First six months, 1922	Imports.	Exports.	
" " 1923	2,013.4	2,207.8	
" " 1923	2,520.7	2,133.9	

The State timber auctions resulted in higher prices everywhere except in East Finland, the increase being attributable to the rivalry of Finnish firms and combines in Central Finland and Ostrobothnia, and to competition between important Swedish saw-milling concerns in the northern districts.

The following table shows the total number of trunks for which bids were taken or rejected, and the average figures of accepted bids:—

	Bids Accepted.		Bids Refused.	
	No. of Trunks.	Average Price per Trunk, 1923.	No. of Trunks.	Average Price per Trunk, 1922.
Northern	181,185	35.21	25.85	235,133
Ostrobothnia	473,851	29.22	18.51	238,595
Western or Central ..	260,447	63.91	57.16	10,942
Eastern	74,579	54.16	55.89	662,975
	990,062		1,147,645	

The bids made for the 2,137,707 trunks offered for sale, with some pulpwood and birch, amounted to 64,954,894.40 F.marks, while the bids accepted totalled 41,728,729.60 F.marks. In addition, 66,604 cubic metres of props and pulpwood and 2,523 cubic metres of birch and alder were disposed of. It is expected, moreover, that the Forestry Department will be able to effect sales of timber direct to purchasers later in the year.

The Budget for 1924 is now receiving the consideration of the Financial Committee of the Diet, and the Government's proposals will be laid before the Diet in October. The task of the Finance Minister has been on this occasion comparatively easy. Not merely has expenditure in 1923 been covered by revenue, but it is anticipated that the Treasury's reserve, which amounted to 683 million marks at the end of 1922, will have considerably augmented when the present financial year closes. The estimates of income and expenditure are as follows:—

	1924.
	F.Marks.
Ordinary revenue	2,730,688,650
Extraordinary revenue	1,201,000
Total	2,731,889,650
Ordinary expenditure	2,283,333,485
Extraordinary expenditure	448,446,358
Surplus	69,807
Total	2,731,889,650

The anticipation of an expansion of revenue in 1924 rests largely upon the experience of the present year, in which receipts from various sources have exceeded expectation. As regards expenditure, appreciable savings have been effected as a result of the rise in value of the Finnish mark and the fall in prices. Land taxes are to be reduced, the exemption limit for income and property taxes raised, company taxation lightened, and certain small taxes which have special importance for the rural population will be lightened. The new Budget, however, shows an increase of 82.7 million F.marks in ordinary and 15.6 million F.marks in extraordinary expenditure, an increase due partly to the exigencies of national defence, and partly to extension of more remunerative works.

The stringency of the money market continues, and there is little expectation of a reduction in the rate of discount. The reports of the State Bank show that home loans have been larger than in 1922, and in the private banks the excess of loans over deposits has been increasing. Since 1919 it is estimated that more than 300 million marks have been invested in the electrification of the country districts, and that since 1917 new emissions of capital for industrial purposes have amounted to over 200 million marks. The state of the labour market is satisfactory, all skilled workers being readily absorbed by industry. In Helsingfors building operations, after a lock-out which lasted for six weeks, have been resumed and are making good progress. The cost of living index rose by 12.1 points in June and by 2.2 in July to 1110.7. Rents increased in June, and the index for wood fuel rose from 1345.1 at the beginning of the year to 1501.4 in July. On the other hand, articles of clothing have become cheaper, and the index number for food has fallen from 1107.9 in January to 1002.5 in July.

The unsatisfactory conditions of rural life in Finland, which rendered some measure of agrarian reform absolutely indispensable, are presented with remarkable vividness in the cold ink of official statistics. In 1901, of 478,142 families living in the rural districts of Finland, only 110,629, or approximately 24 per cent., owned land, while, of the remainder, 160,525,

HARRISONS & CROSFIELD, LTD. 1-4, GREAT TOWER ST., LONDON, E.C.3. THE COMPANY INVITES COMMUNICATIONS FROM BRITISH MANUFACTURERS DESIROUS OF DEVELOPING BUSINESS IN THE FAR EAST.

or approximately 33 per cent., were tenants, and 206,988, or 43 per cent., were landless. Of the estates, which made up the total cultivable area, 26.4 per cent. were small holdings of less than 125 acres; 57.2 per cent. were of moderate size (125 to 625 acres); 15 per cent. were large properties (625 to 2,500 acres); and 1.4 per cent. were very large estates of over 2,500 acres. Excluding land owned by the State, only 4.4 per cent. of the cultivable area was held in small holdings, as against 39.3 per cent. in holdings of medium size; and 38.7 per cent. in larger holdings. The very large properties, despite their relative numerical insignificance, accounted for no less than 17.6 per cent. of the total agricultural area. A Bill was prepared by M. Kyösti Kallio, the Minister of Agriculture, in 1921, which, after being first submitted to the electorate, was passed by the new Diet, and ratified by the President of the Republic on November 25, 1922. This law, which is popularly known as the "Lex Kallio," contemplates the creation of two forms of holdings, one for the purposes of agriculture and the other for the provision of housing accommodation. An agricultural holding is defined as a holding which shall include so much arable land as can be worked in a satisfactory manner by a family of medium size, depending entirely upon its own labour, with a maximum of 50 acres, exclusive of such forest land as may be necessary for the needs of the family. A housing allotment, on the other hand, includes sufficient land for the raising of vegetables and fruit for the use of the household. These holdings will be provided in the first instance from the properties of the State, and secondly, by voluntary purchase from the Ecclesiastical and Communal authorities, and public or private persons. Where these means fail, land for purposes of colonisation may be purchased compulsorily from public companies or private owners. The purchase price of the land may be paid in cash in advance, in State bonds bearing 7 per cent. interest, or in cash and bonds. The occupier of an agricultural holding or building lot will repay the redemption money to the State in annual instalments amounting to 7 per cent. and 9 per cent. respectively. This law crowns the legislative efforts of a generation to solve the gravest problem in the social economy of Finland. If it achieves its purpose the landless population will become contented peasant proprietors, and the political stability of the nation will rest upon a broader and securer basis than it has ever occupied in the past.

SWITZERLAND.—THE LEAGUE ASSEMBLY—THE ITALO-GREEK AFFAIR—A UNANIMOUS DECLARATION—DRAFT TREATY—HUNGARIAN RECONSTRUCTION.

(FROM OUR CORRESPONDENT.)

GENEVA, October 1.

THE prolonged debates of the Council of the League of Nations on the procedure by which the constitutional and juridical points arising out of the Italo-Greek affair shall be settled, concluded just before the close of the Assembly, and the communication to the Assembly of the Council's decision led to a scene which must be unique in the annals of diplomacy. By a unanimous vote, including that of Signor Salandra of Italy, the Council made a formal declaration that any dispute between members of the League likely to lead to rupture is within the sphere of action of the League, and that if such dispute cannot be settled by diplomacy, arbitration, or judicial settlement, it is the duty of the Council to deal with it in accordance with the terms of Article XV. of the Covenant. This, though it seems somewhat like an affirmation that the Covenant is the Covenant, is, nevertheless, an important step, for though six weeks ago every member of the League would have regarded it as ridiculously unneces-

sary, the importance of it may be gauged from the fact that it required a great deal of persuasion to get the Italians to assent, for it looks dangerously like admitting the competence of the League where they have denied it. However, what they mean to say—curious though it may seem—is that they always have observed the Covenant, and their challenge is on the interpretation of the Covenant.

On acceptance of this declaration, which Lord Robert Cecil pressed as a reaffirmation of the essential principles of the League for the reassurance of public confidence, the members of the Council agreed to refer to a special committee of jurists for report to the December meeting of the Council the five questions on the interpretation of Articles XII. and XV. of the Covenant, on the question of rights of coercion, and on the responsibility of States for political crimes against foreigners committed on their territory, instead of insisting on at least some of these questions going to the Permanent Court of International Justice. Mr Branting made a stout reservation that, in his view, the questions should go to the Court, more especially that of a State's responsibility for political crimes, in view of the last decision of the Ambassadors' Conference compelling Greece to hand over the £500,000 to Italy, but he did not press it against the general agreement of the Council. When this decision was reported to the Assembly, Mr Branting mounted the platform amidst prolonged applause, and in more definite form repeated his criticism of the decision of the Ambassadors' Conference and the reference of the questions to a committee of jurists instead of to the Court. Lord Robert Cecil, who followed him, was in general agreement, though he claimed that they had to do what they could, and the arrangement, which was reasonably satisfactory, did not rule out ultimate reference to the Court.

Delegate after delegate from the small States in the Assembly emphatically affirmed their complete belief in the competence of the League, and the reception which they had, one after the other, showed that they obviously voiced the confirmed opinion of the vast majority of the delegations. Denmark, Holland, Finland, the Irish Free State, Persia, Colombia, Norway, and South Africa addressed the Assembly in varying terms of emphasis, and though, with India, they generally, if somewhat reluctantly, acquiesced in what the Council had done, they left no doubt about their real feelings on the fundamental points. The full Italian delegation sat throughout this demonstration, but made no effort to defend Italy against the mass attack. The Assembly did, in the end, prove itself to be the focussing point for the general public opinion of the world, and for the first time expressed itself plainly on the attitude of those who, while the leading powers in the League, thrust it aside in the interests of the old game. The whole story ought to strengthen vital interest in the League.

The profound differences on the subject, of which I wrote in my last letter, have not been disposed of, and what has finally happened is that the Treaty, with the various reservations and the various suggestions and commentaries, is to be forwarded to the Governments with a request for their views, and in view of the variety of opinions it seems scarcely possible that this particular Treaty will ever be put into force. Its value lies in the exploration of the ground in the hope that the time will become ripe later on for some general agreement.

It at last seems certain that the financial restoration of Hungary will come before the League. Negotiations in Geneva between the Little Entente and Hungary have resulted in a resolution of the Council, in which Dr Benes participated, giving authority to the Secretariat and the Financial Committee of the League to take up the study of the matter in view of the request to do so which is expected from the Reparation Commission. This has been done in order that the Financial Committee may go straight ahead without waiting for further authority from the Council, and so have its conclusions ready for the December meeting. The Council has decided that all decisions in the matter shall be taken unanimously, including the votes of Hungary and the Little Entente who will sit in the Council when the subject is under consideration. The Council has also set on foot the scheme for the settlement of Greek refugees on a productive basis, so that two

more valuable pieces of reconstructive work by the League in Europe are now within sight. On the Greek scheme the Greek Government has undertaken to transfer to a Settlement Commission appointed by the League land suitable for settlement, and the Government will hand over to the Commission the proceeds of the loan which it is to raise and of any provisional advances, including the million pounds sterling already offered by the Bank of England. The service for the interest and amortisation of the loan will be guaranteed by certain Greek revenues, the proceeds of which will be controlled by the International Financial Commission, which has for many years controlled the receipts of monopolies, &c., for the service of the external Greek debt.

Letters to the Editor.

THE SPANISH REVOLUTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Allow me to pass a few remarks on your interesting article on "The Revolution in Spain," which appeared in your issue of the 22nd ult. It is strange that among British people a misapprehension should exist when judging the effects of the Spanish revolution.

I should not call it a "pronunciamiento" proper. The movement, although determined by an act of force, is a popular one, and not merely a domestic matter, but something connected with the political problems arising from the Great War. Since 1914 the dominant spirit in the world has been for renovation of Customs, systems, and procedures. Spain, of course, could not escape this fatal law of history. Your correspondent analyses the movement in Spain, and seems somewhat sceptical as to the realisation of General Primo de Rivera's programme.

It is obvious that there are two different stages in every non-chaotic revolution: a destructive or eliminative period followed by one leading to reconstruction. And General Primo de Rivera's decrees show how both are developing simultaneously. The author of the article fears that the military movement in Spain will prove a further blow to the stability of Europe, because it will lower the prestige of the Parliamentary system of government. It is not safe to predict under the present circumstances. I assume, however, that a reformed electorate law is likely to arise as the result of the measures adopted to eradicate the electoral abuses, and may lead to a representative régime in politics and a completion of the economic and administrative reorganisation of Spain.

The centre of gravity of the movement is, in fact, the industrial region of Catalonia, Barcelona. The *coup* in its nature is a national one, but a close study of its spirit and tendencies reveals the origin. No one who knows Spain can for a moment doubt that there are ample resources in store, and that a new spirit and new ideals will accomplish much effective reconstruction of Spain.

Assuredly the strong nucleus of first-class mentalities, so far unknown in public life, even among the professional "politico" (there are many respectable examples), are sound elements for ruling the country free from old party intrigues and according to the modern exigencies of statesmanship.—Yours faithfully,

A SPANISH CORRESPONDENT IN LONDON.

London, October 1st, 1923.

P.R. IN THE IRISH ELECTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your Dublin correspondent is a supporter of proportional representation, and the differences between us are questions of detail, but it is well, nevertheless, to elucidate, in the hope of reducing, them. In his first message, your correspon-

dent laid down a general proposition that P.R. gives a "disproportionately large influence to minorities," and he holds that he finds confirmation in the Irish election. I still reply that as a general proposition the statement is wrong, while, as regards Ireland, it is now evident that conclusions will differ according as one believes that there were only two rigidly distinct parties, or more than two. Your correspondent throws together as Pro-Treaty the Government, Labour, Farmers, and Independents, who obtained the support of some 764,803 voters and thereby 103 seats, while their calculated proportion is 106.6. The aggregation of these four groups may serve as a rough-and-ready division; but it is clear, from an examination of the result sheets, that a proportion of the voters who gave their first preferences to Labour, Farmer, and Independent candidates were Republican in sympathy, for when their votes came to be transferred, they passed to Republican candidates. Such voters, though they may be appropriately ranked under their respective minorities, when these are considered as separate parties, cannot fairly be included in a Pro-Treaty total.

In the Irish boroughs and counties 1,054,804 electors elected 147 members, which gives some 7,200 votes per seat. Labour, Farmers, and Independents polled 353,729. If we assume that some 10 per cent. of the minor parties favoured the Anti-Treaty party, there would be a transfer to the Republicans of 35,372 votes over the whole of Ireland, equivalent to nearly five seats, which is more than the number of seats which the Republicans obtained in excess of their proportionate share, whether we regard that as three or four. Though professing no intimate personal acquaintance with Irish politics, I venture to suggest that the assumed figure of 10 per cent. nearly represents the net gain to Republicans, allowing for any transfers from Republican to the minor parties. There was also a slight interchange of votes between Government and Republican, but it is small enough to be negligible.

As an example of Republican support among minor parties, take the case of Dublin South, the result sheet of which constituency (published in the *Freeman Journal* of the 1st inst.) is before me. The following table shows the votes transferred to Republicans from Labour and Independent candidates as they were one by one excluded at the bottom of the poll:—

Candidates.	Party.	Total Votes when Excluded.	Votes Transferred to Republicans.
Munden	Independent..	290	30
Tucker	Trades Council	430	41
Byrne	Independent..	487	18
Shanks	Business	535	8
Shields	Independent..	742	57
O'Brien	Labour	1,136	152
Medlar	Independent..	1,491	196
McCabe	Business	1,700	76
Farrelly	Trades Council	1,816	516
Totals		8,627	1,094

The total number of votes transferred from Republican candidates to Labour and Independents in the same election was 139. The latter parties, therefore, gave an addition to Republicans of 955 votes, which was a material factor in securing the return of the second Republican member for this division instead of Sir A. Beattie (Independent), the runner-up in the election. Although all estimates of party strength based upon first preferences can only be regarded as approximations, I would claim that a nearer approach to truth is obtained by regarding the minor parties as separate forces, and if this view is adopted, the Irish elections confirm the general experience of P.R.

In his last paragraph your correspondent alludes to P.R. as being "favourable" to minorities. With the word "favourable"—unqualified—I have no quarrel. P.R. is favourable to minorities in the sense that it gives them a chance of a fair representation, which is denied by many other forms of election. The more technical argument can hardly be pursued with advantage apart from actual illustration of the points to which criticism is directed. I gave an example in which I showed that the vote of the elector was not increased in power because it was transferred either as surplus or from an excluded candidate. May I suggest that your correspondent should try to fashion an example in which minorities get advantages over majorities owing to the fact that "the mobility of their voting power facilitates their combination for effective return."

Whatever conclusion readers of the *Economist* may come to on the point at issue, the broad fairness of the results of P.R. will not be called in question.—Yours truly,

ALFRED J. GRAY.

Assistant Secretary,
Proportional Representation Society.

Books and Publications.

RECENT ECONOMIC LITERATURE—A SIX WEEKS' SURVEY.

AUGUST and September are months of preparation, not of publication, and the economic student has had more or less of a holiday in the last six weeks. He will, if he is wise, have given more than a glance to the monthlies, since the shadow of the fourth winter of unemployment has pushed this and other economic topics well to the front in almost all of them, and the brisk discussion on price stabilisation now going on possibly heralds a controversy as important in its way as that once raging round the Free-trade issue. Attention should be called to an article by Mr. James Bellerby in the *Economic Journal* which stresses the need for international action in matters of currency policy, while the *Liberal Magazine* for September contains some most useful statistics about unemployment, both as to numbers and as to schemes for their relief.

The period under review has produced two outstanding books. One is Mr Asquith's *Genesis of the War* (Cassell, 25s). The other, Mr and Mrs Hammond's *Lord Shaftesbury* (Constable, 12s). The second the student of economics who takes, as in these days he must, a wide and human view of his subject must certainly read, and will read with absorbed interest. Lord Shaftesbury was a philanthropist, not a democrat, and much nearer the curiously cruel mysticism of Mr Austin Hopkinson, M.P. (as expressed in the volume he has, with apparently quite unconscious irony called *The Hope of the Workers* (Martin Hopkinson, 1s), than to the standpoint of the very differing writers who contribute to the collection of papers called *The Way Out* (Oxford University Press, 4s 6d). Lord Grey, who writes the introduction to this volume, and all his co-operators, accept democracy in the fullest sense, but hold that only education, above all adult education, can make it a reality. Moreover, education is for them the road along which, ultimately, the solution of the social problem is to be found. To Lord Shaftesbury all this would have been repugnant. He would have agreed with Mr Hopkinson, and with M. Edmond Villey, whose *L'Etat et le Progrès Social* (Presses Universitaires de Paris, 7f) is a forthright and animated attack on all that has been done under that head in France. Every co-operative effort is, in his view, a sapping of individual energy and initiative; his views on such bodies as the Confederation Générale du Travail are, of course, extremely harsh. "Social progress," indeed, works out as a contradiction in terms.

Each of these books, in its different way, is concerned, in the last resort, with those moral questions which underlie and complicate so much of economic discussion. There are, however, aspects more or less free from this irrelevancy. There is a school of writers to-day which attempts, with more fervour than success, to connect credit and conscience; but, on the whole, books about banking are free from sentimental bias. It is from a realistic and technical point of view that *American Banking Methods*, by Mr L. Le Marchant Minty (P. S. King, 15s), is valuable. Its value is increased by an introduction from the pen of Sir F. Drummond Fraser. The subject is one of enormous importance, and this is a useful survey. That Mr Ernest Sykes' *Banking and Currency* has now achieved a fifth edition (Butterworth, 5s) is sufficient proof of its quality. Another book which one is glad to see attaining the dignity of a second edition is the brilliant volume which Mr R. G. Hawtrey called *Currency and Credit* (Longmans, 15s). There must be a larger number than is sometimes supposed of persons who have the courage for stiff reading. In Mr Hawtrey's case the effort is well worth while; the attentive student will find his mind really stimulated and strengthened by contact with him. This particular volume is even more worth attention to-day than when it appeared first in 1919. In the useful series being published by the Chicago University Press, under the general title of "Materials for the Study of Business," there is a new volume from the pen of Professor Hardy, entitled *Risk and Risk Bearing* (\$3 50c). Risk, as he interprets it, has nothing whatever to do with what is vaguely called the "romance of business." It is a

sternly practical aspect, and he gives it a sternly practical treatment. There are useful chapters on insurance of various kinds, and a very good general account of business operations.

For the elementary student there is a new edition, the sixth, of Mr Albert Crew's *Commercial Economics* (Jordan, 5s), and a new and revised edition of Professor Briggs' excellent *A Text-book of Economics* in the University Tutorial Series (Clive, 8s 6d).

THE SOCIAL PROBLEM.*

THE first and indispensable preliminary to a removal of evil is an acute realisation of it. To-day more people, in all classes, are aware of social inequalities, maladjustments, waste, than ever before. To some this realisation appears as a form of unjustified pessimism. They call upon us to be silent and remember how much worse conditions were in the fifties or even in the seventies. In so doing, however, they forget that the effect of any improvement, whether in the individual or the community, is to make him capable and desirous of further improvement still; that the sign of social advance is a progressive standard. So perhaps the most hopeful sign to-day is precisely that "unrest" which disquiets so many—an unrest by no means confined to the comfortable—and the questions being asked about every sort of fundamental hypothesis.

Viscount Grey suggests in the illuminating prefatory note that appears as a foreword to the interesting collection of papers by members of the British Institute for Adult Education published under the title of "The Way Out," that democracy can only be a reality if the public opinion, which is accepted as the supreme arbiter, is instructed and alert. For this education—above all, adult education—is essential. In the chapters that follow Lord Haldane, Messrs. Zimmern and Laski, and Lord Eustace Percy discuss ideals, while Mr Mansbridge, the creator of the Workers' Educational Association, the Hon. W. N. Bruce, Sir William McCormick, Sir Frank Heath, and Miss Elizabeth Haldane, how those ideals are to be achieved. All these papers are worth attentive perusal. Perhaps the most suggestive is that of Lord Eustace Percy, who deals very frankly with what he calls the "stiffness of the political atmosphere to-day," both in international and in national politics; notes our growing "insularity," in spite of all our talk about Europe and the dearth of any sort of philosophy of politics, of which coalition is a logical result. The passionate interest, everywhere, in education is due, he thinks, to an impatience with every existing political party. He may be right, but he probably knows that this impatience is specially directed against the party which, in power, is starving and stunting education and jeopardising that basis without which, as Lord Haldane insists, there can be no adult education worth the name. "The highest forms of education are only possible if the intelligence has been delivered from the hampering sense of incapacity to wield the instruments required for intellectual work."

Mr Philip Snowden's little book comprises the articles which he contributed to the enlightenment of the readers of the *Morning Post* earlier in the present year, together with an additional chapter in the nature of a reply to critics. About education he is perfectly definite. In the view of the Labour party, as set forth by Mr Snowden, "The social and industrial problem in its final analysis is a question of education. A Labour Government will be enthusiastic about this subject.....It will attach supreme importance to the training of the young." At the same time, it will not aim at training them all for the black-coated professions.

In sharpest opposition to all these idealists is the member for Mossley. Social reform, in Mr Hopkinson's stern view, "is probably the cause of more human degradation and misery than all the wars in history. For it is a device by which evolution is thwarted, and the survival

"The Hope of the Workers." Austin Hopkinson, M.P. Martin Hopkinson. 1s.

of the unfittest is brought about." Mr Hopkinson's sincerity is not open to doubt, even when he is laying down the law with the smallest regard for logic; but his is a dark and gloomy outlook, shot through though it is by the exaltation of the fanatic. The hope of the workers, as he conceives it, is that they should clear their minds of all the fallacies and follies of Socialism, which he identifies first with Bolshevism, and second with theft, and wait till capitalists become good men. Among the Scripture parables that he does not quote is that about the rich man and the kingdom. It is bound to occur to his readers, however.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 17.	October 18.

It is not very easy this week to describe in a word the volume of Stock Exchange business that has been transacted, for some members are very busy, while others are doing literally next to nothing. In a few departments, such, for instance, as that for tea shares, this week's settlement has proved one of the heaviest experienced during the present year, and the Consol market continues to drive a steady course in its own particular stocks, while in certain other sections a good deal of business is afoot. Taken as a whole, the restraining influence of foreign politics lays a check upon activity, and, although clients complain that it is difficult to find first-rate stocks which are obtainable in the markets, the disposition of the public is apparently to adopt a waiting attitude in regard to the more speculative sections.

The new Victoria scrip, which started at a premium of 7½, went back to 7½ premium, on the appearance of a 7½ million Commonwealth 5 per cent. Loan at 99, accompanied by rumours that other big borrowers will shortly put in an appearance. Nevertheless, the demand for good-class stocks is insistent, and the Victoria scrip improved again, together with the prices of the War Loan, Conversion (which has been exceptionally weak), and a few of the Home Railway prior-charge securities. The existing Commonwealth Fives fell about 15s on the appearance of the latest corner.

French bonds have given way, upon further consideration of the position as it now stands in the Ruhr area. The recent little spurt in Russian bonds tempted a certain amount of selling, which had the effect of pulling prices down again. The new Austrian scrip has remained steady about 3 premium. French Railway bonds have given way in sympathy with the Government issues. South Americans are quiet, calling for no

particular comment, and Japanese municipal bonds continue their recovery; the reports of further earthquake shocks were not read very seriously.

The speculative position in the Home Railway market, as disclosed by the contangoes on Tuesday, showed little alteration from that of a fortnight ago. The public are taking scant interest in the market at present, and the consequence is that prices have given way. The Argentine Railway group is also easier on the whole; sales followed the B.A. Pacific's announcement of dividend, which brings the rate for the full year up to the expected 7 per cent. Central Uruguays are better, upon excellent dividend declarations. San Paulo has spurred further, thanks to the increase in the interim distribution, and Antofagasta keeps firm, owing to the continued strength of nitrate producing shares. United of Havana did not move on the dividend, which makes 6 per cent. for the year.

The rubber market is quiet, with prices still inclined to droop. It may be remarked that fairly material falls have occurred in some of the leading rubber shares from the prices touched in the short-lived spurt of August. The tea boom halted in its stride, though a few of the leading shares are again higher on the week. The settlement brought in a good many sellers, who had bought shares in order to make a turn. The oil market weakened, on the considerations set out in the *Economist* last week (page 473), coupled with rumours that some of the companies may require fresh capital in the near future. Workman Clark debentures and Tata debentures have both fallen, the former to 35. A drop in Courtaulds was said to be due to forced liquidation; it is possible that an equally good reason may be found in the fact that holders who can still see a profit on their shares are selling, the effervescence of the market having so noticeably subsided. Some of the other textiles are better, after going through a weak period. Hotel shares are good; the Carlton has raised its dividend from 8 per cent. to 10 per cent. After a further show of robust strength the tobacco list reacted, though merely a trifle, from the top. There is some inclination to buy motor shares, in view of the advertisement which the industry will receive from next month's Motor Show. Amongst land shares Sudan Plantations went ahead, the buying coming partly from Egypt. Iron and steel shares continue sluggish. The newspaper list went flat upon the idea that competition in the provinces may affect profits of the London companies, but a rally started on the announcement that the Associated Newspapers proposed to give a bonus of one new deferred share for every five now held, the meeting to confirm which takes place to-day (Saturday). The brewery market feature is a rise of 30 points in Beckett's ordinary, on dividend and report anticipations. There is nothing much doing in wireless or cable shares. One of the less conspicuous features of the industrial market is the manner in which good debenture and preference issues are being persistently absorbed. Tokyo Electric debentures, after their drop to 20 discount on the first news of the earthquake, have recovered to 7 discount.

South Africans make a cheerful showing, with a fair sprinkling of rises in the deep-level and some of the outcrop companies' shares. Chartered have advanced now that the Government has paid the company the 3½ million pounds sterling, of which it is hoped that part, at all events, will be returned to shareholders. Copper shares are weak, and the recent animation in Canadian and Mexican mining shares has given way to quiet conditions, with the usual concomitant of sagging prices. The price of tin, the metal, has been keeping fairly stable at a little over £200 per ton, though without quickening public interest in tin mining shares. The Stock Exchange declared an interim dividend of £3 per share on its own shares last Wednesday, and the price went ex div. on the following day, being now 10½. The nominal paid-up value is £25, and the dividend is the same amount as that of a year ago.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

Government of the Commonwealth of Australia 5 per Cent. Loan, 1935-1945.—Issue at 99 of £7,500,000 registered stock. The principal is repayable in London at par in June, 1945, but the Government has the option of redemption after June 1, 1935, on giving three months' notice. The proceeds of this loan will be used to meet expenditure for settlement of emigrants from Great Britain, for development works, and for the redemption of Treasury bills and other securities. The prospectus points out that "Sinking fund contributions will be paid into the National Debt Sinking Fund of Australia in respect of this loan in accordance with the provisions of Section 9 of Act No. 5 of 1923, entitled the National Debt Sinking Fund Act, 1923, of the Parliament of the Commonwealth of Australia." Under clause 9 of this Act it is provided that:—The Treasurer shall pay into the Trust Fund, under the head of the National Debt Sinking Fund: (a) in each financial year for a period of fifty years, commencing with the financial year 1923-24, a sum of £1,250,000; (b) in each financial year for the said period of fifty years a sum equal to 10s per centum of the net debt created in that financial year and in any financial year prior thereto and after June 30, 1923. The yield on this loan, allowing for redemption in 1945, works out at £5 1s 6d per cent. The previous Australian Commonwealth Loan, made in April of last year, was of a very similar description; the terms and date of redemption were the same, but the issue price being 96, a yield of £5 4s was obtainable. In view of the trend of money rates since this date, the present issue appears to be an attractive trustee investment.

The Lancashire Electric Light and Power Company, Limited.—The total authorised share capital is £2,071,415, consisting of £571,415 6 per cent. (income-tax free up to 6s in the £) cumulative first preference shares of £1 each, of which £511,440 has been issued, £750,000 7 per cent. cumulative participating preference shares of £1 each, of which £562,500 is now issued, and £750,000 in ordinary shares of £1 each, of which £628,560 has been issued. The present issue of 350,000 7 per cent. cumulative participating preference shares at 23s per share and 350,000 ordinary shares at 21s per share are included in the above-mentioned issued capital. It is intended to pay off out of the proceeds of the issue the existing £535,000 7½ per cent. prior lien debenture stock and £150,000 6 per cent. first mortgage debenture stock, which constitute the whole of the outstanding loan capital of the company. The participating preference shares carry the right, after payment of a dividend at the rate of 6 per cent. per annum on the cumulative first preference shares, to a fixed cumulative preferential dividend at the rate of 7 per cent. per annum, and in any year in which the ordinary shares receive a dividend at a higher rate than 7 per cent., then the participating preference shares are entitled to a dividend at a rate equal to that paid on the ordinary shares up to a maximum of 10 per cent. The company owns all the issued debenture and share capital of the Lancashire Electric Power Company, which supplies electricity over a highly developed industrial area of about 150 square miles. The prospectus gives a table of progressive profits of the power company. It is stated that a profit equal to that for 1922 permits the power company to pay to the Lancashire Electric Light and Power Company the sums required for dividends of 6 per cent. on the first preference shares, 7½ per cent. on the participating preference shares, and 7½ per cent. on the ordinary shares of the latter company, leaving a surplus for depreciation, &c., of the power company of £45,716. This is a fairly reasonable offer.

The Leeds Forge Company, Limited.—Authorised share capital £1,300,000, of which £750,000 has been issued and is fully paid. Loan capital outstanding amounts to £479,420, consisting of £150,000 5 per cent. first mortgage debentures and £329,420 8 per cent. convertible debenture stock. This is an issue of £400,000 6 per cent. debenture stock at 95 per cent., repayable at par on December 31, 1950, but the company reserves the right to redeem at 102 after 1930 on giving three months' notice. The stock has been created primarily for the purpose of redeeming the outstanding 8 per cent. convertible debenture stock. The company give holders of the 8 per cent. convertible stock the option of being repaid at par on January 1, 1924, or alternatively of converting into the new security. The present issue has been underwritten by Messrs Cammell, Laird and Co., who have acquired a controlling interest in the concern. This debenture issue is a charge upon fixed assets after the rights of the first mortgage debentures have been satisfied. Moreover, the company reserves the right to charge assets up to £100,000 with its bankers "in the ordinary course of business"—an elastic term in these days of company merging. Profits are given from 1913. Fixed assets are valued at £650,529. If these assets have been valued in accordance with current costs of building and machinery, the margin is sufficient. But the prospectus does not make this clear.

Amalgamated (Rubber) Development Company, Limited.—Authorised capital £125,000, divided into shares of 2s each. These shares—1,250,000 with 6d per share paid up—are being issued as "rights" to the shareholders of Amalgamated Rubber Estates, Limited, shareholders in the latter company having the right to take one share for every four shares held. The Amalgamated Rubber Estates, Limited, have guaranteed a dividend at the rate of 6 per cent. per annum up to 1928, on which date the shares are to be exchanged at par into holdings of Amalgamated Rubber Estates. The company has been formed to develop in Sumatra 5,000 acres of the unplanted area of the Amalgamated Rubber Estates. These details are given in the Press as "information only."

COMPANY MEETINGS, &c.

GENERAL MINING AND FINANCE CORPORATION, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

IMPROVED RESULTS AND PROSPECTS.

The twenty-third annual general meeting of shareholders was held at Johannesburg, on August 30, 1923, Sir George Albu, Bart., presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The two main points brought out by the directors' report and the accounts of the corporation for the past financial year are, firstly, the effect of the general strike of white workmen which took place in the early part of January, 1922, and, secondly, the metamorphosis of the financial position and prospects of our company resulting from the effects of the purchase from the Custodian of Enemy Property of the whole of the ex enemy held shares of the corporation and its affiliated companies. The first point was dealt with at some length by the chairman at the previous annual meeting of the corporation, and I need only to-day emphasise the remarks appearing in your directors' report as to the serious immediate effect which the disastrous strike on the part of the employees had on the operations of the gold-producing mines of our group.

EX-ENEMY SHARES AND DEPRECIATION.

The other leading feature of the report and accounts for the past year is of a more pleasing kind. In his remarks at our last annual meeting, the Chairman referred to the far-reaching importance of the acquisition of the ex-enemy shares of our group, and foreshadowed that the next balance-sheet would probably show that the heavy depreciation shown in the annual accounts of the corporation for so many years would almost entirely, or perhaps wholly, disappear. This prediction was regarded in some quarters as being probably too optimistic, but, so far from this actually having been the case, it has proved to be well within the mark. Not only have we succeeded in wiping out the whole of the £1,186,786 depreciation shown in the balance-sheet at December 31, 1921, but we have also been able to provide further substantial amounts against any possible loss which might accrue in realising other assets of the corporation. But, highly satisfactory as these statements are, they are not the full measure of the tale. For the first time for many years our share and debenture holdings, which appear in the balance-sheet at a total valuation of £853,589, have been taken at or under the market prices ruling at the date of the accounts, and I am pleased to be able to state that, if valued at today's market quotations, they would show a very substantial surplus. By far and away the largest portion of our investments is in the shares and debentures of our subsidiary companies. If you will note the low figures at which most of these stocks are quoted at the present time (several of them at less than the value of their cash assets), and, further, take into account the fact that in nearly every case they are standing in our books at a price below existing quotations, you will realise the conservative basis upon which the balance-sheet at December 31st last has been framed.

BALANCE-SHEET ITEMS.

Under the head of capital a very important change is apparent: the issued capital still remains at £1,875,000, but from this is deducted £847,202, representing a similar number of shares, previously held by ex-enemies but since acquired from the Custodian of Enemy Property and held by our Corporation. This reduces our liability to shareholders to £1,027,798. As mentioned in the report of your directors, it is possible there may be a certain additional number of shares to be acquired from the Custodian under our agreement, but on this point we have no definite knowledge. However, it is to be presumed that we shall have some reliable information before the compilation of the next balance-sheet, and subsequently the necessary formalities will be effected with the object of reducing the capital account by the total number of shares purchased from the Custodian.

The final item on the balance-sheet is cash and Treasury bills

amounting to £194,592, or an increase of £131,618 as compared with the cash position at the close of the previous year. Our financial position is, in common with our general position, vastly improved, as our liabilities to creditors are practically balanced by cash in hand and British Treasury bills, leaving our sole remaining liability, under deposits, covered by assets standing in the balance-sheet at over £1,200,000, and valued conservatively at that.

The net profit for the past year of £78,858 (as compared with £40,346 for 1921) was carried to appropriation account, which already showed a credit balance of £174,048 at December 31, 1921. Adding to these two amounts the difference of £762,458 between the par value and the purchase price of the 847,202 General Mining shares acquired from the Custodian, there was available an amount of £1,015,364, of which £1,004,135 was appropriated for reducing the book value of share and debenture holdings to (or under) market prices, and the balance of £11,229 is carried forward to the current year.

Now that the tide has turned we shall go forward with renewed energy in the effort to further the interests of the Corporation and of the group of companies which we control.

This concluded the proceedings.

THE ANGLO-SIAM CORPORATION, LIMITED.

GOOD RESULTS—INCREASED NET PROFIT.

The twenty-sixth annual ordinary general meeting of the Anglo-Siam Corporation, Limited, was held at the registered offices of the corporation, 5 and 7 St Helen's place, London, E.C., on October 2, 1923, the chairman, Mr J. M. Ryrie, presiding.

In the course of his speech the Chairman referred to the new offices, and mentioned that the increasing business of the corporation had necessitated larger and more up-to-date premises.

Commenting on the accounts for the past financial year, the Chairman stated that, having regard to the depression in trade generally, shareholders could congratulate themselves upon the satisfactory results achieved, and pointed out that the net trading profit exceeds that of the previous year.

SATISFACTORY INDIAN BUSINESS.

Whilst there was no reason to be dissatisfied with the profits of the business in and with Siam, it was encouraging that the results from the Indian branches were very satisfactory and more than

justified the acquisition of that business, whilst the Singapore branch has now arrived at the profit-earning stage.

Continuing his speech, the Chairman referred to the reduction of 5 per cent. in the bonus on the ordinary shares, and expressed a hope that shareholders would be satisfied with the return on their investment, pointing out that whilst the new capital was subscribed only towards the end of the year, the dividends and bonus are being paid upon the increased capital.

RESERVE FUNDS EQUAL PAID-UP CAPITAL.

The Chairman remarked that, in his opinion, the balance-sheet was the best and strongest yet published by the corporation—the general reserve funds being now equal to the paid-up capital—and after dealing at some length with the various items appearing therein he acknowledged, on behalf of himself and his colleagues on the board, the devotion of the staff at home, and particularly in the East, to the interests of the corporation, and also dealt with the changes in the staff at Bangkok necessitated by the retirement from the East of Mr S. H. Hendrick, who had acted as the general manager in Siam for 15 years, and who has now joined the board.

The Chairman then reviewed the position generally, and confessed his inability to forecast the probable results for the current year, remarking that he would prefer to say nothing as to the immediate prospects, except that the corporation is quite ready and in a position to take full advantage of any revival in trade when this comes.

In regard to timber, large deliveries at Bangkok are assured this year, and whilst some satisfactory sales have already been effected locally, it will be necessary to reopen the saw mill for the purpose of disposing of these deliveries, whilst it is to be hoped that the new royalties fixed by the Siamese Government will not prove so burdensome as was at one time feared, though much in excess of those at present in force.

SIAMESE EXCHANGE RATE.

The recent large rice crop in Siam ought to have a favourable influence on the general business in Bangkok this year, though the question of exchange there is a factor which is to some extent retarding trade, and, whilst the Siamese Government are to be congratulated upon having maintained a stable rate of exchange when other exchanges were fluctuating wildly, he hoped that if any further reduction was in contemplation the Siamese Government would announce their intention with as little delay as possible, and at the same time state that the change, if any, is final.

+ BRANCHES OF THE BRITISH BANK OF SOUTH AMERICA, LIMITED.
* BRANCHES OF THE COMMERCIAL BANK OF SPANISH AMERICA, LIMITED.

Referring to India, the Chairman said that he did not expect such satisfactory profits as in the past year, and that at Singapore only moderate results could be looked for.

The directors' report and the statement of accounts for the year ended March 31, 1923, were adopted, and final dividends of 3½ per cent. on the preference shares and 12½ per cent., together with a bonus of 5 per cent. on the ordinary shares were declared, making a total distribution of 25 per cent., less tax, on the ordinary shares for the year.

Mr J. M. Ryrie, Mr Henry Bateson, and Mr S. H. Hendrick were re-elected directors, and Messrs Turquand, Youngs, and Co. were appointed the auditors for the current year.

A vote of thanks to the directors and staff having been passed, the proceedings terminated.

FREDERICK HOTELS, LIMITED.

FINANCIAL POSITION "BEST IN COMPANY'S HISTORY."

The twenty-fifth ordinary general meeting of the Frederick Hotels, Limited, was held, on the 3rd instant, at the Hotel Russell, Russell square, London.

Mr Ronald Peake presided, and, in moving the adoption of the report and accounts, said: The accounts and balance-sheet from the point of view of business done, profit earned, and financial position are the best in the history of the company, and I have no doubt that shareholders will be pleased with the results shown. The net profit for the year was £61,994, and allowing for the compensation received from the Government for the Hotel Great Central and included in the previous year's accounts, represents an increase in earnings of £26,977. I think you will all consider this very satisfactory. The balance brought into the accounts from the previous year was £38,531, to which has to be added the profits for the year, amounting after payment of debenture and mortgage interest to £61,994, giving us an available total of £100,525. The preference dividend of £27,500 has already been paid. The dividend of 9d per share on the ordinary shares will absorb £20,625. £10,000 is added to reserve fund, bringing it up to £40,000, and we have provided £3,500 for work which is being carried out during the current year. After appropriating these amounts there is a balance of £38,900, which we propose carrying forward to the next account. I am sure you will all agree with the policy of your board in keeping the hotels in a thorough state of repair, providing additional bathrooms and making other improvements to keep pace with the requirements of our visitors. Your directors have devoted considerable time and attention to the improved and more efficient working of the hotels, and I venture to say that our kitchens, larders, and staff quarters will compare favourably with any hotel in the country. We are always ready to consider suggestions from shareholders or visitors for the improvement of the working of our business, and we are prepared to authorise any expenditure which may be necessary so long as we are satisfied that the outlay will result in increased efficiency or bring its return in increased trade.

With regard to the balance-sheet and profit and loss account, in the profit and loss account the item which appeared last year for compensation for the occupation of the Hotel Great Central disappears. The profit on trading and investments shows an increase, and the net result of the profit and loss account is to increase the sum available by £10,744. We have now had the returns for the first three months of the current year, and I am pleased to inform you that the business at our hotels is being well maintained. The Right Hon. Lord Bethell seconded the motion, which was carried unanimously.

more than the second settlement. There was good business doing in the bazaar, and the banks were also active. The up-country demand for the metal is about 100 bars per day. No fresh Indian currency returns have come to hand. The stock in Shanghai on the 29th ult. consisted of about 26,700,000 ounces in sycee, 37,500,000 dollars, and 4,330 silver bars, as compared with 26,100,000 ounces in sycee, 36,000,000 dollars, and 1,380 silver bars on the 22nd ult. Statistics for the month of September are appended:—

NOTICES.

The London Joint City and Midland Bank announces the opening of a new branch at Meads, Eastbourne, under the supervision of Mr A. E. Parsloe, manager of the Eastbourne branches, and a new office in Station road, Colwall, near Malvern. The retirement is also announced of Mr J. W. Houlgate, one of the assistant general managers of the London Joint City and Midland Bank, Limited. Mr Houlgate has completed 50 years' service with the Midland Bank and its constituents.

Barclays Bank, Limited, announce that they have opened new branches at 161-163 New Bond street, W. 1, under the management of Mr F. S. Lawrence, also manager of Conduit street branch, and at High street, Torrington, Devon, under the management of Mr W. G. Hall, and at 1 Fountain street, Guernsey, under the management of Mr G. S. G. Martell. They also announce that their sub-branch at Clydach-on-Tawe, Glam., has been converted into a full branch, and the business transferred to new premises at 44-46 High street, Clydach-on-Tawe, under the management of Mr John John, also manager of Pontardawe branch. Their office at Cadoxton (Glam.) has been converted into a full branch under the management of Mr W. P. Phillips (also manager of Barry branch).

Mr Joseph Grieve, assistant manager of the English, Scottish, and Australian Bank, Limited, retired on pension as from September 30th, after 32 years' valuable service. He is succeeded in the position by Mr A. A. Shipston, whose post as sub-manager is filled by Mr J. Argyll Robertson as acting sub-manager.

Reports and Notices.

The National Bank of South Africa, Limited, notify the receipt of a cable from the head office, Pretoria, intimating that the resolution relating to the reduction of the £10 fully-paid share to £7 fully paid was adopted at the extraordinary general meeting of the bank, held at Pretoria, on October 2, with only one dissident.

The Canadian Bank of Commerce, 2 Lombard street, E.C. 3, announces that notices have been posted to its shareholders, calling a special general meeting on November 21, 1923, for the purpose of approving an agreement entered into with the Bank of Hamilton for the purchase of its assets by the Canadian Bank of Commerce.

It is announced that Sir Edward Mackay Edgar has retired from the chairmanship of Crosses and Winkworth Consolidated Mills, Limited, but retains his seat on the board of directors. Mr W. A. Greenhalgh has been appointed chairman, and the registered offices are to be removed from Manchester to Bolton.

We are informed that General Sir Hubert Gough has resigned his directorships of the Rio Janeiro Land and Mortgage Company and the Anglo-German Trust.

A branch of the Meadow Dairy Company, Limited, has been opened at High street, Maltby, Yorks.

The registered offices of Bukit Panjong, Limited, Doranakande Rubber Estates, Limited, Edible Nut Oils, Limited, Kinta Kellas Rubber Estates, Limited, Kuala Hidong Rubber Estate, Limited, Kali (Java) Rubber Plantations, Limited, Lochnagar (Ceylon) Produce Company, Limited, Merton Rubber Syndicate, Limited, Pahi Plantations, Limited, Selangor River Rubber Estates, Limited, Taylor, Noble, and Co., Limited, and Woodend (Kelani Valley, Ceylon) Rubber and Tea Company, Limited, are now situated at 481,484, Salisbury House, London Wall, E.C. 2.

	539,881,769,237		539,881,769,237

In conformity with the decision of the general meeting of shareholders of June 23, 1923, the paid-up capital of Mkp. 691,200,000 will be increased, subject to the sanction of the Minister of Finance, to Mkp. 1,920,000,000 by : (a) Converting the shares of the ninth issue, which have a nominal value of Mkp. 540 each, into shares with a nominal value of Mkp. 1,000 each; (b) the issue of one free share in the 10th issue for each two shares of preceding issues. It has been likewise decided to augment the capital to 5 milliards of Polish marks. This bank has just opened, with the sanction of the Polish Minister of Finance and the Minister of Commerce and Industry, an agency in London situated at 31 and 33 Bishopsgate, E.C. 2. This agency will carry out banking operations of every description as authorised by the statutes, and will devote itself especially to the development of commercial relations between Poland and Great Britain. The engagements contracted by the agency in London will be guaranteed by the whole assets of the bank.

COLONIAL BANK.—The report for the half-year ended June 30, 1923, shows a net profit for the half-year of £42,615, which, with £28,740 brought forward from the last half-year, makes £71,355 available. The directors recommend that the sum of £15,000 be carried to provision for bad and doubtful debts, that a dividend of 8 per cent. per annum, less tax, be declared for the half-year, absorbing £27,450, leaving £28,905 to be carried forward.

GOVERNMENT STOCKS, &c.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 14 to July 31, 1923, compared with those from January 14 to August 13, 1922 :—

	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
Gross receipts, July, 1923.....	Drachmæ. 9,033,531.40	Drachmæ. 17,536,924.50
Do do do 1922.....	8,231,265.75	9,521,343.25
Estimated receipts for seven months (Law of Control) ..	1923 15,829,018.23	1923 5,861,557.11
Actual receipts for seven months, 1923	1922 16,858,333.33	1922 6,241,666.67
Actual receipts for seven months, 1922	51,035,252.80	130,595,759.20
	48,902,504.90	70,095,119.40

NOTE.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper and naxos emery, 45 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1881 to 1893. Owing to the change in the Greek calendar from old to new style, both the estimated and actual receipts in the above statement are for 13 days less in 1923 than in 1922. As regards receipts, subject to the system of plus-values, all increases in duties and prices are excluded therefrom in the above table. Minimum receipts have, however, been fixed, in order to guarantee the plus-values against eventual diminution in the consumption.

RUBBER, &c.

BERNAM-PERAK PLANTATIONS.—A better year has been experienced by this company. The net profits have risen from £116 in the year ended June 30, 1922, to £7,073 for year ended June 30, 1923. The available balance is £10,769. Of this sum £5,805 is to be utilised to pay preference interest for three years, i.e., 18 per cent., which will make preference interest paid right up to June 30, 1923. The remaining £4,964 is to be carried forward. The board state that the rubber market having shown signs of improvement, the directors felt justified in paying on January 31, 1923, the dividend of 10 per cent. in respect of the financial year ended June 30, 1920, which was declared at the general meeting held on November 4, 1920, but the payment of which was postponed at the discretion of the board. During the year the rubber harvested amounted to 337,050 lbs, the net average price realised for the portion sold being 1s 1.15d, as against 7.11d per lb for the previous season.

SEAPORT (SELANGOR).—The report for the year ended June 30, 1923, shows that net profits have risen from £3,524 in 1921-22 to £12,759, and a 10 per cent. dividend is being paid on the ordinary shares, as compared with no dividend in the preceding year. The sum of £20,812 is carried forward, as against £26,803 brought into the accounts. The report adds that the restricted crop of rubber collected for the year amounted to 495,000 lbs, against a yield in the previous year of 530,000 lbs. The average net sale price, including the estimated value of the unsold portion of the crop, is 1s 1.41d. per lb. The cost of production, free on board at port of shipment, including depreciation, commission to staff, &c., was 6.91d per lb, against 6.74d per lb for 1921-22. A heavy programme of draining was carried out, which is proving of benefit to the trees. The estate is in excellent order throughout. An adequate force of Indian labourers was maintained. Health was good. Buildings were upkept in good condition. A new washing mill was installed in the factory. With regard to crop estimate for 1923-4, the standard output now allowed to the company under the scheme for regulation of exports is 651,418 lbs, and the crop to be harvested will be dependent upon the quantity allowed for export at the minimum rate of duty. At present the rate is 60 per cent. of standard.

MISCELLANEOUS.

ANTWERP WATER WORKS COMPANY.—The approximate revenue account to June 30, 1923, shows the working for the six months, subject to debenture interest, British taxation, trustees' fees, sinking fund contributions and commission, and reveals a net profit of £12,129. The profit for the same period of last year was £30,181. The profits for the half-year have been arrived at after charging a loss on exchange of £6,593. The directors draw attention to the fact that the large reduction shown in income for the half-year is due entirely to the adverse rate of exchange, the income in Antwerp showing a considerable increase over the corresponding period of last year. The same cause is also responsible for the

apparent reduction in working expenses. The following figures will show the effect of the exchange on the sterling receipts in London during the first six months of last year and this year. Amount remitted in francs during the first six months of 1922, 1,600,000f, realised £30,381; amount remitted during the first six months of 1923, 1,800,000f, realised £21,602. As the rate of exchange is considerably worse now than it was during the first half-year, the directors regret that they do not feel justified in declaring an interim dividend for the past six months.

BENGAL IRON COMPANY, LIMITED.—The fourth report for year ended March 31, 1923, shows an improvement on the preceding report, as the net profit amounts to £214,228 against £76,376 in the preceding year, and the ordinary dividend has been raised from 2½ per cent. to 7 per cent. Depreciation and colliery sinking fund absorbed £31,126; debenture interest, £41,345; amount written off debenture issue expenses, £43,283; transfer to taxation reserve, £5,000; transfer to general reserve, £15,000—£135,754—£172,648. Deduct preference share dividends paid October 2, 1922, and April 3, 1923, £37,500, leaving a balance to be carried forward of £24,966, against £21,703 brought into the accounts. The report observes that during the year the company's works have been fully employed, and still continue to find a ready market for their output. Considerable extensions and improvements have been made in the works' plant and at the collieries in the same period, and the fourth battery of coke ovens is now almost completed. The directors have written off this year one-tenth of the discount applicable to the recent debenture issue (£2,400), and the whole of the remaining issue expenses therewith connected (£40,883), amounting in all to £43,283.

BRITISH SOUTH AFRICA COMPANY.—The following information has been sent to us by the secretary of the British South Africa Company :—"In accordance with the arrangement with the Crown, approved at the extraordinary meeting of shareholders on July 24th, the British South Africa Company received from H.M. Government on October 1st the sum of £3,750,000. Of this sum, the amount of £1,315,000 has been lent against gilt-edged securities for the four months from October 1st to February 1st next, on which date it will be devoted to the repayment of the company's outstanding 5 per cent., free of tax, debentures. Notice of redemption of the debentures has already been given. The balance of the £3,750,000 has been invested in or lent for short periods against British Government and other gilt-edged securities. The company has arranged to purchase from the Custodian of Enemy Property approximately 260,000 ex-enemy-owned shares at 12s 3d a share. These shares, it is expected, will be delivered and paid for in the near future, and the number of the issued shares of the company will be reduced accordingly. Steps are being taken, in consultation with the company's legal advisers, to endeavour to obtain such alterations of the company's charter and deed of settlement as would enable the board to offer to shareholders a return of capital which would not be liable to be called up again."

IMPERIAL CONTINENTAL GAS ASSOCIATION.—The board of directors of the Imperial Continental Gas Association intend shortly to declare an interim dividend at the rate of 5 per cent. actual on the £1,976,000 capital stock of the association, payable, less income-tax, at 4s 7½d in the £ (i.e., the average rate for the year 1923) on November 15, 1923. As the Inland Revenue Authorities have advised the association that the proportion of the German Compromise which has been received to date must be apportioned over capital and revenue in the accounts for the year 1923, an apportionment has been made which gives a net revenue sum of £86,157 available for appropriation, after making provision for taxation. The board propose that the interim dividend, amounting to £75,952 10s net, shall be appropriated from the German Compromise revenue. In view of the violent fluctuations in foreign exchanges, and the consequent difficulty in framing reliable estimates of the final results of the working year 1923, the board have decided not to pay a dividend in respect of the whole year workings of the association until the final results of the whole year 1923 have been definitely ascertained. The transfer books of the association will be closed from October 24th to November 6th, both days inclusive.

MANCHESTER LINERS, LIMITED.—The directors observe in their report for the year ended June 30, 1923, that the difficult trading conditions referred to in last report have continued during the

past year in accentuated form, again necessitating the laying up of a portion of the fleet for varying periods, notwithstanding which the company's regular services have been satisfactorily maintained. As hitherto, the steamers have been kept in a state of thorough efficiency. In order to meet the requirements of shippers and to stimulate the direct import of refrigerated produce to Manchester during the year, six of the vessels employed in the Canadian trade have been fitted with cold storage accommodation, which, with the special ventilation appliances already installed, specially adapts them for the safe carriage of perishable goods of all classes. After providing for depreciation, directors' fees, and all charges (including preference share dividend), and including the balance brought forward from last year, the amount of profit available is £107,396. Out of this the directors propose to pay a dividend of 10 per cent., free of income-tax, as against 15 per cent., free of income-tax, in preceding year, on the ordinary share capital of the company, absorbing £44,520, leaving a balance of £62,876 to carry forward to next account.

KERN RIVER OILFIELDS OF CALIFORNIA.—The report for the year ended May 31, 1923, shows that the net amount of oil produced has been as follows :—

	Year Ending May 31, 1922.	Year Ending May 31, 1923.	Three Months Ending Aug. 31, 1923 (As Cabled.)
	Barrels.	Barrels.	Barrels.
Kern River properties	593,975	582,603	144,820
St Helens properties	659,982	716,949	155,489
	1,253,957	1,299,552	300,309

Properties in course of development—

Kern Mex Oilfields, S.A.	..	13,557	2,505
Kern Romana, Limited.	..	11,802	4,998
Kern Trinidad Oilfields, Limited	..	87,737	29,593
	1,253,957	1,412,648	337,405

The gross profit for the year amounted to £250,367, against £338,951 in preceding year. Depreciation and amounts written off amounted to £53,810, against £99,663. The ordinary dividend has been reduced from 17½ per cent. to 15 per cent. The sum of £67,811 is carried forward.

RIO NEGRO (ARGENTINA) LAND COMPANY, LIMITED.—Improved results are revealed in the latest balance-sheet just issued. The net profit has risen from £12,122 to £39,547, and the ordinary shareholders are to receive 8 per cent., against a 5 per cent. distribution in the preceding year. The sum of £10,000 goes to reserve fund, against nothing a year ago. The balance of taxation suspense account, a reserve set aside in 1920 from profit on exchange to meet the liability in respect of excess profits duty, has been liquidated by the transfer of £10,000 to general reserve, and £5,596 to renewals and contingencies reserve.

ROBERT HEATH AND LOW MOOR, LIMITED.—The profit on trading in 1922, after crediting munitions levy recovered, coal awards, guarantee payments received in respect of previous periods, and amount transferred from taxation reserve not now required, is £90,376; to which has been added £11,976 transferred from capital reserve account, being the balance not now required of the amount of £57,101 brought into that account at the acquisition of Robert Heath and Sons, Limited, at December 5, 1919, as a reserve for the liability of that company for excess profits duty, £11,976, making £102,352; deduct debenture interest for the year with income-tax thereon, £64,564, leaving a profit for the year of £37,788. The balance to the debit of profit and loss account brought forward from December 31, 1921, was £71,271; deduct profit for 1922 as above, £37,787, leaving a balance to be carried forward to the debit of profit and loss account £33,484. The report states that the buildings, plant, and other property of the company have been well maintained out of revenue, and, in view of the sums of £112,931 and £148,041 to the credit of depreciation and capital reserve accounts, the directors do not consider it necessary to allocate a further sum for depreciation. The stocks are included in the balance-sheet at cost or market values, whichever are the lower.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS.—Estimated gross production of crude oil for the month of September was 55,980 barrels, equal to approximately 8,000 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 4,900 tons.

LOBITOS OILFIELDS, LIMITED.—The production for September is cabled as 10,867 tons.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated October 4th, is as follows:—Pig-iron: There is no marked change to report this week. Makers are getting a little relief by reason of rather easier coke prices. To-day's price for No. 3 Cleveland G.M.B. is 96s per ton. Hematite prices are steady, and about 99s is quoted for East Coast mixed numbers. Manufactured iron and steel: We are still awaiting a statement of the Boilermakers' dispute, and cannot expect any improvement until this difference is arranged. Steel ship plates, £9 15s; steel ship angles, £9 5s; iron bars, £12; steel rails, £9 10s. Iron ore: A little prompt Rubio has been sold at 23s, but otherwise business is very quiet.

Our Sheffield correspondent writes:—The immediate effect upon the iron and steel markets of the sensational development of the Ruhr trouble has been to intensify the feeling of uncertainty of the future of the trade, and users are less disposed to buy forward than ever. The talk of vast quantities of steel in the Ruhr district about to be unloaded, although regarded with some amount of scepticism, is inducing a spirit of caution. On the whole, the settlement is causing a revival of confidence, as it is calculated to clear the air and give trade generally a move which has long been absent. It should also result in cheaper supplies of fuel in the home market. Makers of pig-iron who do not own collieries and coke ovens declare that they are producing at a loss of ten shillings per ton on current quotations. The reduction this week of blast furnace coke from 26s to 24s at ovens will bring them some relief. The market for pig-iron is in a very depressed state, and the recent reduction of output has had no effect in the direction of bringing about remunerative prices. Makers of crude steel in this district are booking no business of weight, and although more than half of the furnaces are idle the output exceeds demand. Very little German cutlery and tools is now arriving in this country, while the prices of such goods are advancing towards those of British goods. Australia and Canada are the only considerable overseas buyers of Sheffield cutlery. Cheap steel is going to the Far East. The coal trade is quiet, and a drop in Continental requirements is believed to be imminent, so that supplies at home, both of coal and coke, should be abundant throughout the winter. Householders are buying comparatively little coal for their winter stocks. Current quotations per ton at pits are: Best

hand-picked branch, 29s; Barnsley best Silkstone, 26s; Yorkshire hards, 20s; Derbyshire ditto, 19s; rough slacks, 11s 6d; nutty slacks, 10s; smalls, 7s; blast furnace coke, 24s.

Our Glasgow correspondent writes:—The shipbuilding position remains unaltered, with builders disappointed at the slow progress being made with the negotiations designed to attain peace in the industrial camp. Official figures as to building operations on the Clyde in the course of last month present a most unsatisfactory picture. The total was no better than 13 vessels of 6,945 tons, which compares with an average output in normal times of 50,000 tons per month. For the nine months of 1923 85 boats, with a gross tonnage touching on 155,222 tons, were put into the water, as against 101 steamers of 289,218 tons in 1922. It is believed that shipowners in Scotland have placed a respectable amount of new tonnage with builders, conditional on prices per ton being substantially reduced from the basis that presently obtains. Bolt and nut makers are well employed, so are tube makers, cast-iron pipe makers, bar makers, locomotive engineers, and wagon builders. At the L. and N.E. works at Springburn 26 coupled tank locomotives are under construction, and some of the men are actually engaged on overtime. At the usual weekly meeting of the pig-iron warrant market on Wednesday Scotch No. 3 was called 102s per ton, No. 3 Middlesbrough 90s, mixed numbers hematite 99s 6d, standard warrants, one month, sellers 94s. Good shipment demand for coal, and prices generally 6d per ton higher than last week.

Our Cardiff correspondent writes:—The depression in the coal export trade has been felt more acutely this week than, perhaps, at any other period this year. The demand for most foreign countries has sagged appreciably, and more particularly that from France and Italy. The exports from the South Wales ports last week were over 100,000 tons, or between 15 per cent. and 20 per cent. less than those in the previous week, and only about two-thirds the exports

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Harvesting operations are now completed in the English counties, but late crops are being secured slowly. Farmers are now actively engaged in preparing the land for winter sowings, and it is hoped that a good acreage will be placed under the all-favoured cereal. All root crops have greatly benefited from recent rains. Offerings of native wheat continue on a moderate scale, and, with a generally good demand, late rates were maintained. Good milling samples ruled at 8s 9d to 9s 3d, and inferior down to 7s 6d per 112 lbs, free on rail. Imported fully steady, especially for North American descriptions, which are somewhat sparingly offered. No. 1 Northern Manitoba ex ship quoted 48s, ditto ex store 50s, No. 2 mixed Durum ex ship 44s, No. 2 hard winter ditto 44s 9d, Rosafe 62½ lbs 45s 6d, choice white Karachi landed 43s 6d, and red ditto 43s per 496 lbs. The floating and forward cargo market remained quiet, but there was no pressure to sell, and prices remained at a generally steady level, especially for Manitoba qualities. Steamers of Australian afloat sold at 45s 3d, and No. 2 Northern Manitoba to Mediterranean, shipment from the Pacific seaboard January, at 42s 9d, Baril 62½ lbs afloat 41s 9d. Maize cargoes were in better request, and steamers of La Plata afloat sold at 34s 6d to 34s 9d, October-November 34s 6d, and a sailer of No. 6 yellow African afloat at 34s 9d, all per 480 lbs. A cargo of Dan-Bess-Kustendji barley due out to load done 27s 9d per 400 lbs. Flour in fair demand at late rates. London standard straight run quoted 38s, patents 40s-41s, town households 36s per sack delivered in. All English country straights 31s-32s per sack delivered to London stations. Imported quiet. Manitoba patents range from 37s-40s as to sample, Minneapolis good patents 40s, Australian 33s-34s per 280 lbs, ex store. Millers' offals tend firmer. Broad bran quoted at 7s 3d, ordinary ditto 6s 3d, middlings 8s-8s 3d, bags included, ex mill. Light oats 5s 9d, powdered oat husks 5s 9d, feed oatmeal 9s 3d, ground oats 13s 9d, free on rail, all per cwt. Barley: English steady, and malting kinds

when trade was abnormally active between March and May. The uncertainty created by the discontinuance of passive resistance movement in the Ruhr and the resumption of work at the collieries is chiefly blamed for the weakness of the market. The actual deliveries from the Ruhr during the past few weeks have been decreasing, and for some time past the exports from South Wales to France, Italy, and other Continental markets have been on a reduced scale. As meanwhile the French industries have been very active, the stocks of coal in that country must have been considerably reduced, but buyers in the Allied countries are hopeful that with the collapse of resistance in the Ruhr, deliveries will be resumed on an increasing scale, and at prices which, under the perequation system, will be much lower than those of coals imported from foreign sources of supply. It remains to be seen to what extent these hopes will be justified. The immediate effect of the postponement of business has been to depress prices at Cardiff, as well as to curtail the volume of the export trade. The quotations of all classes of coal are lower than they have been in any month since last January, and the f.o.b. value of best Admiralty large is to-day 15s less than it was quoted three months ago. Current quotations are as follows:—Best Admiralty large, 27s 6d to 28s 6d; second Admiralties, 26s 6d to 27s 6d; best drys, 27s 6d to 28s 6d; Black Veins, 26s 6d to 27s 6d; Eastern Valleys, 24s to 25s 6d; Western Valleys, 26s to 27s 6d; best small steams, 17s to 19s; ordinary cargo smalls, 13s to 16s; anthracite big vein, large, 45s to 47s 6d; machine-made cobbles, 55s to 57s 6d; French nuts, 60s to 62s 6d; stove nuts, 55s to 57s 6d; rubble culm, 15s to 15s 3d; coke for export, 40s to 45s; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 29s to 32s 6d; pitwood, ex ship, 27s 6d to 28s 6d.

In the iron and steel trade the improvement is still maintained. The imports of raw materials, including French and Belgian blooms, billets, and bars, as well as the exports of such finished goods as tin plates, galvanised sheets, rails, sleepers, &c., are increasing. The inquiries from Japan have not yet led to any expansion in the shipments to that country, but the demand from Europe and South America is increasing. Prices are unchanged, but quite firm.

THE COTTON TRADE.

MANCHESTER, October 4.

The market this week has been very unsettled by the wide fluctuations in raw material rates, and owing to much uncertainty with regard to future values, buyers have been cautious. In cloth there has been a considerable inquiry, and the opinion is gaining ground that many customers have orders to place, but they hesitate to commit themselves until the tone is steadier. Fair lines have been booked for India in light fabrics and fancies, but very little has been done in grey staples. A little more demand has been about for China. Trade prospects in the Near East appear to be rather brighter. Some useful orders have been booked in home trade cloths. American yarns have been very irregular in quotation when tested, and spinners have reported a limited turnover. Moderate contracts have been arranged in Egyptian spinnings. Although business in bundle yarns for India has been patchy, offers for fairly substantial weights have been on the market.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Keen Continental competition in the world's primary markets is keeping wool values on a level quite out of reach of users in this country. Importers are therefore operating with extreme caution, and until trade in the West Riding recovers, this policy would appear to be the safest. The strength of the raw material markets is reflected here in a somewhat better tone, and, in the aggregate, more business has been put through in tops and yarns than for some weeks past. There is no quotable change in tops, but quotations are firm with, if anything, a slight hardening tendency. Demand leans mostly to medium and low qualities, merinos being comparatively neglected. Prices ruling in Bradford are well below costs based on current rates of wool, and this is checking development. Rather more activity is reported in the yarn section, both botany and crossbred yarns having been sold in some fair weights during the last few days, but the general complaint is that prices are cut to such an extreme point that there is no profit in the business. Spinners anxious to keep machinery running appear to be willing to accept business almost at any price, and quotations are very irregular. The piece trade is quiet, but inquiries both on home and export account have been more numerous lately.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

It can now be said that the Australian season is well under way, and this week sales have taken place at Sydney, Melbourne, and Perth. In other words, all the selling centres "down under" have had their initial auction, and although the season is yet young, yet the way wool has moved clearly indicates a sounder situation than the majority expected. At the same time members of the home trade are wondering what is going to happen, for large Bradford buyers say that they are in a quandary, and are completely out of it, so far as actual operations are concerned. There are buyers still in Bradford who ought to have been in Melbourne and Sydney, though one or two are leaving next week. It is by no means satisfactory for the home trade to occupy the position it does to-day in regard to merinos, and so far Australian sales have been one-sided, competition being forthcoming almost entirely from the Continent and Japan. Our cable from Sydney states that good topmaking 64's merino combing wool is selling on a clean basis of 52d to 53d, and in Perth the same standard of values prevails, which means fully 5s 2d in the top, a price which cannot be made in Bradford to-day except for a very good article indeed. It looks as if the home trade is less disposed to embark on buying merinos than for a long time back, simply because there is not the slightest encouragement to put money into fine tops on to-day's level of values. A good many home trade limits went out to Perth on a 4s 9d basis for a 64's top, and many importing topmakers frankly say that that is going to be their price for the next month, until it is seen whether France gets her wants satisfied and then settles down to more rational buying. It is certain that in its present temper the home trade is not the least disposed to buy wool on a basis of over 5s in the top, for apparently neither spinners nor manufacturers can do the slightest good with wool and tops on that level.

VEGETABLE OILS AND OILSEEDS.

The feature of the markets is still the firmness of linseed and linseed oil. Supplies of seed in hand and on passage are comparatively small, and probably not more than sufficient to meet consumptive demands and crushers' commitments between now and the shipment of the new Plate crop. Plate linseed has further advanced in value, and linseed oil is about 20s dearer on the week, spot and near positions being quite firm. The new Egyptian cottonseed is arriving better, and the shortage of oil is thus being relieved. Demand for the latter, however, is not heavy, but prices are steady, and show little variation on the week. Palm kernel oil is in steady demand for export, and what little trade there is passing in soya, rape, and ground nut oils is at late rates. A better inquiry for oilcake is now being experienced from the cattle-rearing farmers.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Market hides and skins were slightly firmer at the auctions held in London on Thursday, three weights in ox and heifers making advances of from 1/2d to 1d per lb. Cows and bulls also showed an upward tendency, as was also the case with kips. Calf skins were firmer to the extent of from 3/4d to 1d per lb, best light skins now making 12d per lb.

The demand for imported hides has rather fallen off, tanners preferring to meet sellers at the fair next week. Prices are without much change, although the United States are reported to be again bidding for supplies. Dry hides are rather slow, and sellers anxious to effect business. The American hide market is cabled as steady, with best heavy Chicago packers offered at 14 1/2c.

To the surprise of many, business has shown more activity this week in Bermondsey. True, inquiries only have been frequent, but it is hoped the various sampling and quoting will lead to business at the fair. Tanners are firm on prices, and where certain grades are scarce, advances are even hinted at. The spell of bad weather which has set in has led to inquiries for a better class of sole leather, and medium grades of home and wet salted bends have gone out more freely. Offal is as firm as ever, and in some cases tanners have booked well forward in shoulders and bellies.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 5.

SUGAR.—General stability was again the salient feature in this market, and with regard to actual parcels something approaching a dearth of supplies has now overtaken the imported section. Apart from white Javass there is really nothing left to handle, and even of these it seems that far too great a quantity was allowed to leave the London distributing centre, and which culminates in a difficult state of affairs upon the point of buyers satisfying requirements. In these circumstances the British produced article is well sought after, with delivery now absorbing refiners' attention. A very tight market has also to be faced in the case of raw refining descriptions, and paucity of supply has become more pronounced of late owing to extensive operations on the part of American refiners in both Peruvian and Brazilian 96 per cent. No change was made in quotations of British goods. Messrs Tate and Lyle's cubes, 60s 6d to 61s 6d; granulated, 57s 7 1/2d to 58s 1 1/2d, as to quality. White Java, spot, sold, 53s 9d to 54s 3d; afloat, steamer "Hemisphere," quoted 27s 6d; ditto, per "Nias," sold, 27s 6d; August-September shipment, 25s 6d, c.f. and i., London. Czech granulated, November-December, sold, 25s 4 1/2d to 25s 6d, f.o.b., Hamburg, with some buying back of same, still taking place. Belgian granulated, November-December, quoted, 24s 6d, f.o.b., Antwerp. White Egyptian, spot, 56s 9d. Mauritius crystals, October, quoted, 30s, c.f. and i., London. White terminal market active and stronger. October, done, 27s; December, freely dealt in at 24s 9d to 24s 10 1/2d, 25s; March, sold, 24s 9d to 24s 3d, 24s 6d; May, 25s 1 1/2d to 24s 3d, 24s 9d.

COFFEE.—Spot market steady, with a moderate trade stirring in the finer qualities. Futures, December, quoted, 55s; March, 54s 3d. **COCOA.**—Steady, with a fair demand. 150 bags Trinidad, sold, fair pale red, 45s; fine plantation, 56s. 500 bags summer Ariba, sold, 61s. Java very scarce, and when obtainable brings fancy prices. Ceylon, also in, but retail supply, and high rates obtainable. Fine red, sold, 105s to 109s. Accra easier forward, and F/F quality, November-January, sold, 29s 3d cwt, f.o.b. terms. English butter, 1s 3 1/2d lb. Dutch auctions met a good demand at dearer prices regarding cocoa-butter.

TEA.—55,300 packages Indian were submitted to auction, and while the commoner qualities were barely steady, fine were wanted and realised stiff rates, despite the fact of general run of quality marking some falling off. Pekoe, sold, 1s 4 1/2d to 1s 10 1/2d; broken ditto, 1s 4 1/2d to 2s 4 1/2d; orange pekoe, 1s 6d to 2s 4 1/2d; good to fine, 2s 2d to 2s 8 1/2d; broken orange, 1s 6d to 2s 4d; fine and fines, 2s 10 1/2d to 3s 7 1/2d per lb, in bond. Low-priced new season's China continue to meet a good inquiry. Ceylon auctions totalled 21,200 packages and proceeded with good spirit, though prices on balance disclosed some irregularity. Common about steady, but the finer qualities easier in most cases, while largely accounted for by a corresponding falling-off in quality. Pekoe, sold, 1s 4 1/2d to 1s 10 1/2d; broken ditto, 1s 5d to 1s 11 1/2d; orange, 1s 6 1/2d to 1s 11d; broken orange, 1s 6 1/2d to 2s 3 1/2d.

RICE.—Burma grain dull and featureless. Two Stars, spot, 16s; September-October shipment, 14s 3d. Spanish from second-hands, October, quoted, 18s 6d. Japanese peas, September-October, 21s cwt.

SPICE.—Pepper steady, but trade moved quietly. Fair black Singapore, L.S., October-December, quoted, 4 1/2d; Lampong, October-December, buyers, 3 1/2d; Muntok, ditto, sold, 6 1/2d to 7 1/2d. Zanzibar cloves quiet. October-December, done, 14 1/2d lb. Tapioca quiet, steady. Singapore flake, October-November, Havre, 29s; Penang seed, ditto to London, 28s 6d. Desiccated coconut steady. Halves, spot, 42s 3d; September-October, sold, 41s; October-November, 40s 6d; November-December, 40s 3d.

JUTE.—Steady, with a moderate demand. First grade, October-November, Continent, sold, £20 15s to £21; November-December, £20 17s 6d to £21; December-January, £21 2s 6d; lightning grade, October-November, quoted, £19 10s ton. Hessians steady. 10 oz, spot, 29s; 8 oz, ditto, sold, 25s; October-December, quoted, 26s and 21s respectively per 100 bags. Twills unaltered.

HEMP.—Manila dull, unaltered. J grade, October-December, quoted £31; K, £26 5s; L, £25 15s; M, £24 10s; African sisal, No. 1 Tanganyika, October-December, £36.

SHELLAC.—Market steady. T.N., spot, 31s; October, 310s; December, 295s.

COPRA in quiet request, and pressed for sale. Prices lower. F.M.S. Straits, August-October, Rotterdam, sold, £28 to £27 2s 6d; October-December, £27 8s 9d to £26 15s. Ceylon, October-November, quoted £29 5s; Java ditto, £27 15s; Dutch East Indies, August-October, sold, £28 to £27; October-December, £26 13s 9d; Cebu, October-November, quoted £26 15s; South Sea, £26 5s. Palm kernels quiet. August-October, Liverpool, sold, £18 10s; November-January, £18 17s 6d to £18 5s.

RUBBER was accorded fair support, partially on American account, but prices, though slightly better, were inclined to show certain irregularity. Standard plantation, crepe and sheet, spot, and October, sold, 14 1/2d, 15 1/2d, and 15d; November, 15d; December, 15 1/2d, 15 1/2d; January-March, 15 1/2d; April-June, 16d to 16 1/2d. To New York, standard sheet, estate, November-December, sold, 15d to 15 1/2d, c.f. and i. Fine hard Para, spot, quoted 14d; soft fine, 13 1/2d. Caucho ball, 12 1/2d per lb.

FRUIT (Dried).—There is only a moderate amount of business doing in currants, and prices moved against sellers. Pyrgos, quarter cases, quoted 43s; ditto, Amalias, 50s; Patras, 53s. Regarding Sultanias, new crop, Smyrna, now arriving; but most of the shipment has already been sold, though some selection will be available shortly of raisins. Valencia, half-boxes, quoted 54s; quarters, 60s to 70s; Australian, four crowns, 49s. New crop dates in moderate demand at steady prices regarding shipment parcels. First-tide Siar quoted 16s; Khredrowie, 20s; and Hallowee, 25s, landed terms, London. Figs.—Genuine naturals, in bags, 38s to 39s; layers, in boxes, 95s to 105s; small boxes of pulled, 145s to 160s. Evaporated Fruits—Californian pears quoted 55s to 85s; Australian apricots, 55s to 65s; peaches, 43s; new crop apricots, 69s to 95s per cwt.

CANNED GOODS.—Sardines met with moderate patronage, and the market is firm owing to the French pack being unsatisfactory. 18-oz market at 16s 6d; quarters,

MONETARY abundance was again diminished this week, by the larger amount of the Treasury bills that had to be paid for, as compared with that of the market's holding of maturing bills, and by Wednesday borrowers found that they had considerable difficulty in supplying their needs, and paid up to 3 per cent. for loans over the night. Extreme stagnation was reported in discount business, bank bills being still conspicuous by their scarcity, but the reduction in the floating supply of cash and the low

level of the Other deposits disclosed by the Bank return checked the demand for bills, and $3\frac{1}{2}$ per cent. became the lowest rate for three months' paper. Yesterday the Treasury Bill allotments went at lower rates than the market had anticipated, but the rate for commercial bills was hardly affected.

	Oct. 12, 1923.	Oct. 5, 1923.	Sept. 28, 1923.	Sept. 21, 1923.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	5 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills) ..	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	..

The Bank return showed an increase of nearly a million in the Reserve, owing to the return of notes from circulation. Repayments by the Government to the Bank were reflected in a decrease of over three millions in the Government securities, while the Public deposits had risen by two millions. These movements left the Other deposits nearly four millions lower. Currency notes outstanding were reduced by £343,400 to £283,599,500, which includes £1,444,100 for notes called in but not yet cancelled. The fiduciary issue is £232,705,400, or £37,478,400 below the maximum.

The monthly statement of average weekly balances for September, issued by the London clearing banks, and printed in detail on a later page, shows only very slight changes in comparison with the figures for August. In the table below we summarise the figures for the nine English banks:—

	Dec. 1922.	May, 1923.	June, 1923.	July, 1923.	August, 1923.	Sept. 1923.
Capital and reserves	116.0	116.2	116.3	116.3	116.3	116.3
Acceptances	72.8	77.5	73.8	73.8	70.7	72.7
Deposits (incl. undivided profits, &c.) ..	1,684.7	1,608.5	1,637.7	1,638.0	1,611.2	1,609.6

Total assets	1,873.5	1,802.2	1,827.8	1,828.1	1,798.2	1,798.6

Some of the previous month's decline in acceptances has been recovered, but deposits have again dropped. A decline of over £4 millions in bills discounted and slight decreases in cash and in investments have been offset by an increase of £3 millions in money at call and a small expansion in advances.

THE STOCK MARKETS.

The steadiness of investment demand has been one of the predominating features of the stock markets this week, and money has flowed freely into gilt-edged stocks. The Commonwealth of Australia and Victoria Government issues were readily absorbed, and underwriters are anticipating an equally favourable reception for the Nigerian loan for £5,700,000 in 4 per cents. at 88, the lists for which were opened yesterday. Prices are mostly better in the foreign bond market, while Home Rails have enjoyed quite a little burst of activity under the lead of Southern deferred. Argentine railway stocks have not been affected by the publication of the reports, but the fall in the exchange has created uneasiness. Rubber shares have fallen a little, and the tea share market has reacted, while oils are neglected. The best features in the industrial section have been textiles, nitrates and electricity supply shares. The Kaffir market is inclined to give way, and there is little business passing in the shares either of copper or tin mines.

THE COMMODITY MARKETS.

Perceptible signs of improvement are noticeable in a few markets. Transactions in the Manchester cotton trade have been difficult to effect, but there is stated to be a good demand, although buyers are not willing to pay the prices asked. Our Bradford correspondent reports active buying of wool "in the Colonies" on Continental and Japanese account, but mentions that wool values are

on too high a basis for Yorkshire operators. The pronounced demand for sugar has somewhat abated, but a firm tone is noticeable in the tea market for all grades. Prices have further declined in the Cardiff coal market, Continental demand having slackened. The pig-iron market is better, and more inquiry is reported. The steel position is slightly better, although our Sheffield correspondent writes in pessimistic vein. On the other hand, our Glasgow correspondent records several interesting developments. Tin and copper were both weaker, and the wheat position is slightly easier. There is a scarcity of linseed oil for prompt delivery.

FOREIGN EXCHANGES.

In the foreign exchange market real business has again been relatively quiet, although political anticipations have as usual lately produced some sharp speculative movements in the Reparation currencies. The mark débacle has been intensified, and its quotation has now little meaning as far as business on this side is concerned. From a quotation of 2.2 milliards on the 6th, the rate rose by leaps and bounds to well over 20 milliards on Wednesday, and though there has been a nominal recovery since then to about 17 milliards on reports of strong action by Herr Stresemann and rumours of the possibility of a German loan in the U.S.A., the currency is practically unsaleable. In Germany itself these fluctuations are, of course, causing complete confusion, and in Bavaria the paper mark has already been discarded by the Government in its Budget calculations in favour of the gold mark. In the meantime, it is announced that a few weeks' time will see the introduction of what is now officially known as the "new mark." It may be noted that future quotations for the mark have now been definitely given up. In Paris optimism as to progress in the Ruhr has been reflected in a sharp recovery in the franc, the quotation for which, after reaching 77.20 on Saturday last, after Lord Curzon's statement to the Imperial Conference, has moved, with some fluctuations, to 74.75 yesterday morning, being quoted at one time on the 10th as low as 73.90. Brussels has as usual moved in sympathy with Paris, and has appreciated from the high point of 91.15 on Saturday last to 87.75 yesterday morning. In Paris future quotations were 4 to 4½ centimes per month above spot, in Brussels 8 to 10 centimes above. The lira also shows an improvement, although less marked, from 101½ to 99½. After falling away a little from the quotation of \$4.55½ reached on the 5th, and moving up again to about \$4.55½, the dollar has shown a slightly weaker tendency, and was yesterday down to \$4.55. There is a general feeling that the full autumn pressure has not yet been felt, and that rates may sag somewhat for some little time to come. Forward rates are quoted at $\frac{3}{4}$ to $\frac{1}{8}$ dollars per month over spot. Amsterdam following the dollar has moved against us from 11.59½ to 11.57½, and Switzerland has also appreciated slightly from 25.47½ to 25.39½. Madrid, too, shows a recovery from 33.72½ to 33.54½. In Northern Europe Helsingfors is about the same at 169½, Stockholm has moved from 17.22 to 17.20, but Christiania has risen again from 28.90 to 29.02½, and Copenhagen from 25.62½ to 25.74½. In Central Europe Vienna is, as usual, unchanged at 322.500. Warsaw, however, largely under the influence of the German mark, has slumped again from 3,000,000 to 3,500,000. It is to be hoped that the visit of Commander Hilton Young may assist the Polish Government in the necessary reorganisation of its finances in order that the favourable factors of the general economic position of the country may be allowed to play their part. Prague, after its recent rise to 154, is back again at 152, and Bucharest is also rather better at 970. In the East the rupee has depreciated somewhat from 1s 4 9-32d to 1s 4½d, and Yokohama is also slightly cheaper (2s 1½d as compared with 2s 1 23-32d). Heavy shipments this week to Bombay have kept up spot prices for silver, but it is expected that the market will be easier again. Hong Kong is unchanged at 2s 3½d, but Shanghai at 3s 1½d is ½d dearer. In South America Rio has moved down from 5½d to 5 3-32d, and Buenos Ayres has depreciated again from 39½d to 38½d, while Monte Video at 39d is ½d cheaper. The Valparaiso quotation is also worse at 39 pesos, as compared with 37.60 pesos a week ago.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the six days ended October 6th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	11,718	From Revenue	15,893
Interest, &c., on Debt	24,549	Amount borrowed	19,364
Sinking Fund	380	Taken from Exchequer balances ..	1,535
Sundries	145		
	36,792		36,792

Revenue amounted to £15,893,500, against £19,153,000. The chief reason for the decline was the lower receipts from Property and Income-tax, which amounted to £5,807,000, and Super-tax to £370,000, against a combined total of £9,137,000 in the corresponding period. Customs produced £2,528,000, against £2,031,000, and Excise £1,294,000, against £1,704,000. The week's operations increased the National Debt by £19,364,000, and caused the following changes:—

	Min. £
National Savings Certificates	+ 4,450
Treasury Bills	+ 4,005
Bank of England Advances	+ 6,500
Public Departments Advances	+ 4,100
Sundries	+ 309
	+ 19,364

It will be noted that the sale of National Savings Certificates were again on a large scale. The floating debt was increased by £14,610,000 to £818,156,500.

FINANCIAL YEAR, 1923-24 (April 1 to October 6, 1923).

£	£
Total Expenditure .. 399,625,539	Raised by Revenue .. 381,723,413
	Net Borrowings 13,980,026
	Decrease in Balances 3,922,100
Total 399,625,539	Total 399,625,539

ESTIMATES FOR YEAR 1923-24.

£	£
Ordinary Expenditure 801,013,000	Ordinary Receipts .. 778,500,000
Special Expenditure .. 15,603,000	Special Receipts 40,000,000
Total 816,616,000	Total 818,500,000
	Surplus 1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the meetings of the United Steel Companies; the Clerical, Medical and General Life Assurance Society; the Kern River Oilfields of California; and the Java Para Rubber Estates. At the meeting of the Clerical, Medical and General Life Assurance Society the chairman made the interesting announcement that as from yesterday premiums on new assurances will be "substantially reduced." Mr Albert Peech took a moderately hopeful view of prospects in the steel trade, while the feature of the speech to shareholders in the Kern River company was the statement that owing to the reduction in oil prices revenue from the Kern Field had dropped by 60 per cent.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MR BRUCE AND THE POLICY OF TRADE RESTRICTION.

We are grateful to Mr Bruce for the frankness of his speech last Tuesday, in which he put forward the views held by certain sections of opinion in the Dominions. At the outset let us say that it would be ridiculous to cavil at the observations of the Australian Premier on the ground that he is discussing a matter of domestic interest to Great Britain. On the contrary, we think that a better understanding will come from mutual criticism and suggestion. We, therefore, hope that we shall not be considered discourteous or be misunderstood if our comments on the proceedings of the Conference are couched in terms of equal frankness. We are grateful to the Australian Premier because he has called a spade a spade. More clearly than any other speaker at the Imperial Conference,

he has explained that what he invites us to do is to put barriers in the way of commerce in the interests of the Dominions. He made it clear that the sort of preferences which have already been granted and instituted by Great Britain, though acceptable as an earnest of good intentions, are not of much real significance, but that what Great Britain is really asked to do is to impose restrictions in favour of the stable agricultural products of the Dominions, and notably wheat, wool, and meat. "That is what the Dominions produce, and that is what will bring about the development of the Dominions, and it is no good our passing pious resolutions, talking about better preference to the Dominions, and ever dodging what is the great issue." In putting forward for discussion his views upon this subject the Australian Prime Minister began with the suggestion of a duty upon food and materials. His particular proposal has, indeed, put into the shade all those tariff reformers known before the war so euphoniously as "whole-hoggers," for he goes right back to the principle of the old Corn Laws of the 18th century by suggesting that "protection for British agriculture and preference for the Dominions should be introduced on a sliding scale." The tariff would come into effect when prices dropped beyond a certain figure, and presumably the duty would increase in proportion as world prices fell below this level. This device is intended to secure, and would undoubtedly be extremely successful in securing, that the price of agricultural products would remain high. The Australian Premier added that the price at which the duty became operative would depend upon the cost of production in this country. This was also the theory of the old Corn Laws. The scheme would insure a steady expansion in the wheat area of Great Britain. Land on which it does not now pay to grow wheat would be sown once more, and wheat culture would be driven into less and less suitable land. That was also the effect of the old Corn Laws. The toll which the agricultural community would take from the towns would steadily increase (though in accordance with economic laws well understood, the greater part of the benefit would in the long run come to the land-owners in higher rent, and would not permanently raise the return to the farmer), and in the end the reduced standard of living, which would be the fate of all our town population, would smash the system, as it did in 1845.

Mr Bruce tells us that Dominion farmers, as well as home farmers, are in many cases incurring losses on their arable crops, and that in the long run it is of no advantage to ourselves or to any other country to buy at prices below the cost of production. Along this road we shall, he says, find reduced production, scarcity, high prices, and ultimately starvation. Nevertheless, he adds that "in view of the high price which the British consumer has to pay for produce, there is no real reason why a system of protection and preference based on a tariff should necessarily increase the cost of living." But it will obviously not serve its purpose unless it adds to the receipts of the producer. We can only suppose that the public report of Mr Bruce's speech is an expurgated one, for there must obviously be a paragraph missing at this point to explain how the producer can get more, while at the same time the consumer is to go on paying the same price. Again, Mr Bruce observes that "unless Empire agriculture can be encouraged Britain must expect to see the control of its food supplies pass more and more into foreign hands, with what results in time of war recent experience may show us." What those results were we mentioned in the *Economist* last week in the case of wheat. Owing to the submarine campaign and a shortage of shipping tonnage it became difficult during the war to get produce either from Australia or, to a less extent, from India. Moreover, the man power of Australia and Canada was reduced by the very heavy call made upon them for the fighting forces. The result was that our imports of wheat from the Empire fell from an average of 47.8 million hundredweights per annum in the decade before the war to an average of 39.5 million hundredweights in the four years of the war, while our imports from foreign countries rose from 68.4 million cwts to 69.9 million cwts a year.

But, of course, the Government will have none of this. The Conservative party managers remember their recent

history well enough to know that the "fair trade" movement of the eighties vanished into thin air as soon as it was realised by the public that it meant keeping this country out of the cheapest market for food, and that the Tory disaster of 1906 was directly due to the fact that a movement, which started on a modest basis of Imperial Preference, and developed in the hands of Mr Balfour into a tariff to be used as a weapon for driving down other people's tariffs, inevitably ended in thorough-going protection, including taxes upon food. In a country which realises more than ever before in its history that its prosperity depends upon the utmost development of the international exchange of goods, it is a thankless task to preach a policy of trade restriction. The Government is, therefore, in something of a dilemma. Having called the Conference they are anxious to show that they mean business, and, in any case, are quite properly concerned to cultivate the goodwill and co-operation of the Dominions, for it is on Imperial solidarity and on good Anglo-American relations that the future peace of the world depends. At the same time they are fully conscious that it would be suicidal to allow a protectionist movement, even though born of Imperial sympathies, to get out of hand, or to find themselves committed to anything more than comparatively innocuous preferences on unimportant commodities. Mr Bruce is by now probably well aware that in saying this we are not expressing a sectional or party view, but that the British nation is "prejudiced" beyond hope of conversion against any policy which involves raising the cost of living of the industrial population for the benefit of any sectional interest.

Mr Bruce is too good a politician to be blind to such considerations. He, therefore, produced three other possible plans for the stimulus of home and Dominion agriculture. The first is that the British taxpayer should pay a subsidy to home and Dominion agriculturalists. The argument, so far as the Dominions are concerned, runs that the preference now granted by Australia is worth £7½ millions to Great Britain, and that we might reasonably be asked to pay a proportion of this back to the Australian exchequer for the benefit of Australian farmers. If we understand this line of reasoning, it means that if the Australian tariff on British goods had been some 33 per cent. higher than it actually is, and if we had nevertheless sent into Australia the same quantity of goods that we do at present—a very large assumption—the Australian exchequer would have been so much the richer. But does it not occur to Mr Bruce that if his tariff wall against English goods were higher, this difference would be paid by the Australian consumer, in the shape of higher prices, partly to the Australian exchequer in respect of more highly taxed imports, and partly to Australian manufacturers in cases where they were enabled by the additional protection to secure the market. We do not wish to belittle either the material or the psychological advantage to British industry of Australian preference, but to speak as though low rates of duty which enable Australian consumers to buy at lower rather than higher prices is a present of so many millions to this country is, to say the least, a curious way of putting things. Mr Bruce recently claimed in his own Parliament that Australia was England's second best customer—India being the first. This has been true for a few months in 1921-22; but, with these exceptions, France has been our second customer since the war, having taken the place held by Germany in 1913. But it is a curious fact that, in spite of Dominion preferences, the proportion of British trade which goes to the Dominions is almost exactly the same as in the decade before the war, whereas in our comparatively indiscriminating market imports from the Dominions have increased from 24 per cent. of our total imports before the war to about 32 per cent. of the total since the war. Moreover, we buy more from the Dominions than the Dominions buy from us, thanks largely to the tariffs against us. Every British manufacturer knows what a handicap he was faced with when Australia added several more storeys to her tariff wall in 1921. We are gradually overcoming the difficulty, and expanding somewhat our trade with Australia because we have reduced our manufacturing costs more than any country in the world, thanks to the comparatively low cost of living and of food in Great Britain. We are afraid there is little prospect of any direct subsidy by the British

taxpayer to the Australian producer so long as he recognises these disabilities, and is, moreover, conscious that he is carrying a war debt of £152 per head of population against £53½ in Australia, and is contributing £3 11s a year per head (1922) to the defence of the Empire, compared with £1 0s 4d per head in Australia.

We have not left ourselves much space to deal with Mr Bruce's remaining suggestions, viz., the prohibition of import into Britain of food and raw material, except under licence, or the setting up of national purchasing organisations. The former of these, which is the most objectionable of all forms of trade restriction, need not detain us; but on the latter we would recall that when last year it was proposed to renew the life of B.A.W.R.A., an organisation of precisely the kind Mr Bruce has in mind, the Australian wool growers turned it down by an overwhelming majority. We are reminded also of a little item of £25 millions, which the latest accounts reveal as the loss incurred over a period of years by the Sugar Commission.

But perhaps, after all, Mr Bruce's remarks were made with chief reference to the "home front." If so, we are glad the case has been put so bluntly; for it has afforded an opportunity to the Dominion Premiers to realise the strength of opinions which perhaps would have gone unexpressed if the issue had not been so clearly stated. We take it, however, that the discussion of these general ideas is not likely to be pressed much further, and that the Conference will henceforth devote itself to proposals of a more restricted scope.

LORD CURZON AND THE TURKS.

THERE will be great differences of opinion as to the merits or demerits of the Treaty of Lausanne*. It may be a ramshackle document, full of patches and ragged edges, but it at any rate has the merit of being a genuine product of negotiation, in which the opposing aims and interests of the parties have been reduced by compromise to middle terms which are not unendurable for either side. Lord Curzon did not fail to make these points in his speech to the Imperial Conference at the end of last week. "The principal problems" that faced him when he went to Lausanne "seemed almost insoluble," he said, "unless the Allies were prepared to dictate their terms at the point of the bayonet. Such had been the case with all the previous post-war treaties. These had in each case been drawn up by the victorious Powers, sitting, so to speak, on the seat of judgment in the absence of the culprit, and imposing what penalty or what settlement they chose. Only when the terms had been drawn up was the beaten enemy admitted to be told his sentence, and to make the conventional protest of the doomed man. Such, indeed, was the environment in which the original Treaty of Sévres was drawn up and signed, though never ratified by the Turkish representatives. Far otherwise was it at Lausanne. There the Turks sat at the table on a footing of equality with all the other Powers. Every article of the Treaty had to be debated with and explained to them. Agreement had to be achieved not by brandishing the big stick, but by discussion, persuasion, and compromise."

This passage, in which Lord Curzon has defended his remarkable diplomatic achievement at Lausanne with his usual ability of exposition, is the most tremendous indictment of the post-war treaties that has yet been delivered by any of the leading statesmen responsible for them. Lord Curzon was Secretary of State for Foreign Affairs when the Treaty of Versailles, as well as the Treaty of Sévres, was drafted and signed, and though he was not a member of the Council of Four, it is not unfair to recall the measure of responsibility which he incurred, since throughout his speech he has taken a very personal line. The vindication of Lord Curzon presented is, in fact, a condemnation of Lord Curzon in his last phrase but one, and the tone of the speech leaves it uncertain to what extent this is realised by the speaker. Does Lord Curzon

* "Treaty of Peace with Turkey and Other Instruments Signed at Lausanne on July 24, 1923." [Treaty Series No. 16 (1923); Cmd. 1929.] London, 1923, H.M. Stationery Office, 8s net.

regret that the big stick was not this time in his hands? From his words it might appear so, yet in the same breath he admits the inefficacy of the big stick at Sévres, while the Government, of which he is now a member, deprecates (to say the least) its even more disastrous employment by M. Poincaré in the Ruhr. Possibly Lord Curzon would argue that the big stick might have knocked Turkey on the head effectually if only France had lent a hand; but such a contention would give M. Poincaré an opening for a *tu quoque* in regard to Germany, and the parallel between the two arguments would demonstrate the fallacy of both. The reason for the failure of the big stick is something more profound than divergence of view and action between the Allies; it flows from the inherent impossibility of imposing permanent peace settlements by the methods of violence which secure military victory in war. The fact is that Lord Curzon has been over-anxious to defend himself in circumstances in which he has exercised the proper functions of a diplomatist with patience, industry, resourcefulness, and credit, and that he has incidentally passed judgment upon previous transactions which it would be a travesty to call diplomatic, and for which a defence is hardly possible.

As regards the policy of the British Government towards Turkey since the Armistice, for which Lord Curzon's personal responsibility was most direct, he maintains that his "object throughout" was to bring the "ill-fated hostilities" between Greece and Turkey to a close. An unkind critic might paraphrase this as "*Video meliora, deteriora sequor*," but it would be unprofitable and ungenerous to rake up out-of-date controversies. Since the moment when the crisis produced by the Greek collapse surprised him, Lord Curzon has done his utmost, in negotiations with M. Poincaré at Paris and with Ismet Pasha at Lausanne, to retrieve the position, and he is to be congratulated on his substantial success under difficult conditions. He deserves to benefit himself by the "goodwill" of which he offers "our sincere expression" to Turkey "in making what will be a great experiment," and, instead of pursuing him with praise or blame into his detailed discussion of the Treaty of Lausanne, it will be more profitable to turn to the text of that document itself.

The broad outlines of the new Treaty are sufficiently familiar already. Indeed, they were already apparent in the draft treaty which was published by the British Government, together with the minutes of the meetings, after the close of the first session of the Conference at Lausanne. But it is worth taking note of the final terms agreed upon in regard to the more controversial points, especially those which at moments threatened to produce a deadlock during the second session. The rights of minorities are a question with which opinion in Great Britain is particularly concerned; for the Greek and Armenian minorities in Anatolia (together with the Turkish population of the war-zone) have been the chief victims of the unhappy events since the Armistice, for which the late British Government cannot escape responsibility. If now, after more or less successfully extricating ourselves from the quandaries in which we had been placed by our Government's policy, we found that

we had left the minorities in a permanently intolerable position, the effect would be equally bad upon our self-respect, our prestige in the East, and our future political relations with Turkey. The position of minorities in Turkey (as elsewhere) depends, of course, much less upon written guarantees than upon the temper of the majority among whom they live and of the Government to which they are subject. If the better spirit now noticeable is more than a passing phase, the non-Turkish minorities in Turkey stand to benefit by it particularly; and in that case the terms assured to them in the Treaty will probably turn to good effect, since they are the most favourable that could have been granted to the minorities without defeating their own object by inspiring the Turks with resentment. In these clauses the Lausanne Treaty substantially follows the lines of the minority conventions accepted by defeated or aggrandised states in Europe. Individual non-Muslims are to enjoy complete equality before the law and in the public service; they are to retain the right to organise and control their charitable, religious, social and educational institutions at their own expense, and they are not to lose their judicial autonomy in matters of personal statute. The Turks have abandoned one of the cherished but most misguided aspirations of their chauvinists by agreeing that no restrictions shall be placed upon the free use by any Turkish national of any language in private intercourse, in commerce, religion, in the Press, or in publications of any kind or at public meetings; and adequate facilities are to be given to Turkish nationals of non-Turkish speech for the oral use of their own language before the Courts. These provisions are of interest to foreign residents, whose lawful activities in Turkey have been as much menaced as those of the native minorities by threats to insist on the exclusive employment, for private as well as official purposes, of the Turkish script, numerals and language. Foreign residents will presumably benefit by rights which native minorities acquire, since the general effect of the section relating to foreigners seems to be to secure them "most-favoured Ottoman subject" treatment. While the minorities have lost much, at least on paper, by the abolition of the old "millet system," they have made a distinct gain in the provision that, in districts where they constitute an important element, they are to be assured an equitable share in the enjoyment and application of the sums which may be provided out of public funds under the State, municipal or other budgets for educational, religious, or charitable purposes. They may also benefit greatly by Turkey's formal acknowledgment that the minority clauses constitute obligations of international concern, and by her consent to their being placed under the guarantee of the League of Nations.

As regards the status of foreign residents (in which our interests, as well as our sentiment and conscience, are concerned), the general position is not unlike that of the minorities. If the minorities miss the precarious shelter of the "millet system," it is even more unpleasant for the foreigners to lose the capitulations, under which they had enjoyed not merely a secure, but a privileged

position for generations. Yet, considering that, in the new circumstances, the capitulations had lost the effective sanction of force, it was undoubtedly better in this case, too, to accept a *régime* on the same footing as that which prevails in most independent civilised countries, on the calculation that if the Turks were not alienated and exasperated by differential treatment, they could be induced to behave with the same degree of sanity as other nations. Equality of status (and therefore, implicitly, of standards of behaviour) is the principle on which the clauses relating to foreign residents in Turkey are drafted; and this equality is asserted in two ways—by reciprocity for Turkish nationals abroad and by identical treatment of foreign and Turkish nationals, corporations and institutions in Turkey. The very first sentence provides that "the application in Turkey of each of the provisions of this chapter to nationals and corporations of the other contracting Powers is expressly subject to complete reciprocity being accorded to Turkish nationals and corporations in the territories of the said Powers." The provisions against discrimination are worked out in considerable detail. Here, again, the foreign residents, though, like the minorities, they have lost much by the lapse of their old status, have made a distinct gain in the express recognition of their right to acquire immovable property. They are to have complete freedom to reside, circulate, and trade. Like the native minorities, they preserve their judicial autonomy in matters of personal statute. Turkey agrees to recognise commercial, industrial, and financial corporations, including transport and insurance corporations, which are regularly incorporated on the territory of any one of the other contracting Powers. Foreigners remain in a distinctly privileged position in so far as they are not to be subject, in any circumstances, to forced loans or capital levies, and are to be exempted from military service (though, in the absence of any provision to the contrary, their descendants born in the country will presumably fall within the scope of whatever may be, from time to time, the Turkish naturalisation laws).

The only approach to a substitute for the capitulations consists in a unilateral declaration by Turkey regarding the administration of justice. For a period of not less than five years she will take into her service a number of European legal counsellors, whom she will select from a list prepared by the Permanent Court of International Justice at the Hague from among jurists nationals of countries which did not take part in the war of 1914-8, and who are to be engaged as Turkish officials. These counsellors are to be observers without executive power, but they are to be empowered to receive complaints and to make representations to the Minister of Justice. In comparison with the old capitulatory extra-territorial jurisdiction, these functions are narrow, but anyone who is acquainted with contemporary conditions in Turkey will realise that they are far from being unimportant. Turkey has now a sufficient number of able, educated and enlightened men to occupy the highest posts of responsibility, but not yet enough to control, let alone to fill, the minor ranks of the official hierarchy. The underpaid and under-educated functionary at the bottom of the ladder largely frustrates the policy of his superiors, to the detriment of the Turkish nation itself, as well as of the native minorities and the foreign residents. The new legal counsellors (whose reference is not restricted, in the declaration, to cases in which foreigners are concerned) may prove to be at least as valuable to the Turks as to the non-Turkish elements in the country.

IMPERIAL PREFERENCES: PRESENT AND PROSPECTIVE.

MANY times during the preparations for the Imperial Economic Conference the Government must have put forth songs of gratitude for the famous pledge of Mr Bonar Law. For, bound as they were by that pledge, no clamour of Dominion representatives could drive them to make a really fundamental change during the existence of the present Parliament in the fiscal policy of this country. And seeing that the last thing which Mr Baldwin and his colleagues are prepared to face is a General Election on

food taxes, they have been under no temptation to risk all by going to the country. That pledge has been a precious sheet anchor on which they could depend to stop any dangerous drift towards a substantial extension of Imperial Preference. Mr Joseph Chamberlain's dictum is as true now as it was 20 years ago when his Tariff Reform campaign split upon it:—"If you want to give a preference to the Empire you must put taxes on food."

The smallness of the concessions announced by the President of the Board of Trade this week will be more readily appreciated if we show how closely they fit in with the system of Imperial Preference set up by Mr Austen Chamberlain in 1919, and with the Bonar Law pledge not to make any fundamental change in our fiscal policy. Mr Chamberlain's principle was to allow a remission of existing and future customs duties in favour of Empire products from whatever part of the Empire they came. There was no reciprocity about it. The United Kingdom granted to all Empire products, which were subject to Customs duties, a remission of duties usually amounting to one-sixth. Spirits from the Empire do not get a direct preference, but foreign spirits are subjected to a surtax of two shillings and sixpence a gallon. The greater part of the Customs revenue comes from the duties on tea, sugar and tobacco, in which the Dominions are not at present greatly interested. We give India a reduction of one-sixth on tea and tobacco, though India gives no preference to us, and is totally opposed to giving a preference to us; the remission of duty which West Indian growers were intended to get on sugar is intercepted by the wholesale traders in sugar, and much the same thing happens to any tobacco which comes from South Africa or Nigeria. Unless an Empire product can be handled and marketed as a distinct commercial commodity—such as Indian or Ceylon tea—the growers can derive little benefit from a preference in duty.

There are other duties now in the United Kingdom on which an Imperial preference is also given. The McKenna duties of 33½ per cent. on private motor cars, clocks and watches, musical instruments, and cinema films are shorn of one-third when these commodities come from the Empire, which they rarely do. The Safeguarding of Industry Act (Part I.) duties on "key industries" do not apply to Empire products when there are any, and the specific duties levied against certain countries under Part II. do not affect the Empire at all. On the whole we see that the application of the principle of Imperial Preference to British customs has not done much for the Dominions, and cannot do much unless the food taxes, forbidden by the Bonar Law pledge and by the fate of Mr Joseph Chamberlain, become enshrined in British fiscal policy.

Sir Philip Lloyd-Greame proposes to remit altogether the existing duties on dried figs, raisins, currants, and plums, in respect of Empire products—the Imperial preference hitherto has been one-sixth of the duty—and to impose a duty on foreign dried fruits and preserved fruits which are not at present dutiable, while admitting Empire preference of about ¼d a lb on sugar for ten years, even though the general level of the duty be reduced, and as regards tobacco, either to stabilise the preference of about 1s 4d a pound or to increase the rate of preference from one-sixth of the duty to one-fourth. The most substantial of these proposals is the one to admit dried and preserved fruits from the Empire duty free, while maintaining or imposing duties on those which come from foreign countries. It may be plausibly argued that so far as figs, raisins, and plums are concerned (which are at present dutiable), the Bonar Law pledge has been kept, but it requires some sophistry to contend that the imposition of a duty on foreign preserved and dried fruits (not at present dutiable) in order to give Empire products a preference is not a breach of the spirit of the pledge. This would be a deliberate tax imposed on food with the object of giving Imperial preference, and though not

perhaps in itself of great importance, would be as fundamental a change in fixed policy on a small scale as Mr Joseph Chamberlain's food taxes would have been a fundamental change on a great scale. It would be a definite departure from our fiscal system of imposing Customs duties for revenue purposes, because its imposition would be admittedly political in purpose. If, within the Bonar Law pledge, the Government can put a tax on foreign dried and preserved fruits, in order give the Dominions a preference, then they could—if they were not afraid of the electors—put a tax on foreign wheat in order to give the Dominions a preference. Both things, in principle, are on the same plane. In practice, they differ widely; the duty on foreign dried and preserved fruits does not excite anybody very much, whereas a tax on foreign wheat would set the whole country ablaze.

We will now deal concisely with the other side of the account—the preferences in trade given to British products by Dominions and Colonies. Their importance is frequently exaggerated. Far and away the most important part of the Empire for our export trade is India, and India gives us no preference. Indeed, India is busy with a Tariff Board establishing protection against British exports. Nevertheless, we give India a preference of one-sixth of the duties on tea and tobacco, and on any other dutiable product which she sends to us. The self-governing Dominions, with the exception of Newfoundland, our "oldest colony," do grant us varying measures of preference. Newfoundland never has done so. In Australia the preferential tariff was made more favourable to us in 1921, and most categories of British goods benefit to the extent of from 10 to 15 per cent. in competition with foreign goods. New Zealand, which also revised its tariff in 1921, aims at charging British products two-thirds of the full rate of duty; this preference affects about two-thirds of the items in the tariff, and amounts to a benefit to us of from 10 to 20 per cent. on the value of the goods which come under it. Canada, which started Imperial preference as long ago as 1897, now has a tariff on which British goods get roughly a preference of one-third of the rates charged on the general tariff. The benefit ranges from 5 to 15 per cent. *ad valorem*, and may be taken as about 10 per cent. *ad valorem* on the more important classes of British goods. There was a temporary war extension of the Canadian preference, but that has since lapsed. The South African preference amounts to 3 per cent. *ad valorem*. On the whole of our exports to the self-governing Dominions the preference amounts to an average remission in duties of 10 per cent. *ad valorem*.

So far as proportion of Imperial preference to general rates of duty is concerned, the West Indies treat us more handsomely than some of the self-governing Dominions. Jamaica, it is true, does not remit more than one-quarter of its duties to British goods, but several other islands give us a preference of one-third, and some grant us a full half. The level of duties in the West Indies is generally lower than in the Dominions, so that the benefit *ad valorem* is not so large as the 10 to 15 per cent. of Australia, New Zealand, and Canada on competitive classes of goods. Nevertheless, as a set-off against the geographical advantages of the United States, the West Indian preference is of real value.

The extent to which Imperial preference has benefited inter-Imperial trade is not possible to estimate with any accuracy. Whenever one brings it to the test of figures the results evade the statistical vision. It is not possible to discover by how much we should have lost export markets in the Dominions and Colonies if they had not given us any preference at all. The one queer fact which no one seems able to explain satisfactorily is that over a considerable period of years, in times of depression as in times of prosperity, the proportion of our trade with the Empire remains as an almost constant factor of our total overseas trade. Tariffs come and go; in 1920 and 1921 they came in furious volume almost everywhere; preferences are varied in amount and in incidence, yet the proportions between our Imperial and our foreign trade over statistical periods continue almost unchanged. Even in these most depressed days, with Europe in ferment, we sell approximately the old proportion of 60 per cent. of our exports to foreign countries and 40 per cent. to the Empire.

IMPROVEMENT OF INDUSTRIAL RELATIONS.—I.

THE century old struggle between Labour and Capital for high wages on the one hand and high profits on the other has entered upon a new phase as a result of the war boom and the peace collapse.

While in some respects the new phase has an even more sinister aspect than the old, there are also to be found in it elements which, if fairly and equitably explored, may tend to a far greater community of interests between men and employers than has seemed possible in the past.

The wages in any industry must in the long run depend upon two things. On the one hand, they are determined by the valuation which the public puts upon the joint services rendered by the capital and labour employed in it—i.e., for practical purposes upon the margin between the selling price of its products and the cost of its materials, its payment for the use of land, &c.; and, on the other, by the amount of labour and capital engaged in it. Over a long period the remuneration of both labour and capital must be sufficient to prevent them leaving the industry, or, at all events, to insure that natural wastage is adequately replaced. Hence these profits and wages must bear a relation to current rates of wages and profits in general, having regard to any special risks on the one hand or any incidental advantages on the other which the industry may possess for either party.

But for short periods in most cases neither capital nor labour can move very rapidly either into or out of industry, and, therefore, the division of the net proceeds of the industry is capable of very considerable variations without at once calling into operation influences which will restore a normal economic remuneration, either to wages or capital. But to leave this distribution to chance or for either side to press unduly the advantage which monetary conditions may give to it is foolish and shortsighted, and it is a recognition of this fact that makes us hopeful of the possibility of better industrial relations. The old view of employers that it is reasonable for them to take full advantage of a temporary over-supply of labour is dying slowly but surely. Such a theory would only give to each class of workpeople a bare subsistence wage, or even less when labour is strategically very weak. Indeed, in modern conditions, trade union organisation, by means of its strike pay, imposes a check upon such exploitation, and recently it has been further limited by the rates payable under unemployment insurance schemes. Both of these plans have the effect of artificially limiting supply, and prevent cutthroat competition for the available jobs. If there were no such limitations it is true there would be few unemployed, except the margin of unemployables who are normally on the Poor Law, production would be stimulated and prices lowered; but wages would at such times produce less than a living wage. In the United States, where such checks are less developed than in Great Britain, the power of labour to limit supply has, however, been supported by laws restricting emigration.

On the other hand, there is an obvious limit to the extent to which labour can drive up wages at the expense of capital. If by strikes or other means wages are forced to a point where they absorb the whole of the net product of industry, either business is abandoned or selling prices have to be raised so seriously as to curtail demand. In either case the reaction upon employment is the same; capital loses its profits, but a large number of workpeople are thrown out of work and lose the whole of their income, being only saved from starvation by voluntary or Governmental assistance.

Labour usually thinks that capital is getting too large a share of the joint produce, and in some cases this may be so; but, on the average, it is usually true that the reward of capital is not unreasonable. The record of two great industries—railways and coal mines—in which disputes and strikes have been all too frequent, shows that in these cases the general average reward of capital has not been excessive, while the endeavour in the former to maintain a standard of wages based on an assumed

scale of "cost of living" has resulted in charges for the product which have admittedly crippled industry generally, and are in part responsible for the volume of unemployment.

If due consideration be given to the elementary fact that both wages and profits are limited by the value and cost of the product, it must be recognised more and more that continual disputes as to the level of wages can never lead to any satisfactory result.

The one source out of which increased remuneration to both parties can come is reduction of cost (which in great part must be achieved by increase of output) and a consequent increase in the margin in which both share. Without doubt in the half-century before the war, by improvements in methods, great savings have been effected in cost of manufacture in our staple industries, and while a large part of these savings has gone to the consumer in reduced prices, the demand has thereby been stimulated, a far larger amount of labour has been employed, wages have considerably increased, and the standard of living of the workers has been raised. The process has been continually hampered by disputes and strikes, usually in periods of depression and falling prices, and much of the extra benefit that might have accrued to consumers, capital and labour, has thereby been lost. In recent years attention has been naturally directed to the great apparent extravagance on many sides, which is taken to indicate great prosperity on the part of the so-called capitalists. No attention is given to the much less obvious reduced standard of living, due to high prices and destruction of capital resulting from the war. If the real facts about each industry were known to the workers therein, they would come to realise that unless the losses of the war are repaired by greater skill and energy on the part of both labour and capital, by which alone lower costs, greater production, and its disposal can be ensured, a fall in the standard of living (even more severe than has already taken place) is inevitable.

It is essential that employers and employed work together so as to reduce the cost of production in every way possible, and increase the available margin out of which alone can come the funds to maintain fair remuneration to both labour and capital and a fair price to the consumer.

In his report on the results of the Coal Commission, Mr Justice Sankey made the following statement:—

"For a generation the colliery worker has been educated socially and technically. The result is a great national asset. Why not use it?"

To what extent has this motto been followed in industry generally, and what reduction in cost of manufacture might not be obtained if the full experience of the workers in an industry were taken advantage of and combined with the knowledge and skill of the owners and managers?

In many individual cases consultation with representatives of the workers has been tried with success, and it has been found that the acceptance of a share in the responsibility by such representatives, and the increased knowledge of the financial aspect of the business which they have thereby acquired, has resulted in more harmonious working and in better results both to employers and owners, without any increased burden on the consumer. Individual efforts of this kind, whilst most useful as examples of what can be done, cannot go very far in the reformation of a whole industry; what is required is a collective effort to attain the necessary community of interests and to make use of the united experience of owners and workers. So far endeavours in this direction have been few, and while in the case of certain gas companies representatives of Labour have been admitted to a seat on the board of directors, it has been as capitalists (by subscriptions for shares) and not as labourers.

The capitalist risks his money; the labourer his livelihood, and in some trades his life and health. Failure means to the capitalist some, but usually not a total, loss of his possessions; to the labourer it may well mean starvation. Surely it is not unreasonable to suggest that if the capitalist is entitled to representation on the board of directors, the labourer is also so entitled, and that the business as a whole would benefit largely by the joint consultation and activities of these two elements.

It is said that representation would put an end to discipline, but this objection overlooks the elementary fact that a director has no power or authority as an individual; acts of directors being valid only when they are decisions of the board as a whole. Moreover, the fact that the board contains representatives of the workers is more likely to promote discipline, on account of the greater feeling of responsibility and loyalty thereby induced in the workers.

The first step towards a solution of the continuous struggle is to put labour in the position to obtain all information—financial and technical—about the industry, and to share with capital the responsibilities for decisions taken as a result of this information. Section 2 of the Mining Industry Act passed in August, 1920, provided for a complete system of Pit and District Committees, and Area and National Boards, consisting of equal numbers of representatives of owners and workers, to whom were referred questions of:—

- (a) Safety, health, and welfare of workers.
- (b) Maintenance and increase of output.
- (c) Disputes.

(d) Any others referred to them by the Board of Trade. Unfortunately, this section of the Act was rendered abortive by the failure of those entitled to appoint representatives to these Committees, and it was repealed in March, 1922.

The second step is to determine for any industry the fair division between capital and labour of the margin between cost and selling price of the product. If the average capital employed be known, a minimum rate of interest corresponding to a minimum rate of wage can be determined, and it should not then be difficult to settle the rate of division between the two parties of any further surplus. This is the principle adopted in the Coal Mines Agreement of July 1, 1921, and it will be useful in a second article to note the main outlines of this Agreement, and see how it has operated in the difficult period through which that industry has passed.

INDIAN AND COLONIAL MUNICIPAL STOCKS.

WHAT Mr Baldwin and his colleagues may be saying *sub rosa* in reply to the requests of the Dominion Premiers for more privileges in the British market at the expense of our consumers and taxpayers and foreign customers we have no means of ascertaining; but it has too long been our practice in dealing with Dominion demands to use less candour in our answers than they in their requests. For example, is not Great Britain in an economic sense even more valuable to the Dominions than they are to her? Is not a free market without a Preference better than a protected market with a Preference? Is not the defence of the Dominions almost wholly provided by the British fleet and at the expense of the British taxpayer? If the British Government has to borrow, where does it borrow? At home. If the Dominion Governments need money, where do they borrow? Frequently, perhaps usually, in Great Britain. Altogether the balance of advantage is clearly on the Dominion side. Great Britain gains much, but the overseas Dominions gain more. In this article we propose to examine one particular item of Dominion indebtedness, that of the cities or municipalities.

Taking the whole overseas Empire, about 75 towns seem to have borrowed in London, and the total amount borrowed (about £86,000,000) would not be excessive if it represented the whole debt. But many of the municipalities have mortgages or other debts contracted locally which ought to enter into the valuation of their credit. If a municipality became insolvent, it might choose to default on its foreign and continue to pay its local debt.

The market valuation of this £86,000,000 is about £68,700,000, or an average price of about £79 per £100 stock. Taking the average price of issue as 95 per cent., this represents a loss to investors of 16 per cent. of their capital, apart from the depreciation in the purchasing power of sterling which affects pre-war issues.

Throughout the stocks quoted in the Stock Exchange

Official List there are numerous anomalies. Owing often to some temporary cause two municipal stocks equally good stand at different levels. We should have thought that the credit of the great city of Calcutta would at least be as good as that of some smaller Dominion town, but we find that during the recent political turmoil Calcutta had to borrow at 7 per cent. Consequently the Port of Calcutta 7 per cent. debentures yield as much as £6 8s 9d, whereas the 4½ per cent. debentures of the City of Regina return only £5 10s. Then, again, the Bombay 4 per cent. guaranteed sterling loan is on a 5½ per cent. basis, while only £4 17s 9d can be got on the Victoria (British Columbia) 4 per cent. debentures.

Five Indian cities have raised money in the London market, and their stocks are quoted, namely, Bombay, Calcutta, Karachi, Madras, and Rangoon. Bombay has a rupee debt of Rs. 50,00,000, which is also dealt in on the London Stock Exchange.

The following is a list of some of the Indian municipal stocks the yields of which range from 5½ per cent. to £6 8s per cent.:—

	Price.	£	s	d
4% Bombay sterling guaranteed loan	76½	5	15	9
4% Bombay Port debentures	80½	6	3	9
7% Calcutta Port debentures	106	6	8	9
4% Do	81	6	2	0
6% Calcutta Corporation debentures	104x	5	14	6
4% Karachi Port debentures	81	5	18	0
6% Karachi sterling debentures	104	5	16	3
5½% Madras Port debentures	100	5	10	0
4% Rangoon Port	79½	5	14	0

These and subsequent yields are worked out to allow for profit or loss on redemption at varying dates. A great number of Canadian municipalities have borrowed in this country, and the largest amounts have been raised by Toronto, Montreal, and Edmonton. Generally their credit as judged by the yield at current prices is good. Moose Jaw debentures, however, give a return of £6 10s 6d, but the 3 per cent. Montreal permanent stock yields only £4 15s 3d. A good number of the cities are in the newer provinces:—

	Price.	£	s	d
4½% Calgary debentures	90	4	9	9
5% Edmonton sterling bonds	99	5	4	6
4½% do	88½	5	9	0
4% Hamilton debentures	88	5	5	3
5% Medicine Hat debentures	89	6	0	6
3% Montreal permanent stock	64	4	15	3
4½% Montreal sterling stock	92½	5	1	0
4½% Moose Jaw debentures	83	6	10	6
4½% New Westminster sterling debentures	83½	5	12	3
4½% North Vancouver debentures	89½	6	6	9
4% Vancouver consolidated debentures	83	5	4	6
4½% Vancouver debentures	92	5	6	6
5% Port Arthur sterling debentures	94	5	10	6
5% Point Grey debentures	90½	5	11	6
3½% Quebec consolidated registered stock	73½	5	4	3
4½% Quebec sterling debentures	93	5	0	6
4½% Regina debentures	89½	5	6	0
5% Regina consolidated stock	94½	5	7	6
5% Saskatoon consolidated stock	92½x	5	10	0
4½% do	85½x	5	8	9
4½% Toronto consolidated debentures	91	5	7	9
4% Toronto general consolidated debentures	85	5	2	3
4½% do	92	5	2	3
4% Ottawa sterling debentures	85½	5	5	6
4½% Victoria consolidated stock	85½	4	17	9
4% Winnipeg consolidated registered debentures	83½	5	0	6
4½% do	91	5	1	0

Few of the above stocks yield more than 5½ per cent., but it must be remembered that many of them are not very active, and the difference between the buying price and the selling price is considerable.

Turning to South Africa, we find the credit of the municipalities is about equal to that of Canadian towns, but here again most of the stocks are not very active, and prices are wide. Johannesburg has raised over £5 million in London:—

	Price.	£	s	d
4% Bloemfontein inscribed	82½	5	5	6
4% Cape Town inscribed stock	83	5	3	9
3% Cape Town debentures	79	5	13	6
3½% Durban inscribed	71½	5	15	6
4% do	82	5	7	0
4% East London	77½	5	14	9
4% Johannesburg inscribed	89x	5	7	9
5½% do	102½	5	7	0
4% Pietermaritzburg	81	5	6	9
4% Pretoria inscribed	87½	5	3	3
4% Port Elizabeth inscribed	79½	5	8	3
4% Rand Water Board	90	5	5	6

A large proportion of the population of Australia is concentrated in the several capitals. The Queensland Land Act Amendment Act has somewhat prejudiced British investors, and Queensland has turned to New York; but the yield on Queensland Government stocks does not appear to have been affected materially, though Brisbane water debentures afford the highest return:—

	Price.	£	s	d
6½% Brisbane (Water) debentures	108½	6	0	3
5% Brisbane (Water), "25-year" debentures	98	5	4	3
6½% Melbourne and Met. Board	106x	5	18	9
6½% Melbourne Harbour debentures	106	5	19	3
6½% Sydney 10-year debentures	107	5	6	0
6% Sydney debentures	106	5	4	9
4% Perth debentures	81	5	15	9

Many New Zealand towns have come to London for money, but in some cases the amounts have been quite small. The yields are about the same as those of Australian municipal securities:—

	Price.	£	s	d
4% Auckland consolidated loan debentures	91	5	9	6
6% Auckland debentures	106	5	12	9
6% Lyttleton Harbour Board	103	5	9	0
4½% New Plymouth Harbour	90	5	14	9
5% Otago Harbour Board	96½	5	12	0
5½% Wellington Electric	104	5	1	6
4% Wellington debentures	91x	5	13	9

To the above lists must be added the Singapore 4 per cent. sterling debentures, which yield £5 8s, and the Dublin 3½ per cent. stock, which returns £6 4s 9d. Hong Kong comes under the Crown Agents. Its credit is good; the 3½ per cent. stock is on less than a 5 per cent. basis.

Amongst the large cities, of whose solvency there can be no reasonable misgivings, those generally have better credit which managed to avoid borrowing at a high rate of interest during the period of dear money after the war.

Although investors who subscribed to Dominion municipal issues in pre-war days have, on the whole, lost part of their capital, they have not much to complain of. Defaults have been very few, and the record of the Dominion cities compares very favourably with the United States, where townships have been known to walk away during the night. Holders of Dominion municipal stocks may be thankful that they did not put their money into Central European securities, to have their dividends paid in worthless paper, or into Russian and some South American municipal stocks such as Moscow, Petrograd, Kieff, Manao, or Para, to mention only a few.

COAL PRODUCTION, WAGES, AND PROFITS.

THE practical working of the National Agreement in the coal mining industry is being followed with the greatest interest by all who believe in the possibility of a working understanding being arrived at between Labour and Capital. Not the least important feature of this experiment is the fact that secretiveness is now largely a thing of the past, and the agreed ascertainties of output costs and profits, which are available for the use of the general public, merit the closest attention, reflecting, as they do, the fluctuations in the general position of one of the most important of British industries. In the following table will be found the more important totals for the second quarter of this year, together with those for the three previous quarters for purpose of comparison:—

Totals.	1922.		1923.	
	Third Quarter.	Fourth Quarter.	First Quarter.	Second Quarter.
Tonnage raised tons	58,717,767	64,550,171	67,099,121	65,550,443
Tonnage disposable tons	53,694,293	58,977,291	61,357,470	60,117,435
Wages £	30,533,993	33,658,099	35,441,768	35,921,946
Net costs £	46,106,227	50,108,391	50,663,203	51,724,937
Proceeds £	49,013,908	54,603,996	58,156,716	61,400,723
Net profit £	2,907,681	4,495,605	7,493,513	9,675,786

* Total costs, less proceeds of miners' coal sold at special prices.

These figures relate to undertakings which between them were responsible for some 94 per cent. of the total coal raised in the country. The output is not quite so high in the second quarter as it was in the first quarter of this year, though it is much greater than the corresponding

figure last year. The increase in the average selling price of coal is reflected in the rise in the statistics of proceeds, profits and wages. The position is, however, made clearer by reducing all these returns to a tonnage basis:—

	Proceeds per Ton.		Wages per Ton.		Net Cost per Ton.		Net Profit (+) or Loss (—) per Ton.	
1922.	s	d	s	d	s	d	s	d
First quarter	20	9-90	13	4-08	19	8-28	+ 1	1-62
Second quarter	18	11-41	12	7-39	18	11-58	— 0	0-17
Third quarter	18	3-08	11	4-48	17	2-08	+ 1	1-00
Fourth quarter	18	6-18	11	4-09	16	11-90	+ 1	6-28
1923.	s	d	s	d	s	d	s	d
First quarter	18	11-48	11	6-63	16	6-17	+ 2	5-31
Second quarter	20	5-12	11	11-41	17	2-49	+ 3	2-63

The rise in the selling price is, of course, due mainly to the increased demand for British coal following upon the occupation of the Ruhr, and the resultant paralysis of production in that important field. It cannot thus be regarded as more than a temporary advantage, and may well lead in the near future to a corresponding set-back in the general upward trend of trade which has been noticeable in the coal industry since the third quarter of 1922. It is disquieting, too, to learn that the net cost per ton has increased more rapidly than have wages as compared with the previous quarter. Meanwhile, however, net profits show a further rise to over 3s 2d per ton, this making an average for the twelve months ended June 30th last of 2s 1.18d per ton. Wages in May and June were based on the ascertainment for January and February, and do not therefore as yet fully reflect the improved financial position of the industry. The labour situation is further described in the following table:—

	Number Employed.	Total Manshifts Worked.	Total Manshifts Lost.	Output per Man- shift Worked.	Earn- ings per Man- shift Worked.
1922.				Cwts.	
First quarter....	1,020,207	63,236,314	6,171,819	18-23	11/0-18
Second quarter..	1,025,592	59,831,062	4,677,252	17-80	10/2-51
Third quarter ..	1,027,853	65,446,658	5,476,180	17-94	9/3-97
Fourth quarter..	1,068,623	71,323,137	5,696,488	18-10	9/5-25
1923.					
First quarter....	1,087,733	73,504,058	6,163,833	18-26	9/7-72
Second quarter..	1,102,381	73,205,708	6,291,749	17-91	9/9-77

It will be observed that, while the total number employed has risen, there has been a slight fall in the total number of manshifts worked. Absenteeism remains much the same, but the output per manshift worked shows a not inconsiderable falling-off. Average earnings, however, continue the upward movement which began in the fourth quarter of last year. The general impression obtained from these returns is that although the efficiency of labour and management which characterised the first three months of this year has not been maintained, the financial position of the industry continues to improve, while naturally enough, the wage assessments for September and October, which were described in our issue of September 29th last, based as they are on the general ascertainment for the months of May and June, show a considerable improvement over the rates ruling during the second quarter of the year.

GERMANY'S CAPACITY TO PAY: SOME AMERICAN VIEWS.

WHILE British economists and publicists have been occupied with the political aspects of the reparations problem, a considerable number of books and pamphlets on the economic aspects of the problem have been issued recently in the United States. Among these there are two of special interest. In the first place, the American Institute of Economics has published an "investigation into Germany's capacity to pay. The institute has carried out this research apparently at considerable

labour and expense, having realised that there is little likelihood of the matter being officially inquired into by an expert commission of business men and economists. The other contribution is an anonymous one contained in the current number of "Foreign Affairs," written by an American who obviously has the closest touch with the Reparations Commission. The latter takes the form, in the main, of a criticism of English economic writing on the subject, and in particular of that Liberal school of thought which the author curiously enough describes as the Manchester school. There is an important respect in which an instructive contrast may be drawn between these two documents.

The research of the American Institute starts, continues, and ends with strong emphasis upon the difficulty of a nation making large payments abroad. But the book, which we heartily commend to those who wish for a summarised discussion of the economic difficulties of the problem, combined with a fairly complete statement of the salient facts, is open to one important criticism. The thesis of the book is stated in the following phrase—"The total capacity of Germany to pay will be measured by the excess of her exports of goods and services rendered to foreigners over the imports of goods and receipt of services from foreigners." This is very much what Mr McKenna said to the Institute of Bankers a year ago. But it is very liable to be misunderstood. If the authors had said that "the total reparation payments which Germany in fact makes in any year will be the difference between visible and invisible imports and visible and invisible exports," they would have been on unassailable ground. But the statement as printed seems to imply that Germany's actual export surplus this year, last year, or for some period of years is a measure of her ability to pay in the future, and therefore a test of what reparations should be demanded from her. If this doctrine were even approximately true, the facts and figures as to Germany's trade situation in the past would be extremely discouraging. But it is just in arguing from the past or present to the future that the whole uncertainty arises. The view of those politicians and economists who have maintained that Germany could pay considerable sums in reparations, implies that it is possible substantially to modify previous conditions of German trade, and to create an export surplus by the fact of enforcing reparation payments. The argument runs thus. If the German Government imposes and succeeds in collecting heavy taxation, and the proceeds are transferred to the account of foreign Governments, the total purchasing power available for the home population will be reduced, the demand for goods for internal consumption diminished, and the demand for goods for export increased through the increased holdings abroad of purchasing power over German goods. The receivers of reparation would not always want to take the proceeds in German goods, but the transfer of currency or of credit held in Germany into foreign currency would tend to create an exchange situation favourable to German exports. The authors of this book at various points state the conditions needed for re-establishing a new equilibrium in this way. They obviously imply a lower standard of living in Germany than in competing countries, and a somewhat higher purchasing power of the mark at home than abroad, a condition not necessarily incompatible with a stabilised mark. There may be political or psychological reasons for doubting whether, in practice, a new equilibrium can be established on these conditions. But the book contains no economic argument which disproves the assumption that it would be possible, given the will of Germany to levy taxation and pay the proceeds to foreign governments, for a large export surplus to be created. The practical limitations depend upon the ability of Germany industry to adjust production to meet world requirements rather than home needs, and the ability of the world to absorb an increased surplus of

exports from Germany. On this latter point we may observe, in passing, that the pre-war exports of the leading exporting nations amounted to some two thousand millions sterling; that this is equivalent to at least three thousand millions to-day; that an annuity involving increased exports by Germany of £100 millions would add 3 per cent. to pre-war exports; but that reparation payments of this amount need not, in fact, involve an absolute increase of this amount in Germany's exports, since the surplus could partly be achieved by reduced imports into that country.

If the possibility of creating an export surplus is admitted, it is very relevant to study the surplus of Germany's annual production over consumption—which the authors of this report describe as a fallacious measure of capacity to pay—and the surplus must be studied not merely in the past, but under the new conditions that would be created when an obligation of this kind was, in fact, in process of being paid by Germany. Before the war, Germany's excess of production over consumption was very large. But the authors do not think this surplus could have been diverted abroad, for they point out that, in view of the tremendous efforts that Germany was making to expand her foreign trade by means of low freight rates on export duties, and in view of the struggle of other countries to prevent Germany's expansion, "it does not appear that Germany could have appreciably increased her manufactured exports." But this statement is highly debatable. Germany's surplus production was being used to increase, at a very rapid rate, her plant, factories, buildings, and other forms of invested capital. She was, in fact, in a state of rapid internal growth. England, on the other hand, was sending her capital rapidly abroad. If Germany's opportunities for internal expansion had been fewer, and it had been more profitable for her to export capital, this increased foreign investment would, without doubt, have produced an export surplus; Great Britain would have felt Germany's competition more keenly, and the foreign trade position would have been created that will be brought into effect if Germany, instead of adding another £100 millions a year to her home capital, has to pay this sum abroad as a reparations annual annuity. The authors of this paper add that any curtailment of imports affects exports indirectly by restricting the purchasing power of those foreigners who would otherwise have sold goods to Germany. But this is not true if the curtailment of imports is due to the fact of Reparations payments which transfer abroad to someone or other the control of marks in Germany just as effectively as the despatch of goods from London to Hamburg does. The funds may at first be in the hands of foreign Governments; but, even so, the effect will be passed on to the people in reduced taxation or in the form of new capital expenditure in the recipient country.

We have dwelt somewhat at length on these points, not because we think that Germany can be proved to have a very large capacity to pay or the world a very large capacity to absorb, but because the way the case is presented in this book tends to minimise the possibilities. In the unlikely event of the question ever being brought to the test of serious economic investigation, it would be of the utmost importance that the kind of considerations we have mentioned should be weighed in just proportion.

On the other hand, the writer in foreign affairs goes too far in the opposite direction. Without formally associating himself with their arguments, he repeats the reasons which make French economists sceptical of the difficulty of making foreign payments, and regards the question of Germany's ability to pay as almost entirely a budgetary one. In stating his case he brings to the forefront the fact that the Reparation question is not merely one of how Germany can pay her debts, but of how France can pay hers. He quotes the striking figure that, even if Germany's internal war debt were honoured at the gold value it had when it was incurred, German indebtedness, including Reparation at its present nominal value, would amount to \$928 per head. The French *per capita* debt is \$816, and will be \$990 per head when the work of Reparations has been completed. If Germany should reimburse all Reparation hitherto made and start afresh, the French *per capita* debt would become \$650 per head.

For these reasons the writer urges that if the case is really made out for reducing Germany's debt to a negligible quantity on the export argument, we are at a deadlock. The writer also adds that, as we have more than once stated in the *Economist*, French taxation, when looked at from the point of view of total tax receipts from all sources, is nearly as heavy in proportion to the nation's wealth as taxation in Great Britain, and that there was some justification for France in not levying heavier taxation during the war, owing to the fact that she had lost some of her best sources of revenue in the occupied areas, and that she mobilised no less than 19 per cent. of her population. Alpha's statement, though an *ex parte* one, is the best exposition of the French attitude that we have seen for some time past. He regretfully admits that it is useless to look to America for a lead, and believes the solution lies with England. With apologies for venturing to offer advice to a nation not his own, he therefore suggests the following British programme:—

1. The Allies to make it plain to Germany that the debt as at present established must stand, subject to a re-examination of the question in ten years' time.
2. Germany to be called upon to cease printing paper money, and to balance her budget by taxation within a year; also to submit to measures of financial control.
3. Subject to satisfactory guarantees, including the pledging of assets, the Ruhr to be gradually evacuated and Germany to be granted a moratorium for two years, except for deliveries of certain essential commodities, and an initial cash payment of 250 million dollars from present foreign balances.
4. An investigation to be started by the League of Nations into the budgets and fiscal and tax systems of Germany, of the powers claiming reparation and of such other ex-belligerents as may desire it. The investigation also to include an examination into Germany's foreign exchange operations. A first report to be rendered prior to the expiration of the moratorium. A second report on the same subjects, plus a study of economic resources and national income to be made four years later, and a final report four years after that. The complete text of all reports to be given immediate publicity in English, French, German, and Italian.
5. The first report of the League to be examined by a sub-committee of bankers, including American and German members. The committee to submit recommendations to the Reparation Commission as to the fixation of Germany's payments for a period of four years after the moratorium. These recommendations to include proposals on the subject of payments by delivery of German industrial securities.
6. Payments for a further period of four years to be fixed after a similar examination of the second report of the League of Nations. A world conference, if necessary, to be summoned at the expiration of ten years to consider the final report of the League.
7. The principle to be accepted that, if proper guarantees can be obtained, German products, instead of being delivered directly on reparation account, shall be allowed to follow their natural export channels, and create foreign balances in a normal way.
8. The principle to be accepted that payments may, if necessary, be extended over a longer period of years than now contemplated.
9. The principle to be accepted that advantageous discounting provisions will be offered to Germany as an incentive to discharge portions of her capital obligation through the raising of loans.
10. The governments concerned to agree to introduce measures looking to the repeal of differential tariffs which have been erected against German goods.

The author suggests that this programme ought to command the support of France, of America, and even of Germany. We need hardly say that if Alpha is right we would gladly press this plan upon the British Government. But we can only confess to surprise that a writer so obviously well informed on the subject should imagine that even in return for allowing the present German debt to stand on paper without reduction, France would accept the decision of the League of Nations upon what Germany should in fact pay period after period; and further, that any programme at all can be made so long as no decision is arrived at as to the inter-Allied debt. Great Britain has offered to write down claims against Germany amounting to £1,250 millions, plus loans to her Allies amounting to £1,800 millions, to a total of £700 millions. For our part we have constantly urged that it would be wise to write them off altogether. America has outstanding obligations against the European Allies of 10 billion dollars, or about 2,000 million sterling. If the United States would make a sacrifice proportionate to that of Great Britain and would write off all debts except the 700 millions which Great Britain has undertaken to pay her, the finance of reparations would be comparatively simple. Without such concession Alpha must recognise that his proposal leaves unsolved the greatest of the financial difficulties.

DIARY OF THE IMPERIAL CONFERENCE.

MONDAY, OCTOBER 8TH.—After welcoming Mr Bruce, the Australian Prime Minister; Senator Wilson, Honorary Minister in charge of the Commonwealth Department of Health and Migration; and Sir Lomer Gouin, Canadian Minister of Justice, all of whom attended for the first time, the Conference proceeded to the adjourned debate on foreign affairs. Discussions, which naturally had special reference to Lord Curzon's speech on Friday last, were carried on throughout the day, and all the principal delegates made their views known. The nature of the topics discussed, and the paramount need for plain speaking, led to a unanimous decision that the day's proceeding should be treated as strictly confidential. Further consideration of Empire foreign policy was deferred until the next meeting of the conference on Thursday.

The return to secrecy, which marks a departure from the precedent set by the publication *in extenso* of important passages from Lord Curzon's speech last week, naturally makes it impossible to discuss the proceedings of this meeting with any degree of certainty. It is believed, however, that they were of the very greatest importance; and that, although the present situation in Europe was the main topic, there was also some discussion of the rôle of the Dominions in the sphere of foreign policy.

TUESDAY, OCTOBER 9TH.—In its morning session, the Imperial Economic Conference listened to a speech by Mr Bruce, the Australian Prime Minister, which would have been delivered at the opening session of the Imperial Conference had he arrived in time. This, together with the Government proposals for fuller Imperial preference, which were made in the afternoon by the President of the Board of Trade, are dealt with elsewhere in this number.

WEDNESDAY, OCTOBER 10TH.—The Imperial Economic Conference discussed first the question of Imperial preference in the granting of public contracts. To a great extent this is already the accepted practice in the Dominions. The Chancellor of the Exchequer was of opinion that the granting of a fixed percentage of preference would be undesirable, but strongly expressed the hope that the contract for the Sydney bridge, which is now under consideration, should not go outside the Empire.

The afternoon session was devoted to the question of "Co-operation in Financial Assistance to Imperial Development." The President of the Board of Trade stated that the Government was proposing to give financial assistance to local authorities and public utility companies at home, and announced further that the same policy would be pursued with regard to the Dominions and Colonies, with a view to speeding-up Empire development. In effect, the proposal was that part of the interest should be advanced for a period in respect of anticipated schemes put in hand before their normal time.

THURSDAY, OCTOBER 11TH.—The Imperial Conference met once again for the discussion of foreign affairs. Apart from a preliminary statement by Lord Curzon on the political results of the Janina murders—which will probably not be published—to-day's meeting was devoted to a discussion of the activities of the League of Nations, and is not, thus, a continuation of Monday's discussions. Lord Robert Cecil reviewed the whole work of the League, and the Prime Minister of every Dominion took part in the discussion which followed. The official report of the meeting will not be issued until Saturday, but it is understood that all the speakers were strongly in favour of giving the fullest possible support to the League.

The committee of the Economic Conference dealing with Empire settlement discussed, *inter alia*, the question of passenger rates, of arrangements for the reception of immigrants, and of schemes of preliminary training.

FRIDAY, OCTOBER 12TH.—Committee work of the Imperial Conference. The next full meeting will be held on Monday, while the Economic Conference has also been adjourned until next week.

Notes of the Week.

The German Crisis.—If this week has not produced any clearer light than existed a week ago on the chances of a break-up in Germany, it has produced fresh elements of anxiety in several directions. The riotous plunge of the currency is causing rapidly increasing economic and social disturbance; unemployment is rising rapidly, the impossibility of adjusting wages and prices fast enough have caused commercial dislocation, and serious food riots are reported from Cologne, Dusseldorf, and other centres. Ugly temper is already visible, and there is no telling what the progressive fanning of this temper by economic causes may or may not produce in the coming weeks. Meanwhile Herr Stresemann has met the Reichstag with a reconstituted Cabinet, and has faced a bitter obstructive fight in his attempt to carry a Bill suspending important parts of the Constitution. The final voting on this Bill is postponed till to-day; but there are indications that if the Bill does not receive the necessary two-thirds majority, the President will confirm it over the heads of the Reichstag, which, in that case, Herr Stresemann will dissolve. It may therefore be known in a few days whether a lament on the death of Parliamentarism in Germany, delivered on Thursday by a Nationalist deputy, is premature or not. The terms of this bitterly contested "Powers Bill" are described in a later column by our Berlin correspondent, who also shows that every week is plunging German finances deeper and deeper into chaos. In other directions, beyond those which we have mentioned, the task confronting the rulers of Germany becomes daily more difficult. Bavaria has adopted the pose of an independent State, willing to observe only such laws of the Reich as she chooses, and proclaiming devotion to the monarchical system. The separatist movement in the Rhineland is taken a step farther by the proposals made by the industrialists to France for an agreement, and the ultimatum demands made by Herr Stinnes and other Ruhr magnates on the Berlin Government. All these elements making for physical disintegration and social upheaval, the Berlin Government have to face under conditions of bankruptcy and deepening chaos, moral, financial and economic. How pregnant with danger to Europe this position is, is self-evident. But contemplation of it has apparently produced no effect on French policy, except in the direction of greater "firmness." To a *démarche* by the German Government in Paris and Brussels, M. Poincaré has replied that he will enter into negotiations with Germany when passive resistance has really disappeared, and when the condition of affairs existing before it was introduced has been restored. Only a few weeks ago it was believed that the cessation of passive resistance dictated and subsidised by Berlin was M. Poincaré's condition for negotiation. Now not only must local passive resistance, which Berlin cannot control, cease, but also Ruhr industry must be restored to its pre-occupation state before negotiation can begin. The latter task, M. Poincaré is reported to estimate, could be performed in a fortnight. Most people will agree with our Berlin correspondent in estimating the minimum time in which restoration could be accomplished at many months. This being the Paris attitude, little hope arises from the suggestion that, when once he has obtained his extraordinary powers (with or without the Reichstag's consent), Herr Stresemann will make a new reparations offer. Only by immediate action can Germany be clutched back from the brink of chaos and incalculable European trouble averted; but M. Poincaré's policy could hardly help on the arrival of catastrophe more effectively, even if it were framed with that avowed object. This surely is a critical position in which the British Government must speak at once and without ambiguity. Lord Curzon has told the Dominion Premiers that the British Government is waiting for France to take the next step. The time factor is all important, and demands that this waiting policy should be abandoned forthwith. It would seem that our position in the occupied area of Cologne might be the key to a fresh British initiative, a basis for justifiable and effective measures

being our moral responsibility for the third city of Germany, and the important industrial area which surrounds it.

Overseas Trade in September.—In the statistical pages of this issue will be found some detailed comparisons of the official overseas trade returns for September, and the nine months period of this year and last. In reading these and also the summary given below the usual caveat must be entered regarding the unknown effect on the figures since last April of the separation of the returns of the Irish Free State:—

MONTH OF SEPTEMBER.				
	1922.	1923.	Increase or Decrease in September, 1923.	
	£	£	£	%
Imports	76,766,577	83,265,581	+ 6,499,004	+ 8.5
British exports	62,511,099	63,836,144	+ 1,325,045	+ 2.1
Re-exports	6,381,443	8,110,443	+ 1,729,000	+ 27.1
Total exports	68,892,542	71,946,587	+ 3,054,045	+ 4.4
Excess of imports over total exports	7,874,035	11,318,994	+ 3,444,959	+ 43.6

NINE MONTHS ENDED SEPTEMBER 30TH.				
	1922.	1923.	Increase or Decrease in 1923.	
	£	£	£	%
Imports	728,213,962	787,464,274	+ 59,250,312	+ 8.1
British exports	534,723,767	566,122,381	+ 31,398,614	+ 5.9
Re-exports	77,873,526	86,857,891	+ 8,984,365	+ 11.6
Total exports	612,597,293	652,980,272	+ 40,382,979	+ 6.6
Excess of imports over total exports	115,616,669	134,484,002	+ 18,867,333	+ 16.3

On the nine months the import excess has averaged just over £2 millions per month more than in 1922. When compared with the August figures, imports are £5½ millions lower, British exports £3¼ millions higher, and re-exports £2 millions higher. A glance at the figures for recent years shows that imports tend to fall and exports to rise in September, and although on the face of them the returns for last month are quite as good as was expected, it is difficult to glean from them any very definite evidence bearing on the trade position. Raw cotton imports were larger in quantity than in August or in September, 1922, but in the nine months the imports were over 2 million cents less than in the corresponding period of last year, while on a similar comparison imports of wool were lower by 3 million cents. Silk and jute are among other raw materials which show a drop on the nine months. On the other hand, our imports of flax, hides, rubber, timber, and wood, are considerably in excess of last year's figures. On the export side coal shipments at 6.3 millions in September were the lowest since February. Germany and France each took less than in August, but more than a year ago, Germany taking in September over 1.1 million tons, and France 1.3 millions. Iron and steel and manufactures thereof show aggregate September exports slightly in excess of the August total; they were 333,985 tons, against 323,877 tons in August and 279,168 tons in September, 1922. Cotton yarn exports were over ¾ million lbs less than in August, and nearly 5 million lbs less than a year ago. September exports of cotton piece goods, on the other hand, at 344 million square yards, were 15 millions better than in August, and the total for the nine months is slightly in excess of the figure for January-September, 1922. German takings, both of piece goods and yarns, showed a considerable drop in September, and her imports of the former from us in the nine months were less than one quarter of her last year's takings. Woollen and worsted manufactures were exported in rather less quantity than in August, but the nine months' figures show an excess over those of last year. The advance in re-exports as compared with the previous month is spread over a wide range of commodities, and the explanation may partially be in the ending of the London dock strike. The bullion and specie account for the nine months of this year and last reads as follows:—

	Jan. to Sept., 1922.	Jan. to Sept., 1923.
Imports	31,040,499	42,543,488
Exports	39,326,658	48,682,379
Excess of exports	8,286,159	6,138,891

For the past nine months gold sent to British India was £18.3 millions, compared with £10.6 millions last year, but gold sent to the United States was almost unchanged at £17½ millions. The statistics of shipping engaged in the foreign trade in September show no very important changes from the previous month.

The September Iron, Steel, and Coal Output.—The statistics just published by the National Federation of Iron and Steel Manufacturers show that in September, for the fourth month in succession, there was again a decline in the production of pig-iron, though when allowance is made for the shorter month the decrease is seen to be less than 4 per cent. compared with August (19,350 tons daily and 18,620 tons daily in August and September respectively). Six furnaces went out of blast during the month, bringing the total of furnaces ceasing operation since the end of May, to 33. Steel production, which was specially low in July and August owing to the holidays, rose to 695,100 tons, which, although 128,000 tons better than August, was 126,000 tons less than in May. The following table shows the furnaces in blast and the production and exports of iron and steel in each of the last five months:—

1923.	Furnaces in Blast at End of Month.	Production of		Exports of Iron and Steel.
		Pig-Iron.	Steel.	
		Tons.	Tons.	Tons.
May	223	714,200	821,000	424,500
June	222	692,900	767,700	365,100
July	206	655,100	639,500	307,700
August	196	599,800	567,500	323,900
September	190	558,600	695,100	334,000

It will be seen that the exports of iron and steel have shown a slight rise in each of the last two months, but are 90,000 tons less than in May. While the production of pig-iron in Great Britain has been steadily declining, production both in France and Belgium has been steadily increasing. The latest figures available relate to August, and in France these show a rise from 300,800 tons in February to 478,700 tons in August, or about 95 per cent. of the pre-occupation rate, and in Belgium from 149,000 tons in February to 195,800 tons in August, which is 24 per cent. above the production of December last. In Belgium production is practically at pre-war level, but it is interesting to note that it is being obtained from some 15 furnaces less than were normally working before the war, the new furnaces which have replaced those destroyed during the war being of greater capacity. The output of coal in the five weeks ending September 29th averaged nearly 5,400,000 tons per week, and in the last week of the period reached 5,574,600 tons, a figure higher than in any week since that ending June 23rd. Exports of coal amounted to 6,316,000 tons, of which 1,347,000 tons went to France, 1,130,000 tons to Germany, and 635,000 tons to Italy. Exports of coke remain high (438,800 tons), and although the trade returns are silent as to its destination, it is understood that most of it goes to Germany. The difficulty of obtaining coke from the Ruhr and the dearth of English coke has stimulated production both in France and Belgium, French production having risen from 132,000 metric tons in January to 181,000 tons in August, and Belgian production from 324,000 tons in January to 364,900 tons in August. Great Britain is the only coke-producing country which does not collect and publish the output of coke monthly.

Irish Finance and Labour Troubles.—Our Dublin correspondent writes:—The Dail met again on Wednesday after its week of adjournment, which was to give the Government time to seek remedies for an adjustment of the numerous industrial disputes which are causing much loss and general dislocation. President Cosgrave made a brief statement that the position is exceptionally grave,

and that more time will be required before a definite solution is achieved. He deprecated detailed discussion at the moment, and stated that, while the price of bread had been recently reduced, it was hoped that the prices of other essential commodities would shortly follow. Taking the dockers' strike as the most important and difficult of his problems, he suggested that there should be an immediate reduction of wages by 1s per diem, with consequential reductions in tonnage and overtime rates, and that the Minister of Industry and Commerce should, on work being resumed, set up a Court of Inquiry to report on the question of dock labour under the Industrial Courts Act, 1919, with a view to its treatment upon a national basis. He kept the problem of the cost of living well in the foreground, as being, by general consent, one of the essential points upon which adjustment is necessary. There is, therefore, no settlement in sight this week, and it is not yet clear whether his suggestion for a temporary truce will be accepted. There are many difficulties. The employers are by no means a cohesive or homogeneous body, and they are little accustomed to collective action or the handling of these matters on broad lines. Labour, on the other hand, while more experienced in collective bargaining, is split from top to bottom by competing factions aiming at control of its organisation. Since Jim Larkin arrived from America he has been bitterly at feud with the leaders, who in the Dail and outside have been guiding the movement on constitutional lines. His strength lies in his outstanding qualities as a demagogue, and his weakness in his extreme revolutionary views, which are not acceptable save to a relatively small minority of Dublin labour. In the meantime, a carters' strike in Dublin has been added to that of the dockers and the chemical workers and others. There is a certain amount of uneasiness being expressed behind the scenes about financial policy, but it is not always intelligently directed. Thus a demand is being made that the Government shall not merely formulate now, but even state publicly the main lines of its Budget, which will not be due for six months. The suggestion is that only thus can the public here and in Great Britain be assured that the Free State is paying its way. Behind it lies the idea that there is a good deal of extravagance, due to lack of system, experience, and skilled supervision and accountability. It is doubtless good that the public should be vigilant in such matters, but it is questionable whether it is helpful to clamour for premature Budget figures from a Finance Minister who has barely been a month in office. It is known that a continuous and drastic overhaul, both of expenditure and methods of accountability, has been in progress for some months throughout the whole administrative machine. There has been little, if any, delay in starting the process of regularising, reorganising, and pruning. Perhaps a little more uneasiness is warranted in regard to high finance, of which neither the Ministers nor the departmental officials can possibly have had any experience. A national loan of twenty or thirty millions touches or tempts many large interests, which may seek to serve their own purposes in many different ways, direct and indirect. The path of those charged with the guardianship of the national exchequer is full of pitfalls. But nothing is likely to be undertaken without due deliberation. The Ministry has now been completed by the appointment by the Dail of Mr P. J. Hogan, Agriculture, Mr F. Lynch, Fisheries, Mr James A. Bourke, Local Government, and Mr J. J. Walsh, Post Office.

Australian Canned Fruit.—A correspondent who described last week the shortcomings of the management of the dried fruit trade of Australia, writes:—The canned fruit industry is equally as bad. Under a pooling arrangement organised by the Commonwealth Government a big effort has been made to regulate the quality and general appearance of the exported article. Standard grading of the fruit, proper packing, and appropriate labelling have all been well advanced since its organisation, and there is less to complain of now as against a few seasons back, when a comparison is made with the Californian or Hawaiian product. In this respect the industry is to be complimented upon its progress. When the questions of production costs and marketing are considered, however, it is quite another story. Australian fruit growers and

canners have not yet succeeded in turning out their product as cheaply as the Californians or the Hawaiians. Only recently was the balance of 176,000 cases of Australian canned peaches and pears of the 1922 shipments disposed of at the ridiculous price of 7s per dozen, duty paid. Had the "pool" authorities let their agents in London sell this fruit when the time was ripe in the summer of 1922, it would have realised on average 15s per dozen. It is true that even at this figure a loss would have resulted; but, as a consequence of mis-handling, the loss has been added to the extent of 8s per dozen. The total loss amounts to £280,000, as against only £30,000, if sales had been made in 1922. The 1923 output totalled 800,000 cases, but not a single case arrived on the London market in time for this season's sales, and of the fruit which has arrived practically none has been sold. This inefficiency displayed by the "pool" authorities is noteworthy in view of the British Government's proposal to place a duty of 5s per cwt on all canned fruit coming into the country from foreign sources, but to admit the Empire product free.

Shipping Freight Index.—A slight upward tendency in the movement of ocean freights on the majority of routes in September resulted in a rise of over 3 points in our index, following upon a continuous decline from April to August. The figure for September was 119.88, which, it will be noted from the table below, restores the level of freights to approximately that of July, but compares unfavourably with a figure of 128.40 for September, 1922:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (avg., 1898-1913) ..	100.00	100.00	100.00	100.00	100.00	100.00	100.00
Average, 1913	110.03	113.08	123.37	106.29	117.38	127.89	116.34
Feb., 1920	814.31	529.89	757.52	744.81	587.02	712.16	690.95
Dec., 1920	258.90	277.17	244.10	256.79	286.72	347.18	280.14
Dec., 1921	184.06	164.07	144.43	143.25	141.25	166.47	156.67
Sept., 1922	143.00	115.60	122.48	129.48	124.62	135.31	128.40
Nov., 1922	148.89	124.56	134.22	130.86	130.47	155.31	138.95
Jan., 1923	132.05	126.47	124.85	120.20	142.14	150.44	132.69
Feb., "	149.60	116.85	123.93	117.83	134.49	144.21	131.15
Mar., "	163.55	124.30	130.43	125.40	125.35	135.31	134.06
April, "	142.72	133.38	137.32	133.77	134.06	124.63	134.31
May, "	134.91	140.03	143.05	126.99	134.48	120.18	133.27
June, "	131.77	121.04	124.56	125.50	133.90	118.84	124.27
July, "	132.42	107.20	118.67	122.44	126.10	114.83	120.28
Aug., "	124.79	109.11	114.33	117.70	117.51	115.73	116.53
Sept., "	129.83	112.36	116.28	117.77	118.44	124.63	119.88

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec.		Index No.	Inc. or Dec.
Home trade	136.16	+12.40	S. America—Outwards ..	106.26	— 3.36
Bay—Outwards	139.45	+ 3.66	Homewards	126.30	+ 7.26
Homewards	140.33	+ 4.85	India—Outwards	116.55	— 7.0
Mediterranean—Outwards ..	124.25	— 2.32	Homewards	119.00	+ .84
Homewards	102.66	— 74	Far East, &c.	118.44	+ .93
North America	112.36	+ 3.25	Australia	124.63	+ 8.90

The month witnessed an expansion of inquiry rather than increased volume of traffic. Grain freights from British North America rose sharply towards the end of the month; nitrate sales encouraged the hope of better demand for tonnage on that route; rates from Australia showed a marked firmness for the new crop; the River Plate indicated the probability of fuller demand for January loading, but rates for early shipment remained at a ruinously low level. The relation of the index to the average for 1913 may be seen from the following table:—

Month.	1920.	1921.	1922.	1923.
January	545.42	194.59	131.60	114.05
February	593.90	164.54	135.76	112.73
March	588.24	162.17	135.53	115.23
April	519.40	147.48	129.46	115.45
May	480.60	158.42	125.12	114.55
June	463.16	165.73	117.45	106.82
July	384.43	169.87	114.52	103.39
August	350.96	170.60	113.16	100.16
September	360.27	154.47	110.37	103.04
October	394.80	141.85	114.42	..
November	340.33	136.47	119.43	..
December	240.79	134.66	117.39	..
Mean for year	438.52	158.40	122.02	..

With freights so depressed, it is probable that considerable additions will continue to be made to the amount of tonnage laid up pending a more marked recovery than is indicated above.

Welsh Tinplate Merger.—Messrs Richard Thomas and Co., Limited, will shortly amalgamate with the Grovesend Steel and Tinplate Company, Limited, by an exchange of shares and probably a cash payment to the latter's shareholders. The new combine will have a capital of something like £7,000,000, and it will be the largest concern of its kind in the world. Messrs. Richard Thomas and Co., own at present thirteen tinplate works and 110 mills, while the Grovesend Steel and Tinplate Company have 48 mills. Thus the amalgamated companies will have 158 tinplate mills, with an estimated output of 150,000 boxes per week. The steel production will be anything from 12,000 to 14,000 tons a week, and as the combine will own its own collieries, foundries, and be practically self-supporting, it is bound to exercise a very marked influence upon both steel bars and tinplates. The amalgamated companies will thus control something like 50 per cent. of the total tinplate output of this country, and there is some talk of further extensions in the plant being made, but for the time being this may be ignored. The combine will naturally have a leading place in the sheet trade generally, as well as the tinplate industry, and there will be nothing else like it in the world except the United States Steel Trust. London merchants are now very much concerned about the future of the trade. Under the stabilisation scheme selling prices have been fixed at a minimum of 23s 1½d basis I.C., cokes f.o.b. Bristol Channel, up to the middle of January, 1924, but sales made meantime will obviously be governed by that figure even if delivery takes place after the date mentioned. The matter of the minimum prices and also commission to merchants will be considered again next month, and the question of the proposed selling agency is now being discussed by those concerned. It is understood that the amalgamated companies wish to set up a central selling agency and also retain the stabilisation scheme. Many of the smaller tinplate makers and the merchants are dead against this idea, as it clashes with their interests, and it looks as though the trade will be split up, with the new combine in one camp and the smaller makers in the other. Obviously with a big capital, 158 mills to keep going, with something like 10,000 hands to find employment for, and competition to face from the American tinplate makers, the amalgamated companies would like to see steady markets, with a regular flow of orders. Merchants, of course, buy speculatively from the mills when the latter are slack, and they claim that they have done much in the past to find new business and also to help the mills financially. A central selling agency, with fixed selling prices, would injure the merchants' trade, and before the controversy is settled feeling may run even higher than it has done of late. Most of the tinplate makers in this country are holding well-filled order books at present, and the tendency of values is firmly upwards, owing to the strength of tin, high working costs, &c. Some people consider the present minimum price too low, but it remains to be seen what attitude the stabilisation committee will take next month when the question of prices is again considered.

New Departures in China.—On Friday of last week Marshal Tsao Kun was elected President of the Chinese Republic by more than the requisite proportion of votes, and by an overwhelming majority over all his rivals. He is regarded by competent English observers as possessing some force of character, his personal record is distinguished, his age is about 50—which is not too old for a President—and he has a much stronger military backing than any of the rival leaders. Moreover, we are informed that he is a blood relation of Chang-tso-lin, who at present controls Manchuria, and such relationship means much in China. In any case, the country has now a Government with which foreign Powers may feel that they can effectively negotiate. Stress is laid by the *Times* correspondent at Peking on the bribery practised in the election; but the members seem to have been induced to attend chiefly by the hope of obtaining their salaries, hitherto greatly in arrear. Tsao Kun's inauguration took place last Wednesday, and was followed by the promulgation of a Constitution, the draft of which, we believe, was discussed by the Parliament in 1917, and was among the subsidiary causes of the dissolution of that body under

pressure from the militarists of the North. It will apparently secure the elimination of the Tuchuns, and will establish provincial Home Rule and the apportionment, in principle, of revenue between the provinces and the Peking Government—a reversion to the old order which Sir John Jordan and other high authorities regard as necessary for the restoration of internal peace. Holders of Chinese securities have been encouraged by the announcement made last week by the chairman of the Hongkong and Shanghai Bank that a Commission has been appointed by the Chinese Government to consider this and other financial problems, among them the funding of the floating debt. Its chairman, Dr Yen, ex-Minister of Foreign Affairs, is regarded as extremely able, and it comprises representatives of the Chinese Ministry and Parliament, the foreign financial administrations, the Peking bankers, French interests, and the Consortium—though these last are to be present only as individual advisers, and not as representing the Consortium's views. Its composition inspires confidence, and it should have excellent prospects of success. And pending the result of its deliberations, we may fairly expect that the Tuchuns will suspend their warfare. The projected International Commission on the Customs Surtax, of which it was thought the scope might be enlarged to include these financial problems, cannot meet until France has ratified the Washington Treaty, and must be regarded as postponed indefinitely. But this action on the part of this Chinese Government shows that it means business, and may provide a more rapid solution of the financial difficulties of China.

The Rise and Reaction in Tea Shares.—A Stock Exchange correspondent writes:—After the boom in tea shares which took place during August, it is natural enough that there should have been reaction from the top prices. Part of the later buying was of the rather ragged order. A good many shares were taken by people who had no intention of keeping them, and who were attracted to the market simply by the rapidity with which prices rose and the ease with which it seemed possible to make money in less than a day. The fact of so many of the companies' shares being of high denominations, instead of those of the popular £1 order, causes the tea share market to be contracted. It always is, and always has been. Nor is this state of affairs likely to be altered until the companies split their shares into the popular £1 denomination. Some of them have already done this, and others purpose doing so in the near future. The old-fashioned director who opposes such procedure on the ground that it encourages gambling can point to the recent boom as evidence that his contention is justified. Undoubtedly, had there been £1 shares in the big companies instead of £5 and £10 shares, the area of speculation would have been enormously widened. For the tea share market has captivated the popular imagination. The rise in the price of the article led to inquiries coming in for the shares from people all over the country. Curiously enough, when two or three of the big companies declared greatly-increased dividends in the spring, these announcements had little effect upon the quotations at that time. It was left for two or three months later to provide purchasers, but when the buying movement fairly started, it assumed an accumulative force, and the demand pushed up prices to a remarkable extent. To gain some idea of the movements this year, a few examples may be quoted:—

	Share.		
	January 2.	October 10.	Rise.
Amalgamated	12½	18½	5½
Assam	68	112½	44½
British Indian	9½	21	11½
Cachar	13½	24	10½
Chubwa	19½	29	9½
Consolidated	19½	35	15½
Doom Dooma	22	34	12
East Assam	15	26	11
Jhazie	12	21½	9½
Jokai	26	43	17
Nuwara	19½	27	7½

The figures in the third column are substantially lower than those which prevailed a week or ten days ago before the boom showed signs of wear and tear. Assams have been over 120, and Doom Doomas touched 38. The divi-

dends declared this year have been not only good, but excellent. Moreover, the price of tea keeps up well, and some of the companies are declared to have sold the whole of their 1924 crop at a price as high as any which obtained in past years. Good authorities consider it assured that the tea industry is in for a profitable fifteen months at least. Meanwhile, some of the Mincing Lane experts very wisely caution people against being led to take too bullish a view of the outlook. Owing to the misfortunes of the industry some few years ago, there has been much fine plucking, and no doubt it is to the good quality of the tea that no little increase in consumption is due. If the estates yield to the temptation to pluck coarse, as they may, a decline in the quality of tea would probably make itself felt within a short period, but the tea companies have learnt wisdom from experience, and are scarcely likely to flood the market with rubbish. The reaction is a natural sequel to the previous boom, but people who hold shares in sound companies need feel no particular regret at having missed the top prices, for these may be readily regained if a new set of buyers should become attracted by the outlook for tea. In any case, dividends in respect of the present year will be eminently satisfactory to those who are discreet enough to confine their attention to the best shares.

Dyeing Prices.—Our Manchester correspondent writes:—A remarkable situation has arisen in the relations between the piece goods merchants of Manchester and dyers. "For a long time the merchants have pressed the dyers to reduce their charges, as it is held that, compared with pre-war times, the list rates are excessive. About a month ago the Piece Dyers' Association made a proposal that on condition that merchants would not place any of their business with firms outside the association in England, Scotland, Wales and Ireland, they were prepared to grant a discount of 10 per cent. The scheme was considered at a mass meeting of merchants in Manchester, and it was unanimously rejected. After this decision was conveyed to the Dyers' Association several discussions took place between representatives of the merchants and dyers for the purpose of effecting a compromise, the aim of the merchants being to get the dyers to withdraw the condition that all business must be placed with members of the association. This week the dyers have offered a slight alteration in the agreement, but it has not satisfied the merchants, and has been turned down by a further mass meeting. The latest proposal of the Dyers' Association is that at the end of each month merchants should make a return to the association, giving the names and the amount paid to members of the association, and also a return of the amount paid to dyers outside the association. It is understood that if merchants can prove that certain dyeing processes cannot be obtained from members of the association, then the discount on the work done by members of the association will not be stopped. The object of the Piece Dyers' Association is undoubtedly to create a complete monopoly, and it is quite evident if merchants sign the suggested agreement outside firms will have to give up business. At the moment the negotiations have reached a deadlock, and it is now for the dyers to make the next move. The situation is of more than local interest, as a vital principle is at stake. Those who value free competition and individual liberty are rallying to the side of the merchants, but it is no use disguising the fact that the dyers have a strong organisation, whereas amongst merchants there is a fear of a few firms breaking away and consenting to accept the 10 per cent. discount and at the same time agreeing to place all their orders with members of the association.

Agricultural and General Engineers, Limited.—To show during the four years of existence a trading loss of £252,125 on an issued capital of £3,753,852 is possibly considered in some quarters a happy achievement when comparisons are made with other of our post-war large boom flotations. This, however, is but a small part of the troubles of the Agricultural and General Engineers, Limited, as the reconstruction proposals now put forward by the directors show. The original prospectus of this

undertaking, dated October 30, 1919, which we advise shareholders to re-read in the light of subsequent events, is concerned with a public issue of £840,000 in 8 per cent. cumulative preference shares at par. Surplus assets, including the proceeds of this issue, were valued at £3,007,409, and the prospectus added that, "On the basis that 100 per cent. of the capital of each of the associated companies will be acquired, the preference shares will therefore be covered by assets three times over." Incidentally "three times" was printed in black type to emphasise the point. The prospectus then proceeded to cajole the unwary investor by the statement that "Nothing has been included for goodwill," and to explain that advantageous terms had been arranged in "order that the company may start on a most conservative basis of capitalisation." It is probable that four years of trading has mellowed these optimistic opinions. And yet the accounts present some curious aspects. Assets were valued in the prospectus, we conclude, at boom prices. The ordinary shares of the parent undertaking, however, were exchanged for shares in the associated companies on a basis which averaged 33⅓ per cent. below the total value of net assets available for such shares. That was the picture four years ago. In the directors' report in front of us we now find that, "Owing to the trade depression, about 25 per cent. of the normal producing facilities of the companies, treated as a whole, are in use." A serious seeker after truth might question the proposition involved that the loss of 75 per cent. of normal production capacity was solely on account of trade depression. It would be interesting to know how the normal producing facilities are to be ascertained. From 1911 to 1918 the average of profits is £147,262 per annum. In other words, this was a normal profit. Were producing facilities considered from past experiences or calculated by studying the future through rose-coloured glasses? The conservative basis of valuation of 1919 was apparently a mistake, for the directors feel that the investments in associated companies should now be written down by £1,233,445, to bring the share capital into relation with the actual value of the assets of the associated companies. In other words, nearly 2½ million ordinary shares of £1 each are to be written down to 10s each. On turning to the accounts of the associated undertakings some interesting figures are available. Against a manufacturing profit of £270,034, rent, rates, taxes, insurances, and establishment charges amount to £161,000, while directors' fees are £10,568, and bank and other interest total £9,618. Further, in obtaining this manufacturing profit of £270,034, selling and distributing expenses worked out at £103,668. Evidently there is good ground here upon which an economy committee could get to work. The balance-sheet of the combined companies is up to March 31, 1923. A bank overdraft secured by a charge on the assets of the company and by the deposit of debentures in associated concerns appears for £444,688. The assets side is not attractive. Investments appear at £2,983,445, which we know are to be cut down. Loans and advances to associated companies have increased from £693,291 to £918,424, and it is rather disturbing to find that "no interest has been charged to the associated companies on the sums advanced them, as your board felt that no useful purpose would be attained by increasing the loss which the associated companies have, as a whole, made." On the face of it, this does not appear to be a satisfactory method of finance. Those of the associated undertakings which are running at a profit do not receive much encouragement by this process. The company certainly possesses a substantial property in Kingsway. This has cost up to date £423,577. At the time—the boom period—we were inclined to doubt the wisdom of embarking upon a building scheme on such a large scale. It should be noted that the expenditure upon this building is given, and not the present value. The fourth annual meeting is to be held on Friday, October 19th, at Winchester House, Old Broad Street, E.C.

Clerical, Medical, and General Life Office.—As exponents of life assurance finance, the general manager and directors of this life office always attract deserved attention.

In their report for the year ended June 30th last they show a slight falling off in new business—from £1,313,355 net in 1921-22 to £1,210,964—a further advance in the net interest yield from £4 7s 8d per cent. to £4 14s per cent., and the usual very low rate of mortality. Added to the substantial benefits of low mortality—the death claims for the year were 58 per cent. of the amounts expected—a declining rate of expenses, and an advancing yield from interest earnings, there has been a profit on securities realised of £60,958, and an excess in Stock Exchange values over book values of £224,000. The life assurance fund increased in the course of the year by £489,514 to £7,493,768. With the society's report is issued a leaflet showing reduced scales of premium for whole life and endowment assurances.

Harrisons and Crosfield.—Although they complain that the disorganisation of many of the foreign exchanges has greatly restricted or rendered impossible the transaction of business in several important markets, the directors are able to show a substantial improvement in net profits for the year ended June 30th last, which at £192,700 are £43,600 higher than in the preceding year, and £28,300 higher than those of 1920-21. A comparison of results for the last pre-war and for the past six years reads as follows:—

	1913-14.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
Net profit.....	£ 134,269	£ 212,190	£ 200,571	£ 249,204	£ 164,466	£ 149,138	£ 192,711
Brought forward	23,879	37,340	37,530	36,147	37,873	44,525	45,114
Preference dividend ..	158,148	249,530	238,101	285,351	202,339	193,663	237,825
Pref. ord. div. (10%) ..	27,500	33,000	36,165	37,230	37,800	37,800	37,800
Management shares ..	30,000	30,000	37,500	80,000	100,000	100,000	100,000
Reserves, &c.	35,118	74,000	41,024	24,922	5,941	1,250	2,500
Deferred ord. shares ..		15,000	50,088	59,982	14,073	9,499	18,999
Carried forward	35,530	37,530	36,147	37,873	44,525	45,114	66,526

Conditions ruling in both the rubber and tea industries, says the report, have improved during the past year. The full dividends of 6 per cent. on the cumulative preference shares, and of 10 per cent. on the preferred ordinary shares, are paid, £12,000 is transferred to reserve for income-tax, and dividends of 10 per cent. are paid on both the management and the deferred ordinary shares, as against 5 per cent. on each twelve months ago. This distribution allows an increase of over £21,000 to be made to the balance carried forward. The principal changes in the balance-sheet, which is analysed in another column, include increases of £125,900 in bank overdrafts, of £98,700 in sundry debtors, and of £36,000 in investments. Loans to companies have declined from £343,500 to £262,700, and property has fallen by £31,000 to £971,800. The directors state that the depreciation in the total market value of the company's investments, referred to in the reports of the last two years, had practically disappeared at the date of the balance-sheet, and since that date it has been replaced by an appreciation. Investments figure in the present balance-sheet at £1,445,100.

Nourse Mines.—Our mining correspondent writes:—It is distinctly satisfactory that in the year ended June 30th last this Rand mining enterprise should have secured a profit within measurable distance of that earned in 1920-21, when the gold premium was at its maximum. This result is partly due to the crushing of an increased tonnage of ore, but the main factor consists in a marked reduction in the expense ratio, due to the reorganisation which followed the labour trouble of 1922. The working profit figures at £100,400, or 3s 6d per ton, as against £118,300, or 4s 8d per ton, for 1920-21, the expenses averaging 23s 9d and 30s 10d respectively. The dividend total of 8½ per cent., calling for £68,500, appears to represent a rather conservative distribution of the profits, but after providing for taxes and £16,400 expenditure on equipment, &c., the carry-forward is only increased to a small extent. On the development side the results proved no more than moderate. The new deep level shaft was brought into operation, and an increased footage performed; but the ore opened up did not greatly exceed in quantity that extracted, while the value fell off in such a degree as to reduce the average of the reserves by .4 dwt to 6½ dwts. The report of the consulting engineer

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

ALL INSURANCE EXCEPT MARINE

Head Office
10, FLEET ST. LONDON E.C.4

ESTABLISHED 1836 General Manager W. A. WORKMAN, F.I.A.

suggests that the results for the current year will approximate to those of the past session. On the basis of the dividends for 1922-23 the yield on the shares is close upon 12 per cent. gross. This is perhaps not excessive in the circumstances.

Transvaal Gold Output.—The latest returns issued by the Chamber of Mines show that the output of gold of the mines of the Transvaal in September amounted to 739,504 ounces fine gold, as compared with 769,371 ounces in August, 1923, and 747,089 ounces in September, 1922. The following table shows the comparative outputs for the first nine months of each year since 1917, and the complete year's output:—

	1917.	1918.	1919.	1920.	1921.	1922.	1923.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January...	782,634	714,182	676,059	670,503	651,593	639,728	764,469
February...	781,321	659,759	636,728	625,330	558,157	558,157	704,970

This year's figures make a very favourable comparison with preceding years. With three months still to run, the output for the nine months is almost up to the complete figures for 1922, and is the best for the period since 1917. The following table shows the number of natives employed at the end of last month by members of the Witwatersrand Native Labour Association and Contractors:—

	Feb., 1923.	Mar., 1923.	April, 1923.	May, 1923.	June, 1923.	July, 1923.	Aug., 1923.	Sept., 1923.
Gold mines	182,983	181,473	178,337	175,591	170,865	166,443	167,600	174,466
Coal mines	14,717	14,710	15,040	15,176	15,598	16,020	16,156	16,225
Diamond	1,227	1,273	1,860	2,668	3,063	2,893	3,107	3,134
Total	198,927	197,456	195,237	193,435	189,526	185,356	186,863	193,765

A further improvement is noticeable in the labour position during the past month.

Great Boulder Perseverance.—It is seldom indeed that a company, after having been in the hands of a liquidator for several years, resumes its place in the active list. Such, however, has been the experience of this Kalgoorlie undertaking. Last year an engineer sent out to inspect the mine reported that it could be resuscitated as a payable proposition provided that certain development work were performed. This involved the raising of further capital—a measure which could not be carried through by a liquidator. After consultation with the largest shareholders, the decision was arrived at to form a new company with a capital of £125,000, divided into 1,400,000 ordinary and 1,100,000 priority shares of 1s each. The former were allotted to the shareholders in exchange for the existing £1 shares; of the latter, 700,000 were offered at par under guarantee, the consideration being a small commission and an option at par on the balance of the shares. The priority shares carry all the rights of ordinary shares, and in addition are entitled to one-half of the profits until their par value has been repaid, when they become ordinary. Although the new company was not

registered until quite recently, it is understood that it has been credited with the earnings as from May. The first declaration of the new company is £4,450 working profit for September. Dealings have been commenced this week in the priority shares on the basis of 6d to 9d premium.

THE Lord Mayor-Elect, Sir Louis Newton, has granted the use of the Mansion House for the annual dinner of the Newsvendors' Institution, which is arranged for Wednesday, November 14th, under the presidency of Sir Charles Wakefield, Bart.

MR P. D. LEAKE, F.C.A., will deliver an address on "Wasting Assets and Depreciation" at the Institute of Chartered Accountants on Wednesday, the 17th inst., in the course of which the recommendations contained in the Report of the Royal Commission on the Income-tax in regard to material wasting assets and income-tax will be examined and criticised.

PROFESSOR H. S. FOXWELL, M.A., F.B.A., will deliver a course of ten lectures, at the School of Oriental Studies, Finsbury circus, E.C. 2, on "Money and the Exchanges," illustrated from some problems of the day, on Thursdays, at 6.15 p.m., beginning October 18th. Fee for the course, £1 1s. Tickets may be obtained from the secretary, Dr Walter W. Seton, University College, London.

NEWMARCH LECTURES ON STATISTICS.—Mr Henry Higgs, C.B., M.A., LL.B., will deliver six public lectures, at University College, on "The Part of Statistics in Civic Education," with special reference to the uses of statistics in economics, finance, and the problems of central and local government, on Wednesdays, at 6.15 p.m., beginning October 31st. The lectures are open to the public without fee or ticket.

IN view of numerous applications which the Board of Trade have received from associations of traders and others for certificates under Section 78 of the Act for the purpose of enabling them to lodge objections with the Railway Rates Tribunal against the proposed schedules of standard charges, the Board desire to make it known that such certificates are not being required by the Tribunal for that particular purpose.

Oversea Correspondence.

UNITED STATES.—BANKERS' CONVENTION — BUSINESS STEADILY INCREASING—IMPROVEMENT IN STEEL INDUSTRY.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 1.

AT its annual convention in Atlantic City last week, the American Bankers' Association unanimously adopted resolutions dealing with important economic and financial matters now engaging attention in this country. The Association's attitude on some of the chief present-day problems, as expressed in its resolutions, may be summarised briefly. Complete isolation from European affairs, it was insisted, could not be maintained indefinitely without grave danger to American interests. The bankers, therefore, urged upon the Administration the advisability of giving an official standing to the American representative upon the Reparations Commission. They recommended also that the Debt Funding Commission immediately begin negotiations with Great Britain and France with respect to such part of the reparation question as may be included in the inter-Allied indebtedness, to the end that the Commission may be able to make what recommendations to Congress it may consider desirable and in the interest of the United States. Although the Association issued a warning that the full use of this country's tremendous gold reserve for credit expansion would be likely to lead to inflation and disaster, the bankers

saw no occasion to adopt extraordinary measures for disposing of the surplus gold reserve. A decided stand was taken against the menace of unwarranted extension of Government interference and regulation in business, while the growing agitation for Government purchasing of wheat or fixing its price above that in the open market was strongly condemned. The association severely criticised the recent settlement of the anthracite coal strike. With reference to the new machinery of agricultural credits, set up last year, the bankers declared that, though of doubtful value, it should be allowed to demonstrate its effectiveness "without further tinkering." The convention approved a report submitted by the association's Economic Policy Commission which advocated several amendments to the Federal Reserve Act, for the purpose of keeping the Federal Reserve Board free from political control. The Commission's proposed amendments, which were commended to all bankers as embodying the views of the best friends of the system, suggested the appointment of two members of the Board by the 12 Federal Reserve Banks; the reappointment of members of the Board at the expiration of their terms by the President of the United States without confirmation by the Senate; the designation by the members of the Board, instead of by the President, of governors and vice-governors; and making the governor of the Federal Reserve Board the chairman of that body, with an Under-Secretary of the Treasury as an ex-officio member, instead of the Secretary of the Treasury. Other recommendations, if carried out, would prevent the establishment of any branches of the Federal Reserve system in foreign countries under the guise of agencies, and would transfer the principal functions of the Comptroller of the Currency to the Federal Reserve Board. The Economic Policy Commission expressed the opinion, which was endorsed by the Bankers' Convention, that if the Federal Reserve system is to survive, and is to render the invaluable services which it can give when properly protected and directed, it is imperative that the position of the Federal Reserve Board be strengthened, and that measures be taken to assure for it the continued service of the best men available.

Striking evidence of the marked improvement that has taken place in the railroad situation and outlook in this country is found in the fact that, after a lapse of four years, one of the largest railroad systems, the Baltimore and Ohio, has resumed payment of dividends on its common stock. Last week the directors declared a quarterly dividend of 1½ per cent., a quarterly dividend of 1 per cent. being declared on the preferred issue. The restoration of the common stock to a 5 per cent. annual basis was a great surprise, for it is six years since the Baltimore and Ohio paid that rate on its ordinary shares. The company's income account for the nine months ended September 30th (September estimated) fully explains why the directors felt justified in taking such action; for net operating income totalled \$34,755,742, representing an increase of \$22,264,522. In commenting on the resumption of common dividend payments, President Daniel Willard declared that the physical condition power, had been brought up to a higher standard than had prevailed for 10 years, and that, unless there were extraordinarily unfavourable and unexpected developments affecting the company or the entire railroad situation, the company's common stock had "come back for good as a dividend-payer." Judging from car loadings, he added, business has kept up in spite of what has been said to the contrary, and he saw no reason for thinking there would be any serious falling off in the near future. Earnings statements for August from all railroads are not yet available, but many of those that have come to hand make an exceptionally good showing.

While considerable irregularity is still noted in trade and industry throughout the United States, business generally is steadily expanding, though the autumn revival is not so rapid as many people had expected. Wholesale and jobbing distribution in most centres has shown a material increase in the past week, and retail trade, as a whole, has improved somewhat. Free marketing of cotton at high prices has served to stimulate trade in the South, notably in Texas, and the volume of business,

taking the country as a whole, still exceeds that of a year ago, as is evidenced by the remarkably heavy car-loadings; the latest returns of the latter are the third biggest total ever recorded. Every week since the latter part of June, barring weeks in which holidays occurred, has shown aggregate car-loadings above the peak figures of any autumn in the past. There has been a quickening of activity in a number of basic industries, notably in steel. Demand for steel products has materially increased. According to reliable authorities, the United Steel Corporation's bookings in the first three weeks of September averaged 31,300 tons daily, approximately, as against only about 15,200 tons daily in the corresponding period of August. The Steel Corporation is now operating at slightly more than 90 per cent. of capacity, as compared with about 87 per cent. a week or two ago. The average for the entire steel industry now probably exceeds 80 per cent. of capacity. Consumers' stocks of steel are said to be low.

FRANCE.—THE RUHR POSITION—GERMAN COMPETITION.

(FROM OUR CORRESPONDENT.)

PARIS, October 10.

THE events of the week have shown that, despite the theoretical cessation of passive resistance in the Ruhr, M. Poincaré's recent grave warning against premature shouts of victory was fully justified, and that the Franco-German struggle is still far from being ended. It is felt here, both in official and other quarters, that a substantial step forward was made on Sunday, when the directors of the great Phoenix group of collieries and coke plants signed an agreement with the Inter-Allied Commission for Coal and Metallurgical Factories, under which they have agreed to resume reparation payments in kind, and again to pay over to the German Government the tax on coal imposed by the Allied Powers. This agreement has been sent to the Reparations Commission for approval, and appears likely to receive it, in which case, other things being equal, it will probably become operative before the end of the current week. Whether it will actually come into operation, however, is regarded here as by no means certain. At the time of writing passive resistance had only ceased in theory. Neither the Ruhr miners, the Ruhr factory hands, nor the Ruhr railway men have yet actually resumed work. In these circumstances the requests that were made yesterday and to-day to the Belgian and French Governments, by the German *chargés d'affaires* in Brussels and Paris respectively, for negotiations to be opened between the three Governments in regard to questions connected with the cessation of passive resistance, were obviously foredoomed to failure. These matters, M. Poincaré made it plain, must be dealt with by the authorities representing the Occupying Powers in the Ruhr in direct conversations with the inhabitants of the area concerned. At the same time, like the Belgian Foreign Minister, M. Poincaré insisted that if the German Government, "as soon as passive resistance has ceased," wish to put forward proposals in regard to reparations, they must deal with the Reparations Commission. In this the French Premier is not only acting strictly in conformity with the Treaty, but is obviously leaving the question to be dealt with not by the French and Belgian Governments alone, but by the organisation in which the whole of the Allied Powers have voices.

The most striking feature, from the point of view of British interests, of the agreement signed on Sunday between a section of the Ruhr industrialists and the Inter-Allied Control Commission is that portion of it which aims at preventing the German manufacturers from unfairly competing with British, French, and Belgian producers. Article 1 of the agreement stipulates that the coalowners must pay forthwith the coal tax left unpaid for the last three months of 1922, "in order to prevent them from throwing on the market manufactured products that would otherwise have an advantage of 24 gold marks per ton" (as compared with products manufactured from coal on which the *kohlensteuer* has been paid). Further, it is provided that the embargo placed on the enormous stocks of metallurgical goods that have been accumulated in the Ruhr since the beginning of the year will be lifted as and

CABLE ADDRESS: BANKTRUST, PARIS

when future reparation payments in kind are made. Once the conditions of the agreements are fulfilled the signatories will be granted permits allowing them to sell their coal and other products in Germany at any prices they like, and they will be given permits to export a *certain number of thousands of tons*. The Inter-Allied Commission for Coal and Metallurgical Factories, however, "always reserves the right to restrict or extend its permits according to the general situation." These conditions are in conformity with the proposal made by M. Poincaré, in a despatch published in a recent Yellow Book, under date June 12th last, in which he alluded to the "profound disturbance" that would be caused "to British, as well as to French, Belgian, and even German industry," if the enormous accumulated stocks of metallurgical products in the Ruhr are suddenly thrown on the market.

In other directions it is becoming evident that people here, now that the matter apparently has to be faced in earnest, are beginning to be much more sceptical as to the possibility of "making Germany pay." Certain French experts are now pointing out that it would be disastrous to French industry if this country succeeds in extracting anything more than quite moderate annual instalments from Germany. It is suggested that France could not absorb, except at risk of loss of trade and serious unemployment in her own labour market, more than 400,000,000 gold marks (£20,000,000) of reparation payments in kind per annum, and even then practically the whole of this must consist of coal. On the other hand, if Germany is called on to pay a large sum in cash, she could only do this by developing her industry to a point that would be disastrously prejudicial to that of this and other countries. One novel but plausible suggestion put forward here is that, as Germany has now no internal debt, thanks to the collapse of the mark, the burden of the two nations might be to some extent equalised by imposing on Germany the payment of the interest charges on a portion of the French debt. It is held by a good many people here that, if some guarantee could be obtained that Germany would continue to pay the interest charges in question, this form of solution would be far more practicable than even an international loan, which it is felt would have very slight chance of success in view of the present state of Germany.

GERMANY. — POLITICS — FINANCES — EXCHANGE MEASURES — BOURSE — TRADE — PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, October 8.

THE Cabinet difficulties of early last week rapidly developed into a crisis, ending in the resignation of Dr Stresemann, and the formation of a new Cabinet on the former "great coalition" basis, excluding, that is, only the German-Nationals and the Communists. The suggestion that a non-party Cabinet should be formed, which suggestion is part of the general assault, not confined to Germany, on Parliamentary Government, was not taken. The main changes are that the Socialist Finance Minister, Dr Hilferding, has been replaced by Dr Luther, until now Food Minister, and the Minister for Industry, Herr von Raumer, has been replaced by Dr Knoeth, of late a direc-

tor of the Darmstadt Bank, formerly demobilisation commissary, and during the war a manager of the Hindenburg programme, and an assistant of Dr Rathenau in organising the raw materials supply. The Reichstag parties, including a majority of, but not all of, the Socialists, have voted for a programme of increased production, including "new regulation of the working hours law with, in principle, maintenance of the eight hours day as normal working time." This seems to mean that in practice the eight hours day will be abandoned. The "Empowering Law" (Ermächtigungsgesetz), creating a sort of legal dictatorship, which was one cause of the Cabinet crisis, was to-day sanctioned by the Reichsrat against a considerable minority. The law, which will now be submitted to the Reichstag, authorises the Government to "take the measures which it considers necessary and urgent in the financial, economic, and social domains. In this it can depart from the fundamental rights enacted by the Federal Constitution." The Cabinet cannot use this power to alter working hours or social insurance. Measures taken under the law must be rescinded on demand of the Reichstag. Subject to the last proviso, the Bill replaces legislation by administrative decree in the three domains mentioned. The new Cabinet will have to face even greater difficulties than the old. The Ruhr and Reparations questions show no sign of being settled. Even negotiations are made by France conditional upon the resumption of deliveries, which is in part an impossibility. Ruhr technical journals state that it will take at least three months to put the cokeries into full working order. The blast furnaces have escaped serious damage, and can be refired as soon as coke and ore are available.

The position on the Ruhr gives no encouragement to the Cabinet to submit the homogeneous and entirely new financial reform which alone can bring the deficit system to an end. The vast subsidies to Ruhr industry cannot be materially reduced until a Reparations settlement comes. After the multiplied direct tax payments for the third quarter of 1923 were received, the Finances again sagged, and in the third ten-day term of September produced a new record in that receipts from taxation constituted only about 1-500th of expenditure. The mere loss on the railways exceeded by more than a hundredfold the whole tax yield; the loss on posts exceeded the tax yield more than tenfold. In the following account the revenue item "Funded Debt" represents subscriptions to the "gold loan":—

REVENUE.		September 21-30.
From taxes	81,848,151,464,000	
" Floating Debt	39,374,437,422,930,000	
" Funded Debt	609,568,761,801,000	
	40,065,854,336,195,000	
EXPENDITURE.		
Peace Treaty liabilities in foreign currencies	187,615,878,416,000	
Administration and Peace Treaty liabilities in marks	23,994,284,411,242,000	
Service of Floating Debt	5,271,904,155,724,000	
" " Funded Debt	137,740	
Loss on Posts and Telegraphs	764,518,293,527,000	
" " Railways	9,847,531,460,078,000	
	40,065,854,336,727,000	

The new multiplication of taxes will not remedy this condition. As soon as the Ruhr special expenditure ceases, the putting of taxes and State services charges upon a "wertbeständig" basis ought to improve the finances. The Customs gold surcharge has been raised to 13,699,999,900 per cent., or 137 million times the nominal. Railway fares will again be doubled on the 10th, the fares index being then 60,000,000, or 100 times more than the 600,000 index of the beginning of September. The sugar, salt, and most other taxes on consumption are now being raised almost automatically according to the mark's gold value, or to the general price movement.

The foreign exchanges last week again ran away. There is a big demand from the Rhineland, caused partly by genuine need, partly by lack of confidence in Government plans. The Exchange Dictatorship has so far yielded only disappointment and a vast crop of scandals. That the exchange decrees of August 25th and September 7th are illegal has been repeatedly pointed out by distinguished jurists, and the Government is so well aware of

this that it not only does not reply but is afraid to take the threatened penal measures against persons who violate the decrees. Instead, it exercises a kind of terrorism, directed against petty hoarders and speculators who can be counted on not to resist and not to appeal to the courts; and most of the victims are foreigners belonging to countries whose Governments do not protect them. Although the Exchange Dictator's first acts led to a public scandal, and had to be revoked and annulled, the chain of scandals continues. Wholly innocent persons are attacked by the police and plundered of their money, receipts being refused; sailors in German ports who go ashore for a few hours are similarly plundered. Last week the Exchange Dictator attacked several banks and carried off cheques deposited by foreigners for sale on the Bourse in a perfectly legitimate way, and some of the foreigners were unable to meet their engagements. The stolen cheques, if endorsed, will later be presented by the German Government agents for payment by foreign banks, and as English banks may be involved, it is well to say that according to German law cheques presented in such a way in no way differ from cheques stolen by private individuals, and there is no doubt that an English court examining the German exchange decrees in the light of German law would decide that this was the case.

The yield from these measures is extraordinarily small. The Reichsbank, notwithstanding them, has to continue sacrificing its gold in dribblets. The gold reserve, which at the close of 1916 totalled 2,600 million gold marks, has now fallen to 469,727,000 gold marks. At the beginning of this year the total was 1,004,800,000 gold marks. The bank's claims upon the public and the State trebled in the week ending September 23rd, Treasury Bills rising by 8,420,984 milliards to 12,229,418 milliards, commercial bills by 1,497,607 milliards to 2,200,636 milliards, while note circulation rose by 5,444,048 milliards to 8,627,727 milliards. In the month since August 23rd circulation has increased more than 30-fold (from 273,906 milliards); since the beginning of the year it has increased approximately 7,000-fold (from 1,280 milliards). Money market rates fluctuated greatly in the past week. The supply of money was relatively plentiful. Increases of company capitalisation in September totalled 24,975 million marks, against 26,567 million marks in August; issues by new companies 124,950 millions, against 62,807 millions; and bond issues 2,259 billions, against 1,794 milliards. The large increase in bond issues is due mainly to the "gold loan," and to a Hamburg sterling loan, which are entered at their paper mark current value.

The Bourse continues active and firm. The boom in home loans has gone further, the chief buyers this time being native Germans. There is also an enormous demand for mortgage bonds and municipal loans, but the present holders mostly hold fast, and for most municipal loans for weeks past no quotations have been fixed.

The condition of home trade and industry is getting worse. Outwardly this is visible in the big cities in the desertion of retail establishments by the public. The out-of-date official unemployment reports also show a decline in business activity, but they do not fairly represent to-day's conditions, which are considerably worse. At the close of August 6.3 per cent. of members of trades unions were unemployed, against under 1 per cent. a year ago; partly employed were 26 per cent., against also under 1 per cent. a year ago. The Prussian Trade Ministry's monthly report shows bad business everywhere. In most export branches the gold price system recently adopted has made it impossible to compete, and there is no stimulus at home to buy more than is necessary. The iron-ore mines in unoccupied territory cannot sell their output, and have cut down work. The potash mines have also cut down production. Practically no orders are being received in the locomotive branch. The export of chemical preparations has heavily fallen off. In the paper industry, some concerns are working only three days a week. The wool, linen and cotton branches also complain of small turnovers. The wool manufacturers report that foreign goods are 15 to 20 per cent. cheaper than German.

Price movements are very irregular. Most indexes show that at beginning of this month gold prices of certain commodities, e.g., minerals and coal, had risen, as

compared with 1914, nearly 200 per cent. more than other commodities, e.g., food.

The *Frankfurter Zeitung's* general index is:—

	Food.	Textiles and Leather.	Minerals.	Miscellaneous.	Manufactured Articles.	All 98 Commodities.
Middle 1914	1	1	1	1	1	1
January 1, 1923	1,758	3,206	2,622	1,778	1,518	2,504
September 14	23,794,857	36,977,404	31,578,765	17,989,895	22,688,881	25,649,210
October 4	109,667,361	215,778,470	307,306,550	185,445,210	147,975,350	182,953,500

All commodities together had, on October 4th, about reached world market level. For the first time an index for home produced goods is materially higher than the index for wholly imported goods. Whereas on August 31st the home goods index number was 1,869,627, and the foreign 2,818,949, on October 4th the home number was 156,440,452 and the foreign 143,368,670.

CANADA.—NEW FEDERAL LOAN—BANKING SITUATION—FEDERAL REVENUES—IMPROVEMENT IN C.N.R. EARNINGS—GRAIN BLOCKADE THREAT—CROP CONDITIONS—BUSINESS CONDITIONS—CANADA AND THE IMPERIAL CONFERENCE.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 25.

THE Federal Government has decided to raise the whole of the money required to liquidate the \$172,000,000 of Victory Bonds, which mature on November 1st, by a domestic loan, and a campaign for this purpose is now in progress. The Minister of Finance began cautiously by offering \$50,000,000 on the local market through a syndicate of investment houses, but when subscriptions amounting to almost 70 millions were received at once he decided to abandon any idea of resorting to the New York market for the balance, and to place the whole issue at home. The composition of the original syndicate has been widened till it embraces every bank and practically every bond and brokerage house of any standing in the Dominion, 220 agencies in all being employed. The bonds will bear 5 per cent., and two series are being issued; 20-year bonds, maturing October 15, 1843, are offered at 98.25, and will yield 5.14 per cent., and 5-year bonds, maturing October 15, 1928, are offered at 99, and will yield 5.23 per cent. Holders of 1923 bonds are given a conversion privilege; if they exchange their bonds for the same amount of the new issue they will receive a bonus at the rate of \$1.75 per \$100 for 20-year bonds and \$1.00 for 5-year bonds. Holders of the old bonds who convert will also get an extra half-month's interest, as the new bonds are dated a fortnight before the expiry of the old. The campaign is being very rigorously prosecuted by public advertising and personal canvassing, and is meeting with great success. Already the subscriptions exceed 100 million dollars, and the expectation is that the full amount will be raised by the end of the week. The circumstances are peculiarly favourable to a domestic loan because the recent banking revelations have made depositors very suspicious, and many of them welcome an opportunity to transfer their funds to Government bonds. Moreover, many American investors who were ready to subscribe to the issue which was expected in New York are taking the bonds through Canadian channels.

The banking situation is by no means cleared up. The depositors of the Home Bank have been holding meetings throughout the country and organising themselves to bring pressure upon the Government and the Bankers' Association for payment in full of the deposits. At these meetings very violent criticism of the banks is offered, and demands are made that the Finance Department institute a thorough investigation of all the banks and report upon their condition for the guidance of the public. The Government are awaiting the report of the curator before they will make any decision about a public investigation of the Home Bank débâcle. Meanwhile, however, depositors in the smaller banks have become so anxious that very serious withdrawals of deposits are taking place, and the position of these banks is bound to be weakened to a danger-point unless confidence is restored. The result is that many of the directors of the smaller

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

banks have suddenly become converted to the idea of a system of regular Government inspection, because they realise that it will be very difficult to restore confidence in their institutions without some such certificate of stability. The larger banks, however, are profiting by these recent developments, and are as hostile as ever to Government inspection, but a cleavage of interest has now developed, and next session the demand for State inspection will be difficult to resist.

The Federal revenues for the first five months of the year make a very satisfactory showing, amounting to 182 million dollars, as compared with 171 million dollars for the parallel period of 1922, and in the same period the ordinary expenditure has declined from 119 to 116 millions, which shows a net betterment of 14 million dollars. In his farewell speech at Quebec, on the eve of sailing for the Imperial Conference, Mr Mackenzie King prophesied that Mr Fielding would show a balanced Budget next spring, but this forecast is regarded as unduly optimistic. The returns of the Canadian National Railways, however, for the first eight months of the calendar year show that an operating deficit of \$1,166,098 in that period of 1922 had been this year transformed into an operating surplus of \$5,011,845, which means a net betterment of over six million dollars. The crop movement in the autumn months always gives a fillip to the railway returns, and under normal circumstances the operating surplus for the year might easily reach 10 million dollars.

But an unfortunate situation has developed about the crop movement. A few American vessels have come into the Canadian ports at the head of the Great Lakes for grain cargoes, but the great majority still persevere with their boycott, and decline to submit to the new regulations prescribed for lake boats in the matter of filing tariffs, &c. October shipments of grain from the West are estimated at over 90 million bushels, and the available Canadian bottoms cannot take out more than 28 million bushels. As wheat is now pouring into the lake ports from the West, it is bound to pile up there, and a very serious blockade, which will adversely affect grain prices for the farmer, will certainly materialise in October. Meanwhile, the American shipowners are bidding from Duluth for cargoes of Canadian grain; on September 22nd the rate from Duluth to Buffalo was 2½ cents per bushel, as against 5½ cents from Fort William to Buffalo. Duluth has good railway connections with Canada, and it seems probable that unless the Government suspends its regulations there will be a diversion of Canadian grain traffic on a very large scale to Duluth, which will mean a considerable loss of business to the Canadian railways and terminal elevators. Up till the middle of September the Eastward movement of the grain crop had been very slow, but during the past week a marked acceleration has been visible.

Unseasonable conditions in the shape of sleet and snow have kept back threshing operations in Saskatchewan and Alberta, but work has been vigorously resumed this week. In Saskatchewan almost 50 per cent. of the wheat crop has been threshed, and in Manitoba more than 75 per cent. Frost has done some damage to late grains in the more backward districts, but the aggregate loss is small. Many carloads of wheat still show on inspection traces of rust damage, which relegates them to the lower grades; but the proportion thus affected is steadily declining, and the threshing returns are generally better than was expected. In the three prairie provinces pasture

conditions are very good, and livestock are thriving. In British Columbia the weather has been warm and dry, with cool nights, and the apple crop has ripened to a good size and colour. In the Eastern provinces the weather has for the last two weeks been very summer-like, and the farmers have been able to finish their harvest under very favourable conditions. Throughout many districts of Ontario there has been an excellent second hay crop, and pastures are in fine condition. The fruit crop in the Niagara Peninsula lost in quantity through some severe storms, but the average quality, especially of peaches, is high. The optimistic tone of the Western crop reports and the advent of autumn weather have tended to stimulate business in Canada. Wholesalers report a good demand for goods, and retailers find the public more disposed to spend freely. Retailers, however, have formed the habit of buying for immediate delivery and in small quantities, and show no inclination to abandon it till more settled prosperity is assured. In the industrial field some factories have more orders than they can fill, and others cannot get enough.

The public is still in complete mystification about the policies which the Canadian delegates will advance either at the political or economic Imperial Conferences, but it is not expected that they will propose any startling departures. It is believed that the Government is prepared to endorse the formation of some Empire Trade Council, but as they are completely averse to any plans of political centralisation, its function can only be advisory.

AUSTRALIAN TARIFF AND PREFERENCE.

(BY OUR MELBOURNE CORRESPONDENT.)

THE Commonwealth Premier, Mr Bruce, who left Melbourne on September 1st to attend the Economic Conference in London, announced the proposals of the Commonwealth Government in Parliament on July 24th, the three subjects of primary importance being foreign relations, defence, and Empire trade relations. With regard to trade relations, he stated that he would press for trade preference with all the power that in him lies, and that "Australia is certainly entitled to raise the question whether the time has not arrived for giving preferential tariff treatment to Australian products landed in Great Britain." He proceeded to discuss the question of an alternative as follows:—"In 1921 Australia sent £76,849,000 worth of her products to Britain. It would be serious to Britain if because of her negligence we were forced to make reciprocal trade arrangements with some other country, which would then be the outlet for our surplus production. I do not for a second imagine that that will happen. I sincerely hope it will not. We must, however, look at the facts. I suggest that we place the facts before Great Britain, and that we do not first go to some other country and enter into an arrangement which will deprive Britain of our trade and later go to her and say, 'You knew that was the position.' We certainly should give the Mother Country the opportunity to take full advantage of anything we have to offer."

Mr Bruce further explained that it is not proposed to place enormous duties upon the foodstuffs of the people of Britain, and that, apart from tariffs altogether, there are a number of things that could be done as a matter of Imperial policy, including a proposal that Great Britain should make moneys available to the Dominions, either at no interest or at very reduced interest charges, to carry out great developmental public works.

Since Mr Bruce's speech in Parliament on July 24th, the subject has undergone public discussion, the effect of which is to make it clear that the dominant Protectionist interests in Australia are opposed to any relaxation of the present high tariff, and that no concession in this respect can be looked for in return for any tariff arrangements which Great Britain may make for Australian benefit. A little apprehension has been expressed, from a Protectionist point of view, lest Mr Bruce might be inclined to do this in order to obtain concessions for Australian primary products. Some ground for this apprehension appears to be furnished by the amendment which has just been made by Parliament in the constitution of the Tariff Board (which has power to recommend variations of duties

by administrative action) with a view to enabling a rural representative to be appointed to the Board, as it is feared that such a representative would have Free-trade leanings. The removal of the duty on sulphur and the substitution of a bounty in order that farmers may purchase superphosphate at a lower price is also distasteful to Protectionist interests. In some quarters there is a tendency to advocate still higher duties than are now in force, but there is no general agitation on the subject. The object, however, is frequently attained by administrative imposition of anti-dumping duties both on foreign and British goods.

The present Australian tariff has been in force since 1921, having succeeded the interim tariff imposed in 1914, which represented an increase on the 1908 tariff. These tariffs have included preferential rates in favour of British goods, but in all cases the one great object is the protection of Australian manufacturers, preference being little more than an ornamental superstructure. Little has been done to give preference to other portions of the British Empire. There is a long-standing arrangement with South Africa, trade with which consists almost entirely of exports to South Africa from Australia. The practical possibilities of trade in the opposite direction are confined to occasional importations of South African sugar and maize. At present Australian sugar control leaves no opening for South African sugar, and after the recent drought in Australia led to imports of South African maize the Commonwealth Government imposed an anti-dumping duty. Proposals for reciprocal preference with New Zealand made no progress until about a year ago, when Australian boot manufacturers found that they were losing custom in New Zealand to British manufacturers. No arrangement has yet been made with Canada, as Australian makers of agricultural machinery are opposed to any concession that would be of benefit to Canadian manufacturers. An arrangement between New Zealand and Canada has been in force for a number of years past, and the result is that New Zealand butter and other produce are admissible into British Columbia at lower rates of duty than similar Australian articles. Australian tariff policy has been hostile to the Pacific Islands, and not only is there no preference, but in the last revision of the Australian tariff a practically prohibitive duty was imposed on bananas, which has aroused much feeling in Fiji.

Australian imports of merchandise during the year ended June 30, 1922, and the duties collected were as follows:—

	Imports.	Duties.
General tariff	£ 56,261,542	£ 11,226,368
Preferential tariff	46,761,590	6,961,653
Total	103,023,132	18,188,021

Total imports, £103,023,132, include £38,400,193 free of duty (viz., £17,136,543 under the general tariff and £21,263,650 under the preferential tariff) and £64,622,939 subject to duty (viz., £39,124,999 under the general tariff and £25,497,940 preferential tariff).

Letters to the Editor.

P.R. AND THE IRISH ELECTIONS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Alfred J. Gray, assistant secretary of the Proportional Representation Society, apparently reassured by the fact that I am a supporter of P.R., says that "the differences between us are questions of detail," and adds, "whatever conclusion readers of the *Economist* may come to on the point at issue, the broad fairness of the results of P.R. will not be called in question." To the latter proposition I agree, and in doing so must point out that I never suggested that P.R. failed to give results which are broadly fair. To the former proposition I demur. The differences between us are not mere questions of detail, but concern the accuracy of the information furnished to the readers of the *Economist* by its Dublin correspondent. My position remains intact. Mr Gray's frontal attack upon it, delivered in full force, has somehow converted

itself into a rearguard action. I merely desire to clear my front, and have no intention to engage upon a pursuit.

Mr. Gray still claims that the "minor parties" should be regarded "as separate forces." Now the whole discussion hinges upon the distinction between majorities and minorities—you cannot discuss whether minorities, or a minority, have adequate, inadequate, or excessive electoral influence unless you have majorities or a majority to contrast with them. In his effort to show that in the Irish elections the minority got less than its proportionate share of representation, Mr Gray detached from the majority certain of its sections, which consists of groups standing for special interests—Farmers, Labour, Commercial, and the like. He then added these sections to the true minority, so as to lower its percentage of proportionate gain. This surprising method of handling the facts lands Mr Gray into a *reductio ad absurdum*—it results that there was no majority, and that there emerged from the General Election nothing but a bunch of minorities, or, as Mr Gray prefers to call them, "minor parties." He had only to add one more minor party (holding 1.3 of the elected members) to his bunch, and he could then have proved triumphantly that as, between them, they held all the representation, the minorities had exactly the correct amount of representation!

Now was there or was there not, as I wrote in the passage assailed by Mr Gray, "a total majority on the principal issue of 109 to 44, or roughly 2½ to 1"? Was there a majority at all, or only a bunch of minorities? For twelve months or more a bloody conflict had been waged by an armed Republican minority against majority rule and constitutional methods. As the election approached, the armed minority proclaimed a species of cease-fire, but made no submission to the Government and no surrender of arms and munitions to the proper authority. It organised an electoral campaign to test popular opinion and to embarrass constitutional government by its elected representatives refusing to act in the Free State Parliament. Its candidates were carefully selected as pledged opponents of the Treaty and the Constitution. Against this militant minority were arrayed the great majority, the supporters of Treaty and Constitution and of peaceful, ordered government. None of the elected candidates of the minority have taken their seats in the Dail. All of the elected candidates of the majority have taken their seats, and are engaged in working the institutions which they are pledged to uphold against the Republican minority. And there is a perfectly stable Government resting upon the secure foundation of majority support. I suggest that it would be difficult in any country to find a case of majority and minority with a more clear and definite line of demarcation between them.

But, says Mr Gray, "it is clear.....that a proportion of the voters who gave their first preferences to Labour, Farmer, and Independent candidates were Republican in sympathy, for when their votes came to be transferred, they passed to Republican candidates." He goes on:—"Such voters..... cannot fairly be included in a Pro-Treaty total." This is a most amazing proposition. *Simpliciter*, it means that a second preference indicates a voter's politics more accurately than his first preference. The voter gives his first vote for a candidate who will support the Treaty and the Constitution, and sit in the Dail if elected and support certain policies in debate—and because in the event of failing to carry his candidate his second preference is given to a Republican, he is to be deemed to be an opponent of the Treaty and the Constitution. This strange proposition is utterly and wholly inconsistent with the ordinary and orthodox P.R. method of calculating what the true *pro rata* representation should be from the first preference votes, as indicating the distribution of the respective parties.

The Republican minority, then, won 44 seats where their rateable share was 40.4. This, I submit in conclusion as at the outset, illustrates that minorities have "a disproportionately large influence"—which arises from the mobility of their voting power, which facilitates their combination for effective action in varying contingencies. Mr Gray asks for an example of this. An example can be found in the phenomenon of the Independent, or other voter, who after voting for his own candidate gives his second preference to the Republican as the result of a log-rolling agreement by which certain of the weaker candidates endeavour to pool their resources or to engage in "combination for effective action." There is, of course, a reciprocal arrangement for the second preference of the Republican voter to be given to the Independent or other candidate. But such an arrangement does not warrant Mr Gray in treating Pro-Treaty as Anti-Treaty nor Anti-Treaty as Pro-Treaty.

As to the more technical propositions regarding the effects of second and other preferences, and how the system favours minorities, which were indicated in the concluding paragraph of my last letter, I am not disposed to embark upon illustrations of them unless their accuracy is specifically challenged.—I am, yours faithfully,

"YOUR DUBLIN CORRESPONDENT."

Dublin, October 10th, 1923.

Books and Publications.

BRITISH FOREIGN POLICY.

THE third volume of the Cambridge History of British Foreign Policy which has now been published* carries the story from 1866 to the Peace of Versailles. It thus completes the work undertaken under the editorship of the *doyen* of Cambridge historians, Sir A. W. Ward, and Dr G. P. Gooch, the object of which was to provide the general reader, no less than the specialist, with a study of our foreign policy, based on authentic documents, a study "indispensable for an insight, however incomplete, into the problems engaging that policy at the present day."

The difficulties of an undertaking of this kind naturally increase the nearer one approaches to the turmoil and complexity of present-day conditions, and the resultant temptation to fall into the cataloguing habit has not been entirely avoided by some of the contributors to this volume. Thus Mr W. H. Dawson, who will be known to our readers for his admirable studies of life and conditions in Imperial Germany, gives what is in many ways a very efficient summary of known facts covering the last 25 years of the XIXth Century, though his two chapters convey the impression of a series of short and crisp articles in a useful encyclopædia rather than a co-ordinated account of the main trend of developments.

Short, but very suggestive, is the chapter in which Sir Valentine Chirol estimates the influence of the Boer War on the international situation in general, and on British foreign policy in particular. The turn of the century, in fact, coincided with a reconsideration of the whole doctrine of "splendid isolation," and witnessed the beginning of an entirely new phase in the long history of the balance of power. In two thoroughly admirable chapters, Dr Gooch, whose patient research in this sphere is by now well known to all students of contemporary history, treats of the development of those agreements which are collectively known as the Triple Entente, and which completed the division of Europe into two armed camps. We are shown the approach, slow but inevitable, of the final cataclysm, which has done so much to justify the dictum of Sir Robert Walpole that in war we cannot be great gainers if we win, and cannot but be losers if we lose.

More than a mere passing reference is due to Mr Algeron Cecil's chapter on the history and the organisation of the Foreign Office from its birth in 1782 down to the present day. Written in an interesting style, this chapter teems with intimate details which make even the Foreign Office appear a human institution, despite so many Olympian associations. We can well imagine that Palmerston's dictum that "eight hours work, when little is doing, must be your daily minimum," should cause some surprise amongst the easy-going officials of that day, although now, no doubt, the eight-hour day is taken for granted. Of particular interest is the brief summary of the not unimportant question of commercial intelligence. "Generally speaking," we are told, "it seems clear that the Foreign Office has done either too much or too little in the matter of foreign trade." In any case, the demand of Mr Hirst—a former editor of the *Economist* (and not of the *Economic Review*, as the Index to this volume has it)—made in evidence before the Civil Service Commission in 1914, that the Foreign Office itself should be "a mirror of the nation.....an intelligence department for foreign commerce.....a kind of meteorological office for publishing conditions in foreign countries," is still far from being satisfied.

This history suffers from the disadvantage of a lack of co-ordination, which is an almost inevitable concomitant of team-work, no less than from the difficulties inherent in treating coherently a subject at once immensely complex and controversial. At the same time, the three volumes taken together provide a most useful introduction to the study of current problems in foreign affairs and supply a very real need.

LABOUR v. CAPITAL.*

THE Labour Research Department in this short brochure delivers an attack upon the Federation of British Industries. The account of the origin, working, and influence of the F.B.I. is fairly accurate as far as it goes, but the picture is far too rosy. Indeed, deliberately or designedly the authors have drawn a picture of such a marvellously efficient machine that we should have expected them to have been lost in admiration of it, in view of the difficulties of building up a similar organisation in the labour world which have recently been somewhat loudly advertised. But the account entirely fails to depict the weaknesses, conflicting interests, and personal difficulties that are inherent on the side of capital no less than of labour in trying to cover with a single organisation so immense a field as the whole of British industry. The authors bravely endeavour to show that the National Federation of Employers' Organisation which deals with the labour question is merely an agent of the F.B.I. This is very far from the truth. The outlook of the leading men in the two bodies is very wide apart, and there is unfortunately still very little co-ordination throughout British industry between those who direct the labour policy and those who endeavour to formulate commercial opinion. The report prints some of the rules of the F.B.I., but anyone who has read a prospectus knows that there is a very great difference between the theoretical scope of an association and the tasks which it in fact carries out, nor does an enormous membership of concerns which take a very little interest in an association necessarily represent great strength, and it would be a revelation to many who take for granted the solidarity of the employing classes to realise the difficulty of getting agreement among them on what would seem to be comparatively straightforward questions.

We have the greatest respect for the organisers of the F.B.I., but they will be a little surprised to find themselves described as the brain centre of British capital. Such phrases give a totally false impression to the public, which becomes mischievous when the policy of the F.B.I. is represented as being to secure the co-operation of trade unions in order to make them the ready instrument of the employing classes. The report admits that on the whole the Federation is anxious to secure industrial peace by co-operation of organisations on both sides. The outlook of the authors of the report is very much to be regretted when they imply that such co-operation involves merely the submission of workers' organisations.

* "The Federation of British Industries." Studies in Labour and Capital, No. V. Prepared by the Labour Research Department. The Labour Publishing Company (London). 2s 6d.

INCOME-TAX WITHIN THE EMPIRE.*

THIS is a publication which has been urgently required by the public for some time past. The extended adoption of income-taxes in recent years by the Dominion and Colonial Governments of the British Empire, combined with the increases due to the war in the rates of tax imposed in the United Kingdom and elsewhere, have in recent years focussed more attention upon the question of income-tax generally than in pre-war times, when the comparatively small amount of the rate caused little anxiety. Here is an official attempt—by the Inland Revenue Department of London—to set out carefully the provisions of the various Dominion laws. In an interesting preface it is pointed out that these "digests, following the meaning given to the term 'Dominion' in the Finance Act, 1920, include not only those of the self-governing Dominions, but also those of British India and British Colonies, Protectorates, &c." But readers are warned that the "inclusion of any law does not, however, necessarily mean that claims to relief from double taxation will be admitted in respect of tax thereunder, for some taxes have been included to elucidate others, or because no decision as to the precise nature of the tax dealt with has yet been given." We venture to suggest that few large offices will eventually be without a copy of this work.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
October 17.ACCOUNT.
October 18.

Public appetite for investment grows by what it feeds on—such, at least, is the experience of the past week in the matter of new issues offered by front-rank borrowers. Victoria, Commonwealth, and now Nigeria have offered 22 millions of stock within a fortnight, and the first two-named had no difficulty in placing their proportion. The Nigerian underwriters express no qualms as to the result of the subscription in this particular case. Money flows freely into gilt-edged stocks, and during the past few days a dozen rises have occurred in short-dated securities, such as Treasury, Exchequer, and National War Bonds. There is not much change in the price of the War Loan, but Conversion stock rose to 79 bid. The Home Railway prior-charge market is also good, with a growing scarcity of stock available to meet the investor's demand.

Several other big borrowers are expected to put in an appearance in the near future. Curiosity centres around the possible advent of a big Indian Government issue. German bonds rose to 16s 6d before they subsided to 14s 6d, and there was a temporary recovery in French Government bonds as the franc rallied. Argentine, Brazilian, Chilean, and Japanese descriptions are better. The effect of the Japanese earthquake has practically worn off so far as Japanese bonds are concerned. Peruvian preference drooped on rather less optimistic dividend expectations. The Austrian scrip has strengthened, though it failed to hold its best price.

Home Railways have been in good fettle. A brisk rise in Southern Deferred stock led an improvement throughout the market as a whole. The Heavy stocks joined in the rise. Undergrounds went up with the rest. The preferred stocks are harder, and, although it is said that the public buying

which has wrought this change is comparatively modest, the rises on the week are worth noticing. Some men in the market attribute the increased attention as being due to the approach of the dividend times; nothing, of course, will be declared for another three months.

In the Argentine railway market changes are insignificant, the reports which have appeared this week sufficing to keep prices tolerably steady; the fall in the exchange arouses a little uneasiness. San Paulos fell back after their big rise. Antofagasta, notwithstanding an interim dividend of 3 per cent., against nothing a year ago, yielded a little ground, and United of Havana just holds the rise which it secured by reason of its own interim dividend announcement.

Rubber shares have gone back because the raw produce is lower in price, and there has been a substantial reaction in the tea share market. Speculation busied itself over-much in tea shares, and there has been a somewhat eager anxiety to get out, on the turn of the market, amongst those who had bought shares without any intention of keeping them for long. Anglo-Persians have been particularly flat in the oil market, fears still being entertained of a new issue. Burmah Oils strengthened on the interim dividend being the same as that of a year ago. The general oil list is neglected by the public, and what movements there have been this week are the result of more or less professional dealing. Hotel shares have advanced, thanks to the latest-declared dividends; the idea is that hotels will do well this winter, and also next season, when the Exhibition opens.

Amongst textiles, Coats advanced on hopes of the Christmas bonus being increased, though the improvement was slight, and other textiles took their cue from this. Courtaulds are very quiet, their supporters evidently lying low at present, possibly because of the rumoured competition that may come from Switzerland. Nitrates again moved up, though more slowly than of late. The insurance group is good, a good many advances occurring by reason of the gilt-edged market's strength, while the banking market shows irregular changes. Anglo-South Americans and London Brazilians weakened on the reduction in the dividends. Shipping shares are steady, with Cunards in quiet request. It is understood that the expected October Marconi meeting will have to be postponed. The wireless list is slightly better. Cable issues show no changes worth mentioning, but the preference shares in the manufacturing companies are better. Indeed, it is extremely difficult to obtain sound preference shares that offer a yield of 6 to 6½ per cent. on the money. Electricity supply shares maintain their upward tendency.

The rise in the Kafir market lacked staying power, and neither Cape nor Paris is in the mood to render active support. A drop in Randfontein Estates is disquieting to those who had looked for a 10 per cent. dividend at the end of the year. In the Rhodesian market, a new introduction has been Sherwood Stars, where dealings started on the basis of 36s 3d. The shares were run up to 50s. The copper market weakened, some little disappointment being felt with the 10s dividend on Rio Tintos, the same as that of a year ago. The price of tin keeps above £200 per ton, without, however, leading to any noticeable increase in business amongst tin shares, either any Cornish, Malayan, or West African. The Canadian-Mexican list, which recently has been attracting mild attention, has moved but little, and there is nothing doing in Indian mining shares.

Sir Wilfrid Atlay, who was chairman of the Stock Exchange Committee up to March 25th last, sailed yesterday for Bombay at the invitation of the Indian Government. His mission is to advise upon certain matters connected with the working of the Bombay Stock Exchange, and the work is expected to occupy two or three months.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded	£216,807,637	£	£	£

Nigeria Government 4 per Cent. Inscribed Stock, 1923.—This is an issue of £5,700,000, at 88 per cent. It is the first instalment of an issue to produce a total of £10,528,730, plus the cost of issue. The proceeds are required for the construction of railway, harbour, and other public works in the Colony. The loan is secured on the general revenues and assets of the Government of Nigeria, and the principal will be payable at par on October 15, 1923, by a sinking fund of not less than £1 per cent. per annum, the first half-yearly contribution being taken not later than April 15, 1927. This is a good long-dated trustee investment, and, allowing for redemption, the yield works out at £4 13s 5d per cent.—rather a modest yield.

Tamplin and Son's Brewery, Brighton, Limited.—Share capital £740,000. The present issued capital of the company is £300,000, of which £85,000 is in 6 per cent. preference shares and £60,000 in 5½ per cent. "A" preference shares, the remainder (£155,000) being in ordinary shares. This is an issue at par of 300,000 7½ per cent. (cumulative) "B" preference shares of £1 each. The company was incorporated in 1889, and took over a business which was established in 1821. In 1920 the company entered into an agreement with the Southdown and East Grinstead Breweries to purchase certain premises and to take on lease 93 licensed properties for 35 years. The lease contains an option for the company to purchase the freedom or copyhold reversion of the premises for £295,150. Three reversions have already been acquired, and the purchase price of the remainder is £288,542. Profits are given for three years, but the prospectus is somewhat lacking in information as to what the assets actually are and how they are valued.

The East African Power and Lighting Company, Limited (Incorporated in Kenya Colony under Indian Companies Acts.)—Share capital 350,000 ordinary shares of 20s each, of which 70,000 have been issued and are fully paid. The company has also issued £100,000 10 per cent. mortgage debentures, but these are to be redeemed out of the proceeds of the present issue. This is an issue of 200,000 ordinary shares of 20s each at par. The company was formed in January, 1922, to take over an existing power and lighting concern for £160,000, payable in cash. The supply of electricity in and around Nairobi was begun in 1908. Profits are shown for 1919, 1920, 1921, and 1922, and the company paid a dividend of 8 per cent. in the last-mentioned year. Meanwhile, an interim dividend at the rate of 5 per cent. per annum has been paid. A cautious investor would want to know what the plant was worth and what sums had been allocated to depreciation. We might also suggest that the cash consideration of £15,000 for subscribing for £100,000 of debentures of the company denotes either that the directors made a bad bargain, or that money was difficult to obtain for the concern.

CHARLES BAKER.—Charles Baker and Co. regret that no interim dividend on preference and "B" preference shares can be recommended.

CHARLES MARSDEN AND SONS.—Directors announce that trading results do not admit payment of preference dividend due October 1st.

INTERNATIONAL LIGHT AND POWER.—Directors report that unless present circumstances alter materially company's cash position will permit of a commencement being made towards the payment of accrued arrears of preference dividend early in 1924.

MANN, BYARS, AND CO. regret that it has been necessary to postpone payment of the preference dividend due on September 30th.

THE AMALGAMATED COTTON MILLS TRUST, LIMITED.—The directors announce that the dividend on the preference and "B" preference shares of the company for the half-year ending 31st inst. will be paid on that date.

THE CANADIAN NORTHERN RAILWAY COMPANY announce that the earnings for the half-year ended June 30, 1923, are insufficient to enable them to declare any interest on the Five per Cent. Income Charge Convertible Debenture stock. No payment has been made since June 30, 1914.

TINSELEY ROLLING MILLS.—Directors are unable to recommend dividend on ordinary shares.

TOURNAI TO JURBISSE RAILWAY.—The Tournai to Jurbisse and Landen to Hasselt Railway Company has declared dividend of 6.37 Belgian francs on coupon No. 119 preference shares, 6.37 Belgian francs on coupon No. 34 ordinary shares of fixed dividend, and 36 Belgian francs on coupon No. 34 ordinary shares of variable dividend, less tax.

THE WINTERBOTTOM BOOK CLOTH COMPANY, LIMITED, have decided to capitalise cumulative preferred ordinary shares of £1 each among ordinary shareholders in the proportion of one for every two ordinary shares held. This will absorb practically £500,000 of reserve.

COMPANY MEETINGS, &c.

UNITED STEEL COMPANIES, LIMITED.

GREATLY IMPROVED RESULTS.

BOARD'S SOUND DIVIDEND POLICY.

TAXATION AND FOREIGN COMPETITION.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The sixth ordinary general meeting of shareholders of the United Steel Companies, Limited, was held, on the 8th instant, at the Royal Victoria Hotel, Sheffield. The chairman of the company (Mr A. O. Peech) presided, and other directors present were Mr Barber, Mr J. V. Ellis, Mr H. Guedalla, Mr J. Henderson, Sir F. J. Jones, Bart., Mr W. B. Jones, Mr T. Jowett, Mr M. Manna-berg, Mr J. E. Peech, and Mr F. S. Scott-Smith.

Mr A. Blackmore (routine director and secretary) read the notice convening the meeting and also the auditors' report.

The Chairman, who was greeted with applause on rising, said: The report of the directors and the accounts have been in your hands some days. You will probably desire, therefore, that they should be taken as read. Since our last meeting your board have lost the valuable services of their friend and colleague Mr William Tozer, who died in August. Mr Tozer had been connected with the Ickles works for nearly 50 years, and had a very intimate knowledge of the conditions of their special trade. His death leaves a gap which it will be difficult to fill. You will, no doubt, share our very great regret and our sympathy with Mrs Tozer and the family. As mentioned in the report, Mr William Steel has found it necessary to retire owing to failing eyesight. We are extremely sorry to lose his help, and I am sure you will join with us in the hope that his affliction may be less serious than is feared.

NEW DIRECTORS.

competition, which has materially affected the results of the year. At Stocksbridge in the heavy departments work has been very intermittent. Other departments have done fairly well. In May last an unfortunate fire broke out, which resulted in the complete destruction of the cold rolling plant and buildings. The loss was almost entirely covered by insurance, but the dislocation of our business was considerable. The position has been met by arrangement with other cold rollers in Sheffield, so that the dislocation has been minimised to a considerable extent. Rebuilding was started as soon as possible, and it is hoped to resume operations at an early date.

Our Yorkshire collieries and coking plants have been fully employed during the year with very satisfactory results.

STOCKS.

I am pleased to say that during the present financial year there has been no necessity for abnormal writing down of stocks, such as was our bitter experience in the two previous years. All stocks at the various works are now down to perfectly safe prices.

Depreciation has received the careful attention of your board, but, except as appears on the balance-sheet, no provision has been made during the current year. Your directors are of opinion that the question of depreciation may quite prudently be left until the profits are better able to bear the burden.

The whole of the works of the constituent companies have been very fully maintained during the year, and considerable improvements have been made.

We have closely examined our methods of manufacture, with beneficial results. It is not too much to say that we are prepared for a large turnover, and are quite ready to take advantage of whatever revival of trade comes along.

We have still not settled the outstanding figures of taxation. The matter remains in negotiation with the Inland Revenue authorities; our experts have been engaged upon it continually during the whole of the past year.

The construction of the Workington new dock is progressing satisfactorily, and, without any setback, the dock should be completed and ready for use early in 1925. As you are aware, this company owned the whole of the ordinary share capital of the Cleator and Workington Junction Railway. Under the Railways Act, 1921, this railway has been taken over by the London Midland and Scottish Railway, and ordinary share scrip of that railway has been substituted.

As stated in the directors' report, the United Strip and Bar Mills, Limited, have made considerable headway during the year. As regards manufacture, the mills continue to be quite successful. Unfortunately, it has been impossible to book sufficient work to keep them fully employed, and therefore they have not shown the results which may be expected when more work is available.

PROSPECTS.

With regard to prospects, full recovery in trade depends largely upon relief in taxation and cost of transport, and upon stabilised conditions in Europe and the Near East. General trade revival throughout the world is hindered by impoverished markets; purchasing power is at present limited. The general view seems to be that business is on a more stable footing, and that we may expect some improvement by the end of the year.

The concession in railway rates since our last annual meeting, while not nearly so large as manufacturers and traders expected, is helpful, and we appreciate the efforts of the railway companies in this direction. The cost of transport is still so very heavy as to constitute a serious handicap to the business of the country, but we feel sure that this important question is always receiving the sympathetic consideration of the railway management of the country.

The amount of taxation, local as well as Imperial, to which business in this country is now subjected, is a burden which cannot be carried with any chance of living under it. A great responsibility rests upon the Government and local authorities in this matter. Let us hope they realise it, and will take measures to give us speedy relief.

Your directors had an opportunity of acquiring on satisfactory terms, in conjunction with the Parent Tyre Company, the Hoffmann Manufacturing Company, of Chelmsford, the celebrated makers of ball bearings. This company uses a considerable quantity of the highest quality steel, and it was in view of supplying this steel that we acquired an interest in the business.

In conclusion, I desire for myself and my colleagues to pay a tribute to our workmen and staff. We have had no serious trouble with labour at any of our works during the year—on the contrary, we have seen and experienced a continuance of the spirit I referred to a year ago, which is much appreciated by the board and officials. We have received most excellent service from the whole of the officials and staff. We have a very competent staff, and our thanks are due to them for the loyalty and devotion with which they are carrying out their responsible duties. I now beg to move formally the adoption of the report and accounts to June 30, 1923, as presented, and call upon Mr Guedalla to second the resolution.

GOVERNMENT AND FOREIGN COMPETITION.

Mr H. Guedalla: Ladies and gentlemen, in seconding this resolution I have nothing to add to the faithful exposition of the company's affairs which you have just heard from the chairman, but I would like to say, as a member of the board, how much I appreciate the successful manner in which the directors and the management of the company have devoted the whole of their time to your interests, have tackled the many problems which present themselves—have presented themselves continually—in these abnormal times. The chairman has alluded to one or two of these difficulties common to ourselves and many other trades. This country cannot live unless it has its exports. The chief competitive factor is the question of foreign exchanges. It is all very well to tell foreign countries that they must put their financial house in order. Why should they take this view when they find they are taking the trade which we used to get. Our Government has deliberately adopted and embarked upon a financial policy which is calculated to hinder trade and produce unemployment. Until this policy is rectified I do not think we can hope for any important amelioration in the burden of taxation, which multiplies its effects on our working interests in so many directions. Unemployment, apart from its demoralising influence, must be costing quite £150,000,000 a year, and this money, being unproductive, is simply thrown into the gutter. Unemployment, therefore, must be the urgent question of the day. Patchwork schemes will not cure it, but we must get down to the root cause.

The resolution was carried unanimously, there being no response to the invitation of the chairman for questions.

RE-ELECTION OF DIRECTORS.

Mr Edwin Stockton proposed the re-election of the directors—retiring by rotation—Mr H. Guedalla, Mr J. V. Ellis, Mr J. Henderson. He prefaced his remarks with an expression of sympathy with those bereaved by the death of Mr William Tozer, and said he hoped Mr William Steel's illness would not prove to be so serious as had been feared. He warmly approved of the policy of the board in choosing as new directors those actually in harness in the firm—Mr James Valentine Ellis, the general manager of the Workington branch, and Mr James Henderson, the managing director of the Frodingham and Appleby companies.

Mr Twigg seconded, and the resolution was carried.

The retiring auditors, Messrs W. B. Peat and Co., were re-elected.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS, AND STAFF.

A vote of thanks to the chairman, directors and staff was accorded with applause, on the proposition of Mr Edwin Stockton, who said that in difficult times the thanks of the shareholders were really more due than when times were good and a dividend was paid.

Mr Allott seconded, and the resolution was carried. The Chairman, in reply, said they had had a very difficult year, and, with the splendid help and co-operation of the whole of the staff, the company had not done badly. He only hoped they would do as well this present year.

CLERICAL, MEDICAL, AND GENERAL LIFE ASSURANCE SOCIETY.

HIGH RATE OF INTEREST EARNED.

The annual general meeting of the Clerical, Medical, and General Life Assurance Society was held, on the 12th instant, at the chief office, St James's square, London, Mr Francis E. J. Smith (the chairman) presiding.

The general manager and actuary (Mr Arthur Digby Besant) having read the notice convening the meeting, and the certificate of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: One of the most noticeable figures in the transactions of the past year is that of the rate of interest earned. There are many factors which go to make the success or failure of a life assurance office, but there is none of such paramount importance as the net rate of interest earned upon the invested funds. It is very gratifying to be able to report that the gross rate of interest has gone up by a sum of no less than 5s to £5 10s 10d per cent., and that the net rate, after deduction of tax, is 6s 4d per cent., and higher than last year, and has now reached the high level of £4 14s per cent. This is the highest rate earned since the society's foundation in 1824. The relatively marked rise in the net rate is, of course, accounted for by the reduction in the income-tax.

You will all be interested if I give an indication of the causes which have brought about this substantial rise in the rate of interest. Some years ago we bought, as you will remember, 5,000 £100 fully-paid shares in the General Reversionary and Investment Company; that transaction is proving most profitable to the society, both indirectly, as a conduit pipe through which new life assurance business reaches us, and directly, inasmuch as, although the Reversionary Company is valued on a most conservative basis, the rate of dividend has again moved upwards. Then again, in the early part of the financial year, we realised a large sum of money invested in War Loan and similar securities, and reinvested it in some excellent mortgages which were offering at that time, and on which a higher rate of interest was obtained.

INTEREST EARNINGS AND BONUSES.

To realise what high interest earnings mean to us, it is only necessary to do a sum in simple arithmetic. On a life assurance fund of 7½ million pounds a surplus interest of £2 4s per cent. means in one year a contribution to bonus of £165,000. Last year our actuary told you that the surplus interest had then contributed our next bonus. That makes nearly £300,000 in £120,000 towards our next bonus. Even if the next three years be less productive than the two years which have already passed, it is clear that the contribution towards our next surplus from this one source alone will be exceptionally large. The total surplus interest during our last quinquennium was about £500,000.

Turning to the claims of the year, the claims by death amounted only to £319,802; and though this figure is slightly higher than that of last year, it is in reality to be contrasted with £546,500, which was the amount anticipated according to the mortality table which we employ in our valuations.

Another satisfactory feature of the year's transactions is the increase of £489,514 in the life assurance fund.

THE FUTURE.

Looking to the future, it seems clear that for many years to come interest earnings will be on a higher scale than during the pre-war period, while mortality profits with our careful selection of lives may be expected to reflect the general improvement in the health of the community, and we may hope that our expense ratio will move downwards rather than upwards.

The cumulative effect of all these tendencies is to reduce the cost of assurance. You will remember that in the war period, when the tendencies were all the other way, we found it necessary to raise our premiums for new assurances. Now that the tide has turned your directors have again been giving very careful consideration to this problem, and I am happy to be able to announce that as from to-day our premium rates for new assurances will be substantially reduced.

The new rates are being circulated to our agents by to-night's post, and will, I feel sure, be considered by them as a valuable help in the work which they so loyally do for us, and for which I take this opportunity of thanking them warmly. I do not propose to make a detailed survey of these new rates, but I would draw the attention of our good friends the insurance brokers to the premiums under our prime cost table, of which it may be very truly said, it provides the maximum amount of assurance at a minimum cost.

With the close of the current year, we shall conclude the first century of our history. During those hundred years this country has passed through many anxious as well as many prosperous times. But never once has the Clerical, Medical failed to provide a substantial bonus for its policyholders.

The reserves have, over a number of years past, been repeatedly strengthened. Since 1891 we have made our valuations on a 2½ per cent. basis, and, even during and since the war period, that severe standard has been rigidly maintained. The society is, indeed, entitled to pride itself upon this achievement. Moreover, and this is the final point which I wish to make, abundant reserves in the present mean continued and abundant surpluses in the future, for money so reserved is rolling up at compound interest, which is, as you know, the life blood of such a business as we are here to conduct.

The report and accounts were adopted.

JAYA PARA RUBBER ESTATES, LIMITED.

SATISFACTORY OUTLOOK FOR PRODUCERS.

The twelfth annual general meeting of Java Para Rubber Estates, Limited, was held, on the 10th instant, in the Council Room of the Rubber Growers' Association, 2 Idol lane, Eastcheap, London.

Mr Noel Bingley presided, and, in moving the adoption of the report and statement of accounts, observed that the profit and loss account showed a very substantial decrease in expenditure, to the extent of £5,236. In the Java charges income-tax was responsible for a substantial increase of nearly £2,000. But for that increase there would have been considerably larger profits. Shareholders might congratulate themselves on the fact that the year's rubber crop realised the excellent average price of 1s 1½d per lb. Not many companies in 1922 realised such a high average. Coffee also realised a higher price. The final result of the year's working was a profit of £7,081, which, added to the amount brought forward, made a total of £17,157. Out of this the directors recommended the declaration of a 5 per cent. dividend. It was, at any rate, satisfactory to see the company back in the position of paying dividends, and the board would have been glad to have seen their way to recommend a larger distribution. In regard to the current year the restricted output for the two estates was 605,000 lbs of rubber. Up to the end of September 446,021 lbs had been harvested. The board had been able to make satisfactory forward contracts for the sale of 75 tons in deliveries spread over the nine months from April to December at the satisfactory price of 1s 6d per lb, ex warehouse Java. Shareholders would have noted with satisfaction that prices showed a substantial increase when compared with last year's figures. The effect of the restriction policy was now being felt, and it was not at all improbable that in the course of next year there might be something approaching a shortage. A settlement of the troubles on the Continent would at once have an enormous effect on the market, and further, he desired to pay a tribute to the excellent work that was being done for the rubber industry by the propaganda department of the Rubber Growers' Association. On the whole, he thought that the outlook for rubber producing companies was far and away more favourable than it was a year ago. With regard to coffee, the borer beetle still gave trouble on Wonokoyo, and considerable damage had been done by it to this year's crops, but the last report to hand intimated that this pest was distinctly on the decrease. The actual production of coffee to the end of September had exceeded the estimate by 1,408 piculs, and in a cablegram from the local agents on the 3rd inst. it was stated that the year's crop would probably amount to 6,500 piculs. This should compensate, to some extent, for last year's shortage.

Colonel the Hon. Edward Coke, D.S.O., seconded the resolution, which was unanimously adopted.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.

SIGNS OF IMPROVEMENT.

The fourteenth ordinary general meeting of the members of the Kern River Oilfields of California, Limited, was held on October 10th at Kingsway Hall, Kingsway, London, Mr William Ivey (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the production on the Kern 33 field had been so well maintained during the year under review that there had been a reduction of only 9,028 barrels, or 1.596 per cent., whereas

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

last year there had been a decline in production of 22,642 barrels, equal to 3.94 per cent. That performance was really good. It was gratifying that year after year they were able to record the fact that their production was so well maintained that the percentage of decline in some cases was so small that it was hardly worth calling a decline at all. Unfortunately, the decline in prices had been very severe, so much so during the past year that they had suffered a reduction in their revenue from the Kern Field of no less than 60 per cent, as compared with the figures of the previous year.

After giving details of the result on the working of the St. Helens Petroleum Company, Limited, in California, in the course of which he pointed out that the increased production from the Monterey lease—in which they had a half interest—had more than made good the decline in the case of all the other properties in California, he proceeded to say that the profits made during the year from the gas and topping plants on the various fields were very good, despite low selling prices.

With regard to their subsidiary companies outside California, in Mexico, they had again had a troublesome year. A lot of money had been spent on drilling by their sub-lessees and themselves, and the former were quite satisfied that the knowledge obtained by drilling had brought them so near to the oil pool that they had only to continue to drill to be sure of obtaining oil. As to Roumania, they saw an improvement there, the latest production reported being exceedingly good, and a big increase on that of the previous month. With regard to Trinidad, although they had not secured a big profit there, they had been able to secure oil, and the progress made had been good. Their principal difficulty arose from the attitude of the Government with regard to an asphalt concession granted to an American company, the effect of the Government's interpretation of the terms of this concession being that the Kern Company was prevented from drilling for oil within three miles of the Trinidad pitch lake.

Speaking generally as to the outlook, the Chairman said that the present was gloomy, but there were signs that things were improving.

The report and accounts were unanimously adopted.

TRANSVAAL GOLD OUTPUT STATISTICS.

NOTICES.

Barclays Bank, Limited, announce that they have opened a new sub-branch at Regent House, High street, Llanberis, under the management of Mr T. M. Hughes, also manager of Carnarvon branch.

Messrs Samuel Montagu and Co. write as follows on October 10th :—

GOLD.

Indian requirements being small, most of the moderate amount of gold available this week will probably be taken for the United States of America. Gold valued at \$3,570,000 has arrived in New York from London.

SILVER.

The market has been dominated by the demand for prompt shipment to Bombay by this week's steamer, due to arrive in time for the October settlement in that city. This has tended to uphold the cash price, though, of course, after the 4th inst., buyers at the cash price (delivery within seven days) could not count on obtaining their silver by the 11th, the day of shipment, and a substantial premium has had to be paid. At present, the quotation for forward delivery seems rather too low to encourage sales from China and too high for China to replace recent favourable sales made here for that quarter. When the present stress is over, it is reasonable to expect some easement in prices. America is more disposed to feed our market, but the Continent is not selling with any freedom. A movement on the part of a Continental country towards silver currency is worth noting. It is stated in the Press that the Latvian Government has decided to mint 10,000,000 silver "lats," each equal to one franc of the Latin Union, and that negotiations are proceeding between the Latvian Government and the British Royal Mint with that end in view. As it is possible that the material will all be obtained from demonetised metal, the operation is not likely to affect the silver market. We have been informed that the Latvian Government decided on August 3, 1922, that the unit of Latvian currency should be the lat, representing .2903,226 grammes of fine gold. After the establishment of the Latvian Republic, the Government issued circulation notes in roubles guaranteed by all the property of the State. The exchange rate of those notes fluctuated to a certain extent, and was finally stabilised at 50 Latvian roubles to 1 gold lat. The rouble notes were issued to the extent of about 1,800,000,000, but in the spring of 1922 the issue of additional rouble notes was stopped. When the Bank of Latvia (Latvijas Banka) commenced its operations on November 1, 1922, it issued temporary 10 lat notes by simply over-printing the existing 500 rouble notes, as the Latvian Government had undertaken to maintain the relation between the lat and the rouble at 1 lat = 50 roubles. In order to do away with the dual monetary system (Latvian roubles and lats), the Latvian Government have decided to withdraw all rouble notes and to replace them by lat notes of 1, 2, 5, 10, and 20 lats denomination. Later in the year 10,000,000 lats' worth of the Government notes were replaced by copper and nickel coins of 1, 2, 5 santims, and 10, 20, 50 santims denomination respectively. The issue of notes in Latvia is strictly limited to the amount of cover, and notes can be encashed in gold, though there is not much inclination on the part of holders to do so, as the note issue is so popular. The export of gold from Latvia is not forbidden.

BROKEN HILL SOUTH.—For the four weeks ended Oct. 6th, 20,700 tons of crude ore and 7,793 tons of dump slime were treated, and produced 6,049 tons of leady concentrates, assaying 55 per cent. lead and 20 ozs silver per ton; also 2,918 tons of zinc concentrates, assaying 39 per cent. zinc.

BURMA CORPORATION.—During the month of Sept. 19, 974 tons of ore were mined, 21,600 tons of ore were milled in the treatment plant, producing 11,058 tons of leady concentrates, 10,381 tons of hard bearing material were smelted in the blast furnace, producing 4,086 tons refined lead and 435,185 ozs refined silver. The products were 3,967 tons zinc concentrate, 2,052 tons tailings. Of silver produced, 21,600 tons were recovered from treatment of copper tailings, 10 tons silver, 7.2 per cent. lead, 48 per duces 215 tons zinc concentrate, 200 tons antimonial lead were sold and shipped, and 220 tons copper by-products.

NORTH BROKEN HILL.—For the month of September 16,800 tons of crude ore were treated, producing 3,340 tons lead concentrates, averaging 64 per cent. lead, 7.9 per cent. silver per ton; and 3,000 tons zinc concentrates, averaging 50 per cent. lead, and 7ozs silver per ton.

SOUTH AMERICAN COPPER SYNDICATE.—During September 3,401 tons of ore were produced for smelting; 4,943 tons of ore with about 1,200 tons of flux added were smelted, producing 1,675 tons of matte, assaying 22½ per cent. of copper; approximate

smelted, producing 456 tons of matte, assaying 42.2 per cent copper, 1.2 per cent iron, and 0.1 per cent silver. Gross value, £7,700.

ZINC CORPORATION.—September:—Mining department—Lead concentrates, 3,258 tons of ore, producing 3,258 tons of lead concentrates, assaying 66.3 per cent. lead and 5,500 tons of zinc middlings.

Reports and Notices.

The October list (compiled by the National City Company) of securities of interest to those holding dollar funds in America may be obtained on application to the London office, National City Company, 34 Bishopsgate, E.C. 2.

The London office of the National City Company has received notification from its head office that \$750,000 Goodyear Tyre and Rubber Company first mortgage 20-year 8 per cent. Sinking Fund Gold Bonds, due 1941, have been drawn for payment on November 1, 1923, at 120, and accrued interest. A list of the numbers of the drawn bonds may be obtained on application to the National City Company, 34 Bishopsgate, E.C. 2.

We are officially informed that the British South African Company (incorporated by Royal Charter) will act as agent in London for the new Government of Southern Rhodesia until further notice.

Sir Charles Eric Hambro, K.B.E., has been elected deputy-governor of the Royal Exchange Assurance in place of the late Mr G. F. Malcolmson.

We are informed that the board of directors have appointed Mr Robert Edward Shott to be secretary of the Victoria Falls and Transvaal Power Company, Limited, in succession to the late Mr Alfred Wilson Bird, as from October 4, 1923.

Mr John Caley has been elected a director of the United Premier Oil and Cake Company, Limited.

RAILWAYS.

BUENOS AYRES GREAT SOUTHERN.—A better year has been experienced by this company. The gross receipts for the year ended June 30, 1923, have risen by £1,167,044, or 13.86 per cent., and are the highest recorded in the company's history. Working expenses are £316,596 lower, or 5.06 per cent. The net receipts amount to £3,643,913, an increase of £1,483,640, or 68.68 per cent. The ordinary stockholders receive 7 per cent., against 4 per cent. in the preceding year. The sum of £144,705 is carried forward, against £2,723 brought into the accounts. The report points out that: "General conditions in Argentina have shown some improvement during the past year, but in spite of an excellent harvest the balance of trade has been adverse, and in relation to sterling, local currency has further depreciated. The consequent loss to the company in remitting funds for the purchase of stores and the service of interest and dividends has amounted to £401,293, which has been charged to net revenue account."

579

BUENOS AYRES WESTERN.—Improved results are shown in the latest report for the year ended June 30, 1923. The gross receipts have risen from £4,098,030 to £4,643,182. Working expenses have been reduced from £3,226,063 to £3,072,917, and the net revenue has risen from £871,967 to £1,570,265. The ordinary dividend has been raised from 4 per cent. to 7 per cent., and £15,639 is carried forward, against £3,590 brought into the accounts. The loss on exchange of £195,420 has been debited against the reserve fund, which was credited with the favourable differences in exchange in past years.

INSURANCE.

GENERAL ACCIDENT, FIRE, AND LIFE ASSURANCE CORPORATION, LIMITED, AND THE ROAD TRANSPORT AND GENERAL INSURANCE COMPANY, LIMITED.—We are informed that an agreement has been completed whereby Messrs Thomas Tilling, Limited, and their nominees, who represent the remaining shareholders in the Road Transport and General Insurance Company, Limited, have disposed of the whole of their holdings to the General Accident, Fire, and Life Assurance Corporation, Limited. The purchase price is in excess of twice the paid-up capital of the Road Transport and General Insurance Company, Limited, viz., £52,291, and is taken in ordinary shares of the General Accident, Fire, and Life Assurance Corporation, Limited. All the members of the board of the Road Transport and General Insurance Company, Limited, will continue in office, and they will be joined by three nominees of the General Accident Company. The Road Transport Company will continue as a separate undertaking and no change whatever in the management is contemplated. Mr Richard S. Tilling, J.P., chairman of the company, will join the board of the General Accident Company, and Mr John F. Heaton will continue to act as managing director, with a seat on the London board of the General Accident Company.

BANKS.

ALLIANCE BANK OF SIMLA.—The Imperial Bank of India, London branch, announce that they are now prepared to advance to sterling creditors of the London branch of the Alliance Bank of Simla, Limited, a sum equivalent to 50 per cent. of the moneys due to such creditors. Creditors should apply to the Imperial Bank of India, 5 Whitlington Avenue, E.C. 3, London, where full particulars can be obtained.

ANGLO-POLISH BANK, LIMITED.—This bank, formed early in 1920 under the auspices of the British Overseas Bank, Limited, has just issued its report and accounts for the year 1922. The net profit for 1922 amounted to 79½ million Polish marks, against a net profit of 166½ million Polish marks for the year 1921. The dividend is unchanged at 30 per cent. The sum of 4,160,605 Polish marks is put to reserve, and 25,568,028 Polish marks to Tantième and 23,483,481 Polish marks is carried forward. On August 7, 1923, was held the third annual general meeting of the shareholders, when, on the proposal of the council, it was decided to increase the joint-stock capital of the bank to 1,000,000,000 Polish marks.

RUBBER, &c.

BATU RATA (SUMATRA).—An improvement is noticeable in the report for the year ended June 30, 1923. The net profit of £10,163 compares with a debit balance of £4,410. The sum of £13,223 is brought into the accounts from the preceding year, making £23,386 available. The ordinary shareholders are to receive a 10 per cent. dividend, against nothing in the previous year, and £5,000 is to go to reserve, which will then make the reserve fund £16,202, and £5,793 is carried forward. Income-tax at the rate of 4s 10d in the £1 will be deducted from the above dividend. The net proceeds of sale of the rubber averaged 2.04d per lb, as compared with 8.56d per lb for 1921-22.

SELANGOR UNITED.—The net profit for the year ended March 31, 1923, amounts to £3,399, against £3,082 in preceding year. The sum of £9,718 is brought into the accounts, making an available balance of £13,117. The directors have transferred £10,000 to reserve fund, against £2,000 in preceding report, and the balance of £3,117 is carried forward. No dividend is being paid on the ordinary shares, the same as a year ago, but since the close of the financial year the directors have declared an interim dividend of 2½ per cent. in respect of the year 1922-23, and this dividend will be paid to the shareholders on October 20, 1923. The directors have acquired a new property of 1,076 acres of jungle land contiguous to St Andrew Estate at a price of \$34.50 (£4 is 3d) per acre.

BUNGEI DANGAR (MALAY).—The net profit for the year ended June 30, 1923, amounted to £1,969. The loss brought forward from the preceding year was £5,732, so that the debit balance has been reduced to £3,763. The rubber harvested during the year amounted to 256,830 lbs, against a yield of 96,974 lbs in the previous year, when tapping was suspended for seven months. The

average net sale price, including the estimated value of the unsold portion of the crop, was 1s 1.46d per lb. The cost of production, free on board at port of shipment, including provision for depreciation, was 9.44d per lb. The health of the labour force has been fairly good.

TENASSERIM HEVEA PLANTATION.—A better showing has been made by this company during the year ended May 31, 1923. The net profit is £10,663, which compares with a net loss of £743 in preceding year. The ordinary shareholders are to receive a 5 per cent. dividend, against nothing in preceding year. The sum of £4,583 is carried forward, against £450 brought in to the accounts.

MISCELLANEOUS.

ASSAM RAILWAYS AND TRADING COMPANY, LIMITED.—The following interesting table of gross earnings and expenditure is shown in the report and accounts just issued:—

	General Earnings.	Coal Earnings.	Total Earnings.	Total Expenditure.
1919-20.....	Rs. 9,92,789	Rs. 4,87,031	Rs. 14,79,820	Rs. 10,48,450
1920-21.....	10,06,484	5,81,694	15,88,178	12,59,699
1921-22.....	10,19,084	6,97,253	17,16,337	12,38,692
1922-23.....	11,79,717	7,58,158	19,37,875	13,40,935

The general revenue account (No. 9) shows a profit for the 12 months of £116,733 14s 1d. After payment of debenture interest, and allowing for all the preference dividends paid or accrued to date of the balance-sheet, there remained a balance at credit of net revenue account of £61,355 4s 6d. Out of this the directors have to provide £50,400 for the service of the "A" stock, the dividends on which have been paid at the usual dates, and out of the balance available recommend the payment of a dividend of 3 per cent. on the "B" stock, against nothing a year ago, leaving £1,955 4s 6d to be carried forward.

RAPHAEL TUCK AND SONS.—The results of the year's working to April 30, 1923, show a net profit of £41,481, against £42,136 for the preceding year. The ordinary dividend is maintained at 10 per cent. The preference dividend absorbed £13,750. The sum of £2,577 is transferred to special dividend reserve fund, and £5,882 is carried forward, against £5,728 brought into the accounts. The reserve accounts now stand as follows:—Capital reserve, £8,845; special dividend reserve, £60,169; general reserve, £35,042.

TOKYO ELECTRIC LIGHT COMPANY, LIMITED.—The Whitehall Trust, Limited, announce that they have received the following cable from the company in Tokyo:—"Hydraulic power stations and transmission lines, including underground cables, all safe. Out of seventy transforming and sub-stations in Tokyo and Yokohama twelve small stations destroyed. Out of 100,000 poles for distribution of system in Tokyo and Yokohama 35,000 destroyed. In unaffected parts of Tokyo and Yokohama service already resumed. In destroyed area company's general restoration work actively making progress."

TRAFFORD PARK ESTATES, LIMITED.—The accounts for the year ended June 30, 1923, are not credited with the capital value which has been assured to the company by the creation of chief rents and long leases. The profit and loss account for the year 1922-23 shows a balance of £37,913, and the profit on redemption of chief rents during the year amounts to £18,529, making a total of £56,442. Deducting the amount of £18,217 which has been placed to reserve in accordance with agreement with the trustees for the debenture holders, and £10,450 income-tax and corporation profits tax attributable to profit on redemption of chief rents, leaves—with the balance brought forward from last year, £107,359—an available balance of £135,134. The directors recommend the payment of a dividend at the rate of 6 per cent. for the year, which compares with 8 per cent. for preceding year, amounting to £39,000, and to carry forward the balance of £96,134.

OIL OUTPUTS.

BRITISH BURMAH PETROLEUM COMPANY.—The production of crude oil by this company and the Rangoon Oil Company, Limited, for the month of September amounted to 60,748 barrels.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during September amounted to 104,989 barrels, or approximately 14,998 tons, including St Helen's Petroleum Company, Limited, 46,020 barrels (6,574 approx. tons); Kern Trinidad Oilfields, Limited, 9,578 barrels (1,368 approx. tons); Kern Romana, Limited, 3,080 barrels (440 approx. tons).

STEAUA ROMANA (BRITISH), LIMITED.—We are advised that the approximate field's gross production for the month of September was 18,039 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Preparations are well forward for autumn sowings, and drilling has commenced in Southern localities. With regard to this year's crops, official reports state that winter wheat, barley and oats show good quality, but spring cereals less favourable, while estimates of total yields were reduced slightly for all descriptions. Native wheat in fair supply, and a steady demand prevailed for all suitable milling grades at about 8s 9d to 9s 2d, with inferior slow to move at 7s 8d to 8s per 122 lbs free on rail. Imported descriptions were also accorded a fair amount of patronage, particularly North American grades at generally steady rates. No. 1 Northern Manitoba, ex ship, 48s; ditto landed, 50s; No. 2 mixed Durum, ex ship, 44s 6d; Barusso, 62½ lbs, ex ship, 44s 9d; choice white Karachi, landed, 44s; red ditto, 43s per 49½ lbs. A quiet tone prevailed in the floating and forward cargo section, but sellers were not disposed to press, which resulted in a steady price level. Steamers of Barusso, 62½ lbs, October shipment, changed hands at 42s 3d to 42s 6d, new crop, January-February, 43s 3d per 48½ lbs. Maize cargoes rather more firmly held. Steamers of No. 6 yellow African, afloat, sold at 35s 3d, Bessarabian October 35s 9d, Dan-Gal-Foxanian ditto 35s, and La Plata September 15th-December 15th 35s per 48½ lbs. Flour steady, with a fair demand. London standard straight run quoted at 38s, patents 40s-41s, town households 36s, per sack delivered in. All English country straight, 31s-32s per sack, delivered to London stations. Imported remains quiet. Manitoba patents range from 27s-40s as to sample, Australian quoted at 32s 9d per 28½ lbs, ex store. Millers' offals steady. Broad bran quoted 7s 3d, ordinary ditto 6s 3d; middlings 8s 3d, bags included, ex mill; light oats 5s 9d, powdered oat husks 5s 9d, feed oatmeal 9s 3d, ground oats 13s 9d, free on rail; all per cwt. Barley firm. English malting ranges from 10s-13s, with feeding sorts 8s-8s 9d per 112 lbs, free on rail. Imported, Californian quoted at 39s-43s 6d, Chilean brewing 40s-42s, both ex store, per 44½ lbs. Persian 26s 6d, Danubian 31s, landed; No. 3 Canadian Western 29s 3d ex ship, 30s landed; No. 4 ditto, ex ship, 28s; Algerian-Tunisian 27s 6d ex ship; all per 40½ lbs. Maize again firmer. Plate, ex ship, 35s 6d-35s 9d; landed, 36s 6d-36s 9d; No. 6 yellow African, ex ship, 35s 6d; all per 48½ lbs. Oats: English fully steady at 7s 8d-10s per 112 lbs, free on rail. Imported firmly held. Plate ex ship 22s 6d, ditto landed 23s 9d; No. 2 Canadian Western ex ship 27s 6d, landed 28s 9d; No. 3 ditto ex ship 26s 9d; New Zealand "A" grade landed 38s-40s, "B" grade 36s; all per 32½ lbs. Oatmeal in fair demand for London made, and prices dearer for rolled oats at 18s ditto, all cuts, quoted 17s 6d, whole groats 17s 6d, Scottish oatmeal 19s 6d-21s, and American, all cuts, 16s 6d-16s 9d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-1924	1922-1923	1921-1922	1920-1921
Estimated sales of home-grown wheat—				
1 week to October 6	Cwts. 418,253	Cwts. 427,980	Cwts. 462,333	Cwts. 375,586
5 weeks to October 6	2,070,569	1,588,171	2,176,357	1,851,787
Average price of English wheat per cwt.	s d 8 9	s d 8 11½	s d 12 11	s d 21 1½

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1919 to 1922:—

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated October 11th, is as follows:—Pig-iron: The tone of the market for pig-iron is distinctly better, and more inquiry is about. What we want now is a settlement of the boilermakers' dispute and a chance for our shipyards. No. 3 Cleveland G.M.B. is now quoted 95s 6d per ton, and East Coast mixed numbers hematite pig-iron 99s per ton. Manufactured iron and steel: There are a few more orders for steel about. Quotations are unchanged. Steel ship plates, £9 15s; steel ship angles, £9 5s; iron bars, £12; steel rails, £9 10s. Iron ore: Business in imported ore is still very scarce and difficult. Prices under present conditions are so low that any reduction seems to be quite excluded. Indeed, it would be difficult to buy for forward delivery at anything like the present level. Best Bilbao Rubio ore is quoted 23s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—Steel trade conditions have been particularly depressing this week, as most departments report a falling off of both bookings and actual work, while unemployment has again increased. The reaction has manifested itself in both the heavy and light branches. Buyers have never been so shy before during the present year. Their attitude is perhaps excusable in view of the early release of stocks of German steel, although it is by no means certain that any considerable quantity of this will reach outside markets. Rolling mills are quieter on bar and rod work, but busy on sheets. Soft basic wire rods have been reduced from £12 to £11 10s, and soft basic billets can be bought at £8. Engineering requirements are limited, and much of the trade in screwing tackle, twist drills, and cutters is secured by the German makers, whose prices, although constantly rising, are sufficiently low to compete successfully with the British goods. In this department French competition is becoming a factor to be reckoned with. Orders for pig-iron have been rather more liberal this week, but there is no certainty that the improvement will be maintained. More than half the steel furnaces in the district are idle. Some orders for rails and rolling-stock steel are said to be on the way. Good orders in this department are on hand from South America, one of them being for 6,000 wagon tyres. The plate and cutlery branches are extremely quiet for the time of year. The cutlery branches are dropping off, and with competition exceptionally severe no profits are being earned in this ancient trade. Business in the coal market is distinctly quieter, and the pits are not working so regularly as of late; nevertheless, output is still on a large scale. Prices per ton at pits are:—Best hand-picked branch, 29s 6d; Barnsley best silckstone, 26s 6d; Yorkshire best steam, 20s; rough slacks, 11s; nutty slacks, 10s; smalls, 7s; blast-furnace coke, 24s.

Our Glasgow correspondent writes:—Scotch hematite has remained stationary at £5 5s. f.o.t. at works, while No. 1 foundry has yielded 1s 3d a ton at £5 3s 9d, and No. 3 also 1s 3d a ton at £4 18s 9d, both makers' works. These changes are not regarded as significant of what may transpire in values, which, outside of Glasgow, are rather to the stiffish side, mainly because producers and consumers are at last eating into stocks where such exist, and that is not observant in any of the leading districts. Crown bars are still commanding £12 a ton delivered Glasgow. Manufactured steel is more active again, and producers have held their own against recent Continental offerings (French and German) for railway plant and equipments a good inquiry is in evidence, better than appears on the surface. Probably the most energetic department of the day is that for sheet bars and sheets alone. All the works here, and there are several, are fully employed, and it seems that the managements have every reason to be satisfied with the prospects. A lot of this kind of work is on hand for Japan, China, India, and Australia, and the bookings are on a substantial scale. Sheets ½" to 1" are called £12 10s, and corrugated 24 b.g. are £18 17s 6d—all delivered Glasgow stations. Steel hoops (on which there is a good amount of work proceeding) are named as at £12 10s to £13 10s b.g.; ship plates, £9 10s to £10; and steel joists, £9 to £9 15s a ton. Shipbuilders and others are still concerned over the settlement of the boilermakers' dispute, about which all that can be said definitely is—that negotiations between the parties are still proceeding. The Southern Railway Company have placed an order for two powerful cross-channel steamers with Messrs. Wm. Denny and Brothers, Limited, Dumbarton. Each steamer is to be 325 ft long. Messrs. Denny provide the pelling engines. The Latvian Government have given out to Messrs. William Beardmore and Co., Dalmuir, a contract for a 5,000 h.p. ice-breaker, of 2,800 tons displacement. Then the Indian Government have placed an order with Glenfield and Kennedy, Limited, Kilmarnock, for an irrigation barrage, which will keep works fully employed constructing throughout the year, employing about 2,000 men.

Our Cardiff correspondent writes:—There has been no improvement in the state of business on the Cardiff coal market this week, and prices have further declined. Continental demand continues to hang fire. Stocks in France have been further depleted, but consumers in that country are still hopeful—although nothing like as confidently as they were a week or two ago—of receiving large reparations deliveries from the Ruhr, and they are consequently restricting their demands to current requirements. The Italian market is also quiet, and trade with South America gives no sign of expansion. The approximate current quotations are as follows:—Best Admiralties, 27s to 28s 6d; second Admiralties, 26s to 27s; best drys, 27s to 28s; black veins, 26s 6d to 27s 6d; Western Valleys, 26s to 26s 6d; Eastern Valleys, 23s to 25s; best bunker smalls, 17s to 19s; ordinary cargo smalls, 14s to 16s; anthracite big vein large, 42s 6d to 50s; machine-made cobbles, 55s to 57s 6d; French nuts, 60s to 62s 6d; stove nuts, 55s to 57s 6d; rubbly culm, 15s to 15s 3d; inland blast-furnace coke at ovens, 30s to 35s; coke for export, 42s 6d to 47s 6d; patent fuel, 28s 6d to 32s; pitwood, ex ship, 27s to 27s 6d.

The improvement in the iron and steel trade is maintained, and prices show a tendency to advance above the minimum figures. The Customs returns, however, show as yet no material expansion in the volume of the export trade. The fusion of Richard Thomas and Co., Limited, with the Grovesend Tinplate Company creates the largest tinplate combine outside the United States, and it is expected that the amalgamation of these two important concerns will strengthen the demand for the establishment of a central selling agency for the whole of the industry.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Cables from the colonies report continued active buying on Continental and Japanese account, but wool values are on too high a basis for Yorkshire operators. Prices obtainable for tops in Bradford are pence per lb too low, and importers are accordingly adopting a waiting policy. The tone of the market in this centre is fairly good, this being influenced by the strong wool position, but actual business in merino tops is disappointing. Quotations are practically unchanged, but while average 64's are quoted at about 5s, there are sellers at slightly less money. In crossbreds, however, there is certainly more interest, and for anything below about 50's quality prices are firm, with, if anything, a hardening tendency. At current prices crossbreds look attractive, more especially as demand for piece goods is tending more and more to centre on the

CURRENCY

1913-1922 (New Edition). 10s. net.

Financial Times. "The bulk of the memorandum consists of ten sets of tables, dealing with Exchange Rates; Discount Rates; Notes in Circulation; Gold Reserve; Commercial Deposits; Commercial Deposits by Quarters; Central Bank Deposits; Prices; Prices and Exchanges; and Bank Clearances. It will be seen that these cover the larger part of the field of banking and currency . . . and comprising, as it does, practically every nation in the world, it should be of invaluable assistance to all those who require at a moment's notice financial statistics relating to any country."

The feature of the market continues to be the scarcity of linseed oil for prompt or nearly prompt delivery. It is being due to the small arrivals of seed for some weeks past, and the smaller production of oil in the mills. Demand from the consuming trades has been quite good, and this, combined with some amount by speculators to cover, has had a stiffening effect on prices, which have approached £43 for spot oil naked ex-Hull mill. Cotton oils have been a dragging trade, but late values are about maintained, supplies being short, pending further arrivals of the new Egyptian seed. Crude oil from the latter is already offering at 20s per ton below old oil, and a good business appears to have been done for November delivery. Crude soya bean oil of English make is in fair demand, and palm kernel oil continues to find a good market, both home and export.

(BY OUR OWN CORRESPONDENT.)

Hides were practically unchanged at the Bermondsey hide and skin sales, held on Thursday, the only alteration in ox and heifers being an advance of 4d per lb for 59 lbs, and under second class. Second cows were rather firmer, as was also the case with second kips. Calf skins were unchanged when sold, all the lightest weights not finding buyers. Wools made from 4s 7d to 2s, and hogs from 2s 6d to 10s per skin.

Business appeared good with shoe manufacturers at the Shoe and Leather Fair at the Agricultural Hall, and I rather think the Fair will have justified itself in this direction. The exhibit of all British boots and shoes attracted a good deal of attention, as it clearly proved that as far as quality is concerned, our tanners are quite equal in every way to their oversea competitors.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 12.

SUGAR.—Market conditions pointed to no new feature. Demand remains quiet both on grocery and manufacturing account, and the pause so pronounced of late appears to be the natural sequel to previous active replenishing of stocks, while with further regard to the grocery side of the article, the period of the year is now reached when movement of dried fruit for the Christmas fare monopolises attention, with finance a paramount factor. Thus trade throughout the period under review pursued a rather dragging course, and values in some directions were inclined to sag, with no material alteration, however, recorded. Most European beet factories will be in full blast next week, and it is anticipated that every endeavour will be made to deliver early owing to the premium commanded. Raw refining sugars sell quietly, but full prices are asked by holders owing to paucity of offers, and in view of the fact of marked absorption lately by American interests of Peruvian and Brazilian 96 per cent. Messrs Tate and Lyle's spot quotations

Business throughout the market continues very difficult to arrange. Plenty of demand has been about, but the prices that buyers are prepared to pay are seldom acceptable to sellers. A considerable inquiry has been met with in cloth for India, and further buying of moderate extent has taken place in light bleaching descriptions, with the result that makers are now firmer in quotation. Many more attempts have been made to arrange contracts in grey shirtings, and rather more trade has been done in stock lots. The feeling is growing that if values could be stabilised business for India would flow much more freely. The outlook for China business is slow in improving. A few more lines have been put through in white goods, but bids in grey staples remain poor. Miscellaneous fabrics have attracted rather increased attention for Egypt, Turkey, and South America, and fancies continue to be bought for the United States and the Continent. The undercurrent of demand in home trade goods keeps up fairly well. American yarn quotations have been irregular when tested, and a restricted business has been done. Some fair orders have been booked in Egyptian spinnings. Most of the demand in export yarns has been for India in fine counts.

Correspondence solicited.

(FROM A CORRESPONDENT.)

cheaper fabrics. Buying, however, is still being conducted on hand-to-mouth lines, and users are apparently unwilling to do much forward buying. In the yarn trade the discrepancies in quotations are more glaring than ever. Forced sales are resulting in prices being accepted that can only be described as ridiculous, having regard to the cost of replacement. Competition is exceedingly keen, however, for the comparatively small amount of new business on offer, and in their anxiety to keep machinery running spinners seem to be selling almost regardless of the consequences. The white Botany section is probably in the worst position at the moment, but in all departments there is great irregularity in prices. The piece goods trade does not show much expansion. The wholesale fabric buyers are mainly interested in the cheapest productions, and it looks as if the bulk of the trade, both on home and export account, is turning definitely to crossbreds.

the greasy New Zealand wool, which was mostly 46's to super 50's quality. Prices were about 5 per cent. above those current in

The progress of the wool-selling season in the colonies will be marked by the holding of a sale at Christchurch on November 15, after which sales will be held every few days at one centre or another in New Zealand right up to next March 27th. If the same quantity of wool is sold during this season as last, fully 80 per cent. of the Australian and New Zealand clips will be disposed of locally. It is quite evident that sales on a large scale in the colonies have become a permanent institution, and, as far as one can see, there is no prospect of growers wanting to sell any more wool in London than is the case at present. The maintenance of merino prices will depend almost entirely on the Continent. Bradford firms would be only too pleased to see a fall of 10 per cent. Biggest buyers in France and Switzerland are rather doubtful. They can still sell their piece goods, and the depreciation in the French currency will help them in this way, but there seems to be little doubt that fashion is gradually turning from merinos to fine broads.

Signs of returning interest in crossbreds were evident at the Liverpool sale last week, when Bradford buyers took the bulk of

GIRARD TRUST COMPANY
PHILADELPHIA, PENNSYLVANIA.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

Correspondence invited.

Chartered 1836.

Capital and Surplus - \$10,000 000.

Member of Federal Reserve System.

The List will be closed on or before Tuesday, the 16th October.

NIGERIA GOVERNMENT 4% INSCRIBED STOCK, 1963

Issue of £5,700,000.

Price of Issue £88 per cent.

Interest payable 15th April and 15th October.
Six Months' Interest payable 15th April, 1924.

Authorised by Ordinance No. 1 of 1923.

£5 per cent. on application, and the balance payable as under:—
£50 per cent. on the 30th October, 1923.
£33 per cent. on the 19th November, 1923.

The Government of Nigeria having complied with the requirements of the Colonial Stock Act, 1900, as announced in the "London Gazette" on the 27th January, 1919, Trustees are authorised to invest in this Stock, subject to the restrictions set forth in the Trustee Act, 1893.

The Loan is the first instalment of an issue to produce a total of £10,528,730, plus the cost of issue, and is raised for the construction of Railway, Harbour, and other Public Works in the Colony.

THE CROWN AGENTS FOR THE COLONIES, on behalf of the Government of Nigeria, invite applications for the above amount of Stock, which will be issued under the provisions of the General Loan and Inscribed Stock Ordinance, and will be inscribed in accordance with the provisions of the Colonial Stock Act, 1877, 40 & 41 Vict., c. 59.

The Loan is secured on the general revenues and assets of the Government of Nigeria, and the principal will be payable at par on the 15th October, 1963, by a Sinking Fund of not less than one pound per cent. per annum, the first half-yearly contribution being taken not later than 15th April, 1927, to be formed in this country under the management of the Crown Agents, who are appointed Trustees.

The interest at the rate of £4 per cent. per annum will be payable half-yearly on the 15th April and the 15th October in each year by Dividend Warrants, which, if desired, may be transmitted by post, either to the Stockholder or other person, bank or firm within the United Kingdom. Principal and interest will be payable at the Office of the Crown Agents for the Colonies, London.

The Stock will be transferable at the Crown Agents' Transfer Office, No. 1, Tokenhouse Buildings, E.C.2, without charge and free of Stamp Duty.

Applications, which must be accompanied by a deposit of £5 per cent., will be received at the Crown Agents' Offices at 4, Millbank, London, S.W.1, and at 1, Tokenhouse Buildings, London, E.C.2, and the subsequent payments are to be made at the Crown Agents' Transfer Office, 1, Tokenhouse Buildings, E.C.2, not later than the dates above-mentioned.

In the case of partial allotment, the balance of the amount paid on application will be applied towards the payment of the first instalment. If there should be a surplus after making that payment, such surplus will be refunded by cheque.

Applications may be for the whole or any part of the issue, but no allotment will be made of a less amount than £100 Stock or multiples thereof.

Payments may be made in full after allotment under discount at the rate of £2 per cent. per annum from 30th October or from any subsequent date.

Interest at £5 per cent. will be charged on instalments if in arrear, and non-payment of any instalment at its due date will render the deposit and instalments previously paid liable to forfeiture and the allotment to cancellation.

After payment by the allottees of the instalment due on allotment, they will receive at the Crown Agents' Transfer Office, No. 1, Tokenhouse Buildings, E.C.2, in exchange for the receipted Letter of Allotment, Scrip Certificates, which, when paid in full, will be convertible into Inscribed Stock.

Stock Certificates to Bearer of the denominations of £1,000, £500 and £100, with coupons for the half-yearly Dividends attached, will be obtainable in exchange for fully-paid Scrip Certificates or Inscribed Stock at the Crown Agents' Transfer Office, No. 1, Tokenhouse Buildings, E.C.2, on payment of the prescribed fees, and such Certificates can, if desired, be re-inscribed.

A commission of Five Shillings per cent. will be allowed to Bankers and Stockbrokers on allotments made in respect of applications bearing their stamp.

The revenues of the Colony of Nigeria alone are liable in respect of the above Stock and the Dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of His Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the Stock or of the Dividends thereon, or for any matter relating thereto (Act 40 & 41 Vict., c. 59).

Forms of Application and a Statistical Statement relative to the Public Debt, Revenue, Expenditure and Trade of the Colony from 1913 to 1923 may be obtained by applying to the Crown Agents for the Colonies at 4, Millbank, S.W.1, or at 1, Tokenhouse Buildings, E.C.2; to Messrs Mullens, Marshall, Steer, Lawford & Co., 13, George Street, Mansion House, E.C.4; to Messrs J. & A. Scrimgeour, 6, Austin Friars, E.C.2; to the Bank of British West Africa, Ltd., either at 37, Gracechurch Street, E.C.3, West Africa House, 25, Water Street, Liverpool, or at 108/108, Portland Street, Manchester; or to The Colonial Bank, either at 29, Gracechurch Street, E.C.3, 25, Castle Street, Liverpool, 21, York Street, Manchester, or at 67, Whitefriargate, Hull.

Office of the Crown Agents for the Colonies,
4, Millbank, London, S.W.1.
12th October, 1923.

ECONOMIST.

This Form may be used.

FORM OF APPLICATION FOR NIGERIA GOVERNMENT 4% Inscribed Stock, 1963.

TO THE CROWN AGENTS FOR THE COLONIES, GENTLEMEN,

I/We hereby apply for £.....

of Nigeria Government 4 per cent. Inscribed Stock, 1963, according to the conditions contained in the Prospectus of the 12th October, 1923, and undertake to pay £88 for every £100 Stock, and to accept the same, or any less amount that may be allotted to me/us, and to pay for the same in conformity with the terms of the said Prospectus.

I/We enclose the required deposit of £....., being £5 per cent. on the nominal amount applied for.

Ordinary Signature

Name in full

(State whether Mrs. or Miss, and Title, if any)

Address

.....

Date

Cheques should be drawn to Bearer and crossed BANK OF ENGLAND. If altered from "Order" to "Bearer" the alteration should be signed by the drawer.

If the Allotment Letter is required to be forwarded to other than the Applicant, it should be stated.
N.B.—Applications must be for even hundreds of Stock, and must be accompanied by the amount of Deposit thereon, and the Application must be enclosed in an envelope marked outside "Application for Nigeria Government Loan."

THE MONEY MARKET.

MONEY was scarce and bills were scarcer, and the result was stagnation and an easy tendency in discounts. On one or two days stringency was almost acute, but withdrawals by one bank for balance-sheet purposes were offset by purchases of short Treasuries by another, so timely as to suggest design. There was also a demand for bills on behalf of the India Council and, it was said, from the Continent, when once the inflation scare produced by an indiscreet Ministerial utterance had been allayed by a denial that the Government proposes to seek for prosperity through the printing press. Three months' bank bills were taken, when they could be found, at 3 $\frac{1}{8}$ per cent.

	Oct. 19, 1923.	Oct. 12, 1923.	Oct. 5, 1923.	Sept. 28, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses' Notice	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	1 (Jly. 5, '23)
Market rate (3 months' bills)	3 $\frac{1}{8}$	3 $\frac{1}{8}$	3 $\frac{1}{8}$	3 $\frac{1}{8}$	3 $\frac{1}{8}$

The Bank return showed an increase, almost wholly due to the return of notes, of £547,000 in the Reserve. Government and Other securities both showed small expansions, but another addition of 2½ millions to the Public Deposits left Other nearly a million lower on balance. Currency notes outstanding were reduced this week by £1,454,400 to £282,145,100, which includes £1,442,400 for notes called in but not yet cancelled. The fiduciary issue is £231,252,700, or £38,931,100 below the maximum.

THE STOCK MARKETS.

The poor reception of the Nigerian loan was a feature of the Stock Exchange week, but it did not greatly affect the gilt-edged market. In that market prices are fairly well maintained, in spite of the expected issue of big Indian and South African loans. A number of Corporation stocks improved. Ruhr developments continue to disturb the foreign market, but Japanese bonds rallied. In the railway markets Undergrounds were the strong feature, while Great Westerns and North-Westerns spurted and reacted. Argentine rails, like Argentine Government bonds, improved with the exchange. Rubber shares are dull, but oil shares moved upward. Coal, iron, and steel, and engineering shares were favourably affected by the unemployment relief work plans. Insurance shares showed conspicuous strength. In the mining markets Kafirs are following a gentle upward trend.

THE COMMODITY MARKETS.

The position on the Ruhr is responsible for weakness in some markets, while here and there signs of improvement are to be found. Coal prices continue to weaken; our Cardiff and Sheffield correspondents point out that the political situation on the Continent is the cause. In spite of some adverse factors the pig-iron market keeps steady. There is little change in the iron and steel situation. Some alarm is felt at the possibility of stocks of iron and steel being liberated if and when the Ruhr problem is settled. But our Sheffield correspondent writes this week in more optimistic vein, owing to unemployment plans, which we discuss in a later page, while from Glasgow we hear that the boiler-makers' dispute may be nearing the end. Tin and copper improved. A hardening tendency is noticeable in the Manchester cotton trade; there is an increased inquiry, and prices have gone against buyers. The most important feature of the wool trade is the steady buying of crossbred wool by the home trade. Sugar was quiet, but tea was active, and prices were higher all round. Rubber started the week with easier values, but ended with a steadier tone. The hide market remains firm but erratic. Plate linseed has declined all round in value.

FOREIGN EXCHANGES.

Through the indiscretions of a Minister, the foreign exchange market has been able to give a very useful lesson this week of the effects of a deliberate policy of inflation. To those, among whom the Minister in question appears to be included, unaware of the sensitiveness of this market and of the basis of confidence upon which the predominance of London as a monetary centre rests, the immediate removal of funds in some cases, and the thousands of anxious enquiries from every part of the world, showed very clearly what might be expected from such a policy. Fortunately, it has been made clear at once that the Government had no intention whatever of adopting such misguided tactics, and the incident has in the end done more good than harm by giving a salutary shock to some few weaker members of the banking world who for some time past have shown a slight hankering after "a little inflation." As the result largely of this scare, the dollar has been weak, falling from \$4.55 on the 12th to as low as \$4.52½ at one time on the 15th. After that there was some recovery, but on Friday the rate was lower again, and yesterday morning was quoted at \$4.52½. Forward rates at ½ cents per month over spot were about the same. The Paris and other European rates reacted also to the inflation scare, and at one time, on the 15th, the French franc was quoted as low as 73.40, as compared with 75 on the 12th. Since then, however, the gloomy outlook in

Germany and the Ruhr has proved too strong, and there has been a reaction to 75.75 yesterday morning. In particular the fear that France may find itself forced into heavy expenditure in order to finance the Ruhr industries has exercised a depressing influence. Brussels has shown the same features, moving down from 88 on the 12th to 85.40 on the 15th, and up again to 87.75 yesterday. The forward rates in Paris have narrowed very slightly to four centimes per month above spot. In Brussels they have moved down from 9 to 5 centimes per month above spot. The disintegration of the mark has continued at almost as rapid a rate as before, and quotations have little meaning. In some centres, indeed, such as Zurich, the mark is no longer quoted. In the early part of the week there was some slight recovery, but the deadlock in negotiations brought up the quotation as high as 45 milliards at one time on Thursday, and yesterday morning the rate was given as 40 milliards, compared with about 20 milliards a week ago. The new "annuity mark," as it is now to be called, is due to appear in a week or so's time, but little confidence is felt in this purely provisional measure. After some improvement the lira is up again at 100, as compared with 99½ a week ago. The peseta also, after being lower, ends the week the same, at 33.52½. Amsterdam has moved in sympathy with the dollar from 11.56½ to 11.55½, and the Swiss franc from 25.39 to 25.22½. In Northern Europe Stockholm shows little change at 17.17½d. Christiania, however, has depreciated from 29 to 29.22½, and Copenhagen from 25.72½ to 25.80. Helsingfors at 169 shows a slight improvement. In Central Europe Vienna for the first time for many weeks has moved slightly against sterling, from 322.500 to 320.500. Warsaw has not been able to escape the effects of the German collapse, and remains at 4,700,000 slightly worse than a week ago. Budapest remains stationary, and there is no change in either Prague or Belgrade. Bucharest, on the other hand, shows a slight improvement, from 980 to 960. In the East the rupee, on good harvests and improving trade, is better, at 15 4½d, as compared with 15 4½d a week ago. The yen at 25 1 27-32d is the same as last week's quotation. Silver this week has been quiet after the recent bull movement in Bombay, and there is an expectation that a certain amount of the Indian accumulations will again be unloaded. Hongkong is ½d cheaper at 2s 3½d, and Shanghai also ½d cheaper at 3s 0½d. In South America Rio has again depreciated from 5 3-32d to 5d. Buenos Ayres, on the other hand, has improved from 38½d to 39½d, and Monte Video from 39d to 39½d. Valparaiso at 37.50 pesos shows an appreciation after the recent adverse movement of 1.50 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 13th:—

EXPENDITURE.	Min. £	REVENUE.	Min. £
Supply Services	6,270	From Revenue	10,093
Interest, &c., on Debt	1,557		
Sinking Fund	537		
Sundries	313		
Added to Exchequer balances ..	185		
Reduction of debt	1,232		
	10,093		10,093

Revenue amounted to £10,093,400, as compared with £12,552,300. The chief cause of the decline is the absence of any Special Receipts, as compared with £2,038,100 a year ago. Property and Income-tax yielded £3,123,000, and Super-tax £500,000, against a combined total of £3,271,000. Customs produced £2,324,000, against £3,029,000, and Excise £1,329,000, against £1,576,000. The week's operations reduced the National Debt by £1,231,900, and caused the following changes:—

EXPENDITURE.	Min. £	REVENUE.	Min. £
Bank of England Advances ..	6,500	National Savings Certificates ..	1,000
Public Departments Advances ..	1,350	Treasury Bills	5,735
Sundries	117		
	7,967		6,735

The floating debt was reduced by £2,110,000 to £816,046,500.

FINANCIAL YEAR, 1923-24 (April 1 to October 13, 1923).

EXPENDITURE.	REVENUE.
Total Expenditure .. 408,301,493	Raised by Revenue .. 391,816,854
	Net Borrowings .. 12,748,135
	Decrease in Balances 3,736,504
Total	408,301,493

ESTIMATES FOR YEAR 1923-24.

EXPENDITURE.	REVENUE.
Ordinary Expenditure .. 801,013,000	Ordinary Receipts .. 778,500,000
Special Expenditure .. 15,603,000	Special Receipts .. 40,000,000
Total	818,500,000
	Surplus
	1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the meetings of the following companies:—The Royal Bank of Ireland, Raphael Tuck and Sons, Harrisons and Crosfield, and Assam Railways and Trading Company. At the meeting of Raphael Tuck and Sons the chairman spoke rather confidently of a probable reduction in postage rates in the next Budget. Mr C. Heath Clark, at the meeting of Harrisons and Crosfield, described the outlook for the rubber plantation industry as "favourable," but with regard to the probable excess of production during the present year, said that "it remains to be seen what effect will be produced upon the market by such surplus in coming months."

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

TRADE RESTRICTIONS AND GOVERNMENT PROMISES.

It is highly desirable that the public in the British Dominions, as well as those who are concerned with the present Conference, should take note of the statement made this week by Mr Arthur Henderson that the Labour party does not regard itself as in any way bound by promises of preferential or differential duties of any kind which the Government may make, even if it succeeds in passing these through the House of Commons. It is perhaps unnecessary, but we think that it would be extremely useful if Mr Asquith would associate himself with this declaration. It is, of course, constitutionally impossible for any Parliament to bind its successors, but in international dealings and in the case of Treaties the Government acts on behalf of His Majesty, and in practice it would lead to the greatest possible confusion if foreign agreements were subject to change whenever a new party came into power in Great Britain. The failure of the United States Senate to ratify the Treaty of Versailles, and the consequent disturbances of the European equilibrium, so painfully achieved after many months' labour in Paris, forcefully illustrates the difficulties of international dealing if the spokesmen of the various countries cannot commit the nation as a whole. It is for these reasons that foreign policy has, as a rule, been kept as far as possible outside the sphere of party politics.

It cannot, however, be too forcefully repeated that these considerations do not apply to the present Imperial Economic Conference, or to any offers which the British Government may make at them. If the Dominion Prime Ministers return to their respective homes with the impression that they take with them a promise of a preferential policy in Great Britain carrying that degree of sanctity which is associated with international agreements, there will most certainly be disappointment and trouble ahead. In this connection it is only necessary to remark first that whenever the policy of either Protection or Imperial Preference has been submitted to the British electorate, it has been overwhelmingly defeated at the polls; secondly, that the present Government secured its majority largely as a consequence of Mr Bonar Law's pledge that he would not modify our fiscal system (the almost clean sweep of Lancashire by the Conservative party was mainly due to the existence of this pledge); and thirdly, that a substantial majority of votes cast in the country last November were obtained by the Labour and the two Liberal parties, all of which stood on a quite definite Free-trade platform.

These facts are doubtless sufficiently well known in the

Dominions, but there is a danger of overseas opinion assuming that such offers of preference as are put forward by the present Government will not be thought of sufficient importance to be removed by whatever Government may replace the present Conservative administration. This would be a very erroneous reading of the situation in Great Britain. Free-trade opinion holds that a system of preferential duties, which, with the best will in the world, would with difficulty be made equitable as between one Dominion and another, and would involve constant readjustments and negotiation, would form the worst possible cement of Empire, and if built into the edifice, would be much more likely to be a cause of disintegration than of strength. Free-trade opinion holds that Britain's prosperity depends upon buying in the cheapest market, and would suffer a definite set-back if the attempt is made to check trading in those directions in which it is economically most profitable. We may add here that it is of far greater material importance to Australia that Great Britain should be prosperous than that Australia should receive a preference upon dried fruits, or even sugar, and that we should thus be able to bear the extremely heavy burden of taxation, and provide the defence which is so important politically to the Commonwealth Government. Free-trade opinion holds that for this country to embark upon taxes designed to keep out goods from foreign countries will strengthen the tendency, already far too much in evidence in most European countries, to put on tariffs against their neighbours, and to indulge in fiscal warfare. The opposite policy of reducing fiscal barriers to the utmost is the only possible economic policy under which the League of Nations can become effective in Europe. In the interests alike of Britain's economic progress and of political policy, as well as of good relations within the Empire, we have no doubt that the Liberal and Labour parties, when either or both of them come into power, will do so with the avowed intention of making a clean sweep of all protective and preferential duties.

It is true that there are some people to-day who are asking themselves whether Great Britain ought not to make some sacrifice as a concession to Dominion opinion largely on grounds of sentiment, and of gratitude for the splendid solidarity of the Empire during the war. And this feeling expresses itself most forcibly in the statement that if the Dominions were ready to offer complete free trade within the Empire we ought perhaps to be prepared to accept the proposal. This view is supported by the example of the German Zollverein, which bound the German Empire together, and prepared the way for its great economic development. The case of the United States is also quoted as an example of an enormous free-trade area behind a tariff wall, and it is asked whether the British Empire would not benefit by its also becoming such another self-contained economic unit. This proposal is, of course, not at the present moment a matter of practical discussion. India has declared herself against the principle of preference within the Empire, while neither Australia nor Canada is prepared to remove the tariffs which protect their manufacturers against the British producer.

But even if the scheme were politically possible it would be both undesirable and impractical if it implied a high wall against the rest of the world. We have more than once called attention in these columns to the fact that the Empire as a source of food supply is strategically extremely weak in the event of war, and it is obvious that Great Britain would be at a profound disadvantage if at the moment when she was faced with the difficulty of getting food supplies she was drawing them from the Antipodes. Again, the harvests of India and Australia are among the least dependable in the world, and we should be laying ourselves open to the greatest possible variation of prices if we cut ourselves off from supplies which under present conditions supplement one another when this or that harvest fails. The mirage of a self-contained Empire, however, fades away most rapidly when we get down to figures, and see how enormous is the trade in both directions with foreign countries which we are invited to penalise and restrict.

The latest figures available analyse the direction of our trade for the first six months of this year. We have

added the figures for the first half of 1913 for purposes of comparison:—

	Imports.		Exports.	
	1913.	1923.	1913.	1923.
Europe.....	146.5	161.4	120.2	164.6
Other Foreign Countries.....	137.4	212.8	93.6	128.0
Empire	94.9	166.6	102.3	153.9
Total	378.8	540.8	316.1	446.5
Percentage of Empire trade to total	25%	31%	32½%	34½%

The percentages of Empire trade would not be appreciably different if the figures had been based upon averages for a number of years, both before and after the war. They show that, in spite of the condition of Europe, our sales to the Continent have dropped very little in proportion to our total trade, and that the gain in Imperial trade has been small. On the other hand, in the case of imports, in spite of the fact that the Dominions enjoy practically no advantage in our markets in the way of preferences, their sales to us have increased considerably in proportion. The table, however, shows that on the side of imports even now nearly 70 per cent. of all our purchases are made from foreign countries, while in return we sell them 65½ per cent. of our exports. Moreover, of the Imperial total, one-third of our sales are made to India. If this market is excluded, and we consider only the Dominions and Crown Colonies, where a preference has or is likely to be established, it emerges that a Free-trade Empire would mean setting up a wall which would block out 77 per cent. of our overseas markets and a similar proportion of our supplies.

THE GOVERNMENT AND UNEMPLOYMENT.

The speech which Sir Montague Barlow, the Minister of Labour, delivered in the City on Tuesday, possessed both negative and positive interest. He said what the Government proposed to do towards meeting the unemployment problem, and also what they did not propose to do. The negative proposition consisted of an announcement that the Government would not depart from their present financial policy—a statement which relieved the uneasiness caused by the same Minister's reported advocacy of an attempt to palliate unemployment by currency inflation. As regards concrete plans, the three "trunk lines" of Government effort remain as before, namely, unemployment insurance, trade encouragement by export credits and loan guarantees, and relief work schemes. A new unemployment insurance benefit year began this week, and twelve weeks' consecutive benefit becomes available. That carries us on to the New Year, when the Minister promises a fresh statement in the House of Commons. The Government's programme of export credits is still available to the extent of £16 millions, while of the total £50 millions Government guarantee under the Trade Facilities Act £14 millions are not yet exhausted; but advantage of the Act to commence big labour-employing schemes has been freely used. Among those who were about to use it Sir Montague mentioned one or two big shipping companies, the Tube Railways, the North Wales Power Company, and Messrs Tata, of India. In addition, the Government has sanctioned a programme of road and bridge development which will involve an expenditure of £14 millions, the cost being shared by the State and local authorities. The work of the Unemployment Grants Committee is also to be expanded, proposals up to £20 millions (instead of £10 millions) being sanctioned. Grants in the case of revenue-producing schemes may now be made by this committee to public utility concerns, as well as to local authorities. Furthermore, Admiralty and War Office work is to be accelerated, and loans for Crown Colony land development are contemplated. Apart from these lines of Government effort, Sir Montague was able to announce that the railways were undertaking large programmes of work. For instance, the Great Western contemplates an expenditure of £10 millions, including £4½ millions on new

works and £2½ millions on locomotives and rolling stock. Similarly, the London and North-Eastern group is to spend about £1,000,000 on locomotives, sleeping cars, and wagons, and £500,000 on permanent way and new works. As far as Sir Montague could gather, ten to fifteen million pounds worth of work "was being put in hand" by the various railway companies.

The chief comment on relief schemes for the absorption of labour, whether Governmental or otherwise, is that if, as appears, their conception is recent, they are too late to produce serious results this winter. That Rome, or even a Severn tunnel or a Tay Bridge, are not built in a day is axiomatic. But an equally true fact, which is apt to escape observation, is that the plans for building Rome, or a tunnel, or a bridge, cannot be worked out in a day or a month. In the case of some of the schemes of work mentioned by the Minister of Labour, it would be surprising if they are far enough advanced to absorb much, if any, labour this winter. Every engineer knows that the time to prepare schemes for winter work is the early spring, and the only sound procedure for a Government is to prepare schemes in good times, and have them ready to produce when needed. Last spring, perhaps, the Government were lured into false contentment by the trade recovery then in temporary progress. From November to April a decline in unemployment was steadily in progress, but then the check came. At the end of September the Trade Union percentage of unemployment was the same as at the end of April, at 11.3, and the percentage unemployed of all workers insured under the Unemployment Insurance Acts somewhat higher at 11.3, compared with 10.9. On April 30th the total of registered unemployed was 1,261,000, of whom 963,000 were men. On October 1st the total figure was 1,285,000, of whom men numbered 955,000. These figures, as Sir Montague admitted, do not tell the whole story. In some industries, at any rate, the number of workers on short time may have increased considerably in the last six months. Movements of the Trade Union unemployment percentage are shown below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

* Excluding coal miners.

It is satisfactory to learn that the Government has not been seriously tempted by the lure of the inflationary short cut to an artificial and momentary betterment. We observe that Mr F. C. Goodenough, the chairman of Barclays Bank, upon whom inflationists have recently seized as a weighty protagonist of their cause, has emphatically repudiated the soft impeachment. He repeated on Thursday, at the Colchester oyster feast, that "no one would be an advocate of deliberate inflation," and continued: "The commercial prosperity of the Empire..... will not be secured through a policy of deliberate inflation, nor will the evils of unemployment be counteracted by such a policy." A matter of the very greatest importance, he said, is "that there should be neither inflation nor deflation here, but that sterling should maintain a steady value. Whatever may happen to other currencies, we wish to see the relative value of sterling to commodities upon a stable basis. That would give greater confidence to those engaged in trade than any other thing." In urging stabilisation, Mr Goodenough, we think, speaks the present opinion of the great majority of business men. It would be idle to deny that this view is somewhat different from that implied in the Cunliffe report, but the events of the last few years have produced a recognition that in times like these it is unwise to pursue a policy involving a downward drift of prices, however

slow. But if this view sees the disadvantages of deflation, it recognises even more clearly the lessons, drawn from home as well as from foreign experience, of what inflation brings in its train.

Nevertheless, there are signs that these lessons have not been learnt everywhere. It is, for instance, reported that the Grand Council of the Federation of British Industries considers "that the time has passed for temporary palliatives, and that there should be serious investigation of the possible results of fundamental changes in national policy." A public speech by Sir Eric Geddes, the president of the Federation, is, we understand, nearly due; and if we are correct in our suspicion that inflation is the "fundamental change" which is in the mind of himself and his colleagues, we shall be interested to learn from him how the supposed blessings may be obtained and the well-proved curses of its aftermath may be avoided.

INDUSTRIAL PROFITS.

OUR quarterly statistics of the profits of industrial companies, compiled from the weekly summary of company profit and loss accounts printed on a later page, shows a substantial increase in the profits of those companies whose reports have been made public during the third quarter of the current year. But we may say at once that this increase follows very heavy declines in the corresponding periods of the two preceding quarters. This will perhaps be best illustrated by saying that in the third quarter of 1920 the average profit per company was £104,100; in the third quarter of 1921 it dropped to £75,800, and in 1922 to £58,000, while for the past quarter it has recovered to £82,850. Thus there seems to have been a very definite reaction from the initial effects of the trade slump, which made their most serious mark upon the profits disclosed in the latter part of 1921 and in the first nine months of 1922. During the past three months the reports of 209 companies have been analysed in our weekly summary of profit and loss accounts, and these show aggregate net profits, after payment of debenture interest, &c., of £17,317,500, as against £10,469,100 earned by the same companies in their preceding financial year, an increase of £6,848,400, or 65.2 per cent. In our analysis which appeared twelve months ago we showed that 209 companies—the fact that the number is the same as in the past quarter is a mere coincidence, and does not imply that all the companies included are identical—had recorded a decline in aggregate net profits of 23.5 per cent. Since that time the profits disclosed have been on the up grade, as may be seen from the following table, which sets out the net result of our last five quarterly analyses:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c).

	Number of Companies.	Reports published in		Increase.		Decrease.	
		1921-22.	1922-23.	£	%	£	%
1922.							
Third quarter	209	15,853,920	12,120,153	918,267	3.9	3,733,767	23.5
Fourth quarter	319	23,310,452	24,228,719	..	..	..	..
1923.							
First quarter	405	28,489,993	40,276,870	11,786,877	41.4	..	..
Second quarter	425	31,874,787	38,945,778	7,070,991	22.1	..	..
Third quarter	1,358	99,529,152	115,571,520	16,042,368	16.1	..	..
Fourth quarter	209	10,469,118	17,317,482	6,848,364	65.2	..	..

The percentage increase for the past quarter is substantially greater than those shown for the immediately preceding quarters, though in actual amount it is smaller. The next table, which gives the increases or decreases in net profits recorded in each quarter since the beginning of 1918, shows how the increases for each of the past four quarters follow a series of very substantial decreases:—

	1918.	1919.	1920.	1921.	1922.	1923.
First quarter	-1.0	+10.4	+26.9	+3.5	-4.4	+41.4
Second quarter	-5.8	-5.1	+3.78	-8.4	-33.7	+22.1
Third quarter	+12.3	-3.4	+41.9	-42.4	-23.5	+65.2
Fourth quarter	+4.7	+10.5	+27.1	-52.9	+3.9	..

Taking the third quarter of 1920 as 100, the decline of 1921 would reduce the figure to 57.6, and that of 1922 to 44.1, so that the past quarter's increase of 65.2 per cent. would only bring the figure up to 73; that is, 27 per cent. lower than in the corresponding period of 1920.

The next table sets out the changes in profits shown by 14 groups of companies:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Quarter Ended Sept. 30.		Increase.		Decrease.	
		1922.	1923.	£	%	£	%
Breweries	16	4,742,889	4,792,497	49,608	1.1	..	..
Gas	9	182,898	218,649	35,751	19.6	..	..
Hotels, restaurants, &c.	7	201,901	235,700	33,799	16.8	..	..
Iron, coal, and steel	14	314,750	1,015,301	700,551	222.5	..	..
Land, mortgage, &c.	17	518,932	338,993	..	..	179,939	34.6
Rubber, &c.	40	176,782	415,308	238,526	134.8	..	..
Shipping	6	665,788	819,680	153,892	23.0	..	..
Shops and stores	3	282,547	348,867	66,320	23.5	..	..
Tea	3	31,207	131,147	99,940	283.4	..	..
Telegraph, &c.	5	2,587,498	1,835,938	..	..	751,560	29.0
Textiles	11	1,089,684	2,885,952	1,796,268	164.8	..	..
Trust companies	11	329,595	448,195	118,600	35.8	..	..
Waterworks	9	35,678	38,416	2,738	7.7	..	..
Miscellaneous	57	Dr 694,001	3,792,759	4,486,760	..	..	..
Total	209	10,469,118	17,317,482	6,848,364	65.2	..	..

The miscellaneous group includes one or two big companies which have turned the heavy losses of the previous year into profits. The African and Eastern Trade Corporation, for example, has recently declared a profit of £539,800, as against a net loss of £1,794,800 for the previous year; Van den Berghs made a profit of £346,800, against a loss of £256,900; the Smithfield and Argentine Meat recorded a profit of £118,000, against a loss of £297,600, and so on. A striking increase is shown by the iron, coal and steel group. This group includes the Ebbw Vale company, which earned a profit of £52,700, as against a loss in the previous year of £327,600. An increase in profits, however, is fairly general throughout the group. The figures of the textile group are also greatly affected by one company, British Dyestuffs Corporation having turned a loss of over a million into a profit of over £100,000. Each of the four tea companies has contributed to the increase of 283 per cent., and increases were fairly general in the rubber group. The decline in the land, mortgage and financial group is partly accounted for by the figures of Leach's Argentine Estates, which showed a loss of £238,900, as against a profit of £1,000. In the telegraph group, two of the principal cable companies showed a decline in profits of about £400,000 each.

In the next table we show the method of distribution of profits in each of the past five quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1922.	£	£	%	£
Third quarter	12,120,153	10,010,136	82.7	3,328,074
Fourth quarter	24,228,719	15,698,160	64.9	4,720,052
1923.				
First quarter	40,276,870	21,934,234	54.4	9,501,074
Second quarter	38,945,778	25,038,627	64.3	7,732,685
Third quarter	115,571,520	72,681,157	63.0	25,283,885
Fourth quarter	17,317,482	9,653,962	55.8	3,038,838

The welcome feature of the figures for the past quarter is the substantial increase shown in the proportion of profits reserved, either in the form of allocations to specific reserve funds or of additions to balances carried forward. Twelve months ago, the aggregate amount distributed to shareholders was 10 per cent. greater than total net profits, but this state of affairs has been remedied and the proportions distributed are now becoming more reasonable. The distribution adopted by each of the groups in the past three months was as follows:—

	Net Profits.	Ordinary Dividend.	Pref. Dividend.	To Reserve, &c.
Breweries	£	£	%	£
Gas	4,792,497	3,312,220	69.1	584,816
Hotels, restaurants, &c.	218,649	134,820	61.7	9,364
Iron, coal, and steel	235,700	138,415	58.6	41,625
Land, mortgage, &c.	1,015,301	547,652	53.8	192,733
Rubber, &c.	338,993	323,812	95.6	105,524
Shipping	415,308	392,989	94.6	14,937
Shops and stores	819,680	472,452	57.7	69,718
Tea	348,867	155,300	45.0	56,797
Telegraph, &c.	131,147	60,327	46.0	3,600
Textiles	1,835,938	1,058,091	57.8	70,000
Trust companies	2,885,952	1,180,831	40.9	384,551
Waterworks	448,195	319,943	71.0	134,486
Miscellaneous	38,416	26,299	68.4	8,258
Total	3,792,759	1,528,811	40.3	1,363,399

In the matter of reserves the best showing is made by the small tea group, while the textile group also reserves a high percentage of profits. The trust company group has

drawn upon the balances brought forward to pay dividends, but in no case has a definite reserve fund been debited.

In the next table we show the ratio to total ordinary and preference capital of net profits and of amounts carried to reserves, &c. :—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1922.	£	£	£
Third quarter....	205,481,600	12,120,153	5.9
Fourth quarter..	268,105,000	24,228,719	9.1
1923.			
First quarter....	406,793,000	40,276,870	9.9
Second quarter..	396,675,400	38,945,778	9.8
Third quarter....	1,277,055,000	115,571,520	9.1
	195,420,900	17,317,482	8.9

The ratio of profits to capital in the past quarter is a little lower than the average for 1921, but that of amounts reserved shows a considerable improvement.

The average rates paid on debenture, preference and ordinary capital in each quarter since the beginning of 1920 have been as follows :—

AVERAGE RATES PAID.

	On Debenture Capital.	On Preference Capital.	On Ordinary Capital.
	1920. 1921. 1922. 1923.	1920. 1921. 1922. 1923.	1920. 1921. 1922. 1923.
1st quarter	4.25 4.45 4.70 4.61	5.1 5.0 5.0 5.0	11.2 10.3 8.5 9.2
2nd quarter	4.49 4.61 5.00 5.08	5.0 5.0 5.0 5.0	13.7 12.6 8.8 9.9
3rd quarter	4.12 4.45 5.21 4.90	4.9 5.0 5.0 5.0	14.2 13.7 8.7 7.8
4th quarter	4.43 4.52 4.83 ..	5.3 5.1 5.6 ..	11.6 7.6 8.6 ..

The average dividend distributed on ordinary capital in the past quarter was at the modest rate of 7.8 per cent., and very little higher than that distributed in the corresponding period of 1922, when profits were so much smaller, the explanation being that very much larger amounts have been retained in the balance-sheets, as the foregoing figures have shown.

The final table gives the average rates paid by each of the groups, together with the average rate of ordinary dividend shown in our article a year ago :—

	Debenture Capital.	Rate of Interest.	Preference Capital.	Rate of Dividend.	Ordinary Capital.	Rate of Dividend.
	£	%	£	%	£	%
Breweries	10,931,931	5.9	11,810,745	4.9	20,534,691	10.1
Gas	915,709	5.0	145,915	5.0	2,324,283	5.8
Hotels, restaurants, &c.	1,425,156	4.3	735,000	5.7	1,401,079	9.9
Iron, coal, and steel	5,897,625	7.0	4,609,125	4.2	11,603,193	4.7
Land, mortgage, &c.	4,763,371	4.6	3,032,955	3.5	4,750,122	6.6
Rubber, &c.	628,986	6.4	542,335	2.7	7,246,346	5.4
Shipping	48,244	4.5	2,225,000	3.1	7,544,540	6.3
Shops and stores	193,400	6.5	304,975	6.3	1,055,250	14.8
Tees	60,000	6.0	60,000	6.0	248,822	24.4
Telegraphs, &c.	2,810,420	4.0	2,000,000	3.5	16,092,796	10.2
Textiles	5,979,778	4.8	11,310,168	3.2	16,092,796	10.2
Trust companies	1,015,080	4.7	1,431,980	9.4	4,959,982	6.4
Waterworks	197,349	4.7	102,984	8.0	649,654	4.1
Miscellaneous	14,778,928	5.4	31,794,966	4.3	35,400,009	4.3
	49,633,877	4.9	11,306,148	4.3	124,114,774	7.8

Six groups show a reduction in the average rate of ordinary dividend, including the textile group, whose profits increased substantially. The land, mortgage, &c., group, on the other hand, pays a slightly higher rate, though aggregate profits were much lower. In neither year, however, did the company whose figures were responsible for the drop in total profits pay an ordinary dividend.

REVOLT OF THE PANEL DOCTORS.

If the dispute of the "Panel Doctors *versus* the Approved Societies, the Ministry of Health intervening," be not speedily settled, the country will be required to face the wholesale resignation of most of the 13,000 panel doctors who are charged with the medical service of fourteen million people under the National Insurance Acts. The *British Medical Journal*, the official mouthpiece of the powerful Association which is standing behind the panel doctors, declares war in definite terms: "The profession must now decide once and for all whether it will submit to approved society domina-

tion, or whether it will take this opportunity of making its freedom sure.....The only course now open is for the profession to show that no service can be secured under the Acts, whatever the exact terms, until the professional position has been re-established. This means that every insurance practitioner should at once send to the secretary of his Panel Committee his resignation from the service, to take effect on January 1st next." It is expected that the notices of resignation will be secured by October 30th, and seeing that the panel doctors are now very tightly organised and that the British Medical Association is in control of their side of the controversy, there is at least some danger that these expectations will be realised. The Conference of panel doctors on Thursday unanimously accepted the advice of the Association to proceed with the resignation policy.

It is a lamentable business, though when one comes to examine the details of the dispute and to go through the history of the working of the National Insurance Acts, one cannot help feeling that the stand which the doctors are making should not have surprised either the Ministry of Health or the approved societies. The issue now is almost exactly the same as the issue in 1911-12, when Mr Lloyd George was compelled to give way to doctors incomparably less well organised then than they are now. Primarily it was not then, and is not now, a dispute over fees, though an attempt to reduce fees now has occasioned the dispute. Then, as now, it was a refusal by the doctors to be controlled by the approved (friendly) societies. As a result of the settlement in 1912, the control over the medical services under the Act was vested by statute in district Insurance Committees representative of all parties concerned. The friendly societies—which expanded into approved societies—were charged with the organisation and collection of insurance cards and payments, the paying out of cash benefits (sickness, maternity, and so on), and the general financial administration. As time has passed the power and influence of the approved societies have gone up, and those of the district Insurance Committees gone down. The societies, as purse holders, have accumulated large reserves against the Insurance Fund's liabilities under the Acts, and for additional benefits—reserves which the doctors erroneously regard as "surpluses"—and have gained the ear of the Ministry of Health, with which they are intimately associated in the financial administration. It was inevitable that they should do so. The district Insurance Committees, which were supposed to look after the medical service, have fallen so completely out of the picture that they are playing no part at all in the present dispute. The approved societies, taking perhaps a too strictly business view, want to get the medical service placed upon the lowest scale of fees which will attract the necessary number of doctors; the doctors object strongly to this rather narrow and short-sighted view of their functions, and declare further that the approved societies have nothing to do with the determination of their fees, and that interposition by them is an impertinence; the Ministry of Health has tried to hold the balance and keep the peace between the powerful and pushing approved societies and the suspicious and resentful organisation of doctors. So far the Ministry seems to have made rather a mess of things. At any rate, its assumption of authority to lay down terms to the doctors has precipitated the revolt. The doctors look upon the Ministry as being so much under the thumb of the approved societies as to have lost status as an impartial arbitrator.

The solution of the trouble is fairly obvious. It was brought about by an attempt on the part of the approved societies to have the fees of doctors reduced. The Ministry has fixed a scale of fees which it considers a just compromise between the societies and the doctors. The doctors decline to accept the Ministry's scale of fees, but have offered to accept the award of impartial arbitrators. The Ministry has rejected arbitration because the Minister regards "his position as that of an arbitrator with the added responsibility of his Ministerial duty." The doctors reply by threatening resignation of their appointments on the panel. It is clearly necessary to remove the whole question of fees out of the heated atmosphere of suspicion

and resentment by referring them to a court of arbitration acceptable to both sides. There is no progress possible on the present road, which has led directly up to a declaration of war. An arbitrator is of no use unless both sides accept him, and the doctors will not accept the Ministry of Health. Under these circumstances the Ministry would be well advised to stand aside and agree with the doctors upon an arbitrator, or arbitrators, who will be acceptable.

The precedent of 1920 is claimed by both sides, but regarded then was this. The pre-war panel fees were 7s 3d per head of persons on a doctor's list. As they had become inadequate to meet the doctors' increased cost of living and expenses, a court of arbitrators was set up in 1920. One was appointed by the British Medical Association, one by the Ministry of Health, and the third by these two nominees. The arbitrators awarded the panel doctors 11s per head of persons on the lists. For 1922 and 1923, as the cost of living had come down, the doctors accepted 9s 6d without prejudice to the determination of the adequate rate in more settled times. Now the approved societies want to go back to the pre-war 7s 3d, and the doctors regard 9s 6d as the inadequate minimum. The Ministry of Health, after a series of calculations which the doctors challenge—and which are not altogether convincing to the outsider—has fixed upon 8s 6d for a three-years' contract and 8s for a five-years' contract. The doctors will not entertain these rates, especially as they see in their calculation the Hidden Hand of the approved societies. There should be no great difficulty about adjusting the financial differences between the parties if a new court of arbitrators were set up on the 1920 model. All they would have to do would be to take the 11s per head judgment of 1920, and determine what the corresponding rate should be for the next three or five years, after taking all relevant circumstances into account. Then, when the rate of payment had been fixed by impartial arbitration, and agreed to, the other grievances of the doctors concerning the interference of approved societies with the medical service should be capable of reasonable adjustment. Moreover, in spite of the tightened organisation of the doctors, one may be just a little sceptical of their solidity in rejecting a compromise, because it is well known that to a large number of practitioners the difference between having and being without the panel business means the difference between prosperity and hard times. The only alternative to the panel system is that now proposed by the British Medical Association, which is anxious to explain that wholesale resignation does not mean a "strike" against patients. This alternative is for the doctors to go on attending the patients on their lists and to be paid by fees as in private practice (out of the Insurance Fund) or by capitation rates locally agreed upon. The Acts, through the district Insurance Committees, do provide machinery for working a medical service of this kind. But it is scarcely worth while to discuss alternatives until the whole dispute has been removed from its present war atmosphere.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

DURING the past three months the position of the Lancashire cotton industry has not shown any distinct change in so far as employment for the operatives is concerned. In certain quarters, however, demand has been on broader lines, and more business has been done. Some sections are worse than others, but all along the line it is still extremely difficult for spinners and manufacturers to secure prices for their products that are any better than allowing machinery to stand idle. The depression is most acute in the commoner qualities of yarn and the plainer makes of piece goods. During the past quarter there has been some improvement in the finer end of the industry, and the general position is rather more encouraging for mills spinning Egyptian cotton and weaving sheds producing fancy cloths.

Numerous remedies are being proposed to relieve the depression. Some of the suggestions are certainly

amazing, and there is no possibility whatever of many of the ideas put forward being accepted by the trade. A conference has just been held in the Manchester Town Hall, presided over by the Lord Mayor, of employers and trade union officials. It was decided to set up a joint committee of masters and workpeople for the purpose of discussing methods for the betterment of the industry. The first meeting of this committee is being held this week. It is being urged in many quarters that some system of control is desirable, but most of the employers are decidedly against action of this kind. If there is one thing more than any other which would bring about a better feeling in business circles it is a definite settlement of the German reparations question. In local trade circles there is still much nervousness with regard to financial matters.

Very wide fluctuations have occurred in raw cotton rates. On June 29th the quotation for fully middling American cotton on the spot in Liverpool was 16.67d. There was an easier movement during July, and on August 1st the price was 13.40d. A little later there was a smart rise to 15.78d on August 21st. The upward movement in September was very pronounced, and after 16.02d had been posted on the 6th, the figure on the 20th was 18.58d. After 16.78d had been registered on the 26th, the quotation moved on the 29th to 17.33d. Since then many changes have occurred. The price on October 10th was 16.36d, but on Wednesday last (October 17th) 17.49d was posted. According to the official reports of the United States Government, the crop for this season will be about 11,000,000 bales. Owing to the uncertain trade outlook, it is not easy to estimate the probable consumption during the twelve months, but it is not likely that the requirements of users will be less than 12,000,000 bales. Whatever happens, it is certain that stocks at the end of next July will be smaller than at the same time this year. The high price of cotton is stimulating its growth in other countries, and there is every likelihood of larger supplies being received from India, Egypt, the Sudan, and Brazil in the next few years. Recent advices relating to the growth in Egypt have not been altogether satisfactory, but a fairly large output is probable. The quotation for fully good fair Sakellaris Egyptian cotton on the spot in Liverpool on June 29th was 16.20d. By July 30th the price had fallen to 15.25d, but there was an advance to 19d on September 20th, and the figure on October 2nd was 19.10d, whereas on Wednesday last (October 17th) the figure was 18.40d.

Throughout the past quarter there has not been any lack of inquiry in piece goods for abroad. The demand indicates that goods are more urgently wanted in certain parts of the world. When prices have to be arranged, however, the trouble begins, and it has been exceedingly difficult to fix terms of fresh contracts. Business available is not sufficient to meet the requirements of makers, and there is keen competition for the contracts on the market. For India there has been an extensive inquiry covering a wide range of cloths. There has been a distinctly larger turnover in light bleaching descriptions. Many Blackburn manufacturers have cleared their stocks of such goods, and certain producers have extended their order lists. More attempts have been made to arrange transactions in grey shirtings, but actual operations have been very patchy, and so far it has been impossible for manufacturers to secure adequate rates for orders to make, the bulk of the business being in stock lots, which have been sold at prices which mean a definite sacrifice on the part of sellers. Undoubtedly common grey shirtings are the worst thing in the Manchester market. With regard to China very unsettled conditions continue to prevail on the other side, but, according to one or two recent cables, the outlook is slightly better. Rather more activity has been mentioned for some of the minor outlets of the Far East, and an increased turnover has taken place for Java, Singapore, and the Straits Settlements. The Near Eastern markets for many months have been dull, but there are now indications of freer operations for Egypt, Turkey, and the Levant. The outlets of Central and South America have been rather healthier. Fancy goods have been in active request for the United States, and just recently more business has been put through for the Continent. Diverse reports have been received from the home trade, and although some necessary buying has taken

place there is a feeling amongst retailers that clearances this winter are not likely to be very encouraging in view of the large amount of unemployment in the leading industries.

The following is a table of the shipments of cotton piece goods from the United Kingdom for the nine months ended September, together with the comparative figures for previous years:—

	Yards.	£
1913	5,350,278,900	73,659,119
1914	4,782,461,500	66,146,672
	Square Yards.	
1920	3,540,677,100	242,732,477
1921	1,866,341,100	100,045,277
1922	3,068,278,700	106,637,069
1923	3,097,216,600	104,072,046

The depression in the industry is undoubtedly most acute in the American spinning department. Now and again producers appear to experience a little relief, but no sustained improvement in the position can be recorded. At the end of August the extension of the holidays in Oldham resulted in yarn stocks in first hands being reduced, and a larger business in September helped to place some spinners on a rather better footing. Latterly, however, it has been extremely difficult to prevent fresh loss of ground. The demand in medium counts has been on broader lines, and some producers of superior marks are rather more favourably situated. The committee of the Master Spinners' Federation has decided to recommend all users of American cotton to continue the 50 per cent. curtailment of production up to the end of October. This organised short time has been going on since last March, and as it has not achieved the desired result some members are getting rather tired of concerted action, and more cases are being mentioned of firms making their own arrangements as to output. In yarns suitable for export purposes a larger inquiry for India has been well maintained, and although actual business has been patchy a very fair turnover has taken place. For the Continent business has been very slow, and the trade passing from week to week for France, Germany, and Holland has been very disappointing. The ups and downs in Egyptian cotton have caused some changes in quotations for Bolton yarns, but many spinners in this section are in a position to present a firm front to customers. A steady business has been done, and the better condition of the fine spinning department, which has been noticeable since the beginning of this year, continues.

The following is a comparative table of yarn shipments from the United Kingdom for the past nine months, together with comparative figures for previous years:—

	Lb.	£
1913	154,761,700	11,022,055
1914	150,995,400	10,464,922
1920	118,447,700	37,656,977
1921	90,592,600	15,987,327
1922	158,363,900	20,763,425
1923	104,530,000	15,263,209

An important event during the quarter has been the proposal of the Piece Dyers' Association to reduce prices by 10 per cent., on condition that merchants placed all their business with members of the association. This scheme has been unanimously rejected by shippers. Negotiations between the two bodies are still taking place, and strong representations are being made to the dyers that they should withdraw the condition that all orders must be given to members of the association if the 10 per cent. reduction is to be obtained. The high charges for dyeing are undoubtedly strangling our foreign trade, and a substantial amount of business is being held up at the moment as a result of the uncertainty which exists with regard to future prices.

The immediate prospects for the industry are very uncertain. In most quarters the depression is still very pronounced. It must not be taken for granted, however, that all departments in the trade are doing very badly. It is as well to point out that spinners of Egyptian yarns are working at a profit, and numerous manufacturers of special cloths are doing fairly well. Relief is badly wanted by spinners of the commoner sorts of American yarns, and by producers of plain goods such as grey shirtings. The most hopeful feature about the situation at the present time is that stocks of manufactured articles throughout

the world are comparatively low. Cheaper cotton would be of considerable help to Lancashire, but when all the facts of the situation are taken into consideration lower values in the near future are not probable. Many people are of opinion that the cost of raw material will be much higher early next year, especially should there be an improved demand, which is not at all unlikely.

IMPROVEMENT OF INDUSTRIAL RELATIONS.—II.

THE Coal Mines Agreement of July 1, 1921, marks a step of first importance towards the permanent settlement of disputes between Labour and Capital. The particular terms thereof as between coal owners and miners are of less importance than the general principle thereby inaugurated, of a sharing, between the two partners, of the margin between selling price and cost, in one of the largest and most important industries of the country.

The country is divided into thirteen districts, each of which is separately dealt with. The operating accounts of all mines in each district are aggregated for each month, and the aggregation certified by auditors appointed by the owners and the miners, any points on which they may disagree being submitted for decision either to the District or National Boards, constituted by the Agreement (and consisting of an equal number of owners' and miners' representatives), or to the independent Chairman of the National Board, a position also created by the terms of the Agreement. These aggregations of accounts for each district are sent in to the Board of Trade, and by them presented to Parliament and published.

From the proceeds of the sale of coal and other mining products, as specified in the Agreement, there are deducted:—

- (1) The cost of standard wages, which are an agreed figure in each district (based upon past records of the industry, and technically known as the basis rate), plus a percentage. The figure so arrived at is a close approximation to 1914 wages.
- (2) The costs of production other than wages.
- (3) Standard profits equivalent to 17 per cent. of the cost of standard wages.

Of the balance remaining, 83 per cent. is attributed to the miners, and 17 per cent. to the owners, the former share being expressed as a percentage of the basis wages in each district, and determining the wages to be paid for a period of two months at a certain interval (at present two months) after the months for which the percentages were ascertained. If the net proceeds of coal, after deduction of standard wages and other costs, are insufficient to provide for the standard profits, the deficiency is to be carried forward to a subsequent period. The Agreement also provides that wages paid are not to be less than the standard wages, plus 20 per cent.

The importance of this agreement as a first step towards a fair division of the proceeds of an industry between Capital and Labour can hardly be overestimated, and for the first time the workers are provided with reliable accounts showing the working results of an industry by auditors.

Another fact of perhaps even greater importance emerges from a consideration of the results of the Agreement. In certain districts, owing to the bad state of trade, conditions have been in some senses almost disastrous for both parties; wages have been reduced to the minimum, and heavy arrears of standard profits have been carried forward, and yet the Agreement has stood, and although its termination was discussed by the miners, it was never seriously entertained by either party. With the improved conditions now prevailing in the industry, better results are anticipated. As a first result of a full disclosure of the results of working, this fact is of vital importance, and points the way to a period of partnership between the two parties, in place of the periodical disputes and strikes which have prevailed in the past.

THE PROBLEM OF HUNGARY.—I.

(BY A CORRESPONDENT.)

To the traveller fresh from Austria, present conditions in Hungary assume the light of a sinister contradiction. Whereas in Austria the task of reconstruction is being faced by all sections of the people with common resolution and renewed hope, Hungary, befogged by illusions, bedevilled by suspicions and hatreds, is drifting on a tide of warring interests, discontent and despair. While the problem of Austria was never more than an economic question, over Hungary, reactionary, irredentist, and potentially dangerous, there might well be erected a sign: "It is useless to throw economic stones at this notice-board." Every question is confused by political issues, each factor in the grave problem which the country presents being obscured by psychological considerations.

In Buda Pesth conditions are rapidly deteriorating. The rate of suicide "for economic reasons" has risen to nearly one per four hours. In the hospitals patients are dying on beds without bedding, while in the tenements workers are dying without beds at all. The general view of the lower middle class is that "this winter it will be finished." On the other hand, the margin of vitality possessed by a predominantly agricultural country is great, and established civilisations perish slowly. Indeed, to expect the early disintegration of Hungary, even in the event of a failure to arrest existing tendencies, would be premature.

The obvious features of the economic situation—currency depreciation arising from unbalanced budgets and monetary inflation, with foreign trade indebtedness a contributing influence—are common over half Europe. The credit which the Hungarian Government claims for having pursued an anti-inflationary ideal may readily be given—has any European Government except the Soviet deliberately inflated the currency?—and it must be admitted that the recent history of the korona has been not so much the classic cycle of expanded circulation, rising prices, and falling exchanges, as the reversed order of falling valuta, reduced purchasing power, and forced recourse to the printing press. The depreciation of Hungarian currency has been in the main an anticipatory movement, discounting future inflation, and thereby rendering such inflation inevitable. The following figures illustrate the tendency in the past nine months:—

	Note Circulation.	Prices.	Devisen Rate for Sterling.
1922—December (basis)....	100	100	100
1923—March	105	198	159
September 1st	548	748	841
September 23rd	722	..	..

It will be observed that in the first quarter of this year, while currency expanded by no more than 5 per cent., the official rate of exchange fell by 60 per cent., and internal prices doubled. It must, of course, be remembered that prices of imports are governed by the effective commercial rate of exchange, which has long ruled some 50 per cent. above the official quotation. Even at the beginning of September, internal prices, estimated at about 2,500 times the pre-war level, would have warranted, on the basis of purchasing power parities, a quotation of 60,000 at worst for the korona-sterling exchange, as opposed to the commercial rate of 130,000, and the Devisen figure of 90,000.

When all this has been said, however, the fact still remains that Governments usually get from foreign bourses the quotation they deserve, and after due allowance is made for inherent difficulties, the budgets of the Bethlen Cabinet have not been such as to inspire confidence. For the year 1921-22 the deficit appears to have been 90 million gold korona. The deficit for 1922-23 was estimated by the Minister of Finance last March at 40 milliards paper, but this figure is considered to have been exceeded, and the actual deficit seems likely to be nearer 55 milliards. With expenses mounting in conformity with soaring prices, the outlook for the ensuing year is obscure, and pessimism on the part of exchange dealers has not been unjustified.

As a first attempt at the equitable sharing of the proceeds of industry, the scheme is naturally not perfect. In fact, it is not a real profit sharing, for the reason that it fixes wages on the basis of profits of a whole district, but without regard to the profits (or losses) of individual undertakings in that district. The pooling of profits in a district for the purpose of wage determination only, forces up wages to a higher level than the poorest undertaking can afford to pay, and there is no contribution from the more prosperous undertakings; while the latter could, in many instances, afford even higher wages than the Agreement provides. Undertakings which are continually losing money (perhaps a very small proportion of the whole), must eventually be forced out of existence, with a consequent loss of employment to those who worked them. But the elimination of these undertakings will tend to raise the general level of wages under the provisions of the Agreement, and so in effect benefit the miners who remain at work, at the expense of those who are thrown out.

The only remedy for this condition is a gradual consolidation of the various undertakings in each district, so applying to the worst-managed undertakings the methods of the best, and leading to a system of district trusts, in which Labour should naturally have a voice, and the consumer receive due protection. To this problem reference will be made in a further article.

Another objection is the requirement that wages must not be reduced below the standard, plus 20 per cent. Such a provision ignores the fact that more cannot be got out of an industry than the margin between cost and selling price. If this margin is only sufficient to pay standard wages and standard profits, or even is insufficient to provide for both, abatements should equitably be made in both, in the proportion in which they share (i.e., in this case 83 per cent. to wages and 17 per cent. to capital), and the deficits carried forward to be recouped out of future surplus. In such an event the remedy would be a rise in selling prices, if the market could stand it, and if not, there would of necessity be a reduction in both wages and profits.

Some objection may also be taken to the expression of standard profits as a percentage of standard wages. A better unit for both would be the ton of coal raised, the figures used in the Agreement as standard being approximately 6s 4d per ton for wages and 1s per ton for capital. The justification for increased expenditure is increased output of coal, so that this method of calculation would automatically and equitably provide remuneration for additional capital introduced. To meet the contingency of an inability to earn standard wages and standard profits, a reserve should be accumulated by setting aside, in good times, some proportion of the surplus over these standards.

In spite of these defects, the fact remains that in one great industry three principles have been established:—

- (1) Labour is remunerated by an agreed share of the proceeds of industry.
- (2) The facts as to the gross and net proceeds of the industry are made known at regular intervals, in such form that those employed therein have a clear knowledge of the results, and of the proportions thereof which accrue to their benefit.
- (3) For the first time there has come into being the idea of co-operation between Labour and Capital to obtain the best results, and to divide these results equitably between them.

One other large industry, viz., the railways, has also attempted a permanent settlement of wages with its workers. Unfortunately in this case the unsound principle of basing wages entirely on the cost of living has been adopted, with the result so far that adequate reductions in railway rates, which are themselves a substantial item in the cost of living, have been unduly, and perhaps indefinitely postponed. It must, therefore, be reluctantly admitted that the railway agreement has made no contribution to a really permanent settlement of the wages question.

The important consideration is the extent to which the principle of the Coal Mines Agreement can be extended to the other great industries of the country, and whether this can be accomplished by voluntary action or by legislation. This is reserved for discussion in a third article.

So far as can be estimated, the adverse balance of Hungarian trade in the three years 1920-22 totalled over £35,000,000, converting korona to sterling at the mean rate for each year. Put in another way, the excess of imports amounted in 1920 to 156 per cent., in 1921 to 93 per cent., and in 1922 to 83 per cent. of the total exports. As regards 1923, the adverse balance for the first six months came to roughly 80 milliards paper, and although sales on account of the excellent harvest should reduce external indebtedness in the current half-year, it is unsafe to conclude that the future balance of trade is assured, much less that an export surplus for reparation purposes is on the way to being established.

It has to be borne in mind that the Treaty of Trianon left Hungary deficient in many essential commodities. The present level of importation of coal, textiles, timber, paper, chemicals, iron and salt, which together form the bulk of the total, cannot well be curtailed without strangling industry and lowering intolerably the standard of existence. Stability can only be attained by expansion of exports, and such an expansion can only be seriously looked for in the direction of agricultural produce. Lacking labour with natural aptitude for industrial processes, and compelled to rely largely on imported raw materials, Hungary has only succeeded in securing foreign markets for some few factory products, such as agricultural machinery, through the enforced acceptance by the workers of a real wage whose continuance cannot be expected.

Estimates of future agricultural production are notoriously unreliable. The following figures of production of the principal cereals expressed as percentages of the 1913 level for the same territory are at first sight encouraging:—

	Wheat.	Rye.	Barley.	Oats.	Maize
1921	72	72	65	71	53
1922	60	67	63	73	55
1923 (estimated) ..	91	100	74	84	75

Against these figures, however, must be set the consideration that climatic conditions this year have been exceptionally favourable. Nature in 1923 has chosen to play gracious lady in a naughty world, but there is no warrant for expecting on like scale a repetition of her performance. Moreover, the fall in the acreage down to these cereals has continued practically without interruption since the war.

To some extent, no doubt, production could be improved by increased machinery and supplies of fertilisers; more scientific methods of cultivation could do much, while sowings could be largely increased. These are mechanical steps to the end. The crux of the matter, however, is the soul of the peasant. If post-war Hungary is to survive, the peasant must work long and hard in order that his brother in the towns may eat. As things stand, it is doubtful if he will accept this burden. Landless, oppressed, enduring in sullen discontent a mediævalism which has taken from him even the hope of self-betterment, he may maintain production on the average at about 80 per cent. of the pre-war level, but this will not save Hungary. That the country can be saved at all without a sweeping measure of land reform, or except by the conscious determination of a nation of peasant proprietors, is an illusion which few but Hungarian landlords could be found to share.

DIARY OF THE IMPERIAL CONFERENCE.

Monday, October 15th.—Lord Salisbury, Chairman of the National and Imperial Defence Committee, addressed the Conference on matters connected with the military, naval, and air defences of the Empire, Lord Derby (Secretary of State for War), Mr Amery (First Lord of the Admiralty), and Sir Samuel Hoare (Secretary of State for Air) being present during the address and the debate which followed. Although it was decided by the Conference that the publication of any detailed report of this sitting would be inadvisable, it may be surmised that the main lines of Lord Salisbury's address would in part follow those of the Imperial Defence Committee's special report on the relations of the Navy and Air Force, which

was published shortly before the adjournment of Parliament. A subsequent and final report of the Committee has been drawn up, but its contents have not been made public up to the present.

Tuesday, October 16th.—The Imperial Economic Conference, after a discussion opened by Mr Bridgeman (Home Secretary), decided that a committee be appointed to explore the possibilities of arriving at a common Empire policy in the matter of workmen's compensation laws as far as these apply to non-resident workmen, to seaman, and to nationals of foreign countries. In making its recommendations the committee will take into account any reciprocity granted in this respect by foreign countries to nationals of Great Britain and the Dominions. Subsequently, a statement was made by Lord Salisbury with regard to the work of the Department of Scientific and Industrial Research. Lord Salisbury outlined the work of the Department in verifying the different commercial and industrial standards of the Empire, and conducting specialised research into problems affecting both the Government and the trading community as a whole, and instanced fruit, power, alcohol, and flax as suitable subjects for co-operation in imperial research. The Conference, while appreciative of the work accomplished by the Imperial Institute, decided that the whole question of co-ordinating and publishing the results of scientific inquiries undertaken in the different parts of the Empire was of such crucial importance as to merit special consideration by an *ad hoc* committee, which was accordingly set up.

At the afternoon session, Sir Laming Worthington-Evans (Postmaster-General) made a statement on the position of the Empire's mail, cable, and wireless services. Its tenour showed that the hard work carried out since the war would shortly bear fruit in a mail and cable service equal, or almost equal, to that of pre-war days, while in certain cases, such as the West Indian Islands, new developments were in contemplation. From the debate which followed it would seem that most of the Dominions desire greater facilities than are at present available, and it was resolved, firstly, that representatives of the Dominions and India should be associated with the Imperial Communication Committee when questions of interest to them were under consideration; secondly, that Atlantic cable route; and thirdly, that companies within the Empire should be given preference in any development of the Empire's wireless systems.

Wednesday, October 17th.—The Imperial Conference continued its investigations into Imperial Defence, after hearing a statement made by Mr Amery. No details of this sitting have been published beyond the fact that Mr Amery's decision to send certain warships for an extended cruise in Dominion waters was accorded general approval by the various Prime Ministers.

In the afternoon, Sir Halford Mackinder, Chairman of the Imperial Shipping Committee, made a statement to the Imperial Economic Conference regarding the work of that committee since its formation in the autumn of 1920. It was mentioned that the Brussels International Conference on shipping matters had adopted rules in the matter of bills of lading based on the Canadian system. Sir Halford also submitted a series of recommendations connected with the improvement of communications, by sea and air, with Australia and New Zealand. Mr Graham (Canadian Minister of Railways) voiced the difficulties of the Dominions arising from the discrepancy in bulk between their exports and imports.

Thursday, October 18th.—The Economic Conference continued its discussion of the work of the Imperial Shipping Committee, and adopted a resolution thanking that committee for its services to the Empire. The debates throughout this week have revealed the importance attached by all the Dominions to the pressing need for an improved system of Imperial communication. This question has so far proved the most prominent feature of the Economic Conference's deliberations.

The afternoon was devoted to committee work by both the Imperial Conference and the Economic Conference, members of the former meeting at the Admiralty for the elucidation of various technical points arising out of Wednesday's discussion.

Notes of the Week.

Deadlock in the Ruhr.—There have been several developments in the Franco-German situation since we wrote last. In the first place, the negotiations between the French occupying authorities and the Rhineland industrialists for the resumption of payments in kind have broken down. The reason is obvious. Herr Stinnes cannot deliver coal to France unless he gets the wherewithal to pay his workpeople. This is not obstinacy or bad faith, it is simply a fact, which should have been constantly in the minds of French and Belgian statesmen. Before the occupation coal was being steadily delivered over the frontier. It was being paid for by the German taxpayer. It is true that the taxes were only to a small extent levied through the revenue officer, but the balance was taken from the German people none the less surely by means of the printing-press. Reparations in kind have, in fact, been made for two years by the vicious system itself, which has brought Germany to bankruptcy and ruin. At the same time, Mons. Poincaré refuses to negotiate with Berlin at all, and though there has been conveyed to him as clearly as words can express the self-evident truth that the Berlin Government cannot possibly pay for the deliveries in kind, the French Prime Minister continues to declare that he cannot recognise the German declaration as to the impossibility of financing deliveries in kind, but, on the contrary, must regard it as a continuance of resistance. As the German situation depreciates his demands become more extreme and impossible of fulfilment, and we are now told that there will be no negotiations with the German Government until deliveries have been resumed, and have been raised to the figures prevailing before January of this year. Until that time France will not discuss any new offers on the subject of reparations. What would one think of a creditor who in private life dealt with an obviously bankrupt debtor in this way, and informed him that he would not discuss affairs until he had made himself solvent! The truth of the matter is that France has not the least idea along what road to travel. The first phase has passed in which, after embarking upon the Ruhr adventure from very mixed motives, she made up her mind that her real intention was to create in Germany the will to pay; in doing this she has for the moment destroyed the power to pay. Unless some fresh effort at a general and reasonable settlement is made, she will inevitably be drawn as the next step into endeavouring herself to exploit the Ruhr mines, whatever the political organisation in that territory may be. This exploitation means that she can no longer get her coal supplies for nothing. Reparations can only be paid out of the taxable capacity of the payer, which depends upon the surplus of production over consumption. To some extent she may be able to tax the Ruhr, and thus acquire the means of meeting the cost of production of reparation coal, but it is obvious that the taxable capacity of the Ruhr population, or even of the whole Rhineland population, is but a small proportion of that of Germany as a whole. Moreover, the surplus produced by a population working under duress is certain to be very small, as the experience of all slave states in history has shown. While this attitude proceeds on the part of France, the discussion of reparation plans such as that put up by Belgium to the Reparations Commission is academic, especially since Germany is not to be included in the debate. Mons. Poincaré's attitude means that the present chaos must continue, and under these circumstances the attempt to create a new mark currency is foredoomed to failure.

The Chancellor on the Tax Outlook.—The nine days' wonder caused by some stray remarks of the Minister of Labour on inflation as a cure for unemployment has been killed by the Minister himself, who in a speech in the City on Tuesday declared definitely that the Government had no intention of departing from its present lines of financial policy. Thus, the inflation *canard* (or was it a kite?) is disposed of, and one is left free to face the facts of the position of the national finances in the sounder and more sombre spirit that marked Mr Neville Chamberlain's

speech at Birmingham last week-end. This was the new Chancellor's first statement on public finance since his promotion to the Treasury, and he gave early indication of courage. For the keynote of his address to a business audience was the warning that it would be folly "to count upon further remissions of taxation in the near future." As regards the current fiscal year, while deprecating prophecies based upon a half-year's figures of revenue and expenditure, Mr Chamberlain nailed to the counter the fantasy prevalent early in the year that Sir Robert Horne's huge surplus might be repeated. Turning to the outlook for next year's Budget, Mr Chamberlain explained that there would be a formidable automatic fall in the yield from certain sources of revenue. "I can point," he said, "to three items which are bound to result in a substantial reduction in the national income. First of all, there is the reduction of the duties imposed by the Budget of this year. They did not have their full effect upon the revenue this year, but next year they will cost us an additional £24,000,000. The second item is the item of revenue from miscellaneous sources, from which we get £40,000,000 this year, but from which there will be little to come next year; and, thirdly, you must take into account the fact that we shall be substituting a bad year for a good year in the calculations of the income-tax, and if you put these three items together they will certainly not amount to less than £50,000,000, and they may come to considerably more." In the recital of these facts and estimates, the Chancellor finds full justification for his remark that "such savings as we may be able to make will all be wanted to catch up with the corresponding fall in revenue." It is to be hoped that this frank facing of the facts betokens a determination for the greatest measure of retrenchment in public expenditure compatible with efficient administration. The taxpayer, if it is made plain to him that his tax rates depend upon it, will surely back any such measures. The time of year is at hand when Treasury vigilance may find its best scope; for the spending departments are engaged upon preparing their prospective demands for next year, which then come before the Treasury for scrutiny. The country looks to the new Chancellor to make that scrutiny searching and effective.

Irish Free State Affairs.—In spite of dockers' strikes and industrial troubles, writes our Dublin correspondent, direct trade between Ireland and Great Britain showed, according to the *Board of Trade Journal*, a marked improvement in the month of September. Though there is no definite news yet, the chances of an industrial peace, or, at any rate, of a patched-up provisional peace, are growing. President Cosgrave's suggestions for a resumption of work on slightly reduced wages pending the negotiation of a fuller and more permanent settlement have been approved by ballot by one of the two conflicting unions. This is the union which controls Waterford, Cork, Dundalk, and Galway. A definite acceptance or rejection is looked for early next week. Factors which make for peace are, firstly, that the strike has been causing a net outlay of some thousands of pounds per week by the Irish Transport Workers' Union; secondly, that the Strike Committee in Dublin has imposed a "voluntary levy" on workers which is so unpopular that it is only paid under compulsion; and thirdly, that at long last the employers have plucked up courage, and are about to run, load, and man ships with non-union labour under the protection of Government forces. There is no news yet as to the means to be used to lower the cost of living. The latest suggestion is that, in the event of the employers (in the particular trades affected) being unable to guarantee a substantial reduction, an *ad hoc* body should be formed from representatives of labour, employers, and the co-operative movement to run provision and clothing stores in the working-class areas on co-operative lines—the Government participating only to the extent of lending the working capital and providing facilities. While there is no definite news yet as to a National Loan, there is increased discussion of financial problems. The question of a British guarantee is much canvassed, but, supposing that it were forthcoming—and there are good grounds for believing that it might be—there is some reluctance expressed to accept aid which might

be made the basis of a claim to advise or influence in the political sphere. American money seems a little more remote, or at least more expensive, than it was some months ago, and generally there are many claims on the money market just at present. Activity is shown by individuals and societies, mostly coming from London, who are anxious to preach that the enemy is the financial power—high finance and the banking monopoly—and that all that the Free State must do is to print as many currency notes as it desires and fix all prices. The Government and public of this most conservative country, however, are tolerably well aware that that way madness lies. This week has seen the opening of the new Mallow railway bridge in replacement of that destroyed by the Irregulars a year ago—which represents the restoration of an indispensable railway artery for the South-West. Further items of news of economic importance to Cork and neighbourhood are that all American-Free State mails are to pass through Queenstown; that Armstrong's are likely to set up branch works at Haulbowline Dockyard; and that the Postmaster-General, Mr J. J. Walsh, is contemplating an air service for passengers and mails from Queenstown to London which would, it is alleged, enable twenty-four hours to be saved as compared with the New York to Plymouth or Southampton routes. In view of the necessity for an approach shortly towards putting the Ulster Boundary provisions of the Anglo-Irish Treaty into effect, the spectacle of the Prime Minister of North-East Ulster touring the boundary and protesting in unmeasured terms his resolve never to allow a square yard of his territory to be detached whatever any commission may decide is causing serious comment here.

Cost of Living.—The Ministry of Labour's figure for the cost of living again moved upwards in September, the advance, as in August, being two points. Thus on October 1st the figure was 75 per cent. above the level of July, 1914. Monthly movements over a number of years are recorded below:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.	1923.
January 1st..	% 85-90	% 120	% 125	% 165	% 92	% 78
February ..	90	120	130	151	88	77
March ..	90	115	130	141	86	76
April ..	90-95	110	132	133	82	74
May ..	95-100	105	141	128	81	70
June ..	100	105	150	119	80	69
July ..	100-105	105-110	152	119	84	69
August ..	110	115	155	122	81	71
September ..	110	115	161	120	79	73
October ..	115-120	120	164	110	78	75
November ..	120-125	125	176	103	80	..
December ..	120	125	169	99	80	..

Food is again responsible for the advance, the latest index figure for the increase of food prices alone over the pre-war level being 72 per cent., as compared with 68 per cent. on September 1st. This rise was largely due to rises in the price of milk, butter, cheese and eggs. Average butter prices rose by about 2d per lb. Potatoes, flour and bacon, on the other hand, were slightly cheaper on October 1st than a month earlier.

Electricity Commissioners' Report.—The Electricity Commissioners are to be congratulated on the excellent reports surveying the electric supply industry which they have made it their business to publish year by year. The third of these annual reports, covering the year ending March 31st last, has been recently published. It consists of some 142 pages of most valuable information and data. The electricity generated by the electric supply undertakings and railway and tramway authorities of the United Kingdom shows an increase of 17½ per cent. over the previous year. The units generated by the authorised supply undertakings was 4,572 millions, and by the railway and tramway authorities 855 millions. The various schemes for the re-organisation of the electric supply of the country aim at eliminating as far as possible the separate generation of electricity by railway and tramway authorities, so this latter should, as time elapses, tend to decrease, and

the total of units generated by authorised undertakers be augmented correspondingly. In another place, the Report touches on this matter, and quotes the finding of the Board of Trade Electric Power Supply Committee that "the importance of combining the supply of railways, tramways, and other classes of consumers is beyond doubt." The Commissioners are following this policy, as will be seen by their decision (dealt with in this Report) that the South-Eastern and Chatham Railway should not build their own generating station, but take supply from authorised undertakers. The decision is of importance, as the estimated units involved in the first stage of this railway electrification is 89 million units, and in the second stage 210 million units. The expansion of the present authorised undertakings is indicated by the new generating plant which was sanctioned by the Commissioners during the year—namely, 375,609 kilowatts. New plant for railways, tramways, and non-statutory undertakings was sanctioned to the amount of 46,729 kilowatts, making a total of 422,338 kilowatts. This figure shows a very appreciable increase on the total of plant authorised in the previous year, which amounted to only 169,593 kilowatts. As regards the position of the various schemes formulated for the 15 electricity districts which has been delimited under the Act, 1919, the Report gives full details. Summarised, the position is as follows:—One scheme (Lower Severn) has not been proceeded with. The London and Home Counties scheme is in suspense (owing to prohibition being granted by the Court of Appeal on grounds of its being *ultra vires* in certain particulars). Three schemes have now been embodied in Orders passed by Parliament, and so are now in force, viz., North Wales, South-West Midlands, South-East Lancashire. Two schemes are in the draft order stage, and others are being proceeded with. In connection with these schemes some interesting figures are given as to the estimated growth of the demand. The figures are for 12 only of the districts, but as these cover the most important areas, and would represent about 50 per cent. of the public electricity supply of the whole country, the totals may be taken as in a certain measure representative of the whole. Taking the present output as the basis, the figures in the estimates show an anticipated increase of 89 per cent. by 1926-27, and of 180 per cent. by 1931-32. The linking up of undertakings for mutual assistance or bulk supplies is also dealt with in the Report, which shows that at date some 174 undertakings are now taking, or have arranged to take, bulk supplies (in some cases reciprocal supplies). This is all to the good, as tending towards the general centralisation of generation.

U.S. Shipping Board Accounts.—Our New York correspondent writes:—In the first complete statement ever made public of the assets and liabilities of the United States Shipping Board (including the Emergency Fleet Corporation and subsidiary realty and transportation companies), total assets as at June 30, 1923, are given as \$399,919,781. Total liabilities, including reserve for insurance claims and losses and claim settlements, are placed at \$47,514,581. A reserve fund, amounting to \$60,000,000, has been set up for fleet liquidation and expenses of such liquidation, allowances on restricted sales and for loss risk on the laid-up fleet. The excess of assets over liabilities is given as \$292,405,200. The fleet remaining in the Board's hands on June 30th last is carried at \$229,929,758. The latter figure, Chairman Farley explains, has been arrived at by a careful survey, recently conducted, covering a detailed inspection of every vessel owned by the Board. That sum, he points out, bears no relation to the large amount spent in the fleet's construction, but "represents fairly the present-day world market value of the fleet, based not only on the types and characteristics of the vessels, but also upon consideration of their physical valuation." The accounts of the Board, he remarks, "have been placed as nearly as possible on a strictly commercial basis," and "there have been eliminated from the assets all fictitious values resulting from excessive costs of building the Board's fleet." A study of the accounts and notes receivable reveals a very large amount of offsets, representing disputed items and doubtful or uncollectable accounts, which give a fair idea of the liquidating problems still confronting the Board.

From one batch of accounts receivable, totalling \$122,884,147, there has been deducted the sum of \$112,116,220, including \$25,925,793 as "payable offsets," \$39,189,279 as "claim offsets," and \$47,001,147 as "reserve for doubtful or uncollectable accounts," leaving a net amount of only \$10,767,927 that has been included in the total assets. Besides the foregoing accounts receivable, those of managing agents (at estimated realisable value) are given as \$26,186,302 in notes receivable, from which a total of \$19,599,732 in "offsets and doubtful notes" has been deducted, leaving a net sum, carried as assets, of \$6,586,569. Other accounts and notes receivable for ship sales are placed at \$74,101,254, less \$62,316,900 for "payable and claim offsets" and reserve for uncollectable accounts, leaving \$11,784,354 figured as net assets. The grand total of all accounts receivable amounts to \$223,171,703, from which there has been deducted for payable and claim offsets and reserves for doubtful or uncollectable accounts the sum of \$194,032,852, making the net amount of such accounts, which have been entered as assets, \$29,138,850. One of the major tasks of the Board for some time to come, Chairman Farley says, will be to expedite the settlement of these old accounts, most of which are inheritances from the war activities of the Board. The statement includes an estimate of the claims both for and against the Board. The figures, it is explained, do not represent either the gross or net amount in either case, but merely the probable amounts at which final settlement may be effected, and which in many cases must be determined by the courts. Among the assets enumerated are net cash, \$32,146,207, and insurance fund cash, \$8,850,449. The estimated recoverable value of claims in favour of the Shipping Board and carried as assets is \$5,279,860. Liabilities include \$8,850,449 as reserve for insurance claims and losses, and \$6,517,924 as reserve for claim settlements. For the reasons mentioned, it is quite evident that, apart from the appraised value of the Government's merchant marine fleet and a few other items, there is still much uncertainty as to what are the Shipping Board's real assets and liabilities.

The Home Bank Failure.—Our Ottawa correspondent writes:—Mr A. B. Barker, the curator appointed by the Bankers' Association to investigate the affairs of the defunct Home Bank, has now submitted his report, and it confirms all the suspicions and fears which have prevailed. The total assets are estimated at \$15,848,400 and the liabilities at \$18,848,978, leaving a nominal deficit of \$2,638,578. But the "quick" assets are only placed at \$5,643,951, and against this must be set the preferred claims of note holders and Government, which total \$2,956,426. For immediate distribution there is therefore only available \$2,647,625, and this sum falls short by more than a million dollars of the amount required to pay an interim dividend of 25 per cent. to the public creditors. The curator ranks as "special assets" \$9,229,997 loans made on a variety of undertakings, mostly of a speculative character, which are not immediately realisable and are of problematical value. Upon the amount ultimately realised from them will depend the dividend which the depositors will receive, but experts familiar with the securities involved in this class of loans do not expect them to yield more than 50 cents in the dollar. In that event the depositors need not expect to receive more than 40 cents in the dollar, apart from what can be collected under the "double liability" provision of the Bank Act. The report makes it clear that the Home Bank was engaged in something far beyond ordinary banking business, and that its directors had allowed its funds to be used for an orgy of speculation by themselves and their friends. The perilous ventures for which its money had been utilised included railway projects at New Orleans, speculations in veterans' land scrip, real estate schemes in Toronto, and timber enterprises in B.C. One large debtor is a concern known as the British Dominion Holding and Investment Company of Montreal, which owns two tramp steamers credibly reported to have been actively engaged in the rum-running business off the American coast. Companies in which different directors were interested obtained large advances from the bank on security which was quite inadequate to protect the bank

against loss. In face of such revelations, the demand for prosecution of the responsible parties has been irresistible. The Federal Government has ordered the arrest of the president, H. J. Daly, on the charge of signing a false and deceptive statement respecting the returns of the bank; Mr Daly is reported to be seriously ill at his summer home on Lake Simcoe, and bail will be allowed. The Ontario Provincial Government took concurrent action, and have caused the arrest of Mr R. P. Gough, the vice-president, and five other directors, the acting general manager, the chief accountant, and an auditor. The charge against them is very serious, for the return of June 30th sent to the Finance Department placed the assets at \$27,434,090 and the liabilities at \$24,889,000, leaving the deduction to be drawn that both the capital and reserve were intact when they had both been hopelessly dissipated. The Federal Government are expected to order a thorough public investigation, and failure to do so will provoke a serious outcry. They are themselves in a sense involved through the revelation of a curious transaction undertaken by the executive of the Canadian National Railways. The latter has distributed its business among six banks approved of by the Minister of Railways, and of these the Home Bank was not one. But Mr R. P. Gough, the vice-president of the Home Bank, is also a director of the C.N.R., and on May 28th last he induced the management of the C.N.R. to sanction the deposit of a million dollars of C.N.R. funds in the Home Bank. It was withdrawn five days later, but in the meantime the presence of this money had materially improved the aspect both of the annual statement given to the shareholders and the monthly return to the Finance Department. The public is very restless at the discovery that the funds of the C.N.R., which are public funds, have been used to bolster up a tottering bank.

The Turkish External Debt.—The Report for 1922-23 of the Ottoman Debt Council, with Sir Adam Block's preface, is virtually an exhortation to the bondholders, even of the Unified Debt, to have patience and hope for better times. The Treaty of Lausanne, like that of Bucharest, provides that the Debt shall be apportioned between Turkey and the countries which have obtained Turkish territory as the result of the preceding wars; but the adjustment of the respective shares has still to be effected (for Bulgaria, the Ottoman Debt Council will do it), and meanwhile the receipts from the ceded revenues are for the most part suspended by their interception both by the countries in question, notably Iraq, Syria, and, in respect of her Aegean acquisitions, Italy, and by the Angora Government. During the last three years that Government has appropriated about £110,000,000; since September of last year it has held back all the ceded revenues derived from what remains of Turkey, except certain local revenues coming from Constantinople and the neighbourhood. The product of the Constantinople Customs has also been intercepted, while the receipts from the spirits and stamp duties have been reduced by hasty and confused legislation. Albania has formally confiscated the Debt revenues; in Iraq and Syria the Debt Administration "administers" them, but the Governments "deduct" nearly all the proceeds, except a small sum—possibly arrears due when the territories were still Turkish. The net receipts would suffice for the service of the Unified bonds and the "Lots Turcs"—which latter do not concern British investors—if the Council could duly collect the ceded revenues; but the estimated amount for 1922-23 is only £76,262,000, against £77,641,000 for 1921-22, and that for 1923-24 will show a further decline. Under these circumstances, and in view of the state of the exchange, it is improbable that the Council will be able to make additional payments on account on the war and post-war coupons preceding that due last September, or to make any payment for the present on the last-named coupon. The question as to the currency in which the bondholders are to be paid is still unsettled; but Sir Adam Block's preface is both a warning to Turkey and an encouragement to the bondholders to hope. Turkey, he points out, has been relieved by the Treaty of Lausanne of 40 per cent. of her pre-war foreign debt, and by the war of certain Asiatic territories which in-

volved her in constant financial loss. Her war debt is less than that of any other belligerent, and her currency has not been debased by a vast over-issue of worthless notes. With a reasonable readjustment of taxation, reduced expenditure, and a sound Budget, she should meet her engagements with no more difficulty than before the war. She will do wisely to treat her bondholders fairly, so as to maintain her credit in view of the need of foreign capital for reconstruction, which, however, he admits, does not seem to have arisen as yet. The Council's Report, which is full of interesting detail, had been held back in the vain hope of further information from Asiatic Turkey; there is a useful reprint of the financial clauses of the Treaty of Lausanne, and it includes subsidiary documents forming part of the peace settlement.

The Outlook in China.—The reconstructed Chinese Government has made a good beginning by its reply to the Note of the Powers on the Ling-chen railway outrage. It accepts in principle their demands for compensation for the sufferers, leaving the details for future discussion; it announces that the officials responsible for the conditions which led to the outrage have been punished, and that the Tuchun of Shantung has been relieved of his post; and it implicitly acknowledges the responsibility of the central executive authority for the prevalent disorder and brigandage. The satisfaction created by the reply is somewhat qualified by its refusal to accept the scheme of the Powers for a special railway police under foreign officers, and also by the revelation that the dismissal of the Tuchun of Shantung has been veiled by his resignation and acceptance of an honorary dignity; but the Government is obviously not yet strong enough to offend the Nationalist feeling which the new departure has strengthened, or to raise up a fresh and possibly dangerous opponent. It remains to be seen what reply it will make to the Note of the Powers concerned in the Consortium, calling attention to the illegitimate application of the Customs and salt surpluses to the service of the internal loans. Presumably it will temporise, pending the deliberations of the joint Committee just set up to deal with the most urgent of the financial problems of China. At present its stability is threatened by the efforts of Li Yuan-Hung, the ex-President, and by the protests of Sun Yat-Sen against the legitimacy of the election of Tsao-Kun. But Sun Yat-Sen's power has waned considerably in the last few months, and he certainly cannot rely on the united support of the South.

Government Plans and Metal Prices.—A correspondent writes:—The announcement of the Government plans to relieve unemployment and the decision to build bridges, roads, &c., and find additional cash for shipbuilding, has had a good effect upon the metal markets generally, and iron and steel have benefited by the steps taken to keep the Ruhr surplus stocks from being dumped down here. All the iron and steel used for the new construction work will be British, and this will keep the works going for some time. All prices are harder, and the sheet trade is very well booked up, fresh orders having come in from the East this week. The tinplate mills in South Wales are also very active, with more good contracts for oil sizes secured for Canada and the States. The non-ferrous metal markets have shown a very hard undertone, and in some cases values have moved steadily upwards. Copper has improved rather slowly, but both standard and refined have been better, and a fair business has been done. The news from the United States is not very encouraging about copper, but steps are being taken to deal with the big production, and the metal would soon feel the benefit of any European revival in trade. Tin has been firm, although during the early part of the week there was some hesitation and a little selling appeared. The demand for tin is bound to be steadily maintained over the next few months, and if standard tin can be stabilised at over £200 per ton for any length of time most mining companies will do well. Further, if there is no material fall from the present level and all the metal offered is absorbed by the consuming interests here and in the United States, the Government surplus tin in the East will easily be

absorbed during the next few months, and this will do much to aid the general position of the metal. Statistically, tin is very healthy, and if the demand expands according to anticipations in the closing months of the year better prices will undoubtedly be seen. The stocks in this country are very small. Lead has been strong and active, with a good upward movement in values. The supplies coming into the country during the last two months have been exceptionally heavy, but all the metal has been absorbed, and this week high premiums have been paid for prompt delivery. There was at one time a difference of 20s per ton between October and January, and this large backwardation tells its own tale. The imports so far this month have been light, and there is every indication of the shortage continuing, although lead has been put lately into private warehouse. Nearby lead has gone well over £27 per ton, and will go higher. The market for zinc (spelter) has also been very firm, and the shortage of the metal is now beginning to reveal itself. Galvanisers have been buying again, and there are very few sellers. Sales of over a thousand tons a day have been recorded on the open market, and in view of the expansion in home requirements and the active demand for galvanised sheets on foreign account, better values will have to be offered to attract sellers. The news from the United States is better about spelter, and there is very little hope of attracting much from that quarter. Generally speaking, the tone of all the metal markets is more buoyant, and the Government plans have done much to help sentiment.

The Channel Islands and Imperial Expenditure.—Both the Channel Island Legislatures have received the Reports of their Select Committees on the request made by the Home Secretary last February for a contribution towards the cost of the war. Jersey has postponed consideration of the subject till the islanders have expressed their opinion; Guernsey for four months, pending further inquiry into the local resources and revenues. Both Reports, however, are adverse to compliance. The Jersey Committee doubts whether the island Legislature can tax its subjects, without their consent, for the benefit of another community; but, subject to such consent, the Majority Report suggests that the island should make a single payment of £250,000, and take over the responsibility for the salaries of certain of its officials now paid out of local Crown revenues—an annual burden of about £920. The Minority Report suggests that the island should become responsible for the war pensions payable to its inhabitants or their dependents, the salaries above mentioned, and the British share of the expenditure on the local militia and education. The Guernsey Committee points out, what was made clear last February, that the Treasury suggestion of a payment by the island of £275,000 annually is based on the figures of a single year of exceptional prosperity, and that an annual payment would tend to become perpetual and to be spent in meeting charges which the States (the island Legislature) would have no share in fixing; so that it might eventually come to be paid independently of their consent. But the Commission holds that the States, while reaffirming the immunity from Imperial taxation, might assume the burden of the war pensions payable to men recruited in the island and their dependents, and to this end might offer a total sum of £375,000 in 15 annual payments of £25,000. Three members would limit the annual payments to ten, totalling £250,000; one, on constitutional grounds, holds that the States should take over the whole charge for pensions of men recruited in the island and their dependents, rather than make annual payments, which might eventually be demanded for other purposes, and become established and continuous. The annual cost of this arrangement (excluding the annual cost of administration, now £5,000) is estimated at £40,000 for the first five years, £24,000 for the second, and £14,000 for the third, with a subsequent amount which cannot be estimated, but will gradually disappear. The £5,000 for administration might be set off against the death duties paid to the British Treasury in respect of estates of persons dying in the island, which the States claim should be credited to Guernsey, while £22,500 might be raised annually by raising the local income-tax (now 6d) to 1s 1d

in the £. An equal sum might be raised by indirect taxation. That one of the two courses suggested will be adopted seems certain, and the second has the strong support of the Bailiff. Apparently island feeling is largely adverse to contributing. But a German victory might have involved the transfer of the islands to Germany with the French coast as far as Cherbourg—a course actually advocated in Germany during the war—and only a much larger payment, if it were possible, would adequately compensate for their escape from this fate.

Conditions in Honduras.—Adverse climatic conditions writes a correspondent, have seriously interfered with the fortunes of Honduras. Drought, wind storms, out of their season, and serious conflagrations have been experienced. The banana plantations, upon the success of which the country largely depends for its revenues, have suffered grievously, the loss of fruit crop being estimated at between 25 and 50 per cent., although certain districts have felt the effects somewhat less than others. The sugar cane harvest, on the other hand, which suffered from fires, will produce little more than 30,000 tons, compared with an average yield of 40,000 tons, producing some 40 per cent. of the country's purchasing power. Even silver mining has been affected by the shortage of water and the low prices ruling, the production of the white metal during the past few months having been considerably below the estimates. These conditions will, naturally, interfere to some extent with the purchases customarily made by the native, Chinese, and Syrian importers in preparation for the Christmas season; merchants have little ready money to invest in fresh stocks, and credit conditions remain far from encouraging. Except in Tegucigalpa, the capital, where the monetary position has been somewhat relieved, cash is tight and payments are slow, while in certain other sections financial embarrassments are reported.

Union Cold Storage.—Although the report and accounts of the Union Cold Storage are dated October 9th, they cover the period for the year ended December 31, 1922. Thus details of recent developments are not mentioned, and shareholders must in consequence content themselves with what is placed before them. Of course, we quite understand that returns from abroad have to be incorporated into the figures of the home concern, and that no doubt this accounts for the difficulty in presenting a more up-to-date balance-sheet. Further, most shareholders will consider that a little incident of this kind is amply set off by the remarkable progress of the undertaking, which continues without regard to good or bad industrial periods. Again we have to chronicle a year with a fresh record, profits climbing from £558,675 to £581,589. The table below compares results for a number of years:—

	1913.	1917.	1918.	1919.	1920.	1921.	1922.
Gross profits	£ 137,094	£ 289,922	£ 295,424	£ 306,360	£ 467,393	£ 558,765	£ 581,589
Deb. interest, &c.	31,727	66,637	62,333	58,133	72,118	74,676	83,423
Net profit	105,367	223,285	231,091	248,227	395,275	483,999	498,166
Brought forward	23,806	45,014	45,454	51,066	71,717	87,497	104,028
Reserve & depreciation	126,173	268,299	276,545	299,293	466,992	571,496	602,194
Prof. dividend	43,185	75,048	76,679	78,777	87,939	108,667	133,472
Ord. dividend	46,109	117,797	118,800	118,800	261,556	328,800	328,800
Carry forward	..	30,000	30,000	50,000	30,000	30,000	30,000
	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)
	36,879	45,454	51,066	71,716	87,497	104,028	109,922

As will be observed, the 10 per cent. distribution on ordinary capital is maintained, and a slightly larger sum is carried forward. Moreover, reserve and depreciation obtain £133,472, against £108,667 a year ago. And this is not all, for we read that "there has been transferred to depreciation reserve £500,000, being surplus resulting from the sale of investments." The balance-sheet contains many features which no doubt will be dwelt upon at the annual meeting next Tuesday. For instance, the portmanteau item, debts due to the company, stocks, &c., has grown from £3,980,202 to £5,366,154; we would suggest that this should be separated into at least three items. "Sundry creditors" have also increased; the latest figures of £6,263,544 compare with £4,540,135 for the previous year. A curious point about the securities of this undertaking is the comparatively low price of the

4½ per cent. debenture stock. This is redeemable at par in 1928, and there is a total of £948,929 now outstanding, a transaction being lately effected at 93½. The total authorised and issued amount of these debentures was £1,615,000, but £666,071 has since been redeemed, including £64,224 during 1922. At the present market price a yield, including profit on redemption, is shown on this stock of close upon £5 16s per cent. The balance-sheet will be found analysed in our usual column.

United Dairies.—Again we have to record another successful year of trading for United Dairies, Limited—that is as far as can be judged by the meagre details vouchsafed in the report and accounts in front of us. This, the eighth annual report of the company, shows the position of the undertaking up to June 30, 1923, the accounts including dividends from investments in subsidiary companies to March 31, 1923. The following table shows the remarkable progress made by this concern during the past five years:—

Year Ended June 30.	1919.	1920.	1921.	1922.	1923.
	£	£	£	£	£
Preference shares	1,344,508	1,555,284	1,652,564	1,881,674	1,893,243
Ordinary shares	1,086,173	1,726,052	1,798,677	2,027,125	2,038,403
Issued share capital	2,430,681	3,281,336	3,451,241	3,908,799	3,931,646

Divd. on ordinary share	10%	12½%	12½%	12½%	12½%

It will be recalled that for some years past this company has been mainly engaged in absorbing dairy businesses and companies, issuing its own shares in exchange, and if the above figures really do represent the progress of the company, this policy of expansion may be justly claimed to have proved itself. We say advisedly if these figures represent the progress of the company, for although £100,000 has been placed to reserve, bringing the reserve fund up to a total of £250,000, it is obvious that much more light is needed on the situation before any definite pronouncement could be made. The balance-sheet and accounts are in themselves clear though concise statements of affairs, as far as they go, but this is clearly a case where the general investing public is entitled to know something further. Here is a concern of the controlling variety, with investments and loans amounting to £4,026,009 out of assets totalling £5,399,309. Under this heading we have the main business of the parent company—that of looking after its absorbed subsidiary companies. This is all we are permitted to know about them in these accounts. Even the auditors are driven to observe in their report that "the investments and loans in subsidiary and other companies are taken at, or under, cost price," and proceed to say that, subject to this observation, the balance-sheet is properly drawn up. What the precise value of this observation may be we do not know. Obviously, what shareholders and outside investors want to know is what is the actual value of the assets represented by these shareholdings and other investments. Is it to be assumed that all the various small companies which go to make up this combination have each their separate reserve fund? If so, it would be interesting to know if reserves are made on some common basis. It is doubtful if the reserve of £250,000 shown in the balance-sheet is the full story of provision made for wastage and depreciation.

Rhodesian Mining.—On the financial side the results secured last year by the Gaika correspond very closely to those of 1921-22—in fact, the profit of £26,500 is within £100. However, the dividend is raised from 7½ per cent. to 10 per cent., leaving a somewhat reduced balance to go forward. The performance of a largely increased amount of development work has expanded the ore reserves by 32,000 tons to 78,600 tons, but the value is given as 10.2 dwts in place of 13.6 dwts a year ago. The latter feature is explained as due in some degree to the conservatism of the methods of computation employed. Probably many of the shareholders will not be pleased to learn that the one-time projected return of capital has been indefinitely postponed, further considerable expenditure being in prospect. Whether the development position warrants the extension of the reduction plant is somewhat doubtful. A noteworthy

change for the better is shown by the annual statement of the London and Rhodesian Mining and Land Company, there being a profit of £35,500, as against only £9,250 for 1921-22, and an actual loss of £7,000 in the 12 months ended June 30, 1921. The company has a reduced but still large holding of Cam and Motor shares—145,500; and there is the point that the market value of its investments at the date of the balance-sheet amounted to £554,850, or more than double the book entry. The company's portfolio includes a large interest in the recently floated Sherwood Starr concern; the Sabiwa mine is being worked. It is thought that the dividend stage is now within sight.

Uruguayan Railways.—The report of the Central Uruguay Railway Company of Monte Video, Limited, and of its three extension systems for the year ended June 30th last again shows a substantial improvement on the previous year both in the direction of increased receipts and of reduced expenditure. The results for the combined system for a number of years past are set out in the following table:—

Year.	Gross Receipts.	Expenses.	Profit.	Percentage of Expenses to Receipts.
	£	£	£	%
1912-13	1,243,393	669,008	574,385	53.81
1913-14	1,103,229	622,727	480,502	56.44
1914-15	946,767	562,684	384,083	59.43
1915-16	1,088,956	669,208	419,748	61.45
1916-17	1,178,502	771,433	407,069	65.45
1917-18	1,542,320	1,010,288	532,031	65.50
1918-19	1,792,804	1,219,680	573,123	68.03
1919-20	1,892,902	1,245,944	646,958	65.82
1920-21	1,879,630	1,504,995	374,635	80.07
1921-22	1,891,302	1,207,917	683,385	63.87
1922-23	1,989,203	1,172,769	816,434	58.96

The profit figure is easily the highest recorded, while the ratio of expenses to receipts is the lowest since the year 1913-14. Working expenses were reduced by £35,100, or 3 per cent., largely as a result of the lower cost of engine fuel. The coal bill was £93,700, as against £167,000 for the previous year, while the cost of oil was £76,900, against £37,600. The consumption of coal was reduced from 44,516 tons to 34,322 tons, while oil consumption rose from 9,438 tons to 21,816 tons, the mean consumption per engine mile being 40.76 lbs of oil, against 51.04 lbs of coal. The increase in receipts was principally due to the exceptionally heavy cattle traffic handled. The number of passengers increased by 7 per cent., but passenger receipts declined by 0.44 per cent. Goods receipts declined by 3.26 per cent., the average receipt per ton being 8 per cent. less at 24s 10d, although the tonnage was 5 per cent. greater. Live stock receipts increased by nearly 39 per cent. The separate figures for the main line and the three extensions read as follows:—

	Gross Receipts.	Working Expenses.	Profit.	Percentage of Expenses to Receipts.
	£	£	£	%
Central Uruguay	1,378,681	873,437	505,244	63.35
Eastern Extension ..	310,409	142,993	167,416	46.07
Northern Extension..	161,478	76,702	84,776	47.50
Western Extension ..	138,635	79,636	58,999	57.44

The greater movement of livestock is also responsible for better results shown by the extension lines. The Eastern and Northern Extension companies each show an expansion of over 9 per cent. in gross receipts, but expenses are also higher. Profits show an increase of 12.29 per cent. for the Eastern, 11.92 per cent. for the Northern, and 1.35 per cent. for the Western. Both the Eastern and Northern Extensions show a slight reduction in the ratio of expenditure, but the ratio for the Western is a shade higher. Thanks to the continuance of an adverse exchange, the loss on remittance of funds to London during the year amounted to £155,630, as against £182,100 12 months ago, and this is charged to net revenue account. After paying fixed charges and the 5½ per cent. preference dividend, the main line accounts show a balance of £165,600, out of which £20,000 is transferred to Exchange Reserve account, and a dividend of 4 per cent. is paid on the ordinary stock, as against nothing a year

ago, leaving £43,600, or £8,300 more, to be carried forward. The Eastern Extension pays 7½ per cent. on its ordinary stock, as against 6 per cent. a year ago, while the Northern pays 5 per cent., as against 4½ per cent.

Siamese Syndicate.—Our Mining correspondent writes:—Some disappointment seems to have been occasioned amongst those interested by the report for 1922. It is true that the profit of £26,300 only exceeds by a trifle that of the preceding year, while the final dividend of 5 per cent. makes a total of 15 per cent., as before. But the accounts do not, of course, reflect the benefit to the company of the greatly improved price for tin which has ruled during the current year, especially in the spring and just recently. Nor do the directors refer to the subject, although the general manager observes that since the end of 1922 "we have seen a rise in tin that makes a vast difference to our position." Last year a record quantity of gravel was treated, and costs were reduced, but the yield declined owing to the exhaustion of a patch of exceptionally rich ground. Several additional areas have been acquired. The syndicate, it may be recalled, is a finance as well as a mining enterprise. An interim dividend of 10 per cent. on account of the current year was paid in July last.

The Reparation Account.—It was the intention of the Reparation Commission to publish up-to-date summaries of their accounts every six months. But since the changes occurring in the first six months were comparatively slight they have deemed it sufficient to issue a *communiqué* containing one condensed table. On the six months the total of French and Belgian receipts from Germany, whether in cash or kind, have only made a trifling advance. But the Italian total has increased by 62.5 million gold marks in kind and 32.5 millions in cash, while British receipts in kind have received an accretion of just over 100 millions. The explanation of the last-named increase presumably is that the proceeds of the Reparation Recovery Act are included under the main heading of "Deliveries in kind." Roumania in the same period has received the equivalent of 22 million gold marks in kind, and Serbia 54 millions. These are the only changes on the six months worthy of note. The following shows the total credited to the Allies as receipts and the distribution thereof up to June 30, 1923:—

WHAT THE ALLIES HAVE RECEIVED.
(In Millions of Gold Marks.)

	Kind (including Reparation Recovery Act).	Cash.	Property in Ceded Territory.	Total Distributed to Allies.	Repayment of Coal Advance, Armies of Occupation, &c.	Net Receipts
Great Britain	613	641	5	1,255	1,059	196
France	1,358	144	302	1,804	1,562	242
Italy	305	33	..	338	39	299
Japan	9	..	..	9	..	68
Belgium	648	1,082	59	1,730	277	1,453
Poland	15	..	..	15	..	13
Greece	13	..	1,776	1,791	..	1,791
Roumania	32	..	..	32	..	32
S. C. Slove	204	..	..	204	..	204
Czecho-Slovak	16	..	6	22	..	22
Portugal	12	..	..	12	..	12
Total	3,225	1,900	2,144	7,269	2,937	4,332

The figure of 1,776 million gold marks credited to Poland in respect of ceded property is given in the condensed statement as in suspense, because the valuation has not been agreed. To arrive at the payments which Germany is credited with having made, some additions have to be made to the total of 7,269 million gold marks distributed to the Allies. In suspense account are deliveries in kind 533 millions, made up of 393 millions for "portion of value of ships," submarine cables 49 millions, miscellaneous 92 millions; also, under the heading Ceded property, Dantzig 309 millions, "portion of value of Saar Mines 100 millions." The two items in inverted commas represent the difference between the amount credited to Germany for ships handed to Britain and the

Saar Mines handed to France, and the amount at which these respective countries agreed to their entry as receipts. These items together bring the total payments by Germany up to 8,214 million gold marks.

Oversea Correspondence.

UNITED STATES.—COMMODITY PRICES IN SEPTEMBER.—COTTON AND GRAIN CROPS—AUGUST RAILROAD EARNINGS.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 8.

COMMODITY price levels as a whole showed another advance during September, Bradstreet's index number as at October 1st, namely, \$13.0974, representing a gain of 1.3 per cent. over that of September 1st. Price movements among the different groups, however, and even with the same groups were irregular. Seven groups of products advanced, four declined and two remained unchanged. In the list of individual commodities, 30 articles advanced, an equal number declined, and 46 were unchanged. The rise in the textile group was exceptionally marked, owing to the upturn in raw cotton, and in cotton goods prices, and in raw silk, the latter advancing sharply on account of the Japanese disaster. Other groups which ruled higher last month were provisions, meats, fruits, breadstuffs, naval stores, and building materials. Declines were recorded in live stock, because of heavy marketing, in miscellaneous products, hides, and leather, and vegetable oils. The coal and coke group showed no net change, declines in bituminous coal and coke offsetting the rise of 75 cents a ton in anthracite, caused by the miners' strike. Drugs and chemicals also showed no change on the month. The advance in the index number in September was approximately double the rise during August, and was the second upturn in price levels after the steady declines from March until August. The October 1st index number shows an increase of 2 per cent. over this year's low reached in August, but is 4.4 per cent. below that of January 1st. It is 4.9 per cent. above October 1st a year ago, 23 per cent. higher than the low point of June 1, 1921. As compared with February 1, 1920, it represents a decline of 37 per cent., but is 50.4 per cent. above the August 1, 1914, level.

Latest advices state that recent heavy rains in parts of the corn belt did considerable damage to the crop, which has made slow progress. Private estimates of the corn crop now range from 2,982,000,000 to 2,992,000,000 bushels, as against 3,076,000,000 indicated by the Government report last month, and last year's harvest of 2,891,000,000 bushels. Frost has also reduced the prospective yield, one authority estimating the loss from that cause at 70,000,000 bushels in four of the principal producing States, and at 86,000,000 bushels for the entire country. The November 1st carry-over is now estimated at 60,000,000 only, as against 176,000,000 a year ago. The present indicated crop, plus the carry-over, places this season's supply of corn at 3,050,000,000 bushels, compared with 3,068,000,000 last year. During the past week there was increased trading in all grains, especially in corn, which scored further sharp advances, making the rise in about a fortnight 8 to 11 cents a bushel, approximately. In leading Western markets, the price of corn last week passed the dollar level for the first time since October, 1920. The vigorous upturn was attributed to light offerings and active demand from shippers and consumers in need of supplies. Shippers were apparently short of corn for October loading at Chicago. Rains throughout winter wheat sections have helped soil conditions, facilitating ploughing and seeding of winter wheat. In Kansas from 50 to 75 per cent. of winter wheat is reported seeded, with early plantings up in some localities. Acreage sown to winter wheat is being reduced generally. Private estimates of spring wheat yields range from 217,000,000 to 225,000,000 bushels, compared with 276,000,000 last year, making the total wheat crop 785,000,000 to 793,000,000, against 862,000,000 actually harvested last year. The oats crop is variously estimated at

1,272,000,000 to 1,293,000,000 bushels, as against 1,311,000,000 a month ago, and 1,201,000,000 harvested last year.

While the cotton trade generally expected that the Government's report on the cotton crop, as at September 25th, would show a heavy decline in condition, the forecast of a yield 227,000 bales larger than was indicated in the previous report proved a genuine surprise, which was immediately reflected in a violent slump in cotton market prices. The Department of Agriculture's condition report and forecast, which will be the last of the season until the December estimate, placed the September 25th condition of the crop at 49.5 per cent. of normal, indicating a yield of 137.7 lbs per acre and a total crop of 11,015,000 bales, as compared with last month's forecast of only 10,788,000 bales, which was based on a condition of 54.1 per cent., as at August 25th, indicating a yield per acre of 134.8 lbs. In view of the abnormally small carry-over from last year's crop, there is not likely to be enough American cotton for all requirements, even if the crop proves to be as large as now indicated, provided consumption reaches last year's total. As previously pointed out, a big unknown factor is what the consumption will be during the coming year. All seasonal lines of cotton goods are being purchased quite freely for current autumn trade, and distributors are urging that deliveries of merchandise under order for this season be expedited. On the other hand, buyers generally are making comparatively few purchases for more distant requirements, and at least one of the largest manufacturers, probably the largest producer of gingham, has announced an indefinite closing of the cotton goods division of that concern, due to the meagre volume of forward orders received and to a desire not to accumulate stock at present high costs of labour and raw cotton in advance of actual demand for goods. Prices of most finished cottons have been revised upward sharply in recent weeks. Buyers hesitate to operate for the future, fearing that the higher levels will check distribution.

Reports filed with the Inter-State Commerce Commission by all first-class railroads show that those carriers earned net operating income during August of \$98,381,200, equivalent, on an annual basis, to a return at the rate of 4.94 per cent. on their "tentative valuation." That exhibit compares with \$84,591,400, or 4.93 per cent., in July of this year, and with \$51,475,400, or 2.64 per cent., in August, 1922. Total operating revenues in August last amounted to \$561,456,700, representing an increase of \$90,502,960, or about 19 per cent. over the same month a year ago, while operating expenses of \$424,751,400 showed an increase of \$39,650,900, or 10 per cent. For the first eight months of this year, ending with August, Class 1 railroads had a total net operating income of \$625,634,900, equivalent to an annual return on their investment at the rate of 5.40 per cent., as against \$466,477,100, or 4.11 per cent., for the corresponding period of 1922. The more favourable earnings this year are chiefly responsible for the sharp advances lately witnessed in stock market prices of railway shares, although in the case of some issues a factor largely contributing to the rise has been the expectation of dividend increases or resummptions.

FRANCE.—REPARATIONS DEADLOCK—COMMODITY PRICES—REVENUE RETURNS.

(FROM OUR CORRESPONDENT.)

PARIS, October 17.

POLITICALLY, the Franco-German situation is once more at a deadlock. Herr von Hoesch, the German Chargé d'Affaires in Paris, called on M. Poincaré this morning and presented two very short Notes from Berlin, in which the German Government notified the suppression of the coal tax and of export licences, and its inability to finance further deliveries of reparation coal and coke from the Ruhr. The object of Herr von Hoesch's visit to the Quai d'Orsay was evidently to induce the French Government to enter into some kind of conversation in regard to the situation in the Ruhr, but in this he signally failed. M. Poincaré's reply was a polite regret that he was unable to discuss the question of how the German Government was to pay for the coal and coke Germany is under the obligation to deliver on reparations account, and a plain-spoken

intimation that the cessation of deliveries of reparation coal was regarded by France as a proof that passive resistance still continues. In the circumstances he declined to discuss the matter further, and the German envoy left, after a conversation of nearly an hour's duration, with the intimation that if Herr Stresemann had any proposals to submit he should lay them before the Reparations Commission. A similar effort by the German Chargé d'Affaires in Brussels met with an equally sterile result. Equally negative has been the indirect attempt of the Belgian Government to bring its new proposals for a settlement with Germany before the Reparation Commission. The latter body this afternoon formally discussed the manner in which the Belgian proposals should be handled by it, and decided to refer them for consideration by committee, which can only be interpreted, in the circumstances, as a polite manner of shelving the matter indefinitely. French opinion in general, both official and otherwise, regards the deadlock as insoluble at this end until the Berlin Government shows, by definite and concrete action of its own, that it is prepared to bring about such a house-cleaning in Germany itself that any conversations that may be opened between the two parties to the controversy may have at least a chance of leading to practical results. Meanwhile, like their predecessors, the Loucheur-Rathenau and the Lubersac-Stinnes agreements, from which so much was expected in the way of putting reparation deliveries on a rational basis, the agreements tentatively come to at Dusseldorf between the French Mining and Metallurgical Commission in the Ruhr and the Phoenix group of colliery owners have fallen stillborn. The agreements have not yet been actually signed, and there now seems little prospect that they ever will be. The deadlock is complete.

The quasi-capitulation of Germany in the Ruhr is regarded here as very largely due to recognition of the fact that, as disclosed by latest returns of the production of iron in France, the principal object of passive resistance has failed. One reason why the Berlin Government, backed by the German ironmasters, persisted so tenaciously in a wearing down struggle was their belief that sooner or later the French metallurgical industry would be compelled, in self-defence, through shortage of combustibles, to come to a compromise. The figures now published show that whereas the average monthly output of metallurgical iron in France during 1920 and 1921 averaged 300,000 tons, and in 1922 420,000 tons, it has risen steadily, since the occupation of the Ruhr began, from 305,000 metric tons in February to 330,000 tons in April, 447,000 tons in June and July, and 486,000 tons in August. The average monthly output in 1913 was 435,000 tons, but this, of course, was exclusive of the production of Lorraine. It should be pointed out, moreover, that the output for December, 1922, the last complete month before the occupation of the Ruhr began, was 515,000 tons, the largest ever reached in France. The output of steel in August (the latest available return) amounted to 452,000 tons, which is the highest figure reached since 1914. This total was 52,836 tons more than that for July, and 37,767 tons more than for December, 1922.

The index figures for wholesale prices for the month of September, which have just been issued by the Statistique Générale indicate an increase of 12 points as compared with that for August (which was 7 points higher than that for July). The detailed figures are as follows:—

	August (Corrected).	September (Provisional)
General index figure (45 categories) ..	477.5	489.7
Foodstuffs (total of 20 ") ..	442.0	472.1
Vegetable foods (8 ") ..	396.1	409.7
Animal foods (8 ") ..	476.3	498.5
Sugar, coffee, cocoa (4 ") ..	464.9	544.5
Raw materials (total of 25 ") ..	505.9	503.7
Minerals and metals (7 ") ..	474.5	462.2
Textiles (6 ") ..	651.9	651.0
Various (12 ") ..	451.4	454.2

The index figure at the end of 1922 was 418.4, which, in accordance with normal practice, is based on 100 as representing the mean during the period 1901-1910. The figure representing wholesale prices for September, as compared with the period 1901-1910, indicates an increase of 389.7 per cent. last month, against an increase of 377.5 per cent. in August, of 370.1 per cent. in July, and 318.4 per cent. at the end of 1922. As a consequence of the rise

in September, wholesale prices were brought back to practically the same level as in March last, which were the highest yet recorded during the present year, and were 390 per cent. above those recorded during the period 1901-1910. The principal increase during September was in wholesale food prices, sugar and coffee, &c., marking a rise of about 80 points. The figure representing retail prices in Paris is based on the quotations during September for 13 articles of the first necessity—namely, bread, meat, bacon, butter, eggs, milk, cheese, potatoes, haricot beans, sugar, oil, petroleum and methylated spirit. The figure for September indicates an average increase equivalent to a total of 239 per cent. on retail prices that prevailed in 1914, as compared with 228 per cent. in August, 221 per cent. in July, 231 per cent. in June, and 205 per cent. at the end of 1922.

The Ministry of Finance publishes this week the revenue returns for September, which show that during the last month the yield from taxation of all kinds and from the State monopolies (including income-tax and exceptional resources, such as the special tax on war profits) amounted to 1,813,873,000f. Of this amount, 136,906,600f was derived from exceptional resources, including 95,416,100f from the tax on war profits. Receipts from normal resources, therefore, amounted to 1,676,966,400f, or 363,107,000f more than during September, 1922. The total received from normal resources during the first nine months of 1923 has amounted to 2,026,689,000f more than during the corresponding period of 1922. The income-tax yielded 301,305,200f during September, 1923, as against 181,073,400f during the corresponding month last year. The most striking feature in the return for the month is the remarkably satisfactory yield from the tax on turnover, which has now apparently been got on to a stable basis, as its initiator, M. Klotz, predicted some years ago would eventually be the case. This much-discussed and much-objected-to tax produced in September 259,182,000f (or 72,246,000f more than in September, 1922), which is the highest figure it has yet reached in any one month, and also nearly 26½ million francs above what was expected from it last month, when the Budget estimates were drawn up. Customs, on the other hand (largely in consequence of the poor situation of the franc), produced only 126,653,000f, or 11,509,000f less than in September, 1922, and over 20 millions less than the Finance Minister expected. The revenue from posts, telegraphs and telephones was exceptionally good, amounting to 127,720,000f, or 33,951,000f more than in September, 1922, while tobacco, matches, and other monopolies yielded 164,937,000f, or nearly 15,000,000f more than during the corresponding period of last year.

GERMANY.—LABOUR TROUBLES—DICTATORSHIP REFORMS—NEW CURRENCY—FINANCES—EXCHANGE—AUGUST TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, October 16.

THE Stresemann Cabinet, fortified by the new Empowering Law, which creates an almost unlimited dictatorship, is faced with a new trouble in the very rapid increase of unemployment. This has led to riots in the provinces and to serious riots to-day in Berlin. It is to be feared things will get worse. Already in the week September 23rd-29th, the last period for which data are available, there were 150,149 unemployed and 595,317 short-timers among 1,769,001 members of the Metal Workers' Union alone. The figures for to-day would, if available, show conditions still worse. If it is remembered that little over a year ago there were only 20,000 unemployed in all trades, the aggravation will be realised. It has often been pointed out from here that the currency depreciation, as long as it quickened industry, even for the unhealthy motive of the "flight from the mark," could have no very serious consequences. But production, which all along was the main thing, has now been badly shattered, firstly, by the French Ruhr occupation, and, secondly, by the adoption of gold mark calculation, with its result, the great upward jump in gold prices. At present all the disadvantages of a deflation crisis without any of the advantages are being experienced.

The Stresemann Cabinet is showing praiseworthy energy, and, incidentally, pleasing those enemies of Par-

liamentary Government who believed that the institutions of the Republic were the cause of the inertia displayed in financial and economic matters. The Empowering Bill became law in the form described last week, and in all spheres that count in the present crisis the Cabinet can do absolutely anything it likes. It could even execute citizens by decree and without trial if only a financial or economic interest were concerned. Into the character of Dr Stresemann's dictatorship measures so far there has not been much examination; the nation prefers even doubtful measures than none, and is quite content to wait for results out of the sum of measures. Outside of the dictatorship powers two important reforms have been put through. Firstly (under Art. 48 of the Constitution, without waiting for the Empowering Bill, and undoubtedly illegally), taxation has been put on a gold basis. Exceptions are Customs, the tobacco tax, and some other taxes the nominal yield of which already rises in accord with the currency depreciation. The law is a complicated one. With some exceptions, it exempts from this "valorisation" all taxes falling due before August 31st; and provides that the mark totals of taxes falling due after that shall be increased according to a varying index based on the value of the mark. If this is carried out fully, the Budget ought to balance within a reasonable time. Further, the law provides for complete obliteration of petty tax claims, and cessation of petty assessment disputes. This provision ends a fearful scandal of official inertia and unadaptability. Next, in the form of a Bill, not yet passed (the subject being excluded from the scope of the Empowering Bill) is a practical abandonment of the Eight Hours' Day. In future the maximum eight hours (which remains theoretically the norm) may be lengthened (1) by agreement between employers and employees, (2) by an official decree. Formerly the employees' consent did not justify longer than eight hours. In ordinary trades the new maximum, whether by agreement or by official decree, is to be ten hours; in underground mining and in unhygienic occupations the maximum is eight hours. At present the hours in underground mining are seven.

Of the currency reform, which will be simply promulgated under the Empowering Law, the final form was announced to-day. The "Neumark," which was first a "Bodenmark," now becomes a "Rentenmark," and the issuing bank a "Rentenbank." The capital of the bank and security for its note issues, totalling 3,200,000,000 gold marks, will be raised half by mortgages to a value of 4 per cent. of the capital values on agricultural land (city land must, owing to the expropriation of house property, be exempted), and half on security given in the shape of mortgages or bonds by industry. The bank will be represented by a council of fourteen, representing the different classes of compulsory mortgagors. On security of the mortgaged values, the bank will issue 5 per cent. mortgage bonds, which will play the rôle of security for "Rentenmark" notes in denominations of from 1 to 1,000 r.m. The chief difference between this and the earlier official schemes is that the paper-mark will not be converted, and will remain legal tender; but increase of the paper-mark circulation will be prevented by depriving the Republic of the right of having its Treasury bills discounted at the Reichsbank; and the Reichsbank will prepare to return to its functions as a gold-mark bank. The Rentenbank will advance the Republic 1,200,000,000 r.m., sufficient, it is hoped, to cover deficits until the Budget is balanced. "Rentenmarks" will be accepted in payment of taxes and by all public institutions. In order to provide currency (in particular for moving of the crops) during the next weeks, small lots of "gold loan" (i.e., paper mark loan on a gold index basis) will be put into circulation immediately to a total of 200,000,000 g.m.

This scheme is announced as provisional, and therefore admittedly as not fully satisfying its authors. That can be understood, but the scheme seems to be better than none. It depends ultimately upon the balancing of the Budget, because if the Budget is not balanced before the Rentenbank's credit is exhausted, the credit will have to be increased, or some kind of new inflation resorted to. The maintenance of the home buying power of the "Rentenmarks" is assumed to be assured by the fact that the State will take them at their nominal gold value. This claim seems reasonable, because the Rentenmarks will

represent gold mortgage bonds, and as taxes are henceforth to be on a gold basis, the Rentenmark, though not convertible into gold, will be usable for payment of the gold tax claim. As this putting of taxes on a gold basis, already enacted on paper, is undoubtedly the condition precedent of balancing the Budget, the whole scheme has a certain unity. A danger is that declining production, and the chaos produced by the French on the Ruhr (which shows no sign of ceasing) may make it impossible to extract from the population the real taxation necessary for balancing the Budget. This was certainly not the case before the Ruhr complication. Another doubtful point is the retention of the paper mark. The paper mark must continue to have a varying, perhaps declining exchange. The stoppage of further inflation in no way guarantees stability, since over considerable periods before 1921, when inflation was so small that it could not materially influence the mark's home buying power, the mark exchange fell headlong abroad. In that case paper-mark prices will continue to rise, as paper rouble prices continue to rise in Russia, which has also a second stable currency, and the insufficiency of the stable "Rentenmark" circulation will prevent, again as in Russia, its general use. A paper-mark exchange fall associated with stable circulation would deprive the whole paper-mark circulation of practically all buying power, and as there would be no motive for rapid circulation of "Rentenmarks," their insufficiency for the purposes of business would increase. There are other doubtful points, on the basis of which some newspapers, perhaps precipitately, prophesy failure of the scheme.

The mark exchange collapse of last week led to a renewed frantic demand for cash; on one day banks paid out only 20,000-mark notes, worth each about one-millionth of an English pound. As usual, the Reichsbank's last (belated) statement for the end of the third quarter of 1923 gives no idea of to-day's rate of inflation; nevertheless, note circulation trebled in the week from 8,627 to 28,228 billion marks, Treasury bill discounts increased from 12,229 to 45,216 billions, private bills from 2,200 to 3,660 billions. Outstanding Darlehns loans rose to 941 billions. The allowable maximum of these loans has been raised from 300 to 5,000 billions. The Reichsbank is about to issue 10 milliard-mark, later 50 milliard-mark notes. The 58,000 billion marks which the Government was last week authorised to raise on Treasury bills will probably be exhausted before the Rentenmark credit is opened. The Customs gold supplement has been raised (from the 10th) to 13,699,999,900 per cent.

The Government has withdrawn the decree of March, 1919, forbidding import and export of Russian paper roubles. The paper rouble is beginning to be regarded by mere mark holders with a certain respect. The dollar Treasury bills, which are payable in gold and guaranteed by the Reichsbank, hold their value well, being to-day quoted at 4.5 milliards against a dollar exchange of 4.1 milliards. Also the "gold loan" keeps on parity with the dollar exchange. Money in the last few days has again been tight, the day money rate having risen since Friday last from 2 to 4 per cent. per day. This is partly caused by congestion in banking business between Berlin and the provinces.

Trade statistics (again no values are given) for August are, in metric tons:—

	August. 4,120,300	July. 4,159,600
Imports—All.....	253,100	302,000
Thereof—		
Food	3,684,000	3,697,200
Raw & half-finished materials	182,700	159,000
Manufactured goods.....	1,074,500	1,053,300
Exports—All	94,800	90,300
Thereof	596,300	646,200
Raw and half-finished materials..	383,400	316,700
Manufactured goods		

Coal imports were 2,300,000 metric tons, about the same as in July; iron ore only 120,241 metric tons, against a monthly average in 1922 of 917,811 metric tons; exports of rolled and forged iron 91,547, against a monthly average of 193,002 tons; of machines 24,689 tons, against a monthly average of 39,914 tons. Exports in August in weight were 26 per cent. of imports, against a monthly average of 47 per cent. in 1922, but they were above the lowest point of 16 per cent. of April.

An attempt to bring down gold prices must be one of

the Government's economic measures if exports are to be fostered. This policy presents difficulties owing to the necessity of keeping up gold railway rates. The first measure, however, has been taken by the abandonment of the 30 per cent. coal tax, which was first imposed during the war, and which reached in 1921 a highest rate of 40 per cent. This has been accompanied with a reduction in the net price of coal. A reduction of pig-iron and steel prices, which are now quoted in sterling and gold-mark respectively, is due.

CANADA.—FEDERAL LOAN SUCCESS—CROP MOVEMENT—ALBERTA WHEAT POOL—FORESTRY COMMISSION—MANUFACTURERS AND PROTECTION—CANADA—AUSTRALIAN COMMERCIAL TREATY—BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 8.

THE Canadian Government have every reason to feel satisfied with the result of the domestic loan which they have just issued. Encouraged by the avidity with which the preliminary offer of \$50,000,000 was taken up, they decided to abandon their plans for an issue in New York, and raise at home the whole of the 172 million dollars needed to meet maturing obligations. When subscriptions continued to pour in in unexpected volume, Mr Fielding determined to utilise the opportunity to accumulate more funds, and the books were only closed when 200 million dollars had been subscribed. Of this sum about a fourth, or 50 million dollars, represents conversions of the 1923 loan, and the latter would have been greater if a number of holders had not been late with their applications. Several very large subscriptions were received from American corporations, chiefly insurance companies, who had intended to subscribe to the New York issue if it had materialised. The western crop is now pouring down through the Winnipeg funnel to the head of the Great Lakes in great volume, and it seems only a question of time when a serious congestion will develop. Some American vessels have come into the Lake ports to load cargoes, and the Minister of Trade and Commerce professes complete confidence that they will all abandon their boycott and help to move the Canadian crop. But the Winnipeg grain merchants are not so optimistic, and prophesy disastrous consequences unless they are induced to come in by the suspension of the regulations to which they object. The buying demand from Europe has improved slightly in the past week, but is still far from satisfactory, and it is still hard to foresee where markets will be found for the latter half of the crop. Threshing has been proceeding under very satisfactory conditions, and the returns from Alberta show that this province has reaped a record crop. Yields of 50 and 60 bushels per acre are quite common, and the average for the whole province will be between 25 and 30. The farmers of Alberta alone seem to be persevering with their wheat pool schemes, and their leaders claim that they have secured contracts covering 2,500,000 acres, and that their pool will this year handle 60 million bushels of wheat. Vancouver is continuing its efforts to divert the grain trade of Alberta to itself as an export outlet, but lack of elevator facilities and shipping is an obstacle, and the railway companies who are interested in preserving the profits of the long haul to the eastern seaboard are not evincing any disposition to encourage a westward movement which involves a shorter rail haul. The Commission which was appointed by the Federal Government to investigate the forestry problems of Canada and report upon the advisability of an embargo upon exports of pulpwood has commenced its sessions, and has been taking evidence in Nova Scotia. The witnesses who have appeared there have been practically unanimous in opposing an embargo, and, as there is also great hostility to it among the small farmers of Quebec who sell pulpwood in small lots to the agents of American paper mills, and do not want to be left at the mercy of the local Canadian companies, it seems unlikely that the embargo will ever be put in force.

Evidence accumulates that the Canadian Manufacturers' Association intends to make a determined drive for higher tariff duties. At a recent meeting their president officially

voiced its lack of sympathy with the recent increases in the British preferential rates, and declared that they had been particularly harmful to the woollen and knitted goods industries. "The British preferential tariff," he said, "must be put upon a more equitable basis. It has failed to accomplish the objects for which it was designed." The protectionist Press has been carrying a good deal of propaganda on the same lines, and the King Ministry has so far given ear to the pleas of the manufacturers as to send an official to Britain, France, and Belgium with instructions to discover why Canadian manufacturers cannot, under their present schedules, compete with the manufacturers of these countries.

Negotiations for a commercial treaty between Canada and Australia have been proceeding for some time by cable, but apparently are not making much headway. The Australians are insistent upon a heavy preference for their dried fruits, but the Canadian Government declines to accede to this unless Australia makes compensating tariff reductions on agricultural machinery and other products. To this the Bruce Cabinet will not agree. The latter have tried to get the dried fruit issue treated separately, but the Canadian Cabinet refuses.

The latest return shows that the Federal revenues are reasonably satisfactory, there being a slight increase over last year's figures; the expenditure is also slightly less. But the heavy incidence of the sales tax continues to keep up the cost of living, and the latest index numbers of the Bureau of Statistics show a small rise. Thanks to the money set moving by the sale of the farmers' crop, there has been a welcome improvement in business, and wholesalers report that the country storekeepers are buying more liberally. The stock markets remain quiet, but there has been no setback in prices.

NORWAY.—WEATHER, CROPS, AND WATER-POWER—FORESTRY—PRICES—THE MARKETS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, October 3.

AFTER a wet September, a few dry and sunny days have enabled the farmers to gather the harvest under quite good conditions. Oats, and even barley, in the more mountainous regions have not ripened, and to a great extent will have to be used for fodder. Potatoes probably will show good results. The rains have been more constant than copious, the consequence of which is that the water reserves for industrial purposes, at least in some very important districts, are much below the normal. It is to be hoped that October, as usual, will bring rain, otherwise our most important industry would be very much hampered.

The *Farmhand's* price index number for September shows an increase on the figure of the preceding month of 6.2 points—i.e., from 225.1 to 231.3. The main increase has taken place in the food group, viz., 9.8 points. The rise is general among the principal items, the only exceptions being corn and flour, which are handled by the Government, and in these cases a reduction has taken effect in September.

This is generally the season for buyers of timber to cover their wants for the ensuing year. They are, however, very loth to come forward through distrust of the future. Some important buyers are reported to have offered 25 kroner per cubic metre for wood pulp logs, but the forest proprietors hold out for more, even up to 30 kroner.

The end of the month and of the quarter drew rather heavily on the resources of the Bank of Norway; the note circulation rose by about 20 millions, and the reduction of the reserves decreased accordingly. Trade is craving for a reduction of the discount rate; as yet, however, the bank has shown no inclination to meet that wish. The stock markets are quiet, but the prices of most shares keep steady, and in some cases there is even an improvement. The exchanges are continually unfavourable. Sterling went even as high as 28.92, though 28.88 remained the official figure. Marks are practically without any value; Paris francs, too, very low, Kr. 37.25; and Belgian francs Kr. 31.50. Dollars, on the other hand, are very high at Kr. 6.36.

JUGOSLAVIA.—MONETARY SHORTAGE—HARVEST RESULTS—EXPORTS—REVENUE—EXCHANGE.

(FROM OUR CORRESPONDENT.)

BELGRADE, October 8.

THE monetary crisis which has been felt ever since the beginning of the year has now, during the export season, become extremely acute. The average interest on a seasonal loan guaranteed by a bank of good standing is anything from 30 to 50 per cent. While such a rate may have served last year as an offset to the deterioration of currency, it has now no justification, but simply denotes the immense shortage of money. In consequence, many small enterprises have been obliged to close down, and industry is passing through a very serious crisis. A further indication of the shortage is the low price of State bonds; thus, the 2½ per cent. Reparation bonds guaranteed by the State are quoted at only 14 dinars, thus yielding 17½ per cent., though they are legally accepted as caution money at a rate of 30. In view of the need of credits for export a conference of business men requested the Government to pass a law increasing the ratio of paper currency to its bullion cover from 3 to 5, but the Minister refused to give his approbation to what would amount to another form of inflation.

While this shortage of money contributes towards the high cost of living, the Government has done nothing to ease the crisis, and even accentuates it by a policy of indirect taxation. Absorbed by politics, it has failed so far to work out a comprehensive economic policy. So, while, on the one hand, the Minister of Finance has again considerably reduced export duties, and declared that Jugoslavia shall have free export next autumn, on the other hand, the Minister of Transport has increased freight charges by about 50 per cent. Indirect taxation is further increased by the Law of Duties passed this week. It is to be hoped that public opposition may prevent its raising the "agio" on import from 800 to 1,500. The Budget, which is to amount to 9½ milliards, has not yet been brought before Parliament, and the State is still financed by means of monthly budgets.

On the other hand, private initiative is undoubtedly contributing to rapid economic progress, and the harvest has been excellent. The official figures for the 1923 harvest are as follows:—

	(In Thousands of Metric Tons.)		
	1922.	1923.	
Wheat	1,210.3		1,684.5
Barley	241.0		311.8
Rye	103.8		150.2
Oats	265.2		280.9

The 1923 yield is thus in general about 30 per cent. above that of last year. It is estimated, after careful investigation by a conference of business men and Government representatives, that 35,000 trucks of wheat, and 30,000 trucks of maize, will be available for export this year.

The export figures also show considerable promise:—

	(000's omitted.)		
	Weight in Tons.	Value in Dinars.	
	1922.	1923.	
April	160 .. 216		348,400 .. 409,200
May	175 .. 260		302,487 .. 576,394

The publication of the returns, however, still remains very behindhand.

Government revenue, meanwhile, is also on the increase. From August, 1922, to April, 1923, receipts stood at 5,117 million dinars, as compared with an expenditure during the same period of 4,943 millions.

It is mainly owing to the monetary crisis and partly to good export prospects that the dinar has displayed a remarkable firmness in the midst of a very clouded political situation. Since July it has maintained its level of 430 to the £, and even during the worst days of the Corfu and Fiume disputes it never weakened below 440, while as soon as the atmosphere cleared it improved to 420, and has now risen to 400. The latest improvement is due to the deflection from Bulgaria to Jugoslavia of demands for wheat during the recent revolution in the former country. This is the first time that the Jugoslav exchange has remained practically unaffected by political disturbances and been influenced almost exclusively by economic forces. It is a significant indication that the country is at last passing out of the long phase of economic disorganisation.

CURZON REMINISCENCES.*

LORD CURZON has done himself and us a service in publishing these notes from his diary for the amusement and edification of a generation which knows but little of the world of which he writes. He has done himself a service, because of all our political leaders Lord Curzon is the one whom the man in the street knows least. These pages will do something to dissipate the impression of the Foreign Secretary as a pompous, cold, and remote aristocrat. For in this volume he reveals some of his enthusiasms, his sympathies, and his capacity for understanding the eastern world. The volume disclaims any intention to propound or even to discuss political views, for, as its title implies, it consists for the most part of short anecdotes of an eastern traveller's experiences. There are one or two more ambitious descriptions, notably the vivid account of the self-mutilation of the zelots of Kairwan, the character study of the late Amir of Afghanistan, and a collection of recorded instances of "singing sand." The portrait of the Amir is excellently drawn, and this account of Lord Curzon's visit to Kabul will afford the best revelation of the author's qualifications for handling eastern politics. The book is packed with brightly coloured scenes of Oriental life, and particularly of Oriental potentes, and the recording of these reminiscences moves Lord Curzon to meditate on the precarious hold which his various hosts had not only upon power but upon life itself. In his introduction he gives a long catalogue of those who have perished by the assassin's knife, and concludes that the world of which he writes belongs to the past "that is quite dead, not merely by reason of the change in my own environment, but also because of the revolution in the conditions of travel, and in the state of the peoples and lands which I visited."

In the interesting self-revelation that this volume affords there runs with an acute appreciation of the scenes described a streak of vanity, betrayed by a hundred touches. But even those who pick up this book with a background of prejudice, for political or other reasons, against the author, will find in it much pleasure, because it reveals a man who is conscious of his weaknesses as well as of his great powers of observation and description, and reveals them to us with a secret amusement. For example, he describes with gusto how he extemporised a most extraordinary apparel for impressing the Amir when he made his formal entry into Kabul. Before leaving London he hired from a theatrical costumiers three of the most gorgeous stars of foreign orders he could find, though he had no title whatever to wear them, and the most colossal epaulettes that had ever been seen, which, he most colossal epaulettes that had ever been seen, which, he supposed, must have decorated the shoulders of some eighteenth century admiral of vast proportions. In India he ordered an enormous pair of Wellington boots to wear with his levy dress, and completed the remarkable picture by borrowing from Sir William Lockhart a gigantic curved sword with an ivory hilt and magnificent scabbard. These careful designs nearly came to grief, for he had forgotten that epaulettes, especially such ones as those he had brought from London, required special attachments to the shoulders of the uniform. The traveller had, therefore, an hour's hard sewing to do when he proceeded to don this variegated apparel in the special tent that had

* "Tales of Travel." By the Marquess Curzon of Kedleston. Hodder and Stoughton. 28s net.

been pitched for him, by order of the Amir, a mile or so outside the city wall. Lord Curzon thinks that he created a great impression, but was a little nonplussed when his admiring host began to ask inconvenient questions about his trophies. But the gilded epaulettes won the greatest success, for the Amir sent for his court tailor and had him study these beautiful appendages as worthy of reproduction in the Court of Afghanistan. "For all I know," says Lord Curzon, "they may have left a permanent mark upon the sartorial equipment of the god-granted Government."

We regret that the publishers of this volume, which is, after all, very slight in its contents, did not show more confidence in the breadth of its appeal and offer it at a lower price.

BRAZIL TO-DAY.*

BRAZIL extends over nearly half South America, and is now the third largest State in the world. The British capital invested there is at least £250 millions—two-thirds in Federal, State, and municipal securities, the rest mainly in gas and waterworks, tramways, banking, and various industrial undertakings. British shipping predominates in the foreign trade of the country. British goods have regained their primacy in its imports, and Anglo-Brazilian friendship has long been cordial and strong. The native resources are vast, the products various, and rapidly multiplying. Only 1 per cent. of the hydro-electric power is as yet utilised, and the Government, unlike some of its neighbours, welcomes and encourages immigration. Mr Howarth has visited the country, and served for 40 years as one of its Consuls in Great Britain; and he deals very fully with the physical features and conditions of each State, and with the products, resources, shipping, commerce, and commercial organisation of the country as a whole. Such books are often too roseate; but, though he touches lightly on the unsatisfactory finances of some of the State Governments, he deals frankly with the present conditions of the Federal finances and the efforts to better them. Very full particulars are given of Customs and Consular arrangements, and a list (abridged from an official document) is appended of exporters of Brazilian produce. The descriptions of scenery and the illustrations are attractive, and the work is well calculated to further Anglo-Brazilian intercourse and trade.

Rubber Producing Companies, 1923. (London) Mincing Lane Tea and Rubber Share Brokers' Association, Limited. 7s 6d net.

This exceedingly useful volume has been compiled on similar lines to those of previous issues, and the position of all rubber companies whose shares are dealt in on the London market is fully given. This information includes directorate, secretary and offices, authorised and issued capital, acreage, planted area, purchase price and tenure. Particulars are also given of production for the last seven years, with average selling price, profit, dividends, &c. For the same period all-in cost is given. Reserve funds are also shown, together with highest and lowest prices of shares for the last few years. The recent activity in the tea share market has not been overlooked, and special attention has been given to about 85 of the principal companies which produce both tea and rubber.

Letters to the Editor.

GERMANY'S CAPACITY TO PAY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Referring to your review of my article in *Foreign Affairs* (N.Y.), I am encouraged by your not unkindly reception of the proposal to leave the capital reparation debt alone for ten years' time and the other features of the suggested plan to reply to the two objections which you make. Does not your objection that inter-Allied debts must be cut down beg the question? The proposal to leave the capital debt alone is put forward as a temporary solution of the deadlock which has arisen largely on the very question of inter-Allied debts—a deadlock which seems unbreakable for the time. It seems to me that any objection to that proposal should be addressed to the arguments which I have presented to show that the liabilities all round may safely be left alone for the present, and that by thus avoiding the deadlock, instead of continuing to try to break it, Europe will obtain that which is really essential to a solution of the reparation problem—a chance to resume industry and trade in a favourable atmosphere.

As a second objection, you say that France would object to a fixation of Germany's interim payments by the League of Nations. But my proposal that the League of Nations investigate German and other budgets, fiscal and tax systems, does not go beyond a suggestion that the work already done by the Economic Section of the League in connection with the Brussels Conference be continued and brought effectively to the attention of the reparation authorities and the public for its bearing on the reparation problem. Work of this sort must have more publicity if an adequately informed public opinion is to be created. As it is, the budgetary aspect of the reparation problem seems to have been largely submerged by the question of export surplus. I do not regard the *economic* problem as "almost entirely a budgetary one," but—and here is the essential point—I do regard a psychological basis of agreement on the *whole* problem as incapable of being reached until the question of German taxation has been given its proper share of attention. I believe this to be unquestionably true so far as the United States is concerned. In a letter in the "Times" of September 15th I re-stated some of the psychological and practical advantages of devoting more attention to the budgetary aspect and less to the exports question, more to the system of current payments and less to the impossible question of ultimate capacity to pay.

As you have linked your review of my article with a review of "Germany's Capacity to Pay," by Moulton and McGuire, may I suggest that the latter seem to have overlooked the real significance of the proposal that Germany may supplement her payments from export surplus by delivery of industrial securities. They state quite truly that any conversion of the capital obligation into industrial securities offers no help in the direction of increased annual payments, as interest and dividends would still have to be paid out of exports. But the proposal which I make in *Foreign Affairs* is that a portion of the annual instalments of *interest and amortisation* on the capital obligation be converted into industrial securities, and that these securities be sold by the recipient Governments. In that case only interest on interest would have to be paid externally. It is true that in 15 or 20 years' time the external payments for interest and dividends on the accumulated securities would amount to a considerable figure. But for the next five or ten years they would be negligible. The substance of my proposals is a *modus vivendi* for the next ten years. Who can say what will then happen to the reparation debt and the reparation problem? If Europe can get back to normal production and distribution both of them may have disappeared by that time. In attempting to revise the capital debt we are now vainly trying to pierce the future. We are trying to cut down the proportions of the reparation *debt*, but are not succeeding in cutting down the proportions of the reparation *problem*.

I fear you somewhat prejudice the consideration of my suggestions by referring to my article as an *ex parte* (Correspondence continued on page 707.)

IMPERIAL BANKING AND CURRENCY.

THE appearance of our autumn Banking Number coincides with the session in London of the Imperial Conference, at which questions of finance and currency, as well as of political and fiscal development, are coming up for discussion. We have, therefore, devoted considerable space to the consideration of banking and currency matters in the principal component parts of the British Commonwealth, and special articles will be found on later pages dealing with the systems and problems of the great Dominions and British India. There is no unified banking or currency system for the Empire, just as there is no unification of political and fiscal aim. The rapid development of the Dominions has produced special conditions, to meet which various banking and currency systems have been evolved. As between the banking systems of the various parts of the Empire there is no co-ordination, except such as is provided by London connections.

This diversity and lack of unified functioning has both advantages and disadvantages. To some observers the disadvantages appear so great that one of the Empire's chief needs is held to be the provision of a scheme for a unified Empire currency and exchange system. Among the keenest supporters of this idea is Mr J. F. Darling, whose plan for the creation of Imperial Treasury bills to be used as a common backing for the various currencies of the different Dominions, as well as a means of adjusting inter-Imperial payments when a lack of balance in trade disturbs the equilibrium of payments between the different countries, is familiar to readers of the *Economist*. The root difficulty of any scheme to remedy this state of affairs is that, when trade equilibrium is disturbed, some economic correctives must be brought into play to restore the balance by stimulating inadequate exports or checking excessive imports. It does not help matters to soften the disagreeable pressure of these correctives, for that only delays the restoring of sounder trading conditions. But there is considerable doubt whether they would operate freely under the scheme, and in any case any plan would need to be based upon a very large reserve indeed if it was to deal successfully with the enormous trade fluctuations that occurred in the three years after the war. In discussing Mr Darling's, or any other scheme, for dealing with the monetary problems of the Empire, the Imperial Conference may well reach two conclusions; the first is that no scheme, except a very grandiose one involving considerable interference with normal financial operations could ever cope with the extremely one-sided trade that occurred in the years 1920, 1921, and 1922. The second is that when trade is running on fairly normal lines, as it did before the war, the problem of making inter-Imperial payments is one well within the scope of the banking arrangements of the Dominions, and does not seem to require anything more than minor improvements in machinery, together with a free Bill of Exchange market in the Dominions.

None of the principal countries of the Empire have the same banking needs and conditions. Each has evolved a system of its own. Australia and South Africa have central or State banks; Canadian and India have not. Of the two latter cases, in India the supply of the currency is in the hands of the Government, while in Canada the Dominion issue is supplemented by that of the Chartered banks. Both countries, diverse as their conditions and needs are, have this in common, that the currency demands of trade are seasonal in expansion and contraction. In both countries, as described in later articles, a system has been arranged by which the necessary emergency currency can be made available at times of expansion, and retired when other contraction comes, so that no permanent inflation results. In both countries, as in many other parts of the world, the descent from boom to depression has brought banking losses and banking failures. In Canada the disquietude brought about by these untoward incidents has coincided with the decennial revision

of the Bank Act, but although the existing system has been assailed hotly, the revision has passed without fundamental change. In India a step towards the establishment of wider and more adequate banking facilities, and towards greater stability of money rates, has been taken in the establishment of the Imperial Bank—an amalgamation of the three Presidency banks.

The banking situation of each of the various Dominions is dealt with later in separate articles, but it may be convenient to our readers if we present here some relevant comparative figures. The tables which follow show the note circulation in each of the Dominions, and the movement in wholesale prices:—

WHOLESALE PRICES.
(1913 = 100.)

Monthly Average.	U.K.	South Africa.	Australia.	New Zealand.	Canada.	India.
1920.....	283.2	223.3	227.9	211.7	246.3	204
1921.....	181.0	160.4	174.9	200.7	181.6	181
1922.....	159.5	128.4	161.6	177.5	165.5	180
1923 (June)...	159.4	124.0	187.0	176.9	166.7	175

NOTES IN CIRCULATION (Millions).

End of	U.K.	South Africa.	Australia.	New Zealand.	Canada.
	Currency & Bank of England Notes.	Bank Notes (Gross Issue).	State Notes.	Bank Notes.	Dominion and Bank Notes.
1913.....	£ 29.6	£ 2.3	£ 10.0	£ 1.2	\$ 227
1920.....	480.9	9.1	58.7	5.8	522
1921.....	432.7	8.8	55.5	4.7	444
1922.....	398.3	8.3	51.8	4.3	414
1923 (May)...	389.6	8.1	52.1	6.3	388

If we compare the pre-war position with that of the post-war years there is no clear connection between these two series of figures. The reason is that the money in circulation before the war included a large quantity of gold which in all cases has been to a very large extent replaced by notes. If, however, we look only at the post-war situation, we find the movement of prices much more closely reflected in the movement of the note circulation. This comparative statement of prices is in itself very informative, for the changes are very different in the various Dominions. Part of this is no doubt to be accounted for by the fact that the price indices are not all calculated in exactly the same way. But the figures do, in fact, undoubtedly correspond to considerable differences in price movements. We have said that these various figures do not permit of a direct comparison between bank notes and prices, and before we can consider the monetary influences affecting prices we should have to take deposits into account. Some light on this factor is thrown by the summary tables in the articles which follow, but the figures only relate to those banks that have connections with London:—

DEPOSITS OF CERTAIN DOMINION BANKS.

	S. African.	Australian.	New Zealand.	Canadian.	Indian.
	Mln. £	Mln. £	Mln. £	Mln. £	Mln. £
1914.....	48.1	162.8	22.4	725.5	41.5
1920.....	123.9	235.0	46.5	1,930.0	122.7
1921.....	106.4	230.6	42.8	1,889.5	118.4
1922.....	94.6	241.3	36.9	1,720.5	95.9
1923.....	89.7	257.3	39.3	1,673.0	93.2

In general these figures show the same trend as those of the note circulation, but for the reasons given they must not be pressed too far. In the case of South Africa the figures cover most of the banking deposits in the country which might influence prices. The same is true of Australasia, but the figures for Canada are less complete, while those for India only represent the leading exchange banks.

THE ENGLISH BANK FIGURES.

A STUDY of the statements of those English banks which publish them at the end of the June half-year is, as usual, chiefly productive of interesting but sketchy surmises. The most notable feature therein disclosed is the decrease of nearly 115 millions in the volume of the deposits, that most important item in the total purchasing power of this country's people. It is a considerable acceleration of the process which was already shown in our autumn banking number a year ago, reversing the expansion which had till then been continuous since the beginning of the war period. The following table shows the movement in deposits since June, 1914:—

INCREASE OR DECREASE IN DEPOSITS.

	Million £
June 30, 1915.....	+ 196.6
" 1916.....	+ 44.5
" 1917.....	+ 81.1
" 1918.....	+ 282.5
" 1919.....	+ 406.2
" 1920.....	+ 105.5
" 1921.....	+ 19.8
" 1922.....	- 30.2
" 1923.....	- 114.7
	+ 991.3

It will be seen that, by this reduction, the expansion, which at one time was over £1,130 millions, has now been brought down to roughly 990 millions, which is not a very tremendous score on the side of deflation, as measured by this test. We pointed out a year ago that the small decrease in deposits then recorded had been brought about during a year in which a rapid reduction had taken place in Bank rate—from 6 to 3½ per cent.—thus seeming to suggest caution in accepting the doctrine that movements in the official rate can be counted on to produce a prompt effect on the volume of banking credit. According to this theory, the lower Bank rate should have been expected to stimulate expansion of credit, whereas it had been accompanied by slight contraction. During the year that we are now reviewing the theory has been contradicted with equal emphasis, though in a different way. Bank rate was again reduced, from 3½ to 3 per cent. in July, 1922, and remained throughout the rest of the year at this low level, but deposits instead of expanding were contracted by 115 millions. These facts, taken with the previous record, which showed deposits continuing to expand long after the 1919 and 1920 rises in Bank rate, had, if the theory so eloquently expounded by Prof. Cassel and Mr Hawtrey were to be relied on literally, demanded their contraction, seem to justify the scepticism with which it is usually received by practical bankers.

On the other side of the aggregate balance-sheet of the banks whose figures are now examined, we find decreases of 12 millions in cash in hand and at the Bank of England, 58 millions in investments, and 47 millions in discounts and advances, including money at call and short notice. As usual, it is very difficult to draw inferences from these figures concerning the influences which have produced this large contraction, or to make them fit with other figures that are available. The figures of the Bank of England's return, being made up on June 27th, are doubtless a very different picture from the one that they would have shown on June 30th. According to it, the year covered was one of extremely slight movements, as the following table shows:—

BANK OF ENGLAND.
(Million £'s.)

	June 27, 1923.	July 1, 1914.	June 26, 1918.	July 2, 1919.	June 30, 1920.	June 29, 1921.	June 28, 1922.
Rest.....	3.3	+ 0.1	+ 0.1	+ 0.1	+ 0.1	+ 0.1	+ 0.1
Public deposits.....	14.0	- 2.9	- 21.6	+ 5.8	- 1.6	- 1.2	- 2.3
Other deposits.....	114.0	+ 60.3	- 15.0	- 58.1	- 62.1	- 17.8	- 1.1
Govt. securities.....	43.0	+ 32.0	- 8.7	- 55.7	- 47.1	- 18.2	- 6.2
Other securities.....	80.7	+ 31.0	- 20.1	- 2.4	+ 22.5	- 5.1	+ 5.0

Note circulation.....	125.1	+ 95.4	+ 71.5	+ 45.2	+ 5.1	- 3.9	+ 2.1
Gold and silver in banking dept.....	1.8	+ 0.2	+ 1.2	- 0.3	+ 0.7	..	..
Reserve.....	22.3	- 6.5	- 7.7	- 4.8	+ 6.0	+ 4.5	- 2.0
Proportion.....	173%	- 22%	- 3%	+ 31%	+ 84%	+ 51%	- 14%

Here we find other deposits only one million below those of the corresponding figure in 1922, and the total securities held by the Bank are also about a million lower, an increase of 5 millions in Other being offset by a decrease of six odd millions in Government. The coin and bullion has declined by 1.3 million, and the circulation has expanded by 2.1 million, while the reserve has only declined by two millions, thanks to the increase in the fiduciary issue to £19,750,000, from the £18,450,000 which had so long been its level.

It is not easy to reconcile the above-mentioned small decline in the other deposits with the decrease of 12 millions in cash in hand and at the bank, shown by the other banks, especially when the expansion in the Bank of England's note circulation, which so often finds its way into the tills of the other banks, is taken into consideration. But as everyone knows, the other deposits include many accounts besides those of the clearing banks, and our banking figures are chiefly designed to show the position, subject to hidden reserves and other complications, of the individual banks; as guides to the general monetary position they provide a guessing game which is more interesting than conclusive.

As an indication of the state of trade, they may perhaps be taken as favourable in that they show an increase of 20 millions in acceptances. At June 30, 1919, this item stood in the aggregate figures of the banks dealt with, at 62.1 millions, and in 1920 it had risen to 87.8 millions; in 1921 the tumble in prices and other causes had brought it down with a rapid run to 52.9 millions, and a year ago it was "silent as a standing pool" at 52.5 millions. At the end of last June it was 72.7 millions, 10 millions above the 1919 figure, and may perhaps be very cautiously hailed as one of the indications that trade depression is by no means as acute as the unemployment statistics and the general complaints of industry would seem to show.

When we come to the decreases of 50 millions in investments, and 47 millions in loans and discounts, the feet of the explorer are entangled in the difficulty caused by not knowing, thanks to different banking practice in this matter, which of these items contains the Treasury bills. Some banks look on them as Government securities, some as bills discounted. During the year under review Treasury bills were reduced by 156 millions, and ways and means advances from the Bank of England by 35½ millions, another fact which makes the small movements of the Bank return still more puzzling. If we knew how many of the dropped Treasury bills were in the hands of the banks, it might be possible to make some approach to a guess at the movement in their trade discounts and advances. As it is, we can only conjecture from the greatness of the decrease in outstanding Treasury bills, and the general belief that the banks have been disposing of part of the previous increase in their investments in Stock Exchange securities, that to some extent they have replaced cancelled Treasury bills by trade acceptances and loans to customers.

Coming back from conjecture to cold fact, all that we can be sure of is the big decline in deposits, accompanied by a still larger decrease in outstanding Treasury bills. It will be remembered that in his speech to the shareholders of the London Joint City and Midland Bank at the end of January, Mr McKenna charged the Government with producing deflation "effected in pursuance of a declared policy" by redeeming Treasury bills, implying that the bankers, when the total of Treasury bills is reduced, have no choice about replacing them by other assets, and that contraction of deposits is thus forced upon them. If this were really so it might be correct to charge the Government with producing deflation, though it might still be argued that all that the Treasury was doing was to redeem floating debt, the extent of which has ever since the war been something of a nightmare to our financial leaders, and that a deliberate policy of deflation may not have been at all its intention. But surely if trade had shown

any sign of rapid expansion the redemption of Treasury bills, instead of promoting deflation, would merely have enabled the banks to fulfil all the more easily their true function as creators of credit, not for financing Governmental expenditure, but for greasing the wheels of industry and enterprise. If our manufacturers and merchants had been full of orders, the banks would very easily have avoided deflation by substituting among their assets acceptances of banks and merchants, advances to customers, and short loans to Lombard Street, for

the Treasury bills that had been redeemed. In other words, it is just possible that instead of the austere policy of deflation which our Treasury and bankers are alleged to have cultivated, having caused, as is so often argued, the depression and unemployment from which we are now suffering, depression may have been caused by the state of European politics, and may have itself produced the deflation because there were no demands upon the banks for industrial and commercial credit, to take the place of redeemed Treasury bills.

AFRICAN BANKS.

In the appended table summarising the main items of the balance-sheets of banks operating in Africa, the most striking feature is the drastic reduction in the total of notes in circulation. Of the six banks whose figures are given in the last three lines, two operate mainly in Egypt and one in West Africa, but neither of these has a note circulation figuring in its balance-sheet. The drop in the total of notes shown in the table is, in fact, entirely the outcome of the coming into force in South Africa of the Currency and Banking Act of 1920, under which the right to issue notes passed on June 30, 1922, from the commercial banks to the South African Reserve Bank. The Reserve Bank, constituted under the Act, was given the sole right of issue of currency notes for a period of 25 years, and this was to be its principal function. The Act also provided that every South African Bank must hold stock in the Reserve Bank to the equivalent of 5 per cent. of its own capital, and must deposit large reserves with it. In respect to demand liabilities, 10 per cent. of the total was to be provided, and in the case of time liabilities, including interest-bearing deposits, the proportion is 3 per cent. After the first three years the proportion of reserve against demand liabilities was to be increased to 13 per cent. The Reserve Bank is not intended to compete in any manner with the commercial banks, and its dividend is limited to 10 per cent. While there is an embargo on the export of gold from South Africa, however, or so long as gold certificates are inconvertible, it may not pay a dividend of more than 6 per cent. per annum, and all excess profits during that time must be placed to a special fund for strengthening the gold reserve of the bank. When the reserve fund is equal to the paid-up capital, the net profit, after payment of 10 per cent. dividend, is to go to the Government. The note issue has to be secured by at least 40 per cent. in gold, and as to the remainder by commercial paper or trade bills, and by a first charge on all the assets of the bank. In June last an amending Act was passed providing, *inter alia*, for the extension for two years—i.e., until June, 1925—of the inconvertibility of gold certificates and the alteration (which remains in force for five years) of cover that may be held by the Reserve Bank for its note issue, British and Union Treasury Bills being allowed to be taken as security.

The two principal commercial banks in the Union—the Standard Bank of South Africa and the National Bank of South Africa—show a substantial reduction in their note circulation, the former from £4,207,800 to £722,200 and the latter from £4,426,100 to £548,300. The chairman of the Standard Bank stated at the recent meeting that the remainder of the notes is being steadily reduced as they are received for payment. The balance outstanding at June 30th next will be paid over to the Reserve Bank, which will assume liability therefor, and after that date notes in circulation appearing in Rhodesia only. The past three years have been an anxious period for the business community in South Africa, and neither of the two important commercial banks has passed through unscathed. Each has suffered a substantial decline in profits, as will be seen from a table appearing later on, but the decrease shown by the Standard Bank is small in comparison with that of the National Bank, whose figures for the year ended March 31st last show a very large loss, part of which is a legacy from the "imprudent" days of the preceding year. In reviewing conditions in South Africa

in 1922-23, the chairman of the National Bank pointed out that "the settlement of the grave industrial troubles which demoralised the reef in March, 1922, was not so rapidly succeeded by prosperity as was the general expectation. On the contrary, while individual gold mines derived benefit from that settlement, the community in general which depends for its prosperity upon the principal industry of the country is still suffering from the effects of the upheaval. Large numbers of firms and individuals were unable to survive the strain, and the official record of liquidations and insolvencies bears testimony to the severity of the depression. Secondly, the fall in values generally, which, it was thought, had come fairly near to finality a year ago, continued, in many lines, to be a feature of last year's trading experience, and in consequence merchants' stock sheets disclosed further heavy writings down, which have had a serious effect upon many balance-sheets. Then, in Portuguese East Africa, where, as you know, we are very largely interested, merchants have had to suffer from the additional embarrassment occasioned by the currency deadlock, which, I am sorry to say, shows no immediate sign of disappearing." He went on to say that it was these conditions that suddenly transformed outstandings which years ago seemed to be no more than doubtful, into ascertained bad debts, and brought advances which could then be described as fair business risks into the doubtful category. The provisions considered necessary in the past year's accounts in order to replenish reserves against bad and doubtful debts, absorbed not only the whole of the reserve fund of a million sterling, but involved the writing down of the paid-up capital from £10 to £7 a share. The chairman was able to announce at the meeting that the Reserve Bank was willing to extend to the National Bank all facilities necessary for meeting its engagements and to carry on business, and that the Union Government had approved of this decision, and was prepared to afford to the Reserve Bank any support that might be required to make it effective. Thus, quite early in its career, the Central Reserve Bank has been called upon to help in the restoration of confidence. It was also announced at the meeting of the National Bank, it may be added, that the Bank of England was prepared, if necessary, to discount in London acceptances of the National Bank of South Africa.

Both the Standard Bank and the National Bank show an appreciable decline in deposits, though the drop is very much smaller in each case than it was in the preceding year. The cash item is also substantially lower in each case, but both show an increase in investments—the National from £4.4 to £7.7 millions. The latter figure includes over £5 millions in Treasury Bills. The discounts and advances of the National Bank have been reduced by £4 millions, but those of the Standard Bank show a reduction of less than £1½ millions.

Much discussion has been going on as to the rates charged by the South African banks for remittances. Lord Selborne, at the meeting of the Standard Bank, admitted that "rates have been higher during the year than we like to see them. We are anxious to see the rates reduced to the normal level, and we hope that the trend of South African trade will soon allow of this being done." The chairman of the National Bank protested against the agitation for a reduction of rates, and claimed that "it is entirely incorrect to charge the South African banks with having exacted exorbitant

* Includes Money at Call and Short Notice. † December 31, 1920. (a) December 31, 1921. (b) December 31, 1922.

rates for the transmission to this country of the proceeds of Union exports. The true position is the very opposite—viz., that it is very much to the credit of the banks that exporters did not have to pay very much higher rates than the trade situation justified."

Of the two Egyptian banks only the National Bank of Egypt issues notes, and these are controlled by a separate issue department. The note issue at the end of 1922 was £33,200,000, showing a decrease of roughly £4 millions during the year. The gold coin stood at £3,339,600, while the bulk of the balance was represented by British Treasury Bills. The following table shows the fluctuations of the note issue during the past five years:—

	Highest. £E.	Lowest. £E.
1918	46,100,000	29,200,000
1919	68,200,000	39,900,000
1920	66,000,000	39,400,000
1921	39,900,000	30,400,000
1922	37,300,000	26,300,000

The period covered was, of course, abnormal, and the trade balance, which was slightly favourable in the first two years, became excessively so in 1919-20, and then suddenly changed to a very heavy excess of imports. In 1921-22 the balance again became slightly favourable. At the meeting of the National Bank of

Egypt, the chairman stated that the cotton crop of last winter was marketed with more than usual rapidity. "Prices have again been disappointing for growers, and it is certain that the finer qualities of Sakellaris have not obtained the same premium over American cotton as in the past. On the other hand, the lower qualities and Upper Egypt cotton have maintained their position, and during this season it has been possible to dispose of a large accumulation of low cotton which had been unsaleable for the last two or three years." Ever since its inception in 1898 the National Bank of Egypt has acted as banker to the Egyptian Government, and an increase of £7 millions shown in its total deposits in the latest balance-sheet is almost entirely due to the Government account, deposits from the general public having remained practically unchanged. The Anglo-Egyptian Bank, which is purely a British concern, established in 1864, shows a decline of over a million sterling in deposits and in advances, investments have increased by over £2½ millions, while bills receivable have been reduced by some £3½ millions. The Anglo-Egyptian Bank, 90 per cent. of whose share capital was acquired in 1920 by Barclays Bank and the Netherlands Bank of S. Africa are the only banks in the appended profits table to show an increase in profits, those of the National Bank of Egypt having dropped by over £56,000:—

1922-23.	Year Ended.	Net Profit.	Dividend.	To Reserve, &c.	Pre-mises.	Staff Funds.	Carried Forward.	Profit and Dividend for Preceding Year.

The decline in the profits of the Bank of British West Africa was accompanied by a further reduction of 1 per cent. in the dividend. The balance-sheet showed signs of all-round contraction, but the position remains very

liquid. At the annual meeting, the chairman spoke of signs, "though not great signs," of an improvement in trade in West Africa.

AUSTRALASIAN BANKS.

SINCE 1911 the notes of the ordinary banks in circulation in Australia have been in course of withdrawal and up to date a total of £3,511,200 has been withdrawn, leaving only £207,300 in circulation. In 1920 legislation was introduced by the Commonwealth Government to compel the Australian banks (with the exception of the Commonwealth Bank of Australia) to hold a proportion of their deposits in Australian notes, the administration of which was transferred from the Treasury to a Note Issue Department of the Commonwealth Bank. The

Note Issue Department is managed by a board of directors composed of the governor of the bank and three other directors appointed by the Government. Every bank other than the Commonwealth Bank is compelled to hold in the form of Australian notes an amount not less than 20 per cent. of the deposits which it holds, repayable at call or less than six months' notice, and 10 per cent. of deposits it holds repayable at six months' or longer notice. As the word "deposits" is not defined, it would appear to include deposits in London or elsewhere outside Australia, as well as those within Aus-

tralia. The board of the Commonwealth Bank is required to hold not less than one-fourth of the amount of notes outstanding in gold coin and bullion, and is empowered to invest the remainder or any part thereof (a) on deposit with any other bank, or (b) in securities of the United Kingdom, or of the Commonwealth or of a State, or (c) in the ordinary business of the bank. The power conferred upon the Commonwealth Bank by clause (c) was a new departure. Power is reserved to the Governor-General of the Commonwealth to transfer the control of and responsibility for the whole or part of the Australian note issue from the board of the Commonwealth Bank to the Treasury whenever in his (the Governor-General's) opinion an emergency has arisen which renders it desirable in the public interest so to do, and to retransfer the note issue to the board of the Commonwealth Bank when the emergency has ceased. Apart from the board established under this Bill, which has to do only with the note issue, the Commonwealth Bank of Australia has had no board of directors, but has been managed solely by the governor of the bank, with the assistance of the deputy-governor and the staff. It has, however, recently been proposed to appoint a board of directors. In his Budget speech at the end of July the Commonwealth Treasurer, Dr Earle Page, said: "The Government believes this to be necessary in order that continuity of policy may be assured, that the bank may function in a truly national way, and that due assistance may be afforded to the expanding primary and secondary industries of Australia."

In referring to the question of the note issue, the latest number to hand of the *Australasian Insurance and Banking Record* points out that at the outset of the war an arrangement was drawn up by which notes could be issued to the banks, if desired, against one-third gold, but since the war this arrangement appears to have lapsed. The real use to which the greater part of the increased issues of notes was put was to make advances, not to the banks, but to the State Governments for expenditure on public works. The total amount of notes outstanding at June 30th last was £52,102,200, against which assets were held consisting of £24,346,300 in gold coin, £27,017,700 in investments, £234,000 for advances to mints for purchase of bullion, and a balance of £504,000 in the Commonwealth Bank. Interest received for the twelve months ended June 30th last was £1,244,600, and there was a "net profit" of £1,072,900, which forms part of the Commonwealth revenue. Of the total Australian notes outstanding on June 30th last, £28,901,700 were held by the banks, leaving £23,200,500 in the hands of the public. The total issue shows a reduction of £1,479,800 in comparison with June 30, 1922. In the appended table of Australasian bank figures the notes shown consist very largely of New Zealand banknotes.

The figures of Australian trade for the fiscal year ended June 30th last are given by our Australian contemporary quoted above, and show that the balance of trade has once again swung round to an excess of imports. At the moment, however, Australian currency is at a slight premium in comparison with British currency:—

(Million £'s.)

	Imports.	Exports.	Imports.	Exports.
1914-15....	64.4	60.6	3.8	..
1915-16....	77.7	74.8	2.9	..
1916-17....	76.2	97.9	..	21.7
1917-18....	62.3	81.4	..	19.1
1918-19....	102.3	113.9	..	11.6
1919-20....	99.0	149.8	..	50.8
1920-21....	163.8	132.2	31.6	..
1921-22....	103.0	127.8	..	24.8
1922-23....	131.8	117.9	13.9	..

Exports have again been in excess of payments receivable by Australia, owing to the fact that payment

for the shipments of Bawra wool, which only ceased in May last, was received some years ago from the British Government. On the other hand, the Bawra distributions to woolgrowers have formed a supplementary item of payments to Australia. The excess of imports over exports for 1922-23 is a result largely of the exceptionally heavy public borrowings by the various Australian Governments and other public bodies effected in London and New York during 1921-22. The net amount of debt raised outside Australia during that period, according to the Commonwealth Year Book, was about £38½ millions, and this has meant that imports into Australia have been stimulated to a corresponding extent beyond what would have been possible on the basis of the purchasing power furnished by Australian current production and exports, after making allowance for the annual amount to be remitted for interest and business earnings on British capital invested in Australia publicly and privately. Taking this annual payment at about £25 millions, the net purchasing power of Australia, based upon exports amounting to £118 millions, would be about £93 millions, or about £39 millions less than the past financial year's imports. The effect of the £38½ millions borrowed in 1921-22 has thus been felt during the year 1922-23.

In the case of New Zealand, exports continue greatly to exceed imports, and the banks are accumulating funds in London in excess of requirements. Exporters are consequently paying higher rates of exchange than they have recently been accustomed to, but importers are enjoying much more favourable rates.

From the summary table below it will be seen that during the past 12 months the aggregate deposits of 14 Australasian banks with offices in London have increased by nearly £22½ millions, while discounts and advances have risen by over £14 millions. The increase in deposits is common to the Australian and New Zealand banks, but while the discounts and advances of the Australian banks have increased by a larger amount than that mentioned above, those of the New Zealand banks have dropped a little. The chairman of the Bank of New Zealand explained that this was due chiefly to repayment of the exceptional advances made to traders during the period of over-importation in 1920-21, and to the improved returns received for their produce by farming customers. He added that a considerable portion of the advances is still of a somewhat unliquid nature. "To counterbalance this, we are keeping a larger amount of our resources than usual in undoubted investments of an immediately realisable character." The increase in advances shown by the Australian banks reflects the active demand for accommodation from traders and other classes in the cities as well as from country producers, while some of it is due to the larger amount of imports into Australia during 1922-23. Slightly more up-to-date figures are given by our Melbourne correspondent, who sends the following comparative summary of the averages of the ordinary banks in Australia and New Zealand (exclusive of London and other outside figures) for the quarter ended June 30th, with the previous quarter and a year ago:—

	June 30, 1922.	March 31, 1923.	June 30, 1923.
Deposits—			
Australia	£ 219,600,338	£ 232,000,840	£ 237,827,126
New Zealand	47,399,600	48,659,637	52,091,994
Total deposits	266,999,938	280,660,477	289,919,120
Advances inc. Govt. securities—			
Australia	182,758,449	197,994,984	202,514,707
New Zealand	51,977,855	48,347,815	47,523,808
Total advances	234,736,304	246,342,799	250,038,515
Cash items—			
Coin and bullion (A. and N.Z.)	27,333,068	27,287,078	27,167,147
Australian notes	25,577,119	26,353,024	25,026,558
Legal tender notes of other banks (N.Z. only)	1,109,907	501,218	418,791
Total cash	54,020,094	54,141,320	52,612,496

Out of the total increase of £22,919,882 in deposits during the year, £15,373,799 is in deposits bearing

interest. The cash items show a decrease due mainly to the contraction of the Australian note issue and the inaccessibility of gold at present for the purpose of increasing stocks held by the banks. So long as this continues it will apparently be necessary for seasonal fluctuations to be permitted in the note issue to meet the requirements of the active export season towards the end of the year.

The quarterly average return of the Commonwealth Bank of Australia shows the following items within Australia :—

1922-23.	Year Ended.	Net Profit.	Dividend.	To Reserve, &c.	Pre-mises.	Staff Funds.	Carried Forward.	Profit and Dividend for Preceding Year.

* Free of tax.

The substantial increases shown in profits in most cases serves somewhat to strengthen the plea made in these columns more than twelve months ago for reduction in the rates of remittances. In only one instance are net profits lower than they were in the preceding year, those of the Bank of New Zealand having dropped by nearly £130,000. This was a result largely

of a decline in interest consequent on the reduction in advances within the Dominion, referred to above. The only change in dividend rates is an addition of 1 per cent. by the Union Bank of Australia. Two of the Australian banks—the Commercial Banking Company of Sydney and the Queensland National Bank—are taking steps to increase their capital owing to the expansion of business.

CANADIAN BANKS.

THE past year has been a period of peculiar interest for Canadian banking. The Bank Act came up for its decennial revision, and the task of such revision became a subject of widespread public controversy, owing to certain untoward events which have recently taken place, and have caused uneasiness in the minds of the Canadian people as regards their banking system. There was, in fact, an epidemic of serious banking losses. Following on the failure of the Merchants' Bank in the first half of 1922, serious losses were disclosed by the Union Bank, which were met by drastic readjustment. Smaller concerns, such as the Home Bank, the Standard Bank, and the Bank of Hamilton, and some others, found themselves face to face with serious difficulties, and either went under, or, as in the case of the last named, sought safety in amalgamation with stronger concerns. Thus public disquietude was aroused, and the proceedings of the Committee which

investigated the question of the Bank Act Revision were the cynosure of all eyes. In the end, however, the new Bank Act, which was passed at the end of the summer, made no startling innovations.

Canadian banks operate under charters, which lapse every ten years—a provision which necessitates the passing every decade of a new Bank Act, and affords opportunity for amendment of Banking law in the light of accumulating experience and proved national needs. The chief features of the system in force lend themselves to brief summary. Banking in Canada is not a monopoly, but anyone who wishes to open a bank is subject to certain restrictions, the chief of which is that the minimum capital must be \$500,000, of which half is paid up. This minimum is intended to be a guarantee that those embarking on a banking venture are of a *bona-fide* character, and it cannot be regarded as too high, since the permission to conduct a banking

business carries with it the privilege of issuing bank-notes which have not the specific backing of Government credit. A further provision, calculated to restrain the financing of rash and unsound banking ventures, is that shareholders in Canadian banks are subject to a double liability. A clause of the Bank Act says:—"In the event of the property and assets of the bank being insufficient to pay its debts and liabilities, each shareholder of the bank shall be liable for the deficiency to an amount equal to the par value of the shares held by him, in addition to any amount not paid up on such shares." This provision, apart from being, as we have said, some check on haphazard financing, is also some safeguard to depositors and other creditors. Further safeguard is afforded by two prohibitions, which forbid the lending of money on the security of real estate, or on that of the capital stock of any chartered bank. The recent unfortunate incidents should, in fact, be regarded less as revealing inherent weakness in the Canadian banking system, than as a reminder that no legislation can completely guard against unwise management in times of economic difficulty. On the other hand, it may be quoted as evidence of the success of the system that, amid all these banking troubles, the prestige of the greatest banks has been maintained unimpaired, and, as is shown in a later article, their shares have in no measure lost the confidence of the investor.

The *débâcle* referred to aroused a strong demand in certain quarters for the institution of the system of Government inspection of banks. It must, however, be regarded as very doubtful how far such inspection could be a safeguard. In past years banks have been obliged to have their accounts audited by approved auditors, selected from a list compiled by the Minister of Finance. Yet in the case of one of the recent bank collapses, the concern in question failed only a few weeks after the passing by the auditor of a happy balance-sheet, the disclosure of large profits, and the declaration of a good dividend.

In the matter of currency requirements, Canada's position is peculiar in that the demand is not steady. There is a sudden big rise in the demand for currency in the autumn, and a sudden decline in the spring. The system in force in Canada is sufficiently flexible to meet these varying demands without causing serious infla-

tion. Gold is not used as currency in Canada, the country's stock of gold being held by the Government and the banks for reserve purposes. The circulating currency consists of Dominion notes issued by the Government, and notes issued by the Chartered Banks. The latter's power of issuing banknotes is subject to four main qualifications, which may be summarised as follows:—(a) Such issues must not exceed the aggregate of "unimpaired" paid-up capital, plus the amount of Dominion notes and gold coin held on the issuing bank's behalf in the Central Gold Reserve. (b) To facilitate crop movements additional notes may be issued up to 15 per cent. of combined paid-up capital and reserve fund. Notice of intention to use this power must be given to the Finance Minister, and interest at a rate not exceeding 5 per cent. is paid by the bank for the privilege of such emergency issue. (c) No bank may pledge or hypothecate its notes. (d) Notes in smaller denominations than five dollars, or for any sum not a multiple of five dollars, may not be issued. The system so works that it is to the advantage of the banks to redeem as quickly as possible notes that are superfluous to legitimate requirements. Broadly, the system meets Canada's needs, and although, like all other banking systems, it has its imperfections, it does not lend itself to abuses. Some at least of the untoward incidents of the past year or two in the Canadian banking world would hardly have been prevented by a more rigid system. In one case, as our Ottawa correspondent shows in another column, the collapse was clearly due to a complete departure by the management from the rules of sound banking—departures which, it is as well to remember, occur from time to time in the case of smaller institutions under our own system. For the main features of the Canadian system the bankers have been able to put up a successful defence during the recent enquiry, and had little trouble in defeating proposals for the establishment of a State bank.

There are six Canadian banks with London offices, but with this group we have included the Colonial Bank, whose head office is in London, but whose main sphere of operations is in the West Indies. The profits and allocations for these seven last year are given below, with comparable figures for the profits and dividends of the previous year:—

1922-23.	Year Ended.	Net Profit.	Dividend.	To Reserve, &c.	Pre-mises.	Staff Funds.	Carried Forward.	Profit and Dividend for Preceding Year.
		£	£	%	£	£	£	£
Bank of Montreal	Oct. 31	951,333	731,500	14	308,400	100,000	..	188,567
Bank of Nova Scotia	Dec. 31	424,536	311,477	16	26,493	50,000	15,000 +	21,566
Canadian Bank of Commerce ..	Nov. 30	616,939	400,685	12	66,781	82,192	36,304 +	30,977
Colonial Bank	June 30	95,745	60,506	8	35,000	..	..	239
Dominion Bank	Dec. 31	203,536	156,000	13	..	30,000	9,000 +	8,586
Royal Bank of Canada	Nov. 30	791,694	571,200	14	100,000	80,000	20,000 +	20,494
Union Bank of Canada	Nov. 30	226,212	160,000	10	75,914	..	2,000	11,702
Total		3,909,995	2,391,368	..	612,588	342,192	82,304	118,457

As shown by the first column, the figures refer to varying periods, and too much should, therefore, not be made of aggregate comparisons. But the feature of the figures is that all seven maintained their dividend rates, and three increased net profits, the outstanding achievement being that of the Bank of Montreal, with an increase of nearly £220,000, and whose allocations to reserve exceeded £400,000. In a table on the next page will be found aggregate balance-sheet figures for the seven banks for a number of years, and here, again, the varying dates of balance-sheets must be remembered. One feature of that table is the tremendous expansion of the network of branches over the past dozen years. Actually in the past year there has been a decline, but in next year's table the number will probably again show increase through amalgamations which have recently taken place. The most interesting of these

amalgamations has been the absorption of the Bank of Hamilton by the Canadian Bank of Commerce, the particulars of which have been recently announced. The former had 148 branches and agencies in Canada, and the latter will thereby obtain a footing in 84 new towns. The table overleaf shows, as might be expected in a period of unsatisfactory trade, a decline in deposits, although the fall is not so large as that which took place in the previous year. Discounts and advances have also shown further contraction, while investments and cash are both higher. The ratio of cash to liabilities is higher than in any of the four preceding years. Of current banking conditions in Canada there is no need to take a gloomy view. Progress has been made with the liquidation of frozen credits. Crop reports are excellent, and American boom conditions are not without some degree of contagious effect upon economic conditions of the neighbouring Dominion.

added the figures for the first half of 1913 for purposes of comparison:—

	Imports.		Exports.	
	1913.	1923.	1913.	1923.
Europe.....	146.5	161.4	120.2	164.6
Other Foreign Countries.....	137.4	212.8	93.6	128.0
Empire.....	94.9	166.6	102.3	153.9
Total.....	378.8	540.8	316.1	446.5
Percentage of Empire trade to total.....	25%	31%	32½%	34½%

The percentages of Empire trade would not be appreciably different if the figures had been based upon averages for a number of years, both before and after the war. They show that, in spite of the condition of Europe, our sales to the Continent have dropped very little in proportion to our total trade, and that the gain in Imperial trade has been small. On the other hand, in the case of imports, in spite of the fact that the Dominions enjoy practically no advantage in our markets in the way of preferences, their sales to us have increased considerably in proportion. The table, however, shows that on the side of imports even now nearly 70 per cent. of all our purchases are made from foreign countries, while in return we sell them 65½ per cent. of our exports. Moreover, of the Imperial total, one-third of our sales are made to India. If this market is excluded, and we consider only the Dominions and Crown Colonies, where a preference has or is likely to be established, it emerges that a Free-trade Empire would mean setting up a wall which would block out 77 per cent. of our overseas markets and a similar proportion of our supplies.

THE GOVERNMENT AND UNEMPLOYMENT.

THE speech which Sir Montague Barlow, the Minister of Labour, delivered in the City on Tuesday, possessed both negative and positive interest. He said what the Government proposed to do towards meeting the unemployment problem, and also what they did not propose to do. The negative proposition consisted of an announcement that the Government would not depart from their present financial policy—a statement which relieved the uneasiness caused by the same Minister's reported advocacy of an attempt to palliate unemployment by currency inflation. As regards concrete plans, the three "trunk lines" of Government effort remain as before, namely, unemployment insurance, trade encouragement by export credits and loan guarantees, and relief work schemes. A new unemployment insurance benefit year began this week, and twelve weeks' consecutive benefit becomes available. That carries us on to the New Year, when the Minister promises a fresh statement in the House of Commons. The Government's programme of export credits is still available to the extent of £16 millions, while of the total £50 millions Government guarantee under the Trade Facilities Act £14 millions are not yet exhausted; but advantage of the Act to commence big labour-employing schemes has been freely used. Among those who were about to use it Sir Montague mentioned one or two big shipping companies, the Tube Railways, the North Wales Power Company, and Messrs Tata, of India. In addition, the Government has sanctioned a programme of road and bridge development which will involve an expenditure of £14 millions, the cost being shared by the State and local authorities. The work of the Unemployment Grants Committee is also to be expanded, proposals up to £20 millions (instead of £10 millions) being sanctioned. Grants in the case of revenue-producing schemes may now be made by this committee to public utility concerns, as well as to local authorities. Furthermore, Admiralty and War Office work is to be accelerated, and loans for Crown Colony land development are contemplated. Apart from these lines of Government effort, Sir Montague was able to announce that the railways were undertaking large programmes of work. For instance, the Great Western contemplates an expenditure of £10 millions, including £4½ millions on new

works and £2½ millions on locomotives and rolling stock. Similarly, the London and North-Eastern group is to spend about £1,000,000 on locomotives, sleeping cars, and wagons, and £500,000 on permanent way and new works. As far as Sir Montague could gather, ten to fifteen million pounds worth of work "was being put in hand" by the various railway companies.

The chief comment on relief schemes for the absorption of labour, whether Governmental or otherwise, is that if, as appears, their conception is recent, they are too late to produce serious results this winter. That Rome, or even a Severn tunnel or a Tay Bridge, are not built in a day is axiomatic. But an equally true fact, which is apt to escape observation, is that the plans for building Rome, or a tunnel, or a bridge, cannot be worked out in a day or a month. In the case of some of the schemes of work mentioned by the Minister of Labour, it would be surprising if they are far enough advanced to absorb much, if any, labour this winter. Every engineer knows that the time to prepare schemes for winter work is the early spring, and the only sound procedure for a Government is to prepare schemes in good times, and have them ready to produce when needed. Last spring, perhaps, the Government were lured into false contentment by the trade recovery then in temporary progress. From November to April a decline in unemployment was steadily in progress, but then the check came. At the end of September the Trade Union percentage of unemployment was the same as at the end of April, at 11.3, and the percentage unemployed of all workers insured under the Unemployment Insurance Acts somewhat higher at 11.3, compared with 10.9. On April 30th the total of registered unemployed was 1,261,000, of whom 963,000 were men. On October 1st the total figure was 1,285,000, of whom men numbered 955,000. These figures, as Sir Montague admitted, do not tell the whole story. In some industries, at any rate, the number of workers on short time may have increased considerably in the last six months. Movements of the Trade Union unemployment percentage are shown below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

End of—	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.

* Excluding coal miners.

It is satisfactory to learn that the Government has not been seriously tempted by the lure of the inflationary short cut to an artificial and momentary betterment. We observe that Mr F. C. Goodenough, the chairman of Barclays Bank, upon whom inflationists have recently seized as a weighty protagonist of their cause, has emphatically repudiated the soft impeachment. He repeated on Thursday, at the Colchester oyster feast, that "no one would be an advocate of deliberate inflation," and continued: "The commercial prosperity of the Empire..... will not be secured through a policy of deliberate inflation, nor will the evils of unemployment be counteracted by such a policy." A matter of the very greatest importance, he said, is "that there should be neither inflation nor deflation here, but that sterling should maintain a steady value. Whatever may happen to other currencies, we wish to see the relative value of sterling to commodities upon a stable basis. That would give greater confidence to those engaged in trade than any other thing." In urging stabilisation, Mr Goodenough, we think, speaks the present opinion of the great majority of business men. It would be idle to deny that this view is somewhat different from that implied in the Cunliffe report, but the events of the last few years have produced a recognition that in times like these it is unwise to pursue a policy involving a downward drift of prices, however

slow. But if this view sees the disadvantages of deflation, it recognises even more clearly the lessons, drawn from home as well as from foreign experience, of what inflation brings in its train.

Nevertheless, there are signs that these lessons have not been learnt everywhere. It is, for instance, reported that the Grand Council of the Federation of British Industries considers "that the time has passed for temporary palliatives, and that there should be serious investigation of the possible results of fundamental changes in national policy." A public speech by Sir Eric Geddes, the president of the Federation, is, we understand, nearly due; and if we are correct in our suspicion that inflation is the "fundamental change" which is in the mind of himself and his colleagues, we shall be interested to learn from him how the supposed blessings may be obtained and the well-proved curses of its aftermath may be avoided.

INDUSTRIAL PROFITS.

OUR quarterly statistics of the profits of industrial companies, compiled from the weekly summary of company profit and loss accounts printed on a later page, shows a substantial increase in the profits of those companies whose reports have been made public during the third quarter of the current year. But we may say at once that this increase follows very heavy declines in the corresponding periods of the two preceding quarters. This will perhaps be best illustrated by saying that in the third quarter of 1920 the average profit per company was £104,100; in the third quarter of 1921 it dropped to £75,800, and in 1922 to £58,000, while for the past quarter it has recovered to £82,850. Thus there seems to have been a very definite reaction from the initial effects of the trade slump, which made their most serious mark upon the profits disclosed in the latter part of 1921 and in the first nine months of 1922. During the past three months the reports of 209 companies have been analysed in our weekly summary of profit and loss accounts, and these show aggregate net profits, after payment of debenture interest, &c., of £17,317,500, as against £10,469,100 earned by the same companies in their preceding financial year, an increase of £6,848,400, or 65.2 per cent. In our analysis which appeared twelve months ago we showed that 209 companies—the fact that the number is the same as in the past quarter is a mere coincidence, and does not imply that all the companies included are identical—had recorded a decline in aggregate net profits of 23.5 per cent. Since that time the profits disclosed have been on the up grade, as may be seen from the following table, which sets out the net result of our last five quarterly analyses:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports published in		Increase.		Decrease.	
		1921-22.	1922-23.	£	%	£	%
1922.							
Third quarter	209	15,855,920	12,120,153	3,735,767	23.5	..	..
Fourth quarter	319	23,510,452	24,228,719	718,267	3.9	..	..
1923.							
First quarter	405	28,489,995	40,276,870	11,786,877	41.4	..	..
Second quarter	425	31,874,787	38,945,778	7,070,991	22.1	..	..
Third quarter	1,358	99,529,152	115,571,520	16,042,368	16.1	..	..
Fourth quarter	209	10,469,118	17,317,482	6,848,364	65.2	..	..

The percentage increase for the past quarter is substantially greater than those shown for the immediately preceding quarters, though in actual amount it is smaller. The next table, which gives the increases or decreases in net profits recorded in each quarter since the beginning of 1918, shows how the increases for each of the past four quarters follow a series of very substantial decreases:—

	1918.	1919.	1920.	1921.	1922.	1923.
First quarter	5.0	+10.4	+26.9	+3.5	-43.4	+41.4
Second quarter	5.8	-5.1	+37.8	-8.4	-33.7	+22.1
Third quarter	+12.3	-3.4	+41.9	-42.4	-23.5	+65.2
Fourth quarter	+4.7	+10.5	+27.1	-52.9	+3.9	..

Taking the third quarter of 1920 as 100, the decline of 1921 would reduce the figure to 57.6, and that of 1922 to 44.1, so that the past quarter's increase of 65.2 per cent. would only bring the figure up to 73; that is, 27 per cent. lower than in the corresponding period of 1920.

The next table sets out the changes in profits shown by 14 groups of companies:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Quarter Ended Sept. 30.		Increase.		Decrease.	
		1922.	1923.	£	%	£	%
Breweries	16	4,742,889	4,792,497	49,608	1.1	..	..
Gas	9	182,898	218,649	35,751	19.6	..	..
Hotels, restaurants, &c.	7	201,901	235,700	33,799	16.8	..	..
Iron, coal, and steel	14	314,750	1,015,301	700,551	222.5	..	..
Land, mortgage, &c.	17	518,932	338,993	..	..	179,939	34.6
Rubber, &c.	40	176,752	415,308	238,556	134.8	..	..
Shipping	6	665,786	819,680	153,892	23.0	..	..
Shops and stores	3	282,547	348,867	66,320	23.5	..	..
Tea	4	34,207	131,147	96,940	283.4	..	..
Telegraph, &c.	5	2,587,498	1,835,938	..	..	751,560	29.0
Textiles	11	1,089,684	2,885,952	1,796,268	164.8	..	..
Trust companies	11	329,595	448,195	118,600	35.8	..	..
Waterworks	9	35,678	38,416	2,738	7.7	..	..
Miscellaneous	57	694,001	3,792,759	4,486,760	..	..	..
Total	209	10,469,118	17,317,482	6,848,364	65.2	..	..

The miscellaneous group includes one or two big companies which have turned the heavy losses of the previous year into profits. The African and Eastern Trade Corporation, for example, has recently declared a profit of £539,800, as against a net loss of £1,794,800 for the previous year; Van den Berghs made a profit of £346,800, against a loss of £256,900; the Smithfield and Argentine Meat recorded a profit of £118,000, against a loss of £297,600, and so on. A striking increase is shown by the iron, coal and steel group. This group includes the Ebbw Vale company, which earned a profit of £52,700, as against a loss in the previous year of £327,600. An increase in profits, however, is fairly general throughout the group. The figures of the textile group are also greatly affected by one company, British Dyestuffs Corporation having turned a loss of over a million into a profit of over £100,000. Each of the four tea companies has contributed to the increase of 283 per cent., and increases were fairly general in the rubber group. The decline in the land, mortgage and financial group is partly accounted for by the figures of Leach's Argentine Estates, which showed a loss of £238,900, as against a profit of £1,000. In the telegraph group, two of the principal cable companies showed a decline in profits of about £400,000 each.

In the next table we show the method of distribution of profits in each of the past five quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1922.				
Third quarter	12,120,153	10,010,136	827	Dr 1,218,067
Fourth quarter	24,228,719	15,698,160	64.9	3,810,507
1923.				
First quarter	40,276,870	21,934,234	54.4	8,841,562
Second quarter	38,945,778	25,038,627	64.3	6,162,466
Third quarter	115,571,520	72,681,157	63.0	17,606,478
Fourth quarter	17,317,482	9,653,962	55.8	4,623,682

The welcome feature of the figures for the past quarter is the substantial increase shown in the proportion of profits reserved, either in the form of allocations to specific reserve funds or of additions to balances carried forward. Twelve months ago, the aggregate amount distributed to shareholders was 10 per cent. greater than total net profits, but this state of affairs has been remedied and the proportions distributed are now becoming more reasonable. The distribution adopted by each of the groups in the past three months was as follows:—

	Net Profits.	Ordinary Dividend.	Pref. Dividend.	To Reserve, &c.
Breweries	4,792,497	3,313,220	69.1	894,431
Gas	218,649	134,820	61.7	74,465
Hotels, restaurants, &c.	235,780	138,415	58.6	55,740
Iron, coal, and steel	1,015,301	547,652	53.8	174,316
Land, mortgage, &c.	338,993	323,812	95.6	15,181
Rubber, &c.	415,308	392,989	94.6	7,382
Shipping	819,680	472,452	57.7	277,510
Shops and stores	348,867	156,300	45.0	135,770
Tea	131,147	60,327	46.0	67,220
Telegraph, &c.	1,835,938	1,058,091	57.8	707,847
Textiles	2,885,952	1,180,831	40.9	1,320,570
Trust companies	448,195	319,943	71.0	6,234
Waterworks	38,416	26,299	68.4	3,859
Miscellaneous	3,792,759	1,528,811	40.3	900,549
Total	17,317,482	9,653,962	55.8	4,623,682

In the matter of reserves the best showing is made by the small tea group, while the textile group also reserves a high percentage of profits. The trust company group has

drawn upon the balances brought forward to pay dividends, but in no case has a definite reserve fund been debited.

In the next table we show the ratio to total ordinary and preference capital of net profits and of amounts carried to reserves, &c. :—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1922.	£	£	%
Third quarter....	205,481,600	12,120,153	5.9
Fourth quarter ..	268,105,000	24,228,719	9.1
1923.			
First quarter ...	406,793,000	40,276,870	9.9
Second quarter ...	396,675,400	38,945,778	9.8
	1,277,055,000	115,571,520	9.1
Third quarter....	195,420,900	17,317,482	8.9

The ratio of profits to capital in the past quarter is a little lower than the average for 1921, but that of amounts reserved shows a considerable improvement.

The average rates paid on debenture, preference and ordinary capital in each quarter since the beginning of 1920 have been as follows :—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1920.	1921.	1922.	1923.	1920.	1921.	1922.	1923.	1920.	1921.	1922.	1923.
1st quarter	4.25	4.43	4.70	4.61	5.1	5.0	5.3	5.7	11.2	10.3	8.5	9.2
2nd quarter	4.46	4.61	5.00	5.08	5.0	5.6	5.0	5.4	13.7	12.6	8.8	9.9
3rd quarter	4.12	4.45	5.21	4.90	4.9	5.0	4.5	4.3	14.2	9.7	7.6	7.8
4th quarter	4.43	4.52	4.83	4.63	5.3	5.1	5.6	5.6	11.6	7.6	8.6	8.6

The average dividend distributed on ordinary capital in the past quarter was at the modest rate of 7.8 per cent., and very little higher than that distributed in the corresponding period of 1922, when profits were so much smaller, the explanation being that very much larger amounts have been retained in the balance-sheets, as the foregoing figures have shown.

The final table gives the average rates paid by each of the groups, together with the average rate of ordinary dividend shown in our article a year ago :—

	Deben- ture Capital.	Rate of Interest.	Prefer- ence Capital.	Rate of Dividend.	Ordinary Capital.	Rate of Dividend.
Breweries	10,981,931	3.9	11,810,745	4.9	20,534,691	16.1
Gas	913,709	5.0	145,915	6.4	2,324,283	5.8
Hotels, restaurants, &c.	1,425,156	4.3	735,000	5.7	1,401,079	9.9
Iron, coal, and steel	5,897,625	7.0	4,609,125	4.2	11,603,193	4.7
Land, mortgage, &c.	4,763,371	4.6	3,032,956	3.5	4,750,722	6.6
Rubber, &c.	628,986	6.4	542,335	2.7	7,246,346	5.4
Shipping	48,244	—	2,225,000	3.1	7,544,540	9.3
Shops and stores	133,400	6.0	594,979	6.3	1,055,250	14.3
Tes.	2,810,420	4.0	2,000,000	3.5	10,302,796	10.2
Telegraphs, &c.	5,979,778	4.8	11,910,168	3.2	16,093,607	7.3
Textiles	1,015,080	4.7	1,431,980	9.4	4,959,982	6.4
Trust companies	197,349	4.7	102,984	8.0	649,654	4.1
Waterworks	14,778,928	5.4	31,794,966	4.3	35,400,009	4.3
Miscellaneous	49,633,877	4.9	71,306,148	4.3	124,114,774	7.8

Six groups show a reduction in the average rate of ordinary dividend, including the textile group, whose profits increased substantially. The land, mortgage, &c., group, on the other hand, pays a slightly higher rate, though aggregate profits were much lower. In neither year, however, did the company whose figures were responsible for the drop in total profits pay an ordinary dividend.

REVOLT OF THE PANEL DOCTORS.

If the dispute of the "Panel Doctors *versus* the Approved Societies, the Ministry of Health intervening," be not speedily settled, the country will be required to face the wholesale resignation of most of the 13,000 panel doctors who are charged with the medical service of fourteen million people under the National Insurance Acts. The *British Medical Journal*, the official mouthpiece of the powerful Association which is standing behind the panel doctors, declares war in definite terms: "The profession must now decide once and for all whether it will submit to approved society domina-

tion, or whether it will take this opportunity of making its freedom sure. The only course now open is for the profession to show that no service can be secured under the Acts, whatever the exact terms, until the professional position has been re-established. This means that every insurance practitioner should at once send to the secretary of his Panel Committee his resignation from the service, to take effect on January 1st next." It is expected that the notices of resignation will be secured by October 30th, and seeing that the panel doctors are now very tightly organised and that the British Medical Association is in control of their side of the controversy, there is at least some danger that these expectations will be realised. The Conference of panel doctors on Thursday unanimously accepted the advice of the Association to proceed with the resignation policy.

It is a lamentable business, though when one comes to examine the details of the dispute and to go through the history of the working of the National Insurance Acts, one cannot help feeling that the stand which the doctors are making should not have surprised either the Ministry of Health or the approved societies. The issue now is almost exactly the same as the issue in 1911-12, when Mr Lloyd George was compelled to give way to doctors incomparably less well organised then than they are now. Primarily it was not then, and is not now, a dispute over fees, though an attempt to reduce fees now has occasioned the dispute. Then, as now, it was a refusal by the doctors to be controlled by the approved (friendly) societies. As a result of the settlement in 1912, the control over the medical services under the Act was vested by statute in district Insurance Committees representative of all parties concerned. The friendly societies—which expanded into approved societies—were charged with the organisation and collection of insurance cards and payments, the paying out of cash benefits (sickness, maternity, and so on), and the general financial administration. As time has passed the power and influence of the approved societies have gone up, and those of the district Insurance Committees gone down. The societies, as purse holders, have accumulated large reserves against the Insurance Fund's liabilities under the Acts, and for additional benefits—reserves which the doctors erroneously regard as "surpluses"—and have gained the ear of the Ministry of Health, with which they are intimately associated in the financial administration. It was inevitable that they should do so. The district Insurance Committees, which were supposed to look after the medical service, have fallen so completely out of the picture that they are playing no part at all in the present dispute. The approved societies, taking perhaps a too strictly business view, want to get the medical service placed upon the lowest scale of fees which will attract the necessary number of doctors; the doctors object strongly to this rather narrow and sordid view of their functions, and declare further that the approved societies have nothing to do with the determination of their fees, and that interposition by them is an impertinence; the Ministry of Health has tried to hold the balance and keep the peace between the powerful and pushing approved societies and the suspicious and resentful organisation of doctors. So far the Ministry seems to have made rather a mess of things. At any rate, its assumption of authority to lay down terms to the doctors has precipitated the revolt. The doctors look upon the Ministry as being so much under the thumb of the approved societies as to have lost status as an impartial arbitrator.

The solution of the trouble is fairly obvious. It was brought about by an attempt on the part of the approved societies to have the fees of doctors reduced. The Ministry has fixed a scale of fees which it considers a just compromise between the societies and the doctors. The doctors decline to accept the Ministry's scale of fees, but have offered to accept the award of impartial arbitrators. The Ministry has rejected arbitration because the Minister regards "his position as that of an arbitrator with the added responsibility of his Ministerial duty." The doctors reply by threatening resignation of their appointments on the panel. It is clearly necessary to remove the whole question of fees out of the heated atmosphere of suspicion

and resentment by referring them to a court of arbitration acceptable to both sides. There is no progress possible on the present road, which has led directly up to a declaration of war. An arbitrator is of no use unless both sides accept him, and the doctors will not accept the Ministry of Health. Under these circumstances the Ministry would be well advised to stand aside and agree with the doctors upon an arbitrator, or arbitrators, who will be acceptable.

The precedent of 1920 is claimed by both sides, but regarded from widely different points of view. What happened then was this. The pre-war panel fees were 7s 3d per head of persons on a doctor's list. As they had become inadequate to meet the doctors' increased cost of living and expenses, a court of arbitrators was set up in 1920. One was appointed by the British Medical Association, one by the Ministry of Health, and the third by these two nominees. The arbitrators awarded the panel doctors 11s per head of persons on the lists. For 1922 and 1923, as the cost of living had come down, the doctors accepted 9s 6d without prejudice to the determination of the adequate rate in more settled times. Now the approved societies want to go back to the pre-war 7s 3d, and the doctors regard 9s 6d as the inadequate minimum. The Ministry of Health, after a series of calculations which the doctors challenge—and which are not altogether convincing to the outsider—has fixed upon 8s 6d for a three-years' contract and 8s for a five-years' contract. The doctors will not entertain these rates, especially as they see in their calculation the Hidden Hand of the approved societies. There should be no great difficulty about adjusting the financial differences between the parties if a new court of arbitrators were set up on the 1920 model. All they would have to do would be to take the 11s per head judgment of 1920, and determine what the corresponding rate should be for the next three or five years, after taking all relevant circumstances into account. Then, when the rate of payment had been fixed by impartial arbitration, and agreed to, the other grievances of the doctors concerning the interference of approved societies with the medical service should be capable of reasonable adjustment. Moreover, in spite of the tightened organisation of the doctors, one may be just a little sceptical of their solidity in rejecting a compromise, because it is well known that to a large number of practitioners the difference between having and being without the panel business means the difference between prosperity and hard times. The only alternative to the panel system is that now proposed by the British Medical Association, which is anxious to explain that wholesale resignation does not mean a "strike" against patients. This alternative is for the doctors to go on attending the patients on their lists and to be paid by fees as in private practice (out of the Insurance Fund) or by capitation rates locally agreed upon. The Acts, through the district Insurance Committees, do provide machinery for working a medical service of this kind. But it is scarcely worth while to discuss alternatives until the whole dispute has been removed from its present war atmosphere.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

DURING the past three months the position of the Lancashire cotton industry has not shown any distinct change in so far as employment for the operatives is concerned. In certain quarters, however, demand has been on broader lines, and more business has been done. Some sections are worse than others, but all along the line it is still extremely difficult for spinners and manufacturers to secure prices for their products that are any better than allowing machinery to stand idle. The depression is most acute in the commoner qualities of yarn and the plainer makes of piece goods. During the past quarter there has been some improvement in the finer end of the industry, and the general position is rather more encouraging for mills spinning Egyptian cotton and weaving sheds producing fancy cloths.

Numerous remedies are being proposed to relieve the depression. Some of the suggestions are certainly

amazing, and there is no possibility whatever of many of the ideas put forward being accepted by the trade. A conference has just been held in the Manchester Town Hall, presided over by the Lord Mayor, of employers and trade union officials. It was decided to set up a joint committee of masters and workpeople for the purpose of discussing methods for the betterment of the industry. The first meeting of this committee is being held this week. It is being urged in many quarters that some system of control is desirable, but most of the employers are decidedly against action of this kind. If there is one thing more than any other which would bring about a better feeling in business circles it is a definite settlement of the German reparations question. In local trade circles there is still much nervousness with regard to financial matters.

Very wide fluctuations have occurred in raw cotton rates. On June 29th the quotation for fully middling American cotton on the spot in Liverpool was 16.67d. There was an easier movement during July, and on August 1st the price was 13.40d. A little later there was a smart rise to 15.78d on August 21st. The upward movement in September was very pronounced, and after 16.02d had been posted on the 6th, the figure on the 20th was 18.58d. After 16.78d had been registered on the 26th, the quotation moved on the 29th to 17.33d. Since then many changes have occurred. The price on October 10th was 16.36d, but on Wednesday last (October 17th) 17.49d was posted. According to the official reports of the United States Government, the crop for this season will be about 11,000,000 bales. Owing to the uncertain trade outlook, it is not easy to estimate the probable consumption during the twelve months, but it is not likely that the requirements of users will be less than 12,000,000 bales. Whatever happens, it is certain that stocks at the end of next July will be smaller than at the same time this year. The high price of cotton is stimulating its growth in other countries, and there is every likelihood of larger supplies being received from India, Egypt, the Sudan, and Brazil in the next few years. Recent advices relating to the growth in Egypt have not been altogether satisfactory, but a fairly large output is probable. The quotation for fully good fair Sakellaris Egyptian cotton on the spot in Liverpool on June 29th was 16.20d. By July 30th the price had fallen to 15.25d, but there was an advance to 19d on September 20th, and the figure on October 2nd was 19.10d, whereas on Wednesday last (October 17th) the figure was 18.40d.

Throughout the past quarter there has not been any lack of inquiry in piece goods for abroad. The demand indicates that goods are more urgently wanted in certain parts of the world. When prices have to be arranged, however, the trouble begins, and it has been exceedingly difficult to fix terms of fresh contracts. Business available is not sufficient to meet the requirements of makers, and there is keen competition for the contracts on the market. For India there has been an extensive inquiry covering a wide range of cloths. There has been a distinctly larger turnover in light bleaching descriptions. Many Blackburn manufacturers have cleared their stocks of such goods, and certain producers have extended their order lists. More attempts have been made to arrange transactions in grey shirtings, but actual operations have been very patchy, and so far it has been impossible for manufacturers to secure adequate rates for orders to make, the bulk of the business being in stock lots, which have been sold at prices which mean a definite sacrifice on the part of sellers. Undoubtedly common grey shirtings are the worst thing in the Manchester market. With regard to China very unsettled conditions continue to prevail on the other side, but, according to one or two recent cables, the outlook is slightly better. Rather more activity has been mentioned for some of the minor outlets of the Far East, and an increased turnover has taken place for Java, Singapore, and the Straits Settlements. The Near Eastern markets for many months have been dull, but there are now indications of freer operations for Egypt, Turkey, and the Levant. The outlets of Central and South America have been rather healthier. Fancy goods have been in active request for the United States, and just recently more business has been put through for the Continent. Diverse reports have been received from the home trade, and although some necessary buying has taken

place there is a feeling amongst retailers that clearances this winter are not likely to be very encouraging in view of the large amount of unemployment in the leading industries.

The following is a table of the shipments of cotton piece goods from the United Kingdom for the nine months ended September, together with the comparative figures for previous years:—

	Yards.	£
1913	5,350,278,900	73,659,119
1914	4,782,461,500	66,146,672
	Square Yards.	
1920	3,540,677,100	242,732,477
1921	1,866,341,100	100,045,277
1922	3,068,278,700	106,637,069
1923	3,097,216,600	104,072,046

The depression in the industry is undoubtedly most acute in the American spinning department. Now and again producers appear to experience a little relief, but no sustained improvement in the position can be recorded. At the end of August the extension of the holidays in Oldham resulted in yarn stocks in first hands being reduced, and a larger business in September helped to place some spinners on a rather better footing. Latterly, however, it has been extremely difficult to prevent fresh loss of ground. The demand in medium counts has been on broader lines, and some producers of superior marks are rather more favourably situated. The committee of the Master Spinners' Federation has decided to recommend all users of American cotton to continue the 50 per cent. curtailment of production up to the end of October. This organised short time has been going on since last March, and as it has not achieved the desired result some members are getting rather tired of concerted action, and more cases are being mentioned of firms making their own arrangements as to output. In yarns suitable for export purposes a larger inquiry for India has been well maintained, and although actual business has been patchy a very fair turnover has taken place. For the Continent business has been very slow, and the trade passing from week to week for France, Germany, and Holland has been very disappointing. The ups and downs in Egyptian cotton have caused some changes in quotations for Bolton yarns, but many spinners in this section are in a position to present a firm front to customers. A steady business has been done, and the better condition of the fine spinning department, which has been noticeable since the beginning of this year, continues.

The following is a comparative table of yarn shipments from the United Kingdom for the past nine months, together with comparative figures for previous years:—

	Lb.	£
1913	154,761,700	11,022,055
1914	150,995,400	10,464,922
1920	118,447,700	37,656,977
1921	90,592,600	15,987,327
1922	158,363,900	20,763,425
1923	104,530,000	15,263,209

An important event during the quarter has been the proposal of the Piece Dyers' Association to reduce prices by 10 per cent., on condition that merchants placed all their business with members of the association. This scheme has been unanimously rejected by shippers. Negotiations between the two bodies are still taking place, and strong representations are being made to the dyers that they should withdraw the condition that all orders must be given to members of the association if the 10 per cent. reduction is to be obtained. The high charges for dyeing are undoubtedly strangling our foreign trade, and a substantial amount of business is being held up at the moment as a result of the uncertainty which exists with regard to future prices.

The immediate prospects for the industry are very uncertain. In most quarters the depression is still very pronounced. It must not be taken for granted, however, that all departments in the trade are doing very badly. It is as well to point out that spinners of Egyptian yarns are working at a profit, and numerous manufacturers of special cloths are doing fairly well. Relief is badly wanted by spinners of the commoner sorts of American yarns, and by producers of plain goods such as grey shirtings. The most hopeful feature about the situation at the present time is that stocks of manufactured articles throughout

the world are comparatively low. Cheaper cotton would be of considerable help to Lancashire, but when all the facts of the situation are taken into consideration lower values in the near future are not probable. Many people are of opinion that the cost of raw material will be much higher early next year, especially should there be an improved demand, which is not at all unlikely.

IMPROVEMENT OF INDUSTRIAL RELATIONS.—II.

THE Coal Mines Agreement of July 1, 1921, marks a step of first importance towards the permanent settlement of disputes between Labour and Capital. The particular terms thereof as between coal owners and miners are of less importance than the general principle thereby inaugurated, of a sharing, between the two partners, of the margin between selling price and cost, in one of the largest and most important industries of the country.

The country is divided into thirteen districts, each of which is separately dealt with. The operating accounts of all mines in each district are aggregated for each month, and the aggregation certified by auditors appointed by the owners and the miners, any points on which they may disagree being submitted for decision either to the District or National Boards, constituted by the Agreement (and consisting of an equal number of owners' and miners' representatives), or to the independent Chairman of the National Board, a position also created by the terms of the Agreement. These aggregations of accounts for each district are sent in to the Board of Trade, and by them presented to Parliament and published.

From the proceeds of the sale of coal and other mining products, as specified in the Agreement, there are deducted:—

(1) The cost of standard wages, which are an agreed figure in each district (based upon past records of the industry, and technically known as the basis rate), plus a percentage. The figure so arrived at is a close approximation to 1914 wages.

(2) The costs of production other than wages.

(3) Standard profits equivalent to 17 per cent. of the cost of standard wages.

Of the balance remaining, 83 per cent. is attributed to the miners, and 17 per cent. to the owners, the former share being expressed as a percentage of the basis wages in each district, and determining the wages to be paid for a period of two months at a certain interval (at present two months) after the months for which the percentages were ascertained. If the net proceeds of coal, after deduction of standard wages and other costs, are insufficient to provide for the standard profits, the deficiency is to be carried forward to a subsequent period. The Agreement also provides that wages paid are not to be less than the standard wages, plus 20 per cent.

The importance of this agreement as a first step towards a fair division of the proceeds of an industry between Capital and Labour can hardly be overestimated, and for the first time the workers are provided with reliable accounts showing the working results of an industry by districts, verified (if they so wish) by their own appointed auditors.

Another fact of perhaps even greater importance emerges from a consideration of the results of the Agreement. In certain districts, owing to the bad state of trade, conditions have been in some senses almost disastrous for both parties; wages have been reduced to the minimum, and heavy arrears of standard profits have been carried forward, and yet the Agreement has stood, and although its termination was discussed by the miners, it was never seriously entertained by either party. With the improved conditions now prevailing in the industry, better results are anticipated. As a first result of a full disclosure of the results of working, this fact is of vital importance, and points the way to a period of partnership between the two parties, in place of the periodical disputes and strikes which have prevailed in the past.

As a first attempt at the equitable sharing of the proceeds of industry, the scheme is naturally not perfect. In fact, it is not a real profit sharing, for the reason that it fixes wages on the basis of profits of a whole district, but without regard to the profits (or losses) of individual undertakings in that district. The pooling of profits in a district for the purpose of wage determination only, forces up wages to a higher level than the poorest undertaking can afford to pay, and there is no contribution from the more prosperous undertakings; while the latter could, in many instances, afford even higher wages than the Agreement provides. Undertakings which are continually losing money (perhaps a very small proportion of the whole), must eventually be forced out of existence, with a consequent loss of employment to those who worked them. But the elimination of these undertakings will tend to raise the general level of wages under the provisions of the Agreement, and so in effect benefit the miners who remain at work, at the expense of those who are thrown out.

The only remedy for this condition is a gradual consolidation of the various undertakings in each district, so applying to the worst-managed undertakings the methods of the best, and leading to a system of district trusts, in which Labour should naturally have a voice, and the consumer receive due protection. To this problem reference will be made in a further article.

Another objection is the requirement that wages must not be reduced below the standard, plus 20 per cent. Such a provision ignores the fact that more cannot be got out of an industry than the margin between cost and selling price. If this margin is only sufficient to pay standard wages and standard profits, or even is insufficient to provide for both, abatements should equitably be made in both; in the proportion in which they share (i.e., in this case 83 per cent. to wages and 17 per cent. to capital), and the deficits carried forward to be recouped out of future surplus. In such an event the remedy would be a rise in selling prices, if the market could stand it, and if not, there would of necessity be a reduction in both wages and profits.

Some objection may also be taken to the expression of standard profits as a percentage of standard wages. A better unit for both would be the ton of coal raised, the figures used in the Agreement as standard being approximately 6s 4d per ton for wages and 1s per ton for capital. The justification for increased expenditure is increased output of coal, so that this method of calculation would automatically and equitably provide remuneration for additional capital introduced. To meet the contingency of an inability to earn standard wages and standard profits, a reserve should be accumulated by setting aside, in good times, some proportion of the surplus over these standards.

In spite of these defects, the fact remains that in one great industry three principles have been established:—

(1) Labour is remunerated by an agreed share of the proceeds of industry.

(2) The facts as to the gross and net proceeds of the industry are made known at regular intervals, in such form that those employed therein have a clear knowledge of the results, and of the proportions thereof which accrue to their benefit.

(3) For the first time there has come into being the idea of co-operation between Labour and Capital to obtain the best results, and to divide these results equitably between them.

One other large industry, viz., the railways, has also attempted a permanent settlement of wages with its workers. Unfortunately in this case the unsound principle of basing wages entirely on the cost of living has been adopted, with the result so far that adequate reductions in railway rates, which are themselves a substantial item in the cost of living, have been unduly, and perhaps indefinitely postponed. It must, therefore, be reluctantly admitted that the railway agreement has made no contribution to a really permanent settlement of the wages question.

The important consideration is the extent to which the principle of the Coal Mines Agreement can be extended to the other great industries of the country, and whether this can be accomplished by voluntary action or by legislation. This is reserved for discussion in a third article.

THE PROBLEM OF HUNGARY.—I.

(BY A CORRESPONDENT.)

To the traveller fresh from Austria, present conditions in Hungary assume the light of a sinister contradiction. Whereas in Austria the task of reconstruction is being faced by all sections of the people with common resolution and renewed hope, Hungary, befogged by illusions, bedevilled by suspicions and hatreds, is drifting on a tide of warring interests, discontent and despair. While the problem of Austria was never more than an economic question, over Hungary, reactionary, irredentist, and potentially dangerous, there might well be erected a sign: "It is useless to throw economic stones at this notice-board." Every question is confused by political issues, each factor in the grave problem which the country presents being obscured by psychological considerations.

In Buda Pesth conditions are rapidly deteriorating. The rate of suicide "for economic reasons" has risen to nearly one per four hours. In the hospitals patients are dying on beds without bedding, while in the tenements workers are dying without beds at all. The general view of the lower middle class is that "this winter it will be finished." On the other hand, the margin of vitality possessed by a predominantly agricultural country is great, and established civilisations perish slowly. Indeed, to expect the early disintegration of Hungary, even in the event of a failure to arrest existing tendencies, would be premature.

The obvious features of the economic situation—currency depreciation arising from unbalanced budgets and monetary inflation, with foreign trade indebtedness a contributing influence—are common over half Europe. The credit which the Hungarian Government claims for having pursued an anti-inflationary ideal may readily be given—has any European Government except the Soviet *deliberately* inflated the currency?—and it must be admitted that the recent history of the *korona* has been not so much the classic cycle of expanded circulation, rising prices, and falling exchanges, as the reversed order of falling valuta, reduced purchasing power, and forced recourse to the printing press. The depreciation of Hungarian currency has been in the main an anticipatory movement, discounting future inflation, and thereby rendering such inflation inevitable. The following figures illustrate the tendency in the past nine months:—

	Note Circulation.	Prices.	Devisen Rate for Sterling.
1922—December (basis)....	100	100	100
1923—March	105	198	159
September 1st	548	748	841
September 23rd	722	..	..

It will be observed that in the first quarter of this year, while currency expanded by no more than 5 per cent., the official rate of exchange fell by 60 per cent., and internal prices doubled. It must, of course, be remembered that prices of imports are governed by the effective commercial rate of exchange, which has long ruled some 50 per cent. above the official quotation. Even at the beginning of September, internal prices, estimated at about 2,500 times the pre-war level, would have warranted, on the basis of purchasing power parities, a quotation of 60,000 at worst for the *korona*-sterling exchange, as opposed to the commercial rate of 130,000, and the Devisen figure of 90,000.

When all this has been said, however, the fact still remains that Governments usually get from foreign bourses the quotation they deserve, and after due allowance is made for inherent difficulties, the budgets of the Bethlen Cabinet have not been such as to inspire confidence. For the year 1921-22 the deficit appears to have been 90 million gold *korona*. The deficit for 1922-23 was estimated by the Minister of Finance last March at 40 milliards paper, but this figure is considered to have been exceeded, and the actual deficit seems likely to be nearer 55 milliards. With expenses mounting in conformity with soaring prices, the outlook for the ensuing year is obscure, and pessimism on the part of exchange dealers has not been unjustified.

So far as can be estimated, the adverse balance of Hungarian trade in the three years 1920-22 totalled over £35,000,000, converting korona to sterling at the mean rate for each year. Put in another way, the excess of imports amounted in 1920 to 156 per cent., in 1921 to 93 per cent., and in 1922 to 83 per cent. of the total exports. As regards 1923, the adverse balance for the first six months came to roughly 80 milliards paper, and although sales on account of the excellent harvest should reduce external indebtedness in the current half-year, it is unsafe to conclude that the future balance of trade is assured, much less that an export surplus for reparation purposes is on the way to being established.

It has to be borne in mind that the Treaty of Trianon left Hungary deficient in many essential commodities. The present level of importation of coal, textiles, timber, paper, chemicals, iron and salt, which together form the bulk of the total, cannot well be curtailed without strangling industry and lowering intolerably the standard of existence. Stability can only be attained by expansion of exports, and such an expansion can only be seriously looked for in the direction of agricultural produce. Lacking labour with natural aptitude for industrial processes, and compelled to rely largely on imported raw materials, Hungary has only succeeded in securing foreign markets for some few factory products, such as agricultural machinery, through the enforced acceptance by the workers of a real wage whose continuance cannot be expected.

Estimates of future agricultural production are notoriously unreliable. The following figures of production of the principal cereals expressed as percentages of the 1913 level for the same territory are at first sight encouraging:—

	Wheat.	Rye.	Barley.	Oats.	Maize
	%	%	%	%	%
1921	72	72	65	71	53
1922	60	67	63	73	55
1923 (estimated) ..	91	100	74	84	75

Against these figures, however, must be set the consideration that climatic conditions this year have been exceptionally favourable. Nature in 1923 has chosen to play gracious lady in a naughty world, but there is no warrant for expecting on like scale a repetition of her performance. Moreover, the fall in the acreage down to these cereals has continued practically without interruption since the war.

To some extent, no doubt, production could be improved by increased machinery and supplies of fertilisers; more scientific methods of cultivation could do much, while sowings could be largely increased. These are mechanical steps to the end. The crux of the matter, however, is the soul of the peasant. If post-war Hungary is to survive, the peasant must work long and hard in order that his brother in the towns may eat. As things stand, it is doubtful if he will accept this burden. Landless, oppressed, enduring in sullen discontent a mediævalism which has taken from him even the hope of self-betterment, he may maintain production on the average at about 80 per cent. of the pre-war level, but this will not save Hungary. That the country can be saved at all without a sweeping measure of land reform, or except by the conscious determination of a nation of peasant proprietors, is an illusion which few but Hungarian landlords could be found to share.

DIARY OF THE IMPERIAL CONFERENCE.

Monday, October 15th.—Lord Salisbury, Chairman of the National and Imperial Defence Committee, addressed the Conference on matters connected with the military, naval, and air defences of the Empire, Lord Derby (Secretary of State for War), Mr Amery (First Lord of the Admiralty), and Sir Samuel Hoare (Secretary of State for Air) being present during the address and the debate which followed. Although it was decided by the Conference that the publication of any detailed report of this sitting would be inadvisable, it may be surmised that the main lines of Lord Salisbury's address would in part follow those of the Imperial Defence Committee's special report on the relations of the Navy and Air Force, which

was published shortly before the adjournment of Parliament. A subsequent and final report of the Committee has been drawn up, but its contents have not been made public up to the present.

Tuesday, October 16th.—The Imperial Economic Conference, after a discussion opened by Mr Bridgeman (Home Secretary), decided that a committee be appointed to explore the possibilities of arriving at a common Empire policy in the matter of workmen's compensation laws as far as these apply to non-resident workmen, to seaman, and to nationals of foreign countries. In making its recommendations the committee will take into account any reciprocity granted in this respect by foreign countries to nationals of Great Britain and the Dominions. Subsequently, a statement was made by Lord Salisbury with regard to the work of the Department of Scientific and Industrial Research. Lord Salisbury outlined the work of the Department in verifying the different commercial and industrial standards of the Empire, and conducting specialised research into problems affecting both the Government and the trading community as a whole, and instanced fruit, power, alcohol, and flax as suitable subjects for co-operation in imperial research. The Conference, while appreciative of the work accomplished by the Imperial Institute, decided that the whole question of co-ordinating and publishing the results of scientific inquiries undertaken in the different parts of the Empire was of such crucial importance as to merit special consideration by an *ad hoc* committee, which was accordingly set up.

At the afternoon session, Sir Laming Worthington-Evans (Postmaster-General) made a statement on the position of the Empire's mail, cable, and wireless services. Its tenour showed that the hard work carried out since the war would shortly bear fruit in a mail and cable service equal, or almost equal, to that of pre-war days, while in certain cases, such as the West Indian Islands, new developments were in contemplation. From the debate which followed it would seem that most of the Dominions desire greater facilities than are at present available, and it was resolved, firstly, that representatives of the Dominions and India should be associated with the Imperial Communication Committee when questions of interest to them were under consideration; secondly, that all possible support should be given to the State-owned Atlantic cable route; and thirdly, that companies within the Empire should be given preference in any development of the Empire's wireless systems.

Wednesday, October 17th.—The Imperial Conference continued its investigations into Imperial Defence, after hearing a statement made by Mr Amery. No details of this sitting have been published beyond the fact that Mr Amery's decision to send certain warships for an extended cruise in Dominion waters was accorded general approval by the various Prime Ministers.

In the afternoon, Sir Halford Mackinder, Chairman of the Imperial Shipping Committee, made a statement to the Imperial Economic Conference regarding the work of that committee since its formation in the autumn of 1920. It was mentioned that the Brussels International Conference on shipping matters had adopted rules in the matter of bills of lading based on the Canadian system. Sir Halford also submitted a series of recommendations connected with the improvement of communications, by sea and air, with Australia and New Zealand. Mr Graham (Canadian Minister of Railways) voiced the difficulties of the Dominions arising from the discrepancy in bulk between their exports and imports.

Thursday, October 18th.—The Economic Conference continued its discussion of the work of the Imperial Shipping Committee, and adopted a resolution thanking that committee for its services to the Empire. The debates throughout this week have revealed the importance attached by all the Dominions to the pressing need for an improved system of Imperial communication. This question has so far proved the most prominent feature of the Economic Conference's deliberations.

The afternoon was devoted to committee work by both the Imperial Conference and the Economic Conference, members of the former meeting at the Admiralty for the elucidation of various technical points arising out of Wednesday's discussion.

Notes of the Week.

Deadlock in the Ruhr.—There have been several developments in the Franco-German situation since we wrote last. In the first place, the negotiations between the French occupying authorities and the Rhineland industrialists for the resumption of payments in kind have broken down. The reason is obvious. Herr Stinnes cannot deliver coal to France unless he gets the wherewithal to pay his workpeople. This is not obstinacy or bad faith, it is simply a fact, which should have been constantly in the minds of French and Belgian statesmen. Before the occupation coal was being steadily delivered over the frontier. It was being paid for by the German taxpayer. It is true that the taxes were only to a small extent levied through the revenue officer, but the balance was taken from the German people none the less surely by means of the printing-press. Reparations in kind have, in fact, been made for two years by the vicious system itself, which has brought Germany to bankruptcy and ruin. At the same time, Mons. Poincaré refuses to negotiate with Berlin at all, and though there has been conveyed to him as clearly as words can express the self-evident truth that the Berlin Government cannot possibly pay for the deliveries in kind, the French Prime Minister continues to declare that he cannot recognise the German declaration as to the impossibility of financing deliveries in kind, but, on the contrary, must regard it as a continuance of resistance. As the German situation depreciates his demands become more extreme and impossible of fulfilment, and we are now told that there will be no negotiations with the German Government until deliveries have been resumed, and have been raised to the figures prevailing before January of this year. Until that time France will not discuss any new offers on the subject of reparations. What would one think of a creditor who in private life dealt with an obviously bankrupt debtor in this way, and informed him that he would not discuss affairs until he had made himself solvent! The truth of the matter is that France has not the least idea along what road to travel. The first phase has passed in which, after embarking upon the Ruhr adventure from very mixed motives, she made up her mind that her real intention was to create in Germany the will to pay; in doing this she has for the moment destroyed the power to pay. Unless some fresh effort at a general and reasonable settlement is made, she will inevitably be drawn as the next step into endeavouring herself to exploit the Ruhr mines, whatever the political organisation in that territory may be. This exploitation means that she can no longer get her coal supplies for nothing. Reparations can only be paid out of the taxable capacity of the payer, which depends upon the surplus of production over consumption. To some extent she may be able to tax the Ruhr, and thus acquire the means of meeting the cost of production of reparation coal, but it is obvious that the taxable capacity of the Ruhr population, or even of the whole Rhineland population, is but a small proportion of that of Germany as a whole. Moreover, the surplus produced by a population working under duress is certain to be very small, as the experience of all slave states in history has shown. While this attitude proceeds on the part of France, the discussion of reparation plans such as that put up by Belgium to the Reparations Commission is academic, especially since Germany is not to be included in the debate. Mons. Poincaré's attitude means that the present chaos must continue, and under these circumstances the attempt to create a new mark currency is foredoomed to failure.

The Chancellor on the Tax Outlook.—The nine days' wonder caused by some stray remarks of the Minister of Labour on inflation as a cure for unemployment has been killed by the Minister himself, who in a speech in the City on Tuesday declared definitely that the Government had no intention of departing from its present lines of financial policy. Thus, the inflation *canard* (or was it a kite?) is disposed of, and one is left free to face the facts of the position of the national finances in the sounder and more sombre spirit that marked Mr Neville Chamberlain's

speech at Birmingham last week-end. This was the new Chancellor's first statement on public finance since his promotion to the Treasury, and he gave early indication of courage. For the keynote of his address to a business audience was the warning that it would be folly "to count upon further remissions of taxation in the near future." As regards the current fiscal year, while deprecating prophecies based upon a half-year's figures of revenue and expenditure, Mr Chamberlain nailed to the counter the fantasy prevalent early in the year that Sir Robert Horne's huge surplus might be repeated. Turning to the outlook for next year's Budget, Mr Chamberlain explained that there would be a formidable automatic fall in the yield from certain sources of revenue. "I can point," he said, "to three items which are bound to result in a substantial reduction in the national income. First of all, there is the reduction of the duties imposed by the Budget of this year. They did not have their full effect upon the revenue this year, but next year they will cost us an additional £24,000,000. The second item is the item of revenue from miscellaneous sources, from which we get £40,000,000 this year, but from which there will be little to come next year; and, thirdly, you must take into account the fact that we shall be substituting a bad year for a good year in the calculations of the income-tax, and if you put these three items together they will certainly not amount to less than £50,000,000, and they may come to considerably more." In the recital of these facts and estimates, the Chancellor finds full justification for his remark that "such savings as we may be able to make will all be wanted to catch up with the corresponding fall in revenue." It is to be hoped that this frank facing of the facts betokens a determination for the greatest measure of retrenchment in public expenditure compatible with efficient administration. The taxpayer, if it is made plain to him that his tax rates depend upon it, will surely back any such measures. The time of year is at hand when Treasury vigilance may find its best scope; for the spending departments are engaged upon preparing their prospective demands for next year, which then come before the Treasury for scrutiny. The country looks to the new Chancellor to make that scrutiny searching and effective.

Irish Free State Affairs.—In spite of dockers' strikes and industrial troubles, writes our Dublin correspondent, direct trade between Ireland and Great Britain showed, according to the *Board of Trade Journal*, a marked improvement in the month of September. Though there is no definite news yet, the chances of an industrial peace, or, at any rate, of a patched-up provisional peace, are growing. President Cosgrave's suggestions for a resumption of work on slightly reduced wages pending the negotiation of a fuller and more permanent settlement have been approved by ballot by one of the two conflicting unions. This is the union which controls Waterford, Cork, Dundalk, and Galway. A definite acceptance or rejection is looked for early next week. Factors which make for peace are, firstly, that the strike has been causing a net outlay of some thousands of pounds per week by the Irish Transport Workers' Union; secondly, that the Strike Committee in Dublin has imposed a "voluntary levy" on workers which is so unpopular that it is only paid under compulsion; and thirdly, that at long last the employers have plucked up courage, and are about to run, load, and man ships with non-union labour under the protection of Government forces. There is no news yet as to the means to be used to lower the cost of living. The latest suggestion is that, in the event of the employers (in the particular trades affected) being unable to guarantee a substantial reduction, an *ad hoc* body should be formed from representatives of labour, employers, and the co-operative movement to run provision and clothing stores in the working-class areas on co-operative lines—the Government participating only to the extent of lending the working capital and providing facilities. While there is no definite news yet as to a National Loan, there is increased discussion of financial problems. The question of a British guarantee is much canvassed, but, supposing that it were forthcoming—and there are good grounds for believing that it might be—there is some reluctance expressed to accept aid which might

be made the basis of a claim to advise or influence in the political sphere. American money seems a little more remote, or at least more expensive, than it was some months ago, and generally there are many claims on the money market just at present. Activity is shown by individuals and societies, mostly coming from London, who are anxious to preach that the enemy is the financial power—high finance and the banking monopoly—and that all that the Free State must do is to print as many currency notes as it desires and fix all prices. The Government and public of this most conservative country, however, are tolerably well aware that that way madness lies. This week has seen the opening of the new Mallow railway bridge in replacement of that destroyed by the Irregulars a year ago—which represents the restoration of an indispensable railway artery for the South-West. Further items of news of economic importance to Cork and neighbourhood are that all American-Free State mails are to pass through Queenstown; that Armstrong's are likely to set up branch works at Haulbowline Dockyard; and that the Postmaster-General, Mr J. J. Walsh, is contemplating an air service for passengers and mails from Queenstown to London which would, it is alleged, enable twenty-four hours to be saved as compared with the New York to Plymouth or Southampton routes. In view of the necessity for an approach shortly towards putting the Ulster Boundary provisions of the Anglo-Irish Treaty into effect, the spectacle of the Prime Minister of North-East Ulster touring the boundary and protesting in unmeasured terms his resolve never to allow a square yard of his territory to be detached whatever any commission may decide is causing serious comment here.

Cost of Living.—The Ministry of Labour's figure for the cost of living again moved upwards in September, the advance, as in August, being two points. Thus on October 1st the figure was 75 per cent. above the level of July, 1914. Monthly movements over a number of years are recorded below:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.	1923.
January 1st..	85-90	120	125	165	92	78
February " ..	90	120	130	151	88	77
March " ..	90	115	130	141	86	76
April " ..	90-95	110	132	133	82	74
May " ..	95-100	105	141	128	81	70
June " ..	100	105	150	119	80	69
July " ..	100-105	105-110	152	119	84	69
August " ..	110	115	155	122	81	71
September " ..	110	115	161	120	79	73
October " ..	115-120	120	164	110	78	75
November " ..	120-125	125	176	103	80	..
December " ..	120	125	169	99	80	..

Food is again responsible for the advance, the latest index figure for the increase of food prices alone over the pre-war level being 72 per cent., as compared with 68 per cent. on September 1st. This rise was largely due to rises in the price of milk, butter, cheese and eggs. Average butter prices rose by about 2d per lb. Potatoes, flour and bacon, on the other hand, were slightly cheaper on October 1st than a month earlier.

Electricity Commissioners' Report.—The Electricity Commissioners are to be congratulated on the excellent reports surveying the electric supply industry which they have made it their business to publish year by year. The third of these annual reports, covering the year ending March 31st last, has been recently published. It consists of some 142 pages of most valuable information and data. The electricity generated by the electric supply undertakings and railway and tramway authorities of the United Kingdom shows an increase of 17½ per cent. over the previous year. The units generated by the authorised supply undertakings was 4,572 millions, and by the railway and tramway authorities 855 millions. The various schemes for the re-organisation of the electric supply of the country aim at eliminating as far as possible the separate generation of electricity by railway and tramway authorities, so this latter total should, as time elapses, tend to decrease, and

the total of units generated by authorised undertakers be augmented correspondingly. In another place, the Report touches on this matter, and quotes the finding of the Board of Trade Electric Power Supply Committee that "the importance of combining the supply of railways, tramways, and other classes of consumers is beyond doubt." The Commissioners are following this policy, as will be seen by their decision (dealt with in this Report) that the South-Eastern and Chatham Railway should not build their own generating station, but take supply from authorised undertakers. The decision is of importance, as the estimated units involved in the first stage of this railway electrification is 89 million units, and in the second stage 210 million units. The expansion of the present authorised undertakings is indicated by the new generating plant which was sanctioned by the Commissioners during the year—namely, 375,609 kilowatts. New plant for railways, tramways, and non-statutory undertakings was sanctioned to the amount of 46,729 kilowatts, making a total of 422,338 kilowatts. This figure shows a very appreciable increase on the total of plant authorised in the previous year, which amounted to only 169,503 kilowatts. As regards the position of the various schemes formulated for the 15 electricity districts which has been delimited under the Act, 1919, the Report gives full details. Summarised, the position is as follows:—One scheme (Lower Severn) has not been proceeded with. The London and Home Counties scheme is in suspense (owing to prohibition being granted by the Court of Appeal on grounds of its being *ultra vires* in certain particulars). Three schemes have now been embodied in Orders passed by Parliament, and so are now in force, viz., North Wales, South-West Midlands, South-East Lancashire. Two schemes are in the draft order stage, and others are being proceeded with. In connection with these schemes some interesting figures are given as to the estimated growth of the demand. The figures are for 12 only of the districts, but as these cover the most important areas, and would represent about 50 per cent. of the public electricity supply of the whole country, the totals may be taken as in a certain measure representative of the whole. Taking the present output as the basis, the figures in the estimates show an anticipated increase of 89 per cent. by 1926-27, and of 180 per cent. by 1931-32. The linking up of undertakings for mutual assistance or bulk supplies is also dealt with in the Report, which shows that at date some 174 undertakings are now taking, or have arranged to take, bulk supplies (in some cases reciprocal supplies). This is all to the good, as tending towards the general centralisation of generation.

U.S. Shipping Board Accounts.—Our New York correspondent writes:—In the first complete statement ever made public of the assets and liabilities of the United States Shipping Board (including the Emergency Fleet Corporation and subsidiary realty and transportation companies), total assets as at June 30, 1923, are given as \$399,919,781. Total liabilities, including reserve for insurance claims and losses and claim settlements, are placed at \$47,514,581. A reserve fund, amounting to \$60,000,000, has been set up for fleet liquidation and expenses of such liquidation, allowances on restricted sales and for loss risk on the laid-up fleet. The excess of assets over liabilities is given as \$292,405,200. The fleet remaining in the Board's hands on June 30th last is carried at \$229,929,758. The latter figure, Chairman Farley explains, has been arrived at by a careful survey, recently conducted, covering a detailed inspection of every vessel owned by the Board. That sum, he points out, bears no relation to the large amount spent in the fleet's construction, but "represents fairly the present-day world market value of the fleet, based not only on the types and characteristics of the vessels, but also upon consideration of their remarks, 'have been placed as nearly as possible on a strictly commercial basis,' and 'there have been eliminated from the assets all fictitious values resulting from excessive costs of building the Board's fleet.'" A study of the accounts and notes receivable reveals a very large amount of offsets, representing disputed items and doubtful or uncollectable accounts, which give a fair idea of the liquidating problems still confronting the Board.

From one batch of accounts receivable, totalling \$122,884,147, there has been deducted the sum of \$112,116,220, including \$25,925,793 as "payable offsets," \$39,189,279 as "claim offsets," and \$47,001,147 as "reserve for doubtful or uncollectable accounts," leaving a net amount of only \$10,767,927 that has been included in the total assets. Besides the foregoing accounts receivable, those of managing agents (at estimated realisable value) are given as \$26,186,302 in notes receivable, from which a total of \$19,599,732 in "offsets and doubtful notes" has been deducted, leaving a net sum, carried as assets, of \$6,586,569. Other accounts and notes receivable for ship sales are placed at \$74,101,254, less \$62,316,900 for "payable and claim offsets" and reserve for uncollectable accounts, leaving \$11,784,354 figured as net assets. The grand total of all accounts receivable amounts to \$223,171,703, from which there has been deducted for payable and claim offsets and reserves for doubtful or uncollectable accounts the sum of \$194,032,852, making the net amount of such accounts, which have been entered as assets, \$29,138,850. One of the major tasks of the Board for some time to come, Chairman Farley says, will be to expedite the settlement of these old accounts, most of which are inheritances from the war activities of the Board. The statement includes an estimate of the claims both for and against the Board. The figures, it is explained, do not represent either the gross or net amount in either case, but merely the probable amounts at which final settlement may be effected, and which in many cases must be determined by the courts. Among the assets enumerated are net cash, \$32,146,207, and insurance fund cash, \$8,850,449. The estimated recoverable value of claims in favour of the Shipping Board and carried as assets is \$5,279,860. Liabilities include \$8,850,449 as reserve for insurance claims and losses, and \$6,517,924 as reserve for claim settlements. For the reasons mentioned, it is quite evident that, apart from the appraised value of the Government's merchant marine fleet and a few other items, there is still much uncertainty as to what are the Shipping Board's real assets and liabilities.

The Home Bank Failure.—Our Ottawa correspondent writes:—Mr A. B. Barker, the curator appointed by the Bankers' Association to investigate the affairs of the defunct Home Bank, has now submitted his report, and it confirms all the suspicions and fears which have prevailed. The total assets are estimated at \$15,848,400 and the liabilities at \$18,848,978, leaving a nominal deficit of \$2,638,578. But the "quick" assets are only placed at \$5,643,051, and against this must be set the preferred claims of note holders and Government, which total \$2,956,426. For immediate distribution there is therefore only available \$2,647,625, and this sum falls short by more than a million dollars of the amount required to pay an interim dividend of 25 per cent. to the public creditors. The curator ranks as "special assets" \$9,229,997 loans made on a variety of undertakings, mostly of a speculative character, which are not immediately realisable and are of problematical value. Upon the amount ultimately realised from them will depend the dividend which the depositors will receive, but experts familiar with the securities involved in this class of loans do not expect them to yield more than 50 cents in the dollar. In that event the depositors need not expect to receive more than 40 cents in the dollar, apart from what can be collected under the "double liability" provision of the Bank Act. The report makes it clear that the Home Bank was engaged in something far beyond ordinary banking business, and that its directors had allowed its funds to be used for an orgy of speculation by themselves and their friends. The perilous ventures for which its money had been utilised included railway projects at New Orleans, speculations in veterans' land scrip, real estate schemes in Toronto, and timber enterprises in B.C. One large debtor is a concern known as the British Dominion Holding and Investment Company of Montreal, which owns two tramp steamers credibly reported to have been actively engaged in the rum-running business off the American coast. Companies in which different directors were interested obtained large advances from the bank on security which was quite inadequate to protect the bank

against loss. In face of such revelations, the demand for prosecution of the responsible parties has been irresistible. The Federal Government has ordered the arrest of the president, H. J. Daly, on the charge of signing a false and deceptive statement respecting the returns of the bank; Mr Daly is reported to be seriously ill at his summer home on Lake Simcoe, and bail will be allowed. The Ontario Provincial Government took concurrent action, and have caused the arrest of Mr R. P. Gough, the vice-president, and five other directors, the acting general manager, the chief accountant, and an auditor. The charge against them is very serious, for the return of June 30th sent to the Finance Department placed the assets at \$27,434,000 and the liabilities at \$24,889,000, leaving the deduction to be drawn that both the capital and reserve were intact when they had both been hopelessly dissipated. The Federal Government are expected to order a thorough public investigation, and failure to do so will provoke a serious outcry. They are themselves in a sense involved through the revelation of a curious transaction undertaken by the executive of the Canadian National Railways. The latter has distributed its business among six banks approved of by the Minister of Railways, and of these the Home Bank was not one. But Mr R. P. Gough, the vice-president of the Home Bank, is also a director of the C.N.R., and on May 28th last he induced the management of the C.N.R. to sanction the deposit of a million dollars of C.N.R. funds in the Home Bank. It was withdrawn five days later, but in the meantime the presence of this money had materially improved the aspect both of the annual statement given to the shareholders and the monthly return to the Finance Department. The public is very restless at the discovery that the funds of the C.N.R., which are public funds, have been used to bolster up a tottering bank.

The Turkish External Debt.—The Report for 1922-23 of the Ottoman Debt Council, with Sir Adam Block's preface, is virtually an exhortation to the bondholders, even of the Unified Debt, to have patience and hope for better times. The Treaty of Lausanne, like that of Bucharest, provides that the Debt shall be apportioned between Turkey and the countries which have obtained Turkish territory as the result of the preceding wars; but the adjustment of the respective shares has still to be effected (for Bulgaria, the Ottoman Debt Council will do it), and meanwhile the receipts from the ceded revenues are for the most part suspended by their interception both by the countries in question, notably Iraq, Syria, and, in respect of her Aegean acquisitions, Italy, and by the Angora Government. During the last three years that Government has appropriated about £110,000,000; since September of last year it has held back all the ceded revenues derived from what remains of Turkey, except certain local revenues coming from Constantinople and the neighbourhood. The product of the Constantinople Customs has also been intercepted, while the receipts from the spirits and stamp duties have been reduced by hasty and confused legislation. Albania has formally confiscated the Debt revenues; in Iraq and Syria the Debt Administration "administers" them, but the Governments "deduct" nearly all the proceeds, except a small sum—possibly arrears due when the territories were still Turkish. The net receipts would suffice for the service of the Unified bonds and the "Lots Turks"—which latter do not concern British investors—but if the Council could duly collect the ceded revenues; but the estimated amount for 1922-23 is only £16,262,000, against £17,641,000 for 1921-22, and that for 1923-24 will show a further decline. Under these circumstances, and in view of the state of the exchange, it is improbable that the Council will be able to make additional payments on account on the war and post-war coupons preceding that due last September, or to make any payment for the present on the last-named coupon. The question as to the currency in which the bondholders are to be paid is still unsettled; but Sir Adam Block's preface is both a warning to Turkey and an encouragement to the bondholders to hope. Turkey, he points out, has been relieved by the Treaty of Lausanne of 40 per cent. of her pre-war foreign debt, and by the war of certain Asiatic territories which in-

volved her in constant financial loss. Her war debt is less than that of any other belligerent, and her currency has not been debased by a vast over-issue of worthless notes. With a reasonable readjustment of taxation, reduced expenditure, and a sound Budget, she should meet her engagements with no more difficulty than before the war. She will do wisely to treat her bondholders fairly, so as to maintain her credit in view of the need of foreign capital for reconstruction, which, however, he admits, does not seem to have arisen as yet. The Council's Report, which is full of interesting detail, had been held back in the vain hope of further information from Asiatic Turkey; there is a useful reprint of the financial clauses of the Treaty of Lausanne, and it includes subsidiary documents forming part of the peace settlement.

The Outlook in China.—The reconstructed Chinese Government has made a good beginning by its reply to the Note of the Powers on the Ling-chen railway outrage. It accepts in principle their demands for compensation for the sufferers, leaving the details for future discussion; it announces that the officials responsible for the conditions which led to the outrage have been punished, and that the Tschun of Shantung has been relieved of his post; and it implicitly acknowledges the responsibility of the central executive authority for the prevalent disorder and brigandage. The satisfaction created by the reply is somewhat qualified by its refusal to accept the scheme of the Powers for a special railway police under foreign officers, and also by the revelation that the dismissal of the Tschun of Shantung has been veiled by his resignation and acceptance of an honorary dignity; but the Government is obviously not yet strong enough to offend the Nationalist feeling which the new departure has strengthened, or to raise up a fresh and possibly dangerous opponent. It remains to be seen what reply it will make to the Note of the Powers concerned in the Consortium, calling attention to the illegitimate application of the Customs and salt surpluses to the service of the internal loans. Presumably it will temporise, pending the deliberations of the joint Committee just set up to deal with the most urgent of the financial problems of China. At present its stability is threatened by the efforts of Li Yuan-Hung, the ex-President, and by the protests of Sun Yat-Sen against the legitimacy of the election of Tsao-Kun. But Sun Yat-Sen's power has waned considerably in the last few months, and he certainly cannot rely on the united support of the South.

Government Plans and Metal Prices.—A correspondent writes:—The announcement of the Government plans to relieve unemployment and the decision to build bridges, roads, &c., and find additional cash for shipbuilding, has had a good effect upon the metal markets generally, and iron and steel have benefited by the steps taken to keep the Ruhr surplus stocks from being dumped down here. All the iron and steel used for the new construction work will be British, and this will keep the works going for some time. All prices are harder, and the sheet trade is very well booked up, fresh orders having come in from the East this week. The tinplate mills in South Wales are also very active, with more good contracts for oil sizes secured for Canada and the States. The non-ferrous metal markets have shown a very hard undertone, and in some cases values have moved steadily upwards. Copper has improved rather slowly, but both standard and refined have been better, and a fair business has been done. The news from the United States is not very encouraging about copper, but steps are being taken to deal with the big production, and the metal would soon feel the benefit of any European revival in trade. Tin has been firm, although during the early part of the week there was some hesitation and a little selling appeared. The demand for tin is bound to be steadily maintained over the next few months, and if standard tin can be stabilised at over £200 per ton for any length of time most mining companies will do well. Further, if there is no material fall from the present level and all the metal offered is absorbed by the consuming interests here and in the United States, the Government surplus tin in the East will easily be

absorbed during the next few months, and this will do much to aid the general position of the metal. Statistically, tin is very healthy, and if the demand expands according to anticipations in the closing months of the year better prices will undoubtedly be seen. The stocks in this country are very small. Lead has been strong and active, with a good upward movement in values. The supplies coming into the country during the last two months have been exceptionally heavy, but all the metal has been absorbed, and this week high premiums have been paid for prompt delivery. There was at one time a difference of 20s per ton between October and January, and this large backwardation tells its own tale. The imports so far this month have been light, and there is every indication of the shortage continuing, although lead has been put lately into private warehouse. Nearby lead has gone well over £27 per ton, and will go higher. The market for zinc (spelter) has also been very firm, and the shortage of the metal is now beginning to reveal itself. Galvanisers have been buying again, and there are very few sellers. Sales of over a thousand tons a day have been recorded on the open market, and in view of the expansion in home requirements and the active demand for galvanised sheets on foreign account, better values will have to be offered to attract sellers. The news from the United States is better about spelter, and there is very little hope of attracting much from that quarter. Generally speaking, the tone of all the metal markets is more buoyant, and the Government plans have done much to help sentiment.

The Channel Islands and Imperial Expenditure.—Both the Channel Island Legislatures have received the Reports of their Select Committees on the request made by the Home Secretary last February for a contribution towards the cost of the war. Jersey has postponed consideration of the subject till the islanders have expressed their opinion; Guernsey for four months, pending further inquiry into the local resources and revenues. Both Reports, however, are adverse to compliance. The Jersey Committee doubts whether the island Legislature can tax its subjects, without their consent, for the benefit of another community; but, subject to such consent, the Majority Report suggests that the island should make a single payment of £250,000, and take over the responsibility for the salaries of certain of its officials now paid out of local Crown revenues—an annual burden of about £920. The Minority Report suggests that the island should become responsible for the war pensions payable to its inhabitants or their dependents, the salaries above mentioned, and the British share of the expenditure on the local militia and education. The Guernsey Committee points out, what was made clear last February, that the Treasury suggestion of a payment by the island of £275,000 annually is based on the figures of a single year of exceptional prosperity, and that an annual payment would tend to become perpetual and to be spent in meeting charges which the States (the island Legislature) would have no share in fixing; so that it might eventually come to be paid independently of their consent. But the Commission holds that the States, while reaffirming the immunity from Imperial taxation, might assume the burden of the war pensions payable to men recruited in the island and their dependents, and to this end might offer a total sum of £375,000 in 15 annual payments of £25,000. Three members would limit the annual payments to ten, totalling £250,000; one, on constitutional grounds, holds that the States should take over the whole charge for pensions of men recruited in the island and their dependents, rather than make annual payments, which might eventually be demanded for other purposes, and become established and continuous. The annual cost of this arrangement (excluding the annual cost of administration, now £5,000) is estimated at £40,000 for the first five years, £24,000 for the second, and £14,000 for the third, with a subsequent amount which cannot be estimated, but will gradually disappear. The £5,000 for administration might be set off against the death duties paid to the British Treasury in respect of estates of persons dying in the island, which the States claim should be credited to Guernsey, while £22,500 might be raised annually by raising the local income-tax (now 6d) to 1s 1d

in the £. An equal sum might be raised by indirect taxation. That one of the two courses suggested will be adopted seems certain, and the second has the strong support of the Bailiff. Apparently island feeling is largely adverse to contributing. But a German victory might have involved the transfer of the islands to Germany with the French coast as far as Cherbourg—a course actually advocated in Germany during the war—and only a much larger payment, if it were possible, would adequately compensate for their escape from this fate.

Conditions in Honduras.—Adverse climatic conditions writes a correspondent, have seriously interfered with the fortunes of Honduras. Drought, wind storms, out of their season, and serious conflagrations have been experienced. The banana plantations, upon the success of which the country largely depends for its revenues, have suffered grievously, the loss of fruit crop being estimated at between 25 and 50 per cent., although certain districts have felt the effects somewhat less than others. The sugar cane harvest, on the other hand, which suffered from fires, will produce little more than 30,000 tons, compared with an average yield of 40,000 tons, producing some 40 per cent. of the country's purchasing power. Even silver mining has been affected by the shortage of water and the low prices ruling, the production of the white metal during the past few months having been considerably below the estimates. These conditions will, naturally, interfere to some extent with the purchases customarily made by the native, Chinese, and Syrian importers in preparation for the Christmas season; merchants have little ready money to invest in fresh stocks, and credit conditions remain far from encouraging. Except in Tegucigalpa, the capital, where the monetary position has been somewhat relieved, cash is tight and payments are slow, while in certain other sections financial embarrassments are reported.

Union Cold Storage.—Although the report and accounts of the Union Cold Storage are dated October 9th, they cover the period for the year ended December 31, 1922. Thus details of recent developments are not mentioned, and shareholders must in consequence content themselves with what is placed before them. Of course, we quite understand that returns from abroad have to be incorporated into the figures of the home concern, and that no doubt this accounts for the difficulty in presenting a more up-to-date balance-sheet. Further, most shareholders will consider that a little incident of this kind is amply set off by the remarkable progress of the undertaking, which continues without regard to good or bad industrial periods. Again we have to chronicle a year with a fresh record, profits climbing from £558,675 to £581,589. The table below compares results for a number of years:—

	1913.	1917.	1918.	1919.	1920.	1921.	1922.
Gross profits	£137,094	£289,922	£293,424	£306,360	£467,393	£558,765	£581,589
Deb. interest, &c.	31,727	66,637	62,333	58,133	72,118	74,676	83,423
Net profit	105,367	223,285	231,091	248,227	395,275	483,999	498,166
Brought forward	23,806	45,014	45,454	51,066	71,717	87,497	104,028
Reserve & depreciation	126,173	268,299	276,545	299,293	466,992	571,496	602,194
Prof. dividend	43,185	75,048	76,679	78,777	87,939	108,667	133,472
Ord. dividend	46,109	117,797	118,800	118,800	261,556	328,800	328,800
Carry forward	36,879	45,434	51,066	71,716	87,497	104,028	103,922

As will be observed, the 10 per cent. distribution on ordinary capital is maintained, and a slightly larger sum is carried forward. Moreover, reserve and depreciation obtain £133,472, against £108,667 a year ago. And this is not all, for we read that "there has been transferred to depreciation reserve £500,000, being surplus resulting from the sale of investments." The balance-sheet contains many features which no doubt will be dwelt upon at the annual meeting next Tuesday. For instance, the portmanteau item, debts due to the company, stocks, &c., has grown from £3,980,202 to £5,366,151; we would suggest that this should be separated into at least three items. "Sundry creditors" have also increased; the latest figures of £6,263,544 compare with £4,540,135 for the previous year. A curious point about the securities of this undertaking is the comparatively low price of the

4½ per cent. debenture stock. This is redeemable at par in 1928, and there is a total of £948,929 now outstanding, a transaction being lately effected at 93½. The total authorised and issued amount of these debentures was £1,615,000, but £666,071 has since been redeemed, including £64,224 during 1922. At the present market price a yield, including profit on redemption, is shown on this stock of close upon £5 16s per cent. The balance-sheet will be found analysed in our usual column.

United Dairies.—Again we have to record another successful year of trading for United Dairies, Limited—that is as far as can be judged by the meagre details vouchsafed in the report and accounts in front of us. This, the eighth annual report of the company, shows the position of the undertaking up to June 30, 1923, the accounts including dividends from investments in subsidiary companies to March 31, 1923. The following table shows the remarkable progress made by this concern during the past five years:—

Year Ended June 30.	1919.	1920.	1921.	1922.	1923.
Preference shares	£1,344,508	£1,555,284	£1,652,564	£1,881,674	£1,893,243
Ordinary shares	1,086,173	1,726,052	1,798,677	2,027,125	2,038,403
Issued share capital	2,430,681	3,281,336	3,451,241	3,908,799	3,931,646
Net profit	233,445	279,668	356,186	452,692	468,623
Divd. on ordinary share	10%	12½%	12½%	12½%	12½%

It will be recalled that for some years past this company has been mainly engaged in absorbing dairy businesses and companies, issuing its own shares in exchange, and if the above figures really do represent the progress of the company, this policy of expansion may be justly claimed to have proved itself. We say advisedly if these figures represent the progress of the company, for although £100,000 has been placed to reserve, bringing the reserve fund up to a total of £250,000, it is obvious that much more light is needed on the situation before any definite pronouncement could be made. The balance-sheet and accounts are in themselves clear though concise statements of affairs, as far as they go, but this is clearly a case where the general investing public is entitled to know something further. Here is a concern of the controlling variety, with investments and loans amounting to £4,026,009 out of assets totalling £5,399,309. Under this heading we have the main business of the parent company—that of looking after its absorbed subsidiary companies. This is all we are permitted to know about them in these accounts. Even the auditors are driven to observe in their report that "the investments and loans in subsidiary and other companies are taken at, or under, cost price," and proceed to say that, subject to this observation, the balance-sheet is properly drawn up. What the precise value of this observation may be we do not know. Obviously, what shareholders and outside investors want to know is what is the actual value of the assets represented by these shareholdings and other investments. Is it to be assumed that all the various small companies which go to make up this combination have each their separate reserve fund? If so, it would be interesting to know if reserves are made on some common basis. It is doubtful if the reserve of £250,000 shown in the balance-sheet is the full story of provision made for wastage and depreciation.

Rhodesian Mining.—On the financial side the results secured last year by the Gaika correspond very closely to those of 1921-22—in fact, the profit of £26,500 is within £100. However, the dividend is raised from 7½ per cent. to 10 per cent., leaving a somewhat reduced balance to go forward. The performance of a largely increased amount of development work has expanded the ore reserves by 32,000 tons to 78,600 tons, but the value is given as 10.2 dwts in place of 13.6 dwts a year ago. The latter feature is explained as due in some degree to the conservatism of the methods of computation employed. Probably many of the shareholders will not be pleased to learn that the one-time projected return of capital has been indefinitely postponed, further considerable expenditure being in prospect. Whether the development position warrants the extension of the reduction plant is somewhat doubtful. A noteworthy

change for the better is shown by the annual statement of the London and Rhodesian Mining and Land Company, there being a profit of £35,500, as against only £9,250 for 1921-22, and an actual loss of £7,000 in the 12 months ended June 30, 1921. The company has a reduced but still large holding of Cam and Motor shares—145,500; and there is the point that the market value of its investments at the date of the balance-sheet amounted to £554,850, or more than double the book entry. The company's portfolio includes a large interest in the recently floated Sherwood Starr concern; the Sabiwa mine is being worked. It is thought that the dividend stage is now within sight.

Uruguayan Railways.—The report of the Central Uruguay Railway Company of Monte Video, Limited, and of its three extension systems for the year ended June 30th last again shows a substantial improvement on the previous year both in the direction of increased receipts and of reduced expenditure. The results for the combined system for a number of years past are set out in the following table:—

Year.	Gross Receipts.	Expenses.	Profit.	Percentage of Expenses to Receipts.
	£	£	£	%
1912-13	1,243,393	669,008	574,385	53.81
1913-14	1,103,229	622,727	480,502	56.44
1914-15	946,767	562,684	384,083	59.43
1915-16	1,088,956	669,208	419,748	61.45
1916-17	1,178,602	771,433	407,169	65.45
1917-18	1,542,320	1,010,288	532,041	65.50
1918-19	1,792,804	1,219,680	573,113	68.03
1919-20	1,892,902	1,245,944	646,958	65.82
1920-21	1,879,630	1,504,995	374,635	80.07
1921-22	1,891,302	1,207,917	683,385	63.87
1922-23	1,989,203	1,172,769	816,434	58.96

The profit figure is easily the highest recorded, while the ratio of expenses to receipts is the lowest since the year 1913-14. Working expenses were reduced by £35,100, or 3 per cent., largely as a result of the lower cost of engine fuel. The coal bill was £93,700, as against £167,000 for the previous year, while the cost of oil was £76,900, against £37,600. The consumption of coal was reduced from 44,516 tons to 34,322 tons, while oil consumption rose from 9,438 tons to 21,816 tons, the mean consumption per engine mile being 40.76 lbs of oil, against 51.04 lbs of coal. The increase in receipts was principally due to the exceptionally heavy cattle traffic handled. The number of passengers increased by 7 per cent., but passenger receipts declined by 0.44 per cent. Goods receipts declined by 3.26 per cent., the average receipt per ton being 8 per cent. less at 24s 10d, although the tonnage was 5 per cent. greater. Live stock receipts increased by nearly 39 per cent. The separate figures for the main line and the three extensions read as follows:—

	Gross Receipts.	Working Expenses.	Profit.	Percentage of Expenses to Receipts.
	£	£	£	%
Central Uruguay	1,378,681	873,437	505,244	63.35
Eastern Extension	310,409	142,993	167,416	46.07
Northern Extension	161,478	76,702	84,776	47.50
Western Extension	138,635	79,636	58,999	57.44

The greater movement of livestock is also responsible for better results shown by the extension lines. The Eastern and Northern Extension companies each show an expansion of over 9 per cent. in gross receipts, but expenses are also higher. Profits show an increase of 12.29 per cent. for the Eastern, 11.92 per cent. for the Northern, and 1.35 per cent. for the Western. Both the Eastern and Northern Extensions show a slight reduction in the ratio of expenditure, but the ratio for the Western is a shade higher. Thanks to the continuance of an adverse exchange, the loss on remittance of funds to London during the year amounted to £155,630, as against £182,100 12 months ago, and this is charged to net revenue account. After paying fixed charges and the 5½ per cent. preference dividend, the main line accounts show a balance of £165,600, out of which £20,000 is transferred to Exchange Reserve account, and a dividend of 4 per cent. is paid on the ordinary stock, as against nothing a year

ago, leaving £43,600, or £8,300 more, to be carried forward. The Eastern Extension pays 7½ per cent. on its ordinary stock, as against 6 per cent. a year ago, while the Northern pays 5 per cent., as against 4½ per cent.

Siamese Syndicate.—Our Mining correspondent writes:—Some disappointment seems to have been occasioned amongst those interested by the report for 1922. It is true that the profit of £26,300 only exceeds by a trifle that of the preceding year, while the final dividend of 5 per cent. makes a total of 15 per cent., as before. But the accounts do not, of course, reflect the benefit to the company of the greatly improved price for tin which has ruled during the current year, especially in the spring and just recently. Nor do the directors refer to the subject, although the general manager observes that since the end of 1922 "we have seen a rise in tin that makes a vast difference to our position." Last year a record quantity of gravel was treated, and costs were reduced, but the yield declined owing to the exhaustion of a patch of exceptionally rich ground. Several additional areas have been acquired. The syndicate, it may be recalled, is a finance as well as a mining enterprise. An interim dividend of 10 per cent. on account of the current year was paid in July last.

The Reparation Account.—It was the intention of the Reparation Commission to publish up-to-date summaries of their accounts every six months. But since the changes occurring in the first six months were comparatively slight they have deemed it sufficient to issue a *communiqué* containing one condensed table. On the six months the total of French and Belgian receipts from Germany, whether in cash or kind, have only made a trifling advance. But the Italian total has increased by 62.5 million gold marks in kind and 32.5 millions in cash, while British receipts in kind have received an accretion of just over 100 millions. The explanation of the last-named increase presumably is that the proceeds of the Reparation Recovery Act are included under the main heading of "Deliveries in kind." Roumania in the same period has received the equivalent of 22 million gold marks in kind, and Serbia 54 millions. These are the only changes on the six months worthy of note. The following shows the total credited to the Allies as receipts and the distribution thereof up to June 30, 1923:—

WHAT THE ALLIES HAVE RECEIVED. (In Millions of Gold Marks.)						
	Kind (including Reparation Recovery Act).	Cash.	Property in Ceded Territory.	Total Distributed to Allies.	Repayment of Coal Advances, Armies of Occupation, &c.	Net Receipts
Great Britain	613	641	5	1,255	1,059	196
France	1,358	144	302	1,804	1,562	242
Italy	305	33	..	338	39	299
Japan	9	..	59	68	..	68
Belgium	648	1,082	5	1,730	277	1,453
Poland	15	..	1,776	1,791	..	1,791
Greece	13	..	..	13	..	13
Roumania	32	..	..	32	..	32
S. C. Slovene	204	..	..	204	..	204
Czecho-Slovak	16	..	6	22	..	22
Portugal	12	..	..	12	..	12
Total	3,225	1,900	2,144	7,269	2,937	4,332

The figure of 1,776 million gold marks credited to Poland in respect of ceded property is given in the condensed statement as in suspense, because the valuation has not been agreed. To arrive at the payments which Germany is credited with having made, some additions have to be made to the total of 7,269 million gold marks distributed to the Allies. In suspense account are deliveries in kind 533 millions, made up of 393 millions for "portion of value of ships," submarine cables 49 millions, miscellaneous 92 millions; also, under the heading Ceded property, Dantzig 309 millions, "portion of value of Saar Mines 100 millions." The two items in inverted commas represent the difference between the amount credited to Germany for ships handed to Britain and the

Saar Mines handed to France, and the amount at which these respective countries agreed to their entry as receipts. These items together bring the total payments by Germany up to 8,214 million gold marks.

Oversea Correspondence.

UNITED STATES.—COMMODITY PRICES IN SEPTEMBER.—COTTON AND GRAIN CROPS—AUGUST RAILROAD EARNINGS.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 8.

COMMODITY price levels as a whole showed another advance during September, Bradstreet's index number as at October 1st, namely, \$13.0974, representing a gain of 1.3 per cent. over that of September 1st. Price movements among the different groups, however, and even with the same groups were irregular. Seven groups of products advanced, four declined and two remained unchanged. In the list of individual commodities, 30 articles advanced, an equal number declined, and 46 were unchanged. The rise in the textile group was exceptionally marked, owing to the upturn in raw cotton, and in cotton goods prices, and in raw silk, the latter advancing sharply on account of the Japanese disaster. Other groups which ruled higher last month were provisions, meats, fruits, breadstuffs, naval stores, and building materials. Declines were recorded in live stock, because of heavy marketing, in miscellaneous products, hides, and leather, and vegetable oils. The coal and coke group showed no net change, declines in bituminous coal and coke offsetting the rise of 75 cents a ton in anthracite, caused by the miners' strike. Drugs and chemicals also showed no change on the month. The advance in the index number in September was approximately double the rise during August, and was the second upturn in price levels after the steady declines from March until August. The October 1st index number shows an increase of 2 per cent. over this year's low reached in August, but is 4.4 per cent. below that of January 1st. It is 4.9 per cent. above October 1st a year ago, 23 per cent. higher than the low point of June 1, 1921. As compared with February 1, 1920, it represents a decline of 37 per cent., but is 50.4 per cent. above the August 1, 1914, level.

Latest advices state that recent heavy rains in parts of the corn belt did considerable damage to the crop, which has made slow progress. Private estimates of the corn crop now range from 2,982,000,000 to 2,992,000,000 bushels, as against 3,076,000,000 indicated by the Government report last month, and last year's harvest of 2,891,000,000 bushels. Frost has also reduced the prospective yield, one authority estimating the loss from that cause at 70,000,000 bushels in four of the principal producing States, and at 86,000,000 bushels for the entire country. The November 1st carry-over is now estimated at 60,000,000 only, as against 176,000,000 a year ago. The present indicated crop, plus the carry-over, places this season's supply of corn at 3,050,000,000 bushels, compared with 3,068,000,000 last year. During the past week there was increased trading in all grains, especially in corn, which scored further sharp advances, making the rise in about a fortnight 8 to 11 cents a bushel, approximately. In leading Western markets, the price of corn last week passed the dollar level for the first time since October, 1920. The vigorous upturn was attributed to light offerings and active demand from shippers and consumers in need of supplies. Shippers were apparently short of corn for October loading at Chicago. Rains throughout winter wheat sections have helped soil conditions, facilitating ploughing and seeding of winter wheat. In Kansas from 50 to 75 per cent. of winter wheat is reported seeded, with early plantings up in some localities. Acreage sown to winter wheat is being reduced generally. Private estimates of spring wheat yields range from 217,000,000 to 225,000,000 bushels, compared with 217,000,000 last year, making the total wheat crop 785,000,000 to 793,000,000, against 862,000,000 actually harvested last year. The oats crop is variously estimated at

1,272,000,000 to 1,293,000,000 bushels, as against 1,311,000,000 a month ago, and 1,201,000,000 harvested last year.

While the cotton trade generally expected that the Government's report on the cotton crop, as at September 25th, would show a heavy decline in condition, the forecast of a yield 227,000 bales larger than was indicated in the previous report proved a genuine surprise, which was immediately reflected in a violent slump in cotton market prices. The Department of Agriculture's condition report and forecast, which will be the last of the season until the December estimate, placed the September 25th condition of the crop at 49.5 per cent. of normal, indicating a yield of 137.7 lbs per acre and a total crop of 11,015,000 bales, as compared with last month's forecast of only 10,788,000 bales, which was based on a condition of 54.1 per cent., as at August 25th, indicating a yield per acre of 134.8 lbs. In view of the abnormally small carry-over from last year's crop, there is not likely to be enough American cotton for all requirements, even if the crop proves to be as large as now indicated, provided consumption reaches last year's total. As previously pointed out, a big unknown factor is what the consumption will be during the coming year. All seasonal lines of cotton goods are being purchased quite freely for current autumn trade, and distributors are urging that deliveries of merchandise under order for this season be expedited. On the other hand, buyers generally are making comparatively few purchases for more distant requirements, and at least one of the largest manufacturers, probably the largest producer of gingham, has announced an indefinite closing of the cotton goods division of that concern, due to the meagre volume of forward orders received and to a desire not to accumulate stock at present high costs of labour and raw cotton in advance of actual demand for goods. Prices of most finished cottons have been revised upward sharply in recent weeks. Buyers hesitate to operate for the future, fearing that the higher levels will check distribution.

Reports filed with the Inter-State Commerce Commission by all first-class railroads show that those carriers earned net operating income during August of \$98,381,200, equivalent, on an annual basis, to a return at the rate of 4.94 per cent. on their "tentative valuation." That exhibit compares with \$84,591,400, or 4.93 per cent., in July of this year, and with \$51,475,400, or 2.64 per cent., in August, 1922. Total operating revenues in August last amounted to \$561,456,700, representing an increase of \$90,502,960, or about 19 per cent. over the same month a year ago, while operating expenses of \$424,751,400 showed an increase of \$39,650,900, or 10 per cent. For the first eight months of this year, ending with August, Class 1 railroads had a total net operating income of \$625,634,900, equivalent to an annual return on their investment at the rate of 5.40 per cent., as against \$466,477,100, or 4.11 per cent., for the corresponding period of 1922. The more favourable earnings this year are chiefly responsible for the sharp advances lately witnessed in stock market prices of railway shares, although in the case of some issues a factor largely contributing to the rise has been the expectation of dividend increases or resummptions.

FRANCE.—REPARATIONS DEADLOCK—COMMODITY PRICES—REVENUE RETURNS.

(FROM OUR CORRESPONDENT.)

PARIS, October 17.

POLITICALLY, the Franco-German situation is once more at a deadlock. Herr von Hoesch, the German Chargé d'Affaires in Paris, called on M. Poincaré this morning and presented two very short Notes from Berlin, in which the German Government notified the suppression of the coal tax and of export licences, and its inability to finance further deliveries of reparation coal and coke from the Ruhr. The object of Herr von Hoesch's visit to the Quai d'Orsay was evidently to induce the French Government to enter into some kind of conversation in regard to the situation in the Ruhr, but in this he signally failed. M. Poincaré's reply was a polite regret that he was unable to discuss the question of how the German Government was to pay for the coal and coke Germany is under the obligation to deliver on reparations account, and a plain-spoken

intimation that the cessation of deliveries of reparation coal was regarded by France as a proof that passive resistance still continues. In the circumstances he declined to discuss the matter further, and the German envoy left, after a conversation of nearly an hour's duration, with the intimation that if Herr Stresemann had any proposals to submit he should lay them before the Reparations Commission. A similar effort by the German Chargé d'Affaires in Brussels met with an equally sterile result. Equally negative has been the indirect attempt of the Belgian Government to bring its new proposals for a settlement with Germany before the Reparation Commission. The latter body this afternoon formally discussed the manner in which the Belgian proposals should be handled by it, and decided to refer them for consideration by committee, which can only be interpreted, in the circumstances, as a polite manner of shelving the matter indefinitely. French opinion in general, both official and otherwise, regards the deadlock as insoluble at this end until the Berlin Government shows, by definite and concrete action of its own, that it is prepared to bring about such a house-cleaning in Germany itself that any conversations that may be opened between the two parties to the controversy may have at least a chance of leading to practical results. Meanwhile, like their predecessors, the Loucheur-Rathenau and the Lubersac-Stinnes agreements, from which so much was expected in the way of putting reparation deliveries on a rational basis, the agreements tentatively come to at Dusseldorf between the French Mining and Metallurgical Commission in the Ruhr and the Phoenix group of colliery owners have fallen stillborn. The agreements have not yet been actually signed, and there now seems little prospect that they ever will be. The deadlock is complete.

The quasi-capitulation of Germany in the Ruhr is regarded here as very largely due to recognition of the fact that, as disclosed by latest returns of the production of iron in France, the principal object of passive resistance has failed. One reason why the Berlin Government, backed by the German ironmasters, persisted so tenaciously in a wearing down struggle was their belief that sooner or later the French metallurgical industry would be compelled, in self-defence, through shortage of combustibles, to come to a compromise. The figures now published show that whereas the average monthly output of metallurgical iron in France during 1920 and 1921 averaged 300,000 tons, and in 1922 420,000 tons, it has risen steadily, since the occupation of the Ruhr began, from 305,000 metric tons in February to 330,000 tons in April, 447,000 tons in June and July, and 486,000 tons in August. The average monthly output in 1913 was 435,000 tons, but this, of course, was exclusive of the production of Lorraine. It should be pointed out, moreover, that the output for December, 1922, the last complete month before the occupation of the Ruhr began, was 515,000 tons, the largest ever reached in France. The output of steel in August (the latest available return) amounted to 452,000 tons, which is the highest figure reached since 1914. This total was 52,836 tons more than that for July, and 37,767 tons more than for December, 1922.

The index figures for wholesale prices for the month of September, which have just been issued by the Statistique Générale indicate an increase of 12 points as compared with that for August (which was 7 points higher than that for July). The detailed figures are as follows:—

	August (Corrected).	September (Provisional)
General index figure (45 categories) ..	477.5	489.7
Foodstuffs (total of 20 ") ..	442.0	472.1
Vegetable foods (8 ") ..	396.1	409.7
Animal foods (8 ") ..	476.3	498.5
Sugar, coffee, cocoa (4 ") ..	464.9	544.5
Raw materials (total of 25 ") ..	505.9	503.7
Minerals and metals (7 ") ..	474.5	462.2
Textiles (6 ") ..	651.9	651.0
Various (12 ") ..	451.4	454.2

The index figure at the end of 1922 was 418.4, which, in accordance with normal practice, is based on 100 as representing the mean during the period 1901-1910. The figure representing wholesale prices for September, as compared with the period 1901-1910, indicates an increase of 389.7 per cent. last month, against an increase of 377.5 per cent. in August, of 370.1 per cent. in July, and 318.4 per cent. at the end of 1922. As a consequence of the rise

in September, wholesale prices were brought back to practically the same level as in March last, which were the highest yet recorded during the present year, and were 390 per cent. above those recorded during the period 1901-1910. The principal increase during September was in wholesale food prices, sugar and coffee, &c., marking a rise of about 80 points. The figure representing retail prices in Paris is based on the quotations during September for 13 articles of the first necessity—namely, bread, meat, bacon, butter, eggs, milk, cheese, potatoes, haricot beans, sugar, oil, petroleum and methylated spirit. The figure for September indicates an average increase equivalent to a total of 239 per cent. on retail prices that prevailed in 1914, as compared with 228 per cent. in August, 221 per cent. in July, 231 per cent. in June, and 205 per cent. at the end of 1922.

The Ministry of Finance publishes this week the revenue returns for September, which show that during the last month the yield from taxation of all kinds and from the State monopolies (including income-tax and exceptional resources, such as the special tax on war profits) amounted to 1,813,873,000f. Of this amount, 136,906,600f was derived from exceptional resources, including 95,416,100f from the tax on war profits. Receipts from normal resources, therefore, amounted to 1,676,966,400f, or 363,107,000f more than during September, 1922. The total received from normal resources during the first nine months of 1923 has amounted to 2,026,689,000f more than during the corresponding period of 1922. The income-tax yielded 301,305,200f during September, 1923, as against 181,073,400f during the corresponding month last year. The most striking feature in the return for the month is the remarkably satisfactory yield from the tax on turnover, which has now apparently been got on to a stable basis, as its initiator, M. Klotz, predicted some years ago would eventually be the case. This much-discussed and much-objected-to tax produced in September 259,182,000f (or 72,246,000f more than in September, 1922), which is the highest figure it has yet reached in any one month, and also nearly 26½ million francs above what was expected from it last month, when the Budget estimates were drawn up. Customs, on the other hand (largely in consequence of the poor situation of the franc), produced only 126,653,000f, or 11,509,000f less than in September, 1922, and over 20 millions less than the Finance Minister expected. The revenue from posts, telegraphs and telephones was exceptionally good, amounting to 127,720,000f, or 33,951,000f more than in September, 1922, while tobacco, matches, and other monopolies yielded 164,937,000f, or nearly 15,000,000f more than during the corresponding period of last year.

GERMANY.—LABOUR TROUBLES—DICTATORSHIP REFORMS—NEW CURRENCY—FINANCES—EX- CHANGE—AUGUST TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, October 16.

THE Stresemann Cabinet, fortified by the new Empowering Law, which creates an almost unlimited dictatorship, is faced with a new trouble in the very rapid increase of unemployment. This has led to riots in the provinces and to serious riots to-day in Berlin. It is to be feared things will get worse. Already in the week September 23rd-29th, the last period for which data are available, there were 150,149 unemployed and 595,317 short-timers among 1,769,001 members of the Metal Workers' Union alone. The figures for to-day would, if available, show conditions still worse. If it is remembered that little over a year ago there were only 20,000 unemployed in all trades, the aggravation will be realised. It has often been pointed out from here that the currency depreciation, as long as it quickened industry, even for the unhealthy motive of the "flight from the mark," could have no very serious consequences. But production, which all along was the main thing, has now been badly shattered, firstly, by the French Ruhr occupation, and, secondly, by the adoption of gold mark calculation, with its result, the great upward jump in gold prices. At present all the disadvantages of a deflation crisis without any of the advantages are being experienced.

The Stresemann Cabinet is showing praiseworthy energy, and, incidentally, pleasing those enemies of Par-

liamentary Government who believed that the institutions of the Republic were the cause of the inertia displayed in financial and economic matters. The Empowering Bill became law in the form described last week, and in all spheres that count in the present crisis the Cabinet can do absolutely anything it likes. It could even execute citizens by decree and without trial if only a financial or economic interest were concerned. Into the character of Dr Stresemann's dictatorship measures so far there has not been much examination; the nation prefers even doubtful measures than none, and is quite content to wait for results out of the sum of measures. Outside of the dictatorship powers two important reforms have been put through. Firstly (under Art. 48 of the Constitution, without waiting for the Empowering Bill, and undoubtedly illegally), taxation has been put on a gold basis. Exceptions are Customs, the tobacco tax, and some other taxes the nominal yield of which already rises in accord with the currency depreciation. The law is a complicated one. With some exceptions, it exempts from this "valorisation" all taxes falling due before August 31st; and provides that the mark totals of taxes falling due after that shall be increased according to a varying index based on the value of the mark. If this is carried out fully, the Budget ought to balance within a reasonable time. Further, the law provides for complete obliteration of petty tax claims, and cessation of petty assessment disputes. This provision ends a fearful scandal of official inertia and unadaptability. Next, in the form of a Bill, not yet passed (the subject being excluded from the scope of the Empowering Bill) is a practical abandonment of the Eight Hours' Day. In future the maximum eight hours (which remains theoretically the norm) may be lengthened (1) by agreement between employers and employees, (2) by an official decree. Formerly the employees' consent did not justify longer than eight hours. In ordinary trades the new maximum, whether by agreement or by official decree, is to be ten hours; in underground mining and in unhygienic occupations the maximum is eight hours. At present the hours in underground mining are seven.

Of the currency reform, which will be simply promulgated under the Empowering Law, the final form was announced to-day. The "Neumark," which was first a "Bodenmark," now becomes a "Rentenmark," and the issuing bank a "Rentenbank." The capital of the bank and security for its note issues, totalling 3,200,000,000 gold marks, will be raised half by mortgages to a value of 4 per cent. of the capital values on agricultural land (city land must, owing to the expropriation of house property, be exempted), and half on security given in the shape of mortgages or bonds by industry. The bank will be represented by a council of fourteen, representing the different classes of compulsory mortgagors. On security of the mortgaged values, the bank will issue 5 per cent. mortgage bonds, which will play the rôle of security for "Rentenmark" notes in denominations of from 1 to 1,000 r.m. The chief difference between this and the earlier official schemes is that the paper-mark will not be converted, and will remain legal tender; but increase of the paper-mark circulation will be prevented by depriving the Republic of the right of having its Treasury bills discounted at the Reichsbank; and the Reichsbank will prepare to return to its functions as a gold-mark bank. The Rentenbank will advance the Republic 1,200,000,000 r.m., sufficient, it is hoped, to cover deficits until the Budget is balanced. "Rentenmarks" will be accepted in payment of taxes and by all public institutions. In order to provide currency (in particular for moving of the crops) during the next weeks, small lots of "gold loan" (i.e., paper mark loan on a gold index basis) will be put into circulation immediately to a total of 200,000,000 g.m.

This scheme is announced as provisional, and therefore admittedly as not fully satisfying its authors. That can be understood, but the scheme seems to be better than none. It depends ultimately upon the balancing of the Budget, because if the Budget is not balanced before the Rentenbank's credit is exhausted, the credit will have to be increased, or some kind of new inflation resorted to. The maintenance of the home buying power of the "Rentenmarks" is assumed to be assured by the fact that the State will take them at their nominal gold value. This claim seems reasonable, because the Rentenmarks will

represent gold mortgage bonds, and as taxes are henceforth to be on a gold basis, the Rentenmark, though not convertible into gold, will be usable for payment of the gold tax claim. As this putting of taxes on a gold basis, already enacted on paper, is undoubtedly the condition precedent of balancing the Budget, the whole scheme has a certain unity. A danger is that declining production, and the chaos produced by the French on the Ruhr (which shows no sign of ceasing) may make it impossible to extract from the population the real taxation necessary for balancing the Budget. This was certainly not the case before the Ruhr complication. Another doubtful point is the retention of the paper mark. The paper mark must continue to have a varying, perhaps declining exchange. The stoppage of further inflation in no way guarantees stability, since over considerable periods before 1921, when inflation was so small that it could not materially influence the mark's home buying power, the mark exchange fell headlong abroad. In that case paper-mark prices will continue to rise, as paper rouble prices continue to rise in Russia, which has also a second stable currency, and the insufficiency of the stable "Rentenmark" circulation will prevent, again as in Russia, its general use. A paper-mark exchange fall associated with stable circulation would deprive the whole paper-mark circulation of practically all buying power, and as there would be no motive for rapid circulation of "Rentenmarks," their insufficiency for the purposes of business would increase. There are other doubtful points, on the basis of which some newspapers, perhaps precipitately, prophesy failure of the scheme.

The mark exchange collapse of last week led to a renewed frantic demand for cash; on one day banks paid out only 20,000-mark notes, worth each about one-millionth of an English pound. As usual, the Reichsbank's last (belated) statement for the end of the third quarter of 1923 gives no idea of to-day's rate of inflation; nevertheless, note circulation trebled in the week from 8,627 to 28,228 billion marks, Treasury bill discounts increased from 12,229 to 45,216 billions, private bills from 2,200 to 3,660 billions. Outstanding Darlehns loans rose to 941 billions. The allowable maximum of these loans has been raised from 300 to 5,000 billions. The Reichsbank is about to issue 10 milliard-mark, later 50 milliard-mark notes. The 58,000 billion marks which the Government was last week authorised to raise on Treasury bills will probably be exhausted before the Rentenmark credit is opened. The Customs gold supplement has been raised (from the 10th) to 13,699,999,900 per cent.

The Government has withdrawn the decree of March, 1919, forbidding import and export of Russian paper roubles. The paper rouble is beginning to be regarded by mere mark holders with a certain respect. The dollar Treasury bills, which are payable in gold and guaranteed by the Reichsbank, hold their value well, being to-day quoted at 4.5 milliards against a dollar exchange of 4.1 milliards. Also the "gold loan" keeps on parity with the dollar exchange. Money in the last few days has again been tight, the day money rate having risen since Friday last from 2 to 4 per cent. per day. This is partly caused by congestion in banking business between Berlin and the provinces.

Trade statistics (again no values are given) for August are, in metric tons:—

	August.	July.
Imports—All.....	4,120,300	4,159,600
Thereof—		
Food	253,100	302,000
Raw & half-finished materials	3,684,000	3,697,200
Manufactured goods.....	182,700	159,000
Exports—All	1,074,500	1,053,300
Thereof	94,800	90,300
Raw and half-finished materials..	596,300	646,200
Manufactured goods	383,400	316,700

Coal imports were 2,300,000 metric tons, about the same as in July; iron ore only 120,241 metric tons, against a monthly average in 1922 of 917,811 metric tons; exports of rolled and forged iron 91,547, against a monthly average of 193,002 tons; of machines 24,689 tons, against a monthly average of 39,914 tons. Exports in August in weight were 26 per cent. of imports, against a monthly average of 47 per cent. in 1922, but they were above the lowest point of 16 per cent. of April.

An attempt to bring down gold prices must be one of

the Government's economic measures if exports are to be fostered. This policy presents difficulties owing to the necessity of keeping up gold railway rates. The first measure, however, has been taken by the abandonment of the 30 per cent. coal tax, which was first imposed during the war, and which reached in 1921 a highest rate of 40 per cent. This has been accompanied with a reduction in the net price of coal. A reduction of pig-iron and steel prices, which are now quoted in sterling and gold-mark respectively, is due.

CANADA.—FEDERAL LOAN SUCCESS—CROP MOVEMENT—ALBERTA WHEAT POOL—FORESTRY COMMISSION—MANUFACTURERS AND PROTECTION—CANADA-AUSTRALIAN COMMERCIAL TREATY—BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 8.

THE Canadian Government have every reason to feel satisfied with the result of the domestic loan which they have just issued. Encouraged by the avidity with which the preliminary offer of \$50,000,000 was taken up, they decided to abandon their plans for an issue in New York, and raise at home the whole of the 172 million dollars needed to meet maturing obligations. When subscriptions continued to pour in in unexpected volume, Mr Fielding determined to utilise the opportunity to accumulate more funds, and the books were only closed when 200 million dollars had been subscribed. Of this sum about a fourth, or 50 million dollars, represents conversions of the 1923 loan, and the latter would have been greater if a number of holders had not been late with their applications. Several very large subscriptions were received from American corporations, chiefly insurance companies, who had intended to subscribe to the New York issue if it had materialised. The western crop is now pouring down through the Winnipeg funnel to the head of the Great Lakes in great volume, and it seems only a question of time when a serious congestion will develop. Some American vessels have come into the Lake ports to load cargoes, and the Minister of Trade and Commerce professes complete confidence that they will all abandon their boycott and help to move the Canadian crop. But the Winnipeg grain merchants are not so optimistic, and prophesy disastrous consequences unless they are induced to come in by the suspension of the regulations to which they object. The buying demand from Europe has improved slightly in the past week, but is still far from satisfactory, and it is still hard to foresee where markets will be found for the latter half of the crop. Threshing has been proceeding under very satisfactory conditions, and the returns from Alberta show that this province has reaped a record crop. Yields of 50 and 60 bushels per acre are quite common, and the average for the whole province will be between 25 and 30. The farmers of Alberta alone seem to be persevering with their wheat pool schemes, and their leaders claim that they have secured contracts covering 2,500,000 acres, and that their pool will this year handle 60 million bushels of wheat. Vancouver is continuing its efforts to divert the grain trade of Alberta to itself as an export outlet, but lack of elevator facilities and shipping is an obstacle, and the railway companies who are interested in preserving the profits of the long haul to the eastern seaboard are not evincing any disposition to encourage a westward movement which involves a shorter rail haul. The Commission which was appointed by the Federal Government to investigate the forestry problems of Canada and report upon the advisability of an embargo upon exports of pulpwood has commenced its sessions, and has been taking evidence in Nova Scotia. The witnesses who have appeared there have been practically unanimous in opposing an embargo, and, as there is also great hostility to it among the small farmers of Quebec who sell pulpwood in small lots to the agents of American paper mills, and do not want to be left at the mercy of the local Canadian companies, it seems unlikely that the embargo will ever be put in force.

Evidence accumulates that the Canadian Manufacturers' Association intends to make a determined drive for higher tariff duties. At a recent meeting their president officially

voiced its lack of sympathy with the recent increases in the British preferential rates, and declared that they had been particularly harmful to the woollen and knitted goods industries. "The British preferential tariff," he said, "must be put upon a more equitable basis. It has failed to accomplish the objects for which it was designed." The protectionist Press has been carrying a good deal of propaganda on the same lines, and the King Ministry has so far given ear to the pleas of the manufacturers as to send an official to Britain, France, and Belgium with instructions to discover why Canadian manufacturers cannot, under their present schedules, compete with the manufacturers of these countries.

Negotiations for a commercial treaty between Canada and Australia have been proceeding for some time by cable, but apparently are not making much headway. The Australians are insistent upon a heavy preference for their dried fruits, but the Canadian Government declines to accede to this unless Australia makes compensating tariff reductions on agricultural machinery and other products. To this the Bruce Cabinet will not agree. The latter have tried to get the dried fruit issue treated separately, but the Canadian Cabinet refuses.

The latest return shows that the Federal revenues are reasonably satisfactory, there being a slight increase over last year's figures; the expenditure is also slightly less. But the heavy incidence of the sales tax continues to keep up the cost of living, and the latest index numbers of the Bureau of Statistics show a small rise. Thanks to the money set moving by the sale of the farmers' crop, there has been a welcome improvement in business, and wholesalers report that the country storekeepers are buying more liberally. The stock markets remain quiet, but there has been no setback in prices.

NORWAY.—WEATHER, CROPS, AND WATER-POWER—FORESTRY—PRICES—THE MARKETS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, October 3.

AFTER a wet September, a few dry and sunny days have enabled the farmers to gather the harvest under quite good conditions. Oats, and even barley, in the more mountainous regions have not ripened, and to a great extent will have to be used for fodder. Potatoes probably will show good results. The rains have been more constant than copious, the consequence of which is that the water reserves for industrial purposes, at least in some very important districts, are much below the normal. It is to be hoped that October, as usual, will bring rain, otherwise our most important industry would be very much hampered.

The Farmand's price index number for September shows an increase on the figure of the preceding month of 6.2 points—i.e., from 225.1 to 231.3. The main increase has taken place in the food group, viz., 9.8 points. The rise is general among the principal items, the only exceptions being corn and flour, which are handled by the Government, and in these cases a reduction has taken effect in September.

This is generally the season for buyers of timber to cover their wants for the ensuing year. They are, however, very loth to come forward through distrust of the future. Some important buyers are reported to have offered 25 kroners per cubic metre for wood pulp logs, but the forest proprietors hold out for more, even up to 30 kroners.

The end of the month and of the quarter drew rather heavily on the resources of the Bank of Norway; the note circulation rose by about 20 millions, and the reduction of the reserves decreased accordingly. Trade is craving for a reduction of the discount rate; as yet, however, the bank has shown no inclination to meet that wish. The stock markets are quiet, but the prices of most shares keep steady, and in some cases there is even an improvement. The exchanges are continually unfavourable. Sterling went even as high as 28.92, though 28.88 remained the official figure. Marks are practically without any value; Paris francs, too, very low, Kr. 37.25; and Belgian francs Kr. 31.50. Dollars, on the other hand, are very high at Kr. 6.36.

JUGOSLAVIA.—MONETARY SHORTAGE—HARVEST RESULTS—EXPORTS—REVENUE—EXCHANGE.

(FROM OUR CORRESPONDENT.)

BELGRADE, October 8.

THE monetary crisis which has been felt ever since the beginning of the year has now, during the export season, become extremely acute. The average interest on a seasonal loan guaranteed by a bank of good standing is anything from 30 to 50 per cent. While such a rate may have served last year as an offset to the deterioration of currency, it has now no justification, but simply denotes the immense shortage of money. In consequence, many small enterprises have been obliged to close down, and industry is passing through a very serious crisis. A further indication of the shortage is the low price of State bonds; thus, the 2½ per cent. Reparation bonds guaranteed by the State are quoted at only 14 dinars, thus yielding 17½ per cent., though they are legally accepted as caution money at a rate of 30. In view of the need of credits for export a conference of business men requested the Government to pass a law increasing the ratio of paper currency to its bullion cover from 3 to 5, but the Minister refused to give his approbation to what would amount to another form of inflation.

While this shortage of money contributes towards the high cost of living, the Government has done nothing to ease the crisis, and even accentuates it by a policy of indirect taxation. Absorbed by politics, it has failed so far to work out a comprehensive economic policy. So, while, on the one hand, the Minister of Finance has again considerably reduced export duties, and declared that Jugoslavia shall have free export next autumn, on the other hand, the Minister of Transport has increased freight charges by about 50 per cent. Indirect taxation is further increased by the Law of Duties passed this week. It is to be hoped that public opposition may prevent its raising the "agio" on import from 800 to 1,500. The Budget, which is to amount to 9½ milliards, has not yet been brought before Parliament, and the State is still financed by means of monthly budgets.

On the other hand, private initiative is undoubtedly contributing to rapid economic progress, and the harvest has been excellent. The official figures for the 1923 harvest are as follows:—

(In Thousands of Metric Tons.)			
	1922.	1923.	
Wheat	1,210.3		1,684.5
Barley	241.0		311.8
Rye	103.8		150.2
Oats	265.2		280.9

The 1923 yield is thus in general about 30 per cent. above that of last year. It is estimated, after careful investigation by a conference of business men and Government representatives, that 35,000 trucks of wheat, and 30,000 trucks of maize, will be available for export this year. The export figures also show considerable promise:—

(000's omitted.)			
	Weight in Tons.	Value in Dinars.	
	1922.	1923.	
April	160 .. 216		348,400 .. 409,200
May	175 .. 260		302,487 .. 576,394

The publication of the returns, however, still remains very behindhand.

Government revenue, meanwhile, is also on the increase. From August, 1922, to April, 1923, receipts stood at 5,117 million dinars, as compared with an expenditure during the same period of 4,943 millions.

It is mainly owing to the monetary crisis and partly to good export prospects that the dinar has displayed a remarkable firmness in the midst of a very clouded political situation. Since July it has maintained its level of 430 to the £, and even during the worst days of the Corfu and Fiume disputes it never weakened below 440, while as soon as the atmosphere cleared it improved to 420, and has now risen to 400. The latest improvement is due to the deflection from Bulgaria to Jugoslavia of demands for wheat during the recent revolution in the former country. This is the first time that the Jugoslav exchange has remained practically unaffected by political disturbances and been influenced almost exclusively by economic forces. It is a significant indication that the country is at last passing out of the long phase of economic disorganisation.

CURZON REMINISCENCES.*

LORD CURZON has done himself and us a service in publishing these notes from his diary for the amusement and edification of a generation which knows but little of the world of which he writes. He has done himself a service, because of all our political leaders Lord Curzon is the one whom the man in the street knows least. These pages will do something to dissipate the impression of the Foreign Secretary as a pompous, cold, and remote aristocrat. For in this volume he reveals some of his enthusiasms, his sympathies, and his capacity for understanding the eastern world. The volume disclaims any intention to propound or even to discuss political views, for, as its title implies, it consists for the most part of short anecdotes of an eastern traveller's experiences. There are one or two more ambitious descriptions, notably the vivid account of the self-mutilation of the zelots of Kairwan, the character study of the late Amir of Afghanistan, and a collection of recorded instances of "singing sand." The portrait of the Amir is excellently drawn, and this account of Lord Curzon's visit to Kabul will afford the best revelation of the author's qualifications for handling eastern politics. The book is packed with brightly coloured scenes of Oriental life, and particularly of Oriental potentates, and the recording of these reminiscences moves Lord Curzon to meditate on the precarious hold which his various hosts had not only upon power but upon life itself. In his introduction he gives a long catalogue of those who have perished by the assassin's knife, and concludes that the world of which he writes belongs to the past "that is quite dead, not merely by reason of the change in my own environment, but also because of the revolution in the conditions of travel, and in the state of the peoples and lands which I visited."

In the interesting self-revelation that this volume affords there runs with an acute appreciation of the scenes described a streak of vanity, betrayed by a hundred touches. But even those who pick up this book with a background of prejudice, for political or other reasons, against the author, will find in it much pleasure, because it reveals a man who is conscious of his weaknesses as well as of his great powers of observation and description, and reveals them to us with a secret amusement. For example, he describes with gusto how he extemporised a most extraordinary apparel for impressing the Amir when he made his formal entry into Kabul. Before leaving London he hired from a theatrical costumiers three of the most gorgeous stars of foreign orders he could find, though he had no title whatever to wear them, and the most colossal epaulettes that had ever been seen, which, he supposes, must have decorated the shoulders of some eighteenth century admiral of vast proportions. In India he ordered an enormous pair of Wellington boots to wear with his levy dress, and completed the remarkable picture by borrowing from Sir William Lockhart a gigantic curved sword with an ivory hilt and magnificent scabbard. These careful designs nearly came to grief, for he had forgotten that epaulettes, especially such ones as those he had brought from London, required special attachments to the shoulders of the uniform. The traveller had, therefore, an hour's hard sewing to do when he proceeded to don this variegated apparel in the special tent that had

* "Tales of Travel." By the Marquess Curzon of Kedleston. Hodder and Stoughton. 28s. net.

been pitched for him, by order of the Amir, a mile or so outside the city wall. Lord Curzon thinks that he created a great impression, but was a little nonplussed when his admiring host began to ask inconvenient questions about his trophies. But the gilded epaulettes won the greatest success, for the Amir sent for his court tailor and had him study these beautiful appendages as worthy of reproduction in the Court of Afghanistan. "For all I know," says Lord Curzon, "they may have left a permanent mark upon the sartorial equipment of the god-granted Government."

We regret that the publishers of this volume, which is, after all, very slight in its contents, did not show more confidence in the breadth of its appeal and offer it at a lower price.

BRAZIL TO-DAY.*

BRAZIL extends over nearly half South America, and is now the third largest State in the world. The British capital invested there is at least £250 millions—two-thirds in Federal, State, and municipal securities, the rest mainly in gas and waterworks, tramways, banking, and various industrial undertakings. British shipping predominates in the foreign trade of the country. British goods have regained their primacy in its imports, and Anglo-Brazilian friendship has long been cordial and strong. The native resources are vast, the products various, and rapidly multiplying. Only 1 per cent. of the hydro-electric power is as yet utilised, and the Government, unlike some of its neighbours, welcomes and encourages immigration. Mr Howarth has visited the country, and served for 40 years as one of its Consuls in Great Britain; and he deals very fully with the physical features and conditions of each State, and with the products, resources, shipping, commerce, and commercial organisation of the country as a whole. Such books are often too roseate; but, though he touches lightly on the unsatisfactory finances of some of the State Governments, he deals frankly with the present conditions of the Federal finances and the efforts to better them. Very full particulars are given of Customs and Consular arrangements, and a list (abridged from an official document) is appended of exporters of Brazilian produce. The descriptions of scenery and the illustrations are attractive, and the work is well calculated to further Anglo-Brazilian intercourse and trade.

Rubber Producing Companies, 1923. (London) Mincing Lane Tea and Rubber Share Brokers' Association, Limited. 7s 6d net.

This exceedingly useful volume has been compiled on similar lines to those of previous issues, and the position of all rubber companies whose shares are dealt in on the London market is fully given. This information includes directorate, secretary and offices, authorised and issued capital, acreage, planted area, purchase price and tenure. Particulars are also given of production for the last seven years, with average selling price, profit, dividends, &c. For the same period all-in cost is given. Reserve funds are also shown, together with highest and lowest prices of shares for the last few years. The recent activity in the tea share market has not been overlooked, and special attention has been given to about 85 of the principal companies which produce both tea and rubber.

Letters to the Editor.

GERMANY'S CAPACITY TO PAY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Referring to your review of my article in *Foreign Affairs* (N.Y.), I am encouraged by your not unkindly reception of the proposal to leave the capital reparation debt alone for ten years' time and the other features of the suggested plan to reply to the two objections which you make. Does not your objection that inter-Allied debts must be cut down beg the question? The proposal to leave the capital debt alone is put forward as a temporary solution of the deadlock which has arisen largely on the very question of inter-Allied debts—a deadlock which seems unbreakable for the time. It seems to me that any objection to that proposal should be addressed to the arguments which I have presented to show that the liabilities all round may safely be left alone for the present, and that by thus avoiding the deadlock, instead of continuing to try to break it, Europe will obtain that which is really essential to a solution of the reparation problem—a chance to resume industry and trade in a favourable atmosphere.

As a second objection, you say that France would object to a fixation of Germany's interim payments by the League of Nations. But my proposal that the League of Nations investigate German and other budgets, fiscal and tax systems, does not go beyond a suggestion that the work already done by the Economic Section of the League in connection with the Brussels Conference be continued and brought effectively to the attention of the reparation authorities and the public for its bearing on the reparation problem. Work of this sort must have more publicity if an adequately informed public opinion is to be created. As it is, the budgetary aspect of the reparation problem seems to have been largely submerged by the question of export surplus. I do not regard the *economic* problem as "almost entirely a budgetary one," but—and here is the essential point—I do regard a psychological basis of agreement on the *whole* problem as incapable of being reached until the question of German taxation has been given its proper share of attention. I believe this to be unquestionably true so far as the United States is concerned. In a letter in the "Times" of September 15th I re-stated some of the psychological and practical advantages of devoting more attention to the budgetary aspect and less to the exports question, more to the system of current payments and less to the impossible question of ultimate capacity to pay.

As you have linked your review of my article with a review of "Germany's Capacity to Pay," by Moulton and McGuire, may I suggest that the latter seem to have overlooked the real significance of the proposal that Germany may supplement her payments from export surplus by delivery of industrial securities. They state quite truly that any conversion of the capital obligation into industrial securities offers no help in the direction of increased annual payments, as interest and dividends would still have to be paid out of exports. But the proposal which I make in *Foreign Affairs* is that a portion of the annual instalments of *interest and amortisation* on the capital obligation be converted into industrial securities, and that these securities be sold by the recipient Governments. In that case only interest on interest would have to be paid externally. It is true that in 15 or 20 years' time the external payments for interest and dividends on the accumulated securities would amount to a considerable figure. But for the next five or ten years they would be negligible. The substance of my proposals is a *modus vivendi* for the next ten years. Who can say what will then happen to the reparation debt and the reparation problem? If Europe can get back to normal production and distribution both of them may have disappeared by that time. In attempting to revise the capital debt we are now vainly trying to pierce the future. We are trying to cut down the proportions of the reparation debt, but are not succeeding in cutting down the proportions of the reparation problem.

I fear you somewhat prejudice the consideration of my suggestions by referring to my article as an *ex parte* (Correspondence continued on page 707.)

IMPERIAL BANKING AND CURRENCY.

THE appearance of our autumn Banking Number coincides with the session in London of the Imperial Conference, at which questions of finance and currency, as well as of political and fiscal development, are coming up for discussion. We have, therefore, devoted considerable space to the consideration of banking and currency matters in the principal component parts of the British Commonwealth, and special articles will be found on later pages dealing with the systems and problems of the great Dominions and British India. There is no unified banking or currency system for the Empire, just as there is no unification of political and fiscal aim. The rapid development of the Dominions has produced special conditions, to meet which various banking and currency systems have been evolved. As between the banking systems of the various parts of the Empire there is no co-ordination, except such as is provided by London connections.

This diversity and lack of unified functioning has both advantages and disadvantages. To some observers the disadvantages appear so great that one of the Empire's chief needs is held to be the provision of a scheme for a unified Empire currency and exchange system. Among the keenest supporters of this idea is Mr J. F. Darling, whose plan for the creation of Imperial Treasury bills to be used as a common backing for the various currencies of the different Dominions, as well as a means of adjusting inter-Imperial payments when a lack of balance in trade disturbs the equilibrium of payments between the different countries, is familiar to readers of the *Economist*. The root difficulty of any scheme to remedy this state of affairs is that, when trade equilibrium is disturbed, some economic correctives must be brought into play to restore the balance by stimulating inadequate exports or checking excessive imports. It does not help matters to soften the disagreeable pressure of these correctives, for that only delays the restoring of sounder trading conditions. But there is considerable doubt whether they would operate freely under the scheme, and in any case any plan would need to be based upon a very large reserve indeed if it was to deal successfully with the enormous trade fluctuations that occurred in the three years after the war. In discussing Mr Darling's, or any other scheme, for dealing with the monetary problems of the Empire, the Imperial Conference may well reach two conclusions; the first is that no scheme, except a very grandiose one involving considerable interference with normal financial operations could ever cope with the extremely one-sided trade that occurred in the years 1920, 1921, and 1922. The second is that when trade is running on fairly normal lines, as it did before the war, the problem of making inter-Imperial payments is one well within the scope of the banking arrangements of the Dominions, and does not seem to require anything more than minor improvements in machinery, together with a free Bill of Exchange market in the Dominions.

None of the principal countries of the Empire have the same banking needs and conditions. Each has evolved a system of its own. Australia and South Africa have central or State banks; Canadian and India have not. Of the two latter cases, in India the supply of the currency is in the hands of the Government, while in Canada the Dominion issue is supplemented by that of the Chartered banks. Both countries, diverse as their conditions and needs are, have this in common, that the currency demands of trade are seasonal in expansion and contraction. In both countries, as described in later articles, a system has been arranged by which the necessary emergency currency can be made available at times of expansion, and retired when other contraction comes, so that no permanent inflation results. In both countries, as in many other parts of the world, the descent from boom to depression has brought banking losses and banking failures. In Canada the disquietude brought about by these untoward incidents has coincided with the decennial revision

of the Bank Act, but although the existing system has been assailed hotly, the revision has passed without fundamental change. In India a step towards the establishment of wider and more adequate banking facilities, and towards greater stability of money rates, has been taken in the establishment of the Imperial Bank—an amalgamation of the three Presidency banks.

The banking situation of each of the various Dominions is dealt with later in separate articles, but it may be convenient to our readers if we present here some relevant comparative figures. The tables which follow show the note circulation in each of the Dominions, and the movement in wholesale prices:—

WHOLESALE PRICES. (1913 = 100.)						
Monthly Average.	U.K.	South Africa.	Australia.	New Zealand.	Canada.	India.
1920.....	283.2	223.3	227.9	211.7	246.3	204
1921.....	181.0	160.4	174.9	200.7	181.6	181
1922.....	159.5	128.4	161.6	177.5	165.5	180
1923 (June)...	159.4	124.0	187.0	176.9	166.7	175

NOTES IN CIRCULATION (Millions).					
End of	U.K.	South Africa.	Australia.	New Zealand.	Canada.
	Currency & Bank of England Notes.	Bank Notes (Gross Issue).	State Notes.	Bank Notes.	Dominion and Bank Notes.
1913.....	£ 29.6	£ 2.3	£ 10.0	£ 1.2	\$ 227
1.20.....	480.9	9.1	58.7	5.8	522
1921.....	432.7	8.8	55.5	4.7	444
1922.....	398.3	8.3	51.8	4.3	414
1923 (May)...	389.6	8.1	52.1	6.3	388

If we compare the pre-war position with that of the post-war years there is no clear connection between these two series of figures. The reason is that the money in circulation before the war included a large quantity of gold which in all cases has been to a very large extent replaced by notes. If, however, we look only at the post-war situation, we find the movement of prices much more closely reflected in the movement of the note circulation. This comparative statement of prices is in itself very informative, for the changes are very different in the various Dominions. Part of this is no doubt to be accounted for by the fact that the price indices are not all calculated in exactly the same way. But the figures do, in fact, undoubtedly correspond to considerable differences in price movements. We have said that these various figures do not permit of a direct comparison between bank notes and prices, and before we can consider the monetary influences affecting prices we should have to take deposits into account. Some light on this factor is thrown by the summary tables in the articles which follow, but the figures only relate to those banks that have connections with London:—

DEPOSITS OF CERTAIN DOMINION BANKS.					
	S. African.	Australian.	New Zealand.	Canadian.	Indian.
	Mln. £	Mln. £	Mln. £	Mln. £	Mln. £
1914....	48.1	162.8	22.4	725.5	41.5
1920....	123.9	235.0	46.5	1,930.0	122.7
1921....	106.4	230.6	42.8	1,889.5	118.4
1922....	94.6	241.3	36.9	1,720.5	95.9
1923....	89.7	257.3	39.3	1,673.0	93.2

In general these figures show the same trend as those of the note circulation, but for the reasons given they must not be pressed too far. In the case of South Africa the figures cover most of the banking deposits in the country which might influence prices. The same is true of Australasia, but the figures for Canada are less complete, while those for India only represent the leading exchange banks.

THE ENGLISH BANK FIGURES.

A STUDY of the statements of those English banks which publish them at the end of the June half-year is, as usual, chiefly productive of interesting but sketchy surmises. The most notable feature therein disclosed is the decrease of nearly 115 millions in the volume of the deposits, that most important item in the total purchasing power of this country's people. It is a considerable acceleration of the process which was already shown in our autumn banking number a year ago, reversing the expansion which had till then been continuous since the beginning of the war period. The following table shows the movement in deposits since June, 1914:—

INCREASE OR DECREASE IN DEPOSITS.		Million £
June 30, 1915.....		+ 196.6
" 1916.....		+ 44.5
" 1917.....		+ 81.1
" 1918.....		+ 282.5
" 1919.....		+ 406.2
" 1920.....		+ 105.5
" 1921.....		+ 19.8
" 1922.....		- 30.2
" 1923.....		- 114.7
		+ 991.3

It will be seen that, by this reduction, the expansion, which at one time was over £1,130 millions, has now been brought down to roughly 990 millions, which is not a very tremendous score on the side of deflation, as measured by this test. We pointed out a year ago that the small decrease in deposits then recorded had been brought about during a year in which a rapid reduction had taken place in Bank rate—from 6 to 3½ per cent.—thus seeming to suggest caution in accepting the doctrine that movements in the official rate can be counted on to produce a prompt effect on the volume of banking credit. According to this theory, the lower Bank rate should have been expected to stimulate expansion of credit, whereas it had been accompanied by slight contraction. During the year that we are now reviewing the theory has been contradicted with equal emphasis, though in a different way. Bank rate was again reduced, from 3½ to 3 per cent. in July, 1922, and remained throughout the rest of the year at this low level, but deposits instead of expanding were contracted by 115 millions. These facts, taken with the previous record, which showed deposits continuing to expand long after the 1919 and 1920 rises in Bank rate, had, if the theory so eloquently expounded by Prof. Cassel and Mr Hawtrey were to be relied on literally, demanded their contraction, seem to justify the scepticism with which it is usually received by practical bankers.

On the other side of the aggregate balance-sheet of the banks whose figures are now examined, we find decreases of 12 millions in cash in hand and at the Bank of England, 58 millions in investments, and 47 millions in discounts and advances, including money at call and short notice. As usual, it is very difficult to draw inferences from these figures concerning the influences which have produced this large contraction, or to make them fit with other figures that are available. The figures of the Bank of England's return, being made up on June 27th, are doubtless a very different picture from the one that they would have shown on June 30th. According to it, the year covered was one of extremely slight movements, as the following table shows:—

BANK OF ENGLAND. (Million £'s.)							
	June 27, 1923.	Comparison with					
	1914.	July 1, 1918.	June 26, 1918.	July 2, 1919.	June 30, 1920.	June 29, 1921.	June 28, 1922.

Proportion.....	173%	- 22%	- 1%	+ 3%	+ 8%	+ 5%	- 1%

Here we find other deposits only one million below those of the corresponding figure in 1922, and the total securities held by the Bank are also about a million lower, an increase of 5 millions in Other being offset by a decrease of six odd millions in Government. The coin and bullion has declined by 1.3 million, and the circulation has expanded by 2.1 million, while the reserve has only declined by two millions, thanks to the increase in the fiduciary issue to £19,750,000, from the £18,450,000 which had so long been its level.

It is not easy to reconcile the above-mentioned small decline in the other deposits with the decrease of 12 millions in cash in hand and at the bank, shown by the other banks, especially when the expansion in the Bank of England's note circulation, which so often finds its way into the tills of the other banks, is taken into consideration. But as everyone knows, the other deposits include many accounts besides those of the clearing banks, and our banking figures are chiefly designed to show the position, subject to hidden reserves and other complications, of the individual banks; as guides to the general monetary position they provide a guessing game which is more interesting than conclusive.

As an indication of the state of trade, they may perhaps be taken as favourable in that they show an increase of 20 millions in acceptances. At June 30, 1919, this item stood in the aggregate figures of the banks dealt with, at 62.1 millions, and in 1920 it had risen to 87.8 millions; in 1921 the tumble in prices and other causes had brought it down with a rapid run to 52.9 millions, and a year ago it was "silent as a standing pool" at 52.5 millions. At the end of last June it was 72.7 millions, 10 millions above the 1919 figure, and may perhaps be very cautiously hailed as one of the indications that trade depression is by no means as acute as the unemployment statistics and the general complaints of industry would seem to show.

When we come to the decreases of 50 millions in investments, and 47 millions in loans and discounts, the feet of the explorer are entangled in the difficulty caused by not knowing, thanks to different banking practice in this matter, which of these items contains the Treasury bills. Some banks look on them as Government securities, some as bills discounted. During the year under review Treasury bills were reduced by 156 millions, and ways and means advances from the Bank of England by 35½ millions, another fact which makes the small movements of the Bank return still more puzzling. If we knew how many of the dropped Treasury bills were in the hands of the banks, it might be possible to make some approach to a guess at the movement in their trade discounts and advances. As it is, we can only conjecture from the greatness of the decrease in outstanding Treasury bills, and the general belief that the banks have been disposing of part of the previous increase in their investments in Stock Exchange securities, that to some extent they have replaced cancelled Treasury bills by trade acceptances and loans to customers.

Coming back from conjecture to cold fact, all that we can be sure of is the big decline in deposits, accompanied by a still larger decrease in outstanding Treasury bills. It will be remembered that in his speech to the shareholders of the London Joint City and Midland Bank at the end of January, Mr McKenna charged the Government with producing deflation "effected in pursuance of a declared policy" by redeeming Treasury bills, implying that the bankers, when the total of Treasury bills is reduced, have no choice about replacing them by other assets, and that contraction of deposits is thus forced upon them. If this were really so it might be correct to charge the Government with producing deflation, though it might still be argued that all that the Treasury was doing was to redeem floating debt, the extent of which has ever since the war been something of a nightmare to our financial leaders, and that a deliberate policy of deflation may not have been at all its intention. But surely if trade had shown

[illegible]

any sign of rapid expansion the redemption of Treasury bills, instead of promoting deflation, would merely have enabled the banks to fulfil all the more easily their true function as creators of credit, not for financing Governmental expenditure, but for greasing the wheels of industry and enterprise. If our manufacturers and merchants had been full of orders, the banks would very easily have avoided deflation by substituting among their assets acceptances of banks and merchants, advances to customers, and short loans to Lombard Street, for

the Treasury bills that had been redeemed. In other words, it is just possible that instead of the austere policy of deflation which our Treasury and bankers are alleged to have cultivated, having caused, as is so often argued, the depression and unemployment from which we are now suffering, depression may have been caused by the state of European politics, and may have itself produced the deflation because there were no demands upon the banks for industrial and commercial credit, to take the place of redeemed Treasury bills.

AFRICAN BANKS.

In the appended table summarising the main items of the balance-sheets of banks operating in Africa, the most striking feature is the drastic reduction in the total of notes in circulation. Of the six banks whose figures are given in the last three lines, two operate mainly in Egypt and one in West Africa, but neither of these has a note circulation figuring in its balance-sheet. The drop in the total of notes shown in the table is, in fact, entirely the outcome of the coming into force in South Africa of the Currency and Banking Act of 1920, under which the right to issue notes passed on June 30, 1922, from the commercial banks to the South African Reserve Bank. The Reserve Bank, constituted under the Act, was given the sole right of issue of currency notes for a period of 25 years, and this was to be its principal function. The Act also provided that every South African Bank must hold stock in the Reserve Bank to the equivalent of 5 per cent. of its own capital, and must deposit large reserves with it. In respect to demand liabilities, 10 per cent. of the total was to be provided, and in the case of time liabilities, including interest-bearing deposits, the proportion is 3 per cent. After the first three years the proportion of reserve against demand liabilities was to be increased to 13 per cent. The Reserve Bank is not intended to compete in any manner with the commercial banks, and its dividend is limited to 10 per cent. While there is an embargo on the export of gold from South Africa, however, or so long as gold certificates are inconvertible, it may not pay a dividend of more than 6 per cent. per annum, and all excess profits during that time must be placed to a special fund for strengthening the gold reserve of the bank. When the reserve fund is equal to the paid-up capital, the net profit, after payment of 10 per cent. dividend, is to go to the Government. The note issue has to be secured by at least 40 per cent. in gold, and as to the remainder by commercial paper or trade bills, and by a first charge on all the assets of the bank. In June last an amending Act was passed providing, *inter alia*, for the extension for two years—i.e., until June, 1925—of the inconvertibility of gold certificates and the alteration (which remains in force for five years) of cover that may be held by the Reserve Bank for its note issue, British and Union Treasury Bills being allowed to be taken as security.

The two principal commercial banks in the Union—the Standard Bank of South Africa and the National Bank of South Africa—show a substantial reduction in their note circulation, the former from £4,207,800 to £722,200 and the latter from £4,426,100 to £548,300. The chairman of the Standard Bank stated at the recent meeting that the remainder of the notes is being steadily reduced as they are received for payment. The balance outstanding at June 30th next will be paid over to the Reserve Bank, which will assume liability therefor, and after that date notes in circulation appearing in the balance-sheet will represent notes issued in Rhodesia only. The past three years have been an anxious period for the business community in South Africa, and neither of the two important commercial banks has passed through unscathed. Each has suffered a substantial decline in profits, as will be seen from a table appearing later on, but the decrease shown by the Standard Bank is small in comparison with that of the National Bank, whose figures for the year ended March 31st last show a very large loss, part of which is a legacy from the “imprudent” days of the preceding year. In reviewing conditions in South Africa

in 1922-23, the chairman of the National Bank pointed out that "the settlement of the grave industrial troubles which demoralised the reef in March, 1922, was not so rapidly succeeded by prosperity as was the general expectation. On the contrary, while individual gold mines derived benefit from that settlement, the community in general which depends for its prosperity upon the principal industry of the country is still suffering from the effects of the upheaval. Large numbers of firms and individuals were unable to survive the strain, and the official record of liquidations and insolvencies bears testimony to the severity of the depression. Secondly, the fall in values generally, which, it was thought, had come fairly near to finality a year ago, continued, in many lines, to be a feature of last year's trading experience, and in consequence merchants' stock sheets disclosed further heavy writings down, which have had a serious effect upon many balance-sheets. Then, in Portuguese East Africa, where, as you know, we are very largely interested, merchants have had to suffer from the additional embarrassment occasioned by the currency deadlock, which, I am sorry to say, shows no immediate sign of disappearing." He went on to say that it was these conditions that suddenly transformed outstandings which years ago seemed to be no more than doubtful, into ascertained bad debts, and brought advances which could then be described as fair business risks into the doubtful category. The provisions considered necessary in the past year's accounts in order to replenish reserves against bad and doubtful debts, absorbed not only the whole of the reserve fund of a million sterling, but involved the writing down of the paid-up capital from £10 to £7 a share. The chairman was able to announce at the meeting that the Reserve Bank was willing to extend to the National Bank all facilities necessary for meeting its engagements and to carry on business, and that the Union Government had approved of this decision, and was prepared to afford to the Reserve Bank any support that might be required to make it effective. Thus, quite early in its career, the Central Reserve Bank has been called upon to help in the restoration of confidence. It was also announced at the meeting of the National Bank, it may be added, that the Bank of England was prepared, if necessary, to discount in London acceptances of the National Bank of South Africa.

Both the Standard Bank and the National Bank show an appreciable decline in deposits, though the drop is very much smaller in each case than it was in the preceding year. The cash item is also substantially lower in each case, but both show an increase in investments—the National from £4.4 to £7.7 millions. The latter figure includes over £5 millions in Treasury Bills. The discounts and advances of the National Bank have been reduced by £4 millions, but those of the Standard Bank show a reduction of less than £1½ millions.

Much discussion has been going on as to the rates charged by the South African banks for remittances. Lord Selborne, at the meeting of the Standard Bank, admitted that "rates have been higher during the year than we like to see them. We are anxious to see the rates reduced to the normal level, and we hope that the trend of South African trade will soon allow of this being done." The chairman of the National Bank protested against the agitation for a reduction of rates, and claimed that "it is entirely incorrect to charge the South African banks with having exacted exorbitant

rates for the transmission to this country of the proceeds of Union exports. The true position is the very opposite—viz., that it is very much to the credit of the banks that exporters did not have to pay very much higher rates than the trade situation justified."

Of the two Egyptian banks only the National Bank of Egypt issues notes, and these are controlled by a separate issue department. The note issue at the end of 1922 was £33,200,000, showing a decrease of roughly £4 millions during the year. The gold coin stood at £3,339,600, while the bulk of the balance was represented by British Treasury Bills. The following table shows the fluctuations of the note issue during the past five years:—

	Highest. £E.	Lowest. £E.
1918	46,100,000	29,200,000
1919	68,200,000	39,900,000
1920	66,000,000	39,400,000
1921	39,900,000	30,400,000
1922	37,300,000	26,300,000

The period covered was, of course, abnormal, and the trade balance, which was slightly favourable in the first two years, became excessively so in 1919-20, and then suddenly changed to a very heavy excess of imports. In 1921-22 the balance again became slightly favourable. At the meeting of the National Bank of

Egypt, the chairman stated that the cotton crop of last winter was marketed with more than usual rapidity. "Prices have again been disappointing for growers, and it is certain that the finer qualities of Sakellaridis have not obtained the same premium over American cotton as in the past. On the other hand, the lower qualities and Upper Egypt cotton have maintained their position, and during this season it has been possible to dispose of a large accumulation of low cotton which had been unsaleable for the last two or three years." Ever since its inception in 1898 the National Bank of Egypt has acted as banker to the Egyptian Government, and an increase of £7 millions shown in its total deposits in the latest balance-sheet is almost entirely due to the Government account, deposits from the general public having remained practically unchanged. The Anglo-Egyptian Bank, which is purely a British concern, established in 1864, shows a decline of over a million sterling in deposits and in advances, investments have increased by over £2½ millions, while bills receivable have been reduced by some £3½ millions. The Anglo-Egyptian Bank, 90 per cent. of whose share capital was acquired in 1920 by Barclays Bank and the Netherlands Bank of S. Africa are the only banks in the appended profits table to show an increase in profits, those of the National Bank of Egypt having dropped by over £56,000:—

1922-23.	Year Ended.	Net Profit.	Dividend.	To Reserve, &c.	Pre-mises.	Staff Funds.	Carried Forward.	Profit and Dividend for Preceding Year.
Anglo-Egyptian Bank, Limited	Aug. 31 ('22)	£ 119,699	90,000	15*	£	£	£	£
Bank of British West Africa, Lim.	Mar. 31	100,574	60,000	5	22,000	7,270	429	118,883
National Bank of Egypt	Dec. 31	502,094	450,000	15	30,000	10,000	574	105,935

Netherlands Bk. of South Africa	Dec. 31	26,753	9,600	4	15,833	50,000	311	Dr 116,457
Standard of South Africa, Lim.	Mar. 31	888,825	312,089	14	..	50,000	1,320	24,388
Total		218,255	921,688	..	Dr 904,167	112,000	68,530	1,194,118

The decline in the profits of the Bank of British West Africa was accompanied by a further reduction of 1 per cent. in the dividend. The balance-sheet showed signs of all-round contraction, but the position remains very

liquid. At the annual meeting, the chairman spoke of signs, "though not great signs," of an improvement in trade in West Africa.

AUSTRALASIAN BANKS.

SINCE 1911 the notes of the ordinary banks in circulation in Australia have been in course of withdrawal and up to date a total of £3,511,200 has been withdrawn, leaving only £207,300 in circulation. In 1920 legislation was introduced by the Commonwealth Government to compel the Australian banks (with the exception of the Commonwealth Bank of Australia) to hold a proportion of their deposits in Australian notes, the administration of which was transferred from the Treasury to a Note Issue Department of the Commonwealth Bank. The

Note Issue Department is managed by a board of directors composed of the governor of the bank and three other directors appointed by the Government. Every bank other than the Commonwealth Bank is compelled to hold in the form of Australian notes an amount not less than 20 per cent. of the deposits which it holds, repayable at call or less than six months' notice, and 10 per cent. of deposits it holds repayable at six months' or longer notice. As the word "deposits" is not defined, it would appear to include deposits in London or elsewhere outside Australia, as well as those within Aus-

tralia. The board of the Commonwealth Bank is required to hold not less than one-fourth of the amount of notes outstanding in gold coin and bullion, and is empowered to invest the remainder or any part thereof (a) on deposit with any other bank, or (b) in securities of the United Kingdom, or of the Commonwealth or of a State, or (c) in the ordinary business of the bank. The power conferred upon the Commonwealth Bank by clause (c) was a new departure. Power is reserved to the Governor-General of the Commonwealth to transfer the control of and responsibility for the whole or part of the Australian note issue from the board of the Commonwealth Bank to the Treasury whenever in his (the Governor-General's) opinion an emergency has arisen which renders it desirable in the public interest so to do, and to retransfer the note issue to the board of the Commonwealth Bank when the emergency has ceased. Apart from the board established under this Bill, which has to do only with the note issue, the Commonwealth Bank of Australia has had no board of directors, but has been managed solely by the governor of the bank, with the assistance of the deputy-governor and the staff. It has, however, recently been proposed to appoint a board of directors. In his Budget speech at the end of July the Commonwealth Treasurer, Dr Earle Page, said: "The Government believes this to be necessary in order that continuity of policy may be assured, that the bank may function in a truly national way, and that due assistance may be afforded to the expanding primary and secondary industries of Australia."

In referring to the question of the note issue, the latest number to hand of the *Australasian Insurance and Banking Record* points out that at the outset of the war an arrangement was drawn up by which notes could be issued to the banks, if desired, against one-third gold, but since the war this arrangement appears to have lapsed. The real use to which the greater part of the increased issues of notes was put was to make advances, not to the banks, but to the State Governments for expenditure on public works. The total amount of notes outstanding at June 30th last was £52,102,200, against which assets were held consisting of £24,346,300 in gold coin, £27,017,700 in investments, £234,000 for advances to mints for purchase of bullion, and a balance of £504,000 in the Commonwealth Bank. Interest received for the twelve months ended June 30th last was £1,244,600, and there was a "net profit" of £1,072,900, which forms part of the Commonwealth revenue. Of the total Australian notes outstanding on June 30th last, £28,901,700 were held by the banks, leaving £23,200,500 in the hands of the public. The total issue shows a reduction of £1,479,800 in comparison with June 30, 1922. In the appended table of Australasian bank figures the notes shown consist very largely of New Zealand banknotes.

The figures of Australian trade for the fiscal year ended June 30th last are given by our Australian contemporary quoted above, and show that the balance of trade has once again swung round to an excess of imports. At the moment, however, Australian currency is at a slight premium in comparison with British currency:—

	(Million £'s.)		Excess of—	
	Imports.	Exports.	Imports.	Exports.
1914-15....	64.4	60.6	3.8	..
1915-16....	77.7	74.8	2.9	..
1916-17....	76.2	97.9	..	21.7
1917-18....	62.3	81.4	..	19.1
1918-19....	102.3	113.9	..	11.6
1919-20....	99.0	149.8	..	50.8
1920-21....	163.8	132.2	31.6	..
1921-22....	103.0	127.8	..	24.8
1922-23....	131.8	117.9	13.9	..

Exports have again been in excess of payments receivable by Australia, owing to the fact that payment

for the shipments of Bawra wool, which only ceased in May last, was received some years ago from the British Government. On the other hand, the Bawra distributions to woolgrowers have formed a supplementary item of payments to Australia. The excess of imports over exports for 1922-23 is a result largely of the exceptionally heavy public borrowings by the various Australian Governments and other public bodies effected in London and New York during 1921-22. The net amount of debt raised outside Australia during that period, according to the Commonwealth Year Book, was about £38½ millions, and this has meant that imports into Australia have been stimulated to a corresponding extent beyond what would have been possible on the basis of the purchasing power furnished by Australian current production and exports, after making allowance for the annual amount to be remitted for interest and business earnings on British capital invested in Australia publicly and privately. Taking this annual payment at about £25 millions, the net purchasing power of Australia, based upon exports amounting to £118 millions, would be about £93 millions, or about £39 millions less than the past financial year's imports. The effect of the £38½ millions borrowed in 1921-22 has thus been felt during the year 1922-23.

In the case of New Zealand, exports continue greatly to exceed imports, and the banks are accumulating funds in London in excess of requirements. Exporters are consequently paying higher rates of exchange than they have recently been accustomed to, but importers are enjoying much more favourable rates.

From the summary table below it will be seen that during the past 12 months the aggregate deposits of 14 Australasian banks with offices in London have increased by nearly £22½ millions, while discounts and advances have risen by over £14 millions. The increase in deposits is common to the Australian and New Zealand banks, but while the discounts and advances of the Australian banks have increased by a larger amount than that mentioned above, those of the New Zealand banks have dropped a little. The chairman of the Bank of New Zealand explained that this was due chiefly to repayment of the exceptional advances made to traders during the period of over-importation in 1920-21, and to the improved returns received for their produce by farming customers. He added that a considerable portion of the advances is still of a somewhat unliquid nature. "To counterbalance this, we are keeping a larger amount of our resources than usual in undoubted investments of an immediately realisable character." The increase in advances shown by the Australian banks reflects the active demand for accommodation from traders and other classes in the cities as well as from country producers, while some of it is due to the larger amount of imports into Australia during 1922-23. Slightly more up-to-date figures are given by our Melbourne correspondent, who sends the following comparative summary of the averages of the ordinary banks in Australia and New Zealand (exclusive of London and other outside figures) for the quarter ended June 30th, with the previous quarter and a year ago:—

	June 30, 1922.	March 31, 1923.	June 30, 1923.
Deposits—			
Australia	£ 219,600,338	£ 232,000,840	£ 237,827,126
New Zealand	47,399,600	48,659,637	52,091,994
Total deposits	266,999,938	280,660,477	289,919,120
Advances inc. Govt. securities—			
Australia	182,758,449	197,994,984	202,514,707
New Zealand	51,977,855	48,347,815	47,523,808
Total advances	234,736,304	246,342,799	250,038,515
Cash items—			
Coin and bullion (A. and N.Z.)	27,333,068	27,287,078	27,167,147
Australian notes	25,577,119	26,353,024	25,026,558
Legal tender notes of other banks (N.Z. only)	1,109,907	501,218	418,791
Total cash	54,020,094	54,141,320	52,612,496

Out of the total increase of £22,919,882 in deposits during the year, £15,373,799 is in deposits bearing

interest. The cash items show a decrease due mainly to the contraction of the Australian note issue and the inaccessibility of gold at present for the purpose of increasing stocks held by the banks. So long as this continues it will apparently be necessary for seasonal fluctuations to be permitted in the note issue to meet the requirements of the active export season towards the end of the year.

The quarterly average return of the Commonwealth Bank of Australia shows the following items within Australia:—

1922-23.	Year Ended.	Net Profit.	Dividend.	To Reserve, &c.	Pre-mises.	Staff Funds.	Carried Forward.	Profit and Dividend for Preceding Year.

* Free of tax.

The substantial increases shown in profits in most cases serves somewhat to strengthen the plea made in these columns more than twelve months ago for reduction in the rates of remittances. In only one instance are net profits lower than they were in the preceding year, those of the Bank of New Zealand having dropped by nearly £130,000. This was a result largely

of a decline in interest consequent on the reduction in advances within the Dominion, referred to above. The only change in dividend rates is an addition of 1 per cent. by the Union Bank of Australia. Two of the Australian banks—the Commercial Banking Company of Sydney and the Queensland National Bank—are taking steps to increase their capital owing to the expansion of business.

CANADIAN BANKS.

THE past year has been a period of peculiar interest for Canadian banking. The Bank Act came up for its decennial revision, and the task of such revision became a subject of widespread public controversy, owing to certain untoward events which have recently taken place, and have caused uneasiness in the minds of the Canadian people as regards their banking system. There was, in fact, an epidemic of serious banking losses. Following on the failure of the Merchants' Bank in the first half of 1922, serious losses were disclosed by the Union Bank, which were met by drastic readjustment. Smaller concerns, such as the Home Bank, the Standard Bank, and the Bank of Hamilton, and some others, found themselves face to face with serious difficulties, and either went under, or, as in the case of the last named, sought safety in amalgamation with stronger concerns. Thus public disquietude was aroused, and the proceedings of the Committee which

investigated the question of the Bank Act Revision were the cynosure of all eyes. In the end, however, the new Bank Act, which was passed at the end of the summer, made no startling innovations.

Canadian banks operate under charters, which lapse every ten years—a provision which necessitates the passing every decade of a new Bank Act, and affords opportunity for amendment of Banking law in the light of accumulating experience and proved national needs. The chief features of the system in force lend themselves to brief summary. Banking in Canada is not a monopoly, but anyone who wishes to open a bank is subject to certain restrictions, the chief of which is that the minimum capital must be \$500,000, of which half is paid up. This minimum is intended to be a guarantee that those embarking on a banking venture are of a *bonâ-fide* character, and it cannot be regarded as too high, since the permission to conduct a banking

business carries with it the privilege of issuing banknotes which have not the specific backing of Government credit. A further provision, calculated to restrain the financing of rash and unsound banking ventures, is that shareholders in Canadian banks are subject to a double liability. A clause of the Bank Act says:—"In the event of the property and assets of the bank being insufficient to pay its debts and liabilities, each shareholder of the bank shall be liable for the deficiency to an amount equal to the par value of the shares held by him, in addition to any amount not paid up on such shares." This provision, apart from being, as we have said, some check on haphazard financing, is also some safeguard to depositors and other creditors. Further safeguard is afforded by two prohibitions, which forbid the lending of money on the security of real estate, or on that of the capital stock of any chartered bank. The recent unfortunate incidents should, in fact, be regarded less as revealing inherent weakness in the Canadian banking system, than as a reminder that no legislation can completely guard against unwise management in times of economic difficulty. On the other hand, it may be quoted as evidence of the success of the system that, amid all these banking troubles, the prestige of the greatest banks has been maintained unimpaired, and, as is shown in a later article, their shares have in no measure lost the confidence of the investor.

The *débâcle* referred to aroused a strong demand in certain quarters for the institution of the system of Government inspection of banks. It must, however, be regarded as very doubtful how far such inspection could be a safeguard. In past years banks have been obliged to have their accounts audited by approved auditors, selected from a list compiled by the Minister of Finance. Yet in the case of one of the recent bank collapses, the concern in question failed only a few weeks after the passing by the auditor of a happy balance-sheet, the disclosure of large profits, and the declaration of a good dividend.

In the matter of currency requirements, Canada's position is peculiar in that the demand is not steady. There is a sudden big rise in the demand for currency in the autumn, and a sudden decline in the spring. The system in force in Canada is sufficiently flexible to meet these varying demands without causing serious infla-

tion. Gold is not used as currency in Canada, the country's stock of gold being held by the Government and the banks for reserve purposes. The circulating currency consists of Dominion notes issued by the Government, and notes issued by the Chartered Banks. The latter's power of issuing banknotes is subject to four main qualifications, which may be summarised as follows:—(a) Such issues must not exceed the aggregate of "unimpaired" paid-up capital, plus the amount of Dominion notes and gold coin held on the issuing bank's behalf in the Central Gold Reserve. (b) To facilitate crop movements additional notes may be issued up to 15 per cent. of combined paid-up capital and reserve fund. Notice of intention to use this power must be given to the Finance Minister, and interest at a rate not exceeding 5 per cent. is paid by the bank for the privilege of such emergency issue. (c) No bank may pledge or hypothecate its notes. (d) Notes in smaller denominations than five dollars, or for any sum not a multiple of five dollars, may not be issued. The system so works that it is to the advantage of the banks to redeem as quickly as possible notes that are superfluous to legitimate requirements. Broadly, the system meets Canada's needs, and although, like all other banking systems, it has its imperfections, it does not lend itself to abuses. Some at least of the untoward incidents of the past year or two in the Canadian banking world would hardly have been prevented by a more rigid system. In one case, as our Ottawa correspondent shows in another column, the collapse was clearly due to a complete departure by the management from the rules of sound banking—departures which, it is as well to remember, occur from time to time in the case of smaller institutions under our own system. For the main features of the Canadian system the bankers have been able to put up a successful defence during the recent enquiry, and had little trouble in defeating proposals for the establishment of a State bank.

There are six Canadian banks with London offices, but with this group we have included the Colonial Bank, whose head office is in London, but whose main sphere of operations is in the West Indies. The profits and allocations for these seven last year are given below, with comparable figures for the profits and dividends of the previous year:—

1922-23.	Year Ended.	Net Profit.	Dividend.	To Reserve, &c.	Pre-mises.	Staff Funds.	Carried Forward.	Profit and Dividend for Preceding Year.
		£	£	£	£	£	£	£
Bank of Montreal	Oct. 31	951,333	731,500	14	308,400	100,000	188,567	789,959
Bank of Nova Scotia	Dec. 31	424,536	311,477	16	26,493	50,000	21,566	422,347
Canadian Bank of Commerce	Nov. 30	616,939	400,685	12	66,781	82,192	30,977	640,302
Colonial Bank	June 30	95,745	60,506	8	35,000	..	239	121,151
Dominion Bank	Dec. 31	203,536	156,000	13	..	30,000	8,586	208,252
Royal Bank of Canada	Nov. 30	791,694	571,200	14	100,000	80,000	20,494	807,567
Union Bank of Canada	Nov. 30	226,212	160,000	10	75,914	..	11,702	268,479
Total		3,809,995	2,391,368	..	612,583	342,192	118,457	3,263,056

As shown by the first column, the figures refer to varying periods, and too much should, therefore, not be made of aggregate comparisons. But the feature of the figures is that all seven maintained their dividend rates, and three increased net profits, the outstanding achievement being that of the Bank of Montreal, with an increase of nearly £220,000, and whose allocations to reserve exceeded £400,000. In a table on the next page will be found aggregate balance-sheet figures for the seven banks for a number of years, and here, again, the varying dates of balance-sheets must be remembered. One feature of that table is the tremendous expansion of the network of branches over the past dozen years. Actually in the past year there has been a decline, but in next year's table the number will probably again show increase through amalgamations which have recently taken place. The most interesting of these

amalgamations has been the absorption of the Bank of Hamilton by the Canadian Bank of Commerce, the particulars of which have been recently announced. The former had 148 branches and agencies in Canada, and the latter will thereby obtain a footing in 84 new towns. The table overleaf shows, as might be expected in a period of unsatisfactory trade, a decline in deposits, although the fall is not so large as that which took place in the previous year. Discounts and advances have also shown further contraction, while investments and cash are both higher. The ratio of cash to liabilities is higher than in any of the four preceding years. Of current banking conditions in Canada there is no need to take a gloomy view. Progress has been made with the liquidation of frozen credits. Crop reports are excellent, and American boom conditions are not without some degree of contagious effect upon economic conditions of the neighbouring Dominion.

INDIAN BANKS.

THE tables given in this article refer only to the exchange banks with London offices. But these banks, important as they are, form only one part of the Indian banking system. Until two years or so ago the other main links in the system were:—(1) The three Presidency banks, (2) the Indian Joint Stock Banks, (3) private banks, and moneylenders of the bazaars; (4) savings banks. But in 1920-21 the three Presidency banks were merged into the Imperial Bank of India. The reasons for this amalgamation were mainly threefold. The three Presidency banks had common interests, and co-ordination of functions and policy were desirable. The events of recent years had brought the Government of India into closer touch with the Presidency banks, and from this point of view also unification became a desirable object. Thirdly, the need for more adequate banking facilities spread over India had become more and more insistent, and it was evident that healthy banking development could be better achieved by a consolidated bank in close touch with the Government, and with connections in London, than by the existing institutions. So the Imperial Bank was established with a London office. It was made the sole Government banker, and was also entrusted with the management of the public debt. It shouldered the obligation of creating 100 branches in various parts of India, and of these, according to latest information, 59 have already been established. It is not a State or central bank in the commonly accepted meaning of the term, and good authorities are of the opinion that the banking system of India is not yet ripe for the establishment of such an institution; but its establishment may perhaps be regarded as a stage in the evolution of Indian banking in that direction.

The new bank has not got the right of issuing notes, and the Government of India retains its control of the issue of currency. One of India's difficulties as regards the supply of currency is that the trade of the country is largely seasonal, and there arises need for very quick expansion of cash resources at certain periods. We have examined on a previous page the methods by which the banking system of Canada meets a not dissimilar seasonal requirement. Already advantage has been taken of the machinery of the Imperial Bank for devising measures for meeting emergency

demands for cash. This summer the Legislative Assembly has passed an Act, known as the Indian Paper Currency Act of 1923, the object of which is to provide facilities for making additional currency available at times of genuine seasonal demand, and for automatically retiring it when the demand ceases. This legislation enables the Government of India to lend from the Paper Currency Reserve to the Imperial Bank, with the object of increasing its cash resources during the period when cash reserves tend to be reduced by special legitimate trade demand for currency, arrangements being made that as the additional rupee currency returns to the Imperial Bank, it is retired, and does not become a permanent addition to the circulation. It may, therefore, be claimed that in the past year or two a definite progress has been made in developing the Indian banking and currency system in the direction of meeting the proved needs of the country.

The latest report of the Imperial Bank of India, for the half-year ended June 30th last, shows net profits of Rs. 76,01,175, as compared with Rs. 63,52,241 in the corresponding period of 1922. The dividend of 16 per cent. was maintained. By way of comment on the half-year's operations, the directors state that the bank's funds were fully invested through the half-year, money having been in strong demand, for financing the cotton, rice, and other crops, which last season were good. The arrangements referred to above for augmentation of available currency supply during a period of stress were experimented with, and were apparently successful. In reference to the disturbance caused by the failure of the Alliance Bank of Simla, the directors of the Imperial Bank say: "Owing chiefly to the action taken by this bank, normal conditions were soon restored." Altogether the new consolidated bank appears already to be proving its usefulness in the Indian financial system.

The main function of the Exchange banks is the finance of the trade of the great ports. The accounts of these banks for the year 1922, as summarised below, show an aggregate fall of about £38,000, but in the case of all four the dividend rates of the previous year were maintained. The following table gives comparative figures of dividends and profits for 1922 and 1921, and details of 1922 appropriations:—

1922-23.	Year Ended.	Net Profit.	Dividend.	To Reserve &c.	Premises.	Staff Funds.	Carried Forward.	Profit and Dividend for Preceding Year.
		£	£	£	£	£	£	£

* Free of tax.

The large table appended to this article gives evidence of contraction, due to the state of trade. Adverse trade factors were mainly external. The early part of 1922 saw striking trade improvement, a good monsoon was enjoyed, and up to the middle of the year optimism was rampant. But the pressure of external circumstances then asserted itself, and the effects of Europe's troubles were reflected, and this factor was re-inforced by an epidemic of crisis following on over-speculation, while the business community were further disturbed by the report of the Fiscal Commission. In its factors affecting banking business, therefore, the year, which began so strikingly well, turned out in the end to be disappointing. Two events illustrating the banking difficulties, which arose out of last year's disappointing change-over of the trade position, came to light in the present year. One was the failure of the Alliance Bank of Simla, and the other the absorption of the Tata Industrial Bank by the Central Bank of India. For the latter development the public were somewhat prepared by the report of the Tata Bank for 1922, which announced the passing of the dividend, and the transference of the major part of its industrial interests to a separate concern. Nor was the collapse of the Alliance Bank of Simla a great surprise; indeed, it might have been better had the bank frankly faced the facts of its position in the previous autumn. The liquidation of the Alliance Bank was

undertaken by the Imperial Bank. These banking troubles, paralleled by similar occurrences in Canada and elsewhere, afford a reminder of the world-wide effect on banking of difficult economic conditions—conditions which may in some cases be more clearly reflected in the reports and accounts for the current year than in those for 1922. Features to be noted in the appended table are the contraction in deposits and discounts and advances, and the rise in investments. All these movements continue the trend shown in the previous year. As compared with two years ago, the deposits of the four banks fell from £118 millions to £93 millions, and discounts and advances from £108 millions to £75 millions, while investments rose from £10 millions to nearly £28 millions. The two latter movements reveal a lack of demand for banking credit on the part of trade and industry, which caused the banks to employ a larger part of their funds in the purchase of investment stocks. If the experience of the Imperial Bank, referred to above, has been shared by the exchange banks, the early part of this year will have seen a greater demand upon the credit facilities which they have to offer. If this has been so it will accord with the expectations held out by the chairmen at the annual meetings. Monetary rates rose in the first half of this year; the Indian Bank rate was raised from 7 to 8 per cent. on January 11th, and remained at that level until May 25th, when it was reduced to 7 per cent.

BANK SHARES.

WHILE the banking year at home has been free from peculiar anxiety, less satisfactory conditions have had to be faced by many of the banks operating in overseas countries, whose profits, dividends, and share quotations are set out below. In India, trade depression and political unrest have combined. In Canada several of the smaller banks have found themselves in serious difficulty, and the investigations of their affairs have succeeded in creating uneasiness among the public of the Dominion as regards the banking situation in general—an uneasiness clearly reflected in the controversy over the decennial revision of the Canadian Bank Act. In South Africa one of the two leading banks has recorded a very large loss, and the other a substantial fall in profits. Banks operating in South America have clearly felt the pressure of trade stagnation. By comparison, the progress of the Australian banks seems to have been placid and undisturbed. In the following table we show the profits and dividends of some of the more important colonial and foreign banks whose balance-sheets are set out elsewhere in this issue:—

Name of Bank.	Year Ended.	Whole Year's Net Profits and Dividends.

† Free of income-tax. (1) Accounts for 15 months to March 31, 1921.

In reading this list it must be remembered that the difficulties referred to above have not in some cases had time to be reflected fully in the latest available accounts. So far as the above figures go—and they are taken, as will be seen, from the latest reports of the various banks, issued at a variety of dates, and covering a variety of periods—the general showing is not unsatisfactory. In fact, the only reductions in dividend rates are those recorded in the case of the South African banks mentioned above, and the two South American institutions, the Anglo-South and the London and Brazilian.

It must be remembered that developments occurring after the appearance of the latest reports are, in a number of cases, reflected in the movements of share quotations which we give in the following table:—

Share.	Am't of Share.	Paid up.	Price July 30, 1914.	Price Sept. 29, 1922.	Price Sept. 28, 1923.	Yield %

† Free of tax. (b) £64 shares fully paid. (c) £10 with 24 paid. (k) £40 fully paid shares. (t) £20 shares fully paid. (f) £25 shares with £12 1/2 paid.

As compared with a year ago, Australian shares, like the English, are all higher. With the exception of the Union Bank of Canada (whose shares fell heavily on news of losses, but recovered a good deal on the announcement of bold steps by the directors to meet the situation), the Canadian shares show a firmness which is very satisfactory, in view of certain circumstances referred to above. This firmness

indicates that the market recognises the solidity of the biggest Canadian banks to be unaffected by the troubles of their smaller confrères. Similarly, the Eastern group show an advance on the quotations of a year ago. The Anglo-South American and the London Brazilian shares have each lost about 1 1/2 points, but Standard of South Africa have only fallen about 1/2 a point, and the only really big decline in the whole list is that suffered by the shares of the National of South Africa. On the whole, the above record is evidence of market confidence.

It will be observed that the yields offered by the best bank shares, both British and colonial, now run from about 5 per cent. to 5 1/2 per cent. In the case of the English banks, the decline in the yields offered has been similar in trend over a two-year period to that of first-class gilt-edged securities. This point is illustrated below:—

	Yield per Cent.		
	1921.	1922.	1923.
Bank of England	5 1/2	5	4 1/2
Barclays "A"	6 1/2	5 1/2	4 1/2
Barclays "B"	6 1/2	5 1/2	5 1/2
Lloyds	6 1/2	5 1/2	5 1/2
London Joint City and Midland	6 1/2	5 1/2	5 1/2
National Provincial and Union	7 1/2	6	5 1/2
Westminster	7 1/2	5 1/2	5 1/2
Consols	5 1/2	4 1/2	4 1/2
5% War Loan	5 1/2	5	5

But while the yield on War Loan, for instance, is now the same as a year ago, the yield on bank shares has continued to move downwards in the past twelve months.

Two factors which have in the past, more than the present, restricted the popularity of bank shares are the large denominations of shares and the existence of liability. The progress made in recent years with splitting shares into small denominations without liability has slightly increased the attention paid by the public to the market, but not so greatly as was hoped. Below we set out a table showing a number of bank shares on which the liability is either small or non-existent:—

Bank.	Denom-ination.	Am't Paid Up	Price Sept. 30, 1921.	Price Sept. 29, 1922.	Price Sept. 28, 1923.	Yield %
Anglo-South American	£	£ 5	8 1/2	9 1/2	7 1/2	5 1/2
Australian Bank of Commerce	1	1	1 1/2	1 1/2	1 1/2	5 1/2
Bank of New Zealand	1	1	2 1/2	2 1/2	2 1/2	5 1/2
Barclays "A"	4	4	6 1/2	7 1/2	8 1/2	4 1/2
Do "B"	1	1	2 1/2	2 1/2	2 1/2	5 1/2
British Overseas, "A," ord.	5	5	5 1/2	5 1/2	5 1/2	5 1/2
Lloyds	5	1	2 1/2	2 1/2	2 1/2	5 1/2
London Joint City & Midland	2 1/2	2 1/2	7 1/2	8 1/2	9 1/2	4 1/2
Manchester and Leinster	5	2	5 1/2	6 1/2	7 1/2	5 1/2
National Bank of S. Africa	10	10	10 1/2	10 1/2	6	Nil
Westminster	1	1	2 1/2	2 1/2	2 1/2	4 1/2
Williams, Deacon's, "A"	5	1	1 1/2	1 1/2	1 1/2	5 1/2
Do "B"	1	1	1 1/2	1 1/2	1 1/2	5 1/2

In the case of shares of the English "big-five," the existence of "callable" liability need not be taken too seriously by investors. But in the case of overseas banks, investors need to look into the question of liability carefully. For instance, the Canadian Bank shares have a double liability, callable and reserve, which means not only that the amount not paid up is liable to be called, but also that in a liquidation the shareholder is liable for the nominal amount of one share. When intending a purchase of an overseas bank share, investors should therefore find out before purchase exactly how they stand in this matter.

FOREIGN BANKS WITH LONDON OFFICES, AND BRITISH BANKS TRADING WITH FOREIGN COUNTRIES.

For the purposes of our annual review, banks with offices both in London and in foreign countries are considered together, although they include two distinctly different types of banks. Firstly, there are British companies with offices in London and abroad, and, secondly, there are those foreign institutions which have branches in London. English joint stock banks, which have subsidiary concerns abroad, do not come within the scope of this survey.

First for notice comes the little group of purely

British overseas banking companies, which have either been established or strengthened within the last few years as a result of a more intensive overseas trade development policy. Most of these undertakings are rendering good account of themselves, and may be said to have justified their existence. It is perhaps only natural to find that this little group, as a whole, shows signs of being affected by the industrial depression. But there are a few exceptions. The most striking increase in our table is that of the P. and O. Banking Cor-

poration. It may be recalled that this bank is affiliated with the Allahabad Bank; it also announces that branches have been opened in Shanghai and Colombo. The British Italian Corporation makes excellent headway, and the British Overseas Bank is apparently developing its discount and advance business. The position of the British Trade Corporation is

not as happy as it might be. The profit for the year 1922 is given as £39,412, which compares with £104,103 for 1921 before bad debts had been written off, and £119,309 for 1920; deposits are £235,100 lower, and acceptances £273,800 lower on the year's trading. The figures for Hambro's reflect the financial troubles in Norway and elsewhere.

This year the table of Continental banks with branches in London has been omitted. This is on account of the fluctuations in exchange rates which render the figures almost valueless when converted into sterling. When the exchanges become more stabilised it may be possible to devise a fresh table of comparative values, which will interest our readers. The detailed balance-sheets, however, of all the leading Continental banking institutions will be found on the later pages of this issue in their respective currencies. The figures of the Crédit Lyonnais illustrate the trend of expansion in France. Deposits which in December, 1921, were just over 4,500 million francs by December, 1922, grew to 4,984 millions. Bills receivable, including French Treasury bills, increased from 3,791 millions to 4,096 millions, while loans totalled 216 millions in December, 1922, as against 164 1/2 millions for the previous year. The Société de Crédit Industriel gives its balance-sheet and accounts in sterling taken at 25 to the pound. Deposits now reach over £20 1/2 millions, as against approximately £30 millions for the previous year. The Banque Française pour le Commerce et l'Industrie has been merged into the Banque Nationale de Crédit. This latter institution continues to expand. Deposits for 1922 were 2,440 million francs, as against 2,103 for 1921. It may be recalled that this concern—comparatively a newcomer—was established in 1913 to take over the French business of the Comptoir d'Escompte de Mulhouse, in 1919 absorbing the Banque de Metz; it has now 422 offices. The Société Générale pour Favoriser, &c., continues to develop in a very satisfactory manner, and its activities in assisting French industry may be judged from the long list of issues given in the report in which this great banking undertaking was interested; current accounts have increased from 1,148 1/2 million francs to nearly 1,233 1/2 millions, and the reserve appears as well over 54 1/2 millions. We have often remarked upon the activities of the Comptoir d'Escompte de Paris. This undertaking has 62 offices alone in Paris and its suburbs. In addition to this, it has branches throughout France, Madagascar, and Tunis, while its offices are also to be found in Australia, India, and Egypt.

The Banca Commerciale Italiana maintains its programme of progress. Details of the various interests of this institution were given in our banking issue of a year ago; deposits are recorded at 767 million lire, as against 790 millions for 1921. The most striking increase is that of bills receivable, which has gained 360 millions. Bills in circulation stand at 367 1/2 millions—an increase of 30 millions. The report mentions that in agreement with other banks the system of crossed cheques has been introduced into Italy. The great rival Italian concern—the Credito Italiano—has devoted its energies to consolidate its recent rapid expansion. The report states that "the work of our representative office in New York has continued to develop the programme already indicated The same may be said of the companies of representation which we have established in Paris and Berlin." Deposits of 3,923 million lire are now recorded by the Credito Italiano. A worthy representative of Swiss financial institutions is the Swiss Bank Corporation. For 1922 its profits, reckoning the franc at 25 to the pound, amounted to £421,100, which compares with £462,000 for 1921, and £469,700 for 1920. In Belgium the activity of the Crédit Industriel et Commercial calls for notice; current accounts have increased by 17 per cent., while profits have been sufficient to distribute substantial dividends. The Portuguese undertaking—Banco Nacional Ultramarino—records an increase of cash deposits from 120 1/2 million escudos to well over 156 1/2 millions, while fixed deposits moved from 88 1/2 millions to nearly 122 1/2 millions. The report and accounts of the Banque D'Athènes is always an interesting document mainly because of the useful coloured progress chart which is inserted. At its annual meeting the chairman of the Ionian Bank pointed out that the figures of the balance-sheet are strictly speaking not comparable with those of a year ago on account of the change in the method of converting the drachma. This institution now has no note issue. The Bank of Roumania shows its liquid assets and some current liabilities in Bucarest at 800 lei to the pound, a particularly praiseworthy policy.

We now come to banks operating in Asia:—

ASIATIC BANKS.

	Capital and Reserves.		Deposits.		Cash.		Investments.		Discounts, Loans, and Credits.

In 1912 banks in Japan numbered 2,161. Since then the Government has been encouraging amalgamations for the sake of greater security. As a result, the number decreased year by year, and in December last the total was 2,001, and the total nominal capital amounted to 2,805,210,000 yen (1,862,210,000 yen paid up). While the number of banks had decreased by 160 since 1912, the capital showed an increase by about three and a-half times. The reduction of numbers was aided by the after-war slump, and in 1922 alone there was a decrease of 58. The Japanese banks in our list are, of course, only those with offices in London. As will be observed, the Bank of Taiwan dominates the group for discounts and credits. But the Yokohama Specie Bank leads with deposits. The Sumitomo Bank—an Osaka undertaking—is slightly down on its year's figures. This concern has affiliated banks in Seattle and Honolulu. British banking activity in the Far East is well represented by the Hong Kong and Shanghai. The chairman of this institution, at the

annual meeting in February last, said, in reference to its balance-sheet:—"We are confronted with the usual difficulty in making comparisons with the previous year, owing to the rate of exchange being about 16 per cent. higher at the end of 1921 than it was last December. Several encouraging features may, however, be noticed. Our cash and bullion is considerably lower, and our bills discounted and loans are considerably higher than the previous year, as are our acceptances on account of constituents. All these are indications of more activity in trade. Our silver deposits have shown a normal expansion, while, on the other hand, our holdings of British Government Treasury bills show a substantial decrease—I hope it will not be long before we are relieved of the necessity of using that method of employing our funds. All losses made or ascertained during the year have been fully provided for out of current profits, and the margin between the market value of our gold securities and the prices at which they stand in our books has materially increased in the same period."

SOUTH AMERICAN BANKS.

	Capital and Reserves.		Deposits.		Cash.		Investments.		Discounts and Advances.

In South America, British banking interests are well represented by the Anglo-South American Bank. Unfortunately, owing to depressed industrial conditions in the lower portion of the Western Hemisphere, profits have been on a declining scale for the last three years. Thus profits, which in the boom year 1920 amounted to £1,024,156, fell to £743,175 in 1921, £644,138 in 1922, while for the year ended June 30, 1923, a profit of £436,256 is recorded. The Banco-Espanol del Rio de la Plata, in its report, observes that important firms who make use of its credit facilities are only prepared

to pay a low rate of interest, but proportionate reduction in interest on deposits has not been taken.

Throughout Brazil the number of National and foreign banks, including head offices and branches, exceeds 170, of which approximately 40 are British establishments. In the Federal capital there are more than 40 different banks, and here it is observed that the general movement is fairly evenly divided between the National and foreign institutions. It will be noticed that discounts and advances of the London and Brazilian are higher, while deposits have fallen.

AMERICAN BANKING.

(BY OUR NEW YORK CORRESPONDENT.)

ONE of the outstanding features in the banking situation in the United States is that the volume of loans is much greater than it was at this time a year ago. Owing to rapidly increasing requirements of trade and industry, banks in the Federal Reserve system have been called upon to provide a large amount of additional credit, and, according to the Federal Reserve Board, the volume of member bank credit now in use has reached a new high record for this season of the year. Loans made by such institutions, mainly for industrial and commercial purposes, show an increase of approximately \$1,000,000,000. They have met the demand for credit through the addition of some \$440,000,000 to their time deposits, through an increase of a like amount in accommodation at reserve banks and through the use of imported gold. As indicated, most of the increase in loans for the year has occurred in industrial and large business centres throughout the country, but during the past month or two there has been a marked expansion in demand for credit at banks located in agricultural sections. The latter are in an exceptionally strong position, and are providing credit for crop-moving purposes by using funds secured from

liquidation of loans made earlier in the year during the growing season, by obtaining larger accommodation at the Federal Reserve Banks in the central reserve cities, and by recalling balances from their correspondents in financial centres.

Total reserves of the Federal Reserve system, as of October 3, 1923, amounted to \$3,187,990,000, or about \$25,000,000 less than at the corresponding date a year ago. Gold reserves aggregated \$3,115,830,000, representing an increase of \$26,550,000. Holdings of discounted bills of all kinds totalled \$1,054,563,000, or \$384,909,000 more than at this time in 1922. United States securities held showed a decrease of \$388,200,000, while the total bonds and notes were less by \$163,400,000, and there was a decrease of \$224,800,000 in holdings of United States Treasury certificates of indebtedness. Total deposits on October 3rd were \$1,936,237,000, an increase of \$58,500,000 approximately, while Federal Reserve notes in actual circulation aggregated \$2,272,308,000, a decrease of some \$2,300,000. From January to the middle of September of this year there was an increase of \$260,000,000 in reserve bank discounts, of which about 75 per cent. represented increased borrowings from reserve banks serving cotton and wheat districts.

Throughout the year there has been a steady increase in the demand for currency, and in recent months largely for crop-moving purposes; that demand, however, has been met chiefly by forms of currency other than Federal Reserve notes. The following table shows the amounts and various kinds of money in circulation on September 1st, as compared with September 1, 1922:—

	September 1, 1922.	September 1, 1923.	Increase (+) or Decrease (—)
Gold and guaranteed certificates	\$ 610,375,435	\$ 838,496,751	+ 228,121,316
Silver & silver certificates	564,954,874	683,446,364	+ 118,491,490
U.S. notes	285,000,737	304,576,800	+ 19,576,063
Federal Reserve notes	2,141,305,949	2,204,824,450	+ 63,518,501
Federal Reserve bank notes	60,158,812	17,612,842	— 42,545,970
National bank notes	731,711,120	728,949,604	— 2,761,516
Total	4,393,506,927	4,777,906,811	+ 384,399,884

Of the total increase in circulation indicated above, \$228,000,000, or about 60 per cent., according to the Federal Reserve Board, was in gold or gold certificates, which corresponds approximately with the net gold added to the reserves of the reserve banks, but which has gone into circulation to meet the currency demand. The large increase in silver certificates and United States notes, it is explained, is accounted for in part by the retirement of Federal Reserve Bank notes, and in larger part by the demand for currency of low denominations. The growth of Federal Reserve notes, it is pointed out, has constituted only about 17 per cent. of the total increase of money in circulation.

The combined Federal Reserve ratio of total reserves

to note and deposit liabilities now stands at 75.8 per cent., which compares with 77.4 at this time in 1922, and is only 2.1 points below the high record for the current year. The following table gives the ratios of each of the twelve Federal Reserve Banks in the central reserve cities on October 3, 1923, and October 4, 1922:—

	October 4, 1922.	October 3, 1923.
Boston	79.5	82.1
New York	80.2	82.8
Philadelphia	76.5	79.4
Cleveland	72.7	80.7
Richmond	75.3	53.7
Atlanta	78.9	53.3
Chicago	86.3	80.5
St. Louis	67.1	49.9
Minneapolis	68.9	67.5
Kansas City	64.4	60.2
Dallas	68.2	56.6
San Francisco	68.7	74.0
Total	77.4	75.8

The money situation is entirely comfortable, with no indications of stringency in any section of the country, and the outlook seems to be that rates will continue steady, though probably firm, during the remainder of this year. Call money on the Stock Exchange holds around 5 per cent., which has been the working average for a number of months. Time funds are readily obtainable at 5½ per cent. for 30 days and at 5½ per cent. for 60 and 90 days, on both mixed and all industrial collateral, most of the time loans at present being for 90 days. As for some time past, commercial paper discounts rule at 5½ per cent. for prime names and at 5½ per cent. for others, with the bulk of transactions during recent weeks at 5½ per cent.

GERMAN BANKING.

(BY OUR BERLIN CORRESPONDENT.)

CONGESTION, decline in efficiency, and ever-increasing difficulty in fulfilling its real functions, have characterised German banking in the past half-year. On the one hand the great banks, which formerly competed for and were able to turn to profit the small accounts of the non-commercial public, increasingly confine their business to commercial and industrial accounts, profit merely from these, and, even within this limited sphere, find difficulty in coping with business; on the other hand, a multitude of small banks has sprung up, attracting not only clients rejected by the big banks, but also sometimes business men who are repelled by the slow procedure of the big banks. These small banks largely flourish out of exchange business, and owing to the fact that the average citizen avoids keeping a large mark credit balance, and preserves the substance of his cash by putting it into dollars and pounds, which he changes from day to day, exchange business has largely supplanted mark deposit business. The congestion of the big banks is mainly technical, being due to the enormous volume of work created by quick mark turnovers and by swollen nominal values. The mere physical handling of the Reichsbank notes, the biggest of which to-day is worth only a shilling, has become a problem. Further, the claims of the State for assistance in taxation and exchange-control matters continue to increase. In the last year over 150 decrees or circulars appeared explaining and elaborating laws or decrees in matters concerning banking. Against the big banks many clients are in revolt. These banks charge very high rates of interest, allow low rates or none at all, make high charges for all services, sometimes in gold marks, and take two or three times longer than they took a year ago to clear cheques. Commercial and industrial associations denounce these practices as bank tyranny. The banks justify the high rates which they charge for credit by pointing out that owing to the currency depreciation the borrowers have of late enormously gained, while the new or increased fees and commissions are defended on the ground that only the very biggest accounts now pay for themselves.

The replacement of the paper mark by the proposed stable value "new mark" will, if the plan succeeds, radically change banking conditions, and will

probably lead to the disappearance of many of the new small banks. The demand for a stable unit of value has meantime led to the formation of numerous gold mark, rye, and "wertbeständig" banks. A beginning was made by the savings banks on May 1st, when they adopted a fictitious gold mark for measuring the value of paper mark deposits and withdrawals. This system has since been authorised and regulated by law, and has been adopted by the Reichsbank for part of its business, in that paper marks advances are now made only upon a gold basis. In Hamburg a gold bank, the "Deutsche Standard Bank," has been formed, mainly for foreign trade and credit purposes; and in Stuttgart a "Süddeutsche Festwert (Stable-Value) Bank" has been founded. Altogether, about 15 banks of dimensions worth mentioning have been founded, or announced, for conduct of gold mark or "stable value" business.

The annual balance-sheets and profit and loss accounts, published in July, for the calendar year 1922 show business in that year to have been entirely under the influence of the mark collapse, which took place mainly in the second six months. All totals of profits are enormously swollen, but if the decline in mark exchange—from 184 to 7.350 marks to the dollar—during the year is taken into account, profits and dividends declined. The following table is for eight large, including the four "D" banks:—

(In Millions of Marks.)

	Gross Profits.		Net Profits.		Dividends.	
	1921.	1922.	1921.	1922.	1921.	1922.
Deutsche	1,159	23,679	278	5,949	24	300
Disconto	672	13,115	220	4,782	20	250
Darmstadt and National	577	14,037	89	2,951	14	200
Dresdner	265	77	77	16	16	200
Commerz und Priv. ..	831	18,223	203	2,621	16	150
Mitteldeutsche	452	8,461	98	1,448	16	150
Berl. Handelsg.	150	2,733	33	739	12	150
	151	2,652	61	677	16	200

The cause of the rejection of small accounts by the leading banks is shown by the relative increase in cost of administration and taxes. Of six of the above banks (Handelsgesellschaft omitted), 75.7 of gross profits

were absorbed by the above two items, as against 72.5 per cent. in 1921 and 68.2 per cent. in 1920. Bank capitalisations mostly also last year underwent considerable increases and reserves large increases, but, as with all other figures, the increases did not keep pace with the currency depreciation. The position at the beginning of 1923, including reserves added from profits in 1922, was (in millions of marks):—

	Capital.	Reserves.
Deutsche	800	5,250
Disconto	900	2,627.95
Darmstädter und Nat'l. ..	600	2,000
Dresdner	550	420.5
Com. und Privat.	800	3,200
Mitteldeutsche	170	530
Berliner Handelsges.	110	490

Capital and reserves have continued to fall in their proportion to the public monies held by the banks. At the close of 1922 the six largest institutions (Handelsges. omitted) held 1,595,626 millions marks of public money against 111,275 millions at the end of 1921, 60,214 millions 1920, and 38,179 millions 1919. Liabilities at the close of 1922 of all seven banks were 27,807 per cent. of capital and reserves. Of liabilities, 72.4 per cent. were booked as "fluid in the first degree, against 63.5 a year before, while 77.1 per cent., against 72.7 per cent., were reported as "fluid in the first or second degree." In all the reports a desire appears to create reserves, sometimes concealed, as a precaution against the uncertain future. This, apart from the very large increases in the regular reserves, is attained by writing off entirely or under-valuing assets with considerable real values. The Darmstädter und National Bank actually writes off at 1 mark its investments, its participation in other enterprises and premises; and the valuable buildings of the Disconto Gesellschaft appear at 69,859,500 paper marks, and those of the Dresdner at 55,000,000 marks.

The private note banks, having been deprived of the right of disposing of their own gold, again in September this year were empowered to increase their note issues tenfold. The Bavarian and Saxon note banks have each now the right to issue 13½ billion marks against, in 1918, 110 millions for the former and no limit on the condition of legal cover for the latter; while the Württemberg and Baden note banks have each power to issue 4,725 milliards, against 50 and 54 millions respectively in 1918. The State Bank re-

cently founded in Thüringia in connection with the fusion of the small Thüringian States has formed a semi-fusion with the Sächsische State Bank, directors being exchanged, with the aim of concentrating money business in Central Germany. The Sächsische Bank reports net profits for 1922 of 5,856,983 marks, and announces an 8 per cent. dividend; the Norddeutsche Bank of Hamburg, which is a daughter company of the Disconto Gesellschaft, 360,000,000 marks net profits, against 19,400,000 marks in 1921, dividend 200 per cent., against 20 per cent.; the Allgemeine Deutsche Credit-Anstalt net profits 1,449,943,000 marks, against 57,105,000 marks, dividend 200 per cent., against 15 per cent.

The influence of big business on the banks is steadily increasing, thereby reversing a process observed ever since 1870. Ultimately this is due to the fact that the banks represent almost wholly paper mark values, their capital and profits falling to almost nothing in gold value compared with the vast real resources of industry, while the biggest paper mark credits which the banks can give are almost insignificant for the purposes of business. In the two decades before the war the big banks largely fostered industry, in part created it, and were strong enough to control syndicates and cartels, and even to create and dissolve them. Industry has, however, of late grown independent and later dominating. The smallness of the banks' resources, and the inter-relations between the heavy industry and the shipbuilding and manufacturing branches, tend to make the industrial magnates independent of the banks, and the process of the past decades is now being reversed in the shape of industrial influence on, if not actual ownership of, the banks. The first important sign of this was an agreement last summer between Herr Stinnes and Herr Carl Fürstenberg, of the Berlin Handelsgesellschaft Bank, which resulted in the election of two of Herr Stinnes' nominees to the control board. This deal Herr Stinnes achieved by buying up the bank's shares. In the last week, Herr Otto Wolff, of Cologne, who, as head of the Wolff-Phoenix-Rhenish Steel combine, and as owner of valuable concessions in Russia, may be considered a rival of Stinnes, has been buying up Disconto Bank shares, with the aim, it is reported, of removing the Schaaffhausensche Bank Verein from its semi-fusion with the Disconto Company, and converting it into a pure Wolff bank.

ITALIAN BANKING AND STATE INTERVENTION.

(BY OUR TURIN CORRESPONDENT.)

A LIVELY discussion has been going on in the Italian Press on the limits of State interference with banking. The facts are that when the Banca Italiana di Sconto got into trouble, the Government authorised the consortium for loans on industrial securities (*Consorzio sovvenzioni sui valori industriali*) to make loans on securities deposited by the Banca di Sconto for an egregious sum, which may be calculated roughly at a milliard lire. The consortium is a semi-public institution, which is almost entirely financed by the Banca d'Italia, and the other two minor banks of issue, Banco di Napoli and Banco di Sicilia. It can, therefore, be said that the ultimate losses of the liquidation of the Banca di Sconto would be suffered by the banks of issue. The shareholders of the Banca di Sconto would truly lose all their capital, and the depositors 38 per cent. of their deposits; but if the assets should not prove sufficient to pay the cost of liquidation, and the remaining 62 per cent. of the deposits, the loss was to fall on the consortium, i.e., on the banks of issue. But, as these were innocent third parties, the Government could not say to them: "You shall pay the bill." A decree of November 12, 1921, said instead that a special account should be opened, in which, against the losses of the liquidation of the Banca di Sconto, the banks of issue were to be authorised to put a third part of the so-called extraordinary tax on banks' issue from July 1, 1921, to December 31, 1923. That tax in Italy, as in pre-war Germany, fell on the excess of the note issues above a certain point. For the sake of discouraging such excesses, the banking law had put on

all excess a tax equal to the full amount of the rate of discount. The banks of issue in that way gained nothing from excessive issues; if they discounted commercial paper at the rate of 6 per cent., all the 6 per cent. was to be paid to the Exchequer. To put a third part of the extraordinary tax in a special fund was therefore tantamount to making the Exchequer pay the losses of the liquidation of the Banca di Sconto.

The third part was soon seen to be insufficient to cover the losses in full, and a Royal decree of January 2, 1923, increased the sacrifice of the exchequer as from January 1, 1922, to December 31, 1925, to three-quarters of the extraordinary tax. A subsequent Royal decree of September 28, 1923, prolonged the period, during which the three-quarters of the extraordinary tax are to be put in the "salvage fund," to December 31, 1930. As the banks of issue had their legal life—as banks of issue—restricted to December 31, 1923, it was necessary to give them a new lease of life, and their powers of issue were, for that reason, prolonged first to December 31, 1925, and then to December 31, 1930.

The liquidation of the Banca di Sconto should not have necessitated these huge sacrifices. Men in the street wondered what was the occasion for it. An extraordinary meeting of the shareholders of the Banco di Roma gave the clue; the Banco di Roma had been passing through troubled times, and, if its assets were said to be equal to liabilities, they were not liquid. The consortium of the banks of issue intervened with generous aid; the immobilised assets were put under a special administration, and the Banco di Roma received

the needed cash for facing the position and starting on and initiating a new lease of life. The losses, if any, of the liquidation of the reserved assets were put on the "salvage fund," created as explained above. What will be the liability of the fund, i.e., of the Public Exchequer? The legal maximum may be calculated thus:—The sum already put into the fund, as from July 1, 1921, to December, 1922, is officially stated to have been equal to 237,750,000 lire; for the subsequent years the sum may be calculated (at 230 millions a year for eight years) to reach 1,840,000,000 lire, making a total of 2,077,750,000 lire. The estimate is made on the supposition that the extraordinary issue is to remain up to December 31, 1930, at about the same level as in 1923-24, for which period an official document estimated the sum to be placed in the fund at 221,250,000 lire. To the above sum of 2,077,750,000 lire, some people are inclined to add various other items. But the present Government thinks that this is an extreme maximum; that the losses will fall short of the maximum; and will not ultimately exceed 1,000,000,000 lire. And it may very well be that, under the very strict and rigid administration of the present Finance Minister, Signor De Stefani, and of the director-general of the Bank of Italy, Signor Stringher, the losses will be kept at the lower limit.

Whether they jump up to 2,500 or remain at 1,000 millions lire, the Exchequer loss will be formidable enough, and the discussions going on in the Italian Press bear mostly on the question of principle. How is the salvage of private banks by the State and the taxpayer to be justified? Critics argue that insufficient ability of directors and general managers of private (joint-stock) banks is a private concern. Shareholders should have their eyes open when they elect a board of directors. Depositors, similarly, are taking their own risks when they prefer to put their savings or current accounts into this or that bank. The Public Exchequer was no party to transactions; the taxpayers are innocent in all these matters, and it is extremely perilous to

create a precedent, in virtue of which in future a bank when in troubled waters will come to the Government and claim to be saved at taxpayers' expense. The precedent is certainly full of danger, for if it becomes the position that when affairs go well the gain belongs to the bankers, but when they go badly the losses accrue to the taxpayer, there will be a plentiful crop of losses.

To the above critics replies are made on the following lines:—The bank losses are not due to bank directors. They originated in that troublous period when, before and after the armistice, banks followed in a truly patriotic spirit the hints given to them by the Government. They financed great armament firms, they advanced money to shipping companies and to exporters. When the reaction came, and the Government felt obliged to follow a Socialistic line, when in 1919 and 1920 socialism was rampant and secured 156 seats in the Parliament, the reward obtained by the courageous men who gave to the Army guns and shells, and secured to the people ships and transports, was an "excess profits tax" up to 100 per cent. and a court of inquiry. Many industrial firms were obliged to close, and from that moment the troubles of the banks began. If the Government—both the Government of Signor Bonomi and the present Government—intervened to save the banks, they did not act capriciously. They felt that they were saving the credit of the Italian nation. The loss will not wholly be laid on the Exchequer, for all the profits of the banks of issue above the present level of profit will be also put into the salvage fund. Moreover, the losses will be first cancelled by these excess profits of the issue bank, and only, as a second line of defence, by the three-fourths of the extraordinary tax. That being so, banks of issue in future times will certainly not encourage wanton speculation by private banks. They will know that they would be the first to pay the bill.

Perhaps the time for a final opinion has not yet arrived. The present controversy is truly going to the root of State duty and State rights in banking affairs.

BANCA COMMERCIALE ITALIANA

Head Office: MILAN.

Branches throughout ITALY and in LONDON, NEW YORK, CONSTANTINOPLE.

Affiliated and Associated Institutions:

Banque Française et Italienne pour l'Amérique du Sud, Paris, Buenos Aires, Rio, San Paulo, Santos, Pernambuco, Valparaiso, etc.

FINANCIAL STABILITY

THE banker holds a cash reserve which is sufficient to meet all demands likely to be made upon him, and which should also include a margin to provide for special contingencies. The financial stability of his bank will be judged, in part, by the proportion that the cash reserve bears to the amounts standing to the credit of the bank's customers.

Similarly, the reserves of a life assurance company afford a measure of its stability. Those reserves, besides providing for the claims normally to be expected, should include a safe margin to cover periods of unduly heavy mortality occasioned by epidemics, periods of unfavourable financial markets, and other special matters. A prospective policyholder should therefore satisfy himself that the company with which he proposes to insure has made adequate provision for such contingencies.

That the Prudential fulfils these conditions will not be doubted by any banker or other person having sound financial knowledge. The Prudential weathered the financial storm of the late war in a manner that would have been impossible but for its policy of holding very stringent reserves, and, furthermore, declared a bonus for its with-profit policies. That policy is still the same, and prospective policyholders cannot do better than place their trust in a company that has so deservedly established a reputation for financial stability and security.

PRUDENTIAL ASSURANCE COMPANY, LTD., HOLBORN BARS, LONDON

A WONDERFUL RECORD
OF THE

CANADA LIFE

ASSURANCE COMPANY

DURING 1922

UNPRECEDENTED INCREASES IN

NEW BUSINESS,

JOINT-STOCK BANKS OF ENGLAND AND WALES.

BANK OF ENGLAND.

At the half-yearly Court of the Bank of England, held on September 20th, the Right Honble. Montagu Collet Norman, the Governor, stated that the profits of the half-year ended August 31st, after making provision for all contingencies, had been £674,195, making the amount of the "rest" on that day £3,695,979, and that after providing for a dividend of 6 per cent., less income-tax, the "rest" would be £3,019,265.

HIBERNIAN BANK, LIMITED.

The report submitted to the meeting held on July 30th states that, after providing for rebate on bills, interest on deposits, and bad and doubtful debts and contingencies, the net profits for the half-year amount to £55,748, to which has to be added balance of undivided profits from last account, £14,229—£69,977. The directors have transferred to the reserve fund the sum of £27,246, and they recommend that the balance be applied as follows, viz., in payment of a dividend for the half-year at the rate of 10 per cent. per annum (subject to deduction of income-tax) £25,000; in reduction of bank premises account, £5,000; to next account, £12,731—£69,977.

			47,475,867

The report presented to the meeting held on July 26th states that the profit and loss account for the half-year ended June 30, 1923, including £27,369 brought forward from December 31st last, shows a balance of £208,437 available for distribution. The board decided, owing to the amount of income-tax for which the bank is liable not being as yet ascertained, to pay a dividend free of income-tax, and accordingly declared a dividend at the rate of 10 per cent. per annum, or 10s per share (£10 paid), payable free of income-tax, as against the rate of 12 per cent. per annum paid less income-tax—i.e., 9s per share—for the previous half-year. (N.B.—This is equivalent to an increase of over 1 per cent. per annum on the dividend last declared.) The dividend absorbs £75,000, leaving a balance of £133,437 to be dealt with. Of this sum the directors transferred

£70,000 to income-tax and contingencies account, £15,000 to the reserve fund, and £20,000 in reduction of bank premises account. £28,437 was carried forward to profit and loss new account. They further transferred £75,000 from a fund established to meet depreciation in the bank's investments, and which is now no longer required, to the reserve fund, the total of which fund will now amount to £1,125,000.

NORTHERN BANKING COMPANY, LIMITED.

The report to be submitted to the meeting to be held on October 25th is as follows:—The net profits for the year, after making full provision for all bad and doubtful debts, rebate on bills discounted, and interest due on deposits, amount to £153,279; less bonus to bank's officers, £19,844—£133,435; which, with the balance brought from last year, £50,043, and a special profit on realisation of Government securities of £100,958, makes a total for disposal of £284,436. Dividends at the rate of 17½ per cent. on the "A" shares and 8½ per cent. on the "B" shares, have been paid to the shareholders, amounting in all to £91,875, less income-tax, £22,028. £14,342 has been applied in reduction of bank buildings account, £50,000 has been transferred to reserve, and £100,000 to contingency account, leaving balance of £50,247 undivided profits to be carried to next account.

PROVINCIAL BANK OF IRELAND, LIMITED.
The report presented to the meeting held on July 25th states that, including £42,291 brought forward from last account, there remains a profit for the half-year ending June 30, 1923, of £101,788. Out of this the directors have declared a dividend for the half-year at the rate of 10½ per cent. per annum, free of income-tax, which will require £28,350; they have added to reserve fund, £10,000; written off bank premises account, £7,500; placed to contingency account, £15,000; and carried forward, £40,938—£101,788. The dividend now declared of 10½ per cent., free of tax, yields 13s 1½d on the £100 shares (£12 10s paid), and 10s 6d on the £20 shares (£10 paid), as against the net return of 12s 10½d and 10s 4d respectively paid last half-year.

BALANCE-SHEET—June 30, 1923.

Australian Mutual Provident Society (A.M.P.)

Established 1849.

SEVENTY-FOURTH ANNUAL REPORT.

Remarkable Figures.—Ordinary Department.

NET NEW BUSINESS.—25,106 Policies Assuring £10,767,776, with Annual Premiums of £336,580.
DEATH CLAIMS.—£1,414,833, including Bonus Additions of £461,914. This is only 53 per cent. of the "Expected."
MATURITY CLAIMS.—£1,152,395, including Bonus Additions of £315,475.
ACCUMULATED FUNDS (including Industrial) have increased by £2,736,997 and amount to £49,448,175.
WAR AND REPATRIATION LOAN SUBSCRIPTIONS total over £14,160,000.
THE DIVISIBLE SURPLUS (after strengthening the Reserves by the application of £175,000) is £1,756,738, which represents a return of 47·3 per cent. of the premiums received under participating policies. The corresponding Reversionary Additions amount to about £3,000,000.
THE VALUATION (on a Pure Premium Basis) has been made at 3 per cent.
THE EFFECTIVE RATE OF INTEREST (after deducting Income Tax) was £5 7s. 3d. per cent. There is therefore an Interest Margin of more than 2½ per cent.
THE EXPENSE RATE (excluding Taxes) was 12·95 per cent. of the Premium Income. This is only about two-thirds of the provision for expenses included in the Premiums.
THE TOTAL ASSURANCES issued in 74 years amount to £227,702,775, of which £122,607,257, or 53·8 per cent., are still in force.

BANCO ESPANOL DEL RIO DE LA PLATA.

The report of the directors for the year ended June 30th states that the net profits realised amount to £692,552, which, after deduction of £285,100 distributed and allocated in January last, leaves a balance of £407,452, which the directors propose to apply as follows:—Allowance for bad and doubtful debts, £87,301; allowance for furniture and fittings, £13,095; and of the balance 91 per cent. to the shareholders: 955,853 shares fully paid at December 31, 1922, at \$3.00 per share, 128 shares fully paid on March 31, 1923, at \$2.70 per share, 44,019 shares 80 per cent. paid at \$2.40 per share, £259,596; 2 per cent. to the directors and auditors, £5,705; 2½ per cent. to the staff pension and benevolent fund, £7,845; ¼ per cent. to contributions to charity, £713; 4 per cent. undistributed profits account, £11,411—£385,666. The above distribution, added to the 3 per cent. paid in January last, will make a total distribution of 6 per cent. for the year.

exchange.

BANK OF ROUMANIA, LIMITED.

The report for the year 1922, presented to the meeting held on July 18th states that after making provision for bad and doubtful debts, income-tax, corporation tax, &c., placing £2,000 to pension fund, and providing for exchange depreciation in the bank's funds employed in Roumania, the amount available is £16,437. The directors recom- mend a dividend of 6s per share (less tax), absorbing £11,062, and carrying the balance of £5,375 to credit of the contingency account.

WATCH NEW SOUTH WALES GROW!

AUSTRALIA'S AMBITION is to MANUFACTURE and export as a FINISHED ARTICLE as much as possible of her WONDERFUL PRIMARY PRODUCE; the Governments of the Commonwealth and of New South Wales are anxious to assist, and public opinion sustains the adoption of a policy by which this ambition may be achieved.

MANUFACTURERS catering for the Australian Market are invited to study the OPPORTUNITIES OF ESTABLISHING BRANCH FACTORIES IN NEW SOUTH WALES, thereby coming INSIDE THE TARIFF and SAVING Freight and Handling charges.

NEW SOUTH WALES PRODUCES THE RAW MATERIAL, and MEN OF FORESIGHT, BUSINESS ABILITY and CAPITAL are required to assist in its DEVELOPMENT.

TURN TO THE NEW WORLD FOR OPPORTUNITY!

The report presented to the meeting held on July 25th states that in the preparation of the balance-sheet, assets and liabilities in foreign currency have been converted into sterling at the rates ruling at December 31, 1922. The

accounts made up to December 31, 1922, after providing for bad and doubtful debts out of revenue and provisions previously made, show an amount available of £194,693, including the sum of £18,553 brought forward from the previous year. In view of the present situation, the committee recommended that this amount of £194,693 be carried forward to the current year.

THE CHATWOOD SECURITY

"Achievement is but another milestone along the highway of progress—the end of the journey lies ever beyond."—THE CHATWOOD TRADITION.

It is with pride that we illustrate the new The Chatwood Strong Room Door, which was the first of its type to be manufactured and installed in this country. It is for the Treasury of the new Head Office of one of the leading Bankers in London.

It weighs 21 tons, is 20in. thick, and the entrance is exactly 100in. in diameter. It has 24 bolts of the finest steel 3½in. thick, which are operated by a series of connecting-rods receiving their motion from a centre wrist-plate.

It is fitted with a four-movement time lock, which makes it possible for the Door to be locked so that it cannot be opened by any person whatsoever until a pre-arranged time

has expired, and has, in addition, two letter-locks, which can be set at more than two million different combinations.

The design provides for an arrangement that if the Door is opened during the night or during any unauthorised period a street electric alarm is set in motion, as well as an alarm at the nearest police station.

A record is made when the Door is opened during banking hours, the length of time it remains open, and the exact moment when it is shut.

The Chatwood security is the result of 70 years' unremitting endeavour to attain perfection in its own field—and stands to-day as the nearest approach to that intention.

THE CHATWOOD STRONG ROOM

Since 1858

THE NEW CHATWOOD SAFE BOOK

The guiding factor in the preparation of this book has been a desire to convey something of the standard of quality of work and high ideals of the firm in the hope that their worth may be gauged in some measure by their aims as well as their achievements. It contains 58 pages, many in full colour, and includes the fullest particulars of each model of The Chatwood Safe and Strong Room. A complimentary copy will be sent gratis on receipt of a postcard.

THIRD IMPRESSION WITH ADDITIONAL CHAPTER AND STATISTICS.

AN INTRODUCTION TO THE STUDY OF PRICES

with special reference to the History of the Nineteenth Century.

By WALTER T. LAYTON, M.A. 7s. 6d. net.

The Economic Journal:—"The high qualities he possesses and exhibits will, we are sure, recommend his 'Introduction' to all who would make at once the easiest and the safest approach available to the fascinating but complicated 'study of prices.' That is, perhaps, the most crucial of present popular economic questions, and it must always occupy a prominent place in the scientific discussions of professional economists."

The Westminster Gazette:—"Mr. Layton, who is one of the ablest of the younger Cambridge economists, has refrained deliberately from a long exposition of the theory of the relation between price levels and the quantity of circulating currency. He has adopted that historical method which appeals to the instinctive empiricism of the practical man. His tracing of the price fluctuations of the past ninety years in England, and his analysis of their causes and results are admirably lucid. And if the book secures the wide circulation which its merits deserve, it should do much to draw public attention to the vital importance of a neglected question."

The Economic Review:—"His excellent and clear little book ought to be in the hands of every student of social conditions."

The Practical Engineer:—"This book should be valuable to the student of monetary values and prices, especially of the nineteenth century."

(Continued from page 610.)

statement. I am sorry it gives you that impression. It is true it is intended to redress the balance as to the emphasis placed on various angles of the problem, but most of all it is intended as a constructive suggestion for an agreement which will benefit all parties and create the atmosphere for bringing the United States into the settlement.—Your obedient servant,
October 17th, 1923.

ALPHA.

THE TRANSFER OF MONEY WITHIN THE EMPIRE

TO THE EDITOR OF THE ECONOMIST.

SIR,—The Imperial Conferences have shown that Australia and New Zealand keenly desire improved and extended trade with the United Kingdom, and the attitude of the British Government shows the latter to be more than anxious to assist by every way politically possible the development of Dominion trade and the solution of Empire trade problems. Of these, one of the most important is the question of the present cost and condition of the London-Australasian exchanges.

It is an axiom that a country pays for its imports by its exports; invisible imports or exports, such as loans raised on the one hand, and interest on same on the other, and services, requiring also to be taken into account. But imports and exports do not necessarily take place at the same time, and before 1914, gold, and the facility of its shipment from one country to another, maintained the equilibrium. Hence the value of the Australasian £ and the £ in London could vary only by the cost of shipping the gold. That basis is gone, and it may be assumed that the Dominions cannot at present return to a gold standard. To do so, moreover, and before the United Kingdom does so, would prevent the parity of exchange being maintained.

Compare the position of Australia in 1922 with 1914:—

	Banks' Deposit Liabilities.	Reserves Held by Banks.		Percentage of Reserve to Liabilities.	
		Notes.	Gold.	Notes.	Gold.
1914..	159,209,287	5,036,516	36,410,000	3.1	22.9
1922..	246,575,000	30,049,000	22,070,000	12.2	8.9

Since 1914, therefore, bank deposit reserves have been created on a paper basis. It is presumed that the Commonwealth Government holds the balance of the gold against its note issue.

Notes cost no more than the cost of the paper and printing, but the banks thus got the needful legal tender, borrowers obtained advances, prices advanced, and wages increased as at home. The largely increased purchasing power of the Australian public led to largely increased imports, culminating in the extraordinary position towards the end of 1920 and beginning of 1921, when the Associated Banks ran so short of money in London that they could not finance all the imports purchased under their own letters of credit, whilst the premium on money in London rose to £5 and £6 per cent.

The violent post-war oscillations in Australasian trade have resulted in the accumulation of large balances, either in London or in the Dominions alternately, without any apparent ability on the part of the banks to move them freely in either direction. These lamentable—one might also term them—"breakdowns," are, according to the statements made at the banks' annual meetings, due entirely to the war having destroyed old arrangements, and consequently to the absence of any free movement in gold. On the other hand, it has been suggested that these post-war evils are due to the monopoly which the ring of Australasian banks has established, which enables them to make their own tariff in normal times, which in times of difficulty accentuates the result of violent trade oscillations to the profit of the banks as shown in 1920-21.

Assuming that the late and present difficulties are caused entirely by the admitted inability to ship gold, are the banks not morally bound in the interests of Empire trade and its prospective development to suggest an alternative—a remedy? One, at any rate, is down on the agenda of the Economic Conference now sitting: the scheme of Empire currency bills of which a prominent London banker, Mr J. F. Darling, is the protagonist. Starting apparently with the idea of an enlargement of the British Treasury bill, the present scheme, so fully and lucidly explained this week in the Press, represents the culmination of Mr Darling's idea for the establishment of a financial co-partnership between the great Dominions and Great Britain.

London is, and will remain, the financial centre of the Empire, and its clearing house. But both Australia and New Zealand can borrow to-day in the London market on fairly long-dated securities at approximately the same rate as Great Britain, viz., at or about 5 per cent. per annum. It should, however, be noted that last week the Victorian Treasurer stated that, "The rates of exchange between Australia and London were so high that, beyond borrowing to meet London obligations, English money was too costly to use for construction in Victoria." On British Treasury bills for three months, Great Britain borrows at present at (say) 3 per cent. per annum, and during the past year the average rate has been less. The Dominions have no bill market and Empire currency bills (for three months also) would seem to hold out a great financial advantage to Australia and New Zealand. Certainly, they would provide the remedy which the Australasian banks seem to require (as well as an interest-bearing secondary basis for credit), and it is to be sincerely hoped that the Economic Conference will fully explore the possibility of their adoption.

In the event of the Economic Conference finding itself unable to adopt, or obtain the adoption of, the Empire currency bill scheme, the position will, I suggest, require the gravest consideration. In a very able article in the *Economist* of August 5, 1922, it was stated, when referring to the 1921 difficulties, "the Australasian banks.....did, in fact, refuse to remit money to this country; and had the balance of trade not turned once more in favour of Australia, they must have either raised their rates for London money or continued to this day refusing to remit."

As previously stated, the rate for Australian money in London, where available at all, rose to £5 per cent. and £6 per cent.

It is a very notable fact that in Melbourne, Sydney, Adelaide, &c., almost alone amongst the great cities of the world, there is no open market for bills of exchange on London. There must be some reason for this. The explanation which the English inquirer always receives from Australian merchants is that the Australian banks strongly discountenance the purchase and sales of bills of exchange, except through their own officers. Outside transactions of a kind which, in other markets, are perfectly normal, and regarded as absolutely necessary, seem to be regarded in Australia as piratical, and if they occur the offender suffers for it. I am not able to say whether this is a true account or not, but the indisputable fact is that the Australian banks have secured for themselves a monopoly of exchange business, that the system has of late worked exceedingly badly, and that many merchants think that if free trade in bills of exchange were made effective, the present breakdown would very soon disappear.

Under present conditions, it would appear that there are no limits—other than limits imposed at their discretion by the combine of the Associated Banks—to the rates which Australasian importers may have to pay for remitting money to London, or which exporters may have deducted from the value of their produce when remitted from London to Australia and New Zealand—except one. That one is the competition of City firms in London and small exchange brokers in the Dominions who do banking business in telegraphic transfers.

In spite of the hope expressed in the same issue of the *Economist* referred to, that "they" (the Australasian banks) "will in future move their exchange rates freely and openly as economic conditions indicate," the banks' T.T. rate of 25s per cent. outwards, and 5s per cent. from the Dominions home has remained untouched from November, 1922 to the present.

But such business as the City merchants have been able to do has been done at much lower than the banks' rate. For part, at least, of 1923, the merchants' rate was 12s 6d per cent. to Australia and 5s and 7s 6d to New Zealand. To-day, as against the banks' "official" T.T. rate of 5s per cent. as a charge on money home from Australia and New Zealand, these merchants are offering a premium of 15s per cent. in New Zealand and over 20s in Australia.

The New Zealand Government, at least, must be aware of the position, as Mr Massey is reported as stating in the New Zealand House of Representatives on July 27th this year that he had been successful in obtaining a premium of 10s per cent. on the remittance home of £500,000—a profit of £2,500 instead of an "official" charge of £1,250.

If the facts are, as I believe them to be, correctly stated in this reply, how is this state of affairs to be remedied? The Empire currency bills scheme would certainly seem to provide the proper remedy both for normal times and times of difficulty.

Failing its adoption, there would appear to be but one alternative; it may be "half a loaf," but present conditions are inexcusable, and a handicap to trade. That alternative is:—

(a) Let the Commonwealth Government definitely arrange that the Commonwealth Bank of Australia shall fulfil its proper and original function, and allow perfect freedom for exchange operations in any part of Australia to any customer who likes to open an account with it.

(b) Let the New Zealand Government—regardless of its holding in the Bank of New Zealand, insist on the Bank of New Zealand allowing perfect freedom likewise throughout New Zealand.

(c) Let both, through these banks in London, give proper facilities for the purchase and sale of Australasian exchange in London.

However it is to be achieved, it is important that proper financial arrangements should be made to facilitate not only present Empire trade, but that increase of trade which Mr Bruce and Mr Massey are here to seek and to promote.—Yours, &c.,

J. A. COOPER (Deputy-Chairman, B.A.W.R.A.).
October 18th, 1923, London, E.C.

TO THE EDITOR OF THE ECONOMIST.

SIR,—From the primary producers' point of view the most interesting question to be discussed at the forthcoming Imperial Economic Conference will be how to reduce the cost of transferring money from London to the Union.

Since we were forced to abandon the gold standard the exchange has been against exporters, at various times assuming serious proportions, and with our export trade steadily increasing it will be for some years a source of worry and expense to the mining and agricultural industries.

Three years ago I urged the Select Committee of the House of Assembly to adopt the Egyptian system and secure the stability of the exchange by utilising Imperial Treasury Bills in lieu of gold.

The proposal was rejected mainly on the ground that the outlook for sterling was too uncertain, and also that it might lead to increased cost of living.

The latter argument was largely based on quotations from the *Economist*, which at one time ascribed the rise in the price of cotton and the increased cost of living in Egypt to its new method of financing the export trade.

The Egyptian Government and banks, on the other hand, were confident that the advance in prices was not caused by the change, and I see from the latest tables published by the League of Nations that the cost of living in Egypt is considerably less than in Britain or America.

It may be that the *Economist* of to-day holds different views from the *Economist* of 1914.

The primary producers of Egypt have benefited from the stabilisation of the exchange, and the low cost of realising their products in the world's markets, and I believe the satisfactory financial position of Egypt is largely due to the revenue which she derives from holding Treasury Bills and bonds in lieu of gold.

I cannot see what Egypt would gain if London went on a free market in gold to-morrow, by reverting to the old cumbersome and expensive method of settling her differences by shipping gold backwards and forwards from London to Alexandria.

Is there any reason why Egypt should not continue indefinitely the present satisfactory method of financing her export trade? It seems to me that the position of the Union and Australia is on all fours with Egypt: in each case international transactions are settled in London, and there is therefore no need for them to hold gold reserves.

A big proportion of our business is done by cable transfer, and Treasury Bills are a great help in carrying out such transactions. On the other hand, settling differences by gold shipments means heavy charges in the shape of interest, insurance, and freight. These in themselves are sufficient to make the spread between the gold points of serious importance.

By the proposed method the cost of trading within the Empire is reduced; in practice works smoothly, is not revolutionary, but merely an extension of modern banking methods, can be put in operation without delay, and has not the political objections which are obvious in Mr Darling's empire currency proposals. No Government, for instance, will readily forgo its sovereign right to inflate.

If the revenue derived from the Treasury Bills and bonds were devoted to making our revenue and expenditure balance, it would favourably affect South Africa's credit, just as the utilisation of revenue from a similar source enhanced the credit of India.

I think the *Economist's* views on the above method of financing the export trade of the Dominions, particularly as regards South Africa, would be much appreciated by its primary producers.—Yours faithfully,

D. C. GREIG.

AUSTRALIAN WHEAT PRODUCTION AND BRITISH IMPORTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—You have shown that the annual wheat imports of the United Kingdom from sources within the Empire, which for the pre-war years 1904-1914 averaged 47,800,000 cwts, fell during the war period 1915-1918 to 35,900,000 cwts, showing a decrease in the average import of about 25 per cent., at a time when we were most in need of overseas supplies. But it was no new experience for us to have to depend upon supplies of wheat from foreign countries in times of emergency. Lord Macaulay, in February, 1842, being then a member of the House of Commons, in supporting Mr Villiers' motion for the repeal of the Corn Laws, said, "As to war interrupting our supplies, a striking instance of the fallacy of that assumption was furnished in 1810, when all Europe was against us. In that year there were 1,600,000 quarters of corn imported, *one-half of which came from France itself.*"

Moreover, Australia is so subject to severe droughts, that she has on several occasions within the last generation been unable to send any supplies of wheat to Great Britain. Her average export to us during the period 1909 to 1913 was 12,400,000 cwts, which fell during the years 1914 to 1918 to 6,600,000 cwts. India is also unreliable from climatic causes, and even Canada, though to a much less extent, has occasionally very disappointing harvests. If we wish to remain secure from the fear of famine, we must still encourage wheat-growers all over the world to supply our open market.—Your obedient servant,

H. JAMES ROBINSON.

Isleworth, October 15th, 1923.

BARCLAYS BANK LIMITED.

STOCK EXCHANGE NEWS. SETTLING DAYS.

TICKET. October 30.	ACCOUNT. October 31.
------------------------	-------------------------

The outstanding feature of the week is the coolness of the public reception accorded to the Nigeria 4 per cent. issue at 88, the public subscribing only 8 per cent., and the underwriters being left with the balance of the stock. This came as an unexpected climax to the recent very successful offerings of stock from other colonies and big borrowers. The price went back to 1¼ discount. Other gilt-edged stocks were not greatly affected by this. It is known, however, that several other substantial lines of stock are coming to market in the course of the next week or so, and the Union of South Africa is again here. The *Daily Mail* issue of £8,000,000 7 per cent. debentures at 99 aroused lively interest, and there was an eager demand for underwriting; the commission is 1½ per cent.

The Government's proposals for expenditure in connection with unemployment relief led to a somewhat dull tone in the gilt-edged stocks, already disposed to ease off a little from the recent best in consequence of the expected emission of a big India Government loan. Prices are well maintained, however, in view of the high levels which they have reached. A number of corporation and county stocks are better on the week.

The latest developments in the Ruhr district are disturbing the foreign market, though without affecting prices to any

noticeable extent. French bonds are as volatile as ever. Several Argentine loans advanced by reason of the welcome recovery in the Buenos Aires exchange. Japanese bonds have further rallied. Turkish Unified went back because of the delay that has arisen in connection with the reported mission that is to discuss Turkish finance with European bondholders.

Undergrounds are the centre of attraction amongst Home Railway stocks, and several substantial advances occurred. Reorganisation of the capital of the Underground Railways Company of London is put forward as the mainspring of the buying which has lifted prices of the company's stocks. Great Westerns and North-Westerns, after a spurt, reacted to some extent. American bonds are better because of the rise in the value of the dollar. Argentine Railway stocks, after being heavy and inert, recovered on the advance in the exchange already mentioned in connection with Argentine Government bonds. Brazilians are steady.

Rubber shares, as a whole, are dull, the raw produce losing fractions of a penny day by day. Anglo-Dutch eased off on the dividend of 9 per cent. being below expectation. Rubber Trusts, however, are a bright exception, the shares spurring in response to the news that the company has sold some 3,400 acres of its Sumatra estates to the United Serdang Company. Oil shares went ahead on the contango account showing an increase in the bear position, and the better tone received assistance from American news to the effect that prices of various oils had risen in the States. About 25 different shares in the iron, coal, steel, engineering and roadmaking group gained small amounts, on publication of the Government's unemployment scheme, it being expected that part of the money will find its way into the industries connected with these undertakings. Vickers have been a feature of strength. Shipping shares are being quietly absorbed by people in the North, who maintain that the trade outlook is gradually clearing. The tea share market threw off its recent weakness, and various leading shares show material recoveries. Motor shares are quiet: the Dunlop report, accompanied possibly by that of the Committee of Inspection, is expected to be made public about the end of next month. The activity in hotel shares is not so apparent as it was last week, and textiles have fallen upon quiet days. Nor do tobacco shares show the resilience to which their supporters have been accustomed for so long a time in this market. The electric lighting group is better on the whole, and gas stocks are firmer. Insurance shares are decidedly strong, the increase in the Royal Exchange interim dividend attracting renewed attention to this market. Amongst banking shares the changes are insignificant, though a few of the foreign shares are rallying after their recent heaviness. Nitrates have hesitated; the Salar del Carmen's interim dividend of 5 per cent. did not come up to optimistic hopes.

The Kafir market shows occasional sparks of life, and prices are mounting by degrees under the influence of a little support from the Cape, and also from home purchasers. The latter are buying shares to put away, more especially those upon which good dividends are likely to be declared. In Rhodesians a temporary rise to 14s bid in Chartered aroused mild attention, and Eileen Alannahs, with one or two of the other speculative counters, went ahead for a time on professional support. Huronian Belts were introduced to the Mining market without, however, attracting much public notice. Russians are a little better, and a number of the tin mining shares secured moderate gains in consequence of the price of the metal showing a hard tendency at a pound or two over £200 per ton. In copper, Rio Tintos continue dull on the recent dividend announcement.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

The Daily Mail Trust, Limited.—Share capital £2,500,000 in ordinary shares of £1 each, of which 2,000,000 are issued, with 2s paid up. The loan capital consists of £8,000,000 7 per cent. guaranteed mortgage debenture stock. This is an offer for sale of the debenture stock at £99 per cent. It is repayable at 107 (except in certain cases where it has been fixed at 110) by a cumulative sinking fund of 2 per cent. per annum, the first payment to be made in 1924 and the last in 1947. The company, however, reserves the right to redeem the stock on giving two months' notice. The Daily Mail Trust was established as recently as 1922, and owns 800,000 deferred shares in a newspaper company. We are told that the market value of those shares is £5,600,000. In addition to this, the Trust is about to purchase shares in another company for £6,000,000. Incidentally, we are informed that the Trust holds other newspaper and allied investments recently acquired for £200,000. This £8,000,000 of Daily Mail Trust debenture stock is secured (a) by a first charge on these, (b) by a guarantee of two newspaper companies—namely the Daily Mirror Newspapers, Limited, and Sunday Pictorial Newspapers (1920), Limited, and (c) upon the uncalled capital of the Daily Mail Trust. Profits are at present on a scale sufficiently generous to pay interest and other charges. It is fairly obvious, however, that if these publications did encounter a period of unpopularity that assets might not be so valuable. According to one statement, we learn that "the securities upon which the debenture stock is charged, together with the net assets of the guaranteeing companies," represent a value of £14,600,000. Instead of giving a general statement of this description, we would suggest that it would have been better from the investors' standpoint if these first mortgage debentures had been definitely secured upon the actual property and plant of the allied or subsidiary concerns, and if full details of the value of such property and plant were given. We have never been inclined to view favourably the "offer for sale" method of approaching the public, and this particular offer does not alter our view. This issue is the sequel to the recent big newspaper deal which excited considerable interest. In the ordinary way a newspaper debenture is not a very attractive security for a conservative investor, and though in this particular case the words "guaranteed" and "mortgage" appear, it would be unwise to overlook the fact that the rate of interest and terms arranged with the purchaser of the stock betoken a degree of risk. The value of the uncalled capital as security we would point out depends upon the financial status of the holders—and this is an unknown factor.

Rembau Jelei Rubber, Limited.—Share capital £400,000 in shares of £1 each. This is an issue of 350,000 shares, of which 231,000 will be allotted to the vendors and 125,000 are now offered at par. This company has been formed primarily to acquire eight rubber estates situated in Negri Sembilan, F.M.S. The properties cover a total area of about 7,648 acres, of which approximately 5,873 acres are planted with rubber. A planting expert values the estates at £539,468 on the basis of seven years' purchase with rubber at 15s 3d per lb and unrestricted outputs, after deducting all expenditure to be incurred during that period both on capital and revenue account. The purchase price is £300,000, of which £69,000 is payable in cash and the balance in shares. This is equivalent to £51 per planted acre. A little information about the past financial history of the various estates might have been of assistance to the reader of the prospectus, especially as the future is dealt with up to 1929, when a yield on issued capital is estimated at 18.30 per cent.

South American Gold Areas, Limited.—Authorised capital £200,000, divided into shares of £1 each, of which 65,000 shares have been issued at par for cash and 100,000 have been issued credited as fully-paid. The company was formed in August, 1921, to acquire freehold gold-bearing properties in Brazil. The company in September, 1921, entered into an agreement for the purchase of this property for £100,000 in fully-paid shares and £11,050 in cash. These and other details are published in the Press to comply with Stock Exchange rules, in connection with an application for permission to deal in 65,000 of the issued shares.

Haslemere and District Gas Company.—This is an offer for sale by tender of £5,000 capital, consisting of 1,000 6 per cent. redeemable preference shares of £5 each, the minimum price of issue being par. The issue is to be redeemed at par on March 31, 1930. The authorised capital of the company is £38,435, and, including the present offer, all has been issued. The authorised loan capital is £12,812, of which £6,612 remains to be borrowed. Net revenue for the year ended June 30, 1923, amounted to £3,626. Interest on loan capital

absorbs £310, leaving a balance of £3,316. As the dividend on preference shares will only amount to £900 per annum, a wide margin of security is available. A good share, but one which will have a very narrow market.

ACTIVE SECURITIES.

OIL OUTPUTS.

UNITED BRITISH OILFIELD OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, October 10, 1923, amounted to 1,497 tons.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel Street, Strand, London, W.C.2.

COMPANY MEETINGS, &c.

THE ROYAL BANK OF IRELAND, LIMITED.

STEADY PROGRESS AND RECORD PROFITS.

The eighty-seventh annual general meeting of the Royal Bank of Ireland, Limited, was held on September 28th, at Foster place, Dublin, Mr M. Barrington Jellett, J.P. (chairman of the company), presiding.

The Chairman said: Before proceeding with the business of the meeting, I think I am voicing the wish of all present when I ask you to send a resolution of sympathy to the widow and family of our late secretary and old friend, Mr Colville Jones. His life, I may say, was spent in your service (over 60 years), and it requires no words of mine to recall his worth and devotion to your interests. His charm and personality are sorely missed. I am sure that the shareholders will like to join in the vote of sympathy which will be moved by one of them before we separate.

We meet here to-day when the conditions prevailing in the country are much brighter than at our last meeting, and though the outlook is still clouded, your directors retain their confidence in the future of the commercial prosperity of the country.

The report has been in the hands of the shareholders for the past few days, and no doubt you are all familiar with the results it discloses, so I assume that we may take it as read.

RECORD PROFITS.

It is a great pleasure to the board to be able to put before you such a satisfactory report, which shows steady progress, the profits constituting a record, and this is particularly satisfactory, as we are still passing through troublesome times, happily, however, showing signs of material improvement.

The shareholders will, I feel sure, appreciate the wisdom of the continuation of your directors' policy in setting aside out of the year's profits the substantial sum of £43,000 to strengthen the existing reserves of the bank. This policy is a sound one, and very necessary if we are to continue to progress.

EXTENSION OF ACTIVITIES.

As already pointed out in the report, the board have been able to extend the activities of the bank by acquiring, on advantageous terms, 20 branches from the Belfast Banking Company, which are situated in the Free State area, many of them in important towns, such as Navan, Drogheda, Dundalk, Castleblayney, Ballybay, Monaghan, Sligo, Ballyshannon, Donegal, and Letterkenny.

For the past few years we have been extending our business with your full approval by opening new branches, and you will all realise the advantage to the bank of this purchase, as the branches we acquired have all established business attached to them.

During the negotiations we had the benefit of the services and advice of Messrs. Price, Waterhouse and Co., the very eminent firm of chartered accountants in London, the investigations being under the personal supervision of Sir Gilbert Garnsey, one of the senior partners of that firm.

I cannot do better than to read a paragraph out of their report made to us, which is as follows:—

"We may perhaps add that, taking all the circumstances into consideration, in our opinion the arrangement which you have made with this bank may be considered eminently satisfactory, and made with this bank may be expected to accrue to you as the result of the acquisition should add materially to the strength and prestige of your bank, and at the same time largely increase its earning capacity."

I would like to add that, from beginning to end, the negotiations were carried through with the greatest goodwill on both sides, and were of the pleasantest nature.

THE BALANCE-SHEET.

Turning to the balance-sheet, you will see that the figures are much larger than they were a year ago, the increase being accounted for by the expansion of business and the merging of the newly-acquired branches with the Royal Bank.

The only item that calls for special comment is the amount set out opposite bank premises. This figure has been substantially increased, but when it is borne in mind that, in addition to the purchase of the 20 branches already referred to, there were new branches opened at Phibsboro', Bray, and Naas, the figure is a very moderate one, as all the properties of the bank are value for a very large sum in excess of this amount.

We have had a strenuous year, and I ask you to join with the directors in thanking our staff for their loyalty, keenness and attention to your interests. We have made considerable progress

in the last few years, and no effort will be spared to further develop the business of the bank, and steadily improve the property of the shareholders.

One word more: we must not let the meeting close without turning our sincere thanks to the staff of the 20 branches recently taken over by us, for the manner and despatch with which they have carried out the transfer of the business.

I should like them to know that we realise the anxious and trying times they have gone through, and that you thoroughly appreciate their service and the goodwill and co-operation shown.

The Chairman then moved the adoption of the report, which was carried.

RAPHAEL TUCK AND SONS, LIMITED.

SATISFACTORY RESULTS OF THE YEAR.

The annual meeting of Raphael Tuck and Sons, Limited, was held, on the 17th inst., at Winchester House, London. Sir Adolph Tuck, Bart., the chairman and managing director, presided.

The Chairman, in moving the adoption of the report and accounts, said he ventured to claim that it spoke well for the inherent strength and popularity of the business of the company that, in spite of the serious falling off in the general trade of the world brought about by the insecure conditions which prevailed for so many months, they had emerged from the year's trading with a balance-sheet which under all the circumstances could not but be considered as fairly satisfactory. In the meantime the company's unique position in the art world had not merely been maintained, but further strengthened by the production of a wealth of novelties in every department of the business at a time when less well-placed publishing houses had found it necessary considerably to curtail their activities. In particular did the board take pride in the fact that the department which had been the leading one for the past 50 years and more still continued in the forefront, giving clear evidence of the solidity of its foundations. He referred to the Christmas, New Year, birthday, and general greeting card department, which had carried the name of Raphael Tuck to the four quarters of the globe, and which, despite all the difficulties referred to, more than maintained its record. The book and calendar departments, which came next in importance, had never been in a better condition.

POSTCARD POSTAGE COMPETITION.

The company's great postcard postage competition had duly run its course during the greater part of the year, and attracted an amount of attention on the part of the trade and the public which fully justified the labour and expenditure involved. The real object of the competition, to keep picture postcards and the cheaper postage question well to the front, had proved entirely successful. He was satisfied from the tacit promises made by no less than four Postmasters-General who had held that much-discussed office during the eight months covered by the competition that the next Budget would see the entire question of postage revised, and the penny postage on letters and the halfpenny postage on all postcards revised. The full benefit of the company's competition would then become apparent. The Queen's doll's house postcards formed another unique and highly promising series which they were producing by arrangement with the authorities of the British Empire Exhibition, and for which a very large demand was anticipated. He took that opportunity of predicting that that marvellous doll's house, with its beautifully furnished rooms and considerably over 1,000 individual articles, would prove one of the great attractions of the exhibition, which opens its doors in May next, and from which the board promised themselves gratifying results. They had been fortunate enough to secure a unique site in the British Empire Exhibition which would enable them to make a specially effective display of the art service which the company gave to the world. The directors recommended the payment of a final dividend on the ordinary shares for the six months to the end of April, 1923, at the rate of 12 per cent. per annum, making with the interim dividend paid a dividend of 10 per cent. for the year. He trusted that the twenty-second annual report of the directors would prove satisfactory to the shareholders, and had much pleasure in moving its adoption and the declaration of the dividend recommended.

Sir A. Conan Doyle, in seconding the motion, said there was no doubt that the company would see even greater prosperity in the future than had been the case with them in the past.

The resolution was carried unanimously.

BOOKS AND CALENDARS.

Mr Gustave Tuck, in proposing the re-election of Sir Arthur Conan Doyle and Mr Desmond A. Tuck, said that the sales of their books and calendars were increasing, and he had no hesitation whatever in saying that Raphael Tuck's children's books occupied a foremost place in children's literature. Their various

libraries amounted to about 400 volumes. Many of these had to be reprinted regularly, a fair proof of their popularity. The "Raphael House Library," which was at once unique and unrivalled and had established itself as a collection of children's classics, now comprised 32 beautiful volumes. The last two books, "The Heroes, or Greek Fairy Tales," by Charles Kingsley, and "Tales of the Alhambra," by Washington Irving, were proving a great success.

In conclusion, he wished to take that opportunity to record their great appreciation of the splendid work of their staff, which never stood higher in efficiency than at the present time, and with whose continued assistance they hoped to maintain the position occupied by their company, to the satisfaction of the trade, the public, and last, but not least, of all their shareholders, for many years to come.

The resolution was seconded and unanimously agreed to.

The proceedings terminated with a cordial vote of thanks to the chairman, directors, and staff.

HARRISONS AND CROSFIELD, LIMITED.

IMPROVED POSITION.

At the fifteenth ordinary general meeting of Harrisons and Crosfield, Limited, held on the 17th instant, Mr C. Heath Clark, the chairman, reviewing the balance-sheet, said:—

The view I have expressed at the last two general meetings, that any revival in the rubber industry would do away with the depreciation in our investment values as compared with their cost to the company, has been justified, and at the present time the market value of the investments is in excess of the total at which they stand in the books.

Three years ago, before the period of depression set in, the profits carried forward amounted to £37,873, and you will therefore appreciate that, if the present proposals are carried out, the company's reserves will have been strengthened to the extent of nearly £30,000.

The business has come through three years of unprecedented difficulty, one of the after results of the Great War, but we have been able throughout to pay to both classes of our preference shareholders the full dividend to which they are entitled; our reserves have not only been kept intact, but have been strengthened, and I believe our balance-sheet is to-day in as clean and sound a condition as at any time in the history of the company.

THE TEA INDUSTRY.

Since our last meeting the tea industry has continued in a very prosperous condition. Prices have been well maintained throughout the year, and although they have eased a little at times, they have, on the whole, shown a strong tendency to rise.

The stocks of tea which had accumulated, not only in this country, but also in America and other places, largely on account of the disturbances caused by the war, have now practically disappeared, and the current consumption will have to be met from current production.

The production during the present year will be considerably greater than it was last year, and it will probably amount to from 750 million lbs to 800 million lbs, against 681 million lbs produced last year. The attractive prices that have been ruling during the year have no doubt contributed to this increase.

It seems likely, therefore, that during the present year there will be a moderate excess of production, and that the stocks under bond in the United Kingdom at the middle of next year will be greater than they were at the corresponding period this year. It remains to be seen what effect will be produced upon the market by such surplus during the coming months, but I regard the present and future prospects as being very satisfactory from the producers' point of view.

THE RUBBER INDUSTRY.

The rubber industry has greatly improved its position during the past year. The absorption during the current year will amount to nearly 400,000 tons, of which the United States will account for nearly 285,000 tons, and the rest of the world about 115,000 tons—the production for the same period amounting to about 360,000 tons.

The outlook for the plantation industry is now, I think, favourable. So long as the Stevenson Scheme is in operation the price of rubber will, in my opinion, fluctuate between 1s 3d and 1s 6d per lb. Taking into account the upward trend of consumption, it cannot fall below 1s 3d for any prolonged period. The supply of rubber is, under the restriction scheme, automatically regulated to conform with the world's requirements, and the scheme will also automatically cease to operate, with little disturbance to the industry, whenever the world can absorb the full unrestricted production.

The report was adopted unanimously, and dividends of 10 per cent. on the deferred ordinary and management shares were declared.

ASSAM RAILWAYS AND TRADING COMPANY, LIMITED.

"B" STOCK DIVIDEND RESUMED.

The forty-third ordinary general meeting of the Assam Railways and Trading Company, Limited, was held, on the 17th inst., at Winchester House, Old Broad Street, London, Mr George Turner, M.E. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the accounts showed some improvement, and they were able to resume the payment of dividend on the "B" stock. He desired to emphasise the point. Their railway, as compared with the bigger systems of India, was a short metre-gauge line, but it was one of the most fully equipped, and carried a heavy traffic for a line of its character. His estimate of some years ago that the railway earnings would increase by 5 or 6 per cent. per annum had been borne out, and increase was likely to go on for some time. They had not anticipated such heavy working costs, but hoped to get expenses down to a better proportion of the receipts; the very greatest attention was being given to all costs.

With regard to the collieries, a much better balance was shown than in the preceding year, both the quantity sold and the receipts showing satisfactory increase; in the near future they hoped to show considerable improvement on the expenditure side. As to the development of their new collieries, the railways to the mine entrances should be nearly completed during the present cold weather, and mine development had commenced. Opening out coal mines was a matter of some years, but they would be able to get an early production from a big outcrop of the seam. This year unexpected labour trouble at the mines had caused a good deal of extra expense, and reduced the output. They had practically reconstituted the labour force, however, and it was hoped that the original estimate might hold good to a considerable extent.

With regard to their new timber concessions, the creosoting plant had been completed, and sleepers and other timber were being treated. The veneer plant was at work, though only in its experimental stages, but they hoped to have tea-chests on the market for next season. The earnings in the year under review were £116,734, and they proposed a 3 per cent. dividend on the "B" stock, carrying forward £1,955.

Mr Sydney S. Hawkins said the new areas of coal lay farther back into the hills than the old areas, and so to a great extent were more un-get-at-able, entailing considerable distances of underground drivings and borings before coal was actually reached. Consequently, for probably four or five years increase of the colliery output would be limited. They had decided to open four new collieries, including one where they would start on the outcrops, as mentioned by the chairman.

The report and accounts were unanimously adopted, and a dividend of 3 per cent. on the "B" stock was declared.

GOODE, DURRANT, AND CO., LIMITED.

SUCCESSFUL RESULTS, DESPITE DIFFICULT CONDITIONS.

The twenty-fifth ordinary general meeting of Goode, Durrant and Co., Limited, was held, on the 19th inst., at the registered office of the company, No. 27 Milton Street, London, E.C., Mr J. Albion Williams, chairman of the company, presiding.

The notice convening the meeting and the auditors' report having been read,

The Chairman, in moving the adoption of the directors' report and the audited balance-sheet, stated that, although the conditions of trading in Australia were distinctly difficult during the last half of the year under review, the final result was one upon which the directors were able to look with considerable satisfaction, and fully justified the confidence he had expressed a year ago with regard to the company's prospects.

CREDIT BALANCE.

It would be noted that after paying all the expenses, including the discount of the issue of £200,000 6½ per cent. 20-year notes in November last—and the shareholders would remember that this issue was very quickly over-subscribed—there still remained a balance to the credit of the profit and loss account of £56,755 19s 7d.

Mr J. C. Gait seconded the proposition, and it was unanimously resolved: "That dividends at the rates of 7 per cent. per annum on the preference shares and 10 per cent. per annum on the ordinary shares, including the interim dividends paid in April last, be declared and paid; that the sum of £20,000 be placed to the credit of the general reserve fund, making the

THE DIVIDENDS.

The Chairman proposed, Mr J. C. Gait seconded, and it was unanimously resolved: "That dividends at the rates of 7 per cent. per annum on the preference shares and 10 per cent. per annum on the ordinary shares, including the interim dividends paid in April last, be declared and paid; that the sum of £20,000 be placed to the credit of the general reserve fund, making the

total reserves £240,000, and that the balance of profit amounting to £5,933 4s 6d be carried forward to next year."

FORMAL BUSINESS AND VOTES OF THANKS.

Mr A. T. Wreford proposed, and Mr W. S. Ross seconded, the resolution of the retiring directors, Mr James Albion Williams and Mr William E. Pennick. They were thanked for their past services, and unanimously re-elected.

On the motion of Mr J. C. Gait, seconded by Mr A. C. Emms, the auditors, Messrs Newman Ogle, Ashworth and Co., were re-appointed for the ensuing year.

Hearty votes of thanks to the chairman, the staffs in London and the various branches concluded the proceedings.

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the June outputs, and dividends for four complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

Name. Year ends December 31, Except where Stated.	Outputs.			Output Month Sept., 1923.	Increase or Decrease on 1922.	Output 9 Months 1923, Except Where Otherwise Stated in Brackets.	Increase or Decrease on 1922.	Dividends paid in Past 4 Complete Years.

Transvaal Silver.....	39,611 ozs fine silver.

BRITISH AUSTRALIAN.—Four weeks ended October 6th.—15,006 tons crude ore produced 2,500 tons lead concentrates, containing 1,512 tons lead and 65,500 ozs silver; also 2,000 tons zinc concentrates, assaying 7 per cent. lead, 8.5 ozs silver per ton, and 45 per cent. zinc. 370 tons carbonates raised. Two days' stoppage.

FALCON.—September.—Crushed 16,662 tons of ore, producing 233 short tons (2,000 lbs) of blister copper, containing 2,379 ozs of gold, 4,819 ozs of silver. Estimated value, \$24,350 (taking copper at \$56 per short ton, gold at 90s per oz, and silver at 2s 6d per oz).

NORTH BROOKS HILL.—September.—16,800 tons of crude ore were treated, producing 3,340 tons lead concentrates, averaging 64 per cent. lead, 29 ozs silver per ton, and 8 per cent. zinc; also 3,000 tons zinc concentrates, averaging 48 per cent. zinc, 6 per cent. lead, and 7 ozs silver per ton.

SAN FRANCISCO MINES OF MEXICO.—September.—Ore treated 10,345 tons. Lead concentrates produced 2,150 tons. Zinc concentrates produced 2,400 tons. Estimated net smelter return on lead, \$104,250 U.S. currency; estimated net smelter on zinc, \$46,300 U.S. currency; total net smelter return, \$150,550. Operating expenses, \$69,510; estimated operating profit, \$81,040; capital expenditure (including development), \$33,890.

SANTA GERTRUDIS.—September.—Milled, 8,289 tons; profit, \$17,994. In addition, treated 40,598 tons from the Inversiones mines, the estimated percentage of profit accruing to Inversiones Company being \$19,698, less certain development expenses amounting to \$19,957.

Reports and Notices.

The Anglo-South American Bank, Limited, has received cable advice from their New York agency to the effect that approval has been given to a Charter for the formation of the Anglo-South American Trust Company, New York. The new company will have a paid-up capital of \$1,000,000 and reserves of \$500,000. The board will consist of the following:—Mr R. J. Hose (chairman and managing director of the Anglo-South American Bank, Limited), Mr W. E. Wells (general manager of the Anglo-South American Bank, Limited), Mr W. S. Carpenter (vice-president and treasurer of Messrs E. I. Dupont de Nemours and Co., Wilmington, Delaware), Mr E. J. Cornish (president of the National Lead Company, of New York), Mr F. S. Jerome (president of the American Copper Products Company, of Elizabeth, New Jersey), and Messrs C. J. Gleason, A. Elkus, N. C. Stenning, C. Piatt, and W. H. Trachsel. It is anticipated that the new institution will commence business on November 15th next.

The address of the Second Mercantile Trust, Limited, is now 320 Gresham House, Old Broad Street, London, E.C. 2.

The address of the Mercantile Investment and General Trust Company, Limited, is now 320 Gresham House, Old Broad Street, London, E.C. 2. New telephone numbers, London Wall 3469, 3470.

At an extraordinary general meeting of the shareholders of Hall and Company, Limited, held on Wednesday, the 17th, at the Croydon Chamber of Commerce, Katharine Street, Croydon, the resolution proposed by the board increasing the authorised preference capital to £200,000 by the issue of 125,000 new 6 per cent. cumulative preference shares of £1 each, ranking *pari passu* with the existing 75,000 preference shares, was agreed to by a very large majority. The rate of interest on the existing preference shares is to be increased from 5½ per cent. to 6 per cent. as from October 1st, and the issue of the new preference shares is subject to the condition that the preference shares issued shall at no time exceed the number of ordinary shares from time to time issued.

The retirement is announced of Mr Henry Leaver, manager of the claims department of the Employers' Liability Assurance Corporation, Limited, after 41½ years' service with the corporation. As a token of their friendship and esteem, his colleagues have presented him with an old English bracket chiming clock.

We are officially informed that the old-established distillery business of John Watney, Limited, of Wandsworth, has been reorganised. The two senior partners of the firm have retired, and the business will be conducted in future by Mr Bertram Watney in conjunction with Booth's Distillery, Limited, who have acquired the controlling interest held by the retiring partners.

The address of the United States and South American Investment Trust Co., Limited, now is 320 Gresham House, Old Broad Street, London, E.C. 2.

RAILWAYS.

BUENOS AYRES AND PACIFIC.—The report for year ended June 30, 1923, just issued, shows the following comparative results:—

	Year, 1921-22.	Year, 1922-23.	Train Mile Statistics.	
	£	£	1921-22.	1922-23.
	s	s	d	s
Receipts.....	7,465,112	8,672,234	17 4½	19 0½
Expenses.....	5,318,508	5,485,808	12 4½	12 0½
Profit.....	2,146,604	3,186,426	5 0	7 0
Working percentage.....	71.24	63.26		

The ordinary stockholders receive 7 per cent., against nothing for 1921-22. The reserve funds stand at £1,814,019. The sum of £205,129 is carried forward.

CENTRAL ARGENTINE RAILWAY.—A marked improvement is shown in the working of this line for the year ended June 30, 1923. Gross receipts have risen from £9,442,503 in 1921-22 to £10,655,819 in 1922-23. Working expenses have been reduced from £7,380,951 to £7,210,763. The net receipts have risen from £2,052,611 to £3,445,056. The ordinary stockholders receive 6 per cent., as against 4 per cent., and the deferred stockholders, who received no dividend for 1921-22, are to receive 6 per cent. for 1922-23. The sum of £171,857 is carried forward, against £5,781 brought in to the accounts.

ENTRE RIOS RAILWAYS.—The report for the year ended June 30, 1923, shows that the net receipts at £321,517, increased by £142,406, or 79.57 per cent. Gross receipts were £77,723 higher, or 8.12 per cent. Working expenses were reduced by £64,743, or 8.32 per cent. The report adds that "the prospects so far for the current year are satisfactory. Revolutionary disturbances in Paraguay have ceased, and international traffic has been resumed. The early reports of the next cereal crops are good, grazing lands are in a favourable state, and the cattle industry is gradually recovering from the post-war condition of low prices and restricted demand."

SOUTH INDIAN RAILWAY COMPANY, LIMITED.—The following interesting table of gross earnings, working expenses, and net earnings of the South Indian Railway is given in the report and accounts for the year ended March 31, 1923, just issued:—

Year.	Gross Earnings.	Working Expenses.	Net Earnings.
	Amount.	Amount.	Amount.
		Percentage of Gross Earnings.	Percentage of Gross Earnings.
	Rs	Rs	Rs
1921-22.....	4,40,03,089	3,15,57,197	1,24,45,892
1922-23.....	4,88,99,408	3,44,14,688	1,44,84,720

Compared with the previous year, there was an increase of Rs. 48,96,319, or 11.13 per cent. in the gross earnings; an increase of Rs. 28,57,491, or 9.05 per cent. in the working expenses; and an increase of Rs. 20,38,828, or 16.38 per cent., in the net earnings. The dividend on the ordinary stock is maintained at 8 per cent.

UNITED RAILWAYS OF THE HAVANA & Co.—The following table shows the results for the year ended June 30, 1923, and how they compare with preceding years:—

	1921-22.	1922-23.
	£	£
Receipts.....	3,893,949	3,765,534
Expenditure.....	2,729,956	2,463,264
Surplus.....	1,163,993	1,302,270
Percentage of expenses to receipts.....	70.11	65.42
Profit per train mile.....	4s 5d	5s

The ordinary dividend is 6 per cent., as against 4 per cent. for preceding year. The reserve account amounts to £1,219,617. General renewals reserve amounts to £192,819. Fossilisation of dividends account amounts to £300,000. The insurance account stands at £80,000. The sum of £217,060 is carried forward.

INSURANCE.

OLYMPIC FIRE AND GENERAL REINSURANCE COMPANY, LIMITED.—The directors have made a call of 5s per share on the issued capital of the company, payable in two instalments of 2s 6d each, on November 1st and December 14th. At the last annual meeting reference was made to the fact that the directors were considering the question of reducing the capital of the company, with a view of writing off the preliminary expenses and other losses. This matter is still under serious consideration by the directors. Before the second instalment of the call now made is due, it is expected a meeting of the shareholders will be called for the purpose of submitting proposals for the writing down of the capital, or of considering any alternative proposals which the directors may have to submit to shareholders.

BANKS.

ANGLO-SOUTH AMERICAN BANK, LIMITED.—The report for year ended June 30, 1923, shows that the net profit, after making provision for all charges, rebate, &c., amounts to £436,256, which, together with £256,684 brought forward, makes a total of £692,940, of which £196,530 was absorbed by the interim dividend

paid on April 30th last. There is now an available balance of £496,410, of which the directors recommend that £133,749 be applied to the payment of a final dividend of 4s per share, less income-tax, payable on the 29th inst., making a total distribution for the year of 10 pence, against 12 pence for preceding year; £25,000 to be added to the staff pension fund, and that the balance of £337,661 be carried forward. The report contains some interesting comparative statistics of the position of the bank for a number of years past. The balance-sheets of British Bank of South America and Commercial Bank of Spanish America, Limited, at June 30, 1923, are furnished with the report.

THE CHASE NATIONAL BANK OF THE CITY OF NEW YORK.—Balance-sheet, September 14, 1923:—

LIABILITIES.	ASSETS.
Capital.....	20,000,000
Surplus and profits.....	23,250,355
Reserve for taxes, interest, &c.....	2,312,183
Dividend payable Oct. 1, 1923.....	800,000
Deposits.....	390,783,470
Circulating notes.....	1,063,600
Acceptances outstanding.....	9,058,915
Other liabilities.....	929,980
	448,204,503

THE ONE HUNDREDTH BANK, LIMITED (TOKYO).—Balance-sheet June 30, 1923:—

LIABILITIES.	ASSETS.
Capital paid up.....	17,500,000
Reserve fund.....	8,900,000
Pension fund.....	246,280
Deposits & current accounts.....	121,337,576
Liabilities for account of customers on letters of credit, acceptances, & guarantees.....	5,101,666
Foreign bills sold.....	1,327,638
Due to Bank of Japan.....	9,350,000
Due to other banks.....	6,280,634
Unclaimed dividends, accrued interest on deposits, and unearned discount.....	2,074,337
Net profit—Brought down.....	733,607
For the half-year.....	1,450,390
	174,301,998

THE PUNJAB NATIONAL BANK, LIMITED.—We have received the fifty-seventh report on the working of the bank for the half-year ending June 30, 1923. The accounts have been thoroughly checked by Messrs Basant, Ram and Sons, the auditors, and their report is appended to the balance-sheet. The total profit for the half-year, after defraying normal expenditure, amounts to Rs. 4,19,460-15-9, which works out as profit at about 31 per cent. per annum on the paid-up capital, including advance capital, and at about 1.43 per cent. per annum on the working capital. The results would have been much better but for the failure of the Alliance Bank of Simla towards the end of April, 1923, as a consequence of which the directors thought it necessary to keep a large cash balance in hand, and to restrict investments to some extent. Out of this total profit of Rs. 4,19,460-15-9 the directors have provided a sum of Rs. 42,864-12-1 for writing off bad debts, and have transferred Rs. 1,00,000 to reserve fund No. 2, raising it to Rs. 3,00,408-8-0, to meet bad and doubtful debts, leaving a balance of Rs. 2,76,596-3-8, which, together with the sum brought forward from last half-year, i.e., Rs. 36,561-1-10, makes the total sum available for distribution as Rs. 3,13,157-5-6. The directors recommend that this sum may be appropriated as under:—To ad-interim dividend at Rs. 15 per cent. per annum for the half-year ending June 30, 1923, free of income-tax, payable on and after September 1, 1923, Rs. 2,00,826-15-2; to provision for income-tax in part for 1923-24, Rs. 50,000; balance carried forward to next half-year's account, Rs. 62,330-6-4—total, Rs. 3,13,157-5-6. During the half-year two new branches were opened—viz., at Hafizabad and Peshawar Cantt.

RUBBER, &c.

BAJOE KIDOEL RUBBER AND PRODUCE.—Improved results are revealed in the report for the year ended March 31, 1923. The net profit is £32,165, against £12,243 in preceding year. The ordinary dividend of 12½ per cent. compares with 5 per cent. paid for year 1921-22. The sum of £23,387 is carried forward, against £18,492 brought into the accounts. The average net price, taking in at a valuation the portion of the crop unsold, or not yet accounted for, was 1s 1.93d per lb. The coffee crop harvested on the three estates amounted to 12,165 piculs, against an estimate of 11,000 piculs, and a yield the previous year of 12,700 piculs.

KAMUNING (PERAK) RUBBER AND TIN.—The net profit of this company for the year ended June 30, 1923, amounts to £21,735, as

Current approximate quotations are as follows:—Best Admirals, 27s to 28s; second Admirals, 26s to 27s; best drys, 27s to 28s; Black Veins, 26s 6d to 27s; Western Valleys, 26s to 26s 6d; Eastern Valleys, 23s to 25s; best bunker smalls, 17s to 19s; ordinary cargo smalls, 15s to 16s; anthracite big vein large, 42s 6d to 50s; machine-made cobbles, 55s to 57s 6d; French nuts, 60s to 62s 6d; stove nuts, 55s to 57s 6d; rubble culm, 15s to 15s 3d; coke for export, 42s 6d to 50s; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 28s to 31s; pitwood, ex ship, 29s 6d to 30s 6d.

The position in the tin-plate trade has further improved. The prices are moving beyond the minimum rates, and the volume of trade is steadily expanding. The latest returns of shipments from Swansea are in excess of the average weekly quantity, and are reaching the level of the figures attained during the very active conditions in the first half of the year.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—This market for merino tops still lags behind the raw material markets, and topmakers are finding it difficult to do business. There is such a marked discrepancy between the cost of wool and the price obtainable for tops that sellers are obliged to move with extreme caution. On the other hand, users appear to be more or less indifferent, and the actual business passing is in comparatively small lots for current requirements. The outlook as regards crossbreds, however, is much better, and the steady buying of crossbred wool by the home trade during the last few weeks is evidence of renewed faith in the future of this class of raw material. Moreover, an increasing amount of business is being done in crossbred tops, medium and low qualities changing hands in quite good weights. Quotations do not show much change on the week, but there is a disposition on the part of sellers to ask more money on new business. Meanwhile, it is difficult to sell at a higher level, but the tendency is certainly in that direction. Yarn business remains disappointing. There is rather more doing in both botanics and crossbreds, but prices are cut so fine that they do not cover costs. This is especially noticeable in merinos, where competition is exceedingly keen for the small amount of business on offer. Some fair weights of crossbreds have been sold during the last few days, and spinners are now much better employed than was the case a few weeks ago. The piece goods trade is "spotty," with demand leaning to the cheaper fabrics. Standard lines in botanics are being sold at very low prices, and practically the only demand is for stock lots where delivery can be given immediately. The mohair trade is healthy, and consumption is well maintained.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The sale at Hull last week demonstrated the improved demand which has come about for crossbreds, and the outlook from this standpoint is the best that we have seen since the days of the slump. There has been a very marked recovery in the price of crossbred wools during the past twelve months, and this cannot but be encouraging, particularly from a New Zealand grower's standpoint. It is quite true that Australia is now turning out a fair quantity of crossbred wool, particularly Tasmania and Victoria, although we certainly cannot look with pleasure upon Australian pastoralists breeding crossbred sheep on a larger scale. However, in twelve months' time even crossbred wool will be on a different level of values to what obtains to-day, there being no doubt that users are being inspired to operate by the increasing consumption of 40's to 50's. Perhaps it is as well that these qualities are on a comparatively low level, in view of the sensibly decreased purchasing power of every country in the world. The outlook certainly is black in Germany from a commercial standpoint, and this is bound to have a material effect in reducing consumption of crossbreds, that country certainly coming second as a buyer and user of this class of staple. The home trade has always been the largest consumer of crossbreds, and probably will remain so for some time to come. For hundreds of years Bradford has been accustomed to use the wools of the mutton breeds, hence spinners and manufacturers in other parts of the world cannot beat the goods made from crossbred yarns in the West Riding. All the same, the reasonableness of crossbreds is to-day inducing a large number of merino topmakers to turn their attention to them, that fact alone clearly showing the trend of trade and fashions. It speaks volumes for their absorptive capacity that during the past six weeks the home and Continental trades have taken well over 200,000 bales of crossbreds.

THE COTTON TRADE.

MANCHESTER, October 18.

Prices in the market this week have gone against buyers. The hardening tendency has brought out an increased inquiry, and in certain quarters more business has been done. Transactions in piece goods for India have been interfered with by the holidays on the other side, but light fabrics and miscellaneous goods have attracted a fair amount of attention for Calcutta, Madras, and Karachi. Only occasional lines have been booked for China. The increased activity in fancies for several minor outlets has been a feature of interest. Warp satins and shadow stripes have been sold on an encouraging scale for the United States. Bleaching and finishing descriptions have moved off more freely for Java, the Near East, and South America. Some manufacturers of special cloths are now improving their position. The higher rates in the

raw material have harassed spinners of American yarns, but in small lots rather more business has been put through. A little more activity has also shown itself in Egyptian spinnings. Bundle yarns have been sold on a rather healthier scale for India.

Deposits are received for fixed periods on terms which may be ascertained on application.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

Good supplies of building timbers have been imported over the month, coming principally from Finland and Russia, Swedish supplies having fallen off, we presume, on account of competition from other European producing countries. The new Baltic States are increasing their supplies to this country, which is no more than what was expected, Riga and Danzig sending much larger quantities compared with a year ago.

Stocks of building woods in docks and yards around the coast and inland are fairly heavy, and still further good supplies are expected before the season closes, their volume depending very largely upon whether navigation terminates early or late. The shipper will look for a lengthened season. The importer and merchant will not be greatly upset with a sudden cold snap, though icebreakers are increasing in numbers at Northern ports in order that the latter may be available as long as possible during the early weeks of winter.

Prices on the spot are firm, with the demand very fair from the building trade, while packing-case makers report better times, which means a greater consumption of the inferior qualities. Deal sizes are still an unpopular feature of the market, and though importers and merchants have been trading very well in 2 by 4 scantlings particularly, and in their 2 and 2 1/2 by 7 battens, deals must have entailed this season losses, thus going to prove that it is useless to think of standardised prices in the timber trade, which bears its ups and downs on supply and demand.

Shipbuilding woods—teak, pitchpine, Oregon pine, spruce, &c.—are in no great call, owing to the bad state of the shipbuilding trade; but the demand from Japan for American timber, as well as the increased call for same in the U.S.A., have had a stiffening influence on prices of pitchpine, which has reflected to this side.

There are heavy supplies of foreign furniture hardwoods on the market, mostly American waiting for a change from the present dull demand, and under these conditions it is not surprising that the calls for our own woods are only fair.

Pitwood supplies have been greater this year than last, France contributing the larger part which find their way to the South Wales coalfields.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market remains firm but erratic, as two classes of ox hides failed to find buyers at Thursday's Bermondsey sales, and the three which sold changed hands at a 1/4d per lb advance. Best, when sold, made from 6 1/2d to 8 1/2d, and seconds from 5 1/2d to 7 1/2d per lb. Best cows remained unsold, heavy and light calf meeting with the same fate. 17/24 lb calf sold at 8 1/2d, and 9/16 lbs at 10 1/2d to 12s 6d each. The demand for imported hides has been good during the past week, and prices are firm. The frigorific market is affected by the demand from the United States, and prices paid on spot are \$40 to \$40 1/2 for Argentine ox, and \$44 for Uruguayan ox. Several thousand Liebig hides have been sold to Liverpool at 8 1/2d c.i.f. Dry hides are also firm, and all classes have again been inquired for. Cables from New York report the Chicago market as steady, with best heavy packers selling at 15 cents.

After the excitement of the Shoe and Leather Fair trade has fallen rather flat in sole leather in Bermondsey. Deliveries, however, of medium and heavy-weight bends have gone out to the Midlands, the demand for cheap dry hide bends having fallen off a little. Business in English bends at the Fair was excellent, and some tanners managed to book forward their output for two or three months ahead. Prices are firm, and buyers who went to the Fair bargain-hunting came away feeling disappointed.

The demand for dressed leather seems improving, and many sellers secured large orders for box and willow calf at the Fair. Importers were specially energetic, but offered little advantage in the way of prices to secure business. Sampling is in evidence, and the outlook is thought to be much better.

The boot section is also improving, as many makers secured enough orders at the Fair to keep them employed for several weeks. The export section is also good, the value of footwear sent overseas up to the end of September this year amounting to £3,356,040, as against £2,318,237 for the first nine months of 1922—this referring to footwear of all materials.

VEGETABLE OILS AND OILSEEDS.

The feature of the week has been the sharp break in the values of Plate linseed, which have declined 10s to 15s per ton all round on the week. Speculators in Argentina have held the balance of the oil crop at high levels, which crushers on this side, at any rate, have declined to concede. With only small quantities afloat and market requirements within narrow compass, business is by no means active, and purchasing of new crop hardly begun, although values of this for January-February shipment are back at the level of a few weeks ago, and more likely to attract consumers. The oil demand is small, and values barely held at late rates, "spot" oil offering at £42 per ton naked, ex Hull mill. Cotton oils are only a quiet trade.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 19.
SUGAR.—No fresh development took place in this market, business in refined goods being confined to a moderate compass, and then chiefly in British descriptions, while previous quotations were repeated all along the line. Local markets in Java move steadily upward under steady buying on Indian, Chinese, and Japanese

account, and with stimulating cables from America the undertone of the London market is one of distinct steadiness, despite quietness of general demand. Only comparatively small quantities of Java are due to come along, of which brown sugar forms a large proportion. Messrs Tate and Lyle's cubes quoted 60s 6d to 61s 6d; granulated, 5s 7 1/2d to 58s 1 1/2d, as to quality, and yellow crystals, 52s 1 1/2d. White Java, spot, 53s 6d to 53s 9d; afloat, steamer, 27s; August-September, 25s 6d; May-June, 23s 7 1/2d, c.f. and i.; London. Offers of Belgian and Dutch granulated for shipment are sparingly made. Czecho granulated, November-December, sold, 25s 9d, f.o.b., Hamburg, for star, fine or equal. White terminal market firm, and business proved of fair extent. October, sold, 27s 3d; December, 25s to 25s 4 1/2d to 25s; March, 24s 9d; May, 25s.

COFFEE.—General stability characterised this market, prices for all suitable parcels being again dearer on the week, with supplies on a small scale. Export requirements were of moderate extent. Terminal market steady, but slow.

COCOA.—Only quiet trading in spot lots at about late rates. Accra, F/F quality, November-January, sold, 28s, f.o.b. terms.

TEA.—Indian auctions of 48,190 packages this week met an active demand, especially for low and medium qualities, and prices ruled quite firm to 1/4d per lb dearer. 17,800 packages Ceylon were catalogued and sold readily, all fine and finest being fully maintained with undergrades from 1/4d to 3/4d per lb dearer. 6,500 packages Java and Sumatra were auctioned, and met a strong market. Leaf teas were 1/4d per lb dearer, while all tippy invoices commanded extreme figures. Pekoe sold, 1s 2d to 1s 6d; broken pekoe, 1s 3 1/2d to 1s 6d; pekoe souchong, 1s 3 1/2d to 1s 5 1/2d; orange pekoe, 1s 5 1/2d to 1s 8 1/2d; broken orange, 1s 3 1/2d to 1s 9 1/2d per lb in bond. New season's China selling with fair freedom, particularly finer Keemun.

RICE.—There is no new feature to note, general trade being very quiet. Two sars, spot, value 15s 9d; October-November, 14s. Japanese peas, spot, 23s 9d per cwt. Rangoon bran, October-December, sellers, 112s 6d; and buyers, 110s per ton, ex ship terms, London-Liverpool.

SPICE.—Pepper steady but demand is quiet. Fair black Singapore, October-December; L.S. quoted 4 1/2d; Muntok ditto, 6 1/2d, sellers. Zanzibar cloves, October-December, 1s 2 1/2d lb. Tapioca held for late prices, but buyers are not much in evidence. Sago flour, October-December, Liverpool, sellers, 13s 6d. Desiccated coconut, halves, afloat, sold, 41s 3d per cwt.

JUTE.—This market, after firmness, took a rather sharp downward turn on some pressure being shown to sell. First grade, October-November, continent, sold, £21 10s to £22; November-December, £21 17s 6d to £22; December-January, £22 5s to £22 to £22 5s; January-February, £22 5s to £22 15s. Hessians and twills quiet, unaltered.

HEMP.—The market for Manila developed more activity than for some considerable time past, buying orders from ropemakers circulating with freedom, and prices advanced all round, but more particularly so with regard to J grade. About 18,000 bales changed hands, streaky ones, November-January, also January-March shipments, at £41 10s; ditto twos, £40; ditto threes, £36 15s to £37; J grade, £28 to £32; K, £26 to £26 5s; L, £25 10s to £25 15s; ditto, house marks, £26; M grade, at £23 10s to £23 15s; G quoted £36; and

first-tide, quoted 26s; Khredrowie, ditto, 20s; Siar, 16s; second-tide 14s 6d, landed terms, London. Figs, genuine natural, in bags, quoted 38s to 39s; layers, in boxes, 95s to 105s; and small boxes of pulled, 145s to 160s. Evaporated fruits experienced a moderate demand. Australian apricots quoted 55s; peaches, 43s; Californian apricots, choice, 66s; extra choice, 72s; fancy, 92s. Oregon plums, sizes 60/70, quoted 46s; Californian, ditto, 30/40, at 82s to 84s; 40/50, 70s per cwt.

CANNED GOODS.—There was no new feature to note in any particular line, with general course of trade quiet, but which is usually associated with this period of the year. Sardines in fair supply regarding Portuguese, and quarters of same quoted 2s 6d to 3s; ditto, 12 oz, 5s to 5s 6d; 18 oz, 9s 6d to 11s. French, 18 oz, 16s 6d; quarters of good quality, 9s per dozen tins. Salmon, 1 lb flat reds, labelled, 53s to 55s 6d; ditto tall, 41s to 42s; 1 lb flat pink, 24s 6d; ditto tall, 23s; and cases of 96 3/4-lbs 28s to 30s. Lobster tends in buyers' favour. Fancy halves, 150s to 155s; seconds, 145s per case. Canned fruits in quiet request, with demand largely running upon lower-priced goods. Singapore pines, fair quality, spot, 5s 6d; Californian apricots, 7s to 11s; peaches, 8s to 12s; pears, 12s to 14s 6d; and tomatoes, Spanish threes, 6s 3d; Italian ditto, 6s 6d per dozen tins. Canned meats generally steady, with moderate inquiries in force for beef.

OILSEEDS.—Linseed quiet and easier on weaker Argentine cables and increased crop estimates. Bold Bombay, October, £21 15s; small Bombay, ditto, £21 5s; Calcutta, afloat, £21 15s; September-October, £21 7s 6d. Plate, afloat, £20 5s; December-January, £16 17s 6d; January-February, £16 7s 6d to £16 15s; April-May, £16 10s. Rapeseed quieter. Toria, September-October, £17 5s; real bold Ferozepore, September-October, £17 2s 6d; Jamba, £13 5s. Cottonseed quiet. Egyptian black, October, £11 10s. Sakellaris, £10 17s 6d, to Hull. Bombay, November-December, £9 7s 6d; December-January, £9 5s. Ginnelly seed quiet. East African, October-November, £22 15s. Chinese, October-November, £23. Groundnuts easier. Coromandel, machine-dried, December-January, £21 12s 6d; Chinese decorticated, f.a.q., December-January, £21 7s 6d; East African, afloat, £23 5s. Soya beans quiet. Manchurian, October-November, £11 8s 9d. Castor-seed firmer. Bombay, October-November, £21 7s 6d per ton.

OILS.—Linseed irregular, but easier on balance. Spot, net, naked, 42s; October, 40s 9d; November-December, 39s 9d; January-April, 36s 6d. Rape firm. Crude, spot, 39s 3d; refined, 42s 3d. Cotton easier. Crude Egyptian, spot, 37s; Bombay, 36s; common edible, 45s; deodorised (in barrels), 49s. China-wood firm. Hankow, spot (barrels), 93s; November-December, 94s. Coconut steady. Ceylon, spot, 46s; October-November, 44s 6d; Cochin, ditto, quoted 50s. Soya steady. Oriental, barrels, October-November, 38s 6d.

Cod firm. English, spot, 36s. Groundnuts firm. English, crushed, naked, spot, 47s 6d; deodorised, barrels, 55s 6d. Turpentine dull. American, spot, 73s; November-December, 73s 9d; January-April, 74s 9d. Rosin easier. American, grade B, 13s; F, 13s 3d; G, 13s 3d; H to I, 13s 3d; WG, 15s 9d; WW, 16s per cwt. French nominal. Petroleum steady. American standard, white, spot, 11d; and water white, 1s per gallon. Castor-oil firm. First pressure, spot, quoted 52s; second pressure, 51s, and pharmaceutical 57s per cwt.

METALS.—Tin opened with a firmer tendency, due to higher Eastern and American advices, while a fair business transpired. Standard, cash, quoted at £202 10s, with business in October at £202, and three months at £200 to £200 7s 6d to £199 15s and £200 7s 6d. Later some irregular was noticeable, but prices firm on balance. By the middle of the week standard, cash, sold at £202 17s 6d, and three months £200 15s. Sales in the East occurred on the basis of £202 5s, c.i.f. On the following day rates ruled in seller's favour, though closing below top points. Standard, cash, sold at £204 15s to £204 5s, and three months £201 10s to £202 10s to £201 15s. Further sales were reported in the East at £203, c.i.f. Tin opened easier, though marked some improvement at Friday's session; but on buyers becoming reserved, sellers were obliged to make slight concessions. Standard, cash, sold at £204, and three months £201 to £202 to £201 15s. English ingots quoted at £204 15s to £205. Copper was a firm market at the commencement, due to reserved offerings and higher American advices, while a good demand prevailed. Standard, cash, quoted at £60 15s, with business in three months at £61 10s to £61 5s to £61 8s 9d. Subsequently prices maintained a fully steady level, with business mainly centred on forward dates. Standard, cash, on Wednesday stood at £61, with sales in three months at £61 8s 9d to £61 15s. At Thursday's session a good demand prevailed, and prices after showing firmness, eased somewhat. Standard, cash, sold at £61, and three months £62 to £61 13s 9d to £61 15s. On the following day copper was in good request, and tendency of prices in favour of buyers. Standard, cash, sold at £60 13s 9d, and three months at £61 7s 6d to £61 5s to £61 10s to £61 8s 9d. Electro, £64 to £65; best selected, £63 10s to £65; strong sheets, £92; wire bars, £65 per ton. Lead firmer at £27 12s 6d to £26 7s 6d, as to position. Spelter dearer at £33 12s 6d to £32 10s, according to position. Antimony quiet. English regulus quoted at £34 10s to £35. Aluminium quiet. Home trade, £415; export, £420.

TALLOW.—Messrs Colchesters and Woolner write on October 17th as follows:—The tallow market was quiet during the week, and prices are 6d lower to-day. The business is mostly in the better sorts, inferior kinds receiving little attention. Shipments of tallow from Australasia during September amounted to 1,400 tons,

against 4,800 tons during the same month last year. At auction to-day 1,137 casks tallow were offered, and 134 were sold. Quotations are:—Australian mutton: Fine, 43s 6d; good to fair, 42s 6d to 41s; dull to dark, 37s 6d to 36s 6d; hard, 42s. Australian beef: Fine, 43s; good to fair, 41s to 39s; dull to dark, 36s 6d to 36s; sweet, 43s 6d. Present shipment from Australasia: good mixed, nominal. Present shipment from South America, 4cs 6d to 39s. The market letter is unchanged. Town tallow, 36s 6d per cwt. Rough fat, per 8 lbs, 2d; melted stuff, 27s 6d per cwt. Quotations are:—Town, 35s 6d, net cash, naked, ex works. Country: Frail casks, 35s 6d; home melted, shipping casks, net. f.o.b., good coloured, 39s; fair to dull, 36s 6d to 35s 6d. Bone fat: White, none; pale, none; benzine, 33s; melted stuff, 33s 6d, f.o.b.

R. J. HOSE,
ROBERT HARVEY,
C. G. HYDE.

W. E. WELLS, General Manager.

A. G. BARTHOLOMEW, F.C.A., Chief Accountant.

We report to the Shareholders that we have audited the above Balance Sheet, dated 30th June, 1923, with the Books at the Head Office (London), and have obtained all the information and explanations we have required.

We have examined the Returns from the Branches certified by the respective Managers, and have satisfied ourselves that they are properly incorporated in the above account.

We further report that, in our opinion, the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Head Office and the above-mentioned Returns.

THE DAILY MAIL TRUST, Ltd.

The British, Foreign & Colonial Corporation Ltd., B.F.C. House, Gresham Street, London, E.C.2, will offer for sale next Monday at the price of £99 per cent.

£8,000,000

7% GUARANTEED MORTGAGE DEBENTURE STOCK
OF

THE DAILY MAIL TRUST, Ltd.

Repayable at £107 per cent. by a Cumulative Sinking Fund of 2 per cent. per annum, beginning in 1924 and ending 1948. The Sinking Fund will be applied by purchases on the market, or drawings at £110 per cent. during the first three years, and similarly at £107 per cent. during the remaining period.

The Stock will be secured on 800,000 Deferred Shares in Associated Newspapers, Limited, and on 918,056 Shares (being the whole of the issued capital) in E. Hulton & Company, Limited, also on the uncalled capital of the Trust and its other assets and undertaking. The total security represents about £14,600,000.

The Issue will be guaranteed unconditionally by the "Daily Mirror" Newspapers and "Sunday Pictorial" (1920) Ltd. The average profits of the Guaranteeing Companies of Associated Newspapers, Ltd., of E. Hulton & Company, Limited, and of the Scottish Newspaper Company included in the purchase, calculated over a period of seven years and five and a half years respectively, is £1,048,539, and the current year's earnings of these Companies are estimated to amount to about £2,500,000.

The flat yield is over £7 per cent. per annum, plus the profit of £8 per cent. on redemption between 1928 and 1948 and an additional £3 per cent. if redeemed earlier.

Copies of the Offer for Sale can be obtained from the Bankers, the Brokers, the Trustees and the Issuing House.

pavement.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's,
37 Avenue de L'Opera.

THE MONEY MARKET.

EXTREME stagnation has again ruled in the money market,
with money not too plentiful, and bills decidedly scarce.
The scarcity of money was said to have been relieved
by the usual ministering angels, whose business it is to

keep the market out of the banks lest Treasury bills should become too expensive. Nevertheless, in spite of the scarcity of bills, discount rates were appreciably firmer, chiefly owing to apprehensions connected with the downward movement in the New York exchange. Yesterday the Treasury bills went at a higher rate, and discount rates hardened slightly.

	Oct. 26, 1923.	Oct. 19, 1923.	Oct. 12, 1923.	Oct. 5, 1923.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market Rate (3 months' bills)	3½	3½	3½	3½	..

The Bank return showed an increase of £255,000 in Reserve, with a corresponding decline in the note circulation. There was a small decrease in Government securities, and a smaller increase in Other. Public deposits declined by £1,835,000, and private deposits rose by £1,682,000. Currency notes outstanding were reduced this week by £1,970,700 to £280,174,400, which includes £1,440,000 for notes called in but not yet cancelled. The fiduciary issue is £229,284,400, or £40,899,400 below the maximum.

As we go to press we are informed that the directors of the London Joint City and Midland Bank, Limited, have decided to recommend that the name of the bank be changed to the Midland Bank, Limited. A resolution to this effect will be submitted at a meeting of shareholders to be convened shortly.

THE STOCK MARKETS.

After uneasiness at the beginning of the week, aroused by the revolt in Germany and the decline in the American exchange, which produced talk of a rise in Bank rate, the stock markets have taken on a brighter complexion. Prices have recovered a little, the speeches of Mr McKenna and the Prime Minister having helped to produce a better atmosphere. War Loan was marked ex dividend yesterday, and a large business resulted, while the premiums on the recent Commonwealth and Victoria loans have risen. A new Finnish Government 6 per cent. loan and another large issue of Underground Railway debenture stock were underwritten with ease. In the foreign bond market prices have moved erratically, and Home Rails have been inclined to droop. Canadian Pacifics and American Rails have improved with the decline in the New York exchange, and Argentine Rails are better again. The tone in the Rubber market has become a little harder, and Oils have improved considerably, but the Tea share market is troubled by a stale bull account.

THE COMMODITY MARKETS.

A distinctly better tone is noticeable in many of the Commodity markets. At Cardiff big orders have been placed for best Admiralty coal at 27s 6d per ton, and the outlook is better than that prevailing a week ago. Makers of Cleveland pig-iron, having sold their present limited output, have advanced prices. The steel trade is reported to be showing signs of improvement. Tin went higher, but copper declined. A fair amount of business was effected in rubber at firmer prices; the market, however, tended to be somewhat erratic. The wheat position is dull. The sugar market is steady but quiet, while the demand for tea continues to expand. Transactions in the Manchester Cotton trade have tended to expand, prices having hardened, and buyers being more willing to accept current values. The good general demand for wool at the London auctions this week has again emphasised the strength of the raw material position. The hide market is gathering strength, both in London and in the provinces. Linseed oil has been irregular, and is easier on balance.

FOREIGN EXCHANGES.

Increasing chaos in Germany and further irresponsible discussion of the inflation question has produced more depression and uncertainty in the foreign exchange market. Sterling has again moved sharply down in New York, the mark has collapsed so completely as to have become practically useless as a circulating medium in Germany itself, and at the same time the uncertainty of

German conditions has spread its influence over the other "reparation exchanges." It is to be hoped that the speech of Mr Baldwin on Thursday evening will have finally laid the ghost of the inflationist scare, and one may also entertain a hope—according to late news a growing one—that the speech of General Smuts and the appeal made by Mr Baldwin may prevail on M. Poincaré to join with Great Britain and the United States in a new examination of Germany's position. The dollar rate, which on the 19th closed at \$4.52½, dropped suddenly at the beginning of the week to below \$4.50, and at one time on the 23rd was quoted as low as \$4.47½. After that there was an irregular recovery to about \$4.49½, but at one time on the 25th it was again down to \$4.47½. Early yesterday, before Mr Baldwin's speech had had time to take effect, it stood at \$4.49. Although the usual autumn pressure is still making itself felt, there is no doubt that the main influence on the rate has been the fear, completely unjustifiable, but comprehensible enough in view of statements by less responsible public men and newspapers, of a change in the Government's financial policy. Forward quotations have remained unchanged at ½ cent per month over spot. This same influence accounts for the movement against us of Amsterdam, Vienna, Helsingfors, Stockholm, Switzerland, and other more stable currencies, although it is interesting to note a sudden temporary rise in the Dutch rate in the middle of the week, due, it is suggested, to the removal of German funds to New York. The Berlin rate from 57,500 million marks on the 19th has moved up to 400,000 million yesterday morning, after being considerably higher at various times during the week (on the 25th it actually reached 600,000 millions). Various hasty proposals for the issue of some form of stable currency have so far lost all favourable influence under the threat of the dissolution of central authority. It is interesting in this connection to see that Danzig has not been able to wait for the proposed introduction in January of its new currency based on sterling, but is already issuing an intermediate currency with stable currency backing in order to escape from the disastrous effects of the mark. The Paris rate, which a week ago was 75.45, has not been able to escape the combined effect of the development of the German situation and the world disapproval of M. Poincaré's policy as expressed by General Smuts, and active official intervention has not been able to prevent a rise in rate to at one time as high as 78.35, from which, however, there was some recovery to 77.10 yesterday morning. It is particularly unfortunate for the French Government that this movement should have occurred just in the middle of the subscription period for its new bond issue. The Belgian rate has followed the same course, rising from 87.35 on the 19th to 92 on the 23rd, being quoted yesterday morning at 89.15. Forward rates in Paris are the same at 4 centimes per month above spot; in Brussels they have narrowed again from 5 centimes to 4 centimes above spot. The Italian rate has been less affected, and, after being higher, was quoted yesterday morning at 99½, as compared with 100½ a week ago. Copenhagen, where the recently introduced stabilisation policy is being actively pursued, has moved down slightly from 25.82½ to 25.76. Poland, unfortunately, has not yet found any solution for its financial difficulties, and depreciation has proceeded still more rapidly, the rate moving from 4½ million marks a week ago to 7½ million yesterday. Prague has remained almost steady, and Budapest shows a further appreciation from 960 to about 950, after being somewhat better. In the East the rupee has depreciated slightly from rs. 4 33-64d to rs. 4 11-16d, while Yokohama has moved up from 2s 1 27-32d to 2s 2-18d. In the silver market an unexpectedly strong speculative demand from India and China brought up prices sharply, and the market is now quieter on a higher level. Hong Kong has moved from 2s 3½d to 2s 3 18d, and Shanghai from 3s 1d to 3s 1 18d. In South America, Rio is 1-32d lower at 4 31-32d, while Buenos Ayres has moved from 38½d to 38½d, and Monte Video from 39d to 38½d. Valparaiso, at 38.30 pesos, is also .80 pesos cheaper.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 20th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	8,000	From Revenue	17,215
Interest, &c., on Debt	4,654	Taken from Exchequer balances	281
Sinking Fund	516		
Sundries	1,362		
Reduction of debt	2,964		
	17,496		17,496

Revenue amounted to £17,214,800, as compared with £20,338,200 in corresponding week a year ago. Property and Income-tax yielded £2,673,000 and Super-tax £360,000, against a combined total of £4,419,000 in the corresponding period. Customs yielded £2,003,000, against £2,721,000, and Excise £8,386,000, against £9,308,000. Special Receipts amounted to £900,000, against £1,360,500. The week's operations reduced the National Debt by £2,964,400, and caused the following changes:—

	Min. £
Public Departments Advances	— 600
National Savings Certificates	— 550
Treasury Bills	— 1,567
National War Bonds repaid	— 247
	— 2,964

The floating debt was reduced by £2,175,000 to £813,871,500.

FINANCIAL YEAR, 1923-24 (April 1 to October 20, 1923).

£	£
Total Expenditure .. 422,833,095	Raised by Revenue .. 409,031,634
	Net Borrowings 9,783,689
	Decrease in Balances 4,017,772
Total 422,833,095	Total 422,833,095

ESTIMATES for YEAR 1923-24.

Special Expenditure .. 15,603,000	Special Receipts 40,000,000
Total 816,616,000	Total 818,500,000
	Surplus 1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the meetings of the following companies:—Anglo-South American Bank; United Railways of the Havana and Regla Warehouses; Buenos Ayres and Pacific Railway; Buenos Ayres Western Railway; Buenos Ayres Great Southern Railway; Central Argentine Railway; United Dairies; Union Cold Storage Company, and Piccadilly Hotel. At the meeting of the Anglo-South American Mr R. J. Hose gave his usual interesting review of conditions not only in South America, but also at home. We hope to examine next week the results of the four great Argentine railways, whose meetings have been held this week. We regret that in this column last week, in referring to Mr Heath Clark's speech at the meeting of Harrisons and Crosfield, Limited, we omitted to state that his remarks with regard to excess production referred to the tea industry, and not to rubber, the absorption of which, he predicted, would be in excess of production.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a review of the iron and steel trade in America and an analysis of economic progress in the self-governing Dominions of the British Empire during the last decade.

GENERAL SMUTS SPEAKS OUR MIND.

SOME words are deeds, and however despondent we may feel as we look back with our own eyes over the last five years, we cannot contemplate the picture as presented to us by General Smuts in his speech to the South African Luncheon Club on Tuesday evening without feeling that even now something can be done to avert a catastrophe to which we had almost resigned ourselves. It is not by prophesying smooth things that General Smuts inspires us. None of our statesmen since the war has painted the picture of the European problem with such remorseless truth. That we were "back to 1914" was his trenchant description of to-day's position. He succeeds, nevertheless, in giving us courage by pointing us to a possible conjunction of political and moral forces, which is not

visionary but practicable, and which, if we take our part in setting it in motion, affords, at least, some prospect of victory over the forces of destruction. The new spark of hope which General Smuts kindled is fanned into flame by Mr Baldwin's Plymouth speech, which reveals the British Government as prepared not only in pious expression, but also in action to support General Smuts's policy.

General Smuts made a fresh appeal to the United States to come over and help us. Considering the number of times that other statesmen have made similar appeals without useful result, that might have appeared a hazardous thing to do. But we now know that in making this appeal General Smuts knew something of the ground he was exploring. His appeal coincided with a speech by Mr Harvey, the American Ambassador in London, which went further in the direction of answering it than any declaration by a responsible American since Mr Wilson's failure. Moreover, official documents published yesterday show that the British Government, "on behalf of the whole British Empire," has actually sounded Washington on the subject of American participation in such a conference as General Smuts suggested, and, what is of vastly greater importance, that the reply, while cautious, does nothing towards closing the door. America in no way changes her attitude on the Allied debt question, and continues to regard it as outside the scope of a Reparations Conference, but President Coolidge has himself repeated the famous offer made by Mr Hughes last December. That offer was rendered barren by French refusal to agree to a conference on reparations with American participation. The perils of Europe have deepened tragically since then. Can France afford to refuse again? As we go to press French acceptance "on conditions" is reported. Let us hope the conditions are not obstructive. Even if they are, the Washington Government does not necessarily take French abstention as ruling out the proposed conference. It merely, in such a case, "reserves its decision as to its course of action." Thus from the West comes a new ray of hope, and this is not the only element of encouragement. For once the united voice of the British Empire has spoken. There is, at least, a chance that this, together with some continental influences, may be strong enough to prevent France from slamming the door in the face of the United States; and there is obviously an intention on Germany's part to make a genuine attempt at Reparations. These forces may well be potent in combination. There are, unfortunately, rival forces in the field. We need not take too seriously the British "Die-hards" or the British "Trust" Press.* But we have to reckon seriously with the German reaction, and, above all, with M. Poincaré.

The closing note of General Smuts's speech was friendliness and sympathy for the French people, and he made an eloquent appeal to France to remember "her noble historic mission as the great bearer of the liberal tradition in Europe." But of the policy of M. Poincaré he framed an indictment that surpasses in frankness and lack of reserve any pronouncement of modern statesmen. Referring to the Ruhr occupation and its legality, he said:—"The greatest issue in the international relations, not only of Europe, but of the whole world, has once more come to the front. We are back in August, 1914. It is again the scrap of paper. Once more a great instrument of European settlement has been broken. We entered the war to avenge such a breach. It bodes ill for the future peace of Europe that four years after the war we should have to face the same sort of situation again." As the General admitted, such things "are seldom said by those in responsible positions." By saying them General Smuts has performed a service which is overdue from our home statesmen, for he has made it abundantly clear to France that we cannot share the responsibility or the fruits of her present policy.

But it was not only on the moral and legal question of the Ruhr that General Smuts spoke straight, strong words to M. Poincaré. On the material side he described his policy as barren, and on the all important question of

* The danger of a great Press Trust, especially in the direction of suppression of vital things, was never more clearly revealed than in the fact that the *Daily Mail* omitted to publish the most important parts of General Smuts's speech.

security he said: "There is no real security to be obtained by the sword. In the dark period on which Europe is now entering there is far more security for France in the company of liberal England and America than in all the legions, black and white, which she is mustering, and in all the unstable combinations which her Government is laboriously building up in Europe."

General Smuts grasped the nettle of armaments, and firmly linked the question of Continental militarism with that of the indebtedness of Continental nations to Great Britain and America. The ground which he was here exploring is common to the British Commonwealth and to the United States, and it is of more intimate interest to the non-European members of this great group of nations than M. Poincaré may suspect. What is South Africa's stake in Europe? She is separated by many more days' journey than America herself from the scene of disturbance; she lies in another hemisphere, another world. Yet, whether M. Poincaré knows it or not, he has supplied a key himself in his recent reference to France as "a nation of a hundred millions," which General Smuts has sardonically paraphrased in his warning that "the black hordes of Africa have been called in to redress the political balance of this mother-continent of civilisation." That is a menace to which neither America nor any British Dominion can afford to be indifferent. The Anglo-Saxon world will not abdicate its position in Europe in order to offer Africa the vacancy.

Meanwhile, the changing scene in Germany is a factor with which all parties have to reckon. Will Germany dissolve? What are the prospects of the separatist movement so carefully fostered by M. Poincaré? In the strife that is beginning, will victory go to the forces of reaction? In the face of these movements, what should be the attitude of the British Government? The Prime Minister gave his answer to the last of these questions at Plymouth on Thursday evening:—"We cannot contemplate with any satisfaction the disintegration or the disruption of that country (Germany), which must put back for years her powers of reparation. Nor can we contemplate the breaking-off of any part of Germany into a separate state, which would at once break the Treaty of Versailles." Those words are welcome, and we believe that behind them lies a realisation of the opportunity for action in their sense, which our position at Cologne provides. The Cologne area under British occupation has already been spoken of by the German separatists as the rock on which their movement may be wrecked. So far, the actions of the British authorities in that area have been correct and effective. The Cologne area is a wedge between the separatist movement in the north and the Bavarian territory of the Rhenish Palatinate, where the French representative of the Rhineland Commission has apparently made a *démarche* in favour of autonomy, on the pretext of the recent political developments at Munich. On every ground which the French have alleged on their own behalf, we are entitled to declare ourselves, at Cologne, in favour of German unity.

It would, however, be deplorable in the extreme if there is an attempt by either France or England to look for petty means of bringing pressure on the other. Let the matter be frankly settled on the larger issues. General Smuts has the backing, definitely expressed, of his Empire colleagues, his views have the implied approval of the Government and the explicit support of individual members of it, while on Thursday Mr J. H. Thomas declared that he had precisely expressed what is in the mind of the working classes of this country. Knowing this, we would appeal to France to consider that it was the urge of the moral forces in the world, and the *imponderabilia* of politics, which always will win in the long run, that rallied the material support by which the German menace was overcome. Does France not realise that these forces are slowly but surely shifting over to the other side, and that her apparent inability to take an international point of view, and her reliance upon force, are accomplishing the almost incredible result of producing a feeling of sympathy towards Germany, even among those whose repugnance to militarism and everything German might have been expected to remain a lifelong obsession. Perhaps the latest Paris news means that at last realisation is dawning.

DEFLATION AND INFLATION.

THE question of our monetary policy has once more sprung into prominence in the last few days. The Associated Chambers of Commerce have been discussing the subject at their quarterly meeting, at which both the President and the Chairman of the London Chamber laid special emphasis on the dangers of inflation, which, in the words of Lord Kysant, can only have one result—"a short time of prosperity, and then everything would go wrong." The Federation of British Industries have addressed a memorandum to the Government reiterating the necessity for a new inquiry into the monetary policy, so that, at all events, industry might be protected against further appreciation of the £ sterling. Finally, Mr McKenna, at Belfast on Wednesday, in a speech which dealt very clearly with the essentials of the trade situation, emphasised the harmful effect of pushing on a policy of deflation and restricting purchasing power at a moment like the present. The matter is not, however, by any means only one of academic interest. On the contrary, the idea, which arose out of a recent speech by Sir Montague Barlow, that this country was about to embark upon a career of limited inflation, coincided with a sharp downward movement of dollar exchange; and the uncertainty put into the minds of business people in various parts of the world was undoubtedly one of the influences which brought this movement about. The exchange has since recovered a little, but the incident is a sharp reminder that international opinion is one of the most important factors, at all events for short periods, in regulating exchanges and the movements of international capital.

The experience is not likely to be repeated in the near future, for Mr Baldwin, in his speech at Plymouth, formally announced that the Government would have nothing to do with a "suggestion for creating out of nothing artificial money to finance this, that, and the other..... There is no truth whatever in any stories you may hear from any quarter that a Government of which I am a member will depart from what is understood in this country to be sound financial policy."

But what is this sound financial policy, and what does it imply? Mr Baldwin was very sparing of his words on the subject: "We are not, in present circumstances, any more than we have been for many months, pursuing a policy of active deflation, and we certainly do not propose to proceed in the direction of inflation. No such project has ever been considered. I hope this will lay the ghost." Perhaps it will; but ghosts have a way of hanging about haunted houses in a most disconcerting way. If we understand Mr Baldwin rightly, he means that he is in favour of the view which appears to be common with the great majority of our councillors on the subject. All of them express in general terms their concurrence with the view held by the *Economist* that, on the whole, in present circumstances a definite policy of maintaining stability in prices is desirable. A phrase in the memorandum of the Federation of British Industries, however, shows which way the wind is blowing. For, after paying lip service to this principle, they say that "The object of a policy of price stabilisation should not be to 'stabilise' prices at the abnormal low level shown by the index number at the bottom of a severe depression, but at such an increase on this level as normal trade activity would entail." But are prices abnormally low, and, if so, on what standard? The significance of the phrase obviously depends upon what the Federation of British Industries considers to be a normal level of prices, and its vagueness obviously opens the door to an uncertainty which illustrates the difficulty of departing from the doctrine of stability. We do not conceal that there are very different prices and ability to achieve them are very different things. Mr McKenna is perfectly right in calling attention to the fact that if the volume of trade expands, as we desire, not without hope, that it will soon do, our monetary mechanism must be sufficiently elastic to permit an expansion of credit and of currency. So far as credit is concerned, we do not doubt that our banking system would be quite adequate to deal with this; but it is possible that when a trade revival comes

we may have some difficulty in securing the necessary expansion of the note circulation of the country under the terms of the Treasury Minute of 1919, which imposes an arbitrary limit on our paper circulation. This, however, can be dealt with when the question arises, if it is not previously solved by a unification of our note issue under the Bank of England. But this increase of money to deal with a growing volume of trade is quite a different matter from expanding money sufficiently not only for an increased volume of trade, but also to stimulate a rise of prices. In other words, stability of prices does not mean fixity of the money of the nation, any more than an increase or decrease of money necessarily means deflation or inflation. Nor do these much abused words necessarily apply to even the rise or fall of prices. Inflation is perhaps best defined, on the lines suggested by Mr Baldwin, as a rise of prices brought about by the creation of an artificial purchasing power, and deflation as a fall due to an artificial restriction of purchasing power. Like many definitions, this statement needs a good deal of explanation; but even in its crude form it serves to emphasise that we should only speak of inflation and deflation in relation to a deliberate regulation or manipulation of money. It is in this sense that we are opposed to inflation, and it is in this sense that the instinct of the public has resisted the apparent attractions of inflation.

It would have been natural to suppose that after two or three years of the acutest depression almost any proposal would have been eagerly seized upon which offered any hope of improving employment. Yet hardly any responsible Labour leader has shown any sign of supporting the demand for inflation, and even among employers who are likely to benefit most, opinion is very much mixed. The reasons for this are, we believe, first, the examples of Russia and Germany, which are taken to mean that in the end the plan leads to disaster; second, the feeling that even in small doses inflation which does not increase the real resources of the country means higher profits and a reduced standard of living, both for the wage earner and for the mass of the middle classes; and, finally, there is the idea rooted in the sub-consciousness of the people that we live by foreign trade, and that inflation will not help us to regain the markets of the world. In banking circles the question is considered from its broader aspects and on grounds which we shall have other occasions to discuss. But there is one consideration which is worth emphasising here—namely, that if the truth be told, the after effects of the last period of wild inflation have by no means all been liquidated yet. The banks are still carrying many concerns which will take a considerable time to recover a completely sound position, and so long as this condition persists, the banking community is being constantly reminded of the unsound elements which are almost certain to creep in when the period of credit expansion is in full swing. Their psychology, therefore, is all against speculative expansion.

But while these considerations have meant that the enchantments of the inflationists have fallen upon deaf ears, it is none the less important that if an improved tone is to be fostered in British trade there should be confidence that prices are not likely to sag further at present. At the moment the price tendency is slightly in an upward direction, as figures in our Trade Supplement this week show. But Mr McKenna is right in thinking that it is a restricting influence on trade if employers think that for any reason prices are going to fall again. We welcome, therefore, Mr Baldwin's assertion mentioned above. But his statement that active deflation will not be pursued—which is an important qualification of the doctrine laid down in the Cunliffe report—was thrown out in a rather casual manner, and, in any case, the business world does not know how far it commands the support of the Bank of England. There can be no real confidence among industrialists as to the future of prices so long as there is room for doubt as to whether the condition of the dollar exchange is, or is not, to override the desire for stability of prices in Great Britain. When prices alone are under discussion, there are very few who dis-

pute that in present circumstances steadiness is the best for trade. But if prices fall in America, are we to allow the £ to depreciate in terms of the dollar, or are we to follow America's lead and reduce our own prices in order to keep the exchange steady? It is on this point that we think the industrialists of the country have a right to ask for fuller information, and to know what will be the policy of the Bank of England. But before a statement is made, we are of opinion that an exchange of views should take place between financiers who realise the advantages to this country of a steady dollar exchange in commercial transactions, employers who want to be satisfied that there will be no further fall of prices, and the Government, who would like to be able to buy dollars cheap in order to pay off the American debt.

UNEMPLOYMENT INSURANCE.

No one has ever yet devised a system of State insurance that is free from imperfections; and the scheme of Unemployment Insurance now in force in this country is no exception to the general rule. But many of the chief accusations so freely hurled against this scheme arise from a misunderstanding or ignorance of the facts, which should be dispelled by the "Report on National Unemployment Insurance" just issued in blue-book form* by the Ministry of Health. This report has many merits. It tells the main story clearly, yet gives a mass of detailed information. It is not obtrusively propagandist. It brings the story of the working of the scheme from its inception right up to July, 1923, and is therefore laudably up to date. If those who now talk loosely about "doles" and insolvency will read this report, they will probably concede at least two points: First, that, in view of the crisis which followed so soon after, the beginning of the scheme in a small way in 1912 was a piece of national good fortune. Secondly, that, considering the phenomena conditions under which the scheme has been developed its financial position is nothing like so precarious as might have been expected.

The history of unemployment insurance may be divided into three chapters. When launched in 1912 the scheme embraced about 2½ million workpeople, the weekly benefit for adults being 7s, and the joint weekly contribution of employers and employed 5d and the State contribution 1½d per week. In 1916 the scheme was extended to other classes of workers who were deemed likely to suffer unemployment immediately after the war. These extensions brought the total number of insured up to about 3½ millions. Then in November, 1920, came a far wider extension, which brought the total up to 11½ millions. The Act was made to apply, with certain exceptions, to all manual workers, and all non-manual workers earning £250 a year or less. The chief exceptions were persons engaged in agricultural or private domestic service permanent civil servants, and employees of local authorities and railway companies. At the outset of the expanded scheme weekly rates of benefit began at 15s for men and 12s for women. For a short period in 1921 these rates were raised, but since June, 1921, the 15s and 12s rates have gained in force. Weekly contribution rates under the expanded scheme began as follows:—8d for a man and 6½d for a woman (contributed in equal shares by employers and employed), the State adding a quarter. But since November, 1921, they have been as follows (for men):—Employer, 10d; employed, 9d; State, 6½d. These rates of contribution are to remain in force until the Unemployment Fund has paid off its debt, which at June 30th amounted to £15,600,000.

How comes it, it may well be asked, that the debt is not larger, in view of the prolonged existence of extensive unemployment? In 1913 and 1914 employment in the insured trades was very good, and during the war unemployment in those trades almost disappeared. Thus at the

* Published by H.M. Stationery Office Price 3s net.

date of the Armistice the Fund had a balance in hand of about £15,200,000, which grew to £22,200,000 by November, 1920. Thus in facing the past two years of exceptionally heavy unemployment the scheme started in an unexpectedly good financial position. This, as we have seen, has been changed to a deficit of £15,600,000. It is true, as is pointed out in the report, that borrowings amounting to that figure are not very large in relation to the Fund's annual income of £47 millions. But unfortunately, with no sign on the horizon of a really substantial trade improvement, this deficit must presumably be expected to increase. The report before us says:—"The debt is not so large that it cannot be paid off in a comparatively short space of time as soon as trade revives, and the financial stability of the scheme is not in question." Quite so. But whether it will be possible to make the same claim a few years hence time and economic developments alone will show.

We come now to the question how far it is justifiable to describe unemployment benefit, as it is often described, as a "State dole." That the justification is small is shown by the following aggregate figures:—In the past 2½ years £128,000,000 has been paid out. Of this sum, three-fourths, to quote the report, "has been provided by, or will be a future charge upon, insured workpeople and their employers; not more than one-fourth is provided by the taxpayer." Broadly, those facts dispose of the word "dole" as an accurate description. The word was originally applied to grants, which, while administered through the Employment Exchanges, had nothing to do with the National Unemployment scheme—that is to the "out-of-work" donation instituted for a time after the Armistice. This donation scheme was devised to cover the period of violent post-war readjustment, when service men and war workers were changing over to peace-time employment. That was a "dole." The Exchequer bore the full cost, and no charge was involved on the Unemployment Insurance Fund. The total amount paid out in the shape of these donations was £61,659,000. The only real justification that can be attempted of calling the present unemployment benefit a "dole" arises in the case of "uncovenanted" benefit. The long-continued trade depression had the effect that many workers who had steadily paid their contributions suffered so prolonged an unemployment as to exhaust completely their benefit rights. Fresh measures had to be devised to save them from destitution or the Poor Law. So a system of "special periods" of extra or "uncovenanted" benefit were instituted. We are at the moment in the early days of the fourth "special period," and it is these renewals of payment of uncovenanted benefit which have told so heavily upon the funds of the Unemployment Insurance scheme. Technically, people in receipt of uncovenanted benefit are receiving something to which they have not acquired the right by their contributions. Nevertheless, such receipts may be regarded as advances on account of benefits to which they may hope to acquire the right if and when employment comes their way once more. Contributory rates for those who are employed, as well as for employers and the State, are to be kept at their enhanced level until the Fund's debt has been paid off. Thus it may be claimed that, even in the case of uncovenanted benefit, the contributory principle has not been abandoned, and, further, that the finance of the scheme itself is sound. The present debt arises because the majority of those it now has to carry were not inside the scheme and contributing in the war years, when employment was good.

So long as the present acute depression lasts it may not be possible to do more than meet fresh emergencies as they arise by temporary measures. But in the whole matter of unemployment insurance we have reached the stage where it is time to look back and learn from an adequate period of experience, and lay plans against the return of normal times. One possible development to which great attention is being given is on the line of unemployment insurance by industries. Scope for such development was allowed by the Act of 1920. But in view of the abnormal trade depression only one such special scheme has been evolved. Whatever the future may hold in store, we may be grateful that the skeleton was built before the war of a system that has proved an immense national asset in times of abnormal difficulty.

THE PROBLEM OF HUNGARY.—II.

(BY A CORRESPONDENT.)

"WERE the economist King," the problem of Hungary's future could be stated in terms which by no means preclude solution. That reasonable freedom of trade is an essential factor in reconstruction is a condition applicable not solely to Hungary, but to all the secession States. The desolation of the Danube, with no more than four loaded barges per day entering the Hungarian section of the river, bears mute testimony to the effect of national hostilities, tariffs, and frontiers in South-Eastern Europe. Given, however, some abatement of existing jealousies and restrictions as between the Danubian States, the purely economic situation of Hungary itself is grave but not hopeless.

In a previous article it was suggested that, granted an adequate measure of land reform, which would carry with it the necessity of finding substantial capital to be loaned to peasant proprietors for the purchase of machinery and fertilisers, Hungary could establish a sufficient surplus of cereals to balance all necessary imports. The financial position is equally susceptible of betterment. At the end of September the fiduciary circulation at 588 milliards represented in sterling, converted at the effective rate of exchange, less than £4½ million. Were the Government able to avoid the necessity of further inflation, the harm done to the country's finances would be in no way irreparable.

The question really resolves itself into whether stability in Hungary can be attained, and reconstruction effected, without a foreign loan. If the answer be in the negative, it still remains to be asked whether the conditions on which alone foreign assistance would be forthcoming or, if forthcoming, effective, are likely to be realised.

From the fact that conversations in September at Geneva between Count Bethlen and the representatives of the Little Entente are reported to have reached a conclusion so favourable as to warrant instructions being given to the Financial Committee of the League of Nations to prepare a scheme for a Hungarian loan, in anticipation of a formal request from the Reparations Commission, it may be inferred that Hungary's neighbours are prepared, at least in principle, to assent to raising their liens on Hungary's assets. Failing such assent, all talk of a loan would be a hollow sham, and though a common attitude in Buda Pesth is still to depict the Little Entente in the attitude of a cat releasing a mouse—with ultimate intent unchanged—there is no warrant for endorsing such a view.

(Since the above was written the Reparations Commission has announced itself "disposed in principle to consider the waiving of liens on certain property and resources of Hungary," and has invited the League to prepare a plan of reconstruction, which "would involve exercise of control by the League with which would be associated the States who are creditors of Hungary." The last proviso may well be the stumbling-block.)

Count Bethlen is understood to have made it clear that, failing a foreign loan, neither he nor Dr Kallay, the Minister of Finance, would continue to be responsible for the administration of the country. It is self-evident that on existing lines of policy, without some help in stable currency, the 1923-24 budget must disclose a menacing deficit, and entail further inflation, and perhaps a final crash in the value of the korona. The published estimates for 1922-23 provided for revenue of 153 milliards, against 193 milliards expenditure. Loss on State enterprises accounted for 27 milliards (the bulk under the head of railways), while 48 milliards were chargeable to the Ministry for Home Defence. With a population of 7½ millions, Hungary budgeted for 250,000 civil servants, conceding to them and their dependents (some three-quarters of a million in all) grants in aid to reduce the cost of living at a charge of 24 milliards. On the revenue side, as opposed to a burden of indirect taxation which presses intolerably on the poor, income-tax, which in 1921-22 yielded one-sixteenth of the total revenue, was in 1922-23

estimated to produce 19 milliards, or 12½ per cent. of the whole.

The dilemma is obvious. A balanced budget entails fewer uniforms, demands drastic cutting down of *personnel* in railway and other departmental employ, and requires heavy sacrifices of income by the rich, and, above all, by the large landlords. Without such resources as would provide compensation for "axed" officials, it may be doubted whether the Cabinet would dare throw a hundred thousand men out of employment to swell the various existing brands of agitation and discontent. Unless it were in a position to "deliver the goods," or, in other words, to guarantee future stability if supported, what chance would any Government have of successfully taxing the very class which dominates the country? These are the salient points in the case for a loan, the implication being that, *rebus sic stantibus*, it is worth Europe's while to gamble on a chance of success rather than watch a certain failure with far-reaching consequences of disorder.

Unhappily for the peace of Europe, the Horthy régime called spirits from the vasty deep which the Financial Committee of the League of Nations may find it hard to exorcise. Under present circumstances, a loan without strict foreign control of its expenditure would be equivalent to inviting trouble, and is outside the scope of practical politics. On the other hand, before Count Bethlen returned from Geneva, complaints could already be heard in quarters of Buda Pesth not to be neglected that the Premier was too compliant, that control would be intolerable, that Hungary must stand, die if need be, on her own feet. While supervision "in an advisory capacity" by an English Controller might be welcomed, there are dangerous elements in Hungary which would go far to jeopardise the position of any administration acceding to a control in which members of the Little Entente participated. Regarded as an instrument for keeping ebullitions of proletarian discontent in check, the Army can be relied upon. To what extent its loyalty to the administration is tempered by sympathy with the "Awakening Magyar" and kindred movements is a less calculable factor. Rifles that would be trained readily to the left might not go off so easily to the right, and a sinister feature of the situation is that not only does one brand of Hungarian irredentism receive more or less open encouragement from a greater Fascist power, but, if reliable informants are to be trusted, secret subsidies to several of the underground military organisations in Hungary are furnished by a member of the Little Entente on the principle, presumably, of *quem volo perdere, demento*.

It is not without significance that since his return to Buda Pesth Count Bethlen has been at pains to insist that no "political conditions" would be attached to a foreign loan, and that the Regent was lending no authority to the increasing activities of White irredentists such as Hejjas and Baron Pronay.

Should these initial difficulties be overcome, and a form of control devised acceptable to all parties, the position of the Controller is likely to prove unenviable. His first serious step must be construed as a violation of the integral sovereignty of Hungary. To confine himself to the negative task of seeing that the loan is not applied for warlike purposes would be to leave untouched the issues fundamental to permanent stability and to the repayment of the capital in his charge. To insist, as he must if his trusteeship is to be effective, on a radical alteration in the basis of taxation, and, above all, in the tenure of land, is to assume a position little different from that of an alien dictator. So, at least, his attitude is likely to be described, and even on the supposition that the terms of the loan can be agreed upon, that the Magyar aristocracy can persuade the Little Entente as to their good intentions, that guarantors for the loan can be secured, and a Controller of the highest tact and authority appointed, there remains the need of assurance that the scheme of reconstruction will not break down half-way, when most of the funds have been spent, through refusal of the Hungarian Government to carry out to its conclusion a policy increasingly distasteful to themselves.

A singularly intelligent representative of working-class Hungary (who is not a Communist) recently remarked to the writer that the present régime could maintain itself in

power only so long as it induced sufficient Hungarians outside its own ranks to hate the Governments of other nations more than their own. There is substance in this, admittedly *ex parte*, view, and it illustrates the crux of the problem. Let it be admitted that the overhanging shadow of indefinite claims for reparation has accelerated Hungary's downward progress, that her neighbours have given her small encouragement to put her house in order, that no one but the Hungarians themselves has the right to say what sort of Government Hungary shall have, there still remains the "business" point of view which actual and potential creditors of Hungary cannot be expected to overlook—that reconstruction is not to be effected by the simple operation of a loan, but by the common effort and sacrifices of all sections of the people, inspired by a Government representing the common will.

IRON ORE RESOURCES OF THE WORLD.

"Iron—cold iron—is master of them all."

EARLY in the eighteenth century, when the existence of the British iron trade was thought to be threatened by the competition of the American Colonies, Sweden, and Russia, a pamphlet was written entitled "The Interest of Great Britain in Supplying Herself with Iron," urging that the American forges should be suppressed, or, at least, no new ones allowed to be erected, the duty on imported iron should be increased, and a premium given on the output of British iron. The writer admitted that "Iron ore is a mineral that abounds in most parts of the earth, and that there is no considerable tract of this globe wherein it may not in some shape or other be found," but there were "few counties in England wherein probably it may not be found.....Cumberland and Lancashire are supposed capable of answering the purposes not only of this nation, but even of the universe."

The truth of the assertion as to the abundance and wide distribution of iron ore has since been fully proved, and it is now estimated (by Professor F. W. Clark for the United States Geological Survey) that iron forms 4.44 per cent. of the earth's crust—a proportion exceeded only by oxygen, silicon, and aluminium. Fortunately, however, there are portions of the earth's surface containing up to 70 per cent. of iron, and any material containing upwards of 20 per cent. is usually referred to as iron ore. The utility of iron requires no comment, but it is interesting to note that of the total world production of metals pig-iron accounts for 95 per cent., or 20 times that of all other metals combined, and 60 times that of lead, which is the metal produced in the next largest quantity. At the date of the pamphlet just referred to the writer thought that ore could not "be converted with advantage into good malleable iron with any other fire that we know of, but what is made of wood charakt, or charcoal." Consequently Great Britain was then producing less than 20,000 tons of pig-iron per annum, but since then many inventions have contributed to increase production, so that in 1913 the world production approached 80 million tons, of which Great Britain produced 10,260,000 tons, Germany (as then constituted and including Luxembourg) 19,000,000 tons, France 5,100,000 tons, and the U.S.A. 30,966,000 tons.

The question of the iron ore reserves is second in importance only to that of coal, and the subject has naturally received considerable attention; nor is the subject of local interest merely, for modern transport methods make it possible to smelt ores thousands of miles from where they are raised—half the iron made in this country is produced from Spanish iron ore, while Germany has recently been importing ore from Newfoundland. The latest comprehensive review of the iron ore resources of the world is that undertaken by the Imperial Mineral Resources Bureau, at the request and with the assistance of the National Federation of Iron and Steel Manufacturers. The results have been published in eight volumes—one devoted to Great Britain, four to the other countries of the British Empire, and three to foreign countries.

In the early days of the industry, when the furnaces were small and the processes available crude, the iron

content of the ore was the most important consideration, but when ores containing as little as 20 per cent. of iron can, in favourable circumstances, be smelted, it is clear that the iron content, though obviously important, is not the predominant consideration. Other considerations are the mass of ore available, the cost of transporting ore to fuel or fuel to ore; the cost of "winning" the ore—which depends partly on the cost of labour and partly on the situation of the ore and hardness of the rock; the cost of the "flux"; the percentage of harmful material present; the mechanical condition of the ore, &c.

As the quantity of high-grade ore gradually lessens, rendering it necessary to mine and transport ores of inferior quality, the practice known as "Beneficiation" has arisen, whereby the amount of useless matter to be transported (such as water, silica, &c.) is reduced, and the percentage of iron increased. The most important methods of beneficiation in use are:—(1) Heating to drive off volatile matter, e.g., the carbonate ores of Great Britain are calcined either in open heaps or in kilns, to drive off water and carbon di-oxide, which reduces the weight of the ore sometimes by as much as one-fourth; (2) washing and mechanical concentration, which is used in some parts of the United States and Sweden, to eliminate siliceous and argillaceous impurities; and (3) magnetic concentration, which is practised both in the U.S.A. and Sweden.

The year 1913 was the year of maximum production of iron ore, and seems likely to remain so for some years to come. We therefore give below the 12 countries which in that year produced upwards of one million tons, together with the import and export figures for that year, where these are available. The figures for Germany and France are for those countries as constituted in 1913, the changes consequent on the war being dealt with later.

IRON ORE PRODUCTION, IMPORTS AND EXPORTS IN 1913.

(In Thousands of Tons.)

	Production.	Imports.	Exports.
United States	59,643	2,595	1,042
Germany and Luxembourg	35,364	13,794	2,571
France	21,566	1,388	9,905
United Kingdom	15,997	7,441	5
Spain	9,703	..	8,676
Russia	7,947	?	?
Sweden	7,355	3	6,336
Austria-Hungary	5,016	927	104
Cuba	1,582	..	1,582
Algeria	1,327	..	1,343
Newfoundland	1,243	..	1,243
Total (including other countries).....	170,149	..	..

It will be seen that the four biggest consumers of iron ore are also the biggest producers, and that Spain and Sweden export nine-tenths of their production. The iron industry of Belgium is based on imported ore, the home production in 1913 amounting to only 148,000 tons, and imports to 6,971,000 tons. The predominance of the U.S.A. is most marked, and this predominance has since increased, for in 1920 America raised 68,372,000 tons of ore out of a world production of 122,000,000; that is, the rest of the world, which in 1913 produced 110,636,000 tons, produced in 1920 only 54,000,000 tons.

In the course of this and succeeding articles we propose to examine the reserves of this and other countries, and the prospects of their development, dealing first with Great Britain, next with the other countries of the British Empire, and finally with foreign countries.

GREAT BRITAIN'S RESOURCES.

The volume dealing with the United Kingdom summarises the ore resources as follows:—

IRON ORE RESERVES—GREAT BRITAIN.

(In Millions of Tons.)

	Actual Reserves	Probable Reserves	Possible Reserves	Ores Raised 1917, 1918, and 1919.	Total Reserves 1920.
Jurassic ores	1,212.00	2,177.00	420.00	35.30	3,773.7
Carboniferous bedded ores	1,049.50	1,247.09	5,423.23	3.55	7,716.3
Hematites	45.00	90.00	..	4.70	130.3
Other deposits	..	15.55	75.50	0.31	90.7
Totals	2,306.50	3,529.64	5,918.73	43.86	11,711.0

(1) *The Jurassic Ores.*—It will be seen that 80 per cent. of the ore now being worked comes from the Jurassic beds, where the actually developed reserves amount to over 1,200 million tons—equivalent to 100 years working—and that the probable total quantity available is something like three times as much. Out of the total reserves of 3,774 million tons, 428 million tons are in the Cleveland district of Yorkshire, 490 million tons in the Frodingham district of North Lincolnshire, and 2,245 million tons in the Northampton bed of Northants, Rutland, and South Lincolnshire. The reserves of Jurassic ore were of great importance during the war, when the submarine campaign curtailed supplies of Spanish ores, although the use of this phosphoric ore involved extensive alterations to much of the blast furnace and steel plant of the country, which was designed for acid pig-iron and steel. In 1918 about 30 per cent. of the total output of the country came from the Cleveland district, 23 per cent. from Northampton and Rutland, and 17.5 from North Lincolnshire.

The average iron content of the Jurassic ironstone is 27.6 per cent., varying from 22.7 per cent. in the Frodingham stone to 32.5 per cent. in the Northampton stone. Although relatively poor in iron, the Jurassic ores are of great economic importance, since they are of considerable thickness and extent. Moreover, except in the Cleveland district, where the workings are now exclusively underground, the ironstone is for the most part quarried at the surface after a layer of sand, soil or clay has been removed. This enables very economical working, for whereas the average output per man per shift is little more than 2 tons in underground workings, it is 4 or 5 tons per man per shift in the open workings, and as much as 15 tons where mechanical excavators can be used. Most of the ore raised in Cleveland and North Lincolnshire is used locally, but from returns made to the Ministry of Munitions in 1917, it was found that 27 per cent. of the ore raised in South Lincolnshire, Rutland, Northampton, Leicester, and Oxford was consumed locally, 85 per cent. of the remainder went to blast furnaces in the coal fields—particularly the Derbyshire and Nottingham coal field—and the balance was almost equally divided between the furnaces of Cleveland and North Lincolnshire for mixing purposes.

(2) *Carboniferous Bedded Ores.*—Formerly the carboniferous ores furnished the bulk of the raw material used in this country, but the thicker and more profitable seams are now more or less exhausted, and the reserves occur mostly as nodules or in thin bands. The output, which in 1855 amounted to 7,848,600 tons, had therefore fallen by 1918 to 1,122,800 tons. At present it is only possible to mine the ironstones apart from their associated coals in North Staffordshire, where the beds of ironstone range from 1 ft to 6 ft in thickness. The ironstones of the coal measures are still abundant and fairly rich in iron content, but because of the thinness of the individual beds and the amount of waste left in working them; the irregularity in the occurrence of any particular bed; the compact nature of the strata; and the adherence of foreign deleterious substances which must be removed mechanically or by weather, the extraction of the iron is not profitable. Coal measure ironstone is smelted chiefly in Staffordshire and Shropshire; in Yorkshire the smelting of coal measure ores is confined to the Low Moor district, and in the Sheffield, Derbyshire, Nottinghamshire and S. Wales districts the ores have practically ceased to be used at all. Warwickshire sends some ironstone to South Staffordshire, but does not now smelt any locally, while the output of the remaining coalfields is negligible. In Scotland, the output has fallen from two and a half-million tons in 1876 to about 350,000 tons in 1918, obtained from the coal measures of Ayrshire, Fifeshire, Midlothian and the Central Coalfield.

(3) *Hematites of Cumberland and Lancashire.*—The hematite ores of Cumberland and Lancashire are of particular importance, as they are the only native ores low in phosphorus and sulphur. They therefore furnish pig-iron very suitable for the acid process, and yield an exceptionally pure steel.

Before the war output was in the neighbourhood of 1,700,000 tons per annum, but in 1920 the output was only 1,257,000 tons. The actual reserves amount to about 45,000,000 tons, sufficient, if 1,500,000 tons are raised annually, for about 30 years; there are probable reserves,

however, sufficient to prolong the life of the mines for a further period of sixty years.

(4) *Other Deposits.*—Deposits of ore other than Jurassic, carboniferous bedded and hematites occur in many areas, but nowhere in sufficient quantity for economical working; the ore raised from these "other deposits" amounted in 1917, 1918 and 1919 to no more than an average of 100,000 tons per annum.

It will be seen that there are very considerable reserves of iron ore in this country, but that except in Cumberland and Lancashire it is relatively poor in iron content; for this reason approximately half of the pig-iron made is from richer imported ore, which is smelted in furnaces situated on or near the seaboard, with coalfields not far away inland. In spite of the efforts made during the war to develop home ores, the proportion of ore imported is now slightly higher than before the war on account of the high cost of transport and fuel.

HOME RAILWAY TRAFFICS AND PROSPECTS.

The railway statistics for June published by the Ministry of Transport have appeared this week, and we are enabled to gain some idea of the position at the end of the first half of the current year. Neither these statistics nor the weekly traffic returns give expenditure figures, without which the stockholder can obtain no clue as to his prospects. The Ministry of Transport, however, does publish with the gross figures the comparable totals for last year of the constituent and subsidiary companies of the four groups, from which it is possible to see the effect of trade conditions and changes in fares and rates upon the gross takings of the railways:—

	January to June, 1923.	Inc. or Dec.	%
Passenger traffic—			
Passenger journeys (excluding season ticket holders)	595,100,000	.. + 20,271,000	.. + 3.5
Passenger receipts	£29,167,000	.. — £2,958,000	.. — 9.2
Receipts from season tickets	£6,173,000	.. — £204,000	.. — 3.2
Parcels, &c., traffic	£6,953,000	.. — £849,000	.. — 10.9
	£42,293,000	.. — £4,011,000	.. — 8.7
Freight traffic—			
General merchandise ..	31,058,000 tons	.. + 3,626,000	.. + 13.2
Coal, coke, and patent fuel	112,485,000 tons	.. + 19,695,000	.. + 21.2
Other minerals	32,436,000	.. + 9,770,000	.. + 43.1
Total	175,979,000	.. + 33,091,000	.. + 23.2
Freight receipts—			
General merchandise ..	£28,287,000	.. — £3,705,000	.. — 11.6
Coal, coke, and pat. fuel ..	£20,737,000	.. + £877,000	.. + 4.4
Other minerals	£8,314,000	.. + £1,457,000	.. + 21.2
	£57,338,000	.. — £1,371,000	.. — 2.3

While the number of passenger journeys has increased by 3½ per cent., the reduction in fares, which came into force at the beginning of this year, has reduced the takings by over 9 per cent. Again, an increase of over 23 per cent. in the tonnage of goods carried was accompanied by a reduction of 2.3 per cent. in goods receipts—entirely, it may be noted, on account of the fall in receipts from general merchandise. The total tonnage carried shows a noteworthy increase in comparison with last year. Moreover, a comparison with 1913 is by no means unsatisfactory. For the six months of 1923 general merchandise carried represents 45 per cent. of the tonnage carried in the whole of 1913, coal, &c., 49.5 per cent., and other minerals 45.5 per cent.

But the six months' figures, interesting though they are, do not give any idea as to the net results of working. They tell us, it is true, that passenger train miles increased by 5.4 per cent., that goods train miles increased by 12.4 per cent., that the average goods train load had increased by 6.4 per cent., and that the net ton miles per engine hour were 4.4 per cent. higher than in the first half of 1922. But whether there has been a net saving in general working costs, and if so, whether it has been sufficient to meet the decline in gross revenue, is purely a matter of conjecture. Wages are lower, but, on the other hand, the cost of coal may have been higher. Some

economies in administration expenses may have been achieved, though up to the present these have probably not been very extensive. The weekly figures published by the London and North-Eastern, which is the only one of the four companies to give a comparison with the corresponding period of the previous year, show a decline in gross receipts for the 42 weeks ended October 21st of 5 per cent., the decreases in passenger and goods receipts being 8.7 per cent. and 2.5 per cent., respectively, which is remarkably similar to those of all the railways for the six months, as shown above.

But whatever may be the actual decline shown in total gross receipts, and it is only possible to gain a rough comparison with last year by taking the aggregate figures of all the constituent companies, we must still remain in the dark as to net receipts and dividend prospects for the current year. It is possible that the dividends anticipated at the beginning of the year, when the new stocks were inaugurated, may not be actually earned on the ordinary and deferred stocks, but it is, on the other hand, quite possible that they will be paid, seeing that the large reserve funds of the four companies have so far not been drawn upon to any extent, and are available for increasing dividends if the directors think it desirable to do so. The Home Railway market has, since the turn of the half-year, been fairly steady, and current prices, although below those reached in the boom of the spring, are substantially above the lowest points touched this year, as may be seen from the following table:—

	1923.		Oct. 26,
	Highest.	Lowest.	1923.
London, Midland, and Scottish Ord. ..	108½	102½	106½
London and North-Eastern Deferred..	39½	28½	32½
Southern Deferred	43½	34½	40½
Great Western Ord.....	118½	108½	111½

The Great Western paid a dividend at the end of 1922, when the subsidiary companies had been absorbed, of 8 per cent. Should this be maintained, the yield at the current price works out at over 7 per cent.

IMPROVEMENT OF INDUSTRIAL RELATIONS.—III.

THE CASE FOR THE PUBLICATION OF THE WORKING RESULTS OF ALL STAPLE INDUSTRIES.

EXPERIENCE gained from the operation of the Coal Mines Agreement, to which reference was made last week, suggests the possibility of the extension of a similar principle to other industries.

There is no allegation so far that the publication of figures showing the proceeds of sale and cost of production of coal has damaged anyone, and this fact should go far to dispose of the objections always raised to any suggestion for the disclosure of results in other industries. Such objections can arise from a few causes only:

(1) The ingrained aversion which owners and directors have to disclosing what they consider to be their private affairs, not only to their officials and workmen, but also to their competitors and the public.

Can it any longer be said that the proceeds of sales, the cost of production, and the surplus remaining are the private concern of any individual or group of individuals? If the owners make mistakes it is not only they who suffer; the workers engaged on the undertaking depend upon its success for their livelihood, and are therefore vitally interested in seeing the costs of production reduced to a minimum, a result that can only be attained by harmonious co-operation between owners and workers; the effects of mistakes by the management, as well as of bad workmanship or slackness on the part of the workers, can only be shown by an honest publication of results. Moreover, the general public as consumers have a vital interest in the cost of production, an interest which has been actively brought home to them by the high prices charged during the war for the ordinary necessities of life, and the large fortunes made during that period by many of those, both companies and individuals, engaged in their production and distribution.

Under these conditions the case for the publication of the aggregate proceeds of sale, costs of production, and

margins of surplus in, at any rate, the more important industries of the country is a strong one, if labour and consumers generally are to be placed, as they should be, in the position to form an opinion as to the reasonableness, not only of the profits of capital, but of the wages of labour.

(2) A second possible objection that would be raised by owners to the publication of figures of costs and results is that it would disclose valuable information to competitors, both domestic and foreign.

So far as domestic competitors are concerned, the objection would seem to be met by the publication only of the aggregate figures of all producers in a district, as in the coal industry. In the case of foreign competitors an average figure would give no indication of the lowest costs or of the margin which the most efficient producers had in hand to meet competition.

It happens, however, that there is on record a practical demonstration of the fatuity of this whole argument. In the years 1911 and 1912 full and detailed reports of the manufacturing costs of the United States Steel Corporation were published as a result of an investigation by the Federal Government; it has not been suggested, and the subsequent prosperous course of this great corporation would at once refute any suggestion, that its business has been hampered, or its prosperity unduly diminished, as a result of such publication.

(3) A third possible objection to publication is that at certain times the profits of an industry may be so large that the management are afraid to disclose them. This may be so in a few cases, particularly where the industry is to some extent a monopoly; but it does not, and cannot, apply to our great staple industries, where competition must on the average keep profits within reasonable limits. In so far, however, as this argument exists, it affords an even stronger reason for insisting on publication.

Much labour trouble and much discontented criticism on the part of consumers would be avoided by publication by all our staple industries of summary figures on similar lines to those in force under the Coal Mines Agreement. Such a result could be attained either voluntarily or by legislation. In the case of the coal mines, legislation first compelled the filing of financial returns with the Coal Mines Department, but these were furnished under pledges of secrecy, and it was only as a result of the Coal Mines Commission Act that their publication was authorised. The Labour members of the Commission asked for the submission to the Commission of the individual returns, but this request was not pressed, and publication was limited to summaries substantially in the form of the present quarterly returns. These returns were made compulsory under section 21 of the Mining Industry Act, 1920, but publication was restricted to district summaries, and the secrecy of individual returns was jealously maintained. On this precedent, it would seem as if the authority of Parliament might perhaps be invoked in other industries, so far as to require the filing of periodical accounts in such form as to disclose the gross proceeds, costs, and net proceeds of each undertaking, which would be aggregated and summarised by districts. If these individual returns were made to a Government Department the expense of tabulation and verification would be considerable, and this could be avoided if the owners' and workers' associations for the industry were, by their respective auditors, to verify the individual returns as far as necessary, tabulate them, and forward the certified tabulations to the Government Department concerned for publication. This is the procedure followed in the coal-mining industry, and in effect with the railroads, which are now grouped into four distinct companies. Other industries, such as iron and steel, cotton, woollen, ship-building, and engineering, which have their own trade associations and unions, might be required to follow the same procedure, and to avoid additional expense in a Government Department the district aggregations might be audited and certified by auditors selected from a panel approved by the Board of Trade.

Unfortunately, the railways have not yet seen the wisdom of the publication of periodical monthly or quarterly accounts of their working expenses and net earnings, gross earnings alone being reported, alleging that it is impracticable to prepare such statements with any degree of accuracy. In the United States, on the contrary,

monthly statements of gross and net earnings have been published for over 25 years, and no suggestion that these accounts are not reliable or substantially accurate have been made.

In fact, it must be admitted that this country is behind the United States in methods of accountancy, and the inability for this reason to prepare monthly or quarterly accounts is one of the underlying objections to their publication.

The legislation for coal mines was a war measure, and it is doubtful if, under normal circumstances, a law requiring the publication of accounts would have passed without most strenuous opposition. It may be doubtful whether even now other industries are prepared to follow that example. Among the more enlightened employers in most industries there are undoubtedly many who are keenly anxious to secure permanently harmonious relations with their employees, and there are some who have already adopted with success the plan of sharing with them the net proceeds of their undertakings on a more or less permanent basis. It is to be hoped that the influence of this minority may in time leaven the mass, and it is probable that legislative action can be effectively invoked only as a majority of the owners in an industry are in favour of the publication of the produce, cost, and surplus of the whole.

Assuming that the principle of publicity on the lines indicated is accepted in one or more of our staple industries, there are still other essentials to the removal of friction and suspicion between capital and labour and the consumer.

In the first place, the form of the published returns would require much careful consideration. In the coal industry returns, many months of discussion were required to arrive at the present forms, but the result is a clear statement giving all the main factors involved in the operations of coal mining. The most satisfactory way of arriving at similar results in other industries would be the appointment of joint committees of masters and men, with an advisory chartered accountant appointed by each side, and perhaps a third chartered accountant appointed by the Board of Trade as chairman.

Such committees would have little difficulty in a few months' time in arriving at clear and intelligible forms, which would disclose all material facts. The close relationships engendered between the members of such a committee during their discussions would, in all probability, be such that they could then proceed to discuss the basis of wage fixing on the general principle of the Coal Mines Agreement, with a reasonable prospect of success.

A second essential is the removal of suspicions and of veiled hostility between owners and men, which too often result in misunderstanding and strikes. In the case of the coal mines, the most progressive elements among both masters and men realise the inherent advantages of the scheme, and are alive to the difficulties which still have to be surmounted. The conversion of the extreme elements on both sides is a more difficult matter, and can only be accomplished by persistent education, particularly among the rank and file of labour, who, lacking the higher education of which their leaders, as well as the owners, have had the advantage, are too apt to look at new suggestions as only another attempt to "do them in." The agreement has introduced the idea of both parties being interested in obtaining the best results, and the rank and file should quickly learn that such elementary matters as increased output, reduced absenteeism, and steady work, are essential to their own welfare, and that any individual "slacker" is striking a severe blow at the prosperity of his fellow-workers. This new attitude of mind would be much assisted by the greater interest which should be taken by all owners in the welfare of their employees, not only while at work, but also at play, and by engendering a spirit of comradeship and goodfellowship, which, while not unknown in many individual instances, has by no means been a universal, or even a common experience in the past.

A third essential is that the employees should have some effective voice in suggesting improvements in working. It is of no use to give to employees the results of operations, and to urge them to better organisation and more consistent efforts to improve production, if they have no

means of calling attention to defective methods of operation, which may, and frequently do, have a disastrous effect upon results, or of suggesting and discussing remedies therefor. Their voice must be heard through their representatives, and generally, their representatives are reasonable men, with a thorough knowledge of their work. The second part of the Mining Industry Act, 1920, provided for an elaborate system of pit and district committees to discuss and make recommendations with respect to safety, health, welfare, maintenance, increase of output, and disputes as to wages. Such a body would seem to be an invaluable adjunct to the management, and it is most unfortunate that, by the inaction of both parties, it became a dead letter. The Coal Mines Agreement of July 1, 1921, provided for national and district boards, whose powers, as compared with those given by the Act of 1920, are very limited, being apparently confined to questions relating to wages, arising out of the agreement. Some undertakings, it is true, have pit committees of their own, but there is no such general system of committees as is essential if the new principles of co-operation and partnership between masters and men are to be effective in reducing costs of production and increasing output per person employed. Committees of managers and men, when once established on a proper basis, and with such powers to investigate and recommend as were given by the abandoned provisions of the Act of 1920, must lead to increased co-operation, better understanding, and greater efficiency, and will give to the joint body an effective voice in the conduct of the industry.

DIARY OF THE IMPERIAL CONFERENCE.

Friday, October 19th.—The Imperial Conference, sitting in private, considered questions of Imperial defence, from the naval and aerial aspect. Statements were submitted by the Secretaries of State for War and for Air.

The Imperial Economic Conference listened to a statement on aerial communications by Sir Samuel Hoare (Secretary of State for Air). It was agreed to set up a Committee to examine the "Burnley scheme," which aims at establishing a bi-weekly airship service from this country to India, capable of reducing the average time taken to 100 flying hours. It is understood that the Committee will report so as to enable a definite decision to be made at a very early date.

Monday, October 22nd.—Matters of Imperial defence were again under discussion by the Imperial Conference. No report of the proceedings has been issued.

Wednesday, October 23rd.—The Imperial Economic Conference, after a brief session, unanimously adopted the following resolutions on Imperial shipping policy, epitomising some of the main conclusions emerging from the previous week's discussions:—

In view of the vital importance to the British Empire of safeguarding its overseas carrying trade against all forms of discrimination by foreign countries, whether open or disguised, the representatives of the Governments of the Empire declare:—

(1) That it is their established practice to make no discrimination between the flags of shipping using their ports, and that they have no intention of departing from this practice as regards countries which treat ocean-going shipping under the British flag on a footing with their own national shipping.

(2) That in the event of danger arising in future to the overseas shipping of the Empire through an attempt by a foreign country to discriminate against the British flag, the Governments of the Empire will consult together as to the best means of meeting the situation.

The second resolution ran as follows:—

That this Conference is of opinion:—(1) That the work accomplished by the Imperial Shipping Committee is convincing proof of the wisdom of its establishment, and that it is of the highest importance to the Empire that this work should continue; (2) that it is, therefore, desirable to maintain the Committee on its present basis, deriving authority from, and responsible to, the Governments represented in the Imperial Conference.

The Conference also received a deputation from the Empire Press Union on the subject of cable rates between Great Britain and the Dominions.

Wednesday, October 24th.—Lord Peel (Secretary of State for India), reviewed the present situation of British Indians in other parts of the British Empire. The case from the Indian side was presented by Sir Tej Bahadur Sapru and the Maharajah of Alwar.

During the afternoon the Imperial Economic Conference discussed resolutions put forward by the London Conference of the International Committee on Maritime Law, and by the Committee on the Liability of Dominion and Foreign Governments to United Kingdom Taxation. The former body recommended that Sovereign Powers owning and operating ships for commercial purposes should accept all liabilities enforceable against private owners. While general approval was expressed, no final motion was put, the Canadian and Australian representatives having intimated their inability to commit their Provincial and State Governments.

The report of the Commercial Facilities Committee of the Conference, published on Wednesday, dealt with the supply of information to Dominion and Colonial Governments by Imperial commercial diplomatic representatives in foreign countries; the admission duty-free into any part of the Empire of commercial travellers' samples, &c., and the forthcoming League of Nations Conference on Customs formalities.

Thursday, October 25th.—The Imperial Conference discussed the practicability of enforcing in one part of the Empire judgments of Courts of Justice, and arbitration awards, made in another. No decision was taken, although the members expressed their individual agreement in principle.

After a discussion opened by Lord Onslow (Parliamentary Secretary to the Board of Education), the Economic Conference further agreed that all possible encouragement should be given to the education of children in Imperial matters.

Notes of the Week.

Mr Baldwin Takes the Plunge.—The Prime Minister's Plymouth speech, on Thursday, may become historical for its great appeal to M. Poincaré, and may mark the turning point in the political situation abroad if, as he almost leads us to hope, America may come and lend a hand with the Reparation question. But whether we are disappointed or not in this, the speech is a landmark in internal politics. The presence of the Dominion Premiers and the demand of some of them for increased Imperial Preference, has re-awakened the tariff reform elements in the Conservative party, who have at last made a capture of Mr Baldwin. The Government is pledged to make no fundamental change in our fiscal system, and Mr Baldwin tells us that "I am not the man to play with a pledge." But he adds significantly: "I cannot see myself that any slight extension or adoption of principles hitherto sanctioned in the Legislature is a breach of that pledge. But at any time that I am challenged I am always willing to take a verdict." In other words, Mr Baldwin does not think that the imposition of new taxes not for revenue purposes, but for the sake of giving a preference to the Dominions, is a fundamental change in our fiscal system. On this Mr Baldwin will certainly be challenged, and his words can only mean an early appeal to the electorate. But it is not merely on preference that Mr Baldwin wishes release from his pledge. He is rightly exercised as to ways and means of dealing with unemployment. "If we go pottering along as we are we shall have unemployment with us to the end of time. And I have come to the conclusion myself that the only way of fighting this subject is by protecting the home market." Mr Baldwin is well aware that there are three chief centres of unemployment to-day. The Lancashire cotton trade, which is overwhelmingly an export industry, is in desperate straits; iron and steel, which exports directly or indirectly three-quarters of its products, is painfully recovering from the severest depression in its history; while shipbuilding and its dependent industry of shipping, which is entirely dependent on ex-

ternal trade, is the worst of all. Therefore, says Mr Baldwin, let us cure the trouble by protecting the home market, and restricting the international exchange of our goods. Ever since Great Britain outran her internal resources a hundred years ago, and took to international exchange as the means of supporting a dense population, every protectionist movement has wrecked itself on the imperative necessity of expanding and not checking international trade. From the broadest standpoint and in essentials the war has made no economic revolution. Mr McKenna has shown that the general outlines of world trade, and the proportion which we are able to do, are singularly unchanged by comparison with the pre-war situation. Mr Neville Chamberlain tells us that had his father been listened to 20 years ago, "we should not be where we are to-day." He is right. Had we adopted the policy of trade restriction in 1904, we should have lacked the merchant shipping, we should have had fewer foreign investments in distant countries, we should not have had the control of economic resources in every part of the world which enabled the Allies to win the war. That a cure for unemployment can be found in measures which, by restricting our foreign trade, will restrict the productions of the country, is surely a fallacy so patent that the electorate will reject it as wholeheartedly as it has repudiated similar fiscal fallacies at one general election after another.

Conditions in Ireland.—Our Dublin correspondent writes:—Business is slowly being resumed as the Government proposals for a provisional settlement are gradually being accepted. The dockers at Cork, Waterford, Limerick, and Dundalk are back at work; in Dublin there is little doubt of the result, but on two separate occasions the revolutionary extremists forcibly prevented the men's ballot from being held. On the latter occasion the union leaders, satisfied on the facts that the large majority of the men desired it, ordered a resumption of work on the Government conditions. The Dublin workingman, though willing to do the best for himself without extravagant overwork, has had a long training in politics; he is a patriot rather than a revolutionary, and is not devoid of a certain cynical insight into the motives and methods of the firebrands. In the meantime, the employers and their agents to-day (Thursday) proceeded to load certain ships of their own, and the Government provided full protection. There has been, so far, no disturbance. The cessation of the strikes, though a welcome and much-needed relief to business, is, of course, only temporary pending the fuller consideration, in accordance with the Government proposals, of all the matters in dispute. So far little has been done to tackle the problem of the high cost of living, and those responsible for the latter are said to exercise great, if indirect, influence in Government circles. Doubtless there are difficulties in the way of procuring the due reduction of cost of living, but they will have to be surmounted if the attempt to get wages down to fair competitive levels is to succeed—and to succeed without leaving an intolerable grievance. A mitigation of the burden of crushingly heavy rates and of very high rents for very bad housing accommodation will have to come later from the Oireachtas. The newspapers report that as the result of private negotiations the British Government is about to hand over the whole postal service of Northern Ireland to Sir James Craig's Government. If this be so, there may be serious trouble, as this transfer will be regarded as a clear and wilful breach of the Anglo-Irish Treaty by Great Britain—and this coming on the top of the difficulty as to Article 12 relating to the Ulster Boundary Commission may cause acute controversy. The Treaty provided that the six northern counties could vote themselves out of the Free State, and that, if they did so, the Government of Ireland Act, 1920, should continue to be of full force and effect as regards Northern Ireland. Under the Act of 1920, Section 9 (2), the postal service, amongst others, is a reserved service "until the date of Irish union," and under Section 10 certain deliberative and advisory powers are vested in the Council of Ireland in regard to these "reserved services," and the time, conditions, &c., of their transfer to Irish control. A transfer of the postal service to Northern Ireland without reference to the Council of

Ireland is thus plainly seen to be an infraction of the letter as well as of the spirit of the Act of 1920, in which the Irish Free State, having regard to the provisions of Articles 12 and 13, has very definite rights. On the broader grounds of principle, too, it is clear that the policy of the Act of 1920, as well as of the Treaty, was the unification of Ireland and the withholding of certain services with a view to and until that unification. It is true that, as a portion of the temporary readjustments, the functions of the Council of Ireland are held up to some extent for five years, but that shows that their permanence and effectiveness were deliberately contemplated. It is stated that the Postal Authorities in London estimate that their Northern Ireland service is run at a loss of £165,000 per annum, and that the transfer is to be accompanied by a subsidy of £200,000 per annum.

Lloyds Bank and Profit Sharing.—We are informed that the directors of Lloyds Bank, desiring to give the members of the staff "a direct personal interest in improving the earnings of the bank," have decided that if the dividend paid to shareholders for the current half-year is at the rate of not less than 16½ per cent., an amount equivalent to one-half of the difference between such dividend and 15 per cent. will be set aside for distribution amongst the staff. The calculation will be made in respect of the gross amount of the dividend, and income-tax will be payable by the recipients, as in the case of shareholders. The sum available will be paid over to the Staff Representative Committee, and the Central Committee has been asked to prepare a scheme for the disposal of it, subject to the approval of the board. The arrangement will be continued for the year 1924, except that the allocation will not be made half-yearly, but after the end of the year. It may be abrogated or varied subsequently, but the directors "hope that circumstances will permit of its continuance and even extension." This proposal is quite an innovation in the banking world, as far as we are aware, the nearest approach to anything of this nature having been the introduction by Barclays Bank of C shares of £1 each, which are issued to employees only. The number of these subscribed at the date of the last balance-sheet was 401,205, and on these a dividend of 14 per cent. has been paid for the last three years. If the dividend paid by Lloyds Bank in the current half-year is maintained at 16½ per cent., the amount for distribution amongst the staff will be just short of £60,000. Assuming a total of 10,000 employees, this would give an average of £12 per head for a full year, which, though not large, should be sufficient to stimulate interest in the well-being of the bank and in the pursuit of economy, and the directors are to be congratulated on introducing this innovation. Profit-sharing schemes in ordinary industrial undertakings have frequently proved of little advantage to employees, as they have been swamped by wide fluctuations in profits. But in the case of one of the great English banks the liability to fluctuation is very much smaller, and the profits which are disclosed and the dividends paid keep remarkably steady. For this reason we are inclined to think that the proposal made by the directors of Lloyds Bank should prove successful. It seems to indicate that the general slackness of trade has not greatly impaired the profit-earning capacity of the great banks.

Production Cost of Cereals in America.—The gross average cost last year of producing an acre of wheat in the United States is given by the Bureau of Agricultural Economics as \$21.20, and a net average cost of \$19.68. With an average yield of 16 bushels per acre, the cost per bushel was \$1.23. The average sale value reported was \$1.11 per bushel. Sold at this price, there would be a loss of 12 cents per bushel, or \$1.89 per acre. It is well to keep in mind, however, that this did not represent an actual cash loss, since a large percentage of the total cost of production did not involve a cash outlay. A summary on 2,601 reports on the cost of producing oats showed an average gross cost of \$19.19 per acre, and an average net cost of \$17.40 per acre. The yield per acre was 33 bushels, and the cost per bushel was \$0.53. An average sale value of \$0.48 per bushel was reported; this

is \$0.05 per bushel, or \$1.65 per acre, less than the average cost of production. The average cost of producing an acre of maize was \$25.09; from this a credit for stover of \$2.08 was deducted, leaving a net average cost of \$23.01 per acre and \$0.66 per bushel for a 35-bushel yield. The average value of the maize sold was \$0.73 per bushel, leaving a margin of \$0.07 per bushel, or \$2.43 per acre, after charging all expenses, including unpaid labour and use of land.

Who Makes the Markets?—A Stock Exchange correspondent writes:—Stock Exchange men raise a general plaint that there is no public in their markets, and that for this reason the tendency at the present time in a good many parts of the House is for prices to sag. On the other hand, the belief is almost universally held amongst clients that it is the Stock Exchange which causes fluctuations in prices. Members are constantly blamed for allowing quotations to drop. It is at the Stock Exchange that men point the finger of scorn for running up values at a rate which gives the public little or no chance of getting in at what people consider, in the light of previous quotations, to be reasonable figures. The events of the present day, which can be illustrated by the recent vagaries of prices in the tea share market, show that it is not the Stock Exchange, but the public, to whose efforts must be attributed movements, more or less violent, that occur in markets. In other words, Stock Exchange fluctuations are governed by supply and demand of shares, a fact so apparently self-evident that it would scarcely seem worth while dilating upon were it not that the great majority of public investors unhesitatingly lay the blame—and they rarely concede any praise—upon the shoulders of Stock Exchange men who are declared to be the governors of these price movements. As was pointed out here three weeks ago, if a jobber has not got stock on his book, and does not know where to go for it, it would be unreasonable to expect him to make a price in the dark, knowing that he would run the risk of selling shares that were more or less unobtainable. The buyer, unable to get what he wants at his price, can insist as a matter of right upon having the quotations advanced in the Stock Exchange Official List. If the List calls a stock 74-76, and a buyer bids 76 without being able to get any, that buyer can compel the price to be put up, and to any figure, until his demand is satisfied. In point of practical fact, he would scarcely be likely to do so except, of course, in a modest way, since any dramatic alteration would have the opposite effect from what was intended; it would confirm proprietors in the holding of their stock except in a few cases. Moreover, it would obviously be spoiling one's market to do such a thing, and therefore the raising of prices, or the lowering of them, is regulated by common-sense principles. That stock, which is priced at 74-76, and is obtainable at the latter figure, would probably not appeal to the buyer however insistent if it were put up, say, 10 points. Where the purchaser is really anxious to obtain stock, he will naturally prefer to wait in order to see whether any comes in at a reasonable rate, rather than insist upon the official quotation being advanced, day by day, in such manner as would draw general attention to the fact that somebody was very anxious to buy it. The fact of tea shares being generally of high denomination, and standing at big prices, means, of course, that the issued share capitals are small; that there are not enough shares to go round when pressing demand arises, as it does when a boom is in progress. On the other hand, directly the buying ceases, the market takes a turn towards lower levels, for the constitution of human nature is such that people who will not sell on a rise are eager to get out before a fall has run its full length. Previous buyers who were bidding for shares as prices rose, cancel their intentions and their orders when the market swings in the other direction, and assumes an appearance of going lower. Just as few people have the strength of mind to foresee any conclusion to a rise when a market is booming, so there are few—although more of these than in the former class—who are content to buy on a falling market. These arguments are not meant in any sense to be a special pleading on behalf of Stock Exchange men maligned for the violence with which movements in prices occur. They are intended to show

that, although the Stock Exchange exerts a certain amount of influence over the way in which fluctuations come about, this influence is almost entirely the result of intelligent anticipation of what people are likely to do in the way of buying or selling. Orders from the public "make" the prices, and bring about the changes that cause markets to be good or bad. Politics, revolutions, foreign exchanges, monetary considerations are all factors which sway the markets and Stock Exchange prices, because the public buy when they think the outlook is encouraging, and the same public sell when they are nervous of the immediate future prospects.

The Mint Report.—The fifty-third annual report of the Deputy Master and Comptroller of the Royal Mint for 1922* is full of interesting reading. We are told, for example, why the first of the new silver coins became rapidly discoloured and how this tendency has been overcome. The new silver alloy containing 10 per cent. of nickel has been discarded, and in June, 1922, was replaced by an alloy containing 500 parts silver and 500 parts copper per thousand, and to overcome the tendency of this alloy to exhibit a copper-coloured surface at a very early stage the blanks are subjected to an intensive pickling treatment to remove the copper from the surface, so that the pieces become thickly coated with fine silver, which renders them more uniform in appearance and less likely to suffer rapid deterioration under the varied oxidising influences of ordinary circulation. Then there is a lengthy apologia for the "inferior" work of the medal department, in which Mr Robert A. Johnson, the Deputy Master, sets out many of the difficulties, technical and otherwise, with which the Mint has been faced. So far as actual financial results are concerned, the year 1922 showed for the first time since 1904 an excess of expenditure over receipts to the extent of £264,600. This compares with a profit of £1,703,400 in 1921, of £2,303,900 in 1920, and an annual average for the past fifty years of £695,300. In his report, the Deputy Master writes that as the year went on the contraction in the circulation of silver coins in this country became more and more apparent, and the accumulation of stocks of old coin was still further accentuated by the return of coin from overseas. "In the circumstances, relief to the holders of surplus coin could obviously not be afforded by merely replacing old coin with new, and further recourse was had to the Currency Note Redemption Account, whose holdings of silver coin were increased by stages to a total of seven millions at the end of the year. So held, the old coin in this reserve could be replaced by new coinage at the convenience of the Mint, and the fact that there is always this recoinage to fall back upon when other business is slack is naturally of great assistance in arranging for an economical allotment of the week's work." In the late autumn, as accumulations in the Bank were still heavy, and large repatriations were being made from South Africa in preparation for a forthcoming issue in that Dominion of a subsidiary coinage of their own, a supplementary estimate for £750,000 was presented in the House of Commons to be utilised in buying back old coin at face value on Mint account, the coin so obtained to be melted and the resulting bullion to be sold outright. It is this operation which accounts for the excess of expenditure over revenue for the year mentioned above. Under "extra receipts" there was a profit on silver in 1922 of £4,388,100, and of £6,649,400 in the financial year 1922-23, and while there was a loss in the calendar year on bronze of £23,900, the financial year showed a profit of £32,300. The amount paid over to the Exchequer was £545,500. The value of the new silver coin issued in 1922 was £6,519,550, which compares with £8,529,100 in 1921. The amount of old silver coin of 925 fineness withdrawn was £8,898,100, which showed a loss of weight equal to 2.38 per cent. No gold bullion was received from the Bank of England during 1922, and no gold coin was issued by the Royal Mint. The total issue of bronze coin in 1922 was only about one-fifth of the average annual issue in the previous ten years, the issue in Great Britain and Ireland being £70,900 and to the Colonies £14,500. The total number of bronze pieces

* H.M. Stationery Office. 5s net.

struck was 37,038,658, which compares with 167,214,083 in 1921. The withdrawal of worn bronze coin resulted in the receipt of some £10,600, the largest amount received in any year since 1913. The net loss of metal amounted to 11 per cent. of the standard weight of the coins on issue. On the last weekday in June, 1922, the banks (including the Bank of England) held gold coin to the value of £79,930,400, silver coin to the value of £16,194,700 and bronze coin to the value of £2,131,200. In 1921 the corresponding values were £81,317,300, £17,331,900, and £1,832,100 respectively.

Daily Mail Trust.—From the avid way in which the Daily Mail Trust debenture issue was snapped up, it is obvious that the public imagination has been captured by the appeal for the eight million pounds stock offered at 99. It is thought that the allotments may be published some time within the coming week, and as 2 premium was bid for "Results" before the applications went in, it is generally expected that the price will open, when dealings start, at something like 101. Many people are known to have left orders with their brokers to pick up the scrip at anything like 2 premium, and some have left limits to buy at best. Following upon our comments last week (*Economist*, page 710), a Stock Exchange correspondent writes that it is pointed out in the Stock Exchange that this eight million pounds debenture stock is secured upon 800,000 deferred shares in the Associated Newspapers, Limited, the price being taken at £7 per share for the purposes of the prospectus. Besides these shares there are 918,000 fully-paid ordinary shares in E. Hulton and Co., Limited, which have been acquired for the sum of six million pounds sterling. Cool Stock Exchange observers point out that to value 800,000 Associated deferred shares at the current market price is rather a tall order, in view of the fact that the market in the shares could certainly not be relied upon to take anything like this amount at the figure quoted. It is not always easy to deal even in five thousand of these shares at a time, and the fact that the price fell to 6½ on Wednesday, thus shearing off £200,000 from the assets, is an indication of the way in which security of this nature may fluctuate. The prospectus states that "the company also reserves the right to realise, with the consent of the trustees, all or any of the specifically mortgaged premises, the proceeds of such realisation when amounting to 10 per cent. of the stock for the time being outstanding being applied in redeeming the stock *pro rata*." The word "premises," read casually, might easily be assumed to refer to buildings, &c., such as a debenture is frequently secured upon, but examination of the offer for sale shows that the word applies to what is premised in the earlier part of the offer, namely, the security of these shares, uncalled capital, and sundry investments in allied newspaper undertakings. It is not in any spirit of carping criticism that details such as these are indicated, but, having regard to the unusual security offered upon so large an amount of debenture stock, it is but fair to point out that the investor who is ready to buy scrip "at best," or to pay a substantial premium for it, ought to realise that the debenture stock is different from one which has for its protection such assets of land, property, &c., as are more generally offered.

An Affiliation of South American Banks.—Recent rumours as to an impending amalgamation of British banks operating in South America appear to have had some foundation, for on Saturday last the directors of the London and Brazilian Bank, Limited, announced that subject to the sanction of the Treasury Committee controlling bank amalgamations, and to the passing by this bank of the requisite special resolutions, a preliminary agreement has been arrived at for establishing a community of interests between this bank and the London and River Plate Bank, Limited. The result to the shareholders of the London and Brazilian Bank will be that for every five of their shares they will receive two fully-paid shares of £25 (twenty-five pounds) each in the London and River Plate Bank, arrangements having been made whereby part of the existing capital of the latter bank will be paid up in full, and so rearranged that ultimately the whole paid-up capital will equal the present paid-up capital of the two banks. The assets representing the capital and reserves of both banks will remain undisturbed.

Both the banks are British institutions, and a controlling interest—98½ per cent. of the share capital—in the London and River Plate Bank is held by Lloyds Bank, Limited. Both the South American banks were established in 1862, and each has a subscribed capital of £3 millions, but while the London and River Plate has £2,040,000 paid up, the London and Brazilian paid-up capital is £1,500,000. The London and River Plate Bank paid a dividend of 10 per cent. for the year 1922, but whether this can be maintained for the current year, which, judging by the results of other South American banks, has not been a very favourable one, remains to be seen. London and Brazilian shares rose by £2 to £18 on the announcement, but some of this has since been lost.

Canadian Banks.—A Correction.—We regret that in the article in our Banking Number last week on Canadian Banks, there was a sentence which appears to have conveyed to a correspondent that the Standard Bank of Canada had been absorbed by a larger concern. This, of course, is not the case, although the bank in question was obliged to draw heavily upon its reserves to meet certain losses.

Cotton Trade Short Time.—Our Manchester correspondent writes:—Since last March spinners of American cotton yarns in Lancashire have worked only half time on the recommendation of the Masters' Federation. The position has been reviewed from month to month, and this week the committee has recommended the members to continue the curtailment of production by 50 per cent. until the end of November. Before that month expires a ballot of spinners will be taken as to what further action should be adopted with regard to restriction of output. It is fairly well known that during the past month the recommendation of the Federation has not been carried out so thoroughly as earlier in the year. It cannot be said that the trade position warrants a much larger output, but many companies have grown tired of the organised movement, as it has not achieved the result expected, and more cases are being mentioned of firms making their own arrangements as to output. It is not improbable, therefore, that when the vote is taken it will be found that the necessary majority in favour of any scheme of further short time has not been obtained.

Oil Company Earnings.—Oil prices in this country have been found to reflect the movement of oil prices in the United States generally from six to twelve weeks afterwards. Why that should be so is something of a trade mystery, but the question naturally occurs—How far may the earnings of oil companies operating in Great Britain be expected to reflect the present trend of oil earnings in America? The question is interesting, for at the present time the financial effects of the state of over-production in the American oil industry are becoming prominent. A number of leading companies have either passed or substantially reduced their dividends for the third quarter of the year. Large profits were made in the first quarter, but the trend of oil prices has been downward ever since. The highest grade of mid-Continent crude oil began the year at \$1.80 per barrel, and rose to \$2.60 by February 17th, but in April had fallen to \$2.50, and in May to \$2.20, at which price it was arbitrarily maintained until its reduction about a month ago to \$1.60 per barrel. Californian crude oil of 35 deg. gravity fell from its January price of \$1.45 per barrel to \$1.04 in April, and this month was reduced by the Standard Oil Company of California to 76 cents per barrel. Refined oil prices have declined even more sharply on account of the price war. The ability of the big concerns to meet their current dividend requirements has therefore become a painful question, and many of the leading companies have passed or reduced their payments for the third quarter. When it comes to the final quarter there will no doubt be a larger number of companies who will pass or reduce their payments. According to a report prepared from the *Pittsburg Gazette Times*, 55 of the leading oil companies of the United States, with a total capital investment of \$3,643,363,142, have been paying up to the

present time an aggregate of \$269,310,067 a year in dividends, which would necessitate their earning, over and above all expenses, reserve funds, and interest on bonds, an aggregate of \$448,124 a day. With the present market prices this can no longer be done. Oil companies are, of course, variously affected. Generally speaking, the company that is merely producing and selling the crude oil commodity is hard hit in a period of crude oil over-production, while the complete unit companies—producing, refining, and marketing—may be able to maintain their normal ratio of profit. For example, the Standard Oil Company of New Jersey, by virtue of its widely distributed organisation, is able to earn the \$94,140 a day (\$33,894,587 a year) which it requires in order to meet its dividend payments. The Vacuum Oil Company, handling a product—namely, lubricating oil—which has not proportionately declined in price, is actually showing a better record than last year, when its net earnings were \$13,600,000. For 1923 its net earnings are expected to be between \$18,000,000 and \$19,000,000, and an extra dividend is likely to be declared in the new year. On the other hand, the president of the National Independent Producers' Association is heard bewailing the fact that the continual cuts in the price of crude oil have brought the small oil producer to the verge of bankruptcy. Similarly, the cuts in the price of refined products are ruining the small refiner. All this is not to be wondered at, when some of the complete unit companies have been forced to pass or reduce their dividends. In so far as British oil prices follow the downward course of American, oil companies here might be expected to have the same difficulty in maintaining their dividends. But, again, special circumstances govern each individual company. The Anglo-American Oil Company, for example, which has maintained its interim dividend, has long held the bulk of the wholesale trade in lubricating oils, as well as the largest individual proportion of the petrol trade, and, withal, can show the lowest tanker transportation costs—a very important consideration. It has also claimed that the recent reductions in the price of petrol have increased its turnover by 20 per cent., which must be peculiar to itself, seeing that in America the gasoline consumption is not usually increased by falling prices. Then the Shell group is not confined to this or any other country, but has the advantage of a world-wide organisation, and is able, probably, to obtain a higher average selling price than even Standard Oil. Its production has enormously increased this year. The Anglo-Persian Oil Company is the only one of the three combines here that has been restricted in its refining and market operations, but no question has been raised as to its dividend for the year ending March 31st last, which will shortly be announced. On the whole, British oil companies are never so adversely affected as American, with oil prices more stabilised in the markets here.

Black Sea and Other Chartering.—Following on the formation of an Anglo-Russian company, in which Messrs Furness, Withy and Co., Limited, some well-known grain brokers, and Messrs Arcos, among others, are interested, there has been a big burst of chartering from the Black Sea ports, and during the early part of the week something like 80,000 to 90,000 tons were booked from the South Russian ports for grain to the United Kingdom, France, Belgium, and Germany. The rates paid were 14s to 14s 6d per ton for anything able to load promptly, and the rush of orders cleared all the early tonnage off the market. Should the demand expand further, as anticipated, steamers will have to be drawn from the Mediterranean ports, and this will have a good influence upon the ore markets, which are already beginning to show more interest owing to the rise in pig-iron and the better demand and improving outlook for iron and steel. In other directions the Canadian market has been firm, with tonnage short. Shippers have had to pay 3s 9d per quarter to the United Kingdom, and later 3s 10½d, while 17 cents per 100 lbs on heavy grain basis was paid to Havre and 24 cents to Greece. From the Northern Range of ports there has been a much better business done, and 13 cents per 100 lbs has been fixed for Antwerp-Rotterdam, with 17 cents Genoa. Coal moves quietly, but a steamer for Monte Video made \$3.90. There has been a good

business done for lumber from the Gulf of Mexico, and 130s was fixed for Holland and Belfast, with 150s River Plate, another boat securing \$14.50 to the same destination for 1,250 standards. On net charter, \$4 was arranged from the Northern Range to the River Plate, and a tanker from the Gulf to the French Atlantic made 23s 6d for early loading. The North Pacific ports are fairly active, with a demand for grain and also lumber to the Mediterranean, United Kingdom, and Japan. The Eastern markets continue firm, with Bombay booked up at 24s 6d to the United Kingdom or Continent, and 27s 6d Japan. The River Plate has been very disappointing to ship-owners, and there are numerous steamers ready for November loading as yet unfixed. The general feeling in the freight markets is better, with more business offering both outwards and home.

Linen and Research.—Those who expected the Government scheme for the application of scientific and industrial research to accomplish miracles in the rejuvenation of our industries will find but little evidence to support their view in the annual statement just issued. Nevertheless, it is noteworthy that in the case of the linen industry, where the rule-of-thumb methods so characteristic of past generations were in practice until very recently, the Linen Research Institute, under Dr Vargas Eyre, reports some advances, which must bring very considerable benefit to the linen trade and to the textile industries generally. Perhaps the most outstanding of these is the invention of a simple machine for wear testing, to supplement the apparatus which has hitherto been in general use for testing the breaking strength of yarns under direct tension. The influence of wear on yarns and fabrics is of the utmost importance. This is so much the case that it has been found that some dressings applied to yarns are able to increase tenfold the resistance of the cloth produced without increasing their tensile strength more than 3 per cent. Still another result has been the discovery of a ready means whereby flax, ramie, cotton and hemp constituents may be differentiated qualitatively and quantitatively in any fabric. Then also quite a flood of light has been thrown on the relations of yarns and cloths to moisture under pressure in bleaching and finishing. Of paramount interest likewise, to agriculturists no less than to those connected with linen production, has been the evolution by the Linen Research Association of a pedigree flax seed which will not only produce 200 per cent. more fibre than the best strains now grown, but will also give a flax of similar superiority as far as its spinning qualities are concerned. If the Linen Research Association had been able only to record this latter achievement it would have more than justified its existence and continuance.

The Dearness of Linseed.—A correspondent writes:—"Can any of your readers throw light upon the extraordinary position of linseed, which, despite 6,200,000 cwt. imported since January 1st (seven years' average for the period January 1st-September 30th, 5,760,000 cwt.), is costing £21 per ton for the Argentine, £22 to £23 for Indian, and £25 for English, prices £2 to £3 up from the stiffish terms of last October, and fully £8 above the pre-war prices of 1914, January 1st-June 30th. The dearth of an article which cost British buyers about £7,000,000 last year is rendered the more inexplicable from the fact that the United States, from being a large buyer, has become fully self-supporting. Nearly a million acres added to the area have raised production by 200,000 tons, possibly more, but I believe America only gets a ton from five acres, whereas English growers can rely on that yield from four." The answer to the writer's question is to be found mainly in a consideration of the situation in world markets, and more particularly in the fact that the high prices of late coincide with the interval between the comparative exhaustion of old crop supplies and the forthcoming arrival of the new crops. The heavy shipments of Argentine linseed in the first six or seven months of the year had the effect of reducing the balance left for export to small proportions, and although this has been a variable figure, it is unquestioned that the

balance, including the Indian surplus, has been regarded by market opinion as only barely sufficient to meet the probable consumptive demands until the new crops come along. The tightness of the position has, of course, been seized upon by speculators, and the firmness of Argentine options has been reflected in the prices ruling on this side, old Plate crop afloat or in near positions now standing at a premium of £3 to £4 per ton over the new crop, which is expected to commence shipment late in December or early in January. Apart from this and higher transport and other expenses, there is no particular reason why linseed should be 50 per cent. above pre-war value, because this year's world production has certainly been above normal, and calculated to meet all consumptive requirements and leave possibly a margin over. The output of the two principal exporting countries was estimated around 1,500,000 tons, and at the beginning of October 1,328,150 tons had actually been shipped as compared with 1,000,065 tons at the same date last year. From Argentina alone 1,018,200 tons have been shipped, and it is noteworthy that no less than 524,000 tons have been shipped to the United States, against only 220,000 tons a year ago, to supplement the domestic yield. This, with 1,050 tons from India, gives the United States an import to date of over 525,000 tons towards the 600,000 tons estimated to be required from outside sources this year to meet the home demand for oil. The United States domestic crop yielded only 305,950 tons, but the one now about to be harvested, which, all being well, will be going into the mills next month, is estimated to produce just upon half a million tons. Inasmuch as the year's requirements of linseed oil are the equivalent of a million tons of seed, it will be seen that the United States are not anywhere near being self-supporting, as is suggested by the correspondent who writes enquiring, notwithstanding that there is an import duty on foreign linseed, and an almost prohibitive one on linseed oil from abroad. Last year the net imports of linseed oil into the United States were 64,060 tons, the equivalent of roughly 200,000 tons of linseed, but this year, owing to the operation of the duty, they will not, in all probability, be more than one-third of that figure. Apart from America, both Great Britain and the Continent of Europe have been large buyers of linseed, the shipments of Plate and Indian together to the former this year being 363,775 tons, and to the latter 435,325 tons, against 319,150 tons and 460,925 tons respectively in the corresponding period of last year.

Coal Production, Wages, and Profits.—In our issue of October 13th last, we published our usual quarterly statement of the ascertainment made in the coal industry in accordance with the terms of the National Wages Agreement. Selections from the statistics there given have been quoted by a labour journal, from which the misleading conclusion is drawn that, whereas wages have only risen by some 5 per cent., mine profits rose 236 per cent. during the second quarter of this year, as compared with the third quarter of 1922. Such a comparison is improper for two principal reasons. On the one hand the reference to net profits in these quarterly statements is to the surplus of commercial disposals over total costs during that period. These sums are credited to the owners, but in consequence of the method of two-monthly wage assessments, a large proportion of these "credits" are paid away as wages in a subsequent quarter. Thus the increased wages which are being paid in the current period September-October are financed out of the "credits" (i.e., net profits) of the period May-June. In other words, the quarterly summaries, while giving an admirable picture of the general condition of the industry during the period, do not show the proportion of the surplus accruing from the operations of that quarter which is retained by the owners as profits. In the second place, there has been much leeway to be made up of recent months in respect of the quota due in 1922 according to the Agreement, but not actually realised by the owners. For example, there was actually a small deficit, as our table showed, during the second quarter of last year, though this is naturally passed over for purposes of propaganda. Of course, the returns should be judged on an annual basis in order to arrive at the actual relationship between the remuneration to Capital

and to Labour respectively. These facts should be known to those who endeavour to form labour opinion on the working of what is probably the most important wage agreement of our times.

Standardised Accounts.—The chairman's speech at the Rubber Shareholders' Association annual meeting is always an interesting survey of matters connected with rubber-growing and the rubber industry in general. That part of the speech, however, which deals with "standardisation of accounts" interests us in particular, since we have always pressed for this reform in the pages of the *Economist*. In the course of his remarks the chairman said:—"This brings me to another most important question of administration—the standardisation of accounts and the rendering of full information to shareholders. The position of our association in relation to this question is set forth fully in the annual report, and I do not propose to weary you with vain repetitions. Let me, however, point out that the R.S.A. has not acted in any irresponsible fashion or with hot-headed impetuosity. The form of standardised accounts which we advocate has been approved by one of the most eminent firms of chartered accountants in the City of London—Messrs Deloitte, Plender, Griffiths, and Co., whose considered opinion is set forth in their report printed as part of the memorandum. In March last we circulated that memorandum to the board of every rubber-planting company registered in this country. What has happened since? One or two chairmen at annual meetings have referred sympathetically to our proposals. One or two chairmen have fiercely denounced our proposals. The great majority of directors, however, have simply ignored our proposals. Apparently the R.S.A. memorandum upon standardised accounts has been quietly pigeon-holed, in the belief that the whole question will be allowed to sink into oblivion. Your committee is of opinion that it is not in the best interests of rubber shareholders that this should happen." The chairman then proceeded to point out that "there is a great deal more in this controversy than the mere question of whether or not production costs should be published. The real point at issue is how far shall it be made possible to keep shareholders in the dark. One of the principal objects of the standardised form of accounts which we advocate is to provide shareholders with an adequate amount of information about the businesses they own." We trust that shareholders will support this policy, and not, as is only too often the case, be lulled into a comatose state by the pretty cooings of somnolent or self-interested financiers.

Port of London Authority.—The report of the Port of London Authority for the year ended March 31st shows that in the year 1922 there was a further very large increase in the total net tonnage of vessels which arrived at and departed from London with cargoes and in ballast, the total being 39,293,200 tons, as compared with 34,089,800 tons in 1921. The lowest point since 1913, when the total was 40,082,300 tons, was 1918, with 14,564,000 tons. Since then there has been a steady increase. The net tonnage paying dues in the year ended March, 1923, was 30,028,100, an increase of 16.7 per cent. over the previous year, the increase being made up of 2,905,000 tons in the foreign and 1,392,800 tons in the coastwise trades. Thanks, however, to three reductions which took place in the percentage additions to the basic rate during the year, the total revenue of the Authority was considerably lower last year than in 1921-22, as may be seen from the following table:—

	FOR YEAR ENDING MARCH 31.					
	1914.	1919.	1920.	1921.	1922.	1923.
Total revenue	£ 3,434,453	£ 5,723,690	£ 8,305,801	£ 10,043,731	£ 7,929,874	£ 6,319,295
Total expenditure ..	2,217,822	3,532,604	5,531,726	7,101,601	5,801,217	4,682,425
Balance of rev.	1,216,631	2,191,086	2,774,075	2,942,130	2,128,657	1,636,870
Fixed charges	332,786	1,264,567	1,600,323	1,944,160	1,575,929	1,400,990
Surplus revenue	283,845	926,519	1,173,752	997,970	552,728	235,880
Brought forward	89,637	341,953	349,384	383,347	896,044	1,448,772
Written off, &c.	373,482	1,268,472	1,523,136	1,381,317	1,448,772	1,684,652
Carried forward	281,578	919,068	1,139,789	485,273	..	111,400
	91,904	349,384	383,347	896,044	1,448,772	1,573,252

The reserve fund was raised to £1,000,000 at March 31, 1922, and as this is the statutory maximum, the interest on investments has, since that date, been credited to net revenue account. A contribution of £100,000 to the insurance fund, while £11,400 goes in the form of further provision for a recreation ground for the staff, leaving £1,573,300 to be carried forward, subject to liability, if any, for excess profits duty. On March 31st last the balance of Port stock unissued was £3,056,700, and capital expenditure during the year was £627,000. From the table below, which shows the value of the imports and exports (excluding coastwise goods) of the principal ports, it will be seen that London still maintains its leading position:—

	1920.	1921.	1922.	Inc. or Dec. in 1922.
London (including Queenborough)	£ 1,005,276,386	£ 606,856,886	£ 564,333,772	— 7.0
Liverpool	1,091,657,022	528,012,834	484,200,149	— 8.3
Hull	172,951,919	91,922,735	101,344,091	+ 10.2
Manchester (including Runcorn)	207,683,045	86,515,435	92,023,169	+ 6.4
Southampton	88,509,359	66,813,302	64,039,112	— 4.2
Glasgow	158,126,941	94,701,689	81,174,625	— 14.3

During 1922-23 the Authority landed or received 2,413,600 tons of import goods for warehousing or for immediate delivery, an increase of 182,400 tons or 8.2 per cent. as compared with the previous year.

The Anglo-Dutch Report.—When the directors of the Anglo-Dutch Plantations of Java announced a final dividend of 5 per cent., making 9 per cent. for the year, as against 6 per cent. for the previous year, the market showed some signs of disappointment, a bigger increase in the dividend rate having been expected in some quarters. The report and accounts now published should remove that disappointment, for they show a rise in profits from £116,596 to £231,653, an increase which would have enabled a much bigger distribution had not the directors wisely decided to enlarge the carry forward from £51,644 to £109,581. A summary of results for recent years is shown below:—

	1917.	1918.	1919.	1920.	1921.	1922.
Share capital	£ 1,163,216	£ 1,286,780	£ 1,286,780	£ 1,330,170	£ 1,330,170	£ 1,330,170
Net profit	81,615	89,317	215,350	147,186	116,556	231,653
Brought forward	48,483	71,937	58,311	48,475	50,898	51,644
Available for distribution	130,098	161,254	273,661	195,661	167,454	283,297
Paid in dividends	58,167	102,943	225,187	144,763	115,810	173,715
Rate per cent.	5	8	17½	10 on old shares 2½ on new shares	6	9
Carried forward	71,937	58,311	48,475	50,898	51,644	109,581

The company's tea crop rose from 1,620,778 lbs to 2,610,965 lbs, and while the cost of production fell from 7.44d per lb to 6.34d, the selling price rose from 5.91d to 8.73d per lb. The rubber crop was also larger in 1922 than in 1921, being 3,189,650 lbs, against 2,369,602 lbs, but the selling price fell from 1s 3d to 1s 1d. But production costs were cut by over 3d, being 7d per lb against 10½d in 1921 and over 1s in 1920. This drastic cutting of cost is a favourable feature of the report, which also contains at least two other points of outstanding importance to shareholders. One is the proposed provision of new capital for the purchase of new estates, the intention being to create £1,000,000 debenture stock, and to issue half of this at an early date at 5 per cent. The other is that the Netherlands Indies Government has granted the company permits to prospect for oil over eight areas, totalling 145,000 acres. The speculative interest aroused by this announcement is partially tempered by the following sentence:—"The permits to prospect give the company no rights over oil if found, but application will be made to the Netherlands Government for permission to exploit same upon terms." The shareholders will scan the chairman's speech on Tuesday for further elucidation of this point, and also for his views on the prospects of the rubber-plantation industry.

United of Havana.—The report of the United Railways of the Havana and Regla Warehouses, Limited, for the year ended June 30th last shows a decline in railway receipts accompanied by a greater reduction in working expenses, giving an increase of nearly 12 per cent. in net railway receipts. Other receipts, however, were on a smaller scale, but this decline was largely offset by a reduction in taxes, and the balance available was sufficient to increase the ordinary dividend from 4 to 6 per cent. The table below summarises results for the past three years:—

	1920-21.	1921-22.	1922-23.
Railway receipts	£ 6,329,669	£ 3,893,949	£ 3,765,534
Railway expenses	4,848,142	2,729,956	2,463,264
Ratio	(76.59 %)	(70.11 %)	(65.42 %)
Other receipts (less charges)	1,481,527	1,163,993	1,302,270
	328,703	278,442	71,893
Fixed charges (less sundry income)	1,810,230	1,442,435	1,374,163
To reserve	1,162,521	929,793	793,061
Dividends	439,987	439,987	571,123
Ordinary rate	4 %	4 %	6 %

The decline of £128,400 in railway receipts is more than accounted for by the fact that the tariffs ruling for the first six months of 1921-22 were reduced by approximately 20 per cent. as from January 1, 1922. Passenger receipts declined by 3.6 per cent., and goods receipts by 3.51 per cent., the latter being more than accounted for by sugar cane and products, receipts from which dropped from £1,133,500 to £882,100. This group supplied 44.2 per cent. of the freight revenue, compared with 54.81 per cent. in the previous year. The tonnage of sugar moved represents 30.68 per cent. of the total production of the island, compared with 37.48 per cent. in 1921-22. The general manager states that generally the grinding season began about a month earlier than in the previous year, and as the crop was considerably shorter, it may be said to have practically ended in April. Expenditure was reduced by £266,700, or 9.77 per cent. Expenditure on permanent way and works was 6.18 per cent. higher, and on coaching maintenance 22.43 per cent. higher, but in all other directions there was a substantial reduction, especially in locomotive maintenance and running, towards which lower wages and salaries contributed largely. Receipts from the Regla Warehouses and other properties declined from £63,500 to £20,800, while the gain in exchange was £54,600, as against £218,500 in 1921-22. Interest and dividends on investments, however, brought in £114,900, as against £60,300, while British and Cuban taxes absorbed £236,000, as against £319,000 in the previous year. Twelve months ago £105,000 was transferred to a special deferred maintenance account, but no special allocations are made this year, the balance forward being increased by £10,000. The general manager in his report writes that Cuba has passed through a very satisfactory year, and although a large amount of liquidation still remains to be effected, considerable progress has been made towards a general commercial recovery after the financial crash of 1920-21. The largest factor in the improved business conditions has been the excellent price obtained for this year's sugar crop, which to date has averaged approximately 5 cents per pound in Cuban warehouses. The weekly earnings of the company for the opening months of the new financial year are showing quite satisfactory increases, while the prospects for the coming crop are at the present time quite favourable, as there has been a satisfactory increase in the new planting of cane and in the necessary fertilisation of the older cane fields.

Gold Fields Rhodesian Development.—Our mining correspondent writes:—"The final dividend of 5 per cent. brings the total for 1922-23 up to 10 per cent., the same as paid for half-a-dozen preceding years. It is not very often that an undertaking of the kind maintains its distributions at so level a rate. An examination of the accounts, however, indicates that it has only been practicable in recent years by steadily drawing upon the carry forward. The profit for the twelve months ended May 31st last amounted to £127,300, or a little more than required to provide the 10 per cent. As £21,600 is written off

mining properties, the carry forward becomes almost correspondingly reduced. In each of the two preceding years the earnings fell short of the sum needed to provide the distributions, while in 1921-22 as much as £46,200 was amortised. The result is that the profit and loss surplus has in three years been pulled down from £112,000 to £16,000. The procedure followed by the directors may be considered warranted in view of the strength of the financial position—the latest balance-sheet shows liquid cash assets £119,000 in excess of the liabilities. But it is obvious from the figures given that the time has now arrived when the distributions will have to be governed by the earnings. The company's interests in mining claims are small, but its land holdings are equivalent to over half-a-million English acres. Shares in three important Rand concerns, also in the Cam and Motor, have been added to the portfolio. With reference to the South American Gold and Platinum, in which the "Devels" company holds 100,000 five-dollar shares, it is satisfactory to note that a further and marked expansion has occurred in the output, which in 1922 reached a value of \$1,250,000.

Electrolytic Zinc.—Gratifying results are shown by the statement to June 30th, received by cable from Melbourne by Austral Development, Limited. This covers the first complete year of working. A gross profit is recorded of £401,800, comparing with £93,800 in respect of the seven months included in the preceding report. Moreover, the first-named figure has been arrived at after allowing the largely increased sum of £90,000 for depreciation, as well as writing off £20,000 against research. New issue expenses to the tune of £75,000 have been cleared away, and several special appropriations made. The dividends due on the preference shares (which are held by the general public) have been paid, plus certain arrears, while an initial distribution of 4 per cent. has been made on the ordinary shares (which are held by various associated undertakings). After both classes of shares have received 8 per cent., all rank alike for surplus profits. On the basis of the fixed 8 per cent., the preference shares at current price yield 5½ per cent.; hence their market quotation makes allowance for an increase in the future. It was originally estimated that with the full zinc plant at work the production would total 45,000 tons per annum. In the past financial year 31,300 tons of electrolytic zinc were turned out, with some lead and silver; the estimated output is now being closely approached. The company, it may be recalled, is a mining as well as a treatment enterprise. The report states that the properties on the west coast of Tasmania are being steadily developed, and the erection of reduction works is proceeding. Acid and super-phosphate plants being put up at Risdon should be completed next March. Altogether, therefore, the prospects of the undertaking are distinctly hopeful.

The Resources and Trade of Chile.—Though the immediate financial outlook in Chile may inspire misgivings, the report of the British Consul-General at Valparaiso, just issued by the Overseas Trade Department, indicates that the country has begun to recover from the recent economic crisis, unparalleled in its history, and that the only influences likely to hamper its development are labour difficulties and the policy of "Chile for the Chileans." During 1921 the suspension of the nitrate industry and the closing of many copper mines cut off the northern home market for agricultural produce and necessitated the transfer of 200,000 inhabitants to the southern districts, where they existed on short rations. But since June of last year nitrate and copper have been recovering, with the certain result of a quickened demand for iron and steel constructional material, machinery, and agricultural produce. As to the mineral resources, the output of coal, which ranks third in importance, is aided by labour-saving devices, but so hampered by labour difficulties that America, Great Britain, and Australia must long continue to supply the North. The working of the vast iron ore deposits is hindered by deficient transport and by the uniform export tax on minerals, and the Government's efforts to create an iron and steel in-

dustry have failed, partly through the lack of Chilean coke. The wheat harvest, mediocre in 1922, has been good this year, and the exports to the United States of fresh and dried fruit have alarmed the Californian growers. Cane sugar production is being encouraged by the Government, but beet sugar, so far, has failed. Forestry is attracting attention. The country can supply all its own timber, a dozen kinds or more are largely used for building and furniture, and there is a great future for their export and for that of paper pulp. Sea fisheries are imperfectly developed, and only a Government inquiry can supply the necessary knowledge of the migrations of the fish; but the lobster fishery is important at Juan Fernandez, and is beginning at the islands of San Ambrosio and San Felix, while efforts are being made to develop the salmon rivers in the South. Import trade has declined heavily since 1920, and in a much greater proportion than export trade: hence the fall in exchange, and speculation has caused sharp fluctuations in the rate. But Great Britain, India, France, and Italy have apparently recovered their pre-war share. Germany has recovered about one-fourth, and her exporters have actively pushed sales. British exporters are less active, and are recommended to send out special representatives speaking Spanish to study local needs and terms of business and to sell through competent agents. But in many kinds of goods Chile is now independent of foreign supplies, or likely soon to be so. Coastwise shipping is confined to Chilean ownership, probably to the detriment of domestic traffic. The State railways are worked at a loss, but a suggested transfer to foreign syndicates is prevented by the political influence of the railway men. The foreign mail service has been accelerated and the Transandine line improved. Nearly £7,500,000 is to be spent on port improvements; San Antonio is coming to compete as a port with Valparaiso. About £1,125,000 was voted by Congress in January, 1922, for town drainage, which should reduce the high infantile death-rate. Interesting particulars are given of recent commercial legislation, and the report concludes by noting the national tendency to confine employment in general, and such businesses as shipping, banking, and insurance, exclusively to Chileans.

Santo Domingo Crop.—Encouraging results, writes a correspondent, have followed Government action in removing all restrictions regarding cacao exports. Before 1920 the product—one of the principal articles of commerce in the Dominican Republic, paid an export duty; but under the new Tariff law the tax has been abolished. The Department of Agriculture, in order to encourage extensive cultivation, has established a number of model plots to demonstrate up-to-date methods of planting, and now offers bonuses to farmers who produce the best crops. Penalties are inflicted for badly-cured cacao. The effect of these measures has been to eliminate, almost entirely, inferior qualities, and to improve the general condition of the product, which is now considered superior to that of any previous year. The smaller cacao crop, now coming into bearing, will be gathered during October, November, and December, although the bean is grown throughout the year, the larger crops being gathered between March and June. Trade in this commodity with the United Kingdom has fallen off considerably since 1920, when 246,236 kilos, valued at £15,408, were exported; in the following year (1921) no more than 109,340 kilos, valued at £1,618, were shipped out of a total of 26,573,871 kilos (valued at £616,790). The crop of that year was the largest on record, although the total price received was no more than one-half of that realised in 1920, which proved the best year on record for all West Indian products.

At the first meeting of the session 1923-24 of the Institute of Actuaries, to be held at Staple Inn Hall on Monday, the 29th inst., at 5 p.m., a paper entitled "Notes on the Interpretation of 'Select' Rates of Mortality," by Messrs W. Palin Elderton and H. J. P. Oakley, will be submitted.

Oversea Correspondence.

UNITED STATES.—CROP SITUATION—CO-OPERATIVE MARKETING—FEDERAL LAND BANK FINANCING—STEEL TRADE CONDITIONS—SOLDIER BONUS LEGISLATION.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 15.

ALTHOUGH estimates of prospective yields are lower in some instances than those of a month ago, latest returns indicate that this country's crops in the aggregate will reach an exceptionally large volume. The Department of Agriculture's report, as at October 1st, estimates the corn crop at 3,021,000,000 bushels, which would be 130,000,000 bushels more than last year's harvest, and only for the fifth time in history would exceed the three billion bushel mark. The spring wheat crop forecast has been cut down to 213,000,000 bushels; that would be 63,000,000 bushels less than last year, and some 32,000,000 below the average. The total wheat crop is figured at 781,737,000 bushels, or 7,490,000 less than a month ago, and comparing with last year's actual harvest of 862,091,000 bushels. The prospective yield of seven cereal crops is given as 5,382,000,000 bushels, as against 5,487,000,000 on September 1st, and 5,292,000,000 harvested last year. The oats crop promises to be about 100,000,000 bushels larger than the 1922 harvest. The tobacco crop suffered a heavy reduction last month, due to extensive losses from frosts in Wisconsin and Ohio, and wet or unfavourable weather in Tennessee and Kentucky. In Maryland the yield has been good, although the crop there is said to have been damaged considerably in barns as a result of house burning or pole sweat. In North Carolina the production has been larger than usual, but the quality is described as only fair, while in Indiana the crop is reported as heavy, with little damage from frost. The following table gives the latest Government crop estimates, compared with the September 1st forecast, last year's actual harvest, and with record yields in previous years:—

(Production in Million Bushels.)

	1923, October Fore- cast.	1923, Septem- ber Fore- cast.	1922 Harvest.	Record Yields.	Years.
Winter wheat	568	568	586	760	1921
Spring wheat	213	221	276	356	1918
All wheat	781	789	862	1,026	1915
Corn	3,021	3,076	2,891	3,208	1920
Oats	1,302	1,312	1,201	1,593	1917
Barley	199	199	186	256	1918
Rye	65	65	95.5	96	1922
Buckwheat	13.9	13.5	15	23	1866
Rice	33	33	42.0	52	1920
Total, seven cereals....	5,382	5,487	5,292	5,896	1915
White potatoes	401	390	451	451	1922

Hay, all	102.9	98	113	113	1922
Cotton	11.2	10.8	9.8	16.1	1914
Peaches	45.5	45.4	56.7	64.0	1915
Apples	190.7	190	201	253	1914
Peanuts	695	655	624	1,234	1917

All grain prices have been advancing lately, and the present outlook is that farmers will fare much better in marketing their grain crops than seemed likely a short time ago.

The Government's agricultural policy is to "help the farmers help themselves," and to that end the Administration is encouraging the promotion of co-operative marketing associations among farmers. Eugene Meyer, head of the War Finance Corporation, and another member of that body are now visiting grain farmers in the West and Central North-West to explain co-operative marketing methods in use by cotton, rice, and tobacco growers of the South and by fruit growers in California. They will also explain how producers may be aided financially through such co-operative associations. In this connection it is noteworthy that the Federal intermediate credit banks recently sold a second issue of

CABLE ADDRESS: BANKTRUST, PARIS

\$10,000,000 intermediate debentures, the proceeds to be used in furthering co-operative marketing among wheat growers, according to an announcement by the Federal Farm Loan Board. That the co-operative farming method is becoming increasingly popular with agricultural communities is indicated by figures showing that up to September 30th of this year, farmers, through their co-operative marketing associations, had received advances totalling practically twice the amount that was advanced up to November 30th of last year by the War Finance Corporation.

Another interesting development is that the Federal Farm Loan Board, in co-operation with and on behalf of the twelve Federal Land Banks, announced to-day a new issue of \$47,000,000 ten-thirty-year Federal Land Bank 4½ per cent. bonds, dated July 1, 1923, and not redeemable before July 1, 1933. The bonds are being offered for subscription at 100 and interest. The announcement discloses the fact that in five and a-half years of active operation, the Federal Land Banks have grown rapidly. On August 31, 1923, their combined capital was \$41,113,530, reserves \$4,050,500, surplus and undivided profits \$3,278,177, and total assets \$827,744,341. They are all on a dividend-paying basis, and each bank shows a surplus earned from its operations. On September 30th last, the United States Government owned \$2,400,000, approximately, of the capital stock of these land banks. During 1922, the Farm Loan Associations acquired about \$8,500,000 of such stock, 25 per cent. of the proceeds of which was used to retire stock owned by the Government, as required by the Farm Loan Act. The United States Treasury, it is said, has purchased and now holds more than \$100,000,000 Federal Land Bank bonds. While these bonds are not Government obligations, or guaranteed by the United States Government, they are the secured obligations of banks operating under Federal charter with Governmental supervision.

The latest monthly statement of unfilled orders by the United States Steel Corporation shows that the corporation's unfilled tonnage on September 30th amounted to 5,035,750 tons, as against 5,414,663 on August 31st, representing a decrease during September of 378,913 tons. On September 30, 1922, the total was 6,691,607 tons. The decrease last month compares with a loss of 496,100 in August, and indicates that new business received in September was about 100,000 larger than in the preceding month, allowing for somewhat lighter shipments. An outstanding feature in the steel situation, as disclosed by the corporation's report, is that production is being well maintained, notwithstanding that the volume of unfilled orders has steadily decreased in the past few months. Since March, United States Steel's unfilled orders have dropped from 7,403,332 to 5,035,750 tons, or more than 30 per cent., but its operations have declined during that period only about 7 per cent. to slightly below 90 per cent. of capacity. From this fact, together with the absence of any accumulation of steel at the mills, the inference is drawn that this country's consumption of steel cannot be measured, or is not reflected, by the amount of new orders placed in recent months. The fact that production has been maintained at such a high percentage of capacity is taken to indi-

cate that actual consumption of steel is very heavy. The volume of incoming business thus far in October is said to show further expansion.

It now seems practically certain that efforts will be made at the forthcoming session of Congress to put through soldiers' bonus legislation, similar to that which was enacted at the last session, but vetoed by the late President Harding. It has even been asserted by advocates of such a measure that enough votes could be counted on to pass such a Bill over a possible veto by President Coolidge. Attention is again being given, therefore, to the probable cost of a Bonus Bill, should it be enacted. According to calculations made by the National Industrial Conference Board, the cost of various plans embodied in the bonus proposals which have been made heretofore would involve a total cost of \$3,845,659,481. On that basis the Board estimates that \$1,136,741,670 would have to be provided by taxation or by loans during the next 20 years, while the balance of \$2,708,917,811 would have to be paid after 1943. The Board declares that the bonus would add to the debt of the United States 20 years hence a sum equivalent to from \$102 to \$142 on every family, and from \$64 to \$86 on every person employed in this country. In the form in which the Bonus Bill is likely to be presented the total cost would probably be at least \$4,000,000,000. Any bonus legislation will be vigorously opposed by many business and financial interests.

FRANCE.—RHINE REPUBLIC—FOREIGN TRADE—COAL IMPORTS—TRADE BALANCE.

(FROM OUR CORRESPONDENT.)

PARIS, October 24.

THE circumstances connected with the proclamation last Sunday of the so-called Rhine Republic and the prospects of the latter are still so obscure that French opinion is holding itself very much on the reserve in regard to the whole matter. Apart from the political aspect of the venture, however, the outstanding feature of the situation is the aspiration which is voiced by most of the leaders of the Rhineland Separatist movement, not only in favour of entirely cutting off political connection with the German Empire, but of entering into independent economic agreements with the new Republic's neighbours on the West—France, Belgium, and Luxembourg. "Our economic future," said one of the leaders of the movement, a day or two ago, in an interview with a French journalist, "is bound up with France and Belgium, and not with Germany. We have our eyes on Antwerp as our real port, and all our aspirations tend towards the West. Our ideal would be to have a similar position in Europe to that held by Belgium before the war." These statements are distinctly suggestive, and afford much food for reflection to those people, both in France and in Great Britain, who are inclined to regard the Rhineland Separatist movement merely as a very effective weapon for the purpose of bringing about the breaking up of German unity.

Economically, there can be no doubt, the elevation of the Rhineland into a separate, independent state would have much farther reaching effects than would merely political separation from the Reich of the territory concerned. The detachment from the German Zollverein of the Rhineland—which, it must not be forgotten, includes, in the view of those who are attempting to found the new republic, practically the whole of the Ruhr basin—must inevitably lead sooner or later to the inclusion of this rich industrial area in the orbit of the French-Belgian-Luxembourg combination. In many respects, economically speaking, such an evolution would be entirely in the natural order of things, and would ensure many advantages (which would probably be found far to outweigh the disadvantages) to all concerned. The benefit to French industry, from one point of view, would, of course, be immense.

In any case, such an adjustment of the economic map of Western Europe would render comparatively easy that co-operation between French and German industrial interests which has for many years been the dream of many leading men on both sides of the Franco-German frontier. In the opinion of a good many people here—quite apart

from the comparatively small number who admittedly favour the creation of the new Republic as a means for weakening Germany and aggrandising France—the real solution of the problem of French security is to be found in this direction. Common and interdependent economic interests, it is argued, would place France, Belgium, Luxemburg, and the Rhineland in such an assured position that political union would be unnecessary, and there could thus be no question of the creation of another Alsace-Lorraine on the Rhine, to be a menace to the peace of Europe. At the same time Germany, through the loss of so large a proportion of her economic and military strength, would be deprived of the possibility of being able to repeat her aggression of 1914. From the point of view of British interests, it is doubtful whether a development of this kind would be very welcome. The creation of a potential new Continental economic bloc of this kind could only be another serious menace to British foreign trade, and might, in certain circumstances, be even more dangerous than a united and resurrected Germany itself. The possibility is not so remote, however, as to be unworthy of consideration.

The French foreign trade returns for the first nine months of the present year, which were issued this week, show that imports during the period in question have increased by 37 per cent. in value, as compared with the corresponding period of last year, while exports increased about 41 per cent. The detailed figures are as follows:—

	First Nine Months of		Difference for 1923.
	1922.	1923.	
Imports—			
Foodstuffs	4,067,721,000	5,228,014,000	+ 1,160,293,000
Raw materials	9,463,123,000	14,166,189,000	+ 4,703,066,000
Manufactured goods ..	2,956,389,000	3,157,497,000	+ 201,108,000
Total	16,487,233,000	22,551,700,000	+ 6,064,467,000
Exports—			
Foodstuffs	1,262,141,000	2,238,515,000	+ 976,374,000
Raw materials	4,034,852,000	6,552,928,000	+ 2,518,076,000
Manufactured goods ..	9,068,143,000	11,623,602,000	+ 2,555,459,000
Postal Parcels	939,523,000	1,147,666,000	+ 208,143,000
Total	15,304,659,000	21,562,711,000	+ 6,258,052,000

It will be noted that over three-quarters of the increase in imports was in raw materials, while nearly half the increase in exports was in respect of manufactured goods and an almost equal value in raw materials. Out of 35,239,281 tons of raw materials imported during the nine months, 22,812,501 tons consisted of coal alone, most, if not all, of which came from Great Britain. The total amount of coal imported during the corresponding period of 1922 was 21,194,206 tons, from which it will be gathered that, in round figures, the amount of coal imported into France since the occupation of the Ruhr began was, down to the end of September, 1,600,000 tons more than during the first nine months of 1922. The figures show that, while the value of the total imports during the past nine months was 37 per cent. higher than in 1922, the total weight was less than 10 per cent. more. The effect of the fall in the franc is seen in the fact that, while the quantity of coal imported from Great Britain increased during the nine months by only 7 per cent., the value of the quantity imported increased by over 56 per cent.

The returns for the nine months disclose an adverse balance amounting to 988,989,000f, as compared with one of 1,182,500,000f for the corresponding period of 1922. This adverse balance, of course, concerns only the "visible" imports and exports, and does not take into consideration the large amount of money spent in the country by tourists and others from abroad, which would tend substantially to reduce the apparent deficit. The figures for exports and imports during the last five months are as follows:—

	Imports.	Exports.
May	2,596,881	2,675,045
June	2,559,336	2,479,391
July	2,615,648	2,423,781
August	2,633,217	2,542,820
September	2,613,376	2,434,645

Compared with the corresponding period of 1913, French imports during the first nine months of 1923 showed an increase in value of 16,429,345,000f and in weight of

7,649,635 tons, while the exports were 16,543,920,000f greater in value and 1,992,183 tons more in weight. The increase in value and weight was distributed over all categories of imports and exports, with the exception of the imports of manufactured goods, which were 22,358 tons less in weight, and of the exports in the form of postal parcels, which were 2,636 tons less.

GERMANY.—POLITICS—FOOD CRISIS—CURRENCY—FINANCES—BOURSE AND MONEY MARKET—BUSINESS.

(FROM OUR CORRESPONDENT.)

BERLIN, October 23.

THE end of last week saw the Republic in a desperate condition, and since then things have got worse rather than better. There is an accumulation of evils—in international politics, in home politics, in finance, in currency, and in every branch of business. While predictions of immediate break-up or general disorder cannot safely be made, it is hard to see how present conditions, not to mention the worse conditions which seem to be coming, can be survived. It is probably a record in history that any country, and a country with a homogeneous population, should simultaneously have three movements of wholly different kinds threatening three different secessions; yet such is the case with Bavaria, Saxony, and the Rhineland. The Rhineland movement is a pure French invention; but what it lacks in native physical force it gains in French support. The Bavarian and Saxon movements would probably not have reached the present tension were it not for the general disaster brought by the Ruhr occupation. The Republic has already been forced to move troops into Saxony to restore constitutional conditions, and these troops have been fired on, and have replied. With Bavaria the Republic will ultimately either have to act in the same way, or to recognise a *de facto* secession, because the assertions of the Bavarian Cabinet and of the local dictator, von Kahr, that they are devoted to Germany, and are merely resisting "Berlin Marxism," cannot be taken seriously. The present revolt was undoubtedly planned, probably after the revolt following Dr Rathenau's assassination, when Bavaria refused to put into force on her territory the special security measures taken by the Republic. On that occasion Dr Wirth, sooner than provoke a conflict, weakly gave way, and to-day the Stresemann Cabinet seems to have only the same choice. The next step will probably be the proclamation of a Bavarian Monarchy. This, though it would violate the Constitution no more plainly than several of Bavaria's acts last week, would by its overt nature probably force an armed conflict. It is nevertheless recognised that the retention of Bavaria within the Republic by armed force is, though militarily possible, politically impossible.

The food crisis is very serious, and cannot continue without general disorders. For weeks butter, milk, and potatoes have been hard to get. Now the turn has come to bread. Yesterday nearly all Berlin bakers' shops were closed. In future, according to a decree of to-day, they must be kept open whether they have bread or not. A police inquiry has shown that it is not true that bread is being purposely withheld from the market. Flour is not coming to the market. For weeks past it has been sold wholesale only against dollars, and the mark sums necessary to carry on a small bakery are so enormous that business is not done. In one week the official dollar exchange has risen from around 4 to over 40 milliards, and prices have fully kept pace. Berlin workmen threaten a general strike if a stable wage is not introduced within three days. This can be done only by employing a stable currency. The system, initiated in August, of raising wages automatically according to an index, becomes wholly useless when prices double and even sometimes treble between morning and evening. Already between October 4th and 18th prices (*Frankfurter Zeitung's* index) increased 14.6-fold, and in the second half of the month this record will be beaten. The price of the 1,900 gramme loaf rose in a week from 440,000,000 to 5,500,000,000 marks. On October 15th the cost of living (official index) was 691,900,000-fold that of 1914, having risen 534.2 per

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised £3,000,000
Paid Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,352,105

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

cent. in a week. The Cabinet, in the hope of influencing the farmers, has appointed Count Kanitz, an influential Agrarian and former German-National, as Food Minister. It is to be feared that the bare necessities of life will soon be unobtainable by a great part of the population; that actual starvation conditions will appear in the cities. If that should happen, and should not be remedied in a few days, general disorder seems inevitable.

The Currency Bank has been formally established. The president is Dr Lentze, a former Prussian Finance Minister. Actual business will be begun next week, and it is hoped to issue the first "Rentenmark" notes by November 5th. The notes will be in denominations of 1, 2, 5, 10, 50, 500, and 1,000 r.m., and "Rentenmark" pfennig copper coins of from 1 to 50 pf will be minted. The new currency will have to be issued before the mortgage and bond security by which it is covered is formally completed. In view of the fact that "gold loan," now to be used provisionally as currency, has maintained its theoretical gold value without any real security, it is hoped that the mere assurance that there will be no "Rentenmark" inflation, and that the "Rentenmark" will be taken at full gold value for tax payments, will prevent depreciation. It seems, in fact, that the right to convert into mortgage bonds will have very little influence upon the value of the notes. Banks are preparing for the new currency. The Disconto Gesellschaft has provisionally opened a "stable value department" for managing current and deposit accounts in units of gold-loan and dollar treasury bills. The difficulty here is that these surrogate currencies are not divisible into very small denominations. The bank undertakes to book fragments of indivisible units, and if an account is closed to pay out any uneven balance in the form of paper marks at the day's exchange. Other banks are expected to adopt this system.

The State of Bremen has issued a dollar loan of \$1,000,000. The Minister of Communications has published a plan of savings to be achieved by ceasing to run trains which are little used, and by differentiating the Sunday and the week-day services. The Reichswirtschaftsrat has voted down a proposal to increase the Sales Tax from 2 to 2½ per cent. The Customs gold surcharge is put on a new basis from October 24th, being the same as the new gold key-number for taxes, which will be based on the dollar exchange of the preceding day.

The latest decade report of the Finance Ministry, for October 1st to 10th, must be considered relatively satisfactory. Taxes yielded 393,366 milliards, against 81,848 milliards in the preceding decade, while expenditure rose only from 40,065,854 to 43,230,293 milliards. Revenue rose from the 1-500th to around the 1-100th of expenditure. The loss on the railways in ten days totalled 12,868 billions. The Floating Debt of discounted Treasury Bills rose in ten days from 46,716 billions to 89,142 billions. Despite the great drop in the value of money, the item General Expenditure increased only from 23,994 to 27,474 billions. This is due to a large decline in real expenditure on the Ruhr. The Government is having great difficulty in holding to its new policy of keeping up the charges for State services. As an instance, the home letter rate, though multiplied so rapidly that it is now impossible to get postage stamps of sufficient size, was at yesterday's exchange only about the 150th part of a penny, or much less than at the time when no serious attempt was made to adapt at all, but

when the exchange movement was less rapid. This means an increased deficit.

By decree of yesterday, the Cabinet restored the already tried and already abandoned prohibition against buying or selling exchange at other than the official rate. Industrial concerns are to be allowed to issue their own "stable-value" currency, and will so be able to pay stable wages. The Reichsbank's statement for October 6th shows a slackening off in the demand for credit and in the rate of inflation. Commercial discounts rose by 2,941 billions to 6,601 billions, Treasury Bill discounts by 25,015 billions to 70,231 billions, and circulation by 18,704 billions to 46,933 billions. Advances had a large increase, by 193 billions to 292 billions. Nearly all these new advances are on "wertbestaendig" basis. The gold reserve remains unchanged at 433,927,000 gold marks.

The Bourse boom continues without interruption. Yesterday news from Bavaria and from the Rhineland produced something like a panic atmosphere, which did not, however, check the upward movement, and it was rumoured that the Bourse would be closed for some time. These rumours seem to have been baseless. Money has been very tight, day rates yesterday reaching 15 and even 20 per cent. a day; later in the day money was more plentiful. There is a great demand for dollar Treasury Bills and for gold loan, into which the paper mark gains made in stock speculation seem to go. There have been small bank failures, and rumours of more to come. Stocks last week had another rapid rise, the *Frankfurter Zeitung's* index for home dividend-payers rising from 386,400,570,000 to 1,332,500,570,000, or 48,738,130 if the average at the beginning of January, 1922, is taken as 1, and of January, 1923, at 14. Most home bonds continue to have no official quotations. Threes, still the favourite, yesterday were quoted 1,500,000,000, Savings and Premium 50,000,000, Berlin, 1923 (8-18 per cent.) 3,000,000.

The Reichsrat has approved of the Bill extending the maximum permissible working-day to ten hours. The two Socialist States, Saxony and Thuringia, voted against it, though the Bill is supported by numerous prominent Socialists. The Ober-President of Prussian Saxony and the Burgermeister of Berlin also opposed. The condition of industry is ever worse; there is, therefore, a heavy drop in the demand for coal. Industry is again short of capital; shortened hours are reported from every quarter. A statement for mid-September shows that 71 per cent. of concerns reported that business was bad, as against 49 per cent. in mid-August. The figure to-day is undoubtedly higher.

UNION OF SOUTH AFRICA.—EXPANSION IN MINERAL PRODUCTION—FAR EAST RAND COSTS DOWN TO 18s 7d—GOVERNMENT AREAS' REMARKABLE PRODUCTION AND PROFIT—GOVERNMENT'S INTEREST IN MINES.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, October 3.

THE mineral production of the Union is showing progressive increase, the value (inclusive of £105,034 gold "premium") being substantially over four millions and a-half in August, against rather over four millions in January, the exact figures being £4,561,097 against £4,048,919. The most marked expansion has been in diamonds, the yield of which in August was 229,332 metric carats, valued at £645,717, against 86,494 carats, valued at £274,000 in January. There has also been considerable expansion in coal production, which for the past four months has exceeded a million tons a month, the value of £336,615 for August being £53,000 in advance of that for January. For the eight completed months the total value, inclusive of somewhat less than £1,100,000 currency premium on gold, is practically £33½ millions. I do not give the corresponding figures for last year, as they are vitiated by the strike. It only requires the present production to be maintained for the year's value to exceed £50 millions.

The foregoing figures are taken from the publication of the Mines Department, for details of the profit aspect of the gold mines one may similarly refer to the analysis

of the Chamber of Mines. During the eight months upwards of 17,750,000 tons have been crushed (all but a mere 224,400 tons on the Rand itself) for 6,040,226 fine ounces, or an average of 6.71 dwt per ton. The working revenue is given at £25,922,900, against a value of £26,801,657 shown by the Mines Department. The apparent discrepancy is explained by the fact that some of the groups deduct the cost of realisation, swollen at the present time by the heavy bank exchange, from the value to arrive at the revenue figure; others, on the contrary, charge realisation to working costs. Naturally these variations in accountancy make no difference in the profit, which totalled £7,860,839, being at the rate of 8s 10d per ton. This corresponds very closely with the average in 1914, but it must be pointed out that the present mean recovery at 6.706 dwt is nearly half a dwt more, and that the premium works out still at 1s 3d per ton. While the recovery is 2s 9d per ton higher, working costs, which have averaged 20s 5d for the eight months, are 3s 4d higher than in 1914. But the Rand's August figure of 19s 11d is only 2s 10d higher. This is a most satisfactory showing when we remember that nine years ago the charges for compensation for miners' phthisis were not included, and there was no regular leave on pay, while, of course, the mines are now much deeper, involving much heavier expenditure on support of workings.

The most important mines of the Far East Rand are working below the general average. Excluding New State Areas and Modder East as exceptional, I find the ten producers average only 18s 7½d. The huge tonnages of 156,500 crushed by the Government Areas at 16s 10d and of 116,000 by New Modder at 16s 5d have a favourable bearing on the average. As they are each making well over a sovereign a ton profit, the adage, "The best is cheapest" is once again exemplified in rather an unusual manner.

Statistics of Union trade for the first six months show imports at £25,343,417, an advance of £3,400,000, and exports at £34,811,588, an increase of £11,105,000, the comparison being, however, with the strike period. Of the total exports, minerals account for two-thirds, or £23,957,000. While exporting capacity improves the Union's financial position, an excess of nearly nine and a-half millions over imports must tend to increase bank balances in London, which is given as the reason (may it not, perhaps, be merely an excuse?) for the high adverse exchange. I am inclined to think that the "shearing" of the profits of the commercial banks by the Reserve Bank securing the monopoly of the note issue, which was formerly highly profitable, has compelled the banks to make their profits in other directions. Among exports, hides, skins, and wool account for an increase of £900,000, but cereals dropped by £639,000. We imported £1,000,000 more in articles of food and drink, but £728,000 less of cotton goods. The value of motor cars, cycles, and lorries increased by £750,000, notwithstanding the lower price tendency.

The report of the Government Mining Engineer for the year ended December 31, 1922, contains statistics of operations and results secured by mines in which the Government participates in profits, and shows the total participation by Government in profits in respect of these mines up to the end of the year. The companies concerned and amounts are as under:—

	Government Share.
Premier (Transvaal) Diamond Mining Company.....	*5,552,359
Meyer and Charlton Gold Mining Company, Limited ..	338,811
Government Gold Mining Areas (M.) Cons., Limited....	3,787,314
Brakpan Mines.....	139,333
Springs Mines.....	71,461
Modderfontein East.....	15,856
Zaaiplaats Tin Mining Company.....	154,681
	9,949,815

* Up to October 31, 1922. † Up to June 30, 1922. ‡ Up to July 31, 1922.

The total amount is £9,949,815, and this colossal sum is, of course, quite apart from contributions to Government revenue in respect of Union and provincial taxation. All the seven profit-earning mines in which the Government is a co-partner are situated in the Transvaal. Mr Clegg, the Governor of the South African Reserve

Bank, has again been recommending the wider use of trade bills instead of open credits, so largely in vogue in South Africa, and the wisdom of such a change is generally realised by merchants who pursue the sounder methods of finance. Mr Patrick Duncan, Acting Minister of Finance, in the absence of Mr Burton, who is attending the Imperial and Economic Conferences in London, in opening the South African Parliamentary Conference here, expressed the opinion that the Union had definitely turned the corner, and that the deficit would not be increased. As to taxation, he went no further than to say it would not be increased, cold comfort for those who looked for some measure of reduction, even if only the jettisoning of the irksome and complicated patent medicine tax. But we should like to see the Customs Tariff moderated, postage brought back, if not to a penny, to three-half-pence an ounce, telephone tariffs reduced, and the income-tax abatement raised from £300 to £350 or £400. In the halycon days it was as high as £1,000—a handsome figure still observed in Rhodesia.

POLAND.—FINANCIAL SITUATION—POLITICS—COMMANDER HILTON YOUNG'S MISSION—CROPS—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

WARSAW, October 16.

THE present financial situation is grave. It would be wrong to consider an improvement as impossible; nevertheless, it is certain that without energetic measures the Polish currency cannot be saved from a total collapse. The depreciation of the currency is so rapid that the fixation of wages every fortnight is no longer sufficient to enable the working population to make both ends meet, and the latter are demanding that the wages should be fixed every week.

According to the last return of the Polish National Bank, the circulation has increased in September by 4,326 milliards, as compared with 800 milliards in June, 900 milliards in July, and 2,400 milliards in August. At the end of September the circulation already exceeded 11,000 milliards.

This rapid inflation has completely disorganised the exchange market, as may be seen from the figures below:—

	London.	New York.	Zurich.	Paris.
End of September..	1,445,000	315,000	56,000	19,900
October 5.....	2,416,000	485,000	86,760	28,625
" 8.....	2,640,000	580,000	103,800	34,500
" 11.....	4,300,000	900,000	170,500	57,000
" 13.....	4,100,000	900,000	161,400	54,750
" 15.....	4,300,000	950,000	170,000	58,750

In a fortnight the Polish mark has lost nearly ⅔ of its value. A rise of the exchanges by 25 per cent. and even more in one day has ceased to be an exceptional phenomenon.

Under such conditions the *exposé* of the new Minister of Finance in the Diet was awaited with great impatience. As reported in my last letter (*Economist*, September 29th, p. 481), Mr Kucharski has recently conducted negotiations with foreign capitalists for the granting of a loan to Poland, and it was expected that he would make some definite announcement on this subject in his speech on Thursday. But he did not; and it seems that he failed to obtain foreign financial assistance. Mr Kucharski's speech was vague; but he proposed three measures for stopping the increasing flood of paper money: (1) an increase of the land tax, (2) the fixation of the fines for defaulters at 150 per cent. a month of the assessed amount, (3) the closing of all credits for new investments. These measures are only palliatives, and do not constitute a financial programme which can restore Polish finance to the right lines.

The gravity of the present situation may be best gathered from the figures quoted by Mr Kucharski. The amount of the income-tax was fixed at 200 milliard Polish marks, corresponding to 133 million Swiss francs. During the first eight months of this year 100 milliard marks were collected, which corresponds to a total of 5.75 million gold francs. After the increase of the income-tax during the

second half-year the revenue from this source will be increased by 700 milliard marks; nevertheless, the total will not exceed 13 million gold francs instead of the 133 which were fixed in the estimates. Similarly the amount which will be collected as land tax will not exceed 7 million francs, instead of 53 millions. From indirect taxes, 125 millions were expected in the first half year, of which 75 millions failed to mature.

According to official statistical data, the revenues of the Ministry of Finance expressed in Swiss francs, and compared with the revenues during the same period in 1922, were as follows:—

	Million Swiss Francs.		Per Cent. in 1923 as Compared with	
	1922.	1923.	1922.	
Direct taxes	98.73	28.50		28.8
Indirect taxes	74.26	56.31		75.7
Import duties	16.06	27.54		171.5
Stamps	18.07	22.23		123.0
Export duties	0.65	3.53		543.1
Total.....	207.77	138.01		66.4

While in 1922 207 million gold francs were collected, the amount obtained in 1923 reaches only 138 millions, or 66.4 per cent. of this sum. In the first instance the direct taxes have decreased, and in spite of the increased yield of Customs duties, the results in 1923 are worse than in 1922.

This very unsatisfactory financial situation is accentuated by the political instability at home. The depreciation of the mark, the steady rise of prices, the failure of Mr Kucharski's negotiations, the recent reverses sustained by Poland at Geneva and at The Hague (the election of Mr Benes, and the decision of the International Court relating to the right of expropriating German colonists are considered as such) have embarrassed the Cabinet and widened the rift existing between the different parties which form the present majority. The Christian Democrats, who represent the working population, are partially refusing support to the present Cabinet. Though it is unlikely that Mr Witos will be overthrown in the near future, it may be expected with some certainty that a reconstruction of the Cabinet will take place. Probably the portfolio of the Ministry of Finance and of the Ministry of Foreign Affairs will pass into other hands.

Commander Hilton Young, the English financial adviser, has given to a Press Conference some information relating to the aim and programme of his mission. He emphasised that his journey to Poland is without any official implication, and that all rumours connecting his mission with the question of a foreign loan are without foundation. He will devote himself to an investigation of Poland's financial position, and he will present his recommendations to the Polish Government. Commander Hilton Young declared that close study has already convinced him that the economic foundation of Poland is sound, and that it is only necessary to complete the superstructure of financial prosperity.

Statistics published recently support this judgment. The crop estimates for the current year show that agricultural production has not only reached, but has in some cases surpassed the pre-war level, as may be seen from the figures below (thousand quintals):—

	Average, 1909-13.	1921-22.	1922-23.	1922-23, As Compared with 1909-13.
Wheat	16,591	11,597	14,528	86
Rye.....	56,591	50,660	65,428	116
Barley	14,985	13,040	17,846	119
Oats	28,101	25,481	37,726	134
Potatoes.....	245,880	337,590	287,182	117

With the exception of wheat, all other crops gave this year a greater yield than before the war. The rye crop is 16 per cent., barley 19 per cent., oats 36 per cent., and potatoes 17 per cent. greater than the average of 1909-13. The value of Polish exports in August reached 101,900,000 gold francs, as compared with imports amounting to 96,700,000 francs. During the first half-year the excess of exports over imports was estimated at 38,000,000 gold francs. This represents great progress in comparison with previous years.

SWEDEN.—BETTER LABOUR POSITION—TRADE CONDITIONS—MONEY AND STOCKS.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, October 16.

THERE is a certain amount of activity at the ironworks now, since the settlement of the long labour dispute. The output is larger than before the conflict, but does not reach normal. Only half of the existing blast furnaces and two-thirds of the Martin and Bessemer works are in action; the number of works open is slightly higher than before the conflict broke out. The settlement of the ironwork dispute has, of course, had a good deal of influence on the labour market in general, as several trades connected with the iron trade were suffering from lack of work, owing to this dispute. At present it seems as if the ironworks are booked with orders for the rest of this year. Some branches of our industry have lately been suffering rather less from foreign competition, but the present state of affairs abroad has, of course, an unfavourable influence on trade in general. In particular, our iron ore export trade has been suffering a great deal, owing to the Ruhr occupation, and the low rate of exchange of the French and Belgian currencies has had a bad influence on our timber exports to these countries. Usually two-thirds of the Swedish iron ore is exported to Germany, but during present conditions iron ore exports to that country have been greatly reduced. This loss has been partly compensated by exports to other quarters, but these are insufficient to keep the mines going as usual, and reductions in the number of workmen have had to be made. In the timber market the sales are rather lively at present, and the amount sold is estimated at 750,000 standards, which is little under the quantity sold at the same time last year. The situation on the pulp market seems to be satisfactory, and there seems to be little anxiety that the quantities still available will not be sold out. In general the business situation at present may be considered less satisfactory than of late; thanks to the general situation in Europe the future is uncertain. The situation on the labour market can be considered satisfactory, as there is no more unemployment now than in pre-war times. This time of the year is about the busiest, but there seems little fear of any great increase in unemployment.

October 1st is the time when trade agreements concerning a great number of labourers in various trades are due for revision. The workshop owners have terminated their present agreement, as they desire reductions of wages and some other alterations for next year. This industry employs about 30,000 workers, and it is stated that even the lower wages now proposed will be higher in purchasing power than were the wages before the war. At the match-making factories as well as in some other trades the agreements are also up for revision. The harvest this year seems, in spite of the very bad weather, to be a little above the average, as far as the quantity is concerned, but the quality is below the average. Approximate figures show that the crop of bread cereals may reach a total value of 150 million crowns. Of the total, it is estimated that about 30 per cent. will appear in the open market, while the rest is used by the producers.

A combined concern of A.S.E.A. (Allmänna Svenska Elektriska A.B.) in Vasteras and the Luth & Rosén A.B. has secured a great order from the State Railways lately. They are to manufacture the 50 electrical locomotives required for the Stockholm-Gothenburg line, which is going to be electrified. The price for each locomotive will amount to 210,000 crowns, the whole order thus amounting to 10.5 million crowns. Tenders for this order were made by several foreign as well as Swedish firms. The price now paid is slightly higher than the lowest foreign offer.

In the money market a feature is the ease with which new loans have been absorbed. For instance, a new 5 per cent. State bond loan of 50 million crowns issued last month was absorbed very quickly. The turnover on the Stock Exchange during September was 10.05 million crowns, of which 3.18 million crowns were for bonds. During September last year it was 10.1 million crowns, and in September, 1913, it was 11.8 million crowns. There seems to have been a check in the fall of prices. The

index issued quarterly by the Board of Social Welfare, which includes all necessities of life, shows an increase from 174 on July 1st to 177 on October 1st. The increase is chiefly due to the increase of prices for house rents and some foodstuffs. This index is the basis on which the war bonus of all Government officials is calculated, and there will thus be a small rise in the pay for all those employed by the Government. The monthly index issued by the same Board, including foodstuffs, fuel, and lighting only, has risen from 161 for August to 165 for September. For July this year it was 160.

ROUMANIA.—OPENING OF PARLIAMENT—LEGISLATIVE PROGRAMME—NATIONAL BANK AND CURRENCY CIRCULATION—LOAN NEGOTIATIONS—INDUSTRIAL BANK.

(FROM OUR CORRESPONDENT.)

BUCHAREST, October 19.

IN a disturbed political atmosphere consequent upon the recent discovery of a plot—said to be partly Fascist and partly anti-Semitic—to assassinate several members of the Government and a number of prominent citizens, and with serious Cabinet differences arising out of the shifting economic policies of the Government, the autumn session of Parliament was formally opened by the King on October 15th. In the usual speech outlining the legislative programme prominence was given to all the administrative reforms and measures necessary to be adopted in order to give full effect to the provisions of the New Constitution for Greater Roumania which was voted and signed last March. The legislative programme also includes a new mining law to govern the exploitation of mineral wealth (a law which will be of paramount importance to the petroleum companies), a new labour code, social and sanitary reforms, and measures to relieve the economic situation. The speech also made complimentary reference to the balancing of the Budget, and inferred—as have other recent official utterances—that no new money has been printed during the past year for the needs of the Treasury.

Under these circumstances it is rather striking that the bank note circulation continues to show a steady rate of increase. At the end of September, 1922, according to the statements of the National Bank, circulation amounted to 15,157 million lei, while on September 29, 1923, it had reached a total of 17,426 million lei, the increase last month alone amounting to more than 400 million lei. That no increase in the Treasury debt to the bank has taken place is confirmed by the asset side of the bank statement, which shows, as a matter of fact, that advances to the State have been reduced during the year ending September 29, 1923, from 12,348 million lei to 11,568 million lei. The increase in note circulation has been offset on the asset side of the bank statement by the item "portfolio" (presumably meaning discounted paper of other banks and industrial enterprises), which has increased during the year under consideration from 3,100 million lei to 5,220 million lei—the bank thereby issuing new currency against discounted bills. A considerable portion of these discounted bills probably represents sums owing by the Government and State-controlled enterprises to industrialists, which the Treasury is as yet not prepared to meet by direct payment; so that, while the Treasury debt to the bank shows no direct increase, it is presumably safe to say that, if the State were able to meet its internal liabilities, the National Bank would not be called upon to discount such a large and growing volume of bills. Some misgivings have been occasioned by the announcement of the bank a few days ago that it would shortly cut down its discount operations by at least 20 per cent., with a further reduction after January 1st next, in an attempt to bring about deflation. No change has yet been announced in the bank rate, which it officially maintained at 6 per cent. That the substantial increase in circulation during the last month or two has not yet been reflected in exchange rates is probably due to the fact that grain shipments are moving out a little more freely after the port stagnation during August and September.

Two visitors to Bucharest during the early part of this month—M. Henri Bérenger, a member of the Budget

Committee of the French Senate, and Mr Douglas Vickers, of Vickers, Limited—attracted a considerable amount of Press attention. It is now being confidently stated that, as a result of M. Bérenger's visit, Roumania will shortly negotiate another French loan—perhaps for as much as 100 million francs; while, in Mr Vicker's case, expectations run as high as a £3 million loan, or credit, in return for which Vickers would receive from the Government (so it is stated) 30,000 shares of stock in the "Reshitza" Metallurgical Works in the Banat, the largest Roumanian industrial enterprise. "Reshitza" shares, of a par value of 500 lei, are now selling at around 1,500 lei, the lowest price (in gold) at which they have yet been sold. It is being stated that, with the active backing of Vickers, the "Reshitza" works would be capable of undertaking the electrification of a considerable portion of the State railways, this being one of the projects in connection with the contemplated (and badly needed) reconstruction of the country's transport system.

The new Industrial Bank, approved by Parliament last June with a capital of 500 million lei, is just beginning to function, the books on the first public offering of shares (200 million lei) having been closed a few days ago. As public subscriptions have amounted to 140 million lei, the State and the National Bank—although required by the charter provisions to subscribe 50 per cent. of the total capitalisation—will only be called upon to take 60 million lei of the first issue. While the new enterprise may be able to afford some slight relief in the present credit crisis, its resources are quite insignificant compared with the needs of the country.

DENMARK.—EXCHANGES—TRADE BALANCE—PRICES—NATIONAL BANK REPORT.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, October 20.

THE question of the price of the Danish krone has been discussed for the last couple of months by an Exchange Conference convened by the National Bank; but it is not yet possible to say what will be the practical results of the conference. Recently the question of the establishment of an Exchange Equalising Fund amounting to about £5,000,000 has been discussed—this amount to be provided through a loan in England. A fund of this description might be employed partly to counteract fluctuations of the krone rate and partly to appreciate this rate, at least through the psychological effect, which no doubt would be created by the establishment of the fund. It is suggested that the Equalising Fund should be provided by co-operation between the State and the banks, and that it should be managed by the National Bank and the principal banks jointly, the National Bank being commissioned to effect the necessary dispositions with the means of the Fund.

In other respects the Exchange Conference has been of importance by throwing light on the economic situation and the causes of the decline of the krone rate. Investigations have been made with regard to the extraordinary consumption of capital after the war. Certain members of the Conference have maintained that the reconstructive measures connected with the reversion of Slesvig to Denmark and also the re-establishment of livestock and replenishment of merchants stocks have to a considerable extent affected exchange conditions. Further, the consumption of capital has, of course, had connection with the losses caused by the world slump.

In August the balance of trade has again shown a rather considerable import surplus, imports aggregating Kr. 172,000,000, against exports of Kr. 140,000,000, of which Kr. 7,000,000 represented the re-export of foreign goods. During the first eight months of the present year imports totalled Kr. 1,265,000,000 and exports Kr. 1,013,000,000. The import excess for the eight months is thus about Kr. 250,000,000. However, exports of agricultural produce have been considerably more than last year. During the eight months exports of bacon, meat, &c., were Kr. 316,600,000, butter, cream, milk, and cheese Kr. 326,900,000, and eggs Kr. 74,500,000, the

figures for the corresponding period last year being for Kr. 227,900,000, Kr. 248,700,000, and Kr. 66,400,000 respectively. Exports of agricultural produce have also risen considerably in quantity. The sales to the United Kingdom, for instance, amounted to 109,800,000 kilos bacon, 62,700,000 kilos butter, and 24,200,000 scores of eggs, as against 69,700,000 kilos, 41,900,000 kilos, and 19,900,000 scores respectively in January-August, 1922. A statistical summary just published shows that Germany in 1922 was again the country from which the largest share of the imports emanated. During the said year the value of the imports from Germany was Kr. 477,000,000, against Kr. 341,000,000 from England, the total value of the imports being Kr. 1,553,000,000. In 1922 31 per cent. of the imports came from Germany, against 27 per cent. in 1921 and 17 per cent. in 1920. In 1913, however, the percentage was 38.

Just over one-fifth of the value of the imports in 1922 fell to the share of the United Kingdom, as against just below one-fifth in 1921. This is, for instance, due to the higher value in 1922 of the imports of the two principal classes of goods, viz., coal and coke and drapery. The value of these imports amounted to Kr. 120,000,000 and Kr. 76,000,000 respectively, as against Kr. 108,000,000 and Kr. 56,000,000 in 1921. The increased value of the mineral fuel imported corresponds to still further increase of the quantities. The greater value of the imports in 1922 is, however, partly due to the fact that the direct import of goods from other continents were less in 1922 than in 1921 and the years just preceding, a portion of goods originating from other countries being once more purchased *via* London. There was a considerable drop in the share of the United States in our import trade, although this share in 1922 was still somewhat larger than before the war.

The monthly wholesale price index of the *Finanstidende* rose during September from 202 to 205 (100 = average 1912-14), price movements having been irregular during the said month. The general tendency was upwards, but several articles show a decline during the month, including pork, potatoes, and especially the four principal cereals, of which supplies have come into the market after completion of the harvest. Rather considerable rises are, however, shown by goods like butter and eggs, and smaller rises by margarine, sugar, coffee, wool, iron, nitrate manures, and various metals, &c. Eight articles, including lumber, coal, and petroleum, were unchanged. At the beginning of August a provisional report was published by the National Bank, suggesting that the financial year closing July 31st would show no surplus, as the earnings would be absorbed by writings off and a sinking fund "to meet the sacrifices made by the National Bank in order to support the Landmands Bank." The annual report now available shows net earnings at Kr. 19,000,000. The board has declared a dividend of 10 per cent. to be paid out of the shareholders' dividend regulation fund, in accordance with the provisions of the charter. This rate is the same as a year ago.

Letters to the Editor.

LOW EXCHANGES AND INTERNATIONAL TRADE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I ask your permission to make some observations on certain statements of Sir Eric Geddes at the luncheon at Glasgow on October 23rd. Sir Eric says: "At the present moment we see the most extraordinary position of two systems of exchange being created—a circle of high-exchange countries and a circle of low-exchange countries; and the tendency is becoming obvious for trade to circulate in two separate circles, the low-exchange countries doing business with each other, the high-exchange countries doing business with each other on an entirely different scale."

I venture to assert that no such two separate circles now exist, that there is no tendency for low-exchange countries to trade with those similarly situated rather than with high-exchange countries, and that any idea that such a tendency would naturally be created is based on wholly false reasoning.

It is not, broadly speaking, true that low-exchange countries are doing a large trade with one another. It may be the case that Germany imports grain from Poland rather than from North or South America or Australia, but it is simply because the countries are adjoining and there is a great saving of freight. It may be true that Poland does relatively more trade with Russia than other countries do. They adjoin, and they understand each other better. In neither case has the condition of the exchanges anything at all to do with it.

Germany used to import a great quantity of wool from Russia, but she now receives none from Russia and has increased her imports from Australia and the Argentine. The relative increases have nothing to do with the fact that Australian exchange is 7 per cent. below par and the Argentine 20 per cent. below par. Germany, Poland, France, and Belgium import their cotton from the United States, India, and Egypt as before. The proportions have not been in the least degree affected by the United States currency being at par while the Indian rupee is 30 per cent. below the parity of a few years ago. Germany's exports of textiles, leather, fancy goods, constructional steel, &c., are not directed in any greater degree than before to the countries where the exchanges have collapsed. Her best customers in 1919-23, as in 1910-14, have been the countries where exchange is now at par or near it. France does not send her wine and her luxury products chiefly to countries where exchanges are as low as her own or lower. Her chief markets continue to be the richest countries, and some countries which have ceased to be rich and have collapsed exchanges have also ceased to figure amongst the best customers of France. England is a better customer of France than all the countries with collapsed exchanges put together. Belgium, likewise, does not look for her markets to the countries that suffer in equal or greater degree her malady of a depreciated currency. Her best buyers are those whose purchasing power has suffered least in consequence of the war, and such countries, without exception, figure amongst those with a good or comparatively good rate of exchange.

This country exports coal as it used to do to the Argentine, Germany, Italy, &c., countries where the exchange has fallen in very varying degrees, and also to such countries as Holland and Sweden, where the currency is at par. We export our manufactures to the Dominions, to the East, to North and South America, and to the Continent of Europe. Because the purchasing power of the countries where exchange is lowest is usually lowest, our exports to certain distressed countries are much less than they used to be, and we suffer bitterly from the loss of that trade. Is it seriously contended by Sir Eric Geddes that we should make good what we have lost by lowering our rate of exchange and putting ourselves into the same circle as certain other countries? In the first place, nobody will dare to suggest that we should lower our exchange sufficiently to compare even with Belgium, France and Italy. In the second place, if we deliberately placed our exchanges in the position which theirs have come to, we

should still find our best customers just where we find them now.

No one need be surprised at the comparatively small effect of relative currency values in the course of international exchange. Let us consider a typical case. The Argentine, Australia, and the United States are all sellers of wheat for export at almost all times. Given that the quality of the wheat is the same, all three countries must sell their wheat at prices equivalent on a given day to the world price, for example, 40s per quarter c.i.f. Liverpool. The rate of freight being the same, if Germany or France wished to buy foreign wheat they must pay 40s per quarter irrespective of the state of their currency. The United States, the Argentine, and Australia will all exact the highest gold price the world market will give. Let us say Poland enters the field as a seller of wheat. Does she turn to Germany as a buyer because Germany's currency has collapsed like her own? Not at all. Poland exacts for her export surplus of wheat the highest gold price she can anywhere obtain. If the transport charges from Warsaw to Liverpool or Rotterdam are 5s per quarter, then Polish wheat, if equal in quality to other foreign wheat, is worth 35s per quarter in Warsaw when the price in Western Europe is 40s. If Germany is to buy Polish wheat she must pay 35s in Warsaw, quite irrespective of whether calculated in Polish marks. This price is equal to one or ten million marks, or calculated in German currency is equal to seven billion or seven trillion marks (the latter happens to be to-day's equivalent). Germany will probably buy her wheat from Poland rather than from the more distant countries, but not in the least because Polish currency is depressed, simply because with transport charges from Warsaw to Berlin at say 3s per quarter she would be able to buy Polish wheat some shillings lower than Australian or Argentine.

It may be noticed in passing that now that Russia is re-entering the wheat export market it is not to Germany within her own circle that she turns, but to England, whose position in the circle of exchanges is, thank Heaven, separated by some trillions!

It may be true that for a time a depreciated exchange gives a country an advantage in export business. Somebody in the exporting country has to pay up the difference some day or another, but for a time the drug may work. Sir Eric Geddes, however, has no foundation at all for his statement that countries with depreciated currencies seek each other out and come into a trade circle from which countries with high exchanges are excluded. This is not true now, and there is not the slightest reasonable ground for supposing that, broadly speaking, it ever will be true.—I am, Sir, your obedient servant,

A. H. GOLDFINCH,

Governing Director.

British Australian Wool Realisation Association,
Limited, E.C., October 24th, 1923.

INFLATION OR DEFLATION?

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr F. C. Goodenough is reported as having stated that "a policy of active deflation would make it difficult for us to find these great sums," meaning the loans we had lent to the Dominions and to India. He emphasised later that "there should be neither inflation nor deflation." One rejoices that he knocked on the head the silly rumour that he was in favour of a large measure of inflation, but it is disquieting to find his disclaimer somewhat marred by the above statements. No one suggests active deflation in the sense of a rapid contraction of the currency, but there is no such thing as passive deflation, and certainly it is impossible to stand still as his later utterance seems to imply.

Surely the restoration of the London money market to its pre-war position of a free market in gold, and a resumption of specie payments, will attract an increasing number of loans to be floated in London, and thus stimulate trade and widen the area of employment. This can only be achieved through deflation gradually applied, and how that can hinder or make it difficult for us to find large sums for the Dominions or anybody else I am at a loss to discover.—I am, Sir, your obedient servant,

October 19th, 1923.

D. M. MASON.

P.R. IN IRELAND.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There is some danger of losing sight of the original issue between your Dublin correspondent and myself. My purpose was not, of course, to impugn the accuracy of your correspondent's statement of the facts of the election, but only to question the accuracy of his opinion in respect of the working of the transferable vote system. Your correspondent explained the slightly greater proportionate success of the Republican Party by the theory that P.R. in some mysterious way gives a "disproportionately large influence to minorities." In order to defend his example from the recent Irish elections of this alleged tendency of the P.R. system, your correspondent is compelled to link together as solidly Pro-Treaty parties which have certainly Republican elements in them. These elements may not be very great, but are sufficient to require special treatment when, as here, one is considering, not the broad aspects of representation, but arithmetic proportions to one place of decimals. The organisations responsible for the Farmers' Union and the Labour Party candidates were quite separate and distinct from the others; they conducted their own separate campaigns; no Ministerial post has been allotted to them, for the Government regards them as independent parties; and on all grounds it would seem desirable to present the figures for the three minor groups separately.

The recent Dail election, if one takes what I believe to be the truer view that there were several separate interests seeking representation, gave a result in accordance with usual experience, namely, that the two largest groups got a slight advantage. It may perhaps be claimed as an exception that the second largest group, the Republicans, did better relatively than the largest group—the Government. These slight variations from strictly proportional representation are to be expected when the contests are spread over a number of separate areas (28 in the Irish case), with differing circumstances. But the causes of variation are special, rather than general.—Yours truly,

ALFRED J. GRAY, Assistant Secretary,

The Proportional Representation Society.

HUNGARIAN EXCHANGE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The writer of the article on "The Reform of Hungary" appearing in this week's issue of the *Economist* refers to the difference between the official and the "commercial" rate of exchange. I have just returned from a visit to Vienna and Budapest, and I was much struck by this very fact. The curious thing about it is that in Budapest the existence of the two rates is not openly recognised. It only came to my knowledge when the head waiter at one of the principal hotels offered to exchange some of my Treasury notes into Hungarian money. He informed me that I should not get more than 88,000 crowns at any bank or exchange office, but that he would give me 100,000 crowns. Wishing to satisfy myself on the point, I inquired at a large bank what was the rate. The reply was 88,000 crowns. When I asked how was it then that outside people were willing to give much more, the cashier only made an evasive reply, and merely reiterated that banks were forbidden by the Government to allow any higher rate, and that if anybody offered more they were breaking the law. It is evident, however, that this regulation is infringed with impunity. The result is a purely fictitious rate of exchange.

I found afterwards that I might have done much better with my Treasury notes. Waiters in other hotels, and even shopkeepers, were offering 130,000 crowns (the "commercial" rate mentioned by your correspondent). The reason given to me was that people were speculating on the eventual fall of the Hungarian crown to an even much lower level than this. I need hardly say that in Vienna no such discrepancy exists at the present time, the Austrian crown having long ago been stabilised at between 315,000 and 325,000 to the pound.—I am, &c.,

RONALD HEPBURN.

Devonshire Club, October 22nd, 1923.

Books and Publications.

TWO BOOKS ON STATISTICS.*

THESE books afford an interesting contrast, illustrating the wide range of statistics, and they will appeal to different classes of readers. Dr Kelley is mainly interested in the statistical methods of measuring ability and in kindred psychological problems, and for these purposes the mathematical investigations of the biometric school are extensively used. Though the book is intended to be self-contained, only competent mathematicians will be able to use it, and even they should proceed very critically, since Dr Kelley is inclined to introduce formulæ without proof or analysis, and with insufficient attention to the hypotheses on which they rest and their limitations. There is, however, some interesting original work in some chapters. Where the author handles economic statistics he is not on ground familiar to him, for he speaks of the table of numbers of assessments to income-tax in 1914 of various amounts as showing "the total distribution of wealth in Great Britain"; of course, the figures relate to the whole United Kingdom, and exclude earned incomes under £160, while assessments are very different things from total incomes. Those whose interest in the theory of index numbers is not exhausted, will find a little that is new in his chapter on the subject.

Mr Boddington's task is to show that the ordinary use of statistics by business men does not involve the higher mathematics, nor, indeed, anything more rare than common sense, and further, that well-considered tabulations, graphs, and analyses of relevant information are of the greatest utility in the conduct of business. The treatment is for the most part simple, straightforward, useful, and convincing. By well-chosen examples, useful rules for the calculation of averages, the framing of tables, and the construction of diagrams, are explained. Perhaps it is not a disadvantage that much of what is said is familiar to every intelligent person who handles numbers; the type is so good that it is easy to skip the obvious. There is, however, a good deal that is open to criticism. In describing schedules for collecting information, he does not advocate the use of cards, though his model on page 23 is very suitable for this method. In speaking of investigation by samples, he does not remark on the greater security that is obtained by selecting a proportion systematically from every class or stratum in the group to be measured than by proceeding entirely at random. The method of approximating by omitting the last three digits (page 49), rather than entering to the nearest thousand, should only have been named in order to condemn it. He advocates the use of round numbers, but in his model tables (page 113) he prints the last unit in 38 millions. There is inconsistency in condemning the geometric mean on the ground that it is troublesome to calculate, while advocating the use of the ratio-chart, the construction of which equally involves logarithms.

When mathematical conceptions are involved the author is not always clear, or even correct. On page 54 he speaks of the standard error (in a total obtained by approximation) as the "best estimate" of the error. The best estimate is zero; the standard error merely measures (in suitable cases) the error against the exceeding of which the chances are two to one approximately. It is absurd to regard, as the author does, the obtaining of an error near the standard error as an indication of correctness. It is incorrect to state, as on page 103, that the mode is incapable of being ascertained by mathematical formulæ, for in those cases where it is needed a simple interpolation formula will afford a good estimate. We recommend readers to omit the section on the normal frequency curve (pp. 143-8); even its shape is not that drawn in the diagrams, and it is not specially suited for representing ordinary frequency curves.

In Mr Boddington's book, also, we have the inevitable

* "Statistical Method." By Truman L. Kelley, Ph.D., Professor of Education in Stanford University. New York: The Macmillan Company, 1923, xi. and 390 pp. Price 18s.

"Statistics and Their Application to Commerce." By A. Lester Boddington. Second Edition (revised and enlarged). London: H. F. L. (Publishers), 1923, xvi. and 344 pp. Price, 12s 6d.

chapter on index numbers. We do not understand why he considers that regulation of wages automatically by a general wholesale price index "shows a distinct advantage" over regulation by a cost of living index; his illustration depends not on the basis of regulation, but on its application.

On page 32 there is a misprint, 4,973 being printed for 4,793, which makes the subsequent argument difficult to follow.

"THE STOCKBROKER'S OFFICE."

"THE Stockbroker's Office," by Julius E. Day (Isaac Pitman and Sons, Limited, 7s 6d net) deals with the organisation, management and accounts of the office of a Stock Exchange member. Mr Day is described on the title page as sometime manager of an inside firm of stockbrokers "on" the London Stock Exchange. His book contains a mass of information, much of it that will be useful, more particularly to the novice entering a Stock Exchange office, though no doubt it will also interest the outsider who would like to know something of the complexities, book-work, routine, &c., that surround the business of dealing in stocks and shares. The book contains many extracts from official data respecting commission, Clearing House forms, certification instructions, &c. From various minor slips which occur in the book, it would seem that the author has not been a member of the House. For instance, he refers to bargains on the contango days being for cash up to twelve o'clock noon, and those after that hour as for the new account. In dealing practice, it happens that the majority of bargains done on the contango day are for new account at whatever time they are transacted. He makes a mistake in regard to commission on bought and sold transactions within the same account, saying that it is not usual to charge commission on both the bargains. The Stock Exchange rule is that commission must be charged on one side at the full scale, and on the other the broker may charge at half the official rate. This is an unfortunate slip in a book which is intended for general as well as for Stock Exchange use. There are exhaustive chapters on informative details and Stock Exchange books; the volume is usefully indexed.

* "The Stockbroker's Office, Organisation, Management, and Accounts." By Julius E. Day. London: Sir Isaac Pitman and Sons, Limited. 7s 6d. net.

THE GREAT PRODUCE MARKETS.*

THIS small volume of some 212 pages should prove useful to many who wish to make themselves acquainted with the organisation and technique of the trade in grain, cotton, wool, sugar, and coffee. The purpose of the volume is to make intelligible to the layman the commercial reports which appear in the Press, and to show the journalist how the reports are drawn up. Each section opens with an historical sketch and a general discussion of the main features of the trade, which serve to introduce the reader to the more technical and detailed matter relating to the organisation and business of particular markets. The authors make clear in each case the conditions of supply and the principal varieties of produce. They explain the importance of the crop reports of the principal producing countries and the value of certain unofficial estimates. The intricacies of grading receive attention, and in the section dealing with cotton the precise relation between the United States and the English grades of cotton is set out. A good deal of information is found on such questions as the weight of a bale of cotton and the number of pounds weight of different kinds of grain which go to a quarter; while numerous technical expressions are defined, and the terms on which business is conducted on the principal markets are explained. Economists and statisticians who are concerned with commercial matters will certainly find in this book a lot of valuable matter.

The new edition has been prepared by a member of the staff of the *Frankfurter Zeitung*, who has for many years been concerned with the produce markets, and has drawn upon a large number of experts connected with various branches of the trade for information.

* "Weltwarenhandel, Märkte und Berichterstattung." By Artur Norden. Second edition revised by Hans Hirschstein. Leipzig: G. A. Gloeckner. 1923.

PALESTINE ESSAYS.*

THIS volume of collected papers by Jews and non-Jews, Zionists and non-Zionists, passing visitors and permanent residents in Palestine, touches upon almost every side of contemporary life in that country; but a considerable proportion of it is devoted to economics. The engineer, Mr S. Tolkowsky, contributes an essay on physical features; Dr M. D. Eder on immigration and labour (a notable contribution); Mr A. Ruppin (author of a work on the economics of Syria and Palestine, besides other publications dealing with Zionism) on economic development; Mr N. Wilbush of Haifa (the principal port), on industrial prospects; Mr S. Hoofien on credit facilities; Dr Jacob Thou on problems of land development; and Mr S. E. Soskia on land settlement. The economic factor in Palestine really conditions all the rest, for the social, political and religious future of the country turns upon the nature, extent, and control of its undeveloped margin of productivity. The essays in this book, though they belong to the class of ephemeral literature, are interesting for the light which they throw upon the development of the unexploited resources of Palestine during the period since the Armistice. Incidentally, they make it evident that if the economics of Palestine are the key to its politics and sociology, the economic factor is even more difficult to abstract in this case than it is in most human relationships. Many educated Europeans of the present day, if asked for a concrete instance of the classical *Homo Economicus*, would probably reply that he does not exist, but that the nearest approximation to him is to be found in the Jew. The best commentary upon such a view is to read what Professor Patrick Geddes or Dr Eder have to say about the Zionist pioneers in Palestine. Here are economic activities of a far-reaching character, being undertaken by people who would never have contemplated them if they had been actuated by the motive of economic profit; and permanent economic results are thus being produced by a non-economic psychological cause. A certain coefficient of non-economic motive doubtless enters, always and everywhere, into economic action, and the case of the Zionists in Palestine differs only in degree and not in kind from others with which we are familiar every day. Nevertheless, the spectacle of a people ordinarily reputed so "realist" in business as the Jews, devoting themselves to the reclamation of so barren a land as contemporary Palestine (with little hope, in most cases, of personal remuneration for their labour in the economic sense) is sufficiently notable (even at second-hand) to interest any student of human nature, over and above the specialists in Near Eastern affairs.

STOCK EXCHANGE NEWS.

TICKET.
October 30.

ACCOUNT.
October 31.

Brighter conditions prevail, in some of the markets of the Stock Exchange, than those which ruled at the beginning of the week. No little uneasiness was engendered a few days ago by the "revolution" in Germany, and the fall in the value of the pound sterling as compared with the dollar, this latter consideration giving rise to talk of a possible rise in the Bank rate. Within the last day or two, however, the atmosphere at home and abroad is read as being clearer, and the tendency is now for prices to recover, the speech of Mr (London), J. Murray. 1923. Pp. 308 and map. 7s 6d net.

BARCLAYS BANK

LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

West End Foreign Branch - 1, Pall Mall East, S.W.1.
Liverpool Foreign Branch - 45, Castle Street, Liverpool.
Manchester Foreign Branch - 94, Portland Street, Manchester.
Bradford Foreign Branch - 13, Market Street, Bradford.

McKenna on Wednesday and of the Prime Minister on Thursday helping to confirm the better impression.

The War Loan went ex dividend yesterday (Friday), when about 45s was deducted from the price. A good many people had been waiting both to buy and to sell when the stock became ex, and a large business resulted. The Nigeria scrip remains at a discount, but both the recently-issued Commonwealth and Victoria loans are in request, and on the former the premium has risen to 1½, to 1¼ on the latter. Other gilt-edged stocks, after being distinctly heavy, recovered under the leadership of Conversion Loan. Underwriting of a new Finland 6 per cent. loan, and another large amount of Tube Railway debenture stock was completed with ease.

French bonds have moved up and down with a good deal of violence, and the prices changed sharply from hour to hour. Austrian scrip suffered an abrupt fall when the foreign market went flat, but there was an equally sharp recovery towards the end of the week. Argentine bonds are not much affected by the movements in the Buenos Ayres exchange, and other South Americans show comparatively few changes.

After a display of something like buoyancy, in the course of which the stocks and shares were substantially advanced in price, the Underground group came in for profit-taking, which reduced prices from the best, though it is noticed that on any setback buyers stand ready to pick up the stocks. Other Home Railways are inclined to droop, talk of a possible Bank-rate rise affecting them. Canadian Pacifics and other Americans have been strong with the dollar, though Canadian Railway pre-ordinary issues moved down a little. Mexican Rails, Government bonds, and Utility descriptions have given way, owing to the long-protracted delay over settlement of the Mexican debt question. Argentine Railway stocks are better again, after being very heavy because of the rate of exchange. The chairman's speech at the Buenos Ayres Great Southern meeting this week was considered encouraging. Nitrate Railways were unaffected by the declaration of a dividend that came as a favourable surprise. Nitrate-producing shares showed irregular movements, none being of particular consequence.

The Rubber market is a little harder, owing to a faint improvement in the price of the produce. Anglo-Dutch went back on the proposal to create a million pounds debenture stock, of which one-half is to be issued shortly. Oil shares went ahead, on heavy option dealing, based apparently on the idea that petrol is about to rise in price, and that, with the improvement in world trade, which some are talking about, the oil industry stands amongst the first that are likely to benefit. In the shipping group, Cunards have risen to nearly a pound, with other shares also disposed to harden. Insurance and Banking issues are heavy. London and Brazilians rose 30s, on the proposed terms of the bank's amalgamation with the River Plate Bank, but the gain was not held. The Tea share market, again lower, is obviously troubled by the account open on behalf of weak speculative holders.

Courtaulds fell below 60s, by reason of the German and other competition from which the company is said to be suffering, and the Textile market, as a whole, is none too bright. Austin Motor fourth debentures enjoyed a material rise, possibly due to the fact that the Motor Show opens next week. Other motor shares, however, are quiet. Watney deferred has fallen several points, this being the only change of note amongst breweries. Newspaper shares weakened as a sequel, which may have been only a coincidence, to the issue of the Daily Mail Trust prospectus. Associated Portland Cements came in for considerable support, on the Government's unemployment plan, while shares in other companies likely to be affected by the winter work in connection with the unemployed have moved narrowly and somewhat irregularly.

In the Kaffir market the outstanding feature has been a jump in the price of Robinson Deep "B" shares, owing to favourable developments reported from the property. People had been expecting that these shares would receive no dividend for two years, at the end of which time it was hoped that substantial profits could be distributed. With the favourable reports now coming in, the talk runs that the dividend-time on the "B" shares is brought appreciably nearer. De Beers

and Rio Tintos fell heavily, on Paris selling. A little animation in some of the Rhodesian issues is ascribed mainly to professional operations. Russo-Asiatics, after a rise, subsided again into quietude, and Mexicans are apathetic. Tin, the metal, enjoyed a material rise, which found a dim reflection in small improvements amongst Malayan shares. Indian mining descriptions drooped, the latest development reports being considered none too good.

We are officially informed that Mr Cecil Asher has this day ceased to be a member of the Stock Exchange.

NEW ISSUES.

Union of South Africa 5 per Cent. Inscribed Stock, 1933-1943.—This is an issue of £9,000,000 stock at £99½. The principal is repayable at par in 1943, the Government of the Union having the option to redeem the stock in whole or in part at par on or after June 1, 1933. The loan is being raised for the redemption of £2,655,035 Cape of Good Hope 4 per cent. stock and £3,000,000 Treasury Bills, maturing in London, and for railways, harbours, irrigation works, land settlement, and other public works. Holders of Cape of Good Hope Stock maturing December 1st next are offered conversion in whole or in part, into an equal amount of this stock, and will receive preferential allotment. Holders exercising the option will receive a cash payment of 10s per cent., being the difference between the nominal amount of the stock maturing and the issue price of the new stock, together with the dividend due in December. Any portion of the maturing stock not converted will be paid off on December 1st next. This is a trustee investment and an excellent security.

Auckland Harbour Board.—Offer for sale of £200,000 5 per cent. 20-year debentures to bearer at 99 per cent. Principal is repayable, in London, at par on July 10, 1943. Interest is payable in London or New Zealand at the option of the holder. These debentures, and the interest thereon, if held by persons not domiciled in New Zealand, will be free of all present or future taxes of the Dominion. The present issue is part of a total authorised amount of £1,000,000 debentures, constituting a charge, subject to prior loans amounting to £1,765,000, upon the lands and rents of the board; also on the dues chargeable by the Board; on the harbour works now constructed, or to be constructed, and on the Auckland Harbour Fund. Of the authorised total of £1,000,000 mentioned above, £600,000 has already been issued. The surplus of assets over liabilities at December 31, 1922, it is stated, amounted to £1,973,738. The accounts show that for the year ended December 31, 1922, after deducting from gross receipts all expenses, including interest and loan charges, "but

before charging depreciation," there remained a balance of £44,317. This is an interesting attempt to test the appetite of the investing public in view of the terms of the recent issue of the Commonwealth loan, which showed a yield of shade over 5 per cent.

Hodgson Road Contractors, Limited.—Authorised capital £100,000, divided into 400,000 ordinary shares of 5s each. This is an issue at par of 328,000 shares. The company has been formed to acquire, as from May 31, 1923, the undertaking of E. S. Hodgson, Limited, quarry masters and transport contractors, of Manchester, and the mechanical transport contractors of Messrs Wort and Way, of Salisbury. In addition to the supply and transport of road material, the company intends to undertake the construction and repair of roads. The assets being acquired, which include the leases and tenancies of five quarries for the supply of road stone, have been valued at £47,077. The aggregate purchase-price is £55,520 (including £8,443 for goodwill), of which £37,520 is payable in cash and £18,000 in shares. Thus a substantial portion of the purchase price is being taken in cash. Past profits are averaged. This information might have been given in greater detail. We cannot find any considerable attraction in the prospectus.

Southend Waterworks Company.—Total ordinary stock, £584,447, preference stock £359,321. This is an offer for sale by tender £33,333 4 per cent. perpetual debenture stock, at a minimum price of £80 per £100 of stock. Apparently debenture stock is issued for £243,090, on which interest is payable amounting to £12,904. But if the present issue is included, the yearly interest on debenture stock will be £14,237. Total interest and dividends at present absorb £65,835 per year. The net revenue of the company for the year ended December 31, 1922, was £92,909. This "offer for sale by tender" is not, in our opinion, well set out, but the security behind the debenture stock is fairly good.

The Westover Garage, Limited.—Authorised capital £75,000, in ordinary shares of £1 each. Of these 7,000 have already been subscribed for at par, and 15,500 are to be issued as fully paid, while 52,500 are now offered for subscription at par. The company has been formed to acquire and extend a garage undertaking at Bournemouth formed in 1920. The purchase price has been fixed at £15,500, payable in shares. Assets are valued £11,000, including goodwill £1,050. But profits are not given, in their place appearing "turnover" figures. This is a serious omission, and must not be overlooked by the careful investor. On the other hand, we have the comforting assurance that profits in the future should allow a dividend of 1½ per cent. to be paid on the capital invested. We do not like the prospectus, or the proposition.

Taku (F.M.S.) Rubber Estates, Limited.—Authorised capital £40,000, divided into shares of 2s each. Of these 217,500 shares will be allotted to the vendors, 160,000 shares will be held in reserve to meet conversion rights attached to debenture stock, and the balance may be issued as and when required. A statement published in the press to comply with Stock Exchange regulations gives details of an issue of £16,000 6 per cent. first mortgage convertible debenture stock at 99. This stock is redeemable at a premium of £4 per cent. on December 31, 1935, or, at the option of the holder, may be converted into 2s ordinary shares at the rate of 10 shares for each one pound of stock. There is not sufficient information available for us to give an opinion as to future prospects.

Hemel Hempstead District Gas Company.—Incorporated by special Act of Parliament, 1878. Authorised stock capital £61,500, of which £34,500 has been issued. The loan capital consists of £27,100, of which £11,710 has been borrowed. This is an issue of £13,000 of 6 per cent. irredeemable preference capital, the minimum price of issue being par. The net revenue of the company for the year ended December 31, 1922, was £5,250. Interest on loan capital absorbs £627, and as the dividends on the preference capital now being issued will require only £870, there is an ample margin.

ACTIVE SECURITIES.

CORNISH KALIN.—Production of china clay for September:—Washed, 1,287 tons; dried, 1,310 tons; despatched, 1,231 tons.
MOUNT LYELL.—Four-weekly period ended October 17th:—Smelted Mount Lyell ore, 952 tons; North Lyell ore (direct to smelters), 635 tons; concentrates, 3,043 tons. Converters produced 587 tons of blister copper, containing copper 582 tons, silver 11,566 ozs., gold 231 ozs. Mill treated 9,138 tons of ore, and produced 3,028 tons of concentrates. Furnace ran 28 days.
TRIPLID MINERALS.—Production of china clay for September:—Washed, 1,300 tons; dried, 875 tons; despatched, 743 tons.

OIL OUTPUTS.

THE UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, October 17, 1923, amounted to 1,485 tons.

COMPANY MEETINGS, &c.

ANGLO-SOUTH AMERICAN BANK, LIMITED.

RESULTS OF A DIFFICULT YEAR.

BANK'S LIQUID POSITION.

SOUTH AMERICAN CURRENCY AND EXCHANGES.

INFLATION AND NATION'S FINANCIAL POSITION.

The thirty-fifth annual general meeting of the Anglo-South American Bank, Limited, was held, on the 23rd instant, at Winchester House, Old Broad Street, London.

Mr Robert J. Hose (chairman of the company) presided.

The secretary (Mr Ernest E. Hayes) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and Gentlemen,—Having regard to the continuance of the general trade depression, the recent history of the national finances of this country may be reviewed with some feeling of satisfaction. It is desirable that the Government should still further reduce expenditure, but, taking into consideration the slight remission of taxation provided for by this year's Budget and the amounts allotted to the service of our debt to America, it is encouraging to note that, during the first half of the present financial year, the national revenue amounted to nearly £366,000,000, against expenditure of just under £363,000,000, thereby showing a surplus of revenue of nearly £3,000,000. The floating debt was lowered during the year ended September 30th last year by over £68,000,000, although the reduction corresponding to the last six months of that period was only about £6,000,000. The process of deflation appears to have been arrested during the present year, and in this connection it is gratifying to note that the Government, in announcing their plans for the amelioration during the coming winter of the growing problem of unemployment, have hastened to deny the rumour that recourse would be had to inflation. The adoption of the latter policy, even temporarily, would, of course, nullify the great efforts and sacrifices made in the past few years in order to maintain our monetary stability, and, in the circumstances, it is probable that the Government will, at most, merely abstain for the time being from taking any further action towards deflation of the currency.

INDUSTRIAL OUTLOOK.

The industrial outlook, I regret to say, continues dark. The past year has not witnessed the trade revival which has been so anxiously awaited, and many of our leading industries are in a serious state of depression. Most of the political and economic problems which have come to us as a legacy of the war still remain unsolved, and the feeling of universal confidence so necessary to prosperous trading relations has not yet been re-established.

EUROPEAN SITUATION.

The European situation continues to be dominated by the reparations question, while the occupation of the Ruhr district by the French has proved a protracted strain upon the resources of both the creditor and debtor nations involved, and particularly upon those of Germany. The lack of confidence engendered by this indecisive state of affairs has spread stagnation in European markets. The prospects of a settlement of this thorny question had, it is true, recently become more hopeful by reason of the withdrawal of the German policy of passive resistance in the Ruhr; but this action is somewhat the less encouraging in that it may be taken as an indication of the chaotic state to which German finances have been reduced. Moreover, although any progress towards the discovery of a basis of negotiations must be welcomed, the general view is beyond doubt that no settlement of this question can be regarded as of practical value unless definite provision be made for effecting an improvement in the financial position of France and Belgium by the establishment of an equitable annuity from Germany in respect of reparations, based upon adequate real guarantees, some small portion of which annuities may be mobilised

by a credit operation in their favour. It, unfortunately, appears from the political events of the last week that the hope of any settlement on these lines is still further deferred.

EXCHANGES.

The question of the depreciation of the exchanges is, I feel, one that has been dealt with almost *ad nauseam*, and, therefore, it would be superfluous for me to treat the subject at any great length. This factor, however, probably has a greater influence upon the business of such a bank as ours than on any other British institution, for, if we except the British Colonies and Protectorates, practically the only countries in which English banks trading mainly abroad are established are the Central and South American Republics. Banks operating in the British colonies are not, however, subject to the effect of exchange fluctuations in the same manner as ourselves. During the past year the course of the exchange values of the currencies in the countries where we are established has been, for the most part, one of steady depreciation, as will be seen from the following comparative quotations:—

	Exchange Rate at June 30, 1922. (Date of last Balance Sheet.)	Exchange Rate at June 30, 1923. (Date of Present Balance Sheet.)	Present Rate (October 23, 1923.)
Argentina	44½d	41½d	38½d
Chile	6½d	6½d	6½d
Peru	6 per cent. premium, i.e., £P.106 = £100 stg.	8½ per cent. premium, i.e., £P.108½ = £100 stg.	10 per cent. premium, i.e., £P.110 = £100 stg.
Uruguay	44½d	42½d	38½d
Spain	28-32 pesetas	31-53 pesetas	33-80 pesetas
France	52-78 francs	75-62 francs	78-15 francs

I would like to point out in passing that the slight improvement shown in the Chilean exchange during the period July, 1922-June, 1923, is more apparent than real, as the highest point touched—viz., 7 27-32d—was recorded as far back as August of last year, and there has since been a gradual but steady decline.

EXCHANGES AND INTERNATIONAL TRADE.

The depreciation of currency and disturbed exchange markets have a most adverse effect upon international trade relations. The inevitable result of the continued fall in value of currency in any country is that the importer there must correspondingly limit his purchases from abroad, whilst violent fluctuations of the exchange rates in themselves tend to bring about a hesitancy to enter into commitments. On the other hand, however, the exporter is likely to experience a temporary benefit by an increase in orders from foreign customers anxious to profit by the favourable state of affairs existing until production costs increase in sufficient measure to counter-balance the fall in exchange.

sound basis which is essential in order that the national accounts may be balanced without recourse to excessive borrowing abroad.

One encouraging feature of the situation is the advantage which has accrued to Great Britain as a result of the course pursued in imposing and submitting to taxation—which has been, to say the least, very onerous—in order to make a reasonable contribution towards the cost of the war. While this taxation must necessarily be regarded as a very heavy burden on the community, it has had the eminently satisfactory effect of maintaining our exchange during 1922 at a discount of only about 9 per cent. in relation to that of the only country in which the free movement of gold is permitted—namely, the United States.

DEBT TO AMERICA.

An outstanding event of the year, and one which has done more towards the maintenance of our leading financial and economic position than any other since the termination of the war, has been the funding of our enormous debt to the United States, the formal agreement for which was signed in Washington on June 19th last. Our readiness to provide for the service of this debt has been loudly applauded in the United States, and, indeed, universally, and this evidence of integrity has been held up as an example to other debtor nations. It is generally admitted that, by thus maintaining that any British commitments would be fully met regardless of the question of collecting the amounts due to us from other countries, we have enhanced in no small measure our credit and prestige throughout the world, and the outcome will doubtless be that international trade will in the future pass through our hands in the same full, or even greater, measure than has been the case in the past. In addition to this sentimental effect, we have derived considerable practical benefit from the reduced cost of providing for the service of our debt by reason of the much lessened depreciation in the value of the £ sterling as represented in United States dollars.

With your permission, I do not propose to occupy your time at the present juncture by giving you either the whole or any part of the usual detailed review of conditions in the countries where the bank is established, which I have had prepared, and which tends each year to become more extensive in consequence of the wide territory covered. We have, therefore, decided to issue a special booklet containing the complete address, which will be posted to you shortly in the same manner as in the past few years.

NET PROFITS.

Turning to the profit and loss account, I will deal first of all with the result for the year, amounting to a net profit of £436,256. This is a considerable falling off from the previous year, when we had a total of £644,137, and it is necessary to explain to you how this arises. In the first place, this bank trades in countries almost all of which have suffered from a fall in the value of their currency during the year. I have, in my preliminary observations, already pointed out to you the effect that this has on business generally, including that of banks, but there is an additional point, and that is, that even the decreased profits that are earned have to be remitted to London at a lower rate of exchange, and consequently yield a less sum in sterling.

LIQUID POSITION.

You will observe that we have subdivided our investments into two parts, the first consisting entirely of British Government securities amounting to over 9½ million pounds, which, added to the cash, totals £24,647,000, whereas last year the amount of cash in hand, together with similar securities, had been grouped in the same way, would have represented about £2,000,000 less. The reason why we have adopted this new form is that, in respect of our surplus funds in London, which had largely increased, we have found it desirable to invest, in order to gain a reasonable interest, together with the best possible and readily realisable security, a very considerable sum in Government securities repayable within a short term of years, and therefore of a practically non-fluctuating value. These two items, and the bills receivable, amounting to nearly £12,000,000, make a total of liquid assets of £36,000,000, against a liability to the public on deposits and bills payable of £55,000,000—a percentage of 65.5—which, whilst eminently satisfactory from the point of view of liquidity, must necessarily involve a reduced earning power, to which we have now to submit. One cannot but hope that conditions will, at no distant date, become so modified that we shall not find ourselves embarrassed to so great an extent by being unable, as I have said, to utilise our resources abroad advantageously, and we feel sure that, in the meantime, you will approve of a policy of extreme caution in times like these, although it involves a really serious decrease in our profits. The item "Holdings in banks and kindred companies" has not appreciably altered since we last met, the only addition being the payment of the final instalments on the new shares in Messrs The Banco de A. Edwards and Cia., to which I alluded at our last meeting, and £2,700 more in respect of further

shares in the British Bank of South America, Limited, which have been delivered in the meantime.

REVIEW OF OTHER BANKING INTERESTS.

It is due to you that I should give some information regarding the position of the banks in which we are interested, and I will commence by referring to the British Bank of South America, Limited, of which we now hold over 99½ per cent. of the capital. The assets of that bank, taken at their true value but excluding the question of exchange, to which I will refer later, may be assessed at approximately the figure at which the shares stand in our books, because, apart from certain reserves which are held in accordance with the custom of all banks, the premises in various places possessed by the bank have been written down from time to time, and represent a value vastly in excess of the balance-sheet figure.

The Commercial Bank of Spanish America, Limited, has had a fairly successful year, and shows a profit of some £39,000, but we have concurred with the management of that bank in retaining that sum in order to meet contingencies which have arisen out of the recent world crisis.

The Banco de A. Edwards and Cia. continues to prosper, and has paid a dividend of 16 per cent. for the year ended June last, as compared with 14 per cent. in the previous year, making also a substantial addition to its reserve funds.

The Banque Générale Belge gives us a dividend of 10 per cent., which is at the same rate as that paid in the previous year, whilst adding considerably to reserves. The depreciation of the Belgian franc which has occurred since we made our investment in the Banque Générale Belge does not leave us with any serious loss at present value, because the price of the shares in francs has risen considerably above that which we paid for them, and we made also certain other arrangements to cover the possibility of a depreciation in the franc.

The British Overseas Bank has, unfortunately, suffered in common with other institutions from the general condition of international trade, and during last year its profits were £75,287, as compared with £102,326 in the previous year. We understand, however, that the current year promises a considerably better result.

PREMISES.

There is, again, an addition to our bank premises and office furniture account, and there will be a still further sum to add during the next year, but our programme is now near completion, and the item will not be appreciably larger. The importance of having adequate premises in which to conduct our business has forced upon us an expenditure at various places, which is, in the aggregate, very considerable, but it was inevitable, and we have in a number of our branches offices which are let and produce substantial rentals, whilst the fact of having tenants within our buildings is found to induce business which might otherwise go elsewhere.

DEPRECIATION OF CAPITAL.

I have said that I will deal with the question of depreciation of capital. This item stands in our own balance-sheet at £326,405, in addition to the provision already made, and the British Bank of South America, Limited, also has a depreciation of some £489,238. Now, this question is one which, as a matter of principle, is generally regarded—and we do so regard it—as being one that should not be dealt with year by year, because it is of a very fluctuating kind, and to adjust it would completely alter the whole aspect of our balance-sheet and prevent you from being able to gauge the actual results of our banking operations. Suppose that we had during the last three or four years made an adjustment on the basis of the rates of the day, we should at one time in recent years have assessed our dollars in Chile at the price of about 16d, our dollars in the Argentine at 70d, and in Uruguay at 70d, and the British Bank of South America, Limited, would have assessed the milreis at over 18d, whereas the prices are to-day, as you know, very much lower. The result would have been that when the exchanges were at their height we should have shown an enormous, but unrealised profit, which would have subsequently been replaced by an even greater and equally unrealised loss. When business has resumed its normal trend, it is quite conceivable that there may be a considerable recovery in any or all of these rates, and it is, therefore, from all points of view, undesirable to deal with the matter by including the result of the fluctuations in our accounts. In the meantime, it is, we think, satisfactory to know that against the total depreciation, which I have already mentioned, we have a reserve fund of £4,000,000, so that in what I believe is the unlikely event of the exchanges remaining at their present low levels, a transfer necessary to provide for the whole of the deficiency would still leave us with a reserve of over £3,000,000, which would be very substantial in proportion to our paid-up capital.

In the profit and loss account you will find that the gross profits, after making all provisions for bad and doubtful debts,

amount to £1,800,000, a decrease of £350,000, whilst the expenses are £100,000 down at £1,010,000.

EXPENSES AND TAXATION.

The question of reducing the expenses has always had our careful attention, and it is to be noted that during the year ended June, 1922, a reduction of £167,000 was effected, followed in the past financial year by the further £100,000 which I have just mentioned. Although it is true that part of this reduction is due to low rates of exchange, much of it is due to real economies effected in difficult circumstances, because a very considerable portion of our charges consists of salaries, and in these days, when the cost of living has ceased to fall, and, indeed, is even rising slightly (and this, I believe, applies not only to Great Britain, but to almost all of the countries where we deal), it is not feasible to make great reductions and at the same time maintain efficiency. An item that largely absorbs our profits is taxation, and, whilst the tax paid in England is £271,000, I may mention that, including taxation abroad, we have actually paid during the year almost precisely the same sum as we are able to allocate to our shareholders for dividend. When I spoke to you last year I expressed the hope that we should find some relief in this respect, and since then the corporation profits tax has been reduced by one-half, whilst there has been a slight decrease in the income-tax. We can only hope for some further modification, but I fear that we must not look for any serious reduction for some time.

THE DIVIDEND.

We propose to pay a final dividend at the rate of 4 per cent., making a total of 10 per cent. for the year, as compared with 12 per cent. last year. I can only tell you that it is with infinite regret that we have felt ourselves compelled, as prudent persons, to ask you to accept this lower rate. The importance of having an ample surplus in the profit and loss account at this moment is perhaps greater than in more prosperous times, and we have preferred, therefore, to increase our carry forward by some £80,000 rather than to distribute the profits in their entirety, a course which I sincerely trust will meet with the approval of all shareholders. There are no signs at present that our earning power will be increased, but if we can maintain it at the present figure, and continue to preserve our *clientèle* in the manner which is proved by the figures in the balance-sheet, we hope, later on, when a revival of trade may occur, to be in a position to utilise our funds to greater advantage, and to be able to give you a rate similar to that which has obtained at times in the past.

ANGLO-SOUTH AMERICAN TRUST COMPANY.

I have to mention to you that we have revised our arrangements for the conduct of our business in New York. As you are doubtless aware, there are certain banking restrictions in the United States whereby our agency is precluded from undertaking banking business in its entirety—being, for instance, debarred from accepting local deposits—with the result that our transactions have been of limited scope. We have, in consequence, arranged to form in the United States a local company under the title of the Anglo-South American Trust Company, the majority of shares in which will be held by this bank, the necessary number being reserved to enable the directors to qualify. The Trust Company has been fortunate enough to secure the services, as directors, of three commercial gentlemen of high standing and also of two members of a leading firm of lawyers. This arrangement will be of great assistance in the developing of our business, and will also give us the benefit of most valuable service. Our own agency will be continued in New York for the conduct of the business with which it has previously been identified.

I now have pleasure in moving:—"That the report and balance-sheet as distributed be adopted, and that a final dividend of 4s per share, less income-tax, be, and is hereby, declared, payable on the 29th inst." If any shareholder has any observations to make, we shall listen to them with pleasure after the resolution has been seconded by Sir Robert Harvey.

Sir Robert Harvey: Ladies and gentlemen, I have great pleasure in seconding the chairman's proposition.

After certain of the shareholders had asked questions, which were answered by the Chairman, the resolution was put to the meeting and carried unanimously.

RE-ELECTION OF DIRECTORS.

Mr J. A. Goudge, C.B.E., moved "That Mr Alfred Naylor, retiring director in accordance with the articles of association, be and is hereby re-elected." In moving the resolution, he observed that Mr Naylor was well known to all the shareholders. He had been engaged in business in South America the whole of his life, and for the past twelve years had been a director of the bank or of the London Bank of Mexico and South America.

Mr E. E. Barclay seconded the resolution, and it was unanimously carried.

Mr H. W. Patrick then proposed, "That Mr Thomas Woodsend,

retiring director in accordance with the articles of association, be and he is hereby re-elected." It was unnecessary, he said, for him to dwell upon the qualifications of Mr Woodsend, as they were well known to all the shareholders. Mr Woodsend was a member of one of the largest firms operating on the West Coast, and his opinion and advice upon all matters appertaining to the bank were of the utmost value to his colleagues. He had great pleasure in proposing that that gentleman be re-elected.

Mr A. Geddes seconded the resolution, and it was passed unanimously.

Mr E. E. Kennard Davis proposed, "That Messrs Price, Waterhouse, and Co. be, and they are hereby, reappointed auditors for the year ending June 30, 1924, at a fee of £750."

Mr F. King seconded the resolution, and it was agreed to.

VOTE OF THANKS TO STAFF.

Sir Clarendon G. Hyde then proposed a vote of thanks to the staff at home and abroad. He said that it gave him very great pleasure to move that resolution, especially in view of the difficult and anxious times through which the world had been passing. It was a great satisfaction for the board to know, as also for the shareholders, that at all the branches of the bank they had a loyal, competent, and hard-working staff. Moreover, they appreciated the wise maxim that it was better to do no business than bad business, and, indeed, it required a great deal of pluck to carry through a comparatively small volume of business when one had been accustomed to do business on a large scale. However, that was the wisest and truest policy in the long run. He had much pleasure in proposing the resolution.

Baron Emile B. d'Erlanger seconded the resolution, which was carried with acclamation.

MR WELLS'S RESPONSE.

Mr William E. Wells (one of the general managers): Ladies and Gentlemen,—It is with special pleasure that on this occasion again I respond to, and acknowledge, on behalf of the staff, the kind expressions to which utterance has just been given, for, from my long residence in South America and the several years since spent in the London office, I feel myself, perhaps, peculiarly qualified to speak on behalf of our staff at home and abroad. Moreover, since our last general meeting I have had the duty and privilege of paying a visit to our principal branches in the Argentine and Chile, as well as our offices in Montevideo, Lima, and New York, and it is with much satisfaction I can say that I found everywhere prevailing, as here, a spirit of enthusiasm for the progress and prosperity of the bank, and of loyalty to our leaders and administrators.

The year has not been without its difficulties, as you have heard; but we are glad, and I may even say proud, that in times when such phenomena as strikes of bank employees in some parts of Europe have not only been in the air, but have actually materialised at points where we are represented, the spirit of co-operation and unity has carried us through those testing periods. Under the sympathetic leadership and guidance of our chairman and his colleagues, we look for a successful issue out of the present widespread depression, and a future true in every respect to the traditions which the bank has already created. On behalf of the staff, therefore, at home and abroad, I proffer our sincere thanks for your kind words.

VOTE OF THANKS TO THE CHAIRMAN AND DIRECTORS.

Mr M. B. Snell: Before we conclude the business of the meeting, I think you would all like to join with me in passing a vote of thanks to the chairman and directors. We have heard to-day the reason why we, the shareholders, have had to put up with a slightly smaller dividend, but really I think we can congratulate ourselves that things have not been far worse. You have only to look round to see how the exchanges of the different countries of the world have been affected in the most extraordinary way, such as the City of London has never been accustomed to witness. I have been in the City a great many years. I am the holder of stocks in many Argentine railways, and I may say that we never gave exchanges a thought until we came to the year through which we have just passed.

We are quite sure that the directors have worked very hard, and in all the circumstances the result has been very satisfactory. I feel that the board will go away cheered by the unanimous vote we are now going to accord them. I have great pleasure in proposing a cordial vote of thanks to the chairman and the board of directors.

Mr W. H. Sadgrove seconded the vote, and it was accorded with acclamation.

The Chairman: On behalf of my colleagues and myself, I thank you most sincerely for this vote of thanks, which, coming at a time such as this, is even of more value to us than usual. I thank you, gentlemen.

The proceedings then terminated.

UNITED RAILWAYS OF THE HAVANA AND REGLA WAREHOUSES, LIMITED.

INCREASED DIVIDEND—FAVOURABLE PROSPECTS.

The 26th ordinary general meeting of the United Railways of the Havana and Regla Warehouses, Limited, was held, on the 25th instant, at Winchester House, Old Broad street, London, the Right Hon. Lord Ashfield, P.C., presiding.

The secretary (Mr W. J. Maslen) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said: I think you will agree that the results for the year are satisfactory. The gross receipts of the railway amounted to £3,765,000, a decrease of £128,000, or 3.30 per cent. when compared with the previous year. This decrease is more than accounted for by the reduction of approximately 20 per cent. in our tariffs which became operative on January 1, 1922. You will remember that our fiscal year begins on July 1st and ends on June 30th, so that, whereas for the year under review the lower tariffs operated for the whole period, for the previous year they operated for only six months. This decrease of £128,000 is made up of a decrease of £41,000 in passenger traffic, £251,000 in sugar traffic, and £23,000 in ferries traffic and sundry receipts; these items total £315,000. On the other hand, parcels and general goods traffic increased by £187,000, and the difference is the sum which I have just mentioned. On the expenditure side the total expenditure on working the railways amounted to £2,463,000, a reduction of £267,000, or 9.77 per cent., when compared with the previous year. The ratio of expenses to receipts was 65.42 per cent., compared with 70.11 per cent., a reduction of 4.69 per cent.

With two exceptions, every department has spent less money this year than was the case last year, which indicates that great care and vigilance were exercised in the management of your railway. The operating costs, excluding costs of maintenance, show a reduction of 11.04 per cent. when compared with the costs for the previous year.

YEAR'S RESULTS.

The final result of the year is that we have a balance of £1,302,000, or £138,000 in excess of the previous year. After making the various adjustments, which are detailed on pages 3 and 4 of the report, we have an available balance of net revenue of £610,470 8s 1d. Deducting from this the interim dividend of 2 per cent., less income-tax, on the ordinary stock and shares paid in June last, there remains a balance of £479,333 13s 4d, out of which we propose to pay a further dividend of 4 per cent., making a total of 6 per cent. for the year, which compares with 4 per cent. paid in each of the two previous years, and leaves £217,060 3s 9d to be carried forward, or £9,979 1s 4d more than was brought into the accounts for the year.

As I have already said, I think that the year's results may be viewed with satisfaction, particularly when they are associated with an increased dividend. At the date of our last meeting Cuba was slowly emerging from the general upheaval resulting from the financial crisis which arose in 1920. It is true that the prospects of the sugar crop were at that time hopeful, and prices were inclined to advance, but the general and passenger traffics were very restricted, and our gross receipts showed a decline of some £128,000. Thanks, however, to the good prices at which the crop was sold, although in quantity it was some 350,000 tons less than that for the previous year, the financial position in the island was greatly improved, and your railway was able to benefit by securing a larger tonnage of general goods handled as distinct from sugar.

It will also be recalled that for some considerable time large sums were owing to us for services rendered, which, owing to the financial conditions in Cuba, we were unable to collect. A large

share of that money has now been paid to the company, and our cash resources have been correspondingly improved. This strengthening of our financial resources, the better results for the past year, and the satisfactory prospects for the current year, together with the large sum of £217,000 which will be carried forward, were the factors which influenced your directors in paying the larger dividend, and I hope that the proprietors will agree that they merited the consideration which we gave to them.

CURRENT YEAR'S PROSPECTS.

As to the prospects for the future, I am encouraged by our general manager (General Jack), who takes the view that we may look for a definite improvement during the current 12 months, and our earnings for the period from July 1st to October 20th, which show an increase of £171,939 over those for the corresponding period of last year, support this forecast.

The latest information which we have received by cable is:—

"Prospects for the coming crop are favourable. Future sales have been made in very small amounts at 4.20 cents, delivery March-April. Reports from the eastern end are pessimistic on account of drought, but believe crop will not be less than last year, both for our zone and whole island."

Mr Cater Scott seconded the resolution, and it was unanimously adopted.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED. RECORD TRAFFIC—FAVOURABLE PROSPECTS.

The ordinary general meeting of the Buenos Ayres and Pacific Railway Company, Limited, was held, on the 26th instant, at Winchester House, Old Broad street, London.

The Viscount St Davids, the chairman of the company, presided, and, in moving the adoption of the report and accounts, dealt first with the position in the Argentine. When he was in that country a year ago the tone was most optimistic; on visiting the Argentine a couple of months ago, however, the tone was quite the reverse; people were talking of bad times and of a crisis. He thought that change of tone was to be attributed to the fact that the cattle industry was doing badly, but for his part he did not treat that as a very serious state of affairs, because he had always thought that too much of the good land there, which ought to have been devoted to agriculture, was being given up to cattle, and when cattle were doing badly it was likely that agriculture would increase. As a matter of fact, they were seeing something of that to-day.

There was another good point in the position in the Argentine, which was that immigration was beginning again, and the country was getting the people who were so badly wanted if its great spaces were to be filled up. Again, the experiment of cotton growing in the extreme north of the country was becoming something more than an experiment; it looked as if it were likely to be a great success. That would be an advantage not only to the Argentine, but to the people of this country and of Lancashire, because instead of buying cotton in America, where the exchange was against us, we could go to the Argentine, where the exchange was favourable.

As to the position of their own undertaking, he had told them perfectly distinctly a year ago that provided the company did not lose further on exchange, and provided there was a good average crop, he was sure the results of the year would be pleasant. One of his provisos had gone against them, as they had lost further on exchange, but there had been a good crop—better than the average—and setting one against the other, the result had been a very satisfactory year. Before the war there was no question but that the railway was over-built, but they had had to build lines rather than that they should be built by the Government or by other

people. Since the war, however, they had confined themselves to completing that work by building little branches and sidings. A great deal had been done in that way, and the policy had been amply justified because of the traffic which they had contributed to the main line. During the year under review they had had the biggest traffic the railway had ever taken, their gross receipts going up to £8,671,000, and he ventured to tell them that, big as that traffic was, in the conditions prevailing to-day, they might look upon that as something like a fair guide to the traffics the line was likely to have in the future. No one could say that the harvest was safe in the Argentine until about the middle of December, but from the weather and other conditions he was able to say that they had never had a better or more hopeful harvest outlook than they had to-day. There was an increase of 4½ per cent. in the acreage under fine cereals, 4 per cent. under vines, and 4 per cent. under fruit, and there was also an increase under vegetables. Those were all very pleasing and reassuring features, and if, as might be the case, their fuel bill for the current year was heavier, it would not be a matter which need worry them at all.

Up to date their traffic showed an increase of £43,000, which came upon an increase of £1,200,000 last year, and a very big increase indeed in the year before, and he would further point out that as they had no longer the "Transandine," it virtually meant that whatever their total traffic for the year might be they were £150,000 better off than when they included the returns of that line. As to the prospects of the current year, he would say once more that given an average harvest, and that they were able to remit their money at an average rate of round about 40d, he felt very confident that when the board met the shareholders next year they would be able to recommend as good a dividend as was being recommended that day.

The report and accounts were unanimously adopted.

BUENOS AYRES WESTERN RAILWAY, LIMITED.

INCREASED RECEIPTS—DECREASED EXPENSES.

The ordinary general meeting of this company was held, on the 23rd instant, at River Plate House, London, Sir Henry Bell, Bart., presiding.

The Chairman, in moving the adoption of the report and accounts, said that the results of the year's working as a whole were satisfactory, showing increased receipts and decreased working expenses. Passenger receipts showed an increase of £82,913, parcels traffic an increase of £30,202, and goods traffic increased by £257,356. The total working expenses had decreased by £153,146, the saving being due mainly to decreased expenditure in locomotive running and traffic expenses. It was gratifying to be able to state that they had been free from any serious labour troubles during the year. Sir Albert Bowen and he had visited Buenos Ayres in March last, accompanied by Sir B. H. Henderson, of Messrs Livesey, Son and Henderson, their consulting engineers, and they were of opinion that the property of the company was in a very good condition, and had been well maintained.

April 30th of the present year was an important date in the history of the company, being the day on which the electric passenger service was officially opened. With regard to the poor traffic since the end of the financial year, a drought in the far west of their line, whence they had the longest haul, had ruined the maize crop, so that instead of a heavy maize traffic between July and November, they had had hardly any to carry. Another cause was that in August all the western portion of their line had had the worst blizzard known in the history of the country. As to the future, much depended upon a general recovery in trade all over the world. There were, however, some indications that business conditions in Argentina were improving.

Coming to their own direct business, they had as an adverse factor the question of exchange, but, on the other hand, they had received on the previous day a satisfactory cablegram from their general manager, stating that the crops were in a splendid condition, and the prospects for harvest were exceptionally good. According to a rough estimate, there was an increase of about 8 per cent. in total area sown with wheat, oats, linseed, rye, and barley. Rainfalls during the last three months had been ample, but for ploughing for maize somewhat excessive. Crops and livestock are in good condition, as result of recent favourable weather. Prospects for Colonia Alvear fruit harvest all that could be desired, and an increase in this traffic should again be recorded. Large increase in potato sowing recorded in many districts. He thought they could look to the coming harvest and results of working with considerable confidence.

The report and accounts were unanimously adopted.

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY LIMITED.

RECORD GROSS AND NET RECEIPTS.

The ordinary general meeting of the Buenos Ayres Great Southern Railway Company, Limited, was held, on the 24th instant, at River Plate House, London, Sir Albert Bowen, Bart., presiding.

The Chairman, in moving the adoption of the report and accounts, said that the company continued to show normal progress, as was evidenced by the fact that the gross receipts, at £9,586,880, were the highest reached in their history. The net receipts also constituted a record, and they had been able to reduce the ratio of working expenses to 61.99 per cent. of the gross receipts—the best showing since 1916. The general reserve, renewal, and other funds totalled £5,398,000—a healthy figure.

The Chairman proceeded to deal at some length with the question of the Argentine exchange, explaining why Argentine currency had depreciated in relation to sterling. He pointed out that, on the whole, it was not unreasonable to anticipate that the fall in exchange had been stayed, and that the intrinsic wealth of the country and its inhabitants, and the high place it was steadily taking as a supplier of the world's staple requirements, made it practically certain that, given sound government, statesmanlike finance, and economical administration, Argentine currency could not permanently remain below its par level.

Describing his recent visit to the property with Sir Henry Bell and the consulting engineer, he said it had been decided that a law of Congress would be necessary in regard to the proposed transfer of the lease and working of the Bahia Blanca and North-Western Railway from the Pacific Company to themselves. It was expected to be dealt with next session, and there was no reason to anticipate difficulty in obtaining the necessary sanction. The development of the "Agricultural Light Railways" had justified all that he had said of them. As regarded their railway generally, he noted distinct progress and improvement in several directions since his last visit four years ago. The outlook for the present year was quite satisfactory. So far they were doing even better than they had done during the corresponding period of the previous year. Current rates of exchange were still unfavourable, but the estimated net revenue increases up to date were more than sufficient to cover the increased loss on remittances during the same period. The area under cultivation was greater than that of the previous year, and steady traffic returns were expected to continue.

The report and accounts were unanimously adopted.

CENTRAL ARGENTINE RAILWAY, LIMITED.

"EMINENTLY SATISFACTORY POSITION."

The ordinary general meeting of the Central Argentine Railway, Limited, was held, on the 25th instant, at River Plate House, London, Sir Joseph White Todd, Bart. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that it was gratifying that the board's anticipations of being able to revert to their accustomed dividends had been fully realised, and they recommended on the present occasion the payment of a final dividend on the ordinary stock of 3½ per cent., making 6 per cent. for the year, and of 6 per cent. for the year on the deferred stock, both less tax. There would then remain a balance to be carried forward of £171,857, against £5,781 brought in. The position was even better than those figures indicated, for this year they had met the loss on exchange of £309,000 out of revenue, whereas last year's deficiency of £258,300 had been debited to general reserve. During the year under review they had credited their renewals fund with the full contribution of 2½ per cent. on the wasting assets of the railway, whilst in the period with which they compared £100,000 had been short credited to that fund. Considerable further sums were charged in the Maintenance Abstracts this year which last year had been debited to the renewals fund. Lastly, they had had to have recourse to the general reserve fund to the extent of £150,000 last year, in order to distribute 4 per cent. on the ordinary stock. The position disclosed by the balance-sheet was eminently satisfactory.

The Chairman then dealt at some length with the exchange position, and added that until the situation in Europe was put upon a practical and sensible basis, there would, no doubt, be sympathetic fluctuations in the Argentine exchange, but he did not believe that there would be a crumbling of the exchange to the extent of spelling a catastrophe or anything approaching it.

With regard to the question of extensions and the many statements which had been made that the Argentine Government proposed to construct lines competing with British-owned railways, the war had prevented the raising of capital by English companies to build extensions, and such extensions being rightly demanded by the people, it was natural that, the companies failing to do it, the Government should take them in hand. In the case of such an

extension in their zone they proposed to offer to construct the line in question if the Government would agree. Generally, the prospects for the current year seemed excellent.

The report and accounts were unanimously adopted.

UNITED DAIRIES, LIMITED. MANIFOLD ACTIVITIES.

The eighth ordinary general meeting of United Dairies, Limited, was held on Friday, October 26, 1923, at the Connaught Rooms, London. Mr J. H. Maggs, the chairman, presided.

The Chairman, in the course of his speech, said: After providing for the final dividend on the ordinary shares at the rate of 7½ per cent., we have recommended the transfer of £100,000 to reserve, and still leaving £101,544 to be carried forward, "subject to excess profits duty (if any)."

Mortgages have been reduced from £21,251 to £6,016. On this item it will interest you to know that the Aylesbury Dairy Company paid off their debentures, amounting to £75,000, during the year, that mortgages and debentures to the total of £16,917 on other subsidiary companies' properties have been paid off, and that notice has been given to pay off others amounting to £24,900.

Every day our organisation in the retail trade makes approximately 1,000,000 calls on customers to distribute the produce of about 2,000 farmers. In short, we make 500 calls to distribute one average farmer's production. Milk, however, is but a section of the trade of United Dairies, and our retail milk trade forms less than one-third of our turnover, continued Mr Maggs. If the whole of our profit had been made out of milk, it would have amounted to just over 1d a gallon, or less than one-sixth of a penny on a pint.

Those who have tried the new milk powders, "Milkal" and "Kookal," will, I am sure, agree that they show a distinct advance on earlier methods of drying milk. In these products we are associated with Messrs. J. Lyons and Co., Limited, whose wonderful delivery organisation should go a long way to ensure success.

Our butter trade has beaten all past records, and our sales of provisions and sundries are most encouraging, particularly having regard to the state of employment throughout the country. We have, indeed, during the year sold over 16,000,000 lbs of butter and 60 million eggs.

WHAT THE PUBLIC PAYS FOR.

We buy milk from the farmer, but the price the consumer pays is not for mere milk, but for milk plus the inspection, collection, pasteurising, delivery, accountancy, credit, and all our other services.

Some actual figures will give you an idea of the extent and expense of these services of collecting and distributing liquid milk. We handle over 100,000,000 gallons a year. We employ over 12,000 people. We keep up a fleet of over 400 road vehicles, and our motor lorry service covered last year 2,500,000 miles. To maintain this transport service alone costs annually over £275,000.

We have many analytical laboratories, and, on an average, 550,000 milk samples annually are chemically tested for quality. This is nearly ten times the number of samples dealt with during 1922 by all the public authorities in England.

Rather a striking illustration of the results of our system of inspection is shown in the annual report of the Ministry of Health, which records the fact that of the 60,274 samples of milk taken by public authorities in England and Wales during 1922, 7.7 per cent. were reported to be adulterated or not up to standard.

The figures analysed show 4.5 per cent. for London and 8.2 per cent. for the rest of the country. In other words, the risk of milk being below the standard in London would appear to be only half that of places outside London. I am happy to tell you that out of 1,342 public samples taken from our companies' milk there were only three complaints. This is very encouraging, and, to my mind, fully justifies the costly system of inspection which we maintain.

Transport and inspection of liquid milk are two aspects of our work practically unknown to the man in the street, for his milk supply is largely carried while he sleeps, and he has no conception of the care taken by our bacteriologists, chemists, and inspectors, who ensure the purity of his milk, and which, of course, is included in the price he pays for it.

The charge for collection, transmission, and the delivery of a pint of milk in the London area is, roughly speaking, 1½d, or the same figure charged by the Post Office for the collection, transmission and delivery of a letter. But the Post Office, which is a public service, not only has a monopoly of the trade, and is paid in advance for its services, but the letter so delivered must not weigh more than 2 ounces, and is merely, of course, collected, transmitted, and delivered. Now consider each pint of milk. Exclusive of the weight of the can or bottle, this is at least ten times greater than the weight of the letter. It has been collected from farms that have been regularly inspected, in churns that have been specially

cleansed; it has been pasteurised in expensive plants, with which are connected expert laboratory examiners, replaced in other specially cleansed vessels, and within eight hours of its arrival in London has been delivered to the consumer—and all this at a cost equal to or less than that charged by the Post Office for the delivery of a single letter. There is no transport service in the country which will deliver an individual package at anything like the figure the dairyman receives for bringing to the consumer's door a pint of milk.

In spite of all these heavy expenses, we continue to reduce the margin between producer and consumer. What are the facts? In the winter of 1921-1922 the margin was 14d per gallon; in 1922-1923 it was reduced to 12d, and now to-day we are working on a 11d basis.

MUST NOT IMPAIR SERVICE.

Personally, I see no possibility of further reduction without impaired service. Our service has been our pride. It has never stood still, and is better to-day than ever. It will be even better in future if we are allowed to make it so. I firmly believe that no other product of the farm is so efficiently distributed with so little waste and so great an economy as milk, and whilst I welcome any honest constructive criticism of the trade, I do deprecate and most strenuously resist ignorant disparagement of our trading methods. The report and accounts were adopted.

UNION COLD STORAGE COMPANY, LIMITED. GOOD RESULTS—SATISFACTORY PROSPECTS.

The twenty-sixth ordinary general meeting of the Union Cold Storage Company, Limited, was held, on the 23rd instant, at Winchester House, Old Broad Street, London, Mr Roger P. Sing, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that since the successful issue of new capital in July last the company had taken a considerable step forward in the organisation of its business by acquiring several large and well-known meat distributors' businesses, having about 2,400 retail shops in the United Kingdom. The board believed those shops had been acquired on favourable terms, well within their real value, and he looked on the transaction as constituting the most important development in the whole history of the company. It was of the utmost importance to see that proper care and attention production to consumption; they aimed at maintaining quality, tribute meat of reliable quality at a fair price to the public.

The shareholders had every reason to be satisfied with the unique position which the company had attained, forming as it did not only the largest, but the most complete organisation of its kind in the world. As for the year ending December 31st last, the volume of business had been maintained, and the results were satisfactory. As to the cold storage department, however, there was, as a result of the aftermath of the war, a great excess of cold storage accommodation, both in this country and in the colonies. Fortunately, the directors had realised that war requirements in that direction were only of a temporary nature, and as a result the company's reserve funds were in the satisfactory state disclosed by the balance-sheet. The reserve now stood at £2,075,617. The balance of working accounts amounted to £581,580, and the available balance was £685,617, from which, after providing for prior charges, there remained £139,922, from which the usual dividend

of 10 per cent. on the ordinary shares was recommended, leaving £109,922 to be carried forward.

He thought shareholders would agree that, on the whole, there was reason to be satisfied with the results achieved for the year under review, and he had pleasure in saying that while the year 1923 had presented many difficulties, a sufficient period had elapsed to enable him to say with confidence that the results to be placed before the shareholders when next they met would, taking the business as a whole, be satisfactory.

The report and accounts were unanimously adopted.

THE PICCADILLY HOTEL, LIMITED.

IMPROVED RESULTS—INCREASED TURNOVER AND PROFIT.

The fourteenth annual general meeting of the Piccadilly Hotel, Limited, was held on the 24th instant, Sir Charles T. Ruthen, F.R.I.B.A., the chairman of the company, presiding.

The Chairman presented to the shareholders the accounts for the year ended July 31, 1923, and said:—

The accounts are as before presented to you in a form which enables you to compare the trading figures with those of the previous year. It is with pleasure that I am again able to inform you that there has been a very satisfactory increase in turnover, and this increase is still being maintained since the close of the year. Last year at this meeting, although I did not indulge in prophecy, I gave it as my opinion that we might look forward to increasing prosperity, and it is very encouraging to find that my opinion has been justified. As to the year upon which we have embarked, I look forward with considerable confidence to presenting you with a still more favourable result. Although we have by no means returned to the normal state of affairs which we enjoyed before the war, yet we have so far recovered that we are not met with those difficulties in general conditions which have so greatly hampered us in past years. Careful management, attention to detail in every department, and, above all, unceasing consideration for the comfort of our visitors, is bearing fruit. The improvement to the ball room which I referred to last year has been of the greatest benefit in increasing our popularity. I would like to mention that for this season we have engaged what is perhaps to-day the best dance band in London, the London Band from the Hippodrome, and that this is recognised by the dancing public is shown by the fact that our ball room receipts are achieving records.

You will see from the accounts before you that the profit for this year has exceeded that of last year, and the increase would have been still greater had we not had to bear the heavy expense of improving the ball room, the excellent results of which are now becoming so apparent.

The directors recommend that the balance of profit should be utilised in strengthening the position of the company, and to this end propose that a sum of £17,000 should be carried to general reserve.

Since the close of the year we have again been able to decrease the rate of interest upon our first mortgage, and we have lately been able to purchase over £100,000 of the 6 per cent. debenture stock on favourable terms. The result of these two transactions will, I am sure, be a source of gratification to the shareholders in the current year.

The Chairman proposed that the accounts and report be adopted. This was seconded by Mr David Williams, J.P., and carried unanimously.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills dated from Oct. 29-Nov. 3 were opened on Oct. 26, 1923, and the total amount applied for was £50,275,000. For bills at three months, dated Monday to Friday, at £99 4s 4d, about 45 per cent., above in full; Saturday, at £99 4s 7d, above in full. The amounts allotted were as follows:—In bills at 3 months, £35,000,000; in bonds nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
1923.				
Sept. 14.....	35,000,000	55,520,000	3 2 4 63	nil
Sept. 21.....	45,000,000	60,140,000	2 19 11 2	nil
Sept. 28.....	45,000,000	86,895,000	3 4 5 59	nil
Oct. 5.....	35,000,000	61,220,000	3 1 4 25	nil
Oct. 12.....	35,000,000	61,565,000	3 0 7 85	nil
Oct. 19.....	35,000,000	61,135,000	3 1 8 33	nil
Oct. 26.....	35,000,000	50,275,000		nil

Tenders will be received on Nov. 2, 1923, for Treasury Bonds and Bills to be issued to the maximum amount of £35,000,000. The amount of Treasury Bonds issued will not exceed £3,000,000.

PUBLIC INCOME AND EXPENDITURE. RECEIPTS INTO AND ISSUES OUT OF THE EXCHEQUER.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have been unsettled, with heavy rains, which interrupted field work. A fairly large area, however, has already been drilled, and the young plants should obtain a good start before frosts set in. Threshings are proceeding actively, consequently offerings of native wheat were on a fairly extensive scale, though prices ruled steady for all good milling samples. A good deal of damp and inferior samples, however, are coming forward, and clear at low rates. Best samples range from 8s 10d to 9s 3d per 112 lbs, free on rail. Imported descriptions in moderate request, and prices were occasionally the turn in buyers' favour. No. 1 Northern Manitoba ex ship quoted 47s to 47s 3d as to position, Rosafe 62½ lbs ditto 46s 3d, Barusso 62½ lbs ditto 44s 9d, and choice white Karachi landed 44s, all per 49½ lbs. The floating and forward cargo section showed more activity, and rates, as a rule, maintained a steady level, the inquiry being chiefly from Continental and Mediterranean countries. Steamers of No. 1 Northern Manitoba shipment from Vancouver, expected to load November 20th, sold to Italy at 43s 6d, U.K. basis ditto to Southampton November 44s 7½d, Barusso 62½ lbs January-February also February March 41s 1½d, both to France. Maize steamers of La Plata arrived sold 35s 3d net, No. 2 white flat African early November loading 38s to Ireland, and No. 6 yellow African September-October 35s 6d, all per 480 lbs. A cargo of Dan-Bess-Kustendji barley end October 27s 6d per 400 lbs. Flour quiet. London standard straight run quoted at 37s 6d, patents 39s 6d-40s 6d, town households 35s 6d per sack delivered in. All English country straights 30s 6d-31s delivered to London stations. Imported dull. Australian 32s 9d per 200 lbs exstore. Millers' offals steady, with a fair demand. Bread bran quoted at 7s 3d, ordinary ditto 6s 3d, middlings 8s 6d, bags included, ex mill, light oats 5s 4d, powdered oat husks 5s 9d, feed oatmeal 9s 3d, ground oats 13s 9d, free on rail, all per cwt. Barley: English malting steady at 9s 9d-13s 3d, with feedings sorts ranging from 8s 3d-9s per 112lbs, free on rail. Imported occasionally firmer. Californian quoted 40s-44s 6d, Chilean brewing 40s-44s, both ex store, per 44½ lbs. Persian ex ship 26s, Danubian landed 31s, No. 3 Canadian Western landed 30s 6d, No. 4 ditto ex ship 27s 6d, Algerian-Tunisian ditto 28s 3d, all per 400 lbs. Maize tends firmer. Plate ex ship 35s 6d, landed 37s, No. 2 white flat African ex ship, 37s, No. 6 yellow ditto 35s 9d, all per 480 lbs. Oats: English at 8s 3d-10s 6d per 112 lbs, free on rail, as to sample. Imported quiet. Plate f.a.q. ex ship 22s, landed 23s 3d, No. 2 Canadian Western ex ship 27s 3d, landed 28s 3d, No. 3 ditto landed 27s 6d, New Zealand "A" grade landed 38s-40s, "B" grade 36s, per 320 lbs. Oatmeal in fair demand at late rates. London-made flaked, also

rolled, 18s 6d, medium and fine cuts 18s, coarse and medium pin-head 17s 6d, ordinary Scottish oatmeal 19s 6d-21s, and American all cuts 17s-18s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24	1922-23	1921-22	1920-21
Estimated sales of home-grown wheat—				
1 week to October 20	Cwts. 416,910	Cwts. 526,007	Cwts. 285,408	Cwts. 341,650

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated October 25th, is as follows:—Pig-iron: Makers of Cleveland pig-iron, having sold their present limited output, have this week advanced their prices. The demand for prompt pig-iron has recently been good, particularly from Scotland, and it now remains to be seen whether consumers and merchants will continue to buy at the increased figure. No. 3 Cleveland G.M.B. is to-day quoted 100s per ton. Makers of East Coast hematite are not so well sold, and would welcome a better demand. The price of mixed numbers is about 99s 6d to 100s per ton. Manufactured iron and steel: The steel trade seems to be picking up slowly but steadily, and the immediate outlook is encouraging. Steel ship plates, £9 15s; steel ship angles, £9 5s; iron bars, £12; steel rails, £9 10s. Iron ore: The demand for iron ore is quiet, most of the consumers having good supplies for some little time. Best Rubio is not easy to sell, as good Mediterranean ores are selling at comparatively low prices. Best Bilbao Rubio ore is quoted 23s per ton c.i.f. Tees.

THE WOOL TRADE.

Our Sheffield correspondent writes:—The output of basic steel is 70 per cent. of capacity, and of acid steel about 50 per cent. of capacity. Orders from the railway companies continue to be comparatively small in bulk, and the foreign demand is only moderate. Makers of pig-iron are stiffening their prices, but there is no quotable change in quotations for Derbyshire irons. Hematite pig-iron is firm, and the output does not exceed consumption. Holders prophesy a shortage of steel scrap immediately following any increased demand for steel, and have anticipated such a movement by advancing their prices. Consumers prefer to buy very sparingly. A large tonnage of scrap metals is being sent out from the yards where is carried on the breaking up of ships, tanks, guns, automobiles, and other surplus war material, and this supply will continue for a long time. Progress in the fine steel branches continues, but at a very slow pace, but few of the makers have any considerable amount of work in hand. There is, however, a fair amount of activity in the hand tool branches, both on home and export account, and the "cold" strip mills are running overtime. The output of table knives and electro-plated goods approaches the pre-war level. The demand is, however, mainly for low-priced articles, and very little expensive silver ware is being bought. Prices in these branches are being severely cut, and are 50 per cent. below the level of last season. Business in the coal market has shown signs of contraction for some time past, both at home and abroad. Although no slump in exports is anticipated, it is realised that shipments to Continent will be on a reduced scale in the future. The quietude of so many of the British works keeps down the consumption of steams and small coals, although the specifications of railways and gas companies continue satisfactory. Prices per ton at pits are:—Best hand picked branch, 31s; best Silkstone, 27s; South Yorkshire hards, 20s; Derbyshire ditto, 19s; Tynes, 24s; blast furnace coke, 24s.

Our Glasgow correspondent (writing on Thursday) says:—The large steel works in the district continue to run on short time, and inquiries for plates and sections are given this week as lighter than have been experienced for years. Opinion differs as to the amount of work in builders' hands at present, and the balance seems to favour the conclusion that the amount is respectable. A large tonnage is being dealt with in billets, bridges, girders, and black sheets. Good quantities of these materials are on request for Japan, India, and Australia. Steel rails are fetching from £8 to £8 10s for export; steel sections from £8 17s 6d and £9; boiler plates from £12 10s upwards. Ferro-manganese easier at 10s per ton of a reduction, making the quotation £17 per ton for 76-80 per cent. delivered at local works. The improvement in Scotch pig-iron referred to last week is fully maintained, and from the nature of the demand it is thought that higher prices are likely to immediately obtain. Scotch hematites are called £5 5s per ton; No. 1 foundry, £5 5s, a gain on the week of 1s 3d; No. 3 foundry, £5 13s 3d or a rise; crown bars, £12; and galvanised corrugated sheets, 24 b.g. (f.o.b. Glasgow), £18 17s 6d. Without going into detail, it may be mentioned that, generally, the tone in iron and steel relations here is the turn firmer, not a little in sympathy with the hardness that has been shown over the week in the Midlands, Sheffield, and Cleveland.

Our Cardiff correspondent writes:—The outstanding feature of the Cardiff coal market this week has been the arrangement of contracts involving considerable quantities for delivery over next year. On the whole, the colliery owners have done better than they expected to do a few weeks ago. Very powerful "bear" influences have been exercised in an effort to depress values, and the new situation created in Europe by the collapse of the passive resistance movement has been exploited to the utmost by foreign buyers. The contracts, however, which have been concluded represent an advance of from 1s to 1s 6d per ton above those at which contracts were placed this time last year. Big orders have been placed for best Admiralties at 27s 6d; for second Admiralties and some of the Monmouthshire coals at from 26s to 27s; and for good bunker smalls at 17s. During the week some of the colliery companies declined to repeat business at the prices which they had previously received, and they are now quoting from 6d to 1s per ton higher. The volume of the trade represented by the deals already transacted is sufficient to decide for the time being, at any rate, the basis of 1924 contract values. The outlook for the future remains very uncertain, but if it contains possibilities of a contraction in foreign demand, it also contains possibilities of expansion. The trouble is that the market has nothing definite to guide it as to the course which political and economic events are likely to take on the Continent. The outstanding fact, however, is that, notwithstanding the present disorders on the Continent and the decrease in the demand from France, Belgium, and Germany, the volume of the coal export trade of the Bristol Channel ports is well maintained, while the outputs are still approximating the best weekly figures for the current year. For spot positions prices have been slightly easier, principally in consequence of the disorganising effects of a succession of storms on the movements of shipping, and, therefore, on colliery stems. The current approximate quotations are as follows:—Best Admiralties, 27s to 28s; second Admiralties, 26s to 27s; best drys, 27s to 28s 6d; black veins, 26s 6d to 27s; Western Valleys, 23s to 25s; Eastern Valleys, 23s to 25s; best bunker smalls, 17s to 18s; ordinary cargo smalls, 15s to 16s; anthracite big vein large, 40s to 47s 6d; machine-made cobbles, 52s 6d to 55s; French nuts, 60s to 62s 6d; stove nuts, 54s to 56s 6d; rubbly culm, 14s 9d to 15s 3d; coke for export, 42s 6d to 50s; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 28s to 31s; pitwood, ex ship, 29s to 29s 6d. In the iron and steel trade the position is not quite as strong generally as it was a week ago. There has been an easing off in the foreign demand for tinplates and galvanised sheets, but this slight reaction is balanced by an active home demand, and prices are unchanged.

Our Bradford correspondent, writing on Thursday, says:—The good general demand for wool at the London auctions this week has again emphasised the strength of the raw material position. Combing merinos are steady on about the basis of the last auctions, and are much too dear for Bradford topmakers, having regard to the prices obtainable here for tops. It is impossible to make more than 5s per lb for average 64's, though based on the current cost of wool the price should be 2d to 3d more. A big business has been put through in crossbred tops of all qualities, and in sympathy with the advance in crossbred wool—anything from 5 to 7½ per cent. on last sales' rates—topmakers have advanced their quotations from ½d to 1d as compared with a week ago. A certain amount of speculative buying is being indulged in, but there are indications that actual consumption is increasing. The home trade and several overseas markets are interested in most qualities of crossbred tops, and this constitutes the feature of the market at present. Rather more encouraging reports are to hand from spinners, some fair weights having been sold during the last few days. This refers more particularly to crossbred yarns. In botanies there is certainly more doing, but at prices greatly below replacement values. This is the worst feature of the trade, keen competition resulting in price-cutting, so that bare costs are not covered. Some improvement is noted in the demand for the hosiery trade. The piece goods trade is showing signs of expanding, wholesale fabric buyers being more interested in the cheaper lines made from crossbreds. With the exception of a small and specialised overseas demand, however, there is little doing in the more expensive botany cloths. Cheapness appears to be the ruling factor, both on home and export account. English wools are moving steadily at very firm prices.

COLONIAL WOOL.
(FROM A CORRESPONDENT.)

The sixth series of London sales commenced last Tuesday, and the results were very satisfactory. The home trade led the way in buying, having apparently generated further energy in that direction. The catalogues for the series consist very largely of crossbreds, the quantity of this description available being about 150,000 bales, and at the first sale merinos were too sparsely represented to be able to give really reliable quotations for them. Succeeding sales have confirmed the full opening rates paid, and, as was generally anticipated, merinos are very firm at the level current at the close of the previous auctions, crossbreds being mostly 5 to 7½ per cent. higher. These advances harmonise with what has taken place at Liverpool and Hull during the interval, and so far the buying honours have gone to the home trade. I am not at all surprised at this, for the opinion is being openly expressed that there is no good in merinos at current values, and particularly in view of present conditions. It is not often that Messrs H. Dawson and Co. speak gloomily of the home trade, but in their latest review

of the situation at home and abroad they say that the home trade is at present struggling for its existence, and continue as follows: "It seems to be helpless against foreign competition, with its cheaper costs of production, larger output, and lesser taxation, and exchanges which are adverse to us. Our home markets, as well as foreign markets, are being lost, whilst, as against unemployment here, one hears of double shifts in some Continental centres." This statement is not an exaggerated one, though it will probably be found at the end of the year that the home trade has absorbed quite as much as during the previous twelve months, the chief difference being that interest has been transferred from merinos to crossbreds. This is an outstanding feature, the significance of which cannot be ignored.

In view of the quantity of wool purchased for the home trade during the past twelve months, which has been practically all crossbreds, there must be great faith in this class of raw material, and it does not seem that the confidence will be misplaced. I should have liked to see buying interest more evenly distributed, but manufacturers are compelled to cater for such requirements as are dictated by fashion, and as far as can be seen at this juncture there is every probability of a better profit being made out of crossbreds than merinos. If Continental users, particularly those in France, can find a profitable outlet for merinos, it is up to them to buy this class of wool, and if they are able to do so it will be all to the advantage of the growing end of the trade. The depreciated Continental currencies are certainly favourable to foreign manufacturers from the point of view of selling goods in this country, but when all is said and done this is only one side of the case, and it should impress upon firms in the home trade the necessity for turning out the very best goods possible, and putting them on the market at a minimum of cost. Probably the wholesale and retail trade can help more substantially in this direction at the present time than any other section, but that is another story. Commission combers and dyers could sensibly reduce their charges and still make a profit, for the trade is being badly handled by the combines which exist in these two departments.

It is recognised in Bradford that the attempt made in Manchester by the Piece Dyers' Association to monopolise dyeing by asking manufacturers and merchants to confine all their dyeing to them, and offering a rebate of 10 per cent. as an inducement, was, to say the least, a bad move. The worst feature of these big combines is the distinct tendency towards monopolisation, and nothing would do the trade more good than for merchants and manufacturers to set up dyeing establishments of their own. There is no objection on the part of anybody against paying reasonable charges, but monopolistic schemes are among the best trade killers that can possibly be introduced.

MANCHESTER, October 25.

Trade in the market during the past week has tended to expand. Prices have hardened, and buyers have been more prepared to operate on a freer scale. A large part of the demand, however, has been impracticable. For India there has been increased activity in grey shirtings and bleaching and printing cloths, and numerous cables have been received from Calcutta and Bombay making offers. Inquiry for China has also been on broader lines, but most of the bids have not been workable. For several minor outlets East and West goods have moved off more freely, particular mention being made of the business passing for Java, Egypt, the Near East, South

America, and in fancies for the United States. Manufacturers with wide looms are getting busier. An increased turnover has also taken place in American and Egyptian yarns for home consumption, but it has been difficult for spinners to obtain full prices.

VEGETABLE OILS AND OILSEEDS

The sharp break in prices of Plate linseed, due to the greatly increased official estimate of the yield of the growing crops in Argentina, brought buyers into the market in numbers, and early in the week a large business was done for January-February shipment to Hull down to as low as £16, business being effected between this figure and £16 5s, while about 100 more was paid for seed ready for shipment December-January. Prices have since steadied somewhat, but without attracting further business.

Under the influence of lower seed values, raw linseed oil has eased off to £41 per ton naked, ex Hull mill, for spot, but trade is

quiet. Cotton oils are in small demand, and sellers are more inclined to meet buyers. New crude Egyptian is now quoting £37 per ton, ex mill.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market is again firming up, both in London and the provinces. At the auctions held in Bermondsey on Thursday last, best ox hides sold from 6 1/2d to 8 1/2d per lb, three classes showing 1 1/2d to 2 1/2d per lb advance. Seconds sold from 6 1/2d to 7 1/2d, three selections also showing advances of 1 1/2d to 2 1/2d. Best cows sold from 6 1/2d to 7d, and seconds from 6d to 6 1/2d. Best calf were also dearer, selling from 7 1/2d to 12 1/2d, and showing advances of 1 1/2d to 2 1/2d on two classes. Wools were slightly firmer, selling from 5s 3d to 10s 6d each, whilst hogs made from 2s 9d to 13s 3d each. Trading in imported hides is improving, and prices show little change. Business in the River Plate is, however, rather slow, and \$40 3/4 is still quoted for Argentine ox. Cables from Buenos Ayres report the killings for September to be 233,000, as against 237,000 for the previous month. The American hide market is reported as steady, with best heavy packers selling on a basis of 15c.

Whilst the improvement is maintained in Bermondsey leather circles, the demand for sole leather has shown a falling off since the Shoe and Leather Fair week. This was, however, to be expected, but it is certain trade is on the up grade at last, as there has been a regular demand for bends from the manufacturing, repairing, and exporting ends of late. Prices are very firm, and already tanners are in some cases advancing some selections by 1 1/2d per lb. A feature of the home trade is an inquiry for a better class of leather than has been popular of late. Official remains in very moderate supply at very firm prices.

There is also a better inquiry for dressed leather in box, willow, glacé, and patent. Imports from Germany seem to be falling off, and this gives British producers a better chance to compete at fair prices.

The boot and shoe sections show a decided improvement, and export orders are frequent. A meeting to discuss the all-British boot was held at Leathersellers' Hall on Tuesday last, when it was decided to form a small committee to report on the matter.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 26.

SUGAR.—No fresh development crept into this market, and which can only be described as steady but quiet. The small daily movement, however, is continuous, and mainly directed towards British refined, owing to supplies of foreign being found wanting. Prices remain at a fairly steady level, as any lack of demand is counterbalanced by smallness of available supplies. British-grown granulated of the new crop is now obtainable in small quantities, but next month will witness an increase, while certain parcels now ready for delivery can be secured from London dealers. 56s 3d is quoted ex works, Cantley and Kelham. Messrs Tate and Lyle's is down on the week; cubes quoted 59s 6d to 60s 6d; crushed, 57s; nibs, 60s 6d; granulated, fine and coarse grain, also stoved, 57s 1 1/2d; No. 1, 56s 10 1/2d; No. 2, also London, 46s 7 1/2d; ditto, second half November delivery, 56s 3d; yellow crystals, spot, 51s 1 1/2d; caster, 57s 9d to 58s 7 1/2d; and finest ditto, 59s 4 1/2d. White Java, spot, sold, 52s 9d to 53s; May-June, steamer, quoted 23 1/2d, c.f. and i., London. Belgian granulated, November-December, 25s; and crystals, 24s 9d, f.o.b., Antwerp. Czech granulated, star, fine or equal, November-December, sold, 25s 4 1/2d, f.o.b., Hamburg. Offers of Dutch sugars for shipment are on a small scale. Raw refining descriptions are scarcely mentioned. White terminal market quiet, and prices weaker. October sold, 26s 9d; December, 24s 7 1/2d to 24s 3d and 24s 6d; March, 21s 3d to 24s to 24s 3d; May, 24s 3d to 24s 6d; August, 24s. Cuban stock, 165,800 tons, against 254,100 last year.

COFFEE.—With sustained inquiries, the spot market gradually hardens, Colombian in particular being a firm feature, and a period of between seasons leaves but limited supplies to handle. New crop Costa Rica is expected to reach the London market about a month hence, and East Indian late next February, while crop accounts of the latter are couched in anything but a favourable strain. Futures firm, quiet. December quoted 59s; March, 58s 6d cwt.

COCOA.—Only quiet trading ensued in spot parcels this week at prices showing no material change. Some good to fine Trinidad sold, 48s to 51s; Grenada, 42s to 43s. Forward market for Accra continues to steadily decline under selling pressure, and down to 26s 6d, f.o.b., was accepted for November-January and December-February, with 29s to 29s 6d being paid on the coast for the fulfilment of October contracts.

TEA.—44,350 packages Indian were offered this week, and experienced active and well-distributed competition at full to slightly dearer rates, common kinds in particular being wanted. Some fine broken orange pekoe sold, 3s 2 1/2d to 3s 4d per lb, in bond. Ceylon auctions of 11,920 packages were briskly competed for at full to rates to 3d and occasionally 1 1/2d per lb advance. Fine broken orange sold, 2s 4d to 2s 5d per lb, in bond. 2,750 packages Java and Sumatra were catalogued in a cation, and met a strong market, at most 1 1/2d to 2 1/2d per lb advance. Pekoe sold, 1s 4 1/2d to 1s 6 1/2d; broken ditto, 1s 1 1/2d to 1s 3 1/2d; pekoe souchong, 1s 4 1/2d; orange pekoe, 1s 7 1/2d; broken orange, 1s 4 1/2d to 1s 8 1/2d per lb, in bond.

RICE.—Burma grain firm, while influenced by the rate of exchange, but buyers remain reticent. Two stars, spot, 16s; October-November, 14s 1 1/2d. No. 3 cleaned Rangoon, October-November, Levant, 14s 3d, c.f. and i. terms. Spanish in steady demand, business proceeding in second-hand parcels at 18s 6d, c.f. and i., London. Carolina sorts

paringly offered and firm. Rangoon haricot and Madagascar butter-beans quiet, unaltered. Japanese peas meet a quiet market. Spot quoted 23s 6d; September-October, 21s 6d; October-November, 20s 6d; November-December, 20s 3d; January-February, 20s 3d, c.f. and i. terms, per cwt. 7-8,000 tons Rangoon bran, October-December, changed hands recently at £5 10s per ton, ex ship, London and Liverpool, but mainly to the latter port.

SPICE.—Pepper steadily held, but trade proved quiet. Fair black Singapore, spot, 4 1/2d; October-December, L.S., ditto, 4 1/2d; Lampung, November-January, buyers, 4d; white Muntok, October-December, quoted 6 1/2d; Janu ry-March, 6 1/2d. Zanzibar cloves dull. October-December, steamer, quoted 1s 3 1/2d lb. Tapioca quietly steady. Fair flake, spot, 3 1/2d for Singapore, and fine Java 4d per lb. Singapore, October-December, to Havre, quoted 29s 9d. Sago flour, October-December, Liverpool, held for 14s. Desiccated coconut steady. Fine cut, spot, 43s 9d; medium, 43s; halves, September-October, 41s 3d; October-November, 40s 6d; November-December, 40s 3d cwt. Ginger quietly firm.

JUTE.—Slightly easier, with moderate transactions. First grade, November-December, Continent, sold, £21 12s 6d; ditto, December-January, sold, £22; January-February, £22 5s ton. Her'sians and twills quiet of sale, at late rates.

HEMP.—Manila dull and rates weak. J grade, November-January, quoted £31 5s; K, £26; L, £25 10s; and M, £23 10s. African sisal, No. 1 Tanganyiki, October-December, £35 10s ton. Italian dull and nominally unaltered on spot.

SHELLAC. steady. T.N., spot, quoted 310s; December, sold, 305s, to 310s; March, 300s to 305s.

COPRA irregular. F.M.S. Straits, October-November, London, sold, £26 17s 6d to £27 5s; ditto, August-October, Rotterdam, £27 10s; October-November, £27 2s 6d; October-December, £26 10s to £26 12s 6d; F.M. Straits, October-November, Rotterdam, at £26 2s 6d; Ceylon, October-November, quoted £29 10s; Java, October-November, Antwerp, sold, £27 7s 6d; Dutch E.L., October-December, £26 11s 3d; South Sea quoted £26 5s; Cebu, £26 7s 6d; F.M. Straits, September-October, Marseilles, sold, £26 12s 6d. Palm kernels, December-February, Liverpool, sold, £18 1s 3d to £18.

RUBBER.—A fair amount of business was effected at firm but slightly irregular prices. Standard plantation crepe and sheet spot, also October, sold, 1s 2d to 1s 1 1/2d; November, 1s 2 1/2d to 1s 1 1/2d; December, 1s 2 1/2d to 1s 2 1/2d, 1s 2d, and 1s 1 1/2d; January-March, 1s 2 1/2d to 1s 2 1/2d and 1s 2 1/2d; April-June, 1s 2 1/2d to 1s 3d and 1s 2 1/2d. To New York, standard estate sheet, October-November, sold, 1s 1 1/2d to 1s 1 1/2d; November-December and December-January, 1s 2 1/2d to 1s 1 1/2d. Fine hard Para, spot, 1s 0 1/2d; soft fine, 1s 0 1/2d; and cauchó ball, 1s 0 1/2d per lb.

FRUIT (Dried).—With a steady demand for currants a fair business was effected this week. Pyrgos, quarter cases, quoted 42s; ditto, Amal, 46s; Patras, 50s; new Vostizza, 65s to 85s. Sultanias were accorded but slow support. New Smyrna quoted 56s to 73s; fine, 80s to 85s. There is a good steady demand for Valencia raisins, and a shortage of fine qualities is noted. Australian, four crowns, quoted, 49s. Valencia, half-boxes, 58s to 62s. Dates: Hallowee, first tide, quoted

The Economist,

WEEKLY COMMERCIAL TIMES,

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

Vol. XCVII

SATURDAY, NOVEMBER 3, 1923.

No. 4,184.

£16 to £16 6s 3d and £16 5s to £16 10s; April-May, quoted £16 10s Rapeseed quieter. Toria, October-November, £16 15s; real bold Ferozepore, ditto, £16 15s; Jamba, £13. Cottonseed steady. Egyptian black, October, £11 10s. Sakellaris, £10 17s 6d, to Hull. Bombay, November-December, £9 7s 6d; December-January, £9 2s 6d. Ginnelly seed steady. East African, October-November, £22 15s. Chinese, October-November, £23 2s 6d paid. Groundnuts quiet. Coromandel, machine-dried, December-January, £21 15s; Chinese decorticated, f.a.q., December-January, £21 10s; East African, afloat, £23 5s. Soyabean steady. Manchurian, October-November, £11 10s. Castor seed firm. Bombay, October-November, £21 10s, Hull, £21 2s 6d, continent, per ton.

OILS.—Linseed irregular, but easier on balance. Spot, net, naked, 41s 3d; October, 40s; November-December, 39s 6d; January-April, 36s 3d; May-August, 34s. Rape steady. Crude, spot, 39s 3d; refined, 42s 3d. Cotton quie. Crude Egyptian, spot, 38s; Bombay, 37s; common edible, 45s; deodorised (in barrels), 49s. China-wood firm. Hankow, spot (barrels), 93s 6d; November-December, 93s. Coconut quieter. Ceylon, spot, 46s; October-November, 44s; Cochín, ditto, quoted 50s. Soya easier. Oriental, barrels, October-November, 37s 6d. Cod firmer. English, spot, 36s 9d. Groundnuts firm. English, crushed, naked, spot, 47s 6d; deodorised, barrels, 55s 6d. Turpentine irregular. American, spot, 73s 6d; November-December, 74s; January-April, 75s 9d. Rosin quiet. American, grade B, 13s; F, 13s 3d; G, 13s 3d; H to I, 13s 3d; WG, 15s 9d; WW, 16s per cwt. French nominal. Petroleum steady. American standard, white, spot, 11d; and water white, 1s per gallon. Ca-tor-oil firm. First pressure, spot, quoted 52s; second pressure, 51s, and pharmaceutical, 57s per cwt.

METALS.—Tin opened with an easier tone due to selling pressure, while in moderate demand. Standard cash sold at £202 10s to £201 17s 6d, and three months at £200 10s to £200 15s to £200. Eastern cables reported sales on the basis of £201, c.i.f. Subsequently the market ruled firmer on buyers becoming more in evidence, combined with stimulating advice from America, and a good demand prevailed, being chiefly confined to distant positions. By the middle of the week cash sold at £204 5s, a d three months at £201 to £202 10s to £201 17s 6d to £202. At Thursday's session active trading resulted, and prices again advanced. Standard cash done at £207 to £208, and three months £203 10s to £204 10s to £204 5s, while finally at £204 12s 6d. Eastern cables reported 300 tons sold at £203 15s. c.i.f. At the final meeting values after opening firmer eased. Standard cash sold at £209 to £207 10s to £207 15s to £207 12s 6d, and three months at £205 5s to £204 5s to £204 10s to £204 7s 6d. English ingots, £203 5s to £208 15s. Copper commenced the week with an easier tone, due to lower American cables, but offers were well absorbed, and a partial recovery resulted. Standard, cash, sold, at £60 8s 9d, and three months £61 5s to £61 2s 6d. The down-

ward movement was continued, though at the lower range buyers were well to the fore. On Wednesday standard, cash, sold, at £59 18s 9d, and three months at £60 15s to £60 11s 3d. Very active trading ensued on the following day, and values ruled in favour of buyers, while somewhat irregular with regard to forward positions. Standard, cash, sold, at £207 to £208, and three months at £203 10s to £204 10s, to £204 5s, to £204 12s 6d. Later a reaction set in, prices moving in an upward direction. Standard cash sold at £59 17s 6d, and three months, £60 to £60 5s to £60 2s 6d, while finally at £60 8s 9d. Electro, £63 to £64; best selected, £62 15s to £64 5s; strong sheets, £62; wire bars, £64 per ton. Lead firmer, at £30 5s to £29 2s 6d, as to position. Spelter dearer, at £33 12s 6d to £33 13s 9d, according to position. Antimony, English regular, quoted at £38 10s to £39. Aluminium, home trade, £115; export, £120.

TALLOW.—Messrs Colchesters and Woolner write on October 24th as follows:—The tallow market was quiet during the week, and prices are unchanged to-day. Information that the Argentine meat works had stopped operations was followed by a little better demand for spot goods, but this came too late for auctions to be arranged this week. Quotations are:—Australian mutton: Fine, 43s 6d; good to fair, 42s 6d to 41s; dull to dark, 37s 6d to 36s 6d; hard, 42s. Australian beef: Fine, 42s 6d; good to fair, 41s to 39s; dull to dark, 36s 6d to 36s; sweet, 42s 6d. Present shipment from Australasia: good mixed, nominal. Present shipment from South America, 40s 3d to 38s 3d. The market letter is unchanged. Town tallow, 36s 6d per cwt. Rough fat, per 8 lbs, 2d; melted stuff, 27s 6d per cwt. Quotations are:—Town, 35s 6d, net cash, naked, ex works. Country: Frail casks, 35s 6d; home melted, shipping casks, net, f.o.b., good coloured, 39s; fair to dull, 36s 6d to 35s 6d. Bone fat: White, none; pale, none; benzine, 33s; melted stuff, 33s 6d, f.o.b.

pavement.
Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's,
37 Avenue de l'Opera.

THE MONEY MARKET.

THERE was the usual increase in the demand for money
at the end of the month, but the market was once more
saved from the clutches of the Bank of England by relief
measures, which appear to have chiefly taken the form of
purchases of early December Treasuries. On Thursday
there was the usual reaction, assisted by the disbursement
of Government dividends. Discount rates had a slightly

easier tendency, in spite of a seasonal increase in the volume of commercial bills.

	Nov. 2, 1923.	Oct. 26, 1923.	Oct. 19, 1923.	Oct. 12, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses' Notice	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate (3 months' bills)	3½	3½	3½	3½	..

The Bank return showed an expansion—due to the demand for cash at the end of the month—of £1,681,000 in the note circulation, with a corresponding decrease in the Reserve. Government and Other securities showed increases of £1,170,000 and £148,000, and Public deposits declined by £2,513,000, leaving the Other deposits £2,196,000 higher. Currency notes outstanding increased by £1,080,500 this week to £281,254,900, which includes £1,438,600 for notes called in but not yet cancelled. The fiduciary issue is £230,366,400, or £39,817,400 below the maximum.

THE STOCK MARKETS.

The Stock Exchange holiday on Thursday did not check the expansion of business, and many sections of the House are, comparatively speaking, active. Not only is money continuing to flow into investment stocks, but a buoyant tone has developed among oil shares, and more interest is being shown in other speculative sections. Five per cent. War Loan is higher, part of the interest deducted last week having been recovered, and dealings have been started in the New Union of South Africa stock at a good premium. Yesterday there was some dulness in the gilt-edged market on fears of an early General Election. The foreign market has maintained a firm front, but Home Rails have been quiet. Rubber shares show inclination to improve, owing to the continuation of the output proportion for the coming three months at 60 per cent. Many industrials have improved, but Kaffirs are quiet.

THE COMMODITY MARKETS.

Although signs of a business revival are not revealed in the movements of commodity prices, there is a distinct tendency toward more stable markets. The position on the Cardiff coal market is inclined to be quiet, but for next year's contracts the movement is towards slightly higher figures. The pig-iron market is quietly firm, makers at Middlesbrough being comfortably situated with regard to orders. The boilermakers' dispute continues to impede progress among steelmakers. Tin on balance is better in price, while copper maintains its value. At one time conditions in the Manchester cotton trade looked brighter, but towards the end of the week buyers displayed a disposition to adopt a waiting policy pending the publication of the expected report on the American cotton crop. A slight improvement is recorded in the spinning section of the wool industry. Jute was in moderate demand, and prices were steady. Rubber was fairly firm, but sales were not heavy. The wheat position was better, and prices advanced about 3d. A depression became noticeable in the sugar market, and though tea values were maintained, a somewhat quieter tone prevailed. The hide market is steady, and the outlook for the boot trade is better. Linseed maintains its value.

FOREIGN EXCHANGES.

Business in the foreign exchange market during the week has been restricted, partly owing to uncertainty as to the fate of the proposals for a new reparations inquiry, and partly owing to holidays on the Continent in connection with All Saints' Day. The rapid recovery on the 26th in connection with the first news of the French acceptance of Mr Baldwin's proposals for an investigation in conjunction with the United States has been followed by a new relapse as it became increasingly clear that M. Poincaré was doing everything to restrict the range

and reduce the usefulness of this new inquiry. The dollar, which on the 26th stood at \$4.51, fell away again quietly until yesterday, when, under the influence of a further speech by M. Poincaré, it dropped suddenly to \$4.46½. Forward rates are slightly narrower at ¾ cents per month over spot, as compared with ⅞ cents a week ago. The Paris rate, which fell to 75.80 on the 26th, and to 75.60 on the following day, has fluctuated with the varying views as to the coming conference, and in spite of efforts to maintain the rate, stood yesterday morning at 77.05. In the same way, Brussels has risen again from 88.30 to 90.05. Forward rates in both centres have widened one centime to 5 centimes per month above spot. The lira has shown somewhat more power of resistance, having depreciated only during the same period from 99 to 100. The mark, after showing a slight recovery to 275 millions on Saturday, has continued its disastrous course, and was quoted yesterday morning at 1,750 millions, as compared with 350 millions a week ago. The emergency issue of dollar gold bond notes, which have been put out to anticipate the "rentenmark," is reported also to have depreciated rapidly. At present no satisfactory information can be obtained as to the new "gold" issues proposed in Hamburg, Bremen, and other centres, nor as to the new currency which Bavaria proposes to issue based on the large water-power stations at present under construction in the Bavarian Alps, and what will emerge out of the present welter of confusion is completely obscure. In the meantime the provisional "gulden" currency (25 gulden to £1 sterling) appears to have been successfully introduced in Dantzig. Among the more stable European currencies, Holland has moved against us in sympathy with the dollar from 11.55½ to 11.53½, Switzerland from 25.24 to 25.15, Stockholm from 17.08½ to 17.02½, Vienna from 320,500 to 317,000, and Helsingfors from 167½ to 166½. Christiania has continued to depreciate from 29.27½ to 29.87½, and Copenhagen from 25.88 to 26.05½. Madrid, however, has recovered from 33.67½ to 33.59½. In Eastern Europe Czecho-Slovakia has moved from 152 to 153; Warsaw, however, after a further collapse, has recovered again to seven millions, and the plans for next year's budget under M. Hilton Young's advice show a serious attempt to tackle a problem which should in no way prove unsurmountable. Bucharest also, in spite of a further issue of currency to meet the crying need for circulating medium, has again improved down to about 940. In the East the rupee has moved from 1s 4 49-64d to 1s 4½d, but prospects remain good. The yen has appreciated slightly from 2s 1½d to 2s 1 3-32d. The silver market has been maintained by the unexpected continuance of heavy buying on Indian account, which has absorbed offerings from China and America, and there is some speculation how long this support can keep up. Hong Kong is unchanged at 2s 3½d, Shanghai ½d lower at 3s 1½d. In South America, Rio is again slightly cheaper, and Buenos Ayres has depreciated from 38½d to 38½d, while Monte Video is down by about the same amount. Valparaiso also has depreciated further, from 38.30 to 38.70 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 27th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	4,625	From Revenue	11,484
Interest, &c., on Debt	348		
Sinking Fund	584		
Sundries	751		
Reduction of debt	4,879		
Added to Exchequer balances ..	297		
	11,484		11,484

Revenue amounted to £11,484,000, against £11,332,200. Customs yielded £2,892,000, against £2,743,000. Excise produced £1,534,000, against £1,719,000. Property and Income-tax receipts at £2,326,000, and Super-tax receipts of £400,000, are practically the same as the combined total a year ago. Expenditure has been reduced from £10,872,200 to £6,307,900, mainly owing to reduction in Supply Services from £6,370,400 to £4,625,000. Interest, &c., and Sinking Fund absorbed £3,565,600 a year ago, whereas interest, &c., absorbed only £348,400 in the latest returns and Sinking Fund £584,000. The week's

operations reduced the National Debt by £4,878,900, and caused the following changes:—

	Min. £		Min. £
Treasury Bills	+ 1,309	Public Departments Advances ..	5,350
		National Savings Certificates ..	200
		Unemployment Assurance ..	550
		National War Bonds repaid ..	888
	+ 1,309		6,188

The floating debt was reduced by £4,025,000 to £809,846,500.

FINANCIAL YEAR, 1923-24 (April 1 to October 27, 1923).

£	£
Total Expenditure .. 429,140,965	Raised by Revenue .. 420,515,634
	Net Borrowings 4,904,749
	Decrease in Balances 3,720,582
Total	429,140,965

ESTIMATES FOR YEAR 1923-24.

	£		£
Ordinary Expenditure	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure..	15,603,000	Special Receipts....	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bengal-Nagpur Railway; Anglo-Dutch Plantations of Java; and Rubber Securities. At the meeting of the Anglo-Dutch Plantations of Java the Honble. C. H. Strutt gave an interesting survey of the rubber and tea position, while the chairman of Rubber Securities claimed the restriction scheme as a success.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MR BONAR LAW.

LAMENTATIONS at the graveside of a departed statesman are sometimes dictated almost as much by formality and decorum as by deep-seated regret. But there is, we believe, no reservation and no trace of insincerity in the chorus of regret aroused by the passing of Mr Bonar Law. In venturing to add our own brief and respectful tribute, we begin by asking ourselves what are the underlying reasons which prompt the genuine spontaneity of the feelings which find expression not only in the Press and on the platform, but in the private talk of people in all walks of life and of all political creeds. It is not greatness of constructive achievement, for death curtailed, at what for statesmen is an early age, the opportunity of major contributions to the country's page of history. Had fate spared him for longer tenure of the highest office, none would have forecast for him a career that would have ranked him with Pitt, Gladstone, or Disraeli. It is not that he possessed the brilliance or magnetism which compels the public regard. Those gifts were not his. Doubtless the pathos of his later years accounts for something of the public sympathy of to-day. But, in our opinion, the fundamental reason why the country so sincerely mourns his loss is that in Mr Bonar Law the country recognised one of the most honest, straightforward, and devoted public servants that have trodden the political stage in recent decades. The war temporarily depressed our political standards. Mr Bonar Law gave the impression—and we believe the impression was fully justified—of striving to uphold them. If we are right in this diagnosis, then the lamentations which follow Mr. Bonar Law to his grave are equally a testimony to the nation and to him; for they reveal recognition and respect for honesty and straight dealing in political life.

Mr Bonar Law—the only Prime Minister born outside the United Kingdom—spent his early years in Canada, and received his schooling and business experience in Glasgow. Elected to the House of Commons in 1900,

he quickly made his mark in debate, and in two years achieved subordinate office under Mr Balfour. He first attracted serious public notice by his attachment to Mr Joseph Chamberlain's tariff campaign, and the energetic part that he took in that "raging, tearing propaganda." But real prominence came later, and dramatically. When Mr Balfour retired from the leadership of the Unionist Party in 1911, the succession was supposed to lie between Mr Walter Long and Mr Austen Chamberlain; but, the supporters of these two candidates being approximately equal, both retired in favour of Mr Bonar Law—a compromise appointment which took the country by surprise. From that date to the outbreak of the war his political record may be summarised as vehement obstruction to Liberal legislation, dictated no doubt by conscience and conviction, but carried out with an excess of acerbity, which led him, not only in his encouragement of Ulster rebellion, but also in his tactics as party leader in the House of Commons, beyond the bounds of constitutional practice. It is, indeed, a grave subject for surmise where this dangerous path might have led him had not the Great War intervened.

When the war crisis came like a bolt from the blue, Mr Bonar Law, with quick realisation of the overwhelming national need, at once assured Mr Asquith of his own and his party's support, an assurance loyally kept. Eight months later, when the shell controversy had been exploited by the Press, he agreed to bring his chief colleagues to the support of the Government, and became Colonial Secretary in the first Coalition Administration. Then in December, 1916, he sided with those who believed a change in the methods of the war's conduct was needed, and, refusing the reversion of the Premiership himself, became Chancellor of the Exchequer, Leader of the House of Commons, and member of the War Cabinet. From that day until the end of the war he was Mr Lloyd George's most doughty henchman. The war over, he made what probably he realised later was the grave mistake of joining with Mr Lloyd George in the "new heaven and new earth" manifesto, which returned the latter's second Government with so overwhelming a majority in 1918. The strain of unremitting work had by this time told on his health, and he no longer coupled a great departmental office with leadership of the Commons, taking instead the post of Lord Privy Seal. Nevertheless, his burden grew rather than diminished with the pressure of great national problems, which, in Mr Lloyd George's frequent absence in Paris, he had mainly to sustain. But he courageously stuck to his post until March, 1921, when doctor's urgent orders compelled a rest. It was feared at the time that his retirement was final, but in November, 1922, the unsatisfactory drift of national and international affairs drove him back into the arena. He took the leading part in breaking the Coalition, and, although fully aware of the warnings of his state of health, accepted the obvious consequences of his action, namely, the assumption of the Premiership. The keynote of his election appeal—"tranquillity"—marked his recognition of the disastrous nature of the brilliant wholesale promises of 1918, and so well accorded with the public mind as to give him a comfortable working majority. But after a brief tenure of office the march of relentless illness compelled him to hand over the reins to Mr Baldwin.

It is too soon as yet to assess the place that history will give him among our modern statesmen. He must share, as no one else but Mr Lloyd George can, both the credit and the discredit of all that was done by the Coalition Governments from 1916 to 1921. But his share in both is in no way comparable to that of Mr Lloyd George, by whom he was completely overshadowed. In one sphere he must rank very high, namely, as a Parliament man, for few have achieved a firmer hold over the House of Commons. But probably his greatest public service was one of his last, namely, that when national unity—during the war both a fact and a necessity—had in 1918 become a dangerous and fraudulent pretence, he restored party government and saved from wreckage the vital principle of Cabinet responsibility. Another outstanding point in his career, which will live long in the public mind, is that he, before the war, the bitterest of anti-Home Rulers, had the courage and vision to pass through the House of Commons, as the first task of his Administration, the Bill

ratifying the Irish Treaty, in the debates on which his own speeches were the outstanding feature.

To attribute to him the stature or calibre of the greatest among English statesmen would savour of a flattery that Mr Bonar Law himself would have spurned. But his honesty, courage, kindness, devotion to duty, and untiring industry go to make up a figure that the country will remember with real affection and gratitude. British public life would be both cleaner and more efficient if men like Mr Bonar Law crossed its stage more often.

CONFERENCE ONCE MORE.

THE first report of French acceptance of the proposed Reparations Conference with American participation caused a momentary optimism which was quickly dispelled by the publication of the restrictive conditions with which M. Poincaré hedged round his acceptance. It must be a conference of experts, not principals; it must be appointed by and held under the auspices of the Reparation Commission; only the "present" capacity of Germany to pay is to be examined; and it must be clearly understood that no reopening of the question of Germany's total liability could be tolerated by France. The total of 132 milliard gold marks fixed in 1921 must remain outside the purview of discussion. At first sight the last two conditions would appear to rob the proposed conference of all chance of real usefulness. But if these conditions are accepted as reasonable at Washington, it becomes impossible for Great Britain to withdraw, even though it be considered that participation, in view of M. Poincaré's attitude, means little more than assistance at an academic and abortive discussion. But, fortunately, there are some important factors in the position which make it possible that, in spite of M. Poincaré and all his obstructive efforts, the opportunities of the conference may not be quite so limited as might appear. On broad and general grounds, the re-entry of the United States in any way, however limited and circumscribed, is a new and welcome fact in the situation, the value of which may turn out to be immense, especially in moral and political effect. But even on the practical side there are reasons for thinking that the conference may make a useful contribution. The Reparation Commission itself has firmly asserted its claim to the functions attributed to it by the Treaty of Versailles, and has unanimously passed a resolution stating in set terms that it and it alone has the right to decide what subjects shall or shall not be discussed by a body set up under its auspices. This resolution may have an important bearing on the terms of reference finally adopted. In any case, the conference is an advance on the Bankers' Committee of last year, which was not allowed to discuss Germany's payments at all.

It thus becomes probable that the conference will take place with both French and American participation, and with, at any rate, some hope of leading those concerned one step nearer to a settlement. Nevertheless, the holding of this conference contains certain elements of danger. It will inevitably tend to focus attention upon reparations, whereas the recent rapid march of events has reduced the reparations problem in the strict sense of the term to a position of secondary and more distant importance. It would be disastrous if the mere fact that the conference is pending should be used as an excuse for a policy of drift with reference to current events in Germany, or for postponing action as regards the grave and urgent international issues which General Smuts discussed with such frankness and eloquence. The question whether the British Government is right in its contention that France is guilty of a breach of treaty undertakings is one of those urgent and fundamental issues, which, once raised, must be submitted to judgment. There has been too much delay already. In our opinion, the British Government should at once make it clear to the Quai D'Orsay that, conference or no conference, it is determined to submit this vital question to the International Court of Justice, to whom it should also be prepared to submit all its own

actions in connection with the Treaty. If the holding of the conference on the possibility of Germany some day paying reparations is to close our lips and tie our hands as regards the really fundamental European problems of to-day, then we say frankly that the arguments against British participation in that conference are irresistible.

Equally obvious is it that the conference must not be used as an excuse for a policy of drift as regards the course of German internal affairs. The growing financial and economic chaos in Germany may be viewed with indifference by M. Poincaré, but it cannot be so viewed by the British Government, whose constant pre-occupation should be to encourage and assist the Berlin Government to stem the tide of demoralisation. Nor can Great Britain afford for one moment to relax a practical interest in German political developments, and we therefore welcome the Note which Lord Curzon has this week addressed both to Paris and Brussels on the subject of the Separatist movement in the Rhineland. The text of the Note has not yet been published, but, according to the Paris correspondent of the *Times*, it "calls attention to the grave and anomalous position which would arise if the menace of the Separatist movement is fulfilled," and clearly enunciates the view that "the creation of an independent State within the German territories would be, in fact, a reversal of the Treaty of Versailles, and would necessitate its revision." If this summary of the British Note is accurate, the British Government have taken the first step along a road of policy which we declared last week to be imperative. It is a step, moreover, that is doubly backed by both moral strength and physical fact. But since in dealing with both the German Separatists and their alleged godfather, M. Poincaré, physical arguments carry more weight than moral, it is the fact of the British position in Cologne that is likely to be most potent in breaking up the Separatist movement. Incidentally, M. Poincaré is at pains to disclaim complicity with the Separatists, while Belgium declares an attitude of "neutrality" towards the movement. The maintenance of a firm attitude by Lord Curzon should now be sufficient to prove the deciding factor in checking Rhineland separation.

As regards political disintegration outside the Rhineland, the past week has provided no new development of first-class importance. Saxony has exchanged a Socialist-Communist Cabinet for a purely Socialist one, and the change and the events connected with it appear to give some measure of satisfaction to Herr Stresemann. Bavaria is indulging in a great deal of bluster, and there is in that quarter wild talk—which should be generously discounted—of "marching on Berlin." But, on the whole, we see no reason for assessing the danger of a real break-up of Germany at a higher level than at the beginning of these movements. It cannot, however, be foreseen what effect the growth of economic chaos may have on political developments. By all means let us have a conference, talk about reparations, and make the most of America's resumption of a limited interest in one phase of the European problem. But our entry into that conference must not induce a Gallic spirit as regards fundamental international issues and the changing scene in Germany. They are the great practical problems of to-day, compared with which the importance of the reparations question is academic and distant.

INTER-IMPERIAL REMITTANCES.

A STRONG Committee has been appointed, as the result of a discussion last week in the Imperial Economic Conference, to consider the question of the difficulty that has been experienced in recent years in transmitting funds from one part of the Empire to another, and the high charges on such remittances that are still complained of as a restraint on inter-Imperial trade. The Conference discussion was based on the scheme, of which much has already been said in our columns, put forward by Mr J. F. Darling for a system of Empire Currency Bills. Our readers will remember Mr Darling, whose energy and enthusiasm in urging a remedy for an admitted evil deserve the thanks of all concerned, aims at providing a uniform basis for currency, a secondary basis for credit, and a

The New York Trust Company

Capital, Surplus & Profits - \$27,500,000

COMPLETE INTERNATIONAL BANKING FACILITIES

100 Broadway

New York City

balancing factor for exchanges within the Empire. Before the war these purposes were served by gold and commercial bills of exchange. Gold has, at least for the time being, ceased to perform its function as a uniform basis for currency, and as a balancing factor for exchanges; and commercial bills are, in his view, "entirely inadequate for the greatly increased superstructure of credit caused by the war." This increase in credit has been backed, as everybody knows, by Governmental indebtedness, and Mr Darling's scheme proposes to exchange a portion of this indebtedness into Empire Currency bills, issued by the Dominions and by the British Treasury, with a joint and several guarantee, to be used by the banks of the issuing powers as the sole basis for note issue, apart from gold. By this method he claims that rates of exchange between those parts of the Empire which join the scheme will be kept at par, and the extreme difficulty, sometimes amounting to actual impossibility, that has in the quite abnormal years that followed the war, been experienced in sending money between Australia and England will be avoided in future. His proposal, already considerably modified since he first put it forward, has been backed by influential support. In our issue of October 20th a letter was published from Sir James Cooper, deputy-chairman of the B.A.W.R.A., urging that "the Empire Currency bills scheme would certainly seem to provide the proper remedy both for normal times and times of difficulty." In the discussion at the Imperial Conference the representatives of Australia and New Zealand argued at length in favour of its careful consideration. Sir James Allen, opening the debate in the absence of Mr Massey, said that New Zealand had put this question on the agenda firstly because of the serious detriment to trade caused by the difficulty and dearth of remittance, and, secondly, because Mr Darling had put forward definite proposals for Empire Currency bills, and he went on to charge the banks with being the cause of the difficulty, which "arose owing to the fact that the question of drafts appeared to be entirely in the hands of the banks, whether they were drafts for sale or drafts to be purchased, and that the banks appeared to exercise a monopoly in the exercise of which, in their judgment, they were charging rates which were not justifiable." The examples that he gave certainly seemed to indicate that the machinery of remittance is extremely costly. Mr Bruce, who spoke next, heartily endorsed Sir James Allen's suggestion that the matter should be referred to Committee. Mr Darling's scheme, in his view, would have to be reviewed in great detail, because, even if it were a perfectly sound solution of the problem, it might involve a complete reversal of the whole banking system of Australia. But he went on to point out that the present position was quite intolerable, and that there was an absolute necessity for doing something. On the other hand, Mr Mackenzie King thought that the matter did not affect Canada, whose exchange arrangements were made chiefly through New York, and Mr Burton said that South Africa was not prepared even to consider and examine Mr Darling's scheme further than it had done already, and urged that the problem could only be solved by getting back to gold, or by the establishment

of central reserve banks. Incidentally, commenting on Mr Bruce's complaints against the Australian banks, he expressed South Africa's wonder why "the Australian State bank was allowed to associate itself with other commercial banks in exploiting the community in this way, because it did so." He thought that the crucial objection to the Darling scheme was the fact that it provided machinery for creating currency without at the same time creating any machinery for controlling credit; and since it is impossible to devise a scheme for controlling credit throughout any four self-governing countries, he felt sure that the Empire currency scheme must fail.

This point concerning control of credit was very effectively made by Colonel Guinness, speaking for the British Treasury. He showed strong reasons for not limiting the Committee to the Darling scheme, but for considering the real evils and finding an effective cure. The Treasury did not think that the scheme would work, "because control of currency could not operate satisfactorily unless at the same time they had control of credit"; Mr Darling's caution in avoiding the question of credit control "really rendered the scheme nugatory." Moreover, high bank charges and expensive exchange operations would not be cured by the issue of currency bills, because these bills would be held by the banks, "and the trader would no more go outside the ring and deal in these bills himself than he went in for exchange credit" at present. These shattering official criticisms of Mr Darling's scheme, combined with the unwillingness of Canada and South Africa to entertain it, and with the fact that even its author did not propose to apply it to India, have in effect narrowed the problem to an improvement in the exchange relations between England and Australasia. It was, however, urged by Colonel Guinness that the Committee should represent all parts of the Empire, because the experience of some parts might be useful to others. He also intimated that the scheme put forward by the Treasury was very similar to one advocated by Sir James Cooper, as a second barrel to be fired if Mr Darling's shot missed the mark. This was a proposal that the central bank system should be applied to Australia and New Zealand, by arranging that the Commonwealth Bank of Australia should fulfil its "proper and original function," and provide exchange facilities for customers in any part of Australia who chose to open accounts with it, and that the Bank of New Zealand should likewise be obliged to provide freedom in exchange operations throughout its own Dominion.

The Committee, which includes Sir Charles Addis, Sir Henry Strakosch, Mr Niemeyer, Controller of Finance in the Treasury, and other men of light and leading, has thus an extremely interesting field to explore; but we ventured to observe, in our Banking Number of October 20th, that the Imperial Conference might very well decide, firstly, that no scheme except a very grandiose one, involving considerable interference with normal financial operations, could cope with one-sided trade such as occurred in and after 1920, and secondly, that, with normal trade, inter-Imperial remittances can well be handled by the existing machinery with minor additions and improvements, in-

cluding a free market in exchange in the Dominions. One of the most interesting questions that the Committee will explore will surely be the defence that will be put forward by the Australian banks for the rates that they have charged. It seems hardly possible that they have really been so shortsighted as to expose themselves to the charges of extortion made by their customers without any answer to give to them. It may be that they can show that peremptory Governmental demand for remittances has done much to produce the state of things for which the Governments are now blaming them.

FISCAL FALLACIES.

WHENEVER the Protectionist movement makes one of its periodical revivals, its advocates invariably would have us believe that whatever may have been sound policy in the past, economic conditions at the moment are so entirely new and unprecedented that economic truths that have stood the test of time must be discarded and the new theories and policies adopted. As a matter of fact, the economic conditions of Great Britain to-day are in many ways startlingly similar to those prevailing after the Napoleonic Wars. We have, moreover, searched both the Press and the speeches of politicians to find some really new grounds which would justify us in returning to a policy of trade restriction. Our search has been disappointing, and, so far, we have only found the old misunderstanding and the partial arguments which have been current, not merely since Great Britain finally adopted Free-trade, but in the seventeenth and eighteenth centuries also. Indeed, the arguments which are now coming to light can be found recorded and commented upon at regular intervals in the files of the *Economist* from the date of its inception 80 years ago. As illustrating the lack of either logic or understanding which is so characteristic of fiscal controversy, we may quote one or two examples which have attracted our attention in the last fortnight. Mr Hewins tells us in the pages of the *Evening Standard* that duties on wheat and meat, with preference for the colonies, would not raise prices, because the Dominions would compete with one another. Has anyone except Mr Hewins ever heard of a market in which, if demand remains unchanged, but supplies restricted, prices do not rise? But the answer is really given by Mr Bruce, who bases his case for preference upon the argument that the British farmer and the Dominions producer "in many instances is unable to obtain prices that cover his costs." If the scheme does not correct this inconvenience it is of no use to Australia. Another statement of Mr Hewins is that from within the Empire "all our food needs are more than adequately met." Anyone who may have lightly accepted that statement is referred to the figures of our wheat supplies before, during, and since the war, which we gave in our issue of October 6th.

Again, Mr Massey, on October 29th, in a speech to the British Cold Storage and Ice Association, declared that, "if the people of Britain were fed upon meat produced within the British Empire, there would be much less unemployment. The trouble was that the people in Great Britain did not discriminate between what was produced by the foreigner and what was produced by their own fellow-citizens in the overseas Dominions. Every shilling spent with the people overseas would result in the provision of more employment for the working people of Britain." We can only assume from this statement that Mr Massey really thinks that when we buy from foreign countries it does not create trade, whereas when we buy from the Dominions it does so. Mr Massey does not say in so many words that foreign countries send us their goods for nothing, but he evidently seems to think it.

But perhaps the misunderstanding of the elementary doctrine of international trade is best illustrated in last Sunday's *Observer*, in which a leader writer, whose copy must clearly have evaded the scrutiny of his distinguished Editor, contains the following gem:—"It is untrue to say

that every import must mean an export. Under the modern conditions of triangular trade it is possible to sell in this country, to knock out British employment, and to use our money to cover purchases from foreign countries." This writer's idea of triangular trade—which incidentally dates from 2000 to 3000 years B.C.—is a triangle with only two sides. He implies that Germany can sell goods to Great Britain with fatal results to British industry, and recoup herself by imports from India. He seems to forget that the operation can only be completed by Britain selling goods to India.

Finally, the *Times*, which we suspect is still trying to make up its mind on this issue, summarises Mr Baldwin's arguments as follows:—"He bases his arguments on the cardinal and indisputable fact that the whole economic situation of the world has undergone an immense revolution since the war.....the interruption of emigration leaves us with more mouths to feed than ever; all our customers in Europe are impoverished, and we have more goods to sell and fewer customers able to buy them; depreciated currencies under our present fiscal system are enabling foreigners to compete with us in our home markets. We are suffering at the same time from a burden of taxation and rates unbearably heavier than our competitors have to bear." Mr Baldwin's own conclusion, which the *Times* hesitates to accept, is that in these difficult circumstances a policy of trade restriction which the country has repeatedly rejected on the sound ground that it would tend to impoverishment, should now be given a trial. The true commentary on the situation is that of Mr Austen Chamberlain, in a speech made only last year, in which, after welcoming the fact that wherever there is an import duty a preferential rebate is given to the Dominions, he added the following significant words:—"But I say to you, also, that it would seem to me perfect madness to think that in a world so altered from that in which we were acting in before the war—in a world where what you want is not to defend yourself against competition, but to find anyone who is in a position to purchase your goods, and to place orders with you—and with a country that has smarted, and very naturally smarted, under the evil effects of those Government controls and interferences in industry unavoidable in war, but proved a great source of difficulty to us both in their existence, and in the necessity to get rid of them since the war concluded—in such a world and in such a country to go out with the old programme of Tariff Reform at this time seems to me perfect madness." On Monday Mr Austen Chamberlain must have hoped that no one remembered the speech that we have just quoted; for in a speech at Birmingham he said: "In face of the existing situation I agree with the Prime Minister that our first duty and the essential duty is to protect our home market." What new factor has appeared to make what was madness last year wisdom to-day? Unemployment is the burden of Mr Austen Chamberlain's latest speech. But unemployment is to-day considerably less than when he condemned the very proposals that he supports to-day.

Every day's newspaper contains speeches by public men, from Mr Baldwin downwards, replete with fallacies which call for the attention of the Free-trader. Of this week's crop we can only find space to refer to two more, both from the Swansea speech of the Prime Minister. The Free-trader, said Mr Baldwin, "forgets that the development of transport has completely upset half the premises on which the arguments for Free-trade were founded, and that a system which was introduced when steam was in its infancy, and before electricity had been thought of, is surely due for revision in the year 1923." We are grateful to Mr Baldwin for his prominent mention of the great transport revolution, for it is one of the profound changes of the past century which, more than almost any other, has tended towards Free-trade. In the days when transport was difficult and crude, even villages, townships, and small areas could maintain local active duties against the rest of the world, including their immediate neighbours. The development of rapid and efficient transport has necessitated the breaking down of multitudinous narrow-area barriers. Mr Baldwin was surely unfortunate in mentioning this aspect of the question. The other slip in his speech to which we refer was his description of British "isolation." One would gather

from Mr Baldwin that British trade is "isolated" in a world of tariffs. If isolation is the correct term to apply to a system under which food and materials pour in from all over the world, not only for use here, but also for re-export, and under which, having been able to buy in the cheapest market, our manufacturers export to every quarter of the globe, then words no longer have any meaning.

OUR INDEX NUMBER.

CHANGES in commodity prices during October were mostly small, the net result upon our Index Number of wholesale prices being an increase of 23 points. This follows a rise of 109 points in September, and brings the total up to 4,320, which compares with 4,264 at the end of last year and 4,260 at this time last year. As will be seen from the appended table, the whole movement in October was accounted for by the minerals group, the small changes in the other four groups neutralising one another:—

Date.	Cereals and Meat.	Other Food Pro-duce (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	%
Basis (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	579	352	516½	484½	553	2565	116.6
Dec., 1915	897	446	731	711½	848½	3634	165.1
Dec., 1917	1286½	686	1684½	839½	1348½	5845	265.2

* Corrected figure.

All commodities but one in the first group of foodstuffs altered during the month, but these changes exactly offset one another. Cereals, with the exception of home-grown wheat, were slightly lower, but beef, mutton, and potatoes rose a little. In the second group butter and sugar were lower, but against this there was a further increase in tea. At the recent meeting of Harrisons and Crossfields, Mr Heath Clark, in briefly reviewing the position of the tea industry, said that the stocks of tea, which had accumulated not only in this country but also in America and other places, largely on account of the disturbances caused by the war, have now practically disappeared, and the current consumption will have to be met from current production. "The production during the present year will be considerably greater than it was last year, and it will probably amount to from 750 million lbs to 800 million lbs, against 681 million lbs produced last year. The attractive prices that have been ruling during the year have no doubt contributed to this increase. It seems likely, therefore, that during the present year there will be a moderate excess of production, and that the stocks under bond in the United Kingdom at the middle of next year will be greater than they were at the corresponding period of this year. It remains to be seen what effect will be produced upon the market by such surplus during the coming months, but I regard the present and future prospects as being very satisfactory from the producers' point of view."

In the textiles group cotton and cotton goods are a little higher, but Australian wool shows a small decline, and there was a considerable fall in silk after the previous month's very large increase. In the minerals section, the principal movement is a rise of 18 points in lead. Imports last month were rather smaller than in the two pre-

ceding months. The price of Cleveland pig-iron was raised last week, makers having sold their present limited output. According to our Middlesbrough correspondent, the demand for prompt pig-iron has recently been good, particularly from Scotland. Copper has declined again to under £60 per ton, and is now lower than the base figure, that is the average for the years 1901-5. The announcement of the Government plans for unemployment relief works have apparently had no pronounced effect upon prices. In the miscellaneous section changes were negligible, as may be seen from the next table, which shows the changes in each commodity's index as compared with the previous month, the figure 50 representing in each case the average price during the basic period, 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.

The net effect of these changes is to raise the increase in prices over the pre-war level from 67.6 per cent. to 68.4 per cent. The fluctuation in each group in comparison with the level prevailing at the outbreak of war may be seen from the final table, in which the figure for the end of July, 1914, is taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5

* Corrected figure.

Apart from the increase in minerals, the changes are negligible as compared with the end of September. Both other food and minerals have moved a little closer to the general average.

SOME RECENT BUDGETS.

It may seem futile nowadays to insist that States, like private individuals, cannot continue indefinitely to live beyond their means. The need for balancing budgets was clearly realised, if not by the Governments concerned, at least by the Brussels Financial Conference of 1920, and a pious resolution of that body in this sense has caused the economic and finance section of the League of Nations to collect and publish a considerable amount of most interesting information on the public finance of the various countries.* From this some idea may be gained of what progress is being made in a return to financial sanity.

Important as it is to have these facts in a handy and easily obtainable form, it should not be forgotten that the figures themselves require to be used with considerable

* See especially "Memorandum on Public Finance, 1922," and "Brussels Financial Conference, 1920: The Recommendations and Their Application, Vol. IV." Geneva: League of Nations.

caution. Quite apart from the unwarrantable optimism which frequently characterises the activities of the politicians of some countries in matters financial, a very considerable difficulty arises from the fact that there is as great a variety in Budget returns as there is in national characteristics. Moreover, the mantle of war finance still hangs heavily over the exchequers of the world, while official personages in certain States have not as yet lost faith in sources of revenue termed "extraordinary."

In spite of all these difficulties, however, a summary of budgetary data, reduced as far as possible on to a common basis, gives a sufficiently true picture to enable us to draw conclusions as to the comparative state of different countries. In the following table will be found the figures of net revenue (exclusive of loans) and expenditure for certain countries which have been arranged for this purpose in order of financial merit:—

(In Millions.)

Country.	Year.	Currency.	Total Revenue.	Total Expenditure.	Percentage of Revenue to Expenditure.	Corresponding Percentage in Previous Year.
(Assuming no Reparation Payments.)						
United States	1923-4	\$	3,361.8	2,835.7	115	101
Great Britain	1923-4	£	818.5	776.6	105	115
Denmark	1923-4	Kroner	407.2	405.1	100	77
South Africa	1923-4	£	27.7	28.5	97	98
Finland	1923	F. Marks	2,466.2	2,633.6	94	86
Sweden	1923-4	Kronor	581.7	775.6	87	89
Italy	1923-4	Lira	14,565.6	18,181.6	80	80
Netherlands	1923	Florins	591.4	815.4	72	56
Greece	1923-4	Drachmai	3,622.6	6,560	55	33
Luxembourg	1923	Francs	74.1	139.8	53	57
Belgium	1923	Francs	4,302.1	8,337	52	47
France	1922	Francs	22,381	50,020	45	50
(Assuming Reparations Payments.)						
France	1922	Francs	22,381	26,936	83	..
"	1923	Francs	23,038	23,402	98	..
Belgium	1923	Francs	5,942	8,337	71	..
Italy	1923-4	Lira	15,565.6	18,181	86	..

In the case both of the United States and of Great Britain, the sums devoted to the obligatory amortisation of debt have been deducted from the total expenditure. The British sinking fund in the current estimates takes £40 millions, while \$345.1 millions is the budget estimate of the reduction in the principal of the Public Debt in the United States. The above table thus shows the real surplus of current revenue over current expenditure. The American estimates for this financial year show a fairly well-marked improvement, while Great Britain maintains her policy of a balanced budget (in the estimates at any rate) without attempting to repeat debt reduction on the scale actually achieved last year. The Danish estimates show a by no means inconsiderable advance—though it may be worth adding that they are only estimates—while South Africa remains in much the same position as last year. The improvement in the Finnish budget is a further token of the increasing stability of that country, while in considering the Swedish figures it should be remembered that the Government is devoting a considerable amount of attention to expenditure for capital purposes.

A detailed consideration of Budget statistics reveals, to the insular mind, at least, the immense superiority of budgeting for cash receipts during the year over the plan of budgeting for the amounts payable in respect of a given year and of presenting "closed accounts" some time after; more especially if the accounts are never actually closed. This latter factor makes it difficult to make any definite comparison between estimates and actual results in the case of France, for example, where no closed accounts are available for any year after 1914. If French expenditure on reparations account be excluded from the reckoning, it will be observed that that country has already very nearly approached an equilibrium between current revenue and current expenditure. For the present financial year the estimates for the ordinary Budget proposed by the Government in April last anticipated a deficit of 3,895 million francs, but after much debate they were finally passed in the form in which they are given in the above table. In the absence of payments made by Germany, the expenditure of over 13,313 million francs estimated in the Budget of recoverable expenditure is to be met as to 9,800 millions from loan receipts, the balance coming for the most part from sales of surplus war stocks in connection with the service for the liberated regions.

Apart from the cost of national defence, which will be dealt with in a later article, one of the most important single items in the budgetary position of most countries

is the cost of the debt service. In the following table the twelve countries are arranged according to the percentage which interest charges bear to total expenditure. The figures relate to interest charges during the current year (1923 or 1923-24) as compared with those of the preceding year. In the case of France, however, the comparison is between 1922 and 1921. Side by side with these will be found the percentual changes in other net expenditure and in net revenue (exclusive of reparations payments) on the same basis:—

Country.	Currency.	Total Interest Charges. Millions.	Percentage of Total Expenditure. %	Increase (+) or Decrease (−) in—		
				Interest Charges. %	Other Net Expenditure. %	Net Revenue. %
Great Britain	£	310	37.8	+ 2.5	— 4.5	— 10.4
United States	\$	950	33.5	— 13.6	— 17.1	— 0.2
France	Francs	14,929	30.6	+ 13.3	— 12.3	+ 16.0
Italy	Lira	5,507	30.2	+ 4.2	— 13.7	— 8.7
Greece	Drachmae	1,579	24.1	+ 33.8	+ 10.0	+ 12.8
South Africa	£	8	20.0	+ 11.1	+ 5.1	+ 6.1
Luxembourg	Francs	21	17.1	+ 14.1	+ 11.6	+ 66.6
Belgium	Francs	951	13.9	+ 2.9	— 2.7	+ 7.0
Denmark	Kronor	53	13.6	— 0.9	— 30.6	— 5.1
Sweden	Kronor	85	10.7	+ 11.1	— 19.9	— 17.4
Finland	F. Marks	201	10.4	+ 2.8	+ 6.8	+ 15.7
Netherlands	Florins	88	9.8	+ 22.8	— 23.7	— 8.1

The remarkable diminution in interest charges shown in the case of the United States is undoubtedly due in no small measure to the fact that the previous year's figures with which the comparison is made are estimates only, and do not allow for the fall in the rate of interest which actually took place during the year. In the case of Great Britain, on the other hand, the comparison is between the current estimates, which allow under the heading of "National Debt Services" for a margin, over and above the Sinking Fund of £40 millions, which is 2½ per cent. greater than the closed accounts of the gross charges for interest and management of the Public Debt last year. In almost all countries, this year's estimates allow for an increase in interest charges, which is due in many cases to an increase in the total indebtedness, though in countries with a depreciating currency the service of the external debt has naturally called for larger sums of the national currency.

It is gratifying to notice that other net expenditure has been diminished considerably, at any rate as far as the current estimates are concerned, though it will be interesting to see to what extent this tendency will be borne out in the closed accounts. Net revenue has increased most in Greece, where the budgetary position, nevertheless, remains chaotic, while in Great Britain and the ex-neutral countries the movement is in the other direction.

In some countries currency depreciation has proceeded so far as to make budget estimates absolutely worthless. For this reason it has not seemed worth while including such countries as Germany and Poland in the above tables. With regard to the countries in the list, the general impression seems to be that while the budgetary position of the strong currency countries is in the main rather better this year than last, the weak currency countries are on the whole in much the same position.

THE OLIVE OIL INDUSTRY.

OLIVE oil is one of the most valuable and important of vegetable oils, and its production is increasing in most of the olive countries of the world, with the possible exception of France, where it has to meet with increasing competition from the grape vine and perfume plants. The total world production is now approaching 1,000,000 tons. In 1920 the total was over 800,000 tons, as will be seen from the appended table, and that year was a good year. In 1921, which was an "off" year, the total was much less, being somewhat over 500,000 tons. The chief producing countries are as follows:—

	1920.	1921.	1922 (estimated).
	Tons.	Tons.	Tons.
Spain	325,000	250,000	304,000
Italy	210,000	110,000	264,000
Greece	50,000	20,000	76,000
Portugal	35,000	20,000	15,000
Tunis	70,000	50,000	24,000
Algeria	15,000	10,000	15,000
Morocco	12,000	6,000	(?) 3,000
France	10,000	20,000	10,000
Others	80,000	24,000	60,000

Chief among the other countries are California, Turkey, Syria, Cyprus, Crete, South Australia, and, more recently, South Africa. It will thus be seen that its cultivation is not entirely neglected in the British Empire, and in view of the growing demand for this valuable oil, when it is really of first-grade quality, there seems no reason why it should not be grown in other parts of the Empire where soil and climate are suitable. Much of the oil produced is consumed in the producing countries, and compared with the production the export trade is not perhaps very large. The United States, however, imports large quantities, for the Californian output is quite inadequate, and the quality of this oil is not of the very best, notwithstanding the best scientific methods employed in cultivation and oil manufacture. The imports of olive oil into the U.K. during the past three years, according to Board of Trade figures, were:—1920, 2,427 tons; 1921, 2,342 tons; 1922, 4,984 tons. During the first nine months of 1923 the imports amounted to 2,896 tons, as compared with 4,381 tons for a like period in 1922, and 1,840 tons in 1921.

As its original home is in the Mediterranean basin, it is evident that the olive prefers a sub-tropical climate not too far from the coast. It often does well on a comparatively poor soil, especially of a calcareous or limestone nature, and therefore not too moist. The ground between the rows of olive trees must be kept thoroughly clean and open, and the practice of growing annual crops in between is not to be recommended. It is easy enough to start a new plantation, for the olive grows readily from cuttings and also by layering. In some parts of Italy buds are cut out from the stems and planted, and good results are also obtained from seed. It is often taken for granted that the olive can only bear a good crop every other year, but with careful pruning it is only necessary to have an "off" year once in every five or six years. The old method of gathering the fruit by beating it off the trees with long poles was also often prejudicial to the next year's crop by damaging the young shoots. But this method is still often practised. Manuring is another important matter in olive cultivation. The best results are obtained by applying farmyard manure one year at the rate of about 100 lbs per tree, and artificial manure the next, this latter consisting of a mixture of 1½ lbs ammonium sulphate, 2 lbs superphosphate, and 1 lb potash per tree. The occasional application of lime is very beneficial, especially in the form of ground limestone. The olive has numerous enemies in the way of insect pests, especially the olive fly, which often does great damage, and is difficult to deal with effectively. For this reason alone it is important that the oil mills in the neighbourhood of the orchards should be kept thoroughly clean and disinfected.

The methods used in the manufacture of olive oil vary from the most primitive of Western Asia to the most up-to-date and scientific of Spain and France. In Spain the industry is well organised. There are over 300 oil mills, many of them large and well equipped with the latest machinery, and practically all of them are combined into a federation. One large mill will collect the fruit from all the country around, and strict regulations as to the quality of fruit supplied are imposed. It has generally been the practice, after the preliminary crushing or pulping of the olives, to press them two or three times in powerful hydraulic presses, the pressure being gradually increased and the mass beaten up with hot water before the final pressing. More recently, however, one pressing only is used, the pressure being fairly slight to begin with and gradually increased up to over 120 tons, and the use of hot water is not desirable, since it encourages the fat-splitting action of the olive enzyme, olease, thus increasing the fatty acid content of the resulting oil. Sometimes the kernels are removed from the olives and crushed separately to yield olive kernel oil, but there does not appear to be any particular advantage in this. After the pressing there is still an appreciable percentage of oil left in the residue or cake (French grignons), and this is nearly all removed by the ordinary extraction process with solvents. The solvent most commonly used is carbon disulphide, and the oil thus obtained is the well-known "sulphur olive oil." Attempts are being made, however, in France to use another solvent, ethylene trichloride, for which several advantages are claimed, among which is non-inflammability. Another recent development is the use of centrifuges for

separating the oil from the dark-coloured liquor or "water of vegetation" (French margines), instead of by settling and decantation.

The very best olive oil is obtained from carefully hand-picked fruit, which may sometimes be peeled before being slightly pressed. Since the fruit on the trees does not, of course, all ripen to the right stage at once, it is necessary to store some of it for a time in shallow layers in well-ventilated rooms, and the fruit is best dealt with in the mills just before it is perfectly ripe. These best edible oils are used for cooking, but the lower-grade oils—including the sulphur olive oils—are employed in soap-making and for other industrial purposes. Olive oil is probably more subjected to adulteration than any other oil, and methods for the detection of adulterants constitute an important branch of olive oil technology.

ARGENTINE RAILWAYS.

VISCOUNT ST. DAVIDS, presiding recently at the annual general meeting of one of the four great Argentine railways, summed up the position in the Argentine very succinctly. He said that "when he was in that country a year ago the tone was most optimistic; on visiting the Argentine a couple of months ago, however, the tone was quite the reverse; people were talking of bad times and of a crisis. He thought that change of tone was to be attributed to the fact that the cattle industry was doing badly, but for his part he did not treat that as a very serious state of affairs, because he had always thought that too much of the good land there, which ought to have been devoted to agriculture, was being given up to cattle, and when cattle were doing badly it was likely that agriculture would increase. As a matter of fact, they were seeing something of that to-day."

The four great Argentine railway companies presented very satisfactory reports to their proprietors for the year ended June 30, 1923. The previous year was described as colourless, but this, perhaps, was only when considered in contrast with the boom year 1919-20. The year 1920-21 is generally thought to have been the poorest on record; certainly, as far as the following table reveals the progress of the companies, it was the most disappointing for stockholders. The dividend record of recent years reads as follows:—

Company.	1913-14.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
	%	%	%	%	%	%	%
B.A. and Pacific, ord. ...	nil	nil	2	5	nil	nil	7
Do 5% 2nd non-cum. pref.	5	5	5	5	nil	5	5
B.A. Great Southern	5	2	3	7	4	4	7
B.A. Western	5	2	4	7	4	4	7
Central Argentine, ord.	5	2	2	6	4	4	6
Do deferred	5	nil	nil	6	nil	nil	6

As will be observed, the ordinary stock of the Buenos Ayres and Pacific Railway received a total distribution of 7 per cent., as against nil for each of the two preceding years. The Buenos Ayres Great Southern and Buenos Ayres Western both increase their distribution from 4 to 7 per cent., while the Central Argentine Railway contents itself with an increase of from 4 to 6. In the next table the results for 1922-23 are set out:—

	Pacific.	Southern.	Western.	Central.
	£	£	£	£
Gross receipts	8,672,234	9,586,880	4,643,182	10,655,819
Working expenses	5,485,808	5,942,967	3,072,917	7,210,763
[Ditto for 1921-22] ..	(5,318,508)	(6,259,563)	(3,226,063)	(7,389,951)

Net income	2,968,578	3,394,445	1,850,666	3,195,436
Fixed charges	1,923,454	816,164	494,776	853,127
Balance	1,045,124	2,578,281	1,355,890	2,342,309
Preference dividends ...	110,000	400,000	129,855	436,306
Ordinary dividends ...	700,000	2,036,300	1,214,336	1,739,926
Reserves	7 %	(7 %)	(7 %)	(6% ord & df)
Inc. (+) or dec. (−) in carry-forward	+ 135,124	+ 141,981	+ 11,699	+ 166,077

A year ago we had to record a net income of £2,034,042 for the Pacific, £2,328,276 for the Southern, £1,029,142 for the Western, and £2,126,604 for the Central. Only one undertaking shows a reserve allocation, but this is much better than previous results, when the Western took £120,000 from reserve, while the Central obtained £150,000 from the same quarter. The increased amounts carried forward are very creditable, especially in the case of the Central; for 1921-22 this undertaking, in addition to tapping reserves, reduced its carry-forward by over £160,000. The Southern is the only company to show reduced fixed charges. The Central, in April last, offered £2,000,000 5 per cent. ten-year bearer notes to existing share and debenture stockholders at 96 per cent. The notes carried some valuable conversion rights, and were well received. This new issue means that next year the Central's fixed charges will have increased.

The next table distinguishes the receipts from passenger train traffic and goods traffic, giving a comparison with the figures for 1921-22 :-

	Passenger Train Traffic.			Goods, Merchandise, and Live Stock.			Total (Including Miscellaneous).		
	1922-23.	Inc. or Dec.	%	1922-23.	Inc. or Dec.	%	1922-23.	Inc. or Dec.	%
B.A. Pacific.	1,945,038	+ 244,897	14.4	6,375,150	+ 889,911	16.2	8,320,234	+ 1,134,808	13.8
B.A. Gt. Southern.	3,506,335	+ 332,698	10.5	5,419,930	+ 731,787	15.6	8,926,265	+ 1,064,485	13.8
B.A. Western.	1,299,896	+ 114,640	9.7	3,181,967	+ 432,539	15.7	4,481,863	+ 547,179	13.3
Central.	3,174,078	+ 357,640	12.7	7,056,846	+ 855,181	13.7	10,230,924	+ 1,212,827	12.8

This is an interesting table, showing the general all-round improvement in traffic receipts. Receipts from passenger traffic, states the Pacific, show an increase of 13.87 per cent. and from goods and livestock 15.86 per cent. The Great Southern state that these receipts are the highest recorded in the history of the company. The Western points out that the comparison has been affected by the increase in the long-distance passenger, parcels, and goods tariffs, which came into force from August, 1922. The changes in total receipts are compared in the table below with those of recent years :-

PERCENTAGE CHANGES IN TOTAL GROSS RECEIPTS.

	1913-14.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
B.A. Pacific.	-12.7	-5.0	+19.2	+19.0	+30.8	-16.4	+8.9	+16.1
B.A. Gt. Southern.	-16.8	+3.3	+1.8	+25.6	+30.1	-8.4	-3.6	+13.9
B.A. Western.	-13.0	-7.7	+14.8	+30.3	+41.0	-21.1	-1.1	+13.3
Central Arg.	-6.6	-8.5	+17.8	+12.0	+41.1	-0.2	-3.1	+12.8

This is a very useful illustration of the progress made in this direction. The Pacific, with a gain of 16.1 per cent., remarks in its report that "our principal revenue-earning traffics have done well, viz., wine, grain, and passengers. The last-mentioned shows a record in number and in receipts. Wine is very little under the previous record year, while grain in all classes shows up well. There has been nothing so good in grain transport during the last five years, with the exception of the record wheat year 1919-20, when almost two harvests were carried in one year." The report adds that "the movement of livestock was better than last year and the year before, but this has been due rather to the removal of cattle from camp to camp by speculative purchasers."

RATIO OF EXPENSES TO RECEIPTS.

	1913-14.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
B.A. and Pacific.	62.63	65.68	65.80	71.51	69.69	85.68	71.24	63.26
B.A. Gt. Southern.	58.56	64.06	76.16	77.96	69.19	84.33	74.34	61.99
B.A. Western.	58.82	66.88	75.68	75.08	69.48	90.88	78.72	66.18
Central Arg.	58.54	68.71	73.93	84.60	67.66	79.82	78.26	67.66

All four lines show large reductions in ratio of expenses to receipts. The Buenos Ayres Great Southern was able to reduce its ratio of expenses to receipts to 61.99 per cent. The company points out that working expenses continued on the downward curve of the previous year, while not on such an acute grade, owing to the difference in fuel costs being less marked.

The next table shows the divisions of expenditure in which the reductions have been effected :-

(00's omitted.)

	Running Expenses.		Maintenance.		General and Miscellaneous.	
	1921-22.	% of Revenue.	1922-23.	% of Revenue.	1921-22.	% of Revenue.
	£		£		£	
Pacific	3,779.5	43.9	3,005.4	34.6	1,841.7	21.2
Great Southern	5,598.6	42.7	3,163.5	33.0	1,954.9	23.2
Western	1,843.9	45.0	1,546.0	33.3	1,029.5	25.1
Central	4,668.8	49.4	3,946.8	37.0	1,941.6	20.7
					1,472.3	17.1
					2,476.5	28.7
					779.6	9.2
					818.5	9.7
					384.5	4.5
					787.4	9.2

As mentioned in the case of the Great Southern, fuel costs were lower, but there was not the marked fall as recorded in previous years. The Western states that it has saved in the year under review 4,708 tons of coal and 66,907 tons of firewood. This saving in coal and firewood is due to (a) the extended use of oil fuel, (b) to the running of suburban trains by electric traction. The change over from coal and wood fuel to petroleum is also a feature of other companies.

Vagaries in maintenance expenditure per mile of road are revealed in the following table :-

	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
Pacific	248	295	451	414	429	555
Southern	254	367	464	507	500	498
Western	312	422	411	600	546	605
Central	376	426	525	606	588	749

Figures for the Central are not representative on account of certain financial adjustments. The Western has undertaken track ballasting on a somewhat extensive scale.

Our final table shows the aggregate gross and net receipts for the first 16 weeks of the year 1923-24 :-

	Present Mileage.	Gross Receipts.		Net Receipts.	
		Amount.	Inc. or Dec.	Amount.	Inc. or Dec.
B.A. Pacific	3,317	2,112,000	+ 43,000	705,000	+ 161,000
B.A. Gt. Southern	3,948	2,539,000	+ 198,000	705,000	+ 161,000
B.A. Western	1,882	1,196,000	- 17,000	286,000	- 23,000
Central Argentine	3,305	3,246,000	+ 258,000	..	..

The Buenos Ayres Great Southern and Buenos Ayres Western have furnished particulars of their net receipts week by week for a long time past, and we trust this excellent practice will soon be followed by the Buenos Ayres-Pacific and Central Argentine Railways, as investors have to await the appearance of the annual report of these two companies for any particulars as to net receipts.

The companies appear to be very hopeful about future prospects. The directors of the Pacific state "that, given an average harvest, and if they were able to remit their money at any average rate of round about 40d..... next year they would be able to recommend as good a dividend as was being recommended.".....The chairman of the Western thought that "they could look to the coming harvest and results of working with considerable confidence." The chairman of the Southern pointed out that "the area under cultivation was greater than that of the previous year, and steady traffic returns were expected to continue." And the chairman of the Central concluded a survey with "generally prospects for the current year seemed excellent."

DIARY OF THE IMPERIAL CONFERENCE.

FRIDAY, OCTOBER 26TH.—The Imperial Economic Conference discussed the subject of Empire currency and exchange, and set up a Committee to go into the matter in detail (see article on p. 781).

A subsequent discussion was concerned with the importation of Canadian livestock. Sir Robert Sanders (Minister of Agriculture) declared that the Government, in the interests of the British cattle-breeder, could not recommend legislation extending free admission to home markets of Canadian fat cattle as well as store cattle. He implied, however, that the Government would be willing to introduce measures to facilitate the exchange of pedigree stock throughout the Empire on reciprocal terms. Mr. Mackenzie King (Prime Minister of Canada)

and Mr. Graham (Canadian Minister of Railways) put forward the Canadian view that the free importation of Canadian fat cattle came within the spirit of the agreement originally concluded between the two countries, and that present methods of inspection were regarded as unnecessarily severe. All the representatives present were assured that the Home Government fully recognised the healthy condition of cattle sent to this country from the Dominions.

MONDAY, OCTOBER 29TH.—The Secretary of State for Foreign Affairs informed the Imperial Conference of the replies received from Allied Governments with regard to the proposed inquiry into German reparations. The adjourned discussion on the position of Indians within the Empire was resumed, a statement being made by the Secretary for the Colonies. It was decided to continue the discussion at the next meeting.

TUESDAY, OCTOBER 30TH.—No formal sitting took place, the day being devoted to committee work.

WEDNESDAY, OCTOBER 31ST.—Under the presidency of the Prime Minister, the Imperial Conference concluded its investigations into the problem of the status of Indians in other parts of the Empire. Each of the Dominion Prime Ministers (with the exception of the Prime Minister of South Africa) expressed his willingness to set up in his own country a commission of three or four members, with an equal number of members from India. The commissions will consider how far effect has been, or may be, given to the principle laid down by a majority at the 1921 Imperial Conference that Indians lawfully resident overseas should not suffer derogation of rights of citizenship. The Secretary of State for the Colonies declared a similar intention with regard to the Crown Colonies and Protectorates.

THURSDAY, NOVEMBER 1ST.—The Imperial Economic Conference adopted resolutions to the following effect :-

State Enterprises and Taxation.—Any Empire Government shall be liable to taxation by other Empire authorities in so far as it engages in trade and makes profits within their jurisdiction. Legislation to this effect will be introduced in the several Parliaments, without retrospective effect for any year prior to 1924. After the passing of these measures, negotiations will be opened with foreign Governments for similar reciprocal arrangements.

Immunity of State-owned Ships.—The Gothenburg draft convention of August last, as amended by the British Admiralty and Board of Trade, is adopted as the basis of a possible international convention.

Commercial Facilities.—The early consideration is recommended of the adoption throughout the Empire of the common form of invoice and certificate for exporters, already in use in some Dominions. Further legislation on the lines of the Imperial Customs Conference's decisions, to which effect has already been given by Australia and New Zealand, is also recommended.

Trade Statistics.—The Board of Trade is to consider a scheme for rendering its statistical publications as useful as possible in the development of inter-Imperial trade.

Bills of Lading.—The Brussels Resolutions, now embodied in the Carriage of Goods by Sea Bill, are recommended for acceptance by the Governments and Parliaments of the Empire.

Enforcement of Judgments.—While at present certain obstacles stand in the way of the reciprocal enforcement of judgments, including arbitration awards, throughout the Empire, such a development would be advantageous to trade, and is an object at which the different parts of the Empire should aim.

Patents.—The Provisional Scheme of the Empire Patents Conference, 1922, should be adopted as far as the Crown Colonies and Protectorates are concerned, but its application by the self-governing Dominions is not advisable at present, in view of difficulties in the Canadian position.

Notes of the Week.

The Republic in Turkey.—The proclamation of a republic in Turkey does not come as a surprise, and does not mark any turning-point either in the internal development of the country, or in its relations to the rest of the Islamic world. It is not even a novelty in Islamic history, for the governments founded in North-West Africa by Ottoman military adventurers in the sixteenth century were virtually autonomous republics under the Ottoman Sultan's suzerainty; the mediæval power of the Mamluks in Egypt was a military oligarchy, in which the elective sultan was only *primus inter pares*; and city-state republics, reminiscent of Ancient Greece, appear on one page in the history of Islamic Spain. In the present instance the really deci-

sive steps were taken in 1920, when the Nationalists in adversity defied the authority of the late Sultan-Caliph, and last year, when the Nationalists, after their triumph, deposed the former sovereign, confined his successor in the Caliphate to "spiritual"—i.e., non-political—functions, and wound up the old Ottoman Empire in favour of a new Turkish national State. These were the really important events, for the power of the Osmanli Turks had been built up by the dynasty whose name it bore, while its prestige in the Islamic world had appeared to depend on the dynasty's hereditary claim to the Caliphate. At that moment, therefore, the question arose whether the Turkish nation could maintain itself without the dynasty's support, and that question has already been answered. The National movement has proved strong enough to obtain a favourable peace from the principal Allied Powers, and to succeed, in the estimation of other Muslims, to the position of the Ottoman Sultans as the bulwark of Islamic society. In comparison with these issues, the constitutional forms adopted by the already secularised Turkish State are matters of secondary importance. The various States created or transformed by revolutionary methods in different parts of the world in the course of the past century and a-half, have either (like Italy and Germany) taken over a dynasty from one of their component parts; or (like Belgium and the Christian Balkan States) they have borrowed a dynasty from abroad; or else (like most American countries, as well as Poland, the Baltic States and Tchecko-Slovakia) they have established republics. The two former alternatives have much to recommend them on grounds of stability, but Turkish nationalism was no more compatible with the continuance of the Ottoman dynasty than English and French with that of the Stuarts and Bourbons; nor could Turkey, for religious reasons, borrow a dynasty from the West, while there is no Sunni Muslim monarchical Power of equal status with herself which could have supplied her with a cadet for a new constitutional Turkish monarchy. A republic was the only alternative available, and Turkey seems destined (like most young republics and young monarchies) to pass through her period of dictatorship. Mustafa Kemal Pasha, who is to combine the offices of President of the State and President of the Assembly, to appoint the Prime Minister, and to exercise a veto upon the selection of his ministerial colleagues, now enters upon the rôle of Capo d'Istria, in Modern Greece, and Stambolov in Modern Bulgaria.

Bradford and Protection.—In view of Bradford's plea for protection against foreign competition, special interest attaches to a study of the woollen and worsted industries, published in the current issue of the *Monthly Bulletin of the London and Cambridge Economic Service*. The main conclusion to be derived from those figures is that competition of foreign imports is not Bradford's fundamental trouble, the essential cause of which must be looked for nearer home. In the first nine months of the present year retained imports of woollen and worsted tissues were 15.1 million square yards, or at the rate of about 20 millions per annum, as compared with approximately 76 million square yards in 1913. Since the quarterly average in 1913 was about 19 million square yards, it is surely amazing that a small rise to 6.3 millions in the third quarter of the present year should have been sufficient to stampede Bradford into a cry for protection. Roubaix was held up as the particular menace. The fact is that, whereas the total exports of woollen tissues from France to this country in 1913 were about 61 million square yards, they amounted in the first nine months of 1923 to only 11.8 millions. In the third quarter they spurted to 5 millions, but even this is less than one-third of the quarterly average of similar imports from France in 1913. On the other hand, British exports of woollen and worsted tissues in the third quarter of the present year were above the 1913 quarterly average. In spite of a falling off in the June quarter, the exports for the nine months were 159 million square yards, or at the rate of 212 millions per annum, as compared with about 220 million square yards in 1913. Thus the net export (exports less retained imports) of cloth was about as large in the past nine months as in the whole of 1913. For the

explanation of manufacturers' difficulties, it is therefore desirable to examine the conditions in the home market. Here is the conclusion of the authority referred to above: "The difficulties that manufacturers find in obtaining orders appear, on the basis of these figures, to be due not to foreign competition so much as to the high costs of manufacturing, and the curtailment of purchasing power on the part of the home population. With raw wool at 48 per cent. above the 1914 price, it seems unreasonable that the cost of clothing should lead to the official estimate of a rise of 120 per cent.; and since wages in general have only increased 70 per cent., or a little more, it is not surprising that wage-earners cannot afford to buy woollen goods." The woollen and worsted industry would be better employed in studying ways and means for reducing the cost of production than in calling for a protective tariff, which, by holding prices up, would still further restrict the demand in the home market.

Irish Affairs.—Our Dublin correspondent writes:—The week-end saw a somewhat confused situation in regard to labour disputes in Dublin. The officials of the unions declared the strike terminated, and directed the men to return to work. The Larkinites, relying upon a small majority of votes at an unofficial ballot, which was boycotted by the large proportion of the union men involved, declared that the strike must continue, and sent round pickets calling out those who had resumed work. The officials replied with a declaration that no more strike pay would be issued, and this proved to be a determining factor, especially as it was quite clear that the bulk of the men wished to resume on the basis of the Government offer. Thereupon Larkin wrote to President Cosgrave proposing a conference, and a settlement on the basis of an immediate resumption all round on conditions that all the interned and imprisoned republicans, irregulars, and suspects should be forthwith released. President Cosgrave's reply will not have done much to enhance Larkin's prestige or influence with his following. His inevitable refusal was phrased in telling terms, and pointed out that the continued strike cannot have been honestly aimed at improved terms for the men when at or after the eleventh hour Larkin was prepared to abandon the men's case for a wholly extraneous and political consideration. Contemporaneous with the attempted great strike has been an attempted general hunger strike by all the prisoners and internees. It also has miscarried. Large numbers of the hunger-strikers have resumed their meals, and the Government has announced that it will concede nothing to this method of agitation and protest. It continues, however, its policy of systematic sifting, with a view to release, of the prisoners' cases, and expects to have a considerable diminution of the total number by Christmas. There is still no definite news as to the projected loan, but it is not likely long to be deferred. Unquestionably an issue of premium bonds would be the most popular form of loan, and would offer the best chance of widely diffused support throughout the country. However, it is known that some members of the Government have doubts—or possibly scruples. There is some resentment here at the continued attacks, systematic and bitter, upon the credit of the Irish Free State, which appear in certain British journals. They do not, however, cause much uneasiness. A country with an annual revenue which is actually being collected at the rate of some 30 millions per annum, while a dangerous insurrection was still in operation and a big dock strike tying up the flow of commerce, has good security to offer. The figures representing the public deposits in the joint stock banks, and the investments of the banks themselves, as shown in the Banking Supplement of the *Economist* recently, speak for the monetary resources of the public. And the Irish Free State has no debt, and enjoys a strong Government which can be trusted scrupulously to honour its obligations.

Production, Population, and Income.—The current number of the *Westminster Bank Review* contains a very interesting *résumé* of the statistics of production, employment and foreign trade of Great

Britain for 1922 leading up to a very rough estimate of the national income in that year. The writer laments the absence of official data, and puts in a plea, which we very strongly endorse, that the Board of Trade should take steps to get figures needed for a sound estimate of the national income under post-war conditions. In the absence of any alternative method, the writer takes the figure of the increase in the volume of our exports and imports, and calculates therefrom an upper and a lower limit, starting from the fact that in 1907, the year of the census of production, net imports of merchandise amounted to 40 per cent. of the "factory value" of the output of the country taken as a whole and free from duplication, while exports were 31 per cent. of that value. Seeing that imports have been maintained much better than exports, a calculation of present "factory value" from our present foreign trade by using these factors gives a higher figure on the import basis than on the export basis. Splitting the difference, the writer concludes that our net production in 1920 was equivalent to £1,300,000,000 in 1913 purchasing power (£2,300,000,000 at 1922 prices), as compared with a net production of £1,680,000,000 in 1913—a fall of 22 per cent. In our opinion, however, this is considerably too low a figure, for we have little doubt that a detailed investigation would show that home trade has been better maintained than overseas trade. It almost certainly varies less from year to year than our exports in good and bad times, and under post-war conditions our exports were particularly badly hit in 1922. Our conclusion is confirmed by the statistics of goods carried on British railways which in 1922 were considerably less than 22 per cent. below the carriage of goods in 1913. In the case of "general merchandise" the decline, it is true, is about 22 per cent. in comparison with 1913, but allowance has to be made for the very much larger quantity carried by road transport in 1922 than in 1913. Again, the home consumption of coal, which was 14.8 million tons a month in 1912 and 16.1 million in 1913, was 14.1 million in 1922—a fall of only 13½ per cent. from the exceptionally high peak of 1913. The writer supports his opinion by figures which suggest to him that in 1922 there were 500,000 less people in employment than in 1914. "With probably over one and a-half millions unemployed or on short time to-day, it is reasonable to assume that the number of wage earners now at work is roughly 500,000 below the 1914 average, although the number available for work is about one million more." This, however, ignores the substantial number who were unemployed in 1914, and we are, moreover, convinced that in the statistics of persons unemployed under the Insurance Act there are a number of persons who never figured in any statistics before the war. We should not be far wrong in assuming at least 350,000 persons unemployed in an average year before the war. The industrial population in 1922 was more than a million more than in 1913, and we therefore believe it will be found that there were as many people at work at the end of 1922 as in 1913, and by the summer of 1923 the number was appreciably greater. The writer reaches the conclusion that as the national income in 1907 was approximately 30 per cent. more than the net factory production it may be assumed that the national income of 1922 at 1922 prices is nearly £3,500,000,000. But for the reasons we have given we think this calculation is too low; moreover, the national income is appreciably bigger to-day than in 1922, and is almost certainly at a rate equivalent to £4,000,000,000 in a year, and may be larger. It should be borne in mind that these figures leave out of account income received by British nationals as interest on their holdings of British Government securities, which does not represent any contribution to the present income of the country, but is a transfer of income created by the productive forces of the country; but for taxation purposes such incomes may be taxed like other incomes, and in estimating the national income for taxation purposes we should therefore have to add £300,000,000 to the figures quoted. We should be surprised to learn that the gross national income is less than £4,300,000,000 for 1923.

Homage to M. Yves-Guyot.—On October 25th a large and distinguished gathering met at the Paris residence of M. Raphaël-Georges Lévy to fête the 80th birthday of M. Yves-Guyot. On this occasion the veteran French economist, whose position as President of the "Société d'Economie Politique," and as director of the "Agence Economique et Financière"—to mention only two of his multitudinous activities—is a fitting tribute to his lifelong devotion to economic science, was presented by his many friends with a bronze "Pegasus," as a small token of their admiration for his unbounded vitality. We for our part desire to associate ourselves with this *geste* of homage and respect to one who, in a world torn by nationalism and cupidity, has had the courage to stand for economic sanity. His attacks on the inflationist heresy have not always been popular in his native country, while his consistent advocacy of freedom of trade makes him a notable figure among French economists of the present day. His views on this latter subject are well set out in the reply made by him on the occasion of this presentation:—"Alas! the war has not dissipated the economic and political errors which result from the spirit of monopoly and commercial jealousy. While science and industry affirm the predominance of a civilisation based on exchange, the majority of nations and most of the governing classes to-day still hold to the old political conceptions of a war-time civilisation." Never was advocacy of this standpoint more needed than to-day, and we sincerely trust that France will at last listen to the voice of one of its few great living economists before it is too late.

The Defence of the Dutch East Indies.—The costly and untimely scheme described by our Amsterdam correspondent on September 22nd in our columns was rejected by the Dutch Parliament on Friday of last week. The fate of the Dutch East Indies in a conflict for supremacy of the Pacific has engaged public attention in Holland for years. Elaborate books have been written on the subject, and in 1913 a Commission recommended a large increase of the fleet, the mother country and the East Indian colonies sharing the cost. The plan was strongly opposed, and was suspended by the world-war; but in 1921 the Colonial Government began to set aside funds to pay for it, and recently the Dutch Ministry—based on a coalition of Conservative groups of Roman Catholics and Protestants—all strengthened by last year's elections—introduced a Bill providing for the construction of a fleet and the establishment of a naval base at Tanjong Priok, near Batavia, together with the strengthening of that existing at Surabaya. The total cost was to be 300 million guilders—some £25,000,000. But deficits both in the Home and the Colonial Budgets have long been chronic; it was officially estimated last year that 35 per cent. of the national income was absorbed by national and local taxation; the commercial depression is severe, the well-to-do classes have lost very heavily by the repudiation of Russian bonds, and both the Home and the Colonial Governments are constrained to borrow abroad. The Ministry contemplated retrenchment to the extent of 105 million guilders, partly by reducing all official salaries by 20 per cent., yet it pressed the Bill. The Socialists and trade unions opposed it vigorously, inside Parliament and outside; the Finance Minister resigned; and a petition was presented against it bearing more than 1,132,000 signatures—the total population being some seven millions. Ten Roman Catholic members deserted the Government, and one Protestant Conservative was ill, so the Bill was defeated by 50 to 49, and the Ministry has resigned. No Opposition Ministry is possible, for the Liberals are hopelessly at variance with the Socialists and among themselves; but the Bill is dead. It is noteworthy that the Prime Minister denied that it was introduced at the instance of a foreign Power—a rumour probably set up by the fact that the largest amount of the foreign capital invested in the Dutch East Indies is British, and by the British plan for Singapore. But it is not easy to see the need of the Bill. It was intended to protect the neutrality of the Dutch East Indies in a naval war in the Far East. But Russia and Germany have collapsed; the United States and Great Britain have no further colonial ambitions; and, whatever dreams may be cherished by

Japanese expansionists, they are not likely under present circumstances to attempt to realise them. Besides, though the Netherlands took no part in the Washington Conference, all the Powers concerned in it have expressly declared their intention to respect the rights of the kingdom to its possessions in the Far East. Under these circumstances the scheme can wait.

Securities and 5 per Cent.—A Stock Exchange correspondent writes:—Security and 5 per cent. may be regarded as the chief aim and object of the present-day investor, to whom preference shares and preferred stocks imply just that element of risk which he is not prepared to face. Nigeria endeavoured to set up a higher standard of price—and a correspondingly lower yield—in offering, last week, a 4 per cent. stock at 88. The underwriters of that loan are best acquainted with the sequel, and the price stands at 1¾ discount. Victoria and the Commonwealth tried 5 per cents. at 99; Union of South Africa asked 99½, and all three issues stand at a premium. The Tube Railway 4½ per cent. second debenture, at 95½, became promptly over-subscribed, but this carries the cachet of Government guarantee, and compares, therefore, with conversion stock and local loans, both of which yield £4 8s 9d per cent. on the money. War Fives pay £4 19s at 101, or £4 16s if it be calculated, as the Stock Exchange practice is, that repayment at 100 will be effected at the earlier of its two dates, 1929-47. Funding and Victory loans, with their yield of £4 7s per cent. on the money, are relatively the dearest of this quintet of British Government securities. These figures demonstrate the reason for the rapid way in which the London Electric railways secured their money. Amongst colonial stocks, the two mentioned above, Victoria and Commonwealth Fives, are popular at present for the simple reason that they can still be bought, not having yet passed entirely into permanent hands, as so many of the previously issued securities have done. Trustees are rightly chary of buying stocks which stand above 100, although some people argue that accrued interest may be allowed for in this connection. The trustee cannot avail himself, however, of the £9,000 Commonwealth Sixes, 1931-41, on offer at the moment at 105, interest March and September, where the yield is 5½ per cent., reduced to £5 9s per cent. upon allowance for redemption. There is also £10,000 Union of South Africa 6 per cent. stock, 1930-40, obtainable at the same price, 105xd, May and November dividends, giving £5 14s 6d per cent. on the money now, but £5 3s per cent. taking repayment into account. The trustee can have £10,000 West Australian 4½ per cents, January and July, dated 1935-65, at 93, when the return comes to £4 18s 6d per cent., or an equal amount of New South Wales 4½ per cent. stock, with the

same dividend dates, and repayable 1935-45, at 93½, the yield being £4 17s now, and £5 1s allowing for redemption. Of Canada stock there is little on offer in the market. Cape Threes, New Zealand, Southern Nigeria, and Crown Colony issues are equally scarce. Four thousand pounds of Ceylon Sixes, 1936-51, January and July interest, can be bought at 109½, the price making the stock ineligible for trustees, and the flat yield of £5 11s per cent. being reduced to £5 2s 9d per cent. by allowance for repayment. The new Nigeria Fours at 86½—1½ discount—afford £4 13s. per cent. outright, and the price will probably go better, because the Loan runs to 1963. Of other stocks in this category actually on offer in the market at the moment of writing (a necessary qualification) there are handfuls of Natal 3½, New Zealand, South Australia, South Africa, Cape, and New South Wales 4 and Straits 4½ per cents. The running yields range from about 4½ per cent. on the money to 4½ per cent., and, allowing for redemption, about 4½ per cent. is obtainable. But the investment appetite is so keen that the demand keeps up with supply, and in spite of all the recent new issues in this market, the cry for security and 5 per cent. becomes, weekly, more difficult to placate.

The World's Food Crops.—On the basis of information now available it is possible to ascertain, within reasonable limits, the results of this year's cereal harvests in most countries north of the Equator, with the important exception of Russia. The comparison with last year's yield is eminently favourable. According to the International Institute of Agriculture, the aggregates for the Northern Hemisphere (exclusive of Russia) in 1923 surpass those of 1922 by 10 per cent. in the case of wheat, 15 per cent. in that of rye, 14 per cent. as regards barley, and 15 per cent. as regards oats. Detailed figures will be found on Page 8 of the *Economist's* Monthly Supplement of October 27, 1923. The increases are mainly the result of plentiful yields in Europe and North Africa, where a favourable season was experienced, in sharp contrast with the drawbacks suffered last year. In North America and Asiatic countries the totals are very similar to last year's, which showed good results. A provisional estimate puts Argentina's probable wheat yield at 6.8 million tons, the highest figure on record, and 31 per cent. above that for 1922. In Australia the area under wheat is similar to last year's, and favourable conditions prevail. European and North African cereal crops for 1923 are nearly equal to those of the pre-war years 1909-1913, though the absence of reliable Russian figures vitiates a true comparison. Extensions in other continents, particularly in America, have resulted, however, in an increase over pre-war production in the case of all countries which supplied information, in the following proportions:—Wheat, 16 per cent.; oats, 7 per cent.; barley, 3 per cent. Rye has declined by 5 per cent. The yield of potatoes, on the other hand, has fallen from 80 million tons last year to 65 millions in 1923, a decrease of 18 per cent. Russian figures are omitted from these calculations. It should be remembered that 1922 was a year of exceptional plenty for potato-growers, the yield being far above the average.

Cotton Trade Production and Export.—Before the war it was estimated that 80 per cent. of the cotton cloth production of Lancashire was exported, and 20 per cent. consumed at home. The present home consumption is very much the same as it was 10 years ago, but production is not more than 65 per cent. of the capacity of the machinery. Of this reduced output, it is estimated that 70 per cent. is for export, and 30 per cent. for home use. The home consumption of cotton yarns before the war was about 85 per cent. of production. The reduction in output is much the same as in the case of cloth, but it is estimated that the proportion consumed at home is much the same as it was before the war.

Dyers' Contract Terms.—Our Manchester correspondent writes:—The dispute between Manchester merchants and dyers has not yet been settled, and a considerable amount of business is being held up in the Manchester market as

a result of merchants not being prepared to agree to the new contract terms of the dyers. It will be remembered that the Piece Dyers' Association about a month ago offered a reduction in charges of 10 per cent. conditional on merchants agreeing to place all their orders with members of the association. The scheme has been definitely rejected by merchants. Private conversations have taken place in Manchester this week between representatives of the two bodies in the hope that a friendly talk might result in some way out of the difficulty. It is understood, however, that no progress has been made, and a complete deadlock exists. The Shipping Merchants Committee of the Manchester Chamber of Commerce has compiled a list of nearly 40 firms that are outside the Piece Dyers' Association. These names have been sent to merchants, and as much business as possible is being given to them. It is also reported that about half a dozen members of the Piece Dyers' Association have notified the committee that they do not agree with the new contract terms, and that if necessary they are prepared to withdraw from the association. On behalf of Manchester merchants, it is stated that an important principle is at stake, and there is determined resistance to the attempt of the dyers to create a monopoly for the members of the association.

Bank of London and South America.—Further details of the proposed fusion of the London and Brazilian Bank with the London and River Plate Bank are given in the circular to shareholders of the former, calling the necessary extraordinary general meeting to be held on the 13th inst. The proposed terms were given in our last issue, and the result of the transaction will be that the issued capital of the London and River Plate Bank will be £3,540,000 in fully paid shares of £5 each, of which the present shareholders in the London and River Plate Bank will hold £2,040,000 and the present shareholders in the London and Brazilian Bank £1,500,000. In order to carry out the transaction, the London and Brazilian Bank will have to go into liquidation. It is proposed that the name of the bank be changed to "Bank of London and South America, Limited."

Dalgety and Co.—The accounts for the year ended June 30th last of Dalgety and Co., the well-known Australasian merchants, show a substantial improvement in profits, which, after providing for bad and doubtful debts and depreciation, amounted to £920,977, as compared with £775,660 for 1921-22. A year ago, however, profits were assisted by the recovery of £158,210 for excess profits duty. Including this amount, the net profit for 1921-22 was £252,790. This year the net profit amounts to £254,162, expenses having increased from £362,475 to £380,190, while taxation has required £31,600 less. A summary of past years' results is set out below:—

Year Ended June 30.	Profits.	Expenses and Taxes.	Debiture Interest.	Prof. Div.	Ord. Div.	Rate.	Reserve, &c.	Carried Forward.
1906	£ 371,591	£ 148,171	£ 114,439	£ ..	£ 70,000	7	£ 40,000	£ 55,381
1910	542,534	198,362	122,364	25,000	80,000	8	110,000	77,579
1914	570,510	245,434	105,593	25,000	80,000	8	10,000	197,015
1915	582,097	258,048	107,377	25,000	80,000	8	100,000	208,687
1916	643,931	322,210	107,864	25,000	100,000	10	100,000	197,544
1917	861,793	484,448	107,119	25,000	130,000	13	210,000	102,771
1918	875,369	510,304	104,065	25,000	140,000	14	85,000	113,770
1919	857,773	494,475	101,141	25,000	140,000	14	90,000	120,928
1920	957,298	566,470	98,251	25,000	150,000	15	110,000	128,506
1921	689,168	445,176	103,386	25,000	100,000	10	60,000	84,112
1922	775,660	408,280	114,591	25,000	150,000	15	60,000	101,901
1923	920,977	552,587	114,228	25,000	150,000	15	65,000	116,063

The directors state that the past financial year, though bringing its own special problems and difficulties, has witnessed some further recovery from the depression of 1920-21. This movement has been specially marked in New Zealand, where the outlook generally is "much more satisfactory." They add that "seasonal conditions, broadly speaking, have not been favourable. Large areas of Australia suffered from drought, which was not relieved until May, and this will be followed in 1923-24 by its natural sequel—namely, a reduced wool clip and a

lambling percentage below the average rate. New Zealand, on the other hand, has had an over-abundance of rain, with heavy falls of snow in the South Island, the pastoral and agricultural interests being prejudiced thereby." The position is now said to have improved considerably. The distribution on the ordinary shares is maintained at 15 per cent., in the form of a dividend of 10 per cent. and a bonus of 5 per cent., both paid free of English income-tax. The cost of premises is written down by £50,000, and £15,000 goes to the staff provident fund, and a surplus of over £14,000 is added to the balance carried forward. The balance-sheet, which is analysed in a later column, shows an increase of £369,400 in creditors and of £101,500 in debtors, but bills payable have been reduced by £283,700, and cash is £439,300 lower at £1,193,400. The reserve fund of £1,000,000 is now equal to the paid-up ordinary capital.

Broken Hill South.—Our mining correspondent writes:—The directors of this important Barrier Range undertaking are able to report the largely increased profit of £322,800 for the year ended June 30th. A somewhat conservative policy has, however, been followed in regard to the distributions, the balance dividend of 1s 6d making a total of no more than 4s 6d per share, as against 4s in respect of 1921-22. From the profits of each of the past two years substantial appropriations have been made for plant and development—£80,000 this time, £62,100 last. The balance now carried forward being considerably larger than that brought in, the surplus liquid assets figure at the increased amount of £648,200. A point to be noted by the shareholders is that the company will be shortly completing the treatment of the dump slimes, which provided nearly two-thirds of last year's profits. It remains to be seen in how far this source of revenue will be replaced by the new factors in the situation. These are three: the full benefit from the coarse zinc flotation process lately introduced; the treatment of de-leaded slime residue dumps for zinc concentrates; and the possibility of dealing with larger quantities of crude ore. The ore reserves still stand at the substantial total of 3,500,000 tons, and the Government geologist reports that something between another million and two million tons may be expected. The proved reserves represent well on the way towards 20 years' work at last year's rate. In view of the current prices of the metals produced, the outlook for the current financial period would appear to be favourable. On the basis of the 1922-23 dividends, the shares yield about 10 per cent. gross.

Guatemala's Finance and Trade.—A correspondent writes:—While funds necessary to meet the service of the Guatemalan 4 per cent. External Debt of 1895 continue to be received with regularity, little evidence can yet be found in the financial policy of the Government of any intention to effect a settlement of the long-overdue arrears of interest. A year and a-half have almost elapsed since practical proposals were made in this direction to the Guatemalan Administration through the medium of an American financial syndicate, which, however, sought, in addition, a concession for an American-controlled bank. Any foreign control of its finances the Government—unlike that of the neighbouring State, Nicaragua—could not see its way to grant. Economic conditions in Guatemala have gradually worsened since, and remain unsatisfactory, notwithstanding the fact that the Government has effected something practical towards the reduction of general expenditure, and increased last year's revenue by an amount of about 50,000,000 pesos. National expenditure, however, still stands higher than the country can afford. For the fiscal year ending June 30th next, the budgetary expenditure in national currency is estimated at 351,705,124 pesos. An unacceptable feature is the large sum of 66,440,557 pesos devoted to war; but, as counter-balance, the sum of 72,933,840 pesos has been allotted to public instruction. Upon the current year's accounts there is still a deficit of 42,000,000 pesos. The balance of the foreign debt at the end of the year stood at 1,908,563 pesos, exclusive of 844,603 pesos in respect of unpaid interest under the agreement entered

THE BRITISH LINEN BANK.

Every Description of Home and Foreign Banking Business transacted.

into on May 10, 1913. To political, as well as economic, causes the unsatisfactory financial condition of the country, may be attributed. Revolutionary activities are even now, it would seem, by no means at an end. Currency has been depreciating with very little variation for the past half-century. The low price of silver may be accepted as the principal cause, but the issue of paper-money without a backing of the white metal has also had its effect. Realisation of the hope that the Government would be enabled to re-organise the finances of the country and place them on a gold basis, seems to be yet a long way off, especially as during 1921 (under the presidency of Don Carlos Herréra) there was a further increase of paper currency by 35,517,303 pesos, and during 1922 (under the presidency of General José María Orellana) by approximately 20,000,000 pesos. British trade with Guatemala has declined considerably of late years. Of the total import trade for 1921, amounting to \$13,369,611, the United Kingdom's share came to \$2,289,047, and that of the previous year to \$3,906,779; of the export trade, valued at \$12,140,826, the United Kingdom's share in 1921 was no more than \$133,618, while that of the previous year had been \$460,142. Our present commercial relations with that not-unimportant Central American Republic stand upon anything but a satisfactory basis.

Australian Banks and the Note Issue.—It has been pointed out to us, in reference to the article on Australasian banks in our issue of October 20 (p. 618), that certain portions of the legislation introduced by the Commonwealth Government in 1920 in relation to banks were subsequently dropped, including the compulsion for the banks to hold certain definite percentages of notes against deposits. The Government, however, made arrangements with the banks by which they continued to hold notes without presenting them for gold at the Treasury.

SIR HERBERT HAMBLING, President of the Institute of Bankers, will deliver his inaugural address at a meeting of the Institute at the Hall of the Skinners' Company, on November 7th, at 5.30 p.m.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, W.C.2, on Tuesday, November 13th, at 8.30 p.m., when an address on "The Influence of the Press on the Development of Empire," will be given by the Right Hon. Viscount Burnham, C.H. The Right Hon. Viscount Milner, K.G., G.C.B., G.C.M.G., will preside.

A FREE TRADE Conference will be held in the Council Chamber of Denison House, Vauxhall Bridge road, London, S.W. (near Victoria Station), on Wednesday, November 28th, from 11 to 5 o'clock. Earl Beauchamp, K.G., will preside at the morning session, and Lord Emmott at the afternoon session. The speakers will include Lord Inchcape, Mr H. H. Spencer, M.P., Mr Ben Turner, M.P., Mr W. T. Layton, Mr R. D. Holt, J.P., and Mr Tom Garnett, J.P. A discussion will take place at each session. Application for tickets should be made to the Free Trade Union, London or Manchester.

Obersea Correspondence.

UNITED STATES.—SHIPPING BOARD'S NEW POLICY —RAILROAD WAGES INCREASED—GRAIN AND COAL RATES—GASOLINE PRICE WAR.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 22.

THE United States Shipping Board has adopted a new plan for operating its five services, known as the United States Lines, between American North Atlantic ports and those of the United Kingdom. Under the new arrangement, which is to be made effective immediately, those services will be consolidated into one service, and the operation of the ships, which include the Leviathan and other large vessels, will be in charge of a sub-committee of the Board. This change means that the United States lines will practically become a subsidiary of the Emergency Fleet Corporation (a Government organisation). The new plan is evidently designed to conform to the Attorney-General's recent decision that it would be illegal for the Board to turn over the operation of its vessels to various private corporations, as was proposed a while ago. If the plan of operation now decided upon for the United Kingdom services proves successful, it will probably be used as a model for the consolidation and operation of other trade routes in which the Shipping Board's vessels are at present in charge of managing operators.

A decision just rendered by the United States Railroad Labor Board awards increases in wages ranging from 1 to 2 cents an hour to clerks, station forces, dock, warehouse, and other freight handlers employed by 65 different railroads throughout this country. Upwards of 400,000 men are benefited, and it is estimated that the higher wage scales will increase the carriers' annual pay roll by approximately \$20,000,000. The decision settles long-standing disputes between the roads and the Brotherhood of Railway Clerks, Freight Handlers, Express and Station Employees, the Brotherhood of Station Employees, and the International Longshoremen's Union in regard to rules, working conditions, and adjustment of inequalities in rates of pay of certain employees, besides granting increases to various classes. In order to iron out such inequalities, the board held that the sum of the increases granted in each classification should be distributed by joint action of representatives of the carriers and of the employees, and in the event of a dispute, the distribution should be referred to the board. The new ruling is effective as from October 16, 1923. But the railroads have other problems to solve. Following a recent conference with an official of one of the largest railway systems it was announced, quite unexpectedly, in advices from Washington that President Coolidge had suggested that railroad rates on export wheat be lowered, to help farmers, and that domestic coal rates be reduced to the same level as export rates. By a singular coincidence, about the same time as that announcement was made, the Interstate Commerce Commission rendered its decision in the long-pending western grain rate case, declaring that the general basis of rates on grain and grain products west of the Mississippi had not been shown to be unjust or unreasonable. The Commission, however, ordered this case to be reopened to permit the development of a more comprehensive record, especially concerning developments since the case was first submitted last May. It is evident, therefore, that, in the new hearings which will be held, the Commerce Commission will broaden the scope of its inquiry to include rates on grain and grain products throughout the country. Just what will be the railroads' attitude in the matter is uncertain, although there are indications that they will oppose reductions.

The gasoline price-cutting war is still raging. In fact, the past week witnessed the most drastic and important reduction since the war started. The Gulf Oil Corporation cut prices 3 cents a gallon in Massachusetts, and 2 cents throughout the rest of its territory covering 24 States. This is the first blanket reduction made by that producer in the present period of declining prices, and affects a much larger area than did the 6-cent. cut several

weeks ago by the Standard Oil Company of Indiana. It is generally believed that the sensational reduction by the Gulf Corporation was made in an effort to stabilise the market, but there are no indications thus far that such a purpose has been accomplished. Its cut was promptly met at various points by all other companies, resulting in the widest slashing of prices seen in many months, and the gasoline trade and industry are now more demoralised than at any time since the price-cutting began. Gasoline prices are usually quite uniform in New York City, but even here underselling has become so extensive that it is not uncommon to find prices varying as much as 2 cents a gallon at competing service stations in the same locality. The latest reductions bring the average tank wagon price in 30 representative cities down to a new low level for this year of 14.35 cents a gallon, which compares with 19.08 cents on July 30th, when summer demand was at its height, and represents a total reduction of 6.76 cents a gallon from the highest of 1923. It is nearly 15 cents a gallon, or about 50 per cent. lower than the high average price recorded on January 1, 1921. As previously explained, the demoralisation is due to the enormous over-supply. On September 1st gasoline in storage amounted to 1,053,000,000 gallons, or 50 per cent. greater than at the same date in 1922. Gasoline is still being produced at a record rate, and in view of the seasonal decrease in consumption now being experienced, competent authorities estimate that refiners will be obliged to store an average of about 100,000,000 gallons monthly during the next seven months. At that rate stocks in storage will amount to approximately 1,750,000,000 gallons by next May. According to latest figures from the American Petroleum Institute, crude oil production in the United States during the week ended October 13th averaged 2,125,350 barrels daily, as against 2,157,400 in the preceding week and 1,555,050 barrels in the corresponding week of last year. As compared with the record production of 2,261,800 barrels daily in the last week of August, the daily output since then has decreased 136,000 barrels.

FRANCE.—REPARATION DELIVERIES—RUHR COAL AGREEMENT—NEW SESSION—TREASURY BONDS.

(FROM OUR CORRESPONDENT.)

PARIS, October 31.

EVENTS are now following each other rapidly, and there is every reason to believe that at last there is a well-founded prospect that before many weeks are over the first definite steps will have been taken to render possible the restoration of real peace to Europe. Whatever our individual opinions may be as to the merits of the case, it is now evident, as the result of the developments of the past week, that the Poincaré policy has proved successful in the Ruhr—which is undoubtedly the keystone of European unrest and unsettlement—and that the worst of the crisis that has been a nightmare to Europe since last January has now been passed. Reports received in Paris to-day indicate that Herren Stinnes and Krupp and their fellow-magnates, who spent twelve hours in conference with the French authorities at Dusseldorf yesterday, have at last definitely surrendered, and are willing to carry out Reparation deliveries, under French control, for the future. The release of Herr Krupp von Bohlen from Dusseldorf jail, on parole for a week, to enable him to discuss the situation with his business associates, was the beginning of developments that have now, so far as can be seen, resulted in a decision on their part to admit defeat and for the future to put into force every operation for the resumption of production in the Ruhr and the restoration of normal economic conditions there. Obviously, once that consummation devoutly to be wished has been accomplished, there is at least a probability that any effort that may be made to restore Germany to the economic map of Europe, and put her in a position to carry out her Reparation obligations, will be successful.

The exact details of the agreement come to between the Franco-Belgian authorities in the Ruhr and the German industrial leaders there are as yet unknown, nor has the agreement yet actually been signed. In official French circles, however, it is asserted that the coal and iron magnates have undertaken to resume production (which

implies that they will at once place their workmen once more on wage-earning conditions), to pay the amount of the kohlensteuer or coal tax which was held back at the time of the occupation of the Ruhr last January, and to hand over to the Allies in the future 20 per cent. of their entire output of coal and coke, to be credited against Reparation accounts. As a guarantee, the coal and iron magnates have deposited with the Allied representatives in the occupied area—which includes British representatives—a substantial sum, said to amount to £5,000,000 in British, American, and other sound currency and securities. The parties to the agreement that has been come to include, in addition to the concerns controlled by Herren Stinnes and Krupp and others, the Otto Wolff group and the Rheinische Stahlwerke, who were interested in the agreement come to (although, it is understood, not actually signed) a few weeks ago. Together these firms represent 90 per cent. of the total production of the Ruhr, which is in the hands of private undertakings. The balance is the output of the German State mines, as to which there will probably be no difficulty, particularly as these are already actually in the hands of the occupying Powers. Transport has also been assured. It was announced some days ago that nearly 300,000 of the German railway workers in the Ruhr had undertaken to resume work immediately under Franco-Belgian control, and as many of these men as are required to meet the exigencies of traffic under existing conditions have already been reinstated. The rest will return to work as and when they are required by the Franco-Belgian *régie*, under which system the lines in the Ruhr will continue to be operated in the immediate future. Foodstuffs are steadily going into the Ruhr, and there is now apparently no danger of any labour trouble in immediate future.

The progress that has been made during the past week is regarded here as the happiest possible omen for the future, so far as the other outstanding problems are concerned. The fixation of Germany's capacity to pay reparations remains to be accomplished, and this, in view of what is regarded in England as France's *intransigence*, may appear, on the surface, to be difficult to bring about. As a matter of fact, neither in official French circles nor by the general public is it any longer seriously expected that Germany will ever pay the 132 milliards of reparations already fixed. The fear is that if this sum is again reduced, France may find herself still held liable for her debts to the United States and Great Britain. On the other hand, if the German debt is left nominally fixed at 132 milliards, France will have an ample margin available with which to come to an arrangement by bargaining with her own creditors. There is reason to believe that France now expects to receive, in direct relief of the debt she has contracted in respect of her devastated regions, not more than 26,000,000,000 gold marks. If this be really the case, it is obvious matters are much nearer a rational settlement than has hitherto appeared possible.

The following official figures as to the average amount of combustible that is being drawn from the Ruhr daily by the French and Belgians at present are interesting:—

	Coal. Tons.	Coke. Tons.
From direct exploitation	7,800	1,369
Accumulated stocks	12,500	7,000
Voluntary deliveries	7,000	2,200
Average per day	27,300	10,569

These figures are based on last week's results. In accordance with the agreement between them, France took 17,800 tons of the total amount of coal and 9,000 tons of coke, the remainder going to Belgium and Luxembourg.

The Parliamentary session, it is now decided, will open on November 13th, when the first important business to be taken in hand will be the consideration of the Budget for 1924. On this occasion the Budget should not occupy a very serious portion of the session. It will be remembered that M. Poincaré insisted, last June, that in view of the fact that the financial year was already half over, the Budget for 1924 should be adopted at the same time as that for the current year, and that the taxation imposed and the supplies voted for 1923 should remain unchanged in 1924. This was agreed to after a division in respect of which the Premier posed the question of con-

fidence. All that the Chamber will have to discuss, therefore, in its Budget debate this year, apart from the Budget of recoverable expenditure (devastated regions and pensions), will be the special credits to be opened in respect of Morocco, Syria, and other outside votes, and the amount of Treasury bonds or other forms of floating debt to be authorised to meet whatever deficit may be found to exist before the Budget for the year can be balanced. The revenue is continuing to come in so satisfactorily, and the general prospects in home and foreign trade are apparently so good that it is not expected any obstacles will arise to prevent this very simple programme from being carried out. We may, therefore, expect that a large portion of the coming special autumn session will be devoted to electioneering, in view of the fact that the annual renewal of one-third of the Senate has been fixed for January next, while it is expected (as the life of the present Parliament automatically comes to an end on May 31st) that the General Elections for the Chamber will take place on the first Sunday in April.

The new issue of Treasury bonds, which opened three weeks ago, and will be closed next week, is reported to be proving satisfactory. In banking circles the total amount already subscribed is reported to be over 5,000,000,000. The issue is unlimited in amount. The maximum issue authorised for the current year, exclusive of the issue made some months ago, is 8,000,000,000.

GERMANY.—POLITICAL CRISIS—CURRENCY—FINANCES.

(FROM OUR CORRESPONDENT.)

BERLIN, October 30.

EXCEPT for the appearance of the first Federal stable currency, all developments in the past week were for the worse. Further Separatist outbreaks are expected in occupied territory, and though fresh evidence comes every day that these outbreaks are engineered by professional, often convicted, criminals, it is very difficult to suppress them in face of French and Belgian support. It was

promised late last week that not more than 150,000 out of 550,000 workmen on the Ruhr would for the present be unemployed as the result of Berlin's stoppage of the subsidies; but reports yesterday spoke of almost complete stoppage of work, and it is certain that yesterday hardly any work was done in the bigger concerns. The Bavarian and Saxon crises are very serious. In expelling the Saxon Cabinet and setting up one more dictatorship in Dresden, as a measure against Saxon Communism and its officially tolerated or protected plots, Dr Stresemann has support of all parties except the Socialists. These, while holding that Communist members in their present mood could not be tolerated by the Republic in a Saxon Cabinet, nevertheless disapprove of some of Herr Stresemann's measures, including the suppression of the Dresden Diet. A crisis in the Federal Cabinet is threatened over this. Dr Stresemann's demand that the Reichswehr division appropriated by Bavaria shall be put back under Federal control has not been conceded, and the prospect of a compromise is lessened by semi-military bands of Bavarian extremists, who, not content with repudiating the Republic's authority within their own frontiers, threaten to march against Berlin, or to proclaim Munich to be the real seat of authority for all Germany. Dr Stresemann has shown considerable energy so far; but if it comes to the worst, there is no constitutional and practical way of asserting Federal authority except to deal with Bavaria as Saxony has been dealt with, even at cost of an armed conflict.

The currency trouble last week got worse and worse. The foreign exchanges continued in the first days upward, and the Reichsbank, as in August, had to admit that it could not produce enough cash. Against 1,000,000 billion marks per day wanted, only about 300,000 billions were being printed. The Reichsbank building was for the second time in vain besieged. This led to the rushing out of stable notes, which, though in small denominations, represent, compared with the sum of depreciated paper marks in circulation, a very considerable buying power; and as these new notes have so far really been stable, it is hoped that the mere cash crisis is checked. Before this was done, Bavaria, Baden, Hamburg, Hanover, and other States and cities, which long ago produced paper mark notes, announced the issue of their own "wertbestaendig" currencies, which are naturally not gold secured, but which in some form or another are guaranteed against loss of buying power. The cover, as in the case of the not yet issued "Rentenmark," is vague; Baden secures her notes on the income of State-owned forests; Hanover simply makes hers convertible into given quantities of rye (like the earlier rye loans). The fact that the currency sovereignty of the Republic is being shaken by these local measures at a time when there are so many other fissiparous tendencies was an additional reason for rushing out the Federal stable notes. Already in circulation in small denominations are notes representing units of gold loan under law of August 14th and gold Treasury bill notes under law of March 2nd. As these may appear in foreign markets, and as, while they are nearly the same in appearance and in part alike in wording, they have very different exchange values, foreigners may save themselves from loss by noting the differences. The first (gold loan notes) bear the inscription "Schatzanweisung des deutschen Reiches," with a statement that they are payable on September 2, 1935. Though popularly called "gold loan" notes, these are not convertible into gold, but are only "wertbestaendig." The second new currency, also bearing "Schatzanweisung des deutschen Reiches," are the gold Treasury bills. These bear a promise to redeem on April 15, 1926, in cheque on New York or in gold; and further, a statement that the Reichsbank guarantees such redemption. They are therefore a gold currency proper. Their paper-mark exchange to-day was 80 milliards, or higher than the dollar exchange of 65 milliards, against 65 milliards, also for the mere "gold loan" notes. The "Rentenmarks," it is expected, will appear this week; and as Berlin city has issued 3,000,000 marks of local "wertbestaendig" currency, the sum total of issue should relieve the cash tension. It will cause, it is feared, considerable confusion owing to the variety of exchange values. For the present, representatives of the retail trades have come to an agreement to quote double (paper

mark and gold loan) prices; and gold Treasury bill notes will be accepted at the official exchange rate until the next official exchange is announced (from midday to midday).

Gold-loan notes will be ultimately convertible at par into "Rentenmarks," which are really better secured. Private credits by the Rentenbank, which are allowed to a maximum of 1,200 million Rentenmarks, will not be made "wertbestaendig," i.e., not accompanied by the condition that the borrower shall compensate the Rentenbank for depreciation before repayment. This decision expresses the official hope that the Rentenmark will really maintain a stable gold value. Official salaries and private wages will be fully paid in the new stable currencies as soon as enough is available; and they will be partly so paid at once. The Vice-President of the Reichsbank states that the bank will devote 300,000,000 Rentenmarks (which it is to get from the Government in repayment of the old Treasury bill debt) to buying up paper marks, and that therefore a certain (paper mark) deflation will take place. As no more paper marks will be printed, this ought to raise the paper mark's value; but in the home and foreign public there is so far no sign of expectation of this. Doubt is also still expressed whether the limited credits which the Rentenbank is to give to the Government will last until the Budget is balanced. The new regulations for the Reichsbank have appeared in the shape of a decree. The bank will issue gold notes secured, to one-third with gold, to two-thirds with gold mark bills or cheques. The notes are convertible in Berlin at will of the bank into gold, dollars or pounds sterling. A gold mark in the sense of the decree is the value of 1.2700 kilogramme of fine gold. This measure will come into force simultaneously with the issue of the first Rentenmarks. From November 1st the State railways will adopt gold mark calculation. Since August the system has been gold mark basic rates, multiplied by a key number based on an index, revised at short intervals. In future the price of tickets and for freight will be the basic gold mark prices, multiplied by the actual day-to-day exchange appreciation of the gold mark, rounded to one milliard. This means gold rates, instead of index rates. For reasons of economy, about 50 trains, mostly express, will cease running from November 12th.

The Cabinet has been forced to this step by continuing heavy railway losses, despite the now rapidly increased fares and rates. The last decade report of the Finance Ministry for October 11-20th, inclusive, shows a daily loss on railways of 10,000 billion marks, and the next report will show a much higher rate of loss. This decade report is in general less favourable than the preceding, which showed about one-hundredth of expenditure to be covered. The yield from taxes was only 2,456 billion marks, against expenditure of 324,117 billion marks. By floating debt operations 317,697 billion marks was raised, and from funded debt (gold loan) 2,962 billion marks. The mere interest on the floating debt, 18,657 billion marks, exceeded revenue from taxes about seven-fold. The loss on railways was 103,151 billions. The floating debt of discounted Treasury bills rose in the ten days from 89,142 billions to 407,839 billions. These totals were on the basis of a dollar exchange of about seven milliard marks; the accumulation of nominal debt at present is very much more rapid. Nominal debt, of course, counts for little; but it is a bad sign that in September, after the passing of the August emergency taxes, the gold value of the revenue fell off. At exchange of October 22nd the whole debt was about \$11,000,000. The old funded (war) debt of 64 milliards, as it stood before the issue of the new funded gold loan, now represents a gold value of \$1. The Cabinet has prepared a measure cutting down the ranks of officialdom, the main point of which is compulsory retirement at the age of 65. Married women as officials will be discouraged, on the ground that owing to their low standard of attendance they cost twice as much as men. The new measure putting taxes on a gold basis will cause great trouble to the taxation officials and the public. It suffers from the usual bureaucratic over-elaboration in regard to the different kinds of multiplication of old taxes at different dates. This will be cured only when taxes are directly assessed in an actual gold currency or at least in the new stable value currency. The September revenue report

shows very remarkably how gold or stable value taxing summarily puts an end to the system under which direct taxes are escaped through the currency depreciation; the mere levy on agricultural land, passed as part of the Rhine-Ruhr levy in August, and imposed in gold marks, yielded 444 billion marks out of a total of 1,124 billions from all direct taxes, while the employers' levy, assessed in paper marks, which ought to have yielded much more, yielded only 213 billions.

The Reichsbank's statement for October 15th shows a new rapid increase of totals. Commercial bills rose by 22,939 billions to 29,541 billions, Treasury bills by 97,548 billions to 167,779 billions, advances by 5,324 billions to 5,616 billions, and circulation by 76,416 billions to 123,349 billions. Outstanding Darlehns loans rose by 875 billions to 5,663 billions. Of late the circulation of Darlehns notes has ceased to appear in the weekly statements, presumably because the total issue, more or less stable around 12 milliards, represents a value of under 1s. The sudden great increase in total of advances is due to the fact that after the Darlehnskassen had lent up to the legal maximum further demands for loans were diverted to the Reichsbank.

It is officially stated that the State railways will, independently of a possible Ruhr solution, continue to need foreign (English) coal. Consumption is about 1,100,000 metric tons per month, of which only a third could be got from Germany and Poland. Before the occupation only 50,000 tons came from the Ruhr, while 250,000 tons came from Upper Silesia and Poland, 25,000 tons from Lower Silesia, and 45,000 tons from Saxony. The quality question here plays a rôle; not all of the available German coal can be used on the railways. It is officially stated that the experiments in the use of brown coal for locomotive firing have not been successful.

CANADA.—GRAIN CROP—PRODIGIOUS YIELD IN ALBERTA—THE ONTARIO LOAN—BUSINESS AND INDUSTRIAL CONDITIONS—THE PREFERENCE PROPOSALS.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 22.

THE latest end of September estimate of the grain crop compiled by the Dominion Bureau of Statistics sets at rest all doubts about the volume of the grain crop. The detailed figures for the crop, with the comparative returns for 1922, are as follows:—Wheat, 469,761,000, against 399,786,400; oats, 531,378,000, against 491,239,000; barley, 80,357,000, against 71,865,300; rye, 26,936,000, against 32,373,400; mixed grains, 29,090,000, against 27,707,700; flax, 6,942,000, against 5,008,500 bushels. But as the subjoined comparative data of the wheat crop by provinces shows, it is due solely to the Alberta crop, which can only be described as prodigious, that all previous records have been surpassed:—Manitoba, 1923, 36,481,000; 1922, 60,051,000 bushels; Saskatchewan, 1923, 252,622,000; 1922, 250,167,000 bushels; Alberta, 1923, 157,467,000; 1922, 64,976,000 bushels. Other provinces, 1923, 23,191,000; 1922, 24,592,400 bushels.

Saskatchewan and the non-prairie provinces are practically stationary in their yield, and the Manitoba crop, which was ruined by rust and other plagues, shows a very serious decline. Alberta, however, has a magnificent compensation for a series of bad years; yields as high as 70 and 80 bushels per acre are recorded, and 50 bushels is not uncommon, with the result that all the plant and labour available in the province will be fully occupied till Christmas in threshing operations. The crop is now pouring down from the prairies through the Winnipeg funnel to the Lake ports at a very rapid rate, and until a few days ago a serious grain blockade seemed imminent. The boycott of the Canadian grain trade organised by American shipowners, who disliked the new regulations imposed by the Canadian Government in regard to freights, succeeded in keeping out of the Canadian ports a large proportion of the American tonnage, which normally handled over 60 per cent. of the grain exported down the Lakes, and as during the past fortnight the ships available have been able to take out from the Thunder Bay ports little more than half the volume of grain that the

railways were pouring in each day, a complete congestion of the elevator accommodation at these ports, which can hold 55 million bushels, was inevitable. The Government maintained a firm front until the crisis was within measurable distance, but now they have capitulated to the American shipowners, and it is announced in so many words that the obnoxious regulations will not be enforced. The full strength of the American grain fleet ought now to come into the Canadian trade, and relieve the situation.

The Ontario Government, encouraged by the great success of the Federal Government's loan, have emulated their enterprise, and placed a few days ago in the hands of a syndicate a block of \$40,000,000 five-year bonds maturing October 15, 1948. They were offered to the public at 98, and will therefore yield 5.14, which is the same yield as the Federal Government's 20-year bonds. The syndicate's managers enlisted the co-operation of a number of bond houses, and on the first day of offering the entire issue was underwritten. The bond market has in general shown surprising strength, and although heavy American subscriptions have helped both the Federal and the Ontario loans, it is plain that there is a lot of money in the country. In the stock markets there has been visible a slow but steady decline of prices since last March, and there is so far no definite sign of an upward turn.

But industrial conditions are still "spotty." The motor-car manufacturers are very busy, and are now doing a huge export trade. Some of the steel plants are rubbing along on timely orders for railway equipment, and firms which make heating apparatus and roofing material are also reasonably busy. But in other lines manufacturers find great difficulty in marketing their products, and many of them are faced with the necessity of curtailing their output for the winter. However, there need be no serious unemployment, for lumbering operations in the bush both for timber and pulpwood will be on a very large scale this winter; in the Gatineau Valley, for instance, north of Ottawa the lumber companies want at least 10,000 more men than can be secured locally. The paper industry is expanding steadily, and exports show no sign of abatement. The mining industry in Northern Ontario still shows great activity, and the machinery and tool companies are profiting by large orders from that region. It is difficult to appraise the exact value of the great discoveries which are chronicled in the Press each week, but most of the mines whose quality is assured are showing better and better returns, and very promising developments on a large scale are in progress. The main bulk of the capital is still American and Canadian, but British investors are becoming more and more interested.

The new preference proposals made by the British Government have excited little interest in Canada. They might if brought into effect promise some expansion of business for the canning companies, but it is difficult to see how they will materially increase Canada's exports to Britain.

ARGENTINA.—AGRICULTURAL POSITION—PUBLIC FINANCE—RAILWAY PLANS.

(FROM OUR CORRESPONDENT.)

BUENOS AYRES, September 24.

GENERAL conditions in Argentina have shown signs of improvement during the past month, prices for cereals keeping steady and cattle quotations being decidedly better in all parts of the Republic. A loss of some 25,000 head of stock occurred in the southern and western areas of the province of Buenos Ayres, owing to an unexpected cold snap; but the latest cattle census shows that Argentina's horned stock is ample to meet all demands. There were 37,064,850 head of cattle in the country on December 31, 1922, and 35,671,000 sheep, the latter figure showing a decrease of 6,600,000 since 1914, while it is less than half the total estimated in 1895, which was 74,379,000. Argentina's main stand-by, the cattle trade, is clearly recovering from the depression that has marked the last two years, and it is doing so without any special Government aid. A liberal policy on the part of the Banco de la Nación, which at present carries some 80 million dollars paper in cattle loans guaranteed by pledges of the stock, though far from profitable to the institution, has un-

doubtedly aided many breeders to tide things over. At the same time, the system has been liable to abuse, and private banking interests have found it to their advantage to leave such business alone. Much of the reduction in the flocks of sheep is comparatively recent, say, during the past two years, and largely due to the fact that ready money was more easily and more profitably obtained by selling sheep than by throwing away cattle for next to nothing. The flocks now existing are, however, reported to be of exceptionally fine quality, viewed from the wool buyer's position, and it is reasonably certain that this year's clip will in the aggregate bring in proportionately high returns, bids for Rivers wool having already been pitched as high as \$25 Argentine paper per 10 kilos. In agriculture everything at the moment promises well for production. Conditions in the dairy industry, the outlook for the local sugar interests, the demand for quebracho, and the favourable prospects for the novel, yet profitable, cotton crop now attracting much attention are all additional reasons for believing that Argentina's 1923-4 season of production will be a good one.

Although the rift between commerce and the official world appears to grow rather than to close as each month passes, it is clear that a climax in the official finances is approaching. The Government do not seem to realise that a brisk trade revival will automatically put a stop to the systematic renewal of short-date indebtedness at 4 per cent., which has been the one fixed point in a maze of visionary projects. The announcement that Dr Herrera Vegas will resign the portfolio of Finance on the departure of Señor Alvarez de Toledo as Minister to Paris may mean a radical change in the Government's financial policy, or rather lack of policy. As Señor Alvarez de Toledo was president of the Banco de la Nación, it is more than probable that the outgoing Minister of Finance will take the vacant seat. To-day the Banco de la Nación holds four times the deposits of any other bank in Argentina, and its advances bear much the same proportion to those of its competitors, while, being almost free from any obligation to do more than cover working expenses, its influence on the market is exceedingly powerful, and, one must add, irregular. Thus during the past month it has carried out an exchange operation based on the withdrawal of gold from the Argentine Legations in London and Rome, which enabled it to utilise \$4,123,157 gold at par as cover for its drawings. Gold from the Banco de la Nación was paid in to the Conversion Office, for whose account the Legation deposits were earmarked, and in principle this act is tantamount to a shipment of gold, inasmuch as it reduces the sum total of Argentina's gold holdings by the amount named. A sum of £250,000 is ceded to the Treasury at par, to be utilised for meeting foreign obligations, but the balance will leave a handsome profit when it is remembered that the United States rate shows 30 per cent. appreciation compared with the Argentine dollar. A further attempt to use the gold of the Conversion Office for settling external debts at par was made in connection with the proposal to modernise part of Argentina's battle fleet abroad. \$9,500,000 gold was sanctioned as the sum to be spent in this connection, and by a snatch vote the Chamber of Deputies, acting on the proposal of a Socialist member, included in the Bill a clause to the effect that the necessary sum should be withdrawn from the Conversion Office against the deposit of the corresponding amount in paper. This was opposed by the Senate, who returned the Bill to the Lower Chamber after deleting the clause. The amendment was accepted, but shows how the wind may blow in the House of Deputies, where there is admittedly a strong feeling in favour of freeing the market for gold and restoring the Conversion Office to the use of its full powers.

Meanwhile discussion of the Budget for 1923 still drags on, and, even at the moment of writing, with but five more working days of the ordinary sessions of Congress available, no one can say what steps the legislature will take towards bringing administrative finances into a comparatively normal course. August salaries are still outstanding, not for lack of funds, but simply owing to the absence of the monthly authorisations that have been the rule throughout the year. The Government has laid before Congress its detailed plans for expansion of the State railways at a total cost of \$365,000,000 Argentine paper. Meanwhile \$20,000,000 paper are sought to com-

plete the programme of work for 1923, and in anticipation of this credit being granted, the Banco de la Nación has given the department \$7,000,000 at 5 per cent. wherewith to meet pressing payments, which are many. Some comment has appeared in the Press relative to the possibility of the Government obtaining a loan in London under the terms of the Trade Facilities Act, though the sum named (£40,000,000) is out of all reason, and the insistence on the money obtained with the British Government's guarantee being spent on material in Great Britain, is likely to prevent business being done as far as the Argentine State railways are concerned. It is, however, on the cards that the Anglo-Argentine lines may find it beneficial to obtain fresh capital funds under the conditions of the Act, and therewith carry out many important extensions giving promise of substantial additions to traffic receipts in the future. By so doing they would temporarily counter the heavy exchange loss that purchases in the ordinary course of trade imply when made in Great Britain, and, by modernising the facilities they offer to their customers, be in a position to meet without undue difficulty the call for a reconsideration of the existing tariffs that is bound to arise sooner or later. Probably sooner, if cereal prices show any marked decline before the next crops are safely marketed.

Exchange moved a little in favour of this country during the third week of September, partly on account of the operation outlined above and partly owing to a bigger offering of bills by exporters, coupled with a withdrawal of remitters. The latter seem to have misjudged the market, thinking, apparently, that when sterling quotations touched 40d nothing prevented them from moving steadily higher. One must repeat that unless some exceptional move is taken by the Government—a foreign loan or gold shipment—sterling exchange will remain more or less where it is to-day.

BELGIUM.—DOLLAR CREDITS—THE FRANC EXCHANGE—BOURSE—PRICES—UNEMPLOYMENT.

(FROM OUR CORRESPONDENT.)

BRUSSELS, October 24.

THE annual report just published by the Belgian metallurgical company, "Forges de la Providence," one of the most important in the country, has once more attracted attention to the very delicate position of the manufacturers who availed themselves of the credits in dollars which the Belgian Government obtained in New York early in 1919. At that time a loan of 50 million dollars, guaranteed by the Belgian Government, was arranged by the Banque Nationale de Belgique, and the dollars were lent to Belgian manufacturers to enable them to obtain necessary raw materials and reconstruct destroyed machinery; but, above all, to avoid unemployment as much as possible. The contracts between the Banque Nationale and the manufacturers expire in 1925, and, unless an extension is arranged, the latter will have to purchase, at the current rate of the day, the dollars which they owe to the bank. In this connection it must not be forgotten that the rate of exchange of the dollar at the time the loans were arranged was, roughly, 6f, whereas the present quotation is between 19f and 20f.

In a number of cases no provision has been made by the manufacturers to counter-balance their losses resulting from the depreciation of the franc, and in the present case, that of the "Société des Forges de la Providence," this loss, according to their latest balance-sheet, amounts to 20 million francs, in respect of which they are only now establishing a sinking fund. This is not vital for such an important undertaking, but there are others less powerful whose position would become very critical indeed were they compelled to repay their dollar loans at the present rate of exchange.

Morally the Government has assumed a very large responsibility in the affair, inasmuch as the object it had in view in supporting the operation was not so much the prosperity of the industry as the fear of a long period of unemployment and the various social disturbances which might have resulted. In Belgian industrial circles the opinion generally is that lengthy delays should be accorded for the liquidation of these loans, so as to diminish the annual charges resulting from the loss in exchange, and

to enable the manufacturers to take advantage of an eventual appreciation of the Belgian franc.

During the past few months the general situation in Belgium has been quite as unstable as previously, and the chaotic state of the foreign exchanges is not one of the least important causes of this position of affairs. One must not lose sight of the fact that during the last few weeks the £ sterling has fallen from 108f to 80f, to rise again to 93f just as quickly, and then fall again and fluctuate violently, often several times during the same day, between 85f and 88f. At the same time the continual demands for increases of wages, the difficulty of obtaining scrap iron at very uncertain prices, and the constant rise in the price of coal indicate the difficulties confronting this very important section of Belgian industry. Thus the situation is not at all as bright as is generally supposed abroad. All industries working for export are suffering more or less to a certain extent except those—e.g., the glass industry—which have a monopoly or suffer very little competition.

The values of industrial shares on the Bourse have naturally reflected the recent fall in the exchange, and at such moments it is not surprising to hear of manufacturers as well as capitalists desiring a reaction in the exchange. The former have a certain interest in a rise in the rate so as to give them a larger margin of profit on their exports, the prices of raw materials and salaries not immediately taking effect with the rise in exchange. As regards the latter, their interest lies in higher values, as expressed in francs, to be obtained on the stock market, as naturally prices must rise with each further depreciation of the franc—for it is surprising how many people cling obstinately to the fascination of the number of francs they possess without sufficiently considering, or even without taking into consideration at all, the gold value of the franc, that is to say the real value of their fortune. It is a curious thing that Belgian Government securities have scarcely risen during the recent fall in industrials as is usual in such cases. Only the "Bons Interprovinciaux 5 per Cent.," issued during the war, have marked any serious increase on the official announcement of the repayment at maturity of the series maturing December 10th-March 10th and June 10th next, totalling, in all, approximately 500 million francs, holders not claiming repayment being entitled in exchange to new five-year bonds at 5 per cent. interest at 95 per cent. of their nominal value. At the same time, rumours which foreshadowed the issue of a new consolidated loan, supposed to be at 7 per cent., have been denied. There will thus be no large loan this year, which is very fortunate, as the money market is at present very tight, day-to-day money fetching easily 4½ and 5 per cent., whereas Treasury bonds at six months are only issued at 5 per cent.

A point worthy of notice, which seems to indicate a change of attitude of the Banque Nationale de Belgique towards foreign banks established in Belgium, is the permission recently given to such foreign banks as are members of the clearing-house (to which they are admitted in Belgium) to obtain small overdrafts at the Banque Nationale against deposit of Belgian Government securities as guarantee.

No new laws of importance have been voted recently. A royal proclamation has been issued forbidding the export of coal unless a licence has been obtained; this is chiefly the result of complaints made by the public, owing to difficulties in securing supplies of coal and to the constant rise in prices. Mention should also be made of a further law forbidding the purchase of foreign currencies, except on production of invoices proving that such foreign currencies are required for the payment of goods bought abroad; Belgians have not even the right to dispose of foreign monies purchased before the issuing of the proclamation without justification of the purposes for which they are required. The law, however, in no way interferes with foreigners living abroad, and imposes no restriction on their exchange dealings, allowing them to buy and sell francs as they please.

The Index number, which serves here as a basis for a large number of agreements between employer and employed for the settlement of wages, has risen considerably since January last for the whole of the country. It has increased from 383 per cent. (based on the prices of 1914) to 453 per cent. in September, and even as high as 468 per

cent. for Brussels. This has been the cause of numerous increases in wages, which cannot be challenged by the employers, as they have agreed that the official Index number should serve as a basis for their calculations, and besides trade is suffering from a lack of workmen since the application of the eight hours' day law.

The unemployment figures for September are not yet known, but for the month of August the number of involuntary unemployed was 12,368, out of a total of 648,487 members of the unemployment insurance society—i.e., roughly 2 per cent. of the number assured, as against 4.4 per cent. for the corresponding period last year.

BULGARIA.—RECENT DISTURBANCES—FOREIGN EXCHANGE—HARVEST—EXPORT POSITION—CREDIT.

(FROM OUR CORRESPONDENT.)

SOFIA, October 23.

AFTER the recent Communist risings, order was re-established throughout the country quickly and energetically, and things have now returned to normal. The flight of the Communist leaders, who abandoned their followers at the critical moment, has had considerable effect on the morale of the "red" peasants, and the insurgents submitted to the regular forces without serious resistance, and returned quietly to their work. November 18th has been fixed as the date for the new elections, and the Democratic Block (the Government party), the National Liberals, and the Agrarians are all carrying on intensive propaganda throughout the country. The Agrarians and the Communists appear to be acting in close co-operation, but they have to suffer from the general discredit which recent disturbances have brought upon their political doctrines. It is confidently anticipated that the Government will obtain a working majority at the polls.

Recent events have had less effect on the foreign exchange market than was generally expected. This is ascribable in the main to large sales of foreign currency by the tobacco firms and sugar producers, who needed leva for the purchase of raw materials. The rate for sterling moved from 478 leva on September 1st, to 452 on the 18th. The riots began on the following day, and the lev at once fell to 471, and, during the critical days which came towards the end of the month, declined still further to 493 to the £. After the end of the disorders, the rate progressively improved to 474, 469, 460, and 455. Since October 1st, the lev has shown a stability rarely observed after the war; fluctuations on the bourse are of no importance, foreign currencies are very easily obtained, and credits in dollars, francs, and pounds are granted to the best firms more abundantly and on better terms than leva credits.

Despite the fact that harvesting has been retarded somewhat this season, the crop returns are very satisfactory, and mark a considerable advance on those of last year:—

(In Metric Tons.)

	1922.	1923.
Wheat	1,026,143	1,055,000
Rye	189,320	215,400
Barley	259,292	267,400
Oats	132,728	145,900
Maize	393,181	559,000
Rice	3,604	3,700

The improvement in the tobacco crop is, however, even greater, and far exceeds expectations. Calculations of specialists point to a crop of some 46 million kilograms—the official estimate being 50 million kgs—against 22 millions last year.

Export prospects for cereals are not as favourable as might have been desired on account of the general world position. Prices are low, and keen competition is feared from America. The Government has endeavoured to assist exporters by reducing export taxes and by granting credit facilities. At the same time the cost of living has not fallen appreciably, despite the general improvement in the exchange position of the lev of recent months, and internal prices are still too high by comparison with the current world prices level. The outlook is much better in the case of tobacco since the Bulgarian product is much appreciated in certain foreign markets, and demand is assured.

Recent unrest has done much harm to finance and trade. A 21 days' moratorium was officially granted by the Government for all liabilities falling due between September 18th and October 9th, and this has been a blow to the commercial credit which the banks had recently begun to give to their best clients. The discounting of trade bills and the advancing of money against goods has again been stopped for an indefinite period. Scarcity of money and high rates of interest are prevailing once more on the market. Certain of the Government's fiscal regulations (such as stamp duty, foreign exchange restrictions, and taxation) are meeting with growing disapproval in business circles. Criticism is chiefly directed against the often absurd way in which these taxes are collected, and against the complicated texts of fiscal legislation.

Letters to the Editor.

DEFLATION AND INFLATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Two questions occur to me:—(1) What is the meaning of "arbitrary" when applied as a term of abuse to the Cunliffe limit on our currency of paper pounds? If an institution—the Treasury in our case under the Act of 1914—is given power to issue bits of paper which must be accepted as "pounds" by everyone to whom "pounds" are due, I fail to see what kind of limit on this power can escape being as "arbitrary" as the power itself. I cannot help suspecting that those who complain of the "arbitrary limit" really wish to see the Treasury exercising its perfectly arbitrary discretion under the Act by increasing the issue whenever sufficiently clamorous interests desire higher prices. If not, will they explain what limit they would suggest?

(2) Is it much use to ask us to decide whether we wish the pound to purchase a stable amount of gold or a stable amount of commodities in general "under present circumstances"? Present circumstances will not last, and the essence of business is to see and provide for future circumstances. If this country went back to a gold standard, many others would follow, and stability of exchanges between the whole group would be attained, which would be much more valuable than stability between this country and the United States alone. And even if this country does not return to a gold standard, is it not now fairly certain that whether their first experiments succeed or fail, Germany and European countries to the east of her will soon be reckoning all prices in gold units and have a stable exchange among themselves and with the United States? Under those circumstances could London afford to go on asking the world to reckon not in gold, but in Bradburys, the value of which was kept stable by the Treasury, assisted by the Bank, the Federation of British Industries, and the party agents' calculations of votes at the next general election?—Yours, &c.,

EDWIN CANNAN.

October 28th, 1923.

THE TRANSFER OF MONEY WITHIN THE EMPIRE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Sir James Cooper's letter in your issue of 20th ult. raises a point of the utmost importance. He states in effect that, as far as Australasia is concerned, it is open to their bankers—and that they take advantage of the opening—to establish a monopoly for exchange transactions, and to penalise any who seek to go outside their charmed circle. This was confirmed by Mr Bruce in regard to Australia, and by Sir James Allen in regard to New Zealand, in their speeches at the Economic Conference on Friday last.

It would be very interesting, and, I think, probably highly instructive if some of your correspondents could throw further light on the question.

The old world has for centuries effected its international exchanges of goods between nations with all sorts of varying currencies, by the use of bills of exchange freely dealt in by dealers in exchange, while the newest of the new world—the Australasian Dominions—have apparently never adopted the system, but have been contented to allow this vital function of "exchange" dealing, to remain a monopoly in the hands of the banks. The direct connection between export and import of goods has consequently been lost, and an important factor, which operates where it exists as a barometer to indicate the state of trade between different countries, is missing.

The point may appear to be an academic one, but investigation will show that there is far more behind it than appears on the surface.—I am, Sir, yours faithfully,

MARK B. F. MAJOR.

London, E.C. 4, November 1st, 1923.

Books and Publications.

A PAGE OF BANKING HISTORY.*

A DETAILED study of banking history, through a study of the story of particular institutions, throws interesting side-lights on the general problems involved by currency and credit systems, and this book, forming Part 2 of Volume CII. of the studies in Economics, History, and Public Law, edited by the Faculty of Political Science of Columbia University, is full of instructive matter. It is written and planned with austere simplicity, and cannot be recommended as light reading, but anyone who wants to know how American banking won through all the difficulties that faced it to the efficiency that it has now reached, will find in this history of the "Gibraltar of the West" many useful opportunities of generalising from the particular. This particular Gibraltar finally surrendered, being put into the hands of a receiver in June, 1877, the cause of its failure being officially described as "fraudulent management, excessive loans to officers, a depreciation of securities," but it paid its creditors 100 per cent. and interest on their claims; and when one considers the boundless temptations to speculation and bad finance that were provided by the amazing forward rushes of American development, a sympathetic student of her banking history can only marvel that any of her banks stood up as long as this one. This is especially so when we remember that her banks were not only beset by the usual crowd of people wanting more credit than was good for them, and wanting it all the more eagerly because their chances of making profitable use of it were so vast, but were also faced in their early years by a crowd of hostile critics who thought that banking was essentially "unrepublican," and were always on the look out for joints in their harness. And those joints were numerous enough to satisfy the greediest critic. "As early as 1810," says Dr Cable, "Vermont, Delaware, Kentucky, and North Carolina had organised banks wholly or partially owned by the State. In many cases the capital was only partly paid up, and it was no uncommon thing for the shareholders to borrow back all they had put in. The denominations of the circulation often were made small, on the theory that

* "The Bank of the State of Missouri." By John Ray Cable, Ph.D., Associate Professor of Finance and Banking in Washington University. (New York) Longmans, Green; (London) P. S. King, 14s.

demands for redemption would thereby be less frequent. Many of the banks were located in inaccessible places to further hinder presentation. Public opinion seemed to sustain this kind of banking. The debtor classes, as always, wanted cheap money. It was not considered good form to ask for specie, and tar and feathers were sometimes used to dissuade those who persisted. Moreover, as time went on, the State banks loaned more and more heavily on real estate paper. Under the credit system of selling public lands, the purchaser had only to pay down 25 per cent. No lots were sold of less than 160 acres. The result was that men put all their money into the initial payment, and trusted to bank loans for the balance." With such customers and such assets, the capital with which the banks had to work consisted chiefly, we are told, of "the cupidity of the public," because the shareholders apparently borrowed from them the money to pay the instalments on their holdings. Kentucky's record was brilliant. By a single act of her legislature she had chartered 43 independent banks, and by 1819 all had failed. Their charters were accordingly repealed, and the Commonwealth Bank of Kentucky was started with no stockholders, and under official management. Its "only real capital" was an appropriation of \$7,000 to pay for printing notes. The notes were lent to needy citizens on real estate mortgages. The circulation was declared unconstitutional, so the State ousted the judges, who were tactless enough to say so, and went on printing notes, on which a discount of 50 to 75 per cent. was not uncommon.

Amongst conditions such as these, the Bank of the State of Missouri was established, and for many years shone "like a good deed in a naughty world," by conducting its operations with eminent success on sound and prudent lines. In fact, the "conservatism" with which it was managed finally led to its undoing, because the community that it served wanted a more dashing policy, and so its whole status was altered, with the result that it fell a prey to bad business. Our Collectionist friends may make most of the interesting fact that it was admirably managed as long as it was a semi-State institution, and having at last been turned into an ordinary joint stock bank, its subsequent career "left a blot on its record. It was to do a 'plunger' type of business for about 11 years, and then to go down in the depression following the panic of 1873."

CARLYLE AND MILL.*

THESE letters, purchased last year at auction by the trustees of the Carlyle Memorial, and published at their instance, claim notice here inasmuch as three-fifths of them are addressed to the chief architect of Victorian philosophy and economics. They throw some fresh light on Mill's circle and on the history of his minor writings; but their main interest lies in their revelation of a very different Carlyle from that presented by the composite portrait produced conjointly by his own reminiscences, his wife's biographers, and Froude. He stands out as a warm-hearted, genial friend, occasionally explosive, but never bitter or querulous, struggling bravely with all his difficulties, and in one great calamity heroic. In the loss, through Mill's carelessness, of the original first volume of "The French Revolution" (for which Mill had apparently supplied much of the material) Carlyle's chief concern was to console Mill in his remorse. "Your sorrow must be far sharper than mine; yours bound to be a passive one. How true is this of Richter's: 'All evil is like a nightmare: the instant you begin to stir under it, it is gone.'" So Carlyle spends £10 on new material, asks Mill to lend him more books, computes his loss of "wages" (which Mill insisted on making good) at £100, and writes: "How lucky.....that neither of us is wealthy and one of us is poor! It has positively hereby become a case which money can remedy." Mill sent £200, which Carlyle most courteously sends back: "More [than £100] were defrauding the revenue." The letters throw some

new light on Mill's life and character, though none on his opinions, and they come appropriately from the Carlyle Trustees as a corrective of the popular view of Carlyle.

A CENTURY OF EAST INDIA TRADE.*

THE student of English commercial policy in the 17th century has something of that satisfaction which comes from dealing in origins. In spite of this, the early history of the East India Company has not received the attention it deserves, and Professor Shafaat Ahmad Khan has done well in producing an undoubtedly able treatise on the political and economic influence of East Indian trade. For the greater part of the century the company was struggling with its Dutch rival. From this conflict against monopoly and from the sheer necessities of the East India trade—not from remote economic philosophy—there arose the mercantilist theories of a commercial state. These theories gave way to a demand for Free-trade only when the company's interests were threatened, no longer by the Dutch, but by those English interests which wished to exclude competing Indian cloths. Another development, of great importance from the political standpoint, was the gradual success of the company's steadfast attempt to gain the active protection of the Crown. The period of early misfortunes, when the whole enterprise was almost abandoned, was followed by more favourable prospects under Cromwell, and finally the company gained the whole-hearted support of Charles II. Trade quarrels now became State quarrels, and these, in turn, led to the commercial wars of the 18th century.

The author avowedly limits his field strictly, and, in fact, imposed on himself a further limitation, in that he makes hardly any reference to the connection between East Indian trade and the general colonial policy of the period, which is obviously of the greatest importance. Moreover, by isolating the Eastern trade itself from the routes by which, and the places in which, it was carried on, he cannot escape a certain intangibility, in spite of his wealth of detailed knowledge. In compensation for this, however, the author is a master of judicious repetition, a gift which renders his work doubly effective.

BOOKS RECEIVED.
