, not less, distributing and agency companies, have been forced to readjust their capital liabilities, and in some cases to liquidate. During the boom period many of these concerns not only embarked upon heavy speculative trading, but failed to set aside adequate reserves. The natural result is that many of them, especially in the North Island, where the boom was more pronounced, are in difficult straits. Many private trading concerns must have experienced more or less similar difficulties, but there is a general impression, reinforced by the more favourable turn of affairs, that the worst of the depression is over for them. With the revival of trade and manufacture in Britain, however, and the artificially stimulated export of goods from countries with depreciated currency, the troubles of the protected secondary industries have begun in earnest. The boot industry is perhaps worst hit; but the pressure of competition from Britain becomes increasingly severe in nearly all lines. In the meantime, the increased volume of imports is putting a much more hopeful complexion upon the public finances for the year. For the six months ended September 30th the Customs revenue was £3,373,461, which exceeded by £800,000 the revenue for the corresponding period last year. Moreover, the rate of importing seems to be on the increase, so that it is not an exaggeration to say that a mild import boom is developing once more. It needs only a fall in our export prices in the season 1924-5 for a serious position to develop, as in 1920-1. The position is likely to be rendered more difficult if the Government, yielding to popular pressure, makes the receipt of this extra Customs revenue the occasion of still further reductions in taxation.

The British Spelter Trade.—The British spelter industry has not made much progress since the war came to an end. There has been difficulty in securing skilled labour and also in other respects, and the total output for all 1922 was only 12,507 tons, against 58,298 tons in 1913. Notwithstanding the fact that the industry receives a subsidy from the Government in the shape of Australian con-

centrates at a cheap rate, the present output is not much over 2,000 tons per month, but efforts are to be made during the next year or two to expand this to something like 10,000 tons per month. The parties interested are the National Smelting Company, the Australian Broken Hill Company, the Burma Corporation, the Swansea Vale Spelter Company, the British Metal Corporation, and Messrs Baldwins. The assets to be taken over by the reorganised National Smelting Company will comprise the Swansea works, 4,000,000 Rs.10 shares in the Burma Corporation, and presumably the balance of the Board of Trade contract. Something like £2,000,000 has already been spent on the plant in South Wales, and by the end of next year it is hoped to have a complete plant working that will make Great Britain independent of foreign supplies of zinc. The National Smelting Company will be reconstructed, and there will be an issue of £1,500,000 7 per cent. first mortgage debentures at 99, redeemable in 1945 or earlier. This is taken in metal circles to foreshadow even larger developments in the British zinc industry when the time is ripe. The importance of a full supply of zinc to this country smelted here from Empire ores and concentrates is obvious. The British exports of galvanised sheets are now working up to 600,000 tons per annum, and this large quantity, coupled with domestic needs, calls for something like 125,000 tons of spelter per annum. The United Kingdom imports in 1913 amounted to 121,500 tons, and for the first ten months of the present year 108,500 tons of zinc came in from abroad. The world's production for all 1922 amounted to 650,000 tons, against 980,000 tons in 1913, and Great Britain's contribution of 12,500 tons was quite negligible. The world's visible supply of spelter has been shrinking fast during the last few years, and at the end of last month was not more than 46,000 tons, compared with over 150,000 tons in 1921. The total supplies in this country are returned as 1,390 tons only, with the surplus in the United States down to about 26,000 tons. The Australian and Canadian output has gone ahead very satisfactorily, and last year these two countries produced about 50,000 tons between them. The Belgian production is now about 150,000 tons per annum, and of the zinc ores imported about 100,000 tons per annum are from Australia under an arrangement made with the Board of Trade. This contract expires in 1925, and by that time it is hoped that the British zinc works will be working close up to full capacity. In 1913 the average price of spelter under German control on the London market was £22 15s; last year the average was £29 15s, and current market rates are well over £30. Thus the outlook for the British industry may be regarded as sound, providing the difficulties as regards labour, management, and in other respects can be successfully overcome.

The British Overseas Bank.—A recovery in profits is revealed in the accounts of the British Overseas Bank, Limited, for the year ended October 31, 1923, and earnings of £100,968 are recorded for the period. A year ago profits were shown of £75,287, as against £102,326 for the previous twelve months. The customary dividend of 6 per cent. is paid on the "A" ordinary shares, while £30,000 is allocated to reserve and depreciation, £68,782 being carried forward, as compared with £57,813 brought into the accounts. Changes in the balance sheet are interesting, but allowance must be made for the absorption of the business of the London and Liverpool Bank of Commerce, hence to what extent progress has been made is not clear. The most marked improvement is that of the bank's acceptance business. A year ago this was recorded at £932,421; to-day it has expanded to £2,081,956. Deposits are up from £1,511,511 to £1,712,067. To provide against currency depreciation in connection with shareholding interests in foreign banks, reserves have been increased. Shareholding interests of this nature amount to £50,445, against which a special reserve has been created amounting to £45,000. Cash, in hand and at bankers, is fairly normal at £339,326, but "money at call" has risen from £1,019,431 to £1,330,000. Advances are down from £905,075 to £757,962. It is not surprising to learn that the bank proposes to revise its control machinery. It is quite conceivable that the dual control of the "Governing Council" and a "Board

of Directors" was found to be troublesome, but it is possible that in its early days the prestige given to the undertaking by the names constituting the Governing Council played a very important part in the development of the undertaking. Now it is proposed to manage the company by a board of directors consisting of not less than seven or more than 15 directors. Obviously, the new proposal is one which makes for more efficient control, and shareholders should support it.

P. and O. Results.—The report of the Peninsular and Oriental Steam Navigation Company for the year ended September 30th last shows a very substantial improvement in the "net result," which at £1,013,200 (after providing an unstated amount for depreciation and adding £105,800 to the insurance fund) compares with £696,700 twelve months ago. As we have protested many times in the past, the presentation of a profit and loss account of this nature is of little value, and entirely fails to give the shareholder a true idea of his company's position. It is such unfortunate examples as these which emphasise the urgency of reform in the matter of company accounts and the necessity for the compulsory disclosure of more information to shareholders. A summary of the published figures for a few years past is appended:—

	YEAR ENDED SEPTEMBER 30TH.					
	1914-15.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.

	269,681	384,027	508,668	431,100	431,102	431,102
	(15 %)	(12 %)	(15 %)	(12 %)	(12 %)	(12 %)
Carried forward.	78,182	115,230	111,938	100,305	101,799	101,873

The issue of £3½ millions in 5½ per cent. debenture stock has increased the amount required for debenture interest by £245,000. The reserve for redemption of this stock takes £123,000, and £10,000 is transferred to Provident Good Service Fund. After payment of the preferred dividend, and 12 per cent. as before on the deferred stock, the balance carried forward is practically unchanged. The balance-sheet, which is analysed in a later column, is still open to criticism for its lack of candour. It is true that a year ago the absurdity of one single composite item on the credit side went by the board, and five separate items were substituted. Of these latter, however, two account for nearly £25 millions out of a total of £26 millions. The one which stands most in need of analysis is one of £12½ millions, which includes sundry investments (less loans), cash at bankers and in hand, and debtors. It is true that directors of the large companies of the country began to set an example of greater frankness instead of publishing figures which obscure rather than reveal the position of affairs. We are interested to observe that the auditors' report does not include the usual formula, to the effect that the balance-sheet is properly drawn up so as to exhibit a true and correct view of the state of the company's affairs, &c.; they merely say that they find the balance-sheet and accounts to be correct. In their report the directors describe working conditions in all spheres of the company's operations as "very difficult during the past twelve months," while the outward trade business is said to be "still very poor." Passenger business has been satisfactory, the earthquake, however, in Japan "has affected the company's business there, but the resource of the Japanese people is such that already business in Yokohama has been resumed. The value of the fleet in the balance-sheet has been reduced from £12,633,300 to £12,014,500, although the tonnage has been increased from 556,709 to 651,610 tons.

Coats' Year.—Although most of us would prefer to have more information concerning the inner working of the big undertaking known as J. and P. Coats, yet we suppose that if we voice our complaint too loudly we may be met with the reply that the trend with other companies is to give less information and not more. The company has had an excellent year, and the distribution on ordinary capital of 17½ per cent. is maintained. As the profit is not so large as that of a year ago, there is no allocation to reserves, and the amount carried forward is £402,617, as against £423,908 brought forward. The following table shows how profits have been distributed since 1906:—

Year ended June 30.	Net Profit After Depreciation, &c.	Interest.	Dividends and Bonus.	Pension, Insurance Fund, &c.	To Reserve, &c.
	£	£	£	£	£
1906	2,974,088	36,642	1,972,821	294,629	450,000
1907	3,056,125	19,680	2,206,642	175,963	500,000
1908	2,701,697	19,394	2,193,403	6,588	500,000
1909	2,917,667	19,399	2,427,402	32,522	500,000

The most satisfactory aspect about this table is, perhaps, the fact that war-time profits were not extraordinarily large when it is considered that the directors can practically control the market for the company's production. It may perhaps be thought that a more cautious policy could have been followed, and reserves built up yet further. The decision of the directors to pass over reserve this year may be taken as implying an opinion that the time has arrived when further building up of reserves is unnecessary. As matters stand, the total assets of the company are approximately £31½ millions, against which there is a dividend reserve fund of £2,100,000 and a war contingencies fund of £3,000,000. There is also a minor reserve item, depreciation of investments account, £81,607. The auditor's statement points out that "certain assets whose value has been largely affected by war and subsequent conditions remain at book value," and add that "against probable loss on these, however, the war contingencies fund has been established." Thus it is impossible to draw any correct conclusion from reserve figures as given in accounts. The balance-sheet is impressive, but from the way in which items are mentioned we would suggest that the time has arrived for an overhaul. The first item of assets reads, "By capital expenditure, including the original purchase price of the goodwill and business in 1890; the expenditure in carrying out the arrangements with other companies; shares acquired therein and permanent loans to those companies; also investments in shares of other subsidiary companies, as per balance-sheet of June 30, 1922, £13,976,552." Surely it would not prove very difficult for the directors and auditors to bring this item more up to date, and let us know of what the actual assets consist. Additional shares in subsidiary companies and other capital expenditure for the year ended June 30th last is returned at £1,821,801. Stocks are down from £5,948,192 to £4,376,148. Debtors remain fairly steady at £2,353,772. The last item on the credit side of the balance-sheet is the substantial sum of £6,818,880, consisting of advances to subsidiary companies. This compares with £7,539,436 a year ago. The issued share capital amounts to £20,250,000, and comprises 250,000 6 per cent. preference shares of £10 each, 3,000,000 6 per cent. "B" preference shares of £1 each, and 14,750,000 ordinary shares of £1 each. In the following table we

show how these shares have fluctuated in the past three years, together with latest price and current yields:—

	Prices, 1921.		Prices, 1922.		Prices 11 months, '23.		
	Hgst.	Lwat.	Hgst.	Lwat.	Hgst.	Lwat.	Present Price.
Coats, J. & P., Ord. £1	2½	2½	3½	2½	3½	3½	£ 5 8 d
6% Cum. Pref. £10	10½	8½	12½	10½	12½	11½	5 7 3
6% Cum. "B" Pref. £1	1½	1½	1½	1½	1½	1½	4 18 0

It may be recalled that in 1919 the capital was increased from £10,000,000 to its present amount, so that any further increase in the near future is unlikely, especially with profits showing a decrease.

Philanthropy and 5 per Cent.—A year ago the First Garden City, Limited, raised its dividend from 2½ per cent. to 4 per cent.; now, with a further increase in its profits or income it feels able to pay for the first time the maximum dividend of 5 per cent. permitted by its memorandum. Nineteen or twenty years seems a long time for the ordinary shareholders to wait before getting a modest 5 per cent., though, doubtless, such a rate would have seemed an excellent yield in 1903. Net profits show an increase of £2,709 over those of 1921-22, but a part of this gain is due to the board's sound policy of redeeming the debentures; some holders of the original 4 per cents have been exchanging them into 5 per cent. preference and ordinary shares, so that the share capital is larger and the debenture issue smaller than a year ago. Still enough is left to set aside £500 for the staff pensions fund, and to raise the carry-forward. With such good results the directors, who worked until 1918 without remuneration, think that their fees might now be raised. The First Garden City was necessarily a pioneer, and had to pay for its experience; later imitators have profited by this experience, but Letchworth has the advantage of having raised all its capital (except some £44,000 of 7 per cent. debentures, issued in 1920) at rates between 4 per cent. and 5 per cent., while all the earlier expenditure was made when labour and materials were cheaper than they have been since 1914.

Van Ryn Gold.—Our mining correspondent writes:—Not so long ago this undertaking, which entered the dividend list in 1895 and has made regular half-yearly disbursements since 1904, was regarded as one of the dying mines of the Rand. Of late there have been two developments which afford ground for a changed view of the future. One consists in the increased use of what is known as reclamation rock. This material has not only been opened up in past years; being of low grade, it is disregarded in computing the ore reserve tonnage, for which also no credit is taken in the balance-sheet. The more reclamation rock can be utilised, the longer will the mine last. In the year ended June 30th, 1923, nearly 40 per cent. of the ore treated came from this source, as against barely 24 per cent. in 1918-19. The second factor consists in the discovery in one section of the property of what in some quarters is thought to be a new reef. So far as opened up at the date of the advice, it carried values above the general average of the mine; and should it prove to continue, the "life" prospect would be materially affected. At the meeting to be held next Wednesday the chairman is expected to make a statement on the subject; it is awaited with much interest. With regard to the financial outcome of last year's operations, these naturally show an advance upon the results of 1921-22, when the labour trouble took place. The dividend total of 15 per cent. is the same as for both 1919-20 and 1920-21. In market circles it is thought that the distribution for the current half-year may be raised to 10 per cent. It is noteworthy that last year's costs averaged rather under 20s per ton, as compared with 25s 9d in 1920-21. This has an important bearing on the future.

Tin Mining Results.—The shareholders in quite a number of tin-producing companies have, during the past week or so, been made acquainted with the progress of affairs, either by the issue of annual reports or the declaration of dividends. Of the concerns operating in Northern

Nigeria, the Bauchi, in the year ended June 30th last, secured a somewhat increased output at a lower ratio of cost, with the result that after providing for depreciation, interest, &c., there was a net profit of £27,100, as against a small loss for the preceding period. However, the cash position did not permit any distribution, even on the preference shares. The reserves are placed at the slightly reduced total of 8,780 tons. An important factor in the future of this company is the hydro-electric power scheme, work upon which has for some time past been in abeyance. It is, therefore, satisfactory to learn that financial arrangements have been made for the completion of the installation. On the Naraguta, tin-winning was restricted, but the improved price secured for the metal, in conjunction with reduced expenses, enabled a profit of £17,700 to be made, in place of £4,100 in 1921-22. The cash position, although better than before, being none too strong, only 5 per cent. (absorbing £6,600), is to be paid in respect of the past year; but this will be supplemented by an interim distribution of like amount. The limited amount of exploratory work so far undertaken on the gold areas has not been attended with any very conclusive results. The directors of the Champion Tin Fields have rather a poor story to tell, the brightest spot relating to the results on some mining leases and alluvial ground taken up for gold. The Ex-Lands has declared an interim dividend of 10 per cent., tax free, comparing with 15 per cent. for the whole of last year. As regards Malayan enterprises, the Tin Dredging company of that name and the Southern Perak—whose affairs were commented upon in a recent "Note"—have declared dividends of 1s apiece; the Ipoh is paying at the increased rate of 9d per 16s share, while the Rambutan will disburse the usual 8d. In the Cornish group the Geevor has—somewhat belatedly—issued its accounts, which are made up to March 31st. Thanks to recovery of income-tax, a small credit is carried forward. For various reasons the next statement should make a better showing. The company has a large holding in the reorganised Levant undertaking, whose returns are expanding.

The Salvador Railway.—Increased traffic, lower working expenses, and the settlement of the claim against the Salvador Government for arrears of subsidy prove that this railway is recovering the prosperity it enjoyed at the outbreak of the world war. The report for the year ending with last June states that the receipts were £206,927, against £177,747 in 1921-22, the expenses £136,389, against £142,404; so that the profit—£70,538 against £35,343—is nearly doubled. The working expenses were 66.48 per cent. against 81.01, the actual passenger earnings constitute a record. The goods carried increased by 23,170 tons, or 31.48 per cent.; the goods receipts by £25,607. The arrears of subsidy, paid within the last few days in "A bonds" of the new American loan, will be included in this year's accounts, and will probably extinguish the debit balance on the net revenue account. The coffee carried increased by 907 tons, the sugar by 8,953 tons; the tonnage of imported merchandise by over 50 per cent., and much of the traffic previously diverted to competing road routes (chiefly from the vicinity of the capital to the port of La Libertad) has been recovered by the revised tariff rates. Since March the country has quieted down after the Presidential election campaign, and the new Government seems stable. The prospects for coffee and sugar are promising, but development of some of the many other resources of the country has long been advocated, and an attempt is now being made to grow mulberry trees and rear silkworms, as it is held that the climate will permit of a greater number of crops annually than that of Japan, and that Salvador and the Pacific slope of Guatemala are better suited for it, owing to the abundance of labour, than any other districts in Central America.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, Northumberland avenue, W.C. 2, on Tuesday, December 11, 1923, at 8.30 p.m., when a paper on "British Rule in India—What it has Achieved" will be read by Sir William Vincent,

K.C.S.I. The Right Hon. Viscount Peel, G.B.E., will preside.

THE third of a series of lectures on the Problem of London Traffic, the Financial and Municipal Problem, will be given by H. H. Gordon, A.M.Inst.C.E., on Thursday, December 13, 1923, at 5.30 p.m., at the London School of Economics. The lecture is open to the public without fee.

Oversea Correspondence.

UNITED STATES.—TAX REDUCTION PLANS—COTTON GINNING—PANAMA CANAL.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 26.

SELDOM has any proposed national legislation received such widespread popular approval as Secretary Mellon's recommendation for a sweeping reduction in income-taxes and surtaxes. For a long time he has consistently advocated such a reduction, but it was not until recently that the full scope of his proposal became known through the publication of a letter to Acting-Chairman Green, of the House Ways and Means Committee, in which he submitted a comprehensive plan of tax revision for the consideration of the committee at the forthcoming session of Congress. His suggestions received instant and hearty endorsement from financial and business interests and the public generally. The reason is plain. The reduction would directly benefit all classes who pay income-taxes and surtaxes. Furthermore, as head of the Treasury Department, Secretary Mellon has shown rare ability, good judgment and foresight in handling the nation's finances, and therefore enjoys the public's confidence to a marked degree. His recommendations are the result of a careful study of the possibilities of tax revision and of simplifying the existing law. He calls attention to the fact that each of the fiscal years 1922 and 1923 ended with a surplus exceeding \$300,000,000. That result was accomplished, he says, only through the utmost co-operation between the President and Congress and executive departments in an effort to curtail Governmental expenditures, together with a substantial realisation upon securities and other assets remaining after the war, and Customs and internal revenue receipts larger than originally expected. Results achieved through the establishment of the budget system encourage the hope, he declares, that during the current fiscal year the Government's expenses can be reduced to about \$3,500,000,000, of which some \$500,000,000 will consist of fixed charges for sinking fund and other debt retirements. Such reduction would involve the most rigid economy in all directions. If such a course be followed, Secretary Mellon estimates that for this fiscal year, and for the ensuing four or five years, the Government's surplus should exceed \$3,000,000 over all expenditures chargeable to the ordinary budget, including the fixed debt payable with ordinary revenue, thus leaving a reasonable margin for tax revision and tax reduction. Accordingly he makes several suggestions, the adoption of which would mean a net estimated decrease of \$323,000,000 annually in taxes. With respect to income-taxes, his recommendations include a reduction of 25 per cent. in the tax on earned income, which would cause a loss in revenue of some \$97,500,000 a year, the greater part of the decrease being in the lower income-taxes; the reduction of normal income-taxes from 4 per cent. and 8 per cent. to 3 per cent. and 6 per cent. respectively, involving a loss of \$91,600,000 annually, and the decrease and readjustment of surtaxes by beginning their application at \$10,000 instead of \$6,000, and scaling them progressively upward to 25 per cent. at \$100,000, which, he figures, would mean an immediate loss of about \$102,000,000 in revenue. The Secretary also proposes to repeal the tax on telegraphs, telephones, and leased wires, thereby losing approximately \$30,000,000 a year, and the tax on theatre tickets, which would cause a loss of \$70,000,000 in revenue. Secretary Mellon, on the other hand, urges that

deduction of capital losses be limited to 12½ per cent. of the loss. He would also limit deductions from gross income for interest paid during the year and for losses not of a business character to the amount by which the sum of those items exceeds the tax-exempt income of the taxpayer. The adoption of those recommendations and one or two others, it is estimated, would increase revenues by about \$68,000,000, leaving on balance a net decrease in taxation, as indicated, of approximately \$323,000,000 a year, without considering miscellaneous taxes which are of minor importance in their bearing upon general revenue, though a source of inconvenience and annoyance to taxpayers; such taxes are difficult to collect and may be eliminated. Mr Mellon also suggests amendments to strengthen the law, to do away with methods resorted to by some people to reduce or avoid tax payments, and to simplify the administration of the law.

The Census Bureau's latest report, showing 8,368,683 bales of cotton ginned to November 14th, as compared with 8,869,851 at the same date last year, seems to bear out predictions that this year's crop will be well below the Department of Agriculture's forecast, made on November 2nd, of 10,248,000 bales. The census returns indicate that, in order to reach the Department's estimated total yield, more than 1,800,000 bales must be ginned after November 14th, which is considered wholly unlikely. The amount ginned this season between November 1st and 14th was only a few thousand bales more than in the corresponding period a year ago, namely, 802,000 bales, approximately, as against 730,000 in the first half of November, 1922. The ginning figures now at hand completely dispose of the theory advanced in some quarters that the small ginnings were due to the lateness of the crop and to bad weather, because weather conditions since November 1st have generally been more favourable, and the total ginned in the period mentioned showed only a slight gain over a year ago. It is now quite evident, therefore, that the comparatively small amount ginned is due to a short crop. Many authorities are more convinced than heretofore that the yield will not exceed 10,000,000 bales, and not a few predict that the final figures will show a crop not much above 9,500,000 bales. The Department of Agriculture is expected to publish its final estimate of this season's crop on or about December 12th. Naturally, the Census Bureau's report was construed in the cotton market as distinctly bullish, and under heavy buying by speculative and trade interests prices of future options soared to new high levels for the year, December rising to 35.75 cents a pound.

New high records in operation and financial returns of the Panama Canal are shown in Governor Morrow's report for the fiscal year 1923. Net profits from all sources, excluding the Panama Railroad Steamship line, amounted to \$12,063,880, an increase of \$2,862,267 over the preceding fiscal year. Net income from tolls and miscellaneous receipts classed as transit revenue aggregated \$10,001,066, as against \$3,466,674 in 1922, while net profits from auxiliary operations increased from \$323,259 in 1922 to \$1,140,642 in 1923. The Panama Railroad Company, excluding steamship operations, showed a profit of \$922,171, as against a loss of \$710,301 in 1922. The number of commercial transits increased from 2,736 in 1922 to 3,967 in the past fiscal year, while the net tonnage rose from 11,417,459 tons to 18,605,786; the cargo tonnage rose from 10,881,910 to 19,567,875, and the tolls from \$11,197,832 to \$17,508,199. The tremendous growth in operations and income is attributed chiefly to the greatly increased movement of California oil through the canal following the development of oilfields in the southern part of that State. The United States carried 56.5 per cent. of the cargo that passed through the waterway, its vessels increasing in number from 1,095 to 1,994. British vessels carried 25.2 per cent. of the total cargo. The most conspicuous gain was in the United States inter-coastal trade, in which the traffic showed a gain from 2,562,527 to 8,068,553 tons. There was also a marked increase in trade between the United States and the west coast of South America, the cargo moving in both directions expanding from 793,123 tons in 1922 to 2,954,523 in 1923.

Automobile production in this country continues at a record pace for this season of the year. The October output of passenger automobiles and trucks totalled 365,107,

as compared with 327,543 cars and trucks in September and 345,202 in August. While last month's total was exceeded in April, May and June, the October production was only 7 per cent. below the peak reached last May, and was 52 per cent. greater than in October of last year. The output for the ten months ending with October was 3,395,478 cars and trucks, representing an increase of 31 per cent. over the entire production for 1922, and double the output for 1921. The continued manufacture of automobiles on such a big scale means heavy purchases of steel and other materials and products used by that industry; it also means increased consumption of gasoline.

FRANCE — RUHR AGREEMENTS — TRANSPORT — REPARATIONS COAL — IRON AND STEEL.

(FROM OUR CORRESPONDENT.)

PARIS, December 5.

AN official declaration was issued by the French Foreign Office last night, announcing that the two Governments occupying the Ruhr—the French and Belgian—have decided to reinstate and pardon forthwith those persons who have been expelled and sentenced, and that on December 10th (next Monday), according to an agreement that was signed at Mayence on Monday, passive resistance will be regarded as having formally come to an end, provided that by that date work has been effectively resumed in the factories and mines, and the agreements with the Reich for the future exploitation of the railways in the Rhineland and the Ruhr have come into operation. That the Franco-Belgian authorities fully believe these two contingencies are actually in course of fulfilment is evident from the fact that the redistribution of the troops of the occupying forces, with a view to a return to the conditions of the "invisible occupation" that prevailed when the French and Belgians first entered the Ruhr, has already actually begun. This diminution of the visible presence of the occupying forces, it will be remembered, the Franco-Belgian authorities, through the mouths of the Prime Ministers of the two countries, have repeatedly, during the past six months, promised to carry out as soon as passive resistance should cease, and they are now honouring the word they have given. The week's developments give every ground to believe that at last a sound foundation has been laid upon which there is every reason to hope a satisfactory means of securing reparation payments may be based.

The transport situation in the Ruhr—the improvement in which was a necessary corollary to the effective conclusion of agreements for the resumption of production—may now be regarded as for all practical purposes satisfactory. M. Bréaud, the director of the Franco-Belgian *régie* under which the railways in the occupied area are now being operated, stated yesterday that the lines can now meet all demands for transport that are likely to be made upon them, and that before long he can guarantee they will be in a position to handle as much traffic as before the occupation of the Ruhr began. When it is recalled that it took the French railways over a year to get over the disturbances caused by a three weeks' general strike in 1920, this statement may possibly err on the side of being too optimistic. The Ruhr railways are a much more complex proposition than the French lines that were affected by the 1920 strike, and when comparisons are being made it must not be overlooked that the German railwaymen have been continuously on strike (quite apart from the serious *sabotage* that has been committed) not for three weeks but for ten full months.

The figures quoted by M. Bréaud, however, for the purpose of demonstrating the foundation of his optimism are remarkable. On April 10th, when the *régie* first took the lines in hand, the traffic consisted of sixty loaded wagons and 1,000 passengers, the number of train-miles run totalling only 18,000, while the traffic receipts amounted to only 22,000f. At that time the *régie* had at its command only 12,500 French and 2,500 Belgian railway men, with which to replace 170,000 German strikers, and to most practical railway experts the task it had set itself appeared to be an impossible one. By October 15th,

however, the daily traffic had increased to 3,000 loaded wagons, representing a transport of 46,000 tons of goods, while trains running 47,000 train-miles a day were carrying 150,000 passengers, the total traffic receipts representing 500,000f a day. With the progressive reinstatement of the German strikers, which began on October 19th, these figures began to rise rapidly until on December 1st (last Saturday) 7,000 goods wagons were recorded as having moved 100,000 tons of merchandise during the 24 hours, the train-miles run amounted to over 78,000, and the cash receipts to 1,500,000f, while the number of passengers carried (which could not be expected to be to an equal ratio, in view of the large amount of unemployment still existing) was 180,000.

These figures, M. Bréaud insists, show that the *régie* is now coping single-handed with approximately one-third of the normal traffic, and he asserts that it is even now in a position, if circumstances demand it, to meet double the demands that were made on it last Saturday. In the Rhineland, as distinct from the Ruhr, traffic has been restored to within measurable distance of the normal.

Figures published here indicate that out of total stocks of 3,435,000 tons of coal that were seized in the Ruhr, 2,170,000 tons have been sent into France and Belgium, leaving 1,265,000 tons yet to be removed. These stocks, under the recent agreements, are to remain in Allied possession, and will be shipped at the rate of 15,000 tons a day, 10,000 tons coming to France and the rest to Belgium. Out of the 2,500,000 tons of coke seized, 810,000 tons is still available for shipment, and will be cleared at the rate of about 6,000 tons a day, 4,400 tons coming to France and 1,000 going to Luxembourg. From the mines that are being directly operated by the Allies, France will (for the time being, and until the pending agreements come into force) receive 10,000 tons of coal per day (of which 6,000 tons will be used to make coke), 4,400 tons of coke, and 2,300 tons of lignite, plus 1,200 tons of coke and 4,500 tons of coal produced daily by the last three mines seized. Altogether, apart from deliveries assured by the recent agreements, this country estimates to receive from these sources 11,300 tons of coal and 8,800 tons of coke per day (equivalent to 23,300 tons of coal). The agreements made with the Ruhr coalowners provide for 18 per cent. of the total output of the mines to be delivered to France and Belgium, who should thus receive, out of a total output of about 70 million tons a year (after deducting local requirements), some 12,600,000 tons per annum, or over 30,000 tons a day. The Reparation Commission's plan provides for France alone to receive 770,000 tons of coal per month, or 25,000 tons a day (either entirely in coal or partly in coal transformed into coke). France would also receive 600,000,000f, under the new agreements, as her share of coal taxes in arrears, plus 350,000,000f from the sale of products that have been seized owing to non-payment of the tax and of fees for export licences. Finally, her share of the revenue to be derived from the tax on the free production of coal would be about 780,000,000f a year.

The iron and steel production figures issued by the Comité des Forges for the month of October show that the French metallurgical industry has now more than recovered from the setback occasioned by the occupation of the Ruhr. The October figures, in fact, are not only higher than any recorded since the last complete month before the beginning of the occupation, but are the highest achieved since the armistice. The output of iron during October totalled 514,230 tons, as compared with 481,877 tons for September, or an increase of 32,353 tons on the month, and of 942 tons on the output for December, 1922, the last month of normal production. The output of steel during October amounted to 476,696 tons, an increase of 30,216 tons as compared with September and of 62,099 tons more than the output for December last. The output for the liberated portion of Lorraine alone was, so far as iron is concerned, 181,840 tons (as compared with 185,000 tons in January last), while steel was returned as having been 157,537 tons, or 9,623 tons more than in December last. The number of blast furnaces in operation throughout French territory on November 1st was 116 (as compared with 111 on October 1st and 77 on April 1st), or the same number as on January 1st last.

(FROM OUR CORRESPONDENT.)

BERLIN, December 4.

THE Cabinet crisis has been for the moment solved by creation of an administration under the Centre party leader, Dr Wilhelm Marx, with Dr Stresemann as Foreign Minister, and several of the other Ministerial posts unchanged. Neither the Socialists, nor their alternative, the German-Nationals, whose plan to replace the present semi-Socialist Prussian Cabinet with an entirely "bourgeois" Cabinet failed, are in Herr Marx's Cabinet, which has therefore no majority. The two opposition parties have so far not clearly declared themselves. Benevolent neutrality from either would save the Cabinet.

A new "Empowering Law" has been prepared authorising the Cabinet to legislate by mere decree, like the "Empowering Law" obtained by Dr Stresemann, but with some important differences. The Stresemann law authorised dictatorship only in financial, economic, and social questions; the new Bill authorises the same dictatorship in all questions, but whereas the earlier law permitted Dr Stresemann to issue valid decrees which violated the Constitution, the new law does not give this authority, so that Herr Marx could exercise only the powers normally enjoyed by the Reichstag. Further, under the new law decrees can be revoked only by two repeated votes of the Reichstag. To pass this new Empowering Law, which, like its predecessor, is an amendment to the Constitution, a two-thirds Reichstag majority is needed; if this majority cannot be had, the Reichstag will probably be dissolved. Undoubtedly in the present rapidly-changing conditions, and in view of Reichstag slowness, something like an Empowering Law is necessary, and on the whole Stresemann's test with his law succeeded; but such a system of government, differing from an unconstitutional dictatorship, requires Parliamentary support if it is to work well; and the initial difficulty—the absence of coherent majorities—which makes Empowering Laws necessary is not wholly overcome by them. Indispensable legislature is, indeed, hastened, but even for this the Reichstag, being armed with revoking power, must be friendly or at worst passive.

The finances continue to be in a hopeless condition; and as the provisional Rentenmark currency reform, which is at best doubtful, cannot possibly succeed without Budget balancing, the general situation is gloomy. The Finance Ministry's decade report for November 10-20 is delayed, it is believed intentionally, owing to its very bad figures. The preceding decade report showed, as already reported, expenditure exceeding by much more than 1,000-fold the revenue from taxes. Figures for the first half of the financial year (April-October inclusive) show that only about 1-700th of expenditure was covered; but this figure misrepresents the more favourable earlier period, the enormously-increased absolute totals of the last few weeks having swamped entirely the earlier small totals.

	6,970,068,364,152

The increase shown in the Funded Debt, which fell to a low point of 64 milliards last year, is due to the Gold Loan, which is booked above in paper marks. The tricks accomplished by currency depreciation are well illustrated by the fact that the (present) value of the 1,089 millions, all the interest paid on Funded Debt in six months is about 1-100th of an English penny. The swamping of the earlier months is shown by the fact that of the above 6,970,068 billion marks expenditure, 6,553,521 billions were spent in one month, October. In October thirteen taxes, including such important items as the spirits monopoly, interest-and-dividends tax and property tax yielded less than £5,000 gold. Some of these taxes, including the interest-and-dividends tax, which yielded 5s, are being abolished.

The currency question late last week took a new turn through a considerable price fall. As the foreign exchanges in Berlin have been kept stable since November 20 at 4,200 milliards to the dollar, a sudden wave of optimism regarding the paper mark rose, being increased by the rise in the (mainly nominal) mark quotations abroad. The new movement is so striking that newspapers have described it as "Flight from the Dollar." It was started by an optimistic Press statement, pointing to a coming rise in the paper mark as a result of its coming scarcity, from the Reichsbank's vice-president; and the boom is being helped by the fact that, owing to an increased supply of Rentenmarks, conversion of paper marks into Rentenmarks is to-day actively going on. The police, by doubtful measures, are trying to help; they fix maximum prices, threatening to close the shops of offenders. Illogically, and contrary to the official doctrine that the paper mark is convertible into the Rentenmark, the police compel shopkeepers to charge cheaper prices when they are paid in Rentenmarks, and not paper marks, this though the exchange of paper marks and Rentenmarks—1 to 1 billion—is unchangeably fixed via the paper mark dollar exchange. This practice is only an instance of the general currency confusion. In reality (at any rate, before the new price fall) those officials who received their salaries in Rentenmarks agree that they have suffered worse than ever under the new Rentenmark system, the reason being that whereas the Government insisted that the Rentenmark was a goldmark and fixed salaries accordingly, all sellers of goods, by charging monstrous goldmark prices, repudiated the doctrine that the Rentenmark was a real goldmark. Even since the price-fall a Rentenmark, supposed to be 1s gold, or its official equivalent 1 billion paper marks, will not buy more than about 8d in England, so that the Rentenmark's depreciation remains, though for the moment it is lessening. Some sellers persist in preferring the "gold loan" currency to the Rentenmark, without any known reason except that the gold loan notes, which bear a promise to redeem in paper on the back, bear the words "gold" and "dollar" on the face.

In connection with the price-fall and the mark rise abroad, the "black bourse" or "bootlegger" (free but illicit) rate for sterling, which once was around 35-40 billions, has fallen to about 23 billions. About the Rentenmark official confidence continues. The Rentenbank assures the public that in Zurich the Rentenmark is quoted above par, in other words, is considered better than the dollar. Up to December 1 about 700,000,000 Rentenmark had been printed, 680,375,000 Rentenmark being delivered to the Reichsbank for distribution. Not all are yet in circulation. The Reichsbank, in its accounts, treats the Rentenmark exactly as it treats foreign exchange, booking it at its paper mark value, and dealing in it only for others' account. Later the Reichsbank may open a special Rentenmark department.

While at best the Rentenmark can hardly be raised in buying power to its theoretical value of 1 goldmark, dangers threaten it from various sources. One danger is the continued output of local emergency money, also all "stable value"; but also (except in Hamburg) unstable in the fact that it began life with a variable buying power, and afterwards depreciated, but also later, owing to the new price fall, appreciated. The "Frankfurter Zeitung's" wholesale index number (basis 1 in 1914) on November 29 was 1,617,100,000,000 against 49,071,500,000 on November 1. "Gold prices" on November 29 were 61.71 per cent. above those of 1914; but this calculation is based on the entirely meaningless official gold (dollar) exchange.

An index for food products shows that on November 29 wholesale prices (1 in 1914) were 2,045,800,000,000 fold, or in gold (official exchange again) slightly over 100 per cent., those of 1914, whereas retail prices were 2,389,500,000,000, or nearly 140 per cent. During the past years of mark decline, wholesale prices compared with 1914 were naturally always much higher than retail; but since "goldmark" calculation began retail prices have been higher than wholesale. This is due to the fact that the wholesale trade largely works with real foreign currencies, whereas the retail trade, using "goldmark" calculation but being paid mainly in paper marks, imposes enormous "risk premiums" to protect itself against possible paper mark falls.

ITALY.—PRICE VARIATIONS—GOOD CROPS AND VINTAGE—COST OF LIVING RISING—WORKING-CLASS SAVINGS AND UNEMPLOYMENT—THE NEW REGULATION OF THE PUBLIC SERVICES.

(FROM OUR CORRESPONDENT.)

TURIN, November 24.

AVERAGE wholesale prices have remained fairly stationary recently, as Bachi's index numbers show:—

(1920 = 100.)

	June, 1921.	Oct., 1921.	May, 1922.	April, 1923.	July, 1923.	Oct., 1923.
Vegetable foods.....	97.0	115.8	106.3	110.6	103.8	93.6
Animals.....	100.5	128.5	93.9	113.6	103.5	109.7
Chemicals.....	63.4	74.6	67.3	69.6	68.0	67.2
Textiles.....	45.8	75.6	65.7	83.0	84.5	89.2
Minerals and metals.....	60.4	64.1	57.1	65.5	64.9	65.1
Building materials.....	101.6	90.9	78.5	83.4	84.0	84.0
Miscellaneous vegetables.....	95.0	114.4	96.4	128.1	101.0	101.2
Miscellaneous manufactured.....	90.4	94.2	87.9	93.2	96.9	97.9
General index.....	81.5	95.9	83.3	94.2	90.6	90.2

The selected figures, up to April, 1923, are those of the highest and lowest average index numbers. Despite the stability of prices in general, particular variations are startling. Vegetable foods and miscellaneous vegetables have fallen most, owing to the excellent crops of this year. The wheat yield is estimated at 61 millions quintals, as compared with 38, 52, and 44 millions in the years 1920, 1921, and 1922 respectively. Internal prices of wheat have therefore fallen below the parity of foreign imported wheat. Imports can only be effected at about 110 lire per quintal, while home wheat is selling at 85, to the great discomfiture of the Italian producers. The cry for protection is again heard, curiously enough, though protection could only raise the cost of the imported commodity higher than 110 lire, while the internal price refuses even to reach the present parity. The vintage was also very good. Against 31.9 and 35.6 millions hectolitres of wine produced in 1921 and 1922, production this year is variously estimated at between 45 and 55 millions. Grape prices have been enormously reduced, the general average price at Casale, one of the most important markets in northern Italy, now standing at 77.6 lire, as compared with 173.7 last year.

Cost of living has not felt, as yet, the beneficial effect of favourable crops. Index numbers of the cost of living in Turin of a working family of two parents and three sons, taking the average for the first half of 1914 as 100, is as follows:—

	Food.	Clothing.	House Rent.	Heat and Light.	Miscel. laneous.	General Index.
January, 1920..	351	327	100	407	345	319
July, ..	409	479	100	415	456	384
January, 1921..	513	547	100	527	514	467
July, ..	446	411	100	354	537	405
January, 1922..	524	454	120	435	591	466
July, ..	487	433	120	365	584	437
January, 1923..	499	433	120	423	574	446
February, ..	484	435	120	428	574	438
March, ..	481	437	120	423	574	436
April, ..	488	437	120	394	574	438
May, ..	493	437	120	370	574	440
June, ..	501	441	120	366	577	445
July, ..	498	434	200	376	580	454
August, ..	509	450	200	406	577	464
September, ..	506	450	200	437	577	464
October, ..	504	450	200	447	577	463

The rise in the cost of living, which has taken place since July, has two main causes; the rise in house rents, which came into force on July 1st, when the system of free bargaining, with the right of appeal to judicial arbitration, was substituted for legislative restriction, and the rise in coal and wood due to the stoppage of German reparation deliveries.

Perhaps as a consequence of the persistent high cost of living, the increase in saving deposits is slowing down. The deposits of the ordinary savings banks, which were 2,727 millions lire on December 31, 1913, rose to 9,294 millions in December, 1922, and went to 9,896 millions by January 31, 1923, owing to the capitalisation of interest due to depositors for the year 1922. At June 30th last the sum was 10,107 millions, an increase of only 2 per cent. in the five months. On the other hand, the public pawn offices recovered the customers lost during the war, and in the immediate post-war years. The number of new pawn-loans was 1,071 in December, 1921, while loans totalled 146.6 millions lire. In the months of December, 1922, and August, 1923, the numbers had risen to 1,177 and 1,337 respectively, and the sums loaned to 176.4 and 199.6 millions lire. Unemployment is, however, diminishing; 270,214 at April 30th, 243,928 at May 31st, and 216,287 at June 30th. The only exception to the decrease is the chemical industry. The greatest unemployment to-day is in Lombardy, with 44,184 unemployed, while the lowest is in Basilicata with only 76. The working-world seems thus to be passing through the hard times of high prices and high costs of living, perhaps with some inroads on past savings, but with a noteworthy measure of success in the main.

The most important piece of legislation in the current month was the Royal decree of November 11, 1923, on public service rearrangement. All categories of public servants, excepting railway men, are comprised in the regulation. The number of public servants was as follows:—

	1914.	Present Numbers.		New Regulations.
	A	B	C	D
Civil servants.....	103,643	136,012	115,501	110,467
Military commissioned officers.....	18,178	22,986	24,609	22,866
Non-commissioned military officers.....	28,523	47,943	44,072	48,638
	150,344	206,941	184,182	181,951

The A, B, and D figures are legal or theoretical ones, i.e., of the number of public servants who ought to be on the pay-roll if all the places were occupied. In practice, owing to dismissal, deaths, &c., the actual number is always lower than the theoretical one. Signor De Stefani, in the new regulation, has contrived to keep the number of public servants not only much below the present theoretical maximum number, but also somewhat below the actual number. This amounts to expressing the hope that the actual number will be even lower. It is, alas, well over the 1914 figure, especially for the non-commissioned military officers, whose number has greatly increased in consequence of the increased duties laid on the police force (Reali Carabinieri) and on the Excise and Custom armed force (Gaurdie di Finanza).

The most interesting feature of the new regulations is the uniform classification of all public servants, military and civil, into 13 classes. The system is akin to the pre-war Austrian system. All public servants are assimilated to various military ranks, and enjoy the same salary which progresses uniformly from class to class. This Royal decree will probably be the Magna Charta of the public services in Italy for a long time. Perhaps the principal object of this general militarisation is not so much economy (to begin with, the reform, with consequent variations of pensions to retired servants will perhaps cost 300 millions lire yearly), as the restitution of hierarchy and discipline among a body which at a certain moment threatened to become a mob. In the war and early post-war years, the salaries of humble servants had become about as high as those of departmental heads and great judges. When a section of public servants menaced stoppage of work, their salaries were increased under the stress of fear. Soon after agitation spread among

CABLE ADDRESS: BANKTRUST, PARIS

the others, and the cost went up by leaps and bounds. The new regulations recreate a hierarchy, and put all servants of the same class on an equal footing. It will not be possible to increase the salaries of military men, or of postal servants, or of teachers only. All will be obliged to go up or down at the same time, and it is hoped that the new system will give force to the government to resist sectional pressure, as a concession to a section will imply an all-round increase of cost.

UNION OF SOUTH AFRICA.—TRANSSVAAL'S ONEROUS TAXATION—THE PROVINCIAL COUNCIL ELECTIONS—PRICES FOR GOOD GOLD SHARES.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, November 7.

THE elections for the Transvaal Provincial Council take place to-morrow, and it is to be hoped that the result will provide the South African party with a workable majority, replacing the Nationalist-Labour combination, which has been in power for the last three years. The Council, whose tenure of office has just expired, has been noteworthy for the excessive taxation it has placed upon the urban communities, in order to defray the cost of a very expensive educational establishment. Its most criticised achievement was the promulgation of an employer's tax when unemployment was increasing every month, and when the Union Government had to devise relief schemes, chief among which was the construction of new railways by white instead of native labour. This tax was really designed to make up for the loss of revenue on account of the taxation of gold mining profits, the continuance of which the Union Government refused to allow, but, while, of course, it did get revenue from the gold mines, with their thousands of native employees, it also hit all sorts of other manufacturers throughout the country. Another impost of the Transvaal Provincial Council was the combination of a poll tax and an income-tax with the usurious penalty of 10 per cent. for every month the tax remained unpaid. Mr Rowe, one of the candidates for the Council, has published some instructive diagrams. He shows that, whereas the Rand and Pretoria represent 45 per cent. of the population of the Transvaal, these two urban centres contribute no less than 80 per cent. of the taxation imposed in the Transvaal Province. This might not be so bad if the money spent on the Rand and Pretoria were in something like equal proportions, but, as a matter of fact, the capital and the industrial centre combined have only 40 per cent. of the money actually expended in their districts.

Mr Rowe sums it up by saying that the Rand gets half what it pays, and the rest of the country three times as much as they pay. The Provincial Councils of the Union are responsible for education, maintenance of roads, hospitals, &c. Secondary education is being fostered at the

expense of primary education, the expenditure being more than double. As regards primary education, £150,000 was provided in the current estimates for new buildings on the Reef, as against £83,350 for the rest of the province.

The Hon. Patrick Duncan, Minister for the Interior in the Union Parliament, recently described the expenditure on secondary education, especially in the country districts, as "ludicrously extravagant. In some places there were no fewer than three schools, one for English-speaking children, one for Dutch-speaking children, and one for Afrikaans-speaking. While these extravagances were taking place in the country the people of Benoni, the centre of the Far-East Rand mining district, had no place where their children could even get primary education, and were being taught under disgraceful conditions—even in stables." To put it quite bluntly, the Provincial Council Executive paid more attention to gratifying the electors in the country districts than to the real needs of the people. Whereas five teachers' training colleges in the province had been established, another gross extravagance, school attendance officers had been abolished. Mr Rowe shows that in the important matter of roads there has been a lack of progress. In 1920-21 £238,500 were spent under this head, while the current estimates provide for only £151,100.

I have in previous letters alluded to the companies' tax imposed by the Transvaal Provincial Council. Mr Duncan, in the speech already referred to, characterised this as one of the most unfair and most unreasonable taxes that could be imposed.

He traversed the statement of Dr Reitz, the chairman of the executive committee, that if the Transvaal did not get this tax the British taxpayer would.

Dr Reitz, among other fiscal escapades, recently quoted some figures given in the House of Commons, showing taxation per head in the Union, Australia, and Canada, proceeding to interpret this as showing that the Union was very lightly taxed. Sir W. Joynson Hicks, however, the Minister who gave these figures, quite failed to appreciate the fact that out of a population of about six millions in the Union, there are only 1,500,000 whites. The natives pay a very small portion of the taxation as their earnings are, on the whole, somewhat meagre. Obviously in order to compare taxation in different countries, the population divisor must be of the same character based on the white population. The aggregate taxation, after deducting a reasonable amount for the natives, is as high if not higher than in Australia or Canada, and probably approaches that of Great Britain with its colossal war expenditure. The *Star* says that "if we further eliminate from the European population that not inconsiderable section which, under our present system of taxation, gets off lightly or escapes scot free, we are confronted by results which are startling indeed. Only by these excessive burdens placed on a minority of our small white population can we afford the luxury of the most costly system of education in the world..... direct taxes constitute only a part of the burden; indirectly we are taxed to an extent which surprises visitors even from Britain." Another candidate, Mr Weightman, shows the Provincial Council's estimates this year total £1,593,000, or over ten guineas for each of the 150,000 electors. Provincial mismanagement is equally noticeable at the Cape, as Mr Duncan pointed out that the administration was "living on tick," and building up huge deficits already amounting to £1,150,000. They had not such a big deficit in the Transvaal, and it had only been avoided at the cost of imposing the most embarrassing and vexatious taxation.

A recent feature of the gold share market has been the demand for shares of the highest class of gold mines of the Far-Eastern Rand. Government Areas have risen to £6 3s 6d, Brakpans to £3 11s 6d, and Springs Mines to £2 15s, while New Modders fluctuate between £4 2s 6d and £4 5s.

Among Central Rand Mines, most conspicuous has been the improvement to 61s 6d in the case of City Deep. If adequate allowance be made for amortisation of capital, it is thought in authoritative quarters that in the majority of instances present quotations for the higher class of mining securities are quite high enough.

GREECE.—INDUSTRY—AGRICULTURE—MERCHANT MARINE—FOREIGN TRADE—FOREIGN EXCHANGES.

(FROM OUR CORRESPONDENT.)

ATHENS, November 14.

THOUGH Greece is an agricultural country, industrial activity has been rather intense for some years past. The preliminary returns of the last industrial census show that there existed in 1920 34,755 factories and workshops of every size and kind, employing 152,440 workers, and with a total of 95,259 horse power. Of course, the majority of these are workshops, though some flourishing enterprises may be found among them. The more important are metallurgical, machinery, building, textile, food, chemical products, leather, paper, printing, wood-working, cigarette and hat-making industries. A new line making rapid progress is carpet-making, which is a specialty of Greeks from Asia Minor now settled here. The driving power is derived chiefly from coal imported from abroad. As, however, the country possesses rich beds of lignite, this is also used where possible, as well as benzine, petroleum and hydraulic power. The latter is still a latent source of energy. It is estimated that in Macedonia and the mainland of Greece nearly 400,000 h.p. could be produced if the waters of the rivers were properly utilised. An important economy could thus be made in coal imports. Though the matter has been receiving consideration for some years, nothing definite has so far been done in this direction on account of the war.

Agriculture shows some progress. In 1915 the cultivated areas, not including those occupied by forests and fruit trees, comprised 2,667,000 acres. In 1920 it amounted to 3,260,000 acres. Forests occupy a surface of about 12 per cent. of the total area of the kingdom. The proportion is small, as is the case with the other Mediterranean countries. Agricultural production (the products of forests not included) was estimated by the Department of Statistics at nearly 1.4 million tons in 1916, and 1.7 million tons in 1920. Returns of the production of the last two years are not yet available. However, from the figures already known, it is inferred that production has since increased considerably, both as a result of an extension in the cultivated areas, and of a more intense cultivation. The production of some articles, such as vegetables and fruits, destined for town consumption, has risen greatly. Tobacco shows a great increase, having risen from 32 million kilos in 1920 to about 80 million kilos in the current year.

The merchant marine comprised in August, 1914, 474 steamers and 884 vessels of 965,000 tons gross. Though losses by act of the enemy, sea risks, and sales to foreigners during the war accounted for no less than 277 steamers and 223 vessels of 687,000 tons, Greek ship-owners have been able to make good their losses from the profits realised during the war and the premiums collected from the insurance companies. Thus, at the end of March, 1923, the Greek merchant marine consisted of 428 steamers and 1,090 vessels, of a gross tonnage of 910,023 tons.

Foreign trade for the first seven months of 1923 compares as follows with the figures for the corresponding period of 1922:—

(In Millions of Drachmæ.)				
	January-July.	Imports.	Exports.	Excess of Imports.
1922		1,283	936	347
1923		3,544	1,056	2,488
Increase in 1923		2,261	120	2,141

The increase is, of course, mainly due to the rise in foreign exchanges.

The foreign exchange market is rather dull, and quotations have been steady for some time lately owing to recent political events. Exchange on London is fluctuating at around 290 drachmæ to the pound sterling. The market is awaiting the issue of the recent democratic movement, which sprung up as a result of the failure of the counter-revolution. If the Government succeeds in keeping down the disturbing elements which are agitating for a violent change of the constitutional régime, the result will be beneficial for the country. Greece to-day needs, above all, peace and political stability. An eventual

change of the constitutional régime, and a continuation of the intervention of militarists in the Government of the country, could hardly contribute towards the achievement of these most essential ends.

Letters to the Editor.

THE IRISH LOAN.

TO THE EDITOR OF THE ECONOMIST.

DEAR SIR,—In your correspondence columns last week there were certain references to the Irish loan. Mr A. Mitchell-Innes raises the question of the currency in which the debt of the Irish Government is to be repaid. My observations upon the same subject, published in another column, can now be supplemented by the statement that, since I wrote, the Governor and Company of the Bank of Ireland (the bank of issue), speaking on behalf of the Ministry of Finance, announced that these payments would be made in sterling.

"Z" makes two points. He shows that, apart from the special arrangement terminable on March 31st next, by which the British Government exempts from income-tax Irish charitable funds invested in British securities, there are other British securities remaining open for such investments, inasmuch as income-tax in respect thereof is not deducted at source. I regret that my reference to the subject was phrased in such wide terms as to appear rather to suggest the contrary. His second point would be unchallengeable if the comparison of the investment values of Dublin Corporation 3½ per cent. stock at 67.68 and of the new Irish loan were based solely and exclusively upon actuarial calculation. But my inference that the latter should go to a premium, having regard to the current price of Dublin Corporation stock, was a compressed argument *a fortiori*, wherein the usual elements of value which affect Stock Exchange prices were impliedly accorded their due weight. No one, in Ireland at least, would expect as large a yield from the new Irish loan as from Dublin Corporation stock. Superior security, more prompt and certain realisability, and the maintenance of market levels by large and increasing Sinking Fund operations are elements, amongst others, which render the Irish loan the more desirable investment, and which consequently will operate to raise its price on the home stock exchanges.—I am, yours faithfully,

"YOUR DUBLIN CORRESPONDENT."

Dublin, December 6th, 1923.

AUSTRIAN CURRENCY REFORM IN 1811.*

HALF a generation of war had in 1811 reduced Austria to a condition of economic chaos very like that from which the League of Nations has intervened to save her to-day. One hundred years ago, however, she had the fortune to possess in her Finance Minister, Count Wallis, a statesman with the courage and perception to take the drastic measures necessary to redeem her situation. Pre-war critics have stigmatised the measures he adopted as a declaration of national bankruptcy, a repudiation of debts comparable with that of the French Government in 1797, and the two have been cited as the classic examples of the bankruptcy of a great Power. Dr Hofmann in his account of the steps which led to the publication of the decree of 1811, protests against this view, and claims that Wallis' policy was conceived and executed as the sole means of preventing the complete devaluation of the paper currency which would have been tantamount to the condition of bankruptcy he is accused of fomenting.

Wallis himself was no financial expert, and his knowledge of currency questions was entirely derived from the works of Anton van Coeverden, which had appeared at

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

Leipzig subsequently to the collapse of the French financial system. Coeverden, who may be considered the spiritual parent of Wallis' policy, laid it down that when paper currency has once got depreciated in terms of metal, it is impossible to reduce it gradually, and thus restore it to the level of metal. Either a surgical operation must be performed or the State must collapse. He rejected such palliatives as the debasing of the coinage and the statutory fixing of prices, and indicated as the first condition of currency reduction the avoidance of a deficit in the national balance-sheet. The methods by which the paper currency should be reduced to bring it to a parity with metal depended on the individual circumstances of different countries.

Wallis' proposal was to reduce each banknote at a stroke to one-fifth of its nominal value. The total nominal value then left in circulation would, he thought, be so small that, despite their inconvertibility, the notes would not depreciate further. Further, he intended to reduce the sum total of the National Debt by two-thirds. Here, however, he was successfully resisted by Metternich, who feared foreign complications if such liberties were taken with the capital sum, and an alternative proposal to reduce the interest was adopted, though only by one-half, and not by two-thirds, as Wallis desired.

After several months' deliberation, the scheme was approved by the Emperor, who saw no other way out of the financial impasse. The necessary Decree was published on March 15, 1811, and came into force immediately. The notes in circulation, whose value was immediately automatically reduced to a fifth on the publication of the Decree, were to be withdrawn by the end of January, 1812, and exchanged against a fresh issue bearing a fifth of their nominal value. As from February 1, 1812, this new issue was to constitute the sole legal currency. The Decree further dealt with the question of the settlement of private debts and contracts concluded before its issue on the basis of a scale appended to the Decree. Finally the recently imposed tax on real and personal property was abrogated. Wallis' opponents had relied on this tax as an alternative to his policy; they advised the Emperor that by reducing the time within which this capital levy was payable the needs of the situation would be adequately met.

The discussions which led to the adoption of the more drastic policy, as also the reception of the latter by the public and its social and economic consequences in the various provinces of the Empire and in Hungary, are fully described by Dr Hofmann, whose position as Director of the Archives in the Finance Ministry at Vienna has given him ready access to the original documents bearing on this most interesting experiment in State finance.

The retreat from Moscow and the consequent preparations by Austria for a resumption of the war with Napoleon brought Wallis' financial scheme to an end. During 1812 he had been able to meet all the military expenditure out of revenue, but his scheme could not be adapted to meet the suddenly increased demands which followed the Government's decision to resume the war, and he refused to depart from the principles on which it was based. Accordingly, when a further issue of paper money was decided upon he resigned his office. He had realised throughout that the development of his system to its logical conclusion depended on the maintenance of peace, but the Emperor and Metternich had probably never regarded it as anything more than a temporary and partial expedient to put them into a better position to resume

war when the military situation should again prove favourable. Thus regarded, it proved its usefulness, even though, from its author's point of view, it was but a half success.

THE BANKER'S ALMANAC*

THERE is only one bankers' annual in this country, and that is the Bankers' Almanac and Year-Book. This year we notice that a large number of institutions not previously included has been added, particularly in the sections devoted to the overseas and foreign banks. An extraordinary amount of banking and commercial history is compressed into the pages headed "Amalgamations and Other Changes Among Banks." This deals not only with the changes of the last few years, but recalls names long since forgotten, and forms a very interesting record. A valuable survey of the movements of the foreign exchanges is given by means of a series of tables of the average rates of each week from the beginning of 1922. Another interesting compilation is that showing the relative statistical positions of the banks of England and Wales, Scotland and Ireland; totals are provided for the pre-war year 1913-14, at the Armistice and annually since. This shows that the deposits of these banks totalled £1,316,327,850 before the war, £2,583,866,824 at 1919-20, £2,703,185,431 at 1921-22, and £2,524,134,442 at 1922-23. Other features of reference include London and Provincial Clearing House returns over a long series of years; Bank of England returns, chief of which are annual averages since 1844 and weekly returns for 18 months; fluctuations in Bank rate, bullion returns and brokers' discount rates since 1884; changes in Bank rates of England, France, Germany, and Holland since 1844 and Belgium since 1851; highest and lowest prices of Consols annually since 1823, prices of bar silver since 1833, weekly average prices of gold and silver in recent years, and full details of currency notes issue. To say that every banker should obtain a copy is a waste of words, for it is impossible to conceive an English banking institution without this trusty counsellor.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. December 12. **ACCOUNT.** December 13.

THE general tendency of Stock Exchange markets during the past week has been reasonably steady, in spite of the fact that as Thursday, the General Election day, approached, business fell away from most of the markets. Disbursement of the War Loan interest had no particular influence over prices in the Consol market, for the amount of the money that was returned in order to be reinvested has been comparatively small. Changes amongst British Government stocks were slight, and, although a certain amount of option money was paid, both for the put and for the call of Conversion stock over the Election time, this had no effect upon the prices. Home Railway prior-charge securities hold their recent moderate improvement, and the lately issued Colonials have barely budged from their previous prices. On Friday there was a general marking down of prices in view of the uncertainty likely to be created by the results of the Election.

Mexican Government bonds have fallen back after their fairly rapid rises. Doubt has again crept in as to whether the bonds will receive the money which confidence had expected next month as a result of the anticipated scheme coming into force. Greek bonds are better in the European group, while the movements in French issues, Government and railway, have been narrow and rather uninteresting. Russians crumbled a trifle after their spurt. Brazilians have gone better, on the hopes raised in connection with the forthcoming mission to Brazil of the four British experts who are to consult with the Brazilian Government on matters affecting finance.

Home Railway stocks are notably good, in consequence of public buying in advance of the dividends. This has raised the prices of the Heavy stocks, as well as those in the Underground group. Grand Trunk Pacific debenture moved wildly on rumours, sharply contradictory, with reference to the probable outcome of negotiations with the Dominion Government over the payment of interest on the stock. The Argentine railway market is better. Brazilians have been moving upwards; Leopoldinas are decidedly better.

The rubber market is dead, so far as any share activity is concerned, the sagging of the price of raw rubber being the chief reason for the inaction. In the oil market, a drop in Mexican Eagles and a rise in Shell Transports are the outstanding features. Dealings in this market continue to be very professional. The textile group improved to a slight extent, and, of the tobacco shares, British Americans are still being bought on vague expectations of an early bonus in shares. The hotel market, after being better, took on a less robust appearance towards the end of the week, but stores' shares have been inclined to harden as a result of Christmas shopping estimates. Dunlops are a better market; Croses and Blackwells weakened. Reports from the directors of both are expected immediately.

In the insurance market, Motor Unions and United British rose substantially, in consequence of the belief that both companies are to be taken over by one of the bigger brethren. Other insurance shares are also strong, less on dividend prospects than on bonus hopes. Banking shares, particularly those of the Eastern group, are in the ascendant. Amongst land companies, Scottish Australian stock continues to be an outstanding feature of strength on the increased dividend. Egyptians have been attracting little notice. Iron and steel shares gained a few pence in a good many cases. The feature

in the shipping group is a rise in P. and O. deferred, on the excellent report. Marconis strengthened as a result of this week's meeting, and cable stocks are better by reason of the impression that the wireless and submarine systems will work in harmony instead of competition. The tea market hesitates, partly because the slight rise in the rupee has not been un- noticed by speculative purchasers of tea shares. The price of Majorities kept within the neighbourhood of 35 for the greater part of the week.

Kaffir shares showed a good deal of strength on the publica- tion of an excellent batch of November returns, which, coupled with optimistic dividend estimates, caused a rise throughout the list. A little profit-taking occurred at the end of the week. The dramatic rise in tin, the metal, led to a strengthening of Malayan shares, and most members of this group have im- proved. West Africans are also better, but the Cornish shares exhibit an undecided tendency. There has been little increase in the amount of speculation in the tin share market, owing to the apprehension that so violent a jump in tin may be followed by an equally sharp slump. Diamonds are lower. Indian shares hold the modest improvements scored on account of the rise in gold. Mexican and Canadian mining shares attract a fair amount of quiet business without, however, moving noticeably in their prices.

The Stock Exchange managers and committee will give their Christmas dinner next Wednesday in the committee room of the House. The function this year it was decided should bear no political complexion, and the invited guests are mainly the heads of well-known financial institutions.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal	Cash	First	Further
	Capital.	Subscription.	Payment.	Lia-

COMPANY MEETINGS, &c.

CITY OF LONDON REAL PROPERTY COMPANY, LIMITED.

CAPITALISATION PROPOSALS EXPLAINED.

PURCHASE OF CITY AND WESTMINSTER PROPERTIES SCHEME.

An extraordinary general meeting of the City of London Real Property Company, Limited, was held, on the 3rd instant, at the Cannon Street Hotel, London, to consider resolutions authorising the capitalisation of the recent valuation of properties, and for the fusion of the City of London Real Property Company, Limited, with the City and Westminster Properties, Limited. Mr W. E. R. Innes (the chairman) presided.

The secretary (Mr S. Walker) read the notice convening the meeting.

The Chairman, after apologising for the absence through illness of Lord St Davids, said: The object of calling to-day's meeting is to anticipate the forthcoming diamond jubilee of the company by asking you to pass the resolutions of which a copy has been sent to you with the notice calling this meeting. Accompanying this notice you will have received a letter explaining the principal reasons for the suggested alteration in the capital of the company—namely, that the value of the company's properties is very inadequately shown in the balance-sheet, and that a fusion of the City of London Real Property Company and City and Westminster Properties, Limited, will be beneficial to the shareholders in each company.

The reason that the value of the company's properties is not fully shown in the balance-sheet is because hitherto they have always appeared at cost, which in the ordinary way is the most simple and satisfactory mode of stating the assets from year to year. But after such a long period as 60 years, with the gradual increase which has taken place in the value of our properties, due chiefly to the developments of the first-class building sites we have accumulated, the directors feel that the balance-sheet no longer provides the shareholders with an accurate statement of the company's position.

We have therefore taken our actual net rents and calculated the value of the freeholds on the 5 per cent. tables and the leaseholds on the 6 per cent. tables, providing for a sinking fund to replace the capital of the latter as the leases expire. These tables were adopted because, in our opinion, they are the terms which have been most usually applied over a period of years in dealing with City properties of the class the company owns between a willing buyer and a willing seller.

INCREASED VALUE OF PROPERTIES.

The valuation so made shows a total of £10,718,034, as against the cost as shown in the balance-sheet for 1923 of £3,871,064, being an increase of £6,846,970. Of this total the shareholders will be gratified to know that £7,386,760 represents freeholds, or upwards of two-thirds of the total value. These figures at first sight may seem startling, but it must be remembered that this increase has been spread over a term of 60 years, and is to a very large extent the outcome of the very careful selection of sites of the most suitable size for economical development in the most favourable positions; also the result of the constant improvement of existing buildings with a view to providing a larger amount of floor space and consequently more accommodation. Without the greatest care and the most excellent judgment and management, I can assure you the result could not have been nearly so satisfactory. It would be interesting if a comparison could be made of the number of workers housed daily in our buildings now as against that when the company was first instituted; the increase must be very large indeed. However, I can tell you, as a kind of guide to the extent of your operations, that the buildings the company own in the City cover an area of approximately eight acres of freehold properties and five acres of leasehold out of the total area of one square mile of which the City consists.

REARRANGEMENT OF CAPITAL.

Having decided upon a valuation of the company's assets, the natural sequence is to ask you to pass a resolution bringing the share capital into line. But in order to be on the safe side, while retaining our present reserve of £500,000, and our sinking fund for replacing capital paid for leasehold premises of £174,471, we suggest capitalising £6,000,000 only out of the increase of £6,846,970, ignoring the £846,970, and increasing the ordinary share capital from £2,000,000 to £8,000,000. At the same time that we suggest this alteration in the number of ordinary shares we propose to ask you to empower us to issue £564,040 new £1

preference shares, which, under our articles, you have the power to do at a general meeting, and at the same time we are going to ask the preference shareholders at a meeting to be held immediately after this one to agree to the splitting of the existing 87,192 £5 fully-paid preference shares into 435,960 £1 preference shares, so as to bring these shares into line with the new issue being made. If this is approved it will have the effect of raising the capital of the company to £9,000,000, consisting of 1,000,000 £1 4 per cent. preference shares, free of income-tax, and 8,000,000 £1 ordinary shares, on which it is proposed to commence by paying a quarterly dividend at the rate of 5 per cent. per annum, subject to income tax, and to pay such extra dividend in the final quarter of the year as may be considered prudent after making adequate provision for reserves.

In case some of you have not had time to read the circulars, I think perhaps I had better make the position quite clear as to how the dividends will be paid. The City of London Real Property Company shareholders will receive their usual quarterly dividend of 6d on December 10th and again in March on the shares as they at present exist, and in June they will receive such final dividend as may be declared on the four £1 shares, instead of on the one existing share—that is to say, on the 8,000,000 ordinary shares, as against the present 2,000,000 ordinary shares.

CITY AND WESTMINSTER PROPERTIES SHARE PURCHASE.

Subject to the passing of the resolutions I am going to move, your directors have made an offer to the shareholders in the City and Westminster Properties Company, on condition that not less than 90 per cent. accept, to purchase their shares in that company on the terms of either:—

(a) One new fully-paid ordinary share and £1 4 per cent. (free of income-tax) fully-paid cumulative preference share in the City of London Real Property Company, Limited.

(b) A cash payment of £1 and one £1 4 per cent. (free of income tax) fully-paid cumulative preference share in the City of London Real Property Company, Limited.

(c) A cash payment of £1 17s 6d, as they may individually select.

That offer seems to have been very well received, and a very large number of the shareholders have already intimated their intention of accepting (a).

As a large number of shareholders hold shares in both companies, an effort has been made to make the offer as fair to those interested in each company as possible, and the shareholders in the City and Westminster Properties Company who accept the offer under the heading (a) will, in effect, with income-tax at its present rate, be receiving from June next a dividend of over 10 per cent. gross on the money they originally subscribed on the formation of the company. Those who select the offer under the heading (b) will have the £1 they subscribed returned to them, with, in addition, a £1 preference share, yielding with the present tax slightly over 5 per cent. gross, and those who choose (c) will receive £1 17s 6d for each £1 subscribed. The shareholders who accept either (a), (b), or (c) will also receive their usual dividend of 3½ per cent. actual, less tax, on January 31st next. The next dividend they will receive will be a quarterly one, paid between four and five months later, in the following June. In the case of the preference shares, the dividend will then be for the quarter ending April 12, 1924, while the ordinary shares will receive the final dividend paid for the year ending April 12th. The cash payments in connection with the purchase of the shares will be made on January 31, 1924, and the new certificates for both the preference and ordinary shares will be ready as soon after March 15th as possible.

PREFERENCE DIVIDEND AMPLY COVERED.

The City and Westminster Company have a paid-up capital of £500,000, and when the present rearrangement is completed it is computed that, after payment of the dividend on the preference shares, there will be a margin of at least £455,000, without taking into consideration the income from the new properties we have purchased since the end of our last financial year, and that the preference dividend will be covered from 12 to 13 times over, so that the preference shareholders can, I think, be satisfied that they will hold a very safe investment, and one very much better secured even than when the existing preference issue was made. The

holders of the £5 shares should also gain by the freer market which should result from the splitting of their shares and the larger amount of the issue.

Before concluding I am going to ask you to pass a very hearty vote of thanks to the managing director, the secretary, and the remainder of the staff, because without the most zealous and painstaking work on the part of all, for many years past, I am certain a scheme such as you now have before you would have been quite impossible.

The Chairman concluded by moving the resolutions.

Mr Edgar Horne (vice-chairman) seconded the resolutions, and no questions being asked, they were carried unanimously.

A meeting of the preference shareholders was afterwards held, at which a resolution was unanimously passed sanctioning the sub-division of the existing preference shares into £1 shares and the issue of further preference shares ranking *pari passu* with the existing preference shares.

On the proposition of Mr English Harrison, K.C., seconded by Mr Guy Nickalls, a hearty vote of thanks was accorded the chairman, directors, and staff, and the proceedings then terminated.

MARCONI'S WIRELESS TELEGRAPH COMPANY, LIMITED.

IMPORTANT DEVELOPMENTS—GOOD PROSPECTS.

The twenty-sixth ordinary general meeting of Marconi's Wireless Telegraph Company, Limited, was held, on the 3rd instant, at the Connaught Rooms, London.

The secretary (Mr A. Ogle, M.C., A.C.I.S.) having read the notice convening the meeting and the auditors' report,

Senator G. Marconi, G.C.V.O., LL.D., D.Sc. (chairman), presided, and in moving the adoption of the report said that they brought forward to the credit of the profit and loss account £664,830, which, added to the balance for the year of £302,948, left a credit balance of £967,778. They had therefore decided to recommend the payment of final dividends on both classes of shares at the same rate as in the preceding year, which would leave them a balance to carry forward of £525,271. Many new patents which he believed to be of great value to the company had been taken out, or applied for, and last summer he was able to carry out, with the valuable assistance of Mr C. S. Franklin and Mr G. A. Mathieu, important tests with what might rightly be considered an entirely new system of long-distance communication. During the tests communication was successfully carried out on this system between England and many places abroad, including St Vincent (Cape Verde Islands), up to a distance of 2,250 nautical miles, by the employment of only a fraction of the electrical energy hitherto found necessary to cover such distances. He was now completing arrangements which would enable him to give this system a thorough test between England and the United States of America.

MR GODFREY ISAACS' SPEECH.

Mr Godfrey C. Isaacs (deputy-chairman and managing director), in seconding the resolution, said that, with regard to its claim against the several Government Departments, after making every possible effort since the last meeting to obtain the necessary information to allow of their proceeding to a settlement, but having failed to get a step further, he finally appealed to the Prime Minister, Mr Baldwin. He was pleased to say that this resulted in very prompt action. A letter was received from Sir William Joynson-Hicks, who was then Financial Secretary at the Treasury, informing him that they were now ready to press forward with arbitration, and expressing his willingness to agree to accept Lord Buckmaster as Arbitrator, with full powers to settle all questions in dispute between the company and the three Departments—the War Office, the Admiralty, and the Air Ministry. To this proposal the company had agreed, and he (the speaker) had suggested that the matters relating to claims in respect of the Post Office should be similarly dealt with. There remained to be settled the terms of reference, in respect of which he had met and corresponded with Mr Neville Chamberlain. He had hoped to have been in a position to say that all matters in connection with the terms of reference had been agreed to, and he thought that this would have been the case had it not been that Mr Neville Chamberlain's time was so much taken up at the present moment with the Election. He had every hope, however, that this would occasion them but very short delay. There was, therefore, a reasonable prospect that before the New Year was very far advanced all the matters which had remained so long in abeyance would have been satisfactorily disposed of. At the same time he would endeavour to arrive at a definite agreement as to settlements to be made year by year in respect of the present and future use of the company's patents and inventions by all the Government Departments which used them.

EARLY AGREEMENT WITH POST OFFICE ANTICIPATED.

The policy of the directors was to create and conduct a world-wide telegraph business. This, to his mind, had always been the great future which lay before the company, and to this end they had struggled in face of all difficulties with great persistence. They had already opened up telegraph services with some countries, and in doing so they created a very big and costly organisation, from which the full benefits would be derived only when their work was greatly extended. During the past year they had made considerable progress in this direction. The late Mr Bonar Law, when Prime Minister, announced in the House of Commons on March 5th of this year that "it is not considered necessary any longer to exclude private enterprise from participation in wireless telegraphy within the Empire. The Government had therefore decided to issue licences for the erection of wireless stations in this country for communication with the Dominions, colonies, and foreign countries, subject to the conditions necessary to secure British control and suitable arrangements for the working of the traffic." He (the speaker) thought he might say that it was these last words, "suitable arrangements for the working of the traffic," which had been the principal cause of delay in the company obtaining licences from the Post Office. There was really not much, he thought, between them at the present moment, and, again, if he was not able to tell the shareholders that complete agreement had been reached, it was due mainly to the Election. So soon as this happened the great programme which they had in front of them would be commenced, which would lead them eventually to become, he thought, the biggest telegraph company in the world. They would make a very big endeavour to complete the greater part of this work within 12 months from the date they started, and when this was done they would have reached the goal for which they had striven so long, and the great future of their company would be secured.

The report and accounts were unanimously adopted.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

"HIGHLY SATISFACTORY" RESULTS.
WORKERS' IMPROVED EFFICIENCY.

The twenty-sixth ordinary general meeting of shareholders was held in Johannesburg, on Tuesday, November 6th, Sir Evelyn Wallers presiding.

The Chairman, in moving the adoption of the report and accounts, said: The results of operations during the year under review were highly satisfactory.

The net profit amounted to £1,678,418, and this figure, which includes the working profit of £1,653,481, has only once been exceeded in the history of the mine, namely, for the year 1920-1921, when the price of gold was very much higher. But with the price of gold taken at its standard value, a striking difference is seen in the total working profit earned in the two periods; on this basis the profit amounted to £947,625 for the year ended June 30, 1921, whereas it was £1,540,897 for the year ended June 30, 1923.

DIVIDENDS AND ALLOCATIONS.

Dealing for a moment with the accounts, the balance of working expenditure and revenue account, together with the balance unappropriated at the beginning of the year, and a small amount in respect of forfeited dividends, makes a total of £1,924,648 14s 5d. The details of the allocation of this sum are shown in the directors' report, but the main figures are the payment of two dividends of 50 per cent. each, amounting for £1,400,000, and the payment of Government and provincial taxes for the year, totalling no less than £241,958. The balance unappropriated, amounting to £216,381, is represented by cash and cash assets after allowing for liabilities, and is carried forward.

With regard to the past year's operations, I must draw your attention to the following facts:—(1) a record tonnage of 1,340,000 tons was crushed, being 257,000 tons greater than the tonnage crushed in 1920-1921, the next best year; (2) working costs averaged 16s 8d per ton milled, showing a satisfactory reduction as compared with the costs of the two previous years, and being bettered only on two occasions, namely, in the years ended June 30, 1910 and 1915; (3) the ore reserve of 9,060,800 tons at 8.8 dwts stands both in tonnage and value at a higher figure than at any time in the past; (4) the ore developed during the year, amounting to 1,653,700 tons valued at 11.5 dwts, is greater both in tonnage and value than that for any preceding year; and (5) the development footage accomplished, of 23,581 feet, has only been exceeded on one occasion in the past, namely, in 1917, when the total footage of development work was 27,117 feet.

The improved results shown above are undoubtedly due to the reorganisation of underground working conditions effected after the strike of 1922, and to the improved efficiency of both white and native workers. It would be misleading if I omitted to men-

tion that these improved results have been brought about not only by the greater efforts on the part of employees, but also by more and better facilities provided by the mine. Experiments are constantly being carried out to secure better quality drilling steel, better supplies of compressed air, and better results from explosives. That a considerable measure of success has already been achieved is admitted by all concerned; and there is every reason to suppose that further advances in mining practice will be made, as time goes along, to the benefit of the whole gold mining industry.

DEVELOPMENT WORK.

Turning now in more detail to the past year's mining operations, you will observe that the ore milled amounted to 1,340,000 tons, and the yield per ton was 9.4 dwts. In the large amount of development work accomplished throughout the property the percentage of payability, at 82 per cent., was high and the values from reef disclosures averaged the gratifying figure of 785 inch-dwts. The payable ore developed amounted to 1,653,700 tons valued at 11.5 dwts, with the result that an improvement has been shown not only in the tonnage but in the value of the ore reserve. The ore reserve as re-estimated at June 30th last amounted to 9,060,800 tons valued at 8.8 dwts over an average width of 66 inches, and it is not necessary for me to elaborate the point that the mine is in an exceedingly strong position.

Capital expenditure for the year amounted to about £54,000, and this money was spent chiefly on the extension of the east reduction plant and on preliminary work on the new Circular Shaft. The main items of future capital expenditure will be chiefly in connection with the new shaft, and for providing additional machinery for sand-filling in the northern and north-eastern portions of the mine.

The sinking of No. 2 Circular Shaft, as it is now called, has been commenced. At June 30th last it had reached a depth of 120 feet, and good progress with the surface equipment had been made. The present position is that the permanent headgear is nearing completion, the platform and hoists have been erected, and everything should be ready to start sinking about January 1, 1924. The final depth to which this shaft will be sunk will be about 3,000 feet, and it is expected that this work will be completed by the end of 1925.

Through the courtesy of the directors of the Modderfontein Deep, we have been able to extend two development headings from the workings of that mine. During the year one of these, the 18th Level Drive, was advanced 717 feet, the average reef value exposed being 617 inch-dwts over a sampled distance of 625 feet. The 19th West Raise 2 W. was advanced 730 feet, the reef value averaging 382 inch-dwts. The most recent values, however, were more satisfactory, and for the last 285 feet sampled averaged 478 inch-dwts. This development will be continued with the object of obtaining an early connection to the No. 2 Circular Shaft, and consequent adequate ventilation for the advanced development in the south-west area, as soon as this shaft reaches the reef.

SORTING WASTE ROCK.

In the matter of sorting of waste rock from the ore mined, the following figures are of interest:—

In the past year, 45,901 tons were packed underground; 30,889 tons were sent direct to the dump, and 184,535 tons, being 12.1 per cent. of tonnage sent to the sorting stations, were sorted on the surface. The total tonnage eliminated was 261,325 tons, and represents 16.33 per cent. of the total tonnage broken. This latter figure compares with 15.3 per cent. for the previous year, and the comparison is all the more favourable when it is borne in mind that the calculated stoping width, which is an important factor in the elimination of the waste, was reduced by about 6 inches, i.e., from 75 inches to 69 inches.

In metallurgical practice, the results achieved during the period under review were entirely satisfactory. The introduction of corduroy blankets in replacement of the amalgamation plates can be definitely stated to be a successful innovation, as is shown by the fact that, whereas the cost of plate amalgamation per ton milled was 3.2d in 1921 and 2.4d in 1922 (excluding the three months' strike period), the cost of corduroy concentration during the first nine months of 1923 was 1.9d only.

GOVERNMENT AND PROVINCIAL TAXATION.

You will observe from the directors' report that your company paid Government and provincial taxes during the past year amounting to no less than £241,958, quite apart from the annual sum of £17,310 payable to the Government in respect of undermining rights leased. In other words, Government and provincial taxes alone absorbed 14.4 per cent. of the company's net profits. One cannot but envy the shareholders of, say, the Hollinger Consolidated Gold Mines of Canada, whose property is in some respects comparable to your own, but is fortunately situated in Ontario, where taxation is levied at a more reasonable rate.

With regard to operations in the current financial year, the average monthly profit for the four months July to October has been £143,557 with working costs averaging 16s 6.2d per ton milled. Development work continues to disclose ore of satisfactory values.

Mr S. C. Black seconded the motion, which was carried unanimously.

STRAND HOTEL, LIMITED.

INCREASED PROFIT DESPITE REDUCED CHARGES.

The sixteenth ordinary general meeting of the Strand Hotel, Limited, was held, on the 6th instant, at the Trocadero Restaurant, Shaftesbury Avenue, London.

The secretary (Mr H. F. Joyner) read the notice convening the meeting.

Major M. Gluckstein, who presided, said it was with no little gratification that he was able to present the report and accounts of another highly satisfactory year's business. That the amount of business done and the profits earned had again increased testified better than any words of his could to the solid foundation of public good will upon which the company stood. Speaking generally on the company's trading, he might remind shareholders that during the year ended in September, 1922, they reduced the tariff for bedrooms, so that these reductions had operated throughout the whole of the year now under review. As previously explained, they did not lower these prices with a view to attracting more visitors; that would have been impossible, as the hotels had always been, and were now, fully occupied. The reductions were made in pursuit of the policy of the board to supply the public at the lowest price, and to get back as near as possible to pre-war rates. With regard to the catering side of the business, there had been some slight reductions in the cost of foodstuffs during the year, and expenses in one or two instances had been lower. The benefit of these lower costs had been passed on to the public in the form of reduced charges. It was natural, therefore, to find that the average amount spent per head had been less. Notwithstanding this lower average, however, the turnover again showed an increase, the number of meals served during the year being the greatest in the history of the company. On the whole, they had more than made good the drop in turnover, due to the lower charges for rooms, and were able to show a balance of profit of £107,746, after making all necessary provisions, or £1,447 more than the previous year's figure. The directors again recommended a final dividend on the participating preferred ordinary shares at the rate of 15 per cent. per annum, making a

total dividend for the year of 11 per cent. They were carrying forward £16,515, or £8,786 more than a year ago. The figures, he was sure the shareholders would agree, disclosed a very sound financial position. It was their good fortune, especially in such unsettled times as these, that their business was one of providing an every-day service of an indispensable character.

The report and accounts were unanimously adopted.

AERATED BREAD COMPANY, LIMITED.

EFFECTS OF TRADE DEPRESSION.

The seventieth ordinary general meeting of the Aerated Bread Company, Limited, was held, on the 3rd instant, at Cannon Street Hotel, London.

Mr Charles E. Cottier (the chairman), in moving the adoption of the report and accounts, said that, notwithstanding the reduction in the gross profits, the trade for the past year showed a substantial increase both in customers and in purchases, and was larger than in any preceding year. That the gross profit was not higher was attributable to reduction in the prices charged to customers. A great proportion of the company's trade depended upon a class of the community acutely affected by trade depression. Reductions in prices had consequently been made which, in many cases, brought them down to pre-war level, although the average cost of foodstuffs during the year was 70 per cent. above that of the pre-war period. The directors had continued to extend the company's business, and a large number of new branches had been acquired. All new shops were on the most modern lines. The total amount expended upon new depots was included in the present accounts, but they had not yet had from them the benefit of a full twelve months' trading. The important building being erected at 326 Regent Street, was nearing completion, and the depot on the premises was proving successful. The bakeries, factories, and stores at Camden Town were not sufficiently large, and the board had secured extensive freeholds adjoining. Bertram and Co. had shown very good progress. The reorganisation of James Cottle, Limited, had received attention, and a great deal of reconstruction work had been carried out at some of the larger cafés. The number of customers served by the Aerated Bread Company showed an increase of some millions during the past year, and had the individual customer spent the same sum as in the previous year the dividend would have been maintained. The directors looked forward to the return of a stable Government with a constructive policy for the re-establishment of the country's industries on economic lines, the provision of work for our vast army of unemployed fellow-countrymen, the maintenance of British credit in the markets of the world, and the gradual reduction of the intolerable burden of taxation. By these means alone would the condition of our people be permanently improved, the spending power of the community enhanced, and the commercial prosperity, in which the company would share, be restored.

Mr George Harvey seconded the resolution, which was unanimously carried.

WARING AND GILLOW, LIMITED.

IMPROVED RESULTS—"NEW VALUES" POLICY.

The annual general meeting of Waring and Gillow, Limited, was held, on the 4th inst., at 164-182 Oxford Street, London.

Lord Waring, who presided, said that the profit for the year was £111,779, as against a loss for the previous year of £71,293. That loss had been due to the writing down of such stocks as had been acquired when prices had stood at their highest. On that occasion the directors did not feel justified in recommending the payment of anything more than the year's dividend on the preference shares. The times were exceedingly difficult, both at home and abroad, and, in the event of a substantial revival of general trade activity, credit facilities were bound to become more stringent. For that reason it was of the utmost importance to the company that it should have, for the purposes of the business, the advantage of all the cash and liquid assets available. The business had expanded with great rapidity, and it had been extended without recourse to the issue of further capital.

In the early part of the year the directors had come to the conclusion that, having regard to the conditions of the times and the effect of heavy taxation upon those who formed a large percentage of their customers, a change of policy was essential and a drastic overhaul necessary in every branch of the business. They had supplemented the existing machinery in the various factories with the latest machines available, and a standardisation of all the best models had been arranged. The showrooms had also been rearranged, and all departments overhauled to enable them to cater for a much larger class and range of customers.

At the present moment they felt they could confidently say that not only could they cater for practically every class for everything

that related to the decoration and complete furnishing and equipment of the home, but they could fairly claim that they held in stock the widest range of designs and best value in prices that could be found under the roof of any furnishing house in the world. They were in a position to say that such changes had had a very beneficial effect upon the business. More and more customers were being attracted to the showrooms as the result of their policy of supplying goods within the reach of those of the most moderate means, and their products were of the first-class quality and design at very moderate prices. They had applied the name of "New Values" to them, which conveyed to the public for whom they catered that in any direction in the furnishing trade "Waring and Gillow" was the trade mark of quality, design, and moderate price.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £45,000,000 in Treasury Bonds and Treasury Bills dated from Dec. 10-Dec. 15 were opened on Dec. 7, 1923, and the total amount applied for was £59,635,000. For bills at three months, dated Monday to Saturday at £99 3s 11d, about 87 per cent., above in full. The amounts allotted were as follows:—In bills at 3 months, £43,800,000; in bonds, £1,200,000.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
Oct. 26, 1923.	£ 35,000,000	£ 50,275,000	£ 100 1 8-33	£ 100 1 8-33
Nov. 2, 1923.	35,000,000	51,350,000	100 1 8-33	100 1 8-33

LONDON AND RIVER PLATE BANK, LIMITED.—The report for the year ended September 30, 1923, shows that the balance available, after making ample allowance for bad and doubtful debts, income-tax, and £80,687 rebate of interest on bills not due, amounts to £383,909, including £220,993 brought forward from last year. The dividend of 8 per cent. for the year absorbed £163,200, leaving £220,709 to be carried forward. In the preceding year 10 per cent. was paid on the ordinary shares. Arrangements have been entered into for a fusion of interests with the London and Brazilian Bank, Limited.

SUMITOMO BANK, LIMITED.—The half-yearly report to June 30, 1923, has just been issued. The balance-sheet and profit and loss account is shown below:—Balance-sheet (June 30, 1923)—Liabilities—Subscribed capital, 70,000,000 yen; reserve funds, 22,800,000 yen; pension reserve, 1,700,000 yen; deposits, 334,653,462 yen; exchange sold and bills payable, 12,661,939 yen; exchange adjustment, 1,079,915 yen; due to other banks, 8,404,185 yen; foreign credits, acceptances, and guarantees, 10,790,253 yen; dividends not yet paid, 2,738 yen; rebate on bills not yet due and interest accrued on deposits, 5,914,239 yen; balance brought forward from last half-year, 1,106,032 yen; net profit for the half-year, 4,245,897 yen; total, 473,358,660 yen. Assets—Capital unpaid, 20,000,000 yen; loans, bills discounted and exchange purchased, 328,882,403 yen; due from other banks, 4,493,978 yen; customers' liabilities on foreign credits, acceptances, and guarantees, 10,790,253 yen; Government bonds, 50,871,970 yen; municipal and other securities, 19,583,578 yen; foreign currencies, 19,400 yen; bank premises and furniture, 7,663,680 yen; cash in hand, 31,023,308 yen; total, 473,358,660 yen. Profit and loss account—To reserve funds, 1,500,000 yen; to dividends, 2,500,000 yen; to pension reserve, 100,000 yen; to bonus, 120,000 yen; to balance carried forward to next half-year, 1,131,928 yen; total, 5,351,928 yen; by balance brought forward from last half-year, 1,106,032 yen; by net profit for the half-year, 4,245,897 yen; total, 5,351,928 yen.

RUBBER, &c.

KUALA LUMPUR RUBBER.—The report for the year ending June 30, 1923, shows that the profit for the year amounts to £15,974, of which £5,000 has been carried to reserve for taxes, leaving £10,974. To this has to be added £8,986, being £10,444 brought forward from last year, less £1,457 6s 8d loss on investment in the Sipef Oil Mill Syndicate written off. The amount at credit of profit and loss is thus £19,961, which, in the uncertain conditions at present affecting the industry, the directors recommend should be carried forward. The yield of rubber during the year was 1,113,429 lbs, being 65,249 lbs in excess of the combined amounts exportable free up to October 31, 1922, and exportable under licence for the period subsequent to that date. The company's standard production has been fixed at 1,669,928 lbs. Of the whole crop 404,352 lbs were sold in Singapore, and 640,828 lbs were shipped to Europe. The average gross price of the exportable allowance, taking a small quantity unsold at an estimated figure, was 1s 0.36d per lb. There was a further reduction in costs of 1.33d per lb during the past year.

MISCELLANEOUS.

ESPARTO PAPER MILLS.—The first report for the eight months ended October 31, 1923, shows that after maintaining the mills and machinery in an efficient condition, and providing for depreciation, corporation profits tax, directors' fees, and managing director's remuneration, there remains a net profit of £43,099. Deduct debenture interest £8,431, leaving available £35,268. There has been paid: the fixed dividend on the preference shares for the period from the dates of payments of instalments to October 31, 1923, £8,701, leaving available £26,567. A dividend on the ordinary shares of 6d per share (less tax) absorbs £5,000. The sum of £5,000 is allocated to reserve fund, leaving to be carried forward, subject to income-tax, a balance of £16,567. The directors draw attention to the fact that the preliminary expenses and the discount on the debenture issue have been written off from reserve, and the balance of reserve has been

TATE AND LYLE.—The report just issued for three years of September 30, 1923, shows a profit, after deducting provision for income-tax liability incurred up to September 30, 1923, of £2,151,255. Investment revenue amounted to £196,408, and cottage rents to £2,255. Directors' fees amounted to £21,538. Debenture interest amounted to £67,500. Debenture trustees' remuneration amounted to £1,418. The sum of £500,000 has been transferred to reserve fund. The balance of profit is £1,759,462. Out of this amount preference shareholders have received £191,333 in dividends, and ordinary shareholders have received £1,529,479, leaving £38,650 to be carried forward. With regard to the balance-sheet, the total assets are £10,594,770. The chief items constituting this amount are:—Properties, £1,325,824; plant, &c., £2,672,173. Investments at market value, £2,204,628. Stock of sugar, &c., £1,856,785. Sundry debtors, £1,158,219. With regard to liabilities, ordinary share capital is £3,312,000. Preference capital, £1,100,000. Debenture stock, £500,000. Sundry creditors, £2,477,993. Bank overdraft, less cash in hand, £377,206. Reserves total £1,062,367.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Seasonable weather continues to prevail, but night frosts, while of benefit to the rain-sodden ground, tends to retard growth of the young wheat plant. No definite indications have yet been received as to the extent of the acreage under wheat this year, although reports from some districts show a slight decrease. Supplies of native wheat were on a larger scale during the week, and prices the turn in buyers' favour. Suitable milling qualities ranged from 9s 6d to 10s 3d, and inferior 8s to 8s 9d per 112 lbs free on rail. Imported descriptions continued in quiet request, and rates barely steady despite moderate supplies, consisting mainly of North American grades. No. 1 Northern Manitoba quoted 46s 9d, No. 2 ditto 46s, No. 3 44s 6d, Barusso 6½ lbs 46s 6d, all ex ship per 496 lbs. The floating and forward cargo market displayed quiet features, the small inquiry being for white descriptions. Prices displayed a weaker tendency on recent heavy shipments, and large available supplies in North America, though contributions from Russia were on a much lighter scale this week. The Australian harvest is proceeding under favourable weather conditions, but heavy rains are impeding progress in Argentina. Flour in moderate demand, and prices of town milled reduced 6d per sack. London standard straight run quoted at 37s 6d, patents 39s 6d to 40s 6d, town households 35s 6d per sack delivered in. All English country straights 31s to 32s delivered to London stations. Imported dull. Manitoba patents range from 36s to 39s, Minnesota 38s 6d to 40s 6d, and Australian 32s 6d to 33s 6d per 280 lbs, all ex store. Maize and barley cargoes move off quietly, U.K. interests counting for little at the moment, so that shippers mostly confine their offers to the Continent, where a fair demand arises. Millers' offers steady but quiet. Broad bran quoted 7s 6d, ordinary ditto 6s 9d-7s, middlings 8s 3d, fine 9s 9d, bags included ex-mill. Light oats 5s 9d, powdered oat husks 6s 3d, feed oatmeal 9s 3d, ground oats 13s 3d free on rail all per cwt. Barley: English firm, and malting descriptions range from 9s 9d-14s 9d with feeders 9s to 9s 6d per 112 lbs free on rail. Imported, firm for feeders. Californian quoted 42s-46s, Chilean Chevalier 50s-53s per 448 lbs landed. Persian 28s 6d, Danubian 31s, No. 4 Canadian Western 30s 6d, all ex-ship per 400 lbs. Maize continues firm. Plate landed 40s 6d-41s, Gal/Foxonian ex-ship 38s 6d, Bessarabian ditto 39s 6d, all per 480 lbs. Oats: English steady at 9s-10s 4d per 112 lbs free on rail as to sample. Imported, steady but quiet. Plate f.a.q. ex ship 22s 6d, landed 23s 3d, No. 2 Canadian Western ex ship, 26s, No. 3 ditto 24s 9d, No. 2 feed new landed 24s 6d, all per 320 lbs. Oatmeal steady. London made flaked also rolled oats quoted 18s, medium and fine cuts 17s 6d, coarse and medium pin-head 17s 6d, ordinary Scottish oatmeal 18s-19s and American 17s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24.	1922-23.	1921-22.	1920-21.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated December 6th, is as follows:—Pig-iron: The pig-iron market is quite firm, but makers are not in favour of increasing the price at present, as the competition of foreign pig-iron is still severe. Still, the output of pig-iron is being gradually increased in this district. No. 3 Cleveland G.M.B. is 100s per ton. East Coast hematite m/n, 101s 6d per ton. Manufactured iron and steel: There is a fair business in steel and prices are unchanged. Steel ship plates, £9 15s; steel ship angles, £9 10s; iron bars, £12; steel rails, £9. Iron ore: In view of higher freights sellers of ore are asking higher prices for forward delivery. Best Bilbao Rubio is nominally 24s 6d to 25s, but best Mediterranean ores could be bought at rather below these figures.

Our Sheffield correspondent writes:—Conditions in the local iron and steel industries have not changed much on the week, but if no further progress can be recorded it is satisfactory there has been no reaction. The feature of the situation during the last month has been the soaring value of heavy steel scrap, which this week records another advance of 5s, and is now worth more than 100s, representing an appreciation of 20s in two months. This has caused the steel makers to put up the price of soft billets another 5s, bringing the minimum quotation to £9. Other descriptions of billets are firmer, but the quotations are unaltered. While business generally is picking up steadily, the situation still leaves much to be desired, as there is a great amount of slackness about. Plate and cutlery are easing off so far as new bookings are concerned, and the Christmas season has proved unremunerative to the majority of makers. The coal trade maintains a fairly strong position, with some improvement in demand from domestic sources, and prices rule firm. House coal is a brisk market, and the outlook for coke has improved, with prices scarcely so strong for current needs. Prices per ton at pits are: Best hand-picked branch, 31s 6d; Barnsley, best Silstone, 27s 6d; Yorkshire hards, 21s; Derbyshire do, 20s; rough slacks, 12s 6d; smalls, 5s to 8s; best Blythe hards, 26s; blast furnace coke, 24s.

Our Glasgow correspondent writes:—The steel and iron manufacturers' position has further improved this week, and the trade feeling, as expressed, is pretty well convinced that the new state of things has come to stay for a period. From leading quarters the advice comes spontaneously that contracting for material—especially plates, angles, and constructional stuff—has reached in the course of the last week or two to many thousands of tons, which it is calculated will occupy the working time of shipwrights, founders, and engineers for, say, from twelve to, in certain cases, 18 months. Figures dealing with the work put through the West of Scotland shipyards during November show that only 11 vessels

of 5,084 tons were launched, the Clyde aggregate amounting to 5,034 tons. For the 11 months of 1923 the Clyde output consisted of 99 boats of 172,275 tons. Last year's figures were 114 steamers, of 369,326 tons, which speaks for the seriousness of the conditions just lately. Scotch hematite has been put up 2s 6d a ton, at £5 7s 6d, f.o.b. makers' works; No. 1 foundry, 1s 3d, at £5 10s; No. 3 foundry, 1s 3d, at £5 5s per ton f.o.b. makers' works. Crown bars remain at £12; steel ship plates, £9 15s; sections, £9 10s; and galvanised sheets, £19 10s. Last week close on 2,000 tons of Scotch pig-iron were dispatched from Glasgow harbour to the West Pacific coast of America.

Our Cardiff correspondent writes:—The Cardiff coal market waxes daily stronger. Collieries are exceptionally well stemmed up to the end of the year, and, with the supply of tonnage abundant, their contract coal is being regularly lifted. Moreover, current inquiries are active, and prices, accordingly, have further advanced. Best Admiralty large coals, which two months ago were selling at 27s 6d, f.o.b., and even less, are now quoted firmly up to 30s, while all other classes of bituminous steam coals have moved up in sympathy. The only quality to lag is that of dry steam, but even the quotations for those coals are now ruling up to 27s 6d. In the anthracite coal market, however, there has been no change, business being comparatively quiet and prices stationary. The current approximate quotations are as follows:—Best Admiralties, 29s 6d to 30s; second Admiralties, 29s to 29s 6d; best drys, 27s to 27s 6d; Black Veins, 28s 6d to 29s; Western Valleys, 28s to 28s 6d; Eastern Valleys, 27s to 28s; best bunker smalls, 21s 6d to 22s 6d; ordinary cargo smalls, 18s 6d to 19s 6d; anthracite Big Vein, large, 40s to 45s; Red Vein, large, 31s 6d to 34s; machine-made cobbles, 50s to 52s 6d; French nuts, 54s to 56s; stove nuts, 52s 6d to 55s; rubble culm, 13s 3d to 13s 9d; inland blast furnace coke at ovens, 30s to 35s; coke for export, 52s 6d to 57s 6d; patent fuel, 29s to 32s; pit-wood, ex ship, 32s 6d to 33s. In the iron and steel trades the position remains strong, notwithstanding the rise in the price of block tin. Business is active and shipments are heavy, but a further rise in minimum prices is likely in consequence of the advance in tin.

MANCHESTER, December 6.

The event of importance in the market this week has been the break in raw cotton prices. Very wide fluctuations have occurred in futures in Liverpool and New York. Business in yarn and cloth has been thoroughly disorganised. On certain days many spinners and manufacturers have refused to quote, and owing to the uncertain outlook numerous buyers have withdrawn all offers. A distinct pause in business, therefore, has been experienced. Shippers of piece goods have reported less inquiry from India, and only scattered sales have taken place. There has been a very limited turnover for China. Some fair contracts have been arranged for Egypt. Customers have been more disposed to purchase fine fabrics than plain goods. American and Egyptian yarn quotations are decidedly easier on the week, and much irregularity has prevailed. The trade passing has been of reduced dimensions.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The brisk bidding at the Liverpool wool sales last week afforded a very clear indication of what might be expected in London, and the course of trade during the three selling days in Coleman Street this week has once again emphasised the strength of the raw material position. Continental and American buyers are dominating the merino section, but Yorkshire is making the running in crossbreds. Having regard to the high prices ruling in New Zealand for crossbred wool, and taking into account

the increasing consumption in this country and in America, still further advances are confidently expected, especially as B.A.W.R.A. stocks are rapidly being absorbed. Here and there the fear is expressed that the rise in crossbreds is being pushed too far, but the general opinion seems to be that the raw material position is so fundamentally sound that buyers are justified in following the market. In this centre demand for merino tops continues on rather restricted lines, and although topmakers are adopting a much firmer attitude, they cannot make prices to harmonise with the cost of wool. There is a considerable turnover in all qualities of crossbred tops, and prices are again higher on the week. In many cases topmakers are quoting protective rates, as stocks are reported to be comparatively light, and they cannot replace on to-day's level of values. Spinners are doing much better, and although the bulk of the business is in crossbred yarns, some fair weights of botanics have also been sold. A weak seller here and there still gives an appearance of irregularity to the market, but most firms are now standing out for prices in keeping with the cost of production, and a general advance in yarn prices is seen to-day. The piece-goods trade is steady, demand leaning almost exclusively to the cheaper fabrics.

COLONIAL WOOL. (FROM A CORRESPONDENT.)

The last series of wool sales in London for this year commenced on Monday, and so far excellent progress has been made, there being every probability of values being maintained right to the finish. It was almost inevitable after the way values moved at the short series held at Liverpool last Thursday and Friday, when about 32,000 bales of crossbreds were offered, and higher values were recorded than at the previous London sales, that the resumption of selling in the latter centre would be marked by at least a maintenance of values. The Liverpool auctions are now too far past to need lengthy comment, but the principal feature was the extensive buying on home trade account, whilst Continental and Boston houses were represented. The general advance in prices was 5 to 10 per cent., the greatest improvement being seen in medium and low sorts, particularly slipes. The fact that medium and coarse crossbred wool still costs less than half what has to be paid for merinos, largely accounts for the great interest which is being shown in it. The general advance in prices may be put at 5 to 10 per cent., though the improvement in medium classes ranges up to 12½ per cent. Merinos show an improvement of 5 per cent., and it is gratifying that the market for these remains so firm, particularly as the firmness now in evidence is expected to continue. Prices for the raw material are well in advance of those ruling in manufacturing centres for partly and fully made goods; indeed, there is not by any means such a response in prices for tops and yarns as corresponds with the present level of wool.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The market hide position was quite steady at Thursday's Bernondsey auctions, best ox selling from 6½d to 8½d, and seconds from 5½d to 7½d—neither class showing alterations on last prices. Best cows were steady at 6d to 6½d, whilst calfskins, best, sold from 6d to 11½d. Wools were firm from 5s 9d to 12s each, hoggs making from 3s 3d to 15s 6d each. Business in S.A. frigorific hides has much improved, and large sales are reported from the River Plate—100,000 is the figure mentioned, and it speaks well for the vitality of our sole leather tanneries that the bulk of the hides have been bought for this country. Dry hides are also selling better, with the market firm in favour of sellers. Dry B.A. Americanos, which a week ago were offered at 7½d, are now offered at 8½d, bids of 8½d being taken.

The boot section is fairly well employed, Leicester and Norwich turning out women's and sports shoes in quantities, whilst Leeds and Bristol are busy on heavy boots suitable for the Irish market.

VEGETABLE OILS AND OILSEEDS.

Markets this week have not been so active, and have lacked interest. Linseed has declined, and although spot and near positions still command a high premium over seed for shipment, the tendency is to lower values, new Plate crop now offering at £17 for January-February loading. Indian linseed is still too dear to invite crushers' attention. The oil product has been a steady trade, raw oil maintaining its value of £40 10s for spot and December ex Hull mill. Egyptian cottonseed has lost 10s or more per ton, in sympathy with the decline in cotton, black Egyptian now offering freely at £13 for December loading. Trade in cotton oils is still good, and crude Egyptian fully steady at £41. Crude soya oil and palm kernel oil are in better request,

and exports fairly good. Arrivals of oilseeds are improving, and the mills are assured a steady supply from now onwards. Oil-cakes continue in good demand, and late prices rule.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, December 7.

SUGAR.—Marking time sums up the general condition of affairs in this commodity, both buyers and sellers alike following a policy of reserve pending some fresh development. Not only here, but also in America, the market seems to be in abeyance until some definite statement is forthcoming regarding the all-important Cuban crop. Meantime, general movement of European beet sugars is slow and all raw descriptions continue scarce and these factors tend to counterbalance any undue slackness of demand while keeping values at a steady level for all actual parcels. American refiners are still operating with freedom in Brazilian and Peruvian raws. Of British refined, Messrs Tate and Lyle's cubes quoted 63s 6d to 64s 6d, as to quality; crushed, 61s; granulated, stoved, also fine and coarse grain, 61s 1½d; No. 1, 60s 10½d; No. 2, also London and T.L., 60s 7½d; ditto, month forward, 61s; January, 61s 6d; February, 61s; March, 59s 6d; yellow crystals, spot, 56s 1½d; caster, finest, 63s 4½d; A quality, 62s 7½d; and B, 61s 3d; white Java, spot, 57s 6d to 57s 9d; May-June, steamer, 26s, c.f. and i. terms, London. Czech, granulated, spot, 58s to 58s 3d; ready for shipment, 59s; December, 29s; January-March, 28s, f.o.b. Hamburg. West Indian preferential, centrifugal basis, 96 per cent., December-January, quoted 31s; Brazilian basis, 96 per cent., prompt, 27s 9d; Cuban, ditto, March, 24s, c.f. and i., U.K. White terminal market rather quiet, but steady. December quoted 29s; March sold, 27s 1½d, 26s 10½d, 27s 4½d; May, 26s 9d to 26s 10½d, 26s 9d, 27s. August, 26s 4½d, 26s 10½d.

COFFEE.—A good steady demand continued on the part of the home trade, and, with only small supplies available, the market disclosed a very firm tone, being dearer on the week. Bold sizes of Costa Rica sold, 109s 6d to 117s; peas, 12½s. Future delivery market remained slow.

COCOA.—Only quiet trading ensued with regard to spot parcels on about former terms. Accra quiet and easier for shipment, and F/F quality, January-March, sold, 26s, f.o.b. terms.

TEA.—During the week about 55,000 packages Indian were brought to auction, and with a good demand for medium and finer qualities these realised steady prices. Inferior descriptions, however, were not so well competed for, and prices, while slightly irregular, frequently ruled in buyers' favour. Only 12,000 packages Ceylon were offered, and met a very good market, all medium to fine liquoring kinds selling in favour of importers. A steady demand was experienced for the 4,250 packages Java and Sumatra offered in auction, and prices in most cases proved steady. Pekoe sold, 1s 4½d; orange pekoe, 1s 5½d to 1s 6d; broken pekoe, 1s 1½d to 1s 5½d; broken orange pekoe, 1s 3½d to 1s 9½d; and pekoe souchong, 1s 4d per lb in bond.

RICE.—With shippers still offering sparingly, the market is firm with a moderate demand. Two Stars Rangoon, spot, 15s 9d; December, 15s 1½d. Spanish and American quiet, owing to reserve of sellers. Japanese peas, spot, 25s 6d; December-January, 22s per cwt.

SPICE.—A moderate inquiry prevailed for pepper forward, and a steady tone resulted. Black Singapore L.S., January-March, quoted 48½d; Lampung ditto, 48½d; Muntok, January-March, buyers, 61½d; and February-April, sold, 61½d, 7d. Zanzibar cloves rather irregular. January-March, sold, 1s 4½d to 1s 4¾d and 1s 4½d per lb. Tapioca steady. Singapore flake, November-January, to Havre, sellers, 31s 3d; Sago flour, January-March, sellers, 15s 6d; desiccated coconut dull. Spot halves quoted 42s 6d; October-November and November-December, 41s; January-February, 41s 3d per cwt. Pimento, to arrive, 21s per cwt.

JUTE lower, and business proved on moderate dimensions. First grade, December-January, Continent, sold, £26 7s 6d, £25 10s; January-February, £25 15s; February-March, sold, £27 10s, £26 15s per ton.

HEMP.—Manila quiet and easier. J grade, January-March, sellers, £33 10; K, quoted £27; L, £26; and M, £23 10s. African sisal firm. No. 1 Tanganyika, November-January, quoted £37; Kenya ditto, £36 10s. Mexican sisal, £34 per ton, c.f. and i.

SHELLAC.—Market quiet. T.N., spot, 310s; December, 302s 6d; March, 295s cwt.

COPRA was a quiet and rather featureless market. F.M.S. Straits, October-December, Rotterdam, sold, £30 to £29 15s; November-January, £29 15s 3d to £29 6s 3d; January-March, £29, £28 15s, Ceylon, November-December, quoted £31 10s; Java, ditto, £30 5s. Dutch E.I., November-December, £29 16s 3d; Cebu, ditto, £29 5s; South Sea, £28 15s. Palm kernels, January-March, Liverpool, £20 8s 9d, £20 5s.

RUBBER dearer in response to higher Singapore cables, and which recorded increased American orders for prompt, but a quieter tone set in later. Standard plantation crepe and sheet, spot, also December, sold 1s 2½d to 1s 2¾d; January-March, 1s 2½d to 1s 2¾d; and April-June, 1s 3½d to 1s 3d. To New York: Standard estate sheet, January-February, sold, 1s 2½d lb, c.f. and i. Wild sorts steady, unaltered.

EGG PRODUCTS.—Market quiet, unaltered; apart from hen albumen, which is firm and offered sparingly.

FRUIT (Dried).—There is a good demand for most kinds of dried fruits, while supplies are on a liberal scale, with the exception of plums, which are by no means plentiful at present pending new arrivals about the end of the year. Of currants, Pyrgos quarter cases quoted 40s; bags, 39s; Amalia, 44s; Patras, 50s; Vostizza, 65s to 69s. Sultanias: Smyrna, quoted 51s to 54s; good, 62s to 66s; fine, 80s to 85s; finest, 95s to 100s. Valencia raisins remain firm, and half-boxes quoted 62s to 63s; quarters, 67s to 72s; seedless, 42s to 50s. Dates steady, with a fair demand. Hallowee, second-tide quoted 25s 6d; Khredrowie, 18s; Siar, 15s 6d, landed terms, London. Genuine natural figs in bags, quoted 34s to 38s; layers in boxes, 95s to 105s; pulled, 125s to 140s. Evaporated fruits steady, with shortage of supply marked in the case of apricots, Californian choice apricots quoted 74s; fancy, 99s to 100s; ditto plums, 30-40, quoted, 85s; 40-50 at 68s. French plums, quarter-cases, 36s to 70s per cwt.

CANNED GOODS.—There is a fair trade in force, and market in general is very steady. With regard to sardines, the market points to higher prices. Portuguese quarters quoted 2s 6d to 3s; ditto 12 oz, 5s 6d to 6s; 18 oz, 9s 6d to 11s per dozen tins. Lobster generally quiet of sale, but prices steady. Fancy halves quoted 145s to 150s. Salmon is in very short supply respecting 1 lb talls, both red and pink, while there is a good steady demand. 1 lb flat reds, labelled, quoted 53s 6d; ditto tall, 42s; 1 lb flat pink, 25s; ditto tall, 25s; cases of 96 ½ lbs, 28s 6d to 29s 6d per case. Reports of shortage in the new crop stimulate demand for canned fruits. Market consequently is very firm. Singapore pines of fair quality, on the spot, quoted 5s 7½d; Californian apricots, 7s 6d to 11s; ditto peaches, 8s 6d to 11s; pears, 12s 6d to 14s. Tomatoes: Spanish threes quoted 6s 6d and Italian ditto 6s 9d per dozen tins. Steady trading ensued in meats at fully previous prices.

OILSEEDS.—Linseed in fair demand, but prices somewhat irregular with regard to new crop Plate, owing to adverse weather reports from Argentina. Indian: Bold Bombay, loading, sold, £23 15s; small Bombay, ditto, £23 5s; Calcutta, afloat, £23 2s 6d; November-December, sold, £22 10s. Plate afloat, £21; December-January, sold, £17 17s 6d to £17 10s; January-February, £17 5s to £16 17s 6d; April-May, £17 5s to £17. Rapeseed firm. Toria, November-

Commercial Times.—Weekly Price Current.

The prices in the following list are revised with the assistance of an eminent firm in each department.

overcome the basic factor that the banks are well supplied with funds. Money has been freely lent up to—but not over—the year-end at 2 per cent.; loans into the New Year have cost about 3½ per cent. as a rule, though arrangements either side of this rate have been mentioned. Discount rates have shown but little decided tendency, the disposition in these uncertain times being to do as little as possible, and this naturally adds somewhat to the supplies of short money.

	Dec. 14, 1923.	Dec. 7, 1923.	Nov. 30, 1923.	Nov. 23, 1923.	Previous Rate and Date Changed.

Market rate (3 months' bills) ..	3½	3½	3½	3½	..

The Bank return showed a further slight decline in the Reserve, which was £12,505 lower, despite an increase of £146,030 in the coin and bullion, Christmas trade presumably being responsible for an increase of £158,535 in the circulation. Heavy transfers were shown between Government securities and Other deposits, a decline of £19,125,500 in the former being offset by a contraction of £19,736,800 in the Private deposits, thus indicating very heavy repayments since last Saturday of the Ways and Means Advances required for the dividends. The reduction in the liabilities raised the Reserve proportion from 14.5 to 16.7 per cent. Currency notes outstanding were increased this week by £4,286,700 to £288,679,300, which includes £1,430,900 for notes called in but not yet cancelled. The fiduciary issue is £237,798,400, or £32,385,400 below the maximum.

The monthly statement of average weekly balances of the London Clearing Banks for November, which is printed in detail on a later page, shows very little change in comparison with that for October, as may be seen from the following table, which summarises the figures for the nine English banks:—

	Dec. 1922.	June, 1923.	August, 1923.	Sept. 1923.	Oct. 1923.	Nov. 1923.
Capital and reserves	1160	1163	1163	1153	1163	1163
Acceptances	728	738	727	727	727	727
Deposits (incl. undivided profits, &c.) ..	1,684.7	1,637.7	1,611.2	1,609.6	1,629.2	1,629.2
Total liabilities	1,873.5	1,827.8	1,798.2	1,798.6	1,824.4	1,833.4
Coin, notes, balance at bank, and cheques in course of collection	2530	2407	2310	2302	2366	2333
Money at call	1060	1133	994	1095	1012	1047
Investments	184.5	355.5	328.7	361.2	359.7	361.5
Discounts	298.3	270.8	264.7	260.4	274.7	263.9
Loans and advances	732.7	746.9	742.7	744.3	745.9	750.3
Over for accept., promises, &c.	99.0	100.6	97.7	100.0	106.3	111.7
Total assets	1,873.5	1,827.8	1,798.2	1,798.6	1,824.4	1,833.4

The principal feature is the sharp increase in acceptances to over £87 millions. This increase, which is partly seasonal, is common to all the banks, and brings the total to the highest figure since the publication of monthly figures was resumed. Deposits are practically unchanged. Loans and advances at over £750 millions are at the highest point since January of last year, but discounts, after a heavy increase in October, have again receded.

THE STOCK MARKETS.

Although a moderate rally in prices occurred on the Stock Exchange in the first part of the week, political conditions have for the moment checked enterprise, and depression has overspread most departments. Public selling was responsible for a set-back in quotations in the gilt-edged market towards the end of the week, and this weakness spread to the home railway market. Argentine rails have been one of the few exceptionally steady sections, while Grand Trunk Pacific debentures have been buoyant in the hope of an early statement in regard to the resumption of interest payments. The industrial markets generally have been depressed. Banks have been moderately firm, but the activity in hotel shares has subsided. In the oil market, Anglo-Persians have been noticeably weak. The Kaffir market has been fairly good, but Chartered lost a little on the development of opposition to the proposed cash return to shareholders.

THE COMMODITY MARKETS.

The position of the commodity markets generally appears to be still under the influence of "election excitement," and movements in many cases are rather erratic. After a further decline in raw cotton values, there has been a marked recovery; a better inquiry was noticeable for cloth towards the end of the week. The rapid advance in wool values in London and elsewhere is causing some uneasiness among users; in the wool trade some fair orders have recently been booked, and machinery is fairly well employed. Wheat is firm in tone, but prices have been held in check by large Russian shipments. Jute values were rather weaker. The rubber market was quiet, and prices were easier. Rice moved upwards on account of the crop forecast of the Burmese Government showing a substantial decrease. Coffee prices advanced, and the better classes of tea met with a good demand, but prices of inferior qualities displayed some irregularity. The upward movement of prices on the Cardiff coal market has been checked, and business is slightly less active. The pig-iron market has been very strong, particularly owing to the good demand from consumers at home. Owing to the increasing costs of making steel, manufacturers have advanced their price 10s per ton. Tin had a spectacular market, and went to over £241 per ton, but copper failed to register higher values. The hide market remains steady, and the boot trade is well employed.

FOREIGN EXCHANGES.

The Foreign exchange market has been extremely quiet throughout the week, with few movements of importance. New York quotations have been irregular. From a closing price of \$4.36½ on the 7th, rates have moved between \$4.35½ at one time on the 8th and \$4.39 at one time on the 12th. On the whole, the improvement in the middle of the week has been followed by a slight relapse to \$4.37 yesterday morning. At the same time, there is a general impression that, unless counteracted by political uncertainties here, the beginnings of a quiet upward movement may soon be expected. Forward rates at ½ cent per month over spot have widened ½ cent since last week. In Paris, in spite of optimism as the result of agreement over the proposed Reparation Commission enquiry, the franc has depreciated from 81.72½ on the 7th to 82.20 yesterday morning, after having been as low as 81.20 at one time on the 10th, and as high as 82.80 at one time on the 13th. This somewhat unexpected depreciation would appear to be due in part to certain special transactions in sterling, in part to a general pressure to meet foreign currency engagements before the end of the year, and in consequence some improvement may be looked for in January unless other factors intervene in the meantime. Brussels has followed much the same development, moving over the week from 94.65 to 95. Forward quotations in Paris at 5 centimes per month over spot are one centime narrower than a week ago. In Brussels they have moved from 6 to 4½ centimes over spot. The lira has remained very steady at about 100½, slightly higher than the quotation of a week ago. Amsterdam has this week moved against us rather more sharply than the dollar, being quoted yesterday at 11.45½, as compared with 11.47½ on the 7th. Switzerland, on the other hand, has depreciated slightly from 25.04½ to 25.07½. In Scandinavia Stockholm has moved in sympathy with the dollar from 16.59 to 16.59½. Copenhagen at 24.50½ has not quite maintained its recent recovery, but Christiania has appreciated slightly from 29.20 to 29.09½. Helsingfors at 177 shows little movement at its new higher level. Madrid at 33.49½ is about the same as a week ago, but Portugal at 1½ is again lower on new political trouble. In Central Europe Berlin at 18 billions has kept very steady during the week. The rentenmark is now in general circulation, and there should be no difficulty in withdrawing the earlier Reichsbank notes. Whether, however, the rentenmark itself will be able to maintain its value depends upon the possibilities of the financial reforms upon which the new Ministry is now engaged, and on the settlement of the Ruhr and reparation difficulties. Vienna, reflecting the slight improvement in sterling, has moved in our favour from 309,500 kr to 312,000 kr. Warsaw, still in the

threes of its inflation problems, has risen from 16½ million to 18 million marks. Prague has depreciated slightly from 149 to 149½, but Bucharest at 850 is again rather better than a week ago. In the East the rupee has recovered slightly from last week's fall, being quoted at 15 5 1-32d, as compared with 15 4 31-32d on the 7th. The yen, after falling away, has moved up again slightly to 25 1½d, as compared with 25 1 31-32d a week ago. The silver market has been steady, with a slight upward tendency, as the result of the absence of stocks, which have been cleared in satisfaction of the Chinese New Year demands. Hong Kong at 2s 3½d is the same as a week ago; Shanghai has risen from 3s 3½d to 3s 4d. In South America the recovery of Rio consequent on the announcement of the British financial mission has been followed by a slight reaction, and yesterday morning the rate stood at 4 31-32d, as compared with 5 3-32d a week ago. Buenos Ayres, on the other hand, has appreciated slightly from 39½d to 40½d, and Monte Video has also moved against us from 42d to 43d. Valparaiso, however, has continued to depreciate, and stood at 40.70, as compared with 40.50 a week ago.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 8th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	6,953	From Revenue	9,917
Interest, &c., on Debt	17,385	Amount borrowed	15,817
Sinking Fund	402		
Sundries	18		
Local Taxation Account	570		
Added to Exchequer balances ..	406		
	25,734		25,734

Revenue amounted to £9,917,000, against £11,565,200. Customs yielded £3,114,000, against £2,922,000, Excise produced £1,837,000, as compared with £1,746,000. Estate duties, &c., at £1,070,000 compares with £780,000 a year ago. Property and Income-tax produced £1,319,000, and Super-tax £590,000, against a combined total £1,847,000. Special Receipts yielded only £6,800, against £1,005,000, and interest on Sundry Loans amounted to only £107,500, against £1,254,100. The week's operations increased the National Debt by £15,816,850, and caused the following changes:—

	Min. £	National Savings Certificates ..	Min. £
Bank of England Advances ..	+ 250	Treasury Bills	— 300
Public Departments Advances ..	+ 15,579	Sundries	— 496
4% Treasury Bonds	+ 851		— 67
	+ 16,880		— 863

The floating debt was increased by £15,344,000 to £847,270,500.

FINANCIAL YEAR, 1923-24 (April 1 to December 8, 1923).

£	£

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—The British Overseas Bank, London and River Plate Bank, P. and O. Steam Navigation, South West Africa Co., Chinese Engineering and Mining, African and European Investment, Van Ryn Gold Mines Estates, Sungei Kari (Sumatra) Rubber, and John I. Thornycroft and Co. Lord Inchcape, at the meeting of the P. and O. Steam Navigation Company, said that he believed a free interchange of commodities with the whole world was the sheet anchor of this country. Mr Edmund Davis (South-West Africa Company) explained the company's position with regard to taxation on profits made on the sale of farms and town lots. At the meeting of the African and European Investment Company Mr C. F. Rowsell said that negotiations were on the way for the development of the iron and steel industries in South Africa. Mr Addinsell at the meeting of Sungei Kari Rubber pro-

tested against the taxation methods employed by the Dutch authorities against English companies. Mr Beaumont Pease, at the London and River Plate Bank meeting, explained the terms of amalgamation with the London and Brazilian Bank. Viscount Churchill at the British Overseas Bank meeting gave an interesting review of conditions in Central Europe.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE ELECTION AND AFTER.

FOR the time being Protection as a political issue is dead. We say "for the time being" advisedly, for the late Lord Salisbury was right when he said that it only requires a match to set ablaze the instinctive feeling of a large section of the Tory party for a policy of Protection. So long as trade continues there will always be those who look at the part instead of at the whole, and will argue that trade restriction would be a benefit to the country because it would benefit a particular section. This narrow view is, moreover, always backed up by an appeal to the instinct of nationalism. But the verdict of the Election is so clear that for some years to come the Tory party is likely to avoid the issue like the plague, and if the party leaders read the lessons of this Election aright, they will see to it that they never allow these primitive instincts to get the upper hand in their party again. The truth of the matter is that, whether the campaign be long or short, every appeal on this issue will inevitably meet the fate which has befallen Mr Baldwin. The Prime Minister made the profound mistake of imagining that Free Trade is a theoretical dogma which somehow has managed to survive from the early Victorian era. The fact is that just as Protection establishes particular vested interests which are very hard to move, so 80 years of Free Trade have established a vested interest, on the one hand among the general consuming public and on the other among innumerable special industries and occupations, in favour of unrestricted imports and exports. A country which lives by selling goods and services abroad to the extent of nearly one-third of its annual production and dependent for the greater part of its raw materials, for nearly one-half of its meat supplies and a very large quantity of other foodstuffs upon imports, will not readily give up the right to obtain all or any of its purchases in the cheapest markets. Innumerable industries have been able to hold their own by being able to buy cheap tools, machinery, and semi-finished goods from abroad, while experience has proved again and again that foreign imports have prevented a monopoly or the raising of the price of such products. Finally, the enormous vested interest of our great exporting industries has been unmoved by the attempt to prove that it is possible to alter the character without reducing the volume of our imports. The case of Coventry, which has voted for Free Trade in spite of the attractive arguments that were put forward upon the ground of the protection recently afforded to the motor industry, is one of the most remarkable object-lessons of the Election. In the course of the last 25 years the watch trade, the cycle trade, and now the motor and motor-cycle industry of Coventry have been attacked by strong foreign competition. In each case Coventry has repelled the invasion by enterprise, efficiency, and cheapness, and has learned the lesson that for a country in the position of Great Britain Free Trade supplies us with the best of all weapons for meeting foreign competition.

Mr Baldwin has been blamed for not resigning forthwith; but, on the whole, we think his decision is the right one. It is not a very grateful task to remain in office for a month after a direct appeal to the electorate has been rejected. But the situation resulting from the fact that no party has a majority in the House is so complex that it can only be unravelled on the floor of the House itself. The enthusiasts of the opposition parties will no doubt chafe at the idea of the Tory Government remaining in

change of affairs for another four or five weeks, but it would be futile for either the Liberal or Labour parties to form a Government for such a short period without reasonable expectation that they will be able to maintain their position in the House for some months. The prospect in this direction cannot be determined in a few hours, and it would be much more satisfactory for the country generally that there should be no hole-and-corner arrangement, but that the basis on which a minority Government is to be kept in power should be discussed openly and the terms thoroughly understood by the country. The Conservative party has nothing to gain by attempting to throw the Opposition into tactical confusion by hasty action. An early second appeal to the country would be extremely unpopular, and bad for the party which precipitated it, and in any case, the tide which has risen against Conservatism so quickly is not in the least likely to move with equal rapidity in favour of a party which, by appealing to the country in December on Protection and in January on Free Trade, would have covered itself with ridicule. On the assumption that it is in the interest of the nation as a whole, no less than of each of the separate parties, that we should have a holiday from elections for a while, and that the recently elected Parliament should somehow provide the means of carrying on the King's Government for some months at least, it is better that the present Cabinet should remain at their posts until the new year.

The most probable, and on the whole the most desirable, outcome of the present situation is that the Labour party should form a Government and remain in office for a time with Liberal support. The Liberal party in the House, with most of the National Liberals rejected at the polls, occupies a position rather more to the left than the Liberal party of the late House. In the last Parliament and in the constituencies it has criticised the Government not merely in home affairs, but on the even more important subject of foreign relations, and in both spheres it stands nearer to the Labour party than to the Conservative party. After recent events, it would in any case be uncongenial for the Liberal party to keep a Conservative Government in power, even if its measures were mainly non-controversial. But the agreement would certainly be wrecked upon the Budget; for a Conservative Government can hardly bring in a Budget without embodying its Preference proposals made to the recent Imperial Conference, whereas the Liberal party is equally bound by its election promises to reject them.

On the other hand, it would, on the whole, be a national advantage for the Labour party to try its prentice hand at governing the country. The fact that it relied upon Liberal support would be an absolute guarantee against revolutionary measures, whether in the form of penal taxation, excessive doles from public funds which might sap the incentives to industry, or hasty experiments with the structure of industry. The greater number of the proposals indicated in the Manifesto of the Labour party are shared in common with the Liberal party. Moreover, the Labour party will inevitably repeat the experience of all parties in a similar case, and find that, while it is an easier matter to build attractive Utopias in the rarefied atmosphere of the wilderness of opposition, it is quite another thing to mould them into concrete form in the somewhat stuffy atmosphere of the Government Departments. The Labour party, which with a few unimportant exceptions, is definitely a constitutional party, has neither the backing in the House nor the experience of administration to be able to order a general advance along the road to Socialism. It will find its hands quite full enough for some time to come in learning the art of government and in carrying out those parts of its programme in which it will have wholehearted Liberal co-operation. The quality of the personnel of the Labour party and the extent to which they can control various elements in their own ranks are to a large extent unknown. We agree with the *Times* in thinking that it will be to the public advantage if the capacity of Labour to govern is first tested under conditions in which it will be impossible for them to make serious mistakes or to rush through hasty or ill-advised measures.

We believe, with Lord Inchcape, that the business world may contemplate a Labour Government supported by the Liberal party without misgiving.

Responsibility always has a sobering influence. Here and there might be changes in the use of administrative power—particularly in the Ministry of Labour; but Ministers without experience are always largely in the hands of their permanent advisers, and, judging from past experience during and before the war, this is particularly the case with Labour Ministers. We can, therefore, see no ground for panic at the prospect before the country. During 1923 British trade has been struggling heroically against very difficult world conditions, and since the middle of August it appears to have got the upper hand to the extent of enjoying a modest but definite and steady advance. The disturbance caused by the General Election has not produced a severe set-back, except perhaps in some branches of the retail trade, and at the moment the indications are that the upward movement is continuing. The best national service which business men can render at this stage is to settle down to work again and to exploit to the utmost all the openings that are likely to occur for trade expansion in the new year, without allowing themselves to be depressed by pessimistic forebodings.

In saying this, however, we do not deny that it is important to scrutinise very carefully the proposals that may be made by the Labour party. For the moment the country has delivered an unequivocal verdict on the question of the Capital Levy, which in the form presented to the electorate is as dead as mutton. But at any time it may experience a resurrection in another form. The last word has not yet been said on this subject, for the key to Labour policy, as to that of any party which holds out hopes of social improvement, is the Budget. In our view, however, there is a much more insidious danger to be feared from a Labour Chancellor of the Exchequer. Early this week the secretary of the Independent Labour party declared that the first task of a Labour Government would be to restore the 10 millions a week to wages which had been taken off in the last three years. There is only one way by which 500 millions could be added to the wages bill of the country, and that is by inflation—a process which for the moment is the only easy way of bringing abundant funds to the Treasury. The idea would certainly be a temptation to a party baulked of its Capital Levy and in dire need of finding some way of fulfilling the expectations of the electorate. The prompt repudiation of any such intention would be the surest way for Mr Ramsay MacDonald to dissipate misgivings in the business world.

OUR MONETARY POLICY.

THE problem of reviving British industry on a scale that will absorb Britain's unemployed transcends and overshadows every other public question. The Conservative party have suggested that a change in our fiscal system would do the trick, but the electorate have decided that that remedy would make the patient worse and not better. This decision will intensify the public desire to probe more deeply into the causes of the trouble, and to examine any other proposals that bear upon it. Among the most important of the issues which must now be discussed is that of our currency policy. Is the policy that we have hitherto pursued driving down prices, and if so, is this hastening or retarding the return to normal conditions? If the latter, is there any practical alternative? Such are some of the questions that are being asked wherever public affairs are being discussed. The issues are more difficult and more complex than the points at issue in the fiscal controversy, and Mr Keynes has done great service in making the issues clear in his latest book.* There are many who will differ in varying degree from Mr Keynes' conclusions and proposals, but whatever opinion may be held of Mr Keynes' specific judgments, no one who reads his book will fail to appreciate the marvellous lucidity (marred only in one or two cases by excessive compression) with which he sets out the problem, analyses its causes and marches boldly to his conclusions.

There have been such striking object lessons in recent years of the evil effects of violently fluctuating prices that there is to-day a very widespread opinion in favour of any plan which holds out a hope of establishing a stable price level. But this is rather the result of instinct than of reason, and it is certainly not generally realised by the public in this country that gold itself is an unstable standard, and that in the last ten years gold prices have been almost as erratic as prices based upon paper money. Mr Keynes has given a characteristic account of the disastrous effects upon society of these fluctuations, and the way in which they operate upon the incomes of different classes. This part of the story is of far greater importance than as a mere economic theory, for it underlies the great issue of whether or not our existing form of economic organisation can be worked in such a way that it will be acceptable to those who live under it. A few random quotations will illustrate the argument.

No man of spirit will consent to remain poor if he believes his betters to have gained their goods by lucky gambling. To convert the business man into the profiteer is to strike a blow at capitalism, because it destroys the psychological equilibrium which permits the perpetuation of unequal rewards. The economic doctrine of normal profits, vaguely apprehended by everyone, is a necessary condition for the justification of capitalism. The business man is only tolerable so long as his gains can be held to bear some relation to what, roughly and in some sense, his activities have contributed to society.

A violent disturbance of the standard of value obscures the true situation, and for a time one class can benefit at the expense of another surreptitiously and without producing immediately the inevitable reaction.

It is one of the evils of a depreciating currency that it enables a community to live on its capital unawares.

The individualistic capitalism of to-day, precisely because it entrusts saving to the individual investor and production to the individual employer, presumes a stable measuring-rod of value, and cannot be efficient—perhaps cannot survive—without one.

Mr Keynes proceeds to deal with the question of the price level in relation to the Budget, emphasising the point that the question whether a given burden of annual interest is tolerable or not depends upon this price level. But we have not space here to pursue this question, while that of the Capital Levy *versus* alternative methods of dealing with the debt burden is a matter which we will deal with on some other occasion. Nor need we refer here to the chapter dealing with the theory of money and foreign exchanges, but will pass to Mr Keynes' conclusions, which we will venture to summarise—we hope without injustice to Mr Keynes—as follows:—

The amount of bankers' credit in existence bears in practice a more or less fixed ratio to "cash in hand or at the Bank of England" held by the joint-stock banks. The amount of these bankers' reserves are mainly dependent upon and can be controlled by the policy of the Bank of England and of the Treasury, which thus can control the level of prices, and, therefore, also the level of the exchanges.

Under post-war conditions, these reserves and the credit reared upon them bear no relation to gold nor in practice to the rule which lays down a theoretical maximum for our currency notes. The maximum has never, in fact, become operative, and the rule is unlikely to be enforced as a check on the volume of currency or of credit.

The control of the volume of credit which in practice exists should be made more conscious and deliberate than at present, and should

be based not upon the desire for exchange stability, but upon the stability of sterling as its primary object, though this would not prevent an attempt to secure exchange stability as a secondary object by co-operation with the Federal Reserve Board of America in a similar policy.

The use of this power to control credit should, as far as possible, be used in anticipation of and not after price fluctuations have taken effect and altered index prices. It therefore depends upon the study of all relative data and the best informed forecasts of the probable course of prices.

In order to prevent violent temporary movements of the exchange, and to retain gold as a means of international payments, the Bank would fix from time to time the price of gold, leaving a fair margin between its buying price and its selling price. This margin would enable the gold reserve to be used freely to steady minor exchange fluctuations, but if gold prices steadily move away from paper pound prices, the Bank's gold price would be changed.

It is further suggested that the purchase of dollars for the payment of the American debt should be used to balance the seasonal movement of the American exchange.

The Bank's price for gold should be quoted not merely for immediate delivery, but for delivery three months hence, a plan which would help to develop the forward market in exchange, which in its turn would facilitate the movement of funds between London and New York without involving gold shipments.

If the standard value is thus divorced from gold, our gold reserve should be entirely controlled by the Bank of England, and the currency note issue could be left without gold backing; for the amount of notes required in circulation would be a consequence of the level of prices, and not a cause.

By this means it is urged that "it is possible to get the benefit of the advantages of gold without irrevocably binding our legal-tender money to follow blindly all the vagaries of gold and future unforeseeable fluctuations in its real purchasing power."

The premise of these proposals—namely, that gold is an unreliable standard of value, and that it is possible in theory to make a scientific standard based upon the value of commodities generally, is not a new idea, but has been familiar to economists under the name of the "Tabular Standard" for well over a hundred years. Its advantages, if it could be applied, would be immense, for not only does a variation in the standard produce quite unjustifiable changes in the distribution of wealth, but also the absence of a policy which aims at stabilising prices on a scientific standard means that the ordinary ups and downs of trade are exaggerated, instead of being checked, by the machinery of credit. Moreover, the violent disturbance of the world's monetary system caused by the war has produced an atmosphere of great receptivity to new ideas and diminished confidence in our pre-war mechanism. There is therefore more readiness to consider the possibility of a more conscious and more scientific control of the monetary system.

Nevertheless, the practical difficulties in carrying such a plan into effect remain. In the first place, unless we were to attain an international agreement on the subject, or, at all events, some common understanding between England and America, we should, if the plan proved successful, be substituting a system of stable internal prices and fluctuating exchanges for one of stable exchanges accompanied by varying price movements, both internally and externally. To introduce a system which would perpetuate our present exchange fluctuations would be a serious matter for Great Britain, particularly in two respects. In the first place, to buy and sell abroad on a varying exchange involves an element of speculation in our all-important foreign trade. It is true that if the

economic theory of the exchanges worked perfectly smoothly, these movements would not have a very disturbing effect. For example, if American prices on a gold basis increased 50 per cent., the value of the dollar in terms of sterling should automatically fall in proportion, so that the British manufacturer buying cotton would pay the same amount of sterling for cotton as before. But as in practice this adjustment does not work promptly and automatically, it involves instability in the prices at which we purchase food and raw material and sell our manufactures. Again, an unstable exchange would unquestionably affect the extent to which the nations of the world would keep their balances in London or do their international financing here; for a given monetary balance in Great Britain could not be relied upon to purchase a given quantity of dollars or of gold. It will be quite correctly pointed out that any distrust of sterling on this ground would be unjustified, for if the scheme worked a sterling deposit would represent a constant value in terms of commodities. But if the great trading nations of the world did not follow our lead, they would not be likely for a long time to recognise that the pound sterling was the most stable unit in the world, and, in the meantime, London would lose her financial pre-eminence.

A second difficulty is that the proposal places absolute discretion in the hands of the Treasury and the Bank of England, qualified to some extent by the power of the great joint-stock banks to modify the working of this central control of credit. Under existing conditions there would undoubtedly be great suspicion on the part of industrialists and merchants of any authority which exercised so great a power, especially since it would, from time to time, take the form of deliberately checking industry just when manufacturers were beginning to think that trade was getting good and handsome profits were in sight. We may even doubt whether wage-earners would accept this monetary dictatorship, which would necessarily have to be carried out practically without explanation of the reasons for its actions. This objection is the more forceful, seeing that it means ultimately control of monetary policy by the political party in power.

In the third place, even if the principle were accepted, it is doubtful whether any small group of men, however well-informed and public-spirited, could in our present state of knowledge gauge the state of economic conditions with sufficient accuracy to avoid making mistakes, which instead of proving helpful might cause disaster. For Mr Keynes himself points out that, in order to remedy trade fluctuations by credit control, it is not enough to take action after prices have risen. Action must be taken in anticipation of a price movement, and so prevent fluctuations being brought about. In this respect the motto of the *Economist* has long been: "Let knowledge grow from more to more," and we are enthusiastic believers in the immense benefit which will result to the community generally when we have adequate knowledge of the facts of business. But we in this country have unfortunately to admit that at the present time we are only just beginning to obtain the essential data for forming a scientific judgment on economic affairs. In its absence credit control would be an art of a very rough-and-ready kind, and not a science, and under such conditions the objection which we mentioned last has particular force. The instinct of the business world will undoubtedly be to endure the evils of the gold standard, with all its drawbacks, rather than to run the risk of other evils which they know not of. Finally, the only other point which we have space to mention is that there are grave reasons for doubting whether the management of credit in the way proposed would, in fact, save us from periodical fluctuations of trade. Experience alone would prove how far credit control could, in fact, eliminate these fluctuations; but we are disposed to think that the backers of the theory place their claim too high. Drastic credit control can undoubtedly check a violent upward movement of prices. It is more doubtful if it can stimulate sagging prices.

These criticisms are, however, qualifications of a brilliant book which is deliberately intended to make out a case for a definite scheme of price stabilisation. They do not, in our opinion, affect the thesis that, in the long run, if our economic system is to work well, money

and credit must become our servants and not our masters, and that our goal should be to eliminate periodical fluctuations in the value of our monetary unit, and to secure over long periods a steady standard of value. Mr Keynes' book should help to make clear the ultimate objects of our monetary policy, but we are disposed to think that we should approach this goal by a number of intermediate stages, or possibly by another route. In particular, perhaps a more hopeful line of approach is to secure a greater measure of confidence by a return to a gold standard, and to attain stability by gradually securing through international action a slow but effective control over the fluctuations in the value of gold itself.

PROFESSOR CASSEL ON PROTECTION.

In stating the case for Free Trade, we emphasised the fact that the issue was one of importance far beyond this country, and that public opinion abroad would not only follow the contest with interest, but would unquestionably be influenced by the course followed in this country—the home of Free Trade. We therefore consider that it will be of interest to our readers to know the views of Professor Cassel, the most distinguished of European economists, on the subject, who writes as follows:—

The fiscal question having been examined during the last few weeks in some hundred thousand speeches and leading articles, it might seem that not much remains to be said on the subject. However, the great controversy has certainly not come to an end with this election. The British people will still have to give much thought to the relative merits of Free Trade and Protection before the definite choice is made, and the time immediately after the election is perhaps particularly suited for a more unbiased and thorough consideration of the matter. It is only natural that in such a discussion the international character of the problem should be emphasised more than it could be in the electoral struggle. In a discussion on the international aspects of the controversy an outsider may perhaps find some justification for accepting an invitation to take part. Clearly it is an advantage if the problem could be handled at least for a moment as a general economic problem, to the elucidation of which every serious attempt at a contribution should be equally welcomed. Again, in a discussion concerning the advantages and drawbacks of Protection, the present generation of Englishmen cannot claim to have much direct experience. Indeed, much that has been said in the election campaign in favour of Protection is clearly influenced by a desire to try something new and unknown, to "let Protection have a chance" when everything else has failed. In countries with more experience of Protection the expectations of unknown blessings of a fiscal policy have not the same imaginative power, and Mr Baldwin's recommendations will in such countries have no undue advantage of freshness or originality.

Few people deny that Free Trade is right in principle. Advocates of Protection always try to convince people by pointing to "particular circumstances" which "for the time being" make certain Protectionist measures necessary. But having once accepted this argument you will, curiously enough, always be confronted with "particular circumstances," and you will invariably find that the time you live in is just the "time being" which demands extraordinary measures.

Thus Protection has a tendency to an infinite prolongation of itself. The particular reasons which provided the first motive are generally preserved with admirable piety, or fresh reasons are invented. But you will never hear from the side of the protected interests that Protection has fulfilled its function and can therefore be abandoned. In this the Protectionist countries of the world have an accumulated experience which is unknown to modern England, but of which, at the present moment, England would do well to take notice.

Protection also has a very strong tendency to widen its field, as interests which feel themselves damaged by

the protection given to others will ask for compensation in fresh protective measures in their own favour, and so on. This experience, which is quite familiar to old Protectionist countries, seems, indeed, already to have begun to make itself sufficiently felt even in England. It should be particularly observed that industrial protection invariably leads to claims for agricultural protection, and England will not be able to avoid this consequence, even if it is for the moment hidden by being presented in the form of a subsidy to agriculture which, in its economic effects, must practically amount to almost the same as a system of duties on agricultural products.

Among the "particular circumstances" which are today quoted in England in favour of Protection we must first notice the undue advantage on the English market which depreciated currencies give to some of England's competitors. The Protectionists do not always make it quite clear what is meant by "depreciated currencies." In reality, a small currency unit gives no advantage to the exports of a country. An undue stimulus is only created when the currency of a country is undervalued on the international markets, i.e., valued lower than would correspond to its purchasing power parity. Such an undervaluation is a great evil, but the remedy for this evil should lie in endeavours to master the causes of such undervaluation, i.e., to help to create stable monetary conditions in the countries concerned, and to remove at least that instability of exchanges which is caused by arbitrary interference in the conditions of international trade. What the Tariff Reformers in England are proposing to do is just the opposite to the last point. By erecting new tariff barriers against the exports from countries with undervalued currencies, we must obviously increase the undervaluation of these currencies, simply because we make the possession of such currencies less useful. This truth is most easily understood if we imagine the policy of Protection against undervaluation carried to its extreme: If all outside countries applied absolute import prohibition against goods from a country with undervalued currency, the international value of that currency would immediately sink to practically nil, because nobody would be able to make much use of it.

The safeguarding of industries which can be attained by aid of duties against undervalued currencies has already shown itself in England to be restricted within very narrow limits. This must naturally be so in a country whose industries essentially depend on export. What might, perhaps, be possible for a more self-contained country is not possible in the case of England, because of the overwhelming importance of the export trades for the maintenance of the British people. A policy aiming at reserving the home market for home-made products must, in the case of industries which also work for export, generally have the effect of fostering combinations for the exploitation of the home market by high prices, foreign markets being supplied at a cheaper rate. A Government promise to prevent such combinations is not of much worth, as there is hardly any other way in which the export industries could draw any advantage from the duties introduced for their protection. The ultimate effect of the whole tariff system must be to increase the cost of production for the export industries and weaken their power of competition in foreign markets. This is only in accordance with the actual aim of the Protectionist policy, which must always be to make the country more self-supporting, i.e., to diminish its need for export goods serving as payment for imports from abroad. Such a policy may, perhaps, be adopted by a country which still has the choice between a mainly self-supporting economy and a development towards greater dependence on exports and imports. For England this choice was made definitely a hundred years ago, or, at least, by the abolition of the corn laws, and there is now no way back. The population has been allowed to grow up to its present density, and can now only be supported on the basis of a Free Trade system allowing the highest possible development of the international exchange of goods.

If the modern English Tariff Reformer is open to learn anything from other countries' experiences of Protectionism, he will also find out the vanity of the phrase that the Protectionist measures now planned in Great Britain will only pave the way for a greater amount of real Free

Trade. The increase of duties in one country has always a very strong tendency to cause a corresponding increase in other countries' duties. The concessions made later on in international trade treaties are under such circumstances often more illusory than real. There is certainly not much experience to support the idea that the advancement of real Free Trade can be furthered effectively by aid of duties introduced as weapons in a tariff war.

The most probable effect of England's return to Protectionism would be that a fresh and strong wave of Protection would flow over the world. This would mean a very serious restriction of international trade. A policy which is calculated to make every country more self-supporting must—whatever advantages it may conceivably bring the different countries—result in a diminution of international trade. This disadvantage may, perhaps, be regarded as negligible by a country whose normal part of, or interest in, the world's trade is insignificant. But certainly the effect cannot be neglected by Great Britain. Even if it could be shown that the usual arguments against and in favour of Protection balance one another fairly well, as far as British production is concerned, the question is not decided for Great Britain. This country's interest in international trade is so great that every weakening of the world's commerce falls upon Great Britain with far more than proportional weight. The commerce, banking and carrying trade of Great Britain have their life interest bound up with a continual development of the international exchange of commodities, a development from self-supporting conditions to greater dependence of nations on one another. Therefore, any reasoning and any considerations which would conceivably be acknowledged as convincing for the adopting of Protection by another country are not convincing in the case of Great Britain.

The present state of unemployment in England is undoubtedly a very serious "particular circumstance," and it is natural enough that all sorts of prescriptions promising help should be willingly accepted under such conditions as are now prevailing in England. But here again it would be wiser to try to analyse thoroughly the causes of the present unemployment. The policy of exhaustion and destruction which has been allowed to take the lead in Europe is, as everybody knows, the first cause of the general depression of the world's trade. The second is the continual unsettlement of the world's monetary conditions, and the consequent instability of currencies and exchanges. It would be better to concentrate all energies on overcoming these fundamental evils than to waste time on futile efforts to cure particular symptoms of the world's sickness. There are also factors particularly responsible for the high degree of unemployment in England: the long suspension of emigration which has allowed the population to grow faster than the resources for its support could be increased; and the lack of a rational redistribution of the population in different occupations according to after-war requirements. In both these cases the remedy has to be sought in a greater mobility of the population, in the overcoming of the frictions which prevent a change of domicile and of occupation, and more particularly in removing the obstacles which a shortsighted trade unionist policy piles up against the free movement of labour from one occupation to another. Protective measures work in the opposite direction when they induce people to remain in their old positions, even though it is clear that they are unable to support themselves there without outside assistance.

The idea that more employment can be created by Pro-

tection is a typical outcome of a false application of arguments of *private* economy on *social* problems. For an employer or a workman in a particular trade it may be plain enough that he can get more employment by being protected from foreign competition. He looks on the matter from the point of view of his private economy, and he does not take any account of the more remote effects of such protection. But if we sum up all these more remote effects for the community as a whole, we shall find them to be very important and, perhaps, to far outweigh the sum of advantages secured by private individuals. The latter will, in all probability, be the case in England: If England's export trades are handicapped, and if the world's commerce is restricted, the loss of employment for the British people as a whole is likely to be very much greater than the additional employment which may be created by aid of protective devices.

OIL AND INTERNATIONAL POLITICS.

A QUESTION which was suspended by the lightning arrival of the General Election was whether the Government should or should not take advantage of an opportunity which has arisen to sell out their shares in the Anglo-Persian Oil Company. Everyone knows that the nation first acquired an interest in this company before the war at the instigation of Mr Winston Churchill, whose object in advising the purchase of shares was the desire to acquire control at the source of supplies of the fuel oil which our Navy would require in quantities which, he foresaw, would increase rapidly as fleets were converted from the coal to the oil basis. Most people to-day would decide the question whether the British Government's interest should now be sold solely on their views as to whether or not naval safety demanded their retention; some others would attach great weight to the principle whether Government participation in an industrial enterprise was right or wrong. Few, probably, have realised the immense importance of the decision. In the last 20 years one of the new factors that has emerged in international politics is oil. Of that fact public opinion is vaguely suspicious, but largely ignorant. It is as well that that ignorance should be dispelled, and we therefore welcome without hesitation a little volume* on the part played by oil in international politics, which has been published this week. The traditional conception of oil is that of a substance which lubricates, which supplies motive power, which, when poured on troubled waters, produces calm. Those who read this little volume will gain a very different idea of its effect when poured on the troubled waters of international politics. No one, for instance, can deny that in the recent relations between Great Britain and the United States oil has been not a lubricant, but an irritant.

Mr Davenport and Mr Cooke are oil experts, and it is therefore not unnatural that they should tend to over-emphasise the international importance of oil problems. When, for instance, they speak of two, if not three, of the great international conferences of 1922 being ruined by oil, we may beg leave to recall that other powerful forces were at work to render abortive those conferences through which Mr Lloyd George so fondly hoped to reach the road of European salvation. But this inclination towards over-emphasis does not really detract from the value of a book which not only examines with a wealth of statistical and geographical detail the present potential oil production of the world, but also gives the reader a peep, which will horrify him, into some dark corners of diplomacy. The public are dimly aware that oil policy has produced friction and suspicion between Washington and London. When the facts set out in this volume are examined, few will fail to understand the American point of view, or to feel that this obstacle to Anglo-American friendship should never have been raised, and ought to be finally removed, in so far as it lies in the power of the British Government to do so.

"The Oil Trusts and Anglo-American Relations." By E. H. Davenport and S. Russell Cooke. Macmillan. 7s 6d.

Mr Churchill's initial conception of a national oil policy, based on considerations of naval safety, took strong hold during the war and after, and in 1918, under the Premiership of Mr Lloyd George, was formed a secret Cabinet Committee, known as the Petroleum Imperial Policy Committee, whose object was to secure greater British participation in the oil-producing companies of the world, "and particularly," as our authors put it, "in the Royal Dutch-Shell." The existence of this Committee, and exaggerated rumours regarding its work and intentions, were sufficient to arouse criticism and suspicion in America. Subsequent events added further fuel to the flames of misunderstanding, and nothing perhaps contributed more than the agreement signed at San Remo between Sir John Cadman and M. Berthelot, on behalf of their respective Governments, and the part which the Mosul question played in the deliberations at Lausanne. The San Remo agreement has been interpreted in many ways, and in some respects is a perplexing document, but its principal meaning is clear: by it Great Britain and France proceeded to divide up among themselves oil interests in important ex-enemy territories. "It is hard to deny the claim," write Mr Davenport and Mr Cooke, "that, having admitted France, alone of our partners in the war, into the Mesopotamia oil monopoly, we were in fact slamming that door in the face of America." We do not propose to trace in detail the whole story of American reprisals against a British oil policy which she conceived to be aimed at her, of Sir John Cadman's subsequent offer to American interests of a half-share in Mesopotamian exploitations—in fact, of oil on the back stairs of diplomacy during the past five years.

The story may be read in detail in the little volume before us. It is the central fact about the story with which we are concerned. This fact is that the adoption of a definite and aggressive oil policy by the British Government has poisoned, and will if continued, poison again the relations between the two great Anglo-Saxon nations. We have on the one side Washington taking the Standard Oil view, and on the other Downing Street following an Anglo-Persian policy. We are not concerned to condemn or approve or even to assess the influence of the oil trust on American policy, except to point out that that influence was inevitably strengthened by British policy and American belief of what that policy meant. But a question which calls for the urgent attention of this country is whether Great Britain should not abandon all idea of an oil policy at all, and so remove a dangerous irritant from the realm of international politics. The only possible justification for a policy of stock control by the Government in producing companies is the argument that such control is necessary to assure supplies of oil fuel for our fleets in time of war. But is it necessary? We are inclined to agree with Mr Davenport and Mr Cooke that this argument, which has been the basis of British oil policy with all its harmful results, is a fallacy. What is vital in war is not control over production at the source, but a sufficient command of the sea to enable us to obtain oil fuel from the most convenient quarters. It would avail us nothing to own the whole of the shares of all the oil-producing companies of the East, if we had not the ability to guard the trade routes by which the oil has to be carried. That is a cardinal naval principle which was clearly grasped by Lord Fisher, and it means that it is necessary to keep large tank-stores at home. "If," as our authors put it, "the Anglo-Persian Oil Company had been controlled by Germans, or had been from first to last German, would not the British Navy have had Persian oil just the same?" In any case, in the late war it was American and Mexican oil, more than Persian, that kept the British fleets under steam.

If this line of argument is right, as we believe it to be, then no justification remains for continued participation by the British Government in the oil production industry. For if strategical arguments do not justify it, the principle of Government investment in industry will have few supporters. There is no possible danger of any potential enemy country gaining a monopoly of oil supplies, the progress of private investment of British capital in the oil industry being sufficient safeguard against any such anti-British monopoly. "The relative oil yield of the United States and the British Empire may be about 32 to 1," write our authors, "but there is hardly an oilfield in any

country in the world where British companies are not working. With the command of the seas, what more could be desired? How unnecessary for the national defence is this policy of State participation in an oil-producing company!"

When Parliament dissolved last month the British Government were in possession of an offer to purchase their Anglo-Persian shares. In our opinion, the offer, provided it is in all respects a reasonable, proper offer, should be accepted. Such action would tend to sweeten Anglo-American relations at a very important juncture; it would remove from post-war diplomacy a sordid and harmful element of intrigue; it would lead the way to the policy of the "open door," and to complete freedom of competition between privately-owned companies, which, as is pointed out in the volume under notice, is the only ultimate alternative to the impracticable and unpalatable policy of "a thorough international control of oil production, with its concomitant of internationalised zones, where oilfields or oil pipe-lines lie situate in unsettled territory, and of an international prorating of expenditure and profit."

LONDON HOTELS AND RESTAURANT COMPANIES.

If the published accounts of companies interested in London's hotels and restaurants are any guide, there is ample evidence that this section of the catering industry is showing reasonable signs of improvement. Most of the big representative concerns are now giving a return on their ordinary capital, after having provided for maintenance and redecoration—two substantial drains upon the revenue of any well-equipped modern hotel. We confess that we are not altogether satisfied with the progress made since the war by the hotel industry as a whole. There is, of course, the fact that the progress of the industry was very much impeded in some cases by Government occupation of premises and the difficulties in connection with compensation. With those who suffered from these drawbacks we have every sympathy. On the other hand, however, there is the fact that those hotels which were occupied by the Government served to accentuate the scarcity of hotel accommodation at a period when London was admittedly overcrowded. Economic conditions made it impossible to build competitive hotels. Most hotels were full to overflowing. Thus hotel companies should have been able to enjoy at least three years of boom prosperity followed by a year of depression and a year of partial recovery. But apparently directors in many cases were not able to abstract from "bumper" business years that distilled essence—more commonly referred to as profits—so necessary to please shareholders. We have often wondered if overhead charges in connection with many of our hotels are not carried too far—if money does not necessarily go to waste in the overpayment of many decorative and even dignified, but certainly useless (from a utilitarian point) officials.

As usual, to survey the industry we have selected a batch of representative undertakings, and compiled a number of comparative statements. Our first table shows dividends declared over a period of years upon shares of a number of companies:—

	1913-14	1914-15	1915-16	1916-17	1917-18	1918-19	1919-20	1920-21	1921-22	1922-23

* Free of tax. † Ordinary. ‡ Year 1922. § For 7 months to end of 1922.

It is interesting to observe the gradual process of improvement. The Piccadilly is an outstanding feature as an exception; it must, however, be remembered that the high dividend was upon a very small amount of capital. The Carlton is noteworthy for its larger distribution, while the Cecil makes a bid for favour. The Savoy looks as if it

intended to maintain 10 per cent. as a standard, and nothing would appear to be able to stem the prosperous course followed by the Strand.

In the next table we set out the gross profit and net profit of these companies for the past three years, adding comparative figures for 1913-14:—

Company.	1913-14.		1920-21.		1921-22.		1922-23.	
	Gross Income.	Net Profit.	Trading Profit or Income.	Net Profit.	Trading Profit or Income.	Net Profit.	Trading Profit or Income.	Net Profit.

* Trading profit. † Year 1922. ‡ For 7 months to end of 1922.

Considered as an industry, profits have been well maintained. The Gordon shows a gratifying increase, while the Piccadilly is once again taking the upward path. The Savoy and Waldorf Hotels have, we hope, definitely joined the lists of prosperous undertakings; Smedley's, as an efficient provincial undertaking, demonstrates what can be done in combining good hotel service with profit-earning. The position of Romano's is an interesting one. It has assets valued at £114,326, including valuable freehold premises in the heart of London. There is a mortgage of £18,700, it is true, in existence, but we would point out that there is also a reserve of £20,000. Gross profits have varied from £23,995 in 1921 to £21,388 in 1922 and £27,492 in 1923. In 1921 and 1922 trading resulted in a loss; in 1923, however, with profits only a little higher, it was decided to distribute a dividend of 7½ per cent. on ordinary capital.

Our next table shows comparative figures of principal assets and liabilities for the past three years:—

Name and Year.	Principal Liabilities.			Principal Assets.		
	Total Capital.	Reserves.	Creditors.	Properties.	Cash & Investments.	Debtors & Stocks.

† Includes claim against Government for expenses of reinstatement and loss of goodwill.

This is a useful analysis, and provides a reasonable safeguard to those who are considering hotels as an investment proposition. Other information is difficult to obtain. Hotel directors in reports, in the majority of cases, have reduced brevity to a fine art. Yet we find that shareholders of one company are enjoined at the end of a bald statement of profits, "Should

you be unable to attend the meeting, the board will be obliged if you will kindly fill up the enclosed form of proxy and return it to the company's office at your early convenience." The trustfulness of the average shareholder is, we must confess, beyond our measure. The Carlton Hotel mentions that "the hotel and its contents have been well maintained and are in good order and condition." The Piccadilly Hotel, Limited, and Gordon Hotels, Limited, are two companies which are slightly more informative in their report than others. The Gordon's report, however, is somewhat ancient history now, but the directors of the Piccadilly in October last pointed out that "since the close of the financial year they have been able to arrange for a reduction to $5\frac{1}{2}$ per cent. in the rate of interest on the first mortgage debentures, which have been increased by £50,000. They have also been able to purchase large blocks of the 6 per cent. participating debentures, reducing the amount held by the public to £94,000"; the original amount was £250,000.

The little group of hotels under the control of the Strand Hotel, Limited, made excellent progress. Major Gluckstein, presiding at the annual meeting of the company, mentioned that "in September, 1922, they reduced the tariff for bedrooms, so that these reductions had operated throughout the whole of the year now under review. As previously explained, they did not lower these prices with a view to attracting more visitors; that would have been impossible, as the hotels had always been, and were now, fully occupied. The reductions were made in pursuit of the policy of the board to supply the public at the lowest price, and to get back as near as possible to pre-war rates." With regard to "the catering side of the business, there had been some slight reductions in the cost of foodstuffs during the year, and expenses in one or two instances had been lower. The benefit of these lower costs had been passed on to the public in the form of reduced charges. It was natural, therefore, to find that the average amount spent per head had been less."

Our final table shows price movements of representative hotel shares for 1922 and 1923, and present yields:—

	Prices of 1922.		Price of 1923 to Nov. 30.		Price End of Nov. 1923.	Present Yield.

† Dividend in arrears. Yield calculated on 5% basis.

There has recently been a considerable activity in hotel shares, due to a greater interest being taken in their future, as a result of the possible large influx of visitors to London for the forthcoming British Empire Exhibition at Wembley Park. The chairman of the Hotel Cecil pointed out at the annual meeting held on November 20th that "since the close of the financial year (August 31st) the business continued good, and showed a satisfactory increase over the previous year." Many hotel managers expect to be able to report similar conditions for next year.

ELECTION STATISTICS.

WHEN the General Election of November, 1922, returned a large Government majority elected by a minority of the electorate, we expressed the hope that this disquieting anomaly would turn out to be a blessing in disguise and serve to impress upon the minds of all lovers of constitutional government the urgent necessity for the amendment of electoral law. We also ventured to hope that that House of Commons would be the last to be elected under the old system. That hope was doomed to disappointment, and last week's election has provided us with a new series of statistics which emphasise the shortcomings of the existing system of Parliamentary election. It is true that the voting has not produced quite so glaringly anomalous a result, but the fact that "the luck of the electoral

table," as Mr Lloyd George described it, has not been so overwhelmingly in favour of one party will, we hope, enable all parties to approach the question of reform without bias. Each of the three great parties has suffered in varying degree in the last election from "three-cornered" contests, and the Conservative party which benefited to some extent in 1922, did not reap the same advantage last week. Indeed, although the Conservative party polled practically the same percentage of the total votes, the proportion of contested seats won by the Conservative party has dropped from 54 per cent. to 39 per cent., the latter figure approximating very closely to the 38 per cent. of the total votes cast in favour of the Conservative party. An examination of the table below shows that while the total vote increased by nearly 200,000, the Conservative party lost 41,000 votes, and Independent candidates 202,000, the Labour party gaining 304,000 and the united Liberal party 134,000. These figures show very little correspondence with a loss of 82 contested seats by the Conservative party and gains of 51 and 41 seats by the Labour and Liberal parties respectively. But it will be seen that the division of seats corresponds more closely with the voting than was the case twelve months ago:—

	November, 1922.				
	Votes.	Candidates.		Seats.	
		Contest- ing.	Unop- posed.	Won.	Total.
Conservative	5,551,648 (39 %)	449 (83 %)	42 (74 %)	304 (54½ %)	346 (56 %)
Labour	4,202,516 (29½ %)	407 (80 %)	4 (7 %)	138 (25 %)	142 (33 %)
Independent	2,663,390 (18½ %)	325 (64 %)	6 (10½ %)	59 (10½ %)	65 (10½ %)
Liberal	1,467,263 (10 %)	135 (26 %)	4 (7 %)	48 (8 %)	50 (8½ %)
Other	4,130,653 (28½ %)	460 (84 %)	10 (17½ %)	105 (18½ %)	115 (19 %)
% of total	466,664 (3 %)	46 (8 %)	1 (1½ %)	11 (3 %)	12 (3 %)
	14,354,481	1,362	57	558	615

	December, 1923.				
	Votes.	Candidates.		Seats.	
		Contest- ing.	Unop- posed.	Won.	Total.
Conservative	5,514,103 (38 %)	500 (86 %)	35 (70 %)	222 (39½ %)	257 (43 %)
Labour	4,506,935 (31 %)	420 (80 %)	3 (6 %)	189 (33½ %)	192 (31 %)
Liberal	4,265,462 (29½ %)	443 (84 %)	11 (22 %)	146 (26 %)	156 (25½ %)

	14,551,920	1,393	50	564	614

Election statistics are very elusive, and it is difficult to find any two authorities which agree. The figures in the above table are taken from the *Morning Post*. The most striking feature is the large turnover in seats which has occurred with a relatively very small turnover of votes. The explanation of this lies in the fact that in 1922 a considerable number of Conservative votes—probably not less than half a million—were given to National Liberal candidates, and to a much smaller extent National Liberal votes were given to Conservative candidates. The effect of this was to keep out the opposition candidate, whether Independent Liberal or Labour. If allowance is made for this, the Conservative poll shows a larger fall—due largely to abstentions—and the Liberal poll a larger increase than the figures show. The effect of this readjustment of votes was to let in Labour where there were three candidates, by dividing more equally the votes given to the other two candidates.

The vote given for Labour and for Independent candidates is the same as the percentage of members elected, but the Conservative party, thanks to the large proportion of unopposed candidates, has 42 per cent. of the

total seats, having polled 38 per cent. of the votes, while the Liberal party has 25½ per cent. of the seats with a poll of 29½ per cent. Under the system of Proportional Representation the composition of the House of Commons would have been, roughly, as follows:—Conservatives, 234; Labour, 191; Liberal, 181; Others, 8—a result which, while still further increasing the Conservative minority, would not produce a situation very different from that which now obtains.

A further analysis of the figures shows that of the three large parties the Liberals had the greatest percentage of rejected candidates, the smallest vote per candidate and the largest number of votes per seat won, namely, over 27,000. The Labour and Conservative candidates rejected were in about the same proportion, but the Labour vote per seat obtained was some 2,000 more than the Conservative at 23,500. The Conservative party contested 246 seats in the boroughs and 246 seats in the counties, the Liberals 227 seats in the boroughs and 213 in the counties, and Labour 234 seats in the boroughs and 182 in the counties. The number of "three cornered" contests was 249 as compared with 253 in November, 1922, when, of course, many seats were contested by both Independent and National Liberals. Last week there were 141 "three-cornered" contests in the boroughs and 108 in the counties.

THE STOCK EXCHANGE AS PUBLIC PROTECTOR.

THE Stock Exchange Committee have taken vigorous steps in regard to certain Chinese loans, the coupons on which have been refused payment by the Chinese Government unless special declarations are signed. These declarations fix the responsibility of ownership upon the signatories. Agents, stockbrokers, and others have found it practically impossible to comply with the requirements, owing to the difficulty of tracing back the ownership of bonds in such cases as those where it has changed hands during years covered by the war and afterwards. The Roumanian Government is also included in the Committee's strictures, in respect of the London issue of the Roumanian 4½ per cent. Gold Loan of 1913, the full coupon service of which has not yet been resumed. The Stock Exchange Committee have issued a formal notice to the agents of the loans that unless the terms of the bonds in question are carried out in full, the Committee will not, in future, grant a quotation to any new issue of these Governments. Moreover, unless satisfactory answers are received, the Committee will consider the advisability of removing from the Stock Exchange Daily Official List such loans already quoted as contain bonds whose coupons have not been met in accordance with the terms of the issue. Investors of all kinds will note with lively satisfaction the pressure which the Stock Exchange Committee are bringing to bear in these two cases. Those who are not directly interested, either in the Chinese or Roumanian loans affected, will see in the present action a strong hint that the Stock Exchange Committee intend to exercise, more vigorously than they have done before, the powers which they undoubtedly possess in the direction of affording assistance to holders of securities. The Stock Exchange Committee have been, and still are, accused of adopting an attitude too negative and parochial in respect of their responsibilities. The power of the Committee is great; greater, in fact, than is generally assumed by the public, who are in the habit of considering the Stock Exchange Committee as a body that pays but occasional attention to matters outside the immediate jurisdiction of the House.

Arising out of the present action, it will be asked whether the threat of the Stock Exchange Committee to remove bonds from quotation in the Official List is of sufficient consequence to carry weight with the borrowers, and here, again, the outsider may not realise how great is the importance attached to a quotation in the Stock Exchange Official List. The borrowers themselves know well enough. They recognise that the refusal of the Stock Exchange Committee to allow securities to be officially quoted is a blow to the prestige of any loan. The cachet which an issue acquires by its admission to the Stock Exchange Official List may appear very sentimental and trivial;

but, from the monetary point of view, it is of solid value. Few responsible issuing houses would care to risk the chance of their loans being refused inclusion in its pages. The practical result of such a refusal is not only to limit the market in the particular security, but to render the price lower as compared with others that enjoy this official recognition—which, by the way, has nothing to do with the security, as such. The outsider can take a block of shares from a vendor and peddle these out to members of the public, who, not knowing that any difference exists between quoted and unquoted shares, assume that the block of vendor shares is on all-fours with the issue quoted in the Stock Exchange Official List. Nor is it until they come to sell that they find themselves left with shares which, in the Stock Exchange phrase, are bad delivery; either unnegotiable, or else saleable at a lower price than the quotation ruling in the market for quoted shares. The Stock Exchange Committee can protect investors in many ways, and their present action in respect of Chinese and Roumanian loans shows they are alive to the responsibility. It is not unreasonable to assume that the London Stock Exchange Committee will be encouraged by public appreciation of their present attitude. With such encouragement they might go on to extend the exercise of their undoubted powers into other directions where these would save the public money and afford additional protection to investors and speculators alike.

Notes of the Week.

The German Problem.—Once again we have reached a stage at which hopes of progress with the hitherto insoluble European problem are again dawning. Such hopes have been so frequently dashed to the ground that they are to-day rather timorous. But there appears to be present at least one favourable factor, the absence of which has wrecked previous efforts, namely, something more like a genuine desire on the part of France to approach the economic and financial problems on business lines. We have in the past few weeks seen French policy move for various reasons somewhat in the direction of accommodation to world opinion; and in the matter of a Reparations settlement this movement is facilitated because the collapse of Ruhr resistance has given M. Poincaré just enough grounds on paper for claiming "success" to enable him at once to save his face, and to proceed on more practical lines. As regards the immediate present, there are three or four main factors that claim attention. The first is the expectation that in the course of a few weeks a committee of international experts (including American) may be entering on an examination of the German position on terms of reference going far beyond those to which M. Poincaré would have restricted the Conference proposed a month or two ago. According to the correspondence between M. Barthou, the French delegate on the Reparations Commission, and Mr J. A. Logan, the American unofficial representative, the Committee would in the first place aim at finding (a) the means of balancing the budget, and (b) the measures to be taken to stabilise the currency. An inquiry is also to be held into the means of tapping German capital that has gone abroad. To reach well-founded conclusions on those problems the scope of enquiry must obviously be very wide. Of equal importance are two intentions with which Dr Marx, the new German Chancellor, is credited, namely, to send a note to France enquiring what is the exact status of the Ruhr and the Rhineland, and possibly also to appeal for her problem to be brought under the purview of the League of Nations on the Austrian and Hungarian models. Either step would put British policy to an immediate and acid test. For five months ago the British Government definitely declared the Ruhr occupation to be illegal, and seven months ago induced Germany to make an offer to the Allies, which still remains without an answer. Should the German Chancellor take these reported steps, then the time will have passed in which the British Government can possibly "go pottering along" without a definite policy. Supreme issues of international justice would immediately be raised in a

form in which no British Government could avoid it. As regards the proposed appeal to the League, the tone of the French Press is much more hopeful than could have been expected a little while ago. The *Temps*, for instance, would not close the doors of the League to Germany, and points out that recourse to the League would not dispossess the Reparation Commission of its authority, for that body has fixed the conditions of the League's intervention in the case of Austria and in the case of Hungary. The success of the League's Austrian experiment has not been without its effect upon Paris opinion, and the League's dealings with Hungary will be even more carefully watched, for Hungary's problem includes, as Austria's did not, an obligation to pay reparations. In all these developments there is the seed of hope. Meanwhile, Dr Marx appears to be more firmly fixed in the saddle than had been anticipated, and the very long and slow process of setting Ruhr industry working again is beginning. Next week the diplomatic situation may be clearer, but those who read the letters of our Berlin correspondent will realise that time is an essential factor.

The Civil War in China.—Sun Yat-Sen's claim to a share in the Customs revenues of the province of Kwangtung, to be enforced either by actually intercepting them, or by declaring their abolition, was promptly met last week by the landing at Canton of marines from the naval squadrons of the four Powers most concerned with China. His action suggests that he disregarded the warnings of their diplomatists, and so provoked an intervention which he must have known he could not resist, chiefly in order to "save his face" before his Yunnanese troops, who, like the armies of the Northern Tuchuns, are really mercenaries rather than political revolutionists. His contention that the Customs revenues collected in the treaty ports of a province belong primarily to that province, and that the Powers have no right to interfere with their application unless and until there is a default in the service of the loans secured on them, while sufficiently specious to appeal to uninstructed Western sympathisers with the right of the Chinese to "self-determination," is utterly untenable. The surplus is that of the Customs' revenues of all the treaty ports taken together, and collected by the Maritime Customs Administration for the central Government at Peking. The service of the foreign loans is the first charge on this total, and it is only after this is provided for that the surplus, if there is one, can be released—not to the provincial Governments separately, but to the Central Government at Peking. Sun Yat-Sen, who has earned British sympathy in the past as a patriot and an ultra-democrat, apparently still regards himself as the distinct saviour of China. But his hints at a possible alliance with Soviet Russia can only estrange such sympathy, his many vicissitudes have shown that his prospects are hopeless, and the breaches between his own supporters, the Peking Government, and the Northern Tuchuns, are too wide to be closed. Apparently peace is likely to be obtained only by bringing all the leaders into a conference, and effecting their voluntary retirement, and the payment and disbanding of their troops: and the prospect of such a solution is remote. The only encouraging feature in the situation is the amazing vitality of Chinese foreign trade, in spite of the closing of the markets of the interior by the obstacles to transit set up by anarchy, brigandage, and the multiplied civil war.

Overseas Trade in November.—The Board of Trade returns for November are at first sight disappointing, for they show a fall of £5.6 millions in British exports, and of nearly £1 million in re-exports as compared with the previous month. However, November had one less working day than October. Moreover, in spite of the fall in exports, the total was the fourth highest of the year, while imports at £101 millions (the largest figure since January, 1921) presage better exports to come. The comparison with November of last year is vitiated by the Irish factor, but for what it is worth we give it below:—

MONTH OF NOVEMBER.				
	1922.	1923.	Increase or Decrease in 1923.	
	£	£	£	%
Imports	95,556,652	101,584,990	+ 6,028,338	+ 6.3
British exports	66,490,784	65,768,155	- 722,629	- 1.1
Re-exports	9,148,128	10,171,110	+ 1,022,982	+ 10.2
Total exports	75,638,912	75,939,265	+ 300,353	+ 0.4
Excess of imports over total exports	19,917,740	25,645,725	+ 5,727,985	+ 28.7

ELEVEN MONTHS ENDED NOVEMBER 31st.				
	1922.	1923.	Increase or Decrease in 1923.	
	£	£	£	%
Imports	908,555,435	988,836,527	+ 80,281,092	+ 8.8
British exports	661,613,394	703,213,467	+ 41,600,073	+ 6.3
Re-exports	95,298,805	108,175,962	+ 12,877,157	+ 13.5
Total exports	756,912,199	811,389,429	+ 54,477,230	+ 7.2
Excess of imports over total exports	151,643,236	177,447,098	+ 25,803,862	+ 17.0

It will be seen that the import surplus for the eleven months is nearly £26 millions more than for the corresponding period of 1922. The comparison of imports and exports in November and October reads as follows:—

	October.	November.
	Million £.	Million £.
Imports	99.9	101.6
British exports	71.3	65.8
Re-exports	11.1	10.1
Total exports	82.4	75.9

Taking the exports first, we find the principal individual contributors to the decline as follows:—Coal nearly £1 million, cotton goods £1.1 million, woollen and worsted manufactures £1.1 million, chemicals, &c., £1.1 million, apparel £400,000. In many other categories there is a small decline. In reading these figures it must be remembered that they are an indication, not of the present state of trade demand, but of the state ruling a while ago. For instance, the recent improvement in the demand for Lancashire cotton goods is so far from being reflected in the figures that cotton piece goods exports in November were only 349.6 million square yards, as against 371.3 millions in October. November coal exports were 6.7 million tons against 7.4 millions in October, France, Germany, Italy and Argentina all taking less. On the other hand, iron and steel exports continued to rise, the November total being 394.9 million tons, against 388.6 millions in October. The increase in November imports of £1.6 millions over October was accounted for by a rise of more than that amount under the head of food, drink and tobacco, a small increase in takings of raw materials being practically offset by a similar decline in imports of manufactures. If the import figures be compared with November, 1922, among items which show striking change are wood and timber (+£879,307), raw cotton (+£1.3 million), wool (-£1.1 million), non-ferrous metals (+£1.1 million). A sudden substantial rise in imports of tin and of sheet bars and tinplate bars is worth noticing in connection with the recent growth of activity in the South Wales tinplate industry. The following figures of shipping tonnage engaged in carrying our overseas trade reveal a drop in November, but a large increase over the figures of one or two years ago:—

(In Million Tons.)				
	Oct., 1923.	Nov., 1923.	Oct., 1922.	Nov., 1921.
Entered, with cargoes	4.8	4.3	3.8	3.1
Cleared, with cargoes	6.5	6.1	5.7	3.9

Detailed comparisons of trade by various categories in November and the eleven months of this year and last will be found on a later page.

Irish Public Revenue.—Our Dublin correspondent writes:—The latest Exchequer returns show that revenue is coming in well. From April 1 to December 8, 1923, total revenue receipts amounted to £20,534,128, against £16,795,874 for the corresponding period (less by one day) for last year. Of course, the increase is due in large measure to the collection of arrears, but there are certain items which are very satisfactory in their import and promise. Thus, an increase in Post Office receipts from £700,000 to £1,200,000, and of stamps from £161,000

to £312,000, and the maintenance of Customs and Excise receipts at their previous level are excellent symptoms of increasing business. Having regard to insurrectionary troubles and the prolonged dock strike, it is most satisfactory that the last of these figures show no falling off. Materials are not available as yet to show how far income-tax, &c., receipts are going to be affected by the expatriation of a not insubstantial section of property-owners who have left Ireland from political causes. There will probably be a strong move made to have Free State income-tax brought down at least to the British level next year, in order to check further migrations of those to whom sixpence or a shilling in the £ income-tax is a matter of real moment.

Iron, Steel, and Coal Output in November.—The production figures just issued by the National Federation of Iron and Steel Manufacturers show that the improvement recorded in October has been maintained in November. Although there is one day less in November, the production of pig-iron rose slightly from 595,700 tons to 597,600 tons, an increase in the daily rate of 3.5 per cent.; the increase in steel production from 702,200 tons to 749,500 tons was more marked. Since there was a net addition of ten to the number of furnaces in blast during the month—making 199 in blast on November 30th—the December figures for pig-iron should show still further improvement, but the steel figures will, of course, be affected by the Christmas holidays. The Government's Protectionist proposals were not announced early enough to affect the imports of iron and steel, which dropped from 106,300 tons in October to 97,500 tons in November; but doubtless subsequent months will reveal the extent to which buying forward was resorted to by those who feared the proposals might prove acceptable, and a tariff be placed on imported iron and steel. Exports of iron and steel rose from 388,600 tons in October to 394,900 tons, with the exception of May last the highest total since the war. The following table, in which the production for the year 1923 is based on the figures for the first ten or eleven months, shows that Great Britain for the first time for many years takes second place among the world's producers of iron and steel; this is partly due to the check caused to production in France and Germany as a consequence of the occupation of the Ruhr, though France is now producing in excess of the pre-occupation rate:—

	1913.	1922.	1923.
	Tons.	Tons.	Tons.
Pig-iron—			
United Kingdom	10,260,300	4,902,300	7,450,000
United States	30,966,200	27,219,900	40,000,000
France	5,126,000	5,146,800	5,200,000
Belgium	2,445,600	1,578,000	2,100,000
Germany	16,492,000	(6,500,000)	?
Steel—			
United Kingdom	7,663,900	5,880,600	8,500,000
United States	31,300,900	35,602,900	43,400,000
France	4,614,000	4,463,600	4,800,000
Belgium	2,427,600	1,540,000	2,200,000
Germany	17,349,000	(9,000,000)	?

The output of coal during November averaged 5,637,000 tons per week, compared with 5,626,000 tons per week in October. Exports of coal fell from 7,433,000 tons in October to 6,670,000 tons in November, of which 1,668,000 tons went to France, 1,046,600 tons to Germany, 800,800 tons to the Netherlands, 572,700 tons to Italy, and 571,000 tons to Belgium.

Lord Inchcape and Business Secretiveness.—The public owes an immense debt to Lord Inchcape not merely for his great public service during and since the war, but also as one of the most successful organisers and leaders of British enterprise in banking, shipping, and many other spheres. His great standing makes us regret the more that he should adopt what we cannot but regard as a reactionary attitude towards the growing demand on the part of shareholders, wage-earners, and the public for a franker disclosure of the financial results of great enterprises. One of a number of aphorisms which Lord Inchcape quoted from Balzac was, "Trust no one farther than you can see him." Whether Lord Inchcape was thinking of his shareholders, the public, or financial journalists we do not know, but the quotation is surely double-edged. Dealings on stock, produce and other

markets of the City of London would be impossible if this doctrine were acted upon. But there is a more serious consideration even than this. The unwillingness to trust, unless the grounds of confidence are fully revealed, is, in our judgment, the root cause of the discontent with our economic system as it exists to-day. The wage-earner, the consumer and the public see all too little—far less than in the United States of America—of the workings of our industrial concerns. That is why they trust them so little. Lord Inchcape tells us that if he gave any more figures he might be urged to make a larger distribution to the shareholders, which would deplete reserves and prove inconvenient not only to the board, but in a few years' time to the shareholders themselves. There is a tendency at company meetings for one or two shareholders with a grievance to make a good deal of noise. But we do not for one moment believe that shareholders in general are disposed to distrust the judgment of their directors in matters of reserve policy, &c., especially when the latter have established a claim to confidence by successful administration. But even if Lord Inchcape's fears were justified, it is a curious doctrine that it is the duty of directors to conceal facts in order to save the proprietors of the company from themselves. Their duty is surely completed when they have laid the facts before the shareholders and given them their best advice as to what the conditions of the business require in regard to distribution of net profits.

The New Revolution in Mexico.—Just as arrangements had been finally made to begin the partial resumption of the service of the External Debt a fresh civil war has been initiated in Mexico through the conduct of the chief civilian agent in its pacification after the fall of Carranza, and in the election of President Obregon. Señor de la Huerta, Provisional President between Carranza's death and Obregon's inauguration, and till three weeks ago Finance Minister, was then suddenly offered a Presidential nomination by the convention of the "Co-operatist" party, representing the majority in Congress and more than 2,500 local political associations. He accepted, resigned his office, and was at once charged by his successor, Señor Alberto Pani, with gross malversation of public funds. Of about 20 other candidates his only formidable rival was General Plutarco Elias Calles, the "Radical" leader, who has strong agrarian and Nationalist tendencies, and is backed by President Obregon. Following Obregon's example when Carranza was preparing to interfere with his candidature, Señor de la Huerta at once left the capital. He went to Vera Cruz, long a focus of revolutionary agitation and Anarchist disorder, and won over the military chiefs there and in other districts, who proceeded to advance on Mexico City and on the oilfields of Tampico. His candidature has split the "Co-operatist" party, but he has the support of most of the central and western States—among them Oaxaca, long disaffected by its association with President Diaz and his family—and by Chihuahua and Sonora, both of them theatres for the past twelve years of revolutionary activity, the latter the native State of President Obregon and the leading factor in his triumph over Carranza. The Federal officials in these States have been ousted, and the Federal troops, whose pay is alleged to be in arrears in some districts, have gone over in large numbers to the insurgent cause. But the revolution is by

no means so exclusively military as President Obregon maintains. A Provisional Government has been set up in Vera Cruz, and is attempting to raise money on the security of the local Customs; and it has notified all the Mexican representatives abroad that it is the *de facto* Government of Mexico. Congress has adjourned after hastily ratifying the Claims Convention with the United States, the delay of which had been a leading obstacle to the recognition of President Obregon's Government, and has accorded him full powers to suppress the rebellion, so that its De la Huertist members must have repented or fled. But the conflicting and extensively censored reports of the military movements foreshadow a prolonged struggle. Obregon, Calles, and De la Huerta have hitherto formed a triumvirate on whose cohesion foreign observers have based their hopes of a durable peace; but it has been foreseen that the election of General Calles might again estrange American opinion, inasmuch as he stands for "Mexico for the Mexicans" and for the literal interpretation of the "confiscatory" Carranzist Constitution of 1917. De la Huerta is the leader of the Liberal Conservatives, who include the "intelligentsia" and the well-to-do urban population, and recognise that Mexico cannot prosper without foreign capital. It remains to be seen if they are permanently stronger than the masses, and if the latter are really, as they have seemed, weary of revolution.

American Cotton Crop.—Our Manchester correspondent writes:—The Department of Agriculture of the United States Government has this week published its final report on the cotton crop for the 1923-24 season, the estimate of the yield being 10,081,000 bales, exclusive of linters. If linters are added the growth will probably be about 10,650,000 bales. The carry-over from last season was 2,570,000 bales, so the supplies available for users during the current twelve months amount to about 13,200,000 bales. Last season the consumption was 12,600,000 bales. Since the beginning of August deliveries to spinners have been smaller than last year, and it looks as though the requirements of users will be about 11,800,000 bales. In round figures, therefore, stocks throughout the world at the end of next July will be about 1,400,000 bales, against 2,570,000 bales a year earlier, and over 9,000,000 bales at the same time in 1921. In view of these figures there seems to be no probability of lower prices in the near future, and on the publication of the official report there was a rise in the New York and Liverpool markets of about 1d per lb. Since the beginning of December there has been heavy liquidation of future contracts. Speculators have rushed to sell, with the result that the spot quotation for fully middling in Liverpool declined from 21.99d on November 29th to 18.59d on December 11th. Since then there has been a marked recovery in values, the figure on Thursday last being 20.83d. The recent gambling in the article has been very freely discussed in Lancashire trade circles, and dealings of this character are undoubtedly very injurious to those engaged in the spinning and manufacturing industry. It is probably true that speculation has been more rampant in the Liverpool market during the last five or six weeks than in any similar period for several years back. Certain operators have come out fairly well, but some of the gamblers have burnt their fingers very badly, and individual losses of £40,000 are not unknown. It is understood, however, that a syndicate of London financiers with some connections in Lancashire have made about a quarter of a million pounds.

Lloyd's Coming Removal.—The business of marine insurance has so long been associated with the Royal Exchange that the decision taken at a general meeting of the members of Lloyd's on Wednesday to remove the headquarters of the Corporation to Leadenhall street sounds altogether revolutionary. Indeed, that was the word applied by Mr A. L. Sturge, the chairman, to the proposal he made to terminate an occupation which has lasted for 150 years. Long before Lloyd's moved to the Royal Exchange an office at which policies had to be registered existed there. Lloyd's itself developed out of the gathering of shipping men at the famous coffee house

which in 1692 was removed from Tower street to Lombard street. The latter was the earliest home of the system of marine insurance which passed into English hands after being established by the Hanseatic Merchant and the Lombards. The traditional and still current form of Lloyd's policy declares, it will be recalled, "that this writing or policy of assurance shall be of as much force and effect as the surest writing or policy of assurance heretofore made in Lombard street, or in the Royal Exchange, or elsewhere in London." Since 1774, when on the initiative of John Julius Angerstein, Lloyd's moved into the Royal Exchange, its occupation has been unbroken except during the rebuilding after the fire of 1838. Its system of collecting and distributing shipping intelligence and all its varied functions have been developed there, including the issue of its daily publication, *Lloyd's List and Shipping Gazette*, which, first established in 1726, is, with the exception of the *London Gazette*, the oldest newspaper in existence. Lloyd's has, as "Arnould on Marine Insurance" pointed out, "a ramified system of agency radiating everywhere to the ports of the world, which is now become of imposing magnitude, essential to the business of marine insurance, whether in the hands of individuals or of companies, and to the general interests of British commerce." Mr Sidney Doulton, in a lecture delivered a couple of years ago when he was chairman of Lloyd's, mentioned that there were nearly eleven hundred underwriting members, besides non-underwriting members, subscribers, associates, and substitutes, with 1,400 agents and sub-agents all over the world. Lloyd's is the largest insurance institution in the world, though the members, and not the Corporation itself, are, of course, the insurers. The removal of such a body, after its lengthy tenure of one building, will necessarily be a most notable event in world business. The need for more space to allow of continuing development is the reason for the coming change, further expansion within the Royal Exchange not being practicable. Lloyd's will, however, move rather towards than away from the shipping business centre of London. In Leadenhall street it will occupy a historic site which was once that of the East India House, the home of "John Company." A contract has been entered into for the purchase of a site nearly an acre in extent, with frontages to Leadenhall street, Lime street, and Leadenhall place, and steps towards the erection of a new building will, it is understood, be commenced as soon as vacant possession can be obtained. On the same day that the general meeting sanctioned this scheme the Committee of Lloyd's elected Mr Ernest E. Adams as chairman and Mr Percy G. Mackinnon as deputy-chairman for next year.

The Dutch East Indies.—The report (to June, 1923) of H.B.M. Commercial Agent at Batavia, just issued by the Overseas Trade Department, shows that the severe trade depression which began in 1921 is virtually over. Business conditions have been made sounder by the elimination of the weaker among those European firms which had made no provision for the retrospective tax on overdue war profits, imposed unexpectedly in 1921. Stronger concerns have taken their place and employ their staffs, and so will profit by their experience. Exports have been stimulated by higher prices, notably for sugar—of which the whole of this year's crop and part of next year's have been sold—rubber, coffee, and tea. But the resultant purchasing power takes time to pass to the import merchants along the chain of capitalist producer, native employees and consumers, and Chinese retailers, so that the corresponding growth of imports has only begun. Consumption is also kept down by high taxation, which is thought to have reached its limit; and it is pointed out that the islands attained their present development when taxes were very low. The Government has appointed a Commission to study the fiscal question, but recurrent Budget deficits—now, however, decreasing—have necessitated stringent retrenchment, especially in official salaries, and business firms have followed suit, so that, as the cost of living for Europeans is 135 to 140 per cent. above pre-war level, and for natives 95 to 110 per cent., there is little demand for luxury goods. Budget equilibrium, it is hoped, will be reached in 1925; meanwhile, the loans issued in New York, London, and Holland, and rapidly

over-subscribed, are absorbed by the discharge of existing indebtedness, and development is all but suspended, especially in the outer islands. A final loan of 300 million guilders (£25 millions) had been sanctioned by the Dutch Parliament, and was to be placed in Holland, abroad, or locally, wherever the best terms seemed obtainable; apparently this covers the loans issued last summer in Holland and London. Money has been plentiful, banking and plantation shares have gone up, and municipal loans have been obtained at 6 per cent. in Holland. Full information is given as to banking, insurance, exchange, communications, and import and export trade. We can only note the refusal of the Government to restrict rubber export, followed by a voluntary limitation on the part of many plantation companies; the export to the United States of liquid latex; the speculation in coffee, accompanied, however, by a *bona-fide* demand at higher prices; the embargo on the import of inferior coffee for blending, which would have gravely endangered the trade; the large increase in the export of tea to Australia and Great Britain, and the arrangements for the import and distribution of chilled foodstuffs from Australia; the slump in tobacco and the increased export of cinchona, quinine (after a heavy decline), and spices, except white pepper. For imports, as explained above, the demand has been retarded; but hardware, cutlery, and piece goods are among the promising lines suggested, and it is noted that the cheaper textiles are now supplied from Japan instead of Great Britain. British exporters are advised to see that their Dutch agents are directly represented in the islands, and not only in Java. The agricultural outlook is good: more land is tilled, and oil palm cultivation is increasing in Sumatra. The Government mining service has been reorganised and its research side developed; petroleum is promising, but the export from Java is diminished, as the oil, to avoid the export duties, is sold locally. Industrial development is still remote, but will be favoured by cheap labour and abundant sources of electric power. The report exhibits effectively the vast resources of the Dutch East Indian Empire.

Anglo-Persian Oil.—The profits of the Anglo-Persian Oil Company for the year ended March 31st last shows a drop in profits of over £720,000, and this follows a decline of £1,289,000 in the previous year. The profits for 1922-23 are shown as £3,266,300, as compared with £3,988,200 for 1921-22, but owing to a reduction of £105,000 in the estimated royalty payable to the Persian Government, and a drop from £181,900 to £9,700 in income-tax, the net profit of £2,689,100 is only £441,000 below that of the previous year. The following table shows profits and appropriations for the past six years:—

March 31.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
Profit	£1,517,215	£2,287,886	£3,577,607	£3,771,627	£3,988,164	£3,266,300

* E.P.D. 1919-20, £854,665, deducted. † Corporation Profits Tax, 1921 and 1922.

The past year's profits have to bear Corporation Profits Tax for the two years 1921 and 1922, and £495,000 is appropriated for "extra depreciation," but no allocation is made to general reserve. The directors, however, have applied £1,830,000 which stood at the credit of general reserve as to £964,000 in writing down certain investments and expenditure in respect of prospecting and testing certain areas outside of Persia which have now been abandoned, and as to £866,000 as a specific provision against expenditure on other outside areas which are still in course of examination. They consider that these provisions will "cover any further writing down that may be necessary in connection with the company's

NOW OBTAINABLE

STATE EXPRESS

CIGARETTES

IN GIFT CASKETS.

current operations outside of Persia." All the 8 per cent. preference shares ranked for dividend in the past year, and this accounts for the increase of £80,000 in the preference dividend. A call of 19s per share was made and paid during the year on the £1,500,000 ordinary shares issued in December, 1919, and the reduced dividend of 10 per cent. thus requires considerably more than half the amount disbursed a year ago, when 20 per cent. was paid. An issue was also made in January last of £850,000 ordinary shares of £1 each at £3 15s per share. The total reserves amount to over £5 millions, of which £3,710,200 consists of premiums on issue of shares. The balance-sheet contains a new item of £2,829,000 for a loan from bankers, while deposits by associated companies have increased by £202,900 to £1,659,600, but sundry creditors have been reduced by £141,900. The property item, including shares in and advances to associated companies, shows an increase of £6,038,500 at £28,061,200. Here is another case of a balance-sheet which hides considerably more than it discloses. We are told that there is a contingent liability of just under £2 millions for uncalled capital on certain shares included in this enormous total, but the report is silent as to depreciation of post-war expenditure, which we imagine ought to be on a very heavy scale. Refineries, tank installations, &c., have been increased by £1,070,700 to £6,456,100. Debtors and cash have declined by £909,200 and £676,400 respectively, cash standing at £561,200. The output of the refinery in Persia, says the report, has been disappointing owing to the effects of a fire towards the end of 1922 and to defects in the plant owing to continuous running during the war. The output of the refinery at Llandarcy shows a steady increase. The results of drilling operations outside the original Persian concession "have so far proved unsatisfactory."

Dorman, Long's Report.—There has been some recovery in the profits of Dorman, Long and Co., from the low figure to which they sank in the year 1921-22, but the increased figure of £272,500 compares, as may be seen from the table below, with £397,700 in 1920-21 and £716,000 in 1919-20:—

Year Ended Sept. 30.	1919-20.	1920-21.	1921-22.	1922-23.
Profit	£716,013	£397,711	£157,369	£272,454

	(10%)	(5%)	..	..
Carried forward	248,540	239,488	201,173	202,667

The past year's relatively small profits have been earned on a very much larger capital. The share capital has been increased from £7,499,600 to £8,018,100 by the issue of £508,100 in 6 per cent. preference shares, and the debt interest capital from £793,600 to £3,900,000. The new preference shares only rank for three months' dividend, but interest on the new 5½ per cent. debenture stock requires £58,400, and after payment of 8 per cent. on the preferred ordinary shares, and a transfer of £50,000 there remains only £1,500, which is added to the balance carried forward, the ordinary shares getting no dividend for the second year in succession. The past year's ac-

counts include for the first time the accounts of the Allied companies—Bell Bros., Limited, Sir B. Samuelson and Co., Limited, Carlton Iron Company, Limited, and North-Eastern Steel Company, Limited, which went into voluntary liquidation for the purpose of amalgamation with Dorman, Long and Co., Limited, on May 2nd last. This accounts for some substantial alterations not only in the figures, but also in the form of the balance-sheet. Capital expenditure is increased by that of the absorbed companies, the total increase amounting to £6,084,900. The auditors point out that no depreciation in respect of the past year has been written off the capital expenditure, apart from the £50,000 transferred to reserve. Total reserves now figure at £596,000, and capital expenditure at £9,462,000. Investments, which last year included shares in and advances to allied companies, have dropped from £5,022,300 to £766,200. Stocks have increased by £1,813,700, and debtors by £342,100. Creditors have also risen by £1,067,900. The directors mention that there are still questions remaining to be settled with the Government involving large sums in respect of taxation, but that they are satisfied that adequate provision has been made to cover all contingencies.

Bolckow, Vaughan, and Co.'s Report.—Very disappointing results are disclosed in the report of Bolckow, Vaughan and Co., Limited, for the year ended June 30th last. After providing £83,700 for depreciation, but before payment of debenture interest, there is a loss on the year's working of £269,200. This compares with a loss of £85,300 for the preceding year, and a gross profit of £441,600 for 1920-21. A summary of results since 1906 is appended:—

	Gross Profit.	Depreciation and Extensions, &c.	Deb. Int. and Pref. Div.	Balance.	Written Off Cap. Expenditure.	Ordinary Div.	Rate.
1906-7	£68,010	£135,734	£45,545	£501,731	£150,000	£274,630	% 10
1907-8	444,201	140,523	48,220	285,468	80,000	164,778	6

* After allowing for War taxation.

To meet this heavy loss the directors have transferred £500,000 from general reserve. Debenture interest requires £101,200, as against £80,000 a year ago, and the preference dividend absorbs £23,600. A further sum of £95,700 is required for payment of interest and preliminary expenses in connection with the purchase of Redpath, Brown and Co., Limited, leaving a balance of £24,800 to be carried forward. In the balance-sheet the principal change is an increase in investments from £348,000 to £1,687,000, presumably owing to the purchase mentioned above. The auditors mention in their report that the investments are mainly in subsidiary and connected companies, and are taken at their book values, which are below cost. Capital expenditure during the year was £217,900. The bank overdraft has increased from £89,800 to £838,700, but sundry creditors have declined by £163,000. The reserve by the withdrawal of £500,000 is reduced by half, while debentures outstanding have been increased by £1,000,000.

The Amalgamated Cotton Mills Trust.—With book assets amounting to £8,495,476, the position of the Amalgamated Cotton Mills Trust, Limited, compels notice. This is a holding company controlling a number of Lancashire and other concerns interested in many branches of the cotton industry. We welcome the complete list of companies given at the end of the annual report under the guidance of the parent undertaking, and we hope that the time will not be far distant when instead of having the details of these interests compressed into the cryptic riddle of "investments in cotton mill companies," at £7,854,571,

we are furnished with a composite balance-sheet showing actually what these figures represent in property, plant, goodwill, and stock—not forgetting details of liabilities. We are told in a note that "investments in cotton mill companies are taken at cost, and no provision has been made in respect of losses incurred by these companies since the shares were acquired." What does this really mean? The auditor states that the "balance-sheet is properly drawn up so as to exhibit a true and correct view of the state of the company's affairs." But is this so? The company's revenue for the year ended October 31st last is given as £207,206, which, after deducting expenses amounting to £53,322 and adding the balance brought forward, leaves £165,746 available for distribution; preference dividends absorb £149,026, and £16,720 is carried forward to next year's accounts. Meanwhile holders of ordinary shares to the extent of £4,650,000 again wonder when they may hope to receive a distribution. It is perhaps fair to add that the directors in their report state that: "During the 11 months under review the stagnation in trade referred to in the last two directors' reports has unfortunately continued, and in certain branches of the trade, especially the coarse spinning trade, the depression has been more acute than ever. The directors, however, are gratified in being able to report that, although certain of the subsidiary companies have made losses, the combined results of the whole of the subsidiary companies for the period of 11 months show a net profit which is in excess of the amount required to cover the dividend on the preference and 'B' preference shares of this company for a full period of 12 months." If optimism will help shareholders, we might add that the report concludes with the statement that the directors "feel that, having regard to the very depressed state of the cotton trade and to the broken time worked by the mills which your company owns, the result of the last 11 months' working is not unsatisfactory, and wish to record once more their absolute confidence in the future of the company." The balance-sheet will be found fully analysed in another column.

Orient Steam Navigation.—The substantial increase in profits secured by the Orient Steam Navigation Company in the year ended June 30, 1922, has been practically maintained, the profit for the year ended June 30th last amounting to £280,100, as against £282,600 for the preceding 12 months. The following table summarises results for the past five years, and for 1913-14:—

June 30.	1913-14	1918-19	1919-20	1920-21	1921-22	1922-23
Profit	£227,454	£162,062	£218,699	£164,656	£282,578	£280,093
Brought forward	56,717	115,073	63,912	118,678	50,167	72,909

	86,911	63,912	68,678	50,167	72,909	72,821

* Includes £50,000 transferred from Underwriting Account.

Debenture interest required £4,500 less, but £25,000 is allocated to underwriting account, in addition to £100,000 transferred to general reserve. The dividend is maintained at 12½ per cent., free of tax, leaving the balance forward practically unchanged. The balance-sheet shows increases of £123,600 in creditors, and of £165,100 in debtors. The first item on the credit side includes the fleet and investments, and has increased by £215,600 to £3,662,500, but cash has been reduced by £36,600. An analysis of the balance-sheet will be found in a later column.

Chartered's Proposed Distribution.—The British South Africa Company has issued a circular referring to the proposed distribution of 5s per share to shareholders as a return of capital, the distribution to be made when the company has received from the Government the sum of £3,750,000 recently awarded to it. The circular describes the legal steps that have to be taken before such distribution can be made, and announces the directors'

decision to take them. Meanwhile opposition to the proposal has developed from holders of two securities guaranteed as to principal and interest by the Chartered Company—namely, Mashonaland Railway 5 per cent. mortgage debentures and Rhodesia Railways and Rhodesia Railways Trust 10-year Joint Secured Notes. A circular issued to the holders of these guaranteed securities protests against the weakening of the value of the guarantee which the proposed return of capital by the Chartered Company would entail. "It is difficult to believe," runs this circular, "that the Privy Council would sanction the dissipation of a large proportion of the company's assets without making some proper provision for the protection of the creditors, such as would be made in the case of a joint-stock company under the Companies Act." The proposed Chartered distribution requires, of course, the sanction of the Privy Council, and the appearance of this opposition caused a set-back in Chartered shares.

The Mexican Railway Report.—Ten days ago, when the report of the Mexican Railway Company for the half-year ending last June went to the printers, the directors were able to express their hope that the existing dullness of the trade of the country would be relieved by the favourable harvest prospects, and by the recognition accorded by the United States, France, and Belgium to President Obregon's Government. That hope has now been deferred by the revolutionary outbreak, which specially affects the districts served by the line. For the half-year in question the gross receipts were \$7,441,965, against \$7,274,584 for the corresponding period of 1922, but the slight increase is due merely to the higher goods tariff which came into force just a year ago. The tonnage of goods carried was practically the same; the passenger, express, and miscellaneous receipts declined. A decrease in the number of first-class passengers was only partially made up by an increase in the second-class numbers; the working expenses increased by about 3.4 per cent., owing to the higher wages paid for less work; and the balance transferred to net revenue account is \$1,491,700, or \$30,206 less than in the first half of 1922. Converted into sterling, it has been further decreased by "differences in exchange" amounting to £3,173, due to losses on the conversion of Mexican silver currency into gold, and to the discount on exchange to the United States. After adding interest and transfer fees, and deducting debenture interest and reserves for taxation, there is a surplus for the half-year of £36,860, reducing the net revenue debit balance to £434,463. The company has had to pay the 10 per cent. tax on gross railway earnings imposed last January, and has only been permitted to recoup itself partially (and perhaps temporarily) by raising its rates. On account of the indemnity due from the Government, £108,244 was collected during the half-year, making a total of £358,855. Traffic was delayed in June by a landslide on the mountain section, and subsequently by a conflict—in which the company was not involved—between two labour unions at Vera Cruz. During the current half-year gross receipts have gone down and wages up, so that the board cannot recommend a further redemption of debenture stock under the scheme of 1921. The mountain section of the line was to be electrified before next June, and an extension, 29 miles in length, of the Huajuapam branch has been opened recently. Work on the Tampico extension is suspended, pending a final decision as to the last part of the route. So, by this time, is everything else in Mexico connected with the company, except a claim for a further indemnity from whatever Government may emerge from the civil war.

Sulphide Corporation.—Fate has been somewhat unkind to the shareholders in this Broken Hill mining and treatment enterprise. Owing to labour troubles no dividend was paid on either class of capital for the year ended June 30, 1920, while for 1920-21 the preference merely got 5 per cent. In respect of the following year the preference received 10 per cent. and the ordinary 5 per cent., while the balance dividends of 5 per cent. apiece just announced bring the total for the past year up to 15 per

cent. upon both classes of capital. The prospects for the current period are, however, far from hopeful, owing to the fire which broke out in the Central mine last July. Even now water is being poured into the mine, and after the fire is extinguished "there will be considerable delay and heavy expense before productive work can be resumed." For the purpose of enabling the mill to be restarted earlier than would otherwise have been possible the company has purchased a neighbouring mine; the ore from this, with the slimes from the Central mine dump, will "leave a margin of profit." At the Cockle Creek works (Newcastle, N.S.W.) operations last year were confined to the production of reduced quantities of superphosphates and sulphuric acid; a cement plant is to be added. The smelting and acid works at Seaton Carew (Durham) were fully employed, and are also to be extended. Last year's net profit amounted to £221,000, as against £82,800 for 1921-22—in each case after providing for taxation; the latter amount just covered the dividends. On the present occasion £50,000 is placed to reserve for contingencies, thus strengthening the financial position. Allowing for the sums required to cover the dividends, the balance-sheet shows surplus cash assets to the tune of £680,000.

The Strength of Tin.—There was a very sharp break in the price of standard tin early this week owing to heavy selling on the surprising result of the General Election, and values dropped under £230. Naturally, many operators wished to take their profits, but the weakness proved very short-lived. Both dealers and users of the commodity came into the market at the lower level, and with good general buying a fresh advance was started, which carried forward tin up to £243 on Thursday, this being equal to the best of the year. Eastern sellers were very reticent, and the demand from the United States seems insatiable. The U.K. stocks have increased to about 4,250 tons, but a lot of the tin in Liverpool warehouse is ear-marked for shipment to America, and while the coming holidays will put a break on the advance, there is no denying the underlying strength of the market. The visible and "invisible" surplus will probably be worn down more during the next few months, and if the demand for consumptive purposes continues on the present scale, it is certain that values will work to a much higher level towards the early part of 1924. Late in the week both cash and forward were very firm at £240 per ton to a little over, and sentiment was decidedly bullish, the earlier set-back having been more than recovered. In tin mining circles a feeling of optimism prevails, and had it not been for the general wave of depression seen in Stock Exchange circles after the Baldwin defeat, there would have been a good deal more life in tin shares, which as it is have responded well to the rise in the commodity. The Straits shipments for December will be on a very moderate scale again, and a good monthly statement is expected, with American deliveries again satisfactory.

Transvaal Gold Output.—The November output of gold of the mines of the Transvaal amounted to 780,639 fine ounces, as compared with 793,842 fine ounces produced in October. The output for November, 1922, was 764,476 fine ounces. The following table shows the outputs for the first ten months of each year since 1917, together with the totals for each completed year:—

UNITED STATES.—OCTOBER EXPORTS—COST OF RAILROAD VALUATION—WESTINGHOUSE—JAPANESE DEAL—COTTON.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 30.

FOREIGN commerce returns show that exports from the United States in October reached a greater value in the aggregate than in any month since February, 1921. The total amounted to \$402,000,000, representing an increase of \$21,000,000 over September, and of \$32,000,000 over October of last year. Imports last month had a total value of \$303,000,000. The balance of trade, therefore, in favour of this country for October was \$99,000,000. The heaviest increase in any single item was in raw cotton exports, which gained \$23,000,000 in value over October a year ago. Meats, dairy products, and animal oils increased some \$5,000,000, and mineral oil exports \$1,300,000, whereas grains and preparations thereof fell off \$19,500,000, compared with October, 1922, and exports of coal and coke were \$3,000,000 less.

Mention has heretofore been made, in this correspondence, of the railroad valuation work in which the Interstate Commerce Commission has been engaged under authority conferred by an Act of Congress in 1913—regarded in many quarters as one of the most ill-advised and expensive measures ever enacted by the national legislature. That work has now been under way ten years. It is still far from finished, and when completed the valuations will be practically useless because out of date, to say nothing of the endless litigation which will result from the Commission's findings. Some idea of the enormous expense involved may be had from figures compiled by the committee on public relations of the eastern railroads, and based on information supplied by the Interstate Commerce Commission. The work to date, it is shown, has cost upwards of \$90,000,000, of which more than two-thirds has been borne by the railroads. The Government has spent some \$23,200,000, while the additional work required of the railroads has cost them approximately \$66,900,000. Those figures do not include sums expended by the carriers and the Government since January 1st of this year. Furthermore, the totals take no account of the amounts spent by the railroads in contesting and preparing to contest the valuations arrived at by the Commission. The Union Pacific, for instance, will probably begin court proceedings in the near future to test valuations placed by the Commission on subsidiaries of the Union Pacific, which officials of the latter company believe are about 100 per cent. too low. Many other carriers are likely to take similar action before accepting valuations which, when finally determined, will be virtually worthless by that time for rate-making or any other purpose.

Cable advices, received here from Japan, confirm recent reports that Westinghouse and Japanese electrical interests have completed a co-operative business arrangement. For several years the Westinghouse Company has been promoting the use of electricity in Japan, with the result that electrical apparatus has come to be one of that country's chief imports. Since Japan's principal exports—silk, copper, and works of art—cannot be increased to a corresponding degree, the Japanese, according to the Westinghouse interests, thought it advisable to begin manufacturing electrical machinery and supplies in their own country, so as to prevent, if possible, continuance of an

unfavourable foreign trade balance. Accordingly the Mitsubishi interests, which are engaged in banking, ship-building, and steel-making, have made a co-operative agreement with the Westinghouse Company, under which the latter will supply technical skill and experience to a Japanese manufacturing company, which has been formed and is known (in English) as the Mitsubishi Electrical Manufacturing Company. By this arrangement, it is explained, the Japanese expect to benefit through employment which will be given to Japanese workmen, and through improvement in Japan's foreign trade situation, as indicated, while the Westinghouse Company hopes to receive a steady revenue from services and royalties, instead of exports which it felt it was likely to lose within a few years.

Reports are current that leading silver interests and many of the smaller producers contemplate instituting mandamus proceedings to compel the Treasury Department to purchase additional silver, the quantity being variously stated at from 8,000,000 to 12,000,000 ounces, which the Government, it is claimed, was obligated to buy under the Pittman Act at the stipulated price of \$1 an ounce. The proposed action is said to have been discussed at recent conferences held primarily to organise a silver export association, and to devise ways and means for relieving the depression in the silver industry, caused by the termination of the Government's purchases last June. A successful outcome of such litigation, it is thought, would bring about more satisfactory conditions in the silver market, for a while at least. The main point at issue lies in the construction placed on certain provisions of the Pittman Act regarding the Government's purchase of silver for use in the manufacture of subsidiary coins, including the quarter and half dollar. It is contended that the Secretary of the Treasury, in effect, saved the Government 35 cents an ounce on the eight or twelve million ounces involved, or between \$3,000,000 and \$4,000,000, as a result of the Government's interpretation of the law. Silver producers interested in the proposed litigation maintain that the Government's construction was contrary to the intent of the Pittman Act.

The outstanding feature in the commodity price situation is the continued rise in raw cotton, which advanced this week to 37.60 cents a pound for spot. That price is 15 cents above the low level recorded last July, 12 cents above a year ago, and the highest reached since August of 1920, when the staple was declining from the highest point recorded since the civil war—namely, 43.75 cents in July of that year. The further upturn has served to increase the difficult problems of cotton goods manufacturers, who have found it impossible to sell merchandise in any volume, even at prices based on cotton costs far below current levels. Despite the plain indications of an exceptionally small crop this year and the sensational advances in the staple, buyers, with few exceptions, have stubbornly refused to place orders covering even a portion of their probable normal requirements. Consumption of cotton goods continues heavy at wholesale and retail, but sales have consisted mostly of stock merchandise acquired at much lower prices than those now prevailing in primary markets. This is the inventory period for wholesale dry goods houses, and they are accordingly keeping stocks as low as possible, rather than make fresh commitments at the advanced prices. But a serious situation will confront them when they start to replenish stocks, for much higher prices will have to be paid than those now ruling, and in many lines they will be unable to procure goods for immediate or early deliveries, because mills generally have not been accumulating stocks, and supplies on hand have been well cleaned up. Manufacturers, as for some time past, are confining operations entirely to orders actually in hand. Many plants in New England have greatly curtailed production or closed indefinitely, owing to lack of business offered at prices they could afford to accept. One of the largest producers of percales and other printed cottons withdrew all lines from the market this week because buyers refused to operate to any extent, although the prices, named some time ago, were far below replacement costs then prevailing. Present indications are that a marked shortage of cotton goods in numerous lines will develop within the next month or two.

FRANCE.—BRITISH ELECTIONS—RUHR MESURES DE GRACE—METALLURGICAL OUTPUT—COST OF LIVING TROUBLES.

(FROM OUR CORRESPONDENT.)

PARIS, December 12.

THE anti-English section of the French Press has already seized upon the new situation that has been set up by Mr Baldwin's defeat on the Protectionist issue to hint that France, now her British Ally is immobilised, shall take the control of the European problem into her own hands and proceed to independent decisions which, once they have become a *fait accompli*, would be very difficult to upset. That this is not the wish of the Poincaré Government may be taken for granted. It has always been realised here that the future peace of Europe depends fundamentally on Anglo-French co-operation, and so far as the only sections of French opinion that really count are concerned, there is no suggestion of any inclination to depart from that principle, even in what may be regarded as the present tempting situation.

The policy of appeasement and *mesures de grace* announced last week as being about to be applied in the Ruhr has apparently come definitely into operation. Down to yesterday 213 decrees of expulsion had been withdrawn, and a large number of sentences of imprisonment for various offences arising out of passive resistance had been cancelled and the condemned persons released. Out of 192 decrees of expulsion that had been withdrawn down to last Saturday, 87 were in regard to public officials of various kinds and the rest in regard to private persons. The majority of the persons under sentence of imprisonment who have been released are manufacturers, while many of the rest are officials, and a few are workmen or employees. Production figures, according to statistics published here, are increasing rapidly, but so far, in spite of the better spirit prevailing between the population and the Franco-Belgian authorities in the Ruhr, it cannot be claimed that any serious reduction has been made in the amount of unemployed labour in that area. It is now more or less clear that the industrialists who are pressing for power to extend the working day from eight to ten hours have a certain amount of reason on their side. It is equally clear that the workers, who are resisting any increase in hours on the ground that, if they give in and the Reich carries out its repeated threat to stop the unemployment doles, at least 150,000 men and their families will be reduced to immediate starvation, have also a sound excuse for their resistance to the proposal. When all is taken into consideration, however, it is evident that the real crux of the whole Ruhr problem, as it stands to-day, lies in the inability of the Ruhr industrialists to secure orders for their metallurgical products unless they are able to reduce costs to such an extent as to enable them to quote below their French, British, American, and other competitors.

In theory, the agreements that have been recently entered into in the Ruhr provide for the delivery to the Allies of 18 million tons of combustibles per annum, in the form of payments in kind, and for the payment of a tax of 10f per ton on the whole of the rest of the Ruhr output of coal. There is abundant available labour, and transport can now be assured. Neither labour nor transport count as serious factors in the situation, however, unless the manufactured goods resulting from the utilisation of the coal can be sold. Under normal conditions the metallurgical industries in the Ruhr (which alone exceeded the metallurgical industries of the whole of France, including Lorraine) absorbed 60 per cent. of the total local output of coal. None of the Ruhr metallurgical concerns at present have any orders worth speaking of in hand, and it is very doubtful whether they will be able to obtain any for some time to come. The cost of living, calculated in gold marks, has quadrupled during the past twelve months. The problem to be solved by the German industrial in the Ruhr is as to how he is to quote competitive prices that will secure the desired orders, when he now has to face a quadrupled labour cost and to provide for the coal tax and other reparation burdens. It is satisfactory that facts of this kind are now being made public here and are receiving careful attention by the French public. The average French citizen, as everybody knows, is an investor to a much

greater extent than are people in any other country, and is accustomed to give reasoned consideration to all kinds of financial propositions. He is now, perhaps for the first time, beginning to weigh carefully the hard facts of the economic situation in regard to reparation payments, and the outcome of his meditations—although it will certainly not be quite on the lines that is hoped in England—will be well worth considering by all who are interested in the solution of the problem.

The unfortunate situation of the large army of French public service officials, owing to the difficulty the vast majority of them find to make their meagre incomes meet the ever-increasing cost of living, is likely to prove a serious thorn in the flesh to the Minister of Finance in the immediate future. In view of the rapid rise in commodity prices after the Armistice, extra allowances to meet the higher cost of living were given to all members of the public services, the minimum grant being 720f per annum. Two years ago, it will be remembered, it was proposed, in view of the then fall in prices, to withdraw these extra allowances, as a means of further relieving the Budget, but the class interested had no difficulty in proving that it would be impossible for them to carry on unless they continued to receive these grants, and the proposal was dropped. Geneva statistics, published some time ago, showed that, whereas real wages in this country are now in many instances higher than before the war, the pay of the average French public servant is really below the level at which it stood in 1914, even when the allowances in question are included. There has been a very general movement in progress for some time past to bring about an increase in the "extra allowance" from 720f to 1,800f, and very strong pressure is now being brought on the Treasury to accede to this demand. The most striking manifestation of the feeling that exists among public servants in this connection was revealed in a demonstration organised yesterday by some 3,000 members of the Paris police force, who made a vain attempt to reach the Chamber of Deputies, in procession, for the purpose of emphasising their demand for

the extra allowance to be increased. Speaking in the Senate last week, M. de Lasteyrie stated that to grant the request would involve an increase in national expenditure of 1,200 million francs per annum, which could only be met by a further increase in the issue of paper money, in which case the remedy must speedily prove worse than the disease.

GERMANY.—POLITICS—CURRENCY—FINANCES—REICHSBANK—BUSINESS.

(FROM OUR CORRESPONDENT.)

BERLIN, December 12.

THE Marx Cabinet has succeeded in putting through the "Empowering Law," renewing the economic dictatorship without which, owing to the urgency of issues, the confusion of parties and the slowness of Reichstag procedure, no Cabinet could be expected to work. This time the Cabinet's dictatorship powers are limited by compulsion to submit projects in advance to an advisory Reichstag Committee. The law remains in force until February 15th. Judging by official and semi-official pronouncements, practically all legislation of moment, including taxation, will be put through under the Empowering Law, the Reichstag having no power except to revoke, and then only by two successive votes. For the moment the Ruhr question largely revolves around the length of the working day. Some of the big steel and iron works have declared themselves willing to resume production only on condition that ten hours are worked. The mineowners declared that without reintroduction of pre-war hours the burden imposed by the agreement with the French Commission could not be borne. The eight hours' day in underground mining, instead of the seven (sometimes seven and a-half) hours of post-war times, is now a fact. Ruhr reports state that, with increased production of coal, selling difficulties are being met with; this is in part due to transport difficulties in part to prices. The Rhenish-Westphalian Coal Syndicate will be replaced by a "Distribution and Selling Corporation," with headquarters at Essen, which will come into existence if 94 per cent. of production in the old Syndicate comes in by the 14th. The Thyssen group and some other mineowners have refused to join. Negotiations are under way for a long-term agreement for exchange of Ruhr fuel against Lorraine ore. The agreements with France have raised a number of problems which can be solved, the proprietors say, only by elaborate reorganisations, mainly aimed at separating concerns in occupied from those in unoccupied territory, and here the Stinnes group leads. The constituent companies in this group have summoned shareholders' meetings with this aim. The Essen *Bergwerks-Zeitung*, which is the chief organ of the heavy industry, publishes figures to show that the financial burden of the French agreements, including the arrears of coal tax, cannot be borne, in view of the attitude towards compensation of the Berlin Government. Further, although the Ruhr concerns are mostly in technically good condition, they lack wood; and are weak financially owing to the disappearance of their stocks of ammonia, benzol, tar, and other by-products.

The currency condition has distinctly improved, owing to a further price-fall, now followed by relative stability, which creates the impression in the public mind that the Rentenmark, "gold-loan" currency, and even paper mark are, for some reason not known to the science of currency, really stable. This view cannot be held. The dominating influence is that for the moment the same view seems to be held abroad (as far as there is any dealing in German currency), and that so long as foreign Bourses do not depress the paper mark, causing a paper-mark price-rise, necessarily accompanied by a (so-called) "gold-mark" price-rise, and therefore by a Rentenmark price-rise, the stability will be maintained. The fact that German inflation is proceeding as rapidly as ever need not at once upset the new stability; experience of earlier post-war years shows that foreign Bourses have bulled the mark (e.g., early 1920) when inflation was very rapid, and that they have beared it (e.g., second part of 1921) after a long period of no inflation, the governing factor both times being foreign beliefs about Germany's general prospects. The present home and foreign belief that the

Rentenmark reform has removed the past causes of depreciation is beneficial, but not well founded. The financial newspapers point out that the fundamental trouble is as bad as ever; and Württemberg's Finance Minister, Herr Schall, says truly that, in view of the fact that the Cabinet has already, for covering of deficits, taken up more than half of its legal maximum credits from the Rentenbank, the Rentenmark must collapse if the finances are not at once put in order. The Finance Minister, Dr Luther, has also again spoken gloomily about the financial situation.

The mortgage bonds into which Rentenmarks are convertible have not yet appeared. Rentenmark credits to industry are now being given through the Reichsbank at an interest rate of 10 per cent. per annum, of which seven-tenths go to the Reichsbank and three-tenths to the Rentenbank. The latest report states that one milliard Rentenmarks have been printed, and that the production rate is 100 millions a day. According to the law, 3,200 millions are to be printed, of which 75 per cent., or 2,400 millions, will be put into circulation. Rentenmarks are now generally used in trade, but no preference whatever is shown for them; even the farmers, since the new stability was reached, are willing to take paper marks. This is a strange feature, in view of the fact that the Rentenmark was specially designed as "wertbeständig," to supplant the paper-mark, and the fact shows that the reform is indeed a façade similar to Russia's denormalisations, but undoubtedly so far beneficial in its effect. A by-result is the improved supply of foreign exchange. The illegal "black Bourse" rate for dollars and sterling has actually at times fallen below the official rate, and the inflow of exchange through legitimate quarters has increased; the Reichstag has even been able to raise the ration to from under 1 to 3 or 4 per cent. of the demand.

Despite the price fall, the Rentenmark must, if tested by the official design to make it an effective gold-mark, be considered depreciated. Rentenmark, or "gold-mark," prices are still above world-market gold prices, though this is more marked in retail than in wholesale trade, because the retail dealer imposes heavier "depreciation-risk premiums." How extraordinarily "gold-mark" and Rentenmark prices rose—how baseless is the official theory that there has ever been any gold-mark pricing—is shown by the following list issued by the Prussian Statistical Bureau:—

Pfennigs per kilo.	1913-14.	30.11.23.	6.12.23.
Beef	175 ..	560 ..	280 ..
Pork	155 ..	860 ..	440 ..
Home Bacon ..	185 ..	1,600 ..	880 ..
Butter	270 ..	600 ..	520 ..
Cheese	160 ..	600 ..	500 ..
Haddock	60 ..	280 ..	160 ..
1 Egg	8.5 ..	40 ..	28 ..

In reality prices at the last two dates were much higher, the above list being considered more or less "legitimate" prices, which were seldom observed. As practical stability has now been reached, and as a further fall in the exchanges is not likely, it is hard to see how the Rentenmark can be raised in purchasing power to full gold-mark value, except by means of deflation; and inflation is the present process.

The Cabinet is doing its rather bad best to get in taxes. The third instalment of the Rhine-Ruhr Levy is to be got in this month, instead of next; the gold rate being 50 pfennigs for every 1,000 pm of income-tax paid for the calendar year 1922. The next sales tax instalment will be on a gold basis. It is proposed further to complicate the income-tax by giving the local finance offices a right to require increased advance payments where the taxpayers' outlay, as tested by a declaration, is in excess of the past year's income upon which the advance payments are based. This is one more instance of the bureaucratic ingenuity with which the Finance Ministry tries to meet every trouble. Much may be said for basing income-tax on outlay. But already, being unable to require the heavily multiplied income-tax advance payments from those classes which are supposed not to have increased their incomes in proportion to the currency depreciation, the Ministry has created two classes, which distinction is dreadfully complicated by the fact that many thousands of citizens belong partly to one class, partly to another;

and now the Finance Offices, which are months late with everything, are expected to judge whether a citizen, by reason of his outlay, ought to be removed from the favoured class into the unfavoured class, and to require from him statements of outlay which can seldom be tested. The whole taxation system is, apart from the weird multitude of taxes, vitiated by elaborations, qualifications, and scholastic distinctions between identical things; and the result, to repeat, is that one-thousandth of the expenditure, and therefore only a small fraction of the cost of tax collection, is covered.

An official declaration states that the reform of the Rents Law of July, 1922, by raising rents to pre-war level, is not yet decided on in detail. In principle it is decided on, and is to be carried through in connection with a measure expropriating gains made by repayment of mortgages with depreciated money. The Reichsgericht has given a clear decision that a mortgagee may reject such repayment. At the same time will be passed a law dealing with the gains made through repayment in paper marks of industrial bonds; and possibly a law prescribing partial restoration of the gold value (*Aufwertung*) of certain kinds of debts. It is added that State debts will not be treated in that way. Thereby speculations based on increase in the gold value of Federal, State and Municipal loans, against which warning has often been sent from here, are made riskier than ever. Rents will be raised gradually, and, it seems, not on a gold, but on a cost-of-living index. The selling values of houses (a modern five-storey flat-house with 60 rooms may still be had for £1,000) have not increased since this announcement, and it is doubtful whether landlords will be any better off.

The Reichsbank's statement for November 15th (much belated) shows, as usual, that each week's totals swamp almost entirely all the vast accumulated totals of the past nine years. In one week private discounts rose by 31½ to 39½ trillions, Treasury bills discounts by 164 to 190 trillions, and circulation by 73½ to 93 trillions. The report for the week ending November 22nd will see a continuation of inflation for State purposes, although no Treasury bills have been discounted since the 15th. An official report shows that at the end of October, in addition to Reichsbank and private note-bank circulation, 539,565½ billion marks of emergency currency, mostly local, but including that issue by the Federal Railway administration, were in circulation. The gold value of the whole circulation was 176,300,000 gm, whereof 31,240,000 gm was emergency money. A great part of the newest emergency money is "wertbeständig," either really so by virtue of gold security and ultimate convertibility, or fictitiously so, like the Federal "gold-loan" currency, but much is pure paper.

Employment reports are much belated; but, apart from resumption of work on the Ruhr, there is no improvement. The automobile industry is reported active, on the basis of home purchases by bourse speculators and landowners. The condition of all winter crops in Prussia is better than at the same date of 1922. Prices formerly controlled by the Steel Syndicate are now free. Of late these prices have been "guiding prices," binding the members among themselves; formerly they were legal maximum prices. The Steel Syndicate is now practically dead; and the official Iron Industry Union almost dead.

BELGIUM.—RUHR EXPENSES—BUDGET FOR 1924—REVISED EXPECTATIONS OF GERMAN PAYMENTS—STOCK MARKETS.

(FROM OUR CORRESPONDENT.)

BRUSSELS, December 11.

Now that a practical arrangement has been arrived at in the Ruhr, there is talk in Government circles of endeavouring to reduce the military requirements at various points in Germany. At any rate, that is what the Belgian Cabinet is advising, apparently only too glad of the chance to seize the opportunity afforded by the official success of the Poincaré policy of lightening the burdens and charges which this policy imposes; for it must not be forgotten that, in addition to the financial sacrifices which have resulted, the Belgian Government has been obliged to prolong the length of military service for certain

BANKING AND INSURANCE.

regiments for a further three months. This policy of reduction is much disapproved by the Francophile Press, which does not hesitate to hint to its readers that this attitude is dictated by the desire for a closer understanding with Great Britain, with a view to finding a favourable market for the issue of a Belgian loan which, in spite of official denials, the Government is endeavouring to negotiate in London.

The Franco-Belgian Commercial Treaty, which has been much talked of for some time, and which is unsatisfactory to the majority of Belgian manufacturers, is once more in the foreground. It has not yet been ratified by the Belgian Parliament, and will be submitted to them in the course of a few days. One must admit that for a Treaty, the terms of which have been discussed since 1919, the results achieved are very insignificant, amounting only to an average reduction of from 5 per cent. to 15 per cent. on the tariffs in force on certain articles, and this certainly does not open the French markets to Belgian industry. On the other hand, the French benefit by a number of concessions accorded them in respect of duties imposed on French goods imported into Belgium. It is fortunate for the Belgian Government that the Treaty is only for a period of one year, eventually renewable every six months; for, by shielding itself behind the fact that it is only temporary, the Government will avoid the defeat it might otherwise have suffered. The Parliamentary Committee formed for the purpose of examining this Treaty concluded its report, adopting the proposal with a few remarks to the effect that it was preferable to sign a Treaty, even only slightly beneficial, rather than have the maximum tariffs erected against Belgian industry. The report of this Committee also draws attention to the large deficit of Belgium's commercial balance with France, which amounted to, roughly, 600 million francs for the first nine months of this year. It pointed out, in connection with imports into this country from France, that a large proportion consists of luxury articles, quoting the following figures:—100 million francs for silks, 100 million francs for wines and liqueurs, 75 million francs for chemical products, of which a certain quantity could certainly have been manufactured in Belgium, as is also the case of the 85 million francs' worth of cotton fabrics.

On the other hand, the Prime Minister, Mr Theunis, has just submitted his proposal for the Budget for 1924. The anticipated receipts from taxation amount to 2,800 million francs, or, roughly, 38 per cent. more than the corresponding amount expected for 1923. Taxation in 1913 only brought in something under 400 millions, and Mr Theunis has, therefore, pointed out that the Belgian taxpayer has not shrunk from his duty, and that for the present the increases in receipts to be obtained in the immediate future must be realised from the stricter application of existing laws rather than from new sources of taxation. It is necessary to bear in mind that the small agriculturalists and the working class have contributed in a very small degree to the increase in taxation receipts, as the majority of the taxes scarcely touch them at all, whilst, in so far as the labouring class is concerned, wages have risen in almost direct proportion to the cost of living. Further, they now work less and enjoy numerous advantages, the cost of which has to be borne by the other classes of society. Among such advantages we might cite cheap dwelling-houses (actually very dear to build) constructed by means of State and local subsidies. Weekly tickets on the State railways are also issued to the labouring classes at prices which are ridiculously cheap in comparison with railway fares abroad.

The ordinary Budget, taken as a whole, shows a very small deficit of eight million francs, which means that it is practically balanced, in spite of the fact that it has to support a definite charge of 477 millions to meet interest and charges on roughly eight milliards borrowed for the purposes of reconstruction. Further, the expenses of the

State, called "after-war expenses"—including bonuses in respect of the cost of living—amounting to roughly 157 millions, have been transferred from the extraordinary to the ordinary Budget. Therefore, had the Budget been compiled on the same lines as in the preceding years, it would have balanced with a surplus of 620 millions. All this proves that the country has taken one more step on the long road to the restoration of its finances, and it is comforting to see that the people are realising more the realities of the state of affairs. Germany will not be able to pay in full, and in this connection the Prime Minister stated in submitting his annual report on the Budget: "We have to set against an item of 37½ milliard francs spent on direct reconstruction a contra item to be received the amount of which is unknown, but which at any rate is certainly considerably inferior to its theoretical maximum value of 10½ milliard gold marks, with the result that it is evident that all our reconstruction work will not be entirely repaid by Germany."

It is certainly much better to hear the situation discussed in this manner, and it is reassuring to see that measures are being taken in consequence, rather than to hear it repeatedly said that the country will be ruined unless Germany pays. This attitude reveals some change in the Ministerial language and in public opinion in Belgium.

The extraordinary Budget shows a deficit of 495 millions, and the Budget for recoverable expenditure amounts to 2,354 millions, being 600 millions less than for 1923, and here again Mr Theunis says that he does not anticipate any payment from Germany for some time, which probably means for a very long time. Thus we shall not be without new loans again next year. Fortunately, they are not too close at hand for the present quotations of Government stocks on Bourse would make it very difficult for the Government at the moment. Sellers predominate, and it is not easy to find buyers and the last issues of "Dommages de Guerre" have fallen to from 10 to 15 per cent. discount, after standing at a premium for a long time. The Consolidated 6 per cent. has fallen to 92, after having remained at about par for several years. Nevertheless, one must not attribute this fall to a distrust of Government securities, but rather to the often exaggerated rise in industrial securities. The public prefer to buy stocks which are appreciating rapidly, and do not hesitate to sell their Government securities, even with a loss, in order to speculate to the full in industrials. So long as this speculation lasts they are rapidly compensated for the losses sustained by selling stocks bearing fixed interest.

NORWAY.—ATTEMPTS TO BALANCE THE BUDGET —INDUSTRIAL CONDITIONS—COST OF LIVING.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, December 8.

THE Finance Minister (who is also the Prime Minister) is making energetic efforts to balance the budget. A very important measure was introduced by him into the Storting, and carried against the votes of the Socialist and Communist members, namely, a temporary enactment that the customs duties be paid at the present gold rate of the krone. It is calculated that this arrangement will yield, at the present rate of importation, 42 millions for the exchequer, but on the assumption of a reduction of importation, only 35 millions are estimated for. Strenuous efforts at reduction of expenses, it is believed, with this increased income, will suffice to make both ends meet.

The threatening lock-out fortunately was averted at the last moment, so that production in most branches of industry is now going on. Still, there is a small increase of unemployment, which may, however, be said to be seasonal. There is, however, unrest in the iron industry, 4,500 having gone out on strike. Naturally the high rate of money (7 per cent.) is felt by the trade rather keenly. The Finance Minister is credited with the statement that he hopes the Bank of Norway will be able to make a reduction shortly.

The calculation of the cost of living issued by the Statistical Central Bureau, at November 15th, shows an increase in the total of two points, and now stands at 231.

Most of the food-stuffs have advanced. The *Farmund's* wholesale index for November shows a still greater advance, viz., 6.7 points, or 3.1 per cent. The textile group (especially cotton) is responsible for the main rise, but on the whole most articles have advanced. This, of course, was to some extent due to the low exchange of the krone ruling during November. An improvement in that respect has set in which will influence prices, unless other adverse forces set in.

AUSTRALIA.—MONEY RATES AND GOVERNMENT BORROWING—WOOL CLIP—ELECTROLYTIC ZINC.

(FROM OUR CORRESPONDENT.)

MELBOURNE, October 31.

THE money market in Australia has shown some hardening owing largely to the pressure of Governments in borrowing locally. Some months ago the Commonwealth and State Governments agreed that after the end of this year the States would discontinue the issue of securities within Australia free of income-tax, the Commonwealth having taken a similar step some years ago. In the meantime the States are pushing to obtain money on existing tax-free terms, and are offering 5 per cent., 5½ per cent., and in some cases 5½ per cent., free of both income-taxes, thus forming active competitors for available supplies of money. From the investors' point of view, as the creation of fresh tax-free securities will finish at the end of the year, this will tend to give a special value to those already in existence, the amount of which will diminish in future years as the redemption dates are reached. Another reason for hardening has been the active private demand for accommodation for some time past, and although the banks have increased their advances, applications from borrowers have been on a larger scale than the banks have at all encouraged. A substantial part of the borrowing demand has been for employment in the cities, where the erection of houses, factories, and business premises has been active. Another form of demand has been due to increased import trade this year. At present the financing of the wool export season is causing the usual demands upon the banks, and, as was the case a year ago, the restricted currency (gold being unobtainable for the purpose while at a premium) does not facilitate the process.

The wool clip is less than last year, and this is reflected in the smaller quantities coming forward from various growers, especially in New South Wales. The prices ruling, however, mean that the aggregate value of the clip will be large. The Australian wheat crop appears likely to turn out a little better on the whole than that for 1922-23, which has resulted in an export of over 54,000,000 bushels (inclusive of flour) since last December. Butter production in Australia is less than last season, but New Zealand promises well for butter and cheese.

The Electrolytic Zinc Company of Australasia, Limited, which has contracts with the British Government, has issued its report for the year ended June 30, 1923, showing a profit of £285,405, against a profit of £76,593 for the seven months ended June 30, 1922. In addition to dividend on the 8 per cent. preference shares for the year, dividend at the rate of 8 per cent. per annum is declared on ordinary shares for the half-year ended June 30, 1923. At the annual meeting the chairman stated that the British Government had expressed a desire (in furtherance solely of its policy of relinquishing trading activities) to be relieved of its obligations under the spelter contract, in return for an equivalent consideration in the direction of the concentrates purchase contract. As explained in the company's report, an additional 400,000 tons of Broken Hill zinc concentrates has been purchased from the British Government, making the total 1,150,000 tons. The contract for the purchase of zinc by the British Board of Trade for a period of years provided for the purchase of the full output on the present scale of production, the payment of a premium over and above the average official price for G.O.B. spelter, and a satisfactory guaranteed minimum price. Under the revised arrangements, the provision for the minimum price still stands.

Letters to the Editor.

EGYPTIAN CURRENCY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The author of the article on "Egyptian Currency since 1914," in your issue of November 17th, though he gives a fairly accurate account of the actual facts, exhibits an extraordinary confusion of ideas in his discussion of the situation.

He endeavours to show, by comparison of the respective index numbers in the United Kingdom and Egypt, that there was a difference in the two price levels of some 20 per cent. in favour of Egypt in 1916, and that the exchange on London was prevented from falling in a corresponding degree by the official stabilisation of the exchange at par, thereby assuming that the price levels worked independently of the fixed exchange.

Yet he goes on to attribute the rise in prices to the fixing of the exchange, a conclusion which is in direct conflict with his former assumption.

It need only be added that the so-called index numbers in Egypt are compiled from the prices of local products only, and afford no indication of the general purchasing power of money comparable with those of the United Kingdom.

It is difficult to follow your correspondent in his further divagations, for he does not explain what currency policy he would have adopted, with a "free" exchange, to prevent the rise in prices, and profiteering, which he says might have been avoided.

It is regrettable that such hazy and unscientific notions should have found publicity in your columns, for they can serve only to encourage the ill-informed elements in Egypt, which, in a spirit of misdirected patriotism, would, by a premature reversion to the gold standard, violently dislocate the Egyptian monetary system, and cause ruinous losses to banks and others who are under heavy liabilities in Egypt, covered by investments in England, made on the strength of the stable exchange.—I am, Sir, yours faithfully,

FINANCIER.

Cairo, November 28th, 1923.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There is no confusion of ideas in the article to which "Financier" takes exception. The discrepancy exists only if one neglects the "time factor," as he does. Nothing in the article suggests that the rise in the price level of one of two countries, linked by a fixed rate of exchange, must take place simultaneously with that in the other. On the contrary, there must be some time-lag. The rise in prices to its 1916 level, in Egypt, was the result of causes operating over the interval between 1914 and then, the chief of these being the fixation of the rate of exchange. The time-lag explains the 20 per cent. difference. But once the level reached a particular point, that value, in relation to the corresponding level in the United Kingdom, would have been effective, and almost immediately effective, in determining the rate of exchange, if that rate had been set free in 1916. If the rate had not been fixed in August, 1914, Egyptian prices would have remained at about their 1914 level, and the rate of exchange would have fallen steadily, in proportion as the general level of prices rose in the United Kingdom. By 1916, the rate would have fallen to some 630 millimes to the pound sterling, by 1920 to some 337. The principle involved is accepted by the vast majority of economists. Does "Financier" deny it?

In his third paragraph, on index numbers, "so-called" or otherwise, there is indeed confusion of thought. When he writes of the "general purchasing power of money," does he mean that the index numbers of the United Kingdom measure the value of currency over a wider area than this country? Germany or France, for example? And how does he propose to measure the pur-

chasing power of Egyptian currency, except by means of "an index number compiled from the prices of local products?"

He asks for an alternative policy. India, with a problem analogous to that of Egypt, indicates one that might have been adopted, but it would have been better still to have left the rate of exchange to be fixed by the free play of supply and demand, as India does now.

The article was an attempt to discuss some aspects of the problem not touched on in the official accounts. It followed scientific method by citing current theory and applying that to observed facts. To seek to discredit it by stigmatising it as unscientific is merely misuse of the name of science.

Finally, the last paragraph of "Financier's" letter amounts to an invitation to suppress the truth because of possible ill effects on "ill-informed elements in Egypt." If there should be such ill effects, they must be laid at the door of those who have had during the past 40 years and have now the informing of Egypt. We are not back in the days of Galileo and the Inquisition.

THE WRITER OF THE ARTICLE.

ALCOHOL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Having read Professor Starling's book on Alcohol, and your own review of it, I find it difficult to understand why you should think that the book—or rather the weighing of such evidence as is contained in it—would not make for a decision on the matter of prohibition.

You will perhaps pardon me if I express the opinion that you are not quite correct when you say that Professor Starling frankly allows his own outlook to escape. At one time the Professor was inclined to range himself on the side of the prohibitionists—such at any rate is the opinion I formed after reading his "Principles of Human Physiology."

If a man of science goes into the question of alcohol thoroughly—or, for that matter, into any other question—and finds that an examination of the evidence before him justifies him in saying definitely that he is opposed to prohibition of the use of the article he has examined, it would surely be more just to give his opinion its proper scientific weight.

Extended study has changed Professor Starling's opinion somewhat; the evidence which has influenced him may fairly be put before others.—Yours faithfully,

ALF. W. WILLIAMSON.

33 Alpha street West, Seedley, Manchester,
November, 1923.

[Our correspondent is under a misapprehension if he thinks we underestimate the value of Prof. Starling's presentation of the evidence in regard to the effects of alcohol on the human body. On the contrary, such work is of the greatest importance in helping to form a judgment. But Prof. Starling himself is leaving the region of scientific deduction for that of political philosophy when he says that if Prohibition were enforced against the conviction of a large proportion of the members of the community, he believes it would be little short of a calamity. Our comment upon Prof. Starling's book was in effect that before the final decision is taken there are other considerations to be weighed which are equally outside the realm of questions to which science can give a precise answer. The balancing of so much human suffering against the disadvantages of certain restrictions upon individual liberty is a task which cannot be carried out in the scales of any scientific laboratory.—Ed. Econ.]

Books and Publications.

THE ULSTER BOUNDARY QUESTION.*

THIS very ably edited volume belongs to a class which has become familiar before, during, and after the various attempts at a resettlement of the map of Europe in consequence of the European War. Let it be said at once that it is a very superior example of its kind. The present reviewer, who has had a certain experience of this branch of literature, does not remember to have met with so good-tempered and well-reasoned an exposition of such a theme, unless, perhaps in the documents put out by the Tchecho-Slovak Delegation to the Peace Conference at Paris in 1914. The good temper is the most notable feature of the book. Its authors are not concerned to crush or scarify their adversaries, but to persuade them by rational argument. They are not seeking to justify in advance a forcible solution, but are attempting to lay foundations for an agreed settlement in the spirit which has prevailed in the case of other British Dominions—a parallel which is discussed in detail in the concluding section and which is obviously present to the writers' minds throughout.

The volume is divided into four main sections. (i.) Historical and Political. (ii.) The wishes of the inhabitants. (iii.) Economic and geographical conditions. (iv.) Analogous problems in other countries. It is a good sign that the first section occupies only 44 pages out of 152, and that the third is slightly the largest of the four; while the inclusion of the fourth—which contains some of the most acute and interesting argument in the book—shows a welcome breadth of view, in contrast to the morbid concentration of vision upon his parochial problem which is the besetting sin of the nationalist in all continents and centuries.

The first section is perhaps, as might be expected, the weakest. It begins, rather ominously, with the year 350 B.C., and advances two main theses. First, that the Scots settlers planted in Ulster during the 17th century were largely homogeneous with the native Irish in their racial origin, and even in the retention, in many cases, of their original Gaelic speech at the time of settlement. Second, that the dissenting Protestants among the Ulster settlers were during long periods so badly treated by the Episcopalian Ascendancy as were the native Catholics themselves. These theses are weak, not because they are untrue (as regards the exact degree of their accuracy the reviewer is incapable of passing any valuable judgment), but because they are in the nature of historical curiosities which have little relevance to the political problems of Ireland in our own time. Physical race and language are of no account from the political point of view as compared with will and sentiment—a point which is taken by the authors of the work in another passage, in which they argue from cases like that of Switzerland, that the absence of objective homogeneity is no obstacle to political unity of feeling and action. Nor, again, are past divisions between Ulster dissenters and Episcopals of account compared with the solid front presented by the Ulster Protestants ever since there has been any question of reversing the Union of 1800. On the other hand, the stress laid upon the remarkable unanimity between Catholics and Protestants in 1798 is entirely relevant to the present issue. There is an important instance, at a date when social and religious conditions were not incomparable to those of our own generation, in which Northerners and Southerners, Protestants and Catholics, did act together under the influence of a great issue. On that occasion the issue was the political one of self-government; but it is by no means inconceivable that the economic issues explained in Section 3 of this book might exercise a similar unifying effect at a not very distant future—the precedent of 1798 proving that this is not a psychological impossibility.

The second section, dealing with the wishes of the inhabitants, illustrates its subject by implication in eight tables, in which the figures of "Catholics" and

"Others" in the six counties are given under different administrative groupings and divisions. The editors not unfairly argue that, although these tables do not represent any direct expression of opinion on the question of partition, there are practically no Catholics in the six counties who are in favour of their exclusion from the Free State, while a certain number of non-Catholics are opposed to it. Three further tables show the results of the voting at the General Election of 1918, the Election for the Northern Parliament in 1921, and the Election for the British Parliament in 1922. Readers should follow carefully the comments on this last table, in which the substantial anti-partition majority in Tyrone and Fermanagh is underlined.

The economic section, however, is the most interesting and instructive. On page 94 there is a clever appeal to the interests of the British taxpayer, to the effect that the Northern area is not paying more than about an eighth of its fair share towards Imperial liabilities and expenditure, and that the missing seven-eighths are presumably being absorbed in artificially maintaining an unnecessary Government in an unworkable administrative area. It is adroitly argued that the ratio of taxable capacity in Ulster and Great Britain ought to be calculated simply per head of the population, since Ulster's whole claim to exclusion rests on the claim that in civilisation and standard of living her people are at a British as contrasted with an Irish level. There is also an illuminating discussion of the commercial position of Belfast, the value to her of Southern Ireland as a market, and the practical possibilities of obviating the disadvantages which she fears if she transfers from the British to the Irish Customs area.

The best passage in the book is the advocacy, in the last section, of some form of union between North and South in the interests, not of States, but of human beings:—

"Union may be considered either from the point of view of the inhabitants of the disputed area, or from that of the two States or communities by which the area is claimed. Here we are concerned merely in the former. From their point of view there can be little doubt that union possesses very great advantages. Even granting that the union formed may not be complete, but that each party which claims the territory may retain its own individuality, yet the fact that the parties are no longer completely apart will greatly help the interests of the inhabitants and conduce to their welfare. To be the citizen of a State entirely separate from or even hostile to the State to which you wish to belong may be a very difficult and sometimes an intolerable position. To be the citizen of a State which is closely bound to the State of your choice is far more pleasant and advantageous. Federations or unions are, in fact, found to be the best means of protecting and serving the interests of minorities."

This is political humanism, or, in other words, political common sense.

SOUTH AMERICA IN BRIEF.*

THIS year-book was originated by Mr W. H. Koebel, whose recent and lamented death has deprived South America of the most active exponent of her great possibilities for British enterprise. It now appears at a reduced price and in a handier and more readable form. It has become not only a storehouse of information—geographical, statistical, and commercial—concerning all the South and Central American countries, with the addition of Mexico, Cuba, Porto Rico, and the Falkland Islands, but a guidebook for intending travellers, and so it gives particulars of the ports of call on the voyage from Southampton to Buenos Aires, lists of hotels in the principal South American cities, with their prices, and advice concerning travel in the more backward districts, with attractive accounts of the Transandine Railway and the journey up the Amazon. Each country is described comprehensively, even such comparatively neglected areas as British Honduras and Dutch Guiana, and full particulars are given of the soil, climate, products, fauna, and

even of the possibilities of sport with rod and gun, chiefly in Argentina and British Guiana. The commercial information is most comprehensive and practical, and the descriptions of scenery, and occasionally of native races and customs, make the book much more readable than most of its class. The total British capital invested in South American countries is estimated at £830,900,000, ranging from £395 millions in Argentina to £400,000 in Bolivia. In its new form the book should have a wide circulation, and should stimulate British travel and enterprise in a continent which has exercised a special attraction on Englishmen from the reign of Elizabeth to the present day.

A SHIPPING ANALYSIS.*

THE analysis of the shipping industry, which has been prepared by the Labour Research Department, would have been more useful had those who compiled it been less anxious to make out a case for the need to wage an international class war. Though the little book brings together many interesting particulars, the way in which they are presented produces a feeling that this is neither one thing nor another. The fruits of so-called "research" really are sheer propaganda. Inflation of capital, the book suggests, where it does not lead to definite collapse, involves a continual struggle, so far as shipping companies are concerned, to maintain high rates of freight and passenger fares, and at the same time to reduce the numbers and pay of men employed. Capital losses, when insolvency does occur, seem to be merely passing incidents of no particular consequence. Attention is concentrated on dividends paid on inflated capital, bonus shares being merely camouflage to prevent the workers from realising what is being paid out to shareholders. The relation of capital inflation to currency inflation is not touched upon. The capital levy automatically inflicted by the debasement of our currency during the war is not brought into account. These things are beyond the scope of the research which is directed towards demonstrating the need of uniting "workers in the struggle against international capitalism." While no one of fair mind wishes seafarers to work for unreasonably low wages, or in objectionable conditions, the militant style of this book may prevent its enlisting the interest of impartial readers.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
December 27.

ACCOUNT.
December 28.

Stock Exchange markets cannot be said to have recovered from the effects of the General Election. In some cases, a moderate rally occurred from the lowest prices touched immediately after the issue of the fight became known. The War Loan has been down to 100 sellers, Courtaulds to 59s 6d, and the only market which was not affected to any particular extent by the political upheaval has been that for South African mines. The decision of the Labour Party to form a Government, if called upon to do so, led to a bout of public selling after the markets had started to improve. Political conditions are such as to render the investor hesitating and the speculator timid, the consequence being that neither feels any particular enterprise so far as operations in stocks and shares are concerned. Business fell away to a very low ebb, and depression deepened in nearly all the markets on Thursday last.

A good many options on Conversion stock and the War Loans fall due for settlement this week, and at the end of the month, on behalf of speculators who have given money for the put or the call of stock, according to their views of the way in which the election would eventuate. These had some effect in keeping the price of the War Loan about par. Conversion and other British Government securities rallied immediately after the election excitement had passed, but the market is undecided, and fell back on the public selling mentioned above. Various recently-issued script stocks in this market lean to the lower side.

With the possibility of America entering the arena of the Ruhr question, confidence revived a trifle in the possibility of peace becoming established, and this caused a short-lived rise in French issues, more particularly in the Government and railway bonds. Austrian scrip and Turkish Unified advanced, though temporarily, on what appeared to be bear repurchases. Chinese bonds are a slightly better market. Brazilians, after their improvement, are showing a disposition to halt; other South Americans remain neglected. Mexicans have been flat, on the news of more revolutions in that distressful country.

Home Railway stocks, which had recovered from their spasm of flatness, gave way incontinently as the weakness of the Consol market spread to more speculative departments. The fall caught the Heavy stocks as well as Undergrounds. It spread to the prior-charges and left the market weak. Grand Trunk Pacific debenture has shown remarkable buoyancy, gaining several points on the hope of an early favourable statement in regard to resumption of interest payments. Argentine Rails managed to show a tolerably steady appearance in the face of the prevailing depression.

Rubber at 1s 2d per lb offers no inducement to the public to take a hand in the share market, and accordingly stagnation rules in this section. Mexican Eagles dropped at one time to 19s 9d on the cables reporting fresh outbreaks on the part of the rebels, but a brief rally occurred in sympathy with the firmer tone that made itself felt amongst the higher-priced shares. The dividend declarations of the Royal Dutch, Shell, and Lobitos companies served to steady the market as a whole, but the list turned down again on the capital levy fears. Anglo-Persians have been noticeably weak. The tea market remains uncertain, a good deal of caution being shown by prospective purchasers. In the textile group the destruction of Protection hopes led to an all-round fall in prices. Buyers from the North, with supporting orders, put a more cheerful complexion upon the market aspect, which was subsequently dimmed by the depression that spread from other quarters.

Tobacco shares were sold fairly heavily by the speculative brigade. The bears, however, regretted their temerity, for prices rallied sharply. Then came public sales, and the market gave way. Associated Portland Cements have been flat. In the insurance market, Motor Unions and United British have been the two shares most closely watched. These, after a heavy fall on announcement that the absorption negotia-

tions had fallen through, recovered substantially as bargain-hunters picked up the stock which disappointment had thrown on the market. Most of the other shares show falls on the week. A placid tone characterises shipping, gas, and electric lighting issues, where changes are few.

Banks remain moderately firm, the Eastern group, however, being scarcely so good as it was a week ago. Wireless and cable shares are steady. Radio Corporations improved, on fresh buying from New York. The newspaper varieties have been flat. The eagerness to buy hotel shares on the strength of optimistic expectations regarding next year's Exhibition has subsided; modest improvements occurred in shares of the stores and shopping companies. In Egyptians there is little doing.

The feature amongst South Africans is the strength of Robinson Deep shares, where demand from the Cape forced up the prices of the "A" and "B" in lively fashion. The rest of the market awaits with eager attention the declaration of the December dividends, and these, as previously mentioned, are expected to be unusually good owing to the high price of gold. Chartered put on a few pence by reason of the anticipation that at the forthcoming meeting something will be said as to a possible cash return in connection with the Government's recent payment to the company. Opposition to this has developed, however, and Chartered went back. Tin, the metal, has been behaving in an extraordinary manner, falling £8 in one day and recovering the loss on the day following. Such meteoric movements discourage rather than stimulate speculation. Tin shares fail to attract public interest. Copper and diamond shares are lower. Mexican mining shares gave way because of the revolutionary troubles, and Russians are scarcely mentioned.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded	£268,545,108			
Adjusted figure.				

ISSUES OF THE WEEK—

Plymouth Corporation.—Issue of £250,000 4½ per cent. redeemable stock, 1929. This issue has the sanction of the Ministry of Health, and is authorised by the Public Health Acts Amendment Act, 1890. Interest is payable half-yearly on June 30th and December 31st. The stock will be redeemed at par on January 1, 1929, unless previously cancelled by purchase in the open market, or by agreement with the stockholder. It will be registered and transferable in any amount by deed (free of transfer stamp duty), at the office of the Borough Treasurer and Registrar of the stock, the Old Guildhall, Plymouth. The stock will be charged "indifferently" upon all the revenues of the Corporation. Proceeds of the issue will be applied to the extension of the waterworks, electricity, gas and tramway undertakings, and other public works of a capital nature. The population of the county borough of Plymouth was, according to the Census of 1921, 209,857, and was estimated by the Registrar-General at mid-year, 1922, at 211,500. The total net outstanding debt at March 31, 1923, was £3,958,106, of which £2,645,548 was in respect of reproductive undertakings. The total rates for 1923-24 are 13s 4d in the £. A rate of 1d in the £ will produce £4,600. A City house has purchased the stock from the Corporation at the price of 99 per cent., less an allowance of ½ per cent. for brokerage. These details are taken from an advertisement

made in the Press to comply with London Stock Exchange regulations. A well-secured stock.

La Campana Chilena de Salitres.—Incorporated under the laws of the Republic of Chili. The issued and fully paid share capital is £202,000. This is an offer for sale of £125,000 7 per cent. first mortgage registered debentures of £100 each at 98; they are redeemable before 1934 in annual drawings at 102 per cent., by a sinking fund of £12,750 per annum, but the company reserves the right of redemption on any interest date at 102 per cent., on giving six months' notice. It is stated that profits for the eight years to December 31, 1922, averaged £43,468 per annum. For the first year the interest will be reduced every year by £875 until the final extinction of the debt. Of the proceeds of the debentures £100,000 will be applied in paying the balance of the purchase-money for the company's "Florescia" and "Vicente Bañados" grounds. The issue will be secured by a trust deed, and, according to a statement of assets and liabilities, a surplus of £529,894 is available, if the proceeds from the present issue are taken into consideration. A rather speculative security.

Kuala Lumpur Rubber Estate, Limited.—Share capital £70,000, divided into shares of 2s each. The company has been formed to acquire and work a rubber estate in the State of Kedah, Malaya. It comprises approximately 1,320 acres, of which 700 acres consist of rubber in bearing (9 to 14 years). The purchase consideration, payable in cash by the company to the vendors, is the amount payable by the vendors to the former owner, namely, £390,000 (equal to, say, £49 per planted acre). The company grants to the vendors the right to subscribe at par for 88,620 shares of 2s each in the company up to December 31, 1926. As the vendors to the company, it is stated, are making no promotion profit on the resale, the company will repay the costs of the report upon the property and those incurred by the vendors in relation to its acquisition. A speculative proposition.

East Ham Palais de Danse, Limited.—Authorised capital £22,500, divided into 20,000 7½ per cent. cumulative participating preference shares of £1 each and 50,000 ordinary shares of 1s each. This is an issue of 17,500 7½ per cent. cumulative preference and 8,750 ordinary shares, all at par. Applicants for preference shares have the right to apply for ordinary shares in the proportion of one ordinary for two preference shares. The business to be carried on by the company is indicated by its title. The prospectus states that "after payment by way of dividend to the holders of the ordinary shares of a sum equal to the amount of the fixed preference dividend, one-fourth of any surplus profits of the company available for distribution will be divided among the holders of the participating preference shares, and the remaining three-fourths will be divided among the holders of the ordinary shares." This appears to be a reasonable distribution of profits. Moreover, the position of preference shareholders is, as usual, secured by the articles of association, which provide that upon a winding-up the surplus assets are to be applied first in payment of the capital paid up on the preference shares, and in the next place, in paying the capital paid up on the ordinary shares. Any assets remaining are to be distributed as to one-fourth among the holders of the preference shares, and as to the other three-fourths among the holders of the ordinary shares. These handsome provisions are excellent in theory, but we feel bound to point out to our readers that in actual practice preference shareholders, when troubles overtake a concern, are frequently asked to forfeit a substantial proportion of their preferential claims. As an investment, the company does not possess much attraction.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

BRITISH OVERSEAS BANK, LIMITED.

RAPID DEVELOPMENT OF THE BUSINESS.

SUCCESSFUL RESULTS OF LONDON AND LIVERPOOL BANK OF COMMERCE PURCHASE.

REVIEW OF CONDITIONS IN CENTRAL EUROPE.

ALTERATIONS TO ARTICLES APPROVED.

The fourth annual general meeting of the shareholders in the British Overseas Bank, Limited, was held, on the 14th instant, in the bank premises, 33, Gracechurch street, London, the Rt. Hon. Viscount Churchill, G.C.V.O., governor of the council, presiding.

The Chairman: I will ask the secretary to read the notice convening the meeting and the auditors' report.

The secretary, Mr A. E. Thorne, having read the notice convening the meeting and the report of the auditors,

The Governor said: Gentlemen,—With regard to the report and accounts, these have been circulated, and perhaps it will be your pleasure to take them as read. (Agreed.)
