It is hardly necessary for me to-day to dwell on the conditions under which our business has been conducted during the past year. Another twelve months of depression have once more emphasised the dependence of this country on political order and prosperity abroad, and, unfortunately, for the greater part of the period conditions, especially on the Continent of Europe, have been growing steadily worse.

FRANCE AND THE RUHR.

The attempt made by France to effect a settlement of the Reparation problem by the seizure of the Ruhr has, for the time being at least, put out of action one of the most important industrial areas in Europe, and has hurried Germany into complete financial collapse. So far little result has been secured, and the conflict of views on this question between our own Government and M. Poincaré has strained the Entente almost to breaking point. Fortunately, there would seem now to be faint hopes of some understanding, but much time must inevitably pass before the harm that has been done can be made good.

RUSSIA.

In Russia the Soviet Government is gradually realising the vital need of building up normal relations with the outside world. But it cannot yet bring itself to adopt a different attitude towards the pre-war creditors of Russia, and it still refuses to admit any satisfactory recognition of the private rights of foreigners. Conditions, therefore, show little improvement, and the vast Russian market remains substantially closed.

In the Near East peace has at last been achieved, but the economic policy of the new Turkish State does not appear favourable to the recovery of trade in those regions.

NECESSITY OF EUROPEAN MARKETS.

As a whole, Europe remains more or less disorganised. It continues to suffer from serious under-production of the necessities of life, and the resulting poverty of so many of our former customers is a serious handicap to our own recovery. For it reacts not only directly on our trade with Europe itself, but on our exports to other regions, such as South America and the East, which depend so largely for their prosperity on finding in Europe a market for their raw material products.

During the last month or so there have been signs of a slight improvement. But so many disappointments during the last few years have taught us the necessity of extreme caution, and we must only expect, even at best, a very slow and hesitating recovery in foreign trade.

BANK'S DEVELOPMENT.

In spite of these adverse conditions, I am happy to say that our bank has shown an increasingly rapid development. The earlier work of organisation and preparation is now already bearing satisfactory fruit, and on the basis of this preliminary work we are confident that we are now sufficiently tested and equipped to deal efficiently with the new business which is continually being offered to us.

Apart from this development of regular business, the bank has continued to play a prominent part in the efforts to reconstruct ordered conditions of development in Central Europe.

ROUMANIA.

The consolidation of the Roumanian Government's external debt has been brought to a successful conclusion, but many questions

connected with the various interests concerned continue to come up for settlement. The bank, also, took an active part in an advisory capacity in the protracted negotiations which led ultimately to an agreement being signed between Roumanian private debtors and their creditors in this country. In this way the bank has assisted the Roumanian Government in a matter which will enable that Government to proceed under more favourable conditions with the development of the great national resources of their country.

The many difficulties still to be settled with those countries which have not yet recovered from the disorganisation of war would be greatly lessened if a more sympathetic and understanding attitude were visible among those more happily placed. It is, of course, natural that the losses of the individual are more evident to him than the troubles of others. But in the painful process of reconstruction a broader view and a longer vision on our part would be of material advantage, not only to the countries concerned, but also ultimately to creditors and others in our own.

POLAND.

These remarks apply to almost all countries of Central and Eastern Europe, and to none, perhaps, to a greater extent than to Poland. It would be unwise to overlook the mistakes that have been made there. But I am glad to be able to say that already our own country is showing a greater comprehension of the difficulties that have to be met and more sympathy for the attempts that are being made to meet them. As I have said already at these meetings, the fundamental trouble in Poland has been the failure to balance the Budget, and this failure has been due for the greater part to both insufficient taxation and the faulty collection of existing taxes. As was inevitable, recourse to the printing press has resulted in an ever-widening gap between expenditure and revenue. The Government has at last realised the true nature of its problem, and has introduced taxation on a gold basis. But, in the meantime, depreciation has gone so far that the struggle to restore financial order is bound to be an extremely painful one.

RIGOROUS ECONOMY AND SOUND FINANCE.

It is, however, a matter for sincere congratulation to the Polish Government that it has faced this problem on its own initiative, and is attempting, by rigorous economy and sound finance, to secure its own salvation. In this effort, I am glad to say, it is being assisted by a Financial Mission from this country, consisting of Mr Hilton Young, Mr Trotter, the late deputy-governor of the Bank of England, and Mr Nixon, the late secretary of the Economic Section of the League of Nations, who have proceeded to Warsaw at the invitation of the Polish Government. Time must elapse before the results of these efforts can be seen, but we look with confidence to the determination and the power of the Polish Government to solve their problem.

DEVELOPMENT OF POLISH ELECTRICAL POWER.

Our own participation in the economic reconstruction of Poland has remained a close one, and we hope that some of its fruits will shortly be seen. For a long time past complicated negotiations have been in progress, with our assistance and advice, for the development of the Polish electrical power system. These negotiations have now been completed by the formation of a powerful British group, which will act in conjunction with Polish electrical interests. The equipment and extension of the already important system of Polish power stations with British machinery will form another close link between the two countries, with promise of many mutual advantages.

FREE STATE OF DANZIG.

Turning to Danzig, the Free State which acts as the port of Poland, I am glad to be able to say that a definite improvement has taken place in political feeling between this small State and its larger neighbour, and that trade through the port of Danzig continues steadily to develop. No doubt, all of you present have seen that the Free State of Danzig has completed plans for the introduction of a new currency at the beginning of next year in order to free itself from the incubus of the German mark. In the meantime, a provisional currency based on sterling has been introduced. The actual results of these first temporary measures

have exceeded all expectations, and they give rise to the hope that when the new Central Bank, with its permanent currency is introduced full stability will be re-established, with favourable reactions on the trade both of the port of Danzig and of Poland. In the discussion and preparation of these changes the bank has played an important part, and it is accordingly unbecoming for me to refer in greater detail to these matters.

LITHUANIA AND ESTHONIA.

In Lithuania quiet and steady progress has been made. About a year ago this country also freed itself from the German mark and established a currency which it has maintained from that time on a constant ratio with gold. A growing trade with Great Britain shows that its political and economic stability is becoming increasingly appreciated, and Lithuania's agricultural exports, together with its excellent market for our goods, give promise of further satisfactory intercourse. Interesting developments in this region may shortly be expected in the close co-operation of British enterprise in the extension of Lithuanian transport facilities. Unfortunately, political misunderstandings with its neighbour, Poland, have been the cause of constant trouble, but we have reason to expect a satisfactory settlement of these difficulties in the near future.

With friends in other countries our relations have continued satisfactory, and many new connections have also been formed. In Esthonia satisfactory progress has been made, although lack of capital in that country and the continued difficulty of trading with Russia make development slow.

LONDON AND LIVERPOOL BANK OF COMMERCE.

As has already been announced, in the early part of this year we made an offer to purchase the shares of the London and Liverpool Bank of Commerce, Limited. The appreciation of our offer by the shareholders of that bank is shown by the fact that every share was sold to us. Indeed, their satisfaction at the transaction can only have been exceeded by our own, as the expectations on which our offer was based have been more than realised, not only with regard to the assets of the bank, but also on account of the business connections that have developed from the transfer.

On completion of the purchase, Mr Lawford, manager of the bank, visited most of its customers on the Continent and in America. As the result, the cordial relations previously existing with the London and Liverpool Bank of Commerce, Limited, have continued with ourselves, while our wider organisation has permitted further developments which, we hope, will be continued in the future. Unfortunately, on his return from America, Mr Lawford experienced a severe attack of pneumonia and, on the recommendation of his medical adviser, sent in his resignation, which we were regretfully compelled to accept.

THE NEW OFFICES.

In view of the increase in our own business, and of the accession of business from the London and Liverpool Bank of Commerce, Limited, our removal to our new building did not take place a moment too soon. It is not, indeed, going too far to say that the results of the year would have been impossible under the old conditions. The new offices have had an excellent effect on the conduct of our business, facilitating, as they have done, the proper distribution of work and the efficient co-ordination between departments, which the unsuitability of our old premises made it impossible to deal with adequately.

With regard to the cost of our new building, it is satisfactory to note that the original estimates not only were not exceeded, but that it has been possible to furnish and equip completely within the original estimates for the cost of the structure alone. The premises themselves have fulfilled our expectations. They are well-lit and airy, and have proved convenient, and the lack of ornate decoration has proved not only a saving of expense, but a definite advantage in appearance and dignity.

CHANGES IN BANK'S CONSTITUTION.

From the circular which accompanies the report and balance-sheet you will have seen that certain changes are contemplated in the constitution of the bank. Our experience of the past few years has shown us that it is difficult for the governing council to maintain sufficiently close relations with the business, and this difficulty has been the subject of serious consideration by the council itself. Recently they have come to the conclusion that the best solution of this problem would be to strengthen the board, and to allow the governing council to disappear as an administrative body. The members of the council, however, will maintain their connection with the bank, and will be available for consultation in their individual capacity. Except in so far as it makes for greater efficiency in the conduct of the bank's business, this change is not one that affects the interests either of the "A" shareholders or of the general public.

These are the broad outlines of the proposals, but copies of the new articles may be seen here and at our lawyers, Messrs Linklaters and Paines, by any shareholder who wishes to acquaint himself with the details.

BALANCE-SHEET ITEMS.

With the exception of one or two items, the figures in the balance-sheet before you require little explanation. A year ago acceptances and endorsements for account of customers reached a total of £932,400. On the present occasion acceptances alone amount to £2,081,955. This increase is due mainly to two factors. On the one hand, the London and Liverpool Bank of Commerce, Limited, whose business we acquired, had some £700,000 of acceptances current at the time when we took it over, and these figures gave a welcome fillip to our business in the direction in which we were most anxious to develop. On the other hand, after we had settled down in our new building our own steadily increasing activities brought a rapid expansion on our own account. At the same time, we have still felt it incumbent on us to follow a very conservative policy, and, however good the risk might appear, to restrict severely the limit which we were prepared ourselves to accept. When, therefore, we have had to handle large business, we have made a practice of forming small groups from among our associated banks and, on occasions, from among friendly banks and accepting houses as well, in order to deal with such larger credits. On the discounting of bills connected with such participations we have to incur a liability as endorsers, but, since the liability on bills carries the acceptance of a leading London bank or accepting house, it is purely nominal, and has been dealt with by means of a footnote in the balance-sheet. From this you will see that our technical liability in such matters amounts to £1,212,000. Fluctuations in other items of the balance-sheet represent normal changes, and do not appear to call for any particular comment.

YEAR'S PROFITS.

Profits for the year show a substantial improvement over those from the preceding twelve months, namely, some £25,000. In view of the extremely difficult conditions prevailing during the period which has just closed, I think these results are a subject for congratulation. I have already referred to the difficulties which we, in common with other banks, have had to face during the past year, and, indeed, they are so well known that it is unnecessary for me to dwell again on this point.

ALLOCATIONS.

As you will see from the report, the governing council recommend that a further £15,000 should be written off investments in other banks, £10,000 off premises, and £5,000 off furniture account. This would leave our furniture account standing at a merely nominal figure, and the provision for premises account, together with that already made, shows a substantial writing down on account of an asset which we consider very valuable.

I think gentlemen, these are all the points that I have to bring before you, but I shall be very happy, before putting the resolution, to answer any questions to the best of my ability, with the help of my colleague on my left and my other friends. I now beg formally to move the following resolution:—

"That the report and accounts, as audited and certified by the bank's auditors, now before the meeting, showing the position of the bank's affairs as at October 31, 1923, be approved and adopted; that the final dividend recommended to be paid by the governing council at the rate of 6 per cent. per annum on the "A" ordinary shares for the half-year ended October 31, 1923, be approved; that the dividend be paid to shareholders on the register of members at the closing of the books on December 1, 1923."

Mr R. T. Hindley: Mr Chairman and gentlemen,—As a member of the council, I should like to associate myself with the note of congratulation that the governor has made in his speech to our chairman, the board of directors, and the executive officers of the bank. Those of us who have the conduct of banking affairs know how difficult they have been during the past twelve months, and still are, and I feel from that standpoint I can very heartily congratulate Mr Gairdner and his colleagues on the results that have been shown to you. I do not wish to add anything more except to thank the governor for what he has said in commenting on these results. I have very much pleasure in seconding the resolution which he has put to you.

The Chairman: Now, gentlemen, I shall be very happy to answer any questions or criticisms if any shareholder wishes to make any before I put the resolution to the meeting. (After a pause.) Very well, gentlemen, if no one has any remarks to make with regard to the resolution, I beg formally to put it to the meeting.

The resolution was carried unanimously.

The Chairman: Now I would like one of you to kindly move the re-appointment of the retiring auditors.

Mr Sidney Baker: I beg to move the following resolution:—

"That the retiring auditors—Messrs A. W. Tait, C.B.E., and A. S. Macharg, chartered accountants—be re-appointed as auditors of the company for the current year at the same remuneration, viz., a collective fee of five hundred guineas."

Mr A. C. Balloch: I have much pleasure in seconding that.

The resolution was carried unanimously.

EXTRAORDINARY GENERAL MEETING.

The Chairman: Now, gentlemen, the proceedings so far as our general meeting is concerned are at an end, and if you will be so kind, by the wave of a magician's wand, to turn yourselves into an extraordinary general meeting, I will ask the secretary to read the notice calling the extraordinary general meeting.

The secretary read the notice.

The Chairman: Gentlemen, you have heard what I have had to say at the previous meeting regarding the proposed change in the constitution of the bank, and the circular letter issued with the report will have made you familiar with the nature and extent of these proposals. I, therefore, now beg to move:—

"That the regulations contained in the printed document submitted to this meeting, and signed for identification by the chairman of the meeting, be, and the same are hereby adopted as the articles of association of the company in lieu of the whole of the existing articles of association."

I will call upon Mr Laurence Currie to second the motion.

Mr Laurence Currie: I have great pleasure in seconding the resolution. I do not think it is necessary for me to say anything about it, because the arguments have all been put before you. I think this will add to the fortunes of the bank, and must be in its interests.

The Chairman: Has any gentleman any remarks to make?

Mr C. J. Brand: I should like to support the board in what they propose to do. I am a retired banker, and quite appreciate the desirability of having a board that is able to discuss things rapidly and come to a decision, which has often to be done in these days.

The resolution was carried unanimously.

MEETING OF "A" SHAREHOLDERS.

The Chairman: Gentlemen, we have once more, I will not say to change our coats, but to turn into something else, that is, to resolve ourselves into a meeting of the "A" shareholders. I will ask the secretary to read the notice.

The secretary read the notice.

The Chairman: Gentlemen,—This meeting of the "A" ordinary shareholders of the bank follows upon the meeting just concluded, and is supplementary to it. As has been explained, your rights as regards voting at general meetings or as regards participation in profits or assets are unaffected by these proposals, but to comply with the provisions of our existing articles your sanction is required to the adoption by the company in general meeting of the new articles of association. I now beg to move:—

"That this separate meeting of the holders of the "A" ordinary shares of the British Overseas Bank, Limited, hereby sanctions the adoption by the company in general meeting of the new articles

of association contained in the printed document submitted to the extraordinary general meeting held to-day, and signed for identification by the chairman of the meeting, as the articles of association of the company in lieu of the existing articles of association."

I will ask Brig.-General A. Maxwell to second the resolution.

Brig.-General A. Maxwell: Mr Chairman and gentlemen, I have very much pleasure in seconding the resolution which has just been read to you. In view of the passing of the general resolution, it does not require any further remarks, but I will only say that if this is good for the whole of the shareholders, it must be good for the "A" shareholders.

Mr Brand: I am afraid I spoke too soon. I am an "A" shareholder, and not a "B," but I support the resolution now.

The Chairman: I am much obliged to you for that remark. I have to take you absolutely into my confidence; in putting the resolution I do not know who are "A" shareholders, and have to leave the "A" shareholders to vote. I now put the resolution to the "A" shareholders.

The resolution was carried unanimously.

The Chairman: That, gentlemen, terminates the business.

VOTE OF THANKS TO THE CHAIRMAN.

Mr Norman L. Hird: Gentlemen, before we separate I have a very pleasant duty to perform; I should like to propose a vote of thanks to our chairman, Viscount Churchill, for presiding at our meetings to-day. It is quite unnecessary for me to tell you how much we who have been associated with Viscount Churchill appreciate what he has done for the British Overseas Bank. It is common knowledge to all of you that anything Viscount Churchill is associated with he takes up with great energy. That is so with regard to the Great Western Railway, and likewise the British Overseas Bank, and I ask you to give him a very hearty vote of thanks to-day.

The vote was unanimously accorded.

The Governor: I am extremely obliged to you. It is a very great pleasure and honour for me to preside over these meetings, and to see the implicit confidence the shareholders have in the bank. I should like to express a word of thanks to Mr Gairdner and the board, and also the council, for their courtesy and assistance and the kind way in which they have helped me, I not being a banker, in the various matters which come up for discussion. I hope, little by little, to learn, but I am told that perhaps the less I know of practical banking the more I shall have an open mind on the broad subject of policy which we have to consider here.

The proceedings then terminated.

At a subsequent meeting of the "B" ordinary shareholders a similar resolution to that passed by the "A" ordinary shareholders was duly carried.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

LORD INCHCAPE ON FREE TRADE AND THE REVIVAL OF INDUSTRY. A REMEDY FOR UNEMPLOYMENT. IMPORTANT ADDITIONS TO THE FLEET.

The eighty-third annual meeting of the Peninsular and Oriental Steam Navigation Company was held, on the 12th instant, at the offices, 122 Leadenhall street, London.

Lord Inchcape, who presided, said that with few exceptions every P. and O. voyage during the past twelve months had shown a loss.

DIVIDEND.

They were able to recommend the same dividend as last year, but it was derived more from dividends on investments and from other sources than from surplus on the working of the ships.

THE INSURANCE FUND.

The insurance fund had not done badly. They had added to it £105,000, bringing it to a total of £3,200,000. The fund had had to make good the value, £51,000, of one steamer lost during the year which had belonged to one of their associates. Their risks were well spread, covering 549 ships, but with so many ships at sea they were never altogether free from anxiety, notwithstanding the skill and prudence of their captains, officers, and engineers.

A METAPHOR.

He had been in considerable anxiety lately regarding their most valuable ship, caught without warning in a typhoon. Fortunately, she was in charge of the veteran skipper, Captain Asquith, and Chief Officer Lloyd George. That ship, well found, like all P. and O. ships, had come through undamaged. Her name was Free Trade.

NEW STEAMERS.

Four new mail steamers for the Australian trade had been commissioned during the year—"Moldavia," "Mongolia," "Mooltan," and "Maloja," the first two each of 15,800 tons, the two last each of 20,800 tons gross. They had large cargo and frozen meat capacity and accommodation for, in all, 2,093 first and second saloon passengers in airy and comfortably-fitted cabins. Four steamers each of 15,200 tons, and one of 10,000 tons gross had been ordered for the Indian mail service, and three passenger and cargo steamers of 15,000 tons each for the Australian trade, all of which, like the "Mongolia," "Mooltan," and "Maloja," would burn oil fuel. The increased size of their vessels had enabled them to place practically the whole of the accommodation on the upper, spar, and promenade decks. Passengers would welcome the greater number of single and two-berth cabins, many with private bathrooms, for which there was an increasing demand.

WAGES ADJUSTMENTS.

They had been reluctantly compelled to reduce wages from the high levels to which Government Boards had raised them during the war. These reductions had been accepted in the best spirit, their captains, officers, engineers, and lower-grades realising the need to reduce working expenses more nearly to the level of earnings.

LABOUR DIFFICULTIES.

Owing to the national strike of dock labourers in July last, work was at a standstill in all London docks but Tilbury Dock for seven

weeks. The strike was a breach of a national agreement endorsed by the men. He wished the men could realise how seriously such stoppages retard the revival of trade, and how much they increase unemployment. They heard a good deal in these days about the cost of living and a better standard of life. He was satisfied every employer of labour in the country desired to improve the condition of the workers, but it was patent that unless people were prepared to work harder, and thus help the revival of our foreign trade, unemployment would tend to increase.

UNBROKEN REGULARITY OF MAIL STEAMERS

To such a company as the P. and O., working under a Government contract, the withdrawal of quayside labour was a greater loss than to owners free to leave their ships idle. Mail steamers must sail to time, strike or no strike, and he was glad to say that they had at considerable sacrifice maintained their mail sailings without a break.

THREATENED RENEWAL OF THE STRIKE.

The Unions now threatened to demand higher wages from February, 1924. Shipowners had, he said, to choose between closing down their business or conceding the men's demands. If the shipowners and the Port of London Authority refused the increase, the old story would be repeated, and men willing to work for the present rate of 10s a day would be prevented by picketing. In resisting these demands they were merely fighting for the public, who eventually had to pay.

A REMEDY FOR UNEMPLOYMENT.

In his (the speaker's) judgment the remedy for unemployment lay in the hands of the trade unions. If the unions would relax their rules and for a year or two give economic conditions free play, diminished production costs would find world markets for an increased output of manufactured goods. Real wages would not be reduced, as the purchasing power of money would be increased. To earn twenty shillings which will buy only ten shillings' worth of goods at pre-war value was, he said, of no advantage to anybody. It was folly to keep up nominal wages, shorten hours, and restrict production at a time when a million idle people were costing 50 millions a year—the whole of it, in effect, a tax on the workers. To get rid of unemployment would be to exchange 50 millions of money which is unproductive for 50 millions of productive money, with a reaction upon the welfare of our population which it would be difficult to assess.

TRAFFIC.

The steamers of the P. and O. Company and its associates had, during the year, covered over 16 millions of miles, they had made 29,000 entries into ports, they had carried nearly fourteen million tons of cargo, 215,551 animals, 1,800,000 passengers, and on board their ships the average daily number of men employed was 40,000.

THE FLEET.

The average age of their tonnage was about seven years; it stood in the books at £23 a ton, £11 deducting reserves, and at an even lower figure if they took into account the market appreciation of their investments. It could not be replaced to-day for less than £36 to £40 a ton. This, of course, meant very little if their voyages produced nothing beyond the operating costs. Some of their allies had done better than they, perhaps because they were free from mail contract obligations. He did not begrudge that, as any advantage eventually accrued to the P. and O.

THE DEBENTURE ISSUE.

The recent issue of £3,500,000 5 per cent. debenture stock had brought in applications exceeding 13 millions. They were fortunate to have made the issue just before a then Minister of the Crown had recommended the inflation of the country's currency system by a resort to the printing press.

THE DANGER OF INFLATION.

Continuing, Lord Inchcape said he had on various occasions expressed his views on Free Trade, and while he did not propose to embark on an economic dissertation, he would put his views once more very briefly. Many distinguished men honestly regarded Protection as a remedy for unemployment, but he believed a free interchange of commodities with the whole world was the sheet anchor of the country, and that now the ground tackle would hold for many a long day. He imagined that any political leader who again raised the issue of Protection in Great Britain would be taken charge of and firmly locked up by his followers. He maintained we should continue our policy of reducing expenditure and paying off debt, with a speedy return to the gold standard. He rejoiced that a further resort to inflation had been promptly ruled out by Mr Baldwin. With any contrary policy London would soon cease to be the world's financial centre.

IMPERIAL CONFERENCES.

It was of great value to the Empire that Imperial Conferences should be held every few years, although they had had a some-

what disturbing influence on our domestic affairs. The Dominions were Protectionist countries; they had for many years advocated Imperial Preference, but so far we had not adopted their proposals. The Prime Minister's recent appeal to the country for a mandate had been turned down, just as it was 17 years ago.

He hoped, when the next Imperial Conference was being arranged, any mention of Imperial Preference or tariffs would be excluded. He would not rule out Free Trade within the Empire, but as the Dominions depended upon tariffs for a large part of their revenue that would for many years not be a practical proposition. He believed each of the countries under the Crown should be free to choose its own way without any attempt by either side to influence the other's fiscal policy.

COMPETITION AT THE TAXPAYERS' EXPENSE.

Continuing, his Lordship said they were still faced with Government competition; there was competition by the Government of the United States, and the legacy of government ownership left by Mr Hughes, the late Premier of Australia, who, with no experience as a shipowner, had started a Government Shipping Department, which had cost his country millions which it would never see again.

To supplement deficits on voyages and provide for depreciation from the taxpayers' pockets was not business, and he thought the taxpayer would get tired of it. Governments should leave business to the business community, and so would have the genius and energy of the commercial classes working not only for themselves, but also for the State. This had been abundantly proved by the results of every commercial undertaking upon which the Government had embarked.

A WORD FOR THE LABOUR PARTY.

He would add one word more. The leader of the Labour Party had proposed, whenever he got into power, to nationalise many of our private enterprises. He, the speaker, did not share the apprehensions with which many people regard the possible advent of the Labour Party to power. If they ever formed the country's Government, they would have reached that position by strictly constitutional means, and would be entitled to the fair play which British Ministers expect and deserve. He did not agree with their programme, and he knew their programme would not agree with him, but no section of the community had more interest in the welfare and stability of the country's institutions than the great body of weekly wage-earners. Any blow to trade, anything that weakened our credit, that checked private enterprise or hindered the adventure of capital would react upon the workers and menace their livelihood. He thought they could trust the Labour leaders to recognise this, and to keep their wild men from playing the wrecking game. He, the speaker, had great faith in the sobering effect of responsibility. He had experienced it himself.

THE VALUE OF CO-OPERATION.

He agreed that the agricultural interests of this country lost much by non-co-operation. He had seen the value of co-operation between the P. and O. and its associated companies—in comparing costs, in the purchase of all their requirements, and in helping one another with tonnage. This spirit of co-operation was not confined to the administration, it extended to the whole of their staff afloat and ashore.

THE STAFF.

Men entered the service of the P. and O. with a life's career before them, and the board endeavoured to set up conditions in which good service could be rendered in acceptable surroundings. Their engineer staff had now, in most ships, airy, quiet quarters on the boat deck. The engineers and their assistants had readily adapted themselves to the change from coal to oil fuel, and he would like to express his thanks to the White Star Company for allowing some of them to gain experience of oil furnaces in the "Majestic" and "Olympic," and for the instruction and assistance derived from the engineers of the White Star vessels.

He desired to say a word in acknowledgment of the good and efficient service of their sea-staff—purser, stewards, boatswains, carpenters, and quartermasters. Many of their Indian deck and engine-room serangs and ratings had spent their lives in the P. and O. He inquired recently of one old man on the "Maloja" how long he had served in P. and O. ships. He replied, with a salaam, "Sahib, chalis chae burras" ("Sir, forty-six years"). No more loyal and efficient service was given by any body of men afloat than by the commanders and officers of the P. and O. Company.

SEA TRAINING.

Some little time before he retired, the late Sir Thomas Sutherland had instituted a scheme of training, mainly at the company's expense, of carefully-selected cadets on board the "Worcester," with a view to their entry into the P. and O. as junior officers. Under the training of the late Commander Sir David Wilson Barker, and his successor, Captain M. B. Sayer, many young cadets had passed from the "Worcester" to sea-training, and were now serving on the P. and O. as navigating officers.

He felt sure they, the stockholders, would wish to be associated in the expression of grateful thanks of the directors to their agents and staff ashore, and to their captains and officers of all departments afloat. He was constantly meeting their men, and it was a source of great pleasure to him to work with them. Loyalty, ability, devotion and integrity characterised the service which it was the good fortune of the P. and O. directors to enjoy at the hands of their staff, at home, afloat, or serving far removed at the other ends of the earth.

CONFERENCE AGREEMENTS AND MARKET STABILITY.

He had been accused lately by a correspondent of the *Times* of being a Protectionist because of the associated companies' participation in conference agreements, the charge being that these agreements led to monopolistic rates of freight. This idea was without foundation. Shipowners, shippers, merchants, and consignees all recognised that the effect of these agreements was to free rates from violent fluctuations upwards or downwards, with a minimum of disturbance and of uncertainty in the marketing of valuable merchandise.

A contrary example was afforded by the effect of a sudden and great reduction in Atlantic freights shortly after the war, which made earlier consignments at the higher rates unprofitable, and led to repudiations of bargains as the sudden drop in freights had spoiled the market. It was claimed by all concerned for these agreements that they produced stability of rates, regulation of tonnage and sailings, and punctuality of delivery. In an entirely irregular freight market they would have cargoes delayed by the waiting of half-filled ships, parcels coming in too great abundance or not at all, and alternate glut and starvation of supplies.

THE ACCOUNTS—NEED OF RETICENCE.

There were, doubtless, he continued, some people outside that room who would like more information of the company's affairs than was given by the report and accounts and by his, the chairman's, speech. To say much more might lead to their being urged to increase the dividend, and to a depletion of their resources, which would be a departure from the conservative policy which had guided the P. and O. Company throughout its existence. The precepts of Balzac still held the field in business. He would quote five of them:—

"Don't beat the bush for others."

"Trust no one farther than you can see him."

"Never say what you do, but always do what you say."

"Keep your hands to yourself, and the same with your purse."

"Sell your jewels for more than they cost you."

The first four they could carry out, but at the present time there was a difficulty about the fifth. Their jewels were space in ships, comfortable passenger accommodation, good food—well cooked, well served—courteous attendance, good speed and safety at sea, with regularity in departures and arrivals. It was not by any means easy at the present time to dispose of these jewels for more than they cost.

In fact, they might still be said, to a great extent, to be living on their losses.

PROSPECTIVE.

There was no greater fallacy than that shipowners had made money out of the war. Those who sold their ships and retired probably did well. They had to consider their great organisation and their staff, and to carry on until things improved. But they were not downhearted; they had a magnificent fleet, and were adding to it; the P. and O., he said, stands high with shippers and passengers, and no endeavour would be wanting to retain the public goodwill. Come good times or bad, he confidently hoped the company would continue to give satisfaction to the public in its services to India, the Far East, and Australia.

A PERSONAL NOTE.

He would, before sitting down, ask them to allow him to make a brief personal statement. A shipping paper had lately displayed some concern as to the fate of the P. and O. Company when—as the writer kindly put it—"Lord Inchcape, in the fulness of years, comes to relinquish his position." He, the writer, had surely forgotten that the indispensable man had not yet been born. He appeared to imagine that the manipulation of two million tons of shipping was kept entirely in his, the speaker's, hands, and suggested that he curbed initiative on the part of his staff. This writer showed complete ignorance of the facts. He welcomed, from high and low, suggestions for forwarding the company's interests, and none of his colleagues would endorse the idea that his disposition was to curb initiative. It was, he was afraid, more frequently the other way round, and that his own suggestions were often sat upon. They worked together as a band of brothers, but that he required to be consulted before any step of high importance was taken he regarded as his duty to them, the stockholders. He

was recently in India, with their approval, for six months; he spent a good deal of time on board P. and O. steamers, but the business of their great organisation went on whether he was there or whether he was not. If they, the shareholders, passed the accounts to-day and confirmed what the board had done during the year, he would slip away in a P. and O. next month to the Sunny South, to play deck quoits and sometimes to recline in a deck chair, cheered by the consolation that Protection is dead and Free Trade survives.

The Chairman concluded by moving the adoption of the report and accounts.

Sir Walter R. Lawrence, Bart., G.C.I.E., G.C.V.O., C.B., seconded the resolution, and, no questions being asked, it was carried unanimously.

The dividends, as recommended, were approved, and the retiring directors, Mr H. N. Gladstone and the Right Hon. Lord Kilbracken, G.C.B., were re-elected.

VOTE OF THANKS TO THE CHAIRMAN, MANAGEMENT AND STAFF.

Sir Charles Stewart-Wilson proposed a cordial vote of thanks to the chairman, management and staff for their continued successful management of the company's business.

Sir Fortescue Flannery, seconding, said he would like to express on behalf of the shareholders their strong hope that the anticipations of the writer referred to would be many, many years before they were realised. They were accustomed to two good things at the meeting of the P. and O. Company. One, the declaration of the dividend, the other the speech from the chair. Some of them might not entirely agree with everything his lordship had said, but they all thought the lucidity, comprehensiveness, and impartiality of the address most illuminating and of the greatest possible public advantage. He would add one word. The report showed in the strongest manner not only the company's stability, but its enterprise. Three and three-quarter millions of funds available for insurance losses was an immense item of stability; they had heard that no less than nine ships of different sizes and character were in process of building. The existing ships had gone from coal to oil, and they saw that the good old P. and O. Company, with all its conservatism—he hoped Lord Inchcape would excuse him for that word—was as enterprising as any company in existence.

In welcoming Lord Inchcape back again from public labours in India, which had been so successful, the shareholders were proud to belong to the company.

The motion was carried unanimously, and acknowledged by the chairman.

LONDON AND RIVER PLATE BANK, LIMITED. FUSION WITH LONDON AND BRAZILIAN BANK. CHANGE OF NAME.

The sixty-first ordinary meeting of the London and River Plate Bank, Limited, was held, on the 13th instant, at the offices of the bank, 7 Princes street, London.

Mr J. W. Beaumont Pease (chairman of the company) presided.

The secretary (Mr George E. Smith) read the notice convening the meeting and the report of the auditors.

TRIBUTE TO MR DUFFIELD.

The Chairman said: Gentlemen,—Before coming to the report and balance-sheet which I have to present to you for the past year, it is my sad duty to refer to the loss which this bank has sustained by the death of one who has for very many years been closely identified with our business. Mr Edward Ross Duffield died on May 2nd this year at the ripe age of 84. During 40 of these years his time, his experience, and his loyal regards for the interests of the London and River Plate Bank were all placed at its service without stint or wavering in every position in which he was connected with it. He was appointed manager at head office in 1883; six years later he was elected as managing director, and after 20 years of constant work in that capacity he was elected chairman in 1909. We have, therefore, a debt of gratitude extending over an unusually long period which we have to acknowledge, and it is only right and fitting that I should try to express our high appreciation of his unremitting attention and unfailing duty to the bank.

The directors last June, as you will see stated in the report, elected Mr Lambert W. Middleton a member of the board. Mr Middleton, who was a former partner in the private banking firm of Messrs Lambton and Co., has thus a thorough knowledge of practical banking. Since his election he has shown special attention to and interest in our business.

BANK'S NEW TITLE.

This bank, which Mr Duffield served so well and for so long, has been hitherto known under the title of the London and River Plate Bank, Limited, and it is under this name, which, I think I may claim, has deserved well both of its shareholders and customers, that you have received notice of this meeting. Since then, however, by resolution of your shareholders, confirmed on Decem-

ber 7th, the title has been changed to Bank of London and South America, Limited.

It is not without genuine and sincere regret, which will, I am sure, be shared by many of our friends, that we have seen the old name pass. Of the events which led up to this necessity you are all aware. In the early part of the year negotiations between this board and that of the London and Brazilian Bank, Limited, were entered into with a view to the consolidation of the two businesses into one. They were broken off for a time, only to be renewed later on, and they were finally concluded by the meeting of the London and Brazilian Bank shareholders held to-day to confirm the resolution agreeing to the absorption of their business into ours.

It would not have been convenient, on account of its cumbrous length, to have added this title to ours to mark the alliance, and, further, it would not even so have been sufficiently comprehensive to include all the seats of our combined activities. We therefore chose an entirely new name. It is one which has this advantage, in that it does not interfere with the continuance of the colloquial title under which we have each of us been known both in Portuguese and Spanish speaking countries—namely, the Banco de Londres. May I be permitted to hope that the honourable tradition for right dealing and sound banking which has been associated for many years with both of the parties to this partnership may be continued through an even longer period of successful co-operation in our combined business?

TERMS OF AMALGAMATION.

I have referred to this alliance as a partnership, and this word truly describes the terms of our coming together. No goodwill is paid on either side. We each bring in all our assets, and out of the common stock we take out an amount in shares in proportion to what we bring in. The terms are, as you know, that for every five £20 shares, of which £10 is paid up, of the London and Brazilian Bank, we give two of our shares of £25 fully paid, or, now that our shares have been divided into £5 shares fully paid, we give ten shares of this new denomination. What immediate value the market will put upon the shares when they are quoted I cannot, of course, prophesy. It will depend upon a variety of causes; the return which the declared dividends will yield; the internal and external strength; the estimate of our prospects and the elimination of the uncalled liability; but this much, at any rate, it is safe to say, that the shares which we shall both hold in the combined company will be more valuable than the aggregate of the shares in the two separate institutions.

We shall both continue to earn our proper proportion of profits, and we shall both have the benefit of the many economies which as a combined concern we ought to be able to effect. I believe, further, that the amalgamation will be of benefit not only to the shareholders, but also to the customers of both banks, and here let me say a word of welcome to the customers of the London and Brazilian Bank. They will continue exactly as they have done in the past. They will for the most part go to the same individuals whom they have been accustomed to see as managers, and to the same premises, and except for the new name which they will see on the door plate, or on their cheques and correspondence, they will hardly realise that any change has taken place.

ADVANTAGES TO CUSTOMERS.

But they will have the advantage of dealing with a larger and more powerful bank, of enhanced importance and prestige, with greater connections and capacity for extending fuller facilities than either of the two banks could have furnished separately. In process of time, no doubt, some of our branches will be amalgamated into one; in some places the old London and River Plate premises will be abandoned and the combined business done in the London and Brazilian Bank premises; in other cases the reverse process will take place, or new premises for the combined business be obtained, and in some places both branches may continue as they are at present.

It is early yet to say what economies and conveniences in this respect may be effected, but what I do want to emphasise is that the customers of the London and Brazilian Bank may look with confident assurance to no less favourable treatment in the future than that which they have hitherto enjoyed. I would like also to extend the same assurance to members of the staff of the London and Brazilian Bank. The tradition and methods of both banks are, I think, very similar, and I do not believe that anyone connected with either bank will ever have cause to regret the amalgamation which we have carried through. I would like to add that I do not think any similar amalgamation can have been arranged with a greater desire on both sides to arrive at a fair and just business conclusion, and it is a pleasure for me to testify to the reasonable and harmonious spirit in which the whole negotiations were discussed.

BALANCE-SHEET ITEMS.

The figures we put before you to-day are the results of a difficult year's trading, but they reflect, as I ventured to prophesy last

year, slightly more profitable conditions. I see no reason why this upward movement should not be continued in the forthcoming year.

Our capital and reserve figures remain as before. On the liabilities side you will notice a welcome increase in our acceptances figure, which is nearly one and a half million pounds higher. Merchandise credits are also up, and the amount of bills advised, &c., standing at £1,891,645, is about half a million pounds higher. The amount of our current accounts, deposits, &c., standing at £24,309,583, appears to be lower as compared with our last year's figure. This reduction, however, as in many other items, is the result of the lower rates of exchange at which currency has been converted into sterling. The currency figures themselves, converted at last year's rate, show an increase of nearly £3,000,000.

There is not much change in the next two items, but when we come to bills for collection, &c., we see the figure of £6,030,435, showing an increase of £1,000,000 over last year. Rebate, &c., shows practically no change, and profit and loss account as entered in the balance-sheet is almost identical with the figure presented last year.

I will say more on this head when we come to the profit and loss account.

ASSETS.

On the assets side, cash in hand, &c., £7,995,613, shows a reduction of about £3,000,000, largely due to the depreciated value of currency as expressed in sterling. The next item is of an omnibus character. Including bills, advances, securities, &c., it stands at £28,345,843, and is £2,400,000 higher than it was last year. This seems a large amount as compared with our credit accounts, but apart from our bills and advances it includes, amongst other things, short-term and other Government investments and acceptances to the extent of over £6,000,000, the *per contra* figure which we have already seen amongst the liabilities. Bills for collection are at the *per contra* figure on the liabilities side, and bank premises show a small increase. In the profit and loss account you will see that the gross profit for this year, after providing for bad and doubtful debts, amounts to £811,681, an increase of £38,578 over last year, and the charges, standing at £648,764, show a reduction of £16,871. Our net profits, therefore, at £162,917 are £55,449 greater than they were last year, and this further fact must be remembered—that last year's profits were swelled at the expense of the carry forward.

THE DIVIDEND.

You will see that we propose to recommend the payment of a final dividend of 4 per cent. and carry forward £220,709, which is within a small amount of the figure brought in. You will notice that the amount of depreciation on our capital employed abroad at current rates of exchange is entered in our balance-sheet at £792,383. This is always rather an embarrassing item, which is only of a somewhat theoretical importance, but which, of course, has to be taken into account because our balance-sheet gives the actual position of our business on September 30th, if it were to be liquidated on that date.

While we continue to trade the appreciation or depreciation, owing to variations in the rate of exchange, of our capital employed abroad, is an unrealised figure on paper only, and does not affect our trading profit any more than the annual fluctuations in the estimated value of our premises would if we were to go to the trouble of revaluing them each year, if that were possible. In any case, of course, it is much more than covered by our reserves and carry forward.

Finally, the Chairman passed in review, by way of commentary, the main conditions, financial and commercial, of the various South American Republics served by the bank, and, in conclusion, moved the adoption of the report and accounts.

Mr Herman B. Sim seconded the resolution, which was carried unanimously.

The Chairman: My next duty, always a pleasant one, is to propose a hearty vote of thanks to the managers and staff for their loyal work through the year and for their continued efforts in your service. I should like to commence by congratulating Mr Simmons on the acknowledgment on the part of the board of the zeal and ability which he has displayed in the interests of the bank in appointing him general manager. The work with which he has had to deal has been intricate, diversified, and difficult. In many cases, especially in regard to the arrangements attending our fusion, it has been unusual, and in all his duties he has brought a cheerfulness, ability, and energy to his task which have contributed largely to the success with which he has handled it. It is always a little invidious to refer to individuals when all, I am sure, have done their best, and I hope other managers and officials will take to themselves personally these remarks and our appreciation of their untiring and loyal efforts to further the interests of the bank.

The resolution was carried unanimously, and a cordial vote of thanks to the chairman and directors terminated the proceedings.

CHINESE ENGINEERING AND MINING COMPANY, LIMITED.

SUCCESSFUL RESULTS—INCREASED DIVIDEND.

REMARKABLE RECOVERY IN COAL SALES.

INCREASED TONNAGE IN SIGHT.

The eleventh annual ordinary general meeting of the Chinese Engineering and Mining Company, Limited, was held, on the 10th instant, at Winchester House, Old Broad street, London, Mr. W. F. Turner (the chairman) presiding.

The secretary (Mr Alfred W. Berry) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—You will remember that on the occasion of our last annual general meeting, December 11, 1922, the position in regard to the working of the current year ending June 30, 1923, was not altogether satisfactory. Owing to exceptional circumstances, the sales of coal by the Kailan Mining Administration had fallen considerably below those of the same period for the preceding year, and the outlook for the moment was uncertain.

INCREASED DIVIDEND.

A remarkable recovery took place, however, in the last five months of the year, and the result is that we have the satisfaction of being able to recommend the declaration of a balance dividend of 8½ per cent., making 16 per cent. for the year, as against a dividend of 13½ per cent. for the preceding year.

The net profit of the Kailan Mining Administration, after providing for interest on the 6 per cent. Kailan bonds, redemption of bonds for the year, reserve for depreciation, and the proportion to which the Chihli Government is entitled, was \$6,109,768.

Our share of the profit amounts to \$3,313,180, against \$2,528,683 in the preceding year. The credit to our profit and loss account, including interest in China, and after making certain adjustments, is £422,101, the average rate of exchange for our remittances for the year being about 25 3/4d per dollar. Interest in Europe amounts to £5,044, against £25,734 in the preceding year, the reduction being caused by the fact that the funds in hand were considerably less, and the rates of interest obtainable for money on deposit having continued very low. The agency fee and other receipts amount to £6,145. The total to the credit of the profit and loss account is therefore £433,291. The expenses in Europe amount to £23,380, an increase of about £3,000, which is due entirely to the cost of new talons and coupons for the share warrants to bearer. The debit on the exchange account shows a reduction of about £7,000. The net balance of profit carried down is £397,467, against £354,686 for the preceding year.

ALLOCATIONS.

The profit and loss account on pages 10 and 11 shows the disposal of the balance at June 30, 1922, in accordance with the resolutions of the last general meeting. The final balance brought forward from that year was £5,945, which makes a total credit to the account at June 30, 1923, of £403,412. Of this, income-tax absorbs £140,113, and corporation profits tax is estimated at £24,100; the interim dividend of 7½ per cent., free of tax, paid on May 30th last, amounted to £105,000, which leaves an available balance carried to the balance-sheet of £134,199. The further remuneration to which the directors are entitled amounts to £4,662. The balance dividend of 8½ per cent., free of tax, which we propose to declare to-day, amounts to £119,000; this will leave a balance to be carried forward to the current year of £10,537.

BALANCE-SHEET ITEMS.

As regards the balance-sheet, there is only one feature of interest. The creditors, £90,662, consisting mainly of income-tax, unpaid dividends and debenture interest, show a reduction of about £5,000 compared with the preceding year. The reserve for corporation profits tax, £45,414, is the provision for two years to June 30th last. The reserve account for redemption of debentures has been increased by the annual drawing of £24,000, making a total of £252,000. On the other side of the balance-sheet the cash stands at £389,000. The debtors consist chiefly of the Kailan Mining Administration current account, including the balance of our share profits to June 30th last. The Kailan working capital account has been increased from £96,801 in the previous balance-sheet to £283,620. This is due to the fact that in order to provide the additional permanent capital required by the Kailan Mining Administration it was arranged that the Lanchow Mining Company, Limited, and ourselves should each provide a sum of \$1,650,000 by transfer of that amount from the credit of the current and loan accounts of the two companies with the Administration. Our Kailan loan account is consequently reduced from £152,893 last

year to £50,143. The other items of the balance-sheet do not require any comment.

INCREASED SALES OF COAL.

The fifth paragraph of the report describes the course of the business of the Kailan Mining Administration during the past year. At last year's meeting we described at some length the after-effects on the year's business, so far as it had gone, of the political troubles which had occurred in the spring of last year, and we also gave you particulars of the strike which had occurred at the Kaiping mines in the month of November; so I need not go into further detail. The consequence of these adverse influences was that at the date of the meeting there had been a decrease in the sales of 517,000 tons compared with the same period of the preceding year. This deficiency continued to increase to the end of the first week in January last, when it amounted to 568,000 tons. From that time it began to diminish; by the middle of June it had disappeared, and the year ended with an increase in the sales of 176,897 tons compared with the preceding year 1921-1922. I should point out, in passing, that the figures of the preceding year include the two months May and June, 1922, when the sales were quite abnormally low.

IMPROVED RAIL FACILITIES.

We made it quite clear at the meeting last year that the serious, though temporary, falling off in the sales of the Kailan Mining Administration was due to special causes, and we concluded by saying that all that was required was an adequate supply of rolling stock on the part of the railway to enable us to keep pace with the increasing demand for our coal and to ensure the future prosperity of the enterprise, in which our confidence was unabated.

Early in the year an opportunity arose for the Kailan Mining Administration to purchase 100 coal wagons which were in China. This was done, and the wagons were sold to the Pekin-Mukden Railway under a hire-purchase agreement satisfactory to both parties. These wagons only came into service in the last two months of the working year, but they were used exclusively for the coal traffic from the mines to the port of Chinwangtao, and thus rendered invaluable service. Another factor which contributed still more powerfully to the increase of sales during the second half of the year has been the assistance rendered by some of the staff of the Kailan Mining Administration in rearranging the handling of the coal traffic on the Chinese Government railways. The benefit of both these factors will be felt over the whole period of the current year's working.

Another important factor in considering the future of the business is the doubling of the railway from the mines to the Port of Chinwangtao. It was expected that this would have been completed and in operation by the end of this year. The track is finished, but we are informed that the signalling service will not be ready before next spring. The traffic is, therefore, still being carried on the single line, but it is hoped that by close co-operation with the railway it will be possible to move the whole of the output from the mines.

COAL IN SIGHT.

The coal in sight at June 30, 1923, amounted to 26,505,000 tons—that is, nearly 2,000,000 tons more than at the same date in the preceding year. Nearly 4,000,000 tons of coal were extracted during the year; therefore, as the chief engineer's report states:—"Our preparatory work during the financial year just finished has brought to sight nearly 6,000,000 tons of coal." It is interesting on looking back to find that at June 30, 1917, the coal in sight amounted to 15,400,000 tons, and that the figure has risen year by year in varying degrees to the one before mentioned—an increase of about 70 per cent.

THE CURRENT YEAR.

As regards the current financial year to June 30, 1924, the sales for the 22 weeks to December 1st show an increase of 520,000 tons over the same period of last year, and, given a continuance of settled conditions, the result of the year's operations should be a very satisfactory one. I do not wish to enlarge upon it, because I think the figures quoted speak sufficiently for themselves.

TRIBUTE TO MAJOR NATHAN.

There are one or two other matters to be mentioned. This year, 1923-24, will be remarkable in the history of the Kailan Mining Administration for the retirement of Major Nathan, which took

place on November 3rd last, after 20 years' service, first with the Chinese Engineering and Mining Company, Limited, the predecessor of this present company, and since 1912 with the Kailan Mining Administration, which, as you know, combines the interests of this company with those of the Lanchow Mining Company, Limited, of Tientsin. Perhaps the best way to appraise the services of Major Nathan will be by giving you a few figures. Major Nathan arrived in China in December, 1903, and took charge on January 6, 1904. The sales for the year ended February 28, 1905, amounted to 843,000 tons; for the year ended June 30, 1912, they amounted to 1,317,000 tons. That year witnessed the formation of the Kailan Mining Administration for the purpose of amalgamating the interests of the old Chinese Engineering and Mining Company and the Lanchow Mining Company of Tientsin. This was done by means of the agreement dated June 1, 1912, mentioned in the second paragraph of the directors' report which is before you to-day. That arrangement, which, as you know, had the formal approval of the British Government and of the Government of China, was due mainly to the initiative, the tact, and the conciliatory spirit exhibited by Major Nathan. Following upon that agreement, the Chinese Engineering and Mining Company, Limited, went into liquidation, and the present company was registered on June 27, 1912. Major Nathan became general manager of the newly formed Kailan Mining Administration. In the first year of its operations the sales amounted to 1,728,000 tons. In the year before us, as you have already heard, they were nearly 3,750,000 tons, in spite of some adverse circumstances, and for the current year I think we may expect a total of about 4,500,000 tons.

HIGHLY EFFICIENT ORGANISATION.

The organisation of the business of the Kailan Mining Administration has been brought to a state of the highest efficiency, and the organisation of the mines will compare with the best in Europe. The scheme of amalgamation of the interests of the two companies has worked with perfect smoothness, Major Nathan having won and retained the confidence of the board of the Lanchow Mining Company to the fullest degree. Indeed, I should doubt if it were possible for anyone to have been more uniformly successful in his dealings with the business community of China than Major Nathan has been during the 20 years of his residence there. It is, I think, appropriate to quote here from the conclusion of Major Nathan's annual report. He says:—

"The new financial year has started well, and given anything like settled conditions throughout the Far East I anticipate the year's trading will be an extremely profitable one. The prestige of the Administration stands high. The quality of its products is known and appreciated throughout the Far East, and I venture to predict that when the long-delayed era of prosperity dawns in this part of the world the Administration will be found well equipped and able to reap the full benefits."

That paragraph might almost be taken as expressing, in the most succinct form, the achievement of Major Nathan at the close of his long career in China.

NEW GENERAL MANAGER.

I have only to add that Major Nathan's successor as general manager of the Kailan Mining Administration is Mr. Patrick Charles Young, C.B.E. He is a member of the Institute of Civil Engineers, who has had a successful career in India and served with great distinction in France during the war. Mr Young, moreover, has had the great advantage of having served under Major Nathan for four years past as his chief assistant, and during that time he has shown himself to be possessed of the abilities and qualities which are necessary to the position he now holds.

As regards the current year, I may mention that Japan is one of the large customers for Kaiping coal, and our business there was to some extent dislocated for the time being by the effects of the terrible earthquake which occurred in September last, but there seems every reason to expect an early recovery. This company has subscribed 500 guineas to the Lord Mayor's Fund for the relief of the sufferers in Japan.

The only other item I have to mention is that since the date of these accounts we have recovered a net sum of about £100,000 in respect of excess profits duty. This will appear in our accounts for the current year, but, of course, it relates to the profits of the years from 1914 to 1920.

I move: "That the directors' report and accounts to June 30, 1923, be and they are hereby received and adopted, and that a final dividend be declared of 8½ per cent., free of income-tax, making 16 per cent. for the year, free of income-tax, payable December 11, 1923."

Colonel H. A. Micklem, C.B., C.M.G., D.S.O., seconded the resolution, which was carried unanimously.

Mr Edmund Davis proposed the re-election of the retiring directors—namely, Mr Emile Franquai, the Rt. Hon. Lord Southborough, G.C.B., and Mr W. F. Turner.

This resolution was also seconded by Colonel Micklem, and unanimously adopted.

On the proposition of Mr Fidge, seconded by Mr Dixon, Messrs Annan, Dexter, and Co. were reappointed auditors.

The proceedings then terminated.

SUNGEI KARI (SUMATRA) RUBBER ESTATE, LIMITED. DUTCH TAXATION CRITICISMS.

The fourteenth annual general meeting of the shareholders of the Sungei Kari (Sumatra) Rubber Estate, Limited, was held, on the 13th instant, at the registered offices, 7 Martin's lane, Cannon street, London, Mr W. Arthur Addinsell (the chairman) presiding.

Mr J. Lewis, on behalf of the secretaries (Messrs Bright and Galbraith, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: It is a pleasure to your directors to find themselves in a position to recommend the payment of a dividend of 10 per cent. for the past year.

You will notice in the profit and loss account a sum of £1,770 for depreciation of mature areas. The Nederland Indies Government have, I think, done a wise thing in admitting the potentialities of allowing depreciation of a wasting asset. Indeed, we can only wish that the authorities at Somerset House will follow such an excellent precedent.

In the same account you will find an item of £1,222 10s, which has been claimed as an additional assessment for war profits tax in connection with the years 1915 and 1916. We had originally paid approximately £1,000 on this account, leaving any further sum in abeyance upon the result of an appeal which was lodged against the assessment. After a lengthy delay the appeal has been decided against the company. We propose, however, to take the matter to a still higher authority. One of the points of our appeal is to be allowed to include, as revenue expenditure, the cost of landing and warehousing our rubber in London. The Dutch authorities have hitherto rejected this, presumably on the grounds that as the produce can be sold to a ready market locally it is therefore unnecessary for the producer to send it to a foreign market.

I feel constrained to comment on what seems to me to be a selfish attitude—indeed, it would appear to be an attempt to extinguish the British rubber producer as a competitor.

As regards the future for rubber, it is very difficult to forecast the probable turn of events, but so far as this company is concerned, we have an area under rubber well equipped, efficiently managed, and in a high state of cultivation. If there is no serious or sustained set-back in the market price, the company should at least maintain the current dividend. I contend, however, that an economical minimum price, both from the point of view of the consumer and producer, is 16d per lb, and it is to be hoped that the state of the world's trade and the restriction scheme will in due time maintain the price at that level, thus releasing larger quantities from the restricted areas.

The report and accounts were unanimously adopted.

THE SOUTH-WEST AFRICA COMPANY, LIMITED. COMPANY'S PROSPECTING POLICY JUSTIFIED.

The annual general meeting of this company was held, on the 12th instant, at Winchester House, Old Broad street, London.

The secretary (Mr C. Launspach) having read the notice convening the meeting and the report of the auditors,

The Chairman (Mr Edmund Davis), in moving the adoption of the report and accounts, said that at the last meeting the directors referred to the necessity of prospecting, which they considered was warranted by the mineralisation of the territory covered by the company's Demaraland Concessions, and they had continued their expenditure for this purpose. The greater the outlay they had made the more they had become satisfied that this policy was the right one, and the results of the year's operations were satisfactory evidence of this.

On a previous occasion he had referred to the extension obtained of the company's exclusive right to search for and win minerals in the 20,000 square miles which they had always controlled. This was an extension for two years, which expired on the 17th of last month. The Government, realising that the prospecting was in good hands, extend their exclusive right for a further two years—till November 17, 1925. The board had no doubt that the Government rightly considered that the company would leave nothing undone to prove the existence of payable mineral deposits in their area during the extension of their rights. For this purpose, owing to the nature of the work, it might be necessary later on to apply for a still further extension, and the directors trusted that their operations would be of such a nature as to satisfy the authorities that the

exploring of the large portion of the territory covered by their concession could not be in better hands.

The directors did not like to make forecasts as to future profits, but they looked to satisfactory results from the company's operations during the present financial year. These should be reflected in the next profit and loss account.

COMPANY'S INVESTMENTS.

The company's British, Colonial, and foreign (other than German and Hungarian) investments, which stood at June 30th last at £473,762, were at the previous day's date worth at middle market prices £485,213. The value of the German and Hungarian investments had been reduced by a small amount owing to realisations. These realisations were necessary in order to make sure that the Inland Revenue authorities would recognise for income-tax purposes the loss which had been made on them. It appeared to him strange that it should be necessary for the company gradually to dispose of these investments for practically nothing, and actually to realise a loss before it was allowed to set it against profits for income-tax purposes. The State, through such securities being sacrificed, would not at any time have an opportunity of obtaining the benefit of any improvement in values which might take place. In their own particular case the sale of investments costing £42,000 for £5 appeared to be a ridiculous transaction, but the board had been practically forced to carry it through in order to save the company a large amount of income-tax by showing a permanent loss; whereas had the securities been retained and depreciation allowed as a loss for income-tax purposes, the loss might have eventually proved to have only been a temporary one.

QUESTION OF PROFITS FROM FARMS AND TOWN LOTS.

The position of the company regarding profits made on the sale of farms and town lots was still the subject of legal proceedings between the company and the Inland Revenue. It was a question as to whether, in computing for the purposes of income-tax, the profits arising from the trade, adventure, or concern in the nature of trade exercised by the company profits derived from sales of land ought or ought not to be taken into account. When their case was originally heard the Commissioners decided that they were bound by the decision of the Court of Appeal in the case of the Hudson's Bay Company to hold that their profits from the sale of land were not assessable to income-tax as profits or gains derived by it by carrying on their trade or business. Judgment of the Court of

Appeal was given in the Hudson's Bay case in 1909, when it was held that the profits derived from the sale of land by the Hudson's Bay Company could not be regarded as profits or gains derived from carrying on a trade or business, and that they were not carrying on the trade of selling land, but were doing no more than a private landowner did who was minded to sell, from time to time, as opportunity offered, portions of his property; and that therefore such profits were not liable to income-tax. The directors felt confident as to the result of their case, and trusted that the Inland Revenue authorities would leave nothing undone to secure that the matter be dealt with at an early date.

Sir Henry Birchenough, Bart., K.C.M.G., seconded the resolution.

The Chairman having replied to questions, the retiring directors, Mr Edmund Davis, Sir Henry Birchenough, Bart., K.C.M.G., and the Rt. Hon. E. S. Montague, were re-elected. The auditors, Messrs Cooper Brothers and Co., were reappointed, and the proceedings terminated with a vote of thanks to the chairman and directors.

AFRICAN AND EUROPEAN INVESTMENT COMPANY, LIMITED.

CHAIRMAN ON COMPANY'S VALUABLE SHARE INTERESTS.

The nineteenth ordinary general meeting of the African and European Investment Company, Limited, was held, on the 11th instant, at the Cannon street Hotel, London.

Mr C. F. Rowsell, who presided, said that as that was the first meeting at which the directors presented accounts which reflected the very important additions made to their interests by the agreement entered into with Messrs Lewis and Marks, Limited, he proposed to review somewhat fully the position of the company. It would be seen that they received by way of dividends £41,580, and for rentals and farm revenue £39,915, a total of about £81,000, which met the interest on their debentures and loans amounting to £79,891. He had been very carefully through the position of the earnings which might be anticipated during the current year, and he was glad to say that they could look forward with assurance to a very substantial increase in the revenue from these sources, so that he was quite confident that the profit and loss account next year would show a substantial margin, after providing for all outgoings. At the credit of the profit and loss account they had £119,560, and they had used that to meet the loss of £12,652 for

the past year, £7,886 expenses of debenture issue and increase of capital, and £66,067 had had to be applied to writing off to a figure—which was now a very small one—their interest in the East Rand Extension Company, which went into liquidation during the year. He wished to make it quite clear that, although a debenture issue had been created of £1,500,000, the only debentures which had actually been issued were £596,000. The total issue of £1,500,000, however, was secured by substantial and valuable assets. Taking the present value of their assets, they could safely add from £600,000 to £700,000 to the book figures, so that the total assets would work out at about £4,000,000. This would cover the company's liabilities by more than £2 for every £1 of liability.

IMPORTANCE OF INVESTMENT IN VAREENIGING ESTATES, LIMITED.

Dealing with the company's share interests, the Chairman stated that there was one company in which they held to day no less than 590,000 shares, namely, the Vereeniging Estates, Limited. He thought the company was to be congratulated upon that holding, because he knew of no company in South Africa which had more varied or more valuable interests. Its properties were situated on both sides of the Vaal River, partly in the Transvaal and partly in the Orange Free State, and had an area of 127,000 acres. An enormous sum had been spent during the past twenty years or so in the development of this property, and there were now established many industries upon the company's land. It was a great coal producing company, not only from its own estates, but from its control of two collieries, one in the Witbank, and one in the East Rand district. The output of coal now controlled by the company was well over 1½ million tons per annum, and very substantial profits were being earned. The Vereeniging Company was fortunate in having very close relations with the Victoria Falls and Transvaal Power Company, whose greatest station was erected upon their land. Further, it was upon its land that some of the most important industries in South Africa were being developed—he particularly referred to the steel industry. The Union Steel Corporation of South Africa—in which the African and European Investment Company had a very substantial interest—had its works at Vereeniging, and had overcome all the early difficulties of a newly-established industry.

DEVELOPMENT OF SOUTH AFRICAN IRON AND STEEL INDUSTRY.

In association with some of the leading iron and steel people of this country, negotiations were well on the way for the establishment of a great industry in South Africa for the development of the iron and steel industry in all its ramifications. When those negotiations resulted, as he hoped they would do very shortly, in the formation of a company to absorb the Union Steel Corporation of South Africa and develop it on the lines he had indicated, a further great step forward would be made in the productive value of the Vereeniging Estates. In his opinion, the present market value of the Vereeniging Estates did not by any means represent their intrinsic value. In fact, he was confident that it would be quite impossible to acquire any South African assets of anything like equal value to those owned by that company for three times the price at which the shares now stood in the market. There was every indication of very much higher dividends being paid by the Vereeniging Estates Company, and he saw nothing to prevent this increase continuing until profits were earned which would justify the valuation of these shares at the price at which they stood some years ago—namely, £3. Another very important holding which is not quoted on the market here is the holding in the Delagoa Bay Land Syndicate, Limited. In the Milnerton Estates, Limited, they had nearly a half interest. This company owns an estate of about 1,000 acres on the eastern shore of Table Bay, about 2½ miles north of, and in direct railway communication with, Cape Town. The estate has been developed for residential purposes, and is in every way the most attractive suburb of Cape Town. The present value of the land is indicated by the fact that although its whole estate of about 1,000 acres stands in the books at a cost of £30 per acre, an area of 19 acres has recently been sold at the price of £135 per plot, which represents about £800 per acre.

The report and accounts were unanimously adopted.

JOHN I. THORNYCROFT AND CO., LIMITED.

RESULTS OF DIFFICULT YEAR'S TRADE.

The twenty-second annual general meeting of John I. Thornycroft and Co., Limited, was held, on the 12th instant, at Winchester House, Old Broad street, London.

Sir John E. Thornycroft, K.B.E., M.Inst.N.A. (managing director), presided, and said that the profit for the year amounted to £22,253, and they were proposing to pay a dividend of 5 per cent. on the preferred ordinary shares. For the past two years there had been a most unprecedented slump in both shipbuilding and commercial motor vehicles. The accounts of their competitors showed, with few excep-

tions, a record of severe losses. They counted themselves very fortunate in having been able to show any profit at all under the conditions. As to the future, although there were indications of slight improvement in business, they did not see such a position developing as would lead them to anticipate very substantial profits in the immediate future. For that reason they considered it necessary to keep their resources intact as far as possible. A large proportion of their sales had been made abroad, and in the development of their present policy their investment item might have to be increased, as it seemed to them that no permanent business could be looked for unless they could provide facilities for the holding of stocks and giving of service both at home and in the overseas markets.

As regarded the shipbuilding side, in common with other firms their yards had been practically empty during the early part of the year. In the spring they had secured a number of orders for vessels of special types, but the boilermakers' strike had made progress impossible. They had at present eight vessels in hand, but it must be remembered that, at a time of such severe depression, the competition to secure orders was so great that to get work it was necessary to quote without any proper margin of profit or even charges.

With regard to the motor vehicle side, sales, especially in the home market, had been adversely affected by competition from countries with depreciated currencies and the sales of surplus War Department vehicles. A duty on imported vehicles would undoubtedly greatly benefit their industry, but American manufacturers would continue to be very severe competitors both at home and in the foreign markets. They believed they had secured a fair share of the orders placed, and sales showed an increase over those for the previous year.

The report was unanimously adopted.

VAN RYN GOLD MINES ESTATE, LIMITED.

MATERIAL REDUCTION IN WORKING COSTS.

The twenty-eighth ordinary general meeting of the Van Ryn Gold Mines Estate, Limited, was held, on the 12th instant, at Winchester House, Old Broad street, London, Mr L. B. Burns (the chairman) presiding.

The Chairman, in the course of his address, said: A year ago both Mr Leopold Albu and I commented on the improvement which had already taken place, and we expressed our belief that still further improvements were in store. These anticipations have been justified by results.

The balance carried forward from appropriation account, £46,995, is nearly £10,000 larger than last year, notwithstanding the fact that dividends of 15 per cent. were distributed, as compared with 10 per cent. for the preceding year. The profit and loss account shows a gross mining profit of £102,788. A considerably larger figure than usual is shown under the heading of additional revenue, as the company's 5 per cent. War Loan was realised during the year at the satisfactory profit of £10,194 and reinvested in the equivalent amount of tax-free 4 per cent. War Loan—namely, £60,000. Taxes show a rather large increase to £33,392, the inevitable result of larger profits. The resultant net profit of £89,577 has been appropriated by the payment of dividends to the amount of £75,000, £5,224 for depreciation of permanent works, &c., and the large balance, referred to previously, carried to the balance-sheet.

The outstanding feature of the mining operations is the material reduction in working costs at the mine. In the past three years

the figures were:—Year ended June 30, 1921, 25s 9d per ton; 1921-22, 26s 2d; 1922-23, 19s 10d.

Recently, in the course of development in the No. 3 section a reef was opened up which for want of a better name was described as the "intermediate reef," but which your technical adviser is now inclined to think can be correlated with the South Reef of the Central Rand. Initial development work in the No. 7 level showed highly satisfactory values—8.7 dwts over the first 100 ft driven—and the management were naturally encouraged to continue the drive energetically. The latest information is that 835 ft have been driven and sampled in the No. 7 level, showing an average value over that distance (and on the satisfactory width of 42 ins) of about the same as that of the developed payable ore reserves. A surface trench in the No. 3 mine has also disclosed the outcrop of this reef with higher values over the same width, and cross-cutting and drilling have been started to test its presence in other parts of the mine.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London. W.C.2.

GOVERNMENT RETURNS, &c.

PUBLIC INCOME AND EXPENDITURE.

RECEIPTS INTO AND ISSUES OUT OF THE EXCHEQUER.

	Estimate for the Year 1923-24. (See Note.)	Total Receipts into the Exchequer from April 1, 1923, to Dec. 8, 1923.	Receipts. Week Ended Dec. 8, 1923.	Week Ended Dec. 9, 1923.

SIDNEY TURNER, Accountant-General.

India Office, December 11, 1923.

Messrs Samuel Montagu and Co. write, on December 12th, as follows:—

GOLD.

Fairly substantial supplies of gold came on offer this week, the bulk of which will be absorbed by the United States of America, as Indian and Continental requirements were only moderate. Gold valued at \$2,700,000 has arrived in New York from London. We hear from Bombay that the bullion market there was very excited over the announcement of the Government sales of gold, and that there was strong opposition on the part of the Indian Chamber and the Bullion Merchants' Associations to the conversion of gold to sterling securities, notwithstanding the cogent reasons which actuate the action of the Government.

SILVER.

Again the market has remained fairly steady. The clearance of supplies involved by the large shipment last week to the East naturally rendered it rather difficult to cover "bear" transactions falling due, even though orders from India have not been much in evidence. Yesterday's sharp rise was an indication of a market depleted to a large extent of available stocks. Silver shipments are still being made on a large scale from San Francisco, whence consignments have left for China, and are still on the way—amounting to 7,500,000 ozs—in addition to the very heavy shipments which have been despatched to Shanghai during the last month or so. In present conditions any marked improvement in the value of the pound sterling is bound to be reflected in a lower London price for silver.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Nov. 22 1923.	Nov. 30, 1923.	Dec. 7, 1923.

1085

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

CARDAMOMS continue in demand, and market very firm owing to dearth of supplies. Indian green sold, 5s 3d on the spot, and Bombay seeds, 6s 3d lb.

CITRONELLA OIL—Java, December, buyers, 4s 6d; and sellers, 4s 7d; January-March, done and buyers, 4s 4d lb. c.f. and i. terms.

EGG PRODUCTS steady at previous level of prices, but trade quiet apart from a moderate demand for hen albumen.

FRUIT (Dried)—With generally sustained inquiries, there was a good amount of business in progress during the week, and prices disclosed steadiness. Of currants, Pyrgos, 4-cases, quoted 40s; bags, 39s; Amalia, 44s; Patras, 50s; Vostizza, 65s to 69s. Sultanias: Smyrna, quoted 51s to 54s; good, 62s to 66s; fine, 80s to 85s; finest, 95s to 100s. Valencia raisins, 4-boxes, quoted, 62s; quarters, 75s to 105s. Genuine natural figs in bags quoted, 34s to 30s; layers, in boxes, 95s to 105s; pulled, 125s to 140s. Evaporated fruits formed a steady market. Californian choice apricots quoted 74s; fancy, 99s to 100s per cwt.

CANNED GOODS—General steadiness predominated, and a moderate business was in progress. Of sardines, Portuguese quarters quoted 2s 9d to 3s 3d; ditto 12 oz, 6s to 7s; 18 oz, 9s 6d to 11s per dozen tins. Lobster steady, but rather quiet of sale. Fancy halves quoted 145s to 150s. Salmon, in small supply, meets a good demand at full rates. 1 lb flat reds, labelled, 54s 6d; ditto tall, 42s 6d; 1 lb flat pink, 2s; ditto tall, 26s; cases of 96½ lbs, 29s to 30s per case. Canned fruits received steady support. Singapore pines, fair quality, spot, quoted 5s 7½d. Californian apricots, 7s 6d to 11s; ditto peaches, 8s 6d to 11s; pears, 12s 6d to 11s. Tomatoes: Spanish threes quoted 6s 6d; Italian ditto, 6s 9d per dozen tins. Meats steady, but demand at the moment is quieter.

OILSEEDS—Linseed in fair demand, and prices firmer on adverse Argentine weather reports. Indian: Bold Bombay, December, sellers, £23 10s; small Bombay, ditto, £22 15s; Calcutta, afloat, £23 5s; November-December, sold, £22 10s to £22 15s. Plate afloat, £21 5s; December-January, £18; January-February, sold, £16 17s 6d to £17 7s 6d; April-May, £17 5s to £17 17s 6d. Rapeseed firmer. Toria, November-December, £19 5s; real bold Ferozepore, ditto, £19 5s; Jamba, £14 12s 6d. Cottonseed firmer for Egyptian, with a fair demand. Egyptian black, December, quoted, £13 7s 6d. Sakellariadis, £12 12s 6d Hull. Bombay, January-February, sold, £10 2s 6d; February-March, £10. Gingly seed firm. East African November-December, £25 5s. Chinese, December-January, £25 10s. Groundnuts steady. Coromandel, machine-dried, December-January, £24 10s; Chinese, decorticated, f.a.q., December-January, sold, £23; East African, afloat, £24 2s 6d, sellers. Soya beans steady. Manchurian, December-January, £12 5s. Castor-seed firmer. Bombay, December-January, £26; February-March, £24 per ton.

OILS—Linseed firmer, with a fair demand. Spot, net, naked 43s 6d; December, 42s 3d; January-April, 39s; May-August, 36s 1½d. Rape firmer. Crude, spot, 43s 6d; refined, 46s 6d. Castor-oil firm. First pressure, spot, quoted 60s; second pressure, 59s; and pharmaceutical, 65s per cwt. Hull, with London 2s cwt extra. Cotton quiet. Crude Egyptian, spot, 41s; Bombay, 40s; common edible, 46s; deodorised (in barrels), 49s 6d. China-wood steady. Hankow, spot (barrels), 91s 6d; December-January, 91s 6d. Coconut steady. Ceylon, spot, 48s; November-December, 47s; Ceylon, ditto, quoted 60s. Soya quiet. Oriental, barrels, November-December, 39s 6d. Cod steady. English, spot, 36s 9d. Groundnuts firmer. English, crushed, naked, spot, 52s; deodorised, barrels, 59s. Turpentine inactive. American, spot, 72s 6d; January-April, 73s 6d. Rosin quiet. American, grade B, 13s 3d; F, 13s 6d; G, 13s 6d; H to I, 13s 9d; WG, 15s 9d; WW, 16s 3d per cwt. French WW, 16s per cwt. Petroleum steady. American standard, white, spot, 11d; and water white, 1s per gallon.

METALS—Tin: Market opened quiet, and values eased slightly on lower Eastern advices. Subsequently, however, a much firmer tone prevailed on a good demand for distant positions and improved Eastern cables. Standard, cash, sold from £229 to £236 10s, and three months £229 10s to £238 12s 6d. Sales in the East were made from £233 15s to £234 15s. At Thursday's session, after a firmer opening, gave way somewhat, though on balance prices were 50s per ton dearer. Standard, cash, quoted at £239 15s to £240, and three months sold at £242 to £243 10s to £240 10s to £241 10s, while finally registered at £241. Rates moved in a downward direction on the following day, though some irregularity was noticeable with regard to three months. Cash sold at £236 5s, and three months £238 to £237 to £238 15s to £237 12s 6d. English ingots, £237 to £237 10s. Copper opened firm, with a good demand for all positions, but later movements were attended by slight irregularity, though dealings continued on a liberal scale. Standard, cash, fluctuated between £62 17s 6d and £62 7s 6d, and three months £63 10s and £63 2s 6d. The turn easier on Thursday, with moderate sales. Standard, cash, sold at £62 5s to £62 3s 9d to £62 5s, and three months £63 2s 6d to £62 18s 9d. The tendency was barely steady at Friday's market. Standard, cash, sold at £62 5s, and three months sold at £63 2s 6d to £62 17s 6d. Electros, £67 10s to £68. Best selected, £66 to £67 5s. Strong sheets, £95; and wire bars, £68 per ton. Lead firmer, with a good demand at £31 10s to £30 15s, as to position. Spelter steady at £32 8s 9d to £32 13s 9d, according to position. Antimony firm. English specials, quoted £44 10s to £45. Aluminium quiet. Home trade, £115; export, £120 per ton.

TALLOW—Messrs Colchesters and Woolner write on December 12th as follows:—The tallow market was firm during the week, and prices were 9d dearer to-day for full and inferior kinds, of which the

catalogues largely consisted. The few lots of good quality showed no advance. At auction to-day 1,145 casks tallow were offered, and 1,045 were sold. Quotations are:—Australian mutton: Fine, 48s 9d; good to fair, 46s 6d to 45s; dull to dark, 42s 9d to 37s 6d; hard, 45s. Australian beef: Fine, 45s; good to fair, 43s 6d to 41s; dull to dark, 38s 6d to 37s 3d; sweet, 45s 3d. Present shipment from Australasia: Good mixed, 42s 6d. Present shipment from South America, 42s 6d to 41s 6d. The market letter is dearer. Tallow, 1s; stuff, 1s. Town tallow, 38s 6d per cwt. Rough fat, per 8 lbs, 3d; melted stuff, 29s 6d per cwt. Quotations are:—Town, 38s, net cash, naked, ex works. Country: Frail casks, 38s; home melted, shipping casks, net, f.o.b., good coloured, 40s; fair to dull, 38s 6d to 37s 6d. Bone fat: White, none; pale, none; benzine, 35s; melted stuff, 35s, f.o.b.

Do mid to fine									

As the end of the year approaches there is a tendency for money to become cheaper for any period up to the end of the year, and dearer for any period extending into the New Year, because it is then rendered unavailable for balance-sheet purposes. During the week money to be repaid within the year has seldom commanded more than $1\frac{1}{2}$ per cent. But the rate for loans into January has hardened from 3 per cent. to $3\frac{1}{2}$ per cent. Treasury bills, too, have been more offered, and March dates have

changed hands at $3\frac{3}{8}$, with comparatively few buyers even at this figure. The three months' Bank bill rate remained at $3\frac{1}{2}$ per cent. until yesterday, when it hardened to $3\frac{3}{8}$ per cent., after the announcement of the unexpectedly high rate at which the Treasury bills were allotted.

	Dec. 21, 1923.	Dec. 14, 1923.	Dec. 7, 1923.	Nov. 30, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills)	$3\frac{3}{8}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	..

Owing to heavy seasonal withdrawals of currency, the Bank return showed a decline of £1,911,000 in the Reserve, notes to the amount of £1,913,700 having been taken out, while only £3,800 of coin and bullion had come in. On the other hand, the liabilities were lower, as the result of further repayments of the Ways and Means Advances necessitated by the December 1st dividends, Other deposits showing a loss of £2,174,300, against which Public deposits were higher by £3,777,400, and Government securities had been reduced by £3,190,000. Other securities rose by £1,725,600, a movement, however, which is not a reflection of any "market" borrowing, as commonly understood. The contraction of the liabilities was insufficient to offset the effect of the lower reserve, as far as the proportion was concerned, the ratio being 1.1 lower at 15.6 per cent. Currency notes outstanding increased by £7,137,900 to £295,817,200, which includes £1,429,900 for notes called in but not yet cancelled. The fiduciary issue is £244,937,200, or £35,246,600 below the maximum.

THE STOCK MARKETS.

A bout of selling in nearly all departments caused severe depression in prices in the stock markets in the early part of the week, and although a cessation of selling in the last two days produced a mild recovery, prices are substantially lower all round on balance. The gilt-edged market has suffered quite as much as any other, nor has the brighter outlook on the Continent so far affected foreign bonds. Nationalisation fears are said to be responsible for flatness in Home Rails, and Foreign have shared in the depression. A long list of declines is recorded in the industrial markets, the exceptions being very few and far between. Mining markets as a whole have been hesitating, and Kaffirs are lower.

THE COMMODITY MARKETS.

With the approach of the turn of the year business appears to be restricted to immediate requirements. There has been very little change in the position on the Cardiff coal market this week. The tone in the pig-iron market is quiet but firm, better prices being anticipated in the first quarter of the New Year. Tin opened easier, but a recovery took place; copper showed no marked change. Fluctuations in raw material have had the effect of producing a scarcity of orders in the cotton trade. Demand for wool continues to be well maintained, and competition has been general. Jute was slightly dearer. The rubber market hardened owing to advices from New York, but eventually it assumed a quieter aspect. Wheat was among steady commodities. Sugar quotations are unchanged; prices for coffee show a hardening tendency, while tea values were maintained. The hide market is firm, and the boot trade fairly well employed. Conditions in the vegetable oils and oilseed markets have been steady, but our Hull correspondent mentions that the prevalence of cattle disease has put a severe check on the demand for oil cakes.

FOREIGN EXCHANGE.

The foreign exchange market has again been quiet during the week, the principal feature being the weakness of the French franc, which fell from 82.25 on the 14th to 84.60 yesterday morning, after touching 84.90 at one time on the 20th. This new low record, in spite of the

better news regarding the Reparation problem, is due, among other causes, to some nervousness regarding the financial position in France, which an increase in the note issue of eight millions and the Government's decision to repay only 800,000,000 of its advances from the Bank of France, instead of the required two milliards, have magnified. A further fall would scarcely be unexpected. Brussels has moved in the same direction from 94.80 to 96.10. Forward quotations in Paris remain steady at 5 centimes per month above spot, while in Brussels they are narrower at 2 centimes per month above spot. The New York rate has shown a slightly sagging tendency, but this market is now so dominated by political considerations that the future is very obscure. The rate remained steady around 4.37½ until the 18th, but then gradually relapsed till it touched 4.36½ yesterday morning. Forward rates are unaltered at ½ cent per month above spot. The variations in the Italian rate have been negligible, and confined between 100½ and 101, but Amsterdam has shown a somewhat surprising reaction in our favour, moving from 11.45 last Friday to 11.46½ by the 19th, 11.48½ on the 20th, and 11.50½ on the 21st. The Swiss rate has shown little variation, and stands at 25.04 as against 25.08 a week ago. In the Scandinavian exchanges, the main feature has been the movement against us at the end of the week in Copenhagen and Stockholm. The former rate, after remaining at 24.52 till Monday, had moved to 24.45 by yesterday, while in Stockholm the quotation is now 16.57, as against 16.61 a week ago. Christiania, on the other hand, rose from 29.09 on the 14th to 29.25 on the 21st. Helsingfors has not varied much from last week's rate of 177. In Madrid the rate, after moving from 33.47 to 33.49 on Monday, reacted again to 33.35, while the Lisbon rate has fallen ½ to 2d on the formation of a new Cabinet. In Central Europe, the official rate in Berlin has remained steady at 18 billions, but the fresh issue of Treasury bills by the Government after a refusal by the Rentenbank to grant credits to the Government beyond the legal limit is not calculated to inspire confidence in the currency. Vienna has been steady round 311,000, but Warsaw has risen from 18 millions to 26 millions as a result of the new political crisis, and even at this rate sellers predominate. Prague fell ½ point at the end of the week and now stands at 149, while Bucharest is steady at 850. In the East the rupee, after a fall of 1-32d on Tuesday, now stands at 1s 5 3-32d, an improvement of ½d on the week. The yen at 2s 1½d is slightly weaker as compared with 2s 1¾d a week ago. The silver market has been steady, chiefly owing to purchases by the Indian bazaars. Hong Kong, after touching 2s 4d in the earlier part of the week, reverted to the earlier rate of 2s 3½d, while Shanghai showed a similar movement from 3s 4d on 15th to 3s 5d on 18th, and back to 3s 4d at the end of the week. In South America, Rio has recovered from its reaction to 4 31-32d last Friday, and now stands at 5 5-32d. Buenos Aires, after moving from 40½d to 39½d on Tuesday, recovered again to 40½d, while Monte Video has moved from 43d to 43½d. Valparaiso, after falling from 40.70 to 40.90 on Wednesday, has once more reacted, and is now given as 40.40, while in Lima the premium has moved from 8 per cent. to 6½ per cent. yesterday.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 15th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	5,855	From Revenue	12,677
Interest, &c., on Debt	16,207	Amount borrowed	14,459
Sinking Fund	4,777	Decrease in Exchequer balances	27,168
Sundries	19		
Local Taxation Account	310		
	27,168		

Revenue shows an improvement on the corresponding period last year amounting to £12,676,800, against £9,986,800. Customs reached £2,446,000, against £1,826,000, but Excise was lower at £2,218,000 as compared with £2,790,000. Estate, &c., duties produced £790,000, against £550,000. Property and Income-tax amounted to £1,704,000 and Super-tax £460,000, compared to a combined total of £2,369,000. Special Receipts were higher at £1,186,200, against £41,800, and interest on sundry loans yielded £1,762,800, against nil. The

week's operations increased the National Debt by £14,459,000, and caused the following changes:—

(000's omitted.)		(000's omitted.)	
Public Departments	+ 20,700	Bank of England Advances ..	— 10,500
Treasury Bills	+ 3,405	National Savings Certificates ..	— 100
Treasury Bonds	+ 1,134	Sundries	— 180
	+ 25,239		— 10,780

The floating debt was increased by £13,600,000 to £860,870,500.

FINANCIAL YEAR, 1923-24 (April 1 to December 15, 1923).

£		£

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of Montreal, Imperial Bank of Persia, National Bank of Scotland, Orient Steam Navigation, Anglo-Persian Oil, British Burmah Oil, Johannesburg Consolidated Investment, Sulphide Corporation, Amalgamated Cotton Mills Trust, Baldwins, Edison Swan Electric, Carreras, and Showell's Brewery. Sir Vincent Meredith at the Bank of Montreal meeting reviewed the conditions of trade and finance in Canada. At the Orient Steam Navigation meeting Sir Kenneth Anderson commented on the findings of the Imperial Shipping Committee's report. The Earl of Kintore at the Sulphide Corporation meeting described the serious effects of the fire at the Central Mine. Sir Charles Greenway at the meeting of the Anglo-Persian Oil Company announced further extensions of proved territory in Persia, and also refuted the rumours as to the company's losses.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a review of Argentina's balance of indebtedness and an analysis of Germany's present economic situation with reference to her Reparation-paying potentialities.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

We regret to announce the death, at the end of last week, after a long illness, of Mr Charles Duguid. Mr Duguid, who was in his 60th year, had a long career as a financial journalist, which he began as assistant editor of the *Daily Economist*, and ended in 1920 as City Editor of the *Daily Mail* and other papers controlled by the late Lord Northcliffe.

THE OPENING DOOR.

In millions of hearts the Christmas spirit will have an uphill fight this year. Unemployment, though substantially lessened and still declining, haunts hundreds of thousands of homes. Eyes cannot be shut to the spectre of misery and starvation which is stalking over large areas of Europe. Political confusion infects the minds of many with an exaggerated anxiety; and altogether 1923, despite its measure of progress and betterment, dies without bringing fulfilment of the high hopes with which it was ushered in. Yet those who seek, as all should try to seek at this season, for reasons for thankfulness and hope,

may legitimately claim, as a ground for their optimism, the present signs that the door to European salvation, so long barred by the folly of statesmen, is now ajar, and may soon yield to new-born efforts to throw it open wide. The hinges of the door may be rusty and stubborn, but at long last it really seems as if goodwill may oil them and that all the janitors will be pushing the same way.

Chief among the new elements of European hope is the narrowing of the gulf between the French and British attitudes towards the whole problem of German finance and reparations. The gulf may still be wide, but the twelve months' deadlock has been broken by the relentless march of circumstances which have led M. Poincaré to modify an intransigent policy and to allow world experts a latitude in surveying the wide field of these problems, which he denied them a short while ago. There are those, perhaps, who would add to the list of the signs of a change of heart in France the defeat which M. Poincaré suffered in the French Chamber on Thursday. To take that view, however, is a mistake. The defeat was on a matter of internal policy, and in the realm of purely domestic matters M. Poincaré's position has long been weak. It has, as all careful observers of French politics must admit, been the "strength" of his foreign policy which has kept him so firmly in the saddle. This defeat, it is true, symbolises the insecurity of his position in relation to domestic affairs, and, in view of the approach of the French elections, may quicken his desire to produce some solid achievement in foreign affairs, and lead him to adopt a less intransigent attitude. But this week's incident in the French Chamber is of more immediate interest to this country in so far as it teaches us a lesson applicable to our own political problem. M. Poincaré's Government, which still appears to interpret the will of France on vital foreign matters, was defeated on a minor, if important, aspect of domestic policy; and it did not resign. In Great Britain we face in the new House of Commons a position, which may for many years and in future Houses prove to be a normal position, in which any Government will have a majority against it, and will be liable to frequent defeat on matters that are not vital. In such circumstances we must obviously discard the old tradition that a Government when defeated on any substantial point should resign. In the present conditions subservience to that tradition would bring about an impossible position. In a House consisting of three powerful groups, the only basis on which the business of Government can be properly carried out is that resignation should only follow a vote of "no confidence," and that in defeats on specific points of legislation the Government of the day should bow to the expressed wishes of the House and amend their legislation accordingly.

To return to the European problem and the new attempts that are being made to approach solution, the first point to emphasise is that speed is the essence of the whole matter. The experts, if their opportunity is not to fade before their eyes, must buckle to their task at once, and work with an eye on the clock. Every day warnings accumulate of the urgency of the time factor. The German Government has already exhausted its Rentenmark credits, and on Thursday Dr Luther, the German Finance Minister, applied without success for an extension. The situation with which the Berlin Government is thus faced spells danger. The paper mark as the currency of business no longer functions; the Government must have the means of carrying on; and if the experts delay long, a grave depreciation of the Rentenmark may raise yet another immense obstacle in the path of setting German finances in order. No one would, therefore, underrate the formidable nature of the task which faces the experts. The belief that they will be able to "deliver the goods" is based on three main grounds. First, the wide terms of reference, to which we referred last week, which permit adequate and comprehensive handling of the main problems. Secondly, the growing eagerness for solution in all quarters. Thirdly, the personnel of the committee. So far, at any rate, as the representatives of this country are concerned, no better choice could have

been made. In Mr Montagu Norman, Mr McKenna, and Sir Josiah Stamp we are sending to Paris the strongest team that could be selected, and one which is entirely competent to grapple with the international problem in its broad aspects. Their choice will strengthen the hope and confidence of the City in the forthcoming inquiries.

Important as the work of the experts may be, it would, however, be a mistake to suppose that their committee will lift from the shoulders of statesmen the onus of vital and pressing decisions. To realise that one has only to consider the position regarding the agreement signed at the end of November between the Ruhr industrialists and the French. The main heads of that agreement were as follows:—

(1) The arrears of coal tax from January 1st to October 1st are to be paid to the extent of \$15,000,000.

(2) A tax of 10 per cent. is to be paid on every ton of coal sold.

(3) Eighteen per cent. of the net output of coal is to be delivered free to the Allies.

(4) Stocks of coal accumulated up to October 1st become the property of the Allies.

(5) The export licensing system is to remain in force. All stocks of iron and steel products are to be released only against payment of taxes due, and may be exported only in quantities equal to the average amount expected during 1922.

(6) By-products of coal—sulphate of ammonia, benzol, tar, and cresote—are to form the subject of a special agreement.

The practical objections to this agreement quickly became apparent, and in the last few days further evidence has accumulated as to the difficulties which the German signatories will have in carrying on under its terms. But the really important point about this agreement is the French claim that receipts under it should be devoted by the Reparation Commission in the first place to meet the expenses of the French and Belgian occupation of the Ruhr. This claim at once puts British policy to the test on a fundamental issue, for if we maintain that the occupation is *ultra vires* under the treaty, we cannot possibly admit that German payments can be used to cover the costs of occupation. Another outstanding question is that of the pending answer by France to the German note inquiring exactly what is the status of the Ruhr. Here there seems to be some hope that France may incline towards a recognition of an independent Ruhr State within the Reich. An influence tending in that direction is, perhaps, being provided by the fear that if separation of the Ruhr remains the French policy, the relief of heavy and prolonged unemployment in that great industrial area would fall on the French Exchequer. Such a burden could hardly be met otherwise than by inflation. In fact, one of the most difficult problems of the moment is, who is to bear the burden of Ruhr unemployment. Of other pressing questions there is no lack, such, for instance, as the German claim for priority for foodstuff credits over reparation obligations. The mere mention of these problems is a reminder that it would be folly to swing over from the black pessimism of the past few months to the facile belief that the European problem is now moving on a smooth path to a quick and easy solution. Nevertheless, as we have said, the door which has long been closed is now ajar. Surely no statesman or Government can again face the world-responsibility of closing it again. On the contrary, we believe a combination of circumstances exists which will at least open it wide enough to give practical economic measures the opportunity of creeping through.

THE OFFER TO THE DOMINIONS.

THE attempt is being made in some quarters, as we foresaw would happen, to argue that whatever the opinion or wishes of the electorate of this country may be, Great Britain is bound by the proposals which were brought forward by the British representatives at the Imperial Conference, and that any Government which may come into power must for the honour of this country impose a duty in the coming Budget upon tinned salmon and tinned and dried fruits, and denounce our Treaty with Greece on the subject of currants. Disappointment has undoubtedly been felt in many circles of Empire opinion at the result of the election, and both General Smuts and Mr Massey have voiced the opinion that if proposals brought forward at Empire Conferences are to be subject to a popular vote the inclination of the Dominions to take part in such dis-

cussions in the future will be diminished. A truer understanding of the position is reflected in the opinions which come to us from Canada, where it is honestly recognised that Canada will not allow her fiscal policy to be bound by decisions at an Empire Conference, and that the Dominions cannot expect British policy to be governed in the same way. Perhaps also Canadian publicists remember that not very long ago a reciprocity Treaty negotiated between Canada and the United States was overthrown by their electorate after the terms had been agreed upon by their representatives and President Taft. We might add that none of the representatives at the Conference has made any commitments which bound any one of the Dominions for a single week. Any one of them is free to alter their tariffs or the amount of their preferences tomorrow, and it is sheer nonsense for the *Times* to pretend that the proposals brought forward by Mr Baldwin in October have something like the sanctity of an international treaty. Indeed, as we may remind our readers, we called special attention at the time to Mr Arthur Henderson's clear statement that the Labour party did not regard itself as in any way bound by promises of preferential and differential duties of any kind that the Government might make, even if it succeeded in passing them through the House of Commons. Our own comment on the situation (*Economist*, October 20th) was more prophetic than we knew:—

If the Dominion Prime Ministers return to their respective homes with the impression that they take with them a promise of a preferential policy in Great Britain carrying that degree of sanctity which is associated with international agreements, there will most certainly be disappointment and trouble ahead. In this connection it is only necessary to remark first that whenever the policy of either Protection or Imperial Preference has been submitted to the British Electorate it has been overwhelmingly defeated at the polls; secondly, that the present Government secured its majority largely as a consequence of Mr Bonar Law's pledge that he would not modify our fiscal system (the almost clean sweep of Lancashire by the Conservative party was mainly due to the existence of this pledge); and thirdly, that a substantial majority of votes cast in the country last November were obtained by the Labour and the two Liberal parties, all of which stood on a quite definite Free Trade platform.

In the interests alike of Britain's economic progress and of political policy, as well as of good relations within the Empire, we have no doubt that the Liberal and Labour parties, when either or both of them come into power, will do so with the avowed intention of making a clean sweep of all protective and preferential duties.

This situation was well known and understood by the Colonial Premiers, and we do not think that any one of them would ask this country to take a step which by a majority of nearly two to one the electorate has declared to be contrary to its interests, on the ground that an offer made by a Government which was promptly defeated at the polls is binding on the country as a whole. After all, even the *Times* would hardly argue that Great Britain is committed to the policy of imposing these duties in perpetuity, but it is not yet told us for how many years Mr Baldwin's proposals of October are binding on Great Britain. Certainly it cannot be argued that they must be maintained as long as the Dominions care to retain their preferences, for Mr Bruce has frankly told us that they are in his view a quite inadequate counter to the preferences which Great Britain enjoys in the Australian market. The Baldwin Government had no mandate to promise to impose additional taxes for the benefit of the Dominions, and there is not the least chance that either the Liberal or the Labour parties would support any such proposals; the whole episode will, however, take us a step farther forward in the matter of Imperial relations. In particular two points emerge. The first is that the wider range of discussion at Conferences of this kind the more clearly must it be recognised that any decisions taken are subject not merely to confirmation, but to revision by the respective Parliaments. The most fruitful of the Imperial discussions in the past have been those of a preparatory character, after which a Dominion Statesman has gone home with the idea of trying to persuade his public of a particular course, and with varying success. The second point is that statesmen must learn to realise the advantage of adequate discussion in their own Parliament of the subjects to be raised at Imperial Conferences before these Conferences meet. In the present instance the British Government was earnestly engaged in trying to formulate a definite agenda

right through August and September, long after Parliament had risen. The whole proceeding was carried out by the Government in the manner so reminiscent of our war activities and Conferences. It will be an advantage gained if the present episode recalls to our rulers the necessity of consulting Parliament and the electorate on matters of first-rate importance on which they have no mandate.

From a perusal of the Conservative Press, we imagine that this question of sanctioning Mr Baldwin's preference offers was regarded in some quarters as one of the points on which Mr Asquith might have come to some agreement with Mr Baldwin by which one of the two parties would maintain the other in office. We are glad to see that Mr Asquith, in his address to his Parliamentary supporters at the National Liberal Club on Tuesday, emphatically repudiated any idea of such an alliance, which, were it workable, would entail the backstairs bargaining away of pledges which are still warm on the lips of the respective leaders. The confused position of home politics is in many respects unfortunate; but it will not be ended or cleared up by insincere agreements behind the back of the electorate on questions with regard to which the lesson of the polls is clear.

THE INDIAN ELECTIONS.

THE results of the Indian elections to the Provincial Councils and to the Central Legislature mark the end of the political lull which followed the arrest of Mr Gandhi and the practical collapse of the Non-Co-operating Movement. This renewal of political activity has long been foreseen. Mr Das, of Bengal, a former leader in Mr Gandhi's party, launched his new policy of co-operation for the sake of obstruction without loss of time, from the moment when the previous policy had become obviously abortive. Mr. Das is a hard worker and an able politician, and the present marked success of the Swaraj or Self-Government party, as his new organisation is called, is the monument of his labours during the last few months.

Thus Obstruction replaces Abstention as the watchword of the Extreme Opposition in India. It may be noted, in passing, as a curious fact, which may be not without significance, that this is a reversal of the order in which the two policies have generally been taken up by opposition movements in Europe. In the British Parliament the Irish Nationalists tried obstruction for two generations before Sinn Féin brushed them aside and introduced the policy of abstaining altogether. In the Austrian Parliament, again, during the same period, the Old Tchechs obstructed before the Young Tchechs held aloof. Were we to attempt an interpretation of what passed in the Irish and the Tchech political mind, we might guess that they tried co-operation first (of however negative a kind), because they had in them the concrete and practical instincts displayed by *Homo Occidentalis* in his political life, and that they eventually adopted the more negative but more radical tactics, because they had found by experience that even the most subversive form of co-operation, when continued over a long period without success, had the effect of in some degree committing them morally to the political system which it was their object to destroy. If this interpretation is correct, it has some bearing upon the interesting correspondence between the Governor-General of Bengal and Mr Das that has followed the elections. In Bengal the success of Swaraj in the polling for the local council was so sweeping that Lord Lytton felt it his constitutional duty to invite Mr Das and his friends to form a Ministry for the transferred Departments. In his reply, Mr Das expressed regret at his inability to accept this offer; recalled the fact that Swaraj was pledged to put an end to the Diarchy, and added that the party would not consider it honest to accept office in order to turn it into an instrument of obstruction. He concluded with an appreciation of the spirit of constitutionalism which had actuated Lord Lytton in making the offer. Lord Lytton has, indeed, done a signal service both to England and to India by his bold and patently honest action, and Mr Das has likewise shown honesty and good feeling in his reply. The incident suggests, however,

that Mr Das might do well to re-examine the foundations of his policy, for if Obstruction is incompatible morally with taking office, is it really compatible with standing for election? This is a very difficult question of degree. Mr Das draws the line between membership of the Council and of the Ministry; others might draw it at a point which morally would preclude persons of Mr Das's persuasion from entering the Councils at all. In taking the former view, as he does, there is no question but that Mr Das is perfectly sincere, and yet, with the Irish example before him, he might ponder whether expediency itself (considered in relation to his ultimate political aims) might not be on the side of abstention, if abstention and obstruction were the only alternatives to which he is able to reconcile himself.

At the moment, however, this is not practical politics, since Mr Gandhi is in prison and Mr Das in a majority. The immediate question is: Will Swaraj succeed in paralysing the constitutional operation of the present first instalment of Indian self-government? In favour of success, the party can count on the signal rout of their Moderate opponents, the energy and ability of several of their leaders, and the strength in which they have been returned. In the Legislative Assembly there are 40 official and nominated members and 105 elected members. Of these 105 places, it appears that 82 have just been filled, that of these, again, 39 have been won by Swaraj. Undoubtedly this puts Swaraj in a strong position. From the point of view of their influence in the country, what counts is the proportion of their gains to the total number of elective seats, and in these they have only just failed to secure a majority. Of course, from the practical point of view of making the Assembly operative, it is their proportion to the total membership that has to be taken into consideration, and here they only constitute a strong minority of 33 per cent. On the other hand, in all Parliamentary bodies the Government has a proportionately more difficult task than the Opposition; Indian politicians have had an unhappily long and wide experience of opposition tactics and possess the intellectual and psychological qualities favourable to pursuing these tactics with success, and therefore the possibility must be faced that in the near future they may succeed in their object. Should they succeed, that would mean the temporary suspense of the Diarchy, but not, of course, the collapse of the Government of India. Under the present régime provision has been made for the executive in the last resort to carry on independently, and the Viceroy has already intimated that this would be the consequence if the Swaraj party did their worst. We should, however, have little cause to congratulate ourselves if we were manoeuvred into carrying on under these conditions. The vista of special administrative decrees, arrests, imprisonments, outbreaks, and embitterment which lies beyond this exit from constitutionalism is a quite deplorable prospect. Unless and until this prospect is realised, however, it would be unprofitable to enlarge upon it, and at the present stage it is perhaps more useful to remind ourselves and our Swaraj fellow-subjects that there are still other political forces in the field.

At this moment the conflict between the British Raj and the Indian Swaraj movement fills the foreground of the stage, but that is only another way of saying that, beneath their acute differences, these actors have their feet planted on certain very fundamental common ground. Both parties look forward to a united India destined to govern herself on the Western plan; and, however much they may disagree as to the rapidity with which this consummation can be reached, that disagreement is only possible within a common framework of expectation. While they are girding themselves for the combat, and before they have actually come to blows, it might, therefore, be salutary for the adversaries to remind themselves that, severally or combined, their numbers are infinitesimal compared not only with the still passive masses of the total population of India, but with other "politically-minded" elements on the Indian continent who are every bit as energetic and as determined, if not as vocal, as they are. They are far, indeed, from being the only actors on the stage, and the front plane which they are monopolising for the moment has plane after plane behind it, fading away gradually into an infinite background. Or, to use another metaphor, the twentieth century India in which

both the British Raj and the Swaraj party live and move and have their being is a thin and brittle crust, beneath which the India of the eighteenth century A.D., if not of the eighteenth century B.C., heaves and quakes like molten lava. The ancient fanaticisms and feuds are not yet exorcised. In Bengal, it is profoundly satisfactory to note that the Hindus and Muslims have drafted a practical working agreement, however much we may dislike the common objects which they have set themselves to pursue, as far as we are concerned. In the Punjab, however, Hindu-Muslim relations are reported to be tense, and whatever may be the outcome of the present crisis over the Caliphate in the Muslim world, its effects in India must almost certainly be adverse to Hindu-Muslim unity. The Indian Muslims, being a scattered minority among the Hindus, have always instinctively looked for extraneous support, and if they see the prospect of obtaining it from their co-religionists abroad diminishing, owing to the destruction of the principal symbol of Islamic unity, they are likely to turn again to a quarter to which they have turned before—the British Raj. Add the troubles between Sikhs and non-Sikhs in the Punjab and between Brahmans and non-Brahmans in the south, and you obtain a picture of an India for which the twentieth century is non-existent, and in the foreground of which Lord Lytton and Mr Das precariously hover.

What is the moral of this situation? Certain sections of opinion in England are tempted to take a malicious pleasure in it, and to console themselves for the nuisance which non-co-operators and obstructors are causing to the British Raj by picturing what is in store for these enthusiasts at the hands of fellow-Indians, if they are unlucky enough to succeed in eliminating the British factor from the scene. English people with this outlook sometimes almost go so far as to express satisfaction at the survival, in the background, of the old evils of India, with a confused idea that this survival renders the maintenance of the British ascendancy a justifiable necessity. Nothing, surely, could be more short-sighted than such a point of view? No Empire ever has been or can be maintained in being by the maintenance of the abuses which it is its purpose to remove. The British Raj would be lost twice over if it stultified itself before being overthrown by its former subjects. The facts in question have a moral, but one of a different order, which is this: If Englishmen interested in India and Indians interested in the unity and self-government of their country genuinely desire to see their respective ideals realised, they cannot possibly afford to poison one another, and so to leave the stage again to its ancient possessors.

THE MINERS' WAGE AGREEMENT.

(FROM A CORRESPONDENT.)

MR LLOYD GEORGE, with his characteristic gift for hyperbole, hailed the coal agreement of July 1, 1921, as being the last word in industrial negotiations. Among other things, he claimed that it would ensure "peace for a very long period," that it would give the miner "a direct individual incentive to effort," and that it would stand as an ideal arrangement worthy of imitation by other industries. "I believe," he said, in the House on June 28, 1921, "that when the workmen see the benefits which they themselves will derive from this arrangement..... we shall attain a condition of harmony which never prevailed before in the coal industry."

Events, we may hope, have not falsified his conclusions, but only postponed them; for the truth is that the workmen have hardly yet seen the benefits referred to. Immediately the agreement was signed, wages in most districts climbed down the ladder of reductions embodied in it, and continued to fall when in November, 1921, the permanent clauses of the settlement came fully into operation, until they finally settled, in every one of the 13 districts by August, 1922, on the solid ground of the irreducible minimum wage. It is indisputable that in many districts—for each of the 13 is a self-contained unit—this minimum wage has been much above what the industry could bear. The reduction of prices from an average of £1 6s 2d per ton in 1921 to only 17s 8d in 1922, so diminished proceeds as to leave the owners with a

debit balance after they had paid other costs and the minimum wages. Towards the end of 1922 matters improved somewhat, and slight increases in wages were given in some districts. This continued until the March, 1923, ascertainment was made.

The wages for March and April depended on the proceeds for November and December, and as December was a holiday month, naturally proceeds, and therefore wages, showed a decline. The January and February results determined the wages for May and June, but as the improvement in trade did not become fully operative until March and April, it was not until July and August that wages rose in proportion. In those two months the average earnings per shift for all classes was 10s 8½d, being 65.73 per cent. over 1914 earnings at a time when the cost of living was 69 per cent. over 1914. Since August wages have declined while the cost of living has advanced, to the inevitable accompaniment of renewed agitation against the agreement.

Such, then, is the position. It is natural, under the circumstances, that the miners should be concerned mainly with the only part of the agreement that has had a full run—the minimum wage. With this they are dissatisfied, as the minimum wage of to-day represents in real value less than did the wage of 1914. The present minimum is only 43 per cent. over the pre-war wage, while the cost of living is 77 per cent. Even with his share of the meagre surplus proceeds, the miner is to-day being forced to accept a lower standard of life than in 1914. Now the openness of the present calculations proves beyond a doubt that the coal-owners have, on the average, no surplus available to increase this wage. If they had, the men would automatically receive 83 per cent. of it. During the last two years profits have been low, in many districts the owners have had to give up a large part of their standard profit—i.e., 17 per cent. of standard wages—to pay the minimum wage, while in others, as, for instance, in North Wales, the owners have actually been encroaching on their capital to pay wages.

It is no sufficient answer to say that these deficits are recoverable in the fat years. It is true that they were meant to be, but in actual fact they are not, in consequence of a pure oversight made in the final drafting of the agreement. As it stands, this distinctly states that any deficits incurred in making up standard wages are recoverable, but no mention is made of the treatment of deficits due to paying the 20 per cent. extra on standard wages required to make up the minimum wages. This is only one of the many puzzles with which the agreement bristles, and one has the greatest sympathy with Sir William Plender, the independent chairman of the National Board, whose ingenuity has been so frequently taxed in explaining the agreement to its authors! The Secretary of the Mining Association has recently given the following explanation, amply corroborated from other sources, of the recoupment anomaly:—

"Clause 4 of the agreement (the recoupment clause) remains in the form in which it stood before Clause 8, providing for a minimum of 20 per cent. above standard wages, was inserted in the agreement."

"Prior to the insertion of that clause, 'standard wages' constituted the minimum, and full provision was accordingly made for recoupment under Clause 4. The substitution of a minimum of 20 per cent. was made at a late stage in the negotiations, and the final drafting of the agreement was performed very hurriedly immediately after the conclusion of the negotiations and under pressure from the Government, who insisted that the completed agreement must be in their hands the same afternoon, before the meeting of the House of Commons, at which the Prime Minister proposed to ask the House to agree to the subsidy. The failure to adjust the wording of Clause 4 in the hurried drafting of the final document was a pure oversight."

When the owners brought the matter up before the National Board, the men's side refused to consider any amendment, and on the independent chairman being called in, he naturally ruled in strict conformity with the text of the agreement. Thus the anomaly, and in many districts the resulting injustice and hardship, persists. In this regard many of the owners would like to see the present agreement revised.

The miners are not nearly so badly off as is commonly

believed. Indeed, if the railwaymen, the builders, and the other trades catering for the home market had accepted similar reductions to the miners and others catering for exports, we should have heard little of the present agitation. The miners have always been the toughest fighters in the industrial field, and with 45 members in the House of Commons, all more or less pledged to nationalisation, continuous agitation would seem to be inevitable. Yet the following are the facts with regard to wages. Although the minimum wage is only 43 per cent. over the level of June, 1914, yet it is 70 per cent. over the average for the five pre-war years. Moreover, as in pre-war years, this wage carries with it free coal and free houses in Northumberland and Durham, and in most other districts coal at reduced rates.

But more important are the new concessions granted since the war, of which the most notable are:—

1. The reduction of hours in 1919 from eight to seven.
2. The same wage was paid to day workers, and a compensating increase for the lost hour of 14.2 per cent. was made in piecework rates.
3. An increase in real wages through the use for the benefit of the miners of the statutory Welfare Levy of one penny per ton.
4. Subsistence allowances are granted in nine districts to the lower paid day-wage men.

5. In spite of the demise of Part 2 of the 1920 Act, the present agreement gives the miner some degree of democratic control over the industry, and, through the publicity applied to the accounts, gives him facts to work upon.

Moreover, the miner's income is frequently in excess of his wages owing to the unexampled opportunity provided for his dependents to find work in the industry. Further, in no staple industry did wages drop so drastically during 1921 and the first half of 1922, and no industry, as a consequence, has had so little unemployment. The figure of unemployment for December this year is only 2.5 per cent., and, as even in the best years we seldom get below 2 or 3 per cent., the position from this angle is entirely satisfactory. About 70,000 more men are employed than in 1913.

At its recent meeting the miners' conference decided to ballot its members, and to recommend them to vote in favour of terminating the agreement. The fundamental question involved is whether the worker is entitled to a wage, irrespective of the capacity of the industry to pay it, sufficient to maintain a given standard of life, or only to such a wage as his energy, and the fortunes heaven sends his industry, can produce. If the former consideration be upheld, then the industry must be mortgaged or even ruined to supply that wage, or the taxpayer must supplement. Both alternatives are equally fatal to true efficiency and economy. We are then driven back on the productivity theory of wages, and it is this theory that is worked out in practical detail in the threatened Coal Treaty. Profits and wages are automatically correlated. This has the enormous advantage of making the industry take the strain of abnormally bad times, not in the wholesale dismissal of workers, but in the lowered remuneration of both capital and labour.

While the principle of the agreement is sound, the details are faulty, as a result both of false anticipations and of careless drafting. It is well known that many of the miners' leaders think highly of the principle, and it is probable that they see in the power to end the agreement a useful megaphone to voice their demands for its revision. But no impartial observer would agree that all the revision should be in favour of the men.

It is possible that the standard profit of the owners is fixed at too high a figure. Their claim to 17 per cent. of the standard wages as a minimum profit is based on the average profit for the 15 pre-war years. But why should the average pre-war profit be made their present minimum profit? In addition, any surplus is divided between owners and workers in the ratio of 17 to 83, which means that were the agreement in full operation, their returns would be considerably above pre-war. It is, of course, the case that the owners in many areas have not received this profit, and, further, that the "agreement" profits are not the same thing as commercial profits, but still it is perhaps reasonable to consider the possibility of reducing the owners' percentage share, and the owners themselves are prepared to discuss this question. But if they are to

accept a reduced profit they must be guaranteed it as far as is possible. The present operation of the recoupment clause is almost comic, and it says little for the men's sense of fairness that they have refused to consider its amendment. Undoubtedly, therefore, the recoupment provisions should be made effective, and this can be done by a very small alteration in the text of the agreement.

It would surely be little less than disastrous that the principle of the agreement should be scrapped at this juncture, though any amendments should hold in view the supreme need for creating some kind of fund in good years for the equalisation of wages and profits in bad times.

THE TRUST MOVEMENT IN GREAT BRITAIN.—I.

SUSPICION of rings believed to control prices of materials, fear that combines, or at least trade agreements, in certain branches of distributing were unduly raising food prices, to the detriment of both consumer and farmer, and, in general, anxiety at the danger of exploitation by monopolies, has brought to the fore the question of the control of trusts. The problem figured in the manifestoes of both Tories and Liberals, and it is clear that until something is done to remove this suspicion the road to industrial goodwill and confidence is blocked. We have therefore arranged to publish a series of articles on the subject by a highly qualified expert, who commences in the following article a survey of the "trust" situation in Great Britain.

The movement of British trade and industry towards combination in one form or another, which had become very marked towards the close of the nineteenth and in the early years of the present century—a process described and examined with a wealth of detailed knowledge in Macrosty's "Trust Movement in British Industry" (1907)—continued, though at no very rapid pace, until the European war, and then received an impetus which is still far from spent. And latterly public opinion in this country has undergone a change, the extent of which it is not yet possible to measure. Long disposed to regard all combination among manufacturers and traders as essentially inimical to the economic well-being of the community, it appears now to be not so hostile to the principle of combination, and disposed to judge each application of that principle on its merits, if, that is, it is afforded adequate opportunities for forming a reasoned opinion.

The increased rapidity of the movement towards combination (using that term in its widest sense), and its widening range, have been due to a variety of causes. The war, with its demonstration of certain relative weak-

nesses in our pre-war industrial equipment and trade methods, and the realisation of the need of preparation for the even more strenuous international competition expected after the war, led to a wide and searching survey of the conditions of world trade. One of the most obvious conclusions (familiar indeed to students of economics, and to many of those more practically concerned, but not generally appreciated in its full significance) was that our British industries, still predominantly individualistic in outlook and organisation, were faced with increasingly severe competition from foreign industries, which were operated each under a common direction and pursuing a co-ordinated policy in production and distribution alike.

The organisation of modern industry presents three characteristic features. The first is *Concentration*, the development of large scale production, so that the number of separate undertakings in any branch of manufacture increases less rapidly than the total output, and the average output per productive unit shows a marked increase. The second feature is *Integration*—or what is often called “vertical combination,” which has been described as “the bringing under a single business control of a series of operations, contributing to a final result, which had previously been conducted entirely apart.” This result, exemplified mostly, though not exclusively, in the engineering and iron and steel trades, is obtained either by a company's purchasing outright, or securing controlling interests in, other undertakings which are producers of its raw or semi-finished materials or engaged in the further working-up of its products, or by the formation of a new company to acquire control of a number of companies engaged at various stages in the production of a particular finished commodity or group of related commodities. And the third feature is what for want of a better term (for the terminology of this subject is still unfixed) may be called *Combination*, meaning thereby the bringing together of a number of concerns engaged in the same line of production. These combinations may be terminable, that is, formed for a limited period, so that it is open to their members to withdraw at any time, with or without notice, and with or without penalty; in these the members retain their independence in respect of processes of production and commercial management, and the scope of the combination is generally very limited—it is, in fact, often confined to the regulation of prices or output. Or the combinations may be permanent, in which case the production and marketing of the output of a number of concerns engaged in the same branch of industry are brought under an unified direction, their financial independence (though often continued in form) comes, in fact, to an end, and managerial independence continues only to such an extent as may be conducive to the maintenance of the goodwill of an old clientèle and of competition in efficiency within the combination. It is to this third characteristic feature of modern industry, finding expression in price-fixing conventions and monopolistic or quasi-monopolistic controls of production, that public attention and criticism has been mainly directed.

All these three features were manifest in British industry before the war, though in varying degrees. Concentration and integration had made some substantial progress, chiefly in the engineering, iron and steel, and coal industries. The principle of permanent combination was exemplified by such great concerns as the United Alkali Company, the Salt Union, the Associated Portland Cement Manufacturers, Borax Consolidated, the Imperial Tobacco Company, J. and P. Coats, the English Sewing Cotton Company, the Bradford Dyers' Association, the Calico Printers' Association, the British Cotton and Wool Dyers' Association, the Bleachers' Association, the Wall Paper Manufacturers' Association, and a number of other similar organisations formed and carrying on their operations with very varying measures of success—so varying, in fact, that there had been a distinct halt in the movement. As regards terminable combinations—generally concerned in each case only with the regulation of the price of a particular product or limited group of products, doing this either directly or by the regulation of output, and with or without a pooling system—these were very numerous, and occurred in almost all branches of production and distribution, covering sometimes the whole country and sometimes only a particular locality. A large

proportion were shortlived, but new ones were constantly being formed. Some of these terminable combinations were parties to agreements of an international character, dealing with the regulation of prices or the delimitation of markets, as, for instance, the International Rail Convention and the conventions between the British and German makers of various chemicals. Finally, there were a number of bodies to which the term “Association” is applied in a sense different from that given to it by some of the combinations mentioned above; that is, they were bodies formed to promote the general interest of a particular trade or industry, and to watch all matters likely to affect it, but not concerned as associations with price-fixing or the regulation of output. No doubt they often afforded, however innocently, opportunities which might otherwise not have arisen for such arrangements, and consequently they also were viewed with much the same public suspicion as other forms of combination. Such bodies, though fairly numerous, were not as a rule very effective.

But in no one of these three directions had the movement gone nearly so far in the United Kingdom as in the United States and Germany. In both those countries concentration and integration had been carried out in the iron and steel industries on a scale far beyond anything known, or indeed possible, in this country, whilst in the United States permanent combinations (largely owing to the operation of the anti-trust legislation), and in Germany terminable combinations in the form of Kartells, which, though formed primarily for regulating prices and distribution, largely directed production also, had become the dominant form of industrial organisation. There were many in this country who believed that only by the remodelling of our own organisation on one or other of the lines adopted in the two countries which had been and seemed likely to be our chief competitors could British industry hold its own in the post-war struggle. This belief found expression particularly in the reports of the various committees constituted by the Board of Trade to consider the probable position of various staple industries after the war and, by way of preface to some illustrations of this which will be given in a succeeding article, we may remark that the committees were composed solely of persons directly concerned in the particular trades under review in each case, and the opinions expressed and recommendations made were, therefore, to be regarded as criticisms of their own past actions and advice as to their own future course.

THE STOCK MARKET DEPRESSION.

EVENTS in the outside world have developed rapidly since the beginning of this month, and the factors which the investor has to take into consideration in endeavouring to gauge the future course of prices have become more complicated than ever. In regard to the slump in security prices which has taken place this week, a Stock Exchange correspondent writes:—

“Conditions have been a little different from those which generally rule at a time of market stress. In the ordinary way prices are put down automatically by jobbers, who read the public as probable sellers if the outlook, for one reason or another, is threatening. Several times during the war, however, a different plan was followed. Prices were left unchanged, or lowered but slightly, though when people came to deal they were informed that buyers were lacking, and that, if they cared to leave selling limits, every endeavour would be made to ‘negotiate’ their business. In other words, the practice of price-making was left in abeyance for the time being, and the fact of quotations being continued at about their current levels had the effect of staving-off any feeling of panic that might have arisen amongst investors had there been a wholesale marking-down of Stock Exchange securities. It may be said that once or twice this week the market has drifted very close to the condition just described. It has never been impossible, however, to dispose of good stock. In the majority of cases where a free market exists as a rule the practice of price-making

continued, jobbers standing up courageously to the sellers, although, of course, as stock poured in so prices were lowered. And a great deal of stock has been sold this week. Short selling is blamed for having accelerated the slump. But it may be shrewdly surmised that on such a fall as each day witnessed, the bear brigade—most timid of all speculative bodies—hesitated to sell a bear at a time when any unexpected item of favourable news would have undoubtedly caused a sharp recovery. The bulk of the sales have been on behalf of holders, investors, and speculators alike, who are genuinely alarmed at the prospect of a Capital Levy and Nationalisation. Fear of the latter operated more particularly in such stocks as those of the Home Railway market, but it also had its effect upon shares in companies that partake in any degree of the nature of trusts. The Capital Levy fear influenced everything. People who held perfectly sound stocks and shares grew fidgety, and became increasingly nervous at the constant drop in prices. They felt that they must do something in order to satisfy this restless anxiety. By way of easing their minds they have turned out securities with which no fault could be found other than the fear that they might some time have to be sold at forced prices in order to satisfy the maw of the vague but terrifying Capital Levy. Further sales took place, concurrently, on behalf of people who had been left weak bulls of stock in active issues, and of those who were gambling with money obtained from the banks on the security of shares put into the names of the latter. These shares having come down in price with the rest, the margin required by the banks has run off, and more money is demanded, in the ordinary course of business, for keeping the accounts open. In order to supply this, sales of more stock have had to be made, and these added to the volume of realisations.

“The last fortnight in December is never a time to expect that people will put substantial sums into stocks and shares. They prefer to keep capital at the banks for window-dressing purposes over the New Year. The slump came, therefore, at the most unfortunate period of the year which is possible, and in the haste to get out of anything and everything, the favourable factors which developed have been completely ignored. Otherwise, attention would have been paid to the slightly better aspect of affairs on the Continent, while, to take a single market as an illustration, the South African list could hardly have failed to respond to the good showing made by most of the dividends declared during the past few days. There were a few disappointments, and their effect outweighed everything else. Favourable factors were lost in the welter of weakness caused by Labour party fears, and it is asked whether the bottom has yet been reached in the range of values to which Stock Exchange prices have dropped. Experienced men in the House are cautious in their estimates of what is likely to happen next. Latent bullishness is held in check by the feeling that it is impossible to tell how far the public mind will be further influenced by the outlook for the new session of Parliament which begins on January 8th. Up to that time, it is probable, according to sound Stock Exchange views, that the markets will remain in a condition of uncertainty and hesitation. There may be abrupt recoveries in some of the speculative counters where a bear account prevails, and it is conceivable that investment, recognising the cheapness which characterises scores of prices as compared with those of a couple of months ago, will take its courage in one hand and money in another, and bring both into the Stock Exchange markets. Broadly speaking, however, the outlook is too confused and obscure for optimism to allow itself anything like free play, and the House will break up on Monday for its Christmas celebrations in a mood less appropriate to the festive season than would have been the case had there been no General Election this month.”

Home investors will probably not be greatly perturbed in the event of the formation of a Labour Government. As things are at present the introduction of a Capital Levy is only a very remote possibility. But the fact that the foreign investor in British securities is not in a position to appreciate the niceties of the situation, and is quite likely to take alarm at the formation of a Labour Government in Great Britain, is a possibility which should be borne in mind. To what extent foreign selling can affect the market it is impossible to say. The greater part of the

foreign holdings of British securities are probably in gilt-edged stocks, and prices in the gilt-edged market would be bound to suffer. Some part of the present depression is possibly due to selling on the part of British investors who argue that improving trade may necessitate the liquidation of some of their own holdings in the not distant future, and in view of a possible bout of foreign selling later on are attempting to forestall such a development. Industrial shares are differently situated. They are mostly immune from the influence of foreign selling, and their future course will much depend upon the rapidity or otherwise with which the already visible improvement in trade develops.

Notes of the Week.

Budget Prospects.—The returns up to date of revenue and expenditure have led a number of commentators in the Press to take a rather dismal view of the prospects of the current year's accounts and of next year's Budget. But these pessimistic forebodings arise from a misunderstanding of the position. A deficit between revenue and expenditure is normal at Christmas time, for in the first nine months expenditure usually amounts to about 70 per cent. of the year's total, while revenue amounts to little over 60 per cent. of the final amount, the balance being made up by the heavy receipts in the last quarter of the year. It will be more possible to make a reasoned forecast when the complete returns to the end of December are available, but on the evidence up to date it would seem probable that there will be this year a surplus of something between £40 to £50 millions on the Budget, due to the fact that expenditure has been kept down to scale, while revenue has been coming in rather in advance of the estimate. If this happens, it means that this year, some £80 millions, instead of £40 millions, of debt will have been repaid. This probable surplus has an important bearing on the coming Budget, since the remissions of taxation made by Mr Baldwin last April have only partially come into effect this year. The Chancellor of the Exchequer stands to lose a further £23 millions in 1924-5 by tax remissions already made, in addition to a loss of revenue from the fact that “special” receipts will yield less next year. If our forecast is realised, the Chancellor of the Exchequer should see his way to square next year's Budget on conservative lines. But it is a very different thing to find new revenue if fresh forms of expenditure have to be provided for.

Mr Bruce on Australian Finance.—Mr Bruce, the Premier of Australia, was entertained to dinner last week by the Westminster Bank. Here he faced a representative City audience, and made good use of his opportunity by delivering a considered statement on the present financial position in the Commonwealth. He gave the following figures relating to the total of Commonwealth and State debts:—

	£
Gross Commonwealth debt.....	410,996,316
State debts	523,489,389
Total	934,485,705
Deduct amounts included in both Commonwealth and in the State debts.....	55,182,665
Total debt of Commonwealth and States	879,303,040
Deduct sums repayable, or cash in hand	73,337,463
Total debt of Commonwealth and States	805,965,577

It is no use to deny that uneasiness has been caused by the idea that Australian States, if not the Commonwealth Government itself, have been over-borrowing, and spending the proceeds on works that were not always of an essential or reproductive character. Mr Bruce's audience was, therefore, glad to hear that he had summoned a Conference of State Treasurers, and established a permanent Commission to co-ordinate borrowing policy; and also that borrowings for public works are to be restricted to essential purposes, and that on all Australian loans a cumulative sinking fund shall be established providing for amortisation in 50 years. Mr Bruce was also able to point to a Commonwealth Budget balance, to proclaim a

policy of ruthless retrenchment in public expenditure, to claim that Australia was one of the few countries that has really carried out the Brussels Conference resolutions, and to dilate upon the immense natural resources of the country. At the same time he made it clear that Australia's capital requirements for some years to come will be heavy. If London financial circles and the British investor generally are assured that Mr Bruce's zeal for sound finance is being translated into action not only by his Commonwealth colleagues, but also by the State Treasurers, then Australia will continue to find in London the ready reception for her frequent loans which she has found in the past.

Railway Rates.—A matter of considerable public interest is the discussion which is now taking place before the Railway Rates Tribunal on the claim of the coal industry that the flat rate increase of 2d per ton, which still continues in addition to the 50 per cent. increase, should now be removed. It will be remembered that when the Rates Tribunal was set up it was hoped that it would judge the important issues involved in railway charges not on legalist lines, but in accordance with broad economic considerations. The Rates Tribunal does not yet seem to have reached in its discussion the high expectations that were formed of it, and this week's hearing illustrates the vagueness and, in some cases, the unsound character of the economic principles which are being used in argument. Thus the coal trade argues with force that the flat rates additions, which were imposed in addition to the percentage increases, were in respect of the excessive increase in engine costs, but that these costs now only show an increase in the same proportion as other costs. This reasoning, however, applies to all flat rate increases, and we have not yet seen any sound argument from the coal owners on this point which is not equally valid in respect of the flat rates increase on all goods. Again it is pointed out that the rate reductions which the coal trade has been granted in the last two years are proportionately less than any other class of goods has enjoyed. But this ignores the fact that the coal rates went up less than any other rates, and that in coming back to normal these other classes are entitled to a larger reduction than coal. Underlying the whole argument is the idea that coal is entitled, on economic grounds, to some special consideration because it is so important a raw material. But the fact of the matter is that these considerations have long since been embodied in our railway tariffs, under which short-haul coal, and particularly export coal, enjoys extremely low rates in comparison with other goods. As against this coal contention there is the fact that the railway problem of the future of the British railways is to retain traffic against the competition of road transport, which means in the main competition with high-grade traffic. The railways must of necessity find ways of reducing these charges if they are to retain high-grade traffic on the railways, and they cannot afford to give too much away on the cost of carrying heavy traffic. On the other hand, with trade steadily increasing, it is evident that the railways are getting to a financial position where they can afford to make concessions—a consideration which illustrates once more the ridiculous principle embodied in the Railways Act. The doctrine that the railways must earn a fixed revenue implies that rates must fall when trade is booming—i.e., when both passenger and freight traffic could afford higher rates, but must rise when trade is bad. Rate concessions two years ago would have been of immense public value. They lose half their merit when they come too late. We hear much nowadays of the importance of steadying trade, and every public corporation should endeavour to stimulate production when we are in the trough of the wave, and to check excessive optimism when things are going well. Our present system of railway rates produces the directly opposite effect.

The Foot and Mouth Disease Problem.—When about 35 years ago the Board (now the Ministry) of Agriculture was established, one of the chief duties entrusted to it was that of keeping the flocks and herds of the country free from contagious disease. Up to the last two or three years this duty had been most efficiently performed—as proved by results. Foot and mouth disease, with which the

countryside is now ravaged, made an occasional appearance, but these sporadic outbreaks were immediately suppressed and localised. It is stated that the average annual cost of eradicating outbreaks of foot and mouth disease—and of keeping the country practically free from it—from 1892 to 1922 was about £9,000. The cost of dealing with the outbreaks in 1922 was about £1,250,000, and in the present year the total cost will apparently be still greater. It is not surprising, under these circumstances, that public attention should be aroused and the methods adopted by the Ministry of Agriculture challenged. Not only the general public, but also many farmers, are asking whether the system of ruthless slaughter, and the heavy cost thereby involved, can be justified. The question naturally arises whether the remedy is not worse, or at any rate more expensive, than the disease. It must be admitted that if it were to be assumed that a charge of from 1 to 1½ millions—in addition to the cost of administration—would fall annually on the Exchequer as the price of failing to suppress foot and mouth disease, the House of Commons would very soon become interested. In the discussion of this question public attention is generally fixed upon a wrong issue. Active debate takes place as to the efficacy of the slaughter method of combatting the disease, and it is suggested that curative methods would be cheaper and equally efficacious. Of course in one sense curative methods would be cheaper to the State, because the cost would fall on the owners of the animals, and compensation for animals compulsorily slaughtered would not, as at present, be paid out of the public funds. But if the object is, as it should be, to keep the cattle in the country free from the disease there cannot be two opinions. The efficacy of the slaughter method has been demonstrated by 30 years' experience in this country; the failure of the curative system has been demonstrated in other countries. The real issue to be faced is what is the new factor, or factors, in the problem. Why have the methods which were successful for 30 years failed during the past two or three years? Conveyance of infection by birds, about which much is heard, or by foxes, is nothing new. Outbreaks of the disease, from this or other causes, are probably inevitable from time to time. The isolation of the farm and the prompt slaughter of all animals is a comparatively simple administrative act. The administrative difficulty arises in the instant discovery and speedy tracing of all media of infection. This is work which requires no technical skill, and could probably best be done by police and detective agencies. There is every reason to believe that the disease is efficiently dealt with on the scientific or veterinary side, but the question which arises is whether the police or detective work—which is even more important to prevent the spread of the disease—is equally well done. It is, at any rate, on that side of the problem that attention should be concentrated. An inquiry by trained administrators, with the help of experienced police officers, would be the best means of investigation into this aspect of the subject.

The Civil War in Mexico.—A correspondent writes:—The strength of the revolutionary movement is shown by the negotiations, reported in London on Thursday, for an armistice, following President Obregon's announcement a few days earlier that "the rebellion would be suppressed with an iron hand"; still more by its extension to parts of Chihuahua where the populace a year or two ago helped to put down revolutionists, to Tabasco, never prominent in the disturbances of the past 12 years, and to Yucatan, which has always stood apart from the rest of Mexico, and whose wealthy sisal planters kept it virtually independent even of the veiled despotism of Porfirio Diaz. All this indicates that the rising is partly a political effort to maintain State rights against a possible military despotism at the Federal capital, partly a protest by the propertied middle and upper classes against the ultra-Nationalist "Radicalism" represented by General Calles, which would renew the difficulties with the American oil interests and frighten away foreign investors. While the allotment of land to the peasantry, who were largely deprived of it under the rule of Diaz, is the surest method of averting future risings, it is certain that Mexico cannot recover her prosperity without the aid of foreign capital, and there is always the possibility that, as in Cuba in

1898, the continuance of disorder may set up a demand for American intervention, both among the classes interested in Mexican enterprises and those who, like the late Mr Walter H. Page, believe that it is the mission of their country to ensure that the Spanish-American States shall have real Republican Governments.

The Status of Tangier.—As Great Britain for many years has demanded, Tangier, the chief gateway to North-West Africa, is to be permanently neutralised, and the open door for the trade of all nations secured. The settlement, which only awaits the approval of the Spanish Government, is a corollary of the agreements entered into in 1912 respecting the status of Morocco, following on the Anglo-French Agreement of 1904 and the Act of the Algeiras Conference in 1906. Tangier is to be placed under an international administration consisting of the Consuls of the Powers which signed the Act of Algeiras and an assembly containing four representatives of France, four of Spain, three of Great Britain, one (eventually) of each of the other signatories of the Act of Algeiras, and ten native members, of whom six will be Moslems, three Jews, and one a representative of the Sultan of Morocco, with considerable power over the natives, independently of the Administration; he will also supervise the collection of the taxes imposed on them by his sovereign. The present Consular courts will be replaced by mixed tribunals. The Assembly will ultimately nominate all administrative officials, but for the next six years there will be a French chief of the Administration, with one British assistant and one Spanish, all nominated by their respective Governments. The gendarmerie will be commanded by a Belgian, and the officers will be French and Spanish. The Caisse de la Dette will be abolished, but the service of the four foreign loans secured on the Customs will be guaranteed by the Sultan's Government, which will, therefore, collect the Customs revenue, subject, however, to the supervision of the international administration, which will also control the management of the port. Tangier should now recover its ancient prosperity and secure its position as the most important city in Northern Africa. The settlement seems to be a satisfactory compromise between widely divergent views. The Spanish representatives have signed it subject to the approval of their Government. Spanish opinion, apparently, is dissatisfied with the result; but in some quarters the reservation is ascribed to the new Spanish friendship with Italy, which, as a Mediterranean Power for whose emigrants North Africa affords an obvious outlet, considers that she should have been invited to aid in framing the settlement. But delay will be prejudicial to Spanish interests. Germany, Austria, and Russia, all signatories to the Act of Algeiras, are not at present in a position to co-operate at Tangier.

Employment in November.—No evidence is available that the General Election produced upon trade and industry the restrictive effect that had been predicted in some quarters, and a sign of the steady upward movement is found in a further drop in the unemployment totals. This drop is the more significant, because it is occurring at a season when an increase in unemployment is a frequent phenomenon. According to the *Ministry of Labour Gazette*, the trade union percentage of unemployment fell in November from 10.9 to 10.5, following a drop from 11.3 at the end of September. The monthly movements of this percentage over a number of years are shown below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.								
	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.

* Excluding coal miners.

INTERNATIONAL BANKING
IN ALL ITS BRANCHES

BANKERS TRUST COMPANY

16, WALL STREET, NEW YORK

PARIS OFFICE

3 & 5, PLACE VENDOME

CABLE ADDRESS: BANKTRUST, PARIS

Among all workers coming under the scope of the Unemployment Insurance Acts in Great Britain and Northern Ireland the percentage unemployed at November 26th was 11.5, as compared with 11.7 at October 22nd. The total number of registered unemployed at November 26th was 1,257,000, as compared with 1,296,000 at October 29th. The principal industries showing an improved demand for labour last month were pig-iron manufactures, iron and steel manufactures, and the Lancashire cotton trade. The latest figure of 1,257,000 for the unemployment total compares with 1,437,000 a year ago.

Cost of Living.—After remaining stationary in October the cost of living, as computed by the Ministry of Labour index number, resumed in November the rise that began in July. At December 1st the average level of retail prices was 77 per cent. above the level of July, 1914, having been 75 per cent. above a month previously. As will be seen from the following table, the latest level is slightly below that in force at the beginning of 1923. In the early months of the year a decline took place, which took the percentage increase as low as 69 in May and June:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.	1923.
January 1st..	% 85.90	% 120	% 125	% 165	% 92	% 78
February ..	90	120	130	151	88	77
March ..	90	115	130	141	86	76
April ..	90.95	110	132	133	82	74
May ..	95-100	105	141	128	81	70
June ..	100	105	150	119	80	69
July ..	100-105	105-110	152	119	84	69
August ..	110	115	155	122	81	71
September ..	110	115	161	120	79	73
October ..	115-120	120	164	110	78	75
November ..	120-125	125	176	103	80	75
December ..	120	125	169	99	80	77

For food alone retail prices at December 1st were 76 per cent. above the pre-war level, the percentage increase having risen 3 points during November. The advance of last month was due to higher average prices for eggs, butter, sugar, and potatoes, the rise in these articles more than offsetting a slight cheapening of fish and bacon.

The Chester Concession.—A correspondent writes:—The report from Angora that the Chester Concession has been annulled does not apparently refer to the whole project. The Ottoman-American Development Company claims that it holds a number of separate concessions, and that only the first has lapsed by agreement with the Turkish Government. This first concerns the Samsun-Sivas Railway. The Angora Minister of Works had not been satisfied with the explanation given by the company of the delay in commencing the work. Mr Kennedy, the company's representative, had wired from London that a cargo of rails, wagons, and machinery was on the way, but he was met with the ultimatum that unless his company complied with the terms of the contract by November 25th the contract would be annulled. And so it happened. If this is not the last we shall hear of this

flamboyant concession that fluttered the Lausanne Conference, it is the beginning of the end. Indeed, it might fairly be said that the beginning of the end came some time ago, when all the responsible people, whose names lent dignity and seriousness to the Chester speculations, severed their connection with the Ottoman-American Development Company. It may be recalled that early in November there was an outrageous proposal to sell 10,000 shares of the company to the public at 100 dollars the share, and that General Goethals and Mr H. C. Sheridan, representing Messrs Vickers, left the company in protest. Since that time the company has struggled on without any American financial backing, and Mr Kennedy has been searching the capitals of Europe for cash equally in vain. There were great possibilities in the Chester Concession, from an oil rather than from a railway point of view, but it was an apt illustration of how things are not done in the capitalistic world. The Angora Government is learning its Western lessons.

Bankruptcy in 1922.—The report of the Board of Trade on Bankruptcy for the year 1922 has recently been published. It shows that the total number of cases of insolvency under the Bankruptcy and Deeds of Arrangement Acts was higher in 1922 than in any of the last ten years, while the liabilities were also greater and the assets less than in 1921. The following table gives the relevant particulars for the last four years:—

	Number of Cases.	Liabilities. (As estimated by Debtors).	Assets.
1919	910	2,373,798	949,691
1920	2,016	6,853,308	3,048,993
1921	4,840	21,887,373	8,898,253
1922	6,580	24,918,995	7,503,086
Increase during past year .	1,740	3,031,622	..
Decrease ..	..	..	1,395,167

The position in 1913 provides an interesting comparison with these figures. The number of cases was then 5,769, with estimated liabilities of £7,857,194 and assets of £3,303,382. During the post-war boom it was really difficult to be insolvent, but the reaction has since come, and the painful but necessary shake-down to more normal credit conditions has been proceeding apace. It is to be hoped, however, that this process is nearing completion, and that the return to more normal conditions will not be delayed much longer. The largest increases in 1922, as compared with the previous year, occurred among commission and general agents, bankers, publicans, stock and share brokers, lace manufacturers, grocers, general merchants, shipbuilders and owners, and timber merchants. On the other hand, the chief decreases came from among the following groups: wine and spirit merchants, wool and silk manufacturers, produce merchants, metal brokers, and printers and publishers. Of failures with unsecured liabilities above £40,000, "ordinary trade failures" accounted for 32 cases, while the other 18 cases were apparently due to "financial and speculative enterprise apart from ordinary trading." The tables given in this report are of considerable interest as a record of a not unimportant aspect of commercial and industrial activities in this country during a period of very great difficulty.

Cotton Trade Control and Gambling.—Our Manchester correspondent writes:—After an adjournment for several weeks there has been another meeting in Manchester this week of the special committee of cotton employers and trade union officials, which was formed to devise means for the betterment of the industry. It was announced at the close that the principle of control for the whole of the trade had been abandoned, because of its impracticability. Since the committee was appointed early in October all the attention of the members has been centred on formulating a scheme whereby production of yarn and cloth could be restricted according to the state of demand. Those in the best position to know the opinions of employers have always held that unanimity on a proposal of this kind would never be possible. It is, therefore, no

surprise to hear that the matter has been dropped. It is true that a sub-committee has been appointed to consider the question of control in the American section of the spinning industry, but it is doubtful whether anything more will be heard of control in any form. The committee has also discussed the effects upon trade of speculation in cotton futures by outsiders, but it has been decided not to take any action at present. Although gambling during the last couple of months in futures in the Liverpool cotton market has been very extensive, some of the stories which are about exaggerate the situation. Many people who have had a flutter have learnt their lesson, and now the bubble has burst we shall probably hear less of strangers to the industry speculating in raw cotton.

North of Scotland Bank Acquired.—It is announced that the directors of the North of Scotland Bank, Limited, have entered into a provisional agreement with the directors of the Midland Bank, Limited, for a fusion of interests of the two banks, upon the following terms and conditions:—

1. The Midland Bank, Limited, offers to purchase from the shareholders of the North of Scotland Bank, Limited, their individual holdings at the rate of £24 15s for each share of the North of Scotland Bank, Limited, which will be paid and satisfied by the exchange of 11 shares of the Midland Bank, Limited, of £2 10s each, fully paid, for every four shares of the North of Scotland Bank, Limited, £20 each, £4 paid. For the purpose of this calculation the fully-paid shares of the Midland Bank, Limited, have been taken at the market value of £9 per share. Fractions of a Midland Bank share will be settled either by the issue of certificates of fractions of shares, or in cash on the above basis of market value as may be determined hereafter by the Midland Bank, Limited.
2. The shares of the Midland Bank, Limited, issued to the shareholders of the North of Scotland Bank, Limited, will carry dividend as from January 1, 1924.
3. The directors of the North of Scotland Bank, Limited, will pay to the shareholders on the register on December 31, 1923, an interim dividend in respect of the three months ending at that date at the rate of 18 per cent. per annum, less income-tax.
4. The purchase is subject (a) To the consent of the Treasury and of the Board of Trade. (b) To the consent on or before January 21, 1924, of shareholders of the North of Scotland Bank, Limited, holding in the aggregate 75 per cent. of the issued capital of the bank, or such lesser proportion as the Midland Bank, Limited, may determine.

The North of Scotland Bank, Limited, will retain its name and continue its existence as a separate entity in all respects as heretofore. The directors will continue their services on the board of the bank. Two of the directors will be invited to join the board of the Midland Bank, Limited, and it is intended to invite two of the directors of the Midland Bank, Limited, to join the board of the North of Scotland Bank, Limited. The directors of the latter have already agreed to exchange their own shares on the terms mentioned, and recommend the shareholders to adopt the same course, which they are satisfied will materially contribute to the further successful development of the business of both banks. The shares offered by the Midland Bank, Limited, are fully paid, and the shareholders of the North of Scotland Bank, Limited, who agree to the exchange will be relieved of the liability of £16 on each North of Scotland Bank share. The market price of the shares of the North of Scotland Bank is in the neighbourhood of £15, and the apparent generosity of the terms now offered is perhaps explained by the exceptionally strong position disclosed by the last published balance-sheet, namely, that for the year ended September 30th last. With deposit liabilities of £20½ millions there was cash and money at call amounting to £3½ millions, and investments in British Government securities of over £13½ millions, the ratio of the two to deposit liabilities being 83 per cent., and to total liabilities 70 per cent. The North of Scotland Bank was established in 1825, and until recently was known as the North of Scotland and Town and County Bank, an amalgamation with the Town and County Bank having taken place in 1908. This will not be the first affiliation with a Scottish bank on the part of the Midland Bank, for in 1920 it acquired the shares of the Clydesdale Bank, whose deposits in January last stood at over £30 millions. The Midland Bank also acquired, a few years ago, all the shares of the Belfast Banking Company, whose deposits at the last balance-sheet were about £18 millions.

Baldwins' Report.—The profits of Baldwins, Limited, for the year ended June 30th last show a substantial increase, but the total is still well below that of the boom year 1919-20. Although £70,000, as compared with £50,000, is allowed for depreciation, and £44,000 more is required for debenture interest and redemption reserve, the net profit is £114,000 higher than last year at £200,900, as may be seen from the summary below:—

	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
Trading profit..	£ 442,900	£ 554,997	£ 683,405	£ 410,758	£ 306,132	£ 484,760
Net profit	359,043	471,139	567,023	325,167	86,993	200,902
Brought fwd.	156,969	255,139	285,799	291,325	303,479	309,178
Reserve	516,012	726,270	852,822	616,492	390,472	510,080
Preference div.	75,000	75,000	75,000	25,000	..	..
Ordinary div..	13,750	13,750	45,667	80,476	81,294	85,940
	(11½ %)	(12½ %)	(12½ %)	(5 %)	..	..
Carried forward	273,473	285,799	201,325	303,479	309,178	424,140

The dividend on the 5 per cent. preference shares requires over £4,000 more owing to an increase in the paid-up capital, and the ordinary dividend is again passed owing to the "special circumstances of the present time and the uncertain conditions of trade." The property item stands at £3,559,000, the total depreciation written off to date being £695,000. Unlike many recent balance-sheets this item does not include holdings in subsidiary companies, but the latter are, however, hidden in an item of £4,250,400 headed "Investments at cost or under, including shares and debentures in subsidiary and other companies." This item shows an increase of £127,200 in comparison with last year, and stock-in-trade has also increased by £174,700. Cash, war bonds, and bills have also risen by £312,500.

Ind. Coope's Year.—The brewery industry continues to flourish. This week we have to deal with two prominent undertakings interested in this trade, namely, Ind, Coope and Co. and Allsop and Sons. It may be remembered that Ind, Coope and Co. was reconstructed under an arrangement sanctioned by the Court in 1912; this company holds all the issued capital of the Leeds and Batley Breweries, and has a controlling interest in Bindley and Co., Robinson's Brewery, and B. Grant and Co. As will be seen by the following table, the advent of the war and post-war events were both very favourable to the progress of the concern:—

Year Ended Sept. 30th	Gross Profits.	Interest on Debenture Stocks and Mortgages.	Depreciation.	Ordinary Dividend.	To Reserve &c.	Carried Forw'd.
1914..	£ 110,821	£ 58,332	£ 28,516	..	..	£ 14,290
1915..	146,238	54,300	34,375	..	40,000	680
1916..	152,906	53,625	36,084	..	50,000	2,484
1917..	204,717	58,186	34,186	14,026	50,000	23,277
1918..	392,575	55,686	29,991	20,671	185,000	57,281
1919..	474,202	55,722	39,373	49,594	285,000	103,872
1920..	415,249	53,814	45,863	91,341	85,000	139,613
1921..	375,657	53,504	49,783	168,000	10,000	106,345
1922..	349,982	55,986	48,879	137,000	60,000	104,482
1923..	347,880	60,482	48,534	90,375	50,000	109,226

The dividend of 15 per cent. is maintained, but the bonus is slightly lower at £22,875, which a year ago was £21,750. In 1919 the capital of this company was increased from £400,000 to £600,000, and in December, 1922, to £1,000,000. The issued capital at present is £600,000. As we could not obtain a copy of the accounts until after the meeting had been held in this particular case, we have the benefit of the chairman's comment upon the balance-sheet in examining the accounts. This gentleman, after pointing out that properties showed an increase of £99,000, accounted for by the fresh purchases, &c., proceeded to state that sundry debtors were less by £64,000, "due almost entirely to the decreased selling price of 24s per barrel brought about by the last Budget." He went on: "Cash and War Bonds are practically identical with last year. You will notice that stocks on hand show a considerable decrease. At the close of the financial year 1921-22 there were some rather

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

heavy commitments for materials, which have since been liquidated, and we are carrying considerably smaller stocks this year, which, together with the reduced duty on stocks of beer, accounts for the difference." We certainly agree with the board of directors in their laudable object to increase reserves, and notice that total reserves now amount to £450,000. If the proceedings of the meeting were correctly reported in the daily Press, it would surely seem that some gentlemen allow their political feelings to prejudice the dignity of their position.

Allsopp's Results.—A better year is shown in the report of Samuel Allsopp and Sons for the twelve months ended September 30th last, and the net profits of £90,141 now given remind us that the brewery industry is enjoying a remarkable run of prosperity. The following table shows how the undertaking has fared over a period of years:—

	1914-15.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.

Carried forward	16,647	21,324	21,116	19,661	20,013	19,979	19,954

It may be recalled that in 1913, under a scheme of arrangement, the authorised and paid-up capital of this company was reduced from £1,870,000, consisting of £770,000 ordinary and £1,100,000 preference stock, to £742,500, made up of £19,250 ordinary and £55,000 preference stock; in other words, the two classes of capital were reduced by 97½ and 95 per cent. respectively. Preference stocks were then consolidated into £74,250 ordinary stock, and the capital was increased to £1,200,000 by the creation of 651,500 ordinary and 1,600,000 participating preference shares of 10s each. In January, 1922, ordinary stock was converted into £1 shares. Another scheme of arrangement was entered into with the 4½ per cent. debenture holders, which was sanctioned in 1915. The history of the company has not been altogether happy, and the present harvest for the brewing industry is no doubt gladly welcomed by those with financial interests in the concern. The participating preference shares receive, in addition to their 5 per cent., a further 2½ per cent., as against an additional 1½ last year, while a 4½ per cent. distribution is made on ordinary capital, as against 3 per cent. for the previous year. On one point at least the directors must be complimented, and that is the informative nature of accounts. The balance-sheet and profit and loss account give much interesting detail. Indeed, we must confess that in many ways we like the balance-sheet. There are, of course, items which should be reduced. We refer to goodwill account, which continues to stand at £700,000. It seems to us somewhat unwise to increase the ordinary distribution without attempting to reduce this; it is true that the reserve obtains £20,000, bringing it up to £220,000. But a reserve account of £220,000 is not a very large provision against total assets of £3,608,560, of which goodwill represents £700,000. An analysis of the balance-sheet will be found in the usual column.

Russo-Asiatic.—In their report the directors of this important consolidation intimate that negotiations for the return of the company's "nationalised" properties have again been entered upon with the Soviet Government—under conditions which would appear to be moderately hopeful. It may be noted that representatives of another group—the Lena—are also treating with the *de facto* Government of Russia for a like purpose. The Russo-Asiatic, however, possesses interests of considerable importance outside Siberia—particularly in the Villemagne silver-lead concession in the South of France. Development here has been attended with encouraging results, and arrangements for the installation of a mill are proceeding. It is estimated that the ore will show a profit of about £2 per ton on the basis of present values. The cash position of the Russo is a strong one, there being a surplus of some £576,000 at the end of December last.

Scuttled Ships and Mortgages.—The judgment given by the House of Lords on Tuesday, in the case of the *Ioanna* (Graham Joint Stock Shipping Company, Limited v. Merchants' Marine Insurance Company, Limited), was of considerable interest to bankers, as well as underwriters. The question was whether, when a ship has been scuttled, mortgagees who are not implicated at all in the casting away of the ship are entitled to claim against the underwriters under an insurance policy on the ship. The decision hitherto regarded as determining the position of mortgagees was given by the Court of Appeal in 1897. In that instance the mortgagees succeeded. That this earlier decision might be overruled in the *Ioanna* case—the first of the series of recent scuttling actions to be carried higher than the Court of Appeal—appeared to be possible, but in the result the judgment of the House of Lords rested on different considerations. In the earlier case the mortgagees' interest was distinct from that of the mortgagor, and the mortgagees who there succeeded did not claim through the mortgagor. In the latest case the mortgagees, though innocent of the scuttling at which the Greek owner had connived, were held, in the circumstances, to be claiming under or through the shipowner. The contention that the policy had been effected on behalf of the mortgagees as well as on behalf of the owner, so that the mortgagees were directly insured, was rejected. The alternative view of the facts—namely, that the policy was effected on behalf of the shipowner, and by his authority assigned or made over to the mortgagees, was unanimously taken by their lordships, and consequently the claim of the mortgagees was finally dismissed. As the facts differed from those with which the earlier decision of the Court of Appeal was concerned, that decision was neither confirmed nor overruled.

Cotton-Growing in Brazil.—A correspondent writes:—A considerable amount of foreign capital, mainly British and North American, has found its way recently into Brazil in connection with cotton cultivation, the prospects of which appear to be bright. Both Federal and State Governments are interesting themselves in some of the projects submitted, encouragement being offered to foreigners to take up tracts of country for this industry. The Federal Administration has despatched a party of young men to the United States to learn American methods, and has set up laboratories in several of the Departments where the services of experts have been engaged. No doubt exists that the visit of the Empire Cotton Growing Committee last year, and the International Cotton Conference held in Rio de Janeiro towards the close, are commencing to show results. It is stated officially that practically "the whole of the country" is suitable for cotton-growing, and that it is possible to obtain in some districts two crops annually. This statement, however, must be accepted with caution, since certain parts of Brazil are still unsuitable for settlers owing as much to climate as to uncertain tribal influences. On the other hand, it is thought that Brazil should be able to supply a considerable part of Lancashire's requirements in the future, provided certain rules for picking and ginnings are carefully adhered to. The remarkable growth of Brazilian cotton cultivation is seen in the fact that already 1,551,160 acres of land out of

7,500,000 acres, upon which cotton can be profitably cultivated, are under crop, producing over 306,000,000 kilos of unginned cotton, 92,000,000 kilos of ginned cotton, and 215,170,000 kilos for seed. The manufacturing industry has shown an advancement hardly less marked. Whereas in 1913 Brazil exported no more than 186 kilos of cotton piece-goods, in 1921 the total attained was 556,427 kilos, valued at 4,956,310 milreis. Imports of cotton manufactures have shown a corresponding decline, the chief sufferer being the United Kingdom, which formerly supplied Brazil with the greater part of its textile requirements. In regard to cotton piece-goods, the proportion of British manufactures imported in 1921 fell to 2,016,000 kilos from 13,026,000 kilos in 1913; but, owing to the vagaries of exchange, the value increased from 38,545,000 milreis in 1913 to 55,775,000 milreis in 1921. Notwithstanding the diminution in British exports of cotton goods to Brazil, the United Kingdom still contrives to hold the leading place among foreign shipments.

Oversea Correspondence.

UNITED STATES.—PRESIDENT COOLIDGE'S MESSAGE—COMMODITY PRICES ADVANCE—OCTOBER RAILROAD EARNINGS.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 7.

PRESIDENT COOLIDGE'S Message to Congress this week is generally regarded as exceptionally straightforward and business-like. It recommends constructive measures that strongly appeal to financial, railroad, and industrial interests and the public at large, as is evidenced by the almost unprecedented popular approval with which it has been received. While the Message embodies some matters that may, and probably will, precipitate political controversies, it is free from any trace of partisanship, and, so far as the main issues are concerned, outlines a programme that seems likely to win increasing support regardless of party affiliations. The more important features of his Message will, of course, have been summarised in the British Press.

There is considerable uncertainty as to just how much of the legislation urged by President Coolidge will be accomplished. There now appears to be good prospect for the adoption of the tax-reduction programme, but the situation and outlook are complicated by the presence in Congress of a Radical element, who may at least obstruct legislation. Furthermore, it is proverbial that few new laws of consequence are enacted by Congress immediately preceding a Presidential election campaign.

Commodity prices showed a substantial advance last month in the average level. *Bradstreet's* index number as at December 1st, namely, \$13,4358, marked a gain of 2.2 per cent. over the number recorded on November 1st, and is the highest reported since May 1st of this year. Compared with the low level of the current year, reached on August 1st, the increase is 4.8 per cent., but the December 1st index is 2.5 per cent. below that of the corresponding date last year. It is 26 per cent. above the low point registered on June 1, 1921, but 35.6 per cent. under the peak price of February 1, 1920. As compared with the pre-war level of August 1, 1914, the present index number is 54.3 per cent. higher. Textiles, particularly raw materials, were mainly responsible for the sharp rise in the general index figure last month. Raw cotton led in the upturn, although wool, hemp, and jute also were firmer, and cotton goods were advanced considerably.

For the first time this year net earnings of Class I. railroads of the United States for the month of October crossed the \$100,000,000 mark, the total amounting to \$102,746,000. That, in fact, is the largest amount earned by the carriers in any one month for more than two years, and compares with \$98,238,000 for September of this year, and with \$85,205,000, approximately, for October of 1922. The net operating income was equivalent to a return at the annual rate of 4.72 per cent. on the tentative

property valuation of the carriers. A large part of the increase, compared with October of last year, was due to the gain of about 7 per cent. in gross earnings, which totalled \$586,694,200. Operating expenses, aggregating \$444,937,800, showed an increase of \$17,013,400. Railroads in the western district showed a return of 5.36 per cent., while the rate earned by roads in the eastern district was 4.02 per cent., and in the southern territory 5.26 per cent.

FRANCE.—PUBLIC FINANCE—THE DEBT TO THE BANK—OUTLOOK FOR 1924—OVERSEAS TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, December 19.

THE difficulties facing the French Treasury are now publicly confirmed by the announcement, in the form of a Bill which the French Minister laid before the Chamber yesterday, that on Saturday last he came to an agreement with the Bank of France under which the advances made by the Bank to the State will at the end of the current year be reduced by 800,000,000 only, instead of by the sum of two milliards stipulated for in the law adopted in 1919. It will be remembered that last year, instead of reducing its debt by two milliards, the State compromised by diminishing it by a single milliard. It had been hoped that, by the aid of the large amount of fresh money that flowed into its coffers as the result of the last issue of Treasury bonds, the State would be able to do at least as well as last year in this regard. It is now evident that this money has been more urgently required elsewhere, and that, but for the fact that the 800 millions has been steadily accumulating for some time past, under the scheme for the amortisation of the debt due to the Bank, and is actually in hand, the good intentions of the Treasury in this direction would have proved completely instead of only partially vain. Comparatively small as is the amount by which this debt is to be reduced, however, the decision that has been taken must still be regarded as a step in the right direction, as it will probably permit of some equivalent and compensating reduction in the note circulation. Still, the outlook for the coming year remains distinctly threatening.

The twin ordinary Budget for 1923 and 1924 was balanced, as everybody knows, without involving any additional taxation, theoretically speaking, but it is now every day becoming more clear that it will be impossible to get through the coming financial year without a good deal of money being furnished by some means or other. The reform of the pensions law, when it is finally carried through, which must be in the near future, will mean that an additional 200 to 300 millions at least will be required under this heading. Increased allowances which are being pressed for by members of the public services and which it is difficult to see the possibility of refusing, in view of the serious increase in the cost of living, will call for an additional sum that may, according to expert opinion, amount to anything between 750 and 1,250 millions during 1924, and which certainly cannot be less than the former figure. In 1924, also, this country will be called on to face the problem of making some arrangement for the payment, which will then become due, of the \$400,000,000 (or 7½ milliards of francs), representing the cost of the American war material sold to France after the armistice. That the United States will insist on the money being paid forthwith is, of course, unthinkable, and undoubtedly some mutual arrangement will be come to; nevertheless, the problem will have to be taken up in some way. There are other factors in the situation, also, which contribute to the difficulties to be faced in the near future, and which make it evident that M. de Lasteyrie will have to accomplish practically the impossible if the present programme of getting through the coming year without either increased taxation or another great loan is to be adhered to.

Taxation returns for November show that the revenue

is continuing to come in well ahead of Budget estimates. The total yield from all sources during the month that has just expired was 2,089,145,700f, of which 1,969,713,000f was from normal and permanent sources, the balance being from "exceptional" channels, such as the special tax on war profits, which yielded 93,767,200f during the month. Income-tax during November yielded 464,666,900f, or an increase of 137,996,800f on the corresponding month of 1922. The most satisfactory feature of the return is again the yield from the tax on turnover, which last month produced 289,464,000f, or 29½ millions more than was expected by the Finance Minister, and 79,759,000f more than this tax yielded in November, 1922. Registrations and stamp duties produced over 39 millions more than Budget estimates during the month, and the duties on sugar and saccharine over 15½ millions more than had been expected. Customs duties, as usual, were a black spot, and yielded over 20½ millions less than Budget estimates, and over a million less than last November, and for this the depreciation in the purchasing power of the franc is, of course, responsible. Demand notes have been issued for income-tax this year down to November 30, for a total of 3,786,138,000f, of which 2,859,471,000f has been in respect of assessments for incomes received during 1922, the balance being for taxation due in respect of previous years. Out of the total income-tax due in respect of incomes earned in 1922 and payable during this year, the revenue authorities had received down to November 30th 1,276,196,000f, or rather less than 50 per cent., in spite of the more stringent methods of collection adopted latterly. It should be stated, however, that no demand notes for the current year began to be issued before September.

The French foreign trade returns for the first 11 months of the year which are issued this evening, show that the value of the imports and exports was as follows, as compared with those for the corresponding period of 1922 :—

	First Eleven Months of		Increase.
	1922.	1923.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	5,150,577,000	6,671,846,000	1,121,269,000
Raw materials	12,122,359,000	18,210,093,000	6,087,734,000
Manufactured goods ..	3,644,621,000	3,899,236,000	254,615,000
Total	20,917,557,000	28,781,175,000	7,863,618,000
Exports—			
Foodstuffs	1,633,954,000	2,884,834,000	1,250,880,000
Raw materials	5,160,117,000	8,296,178,000	3,135,061,000
Manufactured goods ..	11,073,573,000	14,685,129,000	3,611,556,000
Postal parcels	1,192,245,000	1,462,495,000	260,250,000
Total	19,059,069,000	27,317,636,000	8,257,747,000

The tonnage returns show that while the weight of imports during the 11 months has increased by 3,365,394 tons, that of exports has increased by only 1,888,737 tons, this being due to the fact that, so far as weight is concerned, the principal increase has been in connection with raw materials that have been imported. These include coal and other combustibles, of which 27,888,688 tons, valued at 3,289,166,000f, were imported during the 11 months, as compared with 26,062,083 tons, valued at 2,134,289,000f during the corresponding period of 1922, and with 20,682,000 tons, valued at 528,455,000f during the first 11 months of 1913. The figures for imported combustibles disclose that while the quantity imported during the present year has increased by only 7 per cent., the value of the coal purchased has increased by 54 per cent., the reason being chiefly due to the high rate of exchange against this country. Both imports and exports again increased in value, last month's imports being valued at 3,160,504,000f in November, as compared with 3,068,974,000f in October, and exports at 2,941,386,000f, as compared with 2,813,539,000f in the preceding month. On balance, the returns show that this country, during the first 11 months of 1923, purchased 1,491,542,000f worth of foreign goods more than it sold abroad, this being the smallest adverse balance ever recorded. Against this must, of course, be placed the large amount of money spent by tourists during their stay in France, which is classed under the head of "invisible exports."

GERMANY.—REPARATIONS—FINANCES—CURRENCY
—BOURSE—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, December 18.

The Cabinet has appealed to the Reparations Commission to enable the Republic to get a food credit, and at the same time has sought to open direct negotiations on general questions with France. On the latter matter the reply of M. Poincaré is not very promising. The Reparation Commission's powers, says M. Poincaré, must not be infringed, and nothing must be proposed which is not in accord with the Peace Treaty. The Franco-Belgian authorities in the Ruhr district and the Rhineland must retain their powers. M. Poincaré also complains that the Inter-Allied Military Control Commissions have not yet been able to resume their work. This answer is unpromising for the good reason that the Versailles Treaty in no way determines present conditions; the French claim and practice is that they can do anything they like in or with Germany. The Note to the Reparations Commission states that 1½ million tons of breadstuffs must be imported before August, 1924; also 10,000 tons of fats per month are needed. Foreign credits of between 50 and 70 million dollars can be had on condition that the precedence claim for Reparations is abandoned.

The Marx Cabinet looks fairly stable, but only because the Reichstag is not sitting and because the Cabinet's whole activities are extra-parliamentary. The finances are in a desperate condition; so desperate that the Cabinet was obliged to postpone payment of part of the official salaries due on the 17th. The Finance Ministry is now living from hand-to-mouth, this being a result of the policy of abandoning the infallible system of paper-mark Treasury bill discounting and paper-mark printing before provision was made for balancing the Budget. The Rentenmark credit of a mere 1,200 million Rentenmarks has, of course, proved hopelessly inadequate.

The provisional gold-mark Budget drafted for the term between November 15th, when the Reichsbank credits ceased, and the end of the financial year (March 31, 1924) shows expenditure of 1,966 million gold-marks, receipts from taxes of 1,381 millions, and Rentenbank credits of 585 millions. This is relatively favourable, if realised; but the Government gives no data to enable a judgment whether it can be realised. In order not to cause a panic it has not issued the usual decade reports since November 10. The Railways Budget for the term mentioned shows expenditure of 520 millions, the subsidy from the general Budget being 100 millions, while the figures for posts, telegraphs, and telephones show expenditure of 140 millions, and a subsidy of 50 millions. The Cabinet's policy is still to get in taxes rapidly by emergency decree; but so far only the first of three decrees, that dealing with the Rhine-Ruhr levy and the sales tax, has appeared; while the second, dealing with income, property, succession, and other taxes, is held up by the Reichstag Commission, to which, according to the new form of the Empowering Law, Government decrees must be submitted. A third emergency decree has been prepared by the Cabinet, but is also not yet issued. It seems settled that the Government intends to take 50 per cent. of gross rents of dwellings as soon as these are raised to pre-war level, and that it will expropriate the profits made by paying off bonds in depreciated money; but the plan to restore mortgages in the interest of the mortgagees will not be carried out. The tenants' organisations and officials' associations have protested against the restoration of pre-war rents. Concerning the financial position of the railways, the Minister of Communications reports that railway receipts are already again covering the cost of wages and fuel; but there is no money for new locomotives, cars, railway extensions, &c., and before April 1st next 200 million gold-marks are required for these, as well as 100 millions for special expenditure in connection with the Ruhr. For material, &c., a credit will be given by industry.

How the Government intends to pay its way if sufficient taxes do not come in before the Rentenbank's credit is exhausted is not known. Inflation by the Rentenbank or a reversion to paper-mark inflation via the Reichsbank is not to be thought of. It is suggested that short-term gold Treasury bills be issued, on the lines of those of

Prussia, which has issued 50,000,000 gold-marks of 5 per cent. three months' gold Treasury bills, to be met when taxes really come in. It is believed that the money market, which is now liquid, could take such bills up. The form of the first Federal "gold loan," the scrip of which in the end became currency, could not be adopted without causing new inflation.

The unfavourable reports concerning finances have not shaken the new currency. Abroad and here the paper-mark, which ultimately determines the value of the Rentenmark, maintains its stable value. After the fall in food prices there has been a marked fall in prices of manufactured goods. Outwardly, Germany has a completely stabilised currency. All business is now done in "marks," payment being made indiscriminately in Rentenmarks or in billions of paper-marks. No longer is any desire shown to convert "instable" paper-marks into "stable" Rentenmarks. This is not what was foreseen; for it was expected that citizens would rush to convert. In fact, the paper-mark is for any purpose—and for any prospect—as good as the Rentenmark. While according to plan the Rentenmark was to maintain its (wholly artificial) value as a gold-mark, even if the paper-mark continued to fall, it now seems clear that any new fall in the paper-mark will inevitably bring down the Rentenmark. Dealers would simply raise their prices in both, keeping the old ratio of one to one billion. This seems to arise necessarily from the fact that the Rentenmark is not really convertible into any stable security. For practical purposes the circulating paper-marks may be considered small change for Rentenmarks, and not, as was planned, an inferior and in principle different currency. The risk of the paper-mark starting a new crash is reduced by the fact that the buying power represented by this currency is very small compared with that represented by the Rentenmarks now circulating, and the declared aim of Dr Schacht, the Commissary Commissar, of making the paper-mark scarce has been attained.

Weekly returns from the Rentenbank will soon be published. Dr Schacht has declared in favour of hastening on the foundation of a gold-mark bank. Many banks have opened Rentenmark deposit accounts. The first German company with gold-mark capital has been registered in Hamburg. The capital is subscribable in foreign high exchange currencies. A Bill requiring the compiling of balances in gold-marks has been prepared, the gold-mark here being 10-42 of a dollar. It should be noted that, though Germany has no physical gold-marks or gold-mark notes, she has two kinds of calculation "gold-marks," only one of which is a reality. The Bill last mentioned, and the company capitalisation, refer to real gold-marks, in that equality with foreign currency of stable gold value is aimed at. The "gold-mark" used for price quotations, and in tax assessing is, however, an entirely different thing; it has neither physical existence, nor is it in a fixed ratio to gold, or to a foreign gold currency; it is a thing of entirely varying value, which, for the moment, by official decree, is identical with a Rentenmark, which in turn represents nothing stable in gold or goods. Hence a real dollar in Germany will always (if a free exchange rate can be obtained) buy more or less the same quantity of goods, whereas the quantity that 4.2 calculation gold-marks (officially one dollar) will buy has varied probably 300 per cent. during the past month.

The Reichsbank has again not issued its statement; the last, for November 15th, is now more than a month old, though formerly the statements seldom appeared more than ten days late. The enormous price fluctuations actually seen during the past month do not appear in indexes covering long periods; the *Frankfurter Zeitung's* index for December 13th only shows, for instance, a drop from 1,649,600,000 (times the peace level) to 1,565,200,000. This puts gold prices (at official exchange) at only 56.52 per cent. above those of 1914. While gold prices of some goods are enormously higher than in 1914, those of other kinds of goods are cheaper. Average prices of bread-grains, per metric ton, were, in gold-marks or Rentenmarks:—

	Average, 1909-13.	Average, Dec. 1, 1923.	Average, Dec. 14, 1923.
Rye	169.4	174-178	142.5-144
Wheat	213	194-200	162-164

For this the abolition of Agrarian duties is partly responsible. Meat in the past week continued to fall. The police have managed to compel wholesale dealers to abstain altogether from charging "currency depreciation premiums"; in other words, compelled them to admit that the Rentenmark and the paper-mark are now finally stabilised. The Ruhr Mineowners' Association has consented to cut coal prices by around 17 per cent., the price of standard Ruhr (Foerderkohle) being brought down from 28.42 gold-marks to 23.50 gold-marks a metric ton, or to under twice the 12.50-13 marks charged before the war. There is so far no sign of a price fall in such services and goods as have more or less rounded prices refixed at long periods; newspapers with practically no news services, other than agency, and containing half the paper of an English newspaper, cost 3d, sometimes more; the foreign letter rate is 4d; and railway charges are still very high. A cut in iron and steel rates is likely.

Stocks last week recovered, but are well behind the figures touched on November 30th. The *Frankfurter Zeitung's* index is:—December 14th, 625,500,000; December 7th, 554,100,000; November 30th, 746,750,000. Most of last week's gains were made on the 14th, when the Berlin Bourse was active and firm. On the 17th the Bourse was again very active and firm. Favourable influences were statements by the Exchange Commissary, reports from abroad of more optimistic judgments on German conditions, and very large foreign buying orders, mainly, it is reported, English and Dutch. The home public also bought heavily. Federal bonds were yesterday mostly slightly weaker, being (in milliards of paper marks): War Loan, 5 per Cents., 41; Fours, 350; 3½ per Cents., 189; Threes, 890; Colonial Fours, 1,100; Prussian 4 per cent. Consuls were 230; 3½, 195; Threes, 300; Bavarian Fours, 650.

AUSTRIA.—STATE FINANCE—COST OF LIVING—
ECONOMIC POSITION—MONEY AND STOCKS.

(FROM OUR CORRESPONDENT.)

VIENNA, December 1.

THE enormous improvement in the Austrian financial situation is clearly shown by the Budget estimates for 1924, brought before Parliament last week. The following table shows the most important items:—

	Milliard Kronen.
A. Public Administration—	
Gross expenditure	8,065.0
Gross revenue	6,818.0
	Deficit 1,247.0
B. State enterprises—	
Post and Telegraph, Mines, Forests, Ammunition Works, Mint, State Printing Office, Theatres, &c.	38.3
C. Railways	831.9
	Deficit A, B, C 2,137.2
D. Monopolies	1,300.5
	Net profit
	Total deficit 836.7

Since the deficit in the Budget for 1923 was estimated at 2,664.2 milliard kronen (in reality it will amount only to about 1,500 milliard kronen), the above table shows that it has been reduced by 1,827.5 milliard kronen, and even the Finance Minister expressed the hope that he might be able further to reduce it, by economy and increased taxes, to 146.7 milliard kronen—i.e., the figure as estimated in the League of Nations' scheme for the end of 1924.

The Treasury has further made considerable savings out of the League of Nations' Loan, which are reserved, under the control of the Commissioner-General, for unforeseen expenses. No exact figures are available as to the amount of the unused balance of the League of Nations' Loan. Since, however, the Finance Minister stated in August last that about 5,000 milliard kronen were still in reserve, and calculating that of this amount 1,500 milliards will be necessary to cover the deficit of 1923 and 837 million to cover the deficit of 1924, one can assume that in the beginning of 1925 about 2,600 milliard kronen of the loan will still be available.

However satisfactory this improvement may be, it must not be overlooked that the recovery in the Budget is mainly due to the large increase in public revenues and

not to the cutting down of expenses. To what extent the taxes have been, and will further be, raised is shown by the following comparisons:—

	Revenue Deriving from Budget, 1923.	Budget, 1924.
	Milliard Kronen.	
Income-tax	509	950
General tax on profits	40	145
Joint stock companies tax on profits	113	400
Tax on liquors	139	160
Tax on beer	114	190
Tax on sugar	33	42
Tax on turnover of goods	450	1,400

If it is further considered that at the beginning of 1924, railway fares will be increased by 25-30 per cent., postage by 50 per cent., and telephone fees doubled, one can judge that the cost of living in Austria will continuously rise. The following table shows the increase in the cost of living during this year:—

Month.	Inc. or Dec. as Compared with the Previous Month in %.	Month.	Inc. or Dec. as Compared with the Previous Month in %.
January	+ 1	July	— 5
February	+ 2	August	— 4
March	+ 6	September	+ 3
April	+ 7	October	+ 2
May	+ 5	November	+ 1
June	+ 1		

The adaptation of taxes and tariffs to pre-war standard causes the tension between the price of goods and wages to become more accentuated. In consequence of this, first, State officials, then bank clerks, then industrial employees and workmen raise claims for higher wages and salaries, which are mostly granted under high pressure. At the present moment, for instance, all workmen and employees of the metal industry are asking for an increase in wages, and threaten a general strike if their claims are not considered. The Government, which has already granted an increase in salaries to State officials, is trying to act as intermediary in order to avoid a general strike, which would seriously endanger the improvement already begun in the economic situation. The situation in industry is, generally speaking, fairly good. Factories are, on an average, employed to at least 60 per cent. of their capacity; some industries—as, for instance, the electric industry—even to a better degree. This is mainly due to the elimination of German competition; especially Solingen steel goods, German agricultural and other machines are lacking. A number of German firms are endeavouring to transfer their businesses to Austria, since they will not be able to work under existing conditions in Germany for some time.

In the summer session of the last Parliament the new Tariff Bill had to be set aside because it raised serious dissent between industrialists, agriculturists, and the ruling parties in the Parliament. At present the Government is preparing a new Bill which will certainly be Protectionist. The difficulty is that the farmers will agree to Protection for industries only if they also receive Protectionist concessions. On the other hand, however, some countries with which negotiations for commercial treaties are pending—especially Jugo-Slavia—are against Protection of Austrian agriculture, which would sap their imports. However, the Protectionist movement in Austria has been strengthened of late owing to various reasons; the Swiss cement industry, for instance, which enjoys considerable reduction in fares by the Swiss railways, is exercising a dumping activity against Austria which is becoming more and more marked.

KOENIGSWARTER & Co.

Bankers.

Vienna (Austria).

IX. PEREGRINGASSE 2.

Every description of Banking Business transacted.

Correspondence Invited. Telegraphic Address: Kingswart, Vienna.

The process of liquidation, which set in on the Vienna Stock Exchange in the middle of August, seems to have come to an end. Although there was very little business during the past month, the last few days showed an unmistakable tendency for the better, and nearly all quotations went up slightly. It seems that foreign buyers are again taking an interest in Austrian securities; also the casiness of money ($\frac{1}{2}$ to $\frac{3}{8}$ per cent. per week) offers good chances for a possible recovery of the market. It is even said that within the last few days a credit of one million pounds sterling has been granted to a leading Vienna bank for several months, which, if true, will, of course, make money conditions still easier. Western currencies have fallen during last month. The English exchange, which at the end of October was 318,500 kronen, went back, in accordance with the fluctuation of the pound on foreign markets, to 301,000 kronen on November 20th, and stood at 310,000 kronen at the end of November.

ROUMANIA.—NEW EXPORT POLICY—EXPORTS—TRADE BALANCE IN 1922—PAYMENT OF COMMERCIAL DEBTS—NEW BUDGET.

(FROM OUR CORRESPONDENT.)

BUCHAREST, December 13.

THE past month has marked an important step forward in the changing economic policy of the Government. The export of wheat, wheaten flour, rye, and bran, which has been regarded as a Government monopoly since the war (i.e., exported only by the Government, and chiefly for the purpose of liquidating certain external obligations), has now been declared free—subject, of course, to export taxes, which are payable in "strong currencies." The new régime came into effect yesterday, the tax on wheat being fixed at £35 (or \$152) per carload of 10 metric tons, which, however, is subject to revision on the basis of Lei 25,000 per carload. Concurrently with the removal of export restriction on the principal grains, lucerne seed, sunflower seed, and sunflower seed oil have also been declared "free," the export taxes on these being respectively on the basis of Lei 10,000, 30,000, and 80,000 per carload.

Government officials have recently stated that there are at present 10,000 carloads of wheaten flour available for sale abroad, but the latest crop returns have scaled down the earlier estimates of this year's production of wheat. The following table gives the figures published a few days ago by the Ministry of Agriculture:—

GREATER ROUMANIA.		
	Areas Sown to Wheat. Hectares.	Production. Hectolitres.
Year 1923.....	2,640,262 ..	34,874,602
" 1922.....	2,649,640 ..	32,687,407
" 1921.....	2,488,335 ..	27,648,749
" 1920.....	2,022,710 ..	22,050,034

As last year's wheat crop was only about sufficient for internal needs, there cannot be any very considerable surplus of the present crop available for export, and, in any event, the Danube will no doubt freeze over within a week or two, thereby practically shutting off the movement of grain until March or April. In spite of the fact that the only probable immediate effect of the new policy will be to raise the internal cost of living, it is important in that it will undoubtedly stimulate production next year. The Government has announced that the next commodity to be "freed" will be petroleum.

The following table, which is taken from official figures, shows a much improved situation in regard to exports:—

(In Thousands of Lei.)

	Declared Value of Exports.		Export Taxes Collected.	
	1922.	1923.	1922.	1923.
For the month of October	978,446	1,583,468	354,236	555,933
January 1 to October 31...	6,480,363	9,819,975	806,476	3,381,700

It is worth adding that the lei exchange has depreciated by about 15 per cent., as compared with the corresponding period last year. These figures thus show that considerable real improvement has been made this year.

That the general economic situation is improving is further testified to by the figures of Roumania's foreign trade for the year 1922, which have also just been made public. Reducing the total volume of trade (valued in paper lei at 23,962 million) to a gold basis at the average rate of exchange for 1922, exports are valued at 433 millions gold lei, and imports at 420 millions. This "active" balance of 13 millions compares very favourably with the adverse balances of 1919, 1920, and 1921, which—again reduced to a gold basis—were respectively 1,105,379, and 268 million lei.

A noteworthy feature of trade in 1922 was the further substantial decline in imports. In paper lei, these were valued at 11,706 millions in 1921 and 11,799 millions in 1922; but, reduced to gold lei, the respective figures are 840 and 420 millions. The imports of the Old Kingdom alone in the last pre-war year were valued at 590 millions. The principal reasons for the striking decline in 1922 imports were probably the development of domestic sources of supply, Government restrictions on imports, business uncertainty caused by the fluctuating exchanges, and the curtailment of foreign credits to Roumanian merchants.

On December 10th the Chamber of Deputies voted a new law modifying the law of June 3, 1923, for "regulating the payment of commercial indebtedness contracted in foreign currencies prior to January 1, 1922." The new law cancels those provisions of the law of June 3rd which are in contradiction to the so-called British Conventions dated February 15th and March 9th, and also provides for a further three months' "term of grace" on the payment of trade debts, so that funding agreements can be negotiated with other foreign creditors. Swiss creditors have already accepted an agreement similar to the British.

The Minister of Finance has announced that his Budget estimates for the fiscal (and calendar) year 1924 will total 24,000 million lei. The present Budget (from April 1st to December 31, 1923) totals 15,406 million lei—or about 20,100 millions calculated on a yearly basis. In his preliminary outline the Minister has stated that the new Budget estimates will create a fund of 1,360 million lei for the payment of interest and amortisation on the State's internal and external funded indebtedness, particular attention being paid, apparently, to the £35 million sterling loan consolidated in 1922.

Letters to the Editor.

EGYPTIAN CURRENCY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—On inquiry I find that there exists in Egypt an important party which is agitating for an immediate return to a gold basis on the pre-war parity between the sovereign and the piastre. I desire, therefore, to point out that nothing in the article on the above subject in the *Economist* for November 17th can be construed into an argument in favour of such a policy. If the wrong turning was taken in August, 1914, no doubt with the best intentions on behalf of Egypt, the remedy does not necessarily lie in an immediate reversal of the path. The consequences of a sudden return to the gold basis could not fail to be extremely serious to both the external and internal trade of the country. For example, the price of cotton and its products would immediately fall by 12 per cent., the present premium on gold. Rents of agricultural land, which in Egypt largely depend on the price of cotton, and the price of land, would also drop. The real value of the external debt of the Government would be automatically increased by about ten million Egyptian pounds, and the interest by about £400,000 annually. At the same time the Customs dues would automatically fall by about 12 per cent., or, say, half a million pounds. These are some of the results which would follow quite independently of any compensation that might have to be paid by the Government for damage arising from its change of policy, and on the assumption that no kind of panic ensued when prices began to fall. They are enough to show that the idea of a sudden reversion to a gold basis is impracticable.

Further, I believe the desire for such a monetary policy to be founded in error. A currency connection does not

necessarily imply a political bond. Two recent cases may be cited in contradiction of the idea that it does. Poland is introducing a gold coinage, the unit of which, the zloty, is based on the Swiss franc, and Dantzig has actually based its new currency on sterling, though in the one case there is no political bond with Switzerland, and in the other none with Great Britain.—I am, &c.,

THE WRITER OF THE ARTICLE.

CHINESE BONDS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There are possibly one or two considerations which may be overlooked in connection with the communique issued by the Stock Exchange reflecting upon the policy adopted by the Chinese Government with regard to the German issues of certain of their bonds, and hence, perhaps, you will allow me to point out that the doctrine of seizing private property for the payment of public debts was not initiated by the Chinese Government, but that in this respect they have merely followed the example of their European Allies. In pursuance of such a doctrine the Chinese Government is, it seems to me, clearly right in treating German issued bonds as enemy property until the contrary is proved.

It is not suggested, apparently, as a measure of retaliation, that the Stock Exchange here should remove from its lists certain other Chinese bonds. Whilst such a step might limit the dealings here and possibly militate against the interest of English holders of such bonds, it would hardly in any way injure either the good name or the credit of the Chinese Government. I can well imagine that this suggestion would be welcomed by those who, without due inquiry, have been purchasing enemy-held bonds at low prices in the hope of realising a big profit.—Yours faithfully,

CHARLES WATNEY.

A MONOGRAPH ON SHIPS.*

IN "The Ship and Her Work" Sir Westcott Abell, who is chief ship surveyor for Lloyd's Register of Shipping, gives the substance of lectures he delivered at the London School of Economics. Sir Westcott deals with the physical principles involved in the construction and operation of ships, and, while economic and navigational aspects are by no means neglected, the standpoint throughout is primarily that of the naval architect rather than that of the man of business or the mariner. A number of diagrams and tables help to make clearer to the non-technical reader the discussion of sea work, risks, structures, discipline, and engines. Under discipline are included registry and tonnage measurement regulations, ship classification, and rules as to loadlines.

On the matters of which he treats the author has had wide experience, and he has also the faculty, which those who are masters of their subjects do not always possess, of describing essential features in simple terms. The book is, therefore, interesting and useful, though some points of criticism may be taken. The style, though clear, suffers from the repetition in excess of such phrases as, "It is fairly obvious that," "It may be said that," "It is well known that." This frequent use of sentences beginning with "it" deprives the work of grace, which, after all, helps the sense.

In addition, one or two points which go beyond form call for remark. The suggestion that, in calculating the risks passengers incur in sea travel certain exceptional casualties should be excluded, would probably surprise an actuary. Insurers, when considering premiums, could hardly afford to exclude even exceptional cases from their calculations. Again, the reference to the carriage of wood

1-4, GREAT TOWER STREET - - LONDON, E.C.3.

deck cargoes is open to question. This is a matter on which opinions have been very divided. There has been much controversy. The subject was considered, as Sir Westcott Abell states, by shipowners, who recently put forward certain proposals for regulations, but those have not advanced beyond the stage of proposals emanating from one section only of the people concerned. Consequently the statement in the book that "the master of the ship is made responsible" for certain things, and that "apart from this, there are special regulations" as to some other matters, misrepresents the existing state of affairs. The regulations which have been suggested may or may not at some future time be brought into force.

DICTIONARY OF POLITICAL ECONOMY.*

IN this new edition pages 1 to 843 remain practically the same as in the first edition of Sir R. H. Inglis-Palgrave's classic reference book. But 80 pages have been added as an appendix, and the new material brings the volume in line with the requirements of the up-to-date student. Into the new pages is packed an immense amount of information and abundant statistics brought up to recent years, bearing, among others, on such subjects as French and German post-war finances, British taxation and food supplies, gold production, index numbers, unemployment insurance, and international law. Mr Higgs appears to have combined the virtue of brevity with the art of clear exposition of big developments, and this volume will be found well up to the expected high standard.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.

December 27.

ACCOUNT.

December 28.

TOWARDS the end of the week, Stock Exchange markets took on a calmer aspect than they wore on Monday and Tuesday, when stock was turned out in quantities at a time, and the atmosphere of the House grew more and more tense with every hour that passed. The lifting of the clouds came about in natural sequence to the severity of the fall, which was overdone in a good many markets, and served to attract a few bold buyers, whose efforts to pick up stock at bargain prices helped to stem the tide of flatness.

The War Loan has been down nearly to 99, and practically everything in the Consol market went acutely flat. Half-a-million pounds, in a single line, changed hands of the new South Australia 5 per cent. scrip, the sale causing weakness, not in this stock alone, but in others of the same sort. A good deal of Conversion stock was also marketed. The mild recovery which occurred came about as a result of the cessation of selling, rather than from an inrush of new buyers. The market as a whole is hesitating; it is what the Stock Exchange calls tender.

Foreign bonds have been depressed, in spite of the greater hopefulness which develops on the Continent in the Franco-German relations. Chinese Sixes of both issues fell several points. Other Chinese bonds are lower. Peruvian preference fell abruptly, on closing by stale bulls disappointed at there being no revival after the dividend announcement. The French issues moved downwards, and Rio Tintos became conspicuously depressed on Paris realisations.

Home railways gave way because of Nationalisation fears should the Labour party be returned to power. Recovery ensued from the worst, but prices have given way on balance, the Undergrounds with the Heavies. The extensive programme of development outlined by the North-Eastern Railway had no effect upon the prices of the company's stocks. Grand Trunk Pacific debenture rose to 50 before it lost 2½ points. Argentine Railway stocks hardened, but fell back as real stock came to market. Brazilian Rails shared in the depression, and Mexicans further fell, in consequence of the insurrectionary movements, added to which the meeting on Wednesday did not throw much immediate light or consolation upon the outlook.

Rubber shares gave way, by reason of the inability of the market to resist the general conditions. Oil shares have been weak, a good deal of actual stock coming in. Tobacco and textile shares fell, by reason of the idea that, with a Labour party in power, any sort of trust or combination would be a mark for its attentions. Moreover, the British American dividend is well below anticipation. Hotel shares are lower, and breweries gave way. Wireless kept tolerably steady, though cable stocks shared in the all-round heaviness. Long strings of falls took place in banking and insurance shares.

The shipping market is dullish, though movements in this section have been comparatively light. Iron and steel shares showed a monotonous list of falls; prices here, however, as in various other industrials, finished the week well above the lowest levels touched during the period. Vickers, for example, enjoyed a smart recovery.

Kaffirs kept up tolerably well until the Rand Mines dividend, proving very disappointing, came as a wet blanket upon the market. Prices fell sharply, and although a rally occurred on Thursday, the result of the week's work is adverse to holders. Mining markets, as a whole, have been hesitating and shaky. The preliminary carry-over, which started on Thursday in the mining market, and yesterday in the general markets, gave indications of an increase in the bear account open in most speculative parts of the House. Members are disposed to think that the bulk of the selling by frightened folk has now been concluded, but that between now and the re-opening of Parliament markets will move uncertainly, though narrowly.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded	..	269,927,045 ..	..	..
ISSUES OF THE WEEK—

Navarino Recovery, Limited.—Authorised capital £50,000, divided into shares of 2s each. This company was incorporated in November last to acquire a concession granted by a Greek Government for the salvaging of the contents of the Turco-Egyptian Fleet "which were sunk in 1827 at the Battle of Navarino." Apparently the company is going to pay £40,000 in cash for this concession "from the Greek Government and the contract with Mr Contos." The terms arranged with the salvage contractor are interesting. We are told that "a contract has been concluded with Georges Contos under which he undertakes at his own expense or with the co-operation of third parties to carry out the salvage operations under the concession so that the capital required for salvage operations is to be provided by the contractor subject to the right to call upon the company to make advances up to £4,000 against security of articles raised, such advances to carry interest at 10 per cent. per annum. After first deducting the Greek Government Royalties, as stated above, Mr Contos will retain 62½ per cent., 3½ per cent. is payable to certain parties in Athens, and the company will receive 34 per cent. of the value of all salvaged materials." These details appear in the Press in connection with an application to the London Stock Exchange for a share quotation. We should like to know how much of the £40,000 paid goes to Mr Contos. Since first good English pounds were expended in attempts to save the treasures of another lost Armada—that of 1588—we have learned by experience that propositions of this nature, however hopeful, are inherently speculative.

Redfern's Rubber Works, Limited.—Authorised and issued capital £200,000, divided into 80,000 7½ per cent. cumulative "A" £1 preference shares, 40,000 7½ per cent. cumulative "B" £1 preference shares, and 320,000 ordinary shares of 5s each. The company was incorporated in 1905 with a capital of £5,000 to take over the business of Messrs Redfern, manufacturers of rubber heels and soles for boots, &c. The consideration was £4,992, payable in 4,992 fully-paid shares. By special resolutions in 1913, the company was converted into a public company and acquired from T. C. Redfern the benefit of the provisional protection of three patents connected with a new fibrous product, the consideration being £25,000 payable in cash. In 1918 the cumulative dividend on the preference shares was increased from 6 per cent. to 7½ per cent., and the capital was increased in October of that year to £100,000 by the creation of 20,000 preference shares which were issued at par. In 1920 60,000 7½ per cent. cumulative preference shares of £1 each and 160,000 new ordinary shares of 5s each were created. Of these shares 40,000 7½ per cent. cumulative preference shares and 160,000 ordinary shares were issued to the existing ordinary shareholders by way of bonus, and the remaining 20,000 7½ per cent. cumulative preference shares were issued for cash between the months of February and December in 1920. By special resolution passed on August 8-24, 1921, the 80,000 preference shares created in 1918 and 1920 were in future to be known as "A" preference shares, and the remaining 40,000 preference shares as "B" preference shares; the "B" preference shares ranking for dividend next after the dividend on the "A" preference shares. These and other details are given in connection with an application for a London Stock Exchange quotation. Other information as to profits and assets and liabilities is, however, necessary before an investor can take an interest in the undertaking.

Sabie (Transvaal) Gold Mining Company, Limited.—Authorised capital £70,000, divided into shares of 5s each. Shares to the number of 160,000 have been issued, and are fully paid; another 84,000 shares are to be issued as fully paid in part payment of purchase price. The company has been

formed to take over precious metal claims in the Transvaal. The remainder of the purchase money is the sum of £4,000, payable in cash. We notice, amongst other details, that "the sum of £15,000 is payable to Guests Trust, Limited, as commission for placing the shares," and that "such sum has, in fact, been paid." This and other information is given in the Press in connection with an application to the London Stock Exchange. A very speculative proposition.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

BANK OF MONTREAL.

SIR VINCENT MEREDITH'S REVIEW OF TRADE AND FINANCIAL CONDITIONS IN CANADA.

The 106th annual general meeting of the shareholders of the Bank of Montreal was held, on December 3rd, in the board room at the bank's headquarters.

On motion of Lord Shaughnessy, Sir Vincent Meredith, Bart., was requested to take the chair.

The Chairman then called upon the general manager, Sir Frederick Williams-Taylor, to read the annual report of the directors to the shareholders.

THE PRESIDENT'S ADDRESS.

Sir Vincent Meredith, in moving the adoption of the report, said:—

Our banking year has been one of many perplexities. Our profits, in common with banks at home and abroad, are not so large as during the war and succeeding years, but I feel sure it has been a gratification for you to know we have been able to pay our usual dividend as well as a 2 per cent. bonus.

The lessened profits are due partly to the fact that our customers have leaned less heavily upon us, but chiefly because we felt that in view of the possibility of untoward developments in the banking world, our cash reserves should be kept exceptionally strong to enable us to lend aid if and when called upon to do so.

There is also the incidence of much heavier taxation to be considered in connection with the balance-sheet. Our resources, however, are so large and our earning power so constant that I have no misgivings as to the maintenance of substantial profits.

THE BANK ACT REVISION.

The banking system of Canada has received an unusual degree of attention since our last meeting, partly in consequence of the failure of a small institution in the neighbouring province, and principally in connection with the decennial revision of the Bank Act.

It is unnecessary at this time to traverse again the denunciatory comments of creditless critics, the illusory schemes for enriching the country by unlimited printing press currency, or the peculiar tenets which regard banking as the instrument of capital and a public menace. Of all the radical remedies proposed to Parliament, practically none was new, nor had survived the test of experience, either in our own or other countries, and it was perhaps fortunate that at the very time currency inflation was urged, Germany presented impressive proof of the confusion, loss and privation occasioned by such policy.

The revised Bank Act embodies no novel principles. The powers and privileges of the banks remain very much as before, but provision has been made in the way of wider authority of auditors and heavier responsibility of directors, by which means it is hoped to strengthen the safeguards for depositors and shareholders. It is trite to say that however rigid the law, the solvency of banks—as, for that matter, of all business—depends upon the integrity, diligence and perspicacity of the management.

The amended Act continues to the banks scope for wide and helpful operation in finance and commerce, restrained by considerations of safety, but not so hampered as to prevent fair profits under prudent direction. In this connection it may be observed that despite the notion held in some quarters respecting the profitable nature of banking, capital has not greatly sought this source of investment. In the quarter century, from 1876 to 1901, the capital of Canadian banks remained stationary, and in the subsequent twenty years of rapid commercial development, less than \$60,000,000 was added. Banking resources, apart from deposits, have been derived for many years past more from accumulated reserve of profits than from the investment of new capital, a condition which it may become desirable to correct when trade expands, in order to maintain an adequate note circulation.

BUSINESS IN CANADA.

I regard the state of trade in Canada as having improved during the year. Statistical evidence supports this conclusion. Bank clearings, railway receipts, foreign commerce have all increased. Stability of commodity prices has been a favourable factor, encouraging confidence and inducing freer buying. The substantial decrease in unemployment—which has virtually reached the zero mark—is an unerring sign of better business.

AGRICULTURAL CONDITIONS

To crown all, a bountiful harvest has been reaped, the wheat crop greatly exceeding any former yield. In a country so vast

as Canada, variation in production is inevitable both in quantity and quality, but taking the harvest as a whole, it has been both abundant in yield and excellent in quality.

It is true that prices of cereals continue low, giving scant profit to grain growers, but even at prevailing quotations the enormous store of wheat gathered represents an amount of money the circulation of which should stimulate business, not alone in the West, but throughout the Dominion, and permit much liquidation of debts in agricultural areas.

With the relatively low price prevailing for wheat, a condition that may persist for some time, it seems imperative that our western farmers should at once proceed to diversify their crops and enter upon dairying, hog, and poultry raising, if only for their own needs, a course now followed in many of the Western States with marked success.

With our vast, sparsely settled areas, where the lack of companionship is keenly felt, I believe that if a trial were given by the colonising companies to placing settlers in communes or villages, as practised in France and other foreign countries, it would prove a popular as well as a successful venture.

IMMIGRATION.

There has come since we last met a little hope that the problem of immigration is in the way of successful solution. This is generally acknowledged to be the most important question confronting the country. This year a relatively large increase in the number of newcomers has occurred, and though the figures are still small, I am not without hope that the coming year will witness a material enlargement.

THE BURDEN OF TAXATION.

I make no apology for stressing again the desirability, one might even say the imperativeness, of moderating public taxation, federal, provincial, and municipal, in order to lighten the load pressing upon business and deterring development of resources. The margin of profit in all business is seriously curtailed by the accumulation of taxation, a condition that retards enterprise and discourages thrift. In making this remark, I am not unmindful of some recent signs of improvement. The rising revenue of the Dominion Government promises a balanced Budget at the close of the fiscal year, and if out of this, with further reduction in expenditure, comes some remission of direct taxation upon trade, it will undoubtedly operate to the general advantage.

THE RESERVE OF READY MONEY.

The prompt response to the recent appeal of the Finance Minister for a loan to retire the maturing Victory Bonds is gratifying evidence of the ready resources of the Canadian people. Subscriptions aggregating \$200,000,000 made within a week is an event scarcely less notable than the successful launching of large loans during the war; yet even this formidable amount represents less than one-half the investment made during this year in public securities by the people of Canada, more than \$400,000,000 of which have been absorbed. We are beginning to do our own financing, though possibly the reluctance to engage in new business enterprises may have been a factor in the large accumulation of ready money available for investment.

OUR FOREIGN TRADE.

Despite the disorganised state of European markets, the foreign trade of Canada has been gradually expanding. In the seven months ending October 31st, the aggregate of this trade amounted to \$1,094,564,000, a gain of \$172,864,000, or about 18 per cent. over the corresponding period last year. The enlargement of imports began in August of 1921, and has since continued without interruption, while in lesser degree exports have followed the same course. This healthy and hopeful sign of recovered trade derives additional significance from the fact that it is not the consequence of rising prices, but of augmented quantity movement. A satisfactory aspect of our foreign trade is the sustained excess of exports over imports, the favourable balance in the last seven months having been \$13,222,000, and for the year \$82,000,000.

THE NATIONAL RAILWAY.

It is a satisfaction to learn from the published reports that under the new management the National Railway's earnings show a surplus over working expenses in the operations of the first nine months, which may be appreciably increased by the close of the year.

This surplus is chiefly derived from improved earnings on the American branches of the railway.

It must not be overlooked, however, that the company has issued bonds during the year, guaranteed by the Dominion Government, amounting to many millions, which constitute an obligation of Canada for interest as well as principal, so that a material portion of surplus operating revenue will be absorbed by new capital charges.

THE QUESTION OF INFLATION.

The relative prosperity of business in the United States and Canada in the last year or two is both a cause and effect of the greater stability of prices. A falling market is fatal to trade. Manufacturers will not extensively produce, nor merchants freely purchase when prices are declining, of which fact there was abundant evidence during the late deflation. Criticism is sometimes made that restriction of bank credits produced the sharp reaction from the post-war boom, and the opinion has been expressed that an extension of these credits would give impetus to business. I may point out that the recurring cycles of commercial ebb and flow are not regulated by credits or currency but by a higher economic law. It is as impossible to obviate trade depression by persistent emission of currency as to quench a conflagration with oil, of which truth Germany affords an illuminating example. Bankers restrict credits under compulsion of circumstances, not less in their own interests than in that of their customers. When, however, prices have become stabilised in the world's markets and there is reasonable assurance of the continuance of that condition, no undue restriction is placed upon credits, nor dependable borrowers turned empty-handed away.

In my opinion, further deflation would incur the risk of depressing industry and would not be in the interests of the country at this juncture. The ultimate goal to which our financial policy must be directed should be the gold parity, but under existing conditions we must make haste slowly.

THE BUSINESS OUTLOOK IN CANADA.

The outlook in Canada, as I see it, is for a continuance of reasonably satisfactory conditions, with possibly some further revival in trade, but we cannot hope for substantial and permanent betterment until world-wide conditions show a marked improvement, and this is likely to take time.

THE GENERAL MANAGER'S ADDRESS.

Sir Frederick Williams-Taylor, the general manager of the bank, then made his annual address as follows:—

Mr Chairman and Gentlemen:—

The one hundred and sixth annual balance-sheet of the bank is now before you for your consideration, and, in accordance with custom, I shall comment upon the changes therein during the year, also upon the conditions under which we have operated, and which have had a bearing on our affairs and affected our welfare.

It has been a trying year for Canadian bankers, probably as trying as any year since Confederation in 1867. In Canada, as elsewhere, as a consequence of the loss and distress resulting from the disorganisation of business and industry, a spirit of unrest has developed among groups of individuals, inclining them to listen to the vain pretensions of agitators promising quick relief from ills which only time and adherence to sound business principles can cure. Nevertheless, we are better off in this respect than is the case with others in many countries; it is a passing phase, nothing more.

Also, at this particular juncture economic and political confusion abroad necessarily reacts upon this country to an important extent, while it seems more than ever apparent that for all time our economic welfare must be under the special influence of conditions in the United States of America. It is so important to bear this in mind that I may be excused if I repeat the remark contained in my address to you a year ago: Canada cannot progress as she should until our cost of living and our taxation are less than across the line.

Canada's economic position will not be satisfactory until we succeed in balancing our public revenue and expenditure, including railways.

For the time being we are handicapped in three distinct respects, two of which are common to all countries engaged in the war from the beginning, and at present endeavouring to balance their budgets, viz., high cost of living and high taxation. Further, Canada is suffering from lack of adequate population.

As the first two handicaps diminish we shall doubtless attract a greater volume of immigration, and, what is still more important, we shall retain the people who come, as well as our natural increase. Therein lies economic salvation for the Dominion. The remedy is in our own hands, and is practicable. We have only to conduct our personal and public affairs more economically than do our neighbours in that most wealthy and free-spending of all countries, the United States.

Adversity is a severe teacher, but out of our trials of the last two years surely good will come.

CANADA'S PRICELESS ADVANTAGES.

Meanwhile we must not lower our Flag, nor is there any occasion for doing so. Canada has priceless advantages as a place to live in, to work in, and to play in. These should be obvious to all—as indeed they are to our friends in the United States, who now have \$850,000,000 or more commercially invested in Canada—and they will without question attract to us in the fullness of time the people we need.

Prosperity in full measure cannot, however, return to this country until agriculture, our chief industry, becomes again more profitable. The lot of the farmer in the last few years has been hard, owing to low prices for products and high cost of requirements. This unfortunate state of affairs still persists. It is the result of world-wide, not local, conditions, and is by no means confined to Canada. Agriculture, however, cannot be permanently depressed. In the nature of things an improvement is bound to ensue, but the burden in the meantime bears heavily upon this vital industry. For your information, of this bank's current loans in Canada upwards of \$33,000,000 are to the agricultural community.

Quite apart from bad debts, however, the commodity in which banks deal, viz., money, commands no better price in Canada than before the war, while the price paid the depositor is the same. The margin, therefore, between what money costs us and what we receive for it is unchanged, while the cost of operating has increased greatly. For these reasons net banking profits are necessarily diminished.

FEWER FAILURES.

Business failures in Canada and Newfoundland during the year ended October 1st last numbered 3,482 with liabilities of \$71,500,000, as compared with 3,571 failures with liabilities of \$73,500,000 during the previous twelve months.

As a result of lessened business activity our own current loans in Canada are less by \$8,000,000 than a year ago. This means a lower earning power, because the funds so released have to be invested in gilt-edged securities, or employed in call loans in New York and London, upon which we receive a lower rate of interest.

I may say that the loaning department of our business is scrutinised with unremitting care by the bank's executive and by our board, and, so far as can be judged, specific and full provision has been made for all revealed and possible losses.

Our total deposits show a net decrease for the year of \$26,000,000. This is accounted for by the withdrawal of certain large Government and corporation balances, which were required during the year for special purposes. I am pleased to report a steady and satisfactory growth in our savings deposits, which have increased by some \$22,000,000 since our last annual meeting.

Interest-bearing deposits of all the banks, which for the most part represent personal savings, have gained \$10,000,000 in the same period, this notwithstanding the flotation in Canada of a new \$200,000,000 Dominion Government refunding loan, and the activities in some districts of provincial savings banks.

INCREASED INVESTMENTS.

Our investments now stand at \$103,000,000, an increase of \$45,000,000 during the year. This increase is in the form of gilt-edged securities readily realisable, so that we shall be in a position to meet the borrowing requirements of our customers when the country enjoys a return of industrial activity.

As an indication of the expenses your bank is under in the matter of taxation I may say that our Dominion, provincial and municipal taxes in Canada during the bank year amounted to no less than \$1,300,000, in addition to which we paid full income-taxes on our earnings in New York and London and elsewhere abroad.

In order to provide better facilities for a number of influential customers, and at their earnest request, we opened a branch at Puebla, the capital of the State of Puebla, and the centre of a rich agricultural district and headquarters for a number of important industries.

The growth of our business in Mexico City has necessitated the moving of our branch to larger and more commodious quarters in the centre of the financial district. The staff now numbers 122.

In September last the Mexican Government was accorded formal recognition by the Governments of both the United States and France.

The General Manager then gave in detail the reports on the conditions of trade, &c., in the various provinces, as supplied by the superintendents.

The report having been adopted, votes of thanks to the president, vice-president, directors, and staff were passed.

The votes of thanks having been responded to by the President and General Manager, the ballot for the appointment of auditors and the election of directors was duly proceeded with, and the meeting terminated.

ANGLO-PERSIAN OIL COMPANY, LIMITED.

INTERESTING REVIEW OF COMPANY'S POSITION AND PROSPECTS.

CONTINUED INCREASE IN PRODUCTION.

CHAIRMAN'S REPLY TO CRITICS.

The fourteenth ordinary general meeting of Anglo-Persian Oil Company, Limited, was held, on the 17th instant, at Winchester House, Old Broad street, London, Sir Charles Greenway, Bart. (the chairman), presiding.

The secretary (Mr John Clark) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen,—When I last had the pleasure of addressing you I was hopeful that we would at least be able to maintain our previous dividend. Unfortunately, however, owing to disappointments we have had in connection with the throughput of our refinery at Abadan, this is not the case. Nevertheless, the results shown by our accounts may, I think you will agree with me, be regarded as satisfactory, bearing in mind these disappointments and the fact that we have—following our usual conservative policy—made very full provision for depreciation and for any writings down that are necessary in connection with our prospecting and testing operations, both in Persia and in other parts of the world, in our search for further sources of supply.

The dividend on the ordinary shares that we have recommended is 10 per cent. The profits made might have justified a higher dividend, but in view of the desirability of conserving our financial resources as much as possible, owing to the smaller revenue resulting from the failure of our Abadan refinery to realise its estimates, we have come to the conclusion, after full consideration, that the dividend we have recommended is all we should, with prudence, pay.

CURRENT YEAR'S PROSPECTS.

As to prospects for the current year, prices of our main products have, as you are all aware, declined materially, and our Abadan refinery has, as I have already mentioned, so far failed to obtain the throughput for which it was designed. On the other hand, we shall gain some benefit from increased production, which, though not up to original estimates, will be substantially in excess of the year for which the accounts are now before you, and also there will be some set off against the lower prices consequent on the reductions which we have been able to effect in our costs of distribution—partly as the result of the larger turnover, and partly owing to the general decline in costs of all kinds which has taken place during the past 12 months. So far as it is possible to judge, however, I am afraid that we cannot look for any improvement in results for the current year. In the following year, however, we may, I think—subject, of course, to there being no further decline in the prices of our products—look for a very substantial improvement, as the Abadan refinery should then be on a full working basis, and the refineries which are being erected in Scotland and Australia by associated companies will, as mentioned in the report, be completed and in full operation.

COURSE OF MARKETS.

As to the future course of the markets for petroleum, it is, of course, always dangerous to prophesy. Last year when I addressed you there was every indication of a speedy recovery in prices because of the serious falling off in the production in Mexico, but this was later on more than counterbalanced by a very large increase of production in the United States, the country which only quite recently was predicting the speedy exhaustion of its fields, and claiming on that score a large participation in every other known oilfield in the world. Now again, however, the production in that country has begun to fall off, and it would seem pretty certain that we are not far off the point at which demand will again overtake supply. If one follows the course of the world's production and of prices over a long period of years, it will be seen that there is in oil, as in most other commodities, an automatic action and reaction, accounted for by the fact that a period of high prices gives a stimulus to production in the poorer fields, where producing costs are high, which for a time causes the supply to overtake demand, and that a period of low prices has the contrary effect. The over-production of to-day is the direct result of the abnormally high prices current during and immediately subsequent to the war. The low prices current to-day must inevitably, in their turn, lead to the cessation or reduction of drilling in these poorer fields—the oil from which forms in the aggregate a large proportion of the world's total supply—and to the consequent reduction of the quantity of oil produced to a point at which supplies will again be overtaken by demand. This swing of the pendulum in oil is a

certainly, but whether the return swing, in the direction of demand overtaking supply and consequent higher prices, has now commenced or not is largely a matter of opinion. My own is that it has, and that the unexpected increase of production in the United States resulting from the stimulus given by the abnormally high prices of three or four years ago was only a temporary check, which is now nearly, if not quite, exhausted, while the fact that the world's consumption of oil products is yearly increasing by leaps and bounds must necessarily accentuate the reaction towards a recovery in prices.

BALANCE-SHEET ITEMS.

In the balance-sheet the amount of capital issued shows an increase on the previous year of a little over £2,200,000—the proceeds of the recent issues of ordinary shares, less calls previously paid. The amount of debenture stock outstanding is reduced by £125,000, the amount redeemed during the year. The employees' provident pension and insurance fund shows an increase of about £260,000, and now stands at the very gratifying figure of over £816,000. The loan from bankers shown in the balance-sheet is a temporary floating loan which we have arranged as an alternative to issuing further capital. I will refer to this later on, but in the meantime I may mention that the amount outstanding to-day in respect of this loan is only about one-third of the sum shown in the balance-sheet. The reserves, which have been augmented by the premia realised on the last issue of ordinary shares and by a further allocation of £100,000 to the debenture redemption fund, show a net increase of about £500,000, after withdrawing from them £1,830,000 for the purpose explained in the report.

DIVIDENDS.

The balance at the credit of profit and loss account, after paying dividends on the preference shares for the half-year ended September 30, 1922, was £2,993,051. Out of this we have since paid a further £437,500 in respect of preference dividends for the half-year ended March 31, 1923, and the dividend of 10 per cent. on the ordinary shares will absorb £777,763, leaving a balance of £1,777,788 to be carried forward. This balance is again a very large one, but it is, as before, subject to such excess profits duty as we may be liable to pay for the year ended March 31, 1921, and also to corporation profits tax for the year ended March 31st last. What the ultimate liability in regard to the first of these items may be is still uncertain, but whatever it may be both it and the corporation profits tax are much more than covered by the balance carried forward.

We have made no further allocation from profit and loss account this year for concession amortisation reserves, because the cost of the concession has already been written down to a very low figure. Neither have we made any appropriation to general reserve, because this fund has now been applied to the main purpose for which it was originally created—namely, to the writing down of certain investments and expenditure connected with our prospecting and drilling operations outside of Persia, and to making a special provision against others which are still in course of examination and may not prove to be capable of successful commercial exploitation.

On the assets side, the first item—namely, "Purchase price of concession, shares in and advances to associated companies, &c."—shows an increase for the year of about £6,000,000, this representing principally further advances to associated companies to meet capital outlay which has been incurred during the year in connection with additions to our fleet, refineries and distributing organisations. The contingent liability of £1,961,904 referred to in small type will to a large extent disappear in the near future, as the principal item included therein is no longer a real liability, and steps are being taken to extinguish the bulk of it. The next item, "Refineries, tank installations, pipelines, &c.," shows an increased capital outlay for the year in respect of these assets, after allowing for depreciation, of about £1,100,000.

FALSE RUMOURS.

A good deal of loose talk has, I am sorry to say, been current during the past few months as to the financial position of the company. Statements have been made in the Press—and even under cover of the sanctity of Parliamentary privilege—as to "colossal losses" which we are supposed to have made. The past and present published accounts of the company and the full information

which I have given you from time to time, and which I am continuing to-day, as to the policy of the company are, and should have been to those who made them, whether innocently or for ulterior motives, sufficient refutation of these ridiculous suggestions.

Colossal expenditure, both of a capital and revenue character, there has, of course, been, because this is a colossal company—the biggest British industrial concern, I believe, measured by the widespread extent and value of its assets, which exists in the Empire to-day, notwithstanding that we have only been in existence for 14 years, and that our chief developments have been made during a period of difficulty without a parallel in commercial history, but the whole of this expenditure was legitimate and absolutely essential to the building up and maintenance of our business as a self-contained organisation, in accordance with the policy laid down when the Government entered into partnership with us.

The basis for some of these attacks upon us has, no doubt, been the common knowledge that we have incurred a considerable amount of expenditure in connection with our prospecting and drilling operations in the Argentine and other countries outside of Persia, and that a good deal of our recent capital expenditure in additions to our fleet, pipelines, refineries, &c., was incurred at a time when costs were much higher than they are to-day.

The expenditure we have incurred in respect of the first of these two items can, so long as it is met out of current profits from year to year, and so long as it does not bear an undue proportion to the amount of the profits earned—a principle which we have invariably strictly followed—no more be regarded as "losses" than can the money which a farmer expends in putting manure on his land or seed into the ground. No prudent business man—be he merchant, manufacturer or tradesman—takes all of his profits year by year out of his business, since in most cases if he did so it would quickly die of inanition, but retains some portion of them in the business for the purpose of endeavouring to maintain or expand his operations. This, gentlemen, is the policy we have been following, in common with every other considerable oil undertaking, in regard to our search for further oilfields, both inside and outside of Persia, and it is, I am sure you will all agree with me, an absolutely sound one and essential to our future welfare.

"A NECESSARY FORM OF INSURANCE."

In this connection I would like to point out that the expenditure which we have incurred in prospecting and drilling outside of Persia is no different in character from that which we have been incurring in similar operations inside the area of our Persian concession ever since our company was formed. Both were for the purpose of augmenting our reserves of crude and of making the future of the company more secure, and in respect of our Persian prospecting and testing operations, some of which have also been barren of result, we have in past years expended, and are still expending, very large sums, all of which are, of course, duly written off from year to year out of profits, just the same as is being done in the case of the expenditure incurred in connection with our outside operations. Expenditure of this nature is inevitable in the oil business if properly conducted and if carried on. It is, in effect, a necessary form of insurance against the falling off in production or exhaustion of any particular proved field, but to avoid misunderstandings I would add that our search for oil in other parts of the world has not been undertaken through any want of faith in the potential life or richness of the fields we are now working in Persia—which year by year give increased indications of productivity—or in the existence in Persia of other fields of equal extent and richness, but owing to the desirability of securing supplies of crude in other parts of the world and thereby broadening the basis of the company, having in view the worldwide character of the refining and distributing organisations which we have had to create in order to dispose of our present Persian production.

No one who has had the least experience of the oil business would ever dream of expecting that every prospecting and drilling operation carried out in the search for additional sources of supply would lead to the finding of a paying field. Everyone knows that the only real test of the value of a field is the drill. As most of you are aware, geology is not an exact science, so far as defining whether oil is, or is not, present in commercial quantities in any given area of supposed petroliferous territory, and we should consider ourselves very fortunate indeed, and the expenditure connected with them as amply justified, if only one out of every ten of our test drilling operations resulted in the proving of a remunerative field; but you will be pleased to learn that, as a matter of fact, the operations which we have been carrying on have, so far, considerably exceeded this proportion of successes, and that the new territory so far proved as the result of these operations is of a value far in excess of the amount expended on the whole of our testing operations since our company first came into existence.

TANKERS AND REFINERIES.

I will now deal with the other direction in which it has been suggested that we have made enormous "losses"—namely, in our capital expenditure on tankers and refineries. It is true that we could replace some of these to-day at a much lower cost, but to describe this difference as a "loss" is ludicrous, because they were, and are, essentials of our business, just as much as the plough which a farmer buys to till his land or the carts to carry his crops, and had we delayed ordering them until now in order to avail ourselves of to-day's lower costs, we should have been still worse off; for, in the case of the tankers, we should either not have been able to produce the oil that they have carried at all, and, therefore, have lost the profits we have made on it, or have had to pay ruinous rates of freight on it to other tanker owners; and, in the case of the refineries, not have been able to refine the oil at all, and also have been minus the profits we have made on it. In both cases we should undoubtedly have been in a worse position financially than we are to-day, and, moreover, our whole scheme of creating a self-contained organisation capable of carrying on the oil business in all its branches would have been upset and delayed for three years or more.

Our tanker fleet is, in effect, only an extension of our pipelines, both being for the purpose of transporting our oil from the wells to the consuming markets. And our fleet of tankers is just as much an essential of our business as a whole as our pipelines, our refineries, our distributing organisations, our motor lorries, or even the tins in which we deliver our petrol to the consumer. As a matter of fact, however, even looking at the cost of our fleet from the point of view of a shipowner, the position is by no means unsatisfactory, for not only have we always written off the customary depreciation, but we have from year to year written off large sums of extra depreciation, with the result that its cost (and it is practically a new fleet) now stands in our books at a very moderate figure, and any difference between this figure and the probable replacement cost to-day is fully covered by our reserves.

VALUE OF THE ASSETS.

With these explanations you will see how unsubstantial are the rumours to which I have referred, but as they appear to have gained a certain amount of credence, and not unnaturally have caused some uneasiness among shareholders, I will go further and say with confidence that the balance-sheet now before you is one of the finest and most conservative ever placed before any body of shareholders, and one of which we have every reason to feel proud. All assets which have depreciated in value have either been written down or reserved against to their replacement value, and, following the practice of all soundly conducted industrial concerns, not a single one of the assets which have appreciated has been written up by one penny. And were the whole of the assets of the company taken at their true value to-day they would, in my opinion—at a modest computation—stand at from two to three times the figures represented in the balance-sheet now before you.

One other explanation which I think it my duty to give you is this. The expenditure of a capital nature during the past three years by the Anglo-Persian and its subsidiary companies has amounted to a total of about £32,000,000—not the modest £10,000,000 which we are accused of having laid out in that period, but £32,000,000, which sum is represented by a vast amount of property all essential to the proper and economic working of our business—wells, pipelines, pumping stations, whole towns occupied by our employees, refineries, a railway, our tankers and a large flotilla of smaller steamers, tugs, barges and other river and harbour craft, a vast amount of tank storage, ocean and inland bunkering and distributing installations, &c., &c., in all parts of the world. Out of this amount only £12,000,000 was provided for by the new capital issues (including premiums) made during those years. Of the remainder, no less than £20,000,000 was met out of earnings during that period, and £6,000,000 out of funds which we had in hand at the beginning of the period. The remainder has been financed on terms much more favourable than those on which we could have raised new capital. This proof of the extent to which we have been building up our present vast concern out of revenue will, I am sure, be a pleasing surprise to most of you, and be a further confirmation of all I have said as to the sound position of the company and the conservatism of the policy which we have been following in regard to our finances.

RECORDS REFUTE RUMOURS.

With regard to the attacks which have been made upon the administration of the company, I do not think it necessary to enter into any defence beyond the explanations I have already given to you. The object of these attacks is self-evident, but the successful records of the company and the facts I have given to you to-day more than refute the gross mis-statements and criticisms of our would-be detractors. All successful concerns arouse the jealousy and envy of others—the more so an oil company such as ours, which, in the fact of great difficulties and opposition, has made itself a potent influence in the world's markets. That it has shown such satisfactory results as it has, notwithstanding these difficulties, and despite the fact that it is supplying the Navy with a large

proportion of its fuel oil requirements at a very favourable rate, are evidences which speak for themselves.

SALE OF GOVERNMENT SHARES.

I might here also refer to another rumour affecting our company, confirmation of which has actually been given in the House of Commons by the Chancellor of the Exchequer. I refer to the rumour that the Government are considering the disposal of their Anglo-Persian shares, and thereby of their control of the company. We, of course, would not normally be interested in such a daily occurrence as a transaction in our shares, and no more in this case than in any ordinary case have we any control over the sale of his shares by one of our shareholders. You will recognise, therefore, that we are in no way parties to such a proposal, nor have we as a board been consulted, or need we be consulted, by this particular shareholder any more than by any other ordinary shareholder contemplating a sale of his shares. I am consequently not in a position to give you any information of a definite nature in the matter. I understand, however, that no decision in the matter has yet been arrived at, but you can take it, I think, that no sale of this nature will be effected without the interests of the other shareholders in the company being fully protected.

Some curiosity has been expressed as to whether or not we shall require to make any further capital issues. As mentioned last year, and as I have further explained to-day, we have been, and still are, meeting our capital requirements to a large extent out of revenue, and we see no reason at present for anticipating that this source will not suffice for all our requirements. In any case, should any further finance be required in connection with the carrying out of our present programme, it will be only of a temporary nature, and to meet this it is not considered necessary by the board to commit the company to any further permanent obligations of a burdensome character. It is, however, open to us under the articles of association, should the need at any time arise, to create an additional £5,000,000 of debenture stock.

REFINERIES.

As you will have seen from the report, the refinery at Llandarcy continues to give satisfactory results, and the throughput shows a steady increase. Mention is made of the plant which has been installed there for the purpose of full refining—that is, not only for the manufacture of petrol, kerosene and fuel oil as at present, but also for the manufacture of lubricating oils, wax and other by-products. We have delayed installing the necessary plant until our research chemists had been able to advise us, after thorough investigation and many practical experiments, as to the products which would give the best results and the best types of plant for the purpose. These investigations have recently been completed, and the plant necessary for dealing with a portion of the throughput on this basis has been installed, and is to some extent now working.

The refinery which has been erected by one of our associated companies in France has been completed, and is working satisfactorily, and the refineries which are being erected in Scotland and Australia by other associated companies are also on the point of completion, and will shortly be affording us further outlets for our supplies of crude.

So far the record of our refineries is satisfactory, but at our Persian refinery—Abadan—I regret to say that we have, as I have mentioned before, again had some serious disappointments.

With regard to the operations of Scottish Oils, Limited, I regret to say that the heavy fall which has taken place in the prices of products has seriously affected the position of the shale industry, which at the moment is being conducted at a heavy loss. This loss is offset to some extent by the profit which is being made on the refining of Persian crude oil.

PRODUCTION.

I now come to the most important branch of our business—namely, production—on which the whole future prosperity of our company is based, and in this connection I am pleased to say that I have again nothing but good news to give you.

So far as our original producing areas in Persia are concerned, I can only confirm my statements at these meetings in previous years as to the wonderful manner in which the production of the wells is standing up. With increased pipeline facilities, which are now fully completed to handle the 5,000,000 tons per annum referred to by me on previous occasions, we have been able gradually to open out other wells with most gratifying results. These wells, I should explain, are not by any means opened out fully to the pipelines, and I hesitate to place any figures on maximum capacities if they were allowed to produce "all out." It may suffice if I say that in several cases the capacity of F7 (to which I have frequently referred and which is still producing 12,500 barrels daily, and has now produced a total of no less than 5½ million tons) has been largely exceeded.

The development of production is best shown by continuing the table of figures which I gave you last year, namely:—

	Tons.
Production for 1918-19 was	1,106,415
" 1919-20 was	1,385,301
" 1920-21 was	1,743,557
" 1921-22 was	2,327,221
" 1922-23 was	2,959,028

as compared with my estimate last year of 2,900,000 tons.

For the current financial year it will probably amount to 3,775,000 tons, and for the following year it should amount to well over 4,500,000 tons.

TEST DRILLING RESULTS.

During the year we have in Persia been continuing our policy of putting down test wells on the confines of our proved areas, with the result that we have again considerably extended the area of our proved territory in Maidan-i-Naftun and Maidan-i-Naftek, and a test well which we have put down in an adjoining valley called Maidan-i-Bibian has, we have been advised during the past few days, proved a further considerable area, by bringing in a well which is reported to have a capacity of at least 5,000 barrels a day. This development is of the first importance, as it has opened up an extensive addition to our present reserves, and it is quite conceivable that it will add another area to our producing territory in this part of our concession at least as large as Maidan-i-Naftun.

In the report now in your hands reference is made to the discovery of a new oilfield in an entirely different area. This field is a considerable distance from any of our existing working fields, and as it would require the laying of a new and costly pipeline it is not intended to work it until we have ascertained more exactly its extent and productivity. The first test well which was put down in the field is giving daily production of 1,000 barrels under heavy pressure—which most producers would consider ample testimony of a proved field justifying immediate development—but we prefer a more cautious policy and shall await the result of some further test wells which we are putting down before embarking on any large expenditure in connection with it.

At present we have altogether 17 test wells drilling on outside areas in Persia on structure considered by our geologists to be externally promising and conveniently adjacent to our existing pipeline system on to the seaboard. If extensive seepages and favourable structures can be regarded as potential oilfields, these should add largely to our crude oil reserves; but in oil drilling predictions are dangerous, and, as I have already indicated, we may consider ourselves fortunate if only a small proportion of these result in proving the existence of paying fields.

As regards our testing operations outside of Persia, our tests in Hungary and Croatia have so far both failed to confirm geological predictions, but we have not yet decided upon abandonment.

In the Argentine two of our tests—namely, those at Santa Cruz and Neuquen—have also not fulfilled our geologists' anticipations, and have been abandoned. At the Comodoro Rivadavia the small wells referred to in my speech last year are still producing, but not in sufficient quantity to lead us to hope that production on a scale that would justify commercial exploitation under existing conditions in the Argentine will be obtained. We are, however, now awaiting the results of drilling in five wells after cementation. In the event of these wells being satisfactory producers, the whole question of our holdings and of the regulations now in force will be discussed with the Argentine Government, who have, I am pleased to say, shown us every courtesy and consideration. On the other hand, if the five wells above referred to fail to find oil in satisfactory quantities, we shall reluctantly be compelled to withdraw from our testing operations in that country, and, as you will have seen from the report, we have made due provision for this contingency.

Test drilling still continues under difficult working conditions in Papua on behalf of the Commonwealth Government, who are naturally keenly desirous of developing the oil resources of the island. So far operations have been impeded by heavy gas pressure and a heaving mudstone formation, but we are not without hopes that these difficulties will be eventually overcome.

During the year the British Tanker Company's fleet has been working very satisfactorily. Seven new tankers have been added to the fleet, and one old boat has been sold. The total fleet belonging to the company and its subsidiaries, including river steamers, barges, launches, &c., now numbers 240 vessels of all sizes and descriptions.

The Rt. Hon. Lord Inchcape, G.C.M.G., K.C.S.I., K.C.I.E., seconded the motion.

A brief discussion followed, during the course of which the chairman, in reply to a question raised, said that the payment of half-yearly dividends would be taken into consideration by the board.

The motion was unanimously approved.

THE NATIONAL BANK OF SCOTLAND, LIMITED.

SATISFACTORY YEAR—INCREASED PROFITS.

The annual general meeting of the proprietors of the National Bank of Scotland, Limited, was held, on the 20th instant, in the bank's head office in Edinburgh, His Grace the Duke of Montrose, K.T., presiding.

In moving the adoption of the report, as published, His Grace said:

It is a pleasure to my board, and to myself, to submit a balance-sheet which I am sure you have again found satisfactory. The past year, however, has been a difficult one, on account of the continued trade depression which has extended over the whole country.

The settlement of the long-drawn-out dispute with the boiler-makers came as a welcome relief last month, not only to the ship-building industry, but to all allied trades, and now evidence is abroad of the beneficial effect of the agreement. There are apparently more enquiries by prospective builders, which gives an optimistic feeling.

As regards the balance-sheet, it is satisfactory to note that your directors have again increased the reserve fund by £50,000 on this occasion.

The note circulation, £2,476,487, shows a decrease of £178,142, and we observe somewhat similar decreases by other Scottish banks.

The bank's deposits, which have also again shown a contraction, are lower by £3,323,562, the amount at November 1st being £32,314,689.

Coming to advances to customers, you will note that the loans on Stock Exchange securities stand at £1,959,000, being a slight increase of £74,100 during the year.

The advances on working account have been increased by £765,456, which in a way would indicate that more money is being required for trade purposes, but the total amount is still considerably under the figures taken for similar purposes in 1920.

The increase of £5,166 in profits was not sufficient to warrant your directors in making any increase on the dividend, which they have resolved to continue at 16 per cent., less income-tax, this rate having now been maintained for the last eight years.

The question of the future of the staff is always prominently before your directors, and they have seen their way to allocate £75,000 towards the bank's pension fund and £10,000 to the bank's annuity fund.

His Grace, after making fitting reference to the resignation of the most Hon. the Marquess of Zetland, K.T., from his position as deputy-governor of the bank, moved that the report as printed be adopted, and this was seconded by Mr J. A. Cook, and agreed to.

Mr R. K. Blair, W.S., moved that the present governor be re-elected, and that the Right Hon. the Earl of Ronaldshay, P.C., G.C.S.I., G.C.I.E., be elected deputy-governor, and that the extraordinary directors, as noted on the report, be elected for another year.

Mr J. A. Cook and Mr James Mylne, who retire from the board at this time, were re-elected ordinary directors.

Mr Wm. Home Cook, C.A., Edinburgh, and Mr D. Norman Sloan, C.A., Glasgow, were appointed auditors for the current year.

IMPERIAL BANK OF PERSIA.

SUCCESSFUL YEAR—INCREASED BUSINESS.

CONDITIONS IN PERSIA—THE NEW PRIME MINISTER.

The thirty-fourth ordinary general meeting of the Imperial Bank of Persia was held on the 21st instant, at the Cannon Street Hotel, London, Sir Hugh S. Barnes, K.C.S.I., K.C.V.O., chairman of the company, presiding.

The manager and secretary (Mr Sydney Rogers) having read the notice convening the meeting, and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—I do not think I need delay you very long to-day. The report and accounts we have submitted to you, and which I assume you will take as read, show that we have had another successful year. The figures of the balance-sheet, so far as they differ from those of a year ago, indicate an increase of business; the profit and loss account is almost identical with that of last year, and you will see that we have again been able to announce a final dividend of 6s a share. There is, therefore, not much room for comment.

Events in Persia also, so far as the bank is concerned, have been of a more usual and ordinary character during the year under review; that is to say, up to September 20th last, but since that date there has occurred a political development which may have very important consequences. You will remember that when I addressed you last December, the Ghavam es Saltaneh was still

in power as Prime Minister, and it was expected he would hold his position for some time. His tenure of office did not, however, last very long. He resigned in the following February, and a new Cabinet was formed with Mostofi ul Mumalik as its head. This gentleman was in turn succeeded in June by Mushir-ed-Dowleh, who had been Premier in the early months of 1922.

THE NEW PRIME MINISTER.

Throughout these rapid changes of Government, which unfortunately have not been uncommon in Persia, the Sirdar Sepah, the Commander-in-Chief known to us as Reza Khan, was able to retain his position as Minister of War, and when, in October last, Mushir-ed-Dowleh decided to resign, His Majesty the Shah, who was about to leave for Europe, appointed the Sirdar Sepah to be Prime Minister in his place.

I alluded last year to the success which had attended the Sirdar Sepah's organisation of the army, and to the tranquillity throughout the country, which had resulted from his control of the military department. He will now have a far wider sphere for the exercise of his administrative ability, and though it is unwise for us to indulge in prophecies about Persia, especially at such a distance from the scene, still it does seem possible that with a loyal and popular soldier at the head of the Government, who is also in control of the army, Persia may look forward to a much more stable administration than she has possessed for a very long time. Much I expect will depend upon the support which the new Prime Minister is able to give to the reforms initiated by the American Financial Adviser. It seems to me that the military and financial departments are equally interested in these reforms, for unless law and order are maintained no improvement can be hoped for in the collection of revenue, and unless the revenue is largely increased it will be difficult to maintain the army at its present strength. With the Army Commander at the head of affairs, there is reason to hope that the two departments will heartily co-operate in the task of improving the finances of the country.

DR. MILLSPAUGH'S WORK.

So far as we have been able to ascertain, Dr. Millspaugh and his staff have made considerable progress during the past year. Expenditure has been cut down and brought under stricter control; all the sources of revenue have been explored, and the methods of collection revised, revenue inspectors have been appointed in most of the provinces, and efforts are being made to bring the assessment of the land revenue up to date. It will be interesting to see whether Dr. Millspaugh is able to balance his budget for the coming year. I have no doubt he will ultimately be able to do so if he is given adequate support and time to permit of the development of his reforms. We have not failed to shoulder our share of responsibility, for the bank has been able to give valuable assistance to the Government in the way of advancing them, on good security, fairly large amounts, repayable at fixed intervals, so as to enable the Financial Department to tide over the difficult period before the reforms come fully into operation.

It has been stated at previous general meetings that the Persian Government have always scrupulously kept their engagements to us, and my experience since I became chairman of the bank enables me to endorse the statement made by my predecessors.

You will probably have noticed that we have opened during the year two new branches in Persia, one, a small branch on the Caspian Sea at Barfrush, which we hope will assist in the re-opening of trade with Russia, of which there are indications; the other at Maidan-i-Naftun, that is to say, at the oilfields of the Anglo-Persian Oil Company. Both these branches were opened at the request of the financial adviser, who is anxious to make greater use of our provincial branches as Government treasuries in connection with the collection of revenue.

Another item of interest is that we have obtained rather freer powers outside of Persia by the grant of permission from the Government of India to open branches of the bank in India instead of acting through agents. A corresponding arrangement with the Colonial Office and the Iraq Government has enabled us to transform our two agencies in Mesopotamia into branches of the bank.

It is satisfactory to note that the trade of Persia for the year ended in March last has been well maintained. According to the returns received from the Customs department, the total imports for the year amounted to £12,368,228—a slight increase over the previous twelve months. The exports for the year were £14,678,456, a very considerable improvement. The oil exported by the Anglo-Persian Company, of course, figures largely among the exports.

BALANCE-SHEET AND PROFIT AND LOSS ACCOUNT.

With regard to the balance-sheet, you will, I think, agree that the figures show steady progress, and a return to a more normal employment of the bank's funds. You will notice that there are increases in the liabilities of the bank, namely, in the note issue under deposits, and in bills payable. On the assets side our cash

in hand, &c., has fallen to £2,275,000, or £460,000 less than last year, and the amount of our investments is also lower by £306,000. This means, of course, that we have less idle money, and that larger amounts are employed in our business. This is also shown by the increase under bills discounted, loans and advances to £2,982,623, an advance of nearly one and a-quarter millions over the figures of last year.

The profit and loss account needs no comment. We have again been able to put £30,000 to the reserve, which now stands at £370,000, and to pay a final dividend of 6s a share, making altogether 9s a share for the year, free of tax. This represents a gross return of 11s 9d per share, or just over 9 per cent., less tax, on the par value of our shares.

NEW FINANCIAL YEAR.

There is one paragraph of our report in regard to which you will probably be glad of some further explanation, namely, that which refers to our decision to close the financial year in future on March 20th instead of September 20th. I daresay all of you know that the Mohammedan New Year's Day, the Naurouz, is March 21st, and it has always seemed to me a little odd that the financial year of the State bank of Persia should not coincide with the Persian Government's financial year. The explanation is that our charter and deed of settlement were granted in September, 1889, with the provision that the first general meeting should be held in 1890, and thereafter once in every calendar year. The directors of that day, therefore, decided to begin from September 20th, the Persian half-year, and no change has been made since that time. Before the war this did not occasion much difficulty, but you will remember that during the war we more than once found it impossible to get our accounts home in time to hold the meeting before the end of the calendar year, and on one occasion our general meeting was actually deferred until the following March. Since the war, owing to the increase of our business, and the opening of additional branches both in Persia and also in Basra, Bagdad, and Bombay, we have again found our staff in Persia and ourselves very hard pressed in the matter of preparing our accounts for audit and completion in time to enable us to hold our meeting before the Christmas holidays. The advantages of the change we are about to make will be that in future the bank's year will coincide with the Persian financial year; it will also closely correspond with the English financial year, which will simplify the calculation of income-tax, and we shall have plenty of time to get home and complete our accounts, and to hold our general meeting some time towards the end of June or beginning of July; I feel sure, therefore, that you will approve of the change, and find it convenient.

NEW PREMISES.

There is one other matter I may mention. You will receive formal notice of it by a slip which will accompany your dividend warrants. We have at last decided, with some reluctance, to move to another office. The bank has been in Abchurch lane for the past twenty-seven years, and we shall make the change in our address with regret, but for some time we have been hopelessly overcrowded in our present office, to the great discomfort of the staff, and there is no possibility of obtaining extra room in the building we now occupy. We have been looking for a suitable new office for some time, and have at length decided on Imrie House, in King William street, not far from, in fact, nearly opposite, the Monument Station, where we have obtained a lease of the spacious ground floor and basements, which have recently been vacated by one of the overflow departments of the Bank of England. This will give us a light, airy and commodious office of modern construction, which will accommodate easily the whole of our staff and give us room for expansion if necessary, for the

lease includes the sub-basement and basement as well. We move to our new quarters on January 14th.

Mr V. A. Caesar Hawkins seconded the motion, and it was carried unanimously.

ORIENT STEAM NAVIGATION COMPANY, LIMITED.

AUSTRALIAN TRADE—SERVICE ACCELERATED.

The twenty-fourth ordinary general meeting of the Orient Steam Navigation Company, Limited, was held, on the 18th instant, at the company's offices, 3 and 5 Fenchurch avenue, London, Sir Kenneth S. Anderson, Bt., K.C.M.G. (chairman of the company), presiding.

The secretary (Mr R. T. Garrett) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said that the profit on the year's working was £279,964, as compared with £275,015 for 1922, and the disposable balance was £342,533, as compared with £317,621. The directors proposed to pay a dividend at the same rate as in the previous year—namely, 12½ per cent., free of income-tax—transferring £100,000 to general reserve and £25,000 to underwriting account.

The running of the mail and passenger line to Australia in the year under review and in the previous year was not strictly comparable, since in 1922 they had only 12 mail voyages, as against 14 in 1923. Taking the average of the voyages, however, he was glad to record a fairly well distributed fall on the expenditure side, but unfortunately those economies had been accompanied by a decline in revenue affecting every section. The volume of outward cargo had, indeed, shown improvement during the past 18 months, but their rates were on a lower level, and the total number of despatches of all the lines engaged in the Australian trade remained far in excess of its requirements. Homewards also they had carried less and at lower rates all round.

PASSENGER TRAFFIC.

In passenger traffic the first saloon numbers had been fairly satisfactory, but the second saloon exhibited a noticeable falling off and the third-class a complete absence of elasticity. Whatever the measure of success attending the Imperial Conference in other regards there had not emerged from its deliberations any scheme which assured in the near future a marked quickening in the flow of migration. That was a great source of disappointment. Migration, though it could not provide a complete remedy for the unemployment problem in this country, might provide a material alleviation by enabling those who were perforce an obligation at home to become an asset in other parts of the Empire.

RATES REDUCED.

Passenger rates in every class had been substantially reduced during the year, and it was possibly a consequence of those reductions that some increased movement of first-class traffic began to be perceptible. They had lately given consideration to the design of their two new steamers and had decided to carry out a change of policy long contemplated by consolidating the entire saloon accommodation into one first class. The resulting economy in organisation and space, combined with a wider range of fares, would enable them to extend a higher standard of comfort without increased cost. The entire fleet would eventually conform to that change.

They had within the last month, spontaneously and without asking for an increase of subsidy, accelerated their ocean section of the Australian mail transit both outward and homeward. The service they gave was now in point of time the same as it had

been before the war, if allowance were made for the substitution of Toulon for Taranto and Fremantle for Adelaide as the ports of mail embarkation. With regard to their two new ships, the delivery of which had been delayed by the boilermakers' strike, their size was such that Tilbury would at present be unable to accommodate them. The Port of London Authority, however, had prepared plans for new wet and dry docks, locks and entrances at Tilbury for the accommodation of the new ships. The improvements projected there, combined with the new landing stage, would make London an adequate passenger port, but its geographical disadvantages, for which there was no remedy, rendered it doubly imperative that it should in other regards offer facilities equal to those afforded by other United Kingdom ports.

IMPERIAL SHIPPING COMMITTEE REPORT.

There had lately appeared a report by the Imperial Shipping Committee upon the economic size and speed of vessels in the Australian trade, and upon the subsidies necessary to maintain speeds in excess of such economic speed. That document, besides being of great general interest, had a peculiarly intimate bearing on the business of the company. While confirming the view that a mail service involved a cost incommensurate with the advantages accruing, it foreshadowed the possibility of securing the desired acceleration by means of an air mail between Great Britain and Egypt. The Committee's recommendations suggested a basis upon which the Government line could participate in the trade, while the Conference lines could acquiesce without sacrificing essential safeguards.

The Hon. Kenneth Mackay seconded the resolution, which was unanimously approved.

The report and accounts were unanimously adopted.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY.

PROFITABLE YEAR—INCREASED DIVIDEND.

COMPANY'S SOUND AND STRONG POSITION.

The annual meeting of the Johannesburg Consolidated Investment Company was held in Johannesburg on November 20th.

The Chairman (Mr John Munro), in moving the adoption of the report and accounts for the year ended June 30, 1923, said: Gentlemen,—Our permanent chairman, Mr S. B. Joel, had hoped to preside at this general meeting of shareholders, but regrets he is unable to leave England. In his absence, it is my pleasant duty to preside, and I feel sure I am voicing the view of all shareholders in expressing our great regret at his absence from the chair and the deepest sympathy in his recent sad bereavement.

12½ PER CENT. DIVIDEND.

I beg to submit for your approval the report of the directors and the balance-sheet and profit and loss account for the period ended June 30th last, copies of which were distributed among shareholders, both here and in London, on September 18th. Despite the difficult times we have passed through, the company has had a profitable year, and the directors were able to recommend the payment of a dividend of 12½ per cent., compared with 7½ per cent. paid last year. This is the largest dividend yet paid on the present capital of the company, though for the year ended June 30, 1920, a dividend of 10 per cent. was paid, plus a bonus of 2½ per cent.

Following the practice of former years, I shall now proceed to deal with the various accounts.

ACCOUNTS.

The issued capital of the company—namely, £3,950,000—remains unchanged, and the reserve fund of £250,000 also remains unaltered.

The decrease of £264,026 in your share investments represents the difference between shares purchased and shares realised during the year, plus the usual depreciation written off certain of your shareholdings to bring their book value down to their market value at June 30. No credit has been taken in your accounts for the appreciation of certain shareholdings over their book value at the close of the financial year. The increase of £110,725 in mining properties, including advances to mining companies, represents for the most part advances made by the company to the New State Areas to tide that company over the initial difficulties of the producing stage.

Loans to South African companies, £284,343.—The large amount due by the Randfontein Estates Company which appeared under this heading last year has been paid. The figure now shown includes the company's proportion of advances to the Delagoa Bay Lands Syndicate to complete the capital expenditure in connection with the erection and equipment of the Polana Hotel, and also the amount at which the Carlton Hotel now stands in your books.

Loans at short call on market and other securities, £390,285.—An increase of £171,022 is shown under this heading. As you are aware, only a small proportion of this business is done in South

Africa. It is a safe and profitable means of employing surplus funds.

STRONG POSITION.

The shareholders may reasonably congratulate themselves on the exceptionally sound and strong position of the company when they are reminded that its total liabilities to the public are only £1,079,582, while the book value of its assets amounts to £5,945,575—a surplus of assets over liabilities of £4,865,993. I would emphasise the point that the figure I have quoted is the book value of the assets. As you are aware, your directors carefully from year to year write down any of your assets which stand in the books above market values; but they do not write up such assets as stand in the books below market values; consequently the aggregate appreciation of your assets to-day represents a large amount which does not appear in the accounts. This applies more particularly to your investments in stocks and shares.

PROFIT AND LOSS.

The profit for the year, after provision had been made for income-tax in South Africa and England, depreciation and bad and doubtful debts, amounted to £535,973. The total expenses amounted to £31,232, leaving a net profit for the year of £503,841, an increase over the previous year of £229,850. With the balance of £162,152 carried forward from last year, there was thus available a total of £665,993. Of this amount dividend No. 26 of 12½ per cent. absorbed £493,750, leaving the sum of £172,243 to be carried forward to the current year. To have achieved such a result during a period of difficulty and of world-wide unrest, when the opportunities of safely utilising the company's resources were greatly limited, is a source of satisfaction to everyone connected with the company.

THE JOHNNIES INTERESTS.

After complaining of the increasing burden of taxation in South Africa, the Chairman said: I propose now to review the operations of some of the more important concerns in which your company is interested, and first of all I shall deal with the gold-mining companies which come under our control. The commencement of the financial year of your company saw the beginning of a new era in the mining industry. It was not until July, 1922, that the position on the mines became normal after the upheaval in the early part of that year. Working costs from this time began to fall, the reduction being due to the reorganisation of underground work and the marked increase in efficiency. Against this reduction in working costs there has been a heavy fall in the average price of gold. For the 12 months ended June 30, 1922, the average price per fine ounce amounted to £5 2s 5d, as against £4 10s 4d for the year ended June 30, 1923.

With regards to working costs, there is, no doubt, some room for further improvement, more particularly in regard to stores, which are still on a high level compared with pre-war days. Also, further help may still be looked for in the direction of mechanical improvements and better organisation.

GOVERNMENT AREAS.

In spite of the dislocation which took place in the early part of 1922, owing to the general strike, the working profit made for the year ended December 31st amounted to £1,508,026, and after the deduction of £72,591 expenditure in connection with the strike and sundry items for income-tax, employers' tax, &c., not charged to working costs, and adding the amount received for rents, interest, sundry revenue, and the balance brought forward from the previous year, there was an available balance of £1,617,980, which was appropriated as follows:—

The Government's share of profits totalled £737,839. Two dividends of 20 per cent. and 30 per cent. declared at June 30 and December 31, 1922, respectively, absorbed £700,000. Expenditure on capital account amounted to £39,086, and a balance of £141,056 was carried forward to the current year.

Excellent profits have been maintained throughout the current year, and a dividend of 30 per cent. was again declared in June last. The development of the mine continues to be satisfactory, large areas of highly payable ore are being opened up, and the ore reserves are being maintained at over 10,000,000 tons, of an average value of 8.8 dwts over a stoping width of 76 inches.

When the sinking of the ventilation shaft is completed the conditions underground will be materially improved, and the ventilation of the underground workings should be secured for the rest of the life of the mine.

The amount of ore crushed has steadily increased, but this has led to a somewhat unbalanced position, and additions are being made to the slime treatment plant which will have the effect of lowering the gold contents of the residues. As has been explained before, the question of a substantial increase in the plant will be delayed until the ventilation shaft nears completion.

I can only repeat what I said at the last annual meeting of this company, that the position of the mine is excellent, and a long and prosperous future is assured.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

LANGLAAGTE ESTATE.

Since we met last year this company absorbed the Consolidated Langlaagte Mines, and the combined properties are now being worked as one. The two mines have now been connected by an electric railway, and a siding from Langlaagte railway station has been arranged for. Already substantial advantage has resulted from the amalgamation, and when the various alterations are completed further advantages will accrue. The work of extending the Consolidated Langlaagte Mines' reduction plant is in hand, and when it is completed it will be possible to close the old Langlaagte Estate mill. There is no doubt that this amalgamation was a wise step, and will add materially to the profits which the two companies would have made if worked separately.

In June last a dividend of 10 per cent. was declared upon the increased capital of the company.

RANDFONTEIN CENTRAL.

The profit at this mine for the calendar year 1922, in spite of the results being obtained from practically only nine months' work, amounted to £328,428, a considerable improvement on the profit for 1921.

Profits since the beginning of this year have been regular, though they have been on a smaller scale than could have been hoped. This, of course, has been chiefly due to the low grade of the ore milled, and this was affected by two factors of a temporary nature. One was that the grade of the north vertical section of the old mine fell considerably owing to the intrusion of a shoot of low-grade rock on the Randfontein leader. Such a shoot has been met with before, and has been succeeded by good-grade ore, and there are encouraging signs of this occurring again, so that there is every hope that the grade of the north vertical will improve. The other factor was that only a comparatively small tonnage of rock could be got from the Battery reef series, owing partly to the position of development and partly to the fact that there was no direct railway siding to the mill. It is expected that the connecting siding will be completed by the end of this month, when it will be possible to substantially increase the contribution to the mill from the Battery reef series. This should have a good effect on the grade. So that, although progress has not been rapid during the past year, it has been steady, and it is confidently anticipated that when certain structural alterations to the plant now nearing completion are finished a considerable improvement in profits will result.

We have been fortunate in the matter of native labour, and it is very gratifying to know that the mine is now more popular with the natives than it has been for years. This is largely due to the improved conditions obtaining underground.

The development is satisfactory, and, should no unforeseen adverse circumstances arise, there is every reason to hope that the mine will continue to earn substantial profits for many years to come.

RANDFONTEIN ESTATES.

The interests of this company are linked up with those of the Central Company, and any improvement in the Central Company is reflected in this company.

Referring to the case which the company had against Sir J. B. Robinson, the amount awarded under the judgment of the Supreme Court, Transvaal Division, has now been determined at £89,371, and the interest will bring this up to about £165,000.

The finding of the Supreme Court was brought under review at the Appeal Court at Bloemfontein on September 25th last, but the judgment of the Appeal Court has not yet been delivered.

Sir J. B. Robinson has brought a case against the company for £196,000 in connection with certain share transactions, and the company has counterclaimed for a sum of £94,000. This case is being heard in the Supreme Court, and judgment will be awaited with interest.

There would appear to be every reason to hope that this company is nearing the dividend-paying stage.

VAN RYN DEEP.

A total profit of £497,697 was made at this mine for the calendar year 1922, and two dividends of 10 per cent. and 30 per cent. were distributed to shareholders registered at June 30th and December 31st respectively.

Excellent profits were made during the first six months of the current year, and a dividend of 25 per cent. was declared in June.

The working profit for the third quarter of this year amounted to £188,537, which was an improvement of £11,559 on the preceding three months.

This mine, with an ore reserve of over three million tons of high-grade rock, is in a strong position. The Western section of the mine is opening up well and the prospects are encouraging. There is no doubt that the company has many prosperous years to which to look forward.

WITWATERSRAND GOLD.

The profit earned by this company for the year ended December, 1922, amounted to £79,317, and the directors declared two dividends of 5 per cent. and 15 per cent. in June and December respectively. A dividend of 15 per cent. was also declared last June.

This mine is largely dependent upon hand labour, and a sufficient supply of native labour is necessary for the profitable working of the mine. The fall in the number of natives employed in the first few months of this year resulted in a decrease in the monthly profits earned. However, latterly the supply of natives has been more satisfactory, and an improvement in the profits has resulted.

In addition to the area of Knights Deep ground leased from that company, a further area has been taken over by arrangement with the Government. This should be helpful in prolonging the life of the mine.

NEW STATE AREAS.

Crushing commenced at this mine last May, and considerable difficulties were met with in the early stages. There is always a certain amount of trouble experienced in getting a new plant going. Now, however, the various difficulties encountered have been overcome. For the month of October the profit declared amounted to £12,065, and we anticipate that the monthly profit will steadily and considerably increase from this month onwards.

When crushing commenced, it was estimated that the payable ore reserves stood at 2,437,800 tons, of an average value of 8.6 dwts over a stoping width of 67 inches. The development work is being pushed forward, and the mine is in a position to keep the reduction plant fully supplied.

The report and accounts were unanimously adopted.

SULPHIDE CORPORATION, LIMITED.

EFFECTS OF THE FIRE.

STRONG FINANCIAL POSITION.

The twenty-seventh annual ordinary general meeting of the Sulphide Corporation, Limited, was held, on the 20th instant, at Winchester House, Old Broad street, London, the Right Hon. the Earl of Kintore, K.T., G.C.M.G. (the chairman), presided.

The secretary (Mr C. R. Fisher) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said:—Ladies and gentlemen, when our financial year ended on June 30th last, everything pointed to my being able to put before you at this meeting a most cheerful and satisfactory statement, not only as to the results of the past period, but also as to our prospects for that now current. A successful year had been completed. A profit not so large as we have achieved in some past years, but still a very satisfactory profit, had been earned, and, with the probability before us of a further improvement in metal prices, the indications for the new year appeared in all respects to be favourable. Our financial position was so strong that there seemed to be no reason why we should not distribute our earnings freely, and we had felt no hesitation in declaring a 10 per cent. interim dividend on both classes of our shares, while a final dividend of at least another 10 per cent. appeared to be assured.

That was our happy condition when the present financial year began on July 1st. Within a few days, however, of that date we were fated to experience a very severe and unexpected blow, and on July 10 the news reached us that in the afternoon of that day an outbreak of fire had been discovered on the 400ft. level of the Central Mine. Hopes were at first entertained that this fire might be quickly mastered, and everything that experience could suggest to achieve this was done by our manager and staff at Broken Hill, who in their difficult task had the assistance of the managers of the other Broken Hill mines and of the Government inspectors. Their efforts, however, I regret to say, proved unavailing, and although, under the influence of the vast quantities of water poured into the mine, and the steps taken to stop the influx of air, the fire is now only smouldering, the output of ore is still suspended, and we cannot yet say definitely how soon a resumption of underground operations will be possible.

I need not tell you that this most regrettable occurrence has altogether changed for the worse our outlook for the current year, and in consequence, instead of recommending, as we certainly should have done, a final dividend of at least another 10 per cent. on the earnings of last year, we now think it prudent to recommend a final dividend of only 5 per cent., and to conserve our cash resources to an extent that otherwise would have been unnecessary.

OUTBREAK AT BROKEN HILL.

At Broken Hill our output of crude ore was again on the restricted scale, which has been brought about by the limitation of working hours under the Edmunds Award, but it was continuous, and happily was not interrupted by strikes. The total raised from

the mine was rather less than in the previous year, having been 114,685 tons, against 120,603 tons, while the production of lead concentrates was 26,908 tons, against 26,657 tons, of zinc concentrates 33,725 tons, against 35,953, and of slime zinc concentrates 8,688 tons, against 9,971 tons, while in addition to these we produced this year a new product, consisting of 1,280 tons of special slime concentrates, which we disposed of with our lead concentrates.

The tonnage of slimes from our dump treated with the crude ore raised from the mine was 26,958 tons, against 27,131 tons treated in the previous year, and we have still on our dump more than 120,000 tons of this material, constituting a very valuable asset for future working. The mill recoveries were again excellent, and further progress was made in the direction of throwing more of the lead and silver into the lead concentrates instead of leaving it in the zinc concentrates, where it is practically valueless. The ore reserves now amount to 1,255,590 tons, which at last year's rate of extraction represents just upon 11 years' supply to our mill, apart from anything that may be won below the 1,400 ft. level. The average price of lead for the period from October 1, 1922, to September 30, 1923, which, after allowing for adjustments, governed the price we obtained for our year's product, has been £25 19s 4d per ton, and of silver, on the same basis, 34½d per ounce, while to-day's prices of the two metals are £30 3s 9d per ton and 3s per ounce. Unfortunately, owing to the fire, we are not able to raise ore from the Central Mine to take full advantage of these improved prices, but we shall very shortly be in a position to derive some benefit from them owing to our purchase of the Junction Mine.

IMPORTANCE OF COCKLE CREEK.

At our Cockle Creek establishment, owing to the suspension of smelting, productive work has been confined to the manufacture of superphosphates and sulphuric acid, both of which were produced last year on a considerably smaller scale than in the previous year. As regards superphosphate, we started the past year with a considerable stock on hand, and, owing to a severe drought, which affected the agricultural districts of New South Wales, the demand was on a much reduced scale. We therefore closed down our plant for a portion of the second half-year, with the result that on June 30 last our stock was considerably reduced, our sales during the year having amounted to 20,984 tons.

It has always been our policy to make the Cockle Creek works an important industrial concern, which would be a permanent source of revenue independent of the mine, and in pursuance of this policy we had, as I mentioned last year, been considering for some time past the establishment there of cement manufacture. For this important and growing industry we possess at Cockle Creek special facilities owing to our having on our land a large quantity of shale and clay suitable for cement making. This shale deposit has been fully tested, and is estimated to contain at least 820,000 tons, or enough for 50 years' work with an annual output of 60,000 tons of cement a year. The other main requisite for cement production is limestone of pure quality, and to provide this we have purchased an area of 215 acres at Attunga, in the Tamworth district of New South Wales, which is estimated to contain several million tons of very high-grade limestone, and is connected by rail with our works at Cockle Creek. With regard to the marketing of cement, we are also favourably situated, as we are only 94 miles from Sydney, and command the whole of the Newcastle and North Coast districts. In these circumstances we decided some months ago to construct works for the production of 30,000 tons of cement annually, which will be capable of quick increase to 60,000 tons, and contracts were placed in June last in this country for the necessary machinery, while preliminary work for its erection was commenced in Australia.

THE ENGLISH WORKS.

Our English works at Seaton Carew have had quite a satisfactory year, and our manager, Mr Moulden, in his report, rightly describes it as having been "one of continuous progress and activity." Construction work has been on a considerable scale. Last year we produced 3,791 tons of zinc, as against 967 tons in the previous year, 2,365 tons of silver-lead residue concentrates against 528 tons, and 11,462 tons of sulphuric acid against 3,139 tons. In the current year we expect to see our production of zinc and residue concentrates again largely increased, while, as soon as the new sulphuric acid unit is available, our sulphuric acid production will be doubled, and our hydrochloric and salt-cake plant, the starting of which has been delayed owing to our present output of sulphuric acid being all required to supply the needs of our local customers, will at once be put into operation.

POSITION OF EXCEPTIONAL STRENGTH.

The balance-sheet shows a position of very exceptional financial strength. In respect of our cash assets represented by cash and investments, you will, I am sure, be well satisfied with the progress made during the year, and with the position we occupy, which is

one of exceptional strength for such a company as ours. Taking "cash," "investments," "products in hand," "purchased ores," and "stores on hand" as representing our liquid assets, and deducting from this total the excess of "sundry creditors" over "sundry debtors," we have this year a total surplus of £835,980, which compares with a similar total of £718,084 in the previous year, and shows a headway of £117,905 after providing for the dividend of 10 per cent. on our preference shares and 5 per cent. on our ordinary shares which we distributed last December. With the final 5 per cent. on both classes which we now recommend, our company will have paid just upon three millions in dividends, and the average of 13 per cent. on the preference shares and 10½ per cent. on the ordinary shares, which I mentioned last year as having been paid over the 23 years since the payment of dividends commenced, will be now slightly increased over 24 years. This is a record of which no company need be ashamed, especially as we have pursued such a conservative policy in our dividend distribution that we have accumulated the large surplus of liquid assets which I have just indicated.

After referring to the serious effects of the fire upon the current year's accounts, and adding that there were signs of the fire coming to an end, the Chairman said that to supply the mill with ore, which could not be obtained from their own mine, they had purchased the Junction mine. The probable reserves of ore and zinc tailings down to the 10th level of that mine were estimated at not less than 500,000 tons, and the board hoped that the purchase would prove satisfactory on its merits, while it would be a special benefit during the time that must elapse before Central Mine ore again became available. He hoped that at the next meeting he would be able to say that the company was on the way to a complete return to prosperous conditions.

Mr Andrew Williamson seconded the resolution, which was carried unanimously.

AMALGAMATED COTTON MILLS TRUST, LIMITED.

PROFIT EARNED DESPITE UNSTABLE WORLD CONDITIONS.

The fifth annual general meeting of the Amalgamated Cotton Mills Trust, Limited, was held at the registered offices of the company, Yard Works, Stanley street, Preston, on the 17th instant, the Right Hon. Lord Fairfax (chairman) presiding.

The secretary (Mr S. Hutchinson, F.C.A.) having read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and Gentlemen,—The directors' report and the audited accounts, covering the financial year of the company ended October 31st last, have been in your hands for the prescribed period, and with your permission I propose to take them as read.

The accounts before you cover only eleven months' trading, and I think we are entitled to congratulate ourselves upon the fact that, for that period, the combined results of the companies owned by the Trust show a profit of £647,013. Bearing in mind that these profits are arrived at after deducting losses sustained by certain of our companies during the same period, I think you will agree with me that, considering the extremely difficult times through which we have passed, the result is a good one. Of this amount £378,388 has been appropriated for depreciation, taxation, and the payment of debenture interest and preference dividends on shares held by outside interests, leaving the net earnings due to this company at £268,625.

There is one other point in relation to this result which will bear emphasising. Our stock was taken on August 31st, and on that date the price of raw cotton was not only very much below to-day's price, but also substantially lower than it was on September 30th, the date on which we should have taken stock in the ordinary way. Consequently, the high price at which cotton stands to-day is not reflected in the stock figures of the balance-sheets of the various subsidiary companies. Had we taken our stock on the same date as in previous years, viz., September 30th, the net result of the year's trading would have been very substantially higher.

PREFERENCE DIVIDEND.

The directors are desirous that the shareholders should understand that, in view of the fact that the preference shares of this company are cumulative, and having in mind the fact that the companies' earnings more than cover the preference dividend, they have declared the dividend out of the dividends paid to this company by such of its subsidiary companies whose profit and loss accounts are in credit. Owing to this process, some of the profit and loss accounts now stand at a lower figure than they did when the companies were acquired. In reference to this matter, however, some of you will remember that at the time certain of our companies were purchased, I referred in my speech to the balances standing to the credit of the profit and loss accounts of those companies, and stated that they had been specially ear-

marked for dividend purposes, but apart from this, we had very large claims indeed for the return of Excess Profits Duty, which claims were similar in every respect to those which have been paid by the Government in other cases, except for one technical detail, and that was, that, unfortunately, the legal constitution of the business was changed before the duty was taken off. No one could foresee the effect of this action at the time; but had the present company been constituted on the same basis, the benefit to us in the amount of Excess Profits Duty recoverable would have run into very large figures indeed. In one only of our companies, I may say, approximately £260,000 could have been recovered. It is true we are not the only sufferers; but I venture to suggest we are far and away the heaviest losers in this respect in the whole of the cotton trade. I would ask you to bear this in mind when comparing the result of our company with others that were lucky enough when the slump in values came to recover large sums previously paid to the Government in respect of E.P.D. I have not given you this information before because we still consider, and are advised, that our claim is not to be given up readily.

I have to refer to the note in the balance-sheet under the head of "Investments." It is quite true no provision has been made in the accounts for any depreciation in our investments, but such depreciation, if it exists, is of a capital nature.

LOW COST OF COTTON SPINDLE.

As I stated at our last meeting, to arrive at a valuation of our share-holdings is a matter of considerable difficulty, but from the consolidated balance-sheet of the companies, which has been prepared for the information of your board, after allowing for the combined liquid assets of the companies, less all liabilities, and after, of course, cancelling all inter-company loans, our share capital represents a price per spindle less than the value at which mills have changed hands quite recently, which price is again very considerably less than present-day replacement cost.

I cannot disclose details which would not be in the interests of our subsidiary companies, but I should, however, like to tell you that more than half of the spindles purchased by this company were bought at an exceedingly low price even if calculated on a pre-war basis, such purchases having been made before the enormous rise in cotton mill plant values, which took place in 1919 and 1920.

You will, therefore, observe that the cost of our plant cannot, by any stretch of imagination, be placed in the category of boom purchases.

The report and accounts were unanimously adopted.

BALDWIN'S, LIMITED.

IMPROVED RESULTS.

The annual general meeting of Baldwin's, Limited, was held, on the 21st instant, at Birmingham. In the absence of the chairman (Colonel Sir John Roper Wright, Bart.), due to a chill, Sir Robert Horne, M.P., deputy-chairman, presided.

In moving the adoption of the report, Sir Robert Horne read a speech prepared by the chairman, in which it was stated that the profit and loss account showed that the amount brought in to credit was £484,759, an increase of £178,627 as compared with the previous year, a result upon which the shareholders were to be congratulated when the depressed character of the times was taken into account.

QUESTION OF DIVIDEND.

The directors had anxiously considered the question of paying a dividend on the ordinary shares, but after careful deliberation, and having regard to the uncertain conditions of trade and the necessity for conserving the company's resources, they were unable to recommend one. The heavy steel trade, in which so large a part of the company's capital was embarked, was being carried on at present under great difficulties, and for the moment the future contained no brighter prospect. Indeed, the conditions of competition with the Continent were likely to be rendered much more difficult when the arrangements at present being made between France and the German industrialists of the Ruhr were completed. Much, therefore, as it was desired to make some distribution to the shareholders, many of whom must be otherwise oppressed by the ill-fortune of the times, it would be imprudent to dissipate resources which might be needed to carry the company through the obscure and anxious circumstances of the immediate future. The balance of £114,962 on the profit and loss account had, therefore, been added to the £309,178 brought forward from last year, making a total carry forward of £424,140.

SHEET AND TINPLATE DEPARTMENTS.

Whilst a too optimistic note was carefully avoided in last year's speech, it was a source of gratification that some of the anticipations then given expression to had been realised. The sheet and

tinplate departments, for instance, had given fairly satisfactory results, and the prospects for the present year were favourable, but the depression in the heavy steel trade had adversely affected the works belonging to the company, which were mainly engaged in these trades. An important illustration of this fact was to be found in the Margam Works, in which a great capital was employed. It had been impossible to operate this plant with any regularity, although the works were of the very latest type, built, like others, at the request of the Government, for increased steel production during the war; it had been impossible to manufacture heavy steel goods in competition with the cheap products of the Continent, favoured, as the latter were, by the present rates of exchange. In the result, one of the most modern works in the country had cost the company a loss of £100,000 per annum during the last two years. He was glad to say that, at present, there was some improvement compared with the previous year, owing to the work now being placed by the British railway companies to help the trade of the country. Orders had been booked which would materially affect these works in the immediate future, but it was useless to conceal the fact that in our present defenceless condition, as soon as conditions on the Continent were settled, grievous competition from both Germany and France must be anticipated. The collieries of the company, although primarily acquired to safeguard supplies to the company's own works, at present produced about 50 per cent. above the company's requirements, so that there was a large surplus for disposal on the outside market.

COAL TRADE.

The history of the year, so far as the coal trade was concerned, although better than that of the year preceding, was, nevertheless, a rather chequered one. Looking at the situation generally, there were some grounds for satisfaction in the fact that we had recovered practically all the overseas markets from which we were ousted by foreign competitors during the disastrous strike of 1921. This had only been done, however, by tremendous sacrifices on both sides, by the owners of profits, and by the workmen in the shape of wages. One effect of the efforts made and of the German troubles which had suspended the output of coal from the German coalfield had been to raise our exports practically to pre-war level. In fact, he was informed that the figure of May, 1923, constituted a record. As a result of the discontent arising from the reduction of wages, there was a possibility that the ballot now being taken would result in the national agreement, under which wages had varied with profits, being discarded. He hoped with all his heart this would not be the case, as a serious dispute at this stage would be a greater calamity, if such a thing were possible, than the 1921 strike.

The motion was seconded by Sir William Charles Wright, and agreed to.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED.

INCREASED PROFIT DESPITE DIFFICULTIES.

The thirteenth ordinary general meeting of the British Burmah Petroleum Company, Limited, was held, on the 18th instant, at Cannon street Hotel, London.

The Hon. Lionel Holland (chairman of the company) presided. The Chairman, in moving the adoption of the report and accounts to July 31, 1923, said that the period had been one of much difficulty and heavy depression in the oil trade. The profits of nearly all companies producing and refining petroleum were adversely affected, and, although it happened in their case that their revenue was a shade higher than during the corresponding period of 1921-22, those adverse conditions were sufficiently apparent in their trading results. With a refinery throughput and sales as large as in the year 1919 their revenue from sales, owing to the fall in prices, was not one-half of the revenue then realised. Nor could they hope for any material improvement until those conditions were relieved.

Oil prices in especial had been depressed, and a return to healthy conditions in the oil business had been delayed by the prodigious and unexpected excess of crude oil production in America. The conditions generally prevailing in the oil business had of necessity operated to the prejudice of the company's sales revenue during the last twelve months.

In spite of prices having sagged away, in some cases even below the reduced standard ruling during the preceding year, the trading profit of the company was £224,253, against £208,892 for the year ended July, 1922. Certain other receipts brought their total profit for the twelve months up to £250,281—an improvement of some £21,500. The directors recommended a final dividend of 4½d per share, which, with the interim dividend already paid, represented a total sum of £77,834 as the dividend distribution for the year, or at the rate of something over 7½ per cent., free of tax—the same as last year. Including the dividend now proposed, the company had distributed since 1917 the substantial sum of over £1,080,900. It had besides contributed out of its profits an amount

of over £370,000 to the sinking funds established to redeem its debenture issues, and had provided over £530,000 to meet the regular interest on its debentures.

The report was adopted.

EDISON SWAN ELECTRIC COMPANY, LIMITED.

INCREASED CURRENT YEAR'S SALES.

The fortieth ordinary general meeting of the Edison Swan Electric Company, Limited, was held, on the 18th instant, at the Cannon street Hotel, London, Mr C. F. Spencer (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, first dealt with the balance-sheet. He said that the stocks (including work in progress) had been valued by the company's officials at £334,065. They had endeavoured to value the stocks on a very conservative basis, having due regard to the character of the stock and the susceptibility of some part of it to change in fashion. Figures taken out showed that 35 per cent. of the total stock, &c., represented work in progress and raw materials for use in manufacture, while the balance was made up of finished units ready for sale. The item of loans, &c., £314,150, was the amount of debt due to their bankers at June 30th last, but this had since been reduced to £289,450, and would be further reduced by a repayment of £30,000 on December 31, 1923. During the next half-year they hoped to make other substantial repayments.

Proceeding, the Chairman said: The policy of the board may be summed up quite shortly as follows:—

(1) Having carried through a scheme of reorganisation which has effected economies, speeded up and properly regulated output, increased sales, and withal maintained the high quality of our products, we are now engaged in reviewing the whole position so as to secure even greater efficiency in every section.

(2) To discharge the temporary loan obligations of the company as rapidly as circumstances will admit.

(3) To build up an adequate reserve fund, and if you adopt our recommendations to-day, as I am sure you will, the first contribution to such a fund will have been made.

With respect to current trading profits, our sales for the five months up to November 30th have increased appreciably over those of the corresponding period of last year, notwithstanding the average reduction—not less than 10 per cent.—in the selling prices of our products, and we have every reason to believe that our profit for the five months is as good as, and perhaps a little better than, that which resulted from trading in the corresponding period of last year. Your company is now well equipped to deal efficiently with every branch of its business, and may I be allowed to express the hope that your company has now entered on a period of prosperity.

Mr A. F. Berry (deputy chairman) seconded the motion, which was carried unanimously.

CARRERAS, LIMITED.

TWENTY YEARS' CONTINUOUS PROGRESS.

The twentieth annual general meeting of Carreras, Limited, was held, on the 18th instant, at Arcadia Works, City road, London, Mr Bernhard Baron (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said that he would like to congratulate the shareholders on the results of the past year, and to tell them that they could look forward with confidence to the future. The history of the company had shown a gradual and progressive building up of their business. They had determined to lay their foundations on good value, realising that only in that way could they hope to secure and maintain the support of the public. After 20 years their leading brands had attained a world-wide reputation, and it was recognised that goods bearing the name of Carreras, or its subsidiary companies, represented a standard of value which could not be excelled. In the year just completed the sales of each one of their well-known proprietary brands had reached a higher point than ever before, and, judging by the way they had opened their new financial year, there was every prospect of their becoming the favourite smoke of a still larger number of the public, as their business during the two months since October had shown a very large increase over the corresponding period of last year. They, therefore, looked forward to the future with renewed confidence.

The balance-sheet would show that the company was in an excellent position. They had a large cash balance, which enabled them to take full advantage of the market, and they were now running the business entirely with their own money. They had never missed paying a dividend during the 20 years of their existence. During the past ten years their net profits had amounted to over £864,000, and they had actually distributed to the share-

holders nearly £400,000. The dividends paid on the ordinary shares during that period had averaged 12 per cent., several of them having been paid free of income-tax, which made the return considerably higher than that. They had added to their reserve fund in the ten years £175,000, started a pension fund, wiped out all expenses of issuing new capital, written down their investments, and made adequate reserve for everything, and still had undivided capital to carry forward of nearly £146,000. That was a record of which any company might be proud, and there was no firm in the tobacco trade, taking into account the amount of capital employed, which was in a sounder position than Carreras, Limited, and which could show a more satisfactory rate of progress or a greater future.

The report and accounts were unanimously adopted.

SHOWELL'S BREWERY COMPANY, LIMITED.

SOUND AND SATISFACTORY POSITION.

The annual meeting of shareholders of Showell's Brewery Company was held at the Queen's Hotel, Birmingham, on the 19th instant, Mr James Davenport, chairman, presiding.

Mr Davenport, in moving the adoption of the report and accounts, said he thought they would agree that the year's results were not unsatisfactory. The balance-sheet showed a sound and even a strong financial position, while their revenue account, notwithstanding the depression, showed a considerable improvement over the previous year's figures.

The revenue for the year amounted to £48,443, as against £43,777 last year, and he might add that the allocation for repairs, maintenance, and depreciation of their properties was between £3,000 and £4,000 higher this year than in the previous accounts. They proposed a dividend of 12½ per cent. on the ordinary shares, and they were carrying to reserve account £5,000, which would increase the open reserve to the substantial sum of £55,000. They would then be left with £8,372 to carry forward to next year.

During the year they had discharged the balance of the specific mortgages which previously existed on certain of the company's properties. He thought this must be as gratifying to their shareholders and debenture-holders as it was to them. When he told them that when their present board took control of the company's affairs there were specific mortgages outstanding amounting to £110,000, all of which had now been discharged, he thought they would agree that they had some justification for their feelings of satisfaction. During the year certain properties had been disposed of at handsome profits over book values. These profits, they would understand, were capital profits as distinct from trading profits, and the proceeds had gone to increase an internal reserve—the property reserve account—which had been built up since 1914. They had also during the year availed themselves of opportunities of acquiring the freeholds of certain leasehold houses in their occupation, which had also materially improved their position. They had also expended approximately £30,000 in important structural alterations and the rebuilding of licensed houses. They had retained their important holdings of British Government stocks, which stand in the balance-sheet at over £103,000, and were worth considerably more than this figure. They proposed to strengthen the reserve by a further £5,000, so the figure in next year's accounts would be £55,000.

Mr J. J. Calder seconded the resolution, which was unanimously adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £45,000,000 in Treasury Bonds and Treasury Bills dated from Dec. 24-Dec. 29 were opened on Dec. 21, 1923, and the total amount applied for was £46,220,000. For bills at three months, dated Monday, Thursday, Friday, and Saturday at £99 3s 1d, about 69 per cent., above in full. The amounts allotted were as follows:—In bills at 3 months, £41,000,000; in bonds, £500,000.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.

NOTICES.

The Hon. Alexander Shaw has been elected a director of the Bank of England, in place of the late Sir Henry Babington Smith. Mr Shaw is a director of the Peninsular and Oriental Steam Navigation Company and the Peninsular and Oriental Banking Corporation, and is also on the board of the United Kingdom Temperance and General Provident Association.

An agency of Unley Branch of the Bank of Adelaide is now open at Marion on Fridays, and an agency of Ceduna branch is open at Penong on the first and third Thursday in each month.

A branch of the Commercial Banking Company of Sydney, Limited, has been opened at Barellan, in the State of New South Wales.

is put to reserve, making total reserve £100,000. There is also a special reserve for loss on property and loans, &c., amounting to £42,147. The sum of £27,952 is carried forward, against £32,273 brought in. Total assets amount to £1,206,095, of which cash and notes amount to £72,039. Goodwill stands at £34,741. Investments at mid-market prices or less, £127,980. Book debts are at £25,601, and stock stands at £32,330. Loans, &c., are given as £74,075. Properties and plant stand at £839,320. With regard to liabilities sundry creditors stand at £225,398 and deposits at £15,910.

MORUMS ORIENTAL STORES.—After charging London office expenses, interest and discount charges, and directors' remuneration, making provision for depreciation of furniture and fittings, &c., and writing off a loss on realisation of fixed assets, there is a loss for the year ended June 30, 1923, of £42,707. The reorganisation of capital, approved by the shareholders at the last annual general meeting and confirmed at a subsequent extraordinary general meeting, received the sanction of the court in February, 1923. Arrangements were thereafter concluded to issue the 200,000 preference shares of 10s each and 60,000 ordinary shares of 1s each, created by the reorganisation scheme, and these shares were offered and subscribed in May last. The accounts now submitted consequently show the revised capital of the company. The report points out that difficult trading conditions again have been prevalent throughout the whole of the year, and no substantial improvement of the trade stagnation has manifested itself in Egypt or Palestine. The board are advised that the company has obtained a substantial proportion of the trade passing, while the turnover since the termination of the financial year shows improvement.

STOLL FILM COMPANY.—The net profit for the year ended October 31, 1923, amounts to £9,309, as compared with £36,076. The ordinary dividend has been reduced from 15 per cent. to 10 per cent. The sum of £8,539 is carried forward. Liabilities total £317,272. Creditors stand at £71,693. Reserve account is £51,000. With regard to assets, investments at cost and loans stand at £88,152; foreign agencies, establishment expenditure, £79,394; sundry debtors, £35,516. Cash is at £16,001.

STOLL PICTURE THEATRE, KINGSWAY.—The net profit for year ended November 3, 1923, amounts to £25,337, as compared with £32,858 in preceding year. The ordinary dividend is 10 per cent., against 12½ per cent. The sum of £5,000 is set aside for redemption of debenture stock, and £8,069 is carried forward, subject to excess profits duty, corporation profits tax, and managing director's remuneration. Liabilities total £468,286. Reserve stands at £10,632, and creditors at £48,865. The principal assets are leasehold land and theatre, £328,053; investments at cost and loans, £126,191; cash, £8,661.

UNITED STRIP AND BAR MILLS, LIMITED.—In the report for year ended June 30, 1923, the directors point out that the plant as originally projected has been completed during the past year. With the exception of the first three months in 1923, however, the level of prices obtainable for the company's products has been so low, and the volume of trade obtainable so restricted, as to offer no opportunity of securing sufficient business to operate the mills continuously at more than about 50 per cent. of their capacity. Considerable headway has been made in establishing the sales organisation in this country and abroad, and the company is now actively in touch with all those markets in which it expects to sell on the restoration of normal trade conditions. The works organisation has also been advanced during the year. The accounts show a loss for the year amounting to £36,280, which the directors consider is not unsatisfactory having regard to all the circumstances. They are glad to state that at the date of this report there is some evidence of a revival in trade, and that both mills have shown better results since the commencement of the current year. With extreme regret the directors record the loss sustained by the company in the death of Mr William Tozer.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Cold and frosty weather experienced during the week again rendered field operations difficult. Work has proceeded on light soils, but on heavy land drilling was almost impossible. There is still a certain quantity of wheat to be sown, as seeding is much behind this season, but a spell of mild weather will allow of arrears being made good, otherwise same may have to be left over until the spring. English wheat continues in quiet request, and prices were again the turn easier at most of the statute markets. Suitable milling grades range from 9s 4d to 9s 8d, and inferior 8s to 8s 6d per 112 lbs, free on rail. Imported in moderate request, and prices fully steady for North American descriptions. No. 1 Northern Manitoba arrived quoted 47s 3d, ditto afloat 47s, No. 2 ditto afloat 47s, No. 3 ditto 44s 3d, and No. 2 mixed Durum arrived 45s 6d, all ex ship terms per 496 lbs. In the floating and forward cargo section Canadian descriptions were rather more firmly held on improved advices from the other side, combined with a better demand.

Steamers of No. 1 Northern Manitoba afloat, shipment from Atlantic port, sold at 44s, two steamers of No. 2 ditto, shipment from Vancouver, February, 43s 6d, ditto afloat 42s 9d, and a part cargo Rosafe, 63½ lbs, shipping/shipped, at 43s 1½d, all per 480 lbs. Barley and maize firm but inactive, U.K. buyers being still indifferent. Flour in fair demand at late rates. London standard straight run quoted 37s 6d, patents 39s 6d-40s 6d, town households 35s 6d per sack delivered in. All English country straights 30s 6d-31s 6d per sack delivered to London stations. Imported slow. Manitoba patents range from 36s-39s, and Australian 32s 6d-33s 6d per 280 lbs, ex store. Millers' offers quietly steady. Broad bran quoted 7s 6d, ordinary 6s 9d-7s, middlings 8s 3d, fine 9s 9d, bags included, ex mill. Light oats 6s 3d, powdered oat husks 6s 9d, feed oatmeal 9s 3d, ground oats 13s 3d, free on rail, all per cwt. Barley: English steady, with malting kinds ranging from 10s-14s 6d, and feeders 9s 3d-9s 6d per 112 lbs, free on rail. Imported fully steady. Californian 42s-46s, Chilean Chevalier 50s-53s per 448 lbs, landed. Persian 28s 3d, Danubian 30s 6d, No. 4 Canadian 30s, all ex ship per 400 lbs. Maize quiet and easier. Plate, ex ship, 38s 6d, landed 39s 6d, Gal/Foxanian 37s 9d, and Bessarabian 38s 9d, both ex ship all per 480 lbs. Oats: English quiet at 9s-10s 4d per 112 lbs, free on rail as to sample. Imported dull and easier. Plate, ex ship, 21s 3d, landed 22s 3d, No. 2 Canadian Western, ex ship, 24s 9d, landed 25s 9d, No. 3 ditto ex ship 23s 6d, landed 24s 9d, No. 2 Canadian feed, landed, 23s 9d, all per 320 lbs. Oatmeal steady but quiet. London-made flaked, also rolled oats, 17s 6d, medium and fine cut 17s, coarse and medium pinhead 17s, ordinary Scottish oatmeal 17s 6d-18s 6d, and American 15s 6d-17s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24.	1922-23.	1921-22.	1920-21.
Estimated sales of home-grown wheat—				
1 week to December 15	Cwts. 442,203	Cwts. 577,954	Cwts. 455,350	Cwts. 157,388
15 weeks to December 15	5,968,707	7,182,550	6,751,938	6,046,664
Average price of English wheat per cwt.	9 10	9 7½	10 8½	10 0

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1919 to 1922:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1923.

1922	577,954	420,911	74,710	9 8	9 6	9 6

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated December 20, 1923, is as follows:—Pig iron: With the approach of the turn of the year, business is restricted. The tone, however, is firm, and better prices seem to be anticipated for the first quarter. Two more hematite furnaces are to be relighted very shortly. The price of No. 3 Cleveland G.M.B. remains at 100s per ton, and whilst mixed numbers of East Coast hematite can be obtained at 102s 6d for December delivery, makers are asking 103s 6d for January. Manufactured iron and steel: The restarting of the shipyards and railway material orders have been very welcome to local steel works, and steel prices are firm. Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12; steel rails, £9. Iron ore: Foreign ore prices are firm, sellers quoting best rubio at 24s 6d to 25s per ton, and best Mediterranean ores at 23s 6d.

Our Sheffield correspondent writes: A considerable tonnage of steel work is accumulating for execution in the new year. Among other things orders have been placed with local firms for rails which will last for two months, and other contracts are on the way. The improvement in trade has laid bare the shortage of railway wagons and locomotives, and the resulting congestion of traffic at a number of places is causing the British companies to hurry forward new construction. A considerable quantity of work has been placed locally for railway axles and tyres, but not much work of this kind is coming from South America or the colonies.

OIL OUTPUTS.

STEAUA ROMANA (BRITISH), LIMITED, have received telegraphic advice from Roumanie to the effect that a decree establishing liberty of the oil trade in Roumania has been signed, and will be made public.

(n) Represents dividend of £6 9s 5d per cent., free of income-tax, on deferred ordinary stock, against £6 3s, free of tax, in preceding year, and £4 16s 2d per cent., free of tax, on preferred ordinary stock, against £4 17s per cent., tax free, in preceding year.

Buying and selling in the iron and steel market have fallen off owing to the approach of the holidays, but the position generally is on a much sounder basis than at any previous time this year. The majority of the works will close for ten days at Christmas, but in a few cases the firms are so busy that only a couple of days' respite will be permitted. Prices of all materials are distinctly firm, and the recent advances are being maintained. Steel scrap, however, which had been soaring to impossible figures, is now obtainable at 95s, or 5s to 7s 6d below the highest figures paid. Iron and steel foundries, forges, crucible furnaces, and tool factories are all ending the year in an improved position as regards orders on work compared with twelve months ago, although the number is few which can report sufficient output to make their trading operations remunerative. Export trade is fully holding its own, and some special Japanese work is coming through. The coal trade is strong in all sections, there being a heavy demand for house and gas coal. Steam coals are in active request for home and export. Quotations per ton at pits are:—Best hand-picked branch, 33s; Barnsley best Silkstones, 27s 6d; best Blyth steams, 24s; Yorkshire steams, 22s; rough slacks, 12s 6d; smalls, 5s to 8s; blast furnace coke, 24s; foundry coke, 27s.

Our Cardiff correspondent writes:—There has been very little change in the position on the Cardiff coal market this week. The pressure of holiday stems has been strong enough to prevent any spot weakness in prices. Although the third shift is being worked, the supply of tonnage is far in excess of the coal shipment capacity of the docks, and towards the end of the week upwards of 70 vessels were waiting for berths. The bunker demand has accordingly been exceptionally active, and prices for bunker smalls have been quite strong. Large coal have remained practically stationary at last week's levels, and the following are the current approximate quotations:—Best Admiralties, 29s 6d to 30s; second Admiralties, 28s 6d to 29s 6d; best drys, 27s 6d to 28s; black veins, 28s 6d to 29s; western valleys, 28s to 28s 6d; eastern valleys, 27s to 28s; best bunker smalls, 21s 6d to 22s 6d; ordinary cargo smalls, 18s 6d to 19s 6d; anthracite big vein large, 40s to 45s; machine-made cobbles, 31s 6d to 34s; French nuts, 53s to 56s 6d; stove nuts, 54s to 56s; cubby culm, 13s 6d to 14s; inland blast furnace coke at ovens, 30s to 35s; coke for export, 55s to 57s 6d; patent fuel, 31s to 32s 6d; pitwood, ex ship, 29s to 30s. In the iron and steel trades there has been a slightly easier tendency during the past week, and shipments have been nothing like as heavy as in the preceding weeks.

CUMBERLAND IRON.

Business in the Cumberland and North Lancashire hematite pig-iron trade so far improved in the last few weeks of the year that makers sold their output two months ahead, and are assured of maintaining on present production throughout the first quarter of next year. It is more than probable that they will be required to increase their make, since sufficient steel orders have been booked to make it necessary for the rail mills to roll at least two weeks in four. In these circumstances prices are very firm, and Bessemer mixed numbers are quoted at £5 15s per ton delivered at Glasgow and Sheffield, and £6 at Birmingham. It is disappointing, however, that there has not been the broadening of demand that is wanted to restore normality to the hematite pig-iron trade. The needs of Scotch and South Wales steelmakers are not considerable, and most of the make continues to be absorbed by consumers in the Midlands and in the West of this country and in the Furness district, though of late there has been a little renewed

buying by Italy, France, and Belgium. Low phosphorus iron is in fair request only, and manganese alloys are quiet, the comparatively low prices not having tempted any American buying on a substantial scale. Still, makers possess good delivery orders, and no diminution of the output is likely to take place before March. Ferro commands £17 per ton, f.o.b., and spiegel is £9 per ton, f.o.b. The new business that has come to rail makers is chiefly that from home railways, and is on the top of that from the Colonies and Dependencies and South America. With but 14 furnaces in draught between Workington and Carnforth, the iron ore industry is not fully employed, and the consumption of native ore is mainly local. Superior sorts of low phosphoric ore are quoted at 24s to 26s, and ordinary kinds 18s 6d to 20s 6d.

The coal trade is very heavily engaged, demand being much bigger than can be met. The chief pressure is in the Irish market, the cross-channel requirements of best round at the higher figure of 27s per ton being very large. House nuts for shipment are almost unprocurable at 26s. The call for industrial fuel is brisk, and best steam is 30s, and washed steam 29s at works. Best house is a brisk market at 38s 2d at pit. Coke is a fairly big make, and it is all going to the local smelters of ordinary iron at 25s to 26s 6d per ton according to carbon content. East Coast coke supplies to the district average nearly 10,000 tons per week.

THE COTTON TRADE.

MANCHESTER, December 20.

The conditions prevailing in the market at the moment are not at all favourable to active business. The many ups and downs in raw material rates are very disconcerting, and a steadier feeling will have to prevail before buyers are likely to be in the mood to place orders with any freedom. In small lots, towards the close of the week there has been a slight improvement in the turnover. Bids in standard cloths for India remain scarce, and only scattered transactions have been put through in bleaching and printing descriptions. There are no signs at the moment of a revival of buying for China. Shippers to Egypt, the Near East and South America have not been altogether idle, and finishing styles have attracted some attention. Fancies have been in moderate request for the Continent. Something has been done in stock lots for the home trade. American yarns for home use have moved off slowly at irregular rates. There has not been much activity in Egyptian counts. Bids as a rule in export numbers have been impracticable. Most spinners are now producing more than they are selling.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The last series of colonial wool sales for this year have closed in London to-day with values at the highest point touched during the season. Demand has been well maintained throughout, and competition has been general. A hardening tendency is still in evidence in the colonies, and while many members of the trade profess to be amazed at what is being done with all the wool, there is a general disposition to view the future with full confidence. It is realised that any improvement in conditions on the Continent would inevitably bring about a greatly increased volume of trade, and the statistical position of wool is considered to be so fundamentally sound that no serious set-back is expected unless something totally unforeseen occurs to check consumption. The recent advances in wool and tops have undoubtedly checked demand to some extent, and the market to-day is not quite so active. At the same time, topmakers are so convinced of the strength of their position that they are in many cases quoting frankly protective prices. Even with the recent advances in tops, it is still impossible to replace at current values, and there does not appear to be much prospect of cheaper wool being obtainable. Spinners are much better employed than they were a month or two ago, and some fair weights of yarn have been sold during the last fortnight. Demand favours crossbred types, and quotations are firmer all round. It is impossible, however, to make prices correspond to those ruling for wool and tops. There is a better feeling in the piece goods trade, and demand on home and export account shows an expanding tendency. Home-grown wools are very firm, and alpaca and mohair are exceedingly healthy.

COLONIAL WOOL.

FROM OUR SPECIAL CORRESPONDENT.

The final series of London wool sales for the year came to a finish on Thursday, and will go down to history as by far the best held during 1923. From first to last there could not possibly have been a better buying spirit, all qualities of wools being distinctly dearer than the previous series. Merinos appreciated 7½ to 10 per cent., while crossbreds advanced from 15 to 20 per cent.—

in some cases even 25 per cent.—compared with the October-November series. Many are wondering if the advances have been too rapid, particularly in crossbreds, and whether they can be sustained. The increased buying of merinos by the home trade has been one of the most satisfactory features of the series, and clearly shows the changed attitude of the West Riding, but the price of the raw material is very much in advance of what can be made for tops, yarns, and pieces.

The way crossbreds have sold clearly shows the big change which has come over that section of the market. The home trade has taken the lion's share, but a topmaker said during the series that the clean cost of wool was practically Bradford's selling price for tops. America has certainly been a leading buyer of all the best merinos and crossbreds, and many have been surprised with the purchases of the former for that country, but it indicates that America is expecting a good all-round trade next year. America has paid up to 67d clean for good 80's combing wool, 64d for super combing 70's, and 62d to 63d for warp 70's, these being the wools favoured. Practically speaking all the new clip super lines of merino combing grease have gone to the United States. One lot of Geelong greasy 64's (a few 70's and a few 64's in the parcel), 64 per cent. clean yield has made 37d, so that the new Geelong clip of 70's ought to make up to 40d in the grease.

THE TIMBER TRADE.

FROM OUR OWN CORRESPONDENT.

Since the result of the Election has become known, the demand, which generally was very fair before Mr Baldwin threw his boomerang, has recovered to some extent, but the close approach of the Christmas holiday and the termination of the last quarter of 1923 has prevented any satisfactory call for timber, at least until the opening of the New Year. The heavy imports of building and packing case woods into this country have continued with unabated persistency, but we are so close to the end of the year that the closing of navigation in the Baltic must be a matter of a few days only. The most pronounced features of the returns are the very heavy imports from Finland, the increased receipts of wood from Russia, and, to a less extent, but very welcome, from Latvia and Poland, all of which have done much to swell the stocks in consumers' favour. With the glut of wood on the market there should be no question of plentiful supplies of building material to cope with schemes already on hand for the erection of houses. We do not know at the moment, but it is likely that the Labour Party may, in the near future, be called upon to form a Government, and

SOUTH-NORWAY.

that houses are extremely likely to be one of the first matters that will claim their serious attention. If that be the case, there should be a very fair demand for timber at reasonable rates if the market is left to function normally.

The situation of the market for hardwoods—for furniture and decorative fittings—is similar to that of the softwood type of our timber supplies, but the volume of trade in the former is not nearly so large, and the fluctuations are not so heavy and do not promote such anxiety as is experienced in the softwood department. Regarding American furniture woods, it appears that supplies of certain descriptions for the cheaper kinds of cabinet work have been landed here from the United States at little above, if not absolutely at, cost of production. Imports of sawn hardwoods so far this year amount to 17,487,000 cubic feet (cost £4,765,000), against 11,603,000 cubic feet at a cost of £3,343,000 for the eleven months ended November last year.

Mahogany logs continue to be in great favour, prices keeping very firm, and are more likely to go higher than to suffer any easement.

All shipbuilding timbers show an improved demand, and prices generally are firming up.

The pitwood trade is importing much larger quantities of colliery timber—3,523,700 loads, valued at £7,440,800, against 2,620,800 loads, value £5,142,800, for the eleven months ended November last year. The much heavier import and consumption is due to the very busy state of the collieries.

VEGETABLE OILS AND OILSEEDS.

Markets generally have been steady throughout the week. The scarcity of linseed on spot and afloat is causing stringency in the supply of oil, which has met with a good demand from consumers, the market being firm round £41 for spot and December delivery. Some business continues to be done in new Plate seed, the earliest shipments of which are expected at the end of the month, or the first week in January, current value being round £18 2s 6d for this position, and £17 10s for January-February loading.

Cotton oils more than maintain late values, crude Egyptian having advanced to £42 per ton naked, ex Hull mill, while £43 is asked for soap makers' grade of refined. Demand has been fair, but the market has been most influenced by the firmness of Egyptian seed. All other soft oils are fully steady, and inclined dearer. The prevalence of cattle disease has put a severe check on the demand for oilcakes, which are somewhat cheaper to buy, though supplies are not excessive. Meals are firm, and in steady request.

HIDE, LEATHER, AND ALLIED TRADES.

BY OUR OWN CORRESPONDENT.

The hide market is very firm, and at the most important provincial sales this week prices of best ox advanced ½d per lb. Prices were also very firm at the Bermondsey sales on Thursday last, several classes advancing ½d to ¼d per lb. Best ox made from 6½d to 8½d, and this is all the more surprising, as hides are in a very bad condition at this time of the year, and usually fall in price. The prevalence of foot and mouth disease amongst cattle is, however, causing some anxiety amongst the hide traders, as supplies will soon be shorter in consequence of the slaughter of stock which has been going on of late. All classes of foreign hides are sharing in the advances, and tanners both here and on the Continent are buyers of fregorifics at enhanced prices. American tanners are also buying heavily, as they believe the outlook is better for the new year. New York cables that the packer hide market is firm, with best heavy steer hides selling at 13½ cents.

Trade in leather has fallen away this week, business being only for small parcels of bends for filling-up purposes. Prices all round are firm, and there is little to be had in "stocktaking bargains." Dressed leathers are selling also in small lots, but sampling is going forward in a way which bodes well for the New Year's business. Chrome leather tanners are looking forward to better times, as the German Government has definitely refused to pay the reparations duty on exported calf and side leathers, which have been such a bugbear to our tanners.

The boot trade is steadily improving, and large clearances have been made this week for the Christmas trade. Export business is also good, the colonies taking large quantities of British boots and shoes.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, December 21.

SUGAR.—The market failed to produce any new noteworthy feature, general trade being conducted on quiet lines, but with available supplies of manageable dimensions, previous quotations were repeated for all spot lots of refined. The awaited Cuban crop forecast is to hand, and by Mr Guma amounts to 3,750,200 tons, as compared with an output last season of 3,603,000 tons. Market conditions were not influenced thereby, as general expectations hovered around such figures with an increased yield looked forward to owing to greater care being given to general cultivation in the island. Apart from the disturbing factor of political unrest, it is to be hoped that Nature will be kind enough to respond to the increased endeavour of mankind and ensure a full reaping of the harvest. Cuban receipts last week, 625 tons old crop, against 1,150 last year; new crop nil, against 18,202. Exports: Old, 5,866, against 18,796; new, nil, against 4,571. Stocks, 5,934 tons, against 25,251. Centrals working total 20, against 31.

There is nothing fresh to add with regard to general development of European beet crops. Moderate quantities continue to find their way to the U.K. market from Czechoslovakia, but in the case of Holland and Belgium offers are very reservedly made, and then at prices above above parity. Raw refining kinds still scarce, and quotations somewhat nominal. Of British refined, and in which a moderate clearance took place, Messrs Tate and Lyle's cubes quoted 63s 6d to 54s 6d; crushed, 61s; granulated, fine and coarse grain, 61s 1½d; No. 1, 60s 10½d; No. 2, also London and T.L., 60s 7½d; ditto, month forward, 61s; February, 61s; March, 59s 6d. White Java, spot, 57s 3d; white Mauritius crystals, 57s 3d. Czecho, granulated, spot, 58s 6d; ditto, December shipment, 30s; January-March, 29s 6d, f.o.b., Hamburg. Belgian granulated, December, 29s 3d, f.o.b., Antwerp. White terminal market opened quietly, but improved later on increased buying orders circulating. December delivery, sold, 29s 7½d to 30s 6d; March, 28s to 28s 10½d; May, 27s 10½d to 28s 7½d; August, 27s 4½d to 27s 9d per cwt.

COFFEE.—The market continues poorly supplied, and prices show a hardening tendency, particularly with regard to all mild qualities, and which are dearer on the week. Good to fine bold colory Costa Rica sold, 122s to 133s; fine bold Nyassaland sold, 112s 6d.

COCOA.—Market steady, with moderate spot inquiries. Trinidad sold, 49s, and fine Accra, 32s. Accra, F/F quality, January-March, sold, 28s 3d; February-April, 28s 3d, f.o.b. terms.

TEA.—17,330 packages Ceylon were brought forward this week, and though general run of quality was not attractive, full recent rates were secured under brisk support accorded. 52,380 packages Indian were offered, and while all the finer sorts sold steadily, inferior in some cases disclosed slight irregularity. No Java or Sumatra offered.

RICE.—Market generally firm, as shippers offer sparingly, but actual trade proceeds quietly. Two Stars, Rangoon, spot, 16s 6d; afloat, parcels of ditto sold, 15s 6d; new crop, February-March, sellers, 15s 6d, c.f. and i., London. Spanish, December-January, 19s 3d; Italian, 18s 6d, c.f. and i., London. Japanese peas, spot, 25s 6d; afloat, sold, 21s; January-February, sellers, 21s 10½d, c.f. and i., London/Liverpool. Rangoon beans, also Madagascar butter beans, quiet, unaltered.

SPICE.—Pepper firm, especially for white, and a fair demand prevailed. Black Singapore, January-March, L.S., quoted 4½d; Lampung, 4½d; Muntok, white, January-March, 7½d; March-May, sold, 7½d, Zanzibar, cloves, November-January, sold, 1s 4½d; January-March, 1s 4½d per lb. Tapioca quiet, unaltered. Sagor flour, January-March, 15s 3d. Desiccated coconut, fine cut, spot, 42s 3d; medium, 42s 6d; forward, 41s 9d per cwt, c.f. and i.

JUTE in request, and market dearer. First grade, December-January, Continent, sold, £26 12s 6d; January-February, £27; February-March quoted £28 per ton.

HEMP.—Manila firm, with dealers in local markets cabled as very reserved, but buyers in the London centre are reluctant to pay any advance. J grade, January-March, quoted £34 5s; K, £28 10s; L, £27; M, £24 15s per ton. African, Sisal, December-February, No. 1, Tanganyika, £38; Kenya, ditto, £37 10s per ton.

SHELLAC quiet. T.N., spot, 305s; March, 287s 6d, 290s paid. **COPRA** met with quiet support, and prices tended weaker. F.M.S. Straits, October-December, to Rotterdam, sold, £29 18s 9d; November-January, £29 13s 9d; January-March, value, £29 2s 6d. Dutch East Indies, November-December, buyers, £29 12s 6d; South Sea quoted £28 17s 6d; Cebu, £29; Ceylon, £31 10s; Java, £29 15s, for December-January. Palm kernels, January-March, Liverpool, quoted £20 8s 9d ton.

RUBBER firmer, in response to higher advices from New York, but assumed a quieter tone later. Standard plantation, crepe and sheet, spot, also December, sold, 1s 2½d to 1s 2d; and buyers, January, 1s 2½d; January-March, 1s 2½d to 1s 2½d and 1s 2½d; April-June, 1s 2½d. To New York, standard, European, estate, sheet, January-February, sold, 1s 2½d per lb, c.f. and i. terms. Wild sorts quiet, unaltered.

EGG PRODUCTS.—Market remained slow, at previous level of prices.

CARDAMONS.—Very firm, but business kept down by smallness of available supplies.

FRUIT (Dried).—The wholesale side of the article presented quiet features throughout the week, but prices disclosed a firm tendency, in fact, in some cases, same were rather dearer. Of currants, Pyrgos, 4-cases, quoted 42s; bags, 39s; Amalia, 44s; Patras, 50s; Vostizza, 65s to 69s. Sultanias: Smyrna quoted 51s to 54s; good, 62s to 66s; fine, 80s to 85s; finest, 95s to 100s. Demand for raisins proved very slow. Valencia 4-boxes quoted 50s to 60s; quarters, 52s to 95s. Dates

firm at recent level of prices. Figs: Genuine naturals, in bags, quoted 34s to 38s; layers, in boxes, 95s to 105s. Evaporated fruits formed a steady market. Californian choice apricots quoted 74s; fancy, 97s 6d to 100s; old crop peaches, choice, 42s; extra choice, 46s cwt.

CANNED GOODS.—There was a fair amount of business stirring, and, in the aggregate, prices were maintained. Of sardines, Portuguese quarters quoted 2s 9d to 3s 3d; ditto 12-oz, 6s to 7s; 18-oz, 9s 6d to 11s per dozen tins. Lobster steady, but there is really no demand. Fancy halves, 14s to 15s. Salmon commanded sustained support, while available supplies are on a light scale. 1-lb flat tins, labelled, quoted 54s 6d; ditto tall, 42s; 1-lb flat pink, 26s; ditto tall, 25s 6d; and cases of 96 3-lbs, 29s to 30s per case. Canned fruits received steady patronage, and prices manifest a hardening tendency, Singapore pine being dearer. Fair quality Singapore pines, on spot, 5s 10s 3d, Californian apricots, 7s 6d to 11s, ditto peaches, 8s 6d to 11s; pears, 12s 6d to 14s; tomatoes, Spanish threes, 6s 6d; Italian ditto, 6s 9d per dozen tins. Canned meats continue to be well supported, and prices of late have moved against the buyer.

OILSEEDS.—Linseed market opened firm but quieter since; white new crop, La Plata, displayed slight irregularity. Indian: Bold Bombay, December, sellers, £23 5s; small Bombay, ditto, £22 15s; Calcutta, afloat, £23 5s; November-December, £22 15s. Plate afloat, £21 5s; December-January, £18 2s 6d; January-February, sold, £17 7s 6d to £17 12s 6d; April-May, £17 7s 6d to £17 12s 6d. Rapeseed firmer. Toria, November-December, £19 7s 6d; real bold Ferozepore, ditto, £19 7s 6d; Jamba, £14 15s. Cottonseed steady for Egyptian, with a fair demand. Egyptian black, December, quoted £13 7s 6d. Sakellaris, £12 7s 6d Hull. Bombay, January-February, sold, £10 2s 6d; February-March, £10. Gingly seed quiet. East African November-December, £25. Chinese, December-January, £25 5s. Ground nuts, dull. Coromandel, machine-dried. December-January, £24 2s 6d; Chinese, decorticated, f.a.q., December-January, £23; East African, December-January, £24 5s, sellers. Soya beans steady. Manchurian, December-January, £12 5s. Castor-seed easier. Bombay, December-January, £24 10s; February-March, £23 per ton.

OILS.—Linseed irregular. Spot, net, naked 43s; December, 42s; January-April, 39s 6d; May-August, 36s 4d. Rape firmer. Crude, spot, 44s 6d; refined, 47s. Castor-oil firm. First pressure, spot, quoted 60s; second pressure, 59s; and pharmaceutical, 65s per cwt. Hull, with London 2s cwt extra. Cotton firm. Crude Egyptian, spot, 42s; Bombay, 41s; common edible, 47s; deodorised (in barrels), 49s 6d. China-wood firmer. Hankow, spot (barrels), 94s; December-January, 96s 6d. Coconut steady. Ceylon, spot, 47s 6d; November-December, 47s; Ceylon, ditto, quoted 60s. Soya firm. Oriental, barrels, December-January, 42s. Cod quiet. English, spot, 36s. Groundnuts firm. English, crushed, naked, spot, 52s; deodorised, barrels, 60s. Turpentine dull and

easier. American, spot, 72s; January-April, 73s. Rosin quiet. American, grade B, 13s 3d; F, 13s 6d; G, 13s 6d; H to I, 13s 9d; WC, 15s 9d; WW, 16s 3d per cwt. French WW, 16s per cwt. Petroleum steady. American standard, white, spot, 11d; and water white, 1s per gallon.

METALS.—Tin opened easier, a sharp decline being registered, but subsequently the downward movement was arrested, and the drop was mostly recovered under better buying orders, combined with higher cables from the East. Standard cash sold at £233 5s, £235 5s to £233 5s; and three months, £234 12s 6d to £236 10s to £234 12s 6d. Eastern cables reported sales at £235 to £238 10s, c.i.f. At Thursday's market rates moved in buyers' favour, while somewhat irregular forward. Standard cash sold at £231, and three months, £234 to £232 10s to £233 5s, while finally at £232 15s. Further sales occurred in the East at £235 15s, c.i.f. By the end of the week values tended firmer. Standard cash sold at £234 10s to £235, and three months, £236 to £236 10s to £236 12s 6d. English ingots quoted at £235 10s to £236. Copper commenced with a firm tone, but later values gave way on selling pressure, though offers were well absorbed. Standard cash was dealt in from £62 10s to £62, and three months £63 5s to £62 17s 6d. The downward movement was continued at Thursday's session while a good demand prevailed. Standard cash sold at £61 12s 6d, and three months £62 15s to £62 10s to £62 13s 9d. Copper was again easier on Friday, while in quiet demand. Standard, cash, sold at £61 7s 6d to £61 10s, and three months, £62 12s 6d to £62 6s 3d to £62 7s 6d. Electors, £67 15s to £68 5s; best selected, £66 to £67 5s; strong sheets, £95; wire bars, £68 5s per ton. Lead. Easier at £30 12s 6d to £29 15s, as to position. Aluminium quiet. Home trade, £115; export, £120. Spelter: Active, and dealer at £32 12s 6d to £33, according to position. Antimony firm. English special, £44 10s to £45.

THE MONEY MARKET.

The market's anticipations of year-end stringency have been realised during the past week. Daily money is almost a drug, and has been freely offered down to 1 per cent. until the last day of the year. But weekly loans have commanded 3½ per cent. readily, and large amounts were borrowed from the Bank of England, both before and after the Christmas holidays, and there was also some discounting of bills there. The Bank return did

not show market borrowings to the extent expected, and the suggestion has been hazarded that some other operations, such as a clearing-up of pre-moratorium accounts with the Bank, may have partly offset the increase which otherwise would have been shown in Other securities. The discount market has remained firm, though the March Treasury bills have changed hands at $3\frac{1}{8}$ per cent., and have been dealt in for January delivery nearly $\frac{1}{2}$ per cent. lower. Three months' bank bills have been practically $3\frac{1}{8}$ per cent. for March paper and $3\frac{1}{2}$ per cent. for early April maturities. The new Treasuries, which, with the exception of those to be paid for on Monday, are also April bills, were offered at $3\frac{1}{8}$ per cent. after allotment.

The Bank return showed a decrease of £42,400 in the note circulation and of £3,700 in the coin and bullion, so that the Reserve was £38,700 higher. Government securities rose by £2,196,000, and market borrowing was reflected in a rise of £5,152,900 in Other securities, and Other deposits were swollen to the extent of £7,089,700, as Public deposits were only £306,900 higher. The increase in liabilities reduced the ratio of Reserve by 0.8 to 14.8 per cent. Currency notes outstanding showed a further increase of £3,253,000 to £299,070,200, which includes £1,429,200 for notes called in, but not yet cancelled. The fiduciary issue is £248,190,900, or £21,992,900 below the maximum.

THE STOCK MARKETS.

Business in the Stock Exchange was on a very meagre scale on Monday, and when the House reassembled on Thursday after the Christmas break the attendance was small, and business still restricted. The tone, however, was surprisingly good, and gains predominated. There was a slight general improvement in the gilt-edged market, and in the Foreign bond market Brazilian and Russian bonds were better, the latter on speculative buying, but French issues were inclined to be dull. Home Rails have been under the shadow of the impending wages ballot, and prices have been irregular. Industrials have, on the whole, been firm, in the belief that trade is improving, and in the speculative markets both oils and rubbers are a little better, but mines have been irregular.

THE COMMODITY MARKETS.

Owing to the Christmas holidays markets have been generally quiet all round. In the cotton trade the turn-over in yarn and cloth has been on a small scale. From Bradford our correspondent makes similar comment with reference to the wool trade. Our Sheffield correspondent writes that the year has ended with a distinct improvement in the steel trade, both as regards work on hand and prospects for the future. Tin is slightly higher, and copper is in good demand. There has been practically no coal market on the Cardiff Exchange this week. Sugar and coffee are steady. Rubber remains firm, but dealings are not numerous. Business in vegetable oils and oilseeds has made a slighter recovery after the holidays.

FOREIGN EXCHANGES.

With only three business days over the holiday week, the foreign exchange market has been very quiet. The outstanding feature has been the weakness both of sterling and of the French franc. From \$4.35 $\frac{1}{2}$ on the 21st, the dollar was quoted as low as \$4.33 $\frac{1}{8}$ on Saturday, and after a recovery to just under \$4.35 on Monday,

opened on the 27th as low as \$4.33 $\frac{1}{2}$. During the day, however, there was a sharp recovery, though the closing rate of \$4.34 $\frac{1}{8}$ was above the highest. Yesterday morning the rate was about \$4.34 $\frac{1}{2}$. End of the year covering and general political uncertainty are sufficient to account for this movement, and an improvement may be expected with the new year, unless New York is frightened by changes in the Government here. At $\frac{3}{8}$ cent per month above spot forward rates remained unchanged on the week. The Paris rate, which closed at 85.15 on the 22nd, was as high as the record figure of 86.70 on Monday. On Thursday afternoon there was a sharp recovery down to 84.80, and yesterday morning the rate was quoted at 84.55. The apparently favourable course of the present German-French negotiations is suggested as an explanation for this recovery, but it is more probably due to relief at the covering of seasonal requirements. The Belgian rate, which for once has not followed these sharp movements, was quoted yesterday morning at 96.15, as compared with 96.40 a week ago. The lira at 100 $\frac{1}{2}$ showed a slight improvement over the quotation of 100 $\frac{1}{2}$ a week ago. Amsterdam, in sympathy with New York, has also moved against us from 11.48 $\frac{1}{2}$ to 11.45, while Switzerland has also appreciated from 25 to 24.84 $\frac{1}{2}$. Madrid, on the other hand, has moved up a little from 33.38 to 33.40 $\frac{1}{2}$. In Northern Europe, Stockholm and Copenhagen have both moved slightly against us, but Christiania has experienced a slight further depreciation. Helsingfors at 175 $\frac{1}{2}$ shows the beginning of an improvement from recent high levels. It is interesting to note that of the remaining Baltic States Riga now receives a daily quotation on the London market. The unit of currency is the lat (equivalent to the franc), which, as it has been maintained since its introduction on a parity with the dollar, stands at a considerable premium over sterling, the last quotation being 22.45. In Central Europe the mark, in spite of fears as to the future of the Rentenbank, remains at its temporarily stabilised figure of 18 billion. In Vienna the krone has moved against us with the dollar from 311,000 to 310,000. Warsaw, at 25,000,000, also remains about the same as a week ago. Prague at 149 is slightly higher, while Bucharest at 850 shows little change. Athens, where new plans for exchange stabilisation are being developed, has improved from 245 to 210. In the East, the rupee has moved slightly against us from 15 13-64d to 15 5 $\frac{1}{4}$ d, and the yen at 25 1 $\frac{1}{4}$ d is also $\frac{1}{4}$ d dearer. Silver has been very quiet, with some demand from India. Hongkong at 25 3 $\frac{1}{4}$ d is $\frac{1}{4}$ d cheaper, and Shanghai has fallen from 35 4d to 35 3 $\frac{1}{4}$ d. In South America, Rio has made a sharp recovery from 5 $\frac{1}{4}$ d to 5 17-32d, but Buenos Ayres at 40d is 7-32d cheaper. Monte Video has risen from 43d to 43 3-32d, and Valparaiso has also appreciated from 40.40 to 39.40.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 22nd:—

EXPENDITURE.		RECEIPTS.	
Supply Services	8,074	From Revenue	14,518
Interest, &c., on Debt	2,339	Decrease in Exchequer balances	185
Sinking Fund	1,645		
Supplies	1,066		
Reduction of Debt	979		
	14,703		14,703

Revenue, at £14,517,700, shows a decline of about £4,000,000, as compared with a year ago. This reduction is primarily due to the yield from Special Receipts being as low as £14,100, against £1,647,300. Receipts from Customs and Excise are about £600,000 lower at £2,685,000 and £7,326,000 respectively. Property and Income-tax and Super-tax yield £936,000 and £470,000, which shows little variation on the combined total last year. The week's operations reduced the National Debt by £979,000, and caused the following changes:—

EXPENDITURE.		RECEIPTS.	
Public Departments	£ 3,382	Treasury Bills	£ 517
Treasury Bonds	756	Telegraph Money	600
		Bank of England Advances ..	3,780
		National Savings Certificates ..	250
	4,138		5,117

The floating debt was reduced by £898,000 to £859,972,500.

FINANCIAL YEAR, 1923-24 (April 1 to December 22, 1923).			
Total Expenditure ..	£ 580,402,754	Raised by Revenue ..	£ 522,289,100
		Net Borrowings	54,030,961
		Decrease in Balances ..	4,082,693
Total	580,402,754	Total	580,402,754
ESTIMATES FOR YEAR 1923-24.			
Ordinary Expenditure ..	£ 801,013,600	Ordinary Receipts ..	£ 778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British Columbia Electric Railway; Dorman, Long, and Co.; and Samuel Allsopp and Co. At the meeting of Dorman, Long, and Co. Sir Arthur Dorman referred to the arduous times ahead of us, and strongly advocated the need for closer co-operation between employers and employed. Mr J. Davidson at the meeting of the British Columbia Electric Railway spoke of encouraging prospects.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

A YEAR OF SLOW PROGRESS.

Two years ago we described the conditions existing at the end of 1921 as the darkest hour that precedes the dawn. The implied prophecy was a hopeful one, but though the morning has been wintry, the light has been steadily growing. The record of the last two years is one of steady recovery from one of the deepest depressions this country has ever known. We have unfortunately no simple index of the total production of the country, but the figures which are available indicate a steady increase in the nation's economic activities. The number of unemployed workpeople on the Insurance Register, which reached the high figure of 2,045,000 in June, 1921, was 1,886,000 at Christmas, 1921, 1,542,000 at Christmas, 1922, and 1,137,000 a week ago. These figures understate the number of people who have been absorbed into industry during these two years, for there has at the same time been a steady increase in the adult population. The same story is told by the production statistics in the iron and steel and coal trades. Making estimates for the last weeks of the year, for which figures are not yet available, it looks as though the total production of the country will show the following changes:—

	(In Million Tons.)		
	Coal.	Pig-iron.	Ingot Steel.
1913	287	10.3	7.7
1921	164	2.6	3.7
1922	234	4.9	5.9
1923	280	7.5	8.5

The coal figures are a very good index of general conditions, including as they do a very large amount for ordinary household consumption, a large quantity of coal consumed in industry, and a very considerable export. The iron and steel figures are an even more sensitive barometer of the ups and downs of trade, for they refer not to a commodity which is regularly consumed by the public, but to one the demand for which represents to a very large extent the investment of fresh capital or the replacing of existing plant and machinery. In other words, it reflects the attitude of the business world towards industrial expansion.

These figures are encouraging. At the same time, they do not imply that conditions are satisfactory. There are perhaps one million more workpeople available for employment in this country than before the war. But production has only recovered to something like the pre-war level, and we have therefore a considerable road to travel before we can hope to absorb the large number of work-

people out of work. The numbers still to be dealt with are abnormally large. They imply a condition of economic stress and uncertainty in hundreds of thousands of homes. The dependence of the unemployed upon State support is an unhealthy condition in our national life, and their maintenance involves an expensive tax upon profits, upon the wages of their fellow-workers, and upon the funds of the State. Anyone who looks at the prospect in the new year will hesitate to forecast how rapidly the process of absorption can be carried on in 1924. We certainly are not prepared to risk our reputation as a prophet. There are, however, one or two points which are relevant. In the first place, Great Britain is the only country in the world which has anything like complete statistics of unemployment. That incidentally is why our figures look so large in comparison with other countries. But our figures for the last few years have been practically complete for most industrial employments, and we think it will be found, after making allowance for the intermittent character of many occupations, for the local ups and downs of employment, and for the fact that so many have next to no suitable training for work, that not far short of half a million workpeople would in normal times be on the register as seeking employment. This may seem a very large reserve for industry to carry, and one which is larger than would be suggested by the trade union statistics which existed before the war. But the trade unions—or at least those trade unions which made returns to the Board of Trade—are in a sense selective, and tend to leave on one side the less competent, the improvident, the young people who have made a false start in industry, and those who for various reasons drift from one occupation to another. For the first time in history our unemployment insurance figures will give us some measure of this floating residuum of our industrial system, and we do not think that the figure we have mentioned overestimates it. In the second place, the numbers of workpeople in various occupations have been put badly out of balance by the war. There are not enough workers in the building trade for the normal requirements of that industry, but the war forced an undue proportion of the population into the engineering and metallurgical trades. Until this disproportion has been adjusted the large volume of unemployment in the metallurgical trades will keep the unemployment figures unduly high. These two considerations mean that we cannot expect in the near future to write off the bulk of the million names which still appear on the register of the labour exchanges.

On the other hand, the experience of America, which had a colossal amount of unemployment in 1921, shows that when trade prosperity comes there may be a very rapid absorption into industry, and there are some grounds for thinking that a fairly brisk demand for labour may arise in Great Britain next year. The economic situation of many countries of the world, though still difficult, is more satisfactory than at any time since the war, and there is a brisk demand from countries which have been enjoying good harvests in 1923. Australia is prosperous, the condition of South America is slowly improving, and even the stagnation of Indian and Far Eastern trade is reported to be lifting. Germany is in a condition of having to build up her economic life from its foundations afresh, but her buying power may be revived if some sort of agreement is arrived at which will make it possible for her to resume productive activity. America might, in certain circumstances, prove a serious competitor to Great Britain in meeting the world's demand such as it is. But under the stimulus of great internal development and prosperity, with her price level maintained by the Fordney Tariff, and wages kept high by artificial restriction of immigration, America's high cost of production prevents her from being at present an effective general competitor with Great Britain in foreign markets. Foreign trade prospects are therefore not unpromising. Home trade, which has withstood the temporary competition created by the depreciation of European exchanges, shows increasing signs of vitality. Without undue optimism, therefore, we may hope to see a very considerable reduction in unemployment after the turn of the year. The early spring is traditionally the time for trade improvement.

In the political sphere 1923 has certainly not been a year of great achievement. The problem of the future of Germany and her relations to her neighbours seems to be

no nearer solution than a year ago. But as Christmas is the time for putting the best face on things, it may at least be said that during the year the stage of make-believe has been replaced by a more frank expression of the points of view of England and France respectively. British policy has had little influence on the course of events, and the best that can be said is that France has passed through a stage which was perhaps sooner or later inevitable, and has had an opportunity of seeing what results can be achieved by the policy of force. Next to no reparations have been received, and the French Government will apparently make an attempt to charge against the receipts of the near future the cost of its Ruhr adventure. But if 1924 opens without very high hopes either of obtaining reparations or a reasonable understanding with Germany, there is at least in France to-day a clearer realisation of facts and of economic possibilities. German economic life has been reduced to a very disordered condition, but fresh attempts are beginning to be made to find a way out, and America is once more lending the benefit of her advice. The year has not, moreover, been altogether without achievement. The League of Nations' régime in Austria has been an example of successful reconstruction; the shadow of a new war in the Balkans has passed, and as the year closes a large majority of the Greek people have invited M. Venizelos to come home and put their house in order; the signing of the Irish Treaty has been followed by a year in which peace and good government have been slowly re-established in Ireland, and in spite of one or two minor diplomatic breezes the relations between England and America—perhaps the most important factor for the peace of the world—have markedly improved. The Imperial Conference has come and gone, and though the electorate has rejected the policy of tariffs and Imperial preference, on which some of the Dominions had set their hearts, the Conference has helped to achieve a better understanding of the problems of the various parts of the Empire, and afforded an opportunity for the display of Imperial solidarity on some of the major issues of international politics.

In home affairs the year has not been one of large legislative achievement, the outstanding event being the regrouping of parties in the House of Commons as a result of the election. The effect has been to make the House much more representative of the balance of opinion in the country than was the case with the Parliament elected twelve months ago, and though the new House presents our statesmen with the difficult problem of discovering how to govern when no party has a majority in the House, the electorate has returned a majority of members, who, along one road or another, desire to achieve some measure of social reform. Whatever the outcome may be, the period of political tranquillity has passed. The next few months will make history, and determine for some time to come the lines of Britain's political development.

The year 1923 will pass with few regrets. The new year may be expected to be one of economic progress and enterprise, of political excitement, and of intellectual activity in many spheres of life and thought.

A CALIPH AND A KING.

BOTH Turkey and Greece are still in trouble, but on this occasion the trouble in either case is internal, and does not proceed from the two countries' relations with one another, which have so often been the source of their misfortunes in the past. Turkey is in trouble about a caliph and Greece about a king; but Turkey's difficulty is the more serious, because the quarrel between the Turkish Nationalists and Unionists over the status of the Commander of the Faithful is imposing a strain upon the friendship between the Turkish Republic and other important sections of the Islamic world.

The question of the Caliphate has recently taken a dramatic turn, as the result of a letter written jointly by the Agha Khan and Mr Ameer Ali to the Government at Angora. These two distinguished representatives of Indian Muslim opinion expressed, in courteous and moderate language, a view regarding the minimum status and prerogatives of the Caliphate, which is undoubtedly

held by the bulk of their Indian co-religionists, so far as they are "politically minded" at all. The Angora Government's attitude towards the contents of the letter itself has not yet transpired; but Angora immediately took both offence and alarm when the text of the letter appeared in print in the leading opposition organs of the Constantinople Press—and this, so Angora declares, before the letter itself had reached the Turkish Government's hands. The explanation is that duplicate copies were sent to the Press and to the Government by the authors. The three implicated editors maintain that they had every right to publish a document sent to them in this direct fashion, and that they had no *arrière pensée* or intention of disloyalty in doing so, and at this point Angora would have been wise to let the matter drop. There was nothing offensive in the letter itself, and the views expressed in it were matters of public knowledge, which had been published before in Turkey as well as in other parts of the Islamic world, and were bound, whether the Government liked it or not, to be published there again. Angora, however, had just proclaimed a Republican Constitution; it had been doing its best during the past months to stifle discussion upon the Caliphate issue, and it realised that this issue was the strongest point in the Opposition's programme. For these reasons Angora took a high line. A special tribunal was instituted in the Constantinople area with wide terms of reference for the suppression of treason, with the power of inflicting the death penalty, and with the right to summon before it anyone whom it chose. Before this tribunal the editors of the offending newspapers, as well as the leaders of the Turkish Bar, have been this week on their trial. The last-named has already received a drastic sentence, and this and the other verdicts may have momentous effects upon the course of Islamic history. At this stage it is, of course, less easy for Angora to draw back than it was before the tribunal was created; but it is to be hoped that, even at the eleventh hour, the counsels of moderation will prevail. After years of war, depopulation and impoverishment, accompanied by social and political revolutions of a shattering kind, Turkey is in a state of exhaustion, and although she is not merely alive, but has the will to renew her vitality, she can only do this by the united efforts of her own people supported by the sympathy of their co-religionists abroad. Severe sentences passed upon the four prisoners would open a breach between Turk and Turk, and between Turk and Indian Muslim, during the most critical years of reconstruction, and this could do nothing but harm to all parties affected. It would be of no real benefit, even to opponents to Islam in general and of Turkey in particular, for, while weakening them both, it would add one more potent factor to the forces of disintegration in an already sufficiently embarrassed world.

This dramatic situation has not arisen suddenly, and is not primarily due to doctrinal disagreements. Its origins are social, or, rather, geographical, and the cleavage of opinion has been apparent to close observers at any time during the last four years. The Caliphate was bound to possess a different value in the eyes of Muslims dispersed among the Gentiles, as they are in India and China, and in those of compact Muslim populations like the Turks and the Egyptians. For the present generation of Indian Muslims the Caliphate is a symbol which admirably expresses their sentiments and ambitions. The Indian Muslims are as much afraid as ever of being engulfed in the Hindu majority; and, at the same time, the reaction against Western ascendancy, which is sweeping through them as it is through so many other non-Western communities all over the world, is making it increasingly distasteful to them to look for British support against the Hindu superiority of numbers. The solidarity which the Caliphate promised (in the Indian Muslim mind) to create between Indian Islam and the rest of the Islamic world appeared to offer an issue from this dilemma by robbing a breach with the British Raj and an alliance with Hindu political forces of their principal dangers. Hence the zeal with which the Caliphate movement has been promoted in India by moderates and extremists alike, however different their language and their methods.

The position of the Caliph, however, had a much more direct bearing upon the interests of the Turks, for whom

he was a very present and incarnate sovereign instead of a vague and distant symbol. Up to the present there has been little commercial or social contact between Turkey and India, and consequently very little interchange of public opinion; and by a curious fatality the attitudes of the two communities towards the Caliph were not only bound, for the reason just given, to evolve almost independently of one another, but were also bound to evolve in diametrically opposite directions, owing to radical differences in the local conditions. Whereas geography had condemned the Indian Muslims to the weakness inherent in dispersal and isolation, for which the Caliphate was expected to be a remedy, the Turks possessed a compact national home in the Peninsula of Anatolia, and therefore found their Sultan-Caliph nothing but a superfluous tax upon their limited resources. His expenses ate a hole in their budget, whilst his despotism (typified to the modern Turkish mind by the régime of Abdul Hamid) paralysed the national energies and destroyed the happiness and security of individuals. Thus, for every patriotic or progressive Turk, the reality of the Sultan-Caliph came to be the exact antithesis of the ideal figure which the Indian Muslim mind was simultaneously and quite independently evolving; nor did the Caliph even possess in Turkey itself the undisputed sanction of religion. Not a few Sultan-Caliphs at Constantinople have been deposed in pursuance of a *fetwa* from the Sheikh-ul-Islam pronouncing them unfit for office; it was a *fetwa* in this sense that turned the balance against Abdul Hamid himself in 1908; the ecclesiastical element (being till lately the nearest thing to an intelligentsia) has been on the side of reform in a number of important crises (conspicuously in 1876); and when, in 1920, the ex-Sultan-Caliph Wahy-ed-Din Efendi threw his religious prestige into the scales against the men of Angora, he failed to incline the hearts of the Turkish peasantry. Indeed, the Turkish people, from the doctors and soldiers and journalists down to the ploughmen and shepherds, have been engaged in exchanging the familiar yoke of their Islamic past for the unknown yoke of a Western future, until to-day it is not the Caliph but the nation, and not Islam but economics, that make the grand appeal to their imagination. Like their Indian co-religionists, they, too, have been moving rapidly in the direction indicated by their local conditions; and while the Indians have found their adjustment by recasting the conception of the Caliphate in a new mould, the Turks have found theirs by casting it aside and substituting another order of ideas.

In this difficult situation, what policy ought Angora to pursue? An English mind would jump towards a compromise, and would take refuge in some such formula as "Constitutional Monarchy." Unfortunately, however, the Indian Muslims, in the course of their Caliphate campaign against the British Government, have brought into relief the features of the Caliphate that are enshrined in the orthodox Islamic tradition, and these features cannot possibly fit the face of a constitutional monarch in a Turkish national state. The traditional Caliph is a "temporal" and not a "spiritual" power; he must be the effective head of a strong Islamic State, and his dominions must include—not necessarily Turkey, but the holy cities of the Hijaz, if not the entire "Island of Arabia." It is difficult to see any possibility of compromise between this ideal and the Turkish national programme, and the present makeshift of "Vaticanisation" can be satisfactory to neither side. Rome during the last half-century has found a single Vatican awkward enough; but at this moment Constantinople actually harbours two distinguished but unwanted denizens in the persons of the Caliph and the Patriarch. Sooner or later, both of them may find it more comfortable to live abroad, like the King and Queen of Greece.

The Greek Dynasty has been forced into provisional retirement by a Republican party which, as a result of the recent elections, can command only a third of the votes in the Chamber, as against the two-thirds possessed by the Venizelist Liberals. It is a point gained that the King's withdrawal has been effected in a peaceful and dignified way; and it is only fair that his personal and dynastic interests, in regard to his future position, should be subordinated to national expediency. The same principle applies to the position of Mr Venizelos, as he himself has proclaimed more emphatically than anybody; and in

Greece, at this moment, all expediency is concentrated in the word "oblivion." The parties and factions in Greece are suffering from an inability to forget the past. Nothing but an amnesty, in the literal Greek sense of the word, can guide the country's feet into the way of salvation; and if angry hearts are to forget, flags must cease to be waved and contentious figures must fade into the background.

How, meanwhile, are the possibilities of reconciliation likely to be affected by the return to Athens of Mr Venizelos? The urgent invitations which he has received, not only from the *de facto* Revolutionary Government, but from three-quarters of the newly-elected Chamber of Deputies, are a dramatic sequel to his rejection three years ago, and it is a testimony to his character that he has given neither the response of Solon nor yet that of Pisistratus. He has returned, but returned without violence, and even without pomp or triumph, for a limited period, and he has again announced his unalterable intention of once more retiring from Greek politics as soon as his services in this crisis have been rendered. This is the decision of a great man, and we cordially wish him success in his endeavours.

MONEY IN 1923.

At home the monetary history of the year that is now ending has been uneventful. Bank rate has moved but once—on July 5th, when it was raised from 3 to 4 per cent.—so that if tranquillity means happiness and prosperity, bankers and bill brokers should have but little cause for complaint; but, as a matter of fact, stagnant trade and low money rates make the earning of profits the more difficult. The one movement in our Bank rate was dictated less by considerations of international trade, formerly the main factor in Bank rate, than by the suspicion that easy money here was being used to build up an unhealthy Stock Exchange speculative position both on domestic and foreign account, and the fall in securities which followed the movement rather suggested confirmation of the suspicion and justification for the movement. Our level of money rates was, of course, below that of the United States, where the New York Federal Reserve rate had been raised to 4½ per cent. in February; but, apart from this incident, the home money position has remained remarkably oblivious to fluctuations of foreign Bank rates, a circumstance which to some extent goes to prove the contention that under inconvertible paper currencies the influence of Bank rates does not extend much beyond frontiers, whatever may be their uses internally. If Bank rates could influence exchanges by affecting other money markets, London, still the most sensitive in the world, despite the paper pound, would have paid some attention to the fantastic rates indulged in by a few of the European Central Reserve Banks in rather futile endeavour to stem the tide of inflation.

Germany, for example, went by rapid stages to a Bank rate of 90 per cent.—a rate unprecedented in monetary history—yet even this rate was an inadequate charge from the point of view of the lender, so rapid was the depreciation of the principal. Poland followed a similar course, and achieved a Bank rate of 48 per cent. in November. Finland raised her Bank rate to 10 per cent. at the beginning of December, though 10 per cent. is not unduly high for Finland. Below is a list of the changes in various foreign Bank rates during the year:—

CHANGES IN OVERSEAS BANK RATES, 1923.

1923.				
Jan.	11	Indian Bank Rate	raised	1% to 8%
	13	Prague " "	reduced	2% to 5%
	14	Greek " "	raised	1% to 7½%
	18	German " "	"	2% to 12%
	22	Belgian " "	"	1% to 5½%
Feb.	10	Polish " "	"	5% to 12%
	21	New York Federal Reserve Rate	"	4% to 4½%
March	23	Spanish Bank Rate	reduced	1% to 5%
April	23	German " "	raised	6% to 18%
	25	Hungarian " "	"	4% to 12%
May	1	Danish " "	"	1% to 6%
	1	Norwegian " "	"	1% to 6%
	1	Portuguese " "	"	1% to 8%
	26	Indian " "	reduced	1% to 7%
	28	Prague " "	"	1% to 4½%
	31	Indian " "	"	1% to 6%
June	7	Indian " "	"	1% to 5%
	28	Indian " "	"	1% to 4%
July	5	Hungarian " "	raised	6% to 18%
	14	Swiss " "	"	1% to 4%
Aug.	2	German " "	"	12% to 30%
Sept.	12	Portuguese " "	"	1% to 9%
	13	Finnish " "	"	1% to 9%
	15	German " "	"	60% to 90%
Oct.	10	Polish " "	"	12% to 24%
	27	Finnish " "	reduced	1% to 8%
Nov.	9	Swedish " "	raised	1% to 5½%
	10	Norwegian " "	"	1% to 7%
	12	Polish " "	"	24% to 48%
	15	Indian " "	"	1% to 5%
	29	Indian " "	"	1% to 6%
	29	Prague " "	"	1% to 5½%
Dec	3	Finnish " "	"	2% to 10%
	12	Dutch " "	"	1% to 4½%

The rise in our own Bank rate in July naturally affected the price of money here, but not its supply or volume. The supply has still been dependent upon Government finances, the position at any particular moment being determined by the extent to which Government disbursements have been offset by sales of Treasury Bills, or the collection of Government revenues liberated by repayment of Treasury Bills or their purchase in the market. For it is now an open secret that such purchases have provided the means to prevent extremes of ease or stringency in the money market resulting from temporary want of balance between Government revenue and outgoings. During 1922 the Government, on the whole, received much more than it paid out—hence the large realised surplus. The surplus was used to pay off Treasury Bills in the hands of the banks, while at the same time the banks and private investors took up Treasury Bonds, the proceeds of which were applied to the same purpose. Hence, the Treasury Bills in the hands of the banks were reduced from two sources; some were paid off from the banks' deposits which were withdrawn by investors for the purpose of taking up Treasury Bonds or paying taxes, and some were, in effect, merely exchanged by the banks for Treasury Bonds. The latter operation was encouraged by the very much higher return on Treasury Bonds as compared with Bills.

In the first quarter of 1923 repayment of Treasury Bills in the hands of the banks was continued from the proceeds of the tax collections. With the turn of the Government's fiscal year this process of "Deflation" practically ceased on both accounts. The following figures showing the position of the Floating Debt at the end of each quarter illustrate the movement in the Treasury Bills:—

FLOATING DEBT.

	December 31, 1922.	March 31, 1923.	June 30, 1923.	Dec. 22, 1923.
B. of Eng. Advca.	£ 16,500,000	£ None	£ 4,250,000	£ None.
Pub. Dept. Advca.	205,511,500	193,897,500	210,720,500	211,372,500
Treasury Bills ..	719,040,000	616,045,000	604,360,000	648,600,000
	941,051,500	809,942,500	819,330,500	859,972,500

Probably the banks would have continued to exchange their bills for bonds but for their desire to maintain a high degree of "secondary" liquidity in case of heavier demands for trade accommodation. For the Treasury Bills give the banks the power to increase the supply of money by forcing the Government to borrow from the Bank of England to meet maturing bills when not renewed by their holders.

The possession of short-dated investments only gives the banks power to sell them at the expense of drawing down their own deposits, in the aggregate, because the buyers will either have to do this or borrow from the banks. In the mass, the quantity of cash available to the banks will not be increased by such sales. Deflation by the replacement of Treasury Bills by Treasury Bonds, therefore, came to a natural end, at any rate for the time being.

One very important incidental result of the heavy reduction which has occurred in bank deposits during the past two years, however, is the enhancement of the relative weight of the half-yearly payments of interest upon the Five per cent. War Loan. While bank deposits have been shrinking, the half-yearly interest payments have actually increased slightly, owing to the conversion of National War Bonds into the War Loan. By the exercise of great skill, the effect of the disbursement of 50 or more millions of money each half-year had been so minimised as hardly to provoke a ripple on the surface of the short loan market. But the narrowing of the margin of free money in the market has brought them into prominence again, and the last two payments have been marked by slightly more stringency in advance and greater prolongation of easy conditions in their wake.

The reduction in the floating supply of money in the market has been reflected in an average rate of allotment for the weekly Treasury Bill offerings, which is rather nearer to bank rate than was the case in the first half of the year. The average bank rate, as will be seen from the table of average money market rates given below, was £3 19s 7d per cent., and the average rate realised for the Treasury Bills was £3 3s per cent., a difference of 16s 7d per cent. In the first half of the year the bank rate was 3 per cent. throughout, and the Treasury Bills realised £2 2s 4d per cent., a difference of 17s 8d per cent., so that the 4 per cent. was distinctly more effective than the 3 per cent. rate.

Appended are our usual tables of average money rates:—

DAILY AVERAGE OF MONEY RATES.

Whole y'r	3 5 6	3 9 7	5 3 7	4 12 8	2 5 11	1 16 8

It is rather notable that the three months' Treasury Bill allotment rate rose slightly more than did the ordinary market rate for three months' bills, the difference between bank rate and the market rate being 15s 4d per cent. in the second half of the year and 16s per cent. in the first half; even so, however, the rise of 1 per cent. in bank rate was fully reflected in the bill rate. On the other hand, the price of short loans to the discount market only showed a rise of 13s 3d per cent., although bankers had to pay £1 19s 7d per cent. on their deposits, against only 1 per cent. in the previous half-year. But on the year bankers have only paid £1 9s 9d per cent. on deposit money, against £1 13s 10d per cent. in the previous year, while the average Treasury Bill allotment rate for the year was about 2s per cent. higher than that of the previous year, a factor which has probably gone some way towards compensating for the fact that short loans to the market earned about 9s 3d per cent. less than in 1922. There are many other factors in bankers' profits besides money rates, but it is probable that, taken as a whole, and allowing for savings in respect of income-tax and corporation profits tax, bank profits do not make an unfavourable comparison with those of the previous year.

THE HOUSING PROBLEM.

Now that the fiscal controversy has been cleared out of the way, the need and the opportunity returns for constructive statesmanship to resume its frontal attack upon the problem of poverty. It is natural that among all the facets of that complex problem, the instability of employment should be that which in recent months has attracted the lion's share of public attention; and those of us, at any rate, who live comfortable lives have perhaps been a little inclined to forget that the problem has other aspects, and in particular that the question of working-class housing is still very far from solution.

Two recently-published works, widely different in character and appearance, should be of especial use to the intelligent citizen in reminding him of the seriousness of the situation, and in helping him to clear up his attitude towards it.* The first is Major Harry Barnes' bulky study of the history and present position of the housing question—a book of some 400 pages, packed with relevant information and garnished with numerous appendices and tables of figures. The other is a slim little reprint of an address delivered by Mr E. D. Simon to the Liberal Summer School at Cambridge—a mere pamphlet, but in its modest way no less valuable and suggestive than the larger work.

Both these authors bring to bear a wide practical experience of the matters with which they deal. Major Barnes is an architect, and has been chairman of the Housing Committee of the Independent Liberal Party; Mr Simon has been a protagonist of housing reform in Manchester. Both, again, approach the question from the same intellectual angle—that of latter-day Liberalism; both, that is to say, regard the free play of private enterprise as being normally the most efficient mechanism for the satisfaction of human wants, but neither is prepared to rule out the possibility that in particular cases the operations of private enterprise may need to be regulated, and its deficiencies supplemented by the State. It is all the more significant, not to say disconcerting, that they should arrive at diametrically opposite conclusions. Briefly, while Mr Simon holds that "it is the duty of the State to bring into being the conditions under which private enterprise will get vigorously to work in building houses," Major Barnes concludes that the game is up, and that in this matter "public effort will have to make good the deficiency of private enterprise; not a temporary deficiency, but a continuing and, it may be, an increasing one."

Before discussing this divergence of view, it will be well to dwell a little on the respects in which our dis-

tinguished authors are in accord. In the first place, there is substantial agreement as to the needs of the situation. Something like 100,000 new houses are required every year to cater for the increase in the number of families; the present shortage below an acceptable standard may be put at at least 500,000; in addition, according to Major Barnes, we ought to be replacing old houses at the rate of about 30,000 a year. It may, of course, be argued that in this, as in other matters, we shall ultimately have to cut our coat according to our cloth—that if our rapidly-growing population cannot be housed, population will have to grow less rapidly, and that we shall have to take a leaf out of the book of those countries in which it is a normal thing for "newly-married couples to find a corner in the parental home." But such changes, if they come, come slowly, and we may take it that in the next decade at least 1½ million new houses will have to be provided, in order to justify a claim to have dealt seriously with the problem.

Secondly, there is agreement that we are not at present on the way to realising this programme. We are turning out houses at the rate, not of 150,000, but of 75,000 a year. With our present supplies of skilled labour, it seems impossible that we should attain a greater rate than 100,000. According to Mr Simon, we cannot hope that more than one-half of the labour in the building trade will be available for building working-class houses; Major Barnes would seem to put the proportion at least as low as one-fifth. In any case, this factor of labour is ultimately the limiting factor in the problem; nothing can be done unless the supply of skilled labour in the building trades can be largely augmented.

Thirdly, there is agreement as to the reasons for the failure of private enterprise to cope with the problem. This failure is not the result of any peculiar wickedness or inefficiency on the part of private enterprise, which, as Major Barnes admits, displayed "the utmost human ingenuity to provide a standard of accommodation within the rental range of those by whom it was needed." The cause lies simply in the inability of large sections of the working class to pay a rent at which housing accommodation of the quality which public opinion has come to regard as reasonable and necessary can be remuneratively provided.

It is here that we come to the parting of the ways. Major Barnes sees no prospect whatever of bridging the gulf between economic rent and rent obtainable, or of attracting the private investor and the speculative builder back into the building trade. He calculates that at present costs the economic rent of a four-roomed non-parlour house would amount (including rates) to 16s 3d a week, and that something like 25 per cent. of working-class families would be unable, under present conditions, to pay such a rent. And he argues that, even apart from the shattering effect on confidence of the Rent Restriction Acts, the business of house-owning has become so onerous and invidious that those with money to invest will "prefer to receive its yield through more impersonal channels." "The desire is natural to see a procession of frugal souls putting their savings into well-built houses to become the object of their careful supervision, but if that procession depends on the reversal of 70 years of Parliamentary housing policy, it will be long in coming." He comes reluctantly to the conclusion that "the housing of the working classes has now definitely passed into the same political category as that of their education, and of the provision made for them in old age, sickness, and unemployment," fortifying himself with the unassailable principle that "some demands, if unsatisfied, breed conditions which are communally dangerous, and even if there is no profit in their satisfaction, but rather some expense, it is still prudent on the part of society to make collective provision for that for which no private provision is likely to be made. And he concludes that the State must be prepared immediately to shoulder a large part, and ultimately perhaps the whole, of the cost of working-class housing.

Mr Simon arrives at no such desperate conclusion. He concentrates attention on one element in working-class rentals—the contribution which they make to local rates, which he puts on a rough average at 5s out of 15s per week, or one-third of the whole. He argues that about one-fifth of this contribution represents payment for ser-

* "Housing: the Facts and the Future." By Harry Barnes. Ernest Benn, Limited. "Houses for All." By E. D. Simon. *The Daily News, Limited.*

vices rendered to house property, such as the upkeep and lighting of roads, while four-fifths represents a general tax expended on education, poor relief, public health, and so forth.

This tax upon housing is one of the heaviest in our budget system, the amount raised by house tax being exceeded only by the income-tax and the alcohol duties. The effect of taxes on commodities is to raise their price and make them scarce, and this is precisely what has happened with housing. The financing of housing raises this dilemma. The bulk of the houses in the country are pre-war houses. The new ones cost 70 per cent. more to build. It is not practicable to have two prices of the same commodity in the same market. The ability of the working classes to pay house rent is limited by the general level of wages, which in its turn to a considerable extent is governed by conditions in the world generally, which fixes the price we can get for British products. The rent paid for old houses represents cost plus the house duty. Granted that we cannot secure under present conditions a general rise of wages to cover the increased cost of new houses, how are we to make it possible to build new houses and secure economic rent? Mr Simon's answer is that *all new houses should be relieved from the burden of "personal" rates*. This would mean that in an industrial district, where 15s a week is now being paid for an old house, including 5s for rates, a new house let at 15s would only include 1s for rates and 14s for the house only for the builder, and this difference would go a considerable way towards bridging the gap. (The figure mentioned above is, of course, only used as an illustration, but the relief would be proportional whatever the level of rent might be.) The rest of the difference must be looked for in improvements in methods of house building, which have already been considerable. Assuming this relief is granted, Mr Simon's plan embodies two other elements. The labour difficulty has already been referred to. The difficulty here is that those in the trade are by no means willing to see heavy recruiting for the building trade, and their point of view is not unjustified by the history of the industry, in which unemployment has been chronic, and by the uncertain handling of the housing question by Governments since the war. Nevertheless, the problem will not be solved unless there is an increased supply of labour. It is therefore suggested that the principle of insurance by industries should be called in to aid, and a scheme developed for the building trade which would give special benefits for unemployment and some security that these special benefits would be maintained for a period of, say, five to ten years. The second point is that the Board of Trade must be given the power to intervene where there is reason to suspect that rings are holding up the price of building materials. Everyone will at once exclaim that the remission of rates plan is all very well, but how is the deficiency in revenue to be made good? To this there are several answers, but we have only room here to take two points. The first—which meets the difficulty by a flank attack—is that if we can improve the housing of the people we shall thereby reduce the cost of our Public Health and many other services, and should improve the efficiency of the people. The second point is that the items now charged on local rates should be to a larger extent than at present a charge on the national budget. No other great country attempts to raise so large a proportion of revenue needed for national purposes, such as education, roads, &c., by a tax on houses. Rates are a very bad indication of ability to pay, and on all grounds of equality should be borne to a greater extent on the income-tax and consumption tax, which by historical accident in Great Britain are reserved for the central authority. The claim for rate remission in the interests of housing is, in our opinion, stronger than that of any class of individual taxpayer. As a start, we need a sum in the neighbourhood of 1½ millions next year, 3 millions the following year, up to a total of between 9 and 10 millions a year, to be taken off the 75 millions of local rates and transferred to the Imperial Budget.

This threefold plan offers a practical method of providing private enterprise in the building industry and gradually overtaking the insufficiency of houses without a general rise of rent. It is clearly a plan which should be tried before we resort to the building of houses out of public money, which Major Barnes thinks inevitable.

NEW CAPITAL ISSUES IN 1923.

If the aggregate figure of the year's new borrowings be taken as the index of the activity of London's new capital market, then the past year would appear to have been very slack compared with 1922, for last year's aggregate of £573.7 millions compares with £271.4 millions in the year just closing. But it will be seen from the figures presented below that the whole of this decline is accounted for by the large drop in borrowings by the British Government. The total of new capital applications in London quarter by quarter since the beginning of 1910 are shown in the following table:—

Year.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Total for Whole Year.
	£	£	£	£	£
1910.....	99,355,600	88,721,400	28,111,600	51,250,500	267,439,100
1911.....	61,245,000	56,238,800	14,914,500	59,361,200	191,759,400
1912.....	47,966,100	62,377,500	48,687,100	59,819,300	218,850,000
1913.....	50,344,700	70,014,900	29,961,800	46,216,000	196,537,000
1914.....	97,610,200	54,739,100	20,265,200	339,908,100	512,522,600
1915.....	46,313,500	25,693,200	586,772,500	26,462,500	685,241,700
1916.....	156,251,200	131,022,500	111,578,000	186,584,700	585,436,400
1917.....	825,925,200	221,254,300	57,054,400	214,362,100	1,318,596,000
1918.....	475,258,700	220,921,500	329,674,000	367,527,200	1,393,381,400
1919.....	291,901,400	93,879,000	536,502,200	113,776,800	1,036,059,400
1920.....	135,094,500	98,011,700	61,195,600	73,247,800	367,549,600
1921.....	63,382,100	65,281,900	57,890,600	202,423,600	388,978,200
1922.....	286,207,100	162,567,100	61,920,200	62,981,200	573,675,600
1923.....	86,251,500	95,050,100	25,381,000	64,710,600	271,393,200

The second quarter was the busiest, and there was a very marked falling off in activity in the second half of the year, the total for which was only £90 millions as compared with £181 millions raised in the first six months. The same falling off in the second six months occurred in 1922. The categories into which the year's borrowings are divided will be found set out below:—

	Whole Year 1922.	Year 1923.		
		Three Quarters to Sept. 30.	Fourth Quarter.	Total Whole Year 1923.
	£	£	£	£

Miscellaneous.....	11,195,300	1,635,100	467,400	2,092,500
	573,675,600	206,682,600	64,710,600	271,393,200

The drop in British Government borrowings is accounted for by the slackening of that process of replacing floating debt by Treasury Bonds, which was one of the chief features of Government finance in 1922. The borrowings of the British Government (apart from those of a temporary nature) were as follows in the past two years:—

1922.	Milln. £.	1923.	Milln. £.
5½% Treasury Bonds.....	115.1	4½% Treasury Bonds.....	24.1
5% Treasury Bonds.....	110.1	4% Treasury Bonds.....	34.6
4½% Treasury Bonds.....	68.9	Savings Certificates (net sales).....	18.8
Savings Certificates (net sales).....	58.4		
3% Local Loans stock.....	17.1		
	369.6		77.5

In the period from January 1 to December 22, 1923, the floating debt was reduced by £81.3 millions, whereas in the corresponding period of 1922 the reduction was about four times as large, namely, £314 millions.

The next item on the above list, the Colonial Government Loans, provides the feature of the year, for the figure under this head rises to over £69 millions. Of

this total, India took £20 millions in one operation, while the amount borrowed at various times by the Commonwealth and State Governments in Australia exceeded £25 millions. Other Governments from within the Empire to enter the market included Nigeria, Newfoundland, Sudan, Jamaica, and the Union of South Africa, while the Irish Free State made her first appearance last month, with a loan the details of which will be fresh in the minds of our readers. Foreign Governments also figure more prominently than in 1922, having taken nearly £26½ millions, as compared with £14½ millions. The foreign Government borrowers included the Dutch East Indies (twice), Roumania, and Austria. The £14-million Austrian Loan floated in June was the London portion of the international loan floated successfully under the League of Nations plan for setting Austria's finances in order, and, in view of the attempts in contemplation to set finances in order in other countries also, was perhaps the most noteworthy borrowing operation of 1923.

The increase in external lendings has certainly been the feature of the year. Of the total of £271 millions raised in the open market in 1923, about £137.5 millions, or rather more than half, was destined for employment abroad. How this compares with previous years is shown by the following table, which gives the destination of new capital over a number of years, and distinguishes Government from private borrowings:—

	DESTINATION OF NEW CAPITAL.

The proportion of the total new capital which is destined for other lands has not yet recovered to the pre-war level, but it is moving fast in that direction. This progress in the reinstatement of London as lender to the world is one of the salient and salutary features of the financial year.

Turning to other items in our classification list, we find only two entries under the heading of British railways, both of them Underground issues made under the guarantee of the British Government in accordance with the terms of the Trade Facilities Act. Oil issues have been much less prolific than in 1922, while electric light and power concerns have borrowed much more. Another big decline comes under the head of docks, harbours and shipping, and while the iron, steel and coal group total is smaller, the general manufacturing group has increased its figure. In the industrial class, the largest individual operation was the Daily Mail Trust issue of £8,000,000 7 per cent. debenture stock at 99. Other large industrial issues included Dorman Long's £3½ million debentures in April, the Union Cold Storage preference issue of £3,300,000 in July, Anglo-Persian Oil's 850,000 ordinary shares at 65s each, John Walker's dual issue in March of £2,000,000 debentures and £1½ million preference shares, and Tokyo Electric's £3 million of 6 per cent. bonds issued in June. After the striking fall during 1922, interest rates were comparatively steady in 1923, and to this aspect of the new capital market we hope to return in a future article.

BANKER AND CUSTOMER.

In the Court of Appeal on December 17th judgment was delivered in an action which raised interesting points in the relations between banker and customer. Mr E. F. Tournier, a commercial traveller and salesman, had failed in an action brought against the National Provincial and Union Bank of England claiming damages (1) for alleged slander; (2) for breach of the confidence existing

between banker and customer; and (3) for £108 10s. for loss of employment and loss of commission; but after hearing the case in the Appeal Court, Lords Justices Bankes, Scrutton and Atkin ordered a new trial. In delivering judgment, Lord Justice Bankes said that in this appeal the plaintiff asked for a new trial on the ground of misdirection by the learned judge. The action was founded on statements alleged to have been made by an acting manager of a branch of the defendant bank. The plaintiff complained that the statements were slanderous, and, further, that they constituted a breach of the duty owed by the bank to him. The plaintiff was a customer of the Finsbury Pavement branch of the defendant bank. In April, 1922, his account was overdrawn to a small amount, and on April 8 the plaintiff signed a document agreeing to pay off the debt by weekly instalments of £1. At the time when this document was signed the plaintiff was about to enter the employment of a firm of Kenyon and Co., and on the document containing the agreement the plaintiff wrote their name and address. The plaintiff did not pay the weekly instalments as agreed. In July the acting manager of the branch, by name Fennell, got into telephonic communication with Kenyon and Co. to ascertain the plaintiff's private address. The inquiry led to further conversation with two directors of the company, one Wells and the other Kenyon. The plaintiff's complaint in the action was that in the course of that conversation on the telephone Fennell had told Kenyon that his (the plaintiff's) account was overdrawn, that various promises made by him to give the matter his attention had not been fulfilled, that cheques which passed through his account were for betting men, and that the bank thought that he was betting heavily. To Wells, Fennell was alleged to have said that he (Fennell) was afraid that the plaintiff was engaged with bookmakers, as the bank had been able to trace a cheque or cheques passing from the plaintiff's account to bookmakers.

His lordship took the view that there was not any material misdirection by the learned judge on this part of the case. With regard to the claim for damages for breach of duty, he said that the duty is a legal one arising out of contract, and that the duty is not absolute but qualified. "It is necessary in a case like the present to direct the jury what are the limits and what are the qualifications of the contractual duty of secrecy implied in the relation of banker and customer. There appears to be no authority on the point. On principle, I think that the qualifications can be classified under four heads:—(a) Where disclosure is under compulsion by law; (b) where there is a duty to the public to disclose; (c) where the interests of the bank require disclosure; (d) where the disclosure is made by the express or implied consent of the customer. The privilege of non-disclosure to which a client or a customer is entitled may vary according to the exact nature of the relationship between the client or the customer and the person on whom the duty rests. It need not be the same in the case of the counsel, the solicitor, the doctor, and the banker, though the underlying principle may be the same. The case of the banker and his customer appears to me to be one in which the confidential relationship between the parties is very marked. The credit of the customer depends very largely upon the strict observance of that confidence. I cannot think that the duty of non-disclosure is confined to information derived from the customer himself or from his account. Mr. Fennell was put upon inquiry by a cheque drawn in the plaintiff's favour on a customer's account. He acquired the information which he is said to have divulged in his character as the plaintiff's banker. It follows from what I have said that in my opinion a direction to the jury in a case such as the present must inform the jury of the nature and limits and qualifications of the duty of the bank as a matter of law, leaving to them only questions for the purpose of ascertaining their view whether the communication complained of was or was not made, and whether it did or did not come within any of the protected occasions to which I have drawn attention."

A legal correspondent points out that a surprising feature of the case is the absence of authoritative exposition of the law on a subject of such universal importance. When one gazes at the hundreds of substantial volumes in

which judicial decisions on every conceivable topic are massed in bewildering array it would seem incredible that any legal matter of interest could have escaped adjudication, were it not that occasions constantly arise in which counsel arguing a case have to confess that they are without direct authority for their arguments, and the judge admits that he has the doubtful privilege of making new law. And so with this question of a bank's duty not to reveal its customers' affairs. Portly books on banking have been published, but this vital branch of the subject is dismissed in two or three pages of hesitating reference.

The decision in *Tournier v. The National Provincial and Union Bank* is, therefore, in a legal view at any rate, a welcome addition to the meagre law on the subject, even though the judgments were so cautious as to resemble more a tentative airing of the topic than a satisfying decision of unsettled points. In a public view, however, the case under discussion is rather a revelation of a disquieting fact—the fact, namely, that one cannot, in regard to one's banker, repose in that security as to absolute privacy which one has in the case of one's lawyer. There is a duty of confidence in the banker, but it is a duty qualified by vague exceptions, which, to whatever extent they go, at any rate reach farther than the lawyer's solitary exception, of permission to reveal a criminal purpose.

We call the exceptions to the rule of confidence "vague"; let us try to see how far they have been defined. And we may begin with the question whether a banker is justified in giving general confidential information to an inquirer as to a customer's financial position, &c. There is, of course, no doubt in the common case of a man giving a "bank reference" to a person with whom he proposes to have business dealings, as then the communication is made on the invitation of the customer himself. But it appears, also, that a banker may disclose such information without this permission. "If a person who is thinking of dealing with another in any matter of business asks a question about his character from some one who has means of knowledge, it is for the interests of society that the question should be answered." Those words of Lord Justice Brett were made with reference to a communication from the Charity Organisation Society to an inquirer, but they have been cited as authority covering a communication from a bank to an inquiry regarding the bank's customer. This does not seem conclusive; it begs the question whether the relation of banker and customer does not create some special duty of non-disclosure. However, the practice of answering questions as to a customer's financial stability exists among banks, and it has not been held to be a wrong practice, but, on the contrary, its legitimacy has been judicially assumed.

Then there is the question whether a banker may disclose particular information regarding a customer's account and affairs. Here the law is confused and unsatisfying. In *Tournier's* case the other day Lord Justice Bankes rightly said there was no authority; but until his judgment it may be added that the position was even worse than that, for it had become a habit to rely upon two cases which seemed to deal with the matter, but did not really do so, and so were misleading authorities. One is the case of *Hardy v. Veasey*, decided in 1868, which has been quoted as authority for the proposition that "upon a reasonable and proper occasion" a banker is justified in disclosing to a third party the state of his customer's account. There a bank manager had made the disclosure to a money-lender, for the purpose of getting help for the customer, and the allegation of the plaintiff customer was that he had not given the manager leave to do what he did. He pleaded that it was a term of the agreement between banker and customer that the bank should not communicate the state of the customer's account to any other person except on a reasonable and proper occasion, and that this was not one. The existence of the exception was assumed, though its assumption was unnecessary to the decision of the case, and, strictly therefore, it was not decided. The other case, *Foster v. Bank of London*, decided in 1862, was even less of an authority, for there the question turned upon the impropriety of a bank giving one customer information regarding another customer's account, in order that the first

customer, who was a creditor of the other, should pay to the credit of the other's account a sum sufficient to cover the amount of a bill and a cheque held by him, which the bank accordingly honoured. In other words, it was a case of a conspiracy between the bank and this creditor customer to give him an advantage over the other creditors of the other customer. In this empty state of the law the Court of Appeal now holds that there is a contractual duty of secrecy implied in the relation of banker and customer, but subject to the four qualifications enunciated by Lord Justice Bankes.

THE TRUST MOVEMENT IN GREAT BRITAIN.—II.

THE Departmental Committee on the Iron and Steel Trades reported that:—

The American and German iron and steel industries are of a relatively recent growth, and have throughout been organised for large scale production, and small installations held and worked by individual concerns are comparatively unknown. The individualism of the British character has often led the iron and steel manufacturer to prefer to retain personal control over a small and relatively inefficient works rather than pool his brains and capital to the greater advantage of the industry. Many associations have been formed among British iron and steel manufacturers, but their aims and interests have been limited to smaller problems of price regulation or relations with labour. No serious effort has been made to form a national selling organisation, or so to distribute production as to reduce the cost of production and distribution to a minimum.

The Committee recommended, therefore, that British iron and steel makers should be urged to form combinations for the purpose of laying down large new units, for the collective purchase of supplies of iron ore, and for joint marketing of their products.

The Committee on the Engineering Trades reported that they had been much impressed by—

The very large number of relatively small works that exist—each with a separate organisation, separate establishment charges, separate buying and selling arrangements, and each producing a multiplicity of articles. A system of exclusiveness and aloofness marked the engineering trade before the war.

After contrasting the conditions prevailing in Germany and the United States, and pointing to the improvement made here during the war (largely under Government influence), in respect of standardisation, specialisation of output, and co-ordination of production, they urged the necessity for some action, either by amalgamation or pooling of resources, which would maintain this improvement.

The Committee on the Electrical Trades were still more definite. After discussing the development of the electrical industry here and abroad, and what they regarded as the discouragement of combination here, they remarked that—

As a result of this policy of isolated effort, numbers of small concerns have arisen, each struggling against the others for bare existence. By association it should be possible to manufacture each class of apparatus in the most suitable factory, the management of which would thus be concentrated on its own speciality instead of being wasted on a variety of products. It is essential that output should thus be consolidated instead of remaining in the hands of a number of small concerns. A sound and permanent industry can be established not only to supply the home market, but to secure a much greater proportion of the overseas trade of the world. This can be done by amalgamation among the companies engaged in the industry, or by the development of the practice of association for common purposes.

The Committee on the Textile Trades had to deal with conditions altogether different from those prevailing in other trades thus reviewed, for in the main sections of the cotton and woollen trades there is production on a huge scale combined with a high degree of specialisation. But even they felt it necessary to sound a note of warning with regard to the lesser textile industries—silk, hosiery, and lace—and the smaller branches of the large industries, as to which they quoted the opinion of witnesses that—

None of these trades can hope to struggle successfully with particular branches of foreign competition while they are organised upon their present basis of small and highly diversified individual production.

And the Departmental Committee on Shipping and Shipbuilding, after pointing out that "the tendency of the world appears to be in the direction of larger economic

organisation, a tendency manifest in shipping as in steel-making," expressed the fear that unless analogous steps were taken by shipbuilders and marine engineers, those industries "may suffer needlessly to the detriment of the nation," and that "individualism by itself may fail to meet the competition of the future in shipbuilding and marine engineering, as it has failed to meet it in other industries."

In view of this consensus of expert opinion, it is not surprising that Lord Balfour of Burleigh's Committee on Commercial and Industrial Policy, which reported in December, 1917, should have adopted the doctrine so propounded. After noting the existence of a widespread belief that a re-examination of British trade organisation had become necessary on account of the increasing intensity of foreign competition, based largely on combination in respect of production and distribution, they declared their general agreement with the view that the individualistic methods hitherto pursued on the whole in this country needed to be supplemented or replaced by co-operation and co-ordination as regards the obtaining of supplies, production and marketing abroad. They recognised that the adoption of this course would lead to combinations to control the domestic market, but they held that such development is not only practically inevitable under modern economic conditions, but is in some cases desirable in itself.

Whilst authoritative bodies were thus giving support to the theory of trade combination, the Government departments were encouraging it in practice. The Committee on Trusts, appointed by the Ministry of Reconstruction in February, 1918, "in view of the probable extension of trade organisations and combinations, to consider and report what action, if any, may be necessary to safeguard the public interest"—terms of reference which are themselves significant—reported (April, 1919) that—

There was considerable evidence before us that the growth and power of these associations has been greatly strengthened during the period of the war, and that this result appears to have come about primarily from the novel circumstances of war—under which the Government, acting through the Ministry of Munitions or other Departments—found it necessary sometimes to consult the most informed opinion in a trade, and sometimes to ration material through an organisation representative of the trade. Unassociated firms which found themselves not consulted by the Government were thus led to join the existing associations, or, in some cases, to form representative groups for the purpose of advising the Government on matters concerning the trade.

There appears to be no doubt that a large number of definite trade associations have been formed during the war which may certainly be expected to control and regulate prices and the conditions of industry in the same manner as the pre-war associations were already doing, and it is also probable that the habit of co-operation and discussion on matters of common concern, which has been the result of the formation of purely advisory groups of manufacturers and distributors for the purposes of the war, will lead to the transformation of at least a part of such advisory groups into definite trade associations as soon as Government control over trade or industry is withdrawn. The advisory committees will disappear, but will reappear in the form of new trade associations.

The movement thus advocated and encouraged was stimulated further by the conditions which prevailed after 1918. In the first place, many industries had expanded enormously during the war—especially the iron and steel and engineering trades and some sections of the chemical trades—and those engaged in them found themselves with productive capacities far in excess of any lasting post-war demands, and therefore faced with the likelihood of fierce domestic competition—as well as increased competition from the United States, France and other countries whose industrial equipment had been similarly enlarged—unless it could be limited or mitigated by agreement among the producers. Secondly, the armament firms, which had vastly increased their capital, plant and organisation (often with Government financial aid) in order to meet the munition requirements of ourselves and our Allies, realised that the demands upon them of this kind must for some years be insignificant, and to keep their works even partially in operation they must turn to other fields of production, and this led them to acquire various undertakings to serve as the bases for their new activities. Thirdly, after the signature of the Treaty of Versailles, and when the dammed-up demand for goods of all kinds gave British industry an unnatural and transient boom, there was much short-sighted optimism as to the

duration of the apparent prosperity. The results were not only further big extensions by many manufacturing concerns, but also an incursion of financial and promoting interests into industries (the cotton-spinning industry, where, happily, they had hitherto played a very small part, being the most striking example), the object being to buy up a number of hitherto independent enterprises and bring them under one financial and commercial control, with the usual statements in the subsequent offers to the public about the resultant economies and enhanced profits. Fourthly, the high prices ruling for a time for all materials undoubtedly drove manufacturers of finished goods to try to secure their own sources of supply, and thereby cut out so far as practicable intermediate profits. And finally the expectation on the one hand that the State, in response to many demands (some of them from unexpected quarters), would concern itself far more actively than it had done for half a century with industry and trade, and on the other hand the fear that its efforts to promote the development of British trade and industry would lead to the imposition of controls, combined with the great variety of new legislation and the problems of taxation to give an impetus to the formation of trade associations of the more general type, organised on a comprehensive basis and with competent staffs, and though not specifically designed for action in respect of production and prices, yet likely to lead to it at no distant date. The activities of these associations, formed primarily to deal with industrial politics, have to a considerable extent been co-ordinated in the largest and most influential of these post-war organisations, the Federation of British Industries.

DANISH AGRICULTURE.

In a paper read before the last meeting of the Royal Statistical Society, Mr Harold Faber presented a careful calculation of the agricultural production of Denmark. He attempted to give the results both for the pre-war period—taking the average of 1909-13—and for the single year 1922, but not much reliance can be placed on the comparison. The recovery of the Sleswig district has extended the agricultural area of Denmark from 7,150,000 acres, as it was before the war, to 7,956,000 acres—an increase of 11 per cent. Apart from this disturbing factor, the year 1922 was still in some degree affected by war conditions. It was suggested, indeed, that the abundant harvest and the very large increase in the number of pigs in 1923, "when pre-war conditions may be said to be established," would have given more favourable results if this year had been taken. A somewhat perfunctory attempt was also made at a comparison of the agricultural results attained in Denmark with those of Germany and of this country. The figures given were not convincing, and, so far as Great Britain is concerned, the omission of sheep—one of the most characteristic and important factors in British farming—in itself vitiated any comparison of the two countries. These international comparisons are in any case of very little value statistically, and of even less value practically. A few figures in a summary table are more misleading than informative, unless the facts which they purport to represent are very closely examined and analysed.

The chief statistical value of a very valuable paper lay in the calculations of the output of Danish agriculture before the war—i.e., in the period 1909-13. As is well known, the system of farming in Denmark is highly specialised. It is directed to the production from the land of the maximum quantity of animal products. The crops grown are all subservient to this object. It is significant that the Danes, who before the war lived under a menace of isolation and invasion infinitely greater than that affecting the British Isles, made no attempt to organise their agriculture for war-time. They accepted the hard facts of their strategic and economic position, and wisely organised their agriculture for peace. They

recognised the obvious truth that their best resource, even for defence, lay in the utmost possible development of the productivity of the soil, and that in this they had a reserve which in time of emergency could be drawn upon. As Mr Faber truly remarked, the agricultural policy adopted "leaves the country in a state of intense cultivation and the soil in a state of high fertility, and offers a considerable security in times of enforced isolation, because of the ease with which the animal production can be curtailed and a large amount of field crops made available for human consumption."

The total production of milk in 1909-13 was calculated as 3,450,000 tons, of which 70 per cent. was used for butter-making. The quantity of butter made was 108,260 tons, of which only 20,000 tons were consumed at home, the balance being exported. Only about 7 per cent. of the milk produced was sold as milk. The contrast with this country is very marked. In Great Britain about 50 per cent. of the total quantity of milk produced is sold as milk. It is hardly necessary to observe that the sale of milk is far more lucrative than the sale of butter, as every dairy farmer knows.

The total egg production of Denmark in 1909-13 was 4,950,700 great hundreds, and of these 70 per cent. were exported.

The Danish production of meat of various kinds in 1909-13 and its destination may be succinctly shown as follows:—

	Home Consumption.	Exported.	Per Cent.
	Tons.	Tons.	Exported.
Beef and veal	55,600	51,930	49
Mutton and lamb	10,200	180	2
Bacon and pork	56,750	112,580	70

Denmark has long been held up as an example for British farmers. Much has been written, and widely circulated, in this country, and many farmers and others interested in agricultural practice and economics have visited Denmark and seen for themselves how the land is farmed and how the business of farming is conducted. Generally, the conclusion drawn is that co-operation is the secret of success, and British farmers are exhorted to imitate. It is true that the adoption of co-operative methods has enabled Danish farmers to organise their export trade very effectively, and to ensure that the profits of the business come to the producers and are not dissipated along a chain of middlemen. But the organisation of the business is not the result of co-operation. An export trade necessarily involves the collection, classification, grading and eventual bulking of supplies. Other countries export agricultural products, and the organisation of the business is done, with equal efficiency, by intermediary dealers. The wisdom of the Danes lies in the fact that they have been shrewd enough to perform these essential operations for themselves and thus escape exploitation for the benefit of others. Their wisdom and shrewdness are the result of an enlightened and far-sighted system of education. The Danish farmer is carefully trained from his youth upwards for his business. The educational system is based on the principle that the training of the mind comes first, and that general breadth of outlook must be cultivated before specialisation begins. The principle was adopted from England; it is the basis on which our public school and university education for generations rested.

The help given by the State to Danish agriculture has been mainly through education. It has assisted and fostered agriculture in various ways, but it has never attempted to bolster it up by artificial props. Danish farmers have looked to their Government for the removal of hindrances to their enterprise, for active assistance in securing fair terms for their business operations, and for such intervention as may be necessary to ensure full and free access to their markets. But they have never asked the Government to do for them what they can do for themselves. In short, the secret of the success—in spite of natural difficulties far greater than any in this country—of Danish agriculture is, at bottom, self-help.

Notes of the Week.

The British Delegates for Paris.—A change has been announced in the personnel of the British representation at the forthcoming conferences of international experts in Paris. Mr Montagu Norman, the Governor of the Bank of England, finds himself unable to undertake the mission. His decision causes regret on personal grounds, and it is to be hoped that the cause for it is not the probability that the work of the committees is to be a long business. However, a strong substitute has been found in the person of Sir Robert Kindersley, who, as a director of the Bank of England, chairman of Lazard Brothers and Governor of the Hudson Bay Company, occupies a position of eminence among our leaders of finance. Sir Robert is perhaps best known to the public for his sterling work in connection with the National Savings movement, and is at present the President of the National Savings Committee. He is not new to international conferences of the highest importance, for he was the British member of the Bankers' Committee which met in Paris last year. Thus, despite the withdrawal of Mr Norman, the British delegation, of which the other two members, it will be remembered, are Mr McKenna and Sir Josiah Stamp, remains strong and thoroughly representative. It appears that the committees are to begin their sessions on January 14th and 21st respectively.

The Railways and Unemployment.—Railway affairs are very much in the public eye this week, for while the railwaymen are balloting on the question whether the award of the National Wages Board is to be accepted, the railway directors are busy elaborating plans for new works, which will involve large expenditures, and will do something towards relieving unemployment in widely distributed areas. The result of the ballot will be known in the first week in January, and it is earnestly to be hoped that the anxiety regarding the decision which has been reflected in the Stock Exchange will prove to be groundless. The men's leaders have pointed the way to acceptance, for the delegate conference of the National Union of Railwaymen voted by nearly a 3 to 1 majority for acquiescence in the new arrangement. Three of the "big four" companies have announced programmes of new works involving expenditure of over £26 millions. Details as regards these proposals are now available, and the projected plans are already maturing into actual contracts. For instance, the London, Midland, and Scottish have published a list of contracts placed with outside firms for 127,000 tons of steel rails, about 4,000 wagons, and 150 locomotive boilers. The London and North-Eastern's programme contemplates the expenditure of £5½ millions on locomotive, carriage and wagon building, and includes 273 locomotives, 12,000 wagons, and 700 new carriages, some of the work being put out to contract. Even more interesting are the details issued by the Great Western. This company has placed orders for 32,000 tons of steel rails, 20,000 tons of rail chairs, 15,000 tons of wheel tires, and 46,000 wheel centres. Also a considerable portion of the orders for wagons and coaches will go to private firms, instead of going, as they would normally, to the company's Swindon works. Large works for which contracts have actually been placed, or which are about to be commenced, include a new long tunnel under the Malvern Hills, the completion of new lines in Glamorgan and near Wolverhampton, new accommodation for milk traffic at Paddington, and new works of various kinds, including large station extensions at Llanelly, Cardiff, Port Talbot, Wolverhampton, Bristol, Stourbridge, Newton Abbot, Newport, Oswestry, Aberystwyth, Barmouth, and other places. Many of these works will obviously absorb a large amount of unskilled as well as skilled labour. There has been in some quarters a public clamour that the "railway millions" should be devoted to the provision of work for the unemployed. From the latest announcements it appears that the companies, both in the magnitude of their plans and in the speed with which they are translating them into action, are making as effective a contribution as lies within their power to make, towards finding work for the unemployed. If certain

proposals made to the Government by the companies are accepted, the scope of their contribution will be still further extended.

Progress in Ireland.—The year closes, writes our Dublin correspondent, with hopefulness in the ascendant. Order has been fully restored, and its maintenance is passing almost entirely into the care of the unarmed Civic Guard, backed by the ordinary criminal law and trial by jury. The large bulk of the martial law prisoners and internees have been released without, so far, any unfortunate consequences. The Irish Free State has provided for its own financial requirements by an internal loan, and the excess subscriptions, with other signs, warrant the belief that the current has set in the direction of home for Irish money invested abroad. If this be so, it will be a long time before Ireland will need to look beyond her own resources for such loans as she may require. The campaign of economy is in full swing. The Army, the teachers, the Civil Service, and the old-age pensioners have all been made to feel the pinch of retrenchment, and there are many who sought popularity by clamouring for economy that now pursue it by loud sympathy for the victims. Nowhere have these things made a deeper impression than in North-East Ulster, where there has never been a real understanding of the essential conservatism of Irish Ireland nor of its financial resources. This impression and the considerations which naturally flow from it are further coloured and strengthened by the Report, just published, of the Fiscal Inquiry Committee, which shows a strong bias against tariff experiments and other interference with the free flow of commerce along its accustomed channels. The five members of the Committee, previously described in these columns, are professional economists hailing originally from Irish Universities, and though the terms of their reference were fairly wide, they were clearly somewhat embarrassed in reporting by a public pronouncement of President Cosgrave that they were to deal with facts and not policy. They have, therefore, restricted themselves to considering their subject matter from a purely economic standpoint—avowedly they eschewed sociological considerations and such matters as food supply and munitionment in possible times of national emergency. They report definitely that "the volume of industry which is anxious to obtain a protective tariff is small compared with that which desires no change in the existing system." By no means the least valuable portion of the Report is a table showing for Ireland, for North-East Ulster, and for Great Britain the wages levels in all the principal trades in July, 1914, and October, 1923, together with figures indicating by reference to cost of living the true wages level of the latter date. The broad result shown is that comparing the true wages level of October, 1923, with the actual wages level of July, 1914, the Free State shows much the highest percentage of increase, and that actual Free State wages at the later date are very substantially higher than in North-East Ulster or Great Britain. Perhaps this is the explanation of the large receipts of the Dublin shopkeepers during the Christmas shopping season—they report that there is quite as much money as usual, but that it is distributed more widely and in smaller amounts. The Oireachtas has rejected the Labour Party's Bill for the nationalisation of the Free State railways. The Government favours unification by voluntary agreement, and if there be no voluntary agreement, it will provide, probably, a compulsory scheme. All the companies but one—the Dublin and South-Eastern Railway Company—are in substantial agreement, and the matter is hanging fire somewhat for the moment. It is more than possible that, having regard to political changes in Great Britain and the inevitable delay of the Boundary Commission, the Free State Government wishes, during the negotiations which are certain to come, to stand free and uncommitted in regard to its railway policy, so that it can ultimately be shaped with due regard to the larger issues and their ultimate adjustment.

The League and Hungary.—The protracted negotiations which have been carried on by the various interested parties in connection with the League of Nations proposals for the restoration of Hungarian finances on lines

which have already proved successful in the case of Austria seem at long last to be nearing a satisfactory conclusion. The Financial Committee of the League has submitted a unanimous report to the Council, and the amended scheme for a Hungarian loan seems to have every chance of being accepted at an early date. Side by side with this the Committee approved of two Protocols, the one embodying certain political guarantees, and the other containing the engagements which Hungary must undertake in respect of control and reform before the main scheme can come into operation. A few relatively small questions have still to be settled between the Little Entente Governments and Hungary, though it is hoped that direct discussions between the parties will have led to a satisfactory solution by January 16th next. In this event it is understood that negotiations for the flotation of an external loan will probably begin in March. The reconstruction scheme itself provides that inflation shall cease immediately, and that an independent Bank of Issue shall be set up. In this manner the stabilisation of the Crown, which is an indispensable condition of a renewal of confidence, should follow as a matter of course. Every effort is to be made to balance the national Budget by June 30, 1926, while the deficit which must be forthcoming in the intervening period is to be met out of the proceeds of the external loan. As in Austria, a Commissioner-General is to be appointed by the League to ensure that the full programme is, in fact, carried out. Unlike the case of Austria, however, the Reparation Liens are not to be suspended completely for the period of the reconstruction experiment, though it is proposed that no payments shall be made on Reparation account until June, 1926, while, for the twenty years thereafter they shall not exceed 10,000,000 gold crowns (approximately £415,000) annually. It is satisfactory that the main outlines of this scheme should have proved acceptable to the present Hungarian Government, though it is worth emphasising that Count Bethlen's position is being very sharply criticised by many influential political leaders in Budapest. Irredentism is strong amongst certain sections of the population, and to these the idea of external control is extremely distasteful. The reactionaries who came into power after the débacle of Bolshevism four years ago are still in effective control of the situation, and Count Bethlen himself exists very largely on sufferance. Of course, the mass of the people are unable to express their views owing to the reactionary electoral law, which makes a farce of the representative principle, while the social structure of the country ensures the predominance of the aristocracy. We have often pointed out that the existence of this state of affairs makes a comparison between Austria and Hungary somewhat dangerous. At the same time, the States of the Little Entente are certain to insist upon external control being made a reality, while it seems highly improbable that financial reconstruction could ever be achieved by any Hungarian Government if left to its own devices. In other words, a tactful Commissioner might do much to save the country from its own extremists. The technical difficulties of reconstruction in a predominantly agricultural country like Hungary are certainly less than those with which Dr Zimmermann has been faced in the adjoining Republic, and there are many reasons for believing that the "League of Awakening Magyars" and similar reactionary and thoroughly irresponsible organisations which have been so much to the fore of recent years are not really representative in any sense of the mass of the Hungarian nation. For these reasons we hope that the League scheme will soon be definitely accepted by the parties concerned and the work of European restoration proceeded with without unnecessary delay.

End-December Options.—A Stock Exchange correspondent writes:—Those people who are in close touch with financial affairs and Stock Exchange prices know that the end-December markets afford no reliable guide to the ordinary course of supply and demand of stocks and shares on behalf of the public. There are numbers of factors which enter into consideration at the end of the year that bulk largely in the position at that time, but which exercise a secondary influence in the ordinary

course of events. Amongst these factors may be mentioned the effect of those options which fall due to be exercised at the end-December account. In the industrial market, the movements during the past few months have been confused and erratic. A good deal of money was paid last September for the call of tobacco shares, Associated Portland Cement, Courtaulds and Kaffirs. In addition, the oil market found heavy buying of calls on Shell Transports, while, to a minor extent, a good deal of business of this sort took place in Royal Dutch. In such cases as Associated Portland Cement, where the price has fallen so heavily of late, the givers of call-money, unless they have sold shares previously against their bargain, were not likely, of course, to call the shares, and part of the reason for flatness in Cements is ascribed to the reported selling of stock by option-dealers who had bought half the shares against their commitments in the way that is regarded as affording conventional protection to those who take the money. In the Kaffir market the position is a little different, because most prices have gone up during the past few months. This will mean that people who have not sold shares and taken them in on the rise will call their purchases, and either pay for them or carry them over as bulls. This might alter the technical position of the market to some extent. Public interest has been too slender to enable any clear idea to be gained of what the open position is on account of the public. The influence of option-dealing, as it makes itself felt at the end of the year, is frequently noticeable, and it causes a certain amount of bewilderment to people who, holding the stocks and shares in the ordinary way, and not speculatively, are unable to account for apparently inexplicable movements which are really brought about through the operation of closing transactions against options. Where a man gave money three months ago for the call on Rand Mines, for instance, and sold the shares a month ago, he had to carry over his sale as a nominal bear for one account. The shares became callable this time, and this automatically closed his short position. If he is still running the shares and does not want to pay for them, he would, of course, call them if the price stands higher than his option obligation, and he would either, as already stated, contango the shares or pay for them. Speculators, it need scarcely be stated, generally elect to adopt the former course, and if this is carried out to any marked extent in the Kaffir market the result will be a moderate bull account that will require fresh public support from outside sources to enable its realisation at satisfactory prices.

Co-operative Prospects.—A correspondent writes:—The prospects of the co-operative revival suggested in the *Economist* of September 29th last are fully borne out by the report of the directors to be presented at the forthcoming meetings in January, over which Mr George Thorpe, of Dewsbury, will preside for almost the last time. He will in June vacate the office owing to the time-limit, which compels the retirement of directors at 70 years of age. While the sales at £15,182,203 for the quarter show a falling off of 2 per cent., it is clear from the increased turnover of several departments that in volume the amount of trade has shown an advance. The supplies from the society's productive works were £5,007,392. Confirmation of the fact that the slump has been arrested comes also in the amount of deposits and withdrawals from the Co-operative Wholesale Society Bank, which totalled £119,918,512, an increase of nearly 4 per cent. This bank now works the accounts of 1,029 co-operative societies, 8,569 trade unions and friendly societies, and 3,310 clubs and similar mutual organisations. The weight of tea, preserves, soap, biscuits, woollen goods, clothing, &c., sent out was greatly in advance of the previous period, and the present turnover is in the same direction. The directors are advising delegates as to developments in connection with overseas trade that are likely to facilitate international business. Hitherto the organisation of the co-operative tea market has been by means of a working partnership between the English and the Scottish Co-operative Wholesale Societies, under which a capital of something like £2,400,000 is employed. From December 24, 1923, this will be controlled by a new

society just registered and formed of the same owners and directorate, but with a separate existence. It will be known as the English and Scottish Co-operative Wholesale Society, Limited, and £1,800,000 of the capital will be supplied by the English and the other by the Scottish wholesale. Its importance in the tea trade may be gauged from the fact that the sales of the department for the quarter under review were £1,377,464, as compared with £1,146,496 in the same period a year ago. The weight of tea sent to the retail societies was 12,180,641 lbs, an increase of 5 per cent. In addition, the new venture will take over the cocoa and chocolate works at Luton, the business of which was £57,863 in the quarter just concluded. Approval will also be asked for the policy of investing in the Rosso-British Grain Export Company, in which the Co-operative Wholesale Society is investing £25,000, and which has shipped a quantity of wheat now being dealt with in the co-operative flour mill at Trafford Park, Manchester. Last September the *Economist* explained the new policy of the directors with regard to the depreciation of property, and this having been approved by resolution will be the subject of a special meeting following the ordinary business in January, at which the rule will be altered to provide for depreciation at the rate of 5 per cent. on the society's shops and fixtures, 2½ per cent. on buildings, and 1½ per cent. on land, these reduced rates of depreciation to come into operation as from June 24th last. Co-operators will soon be wondering whether this change, together with the more stabilised trade outlook, will bring the wholesale nearer the declaration of a small dividend on the purchases made by societies from their works. If such should prove the case, the progress of the retail societies will be greatly quickened.

British War Pensions.—The sixth annual report of the Minister of Pensions, which has recently been published, covers the twelve months which ended on March 31st last. At that date 2,500,000 people were still in receipt of pensions, this total including 320,000 wives and 895,000 children. Large as is this total, it nevertheless represents a decline of 400,000 during the year under review, and is one million less than the highest recorded figure. Compensation in some form has been paid in respect of two out of every five men who enlisted for service, while approximately 42 per cent. of the total pensions awarded were for wounds and injuries. Since May, 1918, there have been five million medical examinations for purposes of assessment of pension, and one and a-half million courses of medical treatment have been provided. This has naturally entailed considerable expense, though, of the £460,000,000 spent by the Ministry up to March 31st last, all but about 5 per cent. went directly to the benefit of the pensioners. The following table gives the number of first awards made in respect of the various classes of beneficiaries:—

First awards in respect of—	Period.			
	Year Ended March 31, 1920.	Year Ended March 31, 1921.	Year Ended March 31, 1922.	Year Ended March 31, 1923.
Soldiers, seamen, &c., disabled	479,584	95,836	21,998	8,450
Do deceased	162,899	22,901	14,925	9,178
Officers, disabled	34,204	7,599	2,038	800
Do deceased	3,225	1,461	784	378
Nurses	1,011	531	192	70
Totals	680,923	128,328	39,937	18,876

The decline is a natural result of the interval of time since the cessation of hostilities, the Great War having officially ended on September 30, 1921. Of course, many of these awards were of a temporary nature, while deaths among the disabled or their dependants have combined with the re-marriage of war widows to reduce the number actually in receipt of pensions. By March 31st last about 34 per cent. of the total awards made to widows had ceased for the last-mentioned reason. By the same date the total number of permanent awards had risen to 316,000. The

general expenditure of the Ministry for the year ended March 31, 1923, is given in the following table:—

Heading of Expenditure.	Approximate Total, Year ended March 31, 1923. £	Comparative Total, Year ended March 31, 1922. £
(i) Salaries, wages and expenses of staff, including fees to medical referees and members of medical boards	3,846,000	4,363,276
(ii) Administrative expenses of local war pensions committees	404,000	1,160,824
(iii) Pensions and gratuities (officers and their dependents)	5,865,000	6,434,445
(iv) Pensions and gratuities (nurses and their dependents)	92,000	103,066
(v) Pensions and gratuities (men and their dependents)	61,839,000	69,501,576
(vi) Treatment and allowances in excess of pension to pensioners undergoing treatment	8,640,000	12,503,319
(vii) Expenses of pensioners attending medical boards or undergoing treatment	474,000	670,896
(viii) Miscellaneous	340,000	822,214
Totals	81,500,000	95,559,616

Administrative expenses show a decline in consequence of a diminution in the amount of work to be done, with a resultant reduction in staff and in medical examinations, while the other decreases are due principally to the reduced number of beneficiaries. In the course of the current year it seems probable that the number of final awards will be greatly increased, and the whole establishment brought on to a more permanent basis. As the years roll by, of course, the burden on the national budget, which is still very great, will become progressively less. Thus the expenditure in this last year is already considerably below the £106,645,516 spent in the year 1920-21, which is the highest amount on record.

Conditions in Egypt.—A Cairo correspondent writes:—The Government have finally issued on the 4th inst. their estimate concerning the present cotton crop. It is expected to reach 5,844,000 cantars, but in financial circles people speak of a slightly over six million cantar crop. Prices were very erratic on some days, fluctuating from \$45 to \$52, and back to \$40, for Lower Egypt quality. March delivery (Lower Egypt quality) is quoted to-day at \$43.55 and February delivery (Upper Egypt quality) at \$40.05. It is believed that about five million cantars are already sold at an average price of \$35. Assuming that the remainder of the crop, or one million cantars, will be sold at \$40, Egypt will receive for her cotton about 43 million pounds, a sum which leads to hope for a coming revival in the import trade. The stock market has followed the activity of the cotton market, and first-class securities improved substantially. Unified is at 73½, National Bank shares at 24½, Agricultural Bank at 7½, Crédit Foncier Egyptien shares at 79½, and these quotations do not seem exaggerated when one takes into account that the mentioned stock yields about 6 per cent. per annum, free of income-tax in Egypt. Trade continues to show signs of improvement. The Government have published the following statistics for the 11 months ending in November:—

	(000's omitted.)	1922. £	1923. £
Imports	38,895	40,897	40,897
Exports	40,428	48,035	48,035
Re-exports	2,538	1,362	1,362

The balance of trade is thus in favour of Egypt for nearly four million Egyptian pounds, taking into account the re-exports. National Bank of Egypt notes in circulation at the end of November amounted to 36 million Egyptian pounds, as against 33 million in November last year, an increase which is due to the high prices attained by cotton. Official index numbers for November show the cost of living as follows:—

	(1914 = 100.)	Nov.	Oct.
1921	200	198	198
1922	174	173	173
1923	160	159	159

The tourist season promises to be a good one. Thousands of tourists are already announced for the months of January, February, and March. Government officials have been requested to come to office in the afternoon during the winter months, which was not the case up to now, and the Government expect by so doing to reduce their number gradually. Elections for the first Egyptian Parliament will take place in January next. Zagloul's party is expected to have the upper hand in the new Parliament, and everybody is anxiously waiting to see the first acts of Egyptian Constitutionalism.

Peruvian Finance and Trade.—In spite of the occasional rumblings of disruptive forces under the surface of Peruvian politics, the prospects in Peru seem generally encouraging, and the country is free from the jealous nationalism which hampers development in some other Spanish-American States. The Report (to June last) of H.B.M. Vice-Consul at Callao notes that the Customs, the Navy, education, and the Reserve Bank are managed by Americans, the police by Spaniards, the army by a French mission, the electric power of Lima and the neighbourhood is controlled by an Italian company, the posts and telegraphs by the English Marconi Company, the Callao docks by a French company, and over 80 per cent. of the railways are run by the Peruvian Corporation of London. The public debt last June totalled £11,401,391, of which £4,371,049 was external debt. There was a budget deficit of £1,358,090—the revenue amounting to less than 84 per cent. of the expenditure—which was nearly covered, provisionally, by the loan raised last December in London; but it is hoped to fill the gap by means of the increased Customs duties, the alcohol monopoly established last April, increased business licence taxes in Lima and Callao, and eventually also by a projected income-tax based on rent. But it is feared that this year the deficit will be greater. The currency is fully secured on gold and securities, and token coins are being substituted for small notes. The premium on sterling exchange rose from 7 per cent. last December to 16½ in January, then dropped to 8½ per cent. in March, and rose to 14 per cent. in August last; it has since fallen to 7 per cent. again. Imports in 1922 amounted in value to £10,592,554, over £6,000,000 less than in 1921; the only noteworthy increases were in machinery and vehicles and in cotton goods. Exports were valued at £18,692,870, an increase of £2,000,000; of this total petroleum, sugar, and cotton each represented nearly one-fourth, and copper bars most of the balance. The production of petroleum is likely to increase this year. Special mention is made of a blend of cottons useful in woollen manufacture, of which nine-tenths went to Liverpool; sugar and wool seem promising, and American rubber plantations are projected in the Amazon region. Balata is being largely obtained there, but by methods which will extinguish the source of supply. The copper output increased by about 9 per cent., and new mines are likely to be worked in the north. The production of silver rose by more than 33 per cent. to 409,635 kilograms, and Peru now stands third among the silver-producing countries of the world. The railways covered by the lapsed Dunsuir concession have been taken up by the State, and a line is ambitiously projected by an American company from Yurimaguas on a tributary of the Amazon, to the Pacific coast near Payta. Shipping facilities are considerable and increasing, and irrigation, sanitation, and road-making are progressing. It is noted that Great Britain is taking a larger share relatively of the import trade, and that British goods are most in favour. But the Peruvian purchaser is apt to consider cheapness rather than quality.

The Honduras Debt Settlement.—Reuter announced on Friday that the Honduras Government had signed the Agreement accepted last March by the bondholders; but the statement, unfortunately, is misleading. We learn, on inquiry at the office of the Council of Foreign Bondholders, that the Agreement was signed last March by the representatives of the bondholders and the Honduras Government. Probably the President may have signed it subsequently, but, to become operative, it must be approved by Congress, which meets on January 1st. The

settlement, like its abortive predecessors, has had to encounter much popular opposition, but it is indispensable to the improvement of the credit of the country, and, coupled with that of the Salvador external debt, should have a salutary reflex action throughout Central America. The total payments will amount to about one-fifth of the outstanding capital, and the interest default for 51 years is entirely ignored. But considering the circumstances of the issue of the loans, and the fact that they have long passed from the possession of their original holders, it is fairly satisfactory. We trust that the Congress will speedily end one of the longest defaults, following perhaps the most discreditable episode in Spanish-American history.

Shipping Developments.—In the *Economist* of October 27th attention was drawn to the formation of an Anglo-Russian shipping company. Russia was represented by the Soviet Government, the Russian Co-operative Union and Arcos, and on the British side Messrs Furness, Withy and Co. were prominent. This 50-50 company has been successful in its operations, and during the last month or two a large number of steamers have been chartered from the Black Sea ports to load grain for the United Kingdom and also Germany. Now the Russian passenger traffic to and from Canada and the United States is to be put on a better footing, and an agreement has been signed between a group of British, Canadian and other steamship companies for the purpose of developing this important trade. The Canadian Pacific Railway, the Canadian Pacific Steamships, Limited, the Cunard Line, and also the Anchor Line are representative of Canadian British shipping interests, and they are very prominent in the new undertaking, which will have on the board three Russian directors, representing the Soviet Government, which will receive a capitation fee for every passenger shipped. Thus both the Russian passenger and cargo trade will be closely identified with the leading British shipping interests, who will provide the necessary shipping, as obviously the resources of the Russian merchant marine will be very limited for years to come. In other directions the outlook in the homeward freight markets is much more cheerful than it was some time back, and shipowners are looking forward to more active markets in the coming year.

The Czechoslovak Sugar Industry.—Czechoslovakia is the chief European country which has exported sugar since the war, and the present scarcity of the commodity in the world market lends added interest to a consideration of production in that country of recent years. The following table gives a brief *résumé* of the situation, and is based on official statistics published in a recent number of the *Gazette de Prague*:—

SUGAR PRODUCTION.						
Year.	Acreage. (In Hectares.)		Beetroot Treated.		Sugar Produced.	
			(In Metric Tons.)			
1912-13	317,717		9,381,551		1,423,071	
1918-19	200,557		4,190,406		623,744	
1919-20	182,653		3,426,476		507,417	
1920-21	192,864		4,200,341		717,239	
1921-22	191,893		3,461,664		662,520	
1922-23	184,591		4,385,186		744,448	

These statistics show clearly how great has been reduction in the cultivated area and in the yield of recent years as compared with the position immediately before the war. It must, however, be borne in mind that the year 1912-13 was well above the pre-war average. The reduction is more marked in Slovakia and in Moravia than in Bohemia proper, while the number of factories has remained much the same throughout the period under review. The relation between internal consumption and the export surplus during the post-war years has been as follows:—

(In Metric Tons).

Year.	Internal Consumption.	Exports.
1918-19	317,817	160,605
1919-20	330,624	340,516
1920-21	318,339	414,377
1921-22	309,376	376,329
1922-23	351,959	389,160

the production returns of the previous year. In the current year the acreage has increased by about 20 per cent., and the harvest has been fairly satisfactory. Provisional estimates of the crop point to a probable sugar production of 950,000 tons, while internal consumption is almost certain to be at least 350,000 tons. Although production is still much below the pre-war level, there should nevertheless be a considerable increase in the surplus available for export. In the year 1922-23, out of a total of 389,160 tons exported, 100,840 tons were consigned to Hamburg, most of this being in transit for this and other countries, while Great Britain took 68,000 tons direct. It thus appears probable that England is Czechoslovakia's best customer for sugar, with Austria next with 89,070 tons; Switzerland third, with 56,560 tons; and Italy next, with 36,240 tons. Last October 78,599 tons were exported (as against 18,549 tons in October, 1922), this going principally to Great Britain, Switzerland, Austria, and Hamburg (in transit). Considerable efforts are being made by the Government still further to increase the area down to sugar beet, though there seems to be no chance of an immediate return to the conditions prevailing in the epoch-making year 1912-13.

China Clay.—A correspondent writes:—English china clay, or colloidal clay, or kaolin, or "White Wealth of the West," as it is variously called, is obtained mainly in Cornwall, near St Austell, and to a less extent—about 10 per cent. of the whole—in Devon. Although widely distributed over the whole world, the best quality is probably found in Cornwall. It occurs in most European countries, in China and Japan, India, Australia, Canada, Federated Malay States, Africa, and the U.S.A. In many of these countries it is at present mainly of geological interest, and has not yet been commercially exploited. The principal countries in which it is of commercial importance are Great Britain, Germany, Czechoslovakia, Portugal, China, Canada, and the U.S.A. New deposits are continually being discovered, among the more recent being those of Canada and Mexico. In view of its many uses in a great variety of industries, particularly in the paper, textile, and pottery industries, it is probable that increasing attention will be given to its production in various parts of the world. Beside the main uses already noted it is also of value in the manufacture of soaps and soap powders, water softeners, sewage purifiers, metal and plate cleaners, stove and boot polishes, toilet powders, cosmetics, and numerous other commercial products. In spite of the almost total loss of two large markets in Russia and Germany, and a falling off in the American demand, the china clay trade has steadily increased this year. There has been of late a considerable amount of undesirable speculation in the trade, and numerous companies have been formed and shares offered to the public. These "companies" have had no solid foundation, no men of practical experience behind them, and very often the properties so highly extolled in the prospectus have been situated in out-of-the-way localities. Such enterprises, of course, are best left well alone. On the other hand, the genuine old-established companies have been strongly urged to give more attention to advertisement and propaganda. They have an excellent product to dispose of, probably the best in the world, and it is considered that much more could be done, in view of its wide range of uses, to extend its sales in the world markets. Facilities for overseas trade have been increased by the recent opening of the new jetty at Fowey—the Cornish port whence most of the export trade is done. Increased port facilities are also contemplated at Falmouth St Just Ocean Wharves. Production and export for 1913, 1914, and the last three years are given in the following table:—

	1913.	1914.	1921.	1922.	1923 (First 6 Months).
Foreign exports..... tons	598,420	595,955	227,530	482,860	257,370
Imperial "..... "	31,270	32,665	14,410	14,740	11,050
Total exports.....	629,690	628,620	241,940	497,600	268,420
Home trade..... "	275,570	266,612	103,310	239,330	163,810
Total trade..... "	905,260	895,232	345,250	736,930	432,230

The value of the total in 1913 was £1,069,510, whilst that of 1922 was £1,903,730, and for the first six months of 1923 it was £1,050,530. Increasing attention is now being given in Cornwall to the important question of china clay research. It was announced at a recent meeting of the St Austell Rotary Club that the South-Western University College at Exeter proposes to undertake this research. There is urgent need for more information on the chemical nature of this mineral, especially with a view to discovering further uses. Its great value in the paper industry, which uses about two-thirds of the total output, was discovered by chemical research, and the Germans used it for the manufacture of ultramarine, thus revolutionising that industry, whilst its use in the manufacture of alum, bleaching powders, and other chemicals has led to an ever-increasing demand. On the engineering side, in the application of mechanical devices in place of hand labour, great advances have been made, e.g., the uses of hydraulic hoses for washing, steam navvies, portable conveyors, rock drills, and the new electric process for producing colloidal clay of a quite exceptional degree of fineness.

Cotton Mill Shares.—Our Manchester correspondent writes:—Although very little is known outside Lancashire of the dealings in cotton mill shares, quite a big business is done from day to day in Manchester and Oldham. The weekly list of the Lancashire Share Brokers' Association gives quotations and other particulars relating to nearly 300 companies. Owing to the trade depression, the market during the past year has been dull and irregular. The following table gives comparative share quotations for 20 leading concerns, and it will be seen that in each case the value was lower at the end of 1923 than at the beginning. The shares of each company in the list are of the nominal value of £1, on which 10s has been paid up:—

	Jan. 3, 1923.		Dec. 27, 1923.		Fall.
	s	d	s	d

During the last few months the directors of several companies have made calls upon the shareholders, and it is largely owing to the fear of more of this sort of thing that prices keep on a very low level. The stocktaking results for the past half-year, which will be announced in a few days, are expected to be rather more encouraging than the figures published at the end of June. There has been a distinct improvement in the trading conditions for spinners producing Egyptian yarns, but firms engaged on American cotton are still doing badly.

Brewery Fusion.—An extraordinary general meeting of Hoare and Company, Limited, has now been called for next Monday in order to propose resolutions to give effect to that company's side of the agreement for the purchase of the Lion Brewery Company's business. Shareholders of the Lion Brewery Company have already agreed to the scheme. It is proposed to sub-divide each of the existing £10 shares of Hoare and Company into 10 £1 shares, and then to increase the capital to £1,252,500 by the creation of 500,000 additional £1 shares. Six of the directors of the Lion Brewery Company will, under the scheme, be appointed directors of Hoare and Company. Lion preference and preferred shareholders are to receive £1 per share in cash for their shares from Hoare and Company, and ordinary shareholders are to receive

£1 2s 4d per share. The increased capital of Hoare and Company is to be issued to provide part of the cash, amounting to nearly £1,000,000, required for the purchase of the Lion Brewery shares. Further cash will be raised for this purpose by the issue of £230,000 6 per cent. first mortgage debenture stock and £47,500 income stock. This appears to be a reasonable fusion of interests which should meet the approval of both sides.

British American Tobacco.—The report of the British American Tobacco Company for the year ended September 30th last shows a further climb in profits. As will be seen from the comparative table below, the dividend is maintained at 25 per cent., free of British income-tax, but that the payment requires considerably more than the 30 per cent. distributed for five consecutive years, when the ordinary capital was much smaller:—

Sept. 30.	1914.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
Profits, &c.	£2,177,022	£3,105,002	£3,140,174	£3,776,508	£4,879,177	£4,323,481	£4,400,784	£4,494,972
Prof. div'nd	188,297	225,000	225,000	225,000	225,000	225,000	225,000	225,000
Ord. div'nd	1,532,308	1,876,236	1,876,236	2,156,774	3,745,492	3,842,493	4,010,709	4,014,821
To reserve..	(24½%) 1,500,000	(30%) 257,228	(30%) nil	(30%) nil	(30%) nil	(24½%) nil	(25%) Dr 122,000	(25%) ..
Balance	Dr 104,583	746,478	1,038,878	1,394,734	908,685	255,788	1,387,075	254,894
Br'ht for'd	1,975,902	1,780,222	1,966,700	3,005,578	727,778	1,634,200	1,889,877	3,276,952
Carr'd for'd	930,319	2,526,700	3,005,578	4,400,312	1,636,463	1,890,188	3,276,952	3,531,846

A year ago £1,222,000 was withdrawn from the general reserve of £1,500,000 set up in 1914 to provide against possible losses arising from the war. The balance in hand of £3,531,846 is a remarkable figure, and it must be assumed that the directors will enlighten shareholders as to their intention at the annual meeting to be held on January 10th. Assets are slightly lower at £32,446,044. The balance-sheet, however, does not tell us the true position of the company. The most important item is "Investments in associated companies," £15,620,375. It would be well to know what is meant by this item. Unless it is possible to know the amount of actual assets represented by this sum, the balance-sheet to those with an inquiring turn of mind presents a blank. Yet the auditors state that the balance-sheet "is properly drawn up so as to exhibit a true and correct view of the state of the company's affairs." It is surely time that either the wording of the certificate was altered or that more informative details were given. In a case like this it is almost a waste of time to speculate as to whether adequate reserves have been accumulated. Stocks at £5,466,394 are £616,881 higher. Cash amounts to £4,247,040. The balance-sheet will be found analysed in our usual column.

The Rand Dividends.—That the distributions of the Witwatersrand gold mining and finance companies for 1923 would compare favourably with those of the preceding year was a foregone conclusion, seeing that the earnings of the first half of 1922 were seriously affected by a disastrous labour conflict. Indeed, having regard to the advance in the gold premium, some weeks ago there was talk of "bumper" distributions in respect of the past six months. In the event these expectations have not been altogether realised. Most of the companies have declared distributions at a larger rate—in several cases a much larger rate—than 12 months ago. For example, the final instalment of 25 per cent. on the part of that big consolidation, the City Deep, makes a total of 45 per cent., or exactly double the amount paid in respect of 1922. Similarly with the Springs Mines; while the Brakpan aggregate is 42½ per cent. in place of 20 per cent. In these two cases, however, no interim payment was made in 1922, and Robinson Deep's disbursement of 6s upon its "A" shares reduces the arrears to 14s. On the other hand, the Witwatersrand Deep dividend for the past six months is less than that of December, 1922, even allowing for the 7½ per cent. "special" dividend then included as the proceeds of a deal in ex-enemy shares. The rate of the Witwatersrand Gold (Knights) has been slightly reduced, although the total for the year exceeds that of 1922. During the past session the Consolidated Langlaagte has been absorbed by the Langlaagte Estate. Some disappointment was nevertheless occasioned by the failure

of the latter company to maintain the percentage declared for the first half of this year. The appended table sets out the June and December declarations of 1923, the December declarations of 1922, and the totals for the two years:—

Company.	Dec., 1922.	Total, 1922.	June, 1923.	Dec., 1923.	Total, 1923.

* Tax free.

This table does not include declarations made at dates other than June and December.

An interesting feature is the re-entry to the list of several companies absent for several years—the Durban Deep, Geldenhuis Deep, Kleinfontein, and New Unified, which have disbursed nothing to their shareholders for some little time. This year's declarations on the part of the Aurora West represent maiden distributions upon a reduced capital. As regards the finance undertakings, while there is no actual declaration by the Anglo-American, a dividend of 10 per cent. has been officially foreshadowed. The absence of any increase in the case of the Rand Mines gave the market a nasty jar, a repetition of the 80 per cent. announced in December, 1922, having been confidently looked for. It is understood, however, that the directors have on the present occasion followed the policy of distributing only the moneys received as dividends, retaining for financing purposes profits on realisations.

Mexican Mining Affairs.—The annual statements lately submitted to the shareholders in what is known as the Camp Bird group—writes our mining correspondent—may be described as of a mildly encouraging character, although nothing more. In the case of the Santa Gertrudis, a dividend of £100,000 from the operating company was, except as to a few thousands, absorbed by interest, taxes, and depreciation. The cash position indicated by the balance-sheet is not a particularly robust one. As regards developments, it is only natural that there should be a further shrinkage in the ore reserves in the company's original mine, which is approaching exhaustion. In the El Bordo Group, operated on a profit-sharing arrangement, the results at depth in what appeared to be the most important property failed to maintain their earlier promise. On the other hand, good discoveries have been made in the Dos Carlos, a group of claims adjoining the company's original area, which have been acquired on lease. The Santa Gertrudis holds £60,000 7 per cent. notes, and 247,250 £1 shares in the Mexican Corporation. This undertaking has a large interest in the Fresnillo silver property at Zacatecas, also other holdings. The Fresnillo comprises a low-grade surface mine and a deep-level mine. The latter was worked

by its former owners for the richer ores, and so far as unwatered by the present company has shown better values than the surface mine. At the end of June the ore reserves in both properties were computed at 6,873,000 tons, containing 56,200 ozs gold and 37,739,000 ozs silver. Of late the capacity of the mill has been increased to 3,500 tons per day, and a further expansion is in course of arrangement. As a result of last year's operations, the local company converted a substantial debit balance into a small credit. The English company, now entitled to one-half of the profits—benefited accordingly, but the transactions are not reflected so clearly as they might be in the accounts. The Camp Bird holds some 750,000 shares in the Santa Gertrudis, and 250,000 in the Mexican Corporation. No dividends being paid thereon, the company's profit and loss account shows a small deficit. There would seem little hope of an early resumption of dividends on the preference shares. Yet another annual statement is that of the El Oro Mining and Railway Company. For some time past this enterprise has fared poorly under both headings; indeed, doubts have been entertained as to whether the dividend of 10 per cent., tax free, which had been paid for the previous six years would be forthcoming upon the present occasion. In the event, the company has declared a distribution at one-half that rate. The report shows that the actual net profit would practically have covered the usual dividend—recent preceding distributions, by the way, have been on a conservative basis—but the company is financing a subsidiary undertaking which is opening up the Noria silver mine in the State of Zacatecas. Already substantial sums have been provided for development, and a further £110,000 is expected to be required for equipment. Towards this the El Oro Company has appropriated £30,000 out of the past year's balance. The position with regard to the properties of the two undertakings is that the limits of exploration on the El Oro have now been almost reached, and while the ore reserves have been maintained at nearly a year's supply, there is a distinct falling off in values. In the near future, consequently, the El Oro Company will be dependent upon its interest in the Noria. Developments at the latter are considered to warrant the acquisition of the lease upon the terms agreed. In connection with the declaration of its maiden dividend of 15 per cent., the San Francisco Mines has announced that the net profit for the past financial year amounts to £137,300, of which £19,000 will remain to go forward. Practically all the shares under option have now been called, raising the issued capital to £751,300, and the cash balance to more than a quarter of a million. At the moment the intrinsic position of all these concerns is rather overshadowed by the revolution, and the shareholders are having an anxious time.

UNITED STATES—FEDERAL BUDGET—NOVEMBER FOREIGN COMMERCE.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 14. PRESIDENT COOLIDGE's message to Congress this week, transmitting the third federal budget prepared under the new system, contains a summary of estimated receipts and expenditures for the current and the next fiscal year, compared with the actual figures for the fiscal year ended June 30th last. It also presents detailed comparison of appropriations for the present fiscal year ending June 30, 1924, and estimated appropriations for the next fiscal year, which will end June 30, 1925. The following condensed table gives the actual figures for 1923, and the estimates for the 1924 and 1925 fiscal years:—

BUDGET SUMMARY.			
(Exclusive of postal revenues and postal expenditures paid from postal revenues.)			
	Estimated, 1925.	Estimated, 1924.	Actual, 1923.
Total receipts	\$ 3,693,762,078	\$ 3,894,677,712	\$ 4,007,135,480
Total expenditure (including reduction of the public debt required by law to be made from ordinary receipts)	3,294,080,444	3,565,038,088	3,697,476,080
Excess of receipts	399,681,634	329,639,624	309,657,400

In the budget presented a year ago, an excess of expenditures over receipts approximating \$274,000,000 was forecast for the 1923 fiscal year, whereas an excess of receipts totalling \$309,657,460 was actually realised. Therefore, an excess of receipts over expenditures amounting to only \$180,900,000 was estimated for the current fiscal year, but revised estimates now indicate a surplus of more than \$329,000,000. On the same basis, an excess of receipts, in the sum of \$395,681,634, is predicted for the fiscal year ending June 30, 1925. Concerning the postal service, an estimated deficiency of \$24,679,673 is included in the estimated ordinary expenditure for the fiscal year 1924, while it is estimated that postal expenditures for the 1925 fiscal year will exceed postal revenues by more than \$2,000,000. The foregoing table shows a progressive decrease in revenue over the years compared, but a larger reduction in expenditures. Most of the items of expenditure show decreases, but there are increases for the Department of Justice, due to a change in the practice under which estimates are presented, and for prohibition enforcement, owing to the need of a larger field force. A supplementary estimate of appropriations for \$20,000,000 for additional vessels for the coastguard service to deal with liquor smuggling more effectively will shortly be presented, and this, if granted, will be followed by another for about \$6,000,000 for personnel for the same purpose. Such items supply further evidence of the tremendous cost of prohibition enforcement, which must be borne, of course, by the taxpayers. The budget shows that, along with the reduction in governmental expenditures, there has been a gradual lessening of the public debt, the reduction for the last fiscal year amounting to \$613,674,342, and bringing the total down to \$22,349,707,365 on June 30th last. Owing to the favourable condition of the Treasury, President Coolidge strongly recommends a revision of tax laws as suggested by Secretary of the Treasury Mellon, to effect a reduction of income taxes by taxing earned income more lightly than that from business or investments, by reducing the percentages of the normal tax and by lowering the surtaxes, beginning their application at \$10,000 instead of \$6,000. He also urges the repeal of taxes on telegrams, telephones, and leased wires, and of the tax on admissions, and a revision of miscellaneous taxes, which are annoying to taxpayers and difficult to collect. On the other hand, he proposes certain amendments which would cause some increase in total revenue. The changes advised would reduce taxes by more than \$300,000,000 a year, it is estimated, which is considered well within the probable surplus. At the same time, the President emphasises the fact, previously pointed out by Secretary Mellon, that it would not take much to exhaust the margin, and that any programme of new expenditure on a large scale would make tax reduction impossible for many years. He discusses the soldiers' bonus at greater length than he did in his annual message, declaring, among other things, "the Government has no money to distribute to any class of its citizens that it does not take from the pockets of the people, and the payment of a bonus to millions of our former soldiers could only be accomplished at a cost to the whole community, including the veterans themselves, far outweighing the benefits intended to be conferred." That plain statement by the chief executive cannot be misconstrued. It means that any soldier bonus legislation which may be enacted will be vetoed by President Coolidge. And it seems unlikely that enough votes could be mustered in Congress to repass such a measure over his veto.

Preliminary foreign trade returns for November, issued by the Department of Commerce, make an exceptionally interesting exhibit. Exports last month were valued at \$404,000,000, the highest figure since February, 1921. Merchandise imports, valued at \$292,000,000, were slightly less than in October, and about equal to November, 1922. The November surplus of exports over imports amounted to \$112,000,000, a sum greater by \$24,000,000 than in the corresponding month of 1922, and with the exception of last September the largest monthly excess of exports in two years. The export figures would seem to explain the big increase in Great Britain's import trade last month, and to throw consider-

National Bank of Commerce in New York

able light on November's sharp decline in sterling. In its bearing on the foreign exchange situation, mention should be made also of the heavy gold imports into the United States last month, the total reaching \$39,757,000, an amount exceeded in only two months during the past two years. For the eleven months ending with November, this country has received \$290,137,000 in gold and has exported in that period only \$27,931,000. Silver imports last month totalled \$5,269,000, and exports \$8,775,000.

FRANCE—STATE EXPENDITURE—BUDGET—BANK OF FRANCE CONVENTION—PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, December 26.

BOTH the Government and the great Parliamentary Commissions are facing the problem of the nation's finances with energy. The past week has been marked with a large amount of serious work, and it is now clear that, in spite of the temptation afforded by the pending elections, the Poincaré Government is determined not to compromise the country's vital interests in order to secure capital for use in the coming contest. It has also been made clear that the responsible leaders of the country are determined that further rigid economy and increased production shall be made the main factors in bringing about the financial restoration of France, and that the time has come when a firm stand must be taken against everything in the way of further inflation and against further borrowing. How further borrowing is to be avoided in view of the present situation remains to be seen.

The manner in which the Government on Saturday handled the question of the demand made by State employees for an increase of their "extra allowances for the high cost of living" from 720f a year to 1,800f,

which has been the subject of several ugly-looking public manifestations lately, gave ample proof that the national expenditure is now being very seriously controlled. The Finance Commission recommended that temporary increases of the allowances, ranging from 50 per cent. of the present figures downwards, and involving an additional expenditure of 290 millions, should be granted (instead of the 882 millions involved by the demands made), and that a Commission should be appointed to consider, before the end of 1924, a general revision of salaries. On a vote of confidence the Government secured from an unwilling House a vote of 339 against 211 in its favour. The final articles of that part of the Ordinary Budget for 1924 which were last year left for future decision by the Chamber were then adopted by 502 votes against 68.

The Ordinary Budget for 1924, according to the report presented to the Senate to-day by M. Henry Bérenger, now works out as follows:—

	Francs.
Estimated revenue.....	23,950,000,000
" expenditure	23,382,000,000
" surplus	568,000,000

This result, M. Bérenger states, has been arrived at thanks to the increased yield from taxation, which has exceeded the Budget Estimates for 1923, which were drawn up last June (and regarded in some quarters as too optimistic), by 750 millions, in spite of a reduction of about 600 millions in the amount received from the special tax on war profits. This windfall will enable the Treasury to meet the extra expenditure voted on pensions and for increasing the pay of the State employees. The *Rapporteur* claims that the economic situation of the country on the eve of the New Year is very favourable. In French foreign trade, which showed a deficit of 23,000,000,000 in 1920, there is now a balance between imports and exports; while, if the amount spent by tourists in this country be also taken into account, there is undoubtedly a balance in favour of France. These facts, he claims, however much they may be in opposition to the recent renewed fall in the exchange value of the franc, mark the real financial situation of the country.

The convention with the Bank of France, which was approved by the Chamber last week and by the Senate to-day, and in which the amount by which the advances made to the State by the Bank are this year to be reduced ("exceptionally") by 80 millions only (instead of by 2,000 millions, as laid down in the agreement of December, 1920), has been the subject of much criticism. The opinion was expressed in the Senate that the recent fall in the franc (which has again fallen over two full points this week) was due in part to the reduction in the amount paid back to the Bank.

In his latest reply to his Parliamentary critics, last Friday, M. Poincaré again insisted that the material results of the occupation of the Ruhr are proving more and more satisfactory. For 1922, he stated, the Reparation Commission demanded the delivery of 55,000 cubic metres of timber (of which they received only 35,000 cubic metres) and 200,000 telegraph poles (of which only 130,000 were delivered). Since the occupation of the Ruhr began 159,600 cubic metres of timber had been seized, with an approximate value of 27 millions, and 117,000 cubic metres have already been delivered to the *sinistrés*, while the 1914 timber, most of which has already been sold, represents another 80 to 100 millions, to which must be added a further 12 millions for 149,000 cubic metres of timber set aside for the devastated regions. Sulphate of ammonia delivered in 1922 amounted to 27,249 tons, valued at 21,206,140f; the stocks seized since January 1st amounted to 55,000 tons, valued at about 47 millions, of which 43,000 tons had been sold, to a value of 36,000,000f. In 1922, 792,000 kilogrammes of chemical products and dyestuffs, invoiced at 588,000f, were received as Reparation payments in kind; this year 5,500 tons of these products have been seized, of which 2,000 tons had been sold for 13 million francs, 1,500 tons had been attributed to Belgian reparation account, and 2,000 tons to France.

The following list of comparative prices of the principal commodities in France in July, 1914, in 1920 (the year of highest prices), and since will be useful as explaining

many of the present-day industrial and economic factors in this country:—

	July, 1914.	Highest in 1920.	Lowest in 1921-22.	End Sept., 1923.	Dec. 15, 1923.

GERMANY.—FINANCES—NEW TAXES—CURRENCY AND PRICES.—REICHSBANK—TRADE—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, December 22.

THE State financial position came to an acute crisis on the 18th, when the Finance Minister appealed personally to the Control Board of the Rentenbank to grant him a supplementary credit beyond the 1,200 million Rentenmarks provided for in the bank's articles of association. The Minister gave "confidential information" about expected State-financial developments in the next few weeks. This information has not transpired. The Control Board rejected the appeal on the ground that the granting of the credit would shake confidence in the Rentenmark. The 900 million Rentenmarks 6 per cent. interest-bearing credit which the bank was obliged to grant was exhausted earlier than was expected as a result of the continuation of the Ruhr troubles after the abandonment of passive resistance, and as a result of the week-long Cabinet crisis, which delayed intended measures for speedy collection of taxes. The other 300 million Rentenmarks non-interest-bearing credit had, according to law, to be utilised for repayment of the State's paper mark Treasury Bill debt to the Reichsbank, i.e., ultimately for calling in of paper mark notes; but the 200 million Rentenmarks demanded for this purpose by the Republic would have repaid the whole 191 trillion paper marks Treasury Bill debt due on November 15th, when the discounting of Treasury Bills ceased and left 9 million Rentenmarks over. According to the *Frankfurter Zeitung*, 92 trillions of the Treasury Bills were, in fact, redeemed by November 30th. If this report, which cannot be checked in view of the non-appearance of Reichsbank returns, is correct, 109 million Rentenmarks of the maximum 300 million Rentenmarks non-interest credit is unused, but the Rentenbank is not obliged to advance the balance for any purpose not designed in the law. It appears that negotiations on the matter are proceeding. Meantime, the Government is trying to raise money by issuing Rentenmark Treasury Bills, which, as they mean taking Rentenmarks out of circulation, do not involve new inflation. The bills are for 14 days and 3 months' terms, in values of 5,000 and 10,000 Rentenmarks, interest between 8 and 9 per cent. per annum. The bills will be accepted in payment of taxes. It is not certain whether the money market will take up enough of these bills to save the Government, which is without money to pay salaries or to pay for materials. The over-confidence which assumed that a mere 1,200 million Rentenmarks would stop the hole in

the finances until the Budget was balanced is inexplicable.

The decade report of receipts and expenditure for November 10th-20th has not yet appeared, but the Finance Ministry has managed to get out the tax receipts statement for November. The statement shows a considerable improvement, but not enough to alter materially the fact that Germany has no net revenue after cost of collection is deducted. The improvement lies in the fact that taxes yielded 370 times as much as in October, whereas the gold exchange rose only 80-fold. The total tax yield was 33,009,363 billion marks. Once more the customary swamping of all past figures by the last few days' figures is shown by the fact that the whole eight months, April-November, yielded practically the same nominal sum, 33,098,248 billion marks. The Bourse transactions tax (owing to increase of rates) yielded in November 6,450-fold as much as in October. The whole value of the November tax yield at the average exchange of the month was about \$15,000,000.

The second tax decree under the Empowering Law has been issued. About the third, which includes the important Rents Law, and presumably a prohibition against even partial restoration of former gold mortgages, differences within the Cabinet exist, and possibly the decree will not appear this year. The second decree abolishes certain old taxes which have ceased to yield any values worth mentioning, including the property tax (*Besitzsteuer*), the increment of property tax (which was put through by Erzberger as a permanent tax), the emergency levy of 1919, and the income and corporation income taxes for 1920 and 1921, as far as these are unpaid. It regulates the unpaid part of income-tax for 1923, establishes the new income-tax for 1924, reforms the property tax (*Vermögenssteuer*), which replaces the above-mentioned *Besitzsteuer*, amends and puts the succession and capital yield taxes on a gold basis, increases the motor-car tax, and provides for penalties for late payment. Although all taxes are now in gold marks, the penalty is 5 per cent. per fortnight of delay. Other taxes are also dealt with.

It is remarkable that though the Government has reverted to gold-mark taxes, it publishes no estimates of yield. An unofficial newspaper estimate is that all the above-mentioned taxes will yield 600 million gold-marks in the first quarter of 1924. The Cabinet has appointed a Commission to bring about savings. A plan is on foot to reduce the membership of the Reichswirtschaftsrat to half in order to save money. A smaller R.W.R. would probably work more rapidly.

The currency is still a mystery and a puzzle. As exchange stability for the paper-mark is still maintained, necessarily the Rentenmark must be considered as stable at 10/42 of a dollar, that is as a gold-mark, but price stability within the normal fluctuation limit of gold prices has not been attained. After the sharp price fall there has been a new considerable rise, not yet shown in the indexes. Meat in a few days rose nearly 50 per cent., and some articles which have no big open markets rose much more. The prices of unnecessary goods are often incredibly high; for instance, middling good silk costs 80 "marks" a metre (the word "Rentenmark" is no longer used in trade; the "mark" now means 1 Rentenmark, or 1 billion paper-marks, or, in calculations, 1 gold-mark); at 20 marks (about 2s) are just now being sold Christmas trees which before the war cost at most 2 marks, and for empty paper boxes, with printed pictures, for sweets, which Germany up to 1914 flooded the world with at 1d, is demanded 5 marks. While a certain moderation in food prices is enforced by the fact that for such things there are big open markets, the wildest ideas about currency values appear to prevail in narrower special markets like the above; the public, ignorant or careless, pays for a paper box as much as for 2 lbs of butter.

These anomalies will disappear, but it becomes every day more doubtful whether (even apart from the State financial question) a non-convertible paper currency like the Rentenmark can maintain a fictitious exchange so far above its buying power. The public, however, treats the Rentenmark with complete confidence, pointing out, with perfect truth, that now English currency is "below" German; some country banks refuse to give more than 16 Rentenmarks for 20s (the official rate is about 18½ Rentenmarks), and this means that on parity the United

States dollar is also "below" the German mark, and that the German mark is considerably above a convertible and freely movable gold currency. The Rentenbank has, in fact, again published a communiqué affirming that this is the condition in Zurich Rentenmark dealings. Serious newspapers inform their readers that the Rentenmark circulation may be indefinitely increased without damaging its value, because mortgages providing the necessary security may be imposed on certain kinds of property so far exempt. The comment on all this is that if the Government does not put the finances at once in order and check talk about inflation, and if simultaneously the new price-rise cannot be checked, the Rentenmark's claim to be a gold-mark is bound to be exposed by facts.

The Currency Commissary Herr Schacht has been appointed Reichsbank President. Herr Schacht was originally against the Rentenmark experiment, but he did much to save the new currency. He continues, however, to stand for the immediate founding of a gold-mark credit bank. The Reichsbank has again not published its return. A Berlin newspaper professes to know that between November 15th (date of the last return) and November 30th the bank's holding of commercial bills rose from 39½ to 347 trillions of paper-marks. The Reichsbank is lending Rentenmarks at 10 per cent. for bills and 12 per cent. for advances on "wertbeständig" basis, which means that the borrower guarantees the bank for loss due to possible Rentenmark depreciation. October trade was, in metric tons: imports 2,914,900, against 3,419,800 in September; exports 1,183,300,000, against 1,142,600. Imports of wheat, maize, and oil seeds heavily fell; exports of iron and machinery rose. Coal imports were 1,493,900 tons, against 1,601,900 tons. Values are not given. A slackening in the rate of deterioration in business is officially reported. On November 15th only 6 per cent. of industrial firms and companies reported business "good" as against 47.7 per cent. a year before, while 72 per cent. against 18 per cent. reported "bad," the others being "fair."

The Bourse has suspended work for a week. The chief recent feature is the complete collapse in bond quotations, due to the semi-official statement that State loans would continue to be treated as pure paper-mark securities. Some of these have fallen to a seventh of their highest quotations. A long list of towns have given notice to repay on this basis their pre-war gold-mark debts. This repudiation of debt is identical in substance, though different in form, with that of Soviet-Russia; but, thanks to the form, it has made no great stir. In fact it was inevitable, and it ought to have been foreseen by the foreigners who bought German fixed-interest securities almost up to the last.

ARGENTINA.—BETTER OUTLOOK—BUT SOME REASONS FOR PESSIMISM.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, November 27.

By a Government decree the Minimum Price Law, which for a short time served to check all purchases of cattle by the freezing companies, has been declared in abeyance, and there is every reason to hope that its impracticable provisions will not be revived. It now stands revealed as a political rather than a practical measure, and with this sudden check to normal buying and selling removed, prices for all horned stock are firm and breeders decidedly more optimistic. The general outlook for cereals, and indeed for most Argentine produce, is also better, money is cheap as well as abundant, and on superficial inspection one would be warranted in saying that prospects, taking all in all, are very bright. As will have been gathered from the speeches of the chairmen of the great Anglo-Argentine railway systems, traffics are greater than they have been for several years, with even bigger figures in prospect.

Nothing has occurred to check the progress of the coming harvest, and business as a whole should be well content.

Unfortunately this is not so. Importers are pessimistic, partly owing to the new Customs laws and partly because, good tidings from the rural regions notwithstanding, orders are small and collections slow. The new duties, which are to help home industries not as yet past the embryo stage may benefit the Treasury, but will certainly limit the volume of import business done. Indeed, it may well be that the higher taxes will in some cases lessen the Customs receipts, and the new Minister of Finance, on the law being passed for the second time by the Deputies, made a special appeal for certain increases to be omitted on this account. Exactly how the matter stands is still uncertain in the case of cotton cloth, sugar, and one or two other items, but the general opinion is that the law as passed adds 60 per cent. to the tariff values of 1906, over and above any subsequent additions made thereto, and increases by 25 per cent. the specific duties on *ad valorem* goods. That it will add to the cost of living in general, however much it may benefit local industry, is scarcely denied, since everyone knows by experience that local manufactured goods—e.g., clothing, small wares, small hardware—sell at prices which are only infinitesimally less than those of the foreign article, usually of better finish and intrinsic quality, they seek to replace.

Another cause for pessimism on the part of importers is the state of the exchanges and the general feeling of uncertainty regarding the general financial outlook. This is reflected on business in many ways, nor is the situation improved by the little information obtainable regarding the Government's plans for handling its ever-growing debts. The shipment of some \$5,000,000 U.S. in sovereigns to New York on November 23 per s/s American Legion took some £1,100,000 from the gold held by the Banco de la Nación on behalf of the Conversion Office. This gold will be sold in New York and the proceeds employed in buying exchange on London wherewith to meet the January service of the external debt. Carried out under the sanction of this year's Budget Law, which authorises the Government to extract gold from the Conversion Office for the purpose of avoiding the loss in exchange which purchase of remittances in the open market would imply, it is the second direct diminution of the total amount of gold held in or to the order of that institution, and, with the legation balances, makes a total of some \$9,000,000 gold utilised in exchange transactions during the last three months. Therefore it cannot be wondered at that private individuals are asking why Government should be the only beneficiary through the partial abrogation of the emergency legislation under which the abstraction and shipment of gold from the Conversion Office has been prohibited for the past nine years. It is stated that the Minister of Finance has received advantageous offers of open credits in London to a total of £1,200,000 for six-monthly periods at the rate of the day, to be utilised as and when required by the Argentine Government. Further details are not yet available, but it should be understood that figures such as those named are trifling when compared with the amount of the floating debts, as far from settlement as ever, despite the fact that advantageous renewals of \$25,000,000 six-month treasury bills have been made recently at 3½ per cent. per annum. Even the much-discussed \$60,000,000 U.S. loan, which fell due on October 1, and for which temporary accommodation was accepted in New York until such time as the definitive bonds could be placed in that market, is still reported as liable to rejection if, before the beginning of March, the bankers and the Argentine Government do not agree; while local indebtedness in Argentine paper dollars, save for a few millions repaid out of the improving Customs revenues to holders who cannot, or will not, renew on the Government terms, stands where it did. Nor is the situation improved by the categorical pronouncement of the Argentine equivalent to the Attorney-General in the matter of bills drawn by the State Railways. On that functionary's decision as they stand they are not a Government charge. They have been drawn *ultra vires*, and since the public departments of Argentina have only borrowing powers when the same have been specially conceded by Congress, or special loans authorised, the national Government is not, constitutionally, liable for the department's commitments over and above its ordinary

outlay. Granted that this is in a sense a theoretic view of the matter, and that nobody expects to see the national Government go back on the three hundred odd million dollars of State Railway bills and commitments which are extant, the fact remains that it is no easy matter to discount such paper, and, when taken, as much as 9 per cent. is asked for the accommodation in certain quarters.

Much as one must regret it, there is to-day a manifest intention on the part of the national Government to pass laws having as their end a more intensive control of banking business by the State. Not, be it observed, with a view to material profit accruing to the treasury, but rather owing to a mistaken belief that such control can be made to yield greater benefits to Argentine trade and production as contrasted with foreign interests. That the basic idea is utterly false, and that the whole interests of the foreign banking concerns, foreign only in name and in capital, are completely bound up with their ability to meet Argentine needs and assist in the promotion of Argentine prosperity, need not be laboured here. One can but wait and see what the future will bring, hoping that the sound and eminently Argentine policy which has marked the enterprise of all the leading Anglo-Argentine banking institutions will by its very results, which are patent for all to see, outweigh the plausible but fallacious theories of the newer school of Argentine economists, whose well-meant but dangerous conclusions in favour of the so-called "nationalisation" of every form of industry and capital are quoted as sufficient warranty for deserting the established order of things for what one cannot refrain from terming new and perilous experiments. Cereal prices meanwhile remain firm. Spot wheat is \$13 Arg. paper the 100 kilos. Maize \$10.15. Linseed \$25.50, with \$19.80 for January, all the foregoing being Rosario prices, which are 0.50 cents under Buenos Aires for wheat and maize, and \$1.50 less for linseed. The latter crop is being cut in the northern regions, but wheat is rather behindhand, and there will be little of the new crop available during the first half of December. Wool is very firm, and all lots coming to market are snapped up at once. Rivers wool has touched \$30 Arg. paper, and all grades, provided they are clean and free of seed, burr, &c., are bringing exceptional figures. It is not expected that the clip will be much above 250,000 bales, which is unusually small. Exchange is still weak, 38½ banks' sight drawing on London, and \$141 on New York.

DENMARK.—EXCHANGE REGULATION—COMMODITY PRICES—OVERSEAS TRADE.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, December 15.

As might be expected, the beneficial effects of the exchange equalisation preceded the actual application of the measures decided upon. For a long time sterling was quoted at 24.10, and subsequently the rate settled at 24.50, or Kr 2 below the maximum rate early in November. This favourable development was first and foremost due to the psychological impression made by the stabilisation plans, which quickly resulted in arrangements being made in London for a credit of £2,700,000 and \$10,000,000. The agreements were made with Barclays Bank and Hambros Bank, while the National City Bank of New York took part in them.

According to the agreement the credits were made available from December 15th, leaving an interval during which any intervention in the Copenhagen exchange market would have to take place in a different manner. However, such steps were necessary only at the start, when the Nationalbank effected pressure on the market by means of its reserve holding of foreign exchange. This had been considerably increased during November, and amounted to about Kr 37,000,000, appearing in the balance-sheet of the bank under the heading "Correspondents Abroad."

Subsequently it has been possible to maintain the sterling rate at 24.50, apparently without intervention of importance and independently of the credit arrangements abroad. At the same time the exchange market has become decidedly settled, and this is not due to official restrictions of any description. In all quarters it is desired to avoid such measures, and instead a certain co-operation has been established between the Nationalbank,

the leading private banks, and the more important exchange dealers. Thereby better information as to the demand is made available before the official quotation is fixed. At present the fluctuations before and after the quotation—which takes place on the exchange at 2 p.m.—are far less pronounced than before, as a rule quite insignificant. The dollar rate, which reached its maximum of 601 early in November, has now dropped to 562½. However, sterling is still regarded as being the leading exchange, and the sterling rate is particularly important to Denmark. The exchange conditions are now looked upon with a certain optimism, and it is generally believed that it is the intention to avoid drawing against the facilities abroad if possible. Under the present settled conditions this should not be required.

The wholesale price-index of the *Finanstidende* shows a rise during November from 207 to 210. During the month the items "foodstuffs" and "other goods" showed rises from 200 to 205 and from 211 to 213 respectively. On December 1, 1922, when the total index figure was 182, the corresponding figures were: foodstuffs 181, other goods 183. The *Finanstidende* states that the rise in the level of wholesale prices during November, in spite of the improvement of the krone rate, must presumably have some connection with the fact that the Danish krone is still considerably underrated in proportion to the leading exchanges.

The balance of trade for October shows a deficit similar to those of the previous months, viz., Kr 32,000,000. As compared with September the imports were increased by Kr 9,000,000—from Kr 168,000,000 to Kr 177,000,000—and the exports by Kr 10,000,000, i.e., from Kr 135,000,000 to Kr 146,000,000. For the first 10 months of the year the imports aggregate Kr 1,611,300,000 and the exports Kr 1,294,600,000, of which the re-exports amounted to Kr 64,000,000, making an import surplus for the said part of the year of Kr 316,700,000, or an average monthly import surplus approximately corresponding to that for October.

JUGOSLAVIA.—BANK FAILURES—BUDGET—WAR DEBT—FOREIGN TRADE—NEW SHIPPING SYNDICATE.

(FROM OUR CORRESPONDENT.)

BELGRADE, December 8.

THE shortage of money is still very acute, and has been responsible for the closing down of more businesses and the failure of several banks. The "Balkanska Banka" of Zagreb came first in the early autumn, followed by the "Beogradska Ujedinjena (United) Banka," a fusion of two Belgrade banks, the "Beogradska Komisiona Banka" and the "Bosnian Deposit Bank" of Sarajevo. Their failure is not surprising, considering how rapidly new banks sprang up during the inflation period (Belgrade and Zagreb alone have 14 banks founded since the war); the vast amount of speculation on the fall of the dinar, and the consequent placing of capital in immovable property. The effect of the failure of these banks on economic life has, however, been very small, while the liquidation of the numerous frozen credits may do something to ease the shortage. During November nearly 2,500 bills of exchange were protested in Belgrade alone, a number nearly as large as that for the first six months of the year. The renewed efforts of a number of business men to induce the Government to remedy the shortage by inflation have failed, in face of the firm stand taken by the Minister of Finance and the weight of public opinion.

The Budget is ready and balanced, both receipts and expenditure amounting to 10,344 million dinars. Up to the present, however, it has not been brought before Parliament, owing to the obstruction of opposition members in the Financial Council. Most of the receipts are provided from indirect taxation (Customs, tolls, duties, &c.), 3,000 million dinars; State monopolies, 2,500 million; communications, 2,000 million; and direct taxation, 850 million. Most of the expenditure is claimed by the Ministries of Communication and of War (over 2,000 million each). In addition to the budgetary provision, France is to grant 300 million francs for the equipment of the army. To the Ministry of Finance is allotted 1,500

HARRISONS & CROSFIELD, LTD.,

THROUGHOUT THE FAR EAST, AND IN NORTH
AMERICA, AUSTRALIA AND NEW ZEALAND.

million dinars, which includes, besides ordinary expenses, the payment of interest on all internal and pre-war loans.

The question of war loans, for some time in abeyance, has again come to the fore. Discussions were resumed with Great Britain, and the debt provisionally fixed at £23,634,677, while the delegation to the U.S.A. should start in December or January. The matter, however, may be delayed again owing to the stoppage of German Reparations in kind, which has caused great excitement in Government and financial circles here. The Government shares the French opinion that the payment of war debt should depend on Reparation deliveries. The Bulgarian indemnity has been finally fixed at 300 million leva, half to be paid in kind (mostly coal) and half in cash, at the rate of 4.90 leva to the franc.

The first import figures for some time have been published recently:—

(In Millions of Dinars.)

	Import.	Export.	Tons Exported.
1922	6,442 ..	3,691 ..	2,213,881
1923 (January-March)	1,930 ..	1,530 ..	537,478
" (April-June)	..	1,821 ..	738,841

The 1,276,319 tons, worth 3,334 million dinars, exported during the first half-year of 1923 show a large increase as compared with the 912,534 tons, worth 1,960 millions, exported during the first six months of 1922. The statistics, however, fail to give an exact picture of the relation of exports to imports for, owing to faulty administration, a large amount of Reparation deliveries (which are, of course, not paid for) were entered as imports. Experts calculate that the relation of exports to imports during the first half of 1923 is something like 95:100.

Hopes are entertained of a favourable trade balance for the latter half of 1923, which is the export season. Exports should be furthered by the future Commercial Treaty with Austria, which is now being negotiated, since Austria takes more than one-third of Yugoslav trade. Preliminary steps for the negotiation of Commercial Treaties with Hungary and Albania are also being undertaken.

An event of considerable importance is the formation of a new Shipping Syndicate, to comprise the ships belonging to the State and those of the Serbian Shipping Company. The capital will be 150 million dinars, 51 per cent. being subscribed by the State and 49 per cent. by the company and private shareholders. This syndicate, when formed, will be the largest on the Danube.

BULGARIA.—THE NEW PARLIAMENT—WAR CLAIMS—THE CREDIT POSITION—FOREIGN EXCHANGES—TRADE IN 1922.

(FROM OUR CORRESPONDENT.)

SOFIA, December 10.

THE new Chamber of Deputies held its opening meeting on December 9th. The Government, with 200 seats out of a total of 287, appears to have a large majority, but these figures do not prove what its real position will be in Parliament, since this majority has been obtained in consequence of the votes of representatives of at least five political parties composing the so-called "Sgovor," which is a political agglomeration that might well be considered as merely temporary. The problems which will be put before that majority at the very opening of the debates are of such vital importance, and many of them so complicated and difficult to face, that the Government group will need the close and unselfish co-operation of all its supporters. To what extent this will be possible, with the Parliamentary habits of the country what they are, nobody can foretell.

It seems fairly certain that financial questions will occupy a very predominant place in the debates, and

Bulgarian finances certainly do deserve the closest attention. No Budget has been made for the current financial year, and the necessity of a clear and courageous examination of this question is an imperative one. The political unrests of June and September, the subventions given to the State employees, and the payment of reparations have together placed a serious burden on the State. On the other hand, the collection of taxes and duties, which was left in a chaotic state by the Agrarian Government, has been almost continually hampered by the unsettled political situation in the country. The repairs and upkeep costs of railways and roads require immediate and considerable expenditure. The question of the salary of State employees has not yet found its rational solution, although an expenditure of Leva 800 millions has already been made for that purpose since June 9th.

The settlement of the Yugoslavian claims as regards repayment of war requisitions has at last been arranged after hard and difficult negotiations. Bulgaria has undertaken to pay: (1) 150 millions leva in gold bonds in four instalments, i.e., 30 millions leva on May 1, 1924, 40 millions leva on May 1, 1925, 40 millions leva on May 1, 1926, 40 millions leva on May 1, 1927, taking 100 leva as being equal to 4.90 gold francs and 5.18 gold francs equal to 1 dollar. Payment is to be made in Treasury gold bonds guaranteed by the National Bank. (2) 75 millions leva in cereals as follows:—30 millions leva in wheat, 45 millions leva in maize, the delivery of the wheat to be effected before June, 1924, and that of the maize before April, 1925. (3) 75 millions leva in coal to be supplied—20,000 tons between June, 1924, and June, 1925, 30,000 tons between June, 1925, and June, 1926, 55,000 tons between June, 1926, and June, 1927. The repayment of expropriated owners of real estate and of holders of Bulgarian State bonds possessed by Yugoslavians has also been arranged. Negotiations with Roumania on similar matters are now in course, and will quite certainly lead to a definite settlement in the very near future.

The Finance Minister appears to be taking his previous promises quite seriously. The Act which established a *Devisenzentral* has been amended in a very practical and efficient way, which will certainly render export transactions easier, and at the same time prevent the unnecessary inflation of demand for exchange at the Bourse. At the same time a credit of Leva 150 millions has been arranged through the Banque Agricole on behalf of the agricultural co-operative societies, with a view to enabling them to give a larger extension to the corn trade, while the sum of Leva 600 millions has been distributed by the National Bank to industrial, trading, and export enterprises. Facilities have also been arranged for industrial enterprises to pay their Excise and other taxes out of the proceeds of their relatively cheap credits obtained from the National Bank.

The general situation of trade, however, remains uneasy, owing partly to a great scarcity of money and partly to the constant rise of the foreign exchanges during the last two months. Sterling now stands at about 655 leva, and the dollar at 152 leva. Owing to the poor demand for tobacco no foreign sales have been made for the last two or three months, and the foreign bills, which were expected to become available from that source, have not appeared on the exchange market. The payment of recent imports of foreign goods, however, have led to a heavy demand for sterling, francs, and other exchanges, and this situation will probably last for a month or so more. With such abrupt changes as have occurred the cost of living has been increasing roughly in proportion to the general rise in foreign exchange quotations. The only good result of this state of things which is worth mentioning is the revival of the corn trade and the export of cereals and flour to Constantinople. Prices are accordingly firm, and considerable activity is noticeable in that line of business.

The official trade statistics for 1922, which have just been published, are as follows:—

(In Millions of Leva.)

	1921.	1922.
Imports	2,921	4,038
Exports	2,207	4,330

As we had anticipated, these final figures show a favourable balance of trade for the first time for many years.

Letters to the Editor.

ANALYSIS OF BALANCE-SHEETS: IND, COOPE AND ALLSOPP.

TO THE EDITOR OF THE ECONOMIST.

SIR,—On pages 1101 and 1126 in your issue of December 22nd you give these balance-sheets in detail, and the following comparison is interesting because both of the companies have approximately the same capital:—

IND, COOPE.		ALLSOPP.	
ASSETS.		ASSETS.	
Properties	£ 1,780,000	Properties	£ 1,600,000
Trade Investments	536,000	Trade Investments	287,000
Debtors	254,000	Debtors	155,000
Government Investments	320,000	Government Investments	215,000
Cash	166,000	Cash	362,000
LIABILITIES.		LIABILITIES.	
Creditors and beer duty	£ 655,000	Creditors and beer duty	£ 489,000

The above figures show that Ind, Coope have liquid assets of £740,000 to meet liabilities of £655,000, while Allsopps have £732,000 to meet liabilities of £489,000.

Among Ind, Coope's assets, £375,000 figures as goodwill; Allsopp's goodwill figures at £700,000.

At the same time Ind, Coope have written off (p. 1101) £395,000 for "depreciation" since 1914, while Allsopp have written off £590,000; so it would appear to the ordinary lay mind that Ind, Coope's goodwill is more than written off, whereas Allsopp's should stand at £110,000. One can only guess that this "depreciation" is charged in conformity with income-tax requirements instead of being written off goodwill, because it can hardly be contended that the properties owned by both of these companies to-day are less valuable than they were in 1914. Under these circumstances it seems unreasonable to suggest that Allsopp directors have been "somewhat unwise to increase the ordinary distribution without attempting to reduce the goodwill account, which continues to stand at £700,000." Sir Barclay Peat, the chairman of Allsopps, and Messrs Turquand Youngs, the auditors, are generally held to be past masters in conservative finance.

G. S. P.

[G. S. P. is not justified in assuming that the items of £395,000 and £590,000 respectively allotted to "depreciation" since 1914 can be regarded as equivalent to "writing down" goodwill by these amounts. These figures include repairs to and maintenance of premises, depreciation of plant, machinery, casks, &c., and depreciation of leasehold properties—items some of which must have been very heavy in the boom years when prices were high. If G. S. P.'s interpretations were correct, it would not be very flattering to the gentlemen he mentions, for it would mean that they had been parties to a transparent device for evading income-tax.—EDITOR, *Economist*.]

ALCOHOL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In regard to your editorial comment of the 15th inst., I think you will be the first to admit that "the disadvantages of certain restrictions upon individual liberty" are so wide and go so far beyond mere personal inconvenience as to outweigh any advantages possible. Of this, we have ample practical evidence from those countries which have adopted nominal Prohibition of alcoholic beverages.

That Prohibition—as in the case of every prohibition which is opposed to public common sense—exists on paper alone. Its first result is to place difficulties in the way of the very people who do no harm with such beverages—namely, that vast majority of moderate consumers constituting the normal population of most civilised countries. The last class which Prohibition prevents from satisfying its needs is that happily small and still decreasing minority of excessive consumers—the very class for whose improvement Prohibition is theoretically designed. These people can and do go to any length to satisfy their cravings. If they be wealthy they can do so with liquor of fair quality by paying the price—if they be poor they satisfy their needs with poisonous liquor obtained under obviously undesirable conditions.

The real effect of Prohibition is a purely hypocritical one—it pretends to have disposed of the problem by that

favourite method of the professional social reformer, namely, the passing of a law which enables good people to save their consciences by saying that they have settled the question. I am quite sure that so sound a paper as your own will not be found after careful consideration in the ranks of the supporters of such an unreal "remedy" as Prohibition, either general or local, for a disease which undoubtedly did exist on a serious scale in this country at one time, but which is steadily and rapidly curing itself by reason of improved social conditions and the good sense and sanity of our people.—Yours faithfully,

C. R. VENNER.

Books and Publications.

THE CONTROL OF LABOUR IN THE WAR.

THE wars of the past, whilst they may have had profound ultimate effects on economic and social life, did not involve the mobilisation of the whole resources of the belligerent nations as did the Great War. In the world conflict which ended less than five years ago the organisation of the non-combatant population for purposes of production, for example, was, in a sense, as important a factor as the organisation of the armed forces. A war which took for naval and military service about five and a-half million people subjected the economic system to a strain it could not possibly bear. The requirements of this enormous fighting machine, as regards food, clothing, equipment, arms, transport and all the thousand and one things indispensable in modern warfare, had to be met by a reduced working population. Capitalism broke down under the weight of this burden, as might have been anticipated, for no economic system devised to meet the needs of the normal times of peace could be expected to meet the abnormal needs of war. It was temporarily superseded by most rigorous and drastic regulation, administered under a system of collectivist bureaucracy. If it be no argument against capitalism that it failed in war, it is no argument against Socialism that the hastily-devised expedients on centralised collectivist lines did not long survive the Armistice.

But it is clear that the vast economic machine of war-time directed towards a single end holds as many lessons for economists and publicists as the war itself does for students of military operations. The economic system is certainly not static, and as it adapts itself to the complex needs of modern life it may usefully draw upon the experience of the war for light on what might be done and what should be avoided. An indispensable preliminary to reflection on these problems is a study of the facts. These have been admirably presented by Mr Humbert Wolfe in his volume on "Labour Supply and Regulation,"* a noteworthy contribution to the important Economic and Social History of the World War, published by the Carnegie Endowment for International Peace.

Such a series is itself an indication of the importance attaching to the economic and social aspects of the Great War. In a series of this kind no volume is more essential than one devoted to the organisation of the civilian "man-power" of the nation, and no one is more competent to write such a volume than Mr Humbert Wolfe. The book is a sober and cold presentation of the facts. What is the story which is unfolded? In its way it is as remarkable as any story of the war period. The best utilisation of the available civilian workers for the production of munitions, of the necessities of life and of goods for export was not a simple problem. As Mr Wolfe says: "In the normal world a thousand disturbing factors have to be taken into account, of which a few are the unwillingness of the nation to submit to absolute discipline; the unreadiness of the authorities to handle the nation even if it is prepared to exhibit such unexampled docility; the impossibility of estimating, during the astonishments of war, what at any moment will be the degree of importance to be attached to . . . the dominant

* "Labour Supply and Regulation." By Humbert Wolfe. Clarendon Press. 1923. 10s 6d net.

demands upon man-power; and the incredible complexity of modern industry, which will not lend itself to any clean and simple divisions without suffering decay of the whole organism, any more than will any other living body."

The problem of labour supply and regulation requires a central State machine equipped with experience, knowledge and the necessary power. But when the war broke out no such machine existed. The Local Government Board, the Home Office and the Board of Trade all in their different ways were charged with labour policy, and none of them had any real control over or relation with the recruiting departments of the War Office and the Admiralty. Nor was this all. No central department wielded the necessary authority to regulate labour supply and labour conditions. What made the task more difficult was the fact that all the pressing problems of labour supply and regulation had to be tackled at once, and every problem had its implications which were in effect new problems. The question of labour supply was dealt with at first by the Man-Power Board and ultimately by the Ministry of National Service. Labour regulation was a much more complicated business than labour supply. Labour had to be distributed and made as mobile as possible, production had to be made continuous, restrictions on output eliminated, maximum output obtained by the determination of the optimum hours of work and the establishment of proper working conditions, and wages controlled.

The success which was ultimately attained, though by no means unqualified, was a testimony to the strength of the national purpose during the war to the character of the British people and to the British genius for organisation. When the war broke out the rush of recruits to the Colours created serious gaps in the skilled labour supply of the country. When this was realised steps were taken to draw a ring round the necessary civilian labour supply. As more men joined the Colours, efforts were made to tap every possible source of labour supply. Women were attracted into industrial employment, workers were brought from abroad and from the Dominions, men were released from military or naval service, and even enemy prisoners were pressed into service. But this did not make good the wastage created by recruitment. As Mr Wolfe points out: "Those who had gone to the Colours were in many cases the most skilled and the strongest, and no substitution could replace their skill, their experience and their physical strength." The question then presented itself of making intensive use of the available labour. This was solved, in part at least, by the Munitions Code. Even this was insufficient, and after prolonged negotiation "the trade unions agreed to forego their practices which, designed to safeguard the employment of their members, could during wartime be regarded as restricting production." As a result of this agreement and its subsequent statutory enactment, "dilution," i.e., the introduction of semi-skilled and unskilled men and women upon skilled men's work, became possible and was widely carried out. Further, there was the establishment of various mobile corps, such as the War Munitions Volunteers, and the introduction of a measure of "industrial conscription," providing that no man could leave his employment without a certificate of consent from his employer under pain of six weeks' unemployment. Finally, the wages problem had to be settled by new methods owing to changed circumstances.

Many mistakes were made; many new difficulties were created; and oftentimes the new and cumbrous machine creaked and jolted. But on the whole it worked. It worked, however, not because of its perfection but in spite of its imperfections, because there was a conscious national purpose behind the efforts of the people, and the elaborate State mechanism which was devised was brought into being step by step as a means to achieving that purpose. In other words, industry became a public service with a public motive. But what people are prepared to accept in face of the over-riding considerations of national safety and independence, they are not prepared to accept during the humdrum days of peace. And, consequently, there can be no projection into peace times of the complex organisation of war time. Nevertheless, there is food for thought when the country is no longer in the throes of

war in the sense of national unity attained during the war under the inspiration of a national purpose in industry.

Mr Wolfe's book encourages reflection and speculation; but it would need a volume as large as his own to deal at all adequately with the many lessons to be drawn from our industrial experience during the Great War. What is there to be learnt regarding the possibility of a larger measure of unified control, of standardised products, of the extended use of labour-saving contrivances? What did war-time experience teach of methods of wages regulation, of "welfare work," of industrial fatigue, of compulsory arbitration? What light did the war years throw upon the value of the scientist and the economist in industry and of the State as a partner in industrial enterprise? We might continue this catalogue of thought-provoking questions almost indefinitely. But enough has, perhaps, been said to emphasise the need for much more study of war experience than has yet been given to it. After all, the story Mr Wolfe has told is the record of the most impressive experiment in industrial organisation this country has ever witnessed, and as such it ought not to lie forgotten. If we cannot enjoy the fruits of victory, we can at least profit by our own stupendous industrial efforts during the process of achieving military victory.

LONDON'S DIRECTORY.

We always regard the Post Office London Directory* as a reflection of the activities of the Metropolis, and an unique compendium of information.

Within this volume of some 4,000 pages will be found the names and addresses of the inhabitants of London, classified firstly according to streets, and then in alphabetical lists as private residents, and thirdly, those engaged in professions, commerce, or trade. The classified trades section gives an alphabetical list of London's professions and trades. Particulars of the establishments of the various Government Departments, with alphabetical lists of officials; the seating plans of the leading London theatres; and a transport and hotels section of all principal places throughout the country, giving hotels, railway stations, early closing and market days, &c., will be found in this skillfully arranged guide to knowledge of London. We confess that we are impressed beyond measure with the magnitude of the compilers' task in producing this volume. Even those in search of the unusual will find a happy hunting ground in perusing the list of the callings of London's inhabitants, and noticing some of the strange occupations.

STOCK EXCHANGE NEWS.

TICKET. **SETTLING DAYS.** **ACCOUNT.**
January 9. January 10.

Although business in the stock markets has naturally been much restricted not only by holiday influences, but also by the uncertainty of the political outlook, the general tone has been surprisingly good, and there has been a tendency towards a general improvement in prices. When the House reopened on Thursday, there was a small investment demand for gilt-edged stocks, which proved sufficient to harden prices in several directions, including those of some of the short-term War bonds. India issues were also firm, but Irish Loans were inclined to be dull. The improvement in the franc had little effect on the prices of French bonds, which were practically unchanged, but Brazilian bonds advanced on a sharp recovery in the milreis, and Mexican bonds were favourably affected by rumours that the revolution had been suppressed. There has also been some speculative interest in Russian descriptions on the view that trade and political conditions are mending. Chinese and Japanese bonds were steady.

FOREIGN EXCHANGE TRANSACTIONS ARRANGED.

CHIEF FOREIGN BRANCH:
168, Fenchurch Street, London, E.C.3.

Home Rails started well on Thursday morning, but later in the day there was a reaction owing to nervousness with regard to the wages award, &c., result of the ballot. The prior charges, however, were fairly firm. Metropolitan were supported, and Underground Income Bonds gained a little, but Districts sagged. Argentine rails were all strong, and showed advance, and Brazilians did nearly as well, but French Railway sterling bonds were flat. A rise of a point was recorded by Canadian Pacifics, but Grand Trunk Pacifics were unchanged.

The tone in the Oil market has been fairly good on an advance in the price of crude oil, but Mexican Eagles were an exception. Few changes were marked in rubber shares. The recent good tone in industrials has been maintained, and, in spite of very slack markets, further small advances were recorded, on the ground that signs of trade improvement are becoming more definite day by day. Textile shares were supported, and many iron and steel engineering descriptions closed better, but in spite of considerable activity in tobacco shares there was little change in quotations. Nitrates were inclined to improve, and there were one or two good spots in the hotel and catering departments. Some banking and insurance shares were also good.

The Kaffir market opened firm, but later on relapsed a little on Continental selling. Tin shares were neglected, and Tintos were dull, but Mexicans and Russians were both in quiet demand.

We are officially informed that Mr Edward Walter Shotton was declared a defaulter upon the Stock Exchange on December 27th.

COMPANY MEETINGS, &c.

DORMAN, LONG, AND CO., LIMITED.

PROSPECTS IN THE STEEL TRADE.

LONGER HOURS AND GREATER OUTPUT NECESSARY.

AMALGAMATION COMPLETED.

The thirty-fourth ordinary general meeting of the shareholders of Messrs Dorman, Long, and Co., Limited, was held at the registered office, Zetland road, Middlesbrough, on Friday, December 21st, Sir Arthur J. Dorman, K.B.E., in the chair.

The notice convening the meeting and the auditors' report having been read,

The Chairman said: Ladies and Gentlemen, I beg to move that in accordance with the provisions of the articles of association, the minutes of the thirty-third ordinary general meeting, held on December 13, 1922, and the extraordinary general meetings, held on April 17th and May 2nd, 1923, be confirmed.

I assume that, as usual, you will take the directors' report and balance-sheet, which has already been submitted to you, as read.

The balance-sheet for the year ending September 30, 1923, contains for the first time the accounts of the allied companies of Bell Bros., Limited, Sir B. Samuelson and Co., Limited, Carlton Iron Company, Limited, and North Eastern Steel Company, Limited, embodied with the accounts of Dorman, Long, and Co., Limited, these four companies having on May 2nd last entered into voluntary liquidation for the purpose of amalgamation with Dorman, Long, and Co., Limited.

At the meeting of shareholders held on April 17, 1923, when the resolutions leading to the amalgamation were passed, Sir Hugh Bell, in my absence, explained very fully to you the proposals of the board, and I have thought it well to enclose to each shareholder along with the balance-sheet a copy of the statement made by Sir Hugh Bell on that occasion, in order that the whole matter may be brought again to your minds, and to assist you in reading the present balance-sheet. The resolutions passed at that meeting have been acted on, and an issue of £3,500,000 5½ per cent. first mortgage redeemable debenture stock was made on April 18, 1923.

Out of the proceeds of the 5½ per cent. debenture issue the balance of Dorman, Long, and Co.'s 5 per cent. debentures, amounting to £387,400, the balance of Bell Bros. Debentures amounting to £360,686, and the two sets of North-Eastern Steel Company's debentures, amounting to £250,000 and £42,500 respectively, have been repaid. In addition to the foregoing, the debt due to the Treasury amounting to £918,475, and secured on the Redcar Steel-works, has also been repaid. Further, since the date of our last balance-sheet, stocks have increased by nearly £850,000. I refer to this later on in more detail.

THE NEW ISSUE.

In order to absorb the £500,000 cumulative preference shares of Messrs Bell Bros., Limited, an issue of £550,000 6 per cent. cumulative preference shares was, at the same time, made by Dorman, Long, and Co., and Messrs Bell Bros.' preference shareholders were given the opportunity of exchanging their preference shares for a corresponding number plus 10 per cent. of Dorman, Long, and Co.'s preference shares. As a result of this offer, £518,056 preference shares of Dorman, Long, and Co., Limited, were issued; the remainder of Bell Bros.' preference shareholders were paid in cash.

The amalgamation is, therefore, now complete, and the accounts of the four companies have become absorbed into those of Dorman, Long, and Co., Limited, as from May 3, 1923.

I regret that owing to the very heavy additional work entailed by the amalgamation and the bringing in of the accounts of the absorbed companies, we were rather later than usual in presenting this year's balance-sheet. As you will readily understand, the amount of work involved both on the legal and accountancy sides has been very heavy indeed.

For some considerable time past we have been faced with the fact that a complete amalgamation was becoming urgently necessary, if full advantage was to be obtained from the working of the various properties of the allied companies. It was only after very careful consideration of all the facts and weighing the advantages to be obtained against the heavy cost which would be incurred, that your directors finally made up their minds to take the step. The reorganisation is proceeding smoothly, and on right lines. The directors now have better control over the whole undertaking, and closer supervision can be given to it.

CO-ORDINATION OF POLICY.

Much has been done, but a good deal still remains to be done before we shall be satisfied; we are assured, however, that the

interests of the company will ultimately benefit by the step that has been taken, through more complete co-ordination of policy, as well as economy in working. The cost of the amalgamation, including the underwriting of the issue and the premiums payable on redemption of the various sets of mortgages and the preference shares, have been met out of reserves.

With the increase of work consequent upon the amalgamation, I have found it desirable to relinquish the appointment of managing director, while still remaining chairman of the company. The board have accordingly appointed my son, Mr Arthur Dorman, to succeed me as managing director.

If you will now turn to the balance-sheet, you will see, under the heading "Share Capital," the position as it now stands. £1,500,000 8 per cent. preferred ordinary shares and 6,000,000 ordinary shares of £1 each stand as before. In addition, there are the new 550,000 preference shares of £1 each, of which £518,056 only are issued.

The 4 per cent. first mortgage perpetual debenture stock of £400,000 remains as before, the company's holding of this stock being now £70,140. This stock is primarily secured by first mortgage on the Britannia Works.

The next item on the balance-sheet is the £3,500,000 new 5½ per cent. redeemable debenture stock, a large proportion of which has, as I have indicated, been absorbed in repaying the various debentures and Treasury loan.

THE BALANCE-SHEET.

In order to obtain comparative figures between this year's working and last year, it is necessary to include the figures from the balance-sheets of the absorbed companies. I will, therefore, take the totals of the corresponding figures from the latest balance-sheets of those companies, and add them to the figures of Dorman, Long, and Co., Limited, for last year.

Debts due by the company now amount to £1,513,599, as against a total debt of the five companies last year of £1,493,692. In both years an amount is included which is considered to be amply sufficient to meet all claims by the Government against the company in respect of taxation. It was hoped that we should have been able to arrive at a settlement of these claims before the date of the balance-sheet, but, unfortunately, it was not possible to do so.

The reserve account brings in the general reserve account from last year of £459,765, together with the reserve for redemption of the 5 per cent. sinking fund debentures, amounting to £136,225, not now required owing to the debentures having been repaid. It also includes £40,000 placed to reserve last year, bringing the amount up to £635,990. From this sum £68,048, the amount of the net profits made by the absorbed companies from October 1, 1922 (in the case of Messrs Bell Brothers, Limited, from January 1, 1923), to May 2, 1923, the date of the liquidation of these companies and not at that time distributed, is transferred to profit and loss account. Added to the reserve account is the sum of £505,542, being the balance of the reserves of the absorbed companies, including their undistributed profits to May 2, 1923, from which has been deducted £422,840 discount and the expenses of the issue of the £3,500,000 debenture stock and the premiums due on paying off the debentures and preference issues of the absorbed companies. The reserve account, therefore, stands to-day at £650,644.

PROFIT AND LOSS.

The profit and loss accounts show a profit of £207,405 earned by Dorman, Long, and Co., Limited, during the year, which includes the profit of the absorbed companies from May 3, 1923. To this is added the sum of £68,048, which, with the amount brought forward from last year, gives a sum of £476,626 to be dealt with. If you turn to the directors' report, you will see that it is proposed to apply this sum in the following manner:—

£88,189 in payment of interest on debentures. In the case of the 5 per cent. sinking fund debentures, interest is payable only up to August 16th last, the date of the expiration of the company's notice to repay. £5,000 in payment of the dividend on the 6 per cent. cumulative preference shares of Bell Bros., Limited, for two months to June 30, 1923, on which date the exchange to Dorman, Long cumulative preference shares took place. £7,770 in payment of the dividend on the 6 per cent. cumulative preference

shares of Dorman, Long, and Co., Limited, for three months from July 1st to September 30th last. £120,000 in payment of the dividend for the year on the 8 per cent. preferred ordinary shares. £3,000 for directors' fees. £50,000 which it is proposed to transfer to reserve account, leaving a balance of £202,667 to be carried forward to next year's account.

On the assets' side of the balance-sheet under capital expenditure the sum of £3,377,110 represents the amount as at the date of the last balance-sheet of Messrs. Dorman, Long, and Co.'s capital expenditure prior to the absorption of the allied companies. To this sum must be added £5,879,950, being the cost to Dorman, Long, and Co., of the properties of the absorbed companies as at May 3, 1923, and the sum of £204,964 being the net expenditure since that date on the properties of the absorbed companies, and for the whole year in respect of the properties of Dorman, Long, and Co., Limited. The total capital expenditure, therefore, amounts to £9,462,025.

INVESTMENTS.

The investments now stand at £766,186, and chiefly consist of our interest in Horden Collieries, Pearson and Dorman, Long, Braithwaite and Co., Wade and Dorman, Bowesfield Steel Co., Dormanstown Tenants, Limited, and our holding in Dorman, Long 4 per cent. debentures.

The stocks on hand now amount to £2,894,543, as against £2,048,103, the value of the stocks last year, an increase of £846,440. This increase is due partly to exceptionally heavy stocks of pig-iron and steel, some of which have since been realised at prices above the book values, partly to the increased activity of nearly all our departments, and to the stocking of our new constructional works and stockyard at Sydney.

Debts due to the company this year stand at £1,161,811. The total debts due to the five companies last year amounted to £1,100,404.

Cash and bills amount this year to £157,760, as against a total of all the companies of £272,488 last year.

This year short rents under Royalty leases appear for the first time in our balance-sheet, due to the bringing in of the collieries previously owned by the absorbed companies. These amount to £69,182, and are written down to £22,808.

This brings me to the end of my remarks on the balance-sheet. If the results of the year's working are not what we would have liked, they are nevertheless better than we hoped for at the beginning of the year, when few of our departments were working at a profit.

STEELWORKS LOSSES.

With the exception of our steelworks, all our departments have finished the year successfully, and had it not been for the loss incurred in the steelworks, our total profit would have been very much greater than the £275,000 shown in the balance-sheet. During the last few months there has been an improvement in the price of steel, and, if it can be maintained, there is a fair prospect that our steelworks cost will at least be covered by the selling price.

During the year we have carried out further extensions of our coke oven plant, and we have now reached the point where we can claim to be self-supporting in this respect, since in another two months we shall have attained an output of over 18,000 tons per week.

While our policy of increasing the outlets for our finished products remains unaltered, we have no fresh step in this direction to report to you for the year under review, but I may mention that since the accounts for the year were closed we have acquired a controlling interest in the British Structural Steel Company, whose works are situated in Buenos Aires. We look with confidence to this proving a profitable investment.

KENT COAL.

Your interest in Kent to-day consists in a 50 per cent. holding in Pearson and Dorman, Long, Limited. A start has been made by them on their first colliery near Deal. Good progress has been made, and, as a result of a visit paid in November, your board are satisfied that when it is finished the colliery will rank among the most efficiently designed and best equipped collieries in the country. It is hoped to reach coal in about two years' time, and if it comes up in quality and quantity to what we confidently expect, a remarkable addition will have been made to the industrial resources of the country.

Turning now to future prospects, I may remind you that when I addressed you in 1921 I stated that out of 32 blast furnaces controlled by your company only six were in operation, and I gave as the reason for this that it was then impossible for pig-iron to compete in price with scrap owing to the large quantity which had been thrown on the market as a result of the war.

I told you that I was satisfied that in the long run pig-iron must come into its own as the measure of the world's capacity for

BUT DOES IT PAY?

This is the title of a new leaflet of particular interest to all Business Men, demonstrating as it does the Investment Value of "GLOBE" Life Assurance Policies.

A copy will be sent by return of post upon your request.

Branches and Agencies throughout the World.
General Manager and Secretary:—HUGH LEWIS.

producing steel. To-day we have 13 furnaces in blast, and in the near future we hope to blow in more, so that it is becoming everyday more evident that the supply of war scrap is disappearing, and that it is more and more necessary to revert to the use of pig-iron.

This is all to the good. It means a greater consumption of coal and coke, and, generally, a greater demand for the labour required in the manufacture of pig-iron. This cannot be without its effect on the cost of producing steel, but what applies here applies equally throughout the world, and it is only a matter of time for the effect to become universal. The tide, therefore, is turning in favour of those districts which possess their own resources of coal and iron ore in close proximity to one another. Here in Cleveland we are particularly well situated in this respect, and, as a district, we have the additional advantage that, with our works on the seaboard, we can import foreign ores on favourable terms, for mixture with our own ironstone.

A DIFFICULT TIME.

Given fair conditions, therefore, I am confident that we in Cleveland could hold our own in the world's markets against any competition, but when I look at the prospect as I see it to-day, I cannot but think that this country has a very difficult time before it. Exchanges are still moving to our disadvantage. International relations in Europe are far from having reached a state of stability, and there exists the obvious need for our Continental competitors to exert their utmost effort to rehabilitate their impoverished countries.

I do not intend that this should be a political speech, and I do not think I can be accused of making it one if I say that this country, having voluntarily elected in favour of a policy of Free Trade, has thereby admitted the wisdom of unfettered and unconditional competition in every branch of its industry. This must mean a severe struggle if we are to maintain our position in the world, and it is to me as clear as daylight that it marks the end of Utopian programmes of shorter hours and restricted output. I cannot believe that there are not amongst our Labour leaders men who have already recognised this, and it is to them we look to give their followers the lead they require. They know as well as I do that the existence of the country depends upon the prosperity of its industry.

Before concluding, I wish to pay a tribute to the excellent work performed by our staff during the year. From top to bottom they have rendered us loyal service, and our shareholders may be assured that we have a staff who are interested whole-heartedly in our business.

I now beg to propose—

"That the directors' report, balance-sheet, and accounts of the company for the year ending September 30, 1923, submitted to this meeting, be and the same are hereby approved and adopted."

In seconding the resolution, Sir Hugh Bell referred to the regret felt by the board at Sir Arthur Dorman's ceasing to be managing director, a position which he had held since the company was formed. He desired to mention specially a matter which the chairman had dealt with very summarily for obvious reasons, namely, the appointment by the board of his son, Mr Arthur Dorman, as his successor. This appointment had the entire approval of his colleagues.

The resolution was carried unanimously.

Votes of thanks to the chairman and staff concluded the proceedings.

BRITISH COLUMBIA ELECTRIC RAILWAY COMPANY, LIMITED.

GOOD RESULTS—ENCOURAGING PROSPECTS.

IMPROVED POSITION OF TRADE IN BRITISH COLUMBIA. DEVELOPMENT OF COMPANY'S ELECTRIC ENERGY.

The twenty-seventh ordinary general meeting of the British Columbia Electric Railway Company, Limited, was held on the 28th instant, at the Abercorn Rooms, Liverpool Street Hotel, London, Mr J. Davidson (deputy-chairman) presiding.

The secretary (Mr R. W. Bartlett, A.C.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen, as the report and accounts have been in your hands for some time, may we take them as read? ("Agreed.")

In the first place, I have to apologise for the absence of two of our colleagues—Mr G. P. Norton, who has to attend a funeral at Huddersfield, and Mr Horne-Payne, your chairman, who is prevented from attending owing to ill-health. Mr Horne-Payne, however, has sent a speech which, with your permission, I will read to you. It is as follows:—

MR HORNE-PAYNE'S SPEECH.

Ladies and gentlemen, it is very pleasant to be able to present to you to-day such a very satisfactory statement, and to report to you nothing that is not encouraging in the prospects of the company and in the prospects of the Province of British Columbia.

The net revenue of the company available for interest and dividends is £416,472 7s 9d, as compared with £409,233 17s 11d last year.

THE DIVIDENDS.

Interim dividends on the preferred and deferred stock of 3½ per cent., free of tax, were paid to you in June last, as compared with interim dividends for the previous year of 3¼ per cent., and as you will see from the report, we recommend you to declare final dividends of 18s 8d per cent. on the preferred ordinary stock, and £2 11s 11d per cent. on the deferred ordinary stock, both free of income-tax, making with the interim dividends already paid, total dividends for the year of £4 16s 2d per cent., free of tax, on the preferred ordinary stock and £6 9s 5d per cent., free of tax, on the deferred ordinary stock. These are not high dividends, the average return on our investment being 5.260 per cent., which is less than an investor can get from some British Columbia

Government securities, or even from Canadian Government Victory Loans, but there is some compensation in the feeling that there is every reason to believe that they are established on a permanent basis.

The revenue shown in the profit and loss account does not include any profit on exchange derived from the remittance of money from Vancouver to London. The net profit on exchange has been carried direct to reserve fund, because, as I explained last year, it is an exceptional profit. Moreover, it is impossible to forecast how long we may derive any advantage from exchange, and should it become necessary to remit money on capital account from London to Vancouver before the rate becomes normal, the premium on the dollar will be a disadvantage to the company, against which the present profit on exchange forms a useful reserve.

I will not detain you by going into the figures of the various departments of our business, because these are fully set out in the report which is in your hands, and I am sure you would like to hear from my colleagues, Sir Ernest Harvey and Mr Davidson, who, at the request of the board, kindly undertook visits to British Columbia this year.

Before concluding, however, I should like to commend in the warmest possible manner, the invaluable services which have been rendered to the company in the past by our executive in British Columbia, Mr Kidd, Mr Murrin, Mr Goward, Mr Glover, Mr Laursen, Mr Adams, Mr Keiller, and others. Each one of the last nine years covering the war and the perplexing post-war period was difficult and arduous, full of problems and anxieties. Every problem has been met and solved to the equal advantage both of the people of British Columbia and of the company, and I believe that this satisfactory position is due equally to the frank and conciliatory manner which your executive has invariably adopted in their dealings with the authorities, and to the desire of the authorities themselves to find a way out of the embarrassments created by the changes produced by the war—I refer in particular to the matter of the tramway fares, which have been most equitably and satisfactorily settled on a permanent basis since the passing of the British Columbia Electric Railway Passenger Act, and the resultant agreement between your company and the City of Vancouver, which I reported to you last year. All parties concerned are now working together cordially and energetically for the general welfare of the province without loss of strength in disputing and quarrelling. It has given us

the greatest pleasure to invite Mr Kidd to join the board, and in asking you to confirm his election to-day, we are not only asking you to mark your appreciation of his able and faithful services to the company, but we are asking you also to do something which will strengthen the prestige of the company in British Columbia.

In order to come into line with universal practice throughout Canada we have created the offices of "president" and "vice-presidents," and have appointed Mr Kidd, president, Mr Murrin, vice-president, and Mr Goward vice-president in Victoria.

SIR ERNEST HARVEY'S SPEECH.

Sir Ernest Harvey: Ladies and gentlemen, in May and June of this year I had a most delightful visit to British Columbia to see your property. My visit was delightful because I found the company in fine physical condition, well managed, and more popular with its customers than it has ever been.

I had not been to Vancouver and Victoria since 1913. The long years of war prevented travel and the years succeeding the war I had to spend so much time in Russia, Germany, and Austria that it was not until this spring that I was able to get to Canada.

My previous visits were at two years' interval, but I had some compensation for my ten years' absence in that I could note so much development in the cities and in the surrounding country. The increase in our lighting and power load and in our gas output is the most practical evidence to you that this growth and the development is of a solid and permanent character.

From 1913 and throughout the war there was no development in the province, but owing to the flow of men to the war, rather the reverse. It is, therefore, fair to say that the great development I noted after an absence of ten years has all taken place within the last four and a-half years. The solid work throughout the province persuades us that this improvement will continue, and your board consequently devotes the most anxious care to provide well ahead of the demand all the power that the people of the cities and districts of Vancouver and Victoria can possibly require. You will understand, and I think that the people of British Columbia appreciate, that the development of additional power supplies takes time, and that we have therefore always to have our plans and work on supply well ahead of demand.

DEVELOPMENT OF ELECTRIC ENERGY.

For the purpose of meeting the demand which we anticipate for the next fifteen years or more, plans are now being drawn up for increasing our development of electrical energy from the waters of the Stave and Alouette Lakes. Owing to its great importance, I gave this matter my special attention during my visit. You will remember that in 1920 we bought the Western Power Company of Canada, which owned a hydro-electric power plant at Stave Lake. At that time it had a turbine capacity of 39,000-horse power. At the end of 1922 we added another unit to this plant, bringing the capacity up to 52,000-horse power. During the present year we have been at work raising the height of the dams which impound the waters of Stave Lake, in order to increase the quantity of water stored and the average head of water available for power generation purposes. To do this the depth of water in the entire lake will be raised some 50 feet, and some 4,000 acres of additional land will be flooded, and the increase in water will enable changes and additions to be made to the plant which will increase its capacity some 25,000-horse power. In addition, we own, as explained in the report, the water rights of the Alouette Lake, which stands at 140 feet higher elevation than Stave Lake, and at a distance of about half-a-mile.

The intention is to connect the two lakes by a tunnel and use the water of the Alouette Lake, first, in its fall from the mouth of the tunnel into the Stave Lake to generate some 10,000-horse power of electricity, and, second, by increasing the waters of the Stave Lake to increase the hydro-electric capacity of the waters of the Stave, both at the existing installations and at Ruskin, some four miles further down the Stave River, where plans are under way for a further power development with a capacity of 80,000-horse power. The carrying through of these plans as and when required will double the amount of your present power supply, and will supply the future requirements of the district, even upon the most generous estimates of future growth, for a very long time to come, and it is extremely satisfactory to add that the further development required promises to be of the most economical character, giving us our increased supply much more cheaply than it could be obtained from any other source.

In conclusion, I would like to endorse the well-deserved praise of our management, expressed in the speech of your chairman.

I am fortunate to number among my close friends many of those in control of the British Columbia Electric Railway in Vancouver and Victoria.

I am convinced that the prosperity of your property is assured

so long as we continue to give our customers the satisfactory and considerate service which we do now.

I take this opportunity of acknowledging the kindness and courtesy I received from His Honour, the Lieutenant-Governor, from members of the Provincial Government, and from the Municipal Authorities of Vancouver and Victoria.

MR J. DAVIDSON'S SPEECH.

Mr J. Davidson: Ladies and gentlemen, the satisfactory position of your company, its progress and its prospects, have been so fully dealt with in the report, and in the remarks of my colleagues, Mr Horne-Payne and Sir Ernest Harvey, and the importance of the enterprise is so well set out in the illustrated booklet which will reach you in about ten days' time, that there is little left for me to say. With your permission I will, therefore, confine myself to a few remarks about the Province of British Columbia, in which your company operates. I do not need to tell you anything about its natural resources in timber, agriculture (including fruit farming), mines, fisheries, &c., because these are already well known to you. Any country possessed of these natural riches in such superabundance only requires energy and capital to develop them, and the markets to receive the produce, in order to achieve wealth, prosperity, and influence. There is no question that the markets for the produce of British Columbia are increasing. The principal natural resource of the province is lumber. The annual production in 1913 was approximately 30 million dollars. In 1922 it had reached approximately 65 million dollars. The value of agricultural produce, including fruit, in 1913, was approximately 24 million dollars. In 1922 it had reached 55 million dollars. Minerals which in 1914 produced 26 million dollars produced in 1922 35 million dollars. It is somewhat remarkable that there should be such expansion during a period of world-wide depression, and one, if not the main, reason is to be found in the improved water and rail communications which have brought the province into closer touch with the markets of the world. I have no hesitation in saying that the result has been to place every natural industry of the province upon a sounder and more stable basis.

PANAMA CANAL AND NEW MARKETS.

So far as water communications are concerned, the Panama Canal has opened markets for lumber and other produce of British Columbia, in Europe, in Eastern Canada, and in the eastern part of the United States which could never otherwise have been reached. Goods are exchanged between these new markets and British Columbia, and even the Provinces of Alberta and Saskatchewan, through the port of Vancouver. This would be impossible but for the Panama Canal. More and faster vessels also ply between Vancouver and the great commercial trading communities of Japan, China, Australia, New Zealand, and other countries across the Pacific.

IMPROVED RAIL COMMUNICATION.

With regard to rail communication, British Columbia, formerly connected with the Prairie Provinces and Eastern Canada by one railway only, the Canadian Pacific, is now connected also by the Canadian National, some 300 miles further north. Three great American steam railways also converge upon Vancouver, viz., the Great Northern, the Northern Pacific, and the Chicago, Milwaukee, and St Paul Railroads, with which your company are interchanging year by year an increasing amount of freight traffic. This traffic will grow as the port of Vancouver comes increasingly into favour as a port of shipment for trans-Pacific trade.

The full benefit of the increased water and rail communications to which I have referred has not yet been felt, owing to the dislocation of trade and shipping resulting from the war, but these increased connections will be felt more and more as conditions become normal, and if you are satisfied, as I am, that they will prove a great and increasing factor in the prosperity of British Columbia, you will also be satisfied, as I am, that your great enterprise, now involving \$60,000,000 of capital supplied from the savings of yourselves and some 13,000 other British investors, is safely and solidly placed.

The communities you serve will expand, and you will be in a position to aid such expansion and share with them in the resultant prosperity. What I have said before I repeat: one of the

NATIONAL PROVIDENT INSTITUTION for Mutual LIFE Assurance.

At the current Division of Profits,
Bonuses have been allotted to all with Profit Policies
at the high rates paid prior to the War.

guarantees for the safety of your investment lies in the fact that nothing can be done to damage your credit or your investment which does not damage equally, or more, the credit and prosperity of the cities you serve or the credit of the province itself, because this enterprise is so large, so well known, and its securities held by so many people throughout the length and breadth of Great Britain that its safety and stability have come to be regarded by them as an index to the credit of British Columbia and its industries generally. In other words, the interests of your company and those of the province and cities you serve are identical, and under the wise management of the former and the wise government of the latter, both will share in the assured prosperity of the future.

I now beg to move:—"That the balance-sheet as at June 30, 1923, and revenue account for the year ended on that date, together with the reports of the directors and auditors thereon, be and are hereby received and adopted."

Mr T. Blundell Brown seconded the resolution, which was carried unanimously.

SAMUEL ALLSOPP AND SONS, LIMITED. CHAIRMAN OPTIMISTIC OF THE FUTURE.

The 35th ordinary general meeting of Samuel Allsopp and Sons, Limited, was held, on the 28th instant, at the Cannon street Hotel, London.

Sir William Barclay Peat, C.V.O. (chairman of the company), presided, and in moving the adoption of the report said that the trading profits had increased by £16,000, and they were able to show some improvement in their dividend distribution. He then reviewed the progress of the company since the present board took office ten years ago. It would be remembered, he said, that the company was in receivership, and that the receivers were discharged by a scheme of arrangement, which provided for the appointment of the present directors who represented the various interests in the capital, debentures, and prior lien stock of the company. Their first year of control ended on September 30, 1914, and the profit shown was £13,000. No provision, however, had been made in the profit and loss account, or elsewhere for £54,000 interest upon the debenture stock, nor for sinking fund on the prior lien stock, and, therefore, that profit of £13,000 was not available for the purpose of any distribution or even for the payment of interest on the 4½ per cent. debenture stock. Subsequently, meetings of debenture holders were held, and certificates of right redeemable out of the profits were given in respect of unpaid debenture interest amounting to about £160,000. Ultimately the whole of that sum was liquidated out of subsequent profits. Until 1916, however, they were unable to make the interest on the debenture stock, and it was frequently said that "Allsopps" as a concern could never do more than pay the interest and sinking fund on its prior liens, a condition of things circumstances had shown to be inaccurate, because they had not only paid all the interest charges and all their redemption on the prior lien stock, but had also paid what might be called fair dividends to the preference stockholders and to the ordinary stockholders. The first dividend they paid on the ordinary stock was in 1919. Further, their cash and their reserves had all been created during the 10 years which had elapsed since the present board took office.

Referring to barrellage, the Chairman pointed out that in the first half of last year they had suffered in barrellage somewhat seriously. In the second half of the year the barrellage began to improve, and by the end of the year they were not substantially

different from their total barrellage of the immediately preceding year. Since September 30th of this year their barrellage had been improving until within the last month or six weeks.

Apart from the political situation, there were indications of a steadily improving trade, which would benefit all industries of the kingdom, including brewers. He hoped and believed that the wisdom of their legislators would recognise that, whatever their party differences might be, the one great thing which they had to look after was the welfare and interest of this great manufacturing and financial country.

The report and accounts were unanimously adopted.

(a) Gold marks.					

Weather conditions have continued unsettled, with further fall of rain and snow over most parts of the United Kingdom, and particularly in northern localities; consequently field work was more or less suspended for the time being. With a holiday tone in evidence, trading was reduced to a minimum, the attendance of buyers being meagre and price changes unimportant. Wheat—English, quiet, and suitable milling grades quoted at 9s 4d-9s 8d, with inferior at 8s-8s 6d per 112 lbs, free on rail. Imported, about steady. No. 1 Northern Manitoba quoted 47s, No. 2 ditto 46s, No 3 ditto 44s 3d, all ex ship per 496 lbs. Flour: In moderate demand at late rates. London standard straight run quoted a 37s 6d, patents 39s 6d-40s 6d, town households 35s 6d per sack delivered in. All English country straights 30s 6d-31s 6d per sack delivered to London stations. Imported, quiet. Manitoba patents range from 36s-39s as to sample, and Australian 32s 6d-33s 6d per 280 lbs, ex store. Millers' offals tend firmer. Broad bran quoted 7s 6d, ordinary 6s 9d-7s, middlings 8s 6d, fine ditto 9s 9d, bags included, ex mill, lights oats 6s 3d, powdered oat husks 7s 3d, feed oatmeal 9s 3d, ground oats 13s 3d, free on rail, all per cwt. Barley: English, steady, with malting kinds ranging from 10s 14s 6d, feeders 9s 3d-9s 6d per 112 lbs, free on rail. Imported slow. Californian quoted 42s-46s, ex store, Chilean chevalier 50s

53s, ex ship, both per 448 lbs. Persian 28s 3d, Danubian 30s 3d, No. 4 Canadian 30s, all ex ship, per 400 lbs. Maize, firmer. Plate, ex ship, 38s 9d, landed 40s 3d, Gal-Foxanian 38s, Bessarabian 39s, both ex ship, all per 480 lbs. Oats: English quiet at 9s-10s 4d per 112 lbs, free on rail as to sample. Imported, dull, and again easier on lower c.i.f. offers. Plate, ex ship, 21s, landed 22s, No. 2 Canadian Western, ex ship, 24s 6d, landed 25s 6d, No. 3 ditto, ex ship, 23s 6d, landed 24s 6d, No. 2 Canadian feed landed 23s 6d, all per 320 lbs. Oatmeal: Steady, but quiet. London-made flaked, also rolled oats 17s 6d, medium and fine cut 17s, coarse and medium pinhead 17s, ordinary Scottish oatmeal 17s 6d-18s 6d, and American 16s 6d-17s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24.	1922-23.	1921-22.	1920-21.
Estimated sales of home-grown wheat—				
1 week to December 22	Cwts. 365,682	Cwts. 539,926	Cwts. 384,597	Cwts. 140,147
15 weeks to December 22	6,334,389	7,722,476	7,136,535	6,186,811
Average price of English wheat per cwt.....	s d 9 9	s d 9 6½	s d 10 6	s d 20 3

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1919 to 1922:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1923.						
Dec. 15	Cwts. 442,203	Cwts. 545,362	Cwts. 66,999	s d 9 10	s d 10 7	s d 9 2
22	365,682	472,247	76,386	9 9	10 7	9 2
1919	381,193	335,139	52,304	16 11	29 7	20 6
1920	145,504	274,121	31,880	20 3	20 4	15 4
1921	384,596	208,736	58,950	10 6	12 5	10 2
1922	539,927	369,157	58,857	9 6	9 3	9 5

IRON, STEEL, AND COAL.

Our Sheffield correspondent writes:—The year has ended with a distinct improvement in the steel trade both as regards work on hand, and prospects for the future. There has been an almost complete recovery from the set-back which occurred in midsummer. A substantial number of unemployed men will be absorbed immediately work is resumed in the New Year. It cannot be said that much of the improvement is due to business in the export market, work for the home railways being responsible for the bulk of it, although it is satisfactory to learn of some revival in shipbuilding. There is a heavy volume of work on hand for rails, tyres, axles, springs, buffers, and castings for locomotives. The heavy foundries, while still only partially occupied, are busier than for two or three years past. Large as are the railway orders, they will not last long, as the capacity of the plants is much greater than before the war, and output quicker. The consumption of acid open hearth steel is now going up after a long spell of depression. Steel makers anticipate a more active competition in semi-finished material from the Continent henceforward, whereby it will be difficult to maintain the higher quotations for British made billets. The quantity of tool steel going out continues small, and such improvement as has been recorded lately is due to increased home consumption. Engineering is a little more active than earlier in the year. There is abundant enquiry for steel strip, users of which have been meeting their requirements since the war ended almost entirely from home sources. A moderate export trade in cold rolled strip is also being maintained. The position of most descriptions of engineers' small tools and hand tools, including files, is much better than it has been, but prices continue unsatisfactory, and the trade is by no means remunerative, owing to the expense of maintaining idle plant. The coal trade is strong in most branches, as collieries are well sold for export, and the pressure for coke almost exceeds the supply. The demand for the latter will soon be increased by the relighting of a number of blast furnaces. Quotations per ton at pits are:—Best South Yorkshire steams, 21s to 22s; Derbyshire ditto, 20s and 21s; best Blyth steam, 23s 6d and 24s. 6d; rough slacks, 11s to 13s; smalls, 5s to 8s; blast furnace coke, 24s.

Our Cardiff correspondent writes:—There has been practically no coal market on the Cardiff Exchange this week. The collieries were idle on Monday, Tuesday, and Wednesday, and official hours on the Exchange on Thursday terminated at noon. The operations that day were not a sufficient test of the level of prices, but with an abundant supply of tonnage in dock, and very little coal available, there is a likelihood of firm conditions next week. The audit of the coalfield for September and October brings down the wages to the minimum of 28 per cent. above the 1915 standard. The reduced rate comes into operation in January, and will remain in force until the end of February. The proceeds were not sufficient to

pay the minimum, and the owners were accordingly called upon to surrender £42,000 of their standard profits. With the tinplate factories closed there was no iron and steel market.

THE COTTON TRADE.

MANCHESTER, December 27.

Owing to the Christmas holidays, very little business has been attempted in the market, the turnover in yarn and cloth being of retail dimensions. There are signs of a further hardening movement in the raw material, and spinners and manufacturers have held for full quotations. Isolated sales have occurred in fancy cloths for India, and white goods have attracted some attention for China. Restricted operations have taken place for the minor outlets East and West. A slow feeling has prevailed in the yarn section. The owners of some mills have extended the usual holidays.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market to-day has been less active, owing to the break caused by the holidays, and also on account of the preparations for stock-taking. A fair amount of business was done before the mills closed last week, and to-day, although demand is restricted, prices remain very firm for all descriptions of tops. The strength of the raw material position is fully recognised, and as there does not appear to be much prospect of cheaper wool being available, topmakers are more and more inclined to adopt a waiting policy and hold out for prices in keeping with the cost of production. Generally speaking, quotations show little change on the week, but what little movement there is continues to be against the buyer. Crossbreds are firm all round, and in some quarters expectations of a revival in the Continental demand in the near future is having a bullish effect on prices. Values have now touched the highest point of the year, and the outlook is regarded with confidence by most members of the trade, although there is a general desire to see prices stabilised rather than that there should be a further upward movement. Spinners are now fairly well employed, some very good orders having been booked in recent weeks. The demand has also cleared much of the stock lots, and prices have improved to some extent. It is still difficult, however, to sell yarn at anything like replacement costs. There is not much new in the piece goods trade. Home and foreign demand is expanding, especially for crossbred fabrics, and more business is expected in the immediate future. Wholesale fabric buyers are resisting the rise in prices, but the wool market is so firm that producers will be obliged to put up their prices on new business.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The last cable sent over from Melbourne by Dalgety and Co., Limited, was a most significant one, and is well worth more than passing attention. It shows that the first half of the Australian selling season finished with values at the highest point, and the average prices cabled for fleece wools made by certain well-known clips gives every indication of a very red-hot market "down under." Messrs Dalgety say that at their closing sale in Geelong last week they had a magnificent offering of 5,300 bales, which averaged £36 11s per bale, and several fresh Australian records for the season were established, which are as follows:—

Merino fleece	d 45	Merino lambs	d 39½
Merino broken	37½	Comeback lambs	33½
Merino pieces	35½	Crossbred fleece	31½
Merino bellies	30½	Crossbred lambs	26
Fleece averages were as follows:—			
Langi Willi	d 37½	Barwidgee	d 35½
Carngarn	37½	Vite Vite	35½
N.C. (merino)	37	Dowling	34½
Eurambeen	36½		

Anyone familiar with the above marks, and they are among the very "cream" of the West Victorian clips grown, must admit that Australian prices are in the sky. The N.C. mark, it will be remembered, was the famous clip that sold at 9s 1d per lb during the height of the boom in the early days of 1920, and the other merinos are among the best-known clips grown in the world. It must be frankly admitted that the prices cabled are significant, and one must add over 2d to the above prices to bring the wool home, which means that most of the lots are going to cost 40d in the grease when they arrive at their final destination.

VEGETABLE OILS AND OILSEEDS.

Business has recovered very slowly after the holiday. Markets, however, are steady all round. Values of linseed afloat and in near positions are gradually losing the premium over new seed for shipment in the New Year, although spot supplies are very small. Crushers, however, are looking to the new Plate crop to fully satisfy their requirements, the price of January-February shipment now being round £17 5s to Hull. The oil product is in steady demand round £41 for prompt delivery ex Hull mill. A fair trade in cottonseed was done on the eve of the holiday, Black Egyptian now being held for £13 10s, December and January loading. Crude cotton oil has been in good request on Continental account, and is firm at £42 per ton naked ex-Hull mill, while soap makers' grade of refined is quoted at £43. Palm kernel oil is in less demand than recently.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

As no hide auction was held in Bermondsey on Thursday, official prices remain as last quoted, best ox selling around 6½d to 8½d per lb, with a very firm market. Hides are at their worst just now, and tanners usually obtain a reduction; this year, however, this has not materialised, as tanners seem eager buyers, whilst a probable shortage, caused by the slaughter of beasts infected with foot and mouth disease, will be felt later on. Little business has passed during the past week in imported hides; large clearances, however, have been made from origin in S. America to the Continent, sales of about 60,000 frigorifics having been reported. Prices have advanced, and close at \$41½ for Argentine ox, or about 8d c.i.f. The American market is firm, with best Chicago packers still offering at 13½ cents.

Little business has been done in sole leather this week, and most warehouses in Bermondsey have been closed until Thursday morning. As practically all the Midland shoe factories have also been closed, little in the way of orders have naturally come to hand. Upper leathers are still being sampled with freedom, but dressers are rather at a loss to know what is to be the popular leathers for next season. Prices all round are very firm, and much is expected from the refusal of the German Government to pay reparations duty on exported parcels of box and willow calf.

Shoe factories were quite busy up to the close of last week, despatching orders for filling up lines. The bad weather has led to a good clearance of the better types of boots and shoes, and as stocks in manufacturers' hands are not heavy, it seems safe to assume orders will be coming along in fair volume in the New Year.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, December 28.

Markets reopened with a quiet tone, while still under holiday influences, and prices in many instances showed no material alteration.

SUGAR.—The market for refined goods remains steady, with a moderate business, chiefly in British makes, at late rates. Of imported, white Java, spot, 57s 3d; Mauritius, 57s 3d; Czecho granulated, 58s; white Java, May-J

O. Morgan Owen, General Manager.

JUTE firmer, with fair sales. First grade to Continent, December-January, sold, £27 15s; January-February, sellers, £28; February-March, £29; Lightning grades, December-January, £26 10s; January-February, £26 12s 6d per ton. Hessians and twills firmer.

HEMP—Manila steady. J grade, January-March, sellers, £35; K, £28 5s; L, £27; M, £25 per ton. Receipts for past week totalled 24,000 bales; estimates for next week, 15,000, and following week 16,000 bales. African sisal unaltered.

SHELLAC quiet. T.N., spot, 300s; March, 295s per cwt.

COPRA—Market fully steady. F.M.S. Straits, to Rotterdam, October-December, buyers, £30 5s; November-January, £30; January-March, £29 10s. Ceylon, December-January, quoted £32; Cebu, £29 7s 6d; Dutch East Indies, December-January, £29 17s 6d. To Marseilles, F.M., December-January, £29. Palm kernels, to Liverpool, January-March, quoted £20 12s 6d per ton.

RUBBER easier. Plantation, standard crepe and sheet, spot, sold, 1s 2½d; January, 1s 2½d; January-March, 1s 2½d to 1s 2½d; April-June, 1s 2½d per lb. Wild sorts unaltered. London stock, 59,608 tons, against 71,720 tons at same time last year.

OILSEEDS—Linseed market quiet, and prices easy for new crop La Plata. Indian: Bold Bombay, December, sellers, £23 5s; small Bombay, ditto, £22 15s; Calcutta, afloat, £23 5s; December-January, £22 25 6d. Plate afloat, £21 15s; December-January, £17 10s; January-February, £17 7s 6d to £17 2s 6d; April-May, £17 7s 6d to £17 5s. Rapeseed firmer. Toria, December-January, £19 5s; real bold Ferozepore, ditto, £19 5s; Jamba, £14 12s 6d. Cottonseed quiet. Egyptian black, December, quoted £13 7s 6d. Sakel-laridis, £12 5s. Hull, Bombay, January-February, £10 2s 6d; February-March, £10. Gingly seed quiet. East African November-December, £25. Chinese, December-January, £25 5s. Ground nuts, dull. Coromandel, machine-dried, December-January, £23 17s 6d; Chinese, decorticated, f.a.q., December-January, £23; East African, December-January, £24 7s 6d, sellers. Soya beans firm. Manchurian, December-January, £12 5s. Castor-seed quiet. Bombay, December-January, £24 10s; February-March, £23 per ton.

OILS—Linseed quiet. Spot, net, naked, 43s; December, 42s; January-April, 38s 9d; May-August, 35s 9d. Rape firmer. Crude spot, 44s 6d; refined, 47s. Castor-oil steady. First pressure, spot, quoted 60s; second pressure, 59s; and pharmaceutical, 65s per cwt, Hull, with London 2s cwt extra. Cotton steady. Crude Egyptian, spot, 42s; Bombay, 41s; common edible, 47s; deodorised (in barrels), 49s 6d. China—wood firm. Hankow, spot (barrels), 94s; December-January, 96s 6d. Coconut steady. Ceylon, spot, 47s; November-December, 47s; Cochin, ditto, quoted 60s. Soya firm. Oriental, barrels, December-January, 42s. Cod quiet. English, spot, 36s. Groundnuts firm. English, crushed,

naked, spot, 52s; deodorised, barrels, 60s. Turpentine inactive. American, spot, 72s; January-April, 73s. Rosin quiet. American, grade B, 13s 3d; F, 13s 6d; G, 13s 6d; H to I, 13s 9d; WG, 15s 9d; WW, 16s 3d per cwt. French WW, 16s per cwt. Petroleum steady. American standard, white, spot, 11d; and water white, 1s per gallon.

METALS—The market for tin opened easier, but subsequently was subject to a good deal of irregularity, though rates closed 10s firmer for cash and 5s three months compared with last Friday's final figures. Standard, cash, quoted £235 10s to £235 15s; three months, £236 15s to £237. Settlement price, £235 10s. Sales comprised 550 tons, including cash at £236 15s to £236; early February, £237 5s to £236 5s; mid February, £237 5s to £237; and three months fluctuated from £236 10s to £237 10s and £236 15s. The downward movement was continued on Friday, with sales on a fair scale. Standard, cash, sold at £232 15s, and three months at £235 to £233 to £234 5s, while finally registered at £234. English ingots quoted at £233 to £233 10s. Copper in good demand, and prices fully steady. Standard, cash, quoted £61 10s to £61 12s 6d; three months, £62 7s 6d to £62 10s. Settlement price, £61 10s. Sales, 1,500 tons. Cash at £61 12s 6d to £61 10s, and again at £61 12s 6d; January, £61 10s to £61 12s 6d; end March, £62 7s 6d; three months, £62 10s, £62 7s 6d, £62 10s, and £62 8s 9d. At Friday's market values moved in buyers' favour, while a good business transpired at the lower range. Standard, cash, sold at £61 5s to £60 17s 6d, with three months at £62 5s to £61 15s. Electros, £66 15s to £67 5s; best selected, £65 5s to £66 10s; strong sheets, £95; wire bars, £67 5s per ton. Lead steady, with moderate dealings. Sales, 700 tons, including December at £30 7s 6d; March, £29 12s 6d for soft foreign pig, with English quoted at £32. Spelter steady. 350 tons changed hands. January, sold, £32 17s 6d; February, £33 5s; and March, £33 per ton.

SECURITY - £9,836,951.

Accident Fire Marine.

Head Offices: { 45, DALE STREET, LIVERPOOL.
155, LEADENHALL STREET, E.C.3.

Chief Administration: 7, CHANCERY LANE, W.C.2.

GOVERNOR: F. W. PASCOE RUTTER.

MR. J. M. KEYNES, C.B., says:—

“..... It ought to be considered as imprudent for such a man [the average investor] to make his own investments as to be his own doctor or lawyer.....”

THE YIELD

With Profit Endowment Assurances yield up to 4½ per cent. compound interest, free of Income Tax, equivalent, with Tax at 4/6d. in the £ to £5 9s. 8d. per cent. gross. In addition the investor secures valuable life assurance throughout the period.

The yield on ordinary investments is usually simple interest only, as dividends are seldom re-invested when received, and there is no assurance protection.

THE AVERAGE INVESTOR

should ask the National Mutual Life Assurance Society, 39, King Street, Cheapside, London, E.C.2, to state what is the yield on an Endowment Assurance at his age. With the quotation the Society will include a new chart which should be studied by all investors.

LIFE ASSURANCE.

NEW BUSINESS AND EXPENSES.

LIFE assurance, after passing through the most critical years in its long history, has emerged from the fog of war into what looks like the sunshine of prosperity. And this is of special interest to the participating policyholders, those who have paid their with-profit premiums throughout the years when it was not possible for most of the companies to distribute any bonuses, and without whose premiums with their large margin above actual cost many offices must have shown deficits. It is scarcely too much to say that the with-profit system saved the life offices during the war and after-war period of depreciation of funds, and averted what might have been a position of grave financial embarrassment. Since 1919 there has been a most striking change. All the factors which for six years had been highly unfavourable to the earning of profits have now become favourable, and the with-profit policyholders, who have borne the burden of loss, are coming into bonuses once more in the present, and into the prospect of further and even better bonuses in the future.

The war hit the life offices in four distinct ways, all of which require to be understood before one can fully appreciate the nature of the change in the fortunes of the offices and their policyholders. New business, the life blood of life assurance as of other commercial industries, fell off. A large part of the adult population was engaged in the war under conditions which made life assurance too expensive to be practicable. What is more, those who in the ordinary normal course would have been seeking new life policyholders were engaged upon other more urgent national occupations. Expenses in proportion to premiums tended to go up because the salaries of the officials who were above military age had to be increased to meet high living costs, and the salaries of those who went on service continued to be paid in whole or in part. Then a rapidly advancing rate of income-tax cut deeply into the receipts from interest upon which life offices depend not only for profits but for actual solvency. A concession was made by the Exchequer under which expenses of administration were allowed to be deducted from the interest receipts before the tax was charged; nevertheless, there was, until new investments at high rates began to tell, a tendency for the net rate of interest received to fall. A third cause of embarrassment arose out of claims by death from war casualties. Pre-war policies were generally issued on the basis of being “whole world and indisputable,” and no additional premium could be charged for the risks of war. The direct war claims—many of which were paid though not legally recoverable—amounted to very large sums. Last and worst, there was the continual depreciation of invested funds. Gilt-edged securities suffered worst of all, and they were naturally the kind of securities largely held by life assurance companies. The total depreciation on pre-war gilt-edged investments, from first to last, amounted to about one-third of the capital value. The drain was terrifying, especially as actuaries had been brought up to believe that the security offered by life assurance was impregnable to any attacks of fortune.

Thanks to the contributions of with-profit policyholders, the bad years up to 1919 were lived through, but, of course, there were few valuation surpluses which could be divided among participating policyholders. Surpluses, such as they were, had to be jealously conserved until the financial weather changed. Since the turning year of 1919 the change has been rapid and thorough. In 1920, the young men of the country—especially those who had served in the war—woke up to the value of life assurance as a security and an investment. New business of good quality poured into the sound offices, and laid a substantial foundation for future prosperity. The year 1920 was a “record” one in new assurances, a fact most striking seeing that the support of life offices on the part of the public was an act of faith. The offices in 1920 were still suffering severely from depreciation of investments, and almost all valuation statements issued in that year announced the suspension of bonus distributions. There are obvious practical reasons why in 1923 life assurance should be attractive; in 1920 those reasons were much less obvious. Though there has been some decline since then, the figures which

we give show that there has been little falling off in spite of general trade depression. Life assurance, even in the years before bonuses could be paid, had more than regained its pre-war popularity, and the amounts for which assurance was effected advanced in accordance with the decline in the purchasing power of money. In our table we show the new business in policies and amounts for 1914, 1920, and 1922. It will be seen how greatly the amounts insured in these later years exceed the amounts of 1914, and also by how much the average policy value has advanced. This is especially noticeable in the case of offices which cultivate the small policyholder. It is most satisfactory to note the advance in small “ordinary” life assurance of companies which transact what is known as “industrial” business. The small “ordinary” policy at quarterly or monthly premiums gives, of course, far better value for money than small “industrial” policies subject to the expense of weekly premium collections.

The ratio of expenses to premiums is generally higher in 1922 than in 1914, but there has in most cases been a decline from the figures of 1920. We suppose that 1920 was the most expensive year for everything one bought that this country has ever known—at least within the memory of man—and life offices have been able to effect economies since the peak of expenditure was reached. Expense ratios, which include commissions to agents, should always be studied in relation to the new business done. Initial expenses are always high, but the flow of a substantial amount of good new business is worth a reasonable expenditure to obtain. After the first year the annual costs of keeping the business are comparatively small. The importance of these two factors of a large and healthy inflow of new entrants, and a reduction in the expense of conducting the business, can scarcely be overstated. Life assurance, like every other branch of human activity, must be progressive if it is to live and be prosperous. We do not believe in frantic efforts to whip up new assurances regardless of cost. The efforts and the cost of them should be prudently related to one another, and so long as new business remains in as healthy a condition as our figures show it to be—almost up to the peak of 1920 with expenses falling—there is nothing to cause apprehension and much to yield favourable prospects of future prosperity.

There have been striking evidences of improvement in those other factors to which we referred just now—interest yield, and in that drain of depreciation which was so heart-breaking for both life assurance managers and their with-profit policyholders. We will deal with these two factors in their appropriate place.

The tables below give for 42 representative life assurance offices the amount of new business, the premium income, and the proportion of expenses and commission to premiums for the three years 1914, 1920, and 1922. Studied in the light of the foregoing comments they will tell their own story.

FAVOURABLE MORTALITY.

There can be no doubt that the progress of medical and sanitary science has made, and continues to make, our people more healthy and longer lived. The Registrar-General continually reports lower and yet lower death rates per 1,000 of the general population, and though much of the improvement is due to the saving of infant lives in the first year of existence, the experience of the industrial assurance companies confirms the assumption that the death rate among adults is becoming progressively less. The life offices which issue "ordinary" life assurance are not dealing with the general public, but with healthy men and women, whom they themselves select after medical examination or, at least, after careful inquiry. The selection exercised by the offices applies also to family history, so that we have a special assured public which would normally show a considerably lower death rate than that of the general population of corresponding ages. It is for this reason that the life offices have for many years past used mortality tables prepared from their own past experience. The one in use for a long time, and

still employed for many purposes, was the Hm (healthy males) table, prepared, with other tables, from the Institute of Actuaries' investigation of the experience of twenty life offices for the period ended December 31, 1863. It was based on the observation of 130,000 insured lives, and, though old and in some respects out of date, is still of much importance.

The mortality tables now in general use for valuation and other purposes are based upon the investigation by the Institute of the experience of sixty British offices between the years 1863 and 1893. The best known table is the OM, the healthy males table corresponding with the older and less comprehensive Hm. The lives investigated numbered 735,000, as against 130,000 for the Hm. The British offices' tables came into general use in 1903, and have thus had an uninterrupted reign of twenty years. Although the tables themselves, with the elaborate monetary and logarithmic calculations made from them, remain as the most complete instrument which life offices have ever had at their disposal, they also, like the earlier Institute of Actuaries' investigation, are becoming in some respects unrepresentative of modern life and death. The data upon which the tables were based was taken from the experience of 1863 to 1893, years which now seem to us extremely remote. The mortality of assured lives has beyond doubt much improved since the Victorian generation of 1863 to 1893, and the mortality of annuitants has improved even more than that of assured lives.

So conspicuous indeed has the British offices' annuitants' table ceased to represent the lives of those who nowadays take out annuities, that the Institute of Actuaries has in preparation a new annuitants' table, based on the experience since 1900. This investigation already shows that the mortality of annuitants, especially of females, has since 1900 been extremely light. The death rates for women are from 10 to 15 per cent. less than those shown by the British offices' table. The mortality has been light, and has been getting lighter in each period of seven years under investigation. In the case of annuitants—who, as it were, back themselves to live—an improved mortality operates adversely against the offices which grant annuities, so that we can appreciate their anxiety to get at their disposal newer and more accurate tables.

The conditions in regard to life assurances are somewhat different. While it cannot be doubted that the mortality of assured lives is also lighter than that shown by the British offices' experience, the saving to offices in death claims operates in favour of the with-profit policyholders, and becomes a source whence the divisible surplus and the bonuses are augmented. Non-profit policyholders who do not benefit directly from the source of mortality profit, yet do gain an advantage indirectly from the competition among life offices to quote the lowest possible non-profit rates of premium. There is not the same urgency to revise the life assurance tables as there is to revise those dealing with annuitants. Nevertheless, life assurance being a business with a more scientific basis than any other business, the Bureau of Research which has been established by the Institute of Actuaries, with the hearty concurrence of the life offices, will doubtless result in the course of a few years in a series of tables which will supersede the British offices' experience as completely as that experience has superseded our old friend the Hm. and its companion tables.

Meanwhile, we are told in almost every life assurance company's annual report, and in almost every valuation statement, that the mortality experienced has been much more favourable than that shown by the British offices' tables. In some instances, assisted, of course, by careful selection in the acceptance of lives for assurance, the improvement in mortality has been extraordinary. We have already mentioned that under their "whole world and indisputable" policies the offices paid a great number of war claims. The deaths were due to the war, and were altogether outside the purview of life tables. Yet it has been a common experience that over the whole series of war years, and of the years immediately following the war, the total death claims paid—including those due directly to the war—have in the aggregate been less than those "expected" by the British offices' tables. We must not make hasty assumption from this remarkable experience

and conclude that the British offices' tables are a hopeless "back number," but the fact remains as a fact which no actuary in 1914 would have dared to anticipate.

As a matter of interest we have extracted from the official reports for last year the definite statements made by the companies of the relation between the mortality experience, shown by their actual death claims, and the amounts which they "expected" to pay by the British offices' tables. In every instance the actual claims are much below the expected claims, sometimes far below. The figures are as follow:—

ABSTAINERS AND GENERAL.—For the whole period, 1884 to 1922, the number of deaths expected in the abstainers' division was 3,681. The actual number of deaths, including war casualties, was 1,891, or 51.3 per cent.

It will be noted that these figures relate only to total abstainers from alcohol.

CLERICAL, MEDICAL AND GENERAL.—For the year to June 30, 1922, the death claims were less than 60 per cent. of the amount expected.

FRIENDS' PROVIDENT AND CENTURY.—The actual claims in 1922 were 68 per cent. in amount of those expected.

GRESHAM.—In the case of this office, which does a large European business outside the United Kingdom, the actual claims were 73 per cent. of those expected.

LEGAL AND GENERAL.—The number of death claims in 1922 was 61 per cent. of those expected, and the amount of the claims was 64.6 per cent.

LONDON LIFE.—The claims paid last year were 60.1 per cent. of those expected. This office pays no commission for the introduction of business, and its clientele is a specially good one.

NATIONAL PROVIDENT.—The claims of 1921-22 were 78 per cent. in amount of those expected.

NORWICH UNION.—Claims paid 69 per cent. of those expected.

SCOTTISH AMICABLE.—The claims paid in 1922 were 73 per cent. of the expected claims.

SCOTTISH LIFE.—The mortality of 1922 was 53 per cent. of that expected.

SCOTTISH PROVIDENT.—The claims paid last year were under 72 per cent. of those expected.

SCOTTISH WIDOWS' FUND.—Actual claims last year were 68 per cent. of the expected claims.

UNITED KINGDOM TEMPERANCE PROVIDENT.—In the Temperance Section the actual claims were 56.3 per cent. in number and 66 per cent. in amount of the expected claims. The corresponding figures in the General Section were 68.7 per cent. and 65.9 per cent.

FUNDS AND INTEREST YIELD.

If three years ago, at a time when the continual depreciation of life assurance funds seemed as interminable as the war itself seemed while we were enduring its horrors, if life office managers had been told that in 1923 they would be discussing what to do with their appreciated funds, they would have laughed derisively. They would have said—as we all say to rich men who bewail their troubles over income-tax and super tax: "Give us the funds and we will joyfully bear the burden of handling them." Incredible though it would have seemed early in 1920, men have been discussing quite seriously in the spring of 1923 what to do with the funds which show in their market values a large appreciation over their written down book values. Depreciation had been so long and so remorseless that securities have been written down to the bone or large investment reserve funds set up to cover the deficiency. Then in the course of the last two years has come a rapid improvement in Stock Exchange values, especially in those of securities of highest class held by life offices. In many instances, long-dated securities have been sold at a handsome profit and the profit carried to the credit of the life funds—as it had to be as a matter of book-keeping. In other instances investment reserve funds, or portions of them, have been diverted to the life funds because the depreciation which they were created to counter-balance had disappeared with the improved

values. In yet other cases, though not in many of them, credit has been taken in the life accounts for an unrealised appreciation in market values.

The mere fact that any discussion should have arisen out of the improvement in security values emphasises how great and welcome that appreciation has been. For a time, at any rate, the drain of depreciation is over and life offices can return to bonus distribution to policyholders on the pre-war scale. In the particulars which we give under "Valuation Results" issued this year, it will be seen that office after office, which suspended its bonus distribution at the last investigation, has hastened to make a valuation and to give the long-suffering with-profit policyholder the long-deferred reward for his patience. He it is who has borne the burden. Here and there offices did not wait for their customary date of valuation to come round. They made a special valuation after two years or three years, and gave policyholders a bonus on account. When this course was not taken it was announced that interim or intermediate bonuses, payable as additions to claims, would be forthcoming upon an increased scale.

Though nothing can be worse for a life office and its policyholders than continuous depreciation of the investments in which the funds are placed, and nothing better than appreciation, neither depreciation nor appreciation is an entirely unrelieved curse or blessing.

When depreciation is at its worst and security values at their lowest then the opportunities for profitable investment of new money are at their best. The converse also holds; when appreciation is rapid and security values high then new investments are made less favourably. A life office is not only a large holder of securities; it is also a large investor every year. While with one hand life offices had to write down their funds, with the other they were putting away current revenue surpluses at handsome rates of interest. Now that values are relatively high the yield upon new investments is lower. Funds and interest yields, therefore, pull against one another. If it had not been for the war income-tax which, after allowances for expenses of management, ran up to over five shillings in the pound net, there would, after a long course of depreciation, have been a revenue from interest which would have gone far in compensation for the capital losses. As it is the increased yield upon new investments just about balanced the increase in the income-tax, so that the reduction in the rate of tax for 1922-23 and in 1923-24 has come as a pure benefit to the life offices and to their policyholders. The reduction of one shilling in the rate of tax adds, after allowing for abatement, about four shillings per cent. to the net yield of life office funds, so that the two reductions of one shilling and sixpence mean an addition of about six shillings per cent. to the yield. This improvement, due directly to the reduction in tax, will counteract to some extent for a time the lower rate of interest yielded by new investments.

The discussion upon what to do with appreciated funds—it was too mild in temperature to be called a controversy—began with a speech by Mr Maynard Keynes at the annual meeting of the National Mutual Life Assurance Society which had written up its funds by taking credit both for appreciation and realised profit. The greater part of the addition thus made was, in fact, realised profit. The issue which emerged—it was to some extent academic—was whether an appreciation of market values over book values should remain as a hidden reserve or should be openly revealed in the accounts. The general opinion was rather in favour of a hidden reserve.

The effect of appreciation in diminishing the average net yield of interest on the funds has not yet had time to show itself. In the figures which we give below of the funds and interest yields of forty-two representative companies for 1914, 1920, and 1922, it will be seen that the net interest yield last year was generally above that for 1920, and markedly above that for the year 1914 in which the war broke out. The increase in yield is due to the favourable opportunities for investment which lasted for more than six years, and in respect of 1922, to the reduction in income-tax under the Finance Act of that year. We have not yet seen the full effect of that year's reduction, and the reduction for this year of sixpence has not yet come into life assurance accounts.

VALUATION RESULTS: BONUSES RESUMED.

In the previous articles of this Review we have discussed the effect of the changes which have come upon life offices during recent years, and especially during the past two years. New business has been adequate in quantity and good in quality in spite of the tightness of money due to trade depression. Mortality experience has been extremely favourable. The depreciation of life funds which had made the earning of any surpluses most difficult, and the distribution of bonuses to policyholders in most cases quite impossible, has ceased. The improvement in capital values has permitted profits to be realised by the sale of investments and investment reserve funds to be released. What is more, the yield from interest has for the time being become most favourable, and now considerably exceeds the net yield before the war in spite of the higher rate of income-tax.

The result has been the practicable resumption of bonuses on the pre-war scale. Some offices have anticipated their usual date of valuation in order that with-profit policy holders should not have to wait any longer for the fruits of their investment. We give below details of the valuation announcements of seventeen life offices which have been made this year. They tell the same story—a highly agreeable story—of handsome surpluses and resumed bonus distributions. It may be observed that the surpluses have not been divided up to the hilt. Funds have been retained in hand to provide against any conditions unfavourable to profits and bonuses which may develop. This is in accordance with sound practice. Now that the losses of the war have been provided for and bonuses resumed, it is the desire of all sound and responsible offices to take such steps as will raise barriers against the possibility of any failure to keep their bonuses going in the future.

ATLAS.—A valuation for the three years 1920-22 inclusive was made at 3 per cent. for with-profit and $3\frac{1}{2}$ per cent. for non-profit assurances. The Om. (5) table was used. The surplus shown was £265,841, from which £109,276 was taken to replace depreciation and loss on

securities. The proprietors received as a percentage of premiums £31,896, and £101,455 was distributed to policyholders as a reversionary bonus at 30s per cent. per annum on sums assured and existing bonuses in respect of the three years 1920-22. The surplus shown at the previous valuation, 1915-1919, was carried forward.

BRITANNIC.—The annual valuation by the Om. and Hm. tables (ordinary life) and English Life Table No. 6 (industrial life) was made at 3 per cent. and $3\frac{1}{2}$ per cent. interest. The surplus was £206,891, of which £118,446 was declared as divisible between policyholders in the ordinary branch and shareholders. The dividend and bonus to shareholders took £5,629 from the ordinary branch funds, and £33,369 from the industrial branch. Ordinary branch policies in the immediate participating class received a reversionary bonus of 30s per cent. for 1922 as against 26s per cent. for 1921 and 24s per cent. per annum for 1919 and 1920.

CALEDONIAN.—A valuation in respect of the five years to December 31, 1922, was made by the Om. table for life assurance contracts, with interest at 3 per cent. Real and heritable property was written down by £100,000, and feu duties and ground rents by £24,305. The surplus was £317,983, of which £294,008 represented the surplus for the five years. The policyholders received £238,434, the shareholders £29,401, and £50,148 was carried forward. Whole life and endowment assurances were allotted a reversionary bonus of 33s per cent. per annum on sums assured for the five years to December, 1922, and 10s per cent. per annum for the five years 1913-17. No division was made at the previous valuation as at December 31, 1917.

COMMERCIAL UNION.—A valuation by the Om. table at 3 per cent. interest was made for the five years to December 31, 1922. The market value of the securities as a whole was in excess of the amount at which they were taken in the balance-sheet. The total surplus was £843,810, of which £760,291 was divided: £673,979 to policyholders and £86,312 to shareholders; £83,519 was carried forward. The method of distributing profits

to policyholders is as a cash percentage of the premiums received in the quinquennial period. The surplus allowed of a cash bonus at the minimum rate of 28 per cent. for the period 1918-1922, and a minimum cash bonus of 13½ per cent. for the period 1913-1917, in which the company was unable, owing to the conditions caused by the war, to make any general distribution of profits. Thus, every with-profit policy in force for the last ten years received as a cash bonus at least 41½ per cent. of the premiums paid in the last five years.

GENERAL LIFE.—For the period 1918-1922 inclusive, a valuation was made by the OM. and HM. tables at 3 per cent. interest. The surplus shown was £127,881, after £7,864 had been written off securities. The investment reserve fund of £264,000 remained undisturbed. A compound reversionary bonus of £1 5s per cent. per annum was allotted to policies in Series II., as compared with no distribution in 1917 and £1 per cent. per annum in 1912.

LONDON LIFE.—As the result of the annual valuation by the OM. (5) table at 3 per cent. interest the rates of reduction of premium were increased by one, so that for the year beginning July 1, 1923, the rates of reduction for fully participating policies range from the equivalent of 129 per cent. in the First Series to 51 per cent. for the Seventeenth Series. The provision for maintaining the rates of reduction has been raised by £171,324 to £2,289,000. In regard to reversionary bonus policies, the bonus for 1923-4 is 35s per cent. of sums assured and existing bonuses, being the same rate as that declared in each year since 1914. The values of the Stock Exchange securities on December 31, 1922, are stated to be £252,140 in excess of the book values. The accounts take credit for an item £180,838, "profit on realisations and revaluation differences."

LONDON AND MANCHESTER.—The annual valuation to March, 1923, was made by the OM. table in the ordinary branch and English Life table No. 6 in the Industrial branch, with interest at 3 per cent. The surplus was £159,248, of which £25,000 was transferred to the staffs'

pension fund, £28,816 from the industrial branch funds to the shareholders, and £52,987 to the policyholders in the ordinary branch. The total amount divided was £106,803. With-profit policies in the ordinary branch received a reversionary bonus of £1 12s per cent. for 1922-23, and an additional bonus making up to a minimum of £1 5s per cent. per annum the bonuses for the nine years ended March 24, 1921.

LONDON AND SCOTTISH.—A valuation for the five years ended 1922 was made by the HM. table with 3½ per cent. interest. The surplus was £272,182, from which £29,440 was taken to place the valuation on the basis of the OM. table. The sum of £189,792 was divided, nine-tenths to policyholders and one-tenth to shareholders. Deferred bonus policies received an addition of 30s per cent. per annum, and ordinary with-profit policyholders a reversionary bonus of 20s per cent. per annum. There was no distribution of surplus at the valuation for 1913-17.

NATIONAL PROVIDENT.—A valuation for the five years ended November 20, 1922, was made by the OM. table for life assurances, with interest at 3 per cent. The securities taken as a whole are stated to show a substantial margin in value over their book values. The surplus was £1,077,159, of which £914,542 was divided. The reversionary bonuses were at the full pre-war rate, and ranged from £2 to £3 per cent. of the sums assured. The accounts show a net profit on the realisation of investments of £11,829. There was no distribution of surplus at the valuation for 1913-17.

NORTH BRITISH AND MERCANTILE.—A valuation in respect of the two years 1921-22 was made by the OM. table at 3 per cent. interest. In view of the recovery in values of securities £590,000 was transferred from the investment reserve fund to the life fund, leaving £500,000. The surplus was £1,447,996. Reversionary bonuses at the rate of £3 10s per cent. per annum on sums assured and previous bonuses were allotted for 1921 and 1922, at a cost of £1,270,891. Shareholders received £143,173. No distribution was made at the valuation for 1916-20.

PEARL.—The annual valuation was made by the HM.

and OM. (5) tables in the Ordinary Branch, and by the English Life tables in the Industrial Branch, with interest at 3 and 3½ per cent. The surplus was £595,619, of which £379,196 was distributed among participating policyholders and shareholders. The profit and loss account for 1922 took £43,749 from the ordinary branch, and £124,376 from the industrial branch. The reversionary bonuses to with-profit policyholders (ordinary branch) was increased to £1 10s per cent. for 1922, as against £1 6s per cent. for 1921, and £1 5s per cent. per annum for 1919 and 1920.

PROVIDENT MUTUAL.—A valuation for the five years ended December 31, 1922, was made by the OM. table for life assurances with interest at 3 per cent. The book values of the securities were below their market values, and the investment reserve fund of £160,000 was kept intact for possible future depreciation. The surplus was £377,712, of which £275,735 was divided among policyholders. The reversionary bonus was at the rate of £1 5s per cent. per annum. At the 1917 valuation no distribution was made.

PRUDENTIAL.—Ordinary Branch.—The annual valuation was made by the HM. table with 3 per cent. interest. The surplus was £2,047,337. A reversionary bonus of £1 12s per cent. for 1922 on sums assured was allotted to participating policyholders in the ordinary branch, as against £1 6s per cent. in 1921, and £1 per cent. in 1920. The sum of £500,000 was added to the investment reserve fund. Profit and loss account took £135,438.

Industrial Branch.—The annual valuation was made by the English Life tables with interest at 3 per cent. The surplus was £1,737,631. A sum of £250,000 was carried to investment reserve fund. Under the profit-sharing scheme industrial branch policyholders received £500,000 in respect of 1922, against £200,000 for 1921. There was a transfer to profit and loss account of £489,562 from the industrial branch funds.

REFUGE.—Ordinary Branch.—The annual valuation was made by the HM. table with 3 per cent. interest. The surplus was £991,519, of which £525,469 was

allotted among policyholders and shareholders. The reversionary bonus for 1922 was at the rate of £1 12s per cent., as against £1 8s per cent. for 1921, and £1 6s for 1920. The shareholders were allotted £44,213 from the ordinary branch funds in respect of 1921.

Industrial Branch.—The annual valuation was made by the English life tables with interest at 3 per cent. The sum of £150,000 was transferred to the special reserve for strengthening the valuation basis, and the surplus was then £168,240. The sum of £14,953 was allocated to shareholders, against £8,287 for 1921.

SCOTTISH EQUITABLE.—A valuation for the five years ended March 1, 1923, was made by the OM. table at 3 per cent. interest. The assets were revalued, and are stated to show a substantial surplus in comparison with the book values. Credit was taken for £62,891, balance of profit on realisation of securities. The surplus was £688,770, of which £584,380 was allocated to provide a reversionary bonus of £1 10s per cent. per annum on sums assured and existing bonuses. No surplus was distributed at the valuation for 1913-18.

SCOTTISH UNION AND NATIONAL.—A valuation was made for the three years to December 31, 1922, by the OM. table for life policies at 3 per cent. interest. Credit was taken for £131,560 on the revaluation of assets. The surplus was £1,142,278, of which £597,307 was allocated to policyholders, and £132,067 transferred to profit and loss account. A reversionary bonus was declared of £1 10s per cent. on the sums assured in respect of each of the five years 1918-22. No distributions of surplus were made at the valuations of 1914 and 1919.

WESLEYAN AND GENERAL.—The annual valuation for 1922 was made by the OM. table in the Ordinary Branch at 3 and 3½ per cent. interest; in the Industrial Branch the English Life table No. 6 was used at 3 per cent. In the Ordinary Branch there was a profit of £62,782 on realisation of investments, and in the Industrial Branch of £58,701. The surplus in the Ordinary Branch was £84,673, and in the Industrial Branch was £8,767. The sum of £48,687 was applied in the Ordinary Branch in

SCOTTISH AMICABLE LIFE ASSURANCE SOCIETY

Established 1826.

Funds exceed £7,600,000

A MUTUAL PROFIT-SHARING OFFICE. An Unbroken Record of High Compound Bonus Declarations.

The Society since its formation in 1826 has a continuous record of high Bonus rates, unbroken by the war.

Throughout that long period of nearly 100 years a Bonus has been declared at each of the periodic investigations, and on no occasion has the rate fallen below 30s. % compound. This was the rate declared for the latest quinquennial period, which included nearly 3 years of war; and for the preceding 20 years the rate was 35s. % compound.

the form of a reversionary bonus at the rate of £1 10s per cent. of sums assured, the bonus not to become effective until a policy had been two years in force. The reversionary bonus for 1921 was £1 4s per cent., and for 1919 and 1920 £1 per cent. per annum.

FIRE INSURANCE.

A YEAR OF SMALLER SURPLUSES.

THE surprising thing about the fire insurance year of 1922 is that the British offices did so comparatively well in so many adverse circumstances. Their operations are world-wide, and they are directly affected by the depression and disturbance which are also world-wide, though in the course of the year there were some hopeful signs of improvement. Business in the United States—a factor of dominating importance—was not good, though it was not quite so bad as the experience of some offices led their managers to suppose. The total fire wastage in the United States, as returned by the National Board of Fire Underwriters, was 521 million dollars, actually more than the wastage of 1906, the year of the San Francisco earthquake and conflagration. But when we compare last year's wastage with such a year of disaster as 1906, we must bear in mind that the premium income upon which the losses of 1922 fell was immensely greater than the premium income of 16 years earlier. The percentage of losses to premiums last year was no more than 58 per cent., whereas in the year of San Francisco it ran well over 100 per cent., and made a dreadful mess of both British and American fire insurance accounts. The total deficiency in America last year of 2.3 per cent. was due as much to the increased scale of expenses (44.1 per cent.) as it was to the somewhat high ratio of fire claims to premiums.

While it would be correct to say that American experience was unfavourable last year, it would also be correct to add that it was not, so far as many British offices were affected, worse—indeed, it was rather better—than the experience of 1921. In the course of both years much reorganisation of business was going on after the war expansion in values and premiums, which culminated in 1920. American fire profits come and go. British managers accept the lean years with the fat years as philosophically as they can, and seek always to sort out the unprofitable lines and to cultivate those classes of risks which show the best results. It is an insurance market which is always expanding in volume. And herein comes the contrast with Europe under the lamentable conditions which have gone from bad to worse since the war officially ended. Russia, Germany, Austria, Hungary, large and populous countries, may almost be disregarded now from the British fire insurance point of view. Turkey, which was systematically developed to the great advantage of foreign and native business houses, has been closed by short-sighted legislation. This has involved the withdrawal of British companies. Elsewhere business has been dull, and the fall generally in values has brought with it reductions in the volume of premiums.

For purposes of comparison we have taken out the premiums, proportion of claims and expenses, and the underwriting surpluses for the three years 1914, 1920, and 1922. The underwriting surpluses or deficits—there are happily not many deficits—have been calculated on the basis of allowing 40 per cent. of the premiums as a reserve for unexpired risks. The most noticeable fact which emerges is the great expansion in the volume of premiums between 1914 and 1920, the year of maximum values. And this expansion took place without the assistance of any general advance in the rate of premiums charged, except for a short time in the United States, when there was an

advance of 10 per cent. Companies like the Alliance and Guardian, who do not transact American fire business, show a ratio of advance almost—in the case of the Guardian quite—as great as that of the offices with big American connections. The year 1920, when premium incomes were at their highest point, was favourable in respect of fire losses, so that surpluses earned then have gone a long way to make up for the less profitable experience of the past two years. In 1921 there was a big drop in premiums corresponding with the fall in values of stocks insured, and this drop released considerable amounts to the higher premium incomes. In 1922 premiums began to recover again, so that in several instances they are not much below the level of 1920. The advance in expenses, especially in America, where commissions are inordinately high, has been a heavy burden to carry. A glance at the table shows how much higher the expenses (including commissions) were in 1922 than in 1914. As a matter of fact, they were even higher in 1921, since when all the offices have made great efforts to cut them down. The cutting-down process is not simple. Salaries are all much higher than before the war, and it has become the general practice to incorporate war bonuses into permanent advances. The reduction in income-tax in this country will bring some relief on the expense side. It is the practice with most British insurance companies, as with banks, to pay the income-tax assessed upon their staff salaries, a concession which in itself has amounted to a handsome advance in pay. One may expect the item of commissions to be cut into by general agreement. It is not so excessive in Great Britain as it is in America, yet it is probably higher than is really necessary for obtaining and retaining fire business.

An expense which tends continually to increase is that of State taxes, the toll levied by most foreign countries and British possessions on the premium income of insurance offices. These State taxes are distinct from income-tax on profits, and are usually levied as a percentage of premiums taken within a State.

UNDERWRITING RESULTS FOR 1914, 1920, AND 1922.

The general results of an underwriting year, or of a series of years, are best seen by examining the figures of companies with the most widespread connections. Examples of these are the Commercial Union, the Liverpool and London and Globe, the London and Lancashire, the North British and Mercantile, the Phoenix (which now includes the Norwich Union), and the Royal. The bigger the office the more it tends over a series of years to approach the average. Skill in management, of course, accounts for much, but no office, however blessed in its general manager, has a monopoly of skill. If we take these major offices, measured in volume of business, the London and Lancashire heads the list for successful underwriting with a surplus of 11 per cent. for 1922 and 17 per

cent. for 1920. The North British has done well with a surplus of 7.5 per cent. in 1922 and 10.7 per cent. in 1920, and the results of the Commercial Union (6.6 per cent. and 7.3 per cent.) and those of the Royal (5.9 per cent. and 7.2 per cent.) must be considered good when we observe the huge volume of premiums upon which these profit percentages come to be calculated. For the first time, we believe, the fire premiums of Commercial Union have surpassed those of the Royal. The Liverpool and London and Globe—the recently acquired partner of the Royal, though distinct accounts are issued—had very fair results in 1920, though there was a sad falling off in 1921 and 1922. Of the offices with the strongest grip on home fire business—the Alliance and the Sun—the Alliance earned 10.3 per cent. of its premiums as profits in 1922 and 8.1 per cent. in 1920. The Sun's underwriting results were 7 per cent. in 1922 and 12.3 per cent. in 1920. Taken as a whole, the surpluses of 1922, though they did not reach the fine figures of the good year of 1920, were still much better than might have been expected and feared at this time last year.

GRESHAM LIFE OFFICE

Extract from the 74th Report of the Directors on the operations of the Society for the twelve months ending 31st December, 1922.

POLICIES ISSUED ... 4,265 for £2,198,396
NEW ANNUAL PREMIUMS (Net) ... £102,318

Founded in the first half of the last century, the GRESHAM has paid to policy holders in Claims & Bonuses £40,000,000.

SPECIAL FEATURES.

1. Double Benefit Policies.
2. Endowment Assurance with guaranteed Premium reductions and Options at maturity.
3. Pension Policies with Optional Pension Age.
4. Immediate Annuities with Return of Purchase Money.
5. Children's Educational Policies.
6. Life Assurance with or without Medical Examination.

GRESHAM LIFE ASSURANCE SOCIETY, Limited,
St. Mildred's House, Poultry, London, E.C.2.

ALEX. LAWSON,
General Manager & Secretary.

75th Year.

THE

CANADA LIFE ASSURANCE COMPANY

A GREAT RECORD FOR 1922:

Business in Force ... £74,174,217 Increase £8,402,277
Total New Business
Paid for in Year £13,267,687 Increase £605,053
Assets ... £17,805,718 Increase £1,347,177
Surplus Earned during Year ... £553,698

THIS IS THE LARGEST SURPLUS IN THE HISTORY OF THE COMPANY.

The rate of interest earned during the year was 6½ per cent.

The Company has not only maintained, but has twice increased the bonuses to Policyholders since 1914, and at 31st December, 1922, carried forward an undivided Surplus of £1,655,789.

The Company's LIFE POLICIES are the most liberal in the Insurance Market. ANNUITIES issued on exceptional favourable terms.

UNITED STATES RESULTS FOR 1921 AND 1922.

No survey of fire insurance results can be considered complete unless figures are given for the large United States business of British companies and of their numerous American progeny. These results are not easy to make exhaustive. One needs to keep the list of American subsidiary companies up to date, and to allow for variations in the average rate of exchange. It is this difficulty of exchange which has forced us to confine our figures to the two years 1921 and 1922, during which we could take the pound sterling at par without much strain upon accuracy. In calculating the underwriting surpluses or deficits, we have taken the same reserve for unexpired risks (40 per cent.) as that adopted for the head office accounts in this country. In the United States the whole of the unearned premiums has to be reserved, so that, in practice, little, if any, funds can be withdrawn from America to this country except the receipts from interest upon invested funds. We have already discussed the general situation in American fire business of recent years, and have only to call attention to individual company results. Of the big offices, the North British group comes out best, with surpluses of 3.7 per cent. for 1922 and 5.8

per cent. for 1921. The London and Lancashire group follows with 4.9 per cent. for 1922 and 3.9 per cent. for 1921. We say "follows," because though there is not much difference in the percentages of profit when taken together, the North British secured its surpluses on a much greater premium income. The Royal group (which includes the Liverpool and London and Globe) came out badly with two deficits, while the Commercial Union just got home in 1922 with a bare surplus, and showed a deficit for 1921.

INTEREST RECEIPTS AND DIVIDENDS.

Finally, we have to note the interesting fact that, though fire insurance still dominates the accounts of the big composite insurance offices—the accident and miscellaneous branches are not now far behind—and fire results have not in 1921 and 1922 been conspicuously favourable, many companies have recently increased their dividends to shareholders. The explanation is simple. Insurance dividends are paid mainly out of interest receipts from invested funds, and to a small extent directly from underwriting profits. Indirectly, dividends, like everything else, depend upon profitable underwriting. Surpluses go to funds, the funds yield interest, and dividends follow. If there were no surpluses there would be no funds, no interest, and no dividends. During the war years, and during those years immediately following the war, the surpluses of fire, marine, and accident departments were large, and the funds were much increased. Hence higher dividends then and now. The following table which we have prepared for 1922 shows how enormously the funds exceed the paid-up capital upon which dividends are paid, and how large are the contributions of interest to the dividends paid. The reduction in income-tax on profits and the approaching demise of the corporation tax, will permit of larger allocations to reserves in future. The improvement in investment values will relieve profit and loss accounts from the heavy burden of providing for depreciation. In 1920, a good year, practically the whole of the underwriting surpluses had to be set aside either to meet British taxation or to fill up the gap made by depreciation on funds.

ACCIDENT, &c., INSURANCE.

THE GOVERNMENT'S WORKMEN'S COMPENSATION BILL.

FIFTY years ago accident insurance amounted to so little in underwriting business that it was regarded by the big fire offices as unworthy of their attention. With the coming of workmen's compensation, both in this country and America, the accident companies began to expand, and when motor-car insurance passed from an experimental section to a huge organised business, the accident, motor, and miscellaneous branches grew into a bulk little smaller than fire insurance itself. The result has been that the old accident companies have been acquired by fire offices,

and now the tendency is for every well-established insurance office to transact every kind of insurance business.

Workmen's compensation insurance has been in a highly artificial state since the war broke out. Premiums based on wages bills expanded with the war rates of wages, but the compensation for accidents, except in so far as the weekly rates for disability were increased from 20s to 35s by the War Additions Acts, remained under the pre-war conditions. Large profits were made, larger than was wholesome for the insurance offices—as they themselves recognised—and a revision of the Act of 1906 by Parliament became urgent. Since 1920 many changes have come about which did not exist when the Holman Gregory Committee reported on the situation in that year. The companies have given a voluntary rebate upon premiums of 10 per cent., and the premiums have dropped heavily with the reductions in wages of the past two years. Last year there was a fall of 30 per cent. in the premiums from British workmen's compensation business, and during the first six months of this year there has been a further decline of about 12 per cent. The total amount of premiums now paid by employers in this country is about five millions a year.

The Government's amending Bill, introduced by the Home Secretary recently, increases the maximum death benefit from £300 to £500, and puts the weekly disability benefit at 30s, against 20s before the war and 35s under the War Additions Acts, which the new Bill proposes to repeal. Several other changes are made in favour of the workmen, and there is an extension of the definition of "workman," so as to include share fishermen, taxi-cab drivers, and employees of sports clubs.

AGREEMENT BETWEEN HOME OFFICE AND ACCIDENT COMPANIES.

The most interesting innovation is not contained in the Bill at all, but is laid down in an agreement dated May 24th last between the Accident Offices Association and the Home Office. It will be remembered that the Holman Gregory Report recommended that workmen's compensation insurance should be compulsory for employers, and that premiums should be adjusted between employers and the insurance companies, so that 70 per cent. of the premiums should go in benefits to workmen. The Bill does not make insurance compulsory, but, by means of the Agreement of May 24th, premiums are to be based upon a 60 per cent. claims ratio for the next three years. After that time they are to be based upon a 62½ per cent. ratio, or such less figure, not below 60 per cent., as may be agreed between the Home Office and the Accident Offices' Association. Of course, the claims ratios are to be determined after taking into account outstanding claims and provision for unexpired risks. Reasonable medical and legal expenses in connection with the assessment of claims are also to be allowed for. This Agreement is so important that we give the operating clauses in full.

(1) The proportion calculated as a percentage (hereinafter referred to as the loss ratio) which the combined total amount paid by all the offices members of the Accident Offices Association in any year on behalf of employers in Great Britain in respect of compensation or damages for injuries to workmen (including reasonable medical and legal expenses in connection therewith) bears to the combined total amount received as premiums by such offices from such employers in that year in that class of business is to be not less than 60 per cent. for each of the calendar years 1924, 1925, and 1926, and for any calendar year thereafter 62½ per cent., or such other proportion, not being less than 60 per cent., as may be agreed between the Secretary of State and the Accident Offices Association.

(2) In reckoning, for the purpose of the preceding paragraph, the total amount paid in any year in respect of compensation or damages and the total amount received as premiums, allowances will be made in respect of liabilities for unexpired risks and claims outstanding from any previous year or carried forward into any future year which are to be calculated in such manner as may be prescribed.

(3) The rates of premium charged for each class of risk will be adjusted from time to time by the Accident Offices Association so that the loss ratio may approximate as nearly as reasonably practicable for that class of risk to the proportion above mentioned, but if on the accounts of any year it is found that the loss ratio over the combined business of the said offices has fallen short of or exceeded the proportion fixed for that year by more than ½ per cent., the said offices are in connection with the premium which next falls to be paid thereafter to be bound to allow a corresponding rebate, or to be entitled to make a corresponding additional charge, as the case may be, to the employers, to be calculated in such manner as may be prescribed.

Provided that the amount so allowed by way of rebate or received by way of additional charge is not to be taken into account in calculating the total amount received as premiums.

(4) The Accident Offices Association will annually furnish to the Secretary of State a certificate from its auditors, in such form and containing such particulars as may be prescribed, for the purpose of enabling him to see that the foregoing arrangements have been carried out, and to make a report to Parliament on their working.

(5) For the purposes of this undertaking, "prescribed" means prescribed by the Secretary of State after consultation with the Accident Offices Association.

LATEST RESULTS OF ACCIDENT, &C., INSURANCE.

It was our original intention to give for accident and miscellaneous insurance tables similar to those which we have employed for fire insurance. But there have been so many purchases and fusions between 1914 and the present year that we have found it impracticable to present figures which would be properly comparable. It will be understood that the premium incomes for 1922 which are given below include all kinds of accident, workmen's compensation, motor-car, and other miscellaneous branches of in-

urance transacted both in this country and abroad, chiefly in the United States. British companies operating what is called "casualty" insurance in the United States work mainly through American subsidiaries, since, under State laws, no company is permitted to transact both fire and casualty insurance. It will be observed that the big companies, such as the Commercial Union, Employers' Liability, Phoenix (London Guarantee and Accident), and Royal have not, relatively to premiums, been so successful as the smaller and more specialised offices like the North British (Railway Passengers), Northern, and Guardian. In arriving at the underwriting surpluses we have allowed for the increase or decrease in the offices' provision against unexpired liabilities.

MARINE INSURANCE.

A PERIOD OF DEPRESSION.

MARINE insurance, as a business, rises and falls with the greater business of shipping upon which it depends, and of which it is an essential accessory. It enjoyed several years of prosperity during and immediately after the war, but when the heavy slump in shipping began, the competition for risks drove down premiums, both for hull and cargo insurance. Marine insurance company accounts

are issued in two ways. Some companies, especially those which for many years specialised in marine insurance only—of which the Sea Insurance Company is the sole survivor—use the Liverpool form of accounts. Under it accounts for an underwriting year are kept open for two years, and then an estimate is made of how much is required to wind up the account. The balance struck, credit or debit, is profit or loss. We give below the results for the four years 1914, 1918, 1920, and 1921, of six companies which present their accounts in this way.

	Account.	Premiums.	Claims & Suspense.	Expenses.	Surplus or Deficit.

	1921	254,106	222,410	6,383	25,313

Other marine insurance companies—they are really now branches of composite offices—follow approximately the fire insurance practice of presenting for each calendar year figures of premiums, claims and expenses, paid or outstanding, in the course of that year. Seeing that the claims relate not only to the current year but to previous years, these figures do not enable anyone—except the officials of the individual companies—to know how a par-

ticular underwriting year, as distinct from a calendar year, has worked out. Nevertheless, if one takes a series of years it is quite possible to ascertain the broad results, whether good or bad. What we have therefore done is to take out for six marine branches the details of premiums, claims, and expenses for the four years 1919, 1920, 1921, and 1922, and present the surplus or deficit arrived at over the whole series.

	Year.	Premiums.	Claims.	Expenses.	Surplus or Deficit on 4 Years.

The Economist

MONTHLY SUPPLEMENT.

New Series. No. 2.

SATURDAY, JULY 21, 1923.

We resumed last month the publication of a Monthly Statistical Supplement, which has been a feature of the "Economist" for many decades, but was suspended during the war. In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. It is becoming a common practice to reduce these figures to three or four indices, and by their study to endeavour to forecast forthcoming economic changes. This science is, however, yet in its infancy, and it may be doubted whether an attempt to apply scientific rules will obtain a better forecast than the best opinion of the business world when furnished with the requisite information. We, therefore, propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics." is 6d. Constable.

STATE OF TRADE AT HOME AND ABROAD.

COMPARED with a month ago, there is little change in the actual state of trade, though the outlook has become more gloomy. This is a disappointing result, for by this time we ought to have been enjoying the full upward swing of trade, of which a beginning was made during the spring. The end of April, however, witnessed a definite check to this movement, and, on the whole, there is reason to be thankful that the setback during June was not more serious.

The situation may be summed up by saying that the volume of trade continues on a large scale, which is very much better than at this time last year, and is near the peak point reached this spring. But, unfortunately, current orders are not being replaced, and the period ahead for which industry has assured orders is rapidly shortening. In some cases the end of the output in hand is alarmingly near. The two features which are, perhaps, of special interest at the moment are Bradford, whose spinning industry has been peculiarly hard hit in the last few weeks by low prices and lack of demand on the Continent, on the one hand, and, on the other, the electrical engineering trade, which is full up of orders, and whose progress shows no signs of a check.

The attempt has been made in some quarters to question the conclusion that in the struggle between the favourable and the unfavourable reactions of the Ruhr upon British trade, the latter are now definitely becoming predominant, and the overseas trade returns are quoted to prove that British production is still on the up-grade. Such arguments, however, overlook the fact that June exports are the result of orders placed some weeks, and, in cases, some months ago. The foreign trade returns, which are a matter of history, are of little importance compared with the state of demand to-day, and of this the only test is our industrial order book.

During June a substantial seasonal improvement in employment was to be expected, but both the trade union and the insurance returns show little change. Thus the numbers on the unemployed register were 1,226,000, against 1,261,000 a month previously. Over the first six months of the year a marked reduction in the number of unemployed has taken place, the present figure being 10 per cent. less than that of January 1, 1923. Retail prices are unchanged, but our index number of wholesale prices is down by 2 per cent., chiefly as a result of the fall in coal and iron.

Looking round various industries, it will be seen that the coal output, which had been steadily falling after the feverish spurt of March last, made a recovery in June, the total for the month being fully 10 per cent. above that of May. The foreign demand is being fairly steadily maintained, although prices have shown a slight tendency to decline. From home quarters is reported weakening consumption.

The seasonal dulness of the iron and steel trades has been accentuated by the situation with regard to the Ruhr, so that production has been described by more than one iron-master as approaching stagnation. For the first time for many months no increase in the number of furnaces in blast took place during June, and though production figures were fairly high (692,000 tons of pig-iron and 767,700 tons of steel), they unfortunately reflect the past rather than the present condition of manufacturers' order books.

As regards the textile trades, there are some faint signs of better things in the cotton trade, though they do not take us very far. Raw cotton prices during the past month have fluctuated rather widely, and changes are now taking place, according to advices relating to the outlook for the new crop in the United States. The growth, however, is doing very well, and there is a tendency for values to ease. Spinners of American yarns remain in a very depressed condition. Although production is being curtailed by 50 per cent., supplies are more than equal to the requirements of users. Spinners of Egyptian yarns continue to do rather better, and the industrial situation in Bolton is more encouraging than for some time back. Buying in piece goods has been very irregular. Restriction of output in weaving towns continues on a large scale, and most firms are extending the usual holidays. The immediate prospects are not very bright, but there is some expectation of increased activity in the autumn. This improvement is urgently needed, as Lancashire is beginning to feel the financial strain of her long-drawn depression very acutely.

When we look overseas, the most favourable sign is that in America the trade boom shows no serious signs of abating, and it looks as though those who have confidently predicted that the favourable situation would be maintained at least until the end of the calendar year are justified. But even in America conditions are described as "quieter," and speculative interests are inclined to be less optimistic. Bond sales were 9 per cent. below May, and 26 per cent. below June a year ago, the corresponding declines in stock sales being 4 per cent. and 32 per cent. respectively. There is a slight slowing down in the lumber industry, and in the New England cotton manufacture, while unfilled orders of the United States Steel Corporation declined 8½ per cent. in June. Commodity prices have been declining for the last four months, but some industries show an actual increase of output. Canadian crop estimates are good, prospects having taken a turn for the better since the seeding period.

A month ago we said that there seemed to be slight signs of more vigour in the internal trade of China. Latest

advice show that this flicker has apparently expired. India shows no movement, and though prices are lower, exports show no tendency to expand. The monsoon has been good, and the omens seem favourable for trade in the autumn, but no concrete improvement can yet be traced. Among overseas markets Australia and New Zealand seem to be definitely on the up-grade again. South America is dull, and though trade to date is very much better than last year, we cannot find that orders are being booked for South American countries at all freely.

We propose to add to our regular indices of the trade situation an index number of freights, the basis of which we explain in a subsequent article. The figures there given indicate that present freights, though above the 1913 level, are not to-day any higher than in 1912. The movement of the index number over the boom period shows very clearly how much greater the swing of the pendulum in shipping freights has been than in the movement of prices in general.

THE GROWTH IN THE WORLD'S POPULATION.

THE continuity of statistics of population which are the foundation on which a large proportion of economic inquiries must be based, has been much broken in the last decade, not only because the war interrupted the previous trend by checking emigration, by introducing unusual social conditions which affected birth and marriage rates, and by causing actual direct or indirect mortality, but also because it altered so many boundaries and made comparison complicated. However, statistics exist which give some idea of the changes that have occurred, and the League of Nations Economic Section has made the task easier by bringing together the latest census returns or estimates, as the case may be, in the current number of its statistical bulletin. The figures in the following table nearly all refer to 1910 or 1911, in the pre-war column, and the post-war figures to 1920 or 1921. When this is not the case, the date is inserted in brackets:—

POPULATION IN THOUSANDS.—I.—EUROPE.

States with unchanged boundaries—

	Pre-War.	Post-War.
United Kingdom ..	45,222	47,262
Albania ..	850 (1913)*	832 (1922)*
Belgium ..	7,416	7,466
Spain ..	19,950	21,338
Norway ..	2,358	2,632
Holland ..	5,858 (1909)	6,977
Portugal ..	5,960	6,041
Sweden ..	5,522	5,988 (1922)*
Switzerland ..	3,765	3,886

States with changed boundaries—

	Pre-War.	Post-War.
France ..	39,192	39,210
Italy ..	34,671	38,835
Denmark ..	2,775	3,240 (1922)*
Germany ..	64,926	59,856 (1919)
Austria ..	28,572	6,423
Hungary ..	20,886	7,951
Russia in Europe ..	143,115 (1913)*	101,734
Serbia ..	4,038 (1914)	12,017
Roumania ..	7,508 (1912)	16,262*
Bulgaria ..	4,401*	4,861
Czecho-Slovakia ..	..	13,611
Poland .. (incd. in Russia)	..	27,179
Lithuania ..	..	2,293 (1922)*
Latvia ..	..	1,851
Estonia ..	..	1,111 (1922)
Turkey ..	1,891	..
Greece ..	4,810	..

No separate post-war figures can be given for Turkey and Greece, as the frontiers are not yet fixed. The increase shown for Bulgaria, which lost territory after the war, is due to the fact that she first gained at the expense of Turkey in the Balkan War.

The first group of countries shows an increase from 97 millions to 102½ millions, but the second group shows a fall from 357 millions to 343 millions—a net loss in Europe of 8 millions. This is about the loss in Russia, which out of its pre-war European population suffered the following among other losses:—15.4 millions to Poland, 3.3 millions to Finland, about 6.2 millions to the Baltic States, and 2.4 millions to Roumania.

It is estimated that the pre-war population of present Russia was 109 millions, which means that there was a decline of nearly eight millions before the famine set in.

* Estimated total.

When both series are brought to a common comparison they work out as follows:—

Average, 1913=100.

	Commodity Prices (Economist).	Freights.
February, 1920 ..	303	591
March, 1920 ..	310	586
December, 1920 ..	221	240
June, 1921 ..	178	165
December, 1921 ..	162	134
June, 1922 ..	163	117
September, 1922 ..	156	110
December, 1922 ..	159	117
June, 1923 ..	160	107

The recovery of shipping, as of industry in general, depends upon restoring the volume of the world's international trade. Until the volume of goods being moved by sea substantially increases, the outlook for the shipping industry is unpleasantly gloomy.

During the war and revolution there was in Russia as elsewhere a slowing down of the natural increase in the population, which would have produced an increase of 12 millions if pre-war conditions had continued; but the head of the Russian statistical department calls attention to the following special losses:—

- Military losses in the Great War, 2½ millions.
- Emigration following the civil war, 2 millions.
- Loss of life in the civil war, 1 million.
- Surplus mortality due to epidemics, 3½ millions.

It may be added that the number of men killed or died of wounds in Europe, excluding Russia, is probably nearly six millions.

The figure for France conceals a fall in her pre-war population of 2,105,000 people, for 1,708,000 have been added from Alsace-Lorraine. Italy's increase includes about two millions of Austria's former population.

Turning to extra-European countries, the figures show the following results:—

NORTH AND CENTRAL AMERICA.

	Pre-War.	Post-War.
Canada ..	7,207	8,967*
U.S.A. ..	97,163*	107,833*
Mexico ..	15,502 (1912)*	14,463*
Central America (inc. Cuba) ..	9,704	10,239

SOUTH AMERICA (excluding Bolivia).

	Pre-War.	Post-War.
Argentina ..	7,885 (1914)	8,699*
Brazil ..	24,618 (1912)*	30,636
Chile ..	3,550 (1913)*	3,819*
Colombia ..	5,103 (1912)	5,847 (1918)
Paraguay ..	900*	1,000 (1918)*
Peru ..	4,500 (1908)*	7,300 (1919)*
Uruguay ..	1,279 (1913)*	1,529*
Venezuela ..	2,744*	2,412*

When we come to Asia the figures become very uncertain, especially for China. The latest (1920) estimate for the country is 430 millions, which is far in excess of the last pre-war census, which showed only 350 millions. But this is clearly a difference in method of estimation, and not an actual increase. More reliance can be placed on the following:—

	Pre-War.	Post-War.
India ..	315,156	318,942
Japan ..	53,633*	57,656 (1922)*
Russia in Asia ..	27,788 (1913)*	26,489
Siam ..	8,449 (1914)*	9,322 (1923)*

Finally, the following only are available in the remaining Continents:—

	Pre-War.	Post-War.
South Africa ..	5,973	6,929
Egypt ..	11,287 (1907)	13,551 (1922)*
Australia ..	4,894 (1913)*	5,635 (1922)*
New Zealand ..	1,085 (1913)*	1,266 (1922)*

The net result is that only the Continent of Europe has been stationary in the decade under consideration; elsewhere the pre-war growth has continued in spite of restricted emigration. It cannot, however, be assumed that the situation in Europe is symptomatic, for apparently the gradual recovery of Central and Eastern Europe in economics and hygiene is being followed by a revival of the increase in population.

* Estimated total.

AN INDEX OF SHIPPING FREIGHTS.

The following Index of shipping freights is based on 28 representative routes for tramp tonnage, divided into six groups, viz.:—(1) European Waters; (2) North America; (3) South America; (4) India; (5) Far East and Pacific; (6) Australia. The first group—European Waters—comprises three sub-groups:—Home Trade, The Bay, Mediterranean. The routes forming the six groups and three sub-groups are as under:—

- (a) Home Trade: Tyne-Hamburg, Tyne-Havre, Tyne-Antwerp, Tyne-London. (b) The Bay: Tyne-Bordeaux, Bilbao-Middlesbrough. (c) Mediterranean: South Wales-Port Said, Tyne-Barcelona, Tyne-Genoa, South Wales-Venice, Alexandria-United Kingdom, Bepisaf-United Kingdom/Continent, Carthage-United Kingdom/Continent.
- North America: Northern Range-United Kingdom (grain). Gulf ports-United Kingdom/Continent (timber).
- South America: Tyne-Plate, South Wales-Plate, South Wales-Rio Janeiro, San Lorenzo-United Kingdom/Continent, Lower Plate ports-United Kingdom/Continent, Bahia Blanca-United Kingdom/Continent.
- India: South Wales-Bombay, South Wales-Colombo, Bombay-United Kingdom/Continent (d.w.).
- Far East and Pacific: Java-United Kingdom/Continent, Rice Ports-United Kingdom/Continent, Nitrate Ports-United Kingdom/Continent.
- Australia: Australia-United Kingdom (Basis).

The base to which the Index is related is the period 1898-1913. The method of calculation is as follows. The average freight for the month on each route is taken as the mean of the averages for each week, and is expressed as a percentage of the average for the base period. In Groups 3 and 4, and in Sub-group 1 (c), the Group-Index is the mean of the outward and homeward averages, the indices for the other groups being the simple average of the constituent routes. The figure for Group 1 is the mean of the figures for Sub-groups 1 (a), 1 (b), and 1 (c). The final index-figure is the average of the six groups, the arithmetic mean being employed throughout, and all averages being unweighted.

The following table shows the movement of the Index during the base-period 1898-1913:

Year.	Index.	Year.	Index.
1898 ..	121.91	1906 ..	89.37
1899 ..	119.46	1907 ..	90.90
1900 ..	134.67	1908 ..	78.32
1901 ..	103.05	1909 ..	82.02
1902 ..	86.99	1910 ..	84.48
1903 ..	87.26	1911 ..	96.94
1904 ..	88.17	1912 ..	130.95
1905 ..	88.88	1913 ..	116.34

The speculative character of tramp shipping is denoted by a range of fluctuation from "peaks" of over 130 in 1900 and 1912

to a low level of 78 in 1908. It will also be observed that in the case of this class of tonnage the influence of trade cycles is apt to be greatly modified by special factors. Thus, whereas the percentage of trade union unemployment fell from 6 per cent. in 1904 to 3.6 per cent. in 1906-07, freights rose only fractionally, the cause being found in the heavy launchings of tonnage in 1905-06.

The post-war Index is recommenced in January, 1920, and the figures for each month of the last three years are summarised below:—

Month.	1920.	1921.	1922.
January ..	634.55	226.39	153.10
February ..	690.95	191.43	157.95
March ..	684.36	188.67	157.67
April ..	604.27	171.58	150.62
May ..	559.13	184.31	145.57
June ..	538.85	192.82	136.64
July ..	447.25	197.63	133.23
August ..	408.31	198.48	131.65
September ..	419.14	179.72	128.40
October ..	459.31	165.03	133.12
November ..	395.95	158.78	138.95
December ..	280.14	156.67	136.57

It will be noted that the highest point, 691, was reached in February, 1920, i.e., one month earlier than the "peak" of the Economist Commodity Index, while the freight and commodity indices alike touched their lowest level in September, 1922, the fall in freights to 128 having been much more acute.

The table below shows the movements of the Index in detail for the first half of 1923. The mean for 1913, and the highest and lowest figure for 1920 and 1922, are also given. At the foot of the table the Index is expressed as a percentage of the mean for 1913:—

Route Group.	Average 1898-1913	Mean 1913.	Highest 1920.	Lowest 1922.	1923.

Index (average 1898-1913=100) ..	100	116.34	690.95	128.40	132.69	131.15	134.36	134.31	133.27	124.27
Do (1913=100) ..	100	116.34	690.95	128.40	132.69	131.15	134.36	134.31	133.27	124.27

The figures afford the strongest corroboration of the reaction to world trade occasioned by the deterioration which the last six months have witnessed in European conditions. After a gradual improvement from September to November, 1922, when the Index stood at almost 130, a fall to 131 in February was succeeded by a rise to 134 in March, due mainly to the absorption of tonnage by the economically unsound "boom" in transport of coal. This not the economically unsound "boom" in transport of coal. This not the economically unsound "boom" in transport of coal. This not the economically unsound "boom" in transport of coal.

In June, which marked a fall of 5 points in the Economist Commodity Index, the full effects of deepening stagnation in Central Europe were felt by shipping, and the Index slumped to a fresh low record at 124, the lowest point reached since the war.

Comparing June with November, 1922, the point at which reaction (but for the temporary fluctuation upwards in March-May) may be said to have started, the relative positions of each group are as under:—

Group.	Movement since November, 1922.
European waters ..	+ 17
North America ..	+ 13½
South America ..	+ 10
India ..	+ 5½
Far East and Pacific ..	+ 3½
Australia ..	+ 45

Unfortunately, the recent coal boom has had for shipping a converse effect in higher bunker costs. Taking as an example the market quotations for best screened steam coal, f.o.b. Tyne, the course of prices has been:—

	Price per Ton.	Per Cent. of s d June, 1913.
1922, November ..	25 9	172
1923, April ..	35 0	233
" June ..	28 0	187

Pending some recovery of world purchasing power in the direction of such commodities as form bulk cargoes, the position of tramp managements is likely to be difficult and unsatisfactory.

The Investor's Monthly Manual

ESTABLISHED 1864.

THE MOST COMPLETE PERIODICAL RECORD in existence of the dealings, throughout the United Kingdom, in every description of stocks and shares.

Over 4,000 securities are dealt with each month, showing recent dividends and yields at latest prices. The *Manual* also contains a valuable summary of Profit and Loss Accounts each month.

IT IS ABSOLUTELY FREE FROM ANY CONNECTION WITH ANY FINANCIAL HOUSE OR SPECULATIVE AGENCY.

Annual Subscription - £1.1.0

**HALF - YEARLY
DOUBLE NUMBER
PUBLISHED ON JULY 3rd**

POST FREE - - - - 2s. 3d.

The Double Number gives, in addition to the usual information, the highest and lowest prices of all stocks and shares for 1919, 1920, 1921 and 1922, and for the first six months of 1923; the latest quotations for 1923, a tabulated chronicle of the half-year's events, the names of the markets where each security is chiefly dealt in, besides memoranda relating to the financial position of Foreign and Colonial Governments, to Railways, etc., etc. In addition, there will be furnished the addresses of the various companies, with the names of the Chairmen and Secretaries, or Managers.

TO ADVERTISERS

The *Manual* will be found specially suitable for advertising debentures of every kind, prospectuses of limited liability companies, and investments of all descriptions; and for giving publicity to the announcements of banking, insurance and other companies, publishers and auctioneers. Its importance to the general advertiser can hardly be over-estimated.

The Economist

MONTHLY SUPPLEMENT.

New Series. No. 3.

SATURDAY, AUGUST 25, 1923.

We resumed in June the publication of a Monthly Statistical Supplement, which has been a feature of the "Economist" for many decades, but was suspended during the war. In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. It is becoming a common practice to reduce these figures to three or four indices, and by their study to endeavour to forecast forthcoming economic changes. This science is, however, yet in its infancy, and it may be doubted whether an attempt to apply scientific rules will obtain a better forecast than the best opinion of the business world when furnished with the requisite information. We, therefore, propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics." is 6d. Constable.

THE STATE OF TRADE.

At this time last year trade was rapidly on the mend. The unemployed were being steadily absorbed during the summer months, and orders were being booked which produced an expansion of trade throughout the autumn and winter months. This year the normal seasonal improvement in employment in the summer months has not occurred, the gross figures of numbers on the unemployed register under the insurance scheme having remained practically constant for the last four months, while in most trades the forward booking of orders has been curtailed, leaving the factories with work on hand for only a short time ahead. There is much controversy taking place as to the effect of the Ruhr occupation on British trade, and on this Mr Selfridge has some interesting things to say in the following article. Our own view can be expressed quite shortly, namely, that its direct and indirect effects have definitely checked a steady improvement in world trade, for which the stage was set, and that we are, instead, experiencing a very slight drift backwards. At the same time, it is possible to overstress the pessimistic features in the situation. Although business circles are not in enterprising mood, our trade reports show that, in spite of actual or expected competition from abroad, orders are either coming in or are confidently expected when the holiday season is over. Hence there is no need to assume—as Sir Allan Smith assumes in his recent letter to the Prime Minister—that things are in his recent letter to the Prime Minister—that things are going to be worse again this winter. If the Ruhr difficulty should happily be settled, there is general agreement that business would take a definite turn for the better, and even if the present discussions drag on inconclusively, we may be lucky enough to escape with nothing worse than stationary conditions until next spring. This is not a cheerful prospect, and the task of dealing with unemployment will once again be a very severe one, but it is something gained if we do not slip back to the conditions of 1921.

The state of affairs may be illustrated by the position in a few leading industries. In cotton, the spinning section was running at about 65 per cent. of capacity at the end of July as compared with 60 per cent. in March and April last, the American being appreciably worse off than the Egyptian yarn. In the weaving section, employment again fell off, but a more hopeful tone is now felt about the Indian market, though the China market is still very bad. Throughout Lancashire, the long-drawn-out depression is causing anxiety as to the financial position of many firms.

In the wool trade short time is the general rule, many Bradford mills working only three days a week. Orders for winter and spring goods are below the normal, and the home trade is being affected by competing imports from France, Belgium, and Germany.

In the iron and steel trades a small decline in output is

recorded in July; foreign competition—particularly from Belgium—is being experienced, though not on so large a scale as in the spring of 1921, and the general tone is one of uncertainty. The trade has a special trouble of its own in the large stocks of semi-finished products which are said to be stocked in the Ruhr works. No authentic information is forthcoming as to the extent of these stocks; but, though obviously much exaggerated, they loom very large at the moment in market psychology, and are depressing prices. The engineering trade reports are by no means all gloomy, but speak of orders coming along, although in face of keen competition. Even in ship-building there is no serious decline in tonnage under construction, and the yards would show increased employment if the boilermakers' strike were ended. Our index number of freights, however, printed in the *Economist* of August 18, shows that freights, at 3 per cent. above the pre-war figure, are the lowest since the war broke out.

The coal trade output is down, but not more than is to be expected in the summer—the drop being chiefly in centres mainly producing household coal. Industrial demand is not bad, and export centres are busy, though f.o.b. prices have had to be reduced from the fancy levels current a few weeks ago.

The net effect of these various considerations is that, in spite of the unfavourable factors, there is a slightly hardening tendency in certain commodity markets, an important exception being the price of wheat, which is being talked down to very low figures. This sentiment is not at the moment doing more than check the downward movement of the last two months, but there is undoubtedly a fairly firm undertone. Similarly, in the industrial section of the Stock Exchange the recent downward movement of shares has been stopped, and some quotations are even slightly higher.

Outside Europe the symptoms are by no means altogether discouraging. In the United States there was a definite lull in July, but opinions differ as to whether it was or was not more than seasonal. The latest advices, however, report the same signs of a slight hardening tendency, both in the industrial security markets and in the produce markets, and though steel production has fallen below the high level reached in the spring, and cotton production in New England is being curtailed, reports from other industries show that production is well maintained, that there has been no decline in wages or employment, that, on the whole, there is no evidence of stock accumulating, and there is no reason to fear that an unhealthy speculative situation may be revealed, except possibly in building construction. As to the conditions in the Dominions, very satisfactory rains in the summer have created great confidence in crop prospects and fodder supplies for stock. Building is active, and the demand for British goods from Australia is fairly strong. Canadian reports are also favourable, but South Africa

seems to be making a more modest recovery than Canada and Australia. In India the monsoon broke late, and crop prospects are not so brilliant as were expected, but they remain good, and with signs of increased production for export. India should be a fairly good buyer in the coming year. In South America, Argentine prospects are fairly good, but the reports from Chili and Brazil are only moderate. In the Far East the outlook in China remains depressed, and the manufacturing industries of Japan have fallen since the spring, though the silk crop will be substantially bigger than last year. The adverse trade balance of Japan is causing some anxiety. As regards Europe the situation in Germany is dealt with in a subsequent article. Such figures as are avail-

able are chiefly remarkable for the evidence they give that until the last utter collapse of the mark in June, output was maintained and exports continued in spite of an extremely low standard of real wages and of the state of the exchanges. The shutting off of the Ruhr, however, makes it very difficult to say with certainty whether, and if so to what extent, there was a fall in the import and export trade of unoccupied Germany. Belgium is recovering slightly from the depression which followed the occupation of the Ruhr, while Czecho-Slovakia is profiting by some of the orders transferred from Germany and from a large sugar output. Holland, however, is experiencing a bad depression owing to the check to Rhineland production and trade.

A LONDON MERCHANT'S VIEWS ON THE TRADE OUTLOOK.

The following is the substance of a recent interview with Mr Gordon Selfridge:—

"When we give our thoughts to the prospects of trade in this country during the next six months, we must not fail to keep in the forefront of our minds the fact, from which there is no escape, that such trade is entirely dependent upon the measure of our exports. All talk of living by making for ourselves, at least for a period, sounds to me as altogether outside of the problem. The supply of the needs of the 47 millions of people within this island (even if we could readily devise means for giving practical effect to the idea) is a small item compared with the supply of the needs of the hundreds of millions in India and the Far East; if we were compelled to seek the purchasers of our goods in this country alone, a vast proportion of our manufacturing plant would soon be standing idle. Conversation with leading industrialists will speedily drive out of our heads any notion other than that our minds must be persistently directed to ways of enlarging and maintaining the sale of our manufactured goods abroad, these, in the instance of many works, constituting well over 75 per cent. of their output.

"Contrary to the public impression, by the way, practically no German goods are at present coming into the country, for they are too dear. Austrian makers are eager we should buy; but the Germans say, 'Take it or leave it at the price.' This is bound to be the German attitude.

"There reach me reports of orders for industrial goods for export from North Country areas which offer a faint hope of betterment. But when I note the reports from the Britains-over-seas, get a glimpse of the situation in South America, and reflect upon the difficulties which amount almost to a slump in the United States, I am in no way confident that the former customers of this country will show any eagerness to buy again in a notable degree before the end of the year at any rate.

"There is no need to worry, at any rate, over the prospect of France as an industrial rival, despite the current talk to this effect. The French have at Lille, Roubaix, Rouen, and elsewhere factories turning out very fine goods. Owing to the recent introduction of a new machine, too, they can sell certain goods substantially cheaper than Bradford manufacturers can afford. But they are individual in temper, and, apart from occasional experiments, the fruit of patriotic emotion, they do not readily give themselves to mass production.

"When, however, we turn to Germany, I frankly confess that, while I am without a distinct vision of the situation, I entertain a most lively apprehension of the future. For if the Germans do in the end what I fear they may do, the other industrial nations, including the United States, will undergo the worst experience they have yet encountered in their history.

"But let me first clear up a couple of minor issues. There is little foundation for the argument that the French occupation of the Ruhr stops trade upon our part. The truth, in my view, is that the Germans cannot afford to buy just now. I am inclined to believe, following the impression taken by certain German citizens of the United States, friends of mine, who have visited Germany, that the industrial kings like Stinnes have planted many millions of gold in 'ice-cold safes' in this country, the United States and South America. Apart from these people, however, I am inclined to decide that the Germans in Germany are suffering a decided ordeal just now.

"The factor which plays the largest part in involving the future in mystery is the psychology of the German. They admit, I believe, that they are without a profitable psychology in important arenas of mind. Before the war some of their philosophers used to say that when the chance came they meant to import Englishmen to manage their politics, and they admit that their psychology during the war was all wrong. At times I decide, too, that in relation to this Reparation crisis their mentality is unequal to the heavy demand made upon it.

"But if a Cromwell should jump into the saddle, then a long farewell to an easy day for dull brains and lethargic bodies in England and America!

"It is not in industrial production they are to be feared so much as in trade—in short, in merchandising—the world over. I am stating a truth, probably new and startling to many people, but a truth capable of the most convincing demonstration, that turning out goods by machinery (once invention has provided the way) is a thousand times easier and in corresponding degree less costly than selling the same goods: the foundations of all advertising rest upon this fact. This, as it happens, is the art, craft, or industry in which Germany is strongest among the nations. If they had kept to it, instead of having the war, they would have been by this time, it may be, the commercial masters of the world. Shortly, merchandising is their *métier*, and, if they should resolve to do the past history and character of a great nation justice before the world, the other trading nations will have all kinds of reasons, first, for recalling, and then for remembering the fact.

"We in this country cannot afford to treat this prospect lightly. It means that the heads of our varied businesses must divest themselves of their innate conservatism more rapidly than they have done at any time, even in recent years. For momentary example: 10 per cent. of metal must not be wasted upon structural stanchions and beams when the building experience of the United States shows that they can be made 10 per cent. lighter with equal safety. But this side note opens up a series of counsels upon which I cannot afford to expand at this moment. I will only add this: It is imperative that we should get quickly rid of 'grandfather's ways,' and that, if this is impossible to us personally, we must hasten to hand over our enterprises to our sons. Never in the history of trade was the demand upon us for wisdom greater and stronger."

THE SITUATION IN GERMANY.

By PROFESSOR MORITZ J. BONN.

THE economic situation in Germany is mainly influenced by the invasion of the Ruhr. A very considerable area, containing the greatest part of the mineral wealth of the country, is cut off. Its people cannot export their surplus produce, nor can they import the raw material needed. What cannot be consumed locally must be stored. Transportation is out of joint and unemployment is spreading in the occupied districts. If the Central Government did not pay unemployment benefit, organise credit facilities, and award compensation for damage done, the social structure in the occupied territories could scarcely be kept up. The cost of financing the needs of the stricken country must be borne, of course, by the Government and the people of non-occupied Germany.

For a long time the economic situation in non-occupied Germany has been less affected by the stoppage of imports from the Ruhr than might have been expected. Production has been carried on, as great quantities of coal and coke have been imported from England. On the other hand, there has been a great decrease in the import of iron ores, only about 9 per cent. of the monthly average for 1922 being imported in May, and less than 20 per cent. in June. Business, as is quite natural, is contracting. The total monthly average of exports (weight; values are not much good) was 1.8 million tons for 1922; for the period February-May of the present year it fell to 1 million tons, while in June it was scarcely 0.9 million tons. The average weight of imports has risen meanwhile from 3.8 million tons to 4.69 millions, and in June it had reached 4.8 million tons.

Unemployment, of course, is spreading. The percentage of totally unemployed amongst the membership of trade unions had been 0.6 per cent. in July, 1922, and it had risen to 6.2 per cent. in May, 1923. Though it fell to 4.1 per cent. in June the financial stringency must affect this improvement, whilst the percentage of short time workers has been, at the dates mentioned, 0.6 per cent., 21.7 per cent., and 15.3 per cent.

The strain of this development is clearly visible in the financial situation. Within little more than six months the floating debt has increased about 40 times. This catastrophic development is due directly and indirectly to the occupation of the Ruhr. The deadlock on the railways has greatly increased the railway deficit. The spread of unemployment and the necessity of credits has swelled expenditure. But the chief consequences are indirect. The dollar (which to-day is the economic barometer of Germany) was fairly steady between October, 1922, and January 10, 1923. Within 21 days after the invasion it had risen from about 10,000 to 49,000 paper marks. Nevertheless, it was possible to bring the dollar down to 20,000 and to keep it there for three months. But it was not possible to bring down prices, though the rate of increase was slowed down. The index of the cost of living (1913 = 100), which had jumped from 68,500 in December, 1922, to 112,000 in January, 1923, was 264,300 in February, 285,400 in March, and 381,600 in May. It was possible to stem the rise of wages and salaries to a certain degree. The index for the salaries of Civil Servants rose between January and April from 67,800 to 84,700. But when the control of the mark broke down about the middle of April, wages and prices could not be kept back any longer. The cost of living index rose to 927,200 in the third week of June, and to 2,887,200 in the third week of July. This led to the long-postponed increase in the wages of the Civil Service, which immediately affected expenditure and increased the necessity of borrowing. From May 31st to June 30th 13 billions new Treasury bills were issued, nine of them between June 20th and June 30th, when the newly-raised salaries for the Civil Service for the next quarter fell due. On June 30th the

floating debt amounted to 23.5 billion Treasury bills; within five weeks it trebled to 69.6 billions, most of them being in the hands of the Bank.

The circulation of notes has increased correspondingly. Within a single week (July 31st) it has risen by 13.1 billions to 43.6 billions. It is now 33 times the amount outstanding on January 1st. The Bank held 54 billions Treasury bills on July 31st, or 50 times the amount it held six months ago; it had discounted 18 billions trade bills, or 41 times the amount it had lent to private people at the beginning of the year. The Bank's liabilities on outstanding notes and deposits had risen since January 1st from 1.8 billion to 72 billions, whilst its gold holdings at home had fallen from 955 millions to 506 millions. At the rate of the dollar exchange ruling on December 30th the gold in the hands of the Bank almost covered its total liabilities; there was quite a considerable margin as far as the note issue was concerned. On June 30th the total liabilities were considerably ahead of the gold in hand.

The vehement fall of the mark early in August reversed this situation again. At a rate of 4 million marks to the dollar, 500 million gold marks equal 500 billions paper marks. But the same forces which have been driving up the dollar are driving up prices, a fact which makes new issues of notes imperative, whilst the Bank is losing part of its gold.

A few days ago a catastrophe seemed to be imminent. Prices were rising fabulously, wages were following; coal and iron, the two chief basic commodities, were rising above the level of the world market; a price of 23 millions paper mark the ton of coal corresponds to about 28s. Wages were following rapidly. The top wages of the printers have just been settled at 36.6 million paper marks a week, equalling 9 dollars, or a dollar and a-half a working day. But wages could not be paid at the end of last week, for quite apart from the temporary difficulties brought about by a printers' strike, there was not enough circulating medium in the country to satisfy the needs of exchange at the existing level of prices. Strikes were rife and even a general strike seemed imminent. Concessions had to be made which satisfy labour provided the printing press works day and night.

At the same time the first signs were discernible of a repudiation of the mark as a medium of exchange. The markets were deserted as farmers refused to sell. It became apparent that a new circulating medium not subject to violent fluctuations must be introduced quickly, and that an heroic effort must be made to stop future inflation. Taxes were immediately voted which are supposed to bring in hundreds of billions of paper marks within a short time, whilst a big gold loan is being issued, the smaller denominations of which may provisionally take the place of a gold currency.

And there is a well grounded hope that a sound gold covered emergency currency may be created, which will be protected against the inroads of predatory State finance. For some time the printing of notes must go on, for at a rate of 18 million marks to the pound sterling the value of 100 billion paper marks is but equal to 100 million gold marks. If production and distribution had not been greatly reduced, and if in many cases exchange were not carried out by means of foreign currencies, the "money famine" might have brought economic life to a standstill. As it is, it is seriously menaced. There is no hope if the Reichsbank in granting new credits does not base them on a gold standard. If it does, the new financial legislation, the accession of a new Government, and the beginning of the marketing of the new harvest may restore confidence.

If these measures succeed for the time being, economic dissolution can be prevented. Germany will return to a kind of gold-standard currency, sacrificing the so-called advantages of inflation, and revert to methods of hard work and sound finance. If they fail there will be chaos

The Investor's Monthly Manual

ESTABLISHED 1864.

THE MOST COMPLETE PERIODICAL RECORD in existence of the dealings, throughout the United Kingdom, in every description of stocks and shares.

Over 4,000 securities are dealt with each month, showing recent dividends and yields at latest prices. The *Manual* also contains a valuable summary of Profit and Loss Accounts each month.

IT IS ABSOLUTELY FREE FROM ANY CONNECTION WITH ANY FINANCIAL HOUSE OR SPECULATIVE AGENCY.

Annual Subscription - £1.1.0

**HALF - YEARLY
DOUBLE NUMBER
PUBLISHED ON JULY 3rd**

POST FREE - - - 2s. 3d.

The Double Number gives, in addition to the usual information, the highest and lowest prices of all stocks and shares for 1919, 1920, 1921 and 1922, and for the first six months of 1923; the latest quotations for 1923, a tabulated chronicle of the half-year's events, the names of the markets where each security is chiefly dealt in, besides memoranda relating to the financial position of Foreign and Colonial Governments, to Railways, etc., the addresses of the various companies, with the names of the Chairmen and Secretaries, or Managers.

TO ADVERTISERS

The *Manual* will be found specially suitable for advertising debentures of every kind, prospectuses of limited liability companies, and investments of all descriptions; and for giving publicity to the announcements of banking, insurance and other companies, publishers and auctioneers. Its importance to the general advertiser can hardly be over-estimated.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, SEPTEMBER 22, 1923.

No. 4.

We resumed in June the publication of a Monthly Statistical Supplement, which has been a feature of the "Economist" for many decades, but was suspended during the war. In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. It is becoming a common practice to reduce these figures to three or four indices, and by their study to endeavour to forecast forthcoming economic changes. This science is, however, yet in its infancy, and it may be doubted whether an attempt to apply scientific rules will obtain a better forecast than the best opinion of the business world when furnished with the requisite information. We, therefore, propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics." 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

No picture of British trade can be anything but depressing so long as we have to cope with so large a volume of unemployment as exists in the country to-day. Nor can we hope to see any appreciable lightening of the burden this winter. The situation in the Ruhr does not seem to be moving rapidly to an early solution; and even if a settlement were reached in the next few weeks, it may be assumed that a state of hesitation would continue in commercial circles until prices and markets had had time to adjust themselves to the new circumstances. Such influences, for example, as the release of stocks of goods accumulated in the Ruhr might conceivably have a prolonged effect. Hence, on the most favourable assumptions, a reparations settlement could hardly produce better employment here much before Christmas.

At the same time, there is prevalent a widespread belief that all the conditions for a return to prosperity are present, and if only the clouds could be dispelled in Europe there would be a rapid improvement in trade. Indeed, if the outlook may be said to have changed at all in the last two months, it is in the direction of increased confidence that, even under existing circumstances, we may hope to hold and consolidate during the winter the ground gained during the first half of the year. Definite evidence of pronounced improvement is not very easy to find, and the slightly more optimistic outlook may perhaps be based on nothing more than the feeling that depression cannot last for ever. But that more optimism exists may be seen, on the one hand, in the slight but definite hardening in industrial securities, and, on the other, in the tone of the comments received from many industrial centres. Even the disaster in Japan, which over the next two years or so will undoubtedly diminish Japan's normal trading activities, involves immediate purchases for reconstruction, the anticipation of which has revived interest in the iron and steel markets. Orders in some branches of the engineering trade are being booked a little more freely, the cotton trade is in a more hopeful frame of mind, coal output is up again after a drop in August, goods traffic receipts are moving slightly upward, and even shipbuilders have some work ready to put in hand if the disastrous boiler-makers' strike could be ended. Too much stress should not be laid on such movements, some of which are mainly seasonal; and there are factors to be set on the other side, such as the increased unemployment in the West Riding. But on balance there is no reason to fear that we shall slip back to the low level of a year ago.

Overseas, the conditions outside Europe are on the whole trending upwards. American production is not quite up to the level of the early summer, but winter orders are on a large scale, and there are at present no conditions which seem likely to bring the prosperity to a sudden end. Harvest conditions in Canada and Australia are very good, and in South America the chief

countries are better off than a year ago. In India the monsoon has been good, and Lancashire reports that Indian buying of cotton goods is a little freer. In this, as in other markets, stocks are low, and an increase in demand at once reflects itself in increased orders to manufacturers. In China trade is at a low ebb, but, nevertheless, there is trade.

In Europe Sweden is doing better, and the improvement will be very much more pronounced when she has recovered from effects of the prolonged dispute in her metallurgical trades; Belgium, Italy and the Near East are countries which appear to be on the mend, but Holland and Norway are still in the doldrums; while the deterioration of Germany in the last three months has been accompanied by a fall in her imports and exports and a great increase in unemployment.

The following notes on conditions in various trades and countries, while by no means exhaustive, call attention to a number of the more important tendencies.

HOME INDUSTRIES.

Iron and Steel.—The holiday season is now closing, and the autumn demand usually develops at the end of September. The general tone seems more hopeful, though based rather on increased inquiries than actual business placed. Following on the Japanese disaster, some orders for British steel are already placed, but the U.S.A. is expected to obtain a good share of such business.

The hematite position has improved slightly, but pig-iron markets generally have been quiet, especially on the export side. Semi-finished steel is meeting Continental competition, both from Belgium and Alsace, but British prices are low enough to obtain business. Inquiries for finished steel have recently shown a marked increase, but prices offered are low, an impression prevailing that many impending orders are being temporarily held off for lower prices. Continental competition here again is noticeable, but is not so severe as in semi-finished products. Continental manufacturers are apparently uneasy as to the future, and will not book far forward.

Coal.—A correspondent writes:—"After several weeks of comparative dullness there are indications of an early all-round improvement in the coal industry. Output, which fell to a low level during July, is now steadily increasing, and it is expected that this tendency will be maintained."

The position of the export side of the trade is better, particularly in Scotland. The Græco-Italian situation has resulted in a restriction of business in South Wales and the North-Eastern ports, but this has been more than balanced by an increase of orders from other sources. There has been little change in prices for prompt shipments, and quotations for future deliveries indicate that collieries have no intention of reducing their figures."

Shipbuilding.—Clyde conditions are a little better. The Mersey and Tyne are quiet, with uncertain outlook.

Engineering.—A certain amount of civil engineering work is being placed just now. Foreign inquiries, while not large, are not absent. Lancashire carriage and wagon builders and railway engineers are doing well.

Electrical.—The position on the whole is satisfactory. The Hardware trade is quiet. Improvement is shown in the

export demand from Eastern countries, but elsewhere conditions are none too good.

Cotton.—The event of importance in the cotton trade since a month ago," writes our Manchester correspondent, "has been the rise in raw material prices, there being an advance of about 2d a lb in American qualities and over 1d per lb in Egyptian descriptions. The hardening movement in values has stimulated demand in yarn and cloth, and although relatively poor prices have had to be accepted, there has been an increased turnover, a feature of the business done being the activity in piece goods for India. It is feared that dear prices will prevent a big trade, but owing to stocks of manufactured articles throughout the world being comparatively low, the buying which has now started is expected to be maintained. The prospects, therefore, are rather brighter, and there is every probability of less unemployment amongst Lancashire's operatives before the end of the year."

Wool.—Among the "bull points" may be noted:—(1) Mohair spinning trade has contracts extending to next year. (2) Employment is fair in the medium and coarse crossbred

tops, yarns, and cheap clothing sections. (3) Export trade in finished goods is satisfactory. (4) Summer season's trade was better than was expected. Orders for winter goods and underwear are reported to be satisfactory. (5) Price level of raw material appears likely to be stable for a good time ahead.

The "bear points," on the other hand, are:—(1) Export trade, though fair at the moment, represents completion of orders which have not been fully replaced. The absence of normal trade with Germany is being heavily felt. (2) The position is unsatisfactory in the fine combing and spinning sections; the demand for dress goods has been less than anticipated. (3) The much-talked-of French and Belgian exchange-subsidised competition. Manufacturers grumble less at the actual quantities imported (twice as much French tissues were imported in July, 1913, as July, 1923) than the price, which, they declare, is upsetting the market and causing merchants to hold off. (4) The Japanese earthquake. July exports to Japan were a "record."

(Continued on page 8.)

SHIPPING, FREIGHTS AND TONNAGE.

It is superfluous to argue the importance of the shipping trade to a country whose ships not only carry the goods which are vital to its existence, but do half the ocean transport of the world. Other industries may have their importance, but none can be so truly described as "vital" to Great Britain. But shipping cannot flourish when world trade is sick, and we are accustomed to look to the freight market for a reflection of the economic situation at home and abroad. There are, however, special circumstances at the moment which make shipping less responsive than usual to trade movements. In the following notes Sir Alan Anderson, vice-president of the Chamber of Shipping, directs attention to these abnormal circumstances, and to the conditions which must be fulfilled before shipping can recover from its present troubles:—

"When the world's trade is in rough balance with the world's tonnage, the freight market is a sensitive barometer of trade: freights begin to rise almost as soon as the manufacturer notices an improved demand, and a fall in freights is one of the first signs of a coming depression. If the barometer of the freight market was working to-day there would be no reason for any feeling except gloom: freights in 1923 have been as bad as in 1922 and 1921: they cannot go lower, as a reduction would force more owners to lay up. But neither can they rise, because owners and their bankers all over the world are waiting to send their ships to sea at the first good chance, and then down go freights again. The barometer of the freight market can no longer be trusted—it has set fast, and stuck at stormy.

"In one particular the state of shipping is even worse than it seems. Blocks of tonnage are still owned and operated by nations who cannot be trusted to follow the laws of shipping economics, either in their expenses or in the freights they accept or in the losses they bear before they decide to lay up or to scrap their ships.

"Before shipping can improve tonnage must decrease or the world's trade must increase. If the fortunes of shipping concerned only those with money invested in ships, it would not be appropriate in the preface to a general review of trade progress to do more than note those facts and to pass on. But while shipping follows the fortunes of the world's trade, the prosperity of Great Britain seems to me—perhaps a biased observer—to depend in large measure on shipping, shipbuilding, and the allied trades. Every rise in freights brings activity and employment to the great centres of shipbuilding and engineering, and past them right through the United Kingdom; so the rise in freights which heralds an improvement in the trade of the world is itself a powerful lever to raise the prosperity of this country. Nor does the benefit of a normal freight market end when prosperity has returned: the shipowner invests his surplus in new ships, and the orders placed towards the end of the good time carry employment forward through 18 months or two years of depression. This lag between the time of good business when orders are placed and the date of delivery of the ships acts like a flywheel, and helps the machine of employment to keep its momentum through

a spell of bad trade. In the belief, therefore, that the prospects of ships have a direct bearing on the prosperity of everyone in the United Kingdom, I have gathered a few figures from the statistics of Lloyd's Registry and from the Report of the London and Cambridge Economic Service.

"The supply of effective tonnage available for ordinary transport is to-day about 29 per cent. more than in 1914, and 6 per cent. more than in 1921.

"It has risen from 41,000,000 gross tons in 1914, to 49,700,000 gross tons in 1921, and to 52,700,000 gross tons in 1923; of this tonnage there was laid up about 10,800,000 in July, 1922, and over 9,000,000 to-day. The wooden ships of U.S.A. are excluded from these figures.

"The tonnage laid up in British ports had decreased by about one-third by July, 1923.

"Of the world's steam and motor ships there were broken up and condemned 315,110 gross tons in 1922, and in the first quarter of 1923 this process continued at twice the speed of 1922. There were lost by perils of the sea 428,756 gross tons in 1922, making a total deduction of 733,866 tons. There were launched in 1922 2,407,000 gross tons. In the first two quarters of 1923 launches (excluding Germany and Dantzig) were at the rate of two million gross tons per annum. With the three-quarters of a million gross tons of shipping broken up or lost during the year 1922 we may compare the tonnage commenced; this amounted to over 800,000 gross tons, and as much again for the first two quarters of 1923. Thus, whatever his faults may be, the shipowner is evidently not a pessimist. Although the world is heavily overstocked with ships, it is still building more than it loses and breaks up. However, 7,400,000 gross tons, or, say, 12 per cent., of the whole are 25 years old, while of the U.S. Shipping Board fleet of 10,000,000 tons dead weight Mr Lasker has suggested that 6,250,000 tons dead weight, or, say, 4,000,000 tons gross, should be scrapped forthwith. It is, therefore, possible that in the near future the dead load of superfluous tonnage may be cut down by some big slices with benefit to the whole world, and not least to the unfortunate owners of ships which have become useless.

"We are twelve months nearer to good trade than we were twelve months ago, but there is no sign in the freight market that we are near the end of our troubles. Neither in shipping nor in our general business can we hope to prosper until Europe settles down and begins to trade. Such disturbances as the Ruhr may bring us a little spurt of trade—but at an extravagant cost. Wherever in the Ruhr, or in the U.S.A., or in Italy or elsewhere the national spirit sets itself to prevent international trade we all suffer together. In the last year two milestones of progress have been the funding of our debt in U.S.A. and the financial rescue of Austria. If these achievements could be repeated elsewhere—and most of all if the goodwill that made them possible became general—our present distress that seems so solid and permanent might fade like mist. But there is nothing in the shipping situation to show that good trade is at hand."

THE DUTCH ECONOMIC SITUATION.

By JOHN C. VAN DER VEER, London Editor, Amsterdam "Telegraaf."

Luctor et Emergo is the device of a watery province in the south of the Netherlands. "To struggle and emerge" must needs be at the present time the watchword of all her people. They are passing through as hard a time as ever befell them. Trade is slack and unemployment rampant; industry is depressed and bankruptcies increasing; money is scarce and taxation high; and instead of Dutch capital flowing abroad, as it used to do before the war, foreign capital is entering the Netherlands. Money was still plentiful, however, during the first two years after the Armistice. About three years ago the writer was asked for advice by one of the largest English municipalities in the Midlands regarding the offer of a large loan from the Netherlands, but, unfortunately, from a quarter which he could not recommend. Yet part of the last large loan for the Dutch East Indies had to be placed at London and New York.

The Government at The Hague is placed in a quandary: it finds the advice of the late Dutch political economist, Dr Pierson, that "budgets must balance" easier to give than to follow. Its ordinary budget expenditure rose from 200 million guilders in 1913 to 640 million in 1922, and, naturally, many Dutchmen cry out against the Government's proposal to spend many millions on extension and improvement of the Navy for the protection of the Dutch colonies, which likewise are experiencing hard times after the war boom. It was stated in the Amsterdam *Telegraaf* of July 9, 1921, that the Dutch East Indies made up to 1920 a "war profit" of about 2 milliard guilders. Exports rose in 1919 to 2,167,000,000 guilders, against imports in the same year of 793,000,000 guilders. But the fall of prices of Dutch Indian produce, such as sugar, coffee, tea, rubber, and copra, has wiped out all the profit formerly made. Dutch East India, too, cannot make her budget balance. Her floating debt increased from 200 million guilders in 1916 to 1,300 million guilders. The Motherland must needs come to her assistance. "Retrenchment" has become the Dutchmen's cry. The Government is economising, even in small matters. It was not long ago stated in the Dutch Press that all Government stores had been urged to reduce the number of cats kept! A still greater measure of economy is considered necessary by sound Dutch financiers. The former Minister of Finance, Mr de Geer, was of this opinion, but could not carry out his wishes. He, therefore, resigned recently. On all hands it is admitted that the situation in the Netherlands is worse than the present generation has ever known. But it has at least one bright spot, namely, the remarkably strong position of the Netherlands Bank, which the following table illustrates:—

COMPARATIVE ACCOUNTS OF THE NETHERLANDS BANK.
(In Thousand Guilders.)

	Aug. 1, 1914.	Dec. 28, 1918.	Dec. 27, 1919.	Sept. 10, 1923.
Gold	161,951	689,441	637,323	581,789
Silver	2,986	8,544	6,103	10,387
Bills and advances	298,937	393,065	479,572	364,065
Notes in circulation ..	430,271	1,070,997	1,034,472	964,812
Deposits	17,245	88,478	102,343	31,719

The amount of gold and silver held by the bank was on September 10th as much as 258 per cent. larger than at the commencement of the war, while the notes in circulation increased by 124 per cent. It should be remembered that the Netherlands need considerable more banknotes than Great Britain, as the cheque system is not generally used. In the Lowlands one pays one's tailor with notes, of which a Dutchman of substance always carried an ample supply in his portfolio.

The above table explains sufficiently the present strong exchange value of the guilder, which was originally a gold coin (hence its name), but is now struck of silver. The maintenance of the position of the Dutch standard coin is the policy of the Netherlands Bank. The decrease in bills and advances and in deposits since December, 1919, tells another tale, and reflects to some extent the

present position of Dutch trade and industry, which is made more obvious by the following table:—

DUTCH FOREIGN TRADE (excluding Gold and Silver Coin and Bullion)

Year.	Imports. Guildders.	Exports. Guildders.	Excess of Imports over Exports.
1913	3,613,000,000	3,113,000,000	500,000,000
1920	3,335,000,000	1,701,000,000	1,634,000,000
1921	2,240,000,000	1,379,000,000	861,000,000
1922	2,027,000,000	1,221,000,000	808,000,000
1923 (six months) ..	990,000,000	592,000,000	398,000,000

The unfavourable trade balance, which has become much worse since the war, was formerly discounted by "invisible" trade, such as interest received from Dutch investments abroad and shipping freights. But the large amounts of Dutch money invested in Russia and Central Europe have disappeared, and Dutch shipping feels the pinch of the general stagnation, many ships built or bought during and immediately after the war having been sold.

The following figures for the year 1922 show (in guilders) the distribution of Dutch trade with Germany, Great Britain, the United States, Belgium, France, and Dutch East India, which amounts to about three-quarters of the whole:—

	Imports from.	Exports to.
Germany	608,433,000	167,774,000
Great Britain	323,667,000	302,968,000
United States	270,794,000	62,094,000
Belgium	187,991,000	174,062,000
Dutch E. India	102,372,000	127,381,000
France	57,290,000	114,525,000
Total	1,550,547,000	948,804,000

The unfavourable balance of these six countries amounted to 601,743,000 guilders. It was largest in relation to Germany, while the last two countries showed a balance favourable to the Netherlands.

During the first six months of this year the Dutch trade with those six countries was as follows (in guilders):—

	Imports from.	Exports to.
Germany	241,033,000	75,415,000
Great Britain	154,115,000	155,840,000
United States	136,578,000	31,428,000
Belgium	102,322,000	68,709,000
Dutch East India	52,579,000	52,641,000
France	33,368,000	64,308,000
Total	729,995,000	448,341,000

These figures give an unfavourable Dutch balance of 281,654,000 guilders.

German competition is most keenly felt in the Lowlands, particularly in the engineering and printing trades, which, with the shipbuilding, housebuilding, cigarmaking, and the diamond industry, have the largest number of workers unemployed. To face this competition, Dutch employers have demanded an extension of hours of labour, which were in most industries legally reduced to eight hours per day and 45 hours per week in 1919, largely under a threat of revolution made by the Dutch workers after the Armistice and a repercussion of the German revolution. But the 45 hours week has generally been replaced by one of 48 hours, with the tacit approval of Dutch organised labour. Wages which during and immediately after the war were considerably increased have since decreased. But the situation still causes great anxiety. The Dutch coal industry alone is flourishing, its steadily increasing production making the Dutch nation more and more independent of foreign coal supplies. The draining of the Zuyder Zee, which is proceeding slowly, would provide still more work, were it not for lack of capital. That great undertaking is another bright spot on the Dutch horizon, and will ultimately reclaim a large region, which was inhabited in the 13th century, but was subsequently flooded, with much loss of life. Having won back their country from the sea, and maintained it by a wonderful system of dykes, one may fairly expect the Dutch also to conquer their present economic depression.

THE STATE OF TRADE.

(Continued from page 2.)

The hosiery position is improving, especially as regards the export (colonial) trade. Drapery is slack, pending winter seasonal demand.

Linen.—The crop in Northern Ireland is satisfactory. Supplies from Courtrai are also expected to be good. A moderate amount of business has taken place. It is hoped that United States prosperity will be reflected in substantial orders for Belfast houses.

Leather, Boot and Shoe.—Numerous inquiries have been received after a quiet August. The export trade is good, and is increasing. This winter is apparently looked forward to with a certain amount of hope.

Shipping.—August freights were down to 1913 level. About 14 per cent. drop has taken place since June.

Freight markets have shown signs of increased activity, however, in the last few days, although the high price of bunker coal is a discouraging factor. Bright spots in the picture are the Eastern trade and River Plate trade, and fair shipments from the St. Lawrence are expected.

Building Trades.—The position is improving. It is believed that large schemes are on hand in certain municipalities. The shortage of bricks continues, but is now less acute. Employment, on the whole, is better.

AUSTRALIA.

Climatic conditions—

Average rainfall for 84 years, Jan.-end of August..	15.21
Total rainfall Jan. 1, 1923 to Aug. 8, 1923.....	17.21
Total rainfall same period 1922	14.68

Generally, seasonal conditions are eminently favourable to prosperity, and the agricultural and pastoral outlook is bright. Shearing is progressing satisfactorily, but a smaller clip than last season is possible.

CANADA.

There are two distinct aspects to the Canadian situation. Crops are extremely good. The latest wheat estimate promises a record crop (470 million bushels—September 11th), in spite of rust and saw-fly. Harvesting conditions are still being favourably carried on. The wheat area sown has increased significantly since the war.

WHEAT EXPORTS—YEARS ENDING MARCH 31.

	129.2	136.5	215.1	62.2	36.0	50.4

* Converted at \$5 to £1.

Important features are the fall in prices, and the increase in direct exports to the United Kingdom.

On the other hand, the financial situation is not altogether satisfactory. Various bank failures and forced amalgamations have occurred recently. The farmer seems, however, to be less in debt to the banks than last year, and though he may not obtain a high price for produce, his position should be considerably improved this autumn as compared with 1922.

INDIA.

The monsoon, on the whole, has been satisfactory. There were anxious times, states the *Times* of India, at the beginning, when the monsoon, after a good start, suddenly failed, but with July came a heavy and general fall, and the sustained rains of subsequent weeks penetrated into all districts. Some districts received rain too late and others too heavily, but, generally, rainfall was adequate and widely spread. Crop prospects in last week of August were regarded as fair on the whole.

UNITED STATES OF AMERICA.

U.S.A. is perhaps the only country in the world which can be described as "prosperous" at the moment. It is recognised, however, that there has been a moderate curtailment of production during recent months. Almost every industry is now working below the spring "peak," the proportion varying from the automobile industry, which is very little below the best, to cotton, which is 26 per cent. below.

August steel production at 136,276 tons per day, against 140,570 per day in July, was the lowest since December, 1922. Cotton spinning was being carried on at 87.5 per cent. of full capacity according to the Department of Commerce figure for July. The U.S. Steel Corporation's unfilled orders at end of August were 5,414,663 tons, a drop of 475,498 tons compared with July, and of nearly 2,000,000 tons compared with the "peak" in March last.

The consensus of opinion seems to be that, though the recent decrease is something more than seasonal, production is still above normal, and the decline represents the "skimming-off" of the slight marginal speculative activity of the early part of the year. The position is sound, with bank credits not unduly extended and interest rates moderate, while the "fall" seasonal activity is expected to quicken the pace.

SOUTH AMERICA.

Argentina.—Customs receipts for the first seven months of 1923 were \$42,000,000 paper more than those for the same period last year. It is believed, however, that prospects of increased customs duties and other taxation have led to over-importation of manufactured goods of all kinds, especially cotton textiles and yarns, and trade may therefore be quiet in the autumn. Germany and Belgium are sending large quantities of ironmongery and small hardware, states the London and River Plate Bank.

The weather has been very favourable, and agriculture is well forward. It is believed that insect and other pests will be less active in the coming season.

Brazil.—The balance of trade has been favourable, and the statistical position of coffee suggests that this feature may continue, though the market has been unsettled owing to uncertainty as to how far Federal Government will step in to support coffee prices should they fall unduly. For first time in 13 years the official returns of railway revenue for the early part of this year show a surplus over expenses.

EUROPE.

Finland.—Trade in forest resources has begun with the summer thawing of the rivers. July exports were greatest in any month since the war, and conditions are regarded as good. Industrial expansion, however, is hampered by lack of capital.

Sweden.—Recent and prolonged industrial conflicts have caused serious deterioration of the general position. At the present time there is much improvement. Sweden's staple export products—wood, wood pulp, and paper—are in fair demand, production in many branches of industry is increasing, and unemployment falling off. The building trade is active, but has been hampered by the bricklayers' strike in Stockholm.

Holland's position is reviewed in a leading article in this Supplement. The Ruhr occupation has been a great blow to Dutch trade.

Hungary.—The unfavourable trade balance continues. The harvest this year, however, is considerably better than last, and the output of Hungary's industries has increased of recent months.

Germany.—The mark's utter collapse, combined with Germany's enforced reliance on imported basic materials, has resulted in a very serious industrial position. Inland prices are now above world parity, and Germany's export capacity has dwindled.

Exports—May, 1923.....	620 million gold marks.
June "	380 " " "
July "	105 " " "

Leipzig Fair was a failure this year. Lower costs of production are necessary, but a reduced output is likely to accompany the process of adjustment.

France.—The harvests of France and her colonies are coming up to expectations, and the hope that no foreign wheat imports would be necessary this year is in course of realisation.

IRON AND STEEL PRODUCTION.

	Furnaces at		Production (Thousand Tons).

June, 1923	106	447.0	..	427.4
July, 1923	107	436.4	..	399.5

* Month of lowest production.

Belgium.—The Banque General Belge reports that the coal trade is extremely busy, with low stocks and rising prices. Iron and steel are firm, with orders of fair dimensions. An agreement has been come to between masters and men in the metal trades regarding wage increases. Makers of rolling-stock and constructional materials have obtained certain foreign contracts recently.

JAPAN.

Earthquake damage has affected Japan's capital city, a main port, and her financial centre. Cotton districts have suffered but slightly, but the silk industry to a greater extent. Valuable stocks of silk are believed to have been destroyed in Yokohama. Japan's trade balance had been consistently adverse since the beginning of 1923. It is in the last months of the year that the balance usually rights itself, so that the possible effect of the disaster will be a continuance of the import balance during the remaining months of the year. Cotton may benefit from the lifting of the Chinese boycott, now virtually non-existent.

The Economist
MONTHLY SUPPLEMENT.

New Series.

SATURDAY, OCTOBER 27, 1923.

No. 5.

We resumed in June the publication of a Monthly Statistical Supplement, which has been a feature of the "Economist" for many decades, but was suspended during the war. In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. The table of crop yields on page 8 has been supplied by the International Institute of Agriculture, Rome. It is becoming a common practice to reduce these figures to three or four indices, and by their study to endeavour to forecast forthcoming economic changes. This science is, however, yet in its infancy, and it may be doubted whether an attempt to apply scientific rules will obtain a better forecast than the best opinion of the business world when furnished with the requisite information. We, therefore, propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics." is 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD

A MONTH ago we expressed the view that in spite of Continental entanglements British trade was holding its ground against unfavourable factors. The reports since received fully confirm this view. Though the situation in Germany is worse than ever, it seems that business circles in this country have completely discounted the worst that can happen in Europe, except, of course, a serious outbreak of war. The unemployment figures, it is true, since the end of September have shown a small though definite increase, but employment at the end of September was slightly better than at the end of August, and the larger numbers of unemployed that have since been registered are, if anything, less than the increase that is normally to be expected at this time of year as a result of the autumnal shrinkage of employment in the building trade. Other industries a month ago were holding their own. In the last six weeks there has been reported a definite improvement in a number of cases, and practically no instance where trade is worse than in the middle of September. This attitude of qualified optimism is supported by the usual indices of trade conditions. The trade returns remain good, being better in September than in August. Railway traffic returns, though representing money value only, and not quantities, show a tendency to increase. The *Labour Gazette* reports that for the third month in succession the changes in wages which occurred during September were, on balance, in an upward direction, increases in the building and mining industries more than balancing a small but widespread reduction in the transport industries. Prices of industrial securities are, on the average, appreciably firmer than three months ago—a result which is not surprising considering that our analysis of industrial profits, published in the *Economist* last week, showed that the net profit of over 200 companies whose reports were issued in July, August, and September amounted to 17.3 millions, compared with 10.5 millions in the corresponding reports published twelve months ago.

The evidence of general statistics is confirmed by reports relating to various industries and markets. In the coal industry production continues at a level a little higher than before the war. Iron and steel production sagged in July and August, but in September steel output, which can be increased much more promptly than pig-iron production, showed a sharp recovery. We understand that in October a number of blast furnaces have been blown in, so that the October output of pig-iron will probably follow suit. The financial situation of certain branches of the Lancashire cotton industry, after two years of depression, is well-nigh desperate, but even the cotton trade reports are slightly better, though nothing like a real revival can be anticipated until a marked change comes over the markets of China, India, and Turkey. In the West Riding, the

fright which was loudly expressed of the effect of French competition has died down almost as rapidly as it arose. The chemical trade is well employed. In the boot and shoe industry, though short time continues, demand is better and stocks are falling. The lace trade, which has been extremely hardly hit, is showing some signs of life. Certain branches of the engineering industry are doing very well, in particular motor and motor-cycle construction, electrical engineering and textile machinery. Even some branches of general engineering are beginning to look up, but locomotive building, marine engineering, and many other branches remain lifeless. Indeed, anything connected with shipbuilding is in an extremely bad way, and will remain so until the moulders' strike is settled and there is an expansion of the world's volume of trade. At the moment, however, there is some encouragement even here in the fact that our freight index number for September shows a small advance.

Overseas, there are no marked changes compared with a month ago. The handling of very large crops in Canada and Australia is keeping people busy, particularly those engaged in transport. In the United States an immense volume of business is being done, though its amount is stationary rather than increasing. The situation is not so brisk as in the spring, but the volume of freight being offered to the railways remains very high. One result of this is that after four years the Baltimore and Ohio Railroad is resuming its ordinary dividend. In Europe the statistics in the following pages show a tendency to recovery in Sweden, Belgium, Italy, Switzerland, and Austria. Holland is still one of the chief sufferers from the Ruhr chaos, while France, on the whole, is best described as steady, her industry having practically recovered the set-back which followed the initiation of the Ruhr policy. Germany is, of course, rapidly going down hill, the effects being most evident in those industries which are dependent on the investment of new capital—as, for example, the metal trades and building.

INDUSTRIAL REPORTS.

Coal.—A correspondent writes:—"There has been the usual seasonal increase of prices. The steel industry's demand for coal is good, but other large sections are still in the grip of the trade paralysis, and there is no improvement of business with them. The upward tendency in the North-East Coast exporting districts continues, with the result that collieries are now fully booked for October."

"The Welsh steam coal trade is recovering slowly from the depression caused by the serious delay in the arrival of chartered vessels occasioned by the prolonged stormy weather, but is still far from satisfactory."

Iron and Steel.—Although six more furnaces went out (Continued on page 8.)

A DECADE OF IMPERIAL PROGRESS.

In the tables which follow, an attempt is made to give a statistical picture of the economic situation in the chief British self-governing Dominions during the decade roughly bounded by the last two censal years—1911 and 1921. In many cases averages are given based on (1) "Pre-war," (2) "War," and (3) "Post-war" years.

Our first table shows the area and the respective population totals for the last three censal years:—

	Area, Sq. Miles.	Population.		
		1901.	1911.	1921.
Canada	3,729,665	5,371,315	7,206,643	8,788,483
South Africa	473,089	*15,175,824	*5,973,394	*6,928,580
India†	1,802,629	294,317,082	315,156,396	318,942,480
Australia	2,974,581	3,824,913	4,573,868	5,510,229
New Zealand	103,284	772,719	1,008,468	1,218,913

* Census of 1904. † European population, 1904: 1,116,806; 1911: 1,276,242; 1921, 1,519,488. ‡ Including native states.

Some idea of the density of population and the relative importance of "urban" and "rural" areas may be obtained from the next table.

	Population per Square Mile.			Percentage of Urban to Total Population.
	1901.	1911.	1921.	
Canada	1.4	1.9	2.4	49.5
South Africa	*10.9	12.6	14.6	25.0
India	212.1	223.1	226.0	...
Australia	1.3	1.6	1.9	†62.0
New Zealand	7.5	9.8	11.8	48.77

* In 1904. † "Metropolitan" and "Provincial" areas. ‡ Estimated at about 30 per cent.

Vital statistics during pre-war, war, and post-war periods may be summarised thus (in yearly averages):—

	Births.			Deaths.		
	1912-13.	1914-18.	1919-21.	1912-13.	1914-18.	1919-21.
Canada	97,800	108,130	†167,859	...	...	†72,720
South Africa	9,339,257	9,027,063	112,581	6,023	80,116	80,819
India	134,401	131,997	7,601,413	6,968,004	8,787,650	7,761,243
Australia	27,721	17,759	131,631	51,383	51,395	58,431
New Zealand	...	...	27,657	9,666	11,521	11,199

	Excess of Births.			Total Increase Due to Excess of Births, 1912-21.
	1912-13.	1914-18.	1919-21.	
Canada	...	...	195,139	132
South Africa	37,568	6.3	28,014	4.7
India	2,371,253	7.6	239,413	0.8
Australia	72,418	15.8	80,602	17.6
New Zealand	18,055	17.9	16,238	16.3

* Returns for the Dominion of Canada not collected before 1920. † Includes Aden and Perim. ‡ 1920 and 1921 average.

Immigration figures are not calculated in the same manner in every case, and the following averages are not comparable as between one country and another. They suffice to show, however, the effect of the war in checking overseas settlement:—

	Number of New Immigrants (Annual Average).			Total Immigrants.
	1912-13.	1914-18.	1919-21.	1912-21.
Canada§	393,655	81,095	118,604	1,548,598
South Africa	*1,542	*15,649	*9,799	...
India†	5,233	5,462	α3,561	...
Australia	c27,492	c14,227	c15,789	224,381
New Zealand	11,573	8,175	8,505	89,538

* Arrivals and departures by sea only. † Arrivals and departures by sea and railway. ‡ Net coolie immigration. § Gross immigration. α 1920 only. b Net excess of arrivals over departures. c Based on average for 5-year periods 1911-15, 1916-20, and on figures for 1921 respectively.

The next table shows the intensity of railroad development:—

	Dat	Total Mileage.	Miles per 1,000 Population.
Canada	Dec. 31, 1921	*39,771	4.5
South Africa	Mar. 31, 1921	9,559	1.4
India	Mar. 31, 1922	37,266	0.1
Australia	June 30, 1922	24,491	4.4
New Zealand	Mar. 31, 1922	3,156	2.6

* Single track mileage.

The foreign commerce of the Dominions is shown in the two succeeding tables, in yearly averages, for the three periods under which earlier returns have been grouped:—

	Average Imports.			Average Exports.		
	1912-13.	1914-18.	1919-21.	1912-13.	1914-18.	1919-21.
Canada	\$ 645,200	\$ 719,770	\$ 1,024,164	\$ 393,671	\$ 1,011,775	\$ 1,056,299
South Africa	35,339	38,706	70,139	64,772	60,530	93,218
India	114,751	98,537	179,982	161,850	143,998	185,235
Australia	78,954	71,226	121,637	78,834	78,374	138,649
New Zealand	21,632	23,015	45,070	21,878	30,280	46,413

* Fiscal year ending March 31st of following calendar year in each case.

† Including Government stores, but excluding specie. ‡ Includes value of gold premium, averaging \$7,884,000 during these three years. § Private merchandise.

|| Including re-exports of imported foreign merchandise, value, 1921-22, \$9,376,000.

¶ January, 1914 to June, 1918. * Average three years to June 30, 1921.

Data published by the International Institute of Agriculture, Rome, has been used to illustrate the fluctuations in the yield obtained in the Dominions of a few of the world's most important crops. Yearly averages are given, in thousands of quintals (1,000 quintals = 1,968 cwts). The approximate estimated total world production is also shown, so that the relative importance of the Dominions' contribution may be roughly assessed:—

	Wheat.			Barley.

AMERICAN IRON AND STEEL INDUSTRY.

By H. COLE ESTEP, European Manager of the *Iron Trade Review*.

THERE is a tradition in the American iron and steel industry that if the production of pig-iron decreases for three consecutive months, a general depression, but not necessarily a severe one, extending over several months or a year may be expected. It will soon be determined whether this tradition has any basis for existence, for the output of pig-iron in the United States, according to statistics compiled by the *Iron Trade Review*, declined steadily from an average of 124,790 tons a day in May to 104,120 tons a day in September.

There are other indications that a period of relatively quiet trade may be expected. After rising to \$69.28 a ton in September, 1920, the official average price of 14 leading American iron and steel products dropped to \$32.86 in February, 1922. It then gradually increased to \$47.70 in May this year, since when it has steadily declined. On October 3rd it stood at \$44.23 a ton. The best obtainable opinion in America is that the iron and steel business of the United States will be good next year, but that production probably will not be pushed to the high levels it reached last spring. Prices may decline somewhat further, but since there are no abnormal accumulations of steel such as brought about the drastic reaction in 1921, fairly steady market conditions are anticipated.

The new business booked by the United States Steel Corporation in September and October was considerably heavier than in August. Early in October several of the leading American railroads decided, in view of somewhat more favourable conditions, to re-enter the equipment market. The Union Pacific announced a programme involving the construction of 18,000 freight cars, while the Pennsylvania railroad prepared to purchase 15,000 cars. It is expected that a total of 75,000 freight cars will be ordered before the end of the year. This item alone calls for about 750,000 tons of iron and steel. The Ford Motor Co. ordered two steamships early in October, which will require 10,000 tons of steel, together with 15,000 tons of structural steel for shop construction purposes. Rail orders placed with American mills during the first week in October totalled over 85,000 tons. These details are mentioned to show that confidence is being maintained, and that important American enterprises are going ahead with large development programmes.

In other words, there is a revival of confidence in the American iron and steel industry at present, just as there is here. In fact, the fluctuations in production, exports, prices, and trade sentiment in the British and American iron and steel trades have been virtually parallel for the past two years. This is interesting when it is remembered that the American industry is dependent almost entirely on internal conditions, whereas the British iron and steel business is governed largely by the external situation.

In point of production the present year in the United States will undoubtedly equal that of 1916, the most active of the war years, when 39,019,123 tons of pig-iron were made. Up to October 1st the output of pig-iron this year was 31,085,575 tons. When the remaining three months come to be added the total for the year will be around 39,000,000 tons. The production of ingots to September 1st was 30,000,000 tons. For the year it will be about 43,000,000 tons, or about the same as in 1918, and a little less than in 1917, the maximum year, when 43,619,200 tons were turned out.

Both pig-iron and steel are being made in the United States at practically the rate which was only obtained six years ago under the whiplash of war demands. The rate of pig-iron production at present is 30 per cent. in excess of the best pre-war record, while that of steel is 43 per cent. ahead of the *ante bellum* era. In this respect also conditions in America and Great Britain are somewhat similar, since in this country this year the production of steel will be about 9 per cent. more than in 1913, although the pig-iron output is still below the pre-war level.

The ups and downs of America's export trade this year have been similar to those experienced by British iron

masters. Starting the year with a moderate volume of foreign trade, American exports increased 45 per cent. between January and May, owing to the diversion last spring of orders which ordinarily would have gone to Germany. Since that time the generally unfavourable economic reactions of the Ruhr situation have served to curtail the foreign trade of all the leading iron and steel producing countries.

But the relatively small part which foreign trade plays in American iron and steel affairs is clearly illustrated by the subjoined table covering the first eight months of this year and monthly averages for previous years. This table, which gives the monthly exports and imports of American iron and steel products in gross tons, and the imports of pig-iron and ferromanganese from Great Britain this year, is as follows:—

	Total Exports.		Total Imports.		Imported from Great Britain.	
	Tons.	Tons.	Tons.	Tons.	Pig-iron.	Ferromanganese.
Monthly average, 1921	181,000	7,000	...	...	...	...
Monthly average, 1922	161,500	46,600	...	...	...	...
1923—January	135,046	119,955	75,000	4,000	...	...
February	136,853	67,682	30,000	7,000	...	...
March	168,176	104,684	60,000	8,000	...	...
April	183,905	76,365	21,474	6,049	...	...
May	195,535	75,840	25,116	8,651	...	...
June	176,403	67,968	18,150	11,745	...	...
July	171,142	53,451	11,944	11,245	...	...
August	144,419	45,112	6,136	6,835	...	...

As the foregoing table indicates, America's total foreign trade in iron and steel products in August aggregated only 189,531 tons, whereas that of Great Britain was 439,000 tons. British foreign trade in iron and steel, that is, exports plus imports, is equal to about three-quarters of her production, but the corresponding ratio for the United States is only one-twentieth.

The figures showing the exports of pig-iron and of ferromanganese each month this year from Great Britain to the United States are given in the foregoing table for the purpose of calling attention to the considerable trade in ferrous products which goes on constantly between the two countries. In fact, in the iron and steel department, the United States is a much larger customer of Great Britain than Britain is of America.

Attention is called to the shipment of some 248,000 tons of British pig-iron and 63,000 tons of ferromanganese to the United States during the first eight months of this year, in the face of the Fordney Tariff, which is assumed in some quarters to militate against the sale of British products in America. The tariff on ferromanganese is about 30 per cent. *ad valorem*, while that on pig-iron is 3s a ton. The reason for this business is that British costs of production, although high, are lower on commodities of this sort than obtain in the United States, due chiefly to the lower wages and lower cost of iron ore in this country.

Under approximately normal conditions the cost of producing iron and steel does not vary greatly at the present time from one country to another, although the United States, with its high wages, is in a somewhat less favourable position than some of its older competitors. But the great bulk of the American market is protected from foreign competition not by the Fordney Tariff, but by the cost of hauling foreign material from the coast to the principal points of consumption, which are now in the interior of the country. The geographical centre of iron and steel consumption in the United States lies near Cleveland, which is 600 miles inland. It is moving steadily towards the Mississippi valley. This middle western territory is an empire in itself, and although influenced by European conditions, it is not seriously affected by them. For this reason the American iron and steel industry is not greatly disturbed by the situation in Europe, nor is it likely to be so in the near future.

YIELD OF FOOD CROPS IN THE NORTHERN HEMISPHERE.

The figures which follow are supplied by the Imperial Institute of Agriculture, Rome, and show, in thousands of metric tons, the latest estimates of this year's food crops in all countries north of the Equator for which returns are available. The percentage columns are calculated on the basis of the original data, of which only a summary is given here.

Countries.	Wheat.			Rye.			Barley.			Oats.

(Continued from page 1.)

of blast during September (bringing the total in blast to 190, as compared with 223 at the end of May), and the production of pig-iron fell from 599,800 tons in August to 558,600 in September, there has since been a slight recovery (a broadening of the market), and an increased volume of business has been done. Prices have been cut drastically, but are becoming more stable. The orders which are being placed do not extend far into the future, but the feeling of the market is more optimistic. The hematite position is decidedly better. The output of steel in September rose considerably, being 695,100 tons in comparison with 567,500 tons in August. Steelworks are fairly steadily employed at present. Tin-plate and galvanised sheet markets are booking substantial orders.

Cotton.—"Throughout the month," states our Manchester correspondent, "it has been exceedingly difficult for spinners and manufacturers to improve their position, but compared with a little time ago stocks of yarn and cloth in first hands are of smaller dimensions. In the cloth section there has been encouraging activity in fine goods and fancies of various kinds, and for several outlets more business has been done. Trade advices from China have been poor, and buying has been confined to bleached descriptions and fine cloths. Rather more activity has shown itself for several minor outlets, such as Java, Egypt, Turkey, and South America. Operations in home trade goods have been very irregular. In the mills spinning American yarns curtailment of production to the extent of 50 per cent. continues, and home users have purchased quietly from day to day. A very fair business has been done in Egyptian yarns."

Wool.—Perhaps the main source of the West Riding's troubles is the slackness of demand on the merino side, owing to high prices. Trade in crossbreds is much better, and the trend at present is towards increased inquiries for the cheaper and coarser grades. No very serious losses, fortunately, seem to have been caused by the Japanese earthquake (July and August shipments of woollen and

worsted tissues to Japan had been exceptionally heavy); while many cancellations of contracts in that country have since been withdrawn. The disaster, however, is bound to depress Eastern markets for some time.

More orders are coming through for hosiery, and though fine cloth markets continue dull, the carpet and blanket trades are examples of more prosperous conditions.

Miscellaneous Textiles.—The flax crop is not unfavourable, and business in linens is fair, though prices are being cut in some cases, orders being mainly for early delivery. Jute has been firm, taking its tune from Calcutta reports, and Dundee mills are buying raw material in somewhat generous quantities. The lace trade is showing rather more signs of life than has been the case for some weeks past.

Boot and Shoe.—The Leather Fair elicited a good deal of interest, and seems to have been satisfactory from an exhibitor's point of view. Short time continues in the trade, but demand is better and stocks are being reduced.

Chemical Trade.—Conditions have been more stable, with increased home inquiries, and a steady export trade in the heavy chemical section.

Building.—Conditions in the building trade vary very much from district to district. In some areas the *Labour Gazette* reports that in September there was a shortage of certain classes of skilled labour, and on the whole there has been a slight improvement, the trade returns showing the percentage of unemployment as nearly ½ per cent. better than a month ago and 2.2 per cent. better than twelve months ago.

Miscellaneous.—The furnishing trades and the paper trade seem to be a little worse. In pottery there is an improvement in the situation.

General.—With the exception of the boiler-makers' strike, British industry is singularly free from important trade disputes. Wages are in process of adjustment, those which were too high being reduced, while a number of trades show an increase. The net result of the changes during the month was an increase of about £10,000 a week in the wages bill of the million people whose wages were affected.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, NOVEMBER 24, 1923.

No. 6.

We resumed in June the publication of a Monthly Statistical Supplement, which has been a feature of the "Economist" for many decades, but was suspended during the war. In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. It is becoming a common practice to reduce these figures to three or four indices, and by their study to endeavour to forecast forthcoming economic changes. This science is, however, yet in its infancy, and it may be doubted whether an attempt to apply scientific rules will obtain a better forecast than the best opinion of the business world when furnished with the requisite information. We, therefore, propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics." 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

THE signs of a slight increase in production which we have seen in the last two months are confirmed by the further expansion in the iron and steel industry, a brighter outlook in engineering, and a rise of 8 per cent. in shipping freights. Even reports from the cotton industry show that more business is being done, chiefly owing to a rather better demand from India. Raw cotton prices, however, have risen again and are causing anxiety. It is perhaps a little more difficult than usual to read the signs of the times owing to the disturbing effect of the General Election, the price of industrial securities is unusually an important index of current orders and production, but at the present time they are unreliable for this purpose, having been influenced by the consideration that if a General Tariff on manufactures is imposed it will certainly affect future profits, though so long as the proposed tariff remains vague it is impossible to say in what direction for any group of trades. Nevertheless, though investors may hold their hand there is no reason to fear that the election is influencing the underlying trend either of production or of wholesale trade, its direct effect on the whole being confined to retail business.

The employment figures confirm the tendency to improvement, for they have remained practically stationary for the last two months when a seasonal decline would in the ordinary way be expected to occur at this time of year. The foreign trade figures for October also show an improvement in both imports and exports, though there are some trades which have not quite maintained their September figures. The wage changes of the month have been very small, such changes as have taken place showing a very slight net increase, and the cost of living is also stationary.

But though the excitement caused by the Election has not affected industry, it has had considerable reaction in the world of finance. Gathering gloom in Germany, the recent talk of inflation in Great Britain, and the fear—though a very remote one—that a Capital Levy might be attempted here has caused the transfer of a certain amount of capital from Europe to the United States, and coming on top of very heavy autumn payments to America in connection with the usual movement of stocks, has caused a very sharp slump in the dollar exchange, though in the last few days the quotation is slightly recovering. These depressing features have also produced a set-back in the price of Gilt Edged securities.

As regards the situation abroad, reports from America indicate a slight weakening in the wave of prosperity. The staple products of South America and Canada are being marketed in satisfactory quantities; Australia is doing well, and there is a slight improvement in both India and South Africa.

With one or two exceptions, however, Europe remains

in deep depression. The situation in Germany is bringing production to a standstill; it is reported that 4½ million people are unemployed, and where work is going on output is low from the general unsettlement in the country. Trade in France is uneven. Her textile trades, like those of Great Britain, are slackening, but her metallurgical industries are recovering, as she is able to obtain increased supplies of fuel. Belgium, which had a small burst of activity in the late summer, is not doing so well, and in Scandinavia generally the approaching winter season is causing the usual slackening of trade. Italy shows the most definite improvement, but she has still considerable headway to make after two years of very poor trade.

The following notes on conditions in various trades and countries, while by no means exhaustive, call attention to some of the more important tendencies:—

HOME INDUSTRIES.

Iron and Steel.—The progress reported last month has continued. Prices have moved, and are still moving, upwards—a significant feature of the times being the revival of the Steel Bar Association, which is enrolling many small bar-rolling firms in an effort to stabilise prices at a remunerative level. Foreign competition has abated somewhat, Belgian and Luxembourg manufacturers having heavy order-books and being somewhat nervous regarding fuel supplies and the possibility of labour disputes. Cleveland reports a steadily increasing demand for pig-iron, and on the Tees blast-furnaces are being blown in. Scotland has been held back by the boiler-makers' strike. Birmingham is more cheerful, and South Wales tinplate firms are well booked with orders, about 150,000 boxes being received weekly at Swansea Harbour from local works, against about 95,000 at this time last year. Sheffield hardware and cutlery firms have received important foreign orders, though the home market shows less recovery than was anticipated.

Coal.—The October output, at 5,600,000 tons per week, was the highest since June, and the figure for the year 1923 will, it is estimated, fall little short of the "record" of 1913. Retail demand has greatly improved with the cold weather of recent weeks. On the whole, tendencies in the export trade are slightly firmer, France, Belgium, and Italy still being buyers, though few new orders are coming from Germany. There is a shortage of tonnage in South Wales, and, to a less extent, at Newcastle. Internal demand, from industry, gasworks, &c., is satisfactory, but Lancashire complains of an inadequate supply of wagons.

Engineering.—At least two Clyde shipyards, closed for nearly two years, are reopening, and with the settlement of the boiler-makers' dispute this most depressed section of the engineering trades is ready to begin work on orders in hand. The marine engine trade will also benefit. The locomotive section is still depressed, though one large Scottish firm has lately received important Colonial orders. Oversea demands are increasing, also, in the machine-tool trades. The electrical manufacturing industry is actively employed in many instances, night shifts being worked by one Midland firm. Activity in motor construction continues, but it is doubtful whether the

(Continued on page 8.)

THE POPULATION OF FRANCE.

THE various means adopted in France by official as well as by unofficial organisations to encourage larger families, have advertised the fact that France's population is stationary. The contrast of this stationary population with the growing numbers of Germany is perhaps the most important underlying factor of the European political situation. Hence the recently published population figures of the war period have more than an academic interest.

The population of France as quoted in many recent comparative tables, such as those used by the League of Nations, shows a slight increase as compared with the years before the war. This is, however, due to the re-annexation of Alsace-Lorraine. In pre-war France the population has fallen very considerably, but the movement cannot be accurately traced owing to the long occupation of the northern districts. For this reason statistics are only complete for the 77 unoccupied departments, and it is for this area that a fairly accurate study can be made.* The actual census returns show the following changes between 1911 and 1921:—

	Total Population.	French.	Foreign.
March 5, 1911	33,080,000	32,292,000	788,000
March 6, 1921	31,720,000	30,659,000	1,061,000
Difference	-1,360,000	-1,633,000	+273,000

These figures, however, conceal some very important changes which, briefly summarised, are:—(1) The excess of deaths among the civil population over births amounted in the decade to 1,160,000. In the war period—July, 1914, to the end of 1919—the excess of deaths was 1,271,000, but this is reduced for the decade by an excess of births amounting to 10,000 for the years before the war, and to 106,000 in 1920. (2) The number of soldiers drawn from these departments who were killed, or died of wounds or disease amounts to about 1,100,000. (The total losses of France are estimated at 1,400,000, but a certain number of these were colonial troops or men belonging to other departments of France.) (3) The difference between these two sources of loss, which together amount to 2,260,000, and the reduction as revealed by the census return, namely, 1,360,000, is explained by the fact that foreigners increased by nearly 300,000, the balance of some 600,000 being Frenchmen who had emigrated into the 77 departments from the devastated areas, from Alsace-Lorraine, from the French colonies, or from foreign countries. The compilers of this report have made an attempt to analyse these movements year by year, and the summary table given is useful as showing the marked movements at various periods of the war:—

POPULATION (in thousands) ESTIMATED AT THE END OF EACH HALF-YEAR FOR THE 77 DEPARTMENTS.

Year.	Marriages per 10,000.	Births (excluding Still-births) per 10,000.	Infant Mortality per 10,000 Births.	Deaths (ex- cluding Military Losses) per 10,000 of Civil Population.
1911	155	..	1,538	..
1912	155	..	1,050	..
1913	149	182	1,121	177
1914	102	179	1,084	207
1915	45	116	1,091	210
1916	66	95	1,130	198
1917	97	105	1,121	202
1918	109	122	1,314	24
1919	280	126	1,551	193

The striking feature of the first column of this table is the heavy mortality among the civil population in the last half of 1918. This is the effect of the influenza epidemic of the autumn and winter of 1918, the total number of deaths having increased from 582,000 in 1917 to 722,000 in 1918, and 420,000 of the latter being registered in the last half of the year. The second column reflects the period of France's maximum military effort, the most outstanding feature being the low number in the last half of 1917, when the long drawn-out Passchendaele offensive of the British army was keeping the enemy occupied.

The only information given about the remaining 10 departments of France is that the total population fell from 6,523,000 to 5,780,000, a loss of three-quarters of a million between the censuses of 1911 and 1921. The last figure, however, includes some 900,000 refugees, who returned to their homes after the war, and 240,000 demobilised soldiers whose homes were in these departments. During the period of occupation, therefore, these areas must have been reduced in civil population to not much more than 4½ millions. The net losses of 2 millions in the whole of continental France has been counterbalanced by the 2½ million inhabitants of Alsace and Lorraine. Figures published by the International Statistical Institute, The Hague, show for the whole of France an excess of births over deaths of 117,000 in 1921, and 70,600 in 1922. In the first quarter of 1923 there was an excess of births amounting to 6,000 in 90 departments.

The last figure in the preceding table shows an improvement in the excess of births over deaths. This, however, is due to the very low mortality in France. For many decades before the war the French population has been maintained in spite of the low birth rate by the length of life of her people. The following figures show that these conditions are more than maintained in post-war France:—

Year.	Marriages per 10,000.	Births (excluding Still-births) per 10,000.	Infant Mortality per 10,000 Births.	Deaths (ex- cluding Military Losses) per 10,000 of Civil Population.
1911	155	..	1,538	..
1912	155	..	1,050	..
1913	149	182	1,121	177
1914	102	179	1,084	207
1915	45	116	1,091	210
1916	66	95	1,130	198
1917	97	105	1,121	202
1918	109	122	1,314	24
1919	280	126	1,551	193

It will be noticed that during the war the birth rate, though it fell very much, did not fall so much as the marriage rate. The latter had a very marked recovery in 1919, and it may be expected to reflect itself in a rapid rise of the birth rate at all events for a year or two. The figures of infant mortality are not as satisfactory as they might be, but it must be remembered in regard to the last few years quoted here that war conditions were still prevailing. There remain two considerations which affect the prospects of French population. One is the increasing average age, which means that the number of women of child-bearing age is proportionately smaller than in other countries. The second is the low number of children per family. The rising age of the population is illustrated in this return by the average age at death, which was 46 in 1901, and had risen to 48 in 1911 and 50 in 1913. In 1919 it had risen to 52. This is altogether a favourable sign in so far as it reflects improved conditions of life and better sanitation and hygiene; but in so far as it means that the child population is much smaller in proportion to the adult population than it used to be, it is a matter for concern. As regards the second, the number of children born per year per 10,000 women between the ages of 15 and 49 fell from 103 in the decade 1866-75 to 76 in the eight years before the war and to 47 during the war.

* Statistique du Mouvement de la Population. Nouvelle Série—Tome 3. Années 1914 à 1919. (Paris) Imprimerie Nationale. 1922.

OUR IMPORTS OF MANUFACTURED GOODS

IN the Supplement which we published last week we indicated that the figures included by the Board of Trade under the heading of Articles Wholly or Mainly Manufactured contain many items which are really the raw material of finishing industries. In a number of these cases there are obvious difficulties in the way of our doing the primary processes, such as smelting ore or taking off the most volatile products of crude petroleum, in this country. In cases such as this it is clear that our interest is to import the semi-product in as large quantities and as cheaply as possible. The figures of the Board of Trade show that in any case imported manufactures are comparatively small

in proportion either to our imports of raw material and food, or to our own exports of manufactures. An analysis of the Board of Trade figures reduces to a very much smaller item still the total of what may be called finished manufactures. The process of dissection is, however, difficult; we therefore give in the following table a fairly complete statement of the items that may be distinguished in the Board of Trade figures, and leave each reader to decide for himself what items may be called raw materials and what items are finished manufactures, that might be kept out if Mr Baldwin's scheme were put into operation.

There are some countries in which returns such as these are officially divided into "manufactured" and "partly manufactured" goods. But our Board of Trade hesitates to make the attempt, and we will not rush in where angels fear to tread. But there are a few comments which may help the reader in using these returns in connection with the Fiscal controversy. In the first place these are gross imports. If we deduct the re-exports so as to see how much remains for consumption in our home market, the total is reduced in 1923 from £887,500,000 to £789,500,000. Moreover, the figures include freight. Something must be deducted on this account when comparing the figures with our exports.

Almost every item affords an illustration of the difficulty of deciding what is a raw material, or is replaceable by a home product. For example, pig-iron includes a certain amount of special pig-iron from Sweden which cannot be made here. But it also from time to time includes a certain amount of pig-iron which competes with the home product by reason of its cheapness. But this and other items in the iron and steel schedule are the raw material of important industries, and their importation at low prices has

often enabled the finishing trades to compete and hold their own in the world market in times of stress.

There are many items which, like Swedish pig-iron, we shall not exclude. Some of them we cannot produce here because we lack the natural resources; others—such as French dress material, certain scientific instruments, &c.—because we lack the artistry or specialised skill.

Even as regards the remainder, the figures over represent the value of work that might be done at home; for in cases such as that of paper, the raw material would have to be imported. It is only that part of the above figures that represents the cost of manufacture that could possibly be done at home.

These considerations show how difficult it is to estimate how much of our imported manufactures may be considered as competing with particular British industries. Their relation to employment as a whole is simple to estimate; for a comparison over a series of years shows that imports of what the Board of Trade calls manufactures are highest when unemployment is lowest, and lowest when unemployment is at its maximum.

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 1.

Olympia exhibition yielded all the orders which some people expected. The general position in the engineering trades is that of a slowly broadening market, though recovery has still far to go.

Cotton.—Our correspondent writes :—“ The event of importance since a month ago has been the rise in values, there being an advance of about 3d a lb in the price of American and Egyptian cotton. Spinners and manufacturers have had to put up their quotations, and the hardening movement has stimulated demand. An improved turnover has taken place in piece goods for several outlets abroad, and manufacturers, agents, and merchants have sold stocks on a much freer scale. Shippers to India have given encouraging support, especially in light fabrics. Inquiry for China has broadened, and although many bids have been too low, more trade has been done. Useful support has been given by buyers for several minor outlets East and West, and increased activity has shown itself in home trade goods.. In certain weaving districts there has been a tendency to run more machinery, and sellers as a body are in a better position as a result of the reduction in stocks. Business has been on a much freer scale in American and Egyptian yarns at hardening rates, and spinners are more favourably situated than a month ago.”

Wool.—The tendency noted last month towards a broadening of the market in the cheaper grades has become more marked, and is evidenced by the demand for crossbreeds at the wool sales. Corresponding orders for the coarse qualities of tops were received at Bradford, emanating from the Continent, Japan (in replacement of stocks destroyed), the British Dominions, the United States, and also, it may be noted, from the home hosiery market. The merino section was weaker.

Hosiery and Lace have had a burst of activity during the last fortnight, the colder weather having led to placing of winter orders long withheld.

Chemicals.—Business is limited, but better than a few months ago. Buying is still from hand to mouth in the case of many heavy chemicals. The virtual elimination of Germany has led to a marked revival in the market for fine chemicals of British production.

Leather, Boot, and Shoe.—Home trade, especially in high-grade goods, shows a certain amount of improvement, but is retarded by lack of normal demand from depressed areas in the North Country. Exports are better.

EXPORTS of BOOTS and SHOES, JANUARY to OCTOBER.			
	1921.	1922.	1923.
Thousand pairs	259	393	634
Value, thousand £	1,893	2,254	3,446

Pottery.—At present one of the most encouraging features in the industrial picture. Many firms are on full time, orders for Christmas have been unexpectedly large, and export trade is reviving, especially in the general earthenware section.

Building Trades.—Despite many reductions, the high costs of building still seem to be keeping many orders off the market.

Shipping.—The improvement in industry as a whole has been reflected in shipping freights, the *Economist's* Index, which in August was 100.2 per cent. of 1913, rising in October to 107.9 per cent., the highest level since May. Far Eastern rates are firm, but the glut of shipping on the River Plate continues, better conditions being indicated, however, with the turn of the year.

U.S.A.

The general volume of trade is fairly well maintained, without undue optimism as to the future. Steel production increased to some extent in November, but in most branches of trade "hand-to-mouth" buying is the rule. The high price of cotton has discouraged the reviving cotton industry, and short time is again being worked in certain New England mills. Building exhibits a seasonal decline. While prices remain steady at about 60 per cent. above pre-war, industrial wages are as much as 100 per cent. above 1913, and despite excellent crops this season the farmer is as deeply dissatisfied with his lot as ever. The gulf between the price of wheat on the one hand, and that of, say, cotton and manufactured goods on the other, is, perhaps, the fundamentally weak point in the situation.

SOUTH AMERICA.

Argentine crops are reported in excellent condition, but trade as a whole is none too brisk. Sales of nitrate, Chile's staple commodity, continue to expand, and the same remark applies to Brazilian coffee. Both coffee and cotton are selling at prices considerably above those of six months ago—that of the latter having increased by nearly 33 per cent.

THE BRITISH EMPIRE.

Australia and New Zealand maintain a satisfactory export balance, imports of motor-vehicles being a prominent feature.

India is still toying with Protection, though subsidies rather than import duties seem to be favoured in the case of her manufacturing industries. The demand for cotton goods, after being steady for several weeks, has expanded in the last few days; the tea crop is doing well, and export figures are encouraging:—

SIX MONTHS, APRIL, SEPTEMBER.				
(Crores of Rupees.)				
	1921.	1922.	1923.	
Total imports	124	111		110
Total exports	112	142		164

Canada has successfully harvested a bumper wheat crop, foreign trade continuing to show a marked expansion. Mining and lumber industries are active, and Japanese Government orders have increased the demands made on British Columbia's fish-canning works. Eastern manufacturers report a fair, though somewhat unstable, demand; while the confidence generated by the crop situation has led to improvement in most branches of retail dealing. Conditions in South Africa show a marked change for the better. After four months of decline, gold production in October rose to a figure which is the highest since 1916, while production costs have been steadily reduced. The wool season has opened under favourable conditions.

EUROPE.

The Ruhr situation continues to dominate European trade tendencies. In the Ruhr itself conditions are desperate, while in unoccupied Germany new orders are difficult to obtain, and consumption is rapidly declining. Raw materials have risen above the world price, working costs are rising, though wages are lower in Germany than outside, and as regards industrial workers are below the subsistence minimum.

French foreign trade is fairly well maintained, but is disturbed by the instability of the exchange situation. Prices are on the up-grade. The September coal output was the highest since the war, and the same applies to iron and steel, blast-furnaces being relighted at the rate of about one or two per month. In silk and wool markets the volume of business is only moderate, and shows no signs of expansion. Cotton prices are higher, but demand has not increased.

In Belgium the coal trade is less active, but iron and steel are, on the whole, firmer. The prosperity of the glass industry continues, and the building trades are well occupied.

In the Scandinavian countries business has, on the whole, declined since August, and the approaching ice-closure of Baltic ports will accentuate the movement. The autumn demand from overseas for Swedish wood-pulp has apparently been less than was expected. The Norwegian cod fishery has had a prosperous summer, and Finland has benefited by the improved conditions in Russia consequent upon good harvests.

Business in Central European countries has, on the one hand, been helped by good harvests this summer, and, on the other, has been depressed by the demoralisation in Germany. In Czecho-Slovakia matters have been complicated by rather bitter labour troubles in the mining industry. The signing of peace has not brought any material change for the better at Constantinople as yet, Turkey's troubles being too deep-seated to be remedied in a few months. Italy reports increased employment all round and a growing confidence in the future, but Spain shows little increase of activity, despite more settled political conditions, and trade remains quiet to dull.

JAPAN.

The Ruhr created in Japan an "intermediate boom," which from June onwards had been declining, when the earthquake took place. Prices thereafter rose rapidly, but were checked by official measures when the increase had reached only 2½ per cent. The Bank of Japan has largely increased its advances, but a currency shortage is still being experienced. Cotton stocks were low before the disaster, a 30 per cent. curtailment of production having been in force for some months. Insistent demands since the earthquake have more than absorbed available stocks, and prices have increased from 15 to 20 per cent. In Kobe, outside the devastated area, the unemployed in October numbered 13 per 1,000 workers.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, DECEMBER 22, 1923.

No. 7.

We resumed in June the publication of a Monthly Statistical Supplement, which has been a feature of the "Economist" for many decades, but was suspended during the war. In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our own statistical records. It is becoming a common practice to reduce these figures to three or four indices, and by their study to endeavour to forecast forthcoming economic changes. This science is, however, yet in its infancy, and it may be doubted whether an attempt to apply scientific rules will obtain a better forecast than the best opinion of the business world when furnished with the requisite information. We, therefore, propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics." 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

THE slow but steady increase in the volume of trade which we have recorded in the last three months has continued up to date, in spite of the General Election and political alarms which have had no appreciable effect on commercial conditions. Indeed, the indices of trade are more definitely favourable than at any time since the boom of 1920. If we start first with the intangible factor of psychology, we find that in the last two or three weeks the speeches of the chairmen of the various industrial companies who ventured to look ahead are tinged with a note of quiet optimism. The chairman of Bolckow Vaughan, though presenting a by no means cheerful balance-sheet, observed that "during the last three months a decided improvement has taken place in trade. There has been more demand, and prices have been substantially raised without interfering with the flow of orders." The chairman of John I. Thornycroft even reported that in the shipbuilding industry the company's works were more fully employed, and in the manufacture of heavy lorries, though meeting American competition in neutral markets, were able to retain their share of the trade. The chairman of the Orient Steamship Company qualified his report of a very difficult year by the comforting thought that the British Exhibition will bring a great increase in the passenger trade in 1924.

The more hopeful impressions, of samples, are confirmed by figures. The Ministry of Labour's unemployment returns show a small but continuous fall. The Trade Union percentages, which mainly refer to the metallurgical group of trades, record a more substantial drop than the unemployment insurance figures. The latter, however, show that between November 19th and December 10th the numbers on the register fell by 54,000. The improvement is most marked in the coal industry, in many branches of the iron and steel industry—notably in the tin-plate and steel-plate section—and in certain branches of engineering. In shipbuilding things are definitely better, but as the boiler-makers' dispute had reduced the industry practically to a standstill, employment in these trades is still far below normal. In the cotton trade the tendency to improvement recorded a month ago has been checked by violent movement of the price of raw material, which has introduced an element of uncertainty and caused buyers to hold back. In the Yorkshire textile trade the demand for the cheaper grades of woollens and worsteds is better, though complaint is being made that there is very little profit in the business that is being done. Those industries which cater for the needs of the textile trade generally—for example, certain branches of the chemical industry—report that there is quite definitely an improvement in the amount of buying from Lancashire and Yorkshire. There is also a slight improvement in the shipping position. Our freight index number has risen, and it is reported that quite appreciable quantities of tonnage are being used upon

the Pacific Ocean for carrying reconstruction material, including large quantities of timber, from the American Continent to Japan.

The trade returns for November do not reflect any substantial improvement, though they are better than a year ago, but they record the significant fact of a very large import of raw material. The tendency to expansion of trade has not yet begun appreciably to affect wages or prices. Our index number, it is true, rose substantially during November, but chiefly owing to a rise in cotton, and in that case the movement was due to the fear of a shortage, and has not since been fully maintained. The cost-of-living figure is slightly rising, but not more than to the usual seasonal extent.

So far as foreign countries are concerned, there is a tendency to speak of a halt in the upward movement in the United States, but reports on this point are by no means unanimous. The situation appears to be that, in spite of the large volume of production in the past twelve months, there has been no accumulation of stocks in the United States. The volume of demand remains high, and is likely to continue in the present state well into the next year. A time will come when America will turn her attention to export, but for the moment her internal demand is an ample one, and, in any case, her costs are too high to make her competition serious in most of the world's markets. In South America there are several signs of improvement. In the matter of nitrate sales, crops in the Argentine, and even to a small extent in the Brazilian coffee trade, things are on the up-grade. Reports from India are more optimistic than for some time past, and even in Chinese trade there are a number of articles in which greater activity is being shown. There is no sign of a set-back in any of the British Dominions, which for several months past have been improving markets for British trade. When we come to European trade, there are one or two evidences of actual improvement. In Germany itself the check to the catastrophic depreciation of the currency—though it will only be temporary unless German finances are quickly taken in hand—has made it more practicable to do business during the last six or eight weeks. The condition of French industries is irregular, a recovery in the iron and steel trades being offset by uncertainty in textiles. The re-starting of the Ruhr industries had made Holland a little more hopeful, and in most other countries, though not in all, there are signs of a quiet improvement. So far as European trade is concerned, however, the real reason for a more optimistic outlook is the hope that the change in French policy and the setting up of the new Reparations Committee may lead to a settlement, or, at all events, to conditions under which more normal trade may become possible.

The following notes on conditions in various trades and countries call attention to some of the most striking tendencies :— (Continued on page 2.)

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 1.

HOME INDUSTRIES.

Iron and Steel.—That the increase in activity, noted a month ago, has fully maintained itself is the more gratifying in that conditions at this time of year—with the Christmas holiday season and the closing of many firms' books in prospect—are not normally conducive to expansion in production. This year the occurrence of a General Election might also have been counted a disturbing factor, but there is very little evidence in the trade reports of any marked upset from this cause. During November 10 additional furnaces came into blast, the daily output of pig-iron rising by $\frac{3}{4}$ per cent. That of steel rose to a still higher degree. Pig-iron prices at the moment are fairly steady, but the temporary equilibrium between supply and demand would be upset if foreign demand became more prominent in the New Year. Steel prices have advanced,

partly owing to shipbuilding contracts which are being taken in hand now that the protracted boilermakers' dispute has been settled, partly owing to substantial orders received and expected as a result of home and foreign railway requirements. Certain large steelworks have orders sufficient to ensure full-time working for the next three months. The tinplate trade is still very busily employed, with overseas demand as brisk as ever, Germany being a fair buyer at the present time. Scotland has benefited by the resumption of work in the shipyards; Sheffield has had a recrudescence of orders in connection with Christmas cutlery sales; Birmingham hardware firms have received a similar seasonal benefit. The turn of the year is generally regarded with chastened, but not altogether ill-founded confidence.

(Continued on page 8.)

ARGENTINA'S TRADE BALANCE.

THE annual analysis of Argentina's balance of payments compiled by Señor Carlos A. Tornquist, postponed owing to the delay in the production of the Republic's official foreign trade returns, has now been published in the "Review of the River Plate" for the two years from October 1, 1920, to September 30, 1922. The following is the result arrived at:—

BALANCE OF PAYMENTS.

ASSETS.		
Items.	\$ Gold.	
Exportation.....	1,389,460,000	
Issues by already established companies.....	17,500,000	
New capital.....	38,000,000	
Convention with France and England—Amortisation ..	83,680,000	
Convention with France and England—Interest	5,610,000	
Correspondents abroad	1,470,000	
Interest on foreign bonds.....	5,000,000	
Sale of Argentine bonds.....	22,050,000	
Expenditure of foreign travellers in Argentina	9,500,000	
Decrease in gold stock	18,700,000	
Loan in United States	66,000,000	
Credits obtained by the State Railways	22,200,000	
Exportation of foreign bonds	6,500,000	
Sale of ships	4,300,000	
Total	1,689,970,000	
In round figures.....	1,690,000,000	
LIABILITIES.		
Items.	\$ Gold.	
Importation	1,504,760,000	
Service of the Public Debt	87,100,000	
" " Cédulas Hipotecarias	13,950,000	
Railway companies' dividends and interest	100,300,000	
Earnings of other capital.....	66,400,000	
Remittance and savings of foreign residents in Argentina.....	68,000,000	
Expenditure by Argentine travellers abroad	43,000,000	
Argentine bonds repatriated	63,130,000	
Foreign mortgage capital repaid.....	2,000,000	
Other capital repaid or remitted.....	3,400,000	
Interest paid to England	3,940,000	
Aid to Austria.....	2,250,000	
Municipal short term loan	1,650,000	
Total	1,959,880,000	
In round figures.....	1,960,000,000	
Assets	1,690,000,000	
Adverse balance	270,000,000	

ECONOMIC RESULT OF THE BALANCE OF PAYMENTS.

	\$ Gold.
Adverse difference of the balance of payments	270,000,000
United States loan	66,000,000
Convention with France and England—Amortisation ..	83,680,000
Credits obtained by the State railways.....	22,200,000
Decrease in the stock of gold	18,700,000
Total.....	460,580,000

Against this there appear the following items in favour of the country:—

	\$ Gold.
Argentine bonds repatriated—On balance	41,080,000
Capital repaid	5,400,000
Reproductive imports (construction materials, railway materials, &c.).....	40,000,000
Total	86,480,000

Thus, there has been a decrease in the national patri-

	\$ Gold.
mony of—	460,580,000
Less	86,480,000
An actual decrease of	374,100,000
In round figures.....	374,000,000

Señor Tornquist claims that an adverse balance of payments is not in itself necessarily unfavourable to the economy of the country, but goes on to say that "the result this time, however, is particularly unfortunate for the Republic, because the 'liabilities' side of the present balance represents only to a small extent a permanent economic asset to the country, which means that during the two years the country was unable to create surpluses wherewith to acquire Argentine securities or to pay off debts abroad, so that the debit of the balance of payments is for the first time likewise, in great measure, an economic debit for the country. Furthermore, on the 'assets' side of the balance, there figure items which constitute financial obligations, or which signify the liquidation of credits accorded to foreign countries in previous years. I refer more particularly to the loan of fifty million dollars contracted in the United States, which is set down at 66 million gold 'pesos' in the balance, and to the sum paid off by the Allies against the outstanding balance of their loan of 200 million gold 'pesos,' accorded by the Banco de la Nación at the end of the war—this figuring at 83,680,000 gold 'pesos.'

"If I confine myself to the adverse result shown by the present balance of payments, to explain which we require a real and effective offset, I have to suppose that a considerable proportion of the merchandise imported into the country came in without its cost being paid at the time of arrival, or in cash. I believe, moreover, that a certain amount of money yielded by the sale of securities for foreign account, as well as other foreign credits, remained provisionally in the country, either deposited in banks or invested in 'cedulas,' awaiting the appreciation of our gold 'peso'—in order thus to avoid the loss which would have been occasioned by transferring the funds in the depreciated state of exchange of our monetary unit. Furthermore, this same depreciation of our gold 'peso' is an infallible sign of the passive state of our economic relations with foreign countries. We have an additional proof of this, to a certain extent, in the volume of our foreign trade. Whereas for the economic year of 1920-21 the balance of trade showed a deficit of nearly 123 million gold 'pesos,' for the year 1921-22 there was even a small balance in favour—of something over seven million gold 'pesos.' Thus, the 'passive' state of our economic situation in relation to foreign countries and the depreciation of our gold 'peso' actually operated towards a state of equilibrium. It can be said, indeed, that this adverse economic situation of the country undoubtedly contributed to bring about a decrease in the value of the imports, which dropped from 837 millions in 1920-21, to 668 millions in 1921-22.

"I hope that the result, so very unfavourable for the country, to which the present study has conducted me, and which places the economic deficit in the period of two years at 374 million gold 'pesos,' will attract the attention of our public men, and will convince them that we cannot longer maintain this passive attitude, which disorganises the national economy and renders any foresighted action impossible."

THE ECONOMIC POSITION OF GERMANY.

By DR MORITZ ELSAS.

Now that Germany is definitely beaten in the Ruhr struggle, the time for a really wise solution of the Reparations problem seems at last to have arrived. With this end in view, it is essential to find the solution to two main questions. Firstly, what can Germany pay? and, secondly, can Germany make any payment at all in the near future? The following considerations may assist the reader in forming an opinion on these two points.

NATIONAL WEALTH OF GERMANY.

In 1913, according to Helfferich's calculations, the national wealth of Germany stood at 310 milliards of gold marks. The area of the Reich, which was 54,875 square kilometres in 1914, is now only 47,270 square kilometres. It thus appears that Germany has lost 13 per cent. of her territory in consequence of the Treaty of Versailles. The last census, which was taken in 1919, showed a total population of 59,852,000 as against 64,926,000 in 1910. This represents a loss of about 10 per cent. in total population. If we assume that the national wealth has been reduced in proportion to the reduction of population, consequent on territorial concessions made by Germany, we must subtract 10 per cent., that is to say, 31 milliards of gold marks from Helfferich's total. In addition the value of Germany's possessions abroad, lost as a consequence of the Peace Treaty, can be estimated at about 20 milliards of gold marks. At the same time an allowance must be made for the great reduction in the value of house property in Germany, which has resulted from the "socialisation" of dwelling-houses and other buildings. This amounts to at least three-quarters of the total. The value of immovable property before the war was estimated at about 75 milliard gold marks. From this we must deduct at least 10 per cent. for the ceded territories, leaving 67½ milliards. From this latter, again, a 75 per cent. deduction on account of the fall in value of this class of wealth gives us a further reduction of 50½ milliard gold marks to be made from our pre-war estimate. On this basis, therefore, the total German national wealth cannot possibly be greater than 208½ milliards of gold marks.

These calculations have, however, left several important factors out of account. For example, not only has the rent control policy almost completely put a stop to fresh building activities, but it has also made repairs to existing houses almost impossible, as it does not now pay landlords to make any expenditure whatsoever on capital account. Further, we have taken no account of German capital which has been exported abroad, and which is hardly likely to be available for use within the country in the near future. Similarly, the establishment of the perty in the Ruhr, and especially the establishment of the French "Régie" on the railways in that district, has been left entirely out of account. In consequence of all this we cannot possibly reckon the national wealth of Germany at more than two-thirds of the pre-war level. In any case, the figure of 208½ milliard gold marks represents the absolute maximum, and even this figure is almost certainly much too high.

GERMAN NATIONAL INCOME.

The pre-war (private) national income was estimated at between 40 and 41 milliards of gold marks. After allowance is made for territorial losses the equivalent figure would be from 36 to 37 milliard gold marks. Revenue from public receipts was calculated at about 2½ milliards. By the middle of 1921 the German national income was at the most 10½ milliards, and by the end of October, 1921, the total income could only have been about 13.9 milliard gold marks.* This fall in total income was a result in part of the unfavourable balance of trade, but, above all, of the enormously diminished income of workers, employees, officials, and the professional classes.

No figures take any account whatsoever of the loss which results from the export of German capital abroad, and as the Ruhr occupation has almost completely destroyed the very basis of German economic life, the national income can certainly not be placed higher than in

* See Elsas: Indexziffern, Jahrgang 3. Heft 2.

1921, when it stood, taking it through and through, at some 16½ milliard gold marks.

BALANCE OF TRADE.

As no value figures of imports and of exports are available for the past year a comparison is only possible on the basis of "weight" figures:—

	Imports.	Exports.
Monthly Average of.	Million Tons.	Million Tons.
1913.....	6,784,792	6,849,567
1922.....	3,830,000	1,800,000

It will be seen, then, that imports have fallen to something over a half, and exports to just about a quarter of the pre-war level.

BUDGET.

The expenditure of the Reich for general administrative purposes, as also that for communications (railways, &c.), remains exceedingly high. Between November 1st and 10th it stood at 57.9 trillion marks, while the total from April 1st to November 10th was 64.9 trillion marks. Revenue receipts, on the other hand, were only 1.6 trillion marks in the ten days November 1st to 10th, or, in other words, 2.8 per cent. of the expenditure during the same period. From April 1st to November 10th of this year revenue, at 1.7 trillion marks, was only 2.6 per cent. of expenditure.

TAXATION.

The yield from taxes is still relatively very small, despite the fact that taxes are now levied in stable values (i.e., in gold marks). This has already borne very heavily indeed on commerce and industry, and has led to the closing of factories and the wholesale dismissal of employees. Direct taxes are levied up to a maximum of two-thirds of gross income, and even the working classes, who are not assessed in other industrial countries, pay from 7 to 9 per cent. of their income. In consequence it does not seem possible to do much by increasing indirect taxes, with the possible exception of duties on some luxury articles like tobacco and alcoholic liquors.

SITUATION OF GERMAN INDUSTRY.

The internal purchasing power of the mark has not merely adjusted itself to the external level, but since the end of November actually stands about 30 per cent. lower. In consequence it is no longer possible to produce cheaply. This state of affairs is due in part to coal prices, which are well above the world market level (about the middle of October they stood at double the pre-war figure), and in part to railway freights which are also far and away above pre-war levels.

The position is made much worse owing to the general situation of the labour market, for unemployment is increasing by leaps and bounds. Between August 1st and November 1st the number of unemployed rose seven-fold, while the number of men working short time increased nine-fold. On November 15th the total of workers in the former category was 1,249,855, and in the latter 1,772,108.

CONCLUSION.

It is clear from what has already been said that the whole economic life of Germany is passing through an exceptionally severe crisis, and commerce and the export trades are alike suffering severely from its consequences.

The question as to what Germany can pay in the form of reparations thus appears, for the moment, to be a credit question. In other words, what credit can Germany obtain in order to make payments in the immediate future? Out of this arises the further question as to the extent to which other countries stand to gain by forcing on Germany an excessive burden, and in this connection it is worth noting that the uncertainty of this burden is probably even more important than its actual magnitude in overthrowing the economic and financial balance of the country. Germany can only fulfil the obligations imposed upon her by reducing still further the standard of living of her working classes. For no single one of the countries having economic relations with her—not excepting either France or Belgium—can this be an advantage, while for many it can only represent a very serious loss.

THE STATE OF TRADE AT HOME AND ABROAD—Continued from page 2.

Coal.—A correspondent writes:—In the coal industry both output and employment remain good. For the week ending December 1st 5,719,200 tons were raised, while for the three preceding weeks the figures were 5,726,300, 5,574,100, and 5,571,900 tons. Only on six occasions during the present year has the weekly output figure stood at less than 5 million tons, and at least four of these weeks have included public holidays. Employment has reached the peak figure of 1,181,400 wage-earners, which is a record for the industry. House coal has advanced in price from 1s to 2s per ton, owing to the recent spell of cold weather and the neglect on the part of the public to take advantage of the low prices ruling in the summer. Best qualities are in very active request, and it is anticipated that, should there be a severe winter, a shortage of such coal will ensue, and that prices will be further increased. Fog on land and rough weather at sea have been responsible for wagon shortage, and the consequent congestion of traffic between pit and ports. Another contributory factor to the shortage is the demand for extra facilities for dealing with the Christmas goods trade. The demand for manufacturing fuels is increasing slightly, especially in the heavy trades, although there is a disinclination to arrange contracts over long periods. Blast-furnace coke is not quite so strong as it has been recently, but the outlook is regarded as being brighter than for some time. Export business has been retarded by bad weather and a scarcity of vessels at many ports.

Engineering.—Among favourable aspects of the present situation may be cited: revived activity in ship-repairing on the Clyde, following the restoration of normal labour conditions; the extraordinary demand for wireless apparatus, from which the electrical industry is deriving much profit; and the reported placing of certain Japanese orders with Lancashire engineering concerns—though there is no indication that substantial amounts are involved as yet. On the other hand, progress is slow in many other sections, in many of which—the boiler trade, for instance—there is a good deal of leeway to be made up.

Cotton.—The prospects in the Lancashire cotton industry, states our Manchester correspondent, have been very adversely affected by the important developments in raw material prices during the past month. At the beginning of December there was a slump in values, and, as is usual in a falling market, buyers of yarn and cloth withdrew all offers. Since then violent fluctuations have occurred in futures, and it has been quite impossible to restore confidence. Everybody is now waiting for steadier conditions. The turnover in cloth has been distinctly smaller than in November, and there is a tendency for manufacturers to lose ground again. Spinners of American yarns have abandoned organised short time, which was in operation to the extent of 50 per cent. from March to the end of November. The Oldham Master Cotton Spinners' Association, however, has decided to recommend the members to close their mills for a full week at Christmas. Business in both American and Egyptian yarns at the moment is very slow, and numerous spinners are producing more than they are selling. The less favourable outlook is very largely due to events in the raw cotton markets of the world, and the feature of recent trading in futures has been extensive gambling by people outside the trade.

Wool.—Crossbred wool and tops continue to occupy the centre of the picture. Prices remained very firm in November, and large quantities of wool were disposed of in the markets. Yarn-makers evinced reluctance to advance quotations correspondingly, but, with the depletion of stocks based on cheaper raw material, prices for yarns advanced, though not to the same extent as those for wool. According to the *Journal of the Bradford Chamber of Commerce*, "the trade is passing through a period of lean margins." The export trade remains very satisfactory, Chinese demand being fully maintained, in spite of disorganised political conditions. The drapery and clothing trades are experiencing seasonal activity, which seems to be on a somewhat larger scale than last year's.

Hosiery and Lace.—Conditions are uneven, and, in spite of Christmas demands, the volume of production is not apparently as large as might have been expected some months ago. The busiest sections are those producing "fancy" goods.

Linen.—The outlook is brighter, with inquiries on a larger scale, though a good many works are still employed considerably below capacity. Belgian competitors seem to have their hands full at the moment, and Belfast houses are ready to benefit. Irish flax is in keen demand.

Chemicals.—As regards heavy chemicals, any movement there may be is towards slightly improved conditions. With the temporary elimination of Continental fine chemical supplies, the home industry has been markedly active, with prices firm.

Leather, Boot and Shoe.—The boot trade has been the gainer by the advent of wintry weather, and the loser, to some little extent, by the occurrence of the General Election, which upset retail trade in some areas. Export trade continues to expand.

Pottery.—The recent wave of activity appears now to have subsided, and quieter conditions are forecasted for some weeks ahead.

UNITED STATES OF AMERICA.

Conditions on the whole are much firmer than the somewhat irregular opening of the autumn "cycle" seemed to indicate. Towards rapid expansion there is no tendency whatever, nor are orders being placed far ahead. On the other hand, the volume of "short" orders is certainly not unsatisfactory, and the majority of plants are fairly busy, with no necessity for accumulating large stocks. Although iron production in November fell below 100,000 tons a day for the first time this year—a decline of 23 per cent. from the "peak" in May—prices are now steadier, and there is general expectation of a substantial recovery in demand early next year. Railroad buying continues to develop along favourable lines. Cotton production has increased, though it is still much below capacity. Satisfaction is expressed with the improvement on the agricultural side during the last three months, the average price of all crops having steadily risen. According to the Federal Reserve Board, basic production increased by 3 per cent. in October, wholesale trade by 7 per cent., retail by 6 per cent., and mail order business by no less than 47 per cent.—a reflection of greater farm prosperity. Steady conditions seem likely to continue well into the spring.

SOUTH AMERICA.

Argentine crops are in good condition, and cutting has commenced in the North. Chilean nitrate sales have lately been larger than in previous periods of the current year. The recovery in nitrate markets during 1923 is demonstrated by an increase of nearly 100 per cent. in Chilean Customs revenue in the first ten months of 1923, as compared with 1922. Brazilian trade on the whole continues slightly better, as evidenced by a small improvement in the exchange. Peruvian conditions are steady, but a fresh outbreak of revolutionary conditions in Mexico renders the immediate outlook uncertain.

THE BRITISH EMPIRE.

Canadian trade is more or less marking time. The excellent harvests of this year may certainly be expected to bring about increased demand from the prairie provinces before next summer, but as yet such demand is little in evidence. Prospects in the lumbering industry are good. Mining production has been considerably greater in 1923 than 1922, but that of manufactured goods slightly less. Reports from India—which has lately been importing gold very freely—are decidedly more hopeful, and the reviving confidence of importers is believed to be based on substantial demand in the interior of the country. Cotton prices have advanced, tea is firm, and though the jute cultivator has not obtained a very high price for his product this year, the jute industry is in a prosperous condition. As usual, climatic conditions in Australia show many contrasts. Western Australia and Tasmania have had good seasons, floods have occurred in parts of the country, while in pastoral areas of New South Wales and Queensland complaints have been heard this spring of inadequate rainfall. The general position is, however, much better than last year, and the maintenance of high wool prices is giving rise to much optimism. South African gold production in October was the largest for over ten years, and fell off to a small extent only in November. 1924 seems likely to open with brighter prospects for South Africa than did 1923.

EUROPE.

The German situation is slightly, but not materially, better. Comparative stability in prices has for a time been obtained, but production costs remain high. In occupied Germany profitable operation of the various plants is hampered by the heavy taxation charges contained in the French agreements, unsatisfactory communications, lack of raw and semi-finished materials in some cases, and the need for putting machinery and equipment into good order after lying idle for some time. French iron and steel production is forging ahead. The silk market is stagnant, and cotton unstable. As regards wool, Roubaix is active, but elsewhere a certain tendency to curtail production is noticeable. Belgian trade is quieter, the possible return of the Ruhr to the ranks of producer causing some amount of apprehension. Italian conditions remain fairly satisfactory. In Spain an attempt is being made to influence the Directory in the direction of increased protectionist duties, and a "nationalist" industrial policy generally. Swedish iron production has lately been steadily rising. Norwegian production is affected by uncertain labour conditions and high labour costs. Danish constructional industries are well employed. Unemployment in Austria has diminished during the last few months, and trade is brisker, though some industries are hampered owing to insufficient raw material supplies.

CHINA.

Chinese trade shows remarkable vitality in the face of distressing political conditions. The demand for Bradford goods has lately been considerable, and cotton piece goods have also been actively dealt in. Declared exports from Shanghai to the United States in the first nine months of this year exceeded those of the same period in 1922 by more than 20 per cent.

THE CASE FOR FREE TRADE

Britain Gaining Ground	6		

It is so long since the public gave serious thought to our fiscal policy that no apology is needed for restating the case for Free-trade in its simplest terms, and illustrating the underlying principles of foreign trade by the facts of recent experience. The arguments for Free-trade as contrasted with the policy of Trade Restriction are partly economic and partly political, and may be summarised under these heads:—

SUMMARY OF THE CASE.

ECONOMIC.

Foreign trade is the exchange of goods (or services) which a nation is better fitted to produce for those which it cannot produce so efficiently. It is, in effect, the result of international division of labour, analogous to division of labour between individuals. It leads to a greatly increased production, and is a benefit to both parties.

This exchange cannot be one-sided—that is to say, exports cannot continue without corresponding imports except as a loan, in which case the imports will come later, when the interest has to be paid.

Great Britain lives by exchange to a greater extent than any other great country. Normally, 30 per cent. in value of the goods and services produced in Great Britain are exported in exchange for imports. Indeed, the physical resources of these islands could not maintain a population of 47 millions in any other way.

Exports include not only merchandise, but also the work of the British mercantile marine, while the commercial activities of London are also among the most important of our exports, by means of which we buy our necessary imports. The prosperity of these activities depends now, as it has always depended, upon the maintenance of free markets.

To restrict imports means curtailing the ability of our customers overseas to purchase our goods and services. It would compel capital, enterprise, and labour now engaged in export business to try to find occupation in supplying the home market. Particular trades might benefit, but the total production of the country would be diminished, employment as a whole reduced, and the standard of living lowered.

The policy of Trade Restriction is therefore a policy of impoverishment. Under Free-trade, in spite of all the difficulties of the times, the standard of living in Great Britain is the highest in Europe.

These arguments are not rendered invalid by the disturbances resulting from the war. Events show:—

(1) That we have more than maintained our normal share of the world's overseas commerce by the comparative lowness of our cost of living (which has enabled us to reduce the real costs of production).

(2) That though the depreciation of currencies may exercise a disturbing effect on prices, and moment-

arily stimulate a country's exports, internal prices soon rise and the advantage in selling abroad disappears.

The tragedy of unemployment, however, remains, in consequence of the reduced volume of world trade and the small volume of commerce sailing the seas. This particularly affects shipping and shipbuilding. The greater part of unemployment is in export trades or those dependent upon shipping.

This, so far from being cured, would be aggravated by a restriction of imports. It is obviously impossible to transfer Labour and Capital from these trades to others without a great loss of efficiency, fixed capital, acquired skill, &c. We cannot mend the troubles of Lancashire by fostering the home output of lace, silks, cinema films, or even fine chemicals.

POLITICAL.

Imperial Preference is not of practical importance as a remedy for unemployment. The duties at present proposed by the Government are on unimportant commodities, and it is therefore idle to imagine that the scheme can cause a great expansion of Dominion markets for the benefit of Great Britain.

This Supplement can be obtained in pamphlet form from "The Economist" office, 3 Arundel Street, Strand. Price 3d.

Terms for Quantities by Arrangement.
(Ready Wednesday, November 21st.)

It is equally idle to suppose that the Dominions are prepared to see an enormous increase in their purchases of British manufactures. On the contrary, their tariffs are designed to create their own home industries. British goods have a preference in the colonies, it is true, but this means that while British goods pay, say, a 20 per cent. duty, others pay a 30 per cent. duty. The recent changes of colonial tariffs, even after allowing for the preferences granted, have meant a rising duty on British goods. In view of the determination of the Dominions to establish their own industries, the idea of "Free Trade Within the Empire" is outside the sphere of practical politics.

Recent statistics show that, in spite of these preferences, our exports to the Dominions remain the same proportion of our total export trade as in the decade before the war. On the other hand, the Dominions have been supplying us with an increasing proportion of our total imports.

The argument that while it is a good thing to have Free-trade, we can only attain it by putting on a tariff to use as a weapon to push down other people's tariffs is belied by history. The raising of tariffs provokes yet another layer of bricks on the tariff walls of neighbouring countries, and frequently leads to tariff wars. The history

of the last 30 or 40 years shows that we have been at least as successful as Protectionist countries in securing favourable terms for the entry of our goods.

A more hopeful method of lowering tariff walls is to use our diplomatic and financial position to encourage greater freedom of commerce in Europe, and to continue to serve as the chief inspiration of those sections of opinion abroad which are constantly striving, sometimes successfully, sometimes unsuccessfully, to modify the restrictive policies of their respective countries.

Indeed, it is only possible to develop a policy of political co-operation between nations if there is some degree of economic co-operation. Free Trade in economic affairs is the counterpart of the work of the League of Nations in political matters. They stand as a joint policy against the alternatives of Protection, competition in armaments, and aggressive nationalism.

These points are expanded and illustrated in the following pages.

THE BANKERS' MANIFESTO.

ONE of the best short summaries of the general case for Free Trade is to be found in the appeal of the great bankers of the City of London, issued in May, 1921. It reads as follows:—

"A hundred years ago, in a time of depression following a great war, the merchants of London presented to Parliament a memorable petition against the 'anti-commercial principles' of the restrictive system then in force. To-day, moved by the same anxieties, weighed down by far heavier taxation, and face to face with proposals intended to renew the restrictive methods of the past, we submit that it is essential to the revival of confidence that no legislative or administrative measures should be taken which would diminish the total output of British industry or check the free exchange of British goods.

"The burden of taxation can only be lightened if the necessity for public economy is resolutely faced. The present rate of national expenditure threatens to cripple the country's resources and to impair its credit abroad. In our judgment, it is more than the commercial community can bear, more than the capacity of the nation can afford, more than, were proper economies effected, the nation need be asked to sustain.

"The system of Government regulating trade by licences, controls, and departmental orders has, admittedly, however well intended, had in many cases unfortunate results. Political interference with the natural course of commerce without regard to economic laws invariably does mischief. British trade needs nothing so much for its recovery as freedom to deal with its own difficulties, to study and provide for its own interests, and to work out its own salvation.

"It is as true as it was a hundred years ago that foreign commerce conduces to the wealth and prosperity of a country by enabling it to import the commodities which other countries are best able to supply, and to export in payment those articles which from its own situation it is best adapted to produce: that freedom from restraint is calculated to give the utmost extension to foreign trade and the best direction to capital and industry: and that the maxim of buying in the cheapest market and selling in the dearest, which regulates every merchant in his individual dealings, is the best rule for the trade of the whole nation.

"The policy of trying to exclude the productions of other countries, with the well-meant design of encouraging our own, cannot increase the volume of commerce or the total volume of employment here. But it may well compel the consumers, who form the bulk of our population, to submit to privations in the quality or quantity of the goods they buy. The importation of foreign goods does not diminish the activities of our people, because such goods can only be paid for by the

produce of British capital and labour. The advocates of a restrictive system are too apt to lose sight of the elementary fact that nations, or rather individual members of nations, buy foreign goods because they need them, not to benefit others, but to benefit themselves, and pay for them by producing goods which the foreigner in his turn requires. We cannot limit imports into this country without limiting our export trade, and striking a grave blow at the world-wide commerce on which this island kingdom principally depends.

"Trade is exchange. No nation which lives by trading with others can prosper unless other nations prosper too. We hold to-day great stocks of goods. We are ready to manufacture more. There is a large and insistent demand for them abroad. But owing to the paralysis of Continental commerce—due in part to the restrictive barriers which the new States have set up between themselves—the would-be buyers of our goods have not the means to pay for what they want. We have to build up the market that we need by encouraging Continental nations to export to us. For it is only by exports that they can re-establish their credit and provide funds for the payment of their debts. In such a situation we believe that all expedients to control and hamper imports into this country, whether by licences, tariffs, or any other means, can only retard improvement in the Continental exchanges and prevent the natural recovery of trade. Legislation of this nature, while it may increase the profits of a few selected industries, cannot fail to check our output as a whole, and to increase the costs of production to a level which may make it increasingly difficult for British traders to compete successfully with others in the markets of the world.

"With party or political considerations we, as bankers, are not concerned. But in the interests of British industry and commerce, now menaced by anxieties which it would be a profound mistake to underrate, we desire to enter a respectful protest against every restrictive regulation of trade which tends to diminish the resources of the State.

The signatories make an imposing array of the most weighty names in the City. In view of the fact that some among the leaders of the present tariff campaign pronounced tariffs to be "madness" only last year, but have changed their minds in the last twelve months, we have taken steps to ascertain whether the signatories of this Free Trade Appeal still adhere to the opinions therein expressed. Two of them have died since 1921 and some are temporarily absent from London, and the very short time available since immediate dissolution was announced has made it impossible for us to get in touch with all the remainder. But the Right Hon. R. McKenna answers our inquiry by saying:—"I do not withdraw. The Free Trade case as stated there has not changed." Lord Inchcape, Mr Henry Bell, and the Hon. R. H. Brand reaffirm their signatures to-day; Sir Charles Addis also reaffirms, and adds "more now than in 1921." Mr Beaumont Pease adheres to the general principle of the Manifesto. We have no doubt that these reaffirmations are representative of the general attitude not only of the signatories, but of the great majority of the commercial community of the City of London. This bankers' appeal was three months later specifically endorsed in a manifesto signed by a lengthy and comprehensive list of business men and business firms, including names representative of the great staple industries—cotton, wool, and other textiles, coal, iron, and steel, machinery and engineering, shipbuilding, chemicals, building, railways, shipping, and import and export trade.

HOW IMPORTS PAY FOR EXPORTS.

THIS manifesto is based on the axiom that every export must be paid for by an import, unless it takes the form of a loan, and even that must lead to compensating imports later on. But this balance is struck not merely by goods, but by all services which we do for customers overseas, including the use of our capital. This fact is illustrated for our own country in the following statement of the real trade balance of the United Kingdom for last year. The figures in it are those compiled by the Board of Trade. A similar computation made by the *Economist* last February showed results slightly less favourable to this country, but in presenting our case throughout this supplement we have decided to rely entirely upon official figures:—

The NATIONAL TRADE BALANCE-SHEET, 1922.

	Imports. Million £.	Exports. Million £.
Bullion	44	58
Merchandise	1,008	824
Interest on investments	25	200
Shipping Payments	30	140
Commissions †	..	30
Balance of miscellaneous services ..	..	10
Available for investment abroad ..	155	..
	1,262	1,262

* Interest payments on debt to U.S.A.

† Earned abroad by bankers, brokers, insurance companies, &c.

Some of these items may be puzzling to the layman. In the third line, "interest on investments," the £25 millions entered on the import side represent interest payments on the British debt to the United States, while the £200 millions entered under exports is the official estimate of the income derived from British investments in overseas countries. The item shipping payments also calls for explanation. The gross earnings of British shipping for 1922 is officially estimated at £140 millions. But certain deductions and additions have to be made to that figure. The cost of bunkers and stores purchased abroad, and other disbursements at foreign ports, have to be deducted, while similar payments in our home ports on account of foreign shipping have to be added, before the amount entering into the international balance of trade can be determined. On this account a sum of £30 millions is placed in the import column, as against the gross shipping earnings of £140 millions. The entry "commissions" denotes the earnings of bankers, brokers, insurance companies, &c., in transactions abroad. The final result of the balance-sheet is that our year's trade left us with £155 millions available for investment abroad, as compared with an official estimate of £138 millions in 1907, £153 millions in 1910, and £181 millions in 1913. The improvement in the volume of trade and the greater activity of shipping, to which reference is made elsewhere, lead to the expectation that the balance figure for 1923 will be higher.

RAW PRODUCE FOR MANUFACTURES.

THE greater part of our imports of merchandise consists of food and raw material; and even the goods classed by the Board of Trade as manufactures contain many that are the raw material of other industries. Indeed, in the figures for 1923, though it appears that the imports retained at home amounted to £191 millions in the first 10 months, there are included nearly £14 millions of copper, pig-lead, tin in blocks, and zinc (which are manufactured in the sense of having been smelted from their respective ores), £3½ millions for undressed hides, and £26 millions for petrol, lubricating oil, turpentine, &c. A close dissection of the returns would show that these instances could be multiplied. But, taking only the goods that we have specifically mentioned, and transferring these to the class of raw materials, we get the following statement of the classification of net imports and exports in the first ten months of this year:—

TRADE STATISTICS for 1923 to DATE.

	Net Imports.	Exports.
Food	397.8	35.2
Coal	..	84.5
Other raw material	239	25.7
Manufactures	148.7	482.6

This table, which shows the same sort of proportions as the figures for any other period that might be taken, brings out clearly that while there is a certain interchange

of manufactures, our essential food and raw material imports are mainly paid for by exports of coal and British manufactures, the balance being covered by the earnings of our commerce and mercantile marine.

IMPORTANCE OF BRITAIN'S EXPORTS.

THIS dependence on exports and on shipping for essential food and materials, is the outstanding fact of British economic life. Its extent is without parallel among the great nations of the world—indeed, as unique as is the density of our population per square mile of territory. Its significance, however, is not apparent from the figures given, and we have therefore invited Dr Bowley to make an examination of the relation between British exports and the total national income. It is, of course, obvious that most people are engaged in what may broadly be described as "home occupations." But Dr Bowley's estimate given in the pages of this week's *Economist* indicates that in 1913 "£600 millions income (30 per cent. of the aggregate of home-produced income) depended directly or indirectly on foreign trade." To-day the estimate is lower, the proportion being not much more than 25 per cent.

Looking at the question from another angle, the same investigator concludes that in 1913 rather more than half the expenditure of the average working-class family on food was spent on imported food—though, as part of the cost consisted of handling and transport on this side, the proportion of expenditure which went to imported food "at port of arrival" was 36 per cent. of the total. The figure for the present year is down to about 30 per cent.

Even these percentages, however, do not tell the whole story. With so large a proportion of the national income earned by foreign trade, a check to these activities reacts throughout the whole economic system, for the loss of income—which means loss of consuming power—by this great section of the community spreads its influence like the ripples in a pond throughout the home industries of the country. Unfortunately, a stimulus—artificial or otherwise—to these home trades cannot set the export industries going again. This can only be done by a recovery of exports, which, in turn, can only be achieved (a) by the revival of buying power on the part of our customers abroad, and (b) economical production on our part, which will enable us to secure an adequate proportion of the available trade.

The folly of supposing that any such substantial transfer could take place is evident, not merely from general figures, but from consideration of any of these main trades which constitute our main resources of purchasing power abroad. Thus in the case of cotton it was estimated that before the war 80 per cent. of the cloth produced by Lancashire was exported and 20 per cent. consumed at home. Production is now somewhere about 65 per cent. of machine capacity, and with home consumption not much changed as compared with ten years ago, the proportion sold in this country may have risen to 30 per cent. of the present restricted output, which still leaves 70 per cent. of present production for export.

Again, in the case of iron and steel, about one-half the production of the country is directly exported. About one-half the remainder is used in machinery, ships, and various other articles which are themselves exported. Thus some 75 per cent. of the output goes abroad, directly or indirectly.

Or again, if we take the coal trade, which has to supply all our varied domestic needs for warmth, light, and power out of a production which is at present at the rate of 276,000,000 tons a year, 100,000,000 tons is exported (including coal used in ships' bunkers); but a further 40,000,000 tons of the amount consumed at home is used by the iron and steel industry, which, as we have seen, exported 75 per cent. of its produce. A large proportion of the remainder is for other industries engaged in export, while actual domestic consumption accounts for about 40,000,000 tons. It is perfectly evident that the minor industries which might be fostered by a tariff could not possibly provide for the coal trade an alternative market to the main coal-using industries dependent upon export.

Finally there remains the case of shipping, which, as we

have shown, contributed last year £110,000,000 net to the national income. It is clear that if every country in the world were to follow the principle of making itself self-supporting by a policy of trade restriction our shipping would disappear. British ship-owners have always recognised that their welfare depends upon the exchange of goods between nations being as large as possible. In a recent memorial by the Chamber of Shipping in connection with the Colonial Conference, it was pointed out that even though a preference be given, the fact that the colonies retain tariffs against us reduces our commerce with them, and if we impose duties for whatever purpose it also will limit the amount of goods to be carried at sea. Moreover, to the ship-owning community the carriage of coal is of the utmost importance, but this is not to any considerable extent sold to the dominions. "So long as the tariff policy of the Dominions is based on the protection of their home industries, neither our purchasing power nor the total volume of our inward cargoes could be increased by the preference we gave; whilst, on the other hand, the difficulty of selling our coal, which forms 80 per cent. of our outward cargoes, would be increased to the extent to which we ceased to accept in exchange food and raw materials from the countries which were ready and willing to buy our coal."

IMPORTS AND UNEMPLOYMENT.

THE Prime Minister, however, ignoring the teaching of economic science, the opinion of the leaders of the business world, and the evidence of facts that imports are the means by which our customers pay for our exports, believes that unemployment can be cured by restricting imports. It is, therefore, relevant to analyse our imports, and to see what connection they have with unemployment. In order to avoid the appearance of arguing from ancient history, we have taken the latest available figures—those for the first ten months of 1923, and set them class by class with their corresponding exports, those classes in which we import more than we export being printed in italics:—

IMPORTS AND EXPORTS OF ARTICLES "MAINLY OR WHOLLY MANUFACTURED," January to October, 1923.

	Imports (Less Re-exports). Mln. £.	Exports. Mln. £.
Coke.....	8.3	8.3
Glass.....	6.2	10.1
Iron and steel.....	11.3	62.3
<i>Non-ferrous metals.....</i>	<i>18.1</i>	<i>12.2</i>
Cutlery.....	4.7	6.1
Electrical goods.....	1.8	6.9
Machinery.....	6.8	37.4
Wood and timber.....	3.5	1.5
Cotton goods.....	5.6	148.9
Woollen goods.....	8.5	53.1
<i>Silk goods.....</i>	<i>15.8</i>	<i>1.7</i>
Other textiles.....	9.8	19.8
Apparel.....	13.3	22.1
Chemicals.....	10.1	21.4
<i>Oils, fats, &c.....</i>	<i>27.0</i>	<i>5.7</i>
<i>Leather and manufactures.....</i>	<i>8.7</i>	<i>4.7</i>
<i>Paper, &c.....</i>	<i>10.7</i>	<i>7.1</i>
Vehicles.....	5.6	24.0
Rubber manufactures.....	3.9	4.4
Miscellaneous.....	19.4	25.2
Total.....	191.1	482.6

There are 14 groups in which exports exceed imports, the exports amounting to £450 millions, against imports of £107 millions. The classes are coke, earthenware, glass, &c., iron and steel and manufactures, cutlery, electrical goods, machinery, cotton and woollen goods, other textiles, apparel, chemicals, vehicles, rubber manufactures, and miscellaneous manufactures. To this list we must add coal and shipping as industries mainly or entirely dependent upon export. In the six groups in which imports predominate, the figures are, exports £32.8 millions, and imports £83.8 millions. But as already pointed out, the latter figures include £13.8 millions in respect of non-ferrous metals in a non-fabricated condition, and £27 millions in respect of oils, &c., which we cannot produce at home. The seven groups are non-ferrous metals, wood and timber, silk goods, oils, fats, &c. Leather and manufactures thereof, and paper and cardboard. These figures

may be compared with the numbers returned as unemployed. The Ministry of Labour's schedule is not entirely comparable with that of the trade figures, but we have arranged the figures in a number of groups. The first roughly corresponds with the trades which are primarily export trades; the second is a group of purely home industries; a third corresponds with trades in which there is a preponderance of imports, while the fourth are difficult to classify.

NUMBERS UNEMPLOYED at the END of SEPTEMBER, 1923.	
Trades in which there is a Preponderance of Exports.	Home Industries.
Shipbuilding and ship repairing.....	Building.....
Coal mining.....	Public works, &c.....
Iron and steel.....	Hotel, &c., services.....
Engineering.....	Commercial, &c.....
Electrical trades.....	Rail and road transport.....
Cutlery.....	Canals, docks, and storage.....
Cotton.....	Printing and publishing.....
Woollen.....	Bread and biscuit making.....
Other textiles.....	Distribution trades.....
Chemicals.....	Government.....
Rubber.....	Gas, water, &c.....
Earthenware, glass, &c.....	Professional and entertainment.....
Shipping service.....	
698,337	395,018

Trades in which there is a Preponderance of Imports.	
Non-ferrous metals.....	35,311
Woodworking.....	20,951
Silk goods.....	3,586
Oils, grease, &c.....	6,571
Leather goods.....	7,938
Paper, &c.....	9,405
	83,762

Total unemployed..... 1,344,667

Thus, other trades account for a balance of 167,550 unemployed, including motor vehicle and aircraft construction, 23,662, tailoring, dressmaking, &c., 57,574, tobacco and cigarette manufacture, 3,074, food and drink industries, 25,486.

The classification we have made is admittedly a rough one. But unemployment in the trades in the first group is overwhelmingly due to the lack of foreign markets, and not to foreign competition, and there is no prospect of improving employment by enlarging the demand at home. Professor Bowley, in the *Economist* of November 17th, asserts that "nearly half the existing unemployment may be attributed directly to failure of exports." On the other hand, the existence of bad trade in these branches means reduced demand in what may properly be called internal occupations, which are equally not subject to the influence of foreign competition. The general conclusion is plain. A reduction in unemployment can only be achieved by an expansion in the export trades. Our exports can only be expanded by encouraging our customers to send us goods in payment for them. At present the volume of imports is much below the pre-war level, and the imposition of tariffs can obviously only work in the direction of checking the inflow of goods, thereby definitely killing all hope of improving the volume of our export trade, from which, as we have shown, the employment position so largely depends. **Our trouble is that we have not enough imports.**

No Free-trader will deny that Protection may benefit a particular trade. But this benefit is obtained only so long as the Protection is not applied all round, and is only secured at the expense of the nation as a whole. **The controversy between the two fiscal systems is in short between those who see no farther than the immediate interest of the particular section they are considering, and those who are primarily concerned with the general well-being.** The case is well illustrated by the example of the British motoring industry to-day. Many seem to think that this is an example of successful Protection. The simple fact is that motoring would be substantially cheaper if the duty on cars were removed, and though British makers would have very severe competition to meet the great strides that have been made since the war in applying large scale methods to the motor industry by certain leading firms should enable them to hold their own. But this is only a part of the argument. The popularisation of the motor car in recent years has not made nearly such strides in Great Britain as in some other

countries, notably in the United States and Canada, where motoring has been cheapened not by Protection, but by efficient mass production and by cheap petrol. With a car costing £60, and petrol at sevenpence a gallon, outside of large American factories you will see vast parks, not of bicycles, but of workers' cars. As motoring is cheapened in Great Britain, a similar development will occur, and even if no cars were originally built here, the volume of employment in looking after and repairing the cars and in developing our roads would be immense.

No manufacturer enjoys competition, but in economics, as in nature, efficiency and strength follow from competition and the struggle for existence. Under the stress of competition, those who make goods for sale have to use their best wits and energy to turn them out good and cheap. Restrict competition, and we invite them to be less keen and efficient. The proof of the pudding is already to be tasted in the eating. Dyes are protected by the wisdom of our rulers, and ladies complain that the dye of their gloves comes off on to their hands. The writer of these lines owns a hat with a band that was black when he bought it, but after a week or two's wear was decorated with a wavy edging of dirty white. The shopkeeper who sold it, when this unconvenanted benefit was pointed out to him, expressed regret politely, and explained that it was due to the use of British dye. No one believes that our dye makers could not, if they liked, produce a dye that would stand weather; but being comfortably esconced behind a wall of Protection they naturally, human nature being what it is, sell us stuff that we would not have been seen out in when we enjoyed the blessings of Free Trade. Perhaps Mr Baldwin hopes to cure unemployment by making us buy a new hat every week, but this expensive system seems likely to check our demand for other kinds of goods. Under Protection we are treated to bad and slovenly workmanship, offered at most unattractive prices, and we can take it or leave it. In Free Trade days the best goods of all countries came to the English market, and British producers sold the best that they could produce.

THE CANDLE-MAKERS' PETITION.

BASTIAT'S parody of the Protective fallacy may be *vieux jeu*, but so is Protection; and if our rulers propose to feed us on mildewed straw, as Mr Lloyd George pleasantly put it, we have the right to answer them with logic that is as old as their effort, and likely to be much more effective. Bastiat, then, in his *Sophismes Economiques*, translated and published under the title "Fallacies of Protection" (Cassell and Co.), gives a petition to the Chamber of Deputies, alleged to have been presented by the Manufacturers of Candles, Wax Lights, Lamps, Candlesticks, Snuffers, and of the Producers of Oil, Tallow, Resin, Alcohol, and generally of Everything connected with Lighting. This petition complains of the intolerable competition of a foreign rival who "absolutely inundates our national market" with light at a fabulously reduced price. This rival is the sun, and the petitioners pray for the exclusion of sunshine by the shutting up of all openings, holes, clefts, or fissures by which it enters houses. The petitioners show that if this is done all forms of French production will be encouraged. More tallow consumed will mean more oxen and sheep, and there will be multiplication of meadows, meat, wool, hides, and above all, manure—the basis and foundation of agricultural wealth. Navigation is to hum; thousands of vessels will proceed to the whale fishery, and France will rejoice in a navy capable of maintaining her honour. "Only have the goodness to reflect, gentlemen, and you will be convinced that there is, perhaps, no Frenchman, from the wealthy coalmaster to the humblest vendor of lucifer matches, whose lot will not be ameliorated by the success of this our petition." This parody is nearly 80 years old, but it is an amazingly close echo of Protectionist bleatings of to-day.

DEPRECIATED CURRENCIES AND FOREIGN COMPETITION.

THE reader may perhaps find it difficult to accept our demonstration that unemployment is primarily due to depression in our export industries and to the reaction which this depression has upon home trade, rather than to a flood of imports, for, in view of the depreciation of all European currencies, it is commonly assumed that a depreciated currency gives a great advantage to exporters. This is only partially true. When the currency is depreciating, prices inside the country rise less rapidly than the fall in the value of money, and wages move upwards still more slowly. The producer who sells in foreign currency gets a much larger margin of profit than usual, and can afford to under-sell other producers. The chief of these advantages is, of course, the low real wages of his workpeople. But as soon as the prices of raw materials, wages, and costs generally rise sufficiently to counter-balance the depreciation of money his advantage goes, and far from being in a favourable position, he is faced with a series of handicaps owing to the internal disorganisation and the lowered efficiency of labour while real wages were low, and the general insecurity of credit. Hence, although many have foretold that the depreciation of German currency would lead to a flooding of the world's market, and particularly of the great open market of Britain, this has not yet come. For what published figures are worth, they show that the highest monthly average attained in any year since the Armistice was 1,796,000 tons, as compared with 6,143,000 tons before the war. Since, however, some Reparations coal appears to be left out of the post-Armistice figure, it is safer to leave coal out altogether, when we find that the comparison is between 1,259,000 tons in 1922 and 2,455,000 tons in 1913. On the other hand, surprising though it may seem, Europe has of necessity been compelled to buy largely from Great Britain. In order to bring the figures right up to date, we have taken only the first nine months of each calendar year. On this basis, the figures are as follows:—

	Imports from Europe. Mln. £.	Exports to Europe. Mln. £.
Jan. to Sept.		
1914.....	209.8	122.1
1921.....	236.8	166.9
1922.....	218.2	197.2
1923.....	256.5	199.2

Thus while imports from Europe are up 22½ per cent., exports are up by about 63 per cent. Facts are even more striking if we take corresponding figures for France and Germany:—

	France.		Germany.	
	Imports From. Mln. £.	Exports To. Mln. £.	Imports From. Mln. £.	Exports To. Mln. £.
Jan. to Sept.				
1914.....	33.0	20.3	47.2	24.5
1921.....	44.7	35.6	15.6	12.3
1922.....	38.7	42.3	18.7	24.4
1923.....	47.7	43.5	25.5	33.0

In the case of France, our exports have more than doubled, but imports are only up 50 per cent. In the case of Germany the normal adverse balance of pre-war days has been converted into a large balance on the other side. These exports have been paid for partly by those people who were foolish enough to throw their money away by investing in marks, partly by those wiser people who made their investments in Germany in real estate, and partly by the disposal of the remains of German capital abroad.

It would, of course, be foolish to pretend that foreign competition has not been a disturbing element in the recent trade situation. The import of foreign goods has been fitful and often at prices which have caused a sudden break in confidence here, and because of the hesitating and uncertain outlook in the commercial world it has played a part quite disproportionate to its volume. The most striking illustration of the nervousness in trade circles is that of the woollen trade, but the figures of which are so remarkable that they are worth repeating:—

TRADE in WORSTED and WOOLLEN TISSUES (in Million Sq. Yds.).

	Imports Retained at Home.	Exports.
Full year— 1913	76	220
Full years— Average of 1920, 1921, and 1922 ..	9.9	189
1923—First quarter	4.5	54
Second quarter	4.3	48
Third quarter	6.3	57
Nine months' total	15.1	159

The trouble with the wool trade is not that French goods are being sold in great volume instead of British goods in this country, for the above figures show that imports of foreign woollen goods are now only a fraction of the pre-war volume. The difficulty is that home demand is small and the market in certain particular lines easily upset by a few imports.

In this connection it is an interesting fact that though several complaints of alleged dumping have been made, only one has reached the stage of an inquiry under the Safeguarding of Industries Act, and in this case no Order was made. As for the provision of the Act to meet cases of competition from countries with depreciated currencies, in connection with which two Orders have been made, the fact is that when the depreciation is in an acute phase a duty not of 30 per cent., but of 300 per cent. is needed, while perhaps a week later the passing advantage will have disappeared. Australia, with a truer realisation of the constantly changing character of depreciation, invented a sliding scale, under which the rate of duty varies according to the percentage by which the mark or franc, or whatever the currency may be, is below par. The futility of the whole proceeding is, however, illustrated by the fact that the schedule of the Australian Act only runs in the case of Germany from the normal 20 marks to the £ to 240 marks to the £, after which the duty is a flat rate. The rate to-day is—within a mark or two—20,000,000,000,000 to the £. If it were true that the depreciation of the mark were a bonus on exports to the whole extent of the depreciation, the scheme might have something to be said for it, though it would be as useful as building a garden fence to keep out a tidal wave. But this and all such schemes are based on a false assumption, and ignore the fact that the bonus on export only exists when the depreciation is actually occurring, and even then is subject to counteracting disadvantages. Moreover, when depreciation proceeds so far that confidence in the national currency itself is lost, home prices tend to rise even above the world level, as has frequently been the case in Germany recently. In any case, after the experience of the last few years, the transitory nature of the advantages of a falling currency is fully realised, and is generally discounted in advance.

THE DIFFICULTY OF DIVERTING TRADE.

WHILE the statistics show that currency depreciation abroad has had a much smaller effect on trade than has often been expected, the figures have in them a lesson which is no less significant, namely, that the cataclysm of the war which is said by protagonists of the trade restriction policy to have created an entirely new world situation, has left the distribution of British foreign commerce practically unchanged.

The issue of the *Board of Trade Journal* of November 8th shows the distribution of our overseas trade by groups of countries in the form of percentages of imports and British exports from various sources for the year 1913 and for the twelve months ended September 30, 1923:—

	Imports.		British Exports.	
	Year 1913.	Oct., 1922, to Sept., 1923.	Year 1913.	Oct., 1922, to Sept., 1923.
Europe	40.4	33.2	34.4	54.2
United States	18.4	19.6	5.6	8.0
South and Central America	10.0	10.8	10.6	8.8
British India	6.3	6.0	13.4	12.2
Self-governing Dominions	13.3	16.3	17.5	18.0
Other British countries (except Hong Kong)	5.3	5.3	5.4	5.7
Other countries	6.3	8.8	13.1	13.1

The decline of European productive power is illustrated by the reduced percentages of our imports from the Continent, but is primarily to be accounted for by the fact that Russia has dropped out of the running. The gap has been filled by the United States, the British Dominions, and some other foreign countries. But apart from this substitution the changes in proportion are astonishingly small.

The lesson of these facts is clear. The commerce of the world has become so complex and interwoven that any interruption or break in the circle on one point reacts right round the globe. This interdependence was well illustrated last January by Mr McKenna in his address to the City and Midland Bank shareholders, in which he analysed for the year 1913 the trade of England, India, and Germany. In that year, he pointed out, the United Kingdom sold to India goods of the value of £70 millions, and we received from her goods valued at £36 millions—leaving an export excess of £34 millions. In the same year our exports to Germany were valued at £41 millions, and our imports from that country at £76 millions—leaving an import excess of £35 millions. "If for the purpose of foreign trade we were to take India and Germany together as one group, then in dealing with this group our imports and exports in 1913 almost balanced. It was only an accident that there was this close approximation, but we were certain to find some approach towards equality. Looking at the figures of trade between India and Germany in that year, we see that India's exports to Germany were £27 millions and her imports from that country only £7 millions. India had an excess of exports to Germany of £20 millions, and the surplus she thus obtained provided her with the means of paying for British goods." An examination of the whole of our external trade would reveal a similar interdependence of nations.

The moral is clear. The causes affecting our foreign trade are too deep-seated to permit of any hasty diversion of their normal channels. It is as futile to suppose that export industries which have lost their market in this or that country can simply send their goods elsewhere, as it is to hope that we can find an outlet for their produce at home. Unless we are to have a radical alteration of our whole economic system, involving years of dislocation and alteration of our productive processes, the cure for our present difficulty is to be found in the steady increase in the total of the world's commerce, and by the encouragement here of economic and cheap production, which will enable us to retain, and even to enlarge, our proportion of the total.

BRITAIN GAINING GROUND.

FORTUNATELY there is evidence that this is happening. A month ago Mr McKenna made the following statement in a speech at Belfast:—"I have had prepared a statement of the export trade of the United Kingdom for the ten years from 1903 to 1912, and a statement of the total export trade during the same period of 39 countries, including Dominions and all the principal countries of the world in which regular statistics of trade are published. We may fairly speak of the exports of these 39 countries as world exports.

"During these ten years the British proportion of the world's export trade remained fairly constant. The lowest percentage was 13.8, the highest 15.5. In the first year, 1903, the total of world exports was valued at £2,110 millions, and the share of the United Kingdom was 13.8 per cent. In the last year of the period world exports had risen to £3,521 millions, and the share of the United Kingdom was 13.8 per cent. Thus, while world exports increased £1,400 millions in value, the United Kingdom year by year received its due share of the increase, and, as the prosperity of the world grew, the prosperity of the United Kingdom grew with it. We had our rivals and competitors during the whole of this period, but we never failed to get our full proportion of the world's trade.

"Here I have given you an account of the growth of our trade during the last pre-war years. Now I ask you to look at the post-war figures of our exports, and again to compare them with world exports. In 1920 our exports were 18.1 per cent. of the total; in 1921, owing to the

protracted coal strike, they fell to 16.2 per cent.; but in 1922 they rose again to 17.3 per cent. I do not give you the actual figures, but only the percentage relation of one set to the other, because the immense rise in prices in 1920 and the subsequent fall vitiate for comparative purposes all figures of foreign trade measured in values. Here we see that our proportion of the export trade of the world had risen from 13.8 per cent. in 1912 to 17.3 per cent. in 1922. The havoc in several of the manufacturing countries of Europe and the crippling of some of our rivals were accompanied by an increase in our proportion of the world's exports from 13.8 to 17.3 per cent."

These figures are encouraging. Even though the trade of the world is handicapped by the chaos in Central Europe, by the disappearance of Russia, and by the political break-up of China, the volume of the world's trade is slowly rising, and all indices of trade condition show improvement in Great Britain. The case of the trade restrictionists must make its appeal by taking a pessimistic view of the future of British trade. But the following series of representative figures show that in the last three years considerable progress has been made:—

IMPROVED TRADE INDICATIONS, 1921-23.

	Period Covered.	Unit.	1921.	1922.	1923.
Production—	Monthly Average	Thou. Metric Tons.	13,822	21,235	23,359
Coal	"	"	222	415	634
Pig-iron	"	"	314	494	720
Steel ingots and castings	"	"	"	"	"

Total merchandise & mineral traffic	"	"	"	"	"

* Includes also due proportion of claimants to benefit in respect of short time.

These figures refer to calendar years. A similar trend is shown if we take the statistics of the last few months.

BRITISH EXPORTS.

	July.	August.	Sept.	October.
Coal	6,767,255	6,580,410	6,316,396	7,432,868
Iron and steel manufactures	307,670	323,877	333,985	388,599
Cotton yarns	9,514,400	12,802,800	11,987,100	14,733,500
Cotton piece goods	316,083,600	329,945,600	344,318,800	371,289,700
Woollen tissues	14,625,200	14,014,100	13,688,700	12,119,900
Worsted tissues	5,611,400	5,002,300	4,302,700	4,256,700

In the case of woollen and worsted tissues alone do the figures show a declining tendency, the reasons for which are referred to elsewhere in this Supplement.

The official figures of shipping engaged in the overseas trade show an expanding tendency, as will be seen below:—

	July.	August.	September.	October.
Entered	4,627,724	4,529,402	4,366,689	4,798,412
Cleared	5,539,837	6,047,339	6,079,990	6,534,479

Even unemployment has shown less increase than was predicted for the autumn. The percentage of unemployed among all workers coming under the Unemployment Insurance Act was 11.4 at September 24th, as compared with 11.1 at the end of June, the trade union percentage having in the same period risen rather less—namely, from 11.1 to 11.3. The latest tendency is not in the direction of further decline.

Coal output is maintained at a high level, well up to that of the pre-war period, while steel production (ingots and castings) rose from 639,500 tons in August to 702,100 tons in October. This latter figure, though still below the highest output since the war, compares with a pre-war monthly average of only 639,000 tons.

Lancashire spinning spindles, which for several months have been working at 65 per cent. of capacity, have during the last few days increased their production to 70 per cent. of the maximum.

THE MORAL.

THE conclusion from the facts is simple, and has never been better expressed than by Mr Austen Chamberlain in a speech made last year, in which, after expressing his satisfaction that in cases where duties were levied by this country we gave a preference to the colonies, he added the following words:—

"But I say to you, also, that it would seem to me perfect madness to think that in a world so altered from that in which we were acting in before the war—in a world where what you want is not to defend yourself against competition, but to find anyone who is in a position to purchase your goods, and to place orders with you—and with a country that has smarted, and very naturally smarted, under the evil effects of those Government controls and interferences in industry unavoidable in war, but proved a great source of difficulty to us both in their existence, and in the necessity to get rid of them since the war concluded—in such a world and in such a country to go out with the old programme of Tariff Reform at this time seems to me perfect madness."

THE INTEREST OF THE CITY.

A GLANCE at the Stock Exchange Official List, crammed with securities of all climes and countries, should be a sufficient argument to convince any open-minded person who doubts as to whether Free-trade is good for the City, and his conviction would be still more emphatically confirmed if he could turn over the contents of the portfolios of the discount houses. The City maintains its great population with a standard of prosperity that is the envy of humbler centres, because its bankers, financiers, accepting houses, discount houses, produce merchants, and all the subsidiary industries that live on them have assisted in the financing of world development, world production, and world trade. British capital has been poured out all over the globe, increasing its productive power, and British credit supplies all the world, through our acceptance and discount machinery, with unrivalled facilities for financing the period between production in one part of the earth with consumption in another. Any restriction on the free passage of goods between one country and another, and especially across the borders of Great Britain, the great *entrepôt* of international trade, tends at the same time to restrict the profits of the City, which earns so much of its livelihood from the free movement of goods and of capital and of credit. The City's inhabitants, being an eminently patriotic and free-handed community, would, no doubt, be ready enough to run some risk of lessened profit if they were convinced that trade restriction could really

be a cure for unemployment. On that score they will be very fully satisfied, by other pages of this *Economist*, that trade barriers as a cure for unemployment are as useful as a blocked road for the furtherance of locomotion. This doubt once settled, and the interests of the City left free to exercise their full influence, their weight will be wholly on the side of Free-trade. London's business has been built on international trade and the international connections, in finance and credit, that trade has brought with it. **To lend money to all the world and then try to restrict our imports is to invite all our debtors to repudiate their obligations, by making it difficult and expensive for them to pay their debts by the only means by which international debts can finally be paid, namely, by the delivery of goods and services.** For the present it is understood that we only propose to tax manufactured articles, and so all those to whom we have lent money to produce food and materials will not, at first sight, be directly affected. But the manufacturers, shut out of our market, will, if the proposed tariff be at all effective, be less eager buyers of food and material, and examples have lately been plentiful that show how trade dislocation, wherever it may be, has an effect that spreads in widening circles and makes itself felt in most unlikely places. British investors and financiers having given hostages to fortune by lending money all over the world would indeed be blind to their interests if they favoured any policy that restricted the paying and purchasing power of the customers whose solvency affects their own prosperity so closely. In fact, the interests of the City are so international, that this country has been accused of following a bankers' and financiers' policy in allowing borrowers to come here for money and leaving them free to spend it wherever they like. It is true that is a bankers' policy, because our international banking has often got financial business in competition with foreign centres owing to the absence of restrictions on the spending of the money lent. But bankers are not so shortsighted as to favour a policy which would be bad for British trade and their home customers, and in practical fact we cannot lend money abroad without stimulating our exports. There is no need to restrict borrowers in this respect, because when they borrow in London they, or somebody else to whom they hand the credit on, can only take the proceeds in British goods and services. As the City editor of the *Times* aptly observed in discussing this question lately, we lend British legal tender, and it can only, ultimately, be spent in Great Britain. **By restricting the movement of British capital we increase unemployment by restricting British trade. By restricting foreign trade we do likewise, and tariff tinkering can only have the effect of leaving the City with fewer loans to float, fewer securities to deal in, and fewer bills to accept and discount.**

THE CASE OF AGRICULTURE.

THE case of agriculture is the simplest example of the advantage to this country of international exchange, for by selling manufactures or by performing services we can get food much cheaper—that is to say, by a less expenditure of labour and capital, than if we tried to grow it all ourselves. Every commodity could, of course, be produced in Great Britain with a sufficient expenditure of human effort, but we could only make ourselves self-supporting at a ridiculously high cost of labour. In practice the Protectionist argument is that we should grow a little more food at home. This result may be achieved either by tariffs or by subsidies. The tariff method would impose a tax upon four-fifths of our wheat supplies for the benefit of the remaining fifth. Such a tax would certainly bring revenue to the Exchequer, but to put a duty upon the most necessary means of livelihood would be the negation of the first principle of taxation, namely, that taxes should be imposed in proportion to the taxpayer's ability to pay. The Government has, however, fought shy of a tax on food for self-evident reasons. But it could not leave the matter there. For to impose a tariff which would raise the price of manufactures, and leave agriculture alone, would emphasise in too blatant a manner the weakness of all tariffs, mainly that they benefit one section at the expense of another.

Agriculturists do best when prices of food and raw materials are high, and prices of all other commodities and particularly of manufacturers, are low. At the moment all over the world the opposite of this is the case, agricultural products being cheap, and other goods proportionately dearer. The conflict of interest between agriculturists and manufacturers has reached its climax in the United States. A recent writer in the *Round Table* describes the revolt of the middle-west owing to "the greatly reduced purchasing power of the farmers, who comprise about one-third of our population caused by a decline of prices of farm products to below the pre-war level, while prices of most other things remain from 50 to 100 per cent. above pre-war level." And again, "those who now persuasively plead with him that his state cannot be improved by Act of Congress, told him in 1921 that it could, when the Tariff Act was passed. Effective duties were imposed to protect the manufacturer, and these duties raised the price of the commodities which the farmer had to buy. Ineffective duties were imposed on inconsiderable agricultural imports which, he was assured, would keep the price of his grain at a level with the increased cost of his requirements. In spite of these duties, the bottom has fallen out of the wheat market. And when the representatives of the farmers' interests demand in radical and rebellious language that their grievance must be seriously attended to they mean that they have been fooled for the last time."

Agriculturalists might therefore be expected to resist to the utmost Mr Baldwin's tariff proposals, unless they could get some counteracting benefit. And here we may observe that the agricultural claim is not merely that it may be enabled to keep its end up as against the industrial population, but should itself be given special privileges for two reasons, both of which seem to us unsound. They are that we need to expand our home-grown food supply because of possible dangers in war-time, and the other is that the agricultural population contributes most to the nation's physique.

The war-time argument assumes that this country can be isolated more completely than in the late war. But by what possible enemy? Moreover, modern war is a very complex affair. If Great Britain were cut off from overseas supplies, what of our essential imports of iron ore, copper, nitrates for explosives, &c.? The late war confirmed in a most striking way the lesson of previous wars; namely, that it is imperative to our existence that our ships should keep the seas, and if we cannot do this we cannot hold out. We should be surprised to learn that the views held before 1914 by the Royal Commission on Supplies in Time of War and the Committee of Imperial Defence have been modified by subsequent events.

As to the argument from physique, the unsatisfactory physical conditions of our urban population are not a necessary consequence of industrial employment, but due to the bad conditions of our towns and factories. There is no reason why the industrial worker in properly planned factories, with a garden attached to his house, should not be physically as fit as the agricultural labourer. His mental equipment is likely to be greatly superior.

But if the price of manufactures is to be raised by a general tariff, the agriculturalist will undoubtedly have a grievance, which the Government proposes to solace by a subsidy, the funds for which are to be raised by the revenue from the general tariff. But the object of the tariff is to keep out imports, for unless it does this, it will not increase employment in this country, even in the protected trades; if it succeeds in keeping out imports, it will not yield revenue. In practice, unless the tariff is made very high, it will probably fail of its object, and the goods will be imported in spite of the tariff, for our manufactured imports are mostly goods for which there is a special market. In any case, the public will pay the subsidy. **For if the tariff proves to be revenue-producing, the public will pay in increased prices. If not, the taxpayer must find the subsidy from an increase in existing taxation. If we insist on producing the necessities of life at home at greater cost than if we bought them abroad, there is no device which can prevent the added cost being a burden on the resources of the community.**
