Experience in individual cases was varied. During 1922-23 the New South Wales railway obtained a surplus of £84,056, and South Australia a surplus of £5,769, after meeting interest, thus breaking the monotonous record of deficits for several years past. The largest deficit for 1922-23 was Queensland, where the net earnings were £706,138, against interest £2,181,330, leaving a deficit of £1,475,192. The succession of heavy railway deficits in Queensland has been one of the principal causes of the high taxation in that State.

A study of the railway reports in detail tends to emphasise the need for a more rapid growth of country population and production, to promote which the railways have been built. During the last few years, however, an excessive proportion of the growth of Australian population has been in the capital cities, where the principal benefit to the railways is in suburban traffic in competition with trams and motor buses, the latter growing at a moderate pace. The total capital cost of the Government railways in Australia and New Zealand is now over 302 millions sterling, and the mileage open for traffic is 26,925 miles. The total train mileage for 1922-23 was 70,273,530 miles, against 68,454,517 miles for 1921-22.

HUNGARY.—TRADE RETURNS—CEREAL PRODUCTION—VALORISATION LAW.

(FROM OUR CORRESPONDENT.)

BUDAPEST, February 25.

THE trade returns for the year 1923 make interesting reading, and to Hungarians should bring considerable satisfaction. Both imports and exports have increased, but while the former are only 30 million gold crowns more in value, the latter show an increase of 160 millions. The figures are: 1922, imports, 548,037 millions, exports, 334,036 millions; 1923, imports, 578,908 millions; exports, 496,680 millions. The bulk of this increase in exports is, no doubt, due to the good harvest and consequent capacity to export cereals and sugar in greater quantity. But other things have contributed, especially textile manufactures, which show an increase of seven million gold crowns in value. With regard to the latter industry, which has lately made great strides, owing chiefly to the severe import restrictions, it may be admitted that, unprotected, it could not be expected to be in a position to compete with the industries of the West. Some anxiety has, indeed, been expressed lest the recommendation made by the League of Nations in connection with the now sanctioned foreign

loan should be followed too closely, and so bring this struggling manufacture to the ground.

The value of imported manufactured goods was 47 millions less than in 1922, the export value being about the same. Half-finished goods show a 30 per cent. increase both in import and export. Raw material imports were 70,003 millions, against 35,004 millions in 1922, exports some 20 per cent. more—29 against 24 millions. The deduction is that the bulk of the manufactured articles were used to supply the home market, the amount of textiles exported, in gold kronen, being 17 millions, as against 10 millions in 1922. There is a welcome increase in the import of heavy agricultural machinery, arguing a greater attention to intensive farming, and also in raw material generally. But the export to the amount of 250 millions—being an increase over the previous year of 117 millions—of cereals and other foodstuffs is the greatest sign of the capacity of the country to stand on its own feet if given a fair chance. It has been said that cereal production could be increased 30 per cent. by introducing new methods, and, if it be taken into consideration that far more land could be placed under cereals, there is little doubt that much more than 30 per cent. could be added to the yield. The Land Company now about to begin its practical work and issue its land bonds should, if properly managed, assist serviceably in this direction.

It is interesting to compare these trade figures of Hungary with the figures of Czechoslovakia for the same periods. There it will be found that exports have declined 33 per cent. in value from last year, which was, again, 33 per cent. less than the bumper year 1921. The total amount of the exports for 1923 was 12,518,613,000 Czech crowns, against 18,086,348,000 Czech crowns for 1922, the figures for 1921 being 27,311,585,000. This great falling off is explained by 1923 being the first year of the stabilisation of the crown, together with a new method of reckoning. The Czech crown in the year 1921 reached its lowest value as regards the English £, being at one time as much as 410. It dropped to 250 early in 1922, and dropped still further in July, and in September reached its highest level, being some 125 for a short period. It then rose to 160, and in the past year has been 150, or thereabouts. In 1922 came the industrial crisis, and exports were much curtailed. The high value of the crown caused the exports to diminish both in value and quantity in 1923, and once more showed the danger of a high exchange in a new country depending on its exports for prosperity.

The new Valorisation Law is now in force in Hungary, and should do much to relieve the commercial position, and also to stabilise the crown, or at least prevent its sinking. Its operation is simple. A sum of money—say, 10 millions—is lent to a business firm by a bank, for instance, at 10 per cent., the rate of the crown at the time being, say, 1.40 at Zurich. At the expiry of the six months when it has to be repaid, should the crown have fallen to .70, the debtor must pay 20 millions, should it have risen to 2.80, on the other hand, he will be responsible for five millions only. It appears to be a reasonable law, and the only thing that strikes one about it is wonder at its not having been brought forward earlier, in which case much loss would have been avoided.

Letters to the Editor.

COMPANY DEBENTURE REDEMPTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It will be a matter of interest to investors who hold redeemable debenture stocks, and to the directors of companies generally, to know the attitude taken up by the Manchester Stock Exchange as to a company's right to redeem debenture stock by private treaty. The Manchester authorities suggest the following form of circular, to be sent to its debenture-holders by a company in the position to redeem part of its outstanding debenture debt:—

"The trustees for the debenture-holders, having a considerable amount of money in hand, are in a position to purchase a quantity of the company's debenture stock.

"Orders to purchase stock have been placed with the brokers to the company, and if you desire to sell any of your stock you can effect a sale by giving instructions to your own broker."

And it appears that Manchester intends to exclude from an official quotation in its list the debenture stock of any company which does not comply with this form—at least, I can only come to this conclusion from their recent action in removing the quotation of Union Cold Storage debenture stock from the Manchester Official List. This was done after an interview with me, and in spite of the fact that the form of circular which my company now uses has the approval of the London Stock Exchange authorities.

The only other Exchange to follow Manchester's example appears to be Liverpool, but the authorities of the Liverpool Exchange refuse to give any reason for the deletion, so I am unable to say whether Liverpool intends to follow Manchester in such matters generally, or whether this is an isolated case. I might add that the Liverpool Committee removed the quotation from the list without any previous communication with the company.

As examples of debenture redemption on similar lines to that of my company, I would quote Commercial Cable Company 4 per cent. debenture stock (Baring Brothers and Co., Limited's, circular) in 1920, and a recent offer made by the Olympic Portland Cement Company, Limited.

It seems a pity that any provincial exchange should differ on such an important point from London's practice, and I cannot help thinking that London's attitude is not only more broad-minded, but also more likely to serve the interests of the members of its Exchange in the long run. My experience, both as a stockbroker and a company director, is that a circular from a company offering to buy its debenture stock brings a good deal of business to brokers, for many holders wisely consult their broker before selling—and if a sale is decided on, get the broker to handle the business; but even if a sale is made direct, the broker probably benefits later on by earning a commission on the reinvestment of the money. In my opinion, anything which will interfere with a company's right to redeem debenture stock by purchase in the market, or by private treaty, or by asking for tenders, or by drawings, whichever may suit it best, is a retrograde step, and not in the interests of either the investing public or Stock Exchange business.—Yours, &c.,

ROGER P. SING,

Chairman of the Directors, Union Cold Storage Company, Limited.

Eastham, Cheshire, March 6th, 1924.

GREEK POLITICS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of January 12th, under the title "Greek Politics," you publish a letter from Lausanne of Professor Marcel Gauny about the return to Athens of Mr Venizelos.

I beg to hand you at foot the official figures I have obtained from the Home Office, showing the number of electors who voted during the elections of 1920 (which elections really recalled Constantine to the throne) and the number of electors who voted during the recent elections of December 16, 1923.

	No. of Electors who Voted Nov. 1920.	No. of Electors who Voted Dec. 1923.
Old Continental Greece	138,208	131,356
Peloponnesus	144,357	116,990
Cyclades	23,369	19,690
Ionian Islands	41,487	25,366
Negrepont	19,635	16,521
Thessaly	52,362	55,720
Arta and Epirus	31,684	29,814
Macedonia	119,603	149,954
Ægean Islands	35,517	49,079
Crete	55,140	61,503
Thrace	25,240	38,449
Total of votes	686,402	694,442

Mr Venizelos was elected at 18 centres all over the country out of 19 centres that put up his candidature, obtaining 80 per cent. to 97 per cent. of the numbers of

THE DEVELOPMENT OF ESTATES AND SALE OF PRODUCE.

votes. From these he resigned, retaining that of Athens and Piræus, where he came out first among 30 who were elected, obtaining 64,944 votes of 69,762.

On his return to Greece, Mr Venizelos was elected President of the Constituent Assembly by 345 votes out of 354 Deputies present.

The above numbers and facts certainly do not indicate that "three-quarters of the electors, as a protest, abstained from voting," nor "that Mr Venizelos is very unpopular in Greece," as Professor Gauny concludes in his letter to you.—Yours truly,

P. L. CHRYSOVELONI.

AN OPTIMIST ON CHINA.*

THIRTY-FIVE years of experience, consular and diplomatic, have given Mr Williams, now Professor of Oriental Languages at the University of California, peculiar opportunities for the study of China. He has held consular posts at Nanking and Shanghai; he has been American *chargé d'affaires* at Peking; he has travelled widely in districts rarely or never visited by foreigners; he has been in touch with eminent Chinese participants in the transformation of the country from a mediæval and Oriental empire into a modern and Westernising Republic. He can throw light on the process through their revelations to him. He is familiar with the language, the literature, the social life, and the history; he has the power of condensation, understanding, and sympathy. The result is an admirable compendium of the geography and social structure, the religion, and the history of the Chinese people, from the origin of its civilisation—probably in a now desert area in Central Asia, in company with the Assyrian Sumerians—through the complicated annals of its relations with the outside world, from the Indian campaign of Alexander the Great to the Nine-Power Treaty of 1922.

From so vast a field selection is difficult: we may note the account of the guilds, with their analogies in mediæval England, and of Chinese village life. But to-day the chief interest of China lies in her foreign relations. Her isolation was due to the misconduct of the earlier European traders—especially the Portuguese—which reversed the liberal policy of the Ming dynasty and set up unsuccessful efforts at exclusion. Then there followed a period of reciprocal misunderstandings, notably in Lord Macartney's mission of 1792, and in the Anglo-Chinese "opium war"—in which the opium traffic was only a small factor—of 1840-42. China's diplomatic isolation was broken down as a consequence of the Taiping rebellion, chiefly through the organisation of the Maritime Customs under British superintendence and the influence of Sir Robert Hart and Mr Anson Burlingame, the American Minister to Peking, whose mission to Europe as representative of China was cut short by his death. China's collapse before Japan in 1895 set up the period of attempted partition, intensified later by the construction of railways, and countered by the British and American demand for the "open door." Only the paralysis of the chief partitionist Powers in the world-war terminated these efforts, which, indeed, survived in the Japanese "Twenty-one Demands" of 1915. The Washington Conference, we may hope, has closed it for ever—unless China breaks up of herself. But Mr Williams, like some Englishmen with wide experience of China, does not believe she will break up. The present disturbances, he says, have had their parallels at the

* "China Yesterday and To-Day." By Edward Thomas Williams. (London) George G. Harrap and Co., Limited. 15s net

overthrow of every Chinese dynasty—the masses are doing their business as usual, in most places life is quiet, and American missionaries travel unmolested. The good sense of the people will end the strife of factions.

As a sample of the book's sidelights on the history, we may refer to the account (too long to quote), on Chinese authority, of the *coup d'état* of 1898, and to Professor Williams' discovery, after the Boxer rising, of the Guio-American Treaty of 1848 among the Chinese archives at Peking. Bound in purple, with a huge silver seal, it was evidently meant to appeal to the supposedly barbaric tastes of the Chinese Government—as if they were American Indians. We must also mention the author's full treatment of Chinese-American relations, and of the problem of Chinese emigration to the Pacific States.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
March 19.	March 20.

BUSINESS has come to the Stock Exchange in mild gusts, and without any settled tendency. In some parts of the House activity became marked during the middle of the week, but the trade of the first part of March has certainly been moderate. The new issue of Union of South Africa 5 per cent. stock was left with underwriters to the extent of 36 per cent., but the discount at the opening was not more than $\frac{1}{2}$, and the price recovered to its par level of 99. The recently issued Southern Rhodesia and Westralia Fives rose to a small premium, to

CHIEF FOREIGN BRANCH:

168 Fenchurch Street, London, E.C. 3.

lose it upon the underwriting of a New South Wales 5 per cent. stock at 97 $\frac{1}{2}$. Other new issues are generally strong, British Columbia Electric 5 per cent. tax-free debenture, for instance, being 6 premium bid, Japanese new Sixes 3 $\frac{3}{4}$ premium and Daily Mail debenture, issued at 99, rising to 106 upon very vague talk of its possible retirement before long at 110.

The War Loan maintains its price at about 101. People are already beginning to talk about its carrying four months' interest in the current quotation. In Conversion and other British Government stocks the changes are slight, but India Government securities, most of which were quoted ex-dividend on Tuesday, recovered the deductions. India stocks of all kinds are better, on the unexpectedly good showing made by Sir Basil Blackett's Budget.

French bonds are flat, upon the franc's further declines, and the French railway bonds also eased off, in spite of the statement that fares are now raised on the French railway systems. Brazilian bonds showed noticeable strength. There has been a little speculative buying of Chinese 8 per cent. issues. Several fresh borrowers are expected in the near future, Siam, Bolivia, and Peru all being mentioned in this connection. A feature is the strength of Austrian, Czechoslovakian, and Greater Prague bonds.

Quotation of the principal Home Railway stocks ex dividend had no particular effect upon the net prices. The fresh talk about a possible omnibus and tramway strike led to natural inquiries as to whether the strike might not affect the railways, too. The public are afraid to buy Home Railway stocks, and for this reason are turning more attention to Argentines and other foreigners, in which latter group United of Havana stands out especially. Brazilian Rails have spurred, hopes being current as to a possible better treatment being accorded the companies by the Brazilian Government.

Rubber has again receded in price, but the share market is so dead that movements in values are negligible. Tea shares have been marking time. The oil market is swayed more by speculative business on behalf of professional borrowers than by other considerations, though the expected rise in petrol is claimed as a point in favour of the companies' shares. Courtaulds continue dull, on disappointment with the dividend. The Stock Exchange was profoundly shocked at the death of one of its members at the Courtauld meeting on Thursday. The Whiteley, John Barker, and Harrods dividends combined to keep this market strong, and hotel shares also are firm. Breweries have moved upwards, under the leadership of Watney deferred. Sudan Plantations, after a sharp rise, reacted from the top, but other Egyptian land shares have not taken any part in the advance.

The iron and steel market shows a slightly duller disposition. Tobacco shares are, comparatively speaking, neglected; and textiles went back a trifle, in consequence of talk about labour difficulties in the trade. Shipping shares are steady. The insurance and banking groups are, if anything, better on balance, though there is not much business doing. In the electricity supply market Bournemouth and Poole spurred, on declaration of a share bonus to be distributed, but the London shares feel the effects of realisations which continue to be made on behalf of a big deceased account. In gas stocks there is not much doing.

The Kaffir market has fallen upon quiet times, but Rhodesians have remarkable vitality and strength in Cam and Motors to recommend them for their speculative attractions. Chartered are also better, on the hope of the early repayment of 5s. a share to the holders. De Beers and other diamond shares, after being better, went back on Paris selling. The tin markets again show hesitation in attaching too much importance to the extraordinary rise in the price of the metal; each timid advance in shares seems to bring out almost as many sellers as buyers; the various sections keep firm without attracting any noticeable amount of fresh buying. Russians have been a shade better. Canadians remain under a slight cloud of dullness.

Kingdom of Iceland National Bank.—Issue of £200,000

6 $\frac{1}{2}$ per cent. 20-year sterling bonds. Details of the Iceland National Bank (Landsbanki Islands) are given in the Bankers' Almanac. These bonds are a direct obligation of the Iceland National Bank (which belongs entirely to the State), and are guaranteed both as to principal and interest by the Government of Iceland. They are to be redeemed at par on or before February 1st, 1944. The bank undertakes that no further issue of bonds ranking *pari passu* with or prior to the present issue will be made during their currency. The Kingdom of Iceland is a free and sovereign State, united with Denmark, under one King. Budget figures for December 31, 1922, showed receipts amounting to 10,879,000 kr., against expenditure of 12,136,000 kr. Representatives of the Icelandic Government state that steps are being taken to arrange the national finances in the coming year so as to provide a Budget surplus in place of a deficit. The Customs receipts for 1923 are estimated at 3,800,000 kr., equivalent to £126,666 at exchange 30 kr. to the £. The only charge on these receipts is the 7 per cent. loan of 1921, the annual services of which require about £41,500. A fairly good Government security of one of the smaller States.

Karachi Port Trust.—Issue of £333,000 5 $\frac{1}{2}$ per cent.

debentures to bearer at 96 $\frac{1}{2}$ per cent. This issue is authorised by the Government of India under the Karachi Port Trust Act. The board of trustees of the Port have the exclusive right, under this Act, to levy tolls and charges for the landing, shipping, and storage of goods, and for the use of all wharves, quays, &c., vested in them under the Act, and no private wharves or landing places can be constructed without their permission. The Act also provides that the sanction of the Indian Government shall be obtained to all borrowing, and that all loans raised for the purposes of the Port Trust Act above referred to shall be raised on the security of (a) the property vested in the board, and (b) the tolls and charges leviable under the Act, less any sinking fund set aside for the purpose of paying off loans. The amount now owing by the board to the public at 1s. 4d. per rupee equals £1,902,333, against which the board have assets in the shape of lands, buildings, wharves, vessels, plant, &c., valued up to March, 1923, at £3,694,786. Under the orders of the Government, the liquidation of the board's capital debt to debenture-holders is provided for by the accumulation of sinking funds by annual appropriations from the board's revenues. A table of revenue and expenditure is given, which shows that gross revenue has varied from £427,817 six years ago to £272,760 for 1919-20, rising to £389,079 for 1921-22, but declining to £382,548 for last year. Deficits occurred in 1919-20 and 1922-23, "due to the general decline in trade and the abnormal cost of repairs to plant, &c." The bonds will be in the denomination of £100, with coupons attached, payable in sterling on March 15th and September 15th in each year at Lloyds Bank, London, where also the principal in sterling will be repayable in March, 1954. A reasonable investment in its class.

S.T.D. Motors, Limited.—Authorised capital £3,300,000

of which £3,224,408 has been issued and is fully paid. This is an offer for sale at £97 $\frac{1}{2}$ per cent. of £500,000 10-year 8 per cent. guaranteed notes, being part of an authorised issue of £700,000. S.T.D. is an important shareholding company in the motor world, and these notes will be guaranteed by four of the associated companies. In addition, the company is pledging its shareholdings as a specific first charge, and further, debentures will be given, specifically secured upon property and fixed assets of the four principal companies, subject to prior charges, amounting in value to £395,000. These debentures will contain provisions under which the companies concerned will be prevented from issuing further charges ranking

in priority or *pari passu*. According to a statement in the prospectus, surplus assets of the associated companies are given as £1,842,578. Stocks amount to over a million, while property and plant is shown at £740,626. The high rate of interest, 8 per cent., denotes the degree of risk involved, but against this must be placed the facts (1) that the associated undertakings turn out good cars with a world-wide reputation, and (2) that there is a good margin on assets for depreciation or wastage.

Littlehampton Gas Company.—Established in 1847 and incorporated by special Act of Parliament, 1909. Authorised share capital £59,025, of which £46,581 has been issued. The loan capital amounts to £29,512, of which £15,500 has been issued. This is an offer for sale by tender of £7,700 6 per cent. redeemable debenture stock. Interest on debenture stock, including that now offered, will require £1,469 per annum, and as the revenue for the year past was £4,272, a comfortable margin is left over for security.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

AMERICAN TELEPHONE AND TELEGRAPH COMPANY.

SUMMARY OF THE ANNUAL REPORT FOR THE YEAR ENDING DECEMBER 31, 1923.

Publication of the annual report of the American Telephone and Telegraph Company, which is the headquarters organization of the Bell Telephone System, has come to be a financial event of nation-wide interest, because there is a telephone for every seven of the population, while ownership of the company's stock is distributed among more shareholders than are represented on the books of any other American corporation.

President H. B. Thayer says that the habit of using the telephone grows steadily, and that with an annual increase of about 1,500,000 in the population of this country, the indications point strongly to an increasing demand for service. Since the telephone service was first installed, 46 years ago, the purpose has been to create and maintain a service available in any part of the country to furnish communication with any other part.

The Bell Telephone System comprises all the agencies through which this is accomplished. It consists of the American Telephone and Telegraph Company, which owns and operates the national system of long-distance telephoning, and the Associated Telephone Companies, in which the American Telephone and Telegraph Company is a stockholder, owning, directly or indirectly, all of the common stock of 14 companies, a majority in nine companies, and a minority in two companies. These associated companies operate the local lines in communities serving 10,400,000 stations. In addition, there are the connecting companies locally owned, and serving 4,600,000 stations. The American Telephone and Telegraph Company also owns 98 per cent. of the stock of the Western Electric Company, which serves as a manufacturing and supply agency to the Bell System. The American Telephone and Telegraph Company is a minority shareholder of the Bell Telephone Company of Canada, connecting with its lines and stations, and owns one-half of the stock of the company which operates the telephone cables between Florida and Cuba. All the stock of the Bell Telephone Securities Company, which was formed to facilitate a broad public investment in telephone securities by assisting and advising intending investors, is owned also by the American Telephone and Telegraph Company.

The company is, therefore, partly an operating company and partly a holding company, owning 91 per cent. of the voting stock of the companies that own and operate about 70 per cent. of the telephone stations of the United States. The American Telephone and Telegraph Company, President Thayer says, aims to concentrate its efforts and resources upon "the development and perfection of telephone service in this country, including connections with foreign services as improvement in the art may make such connections available; but that policy has not contemplated making them available by investment abroad, or by any other programme which would withdraw any of our resources, either in men or money, from this country."

President Thayer says that by new methods of economy and greater efficiency it has been possible to keep the increase in charges far below the increase in other items which contribute to the general increase in the cost of living and carrying on the business.

As of December 31, 1923, there were 281,149 holders of American Telephone and Telegraph stock. The authorized capital of the American Telephone and Telegraph Company last March was increased from \$750,000,000 to \$1,000,000,000, but only \$735,519,200 of the stock was outstanding at the close of last year.

REDUCTION OF FUNDED DEBT.

While three years ago, at the close of 1920, the company's funded debt represented 42 per cent. of the total capital obligations, there being only \$442,825,400 capital stock then outstanding, there is now, allowing for the \$40,000,000 note issue retired on February 1 last, a funded debt, comprising only 28 per cent. of the total capital obligations outstanding, the capital stock having been increased in the meantime to about \$753,500,000. The net assets of the company, after deducting current liabilities at the

close of 1923, aggregated \$1,274,239,000, a sum \$211,000,000 greater than the total capital obligations—stock and debt—outstanding. The company earned last year 11.35 per cent. on its average outstanding capital stock (compared with 11.14 per cent. the year before), not allowing for the equity in the undivided profits of the Associated Companies, of whose voting stock the American Telephone and Telegraph Company owns more than 90 per cent. Including working capital and other assets, with plant and equipment, and deducting current liabilities, the book cost of net assets used in the business and devoted to earning interest and dividends on the outstanding securities of the Bell System amounts to, approximately, \$2,287,000,000, or more than 139 per cent. of the aggregate amount of securities on which interest and dividends must be earned and paid. A sound financial structure has been created, so that the service may be furnished at as low a cost as is consistent with the maintenance of a high grade of service. The Bell System has always put back into the business a fair proportion of net profits, and this practice, together with the sale of securities at a premium, has resulted in the creation of a surplus which adds materially to the strength of the company's outstanding securities. Although dividends have been earned with a margin, the average rate of earnings on the book cost of the property of the Associated Companies last year was only 5.4 per cent.

Rate regulation during the past year has been for the most part satisfactory, and in all cases that have come to final decisions in the courts the companies of the Bell System have been successful.

RADIO TELEPHONY.

In order to keep in close touch with the practical development of radio broadcasting the American Telephone and Telegraph Company has operated a broadcasting station in New York since November, 1922. The Message of President Coolidge to Congress, delivered December 6th last, was broadcasted through six stations located at Washington, New York, Providence, St. Louis, Kansas City, and Dallas. The stations were connected by the long distance lines to the point where the address was delivered, in this way enabling the President of the United States for the first time on record to address in person several million citizens. As to trans-Atlantic messages, President Thayer says that: "Measurements indicate that, under most favourable conditions, a small amount of power such as is used in an amateur set will transmit speech so as to be heard sporadically in England. Atmospheric conditions, however, often change so greatly within only a few hours that 10,000 times as much power would not give audible speech. Engineers are actively engaged on the difficult problems presented by this extreme variability of radio telephone transmission over such distances. Much more scientific investigation and development work must yet be done before definite statements can be made concerning the prospects of dependable, day by day trans-oceanic telephone service."

RECORD USE OF TELEPHONE SERVICE.

The volume of telephone traffic last year which the companies of the Bell System were called upon to handle showed a substantial increase over preceding years, and the high standards of the service were fully maintained. The net gain of 891,342 stations meant the largest construction programme of the kind ever undertaken. A second trans-continental telephone line to take care of the continuous increase in such business was constructed last year along the route through Pueblo, El Paso, and thence to Los Angeles, so that there are now two complete trans-continental telephone routes, providing insurance against complete interruption of service from severe storm damage. The programme of extending the toll cable to the West has been continued, so that at the end of 1923 this service has been completed from the principal points of the Atlantic seaboard to Cleveland. It will be extended further to Chicago within the next two years.

THE BELL SYSTEM.

There are in the United States approximately 10,000 telephone companies, of which 9,169 companies connect for the interchange of toll traffic with the Bell System. There are also a large number of rural lines operated mainly on a mutual or co-operative basis and not rated as

companies. Of this group over 27,000 connected with the Bell System. The development of the Bell System on December 31, 1923, and its growth during the year, are shown in the following tables:—

TELEPHONE STATIONS.

	Number at End of Year.	Increase During Year.
Bell-owned	10,406,155	891,342
Bell-connecting .. .	4,593,946	58,194
Total	15,000,101	949,536

There is now one telephone station, Bell-owned or Bell-connecting, to each seven of the total population in the United States, as compared with one station to each 12 of the population ten years ago, and one to each 90 of the population in 1900.

TELEPHONE CONNECTIONS—BELL-OWNED EXCHANGES.

	Average Number Daily During 1922.	Average Number Daily During 1923.	Increase.
Exchange Connections .. .	36,831,000	41,109,000	4,278,000
Toll Connections .. .	1,523,000	1,683,000	160,000
Total	38,354,000	42,792,000	4,438,000

Continued on next page.

AMERICAN TELEPHONE AND TELEGRAPH CO.—Continued from preceding page.

MILES OF WIRE AT END OF YEAR—BELL OWNED.

	Aerial.	Underground.	Total.	Increase During Year.
Exchange	8,877,626	21,076,960	29,954,586	3,547,301
Toll	2,875,355	1,693,901	4,569,256	360,019
Total	11,752,981	22,770,861	34,523,842	3,907,320

On December 31, 1923, about 66 per cent. of the total mileage was in underground cable and more than 22 per cent. in aerial cable, with less than 12 per cent. in open wire. The percentage of the total wire mileage which is in cable steadily increases from year to year, thus adding to the stability of the plant through the lessening liability to storm damage. The year 1923 records the largest growth in plant in the history of the Bell System, the net additions for the year exceeding those of 1922 by \$64,000,000.

TELEPHONE EMPLOYEES.

Number on December 31, 1922 .. .	243,053
Number on December 31, 1923 .. .	271,987

The increase of approximately 29,000 employees during the year is comprised almost entirely of additions to the plant and traffic forces to construct, operate, and maintain the additional plant and equipment required for the business and to meet the increased demand for service.

INCOME STATEMENTS AND BALANCE-SHEETS.

The Bell System balance-sheet and income statement from which all inter-company duplications have been excluded, represent the business of the Bell System as a whole in its relation to the public. They consolidate the accounts of the American Telephone and Telegraph Company, the 25 Associated Companies, but do not include data for connecting companies or for such companies as the Bell Telephone Company of Canada and the Western Electric Company.

COMPANY MEETINGS, &c.

BRITANNIC ASSURANCE COMPANY, LIMITED.

MR J. A. JEFFERSON REVIEWS A PROSPEROUS YEAR.

TOTAL FUNDS OVER EIGHT MILLIONS.

WONDERFUL PROGRESS.

MR MURRAY LAING ON CONSERVATIVE VALUATION METHODS.

The fifty-eighth ordinary general meeting of the shareholders of the Britannic Assurance Company, Limited, was held, on February 29th, at the chief offices, Broad street corner, Birmingham, Mr J. A. Jefferson, F.I.A., chairman, presiding.

The assistant secretary read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report, said:—Ladies and gentlemen, since our last meeting death has once again invaded the precincts of our board room, and I am sure that, before we proceed with the ordinary business of the meeting, every shareholder present would desire to show his or her respect to the memory of our late chairman, Mr J. A. Patrick, who passed away on Saturday morning, January 26th. I, personally, have suffered a very deep loss, for when my late father died, Mr Patrick stepped into the breach in a two-fold sense, in that he became not only our chairman, but to me he took to some extent the place of my father, in a manner no one else could, and I shall never forget the kindly and personal interest he took in me. Our late chairman was typically a "Britannic" man, for he gave practically the whole of his life to the company's service. Starting right at the bottom of the ladder on a blank book, and rising to the highest rung, he is an undying example of what sound, honest, hard work can do in our business. By his kindly disposition he had endeared himself to every member of the staff, and he has left a memory which will be cherished by all who knew him. May I ask you, as a token of our deep sympathy with his widow, my colleague, Mr Albert Patrick, and all other members of his family, to stand in silence for a brief moment?

Ladies and gentlemen: It now devolves on me to move the adoption of the directors' report and the accounts for the 12 months ending December 31, 1923, and in doing so, however much I deplore the cause, I want to take the very first opportunity of saying how much I appreciate the honour the directors have conferred upon me in electing me to the proud position of chairman of this great company. In taking up my new responsibilities I realise that I labour under a disability, namely, that of a son seeking to follow in the footsteps of an extremely able and successful father, but as to this I can only say that I shall carry out my new duties to the best of my ability, and I believe that the whole-hearted co-operation I always receive from my colleagues and members of the staff will enable me to lead the "Britannic" to even higher achievements than those already accomplished.

FUNDS OVER EIGHT MILLIONS.

Turning now to the accounts, copies of which have been in your possession for some time, I will, with your permission, take same as having been read. In the directors' report you will see that our total gross income from all sources amounts to £2,987,997—an increase over the previous year of £201,054. The total outgo amounts to £1,974,902—leaving a balance in the year's accounts of well over one million pounds, and it is indeed with pride that on this, the first occasion I am called upon to take the chair at this meeting, I am able to report, for the first time in the history of the company, we have, in one year's operations, been able to save over one million pounds—another mile-stone in our forward march. You can imagine the interest with which I examined our accounts to find when the company was able to report its first million of funds, and I find it was in December, 1903. You will see, therefore, that in one year—1923—we have saved as much as was accumulated in the first 37 years of the company's existence. This feature, I am sure, must be as gratifying to the shareholders as it is to myself, since it affords great promise for the future prosperity of the "Britannic."

The total funds, you will note, now practically amount to eight and a-half million pounds—a truly imposing figure—and one that I hope to see go forward in leaps and bounds. Although income exceeds outgo by over one million pounds, an examination of the accounts shows that our total funds have not increased by this amount, and the reason is that the directors during the year launched a definite staff pension scheme, and, as stated in the report, the sum of £120,000 which had been accumulated for the purpose and which figured among our funds a year ago has been transferred to the trustees of the new staff pension scheme.

You will notice that the directors are recommending that £30,000 be again transferred this year to the trustees of this scheme, and I am sure it requires no words or arguments of mine to convince you of the desirability of the suggested transfer, for the "Britannic" has always been mindful of those worthy servants who have helped to build up this grand edifice, and who, by reason of advanced age or ill-health, find it impossible to carry on their duties any longer. The scheme, you will note, has been approved by the Commissioners of Inland Revenue.

INDUSTRIAL UNREST.

As I have mentioned on more than one occasion, the state of employment in this country is a factor which vitally affects the operations of a company such as this. Our late chairman and I dealt with this feature in our remarks last year, and perhaps you will remember I then stated that I saw distinct signs of trade improvement. Subsequent events have justified that view, for the improvement has been growing steadily though sometimes almost imperceptible. The unfortunate recurrence of trade disputes has had its depressing effect by tending to undermine that degree of confidence on the part of the trading community, which I believe is so necessary if this country is to return to the almost forgotten days of national prosperity.

You will remember last year I referred to the determined efforts made by your board to assist to the utmost limits those of our policy-holders in the industrial branch who were being hit by the unprecedented times through which we had been passing. As a result of our combined efforts, inside and out, I am convinced that a large amount of good sound business was conserved, and as a proof of this I may say that our remittance in this branch from the field force reached the excellent figure of 29.4 per cent., creating a new record, and showing that the business is sound, and that those policy-holders we helped in the past have appreciated our efforts and are gradually paying off their arrears of premium.

On previous occasions I have referred to the enquiry into the conduct of industrial assurance by Lord Parmoor's Committee, and I am pleased to say that during the past year an Act was placed on the Statute Book governing the activities of industrial assurance companies and societies. Allow me here and now to say that I welcome the new Act and believe it will have an uplifting influence on the business as a whole, which cannot but be beneficial to all concerned. I am also convinced that the great publicity given to the work we have for so many years been doing will remove to some extent the ignorance of the ordinary public on what is largely a technical subject, and which, heretofore, has made the business of industrial assurance one of the most vulnerable for ill-informed and prejudiced attack. One result of passing this Act has been to make us look even more closely into the whole of our administration, and in so doing we have been able to reorganise as to make further economies in administration possible—the beneficial effect of which is shown in the accounts now before you, and will, I hope continue to be shown in the future.

In view of the great importance of the new legislation, I may say that we have done all in our power to ensure that every member of the staff is conversant with the provisions of the Act, and it is the earnest desire of the directors that the business of this company shall be conducted in such a manner as will redound to the credit of everyone concerned. As a company, we have always done our utmost to carry on an honourable business in an honourable manner.

So much for past legislation, but as a board naturally our minds have been turning to the future, and to the rumours of further legislation dealing with old age pensions, widows' pensions, &c. Bearing, as they do, indirectly on our business, you can rely on your board watching carefully the interests of the company in these matters.

OUTSTANDING FEATURES OF THE ACCOUNTS.

With these general remarks I would now ask you to be good enough to bear with me whilst I briefly explain some of the outstanding features of the accounts we have presented to you.

The directors' report is, I think you will agree, self-explanatory, so, therefore, if you will kindly turn to the revenue account of the

ordinary branch you will notice that our premium income amounted to £614,228—an increase of £61,746 over the previous year—an increase, I submit, of which we can be justly proud, and which has only once been exceeded, viz., in the boom year of 1920. When we consider that in 1923, as compared with 1920, our claims by death were £18,000 more, and claims by maturity some £20,000 greater, and bear in mind the premium income cancelled by these increased claims, then we can, I think, be well satisfied with the progress made, especially in view of the times through which we have been passing, as compared with the abundant and, I am afraid, fictitious prosperity of 1920.

The net income from interest, dividends, &c., in this branch amounted to £169,000—an increase of over £25,000 on the previous year, and I am very proud indeed to be able to report that our net yield amounts to £5 5s 11½d—an achievement which I think will be reached by few and surpassed by none of our friendly rivals, and I am sure it will be apparent to you all what an important factor this interest yield is as to our future prosperity, for doubtless our esteemed actuary, Mr J. Murray Laing, will in due course be reporting to you that we value on a 3 per cent. basis in this branch, and the margin between the net rate assumed and that earned is a very potent factor indeed in the profit-earning capacity of the future.

On the other side of the account you will see that we have paid out in death claims £93,600, an item in excess of last year by just over £6,000, and in respect of matured endowment assurance policies a sum of no less than £154,533, which is just slightly greater than that paid last year. I would, in passing, like to draw your attention to a comparison of these figures—i.e., the amount paid in claims by death and the amount paid in claims by maturity, viz., £93,600 and £154,000 respectively. We are delighted, as a company, that so many of our policyholders live to reap the benefit of their earlier efforts of thrift.

There is a somewhat heavy increase in the amount paid by way of surrenders, but this is not to be wondered at, in view of the abnormal times to which I have already referred, and the generous terms offered by the company.

As compared with the previous year, the item of commission has increased, as also has the item of new business expenses, but these increases are the natural outcome of our expanding business, and in both cases there is a reduction in the ratio as compared with our premium income, the combined effect being a reduction of about 1 per cent. of the premium income of the year.

In the item of expenses of management there is an actual decrease of over £1,000, despite the large business handled, and, naturally, I am extremely gratified in being able to report such a satisfactory result. The net result is that the total expenses of the ordinary branch represented only 15.65 per cent. of the premium income, as compared with 16.75 per cent. a year ago.

THE TWO-MILLION MARK.

Our total funds in this branch, you will note, now amount to the substantial figure of approximately three and a half million pounds, showing an increase over the previous year of more than £392,000. Finally, I would like to thank all those representatives who helped us to reach the excellent figure of £1,901,802 in new sums assured in this branch last year. We have not yet reached our two million mark, and we are not satisfied that we are obtaining our fair share of this class of business; but I am convinced that, given reasonable conditions throughout the present year, it will not be necessary again to refer to the two-million mark as our aim, but rather to look hopefully to the two and a half million mark.

Before leaving this branch of our business, there is one matter bearing on the results to which, perhaps, I might refer. For many years we have, as you know, run a separate section of the ordinary branch, known as the special tables department. Under these tables we offered to the working classes particularly favourable terms for sums assured as small as £10, the premiums for which were payable yearly, half-yearly, or quarterly. In spite of our best endeavours, this branch has not been a success, and, in view of the excellent monthly prospectus, to which I referred last year, the directors reluctantly decided to withdraw the special tables prospectus as from the end of 1922. It is most gratifying to report that the new business of 1923 in the ordinary branch exceeded that of 1922, although the latter included the policies issued under the special tables.

I am delighted to say that our monthly tables have contributed very considerably to the increase made in the industrial branch, and am able to report that our monthly debit increased by over £3,300.

Referring now to the revenue account of the industrial branch, you will notice that our premium income amounted to £1,932,036—an increase over the previous year of £81,469—and this, although a considerably larger increase than we were able to report last

year, still shows the effect of the state of trade for the period under review.

Our net receipts from interest, dividends, &c., in this branch amounted to £224,548, an increase of approximately £36,000, and here again I am pleased to report that the net yield amounts also to £5 5s 11½d, and the remarks I made on this point when dealing with the ordinary branch apply similarly to this branch.

On the other side of the account you will notice that our death claims amounted to £529,958, a decrease of over £36,000 as compared with the previous year, but you will remember I explained last year that in 1922 we experienced a very heavy death-rate in the early part of that year owing to the influenza epidemic, and, fortunately, we enjoyed comparative immunity in 1923. Unfortunately, the epidemic which is now raging is taking its toll of our policyholders, so that we do well to take a long view when dealing with mortality comparisons.

Claims by maturity amounted to £155,683, an increase of practically £30,000, and as the surrender claims have increased by some £2,700, it means that our total claims under these three headings amounted to £701,557, and were, in fact, over £4,000 less than in 1922. The ratio of our total claims to our premium income for the year works out at 36.31 per cent., as compared with 38.13 per cent. for the previous year.

Of the other items of outgo, you will see that the commission amounts to £448,853, showing a natural increase of approximately £9,000, but the ratio to the premium income shows a decrease of over one-half of 1 per cent.

New business expenses amounted to £200,718, an actual decrease as compared with 1922 of over £9,000, the comparative ratios being 10.39 per cent. and 11.35 per cent.

Under the heading of management expenses, I am also pleased to be able to report a reduction. As in the case of the ordinary branch, our management expenses show a decrease, the saving in this instance being over £5,000. Taking our total expenses in this branch, there is an actual decrease of over £3,000, and our expenses ratio to premium income has dropped by over 2 per cent.—a fact that, I think you will agree, is eminently satisfactory.

THE BALANCE-SHEET.

Turning now to the balance-sheet, I would just like to point out one or two features which I think will be of interest to the shareholders. On the liability side, you will notice that the item of staff pension fund no longer appears, in view of the pension scheme already referred to. Our investment reserve fund remains at £200,000, and I am pleased to be able again to report that after a careful survey of our securities forming the assets side of the balance-sheet, the directors are satisfied that this fund is sufficient. Dealing quickly with the assets side of the company, you will notice that mortgages on property have increased by approximately £65,000, and this is mainly accounted for by our house purchase department, which, I am pleased to say, is still doing good work. A feature of this department is the way in which our borrowers anticipate the date for repayment of their advances, and during the year no less than 283 mortgages, amounting to £106,235, were repaid—15 by reason of the maturity of the endowment assurance policy, and eight by reason of the fact that death overtook our mortgagors—the policy moneys cancelling the mortgage, and in these latter cases we have the satisfaction of knowing that the widow was left a house free from encumbrance. An investigation has shown that in the remaining cases the policies taken out in connection with the mortgage have, in the majority of instances, been maintained in force, thus showing that, although our mortgagors have freed their houses, they still realise the benefit and cover that life assurance gives to them and their dependents. The total amount loaned under this scheme, which has been in operation since 1908, is well over one and a-half million pounds. You will notice that there is an increase of £25,000 in the item of loans on policies within their surrender value, but this only goes to prove that a life policy is an excellent asset readily available to help policy-holders in times of distress.

Two interesting items appear in the accounts for the first time—viz., deposit with the High Court under the new Industrial Assurance Act, 1923, and deposit with the Irish Free State. The latter deposit has arisen on account of the Irish Free State adopting the 1909 Insurance Act, and there is a committee at present sitting in Dublin considering the whole question.

Including the amounts on deposit, you will see that our total holding of British Government securities has slightly increased. Indian and colonial Government securities have increased by over £270,000, but there is a fairly substantial decrease in the Indian and colonial municipal securities. There are also substantial increases in the different classes of railway and debenture stocks, and I am sure you will agree that the company can find no safer class of security than sound railway debentures, preference and ordinary shares, and carefully selected industrial debentures. Foreign Government securities have increased by over £100,000,

but in all cases we have invested only in those countries where credit is high and the currency stable. The variations in the remaining classes are small, so I will not trouble you with the details.

RATE OF INTEREST EARNED.

I think I have covered most of the matters of interest, but there is just one point I would like to refer to again, and that is the rate of interest earned on our funds. As I have already stated, we are earning the excellent rate of £5 5s 11½d on the departmental funds, which is a slight increase over the rate earned last year. You will remember I then stated that I considered it would be increasingly difficult to maintain the high rate earned in 1922, and this has been correct in fact; but we have been favourably situated in acquiring some high-class well-distributed industrial debentures, which, of course, give a somewhat higher yield than purely trustee stocks, and, further, we have had to pay a lower rate of income-tax, or, to put it more correctly, we have received from the Inland Revenue authorities a much larger rebate of income-tax under the provisions of the Finance Act, 1918. These are the two main reasons for the small increase already referred to.

The directors' report concludes with a message of thanks to the inside and outside staffs for their loyal and efficient services, and I can only say that it is a sincere expression of the feelings of the board. In conclusion, I would like to take this opportunity of thanking my co-directors and chief officials for their personal loyalty and co-operation throughout a very strenuous period.

I now formally move that the report of the directors produced, together with the annexed statement of the company's accounts for the 12 months ended December 31, 1923, duly audited, be received, approved, and adopted.

THE ACTUARIAL VALUATION.

Mr Murray Laing, in seconding the resolution, said that, although the assets side of the balance-sheet of a life office was of paramount importance, and it was most gratifying to see large funds well invested, there was another aspect of vital importance—namely, the nature of the standards used by the actuary in estimat-

ing the extent of the company's liabilities. Not only was an estimate of future liabilities necessary to determine the adequacy or otherwise of the funds in hand, but upon the stringency of the actuarial methods employed depended very largely the future bonus prospects of the policyholders and shareholders. Dealing separately with the two main branches of the business, Mr Laing stated that in the ordinary branch the valuation had been conducted on a most conservative basis, namely, on table of mortality and the assumption of 3 per cent. interest. When regard was had to the fact that the net rate earned last year exceeded 5½ per cent., that the mortality experience had again been very favourable, and that an increased business had been conducted at a reduced rate of expense, it would be realised that the position disclosed was one of great strength, and one which should ensure the continuance of excellent bonus results in the future. The policies in force in this branch number over 132,000, assuring, with bonuses, over 12 million pounds, and a surplus of £171,951 had been disclosed, which had enabled the directors to recommend a reversionary bonus at the high rate of £1 16s per £100 assured in respect of all policies in the immediate participating class, and to carry forward to next valuation a balance of £57,868. This was the largest bonus ever declared by the company, and was 6s higher than that declared a year ago. In the industrial branch, the policies in force number over 2½ millions, and assured upwards of 29 million pounds. The valuation in this branch had been conducted on a basis even stronger than that employed a year ago (English Life table No. 6 at 3½ per cent. interest)—increased—and, despite the adoption of such a standard, a surplus had been disclosed of £99,423. Mr. Laing mentioned that in this branch new prospectuses came into force on January 1, coinciding with the date upon which the main provisions of the Industrial Assurance Act operated. Better benefits had been given under certain tables, and, in particular, in the case of juveniles, for the company had taken advantage of the increased limit sanctioned by the new Act to improve very considerably the benefits hitherto in force.

The report and accounts were unanimously adopted, and Mr J. A. Jefferson and Mr W. Roscoe were re-elected directors.

PRUDENTIAL ASSURANCE COMPANY, LIMITED.

SUCCESSFUL RESULTS OF YEAR'S BUSINESS. COMPANY'S CONTINUED PROGRESS.

The annual general meeting of the Prudential Assurance Company, Limited, was held on Thursday, March 6, 1924, at the chief office, Holborn Bars, London, Mr A. C. Thompson, the chairman of the company, presiding.

The secretary, Sir George May, K.B.E., having read the notice convening the meeting and the auditors' report,

The Chairman said: Ladies and gentlemen,—

It is my privilege to present to you this afternoon a record of the progress of the Prudential during the seventy-fifth year of its existence. As in previous years, questions and problems far-reaching in character have required careful and earnest consideration on the part of your directors, unremitting attention and foresight in administration by the management, as well as untiring effort and loyal co-operation by the staff both at chief office and throughout the country.

INCOME-TAX.

Another matter to which attention was drawn a year ago was the basis upon which industrial assurance companies were assessed for income-tax. It was urged that the injustice involved by the method of assessment then existing, which in effect required people with small incomes, who were entitled to substantial or even full relief, to pay a high rate of income-tax on that portion of their savings invested in life assurance, should be removed. I am glad now to be able to say that our hope in this matter has been largely realised by the special provisions of the Finance Act, 1923, although the full effect of the change is not immediately operative.

Coming now to the progress of the Prudential during 1923, it is within the knowledge of all of you that the general trade conditions in the British Isles have been far from satisfactory, unemployment being deplorably heavy; these factors have inevitably had an influence upon the new business done by the company. The position revealed, however, by a close survey of our accounts, will, I feel sure, prove very satisfactory to our policyholders, our staff, and yourselves.

TOTAL INCOME OF THE COMPANY.

The total income of the company during the year from all sources was £33,699,266, a considerable increase over that for 1922, and it is interesting to compare this total, the highest yet recorded by us, with that at the end of each 25 years of the company's history.

The figures are as follows:—

In 1873, after 25 years, the total income was £
In 1898, after 50 years, the total income was 477,355
In 1923, after 75 years, the total income was 9,029,192
These figures, I venture to think, indicate that the vitality of the company, far from diminishing with increasing age, is increasing, and that our record is one for which it is very difficult to find a parallel.

The analysis of the income for 1923 is as follows:—

Premiums, industrial branch	£
Premiums, ordinary branch	14,887,348
Premiums, general branch	9,728,511
Consideration for annuities granted	937,683
Interest and dividends	143,467
Payment received for administration of the approved societies	7,338,865
	663,392

INDUSTRIAL BRANCH.

In the industrial branch the increase in the premiums actually received was £500,760, this being equivalent to nearly £10,000 per week. When it is remembered that these premiums are collected weekly or monthly, the respective proportions being 57 per cent. and 43 per cent., as in 1922, and are paid in small sums of one penny and upwards, it will be realised how careful and efficient must be the organisation if the collection is to be done not only economically, but with the regularity necessary to conform with the requirements of the wage-earning classes.

ORDINARY BRANCH.

In the ordinary branch the increase in the premium income was £112,921, and the sums assured under new business reached the very high figure of £12,112,425. Although this amount falls short of that for 1922, it is almost double that obtained in the year before the war. The number of policies issued in 1923 was 73,831, producing an annual premium income of £888,806, and the average sum assured per policy is nearly twice as much as under the policies issued 10 years ago.

The interest income I have quoted is the gross amount earned by the company, and exceeds the corresponding figure for 1922 by about £600,000.

INTEREST INCOME.

The net interest income in the two branches represents on the life assurance funds a rate of £4 13s 9d per cent. for 1923, as against £4 9s 9d per cent. for 1922; the increase thus shown is a happy augury for future bonus prospects of participating policyholders.

CLAIMS.

Coming to the other side of the account, our total disbursements under our insurance contracts were nearly £13,500,000, this being about £500,000 more than in the previous year. In both the industrial and ordinary branches the mortality experienced was favourable, and, in spite of the fact that the sums assured at risk were greater, the death claims in each branch have appreciably decreased. In the industrial branch the amount paid to our policyholders under matured endowment assurances was in 1923 50 per cent. greater than in 1922, and in view of the growing popularity of this form of assurance, we anticipate considerable increases under this heading in years to come. The amount paid in the ordinary branch under matured endowment assurances exceeded for the second year in succession five million pounds; the increase in this item over the corresponding figure for the previous year is, however, more than counterbalanced by the decreased amount paid in death claims.

VALUATION REPORT.

Having dealt with items of the revenue accounts of the company, I now come to the valuation report. The total liability of the company under its contracts in all three branches, as ascertained at the valuation, is £146,480,836, which exceeds that of 1922 by nearly ten million pounds. This increase represents that portion of the excess of income over outgo, which, by the bases of our valuation, it is necessary to reserve in order that the company may be able to meet the claims as they emerge.

The distribution of the liabilities among the three branches is as follows:—

Ordinary branch	£67,324,460
Industrial branch	78,229,915
General branch	926,461

In the industrial branch the valuation basis has this year been materially strengthened by changing from the English Life Tables Nos. 3 and 6 to No. 8, which is the latest available exponent of population mortality. The rate of interest has not been altered, but remains at 3 per cent., which is considerably below that realised on the assurance fund. The reserves now held are beyond effective criticism, from whatever quarter it may be directed, and set a standard which previously has not been approached in industrial assurance in this country.

TOTAL SURPLUS.

The valuation report shows that the surplus in the ordinary branch is £2,428,648, the highest yet recorded, and in the industrial branch £2,534,013. The total amount of surplus to be dealt with in the two life branches was thus £4,962,661, and of this £1,000,000 has been transferred to the investments reserve funds—that is, £500,000 in each branch—and £250,000 has been added to the common contingency fund. Of the balance, £1,576,022 has been allotted to our ordinary branch policyholders as bonus on the original sums assured under with-profit policies, £906,650 has been allocated to industrial branch policyholders, £675,000 to holders of fully-paid shares, £227,642 to the outdoor staff, £179,152 has been carried forward in the ordinary branch, and £148,195 in the industrial branch.

ORDINARY BRANCH BONUS £2 PER CENT. PER ANNUM.

Last year, in commenting upon the increase of 6s per cent. in the ordinary branch bonus, thus making it up to the 32s per cent., which we were able then to allot to with-profit policies, I held out a modest anticipation that our pre-war rate of bonus would soon be reached. Our more sanguine hopes, however, have been realised, and we have been able this year further to increase the bonus by 8s per cent.—that is to say, from 32s per cent. to £2 per cent. This leaves the highest pre-war rate of 36s per cent. far behind, and marks the setting up of a fresh Prudential record. We have every confidence in being able to maintain this high rate of bonus distribution, and we are proud of the achievement, particularly in view of the fact that the Prudential is one of the few offices which allotted bonuses in respect of the war period and of each year since the war.

INDUSTRIAL BRANCH BONUS.

The amounts available as bonus to our industrial branch policies entitled to participate, and as bonus to the outdoor staff are items arising from the operations of the profit-sharing scheme. The largest amount previously distributed to policyholders under this scheme was £500,000, and the increased amount available this year for the purpose of bonus creates another record, which will be welcomed by all those who hold contracts in this branch, and who are entitled to participate. It may be remembered that last year I announced that we had decided to make a further and important development in industrial assurance by introducing a scheme of reversionary bonuses similar to that operating in the ordinary branch, in respect of all industrial branch policies effected on and after January 1, 1923. In accordance with this decision, we are able at the end of the first year's working of the scheme to give a reversionary bonus, vesting after 15 years, of 25s per cent. on the sum assured; should a claim arise after five years and before the elapse of fifteen years from the date of the policy, it will share in any interim bonus which may be declared. In regard to policies effected before January 1, 1923, we are able to increase the sum assured payable on a claim, either by death or maturity of endowment, arising between March 7, 1924, and the same date in 1929 by the following percentages:—

After 10 years' premiums paid	£5 per cent.
After 20	£7½ per cent.
After 30	£10 per cent.
After 40	£15 per cent.
After 50	£20 per cent.
After 55	£30 per cent.
After 60	£40 per cent.

These bonuses include those declared last year, but, as you will notice, are guaranteed for five years instead of for three years as was the case in 1923, or for two years as in 1922. This progressive increase in the period over which the bonus is guaranteed is in pursuance of the policy which, three years ago, we instituted in order that the bonus should, in the course of time, become permanent, and not be dependent solely upon the profits emerging in a particular year of account.

EXPENSE RATIO.

The surplus disclosed by the valuation has arisen partly from improvement in mortality, partly from the satisfactory rate of interest now being realised on the assurance fund, and lastly from the economies effected in the costs of administration. The reduction in expenses as expressed by the ratio of expenditure to premium income has been one of our chief concerns for the last ten years, and I am sure everyone who is interested in the development of industrial assurance will view with pleasure the success which has attended our efforts. This success, small at first, and hindered by the war, is now becoming more and more apparent, and finds an impressive reflection in our expense ratios, which for the last four years have been as follows:—

1920	40.50 per cent.
1921	36.92 per cent.
1922	32.12 per cent.
1923	29.74 per cent.

The main criticism which in the past has been directed against industrial assurance has been in respect of the cost of collecting the premiums and paying the benefits, but the improvement in our organisation, which has in no sense reached finality, has rendered such criticism meaningless so far as we are concerned. It is gratifying that these economies have not been achieved at the expense of the staff, for there has been a steady increase in their average earnings apart from the addition arising from the increased amount distributed under the profit-sharing scheme.

NEW INDUSTRIAL BRANCH PROSPECTUS—INCREASED BENEFITS.

To us the reduction in expense is, however, not only an ideal to be sought after for its own sake, but a business proposition, since it has become an integral part of Prudential practice to pass on to policyholders by way of profit-sharing or by way of increased policy benefits, or both, the advantages resulting from efficient and economical administration. The rate of expense is now for the first time below 30 per cent., and permits us once again to revise our benefits in favour of our clients. With the advent of the Industrial Assurance Act and the raising of the maximum benefits which legally can be granted in Great Britain under assurance contracts on lives under ten years of age, we have taken the opportunity completely to revise our industrial branch prospectus. This new prospectus is a considerable improvement on previous issues, and contains a set of weekly and monthly tables which embody industrial assurance policies in their simplest forms combined with more favourable benefits than it has hitherto been possible to grant under this class of life assurance policy. We believe that industrial assurance is destined to play an increasingly important part in establishing the economic welfare of the people by the continued encouragement and development of thrift, and it is the happy privilege of the Prudential to reinforce the self-denying efforts of

the people by an administration which with the intensive efficiency of the work of the staff eliminates unnecessary expenditure. We have every confidence that in this respect, and in others equally important for the benefit of our policyholders, the Prudential will continue to play the leading rôle.

GENERAL BRANCH.

Having dealt with the two life branches of the company's business, I will now deal with the results shown by our more recent development, namely, the general branch. I am again able to report still further extension in the business of this branch, the premium income having increased by £121,979 to £937,683; taking into account the general trade conditions, which have all been unfavourable to rapid growth of insurance business of this nature, I am of opinion that the increase, almost equalling as it does that for the previous year, cannot be regarded as other than satisfactory. We look forward to a continuous increase in the general branch premium income, so that before very long the Prudential habit of thinking in millions will be extended to this branch. I have at a previous meeting expressed our determination to accept only the highest class of risks, and have emphasised the difficulty of pursuing such a policy and at the same time of acquiring a substantial increase in premium income. You are aware that with trade conditions as they are at present there is a decided tendency for the claim ratio to move in an upward direction, and it is therefore particularly gratifying to me to be able to report that in 1923 our claim ratio was 40 per cent. as against 44 per cent. in 1922. The marine account again shows healthy development. At the end of the year the fund amounted to £501,806, and the results achieved justify in every way the arrangement with the Royal Exchange Assurance by which they underwrite these risks on our behalf. Everything that has happened during the past twelve months gives emphasis to the satisfaction I expressed last year with the ability being exercised in the management of this class of risk. It has again been thought advisable to carry to reserve the whole balance of premium income remaining after all disbursements have been made. We are of opinion that the policy of carefully husbanding the resources of the general branch is fully justified, since the building up of a substantial reserve fund is one of the first essentials of a successful general insurance business. Such a policy leads to an undoubted strengthening of the security of our insurance contracts, and at the same time leaves us free to take the fullest advantage of all opportunities for extending our business; in this way we consider that we are best serving the true interests of the holders of our "B" shares, and that the course pursued will be to their ultimate advantage.

INVESTMENT POSITION.

With regard to our investments, I am happy to be able to report an entirely satisfactory position. The whole of the Stock Exchange securities have been valued on the basis of market prices as at the end of the year, and you will be gratified to learn that the book values, in the aggregate, still stand at a figure which is below the market value, and this is true also of our total assets.

INVESTMENT RESERVE FUNDS.

In these circumstances, our investments reserve funds, which now amount to £3,000,000 in the ordinary branch and £2,250,000 in the industrial branch, are entirely available for meeting any depreciation which may occur in the future. The necessity for keeping these funds intact, and for making additions to them from time to time is, I think, self-evident. If any argument were needed, one has but to reflect upon the magnitude of the assets that we possess, and upon the experience of the past, which reminds us of the sensitiveness of prices to ever-changing political conditions at home, and to the international situation.

Although we are not yet free from the influence of substantial and sometimes obscure movements in the values of securities, the general position is now relatively much more stable than it has been for some time past; in fact, in spite of fluctuations during the year, prices at the moment are very similar to what they were twelve months ago.

YIELD ON NEW INVESTMENTS.

The result of our investment operations during the year has been to produce an average yield on the net new investments of over 6 per cent. before the deduction of tax. In selecting securities for purchase, we have never lost sight of that high standard of quality which it has always been our policy to maintain, and this being so, I think you will agree that the yield obtained is gratifyingly high.

Of our total assets, 77 per cent. is invested in home securities, 13½ per cent. in Indian and colonial securities, and 7½ per cent. in foreign securities. Of our Stock Exchange investments, 57 per cent. are represented by British Government loans.

BUSINESS IN AMERICA.

You will no doubt expect me to say a few words concerning our American subsidiary which started operations in May, 1922. I am pleased to be able to say that we have already obtained the substantial premium income of 1,500,000 dollars, and that so far as can be ascertained, the business generally appears to be of a satisfactory character.

PROFIT-SHARING SCHEME.

I should now like to deal with a matter which, although not of immediate importance, is one to which we may have to give attention at a later date. I refer to the scheme by which participation in the profits of the company was given to policyholders in the industrial branch, and to the outdoor staff. Your directors have on many occasions allocated large sums from the profits of the company for the benefit of the policyholders, and such actions and recommendations have always met with your cordial support. Until 1907 the method adopted had been to take these amounts from the profits before the dividend to shareholders was determined; in that year, however, it was thought desirable to systematise that which in previous years had been done in a more or less haphazard way. In consequence, we instituted our profit-sharing scheme, whereby the distributable surplus, after payment of 10s per share to the holders of fully-paid shares, is divided into six equal parts, of which four parts go to the industrial branch policyholders and one part each to the outdoor staff and to the shareholders.

Apart from the unavoidable interruption caused by the war, the scheme has worked well, but recently, mainly as the result of the policy pursued by your board, the position has changed to an extent that makes it desirable for consideration to be given to the question of modifying the scheme to the advantage of the policyholders. We have, as you know, as the result of an appreciable reduction of the expense ratio and the higher interest yield obtained on the new investments, considerably increased two of our main sources of profit. We feel that as there is every prospect of the increased profits from these sources continuing for some time to come, and as, in consequence, a fresh era of prosperity declared policy to give ultimately a greater proportion of the increases in profit to our policyholders. It is our intention that the policy adopted in 1907 whereby the outdoor staff participates equally with the shareholders in respect of the allocation of bonus future increases in profits, of which it is suggested a still larger proportion should be allocated to the industrial branch policyholders. It is, therefore, probable that in a few months' time the directors will call you together again and submit a revised scheme for your consideration.

THE FUTURE.

In regard to the future, I can with conviction express my confidence in the ability of the Prudential to uphold the position which it now occupies in the insurance world. It should in this connection be remembered that our fortunes are inseparably bound up with those of the nation, which is passing through an exceedingly troubled period. I have, however, a supreme faith that the people of this country will continue to display the same wonderful spirit of unity which has in the past always characterised their actions in the hour of emergency; given this spirit, a solution for our national difficulties will be found and nothing can then prevent the acceleration of Prudential progress.

This opinion, like others expressed at our previous meetings when the country has been passing through crises of one sort or another, is sufficient to indicate that here at Holborn Bars we are confirmed optimists. We feel we are justified in this optimism, and ties will melt away with no effort on our part, but we have found in the past that by facing our problems fairly and squarely, diligently seeking their solution, we have been able to secure a measure of success which has been exceedingly gratifying. It is in the same spirit that we face the future. Difficulties there will be again, but, fortified by the unswerving support of our staff, by the knowledge that our aims are just and in the belief that our efforts are wisely directed, we have every confidence in the continued progress and success of the Prudential.

Mr Edgar Horne (Deputy Chairman) seconded the resolution, which was carried unanimously.

The Chairman then proposed the re-election of Sir Thomas Dewey as president of the company, and Mr Edgar Horne having seconded the motion, it was carried with acclamation.

The Auditors having been re-elected, votes of thanks to the chairman and directors and to the management and indoor and outdoor staffs terminated the proceedings.

CHARING CROSS ELECTRICITY SUPPLY COMPANY, LIMITED.

SATISFACTORY PROGRESS—SHARE BONUS. COMPANY'S PARLIAMENTARY BILL EXPLAINED.

The annual ordinary general meeting of the shareholders of the Charing Cross Electricity Supply Co., Limited, was held, on the 4th instant, at the offices of the company, 60 St Martin's Lane, London, W.C., Mr W. F. Fladgate, M.V.O. (the chairman) presiding.

The secretary (Mr Cecil G. Stanesby, F.C.I.S.), having read the notice convening the meeting and the report of the auditors, The Chairman, in moving the adoption of the report and accounts, and the payment of the dividend recommended, said that the business for the past year, taken as a whole, showed satisfactory progress. Some 3,000,000 more units had been sold at a cost of £57,000 less than the previous year. Reductions in the prices charged had been made resulting in a saving to the company's customers of some £90,000, making with the reduction of the previous year no less than £152,000 in the two years.

In the West End undertakings, the gross revenue was £13,000 less, the reduction in price in this section of the business amounting to £49,000. As regards the City, owing again to reductions in price amounting to £41,000, the gross revenue was some £29,000 less. A provident fund had been instituted for the benefit of the company's employees, and the shareholders would no doubt gladly consent to the setting up of this fund. Coal and other fuel had cost £76,520, as against £95,500 for 1922, while a much larger amount of energy had been generated. Repairs were reduced from £45,900 to £24,280.

A dividend on the ordinary shares of the City undertaking of 10s per share, amounting to £35,000, had been paid, and this amount, passing through the hands of the Suppliers' Construction Company appeared in the net revenue account No. V. of the West End undertakings in the item of interest and dividends £49,900.

DIVIDEND AND ALLOCATIONS.

After setting aside in the West End undertaking the usual amount for depreciation, and paying interest on debenture stock, dividend on preference shares, and an interim dividend of 5s per share on the 80,000 ordinary shares, there was left a sum of £138,239, out of which the directors recommended that a final dividend of 9s 6d per share on the increased 96,000 shares should be paid; that £73,000 be carried to general reserve, and £19,639 carried forward. It is further recommended that £96,000 of the general reserve be capitalised and distributed in the form of fully-paid ordinary shares to the holders of the ordinary shares in the proportion of one share for every five held.

EARNINGS OF CITY UNDERTAKING.

The net earnings of the City undertaking were £204,130, out of which interest on the debenture stock, 6½ per cent. notes, loans, &c., had been paid, leaving a balance of £154,334. Out of this amount the dividend on the preference shares had been paid, and also a dividend of 10s per share on the City undertaking ordinary shares. £85,000 had been transferred to general reserve, and £16,334 carried forward.

CAPITAL EXPENDITURE.

Continuing, the Chairman said: As regards future capital expenditure, I am glad to say that the remodelling of the Bow Station is now approaching completion. In addition to the three steam turbines, having a total capacity of 24,000 kilowatts, to which I referred last year, a fourth machine, having a capacity of 13,000 kilowatts, is now in process of being installed. This machine, with two additional boilers, will complete our present extensions, although the rapid growth of load is likely to call for further extensions next year. If, however, the proposed alterations, to achieve which the bill to which I shall shortly call your attention should eventuate, the future additions to generating plant will be made by the combined companies, and we shall be relieved from expenditure on this head.

BILL EXPLAINED.

It will, I think, be convenient that I should at once address you, and I fear it must be at some length, on the subject of the circumstances under which the bill referred to in the notice convening the meeting is now put before you for your approval.

The improvement of the London electricity supply has been under consideration for many years, and last year I gave you some particulars as to what had happened since the passing of the Electricity Act of 1919. You will remember that a joint committee of nine of the London companies was formed and registered under the Joint Stock Companies Acts. Your company is a constituent member of that committee, which has since been strengthened by the addition of a tenth company. Last year I

stated that there was really only one important item which had emerged from the general wreckage which was suffered by various schemes which had been proposed and discussed.

That item consisted in the technical scheme which had been recommended by the joint report of the engineers of the London County Council, local authorities, and the committee company. This scheme dealt not only with the companies' areas of supply, but also with those of the local authorities, and it involved the placing under one control of a sufficient number of generating stations—a necessary arrangement if the cost of generation was to be materially reduced. This scheme may have to be modified, but I am confident that so long as in principle it is accepted it will ensure to the benefit of all interested, and need not necessarily be taken as a whole. In other words, provided our ten companies combine to deal with it in our areas, much will have been achieved.

JOINT ELECTRICITY AUTHORITY.

In the course of last summer a second item of value was added in the shape of certain resolutions which were passed by the Electricity Committee of the L.C.C., after discussion with the companies. I do not propose to trouble you with more than a brief statement of the purpose of these resolutions. A joint electricity authority is to be established for greater London. Provided a satisfactory sliding scale of prices and dividends can be agreed with the L.C.C., and accepted by the companies, they are to be given an extension of the tenure of the whole of their undertakings up to the year 1971.

ELECTRICITY COMMISSIONERS' SCHEME.

The third item of importance which has to be considered in dealing with this question is the scheme which the Electricity Commissioners propose to make for dealing with the whole district. I may remind you that they published a scheme last year which had many recommendations, but which, to my regret, it was necessary to challenge in the courts, as it appeared that the Commissioners had endeavoured to do what could only be done by Parliament itself. The Court of Appeal confirmed this view, and we have not yet received from the Commissioners a draft of their amended scheme, which, however, we are promised very shortly.

The fourth item to be dealt with is the Bill which is referred to in the notice convening the meeting, and which, in fact, has been deposited by us really as an enabling measure, so that, provided, as I hope will be the case, that the L.C.C., the Electricity Commissioners, and ourselves, are able to agree upon a scheme, our Bill, which has been deposited, will be the means, if Parliament approves, of confirming any parts of that scheme which do not lie within the competence of the Commissioners.

MEANS OF SUPPLYING CHEAP AND ABUNDANT ENERGY.

I have never admitted, nor am I now prepared to admit that the supply of London is either deficient or unreasonably dear, but the proposals made by the L.C.C., combined with the effect of the technical scheme to which I have referred, if finally approved by the Electricity Commissioners, and sanctioned by Parliament under the Bill which is now submitted to you, will, in my opinion, be the means of effecting a very great improvement in means of generating energy for the metropolitan area, and will place London as high as any other great city in its power to develop and supply a cheap and abundant amount of electrical energy.

I have occupied your time, but I trust at not too great a length.

TRIBUTE TO ENGINEERING AND SECRETARIAL STAFF.

Before moving the adoption of the report, I should like to testify to the very great satisfaction which the directors feel at the way in which their business has been conducted by their consulting engineer, Mr Highfield, their chief engineer, Mr Thorpe, and the whole of the engineering staff, and I would also like to testify to the very satisfactory work which has been undertaken by the secretary, Mr Stanesby, and the secretarial staff of the company.

Mr John M. Gatti, L.C.C. (managing director) seconded the motion, which was carried unanimously.

A resolution was passed approving the capitalisation of £96,000 of the general reserve, as suggested by the directors; the retiring directors, Mr W. F. Fladgate, and Mr J. M. Gatti, were re-elected, and Messrs Brown, Peet and Tilly were reappointed auditors.

An extraordinary general meeting was held subsequently, at which a resolution approving the Bill now pending in Parliament was passed.

A hearty vote of thanks to the chairman, directors, and staff concluded the proceedings.

REFUGE ASSURANCE COMPANY, LIMITED.

ANOTHER SATISFACTORY YEAR.

BONUS TO POLICY-HOLDERS INCREASED TO 38s.

The annual ordinary general meeting of the Refuge Assurance Company, Limited, was held on the 3rd inst., at the chief office of the company, Oxford street, Manchester, Mr James S. Proctor (the chairman) presiding.

The secretary (Mr John W. Moss) having read the notice convening the meeting and the auditors' report,

The Chairman, subsequent to referring to the death of Mr Robert Moss, a former director and secretary of the company, in moving the adoption of the report and accounts, said: I feel that I am again fortunate in being able to present accounts which reveal such an eminently satisfactory outcome of the company's operations during the year under review. When it is recalled that the general trading activity of the country displayed only some slight evidence of improvement compared with that of the previous year of abnormal commercial depression, I think you have very sound reason to be highly gratified by the results indicated. The aggregate income of the company amounted to £7,578,542, showing an increase of £447,874 over that of the previous year. The total assets on December 31st last amounted to £26,589,083, revealing an addition of £2,640,686 during the same period.

INDUSTRIAL BRANCH.

In the industrial branch the number of policies issued amounted to 765,150, assuring the sum of £12,840,878, and again constituted a record—viewed in relation to the new premiums incident to the business—during the past ten years, excluding the year 1920, which, it will be remembered, covered a period characterised by extremely active general trading conditions. The premium income amounted to £3,686,842, being £193,265 in excess of the corresponding item for 1922. The net income from investments—i.e., after deduction of income-tax—amounted to £318,863, which is equivalent to an effective yield of £4 12s 9d per cent. based on the total assets of this branch, whether invested or otherwise, and compares with a yield of £4 9s 8d per cent. produced in the previous year. An outstanding feature has been the exceedingly favourable mortality experienced, as a result of which the aggregate sum paid in death claims constitutes a reduction in actual amount—notwithstanding the substantial increase in business—of £60,536; the sum paid in consequence of death being £1,355,839. The survival claims amounted to £126,355. It has been considered prudent, in spite of the fact that the amount by which the aggregate value of the assets—taking market values as the basis—exceeds the amount at which they stand in the balance-sheet, has been considerably enhanced during the year, to take advantage of the more favourable results due to the light mortality experience to which I have referred, and to transfer to the investments reserve fund in this branch the sum of £100,000, this reserve as a consequence now amounting to £275,000. After making this provision and transferring £25,000 to the staff pension fund, the life assurance fund was augmented by the sum of £886,796 as the outcome of the year's operations, and after such addition amounted to £6,803,925.

I am extremely glad to be able to report that the highly important item of the expense ratio in this branch has again been appreciably reduced, the ratio of expense to premium income being 39.98 per cent., as compared with 40.81 per cent. for the preceding year.

Whilst dealing with the industrial branch it will interest you to know that in April, 1923, new industrial infantile whole life tables were issued, in addition to new infantile endowment assurance tables payable at age 14 or 16; and, further, while these remarks are more strictly applicable only to 1923, perhaps I may be permitted to allude to the new infantile tables which have been introduced in the industrial branch as from January, 1924. Advantage has been taken of the raising of the legal limit for assurances on children under age 10 to a maximum of £15, new whole life tables being issued which secure the full legal limit to a policy-holder. Parents who wish to effect assurances on the lives of their children have now a very wide choice of schemes of assurance from which to select the one most suited to their requirements.

ACTUARIAL INVESTIGATION (INDUSTRIAL BRANCH).

After transferring £125,000 to the funds to which I have referred and allocating a further sum of £250,000 to a special actuarial reserve for the purpose of strengthening the valuation basis—which reserve now amounts to £600,000—the actuary reports a surplus of £125,535, out of which it is proposed to allocate to the shareholders the sum of £12,203, and to declare a dividend of 7½ per cent., absorbing the sum of £22,500.

ORDINARY BRANCH.

The figures in the ordinary branch again emphasise the strong position of the company. The number of policies issued during the year was 41,478, assuring the sum of £4,769,542, showing an increase of £510,204 over the previous year, and creating a new premium income of £333,920, as against £309,446 in 1922. The aggregate premium income of this branch amounted to £2,745,831, an increase of £117,419, as against the amount collected in 1922. The net interest revenue—after deduction of income-tax—amounted to £822,204, equivalent to an effective yield of £4 12s 3d per cent. on the entire assets against £4 10s per cent. for the previous year. This further increase in the net yield is particularly gratifying when it is remembered that the profit—and consequently the bonus to policy-holders—depends to a substantial extent on the margin of yield between the assumed rate of interest on the assurance fund and the actual rate earned. The expenses in this branch have increased from 14.85 per cent. to 15.77 per cent.; this increase, however, is not unsatisfactory having regard to the substantial increase in the amount of new business written during the year.

The death claims amounted to £579,370, and the amount paid in respect of survivals was £665,171. After providing for all disbursements and the allocation of £25,000 to the staff pension fund, the life assurance fund of this branch amounted to £18,201,036, being an increase of £1,569,580, in respect of the year.

I may add that during the year a new 15-year endowment assurance scheme was introduced which gives the policy-holder the option of continuing his assurance after the expiry of the 15 years' term originally chosen.

ACTUARIAL INVESTIGATION (ORDINARY BRANCH).

In pursuance of the company's recognised practice of instituting annual investigations, an actuarial valuation was made of the liability incident to the contracts as at December 31st last, which, after transferring £25,000 to the staff pension fund, as stated above, revealed a surplus of £1,192,397, out of which the company's actuary advises the allocation of £652,967 to the policy-holders and shareholders. This sum admits of the declaration of a reversionary bonus of £1 18s per cent. based on the sum assured, which constitutes a record in the history of the company, and is an increase of 6s per cent. over the bonus declared for the previous year. When it is realised that, in spite of this very substantial increase in the bonus, the amount carried forward has been increased by £73,381—from the already exceptionally substantial amount of £466,049—to £539,430, I think the result may be regarded with the utmost satisfaction and confidence both by with-profit policy-holders and shareholders alike.

INVESTMENTS.

You will, quite rightly, expect me to make some allusion to the investments of the company. As I have already stated, the total assets of the company for the combined branches at December 31st last were £26,589,083. Of this amount invested funds represent £25,812,495, an increase during the year of £2,806,169. It will have been noticed that a small increase in our holdings of British Government securities, which now stand at £8,990,506, has occurred during the year, but by far the largest addition has taken place under the heading of Indian and Colonial Government securities and railway and other debentures and debenture stocks, in view of the slightly better yield afforded by these latter securities. I am again in the happy position to state that, in spite of the setback which occurred in the latter part of the year in the price of securities generally, the margin of appreciation over the amount at which they appear in the balance-sheets—taking market values at the end of the year as our basis—has, in the aggregate, again materially increased, liberal provision having been made for any impairment in other than Stock Exchange securities.

The total net amount of interest received last year was £1,141,068, representing a net yield on the aggregate assets of the combined branches of £4 12s 5d per cent., against £4 9s 11d per cent. for the preceding year, showing an increased yield of 2s 6d per cent. The corresponding yield on the invested funds was 2s 5d per cent. higher at £4 15s 9d per cent. These observations will, I think, convey to your minds the satisfactory position with respect to this highly important matter of the investments, and the care with which they are administered by the board.

TRIBUTE TO STAFF.

In conclusion, I am sure it needs no words of mind to remind you that the eminently satisfactory progress of the company, to which I have referred, is mainly due to the untiring efforts of

a staff whose unfailing loyalty to the company represents not the least of its many outstanding virtues. The depression in trade in many districts has again been such as to call forth the most strenuous endeavours on the part of our men if the best interests of the policy-holders and the company were to be maintained. These efforts, I need hardly say, have been forthcoming, and I desire, on behalf of the board, to convey to every member of the staff our very high appreciation of the services rendered. I am happy to observe signs which lead me to believe that—provided no further serious industrial upheavals occur—the trade of the country will gradually improve, and that, as a consequence, the endeavours of our staff will meet with a response even more encouraging than has been the case during the past year. In addition, the year 1924 commemorates the diamond jubilee of the company, and I have reason to know that the staff, no less than we ourselves, are particularly anxious that the outcome of the year's operations will provide a record which will be memorable in the history of the company.

Now, gentlemen, I have very much pleasure in moving the adoption of the annual report and accounts.

The report and accounts were adopted.

SCOTTISH WIDOWS' FUND LIFE ASSURANCE SOCIETY.

YEAR'S RESULTS "EMINENTLY SATISFACTORY."

QUINQUENNIAL RESULTS—NEW BUSINESS RECORD.

The hundred and tenth annual general court of the Scottish Widows' Fund Life Assurance Society was held in the society's head office, Edinburgh, on the 4th instant, H. E. Richardson, Esq., W.S. (chairman of the ordinary court of directors), presiding.

The Chairman, in moving the adoption of the report and accounts, said:

I shall mention first the new business, which I am glad to say largely exceeds that of the previous year. In 1923 we issued new policies for the gross sum assured of £2,493,000, of which £90,000 was re-assured, leaving a net new business of £2,403,000. This exceeds the previous year's net total by about £300,000, and we have no doubt that the excess would have been greater had not an election greatly disturbed the business of the country in general at the end of the year. During the past five years the new business has varied considerably according to general business conditions, but you will be interested to know that the total for the quinquennium is not only much greater than that of the previous period, which was one of war, but also greater than that of any previous five years in our history.

The death claims constitute a very important factor in the results of our business, and I am glad to say that we have again had a very favourable experience.

The life premium income was £1,611,000, or over £13,000 more than in 1922. The interest income also shows an increase, and for the first time exceeds one million sterling net. The gross rate of interest, namely, £5 4s 5d per cent., though satisfactory, is somewhat less than in the previous year. Owing, however, to the reduction in the rate of income-tax, the net rate of interest, namely, £4 7s 11d per cent., is slightly higher than that obtained in the previous year.

YEAR'S TOTAL INCOME.

The total income of the year was £2,746,000, and the total outgo £2,074,000, showing a surplus of income over outgo amounting to £672,000, which amount has been added to our funds. With the exception of one previous year, when the amount was but slightly greater, this is the largest amount ever added to our funds in a single year. Such a substantial addition to our funds is highly gratifying, as pointing to an expansion of our operations and resources.

As compared with the corresponding figures of five years ago, the annual premium income is now greater, in round figures, by £140,000, and the net annual interest income by £200,000, and the funds by about two millions sterling.

LIABILITIES UNDER LIFE ASSURANCE CONTRACTS.

In taking stock of our liabilities under our life assurance contracts, with the exception of some minor classes that have been specially dealt with, we have again used the combined Om and Om (5) tables, the most modern standard available. The valuation has been made according to the pure premium method—that is to say, only the theoretical risk premiums have been valued, and we have reserved as a provision for future expenses and profits the whole of the margin between those theoretical premiums and the actual premiums payable; and in the case of the non-profit policies where the natural margin is but narrow, a special reserve has been made to bring the margin up to 10 per cent. of the office premiums. The rate of interest adopted in the valuation, both for assurances and annuities, is as previously 3 per cent., that is, it is assumed that the funds and premiums as received will earn 3 per cent. net, the margin between that rate and the rate actually

earned forming one of the provisions made for the maintenance of future bonuses.

ASSETS-VALUE OF SECURITIES.

On the other side of the account we have the life assurance and annuity funds of over 24 millions. The assets making up these funds have been specially considered by a committee of the directors, and their report will, I am sure, be regarded as completely satisfactory. For the purposes of the investigation, the Stock Exchange investments have been taken at the prices at which they stood on the books at December 31st last, viz., at or under cost price. We have fortunately not to face any question of depreciation on this occasion. There have been many ups and downs in values during the past five years, and we shall doubtless have a similar experience during the current quinquennium. Prices on December 31st last, which were neither the best nor the worst of the quinquennium, were on the whole favourable, and I am glad to say that the aggregate market value of our securities considerably exceeded the value in our books.

QUESTION OF BONUS.

The directors have most carefully considered the question of the rate of bonus to be declared for the past five years, particularly with the desire to give some special rate on this occasion having regard to the disturbance of bonuses caused by the war. In order to preserve and protect the position of the holders of policies under which payments fell to be made during the past quinquennium, the directors, in pursuance of special powers which they sought and obtained from Parliament, allotted special intermediate bonuses in addition to those which would ordinarily have been payable in such cases. These special intermediate bonuses have partially absorbed the special reserve of £700,000 which was made in calculating the liabilities five years ago. Having regard to the position in which the society now stands, we feel that the balance of this reserve may now be applied to provide an addition to the ordinary rate of vested bonus to be allotted for the past five years to the participating policies remaining in force. This enables the directors to declare a bonus at the exceptional rate of £2 per cent. for each premium paid during the quinquennium, and calculated on the compound reversionary bonus principle, that is, on the existing bonus additions as well as on the original sums assured. This very high rate of allotment cannot fail to be gratifying to the members, but it is important to observe that it is declared in exceptional circumstances, and therefore is not one which can be expected to be our normal rate of bonus. We do, however, feel that in the absence of any unforeseen contingencies such as would affect offices in general, we are warranted in hoping that we may be able in the future to declare bonuses somewhat higher than our already high pre-war rate of 34s per cent. per annum, and for this reason we have fixed for the present the rate of contingent intermediate bonus to be allotted in respect of policies falling in before the next investigation at the increased rate of 35s per cent. per annum, calculated on sums assured and vested bonus additions.

SOCIETY'S SOUND POSITION.

In conclusion, I may say that the result of the quinquennial investigation into the state of the society's affairs has confirmed the directors in their conviction of its continued vitality and prosperity, and it is with confidence they expect that the members will receive their report as eminently satisfactory. Never before was the society in a stronger position than it occupies to-day. At the commencement of a fresh quinquennial period, with funds totalling over 24 millions, an annual income of over two and a half

millions, a favourable rate of mortality, and a low rate of expense, the society gives renewed evidence of the prudence of its policy and the undoubted security it affords to its policyholders.

The report and accounts were unanimously adopted. The retiring directors were re-elected, a vote of thanks was accorded to the directors and office-bearers, and the proceedings terminated with a vote of thanks to the chairman.

SOUTHERN RAILWAY COMPANY. A TRANSITION PERIOD.

ELECTRIFICATION OF SUBURBAN LINES.

The first annual general meeting of the Southern Railway Company was held, on the 7th instant, at the Cannon Street Hotel, London, Sir Hugh Drummond, Bt., C.M.G. (chairman of the company), presiding.

The secretary (Mr G. Knight) having read the notice convening the meeting,

The Chairman, in the course of his speech, said:

The year under review has been a difficult one. The four large railway companies and the numerous smaller lines which to-day form the Southern Railway, have been in a state of transition entailing great cost with little chance of cutting down expenditure on our part. A large number of the staff became redundant, and had to be compensated—which entailed very heavy and responsible work.

The total authorised capital of the new company is just under £160,000,000. Of this amount £149½ millions of stock has been created by the proprietors, and authorised for issue, leaving £10,300,000 still to be created, and, later on in the proceedings, we intend to ask you to create this amount, and to authorise the directors to issue it as and when it may be necessary.

The gross receipts from railway traffic amounted to £23,800,000. This, I may say, is a decrease of £1,713,000 compared with the receipts of the constituent and subsidiary companies in 1922. This decrease is entirely brought about by the various reductions in the rates and fares which were given effect to during the year. These reductions have undoubtedly given an impetus to trade—as they were intended to do—but up to the present the result to the railway companies has not been all we might have wished.

INCREASE IN PASSENGERS.

As a matter of fact, the number of passengers originating on the Southern Railway in 1923 was over 188,000,000, an increase of about 23,000,000 compared with 1913, and the number of season tickets issued shows an increase from 99,000 in 1913 to 159,000 in 1923. The receipts from other businesses come to £2,640,000, being an increase compared with 1922 of £158,000.

The result is that our total gross receipts from our various businesses show a decrease of £1,552,000. The railway expenditure at £19,254,000 shows a decrease of £781,500, as compared with 1922, and our expenditure on other businesses shows a decrease of £65,500, thereby bringing the total saving in expenditure to £847,000.

The net revenue from miscellaneous receipts—including general interest—shows a net increase of £56,000, and the result of the year's operation is that our net income amounts to £6,252,000, or a decrease of £653,000, as compared with the net revenue of the constituent and subsidiary companies in the previous year. If to this total £6,252,000 we add £250,000, which we proposed shall be taken from the railway compensation account, and the £247,000 brought in from last year's accounts, we have a total of £6,749,000 at our disposal. We recommend that you should declare a dividend of 3½ per cent. upon the deferred ordinary, and upon the ordinary "A" stock of the company, and that the sum of £250,000 be carried forward.

The total amount it is proposed to distribute in interest and dividends is £6,339,000, which is almost exactly the minimum amount that we are claiming as our standard revenue under the provisions of the Railways Act of 1921. The Railway Rates Tribunal is expected under the Act so to regulate the fares and charges as to enable us to earn this standard revenue, which is arrived at by taking the net revenue of all the constituent and subsidiary companies for the year 1913, and adding to it certain additions for interest on capital.

If by effecting economies, and by increasing our gross revenue we are able to augment our net earnings beyond that figure, the railway companies are entitled under the Act to retain 20 per cent. of such increased net revenue, and if this is achieved we should be enabled to increase the dividend on the deferred ordinary stock, and to pay a dividend on the "B" stock.

ELECTRIFICATION SCHEMES.

When the present electrification schemes now in hand are carried through—as I hope they will be by the end of next year—the Southern Railway Company will have electrified nearly the whole of its suburban area, and will have an electrified route mileage

greater than that possessed by all the other railways in the Kingdom put together. We have no doubt whatever as to the financial benefit that will result to the shareholders from this extended electrification scheme. The public will also benefit by the better services we shall be able to provide as compared with the existing steam services.

Then we have the floating dock which is being built for use at Southampton. Early last year the shipping companies told us that they must have facilities at Southampton for docking the largest vessels in their fleet, and they pointed out that it would be impossible for them to wait until a dry dock could be constructed.

We had, therefore, no alternative but to provide a floating dock, and it is expected that by the end of next month there will be installed at Southampton the largest floating dock in the world, capable of lifting 60,000 tons of dead weight. It will be, I am sure, a very valuable adjunct to our Southampton property. The arrangements we have been able to make with the shipping companies in regard to the use of this dock should ensure our getting a fair return on the money which is being spent in providing it.

We have given orders for the construction of five additional steamers, namely, two passenger vessels for the service between Southampton and St. Malo, or the Channel Islands—these boats will be larger than any existing on these routes, will be notable for the amount of sleeping accommodation installed, and will be equipped for burning oil fuel; two cargo boats for the service between Dover or Folkestone and France, and one paddle steamer for use between Portsmouth and the Isle of Wight. Instructions have been given for the construction of new stations at Margate, Ramsgate Exmouth, Wimbledon, Sutton, and Dover Priory, and for the construction of modern locomotive sheds at Dover and Exmouth Junction.

The work at Feltham has been completed, and is giving every satisfaction, enabling us to deal with any increased traffic that we are likely to get, and, at the same time, showing a very considerable reduction in working costs. A commencement has been made with the construction of the Totton, Hythe, and Fawley Light Railway on the West side of Southampton Water, and we expect to open that railway for traffic some time in 1925.

THE RAILWAY STRIKE.

So far as the railway strike is concerned, before the introduction of the Railways Bill in the House of Commons in 1921, an agreement had been arrived at between the railway companies and the trades unions as to the method of negotiation that should be set up to deal with all questions in dispute between the parties. This agreement was embodied in the Railways Act, and is now part of the law of the land. Under the agreement all questions affecting the variations in rates of pay and conditions of service are first of all to be made the subject of negotiations between the railway companies and representatives of the unions.

Failing agreement, the matter, or matters, in dispute are referred to the Central Wages Board, which is composed of eight representatives of the railway companies and eight representatives of the trade unions. Failing settlement at that Board, it is referred to the National Wages Board, which is composed not only of representatives of the railway companies and the trades unions, but also of four representatives of the users of the railways, with a independent chairman in the person of Sir William Mackenzie, who is also chairman of the Industrial Court. Every question that goes before this board is very thoroughly sifted, first at a public hearing, and secondly in camera, and although the decisions arrived at are not legally binding upon any of the parties, there is a guarantee that every point is carefully considered before any such decision is promulgated. The organisation established throughout the industrial community, and it is deplorable that a section of the men should repudiate the recommendation of their own leaders and withdraw their labour, thereby putting the public to the enormous inconvenience that they experienced towards the end of January last.

DOCKERS' STRIKE.

You, as shareholders of the Southern Railway Company, were, of course, involved in the dockers' strike that took place in the third week of February. At Southampton a large number of men of the dock class are employed, and, as far as possible, these men are given regular employment, but obviously owing to the fluctuating trade that is experienced in the port there is a certain amount of casual labour. These men—prior to the strike—were receiving 10s a day for an eight-hour day, as compared with 5s a day for at the rate of 12s a day for an eight-hour day. At Southampton alone this addition of 2s means an increase in our labour charges of no less than £40,000 a year.

We hear to-day of contracts being placed abroad, and various reasons are put forward except, in my opinion, the right ones. I am not afraid of high wages; but a man who receives high wages

must give to his employer of his best; he must put in an honest day's work, and employer and employee should help each other in their business, and the latter should not be guided by outside interferences. Throughout the year the officers of the company have all been busy reconstituting their departments, in order to bring the whole of the work of each individual department under one head. The work involved has been prodigious, necessitating, as it did, the study of the various practices of the different companies, and taking out and adopting the best features of each, and choosing the staff necessary to carry on the work. I am glad to say that everything is proceeding with commendable smoothness. Many of the departments have already got into their full stride, and we expect that within the next few months all difficulties will have been surmounted and the whole of the machinery will be running smoothly.

The Chairman concluded by moving the adoption of the report and accounts.

Brig.-Gen. the Hon. Everard Baring, C.V.O., C.B.E. (one of the deputy-chairmen) seconded the resolution, and, after some discussion, it was carried unanimously.

The directors were re-elected *en bloc*, the auditors were re-appointed, the resolution was passed approving the issue of further capital, and certain special business was approved.

UNDERGROUND ELECTRIC RAILWAYS OF LONDON. LORD ASHFIELD ON LONDON'S TRAFFIC PROBLEMS.

The annual meeting of the Underground Electric Railways Company of London, Limited, was held, on the 7th instant, at Caxton Hall, Westminster, London.

The Rt. Hon. Lord Ashfield, who presided, in moving the adoption of the report and accounts, said that in his recent speech to the shareholders of the principal operating companies he dealt at some length with the traffic situation which had arisen in London. Events had since then moved quickly, and the Prime Minister had promised the House of Commons that a Bill to deal with the matter should be introduced in Parliament immediately. Although certain negotiations had taken place, he (the chairman) could not profess to know what exactly would be comprised in the Bill, but he anticipated that it would, at any rate, include some machinery for dealing effectively with two serious and immediate

problems—namely, the obstruction of the streets for repairs and the congestion of the streets from ill-directed traffic operation. He could only venture the hope that it might prove effective in dealing with these problems. Of this he felt sure, that Parliament might be relied upon to frame a measure which would be fair and just, and he was content to leave the subject there, with just one word of moderation; he thought that, rather than risk an ambitious project, one step at a time in such a complex matter was the safest and wisest policy to follow if in the end they were to arrive at the safest and wisest solution.

BUS COMPETITION.

There was one thing arising out of his previous speech which seemed to have been misunderstood, and which he might take this opportunity of correcting. He freely admitted that the omnibuses placed upon the streets recently by numerous individual owners had just as much right there as the omnibuses of the London General Omnibus Company and its associates. Equally, if additional motor-omnibuses were required upon the streets the L.G.O.C. and its associates had as much right to supply them as any newcomers. There ought, therefore, to be no complaint that they had exercised this right. All he asked was that whoever supplied the omnibuses ought to be compelled to work them in a certain and reliable manner so as to serve the public requirements rather than, by chopping and changing routes and services, solely his own interests. The traffic problem, however—and this was the important point—was not confined to omnibuses; if it were, it would be a simple matter to solve. It embraced railways and tramways, and, because of their diversity of capacity and function, became complex. If railways and tramways constructed under statutory authority were to be subject to unrestricted omnibus competition, then a policy of expansion was at once impossible, and the maintenance of existing railway and tramway services exceedingly doubtful. If, therefore, London was to secure, what he for one thought it must have, a continually improving and expanding underground railway system, London must first secure in some form a measure of public control over omnibus routes and services. This was not a discriminating proposal—it was a general proposal, covering all omnibuses, and it was put forward as necessary in the public interest, and not as mere protection of a private interest. He trusted that, with this further word of explanation, there might be no controversy over his intention.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves exceed £13,000,000

HEAD OFFICE:
62, OLD BROAD STREET, LONDON, E.C.2.

NORTHERN DISTRICT OFFICE:
89, Market St., Bradford.

LANCASHIRE BRANCH:
39, Mosley Street, Manchester.

The Anglo-South American Bank, Ltd., is represented in U.S.A. by the **ANGLO SOUTH AMERICAN TRUST COMPANY, NEW YORK** (Incorporated under the laws of the State of New York); and in FRANCE by the **BANQUE ANGLO-SUD AMERICAINE, Société Anonyme, PARIS.**

Affiliated Institutions:
THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

BRANCHES OF THE ANGLO-SOUTH AMERICAN BANK, LIMITED.
 * BRANCHES OF THE BRITISH BANK OF SOUTH AMERICA, LIMITED.
 * BRANCHES OF THE COMMERCIAL BANK OF SPANISH AMERICA, LIMITED.

Referring to the very large stake which this company had in London traffic, Lord Ashfield said that the railways comprised 68 route miles, with 11 route miles in addition under construction; the tramways 114 route miles, and the omnibuses 753 miles of roadways covered. The total capital invested in railways (including the power station) was £56,750,000, in tramways £6,500,000, and in omnibuses £5,500,000, or, altogether, £68,750,000.

RECORD BUS PASSENGERS.

The total number of passengers carried last year was 1,798 millions, or 204 millions more than in the preceding year. The total now represented much more than half the aggregate local travel in Greater London. Of these passengers, 1,214 millions were carried by the omnibuses of the established companies, and constituted a record. For the first time the omnibus passengers exceeded in number the passengers carried by all the tramway undertakings, both municipal and company owned, and thus the omnibus had become the principal means of transport. They had every reason to be proud of the service which they had helped to render to the public, and it was because they had rendered that service liberally and efficiently that they had been enabled to weld together into one system so large a group of transport undertakings. They had earned their pride of place.

In other respects the past year had not marked a record. The average receipt per passenger had been only 2d, or 17 per cent. less than in the preceding year. The public had enjoyed the benefit of lower fares. The average return on the capital of the operating companies was only 4.3 per cent., or slightly less than in the preceding year. The progress which had been accomplished in handling a large volume of traffic had not so far brought a more satisfactory remuneration to the shareholders—least of all to those of this company. He was not unmindful of the claim which they had for consideration when, after more than 20 years, no dividend had yet been paid upon the ordinary share capital of this company of over £5,000,000, and when the immense activities of their undertakings were reviewed he realised how difficult it was for the shareholders to understand why the financial results of this company year by year were so meagre and disappointing.

UNREMUNERATIVE TRANSPORT UNDERTAKINGS.

It was significant that all transport undertakings in Greater London, whether privately or municipally owned, constantly tended to be unremunerative. Taking the capital invested in all the Underground Railways, he found that in the years subsequent to the completion of electrification, and prior to the war, the average return ranged from 1.9 to 2.5 per cent., and in the few years subsequent to the war, in spite of an enormous development in the volume of traffic carried, from 3.2 to 3.7 per cent. Looked at from the narrower but more pertinent point of view of the ordinary capital only, the pre-war range of return was from .7 to 1.2 per cent., and the post-war range of return from 2.4 to 3.4 per cent. The total capital invested in London transport of all forms was approximately £116,000,000, of which £84,000,000, or 72 per cent., represented the railway share, so it could be realised what a burden the scanty return on the railway capital was. Yet he was sure that if the various transport facilities of London were worked harmoniously together, between them they could earn sufficient for their mutual support without increasing present fares or placing any further burdens on the passengers.

In conclusion, the Chairman moved the adoption of the report and accounts.

Mr H. A. Vernet (deputy-chairman) seconded the motion.

Sir Robert Perks drew attention to what he described as the excessive amounts which had been placed to reserve out of revenue by the companies of the group, and said that the board, by paying dividends on the ordinary stock, should endeavour to restore the credit of the undertaking and put it on a higher level.

The Chairman, in reply to Sir Robert Perks and other shareholders, examined the position in respect of reserves, and added that he did not intend his remarks with regard to the difficulties which stood in the way of a reorganisation of the capital to imply that it was not possible to pay dividends on the ordinary stock until the capital had, as a fact, been reorganised.

The report and accounts were unanimously adopted.

HARRODS, LIMITED.

THIRTY-FIVE YEARS' VIGOROUS GROWTH.

The thirty-fourth annual general meeting of Harrods, Limited, was held, on the 7th inst., on the company's premises, Brompton road, London, Sir Woodman Burbidge, Bart., C.B.E. (chairman and managing director), presiding.

The secretary (Mr R. H. Griffith) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that it was a very pleasant task for him to present the results of the past year's trading, which he ventured to think the shareholders would regard as satisfactory. The net profit for the

year amounted to £567,800, being an increase of £83,679. With the exception of the boom year 1919, that was the largest net profit earned in the history of the company. The business was established 75 years ago, and it was 35 years since its formation into a limited liability company. The net profit earned in the first year was £13,519, so that the net profit for the year under review of £567,800 showed 35 years' vigorous growth. During that period they had earned net profits amounting to £6,730,000, and had distributed more than £6,000,000 in dividends. That was a good record.

In the course of a detailed analysis of the accounts, the Chairman said that the stocks on hand, which at £1,049,173 showed a decrease of £42,079, were in a satisfactory condition. The rate of turnover was the highest reached during the last 10 years. Their merchandise was of high quality, and he ventured to say that there was no house in the kingdom where the choice was so ample and varied, or where the prices were so reasonable. The business would continue to be built upon those principles.

COMPANY'S STRONG POSITION.

Last year he had stated that the company's financial position had never been stronger. They were in an even stronger position this year, having practically a million pounds in liquid assets, apart from cash balances and investments held by Dickins and Jones, or Swan and Edgar, both of which companies kept their finances entirely separate from those of the parent company. It was proposed to pay a final dividend of 8 per cent. on the ordinary shares, making 11 per cent. for the year, to transfer £25,000 to the reserve fund, and to carry forward £41,488. With regard to their associated companies, last year he had stated that Dickins and Jones had been in occupation of their new premises in Regent street for 10 months, and that the increased trade and increased profits were considered quite satisfactory. He was able to give an equally satisfactory report regarding the year just ended. They were settled in their new premises; their trade had increased during the year, and their net profits showed a substantial increase over those of the previous year. He had every confidence that the future of that century-old business would be marked by a continuance of progress and prosperity, and that there was every reason to expect a larger return upon their investment in it in the near future.

With regard to Swan and Edgar, their net profits were satisfactory, showing an increase. The rebuilding of their premises would be commenced about next January. It was proposed to build in two sections, thereby enabling the business to be carried on with a minimum inconvenience to customers. That company would be in a position to finance the rebuilding scheme without recourse to the issuing of any additional share capital. With reference to Kendal, Milne and Co., Manchester, the results of the year's trading had been quite satisfactory, in view of the depression in trade which had been so acutely felt in that great commercial centre during last year. They were confidently anticipating the return of more prosperous times, and were making provision for the development of the business.

As to the Brompton road business, the name of Harrods had never stood higher for quality and value than it did at the present day. It was a satisfactory feature of the business that year by year and over a great many years they continued to record a large increase in the number of account customers.

THE OUTLOOK.

With regard to the outlook, after expressing his conviction that freedom from strikes was essential in order that the trade and industry of the country might be put upon a more favourable basis, he went on to say that he thought the prospects for 1924, both national and international, were more hopeful, and he believed that they would have an even more pronounced improvement this year than last; undoubtedly better times were ahead. There were various favourable features in the situation. An unusually large number of visitors was expected in view of the exhibition at Wembley, and Harrods hoped to get their share of the resulting extra trade. He was therefore hopeful of being able to present next year even better results than those for the financial year with which they were dealing that day.

The report and accounts were unanimously adopted.

NATIONAL MORTGAGE AND AGENCY COMPANY OF NEW ZEALAND, LIMITED. A PROSPEROUS YEAR.

The forty-eighth ordinary general meeting of the National Mortgage and Agency Company of New Zealand, Limited, was held, on the 5th instant, at Winchester House, Old Broad street, London. Mr Robert Logan (the chairman) presided.

The secretary and London manager (Mr A. St George Ryder) having read the notice convening the meeting and the report of the auditors,

The Chairman said that last year had been a very profitable and prosperous one for New Zealand. Wool, frozen meat and dairy

produce had given excellent returns—wool especially so, fine cross-bred having increased in value from 15 to 20 per cent., medium qualities 25 per cent., and coarse wools 50 per cent. B.A.W.R.A. stocks had been reduced to less than 200,000 bales, and it was expected would all be disposed of before the May series of London wool auctions began. Market prospects for the current year were good, particularly for growers of crossbred wools. The most striking feature in prices of the past year had been the upward trend in the value of the coarser sorts of wool.

Dairy farming continued to make good progress, and New Zealand was now the greatest exporter of dairy produce in the world. The market had fluctuated considerably, but the returns had been very satisfactory to the producer. With regard to frozen meat, the past year had been a difficult one from the London importers' point of view. Values at the beginning of last season were undoubtedly too high in the Dominion, and resulted in serious losses being sustained by buyers here. This season opening prices in New Zealand were more reasonable, but the position with regard to our home market was still somewhat obscure, although prices in the Dominion for prime fat sheep and lambs for export had been satisfactory to the growers. Mr Ritchie, the general manager, cabled as follows:—"Wool, lambs, mutton, dairy produce, excellent prices. Grain-growing not profitable; much smaller area under oats and wheat. Good lambing, but dry weather since November affects feed. If it continues much longer supplies of lambs will fall off and harvest will be light in consequence." The board had recently heard that there had been showers in New Zealand, but he was afraid they could not yet be certain that the drought was broken entirely.

The report and accounts were unanimously adopted, and a dividend at the rate of 7½ per cent. per annum, together with a bonus of 1s 6d per share, both free of income-tax, was declared for the half-year ended September 30th last, making 11½ per cent. for the year.

BRITISH AUTOMOBILE TRACTION COMPANY, LIMITED.

COMPETITION AND ROAD CONGESTION.

The twentieth ordinary general meeting of the British Automobile Traction Company, Limited, was held, on the 6th instant, at 88 Kingsway, London. Mr Sidney E. Garcke (the chairman) presided.

The Chairman, in moving the adoption of the report and accounts, said that the profits for the year were only very slightly down. Many of their undertakings served pleasure districts, and the improved railway facilities were found to benefit those services. On the other hand, in residential and industrial districts they had suffered from railway competition, but on balance they had benefited by the improvement in railway facilities.

A great deal had been said and written lately in regard to competition and road congestion. From the public viewpoint quite as much as from that of a shareholder, the effect of irregular competition was very unsatisfactory wherever it took place, but the problem in rural areas was in many respects quite different from that which existed in the Metropolis. In the rural areas the omnibus services were necessarily infrequent, and in such circumstances it would be obvious that a competitor could not hope to live if he ran his omnibus midway between those of the old-established undertaking, because the passengers at the villages along the route waited at the accustomed and advertised times for the regular service cars. It was not in the least surprising, therefore, to find that most of the competitors, who had sprung up during the last few years, habitually ran their cars just in front of the advertised times of the established service. Either the company had to abandon its time-table, which resulted quickly in a chaotic state, or extra cars had to be put out in front of the newcomer in order to prevent him from sweeping up all their regular patrons, who would be waiting for their time-tabled omnibus. That practice not only resulted in great wastage due to running three cars in procession where one was sufficient for the traffic, but it also meant that some of the cars were being run to advertised times and others were not, thus creating considerable confusion to the public, and a general sense of uncertainty. The revenue to be earned in the country was limited, and the division of the traffic between two or three cars resulted in the end in a poverty of the participants serious enough to compel them to raise fares.

He would admit that the finding of a cure presented a problem of extreme difficulty. Many suggestions had been made as to empowering a central or local authority to exercise a greater measure of control. He could not see how any form of control could succeed unless it included a strict limitation of the number of proprietors permitted to run on any particular route.

The resolution was carried unanimously.

UNITED STATES DEBENTURE CORPORATION, LIMITED. GRATIFYING RESULTS.

The ordinary general meeting of the United States Debenture Corporation, Limited, was held, on the 3rd instant, at Winchester House, Old Broad street, London, Mr Frank Chaplin (the chairman) presiding.

The secretary (Mr William George Lock, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said he thought the board could congratulate themselves on the position which they were able to place before the shareholders. Such results had only been approached on one previous occasion. With regard to the balance-sheet, the investments stood at £2,078,455, against £2,130,865 last year—a diminution of £52,410. On the other hand, the cash at bankers was £56,347, against £11,943 last year, when they had loans of £19,000 from their bankers. The gross income from investments, commissions, &c., was £124,949, notwithstanding that the underwriting commissions included in this amount were only £1,852, as against £2,069 last year. This, of course, was a fluctuating item, but he was pleased to say that the gross income from investments, which, of course, was the sheet anchor of their business, had increased from £118,495 last year to £122,352 this year. To this latter figure had to be added the amounts which the corporation had earned from sundry commissions, trusteeship fees, transfer fees, and the above-mentioned amount of underwriting commissions, which brought the total up to £124,949. Adding to this the £25,496 brought forward from last year, there was a grand total to the credit of revenue account of £150,446.

After meeting the expenses of administration and interest on debenture stock, there was a balance to the credit of revenue account of £90,804, and, after paying the usual dividends on the 5½ per cent. and 4½ per cent. preference stocks, and allocating £1,000 to staff pension fund, the board had decided to recommend the payment of the usual 7½ per cent. dividend on the ordinary shares, making 12½ per cent. for the year, less tax, and in view of the excellent results which he had outlined, an additional bonus of 1 per cent., tax free. There then remained a balance of £30,679 to be carried forward, against £25,496 which was brought into the accounts. The changes which had been made in the securities held by the corporation during the year had resulted in a surplus of £20,699, which had been utilised in writing down the cost price of certain investments.

The report and accounts were unanimously adopted.

GENERAL INVESTORS AND TRUSTEES, LIMITED. STRONG POSITION—INCREASED DIVIDEND.

The seventeenth ordinary meeting of General Investors and Trustees, Limited, was held, on the 6th instant, at Winchester House, Old Broad street, London.

Sir J. S. Hammood-Banner, Bt., M.P. (the chairman) presided, and, in moving the adoption of the report and accounts, said the report was the best they had yet issued from every respect—from the points of view of capital and financial strength, gross revenue, and of net revenue. The board were amply justified in recommending an increase from 7 per cent. to 8 per cent. in the dividend on the ordinary stock, which was the highest dividend paid so far. With that distribution they would have made a total return in the seventeen years of the company's existence of exactly 102 per cent., in addition to which they had accumulated a reserve of £160,000. The revenue account with total receipts of

£67,000, showed an increase over last year's figures of approximately £8,000. He hoped and believed the Government would, by sound methods of economy and a ruthless cutting down of unnecessary expenditure, bring about a reduction of taxation. There was no doubt about the large surplus of the Budget, and with economy it would enable them to approach the question of the reduction of taxation in some form or other. It was difficult to suggest what form, but his opinion was that any reduction of taxation should be in a form so that it could be utilised to diminish unemployment. The first necessity was to remove the balance of the abominable corporation profits tax, and to reduce the excessive income-tax with which industry was burdened. Such a reduction would undoubtedly provide funds to encourage the lessening of the burden of unemployment, as it was out of savings that encouragement to spend proceeded. The future was still uncertain. Demoralised exchanges, labour unrest, unemployment, and heavy taxation were still with us, and though this country and her allies won the war, peace to us, at all events, was a mighty expensive business. He did not fear that the Labour party as at present constituted would do anything to injure the credit or the finances of the country, but it was the future—when the next contest came—that he feared. He considered they had to watch most carefully, as Labour would then, he was afraid, make most reckless promises. The prosperity of the country was built on a three-legged stool—one leg brains, one leg labour, and the other capital. Withdraw any one of them and the other two were hopelessly crippled, and would fall to the ground.

The report and accounts were adopted.

B. MORRIS AND SONS, LIMITED. SOUND FINANCIAL POSITION.

The annual general meeting of B. Morris and Sons, Limited, was held, on the 6th inst., at Winchester House, Old Broad street, London.

Mr W. Somers L. Schuster (the chairman) presided, and, in moving the adoption of the report and accounts, said that the profit on trading showed a decrease of £5,600. They were primarily a cigar house, and he might add that they were the first British cigar house in the trade. The cigar trade during the past year had been in a very bad state, and, if that had not been so, their profits would undoubtedly have been quite as good as those of the previous year, if not better. In regard to their other departments, cigarette and tobacco, their brands still found the same favour with both customers and consumers as they had done previously. He had now been head of this company for 35 years, and he could say that, taking the figures of the past year, they were in a way the most successful figures which he had ever been able to present to the shareholders. They had a balance-sheet which any chairman of any company would be glad to bring before his shareholders.

Mr Arthur J. May (managing director), in seconding the motion, said: I am hoping, ladies and gentlemen, you will be satisfied with the result of the past year's trading, especially when you consider the bad state of the British cigar trade throughout the country during 1923. This falling off in cigar smoking is partly due to the high rate of duty on raw material, but chiefly due to the removal, in the year 1921, of the 50 per cent. *ad valorem* duty on cigars entering this country from abroad. I might mention, when this duty was in force your company had a record year's output in cigars, and had this duty been maintained it would have been of great benefit to both the capital and labour employed in the British cigar trade.

I have made a few calculations in connection with our balance-sheet, and find our net assets show that the ordinary £1 shares are covered to the extent of £1 10s 6d per share. This seems to me very satisfactory. Our financial position is particularly sound, and with the ample resources at our command all the prospects for the future point to our being able to maintain dividends, and possibly increase them, once the country settles down to normal trading conditions. Before resuming my seat I should like to pay a tribute to the staff of the company, who have worked hard and given of their best during the last year.

The resolution was carried unanimously.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £30,000,000 in Treasury Bonds and Treasury Bills dated from Mar. 10-Mar. 15 were opened on Mar. 7, 1924, and the total amount applied for was £45,400,000. For bills at three months dated Monday to Friday at £99 4s 0d, about 86 per cent., above in full, Saturday at £99 4s 3d, and above in full. The amounts allotted were as follows:—In bills at 3 months, £30,000,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months, Average Rate.	4% Treasury Bonds, Average Price
Feb. 1, 1924.	35,000,000	45,115,000	3 5 7 3/4	nil
Feb. 8, 1924.	30,000,000	41,675,000	3 11 3 2/3	nil
Feb. 15, 1924.	30,000,000	43,620,000	3 10 5 1/2	nil
Feb. 22, 1924.	30,000,000	44,535,000	3 8 11 7/8	nil
Feb. 29, 1924.	30,000,000	44,400,000	3 6 4 3/4	nil
Mar. 7, 1924.	30,000,000	45,400,000	3 3 4 0/6	nil

Tenders will be received on Mar. 14, 1924, for Treasury Bonds and Bills to be issued to the maximum amount of £30,000,000. The amount of Treasury Bonds issued will not exceed £3,000,000.

		Other countries	2,103
Total declared value of imports	843,248	Total declared value of exports	1,452,859

Messrs Samuel Montagu and Co. write on March 5th as follows:—

GOLD.

A good proportion of the substantial amount of gold on offer this week has been taken for India. Gold valued at \$10,080,000 has arrived in New York from London.

SILVER.

Again, the silver market has been quiet, and buyers and sellers disinclined to operate. Indian dealers have refrained from doing much business in this market. Sales have been made by China and the Continent, and support coming from

somewhat reluctant bear covering, prices have eased to some extent. The tone just now is inclined to be flat, but offerings of silver are so moderate that a better tendency would soon show itself if serious inquiry set in from India or China.

NOTICES.

We are informed that the series of international banks located at Amsterdam has been increased by the advent of the Hamburg Bank (L. Behrens and Son), which has founded a bank at Amsterdam with a capital of 10,000,000 guilders, 3,000,000 guilders (£250,000) being paid up fully, in which Messrs Guinness, Mahon, and Co. and other British interests are participating. One of the purposes of the bank is to finance Continental imports and exports.

Lloyds Bank, Limited, announce that, in anticipation of the rebuilding of their head office in Lombard street, the joint general managers and certain departments will move to the temporary premises at the corner of Gracechurch street and King William street (facing London Bridge) after the close of business on the 8th inst. The telegraphic address will still be Branchage, Stock, London, and the telephone numbers will be Central 5084 and 2006. The City office (72 Lombard street) will not be affected by the change, and the secretary's department will remain at 71 Lombard street, which will still be the registered office. The sub-branch of the bank at Soham has been transferred to new premises in High street, and is now converted into a full branch, under the management of Mr B. B. Saunders, of the Ely branch.

Barclays Bank, Limited, announce that they have opened a new sub-branch at Vine Cottage, Ham Common, under the management of Mr A. H. Etherington, who is also manager of 39 and 61 George street, Richmond, branches. They also announce that they have opened a new branch at New Milton, Hants, under the management of Mr W. J. Bond, who is also manager of Bournemouth branch.

A branch of the Queensland National Bank, Limited, has been opened at Woolloongabba, Brisbane.

The board of directors of the Banca Commerciale Italiana has decided to open a branch at Fiume, and to form auxiliary institutions in Egypt and Jugo-Slavia.

The Bank of Australasia has opened a branch at 71 Collins street East, Melbourne.

BRITISH-AMERICAN CONTINENTAL BANK.—The liquidator announces that a dividend of 1s 3d in the £ will be paid on March 10th at 4 Broad street place, E.C. This makes the seventh distribution.

MARONIERE BROSSE AND BROS.—Directors announce that payment of preference dividend, due March 1st, is postponed.

TYNSMOUTH GAS.—Directors recommend dividend on Consolidated and New Ordinary stock of 5 per cent., less tax, for year, dividend on New Preference stock of 4 per cent., less tax, paying arrears of dividend on Consolidated and New Ordinary stock, less tax.

Reports and Notices.

Messrs R. Nivison and Co. announce that they have admitted into partnership Mr Arthur Ryder Bastard Owen, son-in-law of their senior.

Lieut.-Col. H. E. Verey, D.S.O., of the firm of Messrs Treherne, Higgins and Co., of No. 7 Bloomsbury square, W.C. 1, solicitor, has been appointed a director of the West-End board of the Phenix Assurance Company, Limited.

Baring Brothers and Co., Limited, notify that the transfer books of the Commercial Cable Company sterling 4 per cent. 500-year debenture stock will be closed from the 22nd to the 31st instant, both days inclusive, for the preparation of the warrants for the interest due April 1, 1924.

RAILWAYS.

SOUTHERN PUNJAB RAILWAY.—The following is a brief summary of the earnings for year ended September 30, 1923, together with figures for the preceding year:—

	Gross Earnings.		Net Earnings.	
	Year Ended Sept. 30.	Year Ended Sept. 30.	Year Ended Sept. 30.	Year Ended Sept. 30.
	1922.	1923.	1922.	1923.

Total ..	96,88,609	122,02,864	56,27,165	68,05,181

The dividend on the ordinary stock is 12 per cent. for the year. The sum of £75,934 is carried forward.

BANKS.

B. W. BLYDENSTEIN AND CO.—The balance-sheet for 1923 just issued reveals assets to the total of £13,339,096. Bills receivable (including English Treasury bills) amount to £12,856,959 of the total assets. Cash stands at £83,116, and balances at bankers abroad amount to £87,942. National War Bonds at market value, which fell due February, 1924, stand in the balance-sheet at £234,185. Debtors stand at £49,379, and premises at £27,517. With regard to liabilities, the capital account stands at £625,000. Rebate on bills not due is at £106,926, and loans against securities, &c., stand at £12,607,170.

PUNJAB NATIONAL BANK, LIMITED.—The 58th 'balance sheet and profit and loss statement of the bank for the half-year ending December 31, 1923, shows that the total net profit, after meeting all ordinary expenses, amounts to Rs. 4,63,584, which works out a profit of about 34 per cent. per annum on the paid-up capital of the bank (including advance capital), and at about 1.40 per cent. per annum on its working capital. There was not much demand for money in the earlier part of this half-year, and it was in the latter part only that demand for money became very brisk. Out of the total profit of Rs. 4,63,584 the directors have written off bad and doubtful debts amounting to Rs. 35,975, thus leaving a balance of Rs. 4,27,608, which, together with the sum of Rs. 62,330 brought forward from last half-year, makes up the total sum available for distribution as Rs. 4,89,939. The directors recommend that the above sum of Rs. 4,89,939 may be appropriated as under:—

To a final dividend at Rs. 15 per cent. per annum for the half-year ending December 31, 1923, free of income-tax, payable on and after February 18, 1924 ..	2,03,332
To provision for balance of income-tax for the year 1923-24 ..	48,543
To provision for additional tax for the year 1922-23 ..	1,30,536
To be carried to reserve fund No. 1 ..	50,000
Balance carried forward to next half-year's account ..	57,528

SWISS BANK CORPORATION.—Some interesting particulars concerning the working of this bank during the year 1923 are given in the fifty-second annual report just issued. It is pointed out that the past year, like its predecessor, was under the influence of the after-effects of the war, and the normal development of trade and industry was constantly interfered with by political events. The total of the bank's balance-sheet, taken at 25½ to £1, has increased from £40,782,875 at the end of 1922 to £41,582,868 at the end of 1923. The principal assets are:—Cash, £2,858,537; banks and bankers, £5,209,957; bills receivable, £12,151,983; current accounts, £18,083,718; permanent investments, £318,154; Government, railway, and other securities, £2,110,231; bank premises and other property, £609,332. With regard to liabilities, the share capital is £4,800,000, reserves total £1,320,000, fixed deposits stand at £5,205,166, and current accounts are at £26,808,468. The net profit for 1923 is £430,681, as against £421,084 in 1922. The dividend on the paid-up capital is 8 per cent. for the year 1923, the same as for 1922. The carry forward is £40,874, against £40,201 brought in from preceding year. The board propose to allocate £20,000 to pension fund. The work on the new building for the London office at the corner of Gresham street and Coleman street is progressing, and it is expected that the building will be completed before the end of the current year.

INSURANCE.

BRITANNIC.—The annual valuation for 1923 showed a surplus of £273,786, of which £150,673 was divided among with-profit policies in the ordinary branch and shareholders. A bonus was declared for the year of 36 per cent. on sums assured, as compared with 30 per cent. for 1922. The dividend and bonus to shareholders cost £49,498. In the ordinary branch 11,856 new policies were issued, assuring £1,001,802, and the ordinary premium income increased by £61,746 to £614,228. In the industrial branch the premiums income increased by £81,460 to £1,932,036. There was an addition to the funds of £1,013,095.

REFUGE.—The valuation of the liabilities in the ordinary branch as at December 31st last showed a surplus of £1,192,398, including £466,050 brought forward. A bonus for the year on with-profit policies was declared of £1 18s per cent. (against £1 12s for 1922), and £539,431 was carried forward. In the industrial branch the valuation surplus was £125,535, after transferring £100,000 to investments reserve, £25,000 to staff pension fund, and £250,000 to the fund (now £600,000) for the future strengthening of the valuation basis. A dividend to shareholders was declared of 7½ per cent., absorbing £22,500. In the ordinary branch 41,478 new policies were issued, assuring £4,769,542, and in the industrial branch the new policies numbered 765,150 for £12,840,878. The company's operations are restricted to Great Britain and Ireland.

RUBBER, &c.

RATANUI RUBBER ESTATE.—This company has had a better year. The net profit for year ended September 30, 1923, at £7,083, compares with a net loss of £1,538 in preceding year. The ordinary shareholders are to receive a 5 per cent. dividend, against nothing in preceding year. The reserve fund is strengthened by the allocation of £5,000, and £5,311 is carried forward.

MISCELLANEOUS.

HUDSON'S BAY COMPANY'S LAND SALES.—For 10 months January 31, 1924:—

	1923.	1924.
Farm Lands—		
Acres ..	21,500	27,300
Sold for ..	£64,400	£77,900
Town Lots—		
Sold for ..	£10,500	£6,100
Total receipts ..	£351,500	£360,500

ISAAC WALTON AND CO.—This company has succeeded in maintaining its net profit during the year ended January 31, 1924, also its ordinary dividend, which is again 10 per cent., free of income-tax. The net profit is £17,833, against £18,301, and the carry forward is £10,460, against £11,027 brought in. The total assets are £384,662. Cash stands at £14,207. Goodwill at cost is £43,489, but £18,489 has been written off, making goodwill in the balance-sheet £25,000. Stock in trade is at £58,812.

JOHN BARKER AND CO., LIMITED.—Subject to final audit the net profit for the year ended January 31, 1924, after providing for all working expenses, depreciation, bad and doubtful debts, and all local and Imperial taxation, is £402,433, against £362,384 last year. The directors recommend the payment of the usual 20 per cent. on the ordinary shares (5 per cent. of which was distributed as an interim dividend in October last). £50,000 to the general reserve fund, £10,000 to the employees' pension and benevolent fund, £20,000 off goodwill, and after providing for the dividends on the 5½ per cent. and 6 per cent. preference shares, and interest on debentures and directors' fees, to carry forward the balance of £211,780, against £148,328 brought in. The dividend of 20 per cent. is the same rate as distributed for preceding four years. The premium on the recent issue of preference shares, less the expense of the issue, has been transferred to reserve, and is not included in the above figures.

SWAN, HUNTER, AND WIGHAM RICHARDSON.—The net profit of this concern has been fairly well maintained, as after payment of debenture interest, it amounted to £383,752 for 1923, as against £396,585 for 1922. The ordinary dividend is maintained at 8 per cent., free of income-tax. The sum of £100,000 is put to reserve, while £100,000 goes to reserve for equalisation of dividends, and £10,000 for the benefit of employees. The sum of £46,499 is carried forward. The total assets amount to £6,253,707. Cash and bills stand at £1,182,039. Investments at cost or under stand at £2,854,263. Debts due to the company stand at £674,499.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The estimated gross production of crude oil for the month of February was 92,142 barrels, equal to approximately 13,000 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 12,700 tons.

GENERAL PETROLEUM COMPANY OF TRINIDAD, LIMITED.—The estimated gross production of crude oil for the month of February was 86,432 barrels, equal to approximately 12,347 tons, and the oil delivered to United British Refineries, Limited, amounted to about 11,775 tons.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during February, 21,250 tons; oil purchased during February from other companies, 13,100 tons. Of the oil produced, well No. 87 Forest Reserve Field contributed 6,841 tons. The oil from this well is of lighter quality than the general average of the field.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

With a spell of finer weather and periods of sunshine, farmers were able to push ahead with field operations, while improved climatic conditions will prove of great benefit to growing crops. Generally quiet conditions prevailed at market, and prices in most instances tended in buyers' favour. Native wheat was more freely offered, and values the turn easier, suitable milling samples being obtainable at 10s 6d to 10s 10d per 112 lbs, free on rail. Imported descriptions met with moderate support, and rates generally on a lower basis, though a slight improvement occurred towards the end of the week in sympathy with steadier c.i.f. offers. No. 1 Northern Manitoba afloat quoted at 50s, No. 2 ditto 49s 6d, No. 3 ditto 48s 6d, Rosafé 63½ lbs 47s 9d, and Australian 50s 6d

all ex ship, per 496 lbs. The floating and forward cargo section displayed more activity on improved inquiries both from home and Continental millers, and a generally firm tone resulted. Sales included steamers of Australian afloat at 48s ditto loading, 47s 9d to 47s 9d, No. 1 Northern Manitoba arrived 48s 3d, ditto No. 2 April 47s 3d, to 47s 4½d, Barusso 63½ lbs April 42s 9d, ditto afloat 44s. Rosafé 63½ lbs afloat 44s 4½d, loading 45s, all per 480 lbs c.i.f. Flour quiet, and rates easier. London standard straight run 38s 6d, patents 40s 6d to 41s 6d, town households 36s 6d per sack delivered in. All English country straights 35s to 35s 6d per sack, free on rail at London stations. Of imported, Manitoba patents range from 36s 6d to 38s 6d, and Australian 36s to 37s per 280 lbs ex store. Barley dull and week English malting ranges from 11s 6d-14s 6d, with feeders 11s-11s 6d per 112 lbs, free on rail. Of imported Californian 45s-49s ex store, Chilean brewing 41s 6d-45s ex ship, both per 448 lbs. No. 4 Canadian western 35s 6d landed, Algerian/Tunisian ex ship to arrive 32s, and Karachi ditto 34s per 400 lbs. Maize quiet at about late rates. Plate ex ship quoted 43s, landed 44s 6d, Bessarabian ex ship 44s landed, 45s 6d Red Karachi ex ship 43s 6d all per 480 lbs. Oats: English quiet and ranges from 9s 2d-10s 4d per 112 lbs free on rail. Imported tends easier. Plate f.a.q. ex ship 21s, landed 22s, No. 2 Canadian western 27s 6d, No. 3 ditto 26s 3d, No. 2 Canadian feed landed 24s 9d per 320 lbs. Millers' offers weak. Broad bran quoted 8s, ordinary ditto 7s 6d, middlings 8s 6d, fine ditto 10s, bags included ex-mill, light oats 7s 3d, powdered oat husks 7s 9d, feed oatmeal 9s 3d, ground oats 12s 3d, free on rail per cwt. Oatmeal in moderate demand at late rates. London made, flaked also rolled oats 16s 6d, medium and fine cut 16s 6d, coarse and medium pinhead 16s 6d, ordinary Scottish oatmeal 17s 6d, American 16s 6d-16s 9d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated March 6, is as follows:—Pig-iron: The recent reductions in pig-iron prices has brought out some demand for iron. The fact is, home consumers have been keeping their stocks as low as possible. The demand for export is, however, still very unsatisfactory, but although foreign pig-iron is quoted some shillings below our prices, the supply is not at all plentiful. Cleveland No. 3 G.M.B. is 93s per ton

* Half-year.

† Free of tax.

(s) Includes bonus of 3 per cent., free of income-tax.

Owing to the severity of competition, makers earning a profit are very exceptional. The patents registered in France by the Sheffield inventor of stainless steel have been annulled by a French High Court on the ground that the invention was known and being worked in England before the patent was applied for. The action was brought by steel makers in France. The coal market is active and firm. The demand for steam coal rather exceeds the present output, and deliveries are in arrears. Exports are increasing. Prices tend upwards. There is a good market for all kinds of small fuel, and also for coke in the home market. Prices per ton at pits are:—Best hand-picked branch, 35s; Barnsley best silstone, 30s 6d; Tyne best steams, 26s; South Yorkshire steams, 25s; Derbyshire ditto, 24s; rough slacks, 12s 6d; smalls, 7s to 9s; blast furnace coke, 30s.

Our Glasgow correspondent writes as follows:—Dullness characterises the pig-iron market this week. Stocks are still increasing, and although prices for all grades have been slightly reduced, only small parcels have changed hands. The anticipated advance in Continental pig has not yet materialised, but remarkably few purchases of Continental material have been made, buyers holding off, as is usual in a weak market. The shipments from the Clyde last week were 671 tons.

Quiet conditions also prevail in the finished steel trades. Rolling mills have still sufficient work to keep them fully employed in the meantime, but some little anxiety is felt at the paucity of specifications for forward delivery. A few more shipbuilding contracts have been placed on the Clyde, but these do not amount to much in tonnage. It is also reported that the North British Locomotive Works at Springburn have secured an order for four locomotives for the East Indian Railway. Continental sheet bars have

been offered at little over £7 per ton delivered this district, and a parcel of Belgian angles has been bought at £7 12s 6d delivered. In spite of this competition, and the scarcity of buyers, prices for home manufactures may be said to be maintained at recent past week have booked some fairly good lines.

Sheetmakers are busy on existing contracts, and enquiries are numerous, especially for blacks. A feature of the past week has been the unusually large number of enquiries from Germany for both black and galvanised sheets. The orders placed this week are quite up to the average of the past few weeks, and the Indian market shows signs of picking up again, several fair-sized orders for galvanised sheets having been placed locally within the last day or two. Prices are unchanged.

Our Cardiff correspondent writes:—There has been a slight improvement this week in the position of the Cardiff coal market. In the early part of the week the scarcity of tonnage continued, and for prompt positions prices for all classes of coal were weak. Best Admiralties receded to the extent of about 6d per ton, and were obtainable for this week's loading at round about 28s 6d. On Tuesday and Wednesday chartering was exceptionally active, chiefly for March positions, and although these factors had no effect in relieving the immediate position they strengthened the market for backward positions, and for the end of March collieries were asking up to 30s per ton. The general outlook is better, in April. The current approximate quotations are as follows:—Best Admiralties, 28s to 29s; second Admiralties, 27s to 28s; best dries, 27s to 29s 6d; black veins, 28s to 29s 6d; Western Valleys, 27s to 28s; Eastern Valleys, 26s to 27s; best bunker smalls, 18s to

19s; ordinary cargo smalls, 16s to 17s 6d; coking smalls, 16s to 21s; anthracite big vein large, 41s to 45s; machine-made cobbles, 45s to 47s 6d; French nuts, 47s 6d to 50s; stove nuts, 50s to 52s 6d; rubbly culm, 14s to 14s 6d; coke for export, 55s to 57s 6d; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 30s to 32s 6d; pitwood, ex ship, 29s to 29s 6d. There is no appreciable change in the tinplate market, but prices are firm, with an upward tendency, and both foreign and inland demand is active.

METALS.

Tin commenced with a firmer tone, due to higher advices from the East, combined with a good demand, though values closed below top points. Standard cash sold at £293 to £292 10s, and three months £288 to £290-£289 5s. Eastern exports reported sales on the basis of £289 10s, c.i.f. Subsequent movements were attended by irregularity and weakness, though a partial recovery occurred by the middle of the week. Cash sold at £291 10s to £291 15s, and three months £287 to £286 10s to £290, while finally at £289 15s. Further sales transpired in the East at £288, c.i.f. Values continued to exhibit irregularity on Thursday, while firmer on balance, with a good inquiry for both cash and forward positions. Cash sold at £293 to £294 to £292 10s to £293 10s, and three months £293 to £292 to £293 to £292 2s 6d. Market closed easier, with standard cash at £292 5s and three months £291 15s. English ingots quoted at £292 15s to £293 5s. Copper.—Market opened firmer, values responding to an active demand, especially for distant position, combined with higher advices from United States. Standard cash sold at £67 7s 6d to £67 5s, and three months fluctuating between £68, £68 10s, and £68 6s 3d. On Wednesday realisations resulted in a set-back. American cables being also weaker, though offerings were well absorbed. Cash sold at £67 to £66 15s, and three months £67 15s to £67 17s 6d to £67 11s 3d. On following day active trading ensued, though rates were without material change on balance. Cash sold at £67 to £66 15s to £67 to £66 18s 9d, and three months £67 15s to £67 17s 6d to £67 12s 6d to £67 17s 6d. Active and firmer at close, with transactions in cash at £67 12s 6d to £68 1s 3d, and three months at £68 10s to £68 15s to £68 5s to £68 18s 9d, while finally at £68 17s 6d. Electros, £73 to £73 10s; best selected, £71 to £72 5s; strong sheets, £100; wire bars, £73 10s per ton. Lead firmer, and quoted at £39 12s to £38 7s 6d, as to position. Spelter easier at £36 to £35 17s 6d, according to position. Aluminium steady. Home, £115; export, £120. Antimony, English (special brands), £59 10s to £60.

MANCHESTER, March 6.

The general tone of the market has been quieter, and less business has been done than in recent previous weeks. The falling off in the turnover has been very largely due to bearish sentiment in raw cotton circles, and owing to the possibility of still lower values buyers of yarn and cloth have operated sparingly. A considerable cloth inquiry has been dealt with for India and China, but sales of any importance have been isolated, the bulk of the buying being in light fabrics and fancies. A little more demand has been about for Egypt and the Near East. Some fair lines have been booked in cloths suitable for finishing for the Continent. The threatened lock-out has not caused any anxiety. Quotations in

American and Egyptian yarns remain firm, but spinners have only met with a restricted business in home counts, with occasional transactions in shipping descriptions.

trade was a significant feature of the sales, and this is the outstanding characteristic of colonial auctions, Bradford buyers giving good support to the sales at Adelaide, Melbourne, and Sydney. It is evident that French buyers have to a large extent retired from Australian auctions, due mostly to the sensible depreciation of the franc. It is well known that there is real concern among French textile people, and they feel that a hand to mouth policy will pay them best.

VEGETABLE OILS AND OILSEEDS.

With the resumed production of linseed oil on a substantial scale following the release of seed supplies held up by the recent dock strike, there has been a further easing in prices value of raw oil on spot, falling to £40, and even below, as compared with £50 a fortnight ago. This brought in buyers, and the market has steadied. Large quantities of linseed are still afloat for both the United Kingdom and the Continent, and shipments from the Plate continue at a good level, indicating that there should be from now onward a constant supply of oil to meet current demand and cover trade contracts. As to the probable future course of prices, it is difficult to say. Supplies of seed promise to be ample for world requirements, but much depends upon a revival of industry generally here and in Europe. Cotton oils have again been for the most part neglected, and crude Egyptian is lower, and sellers more disposed to meet the market.

HIDE AND LEATHER TRADES.

(BY OUR OWN CORRESPONDENT.)

The auctions for market hides and skins held in Bermondsey on Thursday found a further easing tendency in prices, and most classes of ox and heifers gave way by ½d per lb—top and bottom prices for these goods now being 8½d and 6½d per lb. Cow and bull hides were also on the weaker side, as was also the case with kip skins. Last week's downward tendency of calf skins was continued, the reductions ranging from ½d to ¾d per lb. Best light calf skins changed hands at 16½d per lb, while heavies made 7d. Wool skins realised from 8s to 16s, and hogs from 5s to 20s 9d.

The imported hide market has shown a slight improvement since last writing, but practically all of the sales taking place are for goods for immediate consumption. Tanners are not prepared to speculate in any way whatsoever, as there is a very pronounced opinion that values will decline yet further. For instance, in spite of sales of frigorific hides to the United States and this country, the market at origin continues to get weaker, and many other sorts of S. American hides are quoted lower in sympathy.

In upper leather, a moderate amount of glacé kid in the cheaper grades of both black and brown are being moved off, but the brighter-coloured glacés which were in vogue a short while ago seem to have fallen very flat. Common to medium grades of patent leather are also finding a fairly satisfactory outlet, so much so that several of the imported brands have advanced 1d to 2d per foot. Suede leathers maintain a ready sale, and it would appear as if this, together with patent leather, will be the predominant feature about spring and summer footwear.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, March 7.

SUGAR.—Prices remained without change in the case of all spot parcels of refined, but general course of trade is quiet, as buyers continue to follow a policy of reserve. Of British, Messrs Tate and Lyle's cubes, quoted, 66s 9d to 67s 9d, as to quality; granulated fine and coarse grain, 64s 7½d; No. 1, 64s 4½d; No. 2, also London and T.L., 64s 1½d; ditto, March, 64s; April, 64s 3d; May-June, 64s 6d; yellow crystals, spot, 59s 7½d; caster, 64s 9d to 66s 1½d; finest, 66s 10½d. Of imported, Czecho granulated, spot, sold, 62s; ditto, March, reopening, sold, 33s 9d; April-May, quoted, 34s; May-June, 34s, f.o.b., Hamburg. White Java, spot, 61s to 61s 3d; May-June, steamer, sellers, 28s 6d; June-July, 27s 6d, c.f. and i. terms, London. Dutch granulated, spot, 62s. J. Dutch, ready for shipment, 34s 6d, f.o.b., Rotterdam. Belgian granulated, spot, 61s 6d. Raw refining kinds firm, with sellers reserved. Cuban, basis 96 per cent., March shipment, quoted, 29s 3d, c.f. and i., U.K. White terminal market steadier, though attended by slight irregularity at times, and quite liberal trading ensued. March delivery, sold, 34s 1½d to 34s 6d to 34s; May, 32s 6d, 31s 6d, 33s, and 32s 6d; August, 30s 3d, 30s 9d, and 30s 3d; September, 28s 1½d; October, 25s 9d to 26s; November, 24s 6d; December, 24s 6d; and November-December combined, 24s 6d cwt.

COFFEE.—There was a fair movement in spot parcels during the week, the better liquoring descriptions claiming chief support, and these realised steady prices. Common on the other hand, moved against sellers. Bold sizes of new crop East India sold, 13s to 17s 6d. Costa Rica bold, 14s 6d to 18s 6d; with Nairobi, 11s 8d to 14s 6d.

COCOA.—Sellers of spot goods required steady prices, but there was not much response from buyers. Clayed Carapana sold, 62s 6d;

Accra, F/F grade, March-May, sold, 36s 6d; April-June, 36s 6d, f.o.b. terms.

TEA.—Indian auctions of 40,230 packages experienced brisk competition for the more attractive liquoring descriptions at full recent rates, but common and thin teas proved rather quiet and at times a shade easier. Pekoe sold 1s 4d to 1s 6½d; broken orange pekoe, 1s 5½d to 2s 3½d. Ceylon sales embraced some 14,460 packages which cleared to an active demand at steady rates. Pekoe sold 1s 4½d to 1s 10½d; broken orange, 1s 6½d to 2s 2½d. Java and Sumatra auctions totalled 6,200 packages, and all good liquoring qualities cleared readily at firm prices, but low, medium and common proved ½d per lb cheaper in most instances. Pekoe sold 1s 2½d to 1s 4½d; broken ditto, 1½d to 1s 4½d; pekoe souchong, 1s 2½d to 1s 3½d; orange, 1s 4½d to 1s 7d; broken orange pekoe, 1s 1d to 1s 8½d per lb in bond.

RICE.—Market without new feature, general tone being quietly steady. Two stars Rangoon, March-April, quoted 14s 9d; Spanish, for shipment, 21s, c.f. and i., London. Japanese peas and Rangoon haricot beans quiet of sale.

JUTE firm and dearer, with active support accorded partly on Calcutta account. First grade, January-February, Continent, sold, £27 5s; February-March, at £27 15s; March-April, £28 5s to £28 10s; April-May, £28 15s to £29; and May-June, £29 per ton.

HESSIAN firm. 10 oz, April-June, quoted 30s; 8 oz, ditto, 24s per 100 yards. A twills, April-June, 87s 6d; B, 77s 9d; sugars, 88s 6d; flour, 93s per 100 bags.

HEMP.—Manila easier, with a moderate demand. J grade, January-March, quoted £38 10s; K, ditto, £32; J, February-April, March-May, £37; K, £30 10s; L, £29 10s; M, £26 10s ton. New Zealand and African sisal unaltered.

SHELLAC quiet, but steady. T.N., spot, fair, 290s, 295s; May, 280s cwt.

COPRA again received but quiet attention, and some pressure to sell imparted a weaker tone to the market. F.M.S., Straits, December-February, to Rotterdam, quoted £30; ditto, January-March, sold, £29 15s, £29 13s 9d; February-April, £29 5s; March-May, £28 15s. Dutch East Indies, January-March, quoted £29 7s 6d; February-April, £29 2s 6d; March-May, £28 12s 6d. Ceylon, March-April, £32 5s; Java, January-March, sold, £29 13s 9d; South Sea Islands, ditto, quoted £28 15s. Palm kernels, March-May, Liverpool, sold, £20 8s 9d, and April-June quoted £20 3s 9d ton.

PEPPER.—Pepper quietly steady. Black Singapore, March-May, L.S., quote 1, 4½d; Lampong, ditto 4½d; Muntok, March-May, 4½d. Zanzibar cloves, spot, 1s 1d to 1s 2d, as to quality per lb. Tapioca steady, quiet. Singapore flake, April-June, to Havre, sold, 32s, c.f. and i. Sago flour, January-March, London-Liverpool, quoted 16s 6d; February-April, 16s; March-May, 15s 7½d. Desiccated coconut slow. Fine cut, spot, 43s 9d; medium, 45s 6d; halves, February-March, 41s 9d; March-April, 41s 6d cwt, c.f. and i., London. Ginger firm, unaltered.

RUBBER.—After opening steadily, the market assumed a quieter state of affairs. Standard plantation crepe and sheet, spot, also March, sold, 1s 1½d to 1s 1d and 1s 1½d; April-June, 1s 1½d to 1s 1½d to 1s 1½d; July-September, 1s 1½d to 1s 1½d to 1s 1½d; October-December, 1s 2½d to 1s 2d to 1s 2½d. To New York, standard estate sheet, March-April, quoted 1s 1½d; and ordinary May-June, sellers, 1s 1½d, c.f. and i. Fine hard Para, spot, 11½d; soft, fine, 11½d; and Caucho ball, 10½d per lb.

EGG PRODUCTS.—There is no new feature to note in this market, actual business being on a limited scale on about former terms.

FRUIT (Dried).—Business proved quiet throughout the week, but prices steady. Of currants, Australian quoted 54s; Pyrgos, 2-cases, 44s; Amalia, 5s; Patras, 52s; Vostizza, 63s to 70s; with finest, 73s to 75s. Valencia raisins, 4-boxes, 50s; quarters, 60s to 80s. Dates steady, with rather more inquiry. Hallowee, spot, 30s; Khadrowie, 20s to 21s; and Sair, 18s. Figs, genuine natural, in bags, 38s to 40s. Evaporated fruits remained firm, as stocks are on a limited scale. Californian apricots, choice quoted 85s; extra choice, 95s; fancy, 110s. Pears, extra fancy, 105s. Apple rings, 75s to 80s. French plums, 2-cases, 90/95, quoted 38s 6d; 81/86, at 41s; 72/77, 47s; Oregon, 30/40, at 73s; 40/50, 58s; and 60/70, 45s per cwt.

CANNED GOODS.—Quiet conditions prevailed, but the general tone of the market remains firm as supplies of most descriptions are only moderate. Of sardines, Portuguese 1-flats, quoted 2s 9d to 3s 3d; ditto clubs, 3s to 3s 6d; 12 oz, 5s 6d to 6s 6d; 18 oz, 9s to 11s per dozen tins. Lobster: Fancy halves, 130s to 135s. Crayfish, 96 flat reds, labelled, quoted 56s; ditto, tall, 43s 6d; 1 lb flat pink, 26s; ditto, tall, 26s 9d; and cases of 96 ½-lbs, 28s to 30s per case. Canned fruits firm with a steady demand. Singapore pines, 1½-lbs, on spot, 6s 9d for 48's. Californian apricots, 8s to 11s; ditto, 8s 6d; ditto, peaches, 9s to 9s 6d. Italian tomatoes, 7s per dozen tins. Canned meat: continue in small supply, and rates well maintained.

OILSEEDS.—Linseed market generally quiet, and prices displayed slight irregularity and weakness. Indian: Calcutta, afloat, £22 5s; February-March, £21 2s 6d; April-May, £19 12s 6d. Plate, afloat, £18 10s to £19 10s, as to position; January-February, sold, £18 15s; April-May, £17 15s to £17 17s 6d. Rapeseed easier. Toria, February-March, £18 10s; March-April, £18 2s 6d, paid; Jamba, February-March, £15; and real bold Ferozepore, March-April, £17 15s; April-May, £17 2s 6d to £17 7s 6d. Cottonseed steady. Egyptian, black, March, £13 3s 9d. Sakellaria, £12 1s 3d. Bombay, February-March, sellers, £10 10s; March-April, £10 2s 6d. Gingly seed quiet. Chinese, afloat, £26 5s. February-March, £26 10s. Groundnuts easier. Coromandel, machine-dried, March-April, £22 17s 6d; Chinese, decorticated, f.a.q., March-April, £22 15s; bold Bombay, February-March, £22 15s. Soya beans dull. Manchurian, afloat, £12 10s; February-March, £12 10s. Castor-seed firm, Bombay, February-March, £24 10s per ton.

OILS.—Linseed irregular and easier. Spot, net, naked, 42s; March-April, 39s; May-August, 37s 4½d; September-December, 37s 1½d. Rape dull. Crude, spot, 48s; refined, 51s. Castor-oil firm. First pressure, spot, quoted 65s; second pressure, 64s;

and pharmaceutical, 70s per cwt, Hull, with London 2s per cwt extra. Cotton easier. Crude Egyptian, spot, 44s; Bombay, 42s; common edible, 49s; deodorised, 51s. Chinawood quiet. Hankow, spot (barrels), 93s; February-March, 92s. Coconut quiet. Ceylon, spot, 48s; February-March, 46s 9d; Cochin, ditto, quoted 59s. Soya easier. Oriental, barrels, February-March, 41s. Cod firm. English, spot, 36s 6d. Groundnuts steady. English, crushed, naked, spot, 51s; deodorised, barrels, 60s. Turpentine lower. American, spot, 76s 6d; March-April, 76s 9d. Rosin firm. American, grades B to G, 13s 6d; WG, 17s 10½d; WW, 19s per cwt. French WW, 17s per cwt. Petroleum steady. American, standard white, spot, 1s; and water white, 1s 1d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on March 5th as follows:—The tallow market was steady during the week, and prices were 6d dearer to-day. There has been only a moderate demand, but supplies are insufficient to meet it. The stock in London on February 29th, as returned by the wharves, amounted to 4,019 packages, showing a decrease during the month of 3,975 packages. There were also 3,977 packages which had arrived, and were in course of being landed or transhipped. At auction to-day 649 casks tallow were offered, and 487 were sold. Quotations are:—Australian mutton: Fine, 51s 3d; good to fair, 51s to 48s; dull to dark, 44s to 43s 6d; hard, 52s. Australian beef: Fine, 48s; good to fair, 47s 6d to 46s 6d; dull to dark, 43s 9d to 42s 9d; sweet, 48s. Present shipment from Australasia: Good mixed, 46s. Present shipment from South America, 45s 6d to 44s. The market letter is dearer. Tallow, 1s; stuff, 2s. Town tallow, 42s 6d per cwt. Rough fat, per 8 lbs, 5d; melted stuff, 34s 6d per cwt. Quotations are:—Town, 43s, net cash, naked, ex works. Country: Frail casks, 43s; home melted, shipping casks, net, f.o.b., good coloured, 46s; fair to dull, 44s to 43s 6d. THE STORY OF COAL

THE MINER'S WORKING DAY

Whether the working conditions in an industry may be considered good or bad depends, not only upon the rate of wages paid, but on the number of hours worked and the risk of unemployment.

The British miner now works seven hours a day underground, as compared with eight hours worked by his foreign competitors.

In January, 1924, there were employed in and about the mines 76,000 more wage earners than in 1913. In a period of acute unemployment in general occupations, the coal miner has, therefore, been practically immune from this great evil.

In 1913 the daily output per man was 21 cwts. In 1922 it was 18 cwts. In 1923 (September quarter) it was 17½ cwts.—a reduction of 17 per cent. on 1913.

Had the output per person employed been the same in 1923 as it was in 1913, some 18 million more tons of coal would have been produced, with beneficial effects upon wages and prices.

Wages in the Coal Mining Industry are paid by results. The actual getter or hewer of the coal is paid on piecework, and the earnings of every wage-earner are determined by the results of the collective effort of all the workers.

Of the proceeds of the sale of coal, after paying for stores, timber and other working expenses, at least tenpence in every shilling goes to wages and never more than 2d. to profits. If the proceeds are insufficient to give the miners their guaranteed minimum wage, they receive more than tenpence. They may even receive more than the shilling—out of the owners' pockets.

The minimum wage should never be regarded as a measure of what the miners can earn. By collective effort it is within the power of the workers to increase output and thus reduce the cost of production per ton. Wages will thereby be increased and the price of coal to the consumer can be reduced.

Prosperity depends upon Private Enterprise and Cheap Coal.

If you are interested in "The Story of Coal," cut this advertisement out and file it. It will be followed by others telling other parts of the Story. Look out for them. They are being issued on behalf of the Colliery Owners of Great Britain by PHILIP GEE, 40, King Street, Covent Garden, W.C.2., from whom further information about the Coal Mining Industry can be obtained.

The prices in the following list are revised with the assistance of an eminent firm in each department:

ROBERT MILL, Manager

Chief Office: HOLBORN BARS, LONDON, E.C.1.

Presented at the Seventy-Fifth Annual Meeting
held on March 6th, 1924.

In respect of all policies issued before 1st January, 1923, which are entitled to participate under the bonus distribution scheme, on which ten years' premiums have been paid and which become claims by death or maturity of endowment between 7th March, 1924, and 7th March, 1929, both dates inclusive, a bonus addition will be made as follows:—

The four Prudential Approved Societies have during the year paid to or on behalf of their members benefits amounting approximately to **£5,261,700**, making a total of over **£21,458,700** since National Insurance was introduced. Included in the amount paid during the year is a sum of **£242,728** expended on additional (non-cash) Benefits granted as a result of the first valuation of the Societies and made up as follows:—
Dental Treatment **£115,582**. Hospital and Convalescent Home Treatment **£120,940**, Medical and Surgical Appliances **£1,582**. Optical Treatment **£3,704**, and Nursing **£3,115**. The numbers of persons admitted to membership of the Societies during the year was **315,049**, of whom **145,106** were men and **169,943** women.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist."
Office: Granville House, Arundel street, Strand, London, W.C.2.

As the week has progressed, there have been many signs that the surplus of short money in the market was but small, and the Bank return clearly indicated that the excess over requirements was being swept up by permitting the tax collections to pursue their normal course. Hence the pre-week-end ease has been less in evidence, and whereas overnight loans were sometimes obtainable down to 1½ per cent. in the earlier part of the week, the rate hardened to 2 per cent., and occasionally more. Bill rates firmed

up slightly as a result, and while the bills allotted last week at just under 3½ per cent. were saleable at times at 3½ per cent., the rate hardened on Thursday to 3½ per cent. Yesterday's bills, however, went at a slightly less favourable rate to the market. The three months' fine Bank bill rate was inclined to be firmer on the Trade Returns, some houses not quoting below 3½ per cent., but yesterday the rate eased again.

Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate (3 months' bills)	3½	3½	3½	3½	..

The Bank return showed a sharp contraction in the circulation after the expansion of the last two weeks, the reduction amounting to £978,600. There was a decline of £3,600 in the bullion stock, and the gain in the Reserve therefore, was £975,000. Tax collections were presumably responsible for the addition of £6,512,400 to Public deposits, while Government securities were reduced by £1,225,000. Hence, though Other securities were increased by £1,912,200—probably the result of further special transactions—Private deposits suffered a loss of £4,868,400, which goes some way to explain the contraction of loanable supplies in the money market. On balance there was a small increase in the liabilities, but the increase in the Reserve resulted in an improvement of 0.5 in the proportion at 18.2 per cent. Currency notes outstanding increased this week by £638,300 to £280,590,800, which includes £1,404,500 for notes called in but not yet cancelled. The fiduciary issue is £229,736,300, or £18,454,600 below the maximum.

The monthly statement of average weekly balances for February, reproduced in detail on a later page, shows a drop of over £41 millions in deposits, presumably a reflection of revenue collections. At the corresponding date a year ago the decline in deposits was £49 millions. The table below shows the aggregate figures of the nine English banks:—

	Dec., 1922.	June, 1923.	Sept., 1923.	Dec., 1923.	Jan., 1924.	Feb., 1924.
Capital and reserves	116.0	116.3	115.3	116.3	116.5	117.8
Acceptances	72.8	73.8	72.7	76.1	103.6	102.5
Deposits (incl. undiv. profits, &c.)	1,684.7	1,637.7	1,609.6	1,673.1	1,674.4	1,622.7
Total liabilities	1,873.5	1,827.8	1,798.6	1,885.5	1,894.5	1,853.0
Gold, notes, balance at bank, and cheques in course of collection	253.0	240.7	230.2	254.2	241.8	235.9
Money at call	106.0	113.3	109.5	113.3	98.5	92.2
Investments	384.8	355.5	351.2	363.8	359.3	356.6
Discounts	298.3	270.8	260.4	278.3	297.5	261.4
Loans and advances	732.7	746.9	744.3	756.5	760.8	770.4
Over for accept., premises, &c.	99.0	100.6	100.0	123.4	130.6	129.5
Total assets	1,873.5	1,827.8	1,798.6	1,885.5	1,894.5	1,853.0

The drop in deposits has been met by reductions of £8 and £7 millions respectively in cash and money at call, while Treasury bills appear to have been allowed to run off to the extent of over £30 millions. Loans and advances have increased by nearly £10 millions, and are now £34 millions higher than in February of that year. The increase in capital and reserves is due to the Midland Bank figures, both items having risen from £10,861,000 to £11,448,000. The paid-up capital of the National Provincial Bank has risen from £9,339,000 to £9,429,000.

THE STOCK MARKETS.

The principal influence upon Stock Exchange movements this week has been the wide fluctuations of the franc exchange, but while prices have moved sharply in many departments, business throughout the week has been on a small scale. Gilt-edged stocks have remained steady, but French bonds have fluctuated with the movements in the exchange. Home Rails have been quiet though firm, and Argentine Rails have moved irregularly, but Brazilian Rails hold their rises. A fresh decline in raw rubber prices was without effect on the share market,

which is lifeless, while Oils have been affected by the franc movements. In the Industrial market Stores and Hotel shares have been good, but elsewhere there have been no prominent features. Mines were weak at first, but recovered from the worst.

THE COMMODITY MARKETS.

A tone of weakness is the dominant note in the commodity markets. In the Manchester cotton trade the amount of business done has proved disappointing in view of the firmness of prices, and the amount of inquiry. Our Bradford correspondent reports that business in the wool trade is quieter than a week ago. Coal prices are firm, house coal being in good demand. The market for pig-iron continues to be somewhat depressed, and our correspondent foreshadows a reduction in prices. Steel works keep going, but few new orders are coming in. Tin suffered a relapse, and copper moved in sympathy. Sugar is quiet, but tea is in demand. Rubber is steady. Wheat declined in view of better exchange rates and expected Argentine shipments. The hide market is weak; similar conditions are noticeable in markets for vegetable oils and oilseeds.

FOREIGN EXCHANGES.

In the foreign exchange market interest again has been concentrated almost entirely on the movements of the franc, business in other currencies being relatively small. After closing on the 7th at 112.20, the Paris rate continued to move up rapidly on Saturday and Monday, until at one time on the latter day the record quotation of 120.25 was reached. On Tuesday the reaction began on rumours of the raising of French credits in New York and London, and since then determined intervention and hurried covering by bears have brought down the rate with a run to a quotation of 94½ yesterday morning. With the assistance of short-term credits, it is, of course, quite possible to catch the speculators as they have been caught in the last few days, but it is not certain yet that this hustled recovery has brought reassurance to the French public in the attitude of which the real danger at present lies, and the central problem of financial reform has still to be met. In Brussels the movements have been even more violent, the rate rising from 127.55 on the 7th to 138½ at one time on the 10th, since when it has recovered to 115½ yesterday morning. The true indication of the feeling of the market is given by the forward quotations, which, in Paris, have moved from 1.10 fr. per month over spot to 6½ fr., in Brussels from 75 to 85 centimes. In sympathy with the franc, the value of sterling in New York moved down in the earlier part of the period from \$4.28½ on the 7th to as low as \$4.26 at one time on the 10th. After that, it made a steady recovery to about \$4.30 on the 13th. Yesterday morning the rate opened rather weaker, but was inclined to move upwards at \$4.29½. Forward quotations have narrowed considerably from ½ cent a week ago to ¼ cent per month above spot. The lira, after moving up to as high as 104½, in sympathy with the franc, has also shared the latter's recovery, and is now quoted again at 100. The peseta from 35.35 on Saturday last has moved steadily down to 33.05 yesterday morning, the result partly of stricter exchange control, but mainly of an improvement in the outlook in Spanish Morocco, and some increase in confidence in internal affairs. After a sharp movement in our favour over the week-end the Dutch rate reacted again, but yesterday morning moved up once more to 11.55, as against 11.53½ a week ago. Switzerland is quoted at 24.80½, as compared with 24.82 on the 7th. In Central Europe the German mark, after moving down ½ billion on the 8th, has remained steady at 19 billion undisturbed by the dissolution of the Reichstag or any fears as to the report of the expert committee. Vienna at 305,000 has moved 1,000 kr. against us. Warsaw at 40 millions remains much the same as a week ago. Prague has gone slightly against us, and Bucharest shows also an improvement to 805. In Scandinavia Stockholm, with the dollar, has appreciated from 16.42 to 16.33½. Copenhagen, after moving up to 28, stands at 27.60, as compared with 27.28½ a week ago, while Christiania is 31.87½, as compared with 31.62½. In the East the rupee stands at 15 4½d, much the same as a week ago. The yen, however, has dropped suddenly to 15 1½d

from 2s 0½d a week ago. The silver market has been quiet, prices being kept steady rather by the movement of the dollar than by any strong indications of demand. Hong Kong at 2s 4d is ½d cheaper, Shanghai at 3s 3d has fallen ½d. In South America Rio shows a slight falling off from its recent improvement from 6 23-32d to 6 15-32d, and Buenos Ayres has depreciated from 43 9-32d to 42½d. Monte Video is unchanged at 42½d, but Valparaiso has moved in our favour from 42 pesos to 43.20 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 8th:—

EXPENDITURE.	£	RECEIPTS.	£
Supply Services	10,253	From Revenue	26,042
Interest, &c., on Debt	5,079		
Sinking fund	2,165		
Road fund	300		
Reduction of Debt	9,840		
Increase in balances	405		
	26,042		26,042

Revenue was lower on the week ending March 8th at £26,042,000, against £26,783,000. Customs and Excise were both slightly higher at £2,209,000, against £2,158,000 and £1,169,000, against £1,078,000 respectively. Estate Duties brought in £3,320,000, against £3,120,000, and Post Office receipts were up £200,000 at £1,000,000. Property and Income-tax yielded £11,722,000, and Super-tax £3,500,000, against a combined total of £18,814,000 for the corresponding period. Ordinary miscellaneous receipts amounted to £591,000, against only £492, but Special receipts were much lower at £186,000, against £1,200,000. The week's operations reduced the National Debt by £9,840,000, and caused the following changes:—

	£		£
Public Departments	+ 5,200	Treasury Bills	- 14,152
Land Settlement	+ 42	Telegraph Monies	- 250
		Saving Certificates	- 200
		Unemployment Insurance	- 480
	+ 5,242		- 15,082

The floating debt was reduced by £8,950,000 to £784,130,500.

FINANCIAL YEAR, 1923-24 (April 1 to March 8, 1924).

THE WEEK IN PARLIAMENT.

MONDAY, MARCH 10TH.—Commons: Debate on unemployment raised on Vote for Civil Services. Statement by Premier on Reparations policy.

TUESDAY, MARCH 11TH.—Lords: Matrimonial Causes Bill read a second time. Commons: Debate on the Air Estimates.

WEDNESDAY, MARCH 12TH.—Lords: Debate on taxation of betting. Commons: Committee stage of Trade Facilities Bill. Second reading of Thames Conservancy Bill.

THURSDAY, MARCH 13TH.—Lords: Report stage of Legitimacy Bill. Debate on Singapore. Commons: Government defeated on motion to suspend 11 o'clock rule. Debate on Army Estimates.

FRIDAY, MARCH 14TH.—Commons: Trade Union Act (1913) Amendment Bill debated.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE RECOVERY OF THE FRANC.

THE result of M. Poincaré's interview last Sunday with the Governor, Deputy-Governors, and Council of the Bank of France has been very apparent in the course of the franc exchange during the past week. On Monday the franc touched 120; on Tuesday it became evident that support was forthcoming from London and New York, and the franc recovered during the day to 112½. On Wednesday the movement continued, bringing the closing quotation to 105½, on Thursday it closed at 98, and at the time of writing it is quoted at 93. This recovery has a simple explanation. It has long been evident that if at any time the Bank of France cared to use its very large gold reserve—which according to the last return amounted to £145 millions sterling, excluding gold "held abroad"—in order to support the fall of the exchange, it could do so, and hold the franc for a considerable time—though not, of course, indefinitely, unless in the meantime steps were taken to remedy the causes tending to produce the decline. At the same time the Bank of France has always shown at least as strong a disinclination as other central institutions to part with its gold reserves, being more obsessed with the idea of its own security than of the obvious consideration that a bullion reserve is useless unless it is used at the proper time. But a week ago the political situation in France was, and, indeed, still remains, critical. As we pointed out last week, M. Poincaré is in danger of losing his tax proposals in the Senate, and opposition to the Government in the country undoubtedly seems to be growing, largely under the influence of the exchange depreciation. If the decline had continued, a large section of the Government supporters intended to press very hard for a suspension of the Constitution, and for a postponement of the election for perhaps a year. Any such action would certainly arouse furious internal controversy. It is difficult for anyone accustomed to English traditions to understand how such a proposal could ever receive any measure of support, for in the difficult circumstances in which France finds herself, the natural issue would seem to British ideas to be an appeal to the country. But there remains in France a strong section of opinion which regards a dictatorship of some kind as the best resource in difficult times, though this doctrine arouses all the traditional fighting instincts of an even larger section of political opinion. We can, therefore, well imagine that the strongest possible pressure was put upon the Bank of France to use its gold reserve as the only possible means of preventing a very serious political crisis.

Loans were consequently negotiated in the early days of the week both in London and New York on the security of the Bank of France gold, and as soon as these dollar and sterling credits began to be used, the downward movement set in. It may be doubted whether the Bank of France intended, or if it did, whether it was wise to precipitate, so rapid a downward movement, for it advertised to the world the dramatic and abnormal character of the action taken. But the rate of movement almost certainly got beyond control, owing to the hurried efforts of those who had been speculating on the further fall of the franc to cover and save themselves from loss. On the whole, the predominant tendency in London circles has recently been to refrain from speculation in the franc. Those who have had dealings in the ordinary course of business have preferred to cover themselves by forward sales or purchases, as the case may be, and to have no open position in either direction—the same cautious policy, on the whole, being the predominant attitude also towards the dollar sterling exchange. But the course of the franc shows that many other persons speculatively inclined, who have developed the habit of making a profit out of fluctuating exchanges, have recently turned their atten-

tion to the franc, and we have no doubt that their action, following on that of the Bank of France, is responsible for the sharpness of the reaction. We may add here that some criticism has been raised against the method of the Bank of France in opening simultaneous negotiations in various quarters in London on different terms, and this attempt to sound the market in various directions, though perhaps not unnatural, has caused some doubt and confusion. We do not think the Bank of France need have feared that it would be pressed unduly hard.

The outstanding question at the moment is where will the franc be held, and how long is the Bank of France prepared to continue to control the market. In this connection there have for some time past been discussions in the case both of the franc and of other currencies as to whether there is a normal level to which these exchanges will tend, based not upon comparative price levels, but upon the state of the Budget. For example, it is argued that if a country is for any reason not prepared to tax itself sufficiently to balance its Budget, or from inexperience is unable to collect the necessary taxes, its internal debt will sooner or later be wiped out by inflation. The extent of the necessary inflation can be worked out on the assumption that the revenue side of the country's Budget will roughly increase with the inflation and the rise of prices, while expenditure on administration and government generally will also similarly increase, the charge for interest alone remaining fixed. Hence, if one-third of a country's Budget is expenditure on services in general, and two-thirds is interest, and if its tax revenue is only two-thirds of the total Budget, a course of inflation which will halve the value of its currency and double prices will produce a balanced Budget at a figure showing an increase of 33½ per cent. on its Budget. On any such calculations, *under present circumstances*, the franc would have to fall considerably further before equilibrium could be established, and in some centres, where it is doubted whether France will for some time to come secure anything from Germany, and where scepticism is entertained as to whether her tax reforms will, in fact, be carried through, it has been assumed that for these reasons the franc would continue to fall.

But these arguments are highly theoretical, and certainly the French Government could not look with complacency on any such downward drift as a solution of its difficulties. In the first place, the solution is only a way of writing down internal debt in order to make it fit into the existing basis of taxation. But in doing so it writes down all other forms of property. That would hardly be an acceptable policy in France, where the number of small property-holders is so numerous. An even more serious consideration is that after recent experiences elsewhere, no Government would consciously act on the assumption that it could, in fact, control an important inflationist movement at any given point; for the element of confidence plays a very big part, and it would be a very great risk to run in assuming that the scheme would work according to plan. We are, therefore, confident that France will make the greatest possible efforts to follow the harder road of increased taxation, and in this course she will have every sympathy in this country, both for her own sake and for the sake of the world of commerce in general, which would be seriously upset if another of the world's most important currencies were to go seriously downhill. But this other remedy requires a very great effort from France, the magnitude of which is to be measured not by comparative figures of how much income-tax Frenchmen and Englishmen respectively pay, but by considering what proportion of France's total national income must be taken by the tax collector. This figure alone gives anything like a proper idea of the burden which is borne by various nations. In this connection we would refer our readers to an article on a later page, which discusses the national

income of France and the proportion which the Budget bears to it. We would only add in this connection that the burden seems heavier and is more unpopular in France because so much larger a proportion of revenue is raised in France by indirect taxation, which is fairly evenly distributed over the whole country, than in this country, where much more is taken in graduated taxes, bearing heavily upon the wealthiest in the community.

Granted that France puts her financial house in order, it remains, however, that she would be burdening herself heavily if the franc returned, let us say, to 80. What the right figure should be is a point which will be determined by balancing prestige against present financial ease. The course of the market will shortly tell us the official view on this matter.

MR BALDWIN ON UNEMPLOYMENT.

THE abnormal extent of unemployment which this country has experienced in the depression that has followed the post-war boom, has given rise to the suggestion that the war has made a radical change in the position of Great Britain, and that, in consequence, a large amount of our present unemployment will be permanent, or, at all events, will last for a long period of years. Those who are inclined to this view point out the desire of many nations to manufacture instead of buying from Great Britain, and to keep out our products by tariffs. They suggest that the standard of living in this country, in certain vital employments at least, is placed so high that our goods are placed on the world market at too high a price to be able to meet competition; that the war violently distorted the proportion of workpeople in certain industries—far too many having been attracted to the metallurgical trades, while the building trades are depleted—and, finally, that we have to cope with an increasing adult population due to death rate, at a time when emigration is, and is likely to remain, lower than it was before the war. In last Monday's debate in the House of Commons, Mr Baldwin, though not definitely committing himself, was inclined to associate himself with this opinion. Indeed, he referred to a further handicap in regard to taxation. It is true he did not argue that income-tax upon divided profits increases the cost of production, but he thought that in so far as the income-tax falls upon profits which are set aside for depreciation and reserve, it was a burden on production. Whether the regulations and allowances of the Inland Revenue in this connection are the right ones or not is a matter open to argument, and it may be that the new Departmental Committee on taxation may find that some adjustments should be made in this matter. There is less room for doubt on the ex-Premier's statement that for certain types of businesses the high level of rates is a charge on production.

There are some very weighty arguments in favour of the view thus presented. In particular, the distribution of labour in the country between different groups of industries seems to be very abnormal. The results of an inquiry published a year ago under the title of "The Third Winter of Unemployment" brought out the fact that the increase in the numbers engaged in the metal group of trades, whether employed or unemployed, was nearly equal to the whole increase of the adult male population, the aggregate working forces of the other industries of the country having remained unchanged, although looked at in detail some had increased and some diminished. It would, however, be a mistake to jump to the conclusion that the metal trades are grossly over-manned, and that we can only solve the problem by gradually withdrawing men from those occupations. Taken as a whole, these industries are those which grew most rapidly up to the war, and must be expected to increase with the growth of the world's material prosperity. Between 1891 and 1911 there was a 50 per cent. increase in these trades. At the time of the investigation mentioned above, the numbers actually employed were about equal to those employed before the war, the surplus being unemployed. It is very difficult to generalise about so complex a group of trades as the metal and engineering group. But in most sections in which we have made inquiry, even in general engineering,

though not in shipbuilding or pig-iron manufacture, we find that the volume of production is to-day at least equal to the volume of output in 1913, and with recovery of trade it may be expected to follow the lead of the electrical industry, which is undoubtedly producing on a considerably larger scale. Given a recovery of trade and the checking of recruitment of these industries, the lack of balance would, we believe, be quickly remedied. In this connection we may venture, with all deference, to suggest that Mr Baldwin is exaggerating and thinking too exclusively of the iron and steel trades when he says that the present recovery of trade "is due principally, if not entirely, to the large orders which have been distributed throughout the country by the railway companies, and the orders which have been distributed under the Trade Facilities Act." Our monthly trade reviews have shown that conditions in this country have responded to the recovery which has been taking place in the distant countries of the world, and even, to some extent, in certain European countries. It has shown itself very markedly in such trades as the tin-plate industry and the galvanized sheet trade, neither of which have benefited appreciably by either of the causes mentioned by Mr Baldwin. Favourable reports have come from many minor industries, such as the boot trade and the potteries, while an encouraging recovery has been very definitely noticeable in buying from India, which has received practically no benefit from the Trade Facilities Act. A great deal was made recently of the fact that some orders for India were placed in Germany, but as we had occasion to point out at the time, these orders only represented one-twentieth of the total then placed, and the balance was all placed here.

Mr Baldwin touched upon a real difficulty when he called attention to the disproportion of wages among various classes here. He quoted four cases of sheltered trades. In building wages are 90 to 114 per cent. over pre-war wages, dockers 85 per cent., railwaymen 100 to 150 per cent., the labourers employed by local authorities 90 per cent. In the trades subject to foreign competition there is a very different story; for skilled men in the engineering trade the increase is only 42 to 45 per cent., shipbuilding 18 to 26 per cent., agricultural labourers 56 per cent., in the cotton trade 61 per cent., potteries 30 per cent., and in the tinplate trade 39 per cent.* These figures are for September last, and in some cases have improved since, but they reflect the fact that we have had to fight to regain our position by bringing prices to world levels, at the expense of both wages and profits. Nevertheless, Mr Baldwin pointed out that, in spite of these reductions, the average price of exports is 89 per cent. higher than before the war, whereas average import prices are only 53 per cent. higher. He added somewhat naively that these figures proved "that the remedy which I have sometimes seen put forward, that we can help unemployment by providing goods for consumption at home, is no remedy." This is one of those cryic observations of Mr Baldwin's which leaves us guessing. Surely no responsible person has ever suggested that our export industries could sell their products at home at any price? How could we use half a million tons of tinplate at home a year, or utilise four times the quantity of cotton goods in Great Britain that we annually consume? On this question of prices, however, Mr Baldwin has his finger on a question of vital importance, for it is evident that there will be neither industrial peace nor stability of employment until there is some equality of wages for equal effort between different trades. The level at which this adjustment will ultimately take place will inevitably be determined in Great Britain by the state of world trade, and the value that other countries are willing to give in exchange for British products. Mr Baldwin vaguely recognises this, but still hankers after Protection. He tells us, for example, that in the iron and steel trade "masters and men alike have made great sacrifices to maintain competition against world prices, and yet in spite of that the last figures I have been able to obtain from the *Labour Gazette* show unemployment to the extent of 23½ per cent. in that great industry. Are

* Mr Baldwin is unduly pessimistic. The *Labour Gazette* shows a 50 per cent. increase in the pottery trades, while in the cotton trade many operatives receive allowances in excess of the wage rates shown above.

you going to have recourse to the Safeguarding of Industries Act to protect that industry—because, owing to the fall in the franc, there is going to be competition now from France and Belgium such as this country has never had—or are you going to throw all the men of that industry on the dole?" But has Mr Baldwin considered that there are several branches of the iron and steel industry in this country which maintain their export marketing by buying cheap steel billets, and has he also considered that if he keeps prices up here by a 33½ per cent. duty, he will make it more certain that prices are lower in world competition? Yet the steel industry of this country exports directly or indirectly three-quarters of its production. He also omits to mention that Great Britain is the only country which has recovered anything like its pre-war export in iron and steel, and according to the latest figures, is sending abroad as much as America, France, and Germany put together. Mr Baldwin confines his reading too exclusively to the *Labour Gazette*; he should alternate it with a study of the trade returns.

The points raised by Mr Baldwin are too far reaching to have been dealt with by the debate in the House, much less in a short article in this journal. But we may say briefly that our own view is a considerably more optimistic one than that of Mr Baldwin. In the first place the Board of Trade Insurance figures are apt to give an exaggerated idea of the problem as compared with that before the war. We are now having a weekly census of unemployed—a thing which has never been done in any country before. It includes large numbers of people who, for various reasons, including that of old age, are getting beyond the possibility of employment on full wages, a difficulty which must ultimately be dealt with by adequate invalidity pensions on a contributory basis as suggested recently by Sir Wm. Beveridge. It includes the normal unemployed in a large number of industries not included in the Trade Union figures, on which we based our conception of unemployment before the war, and it, of course, includes the normal reserve of industry—a reserve required not merely to deal with cyclical ups and downs of trade, but also with the seasonal depressions in various industries, some of which occur in every month of the year. Our view is that, so long as all classes are quoted in the Board of Trade figures, it cannot be expected to drop, except in very exceptional times, much below four or five hundred thousand people. This means that the amount of abnormal unemployment still existing amounts to between six and seven hundred thousand workpeople as compared with one and a-half millions of abnormal unemployment two years ago. The absorption of some 800,000 workpeople, as well as the increasing population, is a very considerable achievement in circumstances which cannot, by any stretch of imagination, be called times of boom. In our opinion, there is good reason to expect that this steady absorption may continue during the next two years.

THE PROPOSED NEW GERMAN BANK.

THE discussion in the Reichstag about the plan for a new German Discount Bank has received less attention in London than its importance warrants. It has been evident from recent discussions that Dr Schacht, the new President of the Reichsbank, is anxious to press on with all speed and float his new bank without waiting for what may after all prove to be a long drawn-out discussion of the plans which the Committee of Experts may decide to recommend. In doing this, he has received some encouragement from financial circles in this country. There is, indeed, a very great desire here that there should be no new catastrophic slump in German currency, for the effects of this might prove to be very disastrous and far-reaching. Our Berlin correspondent sends us the following summary of the statement in question:—

"The Bill creating a gold credit bank, to bear the name 'Deutsche Golddiskontbank,' has been published, after a preliminary statement by the Reichsbank President, Dr Schacht, to the Reichstag. In the preliminary statement, Dr Schacht mentioned that the capital of the bank would be 200,000,000 gold marks. The Reichsbank will take up 100,000,000 gold marks of the shares, plus one share, thus acquiring control. The seat of the bank will be Berlin; the direction will be in the hands of the Reichsbank, and only Germans will take part in the manage-

ment. Dr Schacht gave the reason why the new credit institution could not be created actually within the frame of the Reichsbank, the chief reason being that with such an organisation the Reichsbank could not get foreign help. With the organisation as above, a foreign international syndicate will give the Reichsbank a credit of £5,000,000, which the Reichsbank will use for taking up the Gold-discountbank shares. Further, there is promise of a foreign rediscount credit of 200,000,000 gold marks. Finally, there is an arrangement with a German banking syndicate to provide £5,000,000 for taking up the second half of the Discount Bank's capital. The bank will have the right to issue notes to a limit of £5,000,000. The total resources of the bank will, therefore, be 500,000,000 gold marks, or £25,000,000. The notes are to be in denominations of pounds sterling. As reasons for choosing the pound, not the dollar, Dr Schacht mentioned Germany's dependence on the London money market, and, further, the help which she is receiving from London.

"The Bill provides that as long as the Gold Discount Bank retains its note-issuing right no new right to issue notes will be issued to any other bank. The bank is obliged to hold security for its note circulation to at least 50 per cent. in gold, notes, or cheques in foreign currencies, the remainder in discounted foreign currency bills, of not longer term than three months. For valuation of gold coins and bills, the current London mean exchange quotations will be valid. The bank is obliged, on demand, to convert its notes into drafts on London or Bank of England notes. The bank is obliged to publish its discount rate. Its note-issuing right terminates on December 31, 1934, but may be prolonged by law. The Reichsbank is entitled to liquidate the Gold Discount Bank at any time. The bank must not give credit to the Republic, States, or municipalities. The shareholders have a right to a cumulative dividend of 8 per cent.; of the surplus remaining, 50 per cent. goes to the Republic in return for the note-issuing concession. The bank is granted secrecy of operations; it is freed from all central and local taxes; and its dividends are exempt from interest and dividend tax. It is not bound by the exchange regulation laws and decrees. Its notes do not count as foreign currency in the sense of the exchange regulation laws and of the Capital-transactions Tax Law (i.e., stamp duties on exchange dealings, &c.).

"Simultaneously is published a Bill authorising the Reichsbank to acquire shares in the Discount Bank, and authorising and compelling the Reichsbank to conduct the affairs of the Discount Bank.

"In a further statement in the Reichsrat, the Government declared that the new credit institution had to be organised as a separate bank because the foreign credit-givers emphatically demanded that."

Two points emerge in connection with this statement. The first is that the President of the Reichsbank was in a position to declare that he had received assurances that he will get the necessary foreign capital, the course of the discussion making it fairly evident that the Bank of England is not unconnected with these assurances; and, secondly, that the President of the Reichsbank has committed himself to the policy of establishing not a gold bank, but a sterling bank. From which we may conclude that he expects to tie German currency to the £ sterling.

It seemed at one time as if these proposals might not, after all, go through in Berlin without challenge, for Dr Helferich criticised the scheme severely as unnecessary, inadequate, hasty and ill-drafted. But under the cloud of dissolution, the Reichstag hastily passed the project. This action does not, however, by any means ensure that the plan will receive the necessary support from German industrialists—especially since the Government, in order to secure the Bill, threw overboard the clause giving an amnesty to subscribers who might have transgressed the Flight of Capital Abroad Law. If, however, Dr Schacht succeeds in securing the necessary internal support, and the scheme is floated, it will be a factor of very great importance in the whole reparations discussion that important financial interests will have committed themselves to an attempt to hold and stabilise German currency without regard to whatever commitment Germany may have undertaken towards her creditors.

ACCOUNTS IN PUBLIC ADMINISTRATION.*

Six years ago the National Expenditure Committee of the House of Commons reported that, with a total expenditure on the war up to September, 1917, of 5,000 millions, increasing at the rate of 1,000 millions each half-year, the only checks in operation on further expenditure in any and every direction lay in such physical obstacles as the limits of man-power and shipping; and that it was high time that considerations of cost should again carry weight. The system of financial control had, in fact, broken down entirely, and neither the spending Departments, nor the Treasury, nor Parliament itself had any machinery for the purpose. At best, Treasury control inevitably rested on the personal attitude of Ministers to economy—a bruised reed in 1918—while Parliamentary control, resting entirely on the limitation of cash payments by annual estimates for each Department, had disappeared on the introduction of Votes of Credit. Even had the old forms of estimate and account been in full operation, the Committee realised that they gave no clue to the real cost of the various activities of Government or the standard of economy reached in administration, so that they were of little value for any purpose of control; and (as Sir John Bradbury put it in his evidence) "it must be borne in mind that the control of expenditure, in the sense of securing that the various public services are efficiently administered at a reasonable cost, was no part of the object which the framers of the system had in view."

The Committee found that the first step towards real control was to recast the Parliamentary estimates and accounts in such a form as to "bring to light extravagance and inefficiency, and enable criticism to be usefully applied." "The head of the Department and the Minister will be confronted with the actual results of their decisions. The Treasury will have an entirely new field of control open to it by comparing.....the relative cost per patient in Navy and Army hospitals, the cost per unit of Post Office, Navy and Army storekeeping, and so on. Parliament will be able to see that these comparisons are driven home and made effective, and will also be able to compare the official figures with the results obtained in commercial undertakings."

The then head of the War Office Finance Department (Sir Charles Harris), who had evidently been thinking along these lines, produced to the Committee a scheme for applying them to the Army; and so it fell to the lot of the War Office to pioneer the introduction of modernised accountancy into our public expenditure. The change was ordered to be made in the Army estimates of 1919-20, and other great spending Departments were to follow later; but when peace had come and the business men of the war period had again left Whitehall to the permanent officials, the pendulum began to swing back; and though the War Office has followed the new model from 1919 onwards, the reform has never received final approval, and no other Department has even tried the experiment. In 1922 the War Secretary (Sir L. Worthington Evans) appointed a Committee, under the chairmanship of General the Hon. Sir Herbert Lawrence—himself combining in unique degree both financial and fighting experience—with Sir Gilbert Garnsey as vice-chairman, to examine the War Office account system, and that use (within the War Department) of accounts for purposes of administrative control which was the main object of the whole scheme. The Report of this Committee, which has now been presented to Parliament, is divided into two main sections, dealing with administration and accountancy respectively. The latter part, which is highly technical, shows some difference of opinion between the professional and official accountants; not as to the sort of accounts to be produced but as to the best organisation, in the special conditions of Army life, of the accounting personnel and work—questions of machinery which we may leave to the Secretary of State and his advisers; but the first part contains completely unanimous recommendations of great importance, not only in their bearing on Army expenditure, but on public expenditure generally.

* Report of the Committee on Administration of, and Accountancy for, Army Expenditure. (Cmd. 2073.)

The "accounts" (so called) of the Army under the old scheme consisted almost entirely of voluminous masses of vouchers and certificates designed to prove that every penny of expenditure was authorised by some paragraph of equally voluminous regulations. The actual accounts themselves were incredibly elementary—a mere abstract of the cash payments of the year, classified under the votes, sub-heads, and items of the Parliamentary Estimates. These were so arranged that each payment made could be assigned at once to its proper head, and control consisted in securing that no excess took place under any one vote (or sub-head) without the formal authority of the Treasury, and ultimately of an Act of Parliament. Accordingly, the heads of account presented formal classes or "subjects" of expenditure, such as pay, wages of civilians, food, clothing, &c., without any reference to the "objects" or purposes for which the expenditure was incurred. The only account kept was at the War Office itself, and its scope was world-wide, so that it did not show the expenditure of any Command or area, while, as it took no account of liabilities or consumption of stores, it could not show the cost of any branch of the Army, activity or service. It merely proved the honesty of the paymasters and the observance by the War Office of the hundreds of separate compartments into which the Parliamentary grants were divided. "Where the account is," says the Report, "there also must the control of expenditure reside; and with an account which is available and has meaning only at the centre, any real local freedom is impossible." Thus general officers commanding-in-chief and other dignitaries with high-sounding titles were, in fact, the slaves of regulation, bound fast with red tape.

The new plan sets up on the spot, for each regiment, transport company, hospital, &c., an account of the ordinary business type, showing month by month its cost under all heads (including outstanding liabilities, consumption of stores, &c.), and reducing the return for the expenditure to some suitable economic unit, such as cost per man per day, car-miles run, patient-day; and the object of the scheme is to give the officer in local charge an effective control of the expenditure except where, like soldiers' pay, it must obviously be centrally controlled, and to hold him responsible for the efficiency and economy of his administration as disclosed by the account, thus realising that effective decentralisation in matters of expenditure which (as the Report states) all Army reformers have advocated for thirty years past and have failed to attain.

Here we have a choice between two conceptions of administration. Under the old system all intelligent interest in economy is withdrawn from the circumference (where the actual expenditure takes place) to the centre. It is not the business of the Army to know or care what anything costs or what return is obtained for expenditure. Regulations lay down in minute detail the scales on which the troops are to be supplied with food, clothing, furniture, ammunition, and other necessities of military life, and the regimental officer who keeps to these scales has done his duty; there is no incentive to economise. Financial officials in the War Office itself develop a special technique for keeping the cash payments within the limits of the Estimates, and Parliament accepts as a "saving" a balance that may arise from the mere postponement of a payment from March to April.

The new plan keeps the officer in charge of any establishment informed of its cost under all heads and of the work done in return. It encourages him to place himself in rivalry with other officers similarly situated, to think in terms of cost, to study economy and exercise the faculty of contrivance, and, generally, to regard himself as a responsible being. Instead of choking him with red tape, it offers him a real discretionary power over the expenditure of his establishment, with a corresponding liability to give an account of his stewardship.

The Committee has no hesitation in choosing this plan, not only because "it is proved to demonstration that by a proper system of accounting, economies to an extent at present quite unrealised can be effected," but also because "it is a well-known fact, and can be proved by statistics, that when, as in the case of an army in the field, control by scales practically disappears, the better disciplined a battalion, the more economical it is in con-

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,352,105

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

sumption of stores. We think it will be found that the converse is also a fact, and that as discipline produces economy, so sound methods of administration will tend to improve discipline. "To obtain a sound body of administrators throughout the Army it is necessary to begin to train them early. The regimental officers of to-day, some of whom will be the administrative officers of the future, must from the beginning of their career regard accounts as a necessary part of the Army system of administration."

The Report makes it plain that the time has come for a definite decision. While it has remained doubtful whether the new plan has come to stay, the old and new systems have been running side by side, with separate accounting staffs, and inevitable overlapping and expense, and the full possibilities of simplified and improved administration have not been realised. The War Office must either go forward boldly on the new path or abandon the experiment and revert to the ancient methods. Parliament, which authorised the change, looks to the Treasury for its considered judgment; and we do not think that any man with a knowledge of the place of modern accountancy in business affairs can doubt what the decision should be. Nor is there any reason why this reform should be limited to the Army sphere.

AN ANALYSIS OF RAILWAY RECEIPTS.

WE have had occasion in a previous article to regret that the railway companies did not see their way to give comparative figures of previous years in presenting their accounts for 1923, seeing that the present groups only came into existence last January. But the companies could undoubtedly have given estimates in so important a matter. We, therefore, risked the reputation of those who rush in where angels fear to tread, and published last week a comparative statement based upon compilations which we made a year ago of the composite position of the companies included in the four big groups. In the following article we give some further figures compiled in the same way, with the proviso that the figures are only approximate and cannot be used to do more than indicate with fair certainty the direction of change, and only roughly the amount of change, in the detailed items of the companies' accounts.

The present article briefly analyses gross receipts. As we have explained, the comparison is not strictly accurate, but the margin of error does not appear to be very wide, judging by the L. and N.-Eastern figures of weekly traffics. This company gave a comparative figure throughout last year, and the difference in the total for the 52 weeks corresponds fairly closely with that shown in our comparison. In the first table we compare the various classes of receipts in 1922 and 1923 of the four companies:—

(000's omitted.)

	Passenger Trains.		Goods Trains (excluding Livestock).		Total Railway Receipts (including Livestock, &c.).		Total Gross Receipts (including other Businesses).	
	1922.	1923.	1922.	1923.	1922.	1923.	1922.	1923.
Lon., Mid., and Scottish	34,762	32,633	46,851	45,306	85,589	81,471	91,278	87,317
London and N.-Eastern	23,921	21,974	36,493	35,491	65,141	61,308	71,024	67,026
Southern	18,283	17,270	6,442	5,997	25,301	23,811	27,572	26,440
Great Western	14,741	13,705	18,403	17,755	31,111	32,391	38,523	36,724
	91,707	85,582	108,189	104,552	210,142	198,971	228,397	217,506

Passenger train receipts include receipts for the carriage of mails, parcels, parcels post, excess luggage, and other merchandise by passenger train. The L.M.S., for example, earned £1,007,033 from the carriage of mails last year, and £5,611,791 from parcels, other merchandise, &c. It may be mentioned that this company's earnings from mail carrying exceeded those of the other three companies combined by £46,000. Goods train receipts given in the table comprise revenue from merchandise (less expenses of collection and delivery), coal, coke, and patent fuel, and other minerals, while total railway receipts include revenue from live stock and from jointly-leased lines and miscellaneous receipts. In the final column are included receipts from omnibuses, steamboats, canals, docks, harbours and wharves, and hotels and refreshment rooms and cars. These operations, it will be seen, produced over £18½ millions in 1923. Passenger train revenue declined by 6.7 per cent., and goods train revenue by 3.4 per cent., the heavier decrease in the former being accounted for to some extent by the fact that passenger fares were reduced as from January 1st, whereas the lowering of freight rates in 1923 took place in May and August.

In the next table we compare the number of passengers carried, the receipts from passengers (season ticket holders being excluded), and the mileage run by loaded passenger trains:—

PASSENGER TRAFFIC.
(000's omitted.)

	Total Number Carried.		Receipts (from Ordinary Passenger.)		Average Fare per Passenger.		Coaching Train Miles (Miles Run in Relation to Receipts.)	
	1922.	1923.	1922.	1923.	1922.	1923.	1922.	1923.
London, Midland, and Scottish	329,682	353,037	23,659	22,252	s d 1 5 90	s d 1 3 25	76,995	80,782
London & North Eastern	235,811	240,291	15,859	14,575	1 4 12	1 2 50	53,399	55,720
Southern	184,409	197,380	12,987	12,186	1 4 90	1 2 82	37,582	40,175
Great Western	128,639	143,831	10,266	9,636	1 7 15	1 4 07	33,554	36,633
	878,541	934,599	62,771	58,649	1 5 15	1 3 11	201,530	213,310
	..	+6.4%	..	-6.6%	..	-11.9%	..	+5.9%

Thus while the number carried increased by 6.4 per cent., there was a decline of 6.6 per cent. in receipts from ordinary passengers, and at the same time an increase of 5.9 per cent. in the coaching train miles, the last-named being somewhat disappointing in view of the expected economies in this direction arising from the grouping arrangements. Fares were reduced as from January 1, 1923, by over 14 per cent., so that the average journey has apparently been slightly longer. Until we have passenger mileage and ton mileage statistics, however, there can be no certainty about these figures.

The next table shows goods traffic tonnage and receipts:—

GOODS TRAFFIC.
(000's omitted.)

	Tonnage.		Receipts.		Average Receipt per Ton.		Goods Train Miles (Miles Run in Relation to Receipts.)	
	1922.	1923.	1922.	1923.	1922.	1923.	1922.	1923.
London, Midland, and Scottish	156,211	163,077	46,852	45,306	s d 5 11 9	s d 5 6 75	48,501	53,375
London & North Eastern	156,670	156,902	36,500	35,494	4 7 9	4 6 25	35,325	39,319
Southern	19,642	17,968	6,443	5,998	6 6 7	6 8 11	6,377	6,730
Great Western	73,643	82,624	18,402	17,755	4 11 9	4 3 57	20,507	22,723
	406,166	420,571	108,197	104,553	5 3 94	4 11 72	110,710	122,147
	..	+3.4%	..	-3.4%	..	-6.6%	..	+10.0%

The increase in the total tonnage carried is, according to our figures, entirely accounted for by two lines, the L.M.S. and the Great Western, the latter showing the larger percentage increase. The tonnage of the Southern shows a substantial decline, which may actually have been greater than our figures show, since the 1922 total may well have been incomplete. The increase of 10 per cent. in the goods train mileage seems even more unsatisfactory than the increase in passenger train mileage, seeing that the percentage increase in tonnage carried was substantially smaller than the growth in the number of passengers. The size of the decline in the average receipt per ton points to a reduction in the length of haul, but in the case of the Southern, it will be observed, a reduction in tonnage carried is accompanied by an increase in the average receipt per ton.

In the next table goods train traffic is subdivided into the three classes:—

GOODS TRAFFIC.
(000's omitted.)

	Merchandise.		Coal, Coke, and Patent Fuel.		Other Minerals.

*Originating on the company's system.

The very large increase in coal and mineral tonnage has been accompanied by a slight increase in receipts in these categories, whereas the larger tonnage of general merchandise carried has produced a considerably smaller revenue. The explanation lies in the fact that some reductions in coal and some mineral rates were made before or during 1922, whereas the reduction in general merchandise rates was not made until last year. The tonnage originating on each company's system, namely, 334,529,000 tons, is 70 million tons less than the total given in the preceding table. In some cases there is a striking difference between the total tonnage carried and the amount originating on the company's system. For example, the Southern carried 8,359,000 tons of coal, &c., of which only 1,075,000 tons originated on the system. Similarly, the L.M.S. actually carried 97½ million tons of coal, the L.N.E. 102½ millions, and the Great Western 57 millions. The L.N.E., it may be mentioned, gives the equivalent tonnage for the livestock carried, the number being 7,540,700, and the tonnage 1,102,587. The average receipt per ton of livestock was 11s 9d.

The decrease of £11,864,000 in gross receipts was accompanied, as we showed last week, by a reduction of £7,832,000 in expenditure, and with this aspect of the accounts we hope to deal in a later issue. There was only a small decline in net income, thanks to an expansion in "miscellaneous receipts (net)," which, as may be seen from our final table, include rents and interest:—

MISCELLANEOUS RECEIPTS (NET).
(000's omitted.)

	1923.					In-crease.
	1922.	Rents.	Trans-fer Fees.	General Interest.	Total (Incl. Other Items).	
London, Mid. and Scottish	£ 2,605	£ 1,125	£ 11	£ 1,889	£ 5,610	+ 808
London & N. Eastern	1,217	838	11	883	1,957	+ 640
Southern	708	759	5	372	1,139	+ 431

	5,386	3,015	31	4,085	7,702	+ 2,316

The increase is probably largely due to the higher amounts received under the heading of "general interest," the final instalment of Government compensation money paid at the beginning of 1923 having helped to swell the reserves and the holdings of Government securities.

ENQUIRY BEFORE STRIKES—THE CANADIAN EXPERIMENT.

(BY OUR LABOUR CORRESPONDENT.)

IN industrial, as in political conflict, the decisive factor is public opinion. On the political side, this is, of course, a platitude; it is, however, as true, though less universally admitted, on the industrial. The third party, i.e., the public, really holds the balance. Of this truth the recent docks strike afforded a useful exemplification. Most people would agree that the decisive fact, which

made possible the settlement actually arrived at, was the effect on public opinion of the inquiry instituted by the Government so soon as the strike was declared. After the powerful speech on its opening day by Mr Bevin for the men, and the very weak speech for the employers by Sir Norman Hill, the man in the street and on the 'bus made up his mind. The dockers had won.

Credit, in all this, should be allowed where it is due. The Government's prompt action—both in making all necessary arrangements for safeguarding the national food supply, for restraining illegitimate profiteering in food, and in instituting the inquiry itself—removed any sense of public nervousness; instead, inspired a sense of confidence that they would see justice done all round. They were neither paralysed nor stampeded by the statements freely made in the Press to the effect that a big strike threatened their life; that a protracted one would bring them down; that just because they are a Labour Government they were exposed to peculiar and special difficulties. They acted firmly and temperately, and the result was not merely the settlement of an immediate crisis, but a promise, as the outcome of the work of the special committee instructed to devise means of putting the Shaw Report, as it recommended decasualisation, into operation, of a real forward move in a most unsatisfactory industry.

The peculiar and special difficulties are there. It is true that sectional impatience might jeopardise the general, political chance. At the same time, the existence of a Labour Government undoubtedly has a certain steadying effect. How far can that effect be pushed? Can the procedure adopted at a late stage in the docks case be generalised? Can advantage be taken of the fact that inquiry with a Labour Government in power means a sympathetic inquiry, to interpose such inquiry before action in any and every dispute? Can, in general, the principle of delay, suggested for international disputes in the League of Nations Covenant, be applied, in the sense that it is laid down that whenever an industrial dispute threatens, a period of suspension of hostilities be declared by the Government, during which no action may be taken by either side, but instead, the whole circumstances are investigated by an impartial tribunal? That is a question which is being very generally put. The *Daily Herald* has had a sort of symposium on the subject. It has revealed considerable differences of opinion within the ranks of organised labour, and a justified unwillingness to accept, because of special circumstances, a precedent that could hardly be confined to those circumstances. An inquiry with a Labour Government in power may be all right; an inquiry with an ordinary Capitalist Government in power all wrong. And who knows how long the Labour Government can last, or how far it can bind its successors? Procedure once accepted remains, however its conditions change. The problem is the same as that surrounding the builders' guarantees.

One point is clear. To anything of the nature of compulsory arbitration there is, of course, pretty unanimous opposition. That would take out of the hands of the Trade Unions their main fighting instrument, and undermine the effective strength of their organisation for all purposes. The Australian experiments have consolidated this feeling. Arbitration spells the industrial weakness of Labour. But compulsory investigation is rather a different proposition. It ought to have the advantage of mobilising public opinion behind a just claim, and effecting, without a strike, what is sometimes—but by no means always—secured through them. In any case, it does not, in fact, deprive the workers of the strike weapon. Investigation and arbitration are different things. An ounce of practice is worth a ton of theory—or would be if one could ever get at all the facts which practice reveals. In the one case open to inspection—the working of the Canadian Industrial Disputes Investigation Act of 1907 (the Le Mare Act), all the facts are not available. Those that are are worth considering, however. The substance of the Le Mare Act is contained in Sections 5 and 57:—

"5. Wherever any dispute exists between an employer and any of his employees, and the parties thereto are unable to adjust it, either of the parties to the dispute may make application to the Minister for the appointment of a Board of Con-

ciliation and Investigation, to which Board the dispute may be referred under the provisions of this Act. . . .

"57. Employers and employees shall give at least thirty days' notice of an intended change affecting conditions of employment with respect to wages and hours; and in every case where a dispute has been referred to a Board, until the dispute has been finally dealt with by the Board, neither of the parties affected shall alter the conditions of employment with respect to wages or hours, or on account of the dispute do or be concerned in doing, directly or indirectly, anything in the nature of a lock-out or strike, or a suspension or discontinuance of employment or work, but the relationship of employer and employed shall continue uninterrupted by the dispute, or anything arising out of the dispute. . . ."

Amendments in 1918 and 1920 gave the Minister of Labour power to constitute a Board of Conciliation, as here provided, on his own initiative, without waiting for an approach from the parties. Such Boards consist of three members, one nominated by each party to the dispute, with a chairman selected by these two nominees. Strikes entered into in contravention of the Act (i.e., while an investigation, to which the parties have agreed, is going on) are punished by fines, limited to a thousand dollars for a trade union or employer, fifty in the case of a worker. The actual procedure of the Ministry has been to leave it to the aggrieved party to initiate a prosecution for infraction of the Act; a line commended in the Report. Special research was made into the working of the Canadian Act by the U.S. National Insurance Conference Board in 1918, which expressed the view that "the Act might be quite as strong if the penalty provision were repealed." The restraint exercised, in their view, is a consequence not of any fear of penalty ("the few cases in which penalties have been imposed are responsible for much opposition to the Act"), but of "the fact of declaring a strike illegal." Investigations have "been most successful when most informally conducted." There has been, indeed, considerable opposition, indicated at recent Dominion and Provincial Congresses, to the power to prohibit strikes, but at the same time support for the principle of compulsory investigation, and a willingness to have it applied more widely.

How far has the Act been effective? Since its enactment, up to 1920, Boards have been established in 446 cases. In 1920, there were 72 applications for such Boards. Strikes were prevented in all but three cases.

Two main questions fall to be asked. How far, in the first place, has the Canadian machinery saved the Canadian public from strikes? How far, in the second, have the settlements actually effected been satisfactory? On the second point there is no available information. Indeed, it is a point as to which information is almost impossible to get, urgently desirable as it is to have it, about disputes in general. Nothing, for instance, could be more useful than a properly documented survey of the actual results of strikes, from the point of view of the changes in conditions secured. True, the material is available in detail, in the *Ministry of Labour Gazette*, no doubt; but it is available in too much detail. The belief in the strike is a vague belief; it is not an inference from known achievement. On the first point the evidence is not entirely encouraging. There was a considerable drop in the number of disputes in Canada in the years that immediately followed the introduction of Le Mare Act, but from 1917 to 1919 they steadily rose again, with a subsequent decline, as the following table shows:—

Year.	Number of Disputes.	Workers Involved.	Days Lost.
1907	149	36,624	621,962
1908	68	25,293	708,285
1909	69	17,332	871,845
1910	84	21,280	718,635
1911	99	30,094	2,046,650
1912	150	40,511	1,099,208
1913	113	39,536	1,287,678
1914	44	8,678	430,054
1915	43	9,140	106,149
1916	75	21,157	208,277
1917	148	48,329	1,134,974
1918	196	68,483	763,241
1919	298	138,988	3,942,189
1920	285	52,150	886,754
1921	145	22,930	956,461
1922	85	41,050	1,975,276
*1923	51	35,472	830,180

* Approximate.

Even these figures do not carry one very far, since one is unable to compare the disputes which did not take

place as the result of the interposition of the machinery of inquiry with those that did, in spite of it. One cannot probably go much beyond the view expressed in the American Report, already cited, that "The existence of the Act on the statute books has acted as a wholesome restraint both on employers and employees throughout a period of great industrial unrest; it has served in some degree to crystallise public opinion, and in particular cases to make it effective for the maintenance of industrial peace." An educated and informed public opinion, attentive to an investigation, can give to its findings a force more binding than that of any legal compulsion, but where such opinion does not exist, or cannot be mobilised, the report falls to the ground, and the disputants are left to fight it out. Is not the Report of the Royal Commission on Mines a case in point?

Here the real difficulty about the idea of compulsory investigation and delay comes in to sight. In so far as industry is—and from some points of view it certainly is—a battle, the power to strike, at a chosen time, is a vital element of strength, more vital to the workers than to the employers in most cases. Can they be expected, as things are, to consent to be deprived of it by the power of the employer to call for an inquiry so soon as he sees them ready to strike? If their acceptance of this demand on his part is to be a legal obligation, the distinction between investigation and compulsory arbitration becomes tenuous indeed. To accept the idea of preliminary inquiry in given cases and in special circumstances—such circumstances as those of the moment—is, however, another matter.

THE NATIONAL INCOME OF FRANCE AND THE BURDEN OF TAXATION.

THERE has been much controversy as to the burden of taxation imposed upon the French and British nations respectively. It is, however, by no means easy to make direct comparison. The best approximate idea can be obtained by considering the proportion of the total national income of each country which is taken in taxation, for this gets over much of the difficulty arising from differences of wealth and population. Even this comparison is not scientifically exact, for a country sunk in extreme poverty would find it much more difficult to pay taxes amounting to 10 per cent. of its income than a rich country would experience in paying 30 per cent. The comparison of national income and taxation is, however, a first step, and we have therefore procured an estimate from a French expert of the figures for that country, which may be compared with a proportion in Great Britain at the present moment of something like 18 per cent., excluding local rates. His estimate is as follows:—

Before the war the total of the national income of France was valued by the best statisticians at approximately 35 milliard francs. This figure was built up from direct estimates of the different classes of revenue (wages, profits, interest, &c.), which were themselves based on definite investigation. Since the war our sources of information have become much more uncertain. We do not know either the total wages bill or the revenue from property, still less that of industrial profits or of agricultural earnings. On the other hand, we have two sets of definite statistics which could serve as a basis of rough estimation, namely, the total investments of France since 1918 and the import figures.

The total of shares, debentures and National Defence Bonds subscribed by the public has been published regularly by the Office des Valeurs Mobilières. For the three years 1919-1920-1921 the total has amounted to 119 milliards. But in this total short term borrowings are included to the extent of about 40 milliards. Both the public and the banks have got into the habit of investing in National Defence Bills their floating capital. The remainder, that is to say, 79 milliards, represents the true permanent savings, and this represents 26 milliards a year. This figure is confirmed by the results published for 1922 and 1923. During these two years the new issues of Defence Bills have been balanced or even exceeded by the bills repaid. Consequently the figures of the Bureau show exclusively the true long-term savings, the latter amount-

ing to 26 milliards in 1922 and 12½ milliards for the first six months of 1923. Thus the savings for France, or rather those which can be separately identified, total about 25 milliards a year.

Clearly in this sum we should eliminate investments by foreigners in France, but the deduction to be made under this head would probably be balanced by the savings of French industrialists and agriculturists, which are made in their own business and do not appear on the market.

In 1913 the savings of France amounted to 5 milliards a year, that is, one-seventh of the national income. It seems likely that savings to-day form at least as large a proportion and possibly a larger proportion than before the war, for the depreciation of money means that prudent companies have had to enlarge their reserves. If you take the figure at one-sixth of the national income this would give us a total of 150 milliards.

Another estimate is that which can be deduced from imports compared to full income. From 1906 to 1913 French imports reached an average of 7 milliards, i.e., one-fifth of the national income. The average imports for 1921, 1922 and 1923 reached 26 milliards. On the not unreasonable assumption that these figures represent the same proportion of the national income as before the war, i.e., one-fifth, the national income would be 130 milliards. We may therefore assume that France's national income is somewhere between these figures of 130 and 150 milliards. Let us say for the sake of argument 140 milliards. This figure happens to be exactly four times the pre-war national income. The money in circulation is also exactly four times larger in 1924 than in 1913 (40 milliards of notes in 1924 against 9½ milliards of notes and gold in circulation in 1913). This is a further confirmation of the estimate.

What proportion of this revenue do French people pay to the State Budget? In 1913 the Budget receipts reached five milliards, i.e., about 14 per cent. of revenue. But these figures include about a milliard representing receipts from undertakings such as posts, telegraphs, and State domains, so that taxation revenue only amounted to 4 milliards in 1923. The total receipts actually attained for the general Budget in 1923 were 22,600 millions (this figure does not include special receipts arising from the liquidation of stocks; but, on the other hand, it does include the special receipts in regard to war profits which constitute a tax though a temporary one). These receipts amount to 16 per cent. of the national income of 140 milliards, as against 14 per cent. in 1913. As to 1924, the estimate of receipts for the general Budget amounts to 23,600 millions, i.e., an increase of one milliard. In addition to this the new taxes which will have to be imposed to cover in part the expenditure incurred in respect of "charges recoverable from Germany" should bring in 5,200 millions. The total estimated receipts will thus attain about 29 milliards.* The milliard of economies which will be made in order to establish complete Budget equilibrium do not bear upon the present question. A revenue of 29 milliards represents over 20 per cent. of a total national income of 140 milliards. (Both figures will, of course, rise with a general rise of prices.)

This percentage is a very high one if the two following points are borne in mind. In the first place, local taxation, which amounted to 1,350 millions in 1913 is not included in these figures, although these local taxes have very greatly increased. In the Department of the Seine, for example, they have quadrupled, having risen from 100 to 400 millions. The figures for other departments and communes are not known, but they appear to have increased in the ratio of 1 to 3. The second consideration is more serious. The increase of taxation in 1924 just covers the cost of pensions and the interest on loans already issued in respect of the "Budget of recoverable expenses." But this year the Government was already authorised to borrow either direct or through the Credit National a sum of about 8 milliards (the actual sum authorised is 12 milliards, but 4 milliards represents short-term loans in Treasury bills which are only needed for the temporary requirements of the Treasury). Loans of at least an equal amount are anticipated in the two following years. We must, therefore, anticipate under this head a further interest charge of about 1½ milliards,

* Report of M. Bokanowsky. Documents of the Chamber of Deputies No. 6980.

which must be found by the taxpayer. One or two years hence the Budget of the Central Government will not be less than 31 to 32 milliards.

Thus the policy of securing a real Budget equilibrium, which has been embarked upon in the last five weeks, will not be carried through without very heavy sacrifices being required from the people of France.

Notes of the Week.

The Government's First Defeat.—The Government met with their first defeat in the House of Commons on Thursday, when a motion to suspend the eleven o'clock rule was defeated by 234 votes to 207. It was not a snap division; but, on the other hand, it was a merely tactical defeat which involved no matter of important principle, and therefore by common consent came within the category of defeats, outlined by Mr. MacDonald at the opening of the session, which under existing circumstances do not call for the resignation of the Government. The Government courted their rebuff by insisting upon asking the House to follow the unpopular course of debating important military affairs at a very late hour. An alternative motion to take all the time of the House would rather obviously have been carried. But here the Government were in a difficulty owing to the demand of the strong group of mining members that the debate on a private Bill on Friday should not be interfered with. The defeat in itself is of minor importance; but it has its moral. It will forcibly remind the Labour Whips that a minority Government has got to study the wishes of other parties, and to indulge in give-and-take in the matter of Parliamentary procedure. Public business is in arrears, and the Government's desire to press on with it commands general sympathy. But it is no use trying to butt a brick wall, and if the Government repeats the faulty tactics of Thursday, it will find it increasingly difficult to reach the understandings with the Whips of other parties upon which the smooth progress of business depends. On the other hand, the national interest demands that the other parties should eschew pure obstruction and co-operate in the expediting of important national business. It is only on the basis of reasonable accommodation that the new experiment of three strong parties and a minority Government can possibly succeed; and, since the present strength and grouping of parties may last for a long time without essential variation, it is very important that the experiment should be given every possible chance.

The Westminster By-Election.—The by-election in the Abbey division of Westminster is of greater importance than the ordinary run of such contests, thanks to the appearance on the scene of that stormy petrel of politics, Mr. Winston Churchill, who, by his entry into the contest, has succeeded in splitting the Conservative Party, and possibly to some extent also the Liberal Party, in that division. Some of the high priests of Conservatism worked hard to obtain Mr. Churchill's adoption as official Conservative candidate. The local association refused to be coerced, and selected a candidate of its own, Mr. Nicholson; whereupon Mr. Churchill, still backed by many prominent Conservatives, decided to contest the seat as an "independent anti-Socialist." The Government party obviously had to contest the seat, too, so there is a Labour candidate; and since, although professing himself a Liberal, Mr. Churchill's candidature is avowedly an attack on Mr. Asquith's attitude towards the Government and an assertion that the Conservative Party is the only true opponent of Socialism, the entry of an official Liberal candidate was equally certain. Whatever be the verdict of the electors next Wednesday, this muddled contest will deserve the retrospective attention of the historian. Part of the interest is, of course, personal. Mr. Churchill is a man of wide experience and exceptional administrative ability, who, under a system of proportional representation would always be certain of a seat in Parliament. But we fail to see any solidity in the grounds on which he is basing his present

appeal to the electors of the Abbey division. At a time when other people are settling down to confidence, Mr. Churchill is still scared to death by the advent of a Labour Government. We wonder whether he remembers his own definition of a Liberal, to which he gave currency in 1909: "Above all, I think, a Liberal is a man who should keep a sour look for scaremongers of every kind and size, however distinguished, however ridiculous—and sometimes the most distinguished are the most ridiculous—a cold, chilling, sour look for all of them, whether that panic comes from the sea, or from the air, or from the earth, or from the waters under the earth." The italics are ours. We prefer the staunch Churchill of fifteen years ago to the scared Churchill of to-day, and the definition quoted above describes very prettily why the Liberal Party find it necessary to oppose the new Churchill to-day. Again, Mr. Churchill takes his stand on the ground that Conservatism is the only real trustworthy opposition to Socialism. In taking this line he makes, in our opinion, mistakes both of history and of political philosophy. In the first place, we can imagine no greater filip to Socialism than the attempt to divide the country into Socialist and anti-Socialist. In the second, it is easier to find theoretical affinity between Conservatism and Socialism than between Liberalism and Socialism. The real opposite to the Socialist is the individualist, and it is the charge of extreme individualism that for decades has been the favourite taunt to throw at the heads of Liberals. We recognise to the full Mr. Churchill's personal gifts, experience, and brilliant intellect, but should not be surprised to find that they are insufficient to lift him, with this load of fallacious political doctrine on his back, to the top of the poll on Wednesday.

Navy Estimates.—The total of the Navy Estimates for 1924-25 is £55,800,000, which compares with £58,000,000 for 1923-24. Towards this decrease of £2,200,000 naval armaments contribute £1,369,400 and victualling and clothing £484,400. There is an increase, however, of £788,850 under shipbuilding contract work. Of this, £683,000 appears under the heading of "propelling, &c., machinery" for ships, and there is also an increase of £419,800 in gun mountings, but there is a reduction of £225,000 in armour in the contract work section. The total includes a provision of nearly £1,800,000 for the commencement of five cruisers and two destroyers, this being the only new construction provided for apart from the completion or the progressing of vessels actually in hand. The explanatory statement of the First Lord of the Admiralty points out that, translated into pre-war figures by making allowance for difference in prices, the total of £55,800,000 would represent approximately £34,500,000, which is about equal to the expenditure of the year 1903-4. The First Lord also explains that in preparing the estimates, special regard has been had to the fact that in three successive years a substantial surplus has been realised on the provision made for naval requirements. "These under-spending have been due chiefly to the progress on contract work of various descriptions proving slower than was anticipated in the original estimates." For the coming year the Government have decided to discount these various causes of possible delay in advance, and the provision under the contract subheads has been correspondingly reduced. The estimate of personnel of the Fleet shows a reduction of 136. The numbers required for the existing Fleet are 99,100. The manning of ships already under construction or reconstruction would, under ordinary circumstances, require an additional 3,200 officers and men. "In view, however, of the urgent need for economy, only 1,400 of this 3,200 will be provided for by new entries. The remaining 1,800 will be found by reducing the existing peace complements of the Fleet."

Miners' Wages Negotiations.—An important step forward was taken early this week in the progress of the negotiations for the revision of the National Wages Agreement in the coal mining industry. But unfortunately the new hope was disappointed. Three main questions are under consideration, and on one, namely, the publication of fuller details as to costs of production other than wages, a

settlement appears already to be in sight. This is much to be welcomed, as a still greater publicity as to the real state of the industry should help to allay suspicion. The other points at issue are the guaranteed minimum wage and the ratio of wages to profits. In the former case, the present agreement guarantees a minimum of 20 per cent. above the "standard" wage (i.e., approximately the wage rates in force in June, 1914). At the same time, in districts where this minimum does not provide a subsistence wage to the lowest-paid workers, a so-called "subsistence" allowance is added. The miners' representatives demand that the minimum wage should be increased from 20 per cent. to 40 per cent. above "standard," in order to make the minimum equal to 1914, plus an addition based on the increased cost of living. The owners, on the other hand, are prepared to offer 30 per cent. above "standard" rates. In some areas, as, for example, South Wales, the lowest-paid workers are already in receipt of 40 per cent. above the standard, thanks to the subsistence allowance, and it is interesting to notice that the owners' new offer of a subsistence wage of 8s a day would in all cases mean that the lowest-paid workers would be in receipt of more than the 40 per cent. above standard which the miners' representatives are advocating for all grades of colliery workers. The other point at issue is, perhaps, slightly more complicated. Under the present arrangements the ratio between standard profits and standard wages is as 17 : 100, while any surplus which is available is distributed in the proportion of 83 to wages and 17 to profits. The "all through" ratio (i.e., the mean of these two ratios) is thus at present 85 to 15. While the miners are demanding that standard profits should be 13 per cent. of standard wages, and that the surplus should be distributed in the proportion of 87 (wages) to 13 (profits)—which means an "all through" ratio of 88.5 to 11.5—the owners claim an "all through" ratio of 87 to 13. It will be seen that the combined offers of the owners represent a very substantial concession to the miners' demands. The effect of these changes would, of course, be different in different parts of the country, and in some fields, at any rate, they would probably be welcomed by the men. From the depressed areas, such as South Wales, however, fresh demands continue to arrive. For our part, we cannot but hope that the negotiations will eventually succeed in maintaining the general outline of the National Agreement intact, particularly as the owners' offer would do much to ameliorate the position of those workers whose lot leaves most to be desired. Thursday's delegate meeting, at which a decision was expected, adjourned rather unexpectedly. The resumed meeting yesterday brought a severe disappointment. Most unexpectedly the Miners' Conference rejected the owners' terms, and passed a resolution urging the Government to pass the Minimum Wage Bill. A grave position, therefore, appears to have been reached. But since the present agreement does not expire until April 17th, there is still time for mediatory forces to avert a great disaster.

Cotton Wages Dispute Settled.—Our Manchester correspondent writes:—At the beginning of this week there was a rather remarkable development in connection with the wages dispute in the Lancashire cotton industry. The trouble arose at the Thornham Mill, Royton. Two women were employed at 27s 7d per week for attending to three machines in the cotton room. The management decided to erect a fourth machine. The trade union put in a claim for increased wages for the two women. The employers replied that there would not be any larger production or additional work, but they were prepared to make a small increase to compensate the workpeople for the time spent in cleaning the fourth machine. No agreement could be reached, and the mill was put on strike. Negotiations then took place in Manchester between the Master Spinners' Federation and the Card Room Operatives' Amalgamation, the employers making an offer of an increase of 2s 5d per week for each woman, which was later increased to 4s 5d. The claim of the trade union, however, was for 7s 8d per week for each woman. A fortnight ago there was a mass meeting of the members of the Master Spinners' Federation, when it was decided

that if the operatives at the mill did not return to their employment in seven days the whole of the members of the federation would issue lock-out notices, which would have the effect of closing over 500 spinning mills in Lancashire. The workpeople did not resume work, and lock-out notices were issued to come into effect at the end of this week. Negotiations between the two parties were resumed on Thursday in last week, and the meeting was adjourned until Monday. After further discussions, the representatives of the Card Room Operatives' Amalgamation stated that they had decided to withdraw from the dispute, and leave the management of the mill and the two operatives concerned to make their own arrangements. This was an extraordinary decision. The management of the mill approached the two women, and the latter agreed to resume work for an increase in wages of 2s 5d per week, which, of course, is 2s a week less than the representatives of the Masters' Federation finally offered in the course of the negotiations. Work at the mill was resumed on Tuesday, and the members of the Masters' Federation have withdrawn lock-out notices. It should be said that in connection with this dispute there has been an important principle involved, in that the employers have contended that an increase in wages must depend upon the amount of work involved, and not upon the number of machines attended by the operatives.

Indian Budget Trouble.—On a first reading of Sir Basil Blackett's financial statement, we ventured to express the hope that there would be no repetition this year of the political disturbance created a year ago by the Indian Budget debates and their sequel. For Sir Basil was able to show a prospective surplus, which he proposed to devote partly to the reduction of the salt tax and partly to giving some alleviation to the Provinces. Moreover, he left it open to the Legislative Assembly to take the final decision regarding the disposal of the surplus. But, although both the purposes to which the surplus was to be applied are dear to the native mind, the Swarajists have not been turned from their resolution to devote themselves to wrecking tactics. They have proved strong enough to secure the rejection in the Assembly of the estimates for Customs, administration, income-tax, opium revenue and salt tax. At first sight this would seem to mean chaos, and certainly a very difficult and dangerous position will be reached if the Swarajists carry out their intention of rejecting the Finance Bill *in toto*. But it is not yet certain that they will go to that length. Cables from Delhi indicate a possibility that, having made a demonstration of their power, they will eventually allow the Budget to pass with modifications; for the opposition is, of course, purely political, and is not really aimed at the Government's financial plans. It is greatly to be hoped that they will adopt this attitude; for should they go to the length of rejecting the Budget for the second year in succession, another serious aggravation of already grave political difficulties would immediately result.

Overseas Trade in February.—Those who expected to see a serious drop in our overseas trade in February because of the railway and docks strikes have had a pleasant surprise, for the February returns are in many respects better than those for January. They indicate a considerable increase in the trade turnover compared with a year ago, and contain elements of encouragement for future months. A summary comparison of value figures for February and the first two months of this year and last reads as follows:—

MONTH OF FEBRUARY.				
	1923.	1924.	Increase or Decrease in February, 1924.	
	£	£	£	%
Imports	83,890,976	96,705,489	+ 12,814,513	+ 15.3
British exports	57,509,904	67,974,911	+ 10,465,007	+ 18.2
Re-exports	9,823,323	13,230,764	+ 3,407,441	+ 34.6
Total exports	67,333,227	81,205,675	+ 13,872,448	+ 20.6
Excess of imports over total exports	16,557,749	15,499,814	- 1,057,935	- 6.4

FIRST TWO MONTHS.

	1923.	1924.	Increase or Decrease in 1924.	
	£	£	£	%
Imports	183,647,216	197,964,157	+ 14,316,941	+ 7.8
British exports	124,448,812	132,209,989	+ 7,761,177	+ 6.2
Re-exports	19,621,284	26,541,746	+ 6,920,462	+ 35.3
Total exports	144,070,096	158,751,735	+ 14,681,639	+ 10.2
Excess of imports over total exports	39,577,120	39,212,422	- 364,698	- 0.9

In making comparison with a year ago, three qualifications must be remembered. February this year had an extra working day; a year ago the Irish Free State figures had not been separated; and prices of some commodities are higher than this time last year. Nevertheless, when all allowances are made, the figures still emerge with credit from a close scrutiny. The rise in imports during the two months, as compared with a year ago, is mainly accounted for by raw materials. To some extent this is due to higher prices, as in the case of cotton and wool, but generally speaking there is evidence of an expansion in raw material imports, which may fairly be taken as an augury of increased manufacturing activity. On the other side of the account, the rise in exports has taken place in spite of a drop in coal shipments, which in recent months have played so large a part in rising exports. A year ago the beginning of the Ruhr occupation, and simultaneous Labour troubles in the United States, coincided to create a bumper demand for British coal. Last month coal exports (in spite of the fact that exports to the Irish Free State are now included) were 827,000 tons less than those for February, 1923. This may partly be the result of the strikes, and although the decline is geographically widespread, there is little indication of a drop in the demand from Germany and France, who now take nearly 40 per cent. of our coal exports. Towards the £8 million increase in exports of manufactures, which last month shows over February, 1923, nearly every class contributed, and although prices had something to do with it, quantity figures are by no means discouraging, as the following instances show:—

FEBRUARY.

	1922.	1923.	1924.
Cotton yarns	14,913,200	10,881,600	14,121,900
Cotton piece goods	251,954,800	342,558,500	397,070,200
Woolen tissues	7,755,300	11,621,800	14,591,600
Linen piece goods	7,217,900	6,792,600	9,962,500
Leather	18,457	18,027	27,684
Iron and steel and manufactures thereof	223,616	317,568	330,523

We venture to think that the March returns will be swollen by trade that was temporarily held up by the dock strike, and will consequently make a better showing than those for last month. Altogether the indications of an expansion in trade are encouraging, and, if only the menace of strikes in the coal and other industries can be averted, we look for the expansion to continue. Incidentally, the excess of imports in February was some £8 millions less than in January, and on the two months is slightly less than in the corresponding period of 1923. Detailed figures of imports and exports will be found in our commercial section on a later page.

Iron and Steel and Coal Output.—According to the statistics just issued by the National Federation of Iron and Steel Manufacturers, the production of pig-iron and steel was well maintained in February, for though the actual production of pig-iron fell from 636,600 tons in January to 612,700 tons in February, the daily output was slightly higher in February, owing to the shorter number of days in that month. Steel production rose from 694,300 tons in January to 767,600 tons in February, a great part of the increase occurring in Scotland, where the January output was low on account of the New Year holidays. The number of furnaces in blast, which, owing to the railway strike, had fallen by 14 in January to 190, rose to 202 by the end of February, so that the number of furnaces blowing is still two less than before the railway strike. Unfortunately, the outlook for a continuance of the present output is not bright, for, as Mr Baldwin re-

minded the House of Commons on Monday last, much of the present activity is due to the orders placed by the railways, and when these orders come to an end it is feared that production will again decline. Evidence of the keen Continental competition that is being experienced is found in the import figures, which, after averaging about 110,000 tons a month last year, rose to 141,600 tons in January and 190,400 tons in February, a figure higher than in any previous month since the end of the war, and slightly in excess of the monthly average imported in 1913. The chief items of import were pig-iron and ferro alloys, 31,900 tons (of which 17,730 tons came from Belgium), billets, blooms, and slabs, 65,600 tons (of which 27,300 tons came from Belgium), and 23,600 tons of sheet and tinplate bars (of which 13,600 tons came from Belgium). Exports of iron and steel in February declined slightly to 330,500 tons, compared with 337,700 tons in January and 354,900 tons in December. The output of coal in the four weeks ending March 1st averaged 5,785,000 tons per week, compared with an average of 5,389,000 in the previous four weeks, which were affected by the railway strike. Exports of coal fell for the fourth month in succession, and amounted to 5,070,000 tons, of which 1,296,600 tons went to France, 774,900 tons to Germany, 470,900 tons to Italy, 330,100 tons to Denmark, 308,700 tons to Belgium, and 245,700 tons to the Argentine. Exports of coke also declined, probably owing to the fact that France and Belgium are now receiving better supplies from the Ruhr, for neither of these countries figure in the export list. The exports of metallurgical coke amounted to only 156,142 tons, a figure lower than any month since February last. Of the total, 57,600 tons went to Sweden, 25,000 tons to Denmark, and 20,200 tons to Germany.

Anglo-Irish Finance.—Our Dublin correspondent writes:—A remarkable document, of which more will be heard in Anglo-Irish discussions, has just come to public knowledge here. It is the Report [Cmd. 2072] dated September 4, 1923, of what terms itself "the Northern Ireland Special Arbitration Committee," appointed pursuant to a Treasury Minute dated January 15, 1923, and consisting of Lord Colwyn (chairman), Sir Laming Worthington Evans, and Sir Josiah Stamp. The terms of the Minute are:—"The Chancellor of the Exchequer states to the Board that after consultation with the Prime Minister of Northern Ireland he proposes that a Committee shall be appointed to consider whether, in view of the ratification of the Constitution of the Irish Free State, any alteration is needed in the present scale of the contribution of Northern Ireland to the cost of Imperial Services." Now the ratification of the Constitution of the Irish Free State completed the ratification of the Anglo-Irish Treaty. What bearing it could possibly have upon the "Scale of the contribution of Northern Ireland to the cost of Imperial Services" no one not privy to the undisclosed negotiations between the Chancellor and the Prime Minister of Northern Ireland can surmise. The contribution, its scale and basis, the authority for fixing and for revising it, the method and priority of its payment were fixed by the Government of Ireland Act, 1920, and refixed with certain modifications after the Anglo-Irish Treaty by the Consequential Provisions Act of 1922. The Joint Exchequer Board was the authority created to deal with the matter on principles prescribed by statute. Why, then, a Treasury Departmental Committee? and why the "Special Arbitration" element introduced into its title? and how far have its recommendations been acted upon or anticipated by administrative act in derogation of the arrangements resting upon statute law? It is certain, for instance, that it formally [Para. 5] "recommends" the Joint Exchequer Board to fix the contribution for 1923-4 at the surplus of revenue over expenditure, subject to certain modifications in the revenue account—whereas the statutes directed that it should have such sums as the Board might think just, having regard to the relative taxable capacity of Northern Ireland and its larger neighbour, and that it should be deducted from the reserved taxes prior to the balance being paid over to the Northern Ireland Government. Now, how is the Free State interested in this—so long as the British taxpayer is

willing to make the sacrifice? The answer is that the Act of 1920 provided representation at Westminster for Northern Ireland and taxation of Northern Ireland to render it liable for its due proportion of the cost of the policies upon which the Northern representatives would be voting. To whittle down or abolish the contribution on the basis statutorily provided is to create a privileged status for Northern Ireland which is not the full British citizenship which she claimed, and, in effect, to subsidise Northern Ireland to resist the inducements of the Act of 1920 towards Irish reunion. And it must be remembered that the Act of 1920 is expressly made the basis of Northern Ireland's position by Article XII. and the Irish Free State's interest and qualified participation in the arrangements under that Act are expressly reserved by Articles XII. and XIII. as well as by the subsequent Consequential Provisions Act. In the Dublin view the Treaty was negotiated on the basis most clearly laid down a month earlier (November, 1921) by Mr Lloyd George in his published correspondence with Sir James Craig that there were only two alternatives open to Northern Ireland, viz., to form portion of the Irish Dominion and to contribute towards Imperial expenditure on a purely voluntary basis, if at all; or, alternatively, to form portion of Great Britain with representation at Westminster, and to contribute a full rateable proportion of Imperial expenditure. To change the latter alternative is to create a new status for Northern Ireland and, *pro tanto*, to defeat the Treaty provisions designed to promote the cause of Irish reunion. Such, substantially, is the Southern Irish contention in brief outline. The Free State Government is being assailed for not being sufficiently insistent on the Boundary issue—and it is at the moment hampered by some rather serious insubordination in its Army. The relative importance of the latter may easily be exaggerated, and its true significance can better be ascertained and described a week hence.

Great Britain and Mexico.—The negotiations for the British recognition of President Obregon's Government have been broken off, partly, according to the inspired account in last Saturday's *Times*, because Señor Nieto's credentials were insufficient, but partly also, as Lord Parmoor had intimated in the House of Lords three days earlier, because the Foreign Office is advised that that Government is too unstable even for *de facto* recognition. The negotiations may be resumed later in Mexico City, presumably after the Presidential election fixed for July 6th. The Foreign Office view, however, is not supported either by the news published in New York and London, or by the information received by British banks, railways, and land companies operating in Mexico. Recognition *de jure* will probably be delayed till after a satisfactory settlement of the claims of British subjects and companies for damage—including expropriation under the recent agrarian laws—and of British holders of Series C of the six per cent. Treasury bonds of 1914, and of the two bond issues of the Mexican National Packing Company guaranteed by the Huerta Government. Their claims are being pressed by the Council of Foreign Bondholders; but these issues, made to provide funds for President Huerta's reactionary Government, are probably regarded by the party now dominant much as the United States' Government regards Confederate bonds. Nevertheless, they are just as legal as any of the loans comprised in the pending settlement of the External Debt. Prompt British recognition has been advocated in the *Times* by Sir Thomas Holdich and Mr Vincent Yorke, chairmen respectively of the Chiapas Land Company and the Mexican Railway, as likely to hasten a settlement of the British claims. This would follow the precedent set in the case of Soviet Russia. On the other side it has been argued that this course would deprive the British negotiators of a potent argument, viz., that till their demands were satisfied there could be no recognition. Of course, recognition would imply British diplomatic support for British nationals, and might tend to attract the British capital that President Obregon professes to desire. But, especially in view of the ultra-*agrarianism* and *agrarianism* now dominant in Mexico, there is reason to doubt the efficacy of either the *recognition* or the *support*. And this week another infraction is announced of the rights of British investors. The

Mexico North-Western Railway, Canadian in domicile but owned chiefly in England, and already a claimant of \$7,000,000 for damage during the 13 years of revolution, is threatened with the loss of part of its timber lands conceded in 1882, and confirmed to it in 1922, and with the forfeiture of its whole Mexican property for non-payment of the tax of 10 per cent. on gross receipts, imposed on the railways to help the settlement of the External Debt. The railway is in the hands of a receiver, and is being worked at a loss; and as its freight consists largely of the timber from its own forests, it cannot, like other railways, pass on the impost to the public. Efforts to raise the money on Receiver's Certificates have failed so far, and thirty days' grace has been accorded by the Mexican courts. The threat may be merely departmental pedantry, but it suggests that the Mexican Government is not eager for recognition.

International Commercial Arbitration.—A Bill "to give effect to a Protocol respecting arbitration clauses in commercial agreements, signed on behalf of his Majesty at a meeting of the Assembly of the League of Nations held on September 24, 1923," introduced in the House of Lords by Lord Parmoor on February 27th, has now been printed. This measure is brought forward in pursuance of a scheme (the development of which was referred to in the *Economist* of September 15th last) for encouraging readier resort to arbitration in commercial disputes where the parties are of different nationalities. Some countries have, by their national laws or policy, prevented or rendered difficult the use by commercial men of the machinery of private arbitration for the settlement of disputes which is so common with us. Arbitration has proved so ready and usually satisfactory a method of adjusting business differences that a movement was started to facilitate its more extended use internationally, and led to the signing of the Protocol last September. Little change in our own law will be required to give effect to this international convention, because we already recognise fully the validity of an agreement to submit differences to the decision of arbitrators. While no steps can be taken in our courts to enforce the specific performance of such an agreement, the court refuses its aid to a party who applies to it in breach of an agreement to arbitrate, and thus, by staying legal proceedings, leaves him no other remedy than to proceed to arbitration. In staying proceedings the judges exercise a certain discretion. The Arbitration Act says that the court "may" stay the legal proceedings. In a few instances, where, for example, an Act of Parliament definitely requires a dispute to be determined by arbitration, the courts have held that they have no discretion, and that they are bound to stay proceedings. Under the measure which has been introduced with reference to international arbitration the courts will be in this last-mentioned position. The proposal is that, so far as concerns such agreements for arbitration in commercial matters as are within the Protocol, the court "shall" stay proceedings in respect of the matters agreed to be referred to arbitration in all cases except where the court is satisfied that the agreement or arbitration has become inoperative or cannot proceed. That is the purport of the single operative clause which the Bill contains. In a schedule is set out the Protocol itself, by which the contracting States have agreed mutually to recognise the validity of arbitration clauses in commercial agreements between parties subject to the jurisdiction of different States, and to facilitate arbitral procedure. The Bill is down for second reading in the Lords on March 20th.

Agricultural Prices in Germany.—A table published in the *Frankfurter Zeitung*, of February 2nd, reveals that German prices for wheat and rye are lower than world prices. On February 28th, while the price of foreign wheat at Bremen was 10.50 gold marks per zentner, the corresponding internal price was 8.30 gold marks. Similar prices of rye were 8.30 gold marks and 6.7 gold marks respectively. The explanation seems to be twofold. The immediate cause of the glut is apparently heavy taxation, the full weight of which is only beginning to be felt now that currency values are stable. In order to pay their taxes farmers are being forced to unload their stocks

instead of holding them for more favourable prices. In ordinary circumstances one would expect that if higher prices were to be obtained abroad sales would take place there, and taxes would be paid the more easily. The continued existence of the embargo on food exports, however, effectually prevents any such levelling up of prices. As no party would venture to remove this embargo, its existence is not often mentioned in current discussions on the subject. Instead, various specious explanations in terms of the general decline of purchasing power are given, and the usual cries for remission of taxes and lowering of railway rates—so familiar to English ears—are reiterated. Claims of national expediency, however, have so far proved too strong even for the relatively powerful German agricultural interest.

Shipping Sales in 1923.—The annual Commercial, Industrial and Financial Review of the *South Wales Journal of Commerce* contains some interesting statistics relating to the sale of second-hand ships. It is stated that in spite of the depressed condition of the shipping industry, unremunerative freights, and the laying up of a considerable percentage of the mercantile fleet, there has been no decline in the demand for second-hand ships. During 1923 no less than 300 vessels changed hands, of which 94 were launched in the nineteenth century. Selling competition has, however, brought down the average price per deadweight ton during the year, as shown by the following figures:—First quarter, £4 4s 7d; second, £3 10s 8d; third, £2 18s 5d; fourth, £3 19s 1d. "The increased average price of the last quarter is significant. It appears to suggest a delay in the ordering of new construction, or an attempt to make older vessels suffice. New construction means a much larger capital outlay and a doubtful return." The sales of 1923, compared with those of the three preceding years, were as follows:—

	Numbers		Amount.	Average per Dw. Ton.	
	Sold.	Dw. Tons.	£	s	d
1920 ..	287	970,000	26,431,000	27	0 2
1921 ..	372	1,694,000	10,332,000	6	9 1
1922 ..	313	1,186,624	6,073,000	5	3 1
1923 ..	300	1,380,752	5,116,000	3	13 2
	1,272	5,231,376	47,952,000		

On the assumption that the whole of the British mercantile fleet reaches 19 million tons gross, equal to nearly 29 million deadweight tons, then approximately one-sixth has changed hands in the last four years. The majority of the vessels were old, many very old, most of them competing with new construction. The vessels sold during the past year include 62 launched in the decade 1890-1900, 21 from 1880-1890, 7 from 1870-1880, 3 from 1860-1870, and one in 1859.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that, with the drier weather conditions, a good breadth of land has been cultivated during February, and on the whole this work is now not so backward as a month ago. Little spring sowing has been done as yet in most districts, but in the south a fair amount of drilling has been done for the time of year, and the seed has gone in well, the land generally being in good tilth. Winter corn has made little growth during the cold weather of February. Early-sown wheat on dry land keeps healthy, but the later sown and that on wet land does not look well. In these cases there are many thin plants, and the crops are often a bad colour. On the whole, however, wheat, though backward, gives fair promise. White varieties of winter oats have suffered rather severely from the frosts, but black varieties have come through the cold weather well, and generally look better than wheat. Winter barley is in very fair condition on the whole, and beans are usually an even, strong plant, but backward. On the whole, potatoes have kept fairly well, but those which were caught by the November frosts, and any stored in dirty and wet condition, have kept badly. Ewes are healthy and in good condition. The progress of lambing varies considerably; in some districts it is finished, but in the north it is not general among the lowland flocks. The fall of

lambs so far has been about average on the whole, and with the ewes giving a good flow of milk, the lambs have done well, though the severe frosts experienced in some parts of the country have been trying to young lambs. Owing to the cold weather, winter keep has been heavily drawn on for the live stock during February. Both cattle and sheep have done well during the month, the drier weather being helpful, especially to sheep on turnips, but in the eastern counties, where there has been more rain, cattle have only about maintained their condition. The supply of labour is quite sufficient for requirements in practically all parts of the country.

Spanish Tax on Shipping.—In post-war years there have been many futile attempts by various States to get something for nothing at the expense of the foreigner. To the list of these attempts must be added the recently imposed Spanish tax on shipping. It would appear, from the terms of the Decree issued last December, and taking effect from the beginning of February, that the Spanish Government thinks it can obtain from the pockets of foreign shipowners reimbursement for Spanish shipowners of amounts lost during the war owing to freights being arbitrarily fixed by Government at less than the market rate. The tax is payable by ships of all flags in respect of passengers and cargo landed or taken on board at Spanish ports, and the proceeds are to be distributed in Spain by way of refund of war losses of shipowners. The new burden will, according to the preamble of the Decree, not be able to be passed on to the cargo because freights are competitive. In fifteen years, according to estimate, the outstanding balance of loss will have been made good. In much less than that time, despite preamble and estimate, the tax will have been passed on to the injury of Spanish trade. The idea, officially expressed, that the tax cannot serve as a pretext to increase freights, is illusory. International trade must inevitably be hampered, and, moreover, the imposition, while possibly not infringing the letter of the recent Geneva Convention prohibiting flag discrimination, is, on the face of it, discriminatory in operation. It makes waste paper of the Convention, and the move, to say the least of it, does no credit to the Spanish Government. A further objection is that, till matters have adjusted themselves, a substantial burden—which may amount to £100 on the inward and outward cargo carried on one voyage by a moderate-sized steamer—is placed on shipowners. The tax particularly affects the iron and steel trade. In the circumstances there is naturally a movement with the object of ensuring that suitable representations shall be made in the proper quarter. The Federation of British Industries and the Chamber of Shipping, in addition to the National Federation of Iron and Steel Manufacturers, are interesting themselves in the matter.

Japan's Trade and the Earthquake.—The monthly trade figures of Japan for August, September, and October have arrived together, having, of course, been delayed by the earthquake. A footnote, indeed, to the August return states that Yokohama has been omitted in the case of several commodities in that month owing to the loss of the "ordinal book" in the recent disaster. How the earthquake affected the figures may be clearly seen from the following table, which we have compiled from the official returns:—

	Imports.		Exports.	
	1922. 1,000 Yen.	1923. 1,000 Yen.	1922. 1,000 Yen.	1923. 1,000 Yen.
August	138,548	156,413	145,999	136,175
September	135,122	82,618	149,979	74,809
October	106,686	144,545	161,939	136,837
Total, 3 months	380,356	383,576	457,917	347,821
Total, 10 months	1,629,273	1,652,883	1,338,532	1,181,328
Excess of imports	290,741	471,555		

There was a very sharp recovery in imports in October, and for the three months it will be seen there is a slight increase in imports. Exports, however, although the August and October totals were well above the monthly averages of both 1923 and 1922, show a decline in the three months of 110 million yen, and in the ten months

of 157½ millions. Towards this reduction raw silk contributes 96 million yen, cotton yarn 26 millions, and silk tissues 18 millions.

Reaction in Minor Metals.—Early in the week there was a very strong tone in the non-ferrous metal markets, with active dealings. Standard copper sold up to £69 15s three months, and tin on Wednesday went up to £298 5s, this being the best seen since 1920. Prompt lead advanced to over £39, and spelter went well above £36. Copper was thus about £9 higher than the closing level of 1923; tin at one time showed an improvement of more than £60; soft foreign pig-lead was about £10 dearer, and zinc about £3 to £4 higher on the year. Copper was thus within six or seven pounds of the highest for all 1923, while tin was fully £58 above the highest, and lead was several pounds better than the best recorded last year, zinc being within £2 or so of 1923's highest record. Taking the group as a whole, substantial gains have thus been made, and the matter of a reaction was only a question of time. A very determined selling movement started on Thursday, and it took the market by surprise. Copper declined very sharply, notwithstanding reports of a better statistical position in the United States, where the stocks of refined have been substantially reduced, and tin showed a very weak undertone, with heavy selling, the cash price breaking £12 to £14 from the highest point. Lead exhibited remarkable weakness, and prices fell very quickly, zinc also being subject to various downward fluctuations, although not so violent as the movements in the other metals. Offers as a rule, however, were well absorbed, and it remains to be seen how far the selling movement can be carried. A moderate set-back will make the whole position much healthier, and enable users to cover some part of their requirements. There has been since the opening of the year a lot of speculative attention given to non-ferrous metals, especially tin and lead, the latter having been bought largely on German account, and possibly the upward movement has been carried too far. Metal supplies all over the world, just now, are on the short side, and there is no likelihood of any expansion for some time to come.

Canadian Pacific Results.—The London office of the Canadian Pacific Railway Company has received a cable from Montreal giving the preliminary results of the line for 1923. These compare with those of the three previous years as follows:—

	1920.	1921.	1922.	1923.
Gross earnings—railways and lake steamers	216,641,349	193,021,854	186,675,036	195,837,090
Working expenses	183,488,305	158,820,114	150,373,345	158,358,080
Net earnings	33,153,044	34,201,740	36,301,691	37,479,010
Fixed charges	10,775,409	11,519,072	13,348,906	13,470,653
Surplus	22,377,635	22,682,668	22,952,785	24,008,357
To pension fund	500,000	500,000	500,000	500,000
Net revenue	21,877,635	22,182,668	22,452,785	23,508,357

The increase in gross earnings has been very largely offset by an expansion in working expenses, which include all taxation. Fixed charges show a further slight increase, but the surplus available for dividends is over a million dollars higher than a year ago. After payment of all dividends for the year the surplus from earnings of the railway and lake steamers is \$1,633,347, compared with \$1,025,509 for 1922, \$755,400 for 1921, and \$450,359 for 1920. The special income for the year, after making allowances for contingent reserves, is \$11,391,052, as compared with \$11,092,355, \$10,987,199, and \$10,966,448 for 1922, 1921, and 1920 respectively.

Merchants' Marine Insurance Company.—The underwriting year of 1922 has been closed without yielding a surplus. The premiums were £464,476, the first year's claims £101,000, the second year's claims £209,620, and the expenses £46,192; the balance of £107,664 has been transferred to underwriting suspense account for future claims. The underwriting account of 1923 shows

premiums £446,401, first year's claims £134,292 (30.08 per cent.), and expenses £46,706. The first year's claims of 1923, 30.08 per cent. of the premiums, compare rather unfavourably with the first year's claims (21.75 per cent.) on the 1922 account. A sum of £30,000 has been carried from profit and loss to the reserve for insolvent reinsurers, making the reserve up to £130,000. The dividend of 12½ per cent. for the year, tax free, costs £15,625, against net receipts from interest of £21,408.

British Italian Banking Corporation.—Notwithstanding the unsettled conditions on the Continent, the British Italian Banking Corporation made good progress in 1923. It will be observed that the title is now the British Italian Banking Corporation, the word banking having been incorporated into the name. Profits for the year ended December 31, 1923, were £47,050, as against £41,016 a year ago. With the balance brought forward, the directors have an available balance of £71,386. There is a capital of £1,000,000 in ordinary shares of £20 each. The distribution is maintained at the rate of 4 per cent. per annum; this absorbs £40,000, and a balance of £31,386 is carried forward to next year. Changes in the balance-sheet are set out below:—

LIABILITIES.		ASSETS.	
Amount.	Compared with Dec. 31, 1922.	Amount.	Compared with Dec. 31, 1922.
Share capital .. 1,000,000 ..	..	Cash in hand & at banks	619,320 .. - 126,593
Reserve	233,418 ..	Bills receivable	966,858 .. + 550,687
Deposits	1,466,812 .. + 130,176	Investments at cost	256,586 .. + 82,475
Acceptances, &c. 4,966,262 ..	+ 1,357,518	Advances	89,712 .. - 370,144
Profit and loss .. 73,739 ..	+ 4,999	Cover for acceptances, &c.	4,966,262 .. + 1,357,518
		Premises	39,492 .. - 1,250
		Furniture	1 .. -
Total	7,740,231 .. + 1,492,693	Total	7,740,231 .. + 1,492,693

The acceptance business is increasing, the figures now reaching £4,966,262, as against £3,608,744 a year ago. Advances are £891,712, as against £1,261,856; this reduction is on account of the item "advances to Banca Italo-Britannica," which has been reduced from £803,332 to £127,931. Deposits are up from £1,336,636 to £1,466,812. A rather satisfactory picture when all is considered.

Employers' Liability Business in America.—The unprofitable nature of workmen's compensation business in the United States, at the rates fixed on the basis of conditions in 1918-1920, is shown strikingly in the accounts for last year of the Employers' Liability Assurance Corporation. The full effect of the inadequate rates was not felt until 1923. For that year the premiums in the general account of the corporation were £4,327,560, the claims paid and outstanding £3,024,949 (69.9 per cent. of the premiums), and the expenses £1,458,639 (33.7 per cent. of the premiums). After adjusting the reserve for unexpired risks on the basis of 40 per cent. of the premium income, there was a deficiency of £227,082 (5.2 per cent.) transferred to profit and loss. In the corporation's accident account, which includes workmen's compensation business in this country, there was a small surplus of £986, and in the fire account on premiums of £334,277 there was a substantial surplus of £40,986. The marine account, which is being wound up—the corporation now does marine business through its subsidiary, the Merchants' Marine Company—there was available £100,000 for transfer to profit and loss. The underwriting deficiency on the whole operations for the year was £85,110, against a surplus for 1922 of £446,550, and a surplus for 1921 of £718,446. Interest and dividends yielded £290,179, £275,180 was taken from the general reserve (leaving it at £2,544,930), taxes paid and outstanding amounted to £199,424, and the dividend for 1923 cost £287,818. It will be observed that the dividend is covered by the receipts from interest on investments. With regard to the future of workmen's compensation business in the United States, it is pointed out that the fixing of rates is controlled by the insurance departments of the various States. All the companies transacting this class of business have been suffering from the inadequacy of the rates, and the State Insurance departments have during the past year been conducting

an examination of the statistics of the companies, with the result that during the current year, 1924, the rates will be revised in practically all the States. The directors of the corporation "are confident that rates will be made adequate for the risks insured, and that the present loss is of a temporary character." The insurance moral to be drawn is the importance of building up ample reserves in profitable years to meet exceptional losses. This the corporation has done, and it is consequently able to meet a substantial loss in the United States without impairment to its financial strength, and even without reducing a dividend which is based upon interest earnings.

Ashanti Goldfields.—Our mining correspondent writes: Some time back the shareholders in this, the doyen of West African gold mining enterprises, enjoyed a high degree of prosperity; but of late the returns have been merely moderate—20 per cent. for 1919-20, and 25 per cent. for 1921-22. The report for the past financial period does not announce any distribution, the net profit of £32,900 leaving no more than a small surplus after providing for taxation. This disappointing result is attributed to the decline in the gold premium. The explanation, of course, is correct in itself. Still, obviously, a company whose ore reserves average over 90s per ton on the basis of the normal value of gold should be independent of the adventitious aid of the gold premium. The salient point in the situation is that the change effected in the treatment process has, on the whole, proved unsuccessful. It may be recalled that some two years ago the decision was arrived at, in view of the shortage of fuel, to adopt wet crushing in place of the roasting process. The management recognised that the percentage of the gold recoverable from the ore would not be so good as before, but it was believed that this disadvantage would be more than counter-balanced by regularity of output and economy in costs. The last-named anticipation has been to a large extent realised, a saving of 17s 6d per ton having been effected during the past two years. So many difficulties have, however, been found to arise in connection with the new process, that the consulting engineer recommends a combination of wet and dry treatment. The directors are of the opinion that a complete reversion to the old system would give the best results; moreover, it has been rendered practicable by the reductions which have taken place in the prime cost of and the freight on coal. Accordingly, a bulk test is to be made. Whatever was the case before, it may be presumed that on the present occasion no alteration will be made without the fullest experiment. At 502,400 tons, gross value £2,351,600, the ore reserves on September 30th last show a small decrease in quantity, and a rather more than corresponding decrease in value. As development work was confined to the existing levels, this position is quite satisfactory. The consulting engineer's forecast of the prospects does not suggest anything better than a 10 per cent. dividend for the current year. Altogether, it may be taken that the current price of 7s for the 4s shares represents in a measure a reflection of past glories.

Transvaal Gold Output.—There was a decline in output of gold in the Transvaal during the month of February, due to the shorter month. The figures are very good, and the two months of 1924 make a capital showing when compared with preceding years. The following table shows the output for every month since 1918:—

	1918.	1919.	1920.	1921.	1922.	1923.	1924.
	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.
January	714,182	676,059	670,503	651,593	639,723	764,469	795,768
February	659,759	654,728	625,330	558,137	570,970	701,970	760,617
March	696,961	712,373	707,036	671,123	761,586	761,586	761,586
April	717,000	691,944	686,979	681,382	511,338	743,651	743,651
May	741,317	724,995	699,041	687,776	629,786	786,564	786,564
June	727,696	702,379	715,957	678,490	675,697	755,329	755,329
July	736,199	725,497	736,099	689,555	730,635	764,306	764,306
August	740,210	706,669	702,083	711,526	752,490	769,371	769,371
September	708,206	694,458	682,173	691,026	747,089	739,504	739,504
October	679,764	723,722	662,472	707,825	778,159	793,842	793,842
November	658,701	677,970	633,737	704,236	764,476	780,639	780,639
December	641,245	650,191	632,215	661,847	790,712	778,849	778,849
Total (12 months) ..	8,420,560	8,330,091	8,153,625	8,114,516	7,090,110	7,798,959	1,557,385

The following table shows the number of natives employed at the end of last month by members of the Witwatersrand Native Labour Association and Contractors:—

	July, 1923.	Aug., 1923.	Sept., 1923.	Oct., 1923.	Nov., 1923.	Dec., 1923.	Jan., 1924.	Feb., 1924.
Gold mines	166,443	167,600	174,406	177,047	177,674	177,779	181,659	182,056
Coal mines	16,020	16,156	16,225	16,216	16,246	16,142	16,109	15,958
Diamond	2,893	3,107	3,134	2,911	2,997	3,239	3,482	3,419
	18,356	186,863	193,765	196,174	196,917	197,160	201,250	201,432

More natives were employed at the gold mines during February, but there was a decline in the number employed at the coal and diamond mines.

South African Gold Trust.—Last year the operating subsidiary of this Kaffir finance undertaking earned £73,000—a substantial increase upon the 1922 amount; but as £15,600 is now required for depreciation, the dividend remains at 5½ per cent., tax free. The net profit of the holding company—at £57,400—shows a small decrease; nevertheless, the dividend rate is raised from 6¼ to 7½ per cent., the latter still leaving a surplus to be added to the carry-forward. On the basis of the 1923 rate, the ordinary shares give the attractive yield of 11 per cent., while the company's assets at balance-sheet value represent considerably more than the current market price after allowing for the preference shares at par. Very little change is shown in the portfolio.

At a meeting of the Royal Statistical Society, on the 18th inst., Mr A. W. Flux, C.B., M.A., will read a paper on "The Census of Industry." The meeting will be held in the Hall of the Royal Society of Arts, John street, Adelphi, W.C. 2, at 5.15 p.m.

WE are informed that the "Free Trade Union, North-Western Counties Branch," whose office is at 5 Cross street, Manchester, has decided to change its name, and will henceforth be known as the "North-Western Free Trade Union."

THE Fourth International Agricultural and Industrial Fair-Exhibition will be held on the Exhibition Grounds at Riga from July 20 to August 3, 1924.

Oversea Correspondence.

UNITED STATES.—COPPER AND OIL POSITION—TEXTILE PRICES—AID FOR AMERICAN SHIPS.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 29.

OWING to recent suspensions of dividends by three well-known American producers of copper, more interest than usual is being taken in the domestic copper situation. In view of optimistic forecasts that had been made concerning the outlook, accompanied, as they were, by reports of rapidly increasing demand, the action taken this week by directors of the Anaconda Copper Mining Company in passing the regular quarterly dividend came as a distinct surprise to the financial community. It was not entirely unexpected, however, by persons familiar with actual conditions that have prevailed in the copper trade here for some time. Although demand has shown marked improvement, prices for copper metal, unlike those for iron, steel and some other commodities, have not advanced to any great extent in recent months. Though somewhat above the levels of last autumn, domestic copper prices are still below the average for either of the two years immediately preceding the war, while operating expenses have increased just the same as in other industries. Various companies, therefore, especially high-cost producers, have been unable to market their output at much, if any, profit. Another and important factor is considered responsible in a measure for the unsatisfactory situation in the domestic copper trade, namely, active

competition by South American companies which are able to produce copper at a lower cost than many concerns in the United States. The copper situation in this country is really better than the passing of dividends might indicate. Consumption is at the highest rate ever known. Authorities predict that it will be fully as high this year as it was in 1923, when it averaged 125,000,000 pounds a month.

The domestic petroleum industry has evidently turned the corner. For the month of January, according to the Geological Survey, deliveries of crude petroleum to American consumers, plus exports, exceeded production, including imports, for the first time since December, 1922, while total stocks decreased by 1,557,000 barrels—the first decrease for more than a year. All States, excepting Arkansas and Wyoming, reported lessened production in January, heavy decreases being reported. Gasoline production in the United States reached a new high record in 1923, when 7,555,945,143 gallons were produced, according to the Bureau of Mines of the Interior Department. That total represents an increase of 21.83 per cent. over the output for 1922. Demand showed an even greater percentage of increase. The indicated domestic demand amounted to 6,685,035,280 gallons. Including exports of 871,116,614 gallons, the total demand for the year was 7,556,151,894, or 26.64 per cent. more than in 1922. Gasoline stocks on hand at January 1, 1924, aggregated 1,074,899,650 gallons, representing an increase during the year of 191,106,789 gallons, or 21.62 per cent. This gain, from the refiners' viewpoint, compares favourably with the increase of 50.80 per cent. in stocks during 1922. The total new supply last year, production plus imports, was 7,747,258,683 gallons, or 23.67 per cent. over that of 1922. For the entire year the total new supply exceeded total demand by 2.53 per cent. The December production of gasoline established a new monthly record, amounting to 659,168,606 gallons, or 108,000 gallons above the previous record in October. The oil situation has shown further steady improvement this year, as indicated by the sharp recovery in prices of both crude petroleum and gasoline, and production of crude has continued to decrease. During the past week the daily average gross production of crude oil in the United States, according to the American Petroleum Institute, was 1,888,400 barrels, or 30,500 barrels less than in the preceding week. Oil shares in the stock market are reflecting the change for the better in the industry, and are no longer adversely affected by the Washington investigation of naval reserve oil land leases.

In marked contrast with the improvement that has taken place in other industries since the first of the year, textiles generally continue dull and depressed. Inactivity is pronounced, especially in cotton goods. This week witnessed further downward price revisions in both unfinished and finished cottons, due to efforts of mills and selling agents to stimulate demand, although the lower levels reached on printcloths and grey goods resulted largely from the drastic decline in raw cotton which fell to 29 cents, as against 37.65 cents, the high level of December 1, 1923. No broad buying movement has yet developed, but sellers feel hopeful that trade will expand if raw cotton remains steady when merchants more fully appreciate the intrinsic value of cotton goods at current low quotations in primary markets. Meanwhile, actual curtailment of production is heavy in New England, and is increasing among southern mills, owing to lack of forward business offered at prices which manufacturers can afford to accept. Producers of woollen and worsted goods have also found it necessary to quote very low prices to stimulate business. Prices named on worsted goods showed reductions ranging up to nearly 8 per cent., as compared with prices quoted for the last fall season.

Owners of American vessels are much encouraged over the action of the United States Shipping Board in adopting a resolution calling upon the Interstate Commerce Commission to extend indirect aid to such ships by putting into effect Section 28 of the Merchant Marine Act of 1920. That section grants preferential railroad rates on merchandise and commodities other than grain carried by American vessels between the United States and Great Britain and Ireland, Continental European

ports North of and including Bordeaux, the East coast of Asia, islands of the Pacific, Australia, and the East Indies islands, and ports of Central and South America. Since the passage of the Merchant Marine Act this section has been inoperative, the Shipping Board having certified to the Commerce Commission that adequate American shipping facilities did not exist. The Board now states, however, that ample tonnage under the American flag is now available, and that the operation of the preferential rate provision should no longer be suspended. As soon as the Commerce Commission takes the necessary steps to put that section into effect, shippers who use American flag vessels in foreign commerce will secure through rates, which, with some exceptions, will be materially lower than domestic rail rates to the seaboard, with the ocean rates added. They will thus have an advantage over merchants who use foreign flag ships.

FRANCE.—THE FRANC—THE SENATE AND TAXATION —FEBRUARY REVENUE—PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, March 12.

THE spectacular fall and recovery of the franc, the curiously hesitating attitude of the Senate in regard to the new financial proposals, the question of whether the two Chambers shall be convoked for the purpose of extending the life of the present Parliament for another twelve months (in order to remove from the baleful influence of the pending General Elections the problem of immediately putting the national finances on a better footing), and a growing hope that the now imminent reports of the two committees of experts may prove distinctly favourable to this country, are the outstanding factors in the present situation. The great mass of French opinion, so far as can be gathered, is now in a much more conciliatory mood with regard to the future relations of this country with Germany than appeared to be possible six months ago. Any inclination that may have existed to presume on the fact of Germany's moral defeat in the Ruhr has undoubtedly been largely dissipated as the result of the sharp lesson France has just received as to the consequences that might result from a renewal of the disastrous fall of the franc. For the first time during the past week French opinion has seen with clear eyes the abyss in front of the country, and the lesson has proved invaluable.

The attitude of the Senate, in refusing to take up the work of discussing the new financial proposals, in spite of the insistence of M. Poincaré, has puzzled public opinion in several other countries, but everything tends to support the belief that before another week has passed the Premier will obtain his desires. The French Upper House, like all elected bodies in this country, is often tempted to a display of aggressive independence, and occasionally with exasperating results (as, for example, when it refused, on technical grounds, a few months ago, in its capacity as the High Court of Justice, to try certain militants whom the Government had accused of plotting against the security of the State). As a rule, however, its bark is worse than its bite, and in the end, for all practical purposes, agreement with the Lower House is arrived at. The report of M. Henry Bérenger, the *rapporteur* of the Senate Finance Commission, which is published this evening, suggests that, in spite of several apparent serious obstacles, the Upper Chamber is preparing to fall in with the views of the Government on all that really matters.

The principal objection raised by the Commission is in regard to the *décrets-lois*, by the operation of which the Government seek to effect economies in the various public services amounting to 1,000 millions per annum. The Premier's argument is that if he is empowered to effect these economies by decree, results will be attained much more speedily and effectively than if every detail has to undergo long discussion by both Chambers. The Senate Commission bluntly insists that such a method is unconstitutional, and refuses to allow the reforms the Premier desires to bring about to be taken out of the hands of Parliament. At the same time, although admittedly "without enthusiasm," and solely from a desire to attain

the object aimed at speedily, the Commission accepts the demand for an all-round increase of taxation by 20 per cent., and also the proposal for the creation of the *bondeureau de coupon*, the object of which is to enable the Treasury to obtain some kind of control over incomes derived from bearer bonds that now largely escape taxation. It refuses, however, to approve the suppression of the match monopoly, and it is probable its resistance may prove effective, as this proposal is not vital to the Bill. Its suggestion that persons who, for one reason and another, have been given time for the payment of the special tax on war profits (which expired long ago, although individual firms are alleged still to have left unpaid amounts which in certain cases are said to amount to sums in the neighbourhood of 100 million francs) shall be called on to pay interest at the rate of 10 per cent. is one that will meet with widespread approval. M. Bérenger concludes his report by insisting that "France will not have a financial policy which is worthy of her until it comprises these three objects: payment by Germany, the settlement of the question of the French foreign debts, and the consolidation of the floating debt."

The returns of the yield from taxation of all kinds during the month of February show that the total revenue from these sources was 1,980,335,500f, exclusive of the yield from the postal department (now detached, under the law of June 30 last, from the normal Budget). Of this total, 1,820,089,600f was from normal and permanent taxation, which thus registered an increase of 484,884,200f, as compared with February, 1923. The total increase from these sources for the first two months of the year, as compared with the corresponding period of last year, was 785,067,800f. Part of this exceptionally large increase was due, of course, to the fact that February this year included an extra day, while another factor to be taken into account is the increased price of all commodities, which resulted in a proportional yield from *ad valorem* duties. The importance of this latter factor may be gauged from the fact that the index figure of wholesale prices for January last (calculated on the base of 100 in 1914) was 505, as against 355 in January, 1923. Revenue for the month from indirect taxation and monopolies amounted to 1,334,038,000f, or 308,551,000f in excess of Budget Estimates. The yield from Customs was 1,355,000f below the estimate, which is easily explained by the high rate of exchange against this country, but the revenue from registration was 104½ millions (or over 33 per cent.) more than the Budget Estimate, while that from the tax on turnover was nearly 87 millions (or about 30 per cent.) more than was expected. Tobacco and other monopolies yielded 37 millions more than had been anticipated, while stamp duties on securities yielded over 70 millions, or about 40 per cent. more than the Finance Minister had estimated. "Exceptional resources" furnished 160,245,900f (including 142,072,800f from the special tax on war profits). Income-tax produced over 452½ millions, or 187 millions more than in February, 1923.

The Statistique Générale has now issued the index figure for wholesale prices for the month of January, which shows a rise of 37 points, as compared with the figure for December (which was itself 16 points above that for November). The detailed figures, which are as follows, are calculated now on the base of 100 in July, 1914 (the index figures for the greater part of last year and previous years having been on a base of 100 for the period 1901-1910):—

Categories.	End of January.	End of December.
General index figure.....	45	505
Foodstuffs	20	441
Veg. table foods.....	8	399
Animal foods	8	437
Sugar, coffee, cocoa	4	550
Raw materials	25	560
Minerals and metals ..	7	525
Textiles	6	693
Various	12	500

The only category of commodities which did not rise sharply during the month is butcher's meat, the wholesale price of which remained stationary. Retail prices in Paris during January (13 articles of common necessity) are represented by the index figure of 376, as compared

with 365 for December and 355 for November, or an increase of 274 per cent. as compared with 1914. The January retail figure, however, was appreciably below the level of November, 1920, which was equivalent to a rise of 326 per cent. in Paris and 352 per cent. for the whole of the towns of over 10,000 inhabitants, as compared with pre-war retail prices.

GERMANY.—BUSINESS—FINANCES—CURRENCY— TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, March 11.

THE Bill founding the provisional Gold Credit Bank, which is summarised elsewhere, has given general satisfaction. The plan has changed considerably since it was first discussed; then the chief stress was laid on the note issuing function; to-day this function is secondary, and credit primary. To some extent this change in programme is due to the continued success of the *rentenmark*, as a result of which gold-secured notes may perhaps be dispensed with at home; while for international purposes what is needed is a mechanism based on stable values, for regulating trade payments, and not actual gold notes.

The Reichstag is to be dissolved, it is believed, at the end of this week, and the General Election is expected on May 11th or one of the following Sundays. The business improvement continues. The Prussian Trade Ministry's monthly report shows greater activity in nearly all trades, the building and locomotive branches being the chief exceptions, while almost normally good conditions prevail in textiles, and something like boom conditions in cotton goods, the demand for which cannot always be met. Quite a number of concerns are now refusing to take orders, and some have orders for the whole of the year. The number of unemployed, however, continues to be very great, but, as usual, the statistics are belated. In unoccupied territory the publicly supported unemployed, on February 15th, numbered 1,302,270, against 1,582,852 on January 15th; the number of partly unemployed sank in the same time from 635,839 to 227,810. The last report for Berlin city shows a decline in fully unemployed in the week from 169,370 to 154,000. In the West German iron and steel branch there is increasing activity. The threat that large stocks accumulated on the Ruhr would depress the market when released will not be realised; most of the stocked material has already been sold. Bars now fetch 131-133 marks per metric ton, but are sold to abroad, report Essen newspapers, at 110-115 marks, or 10 to 15 marks below production cost. The lengthened working day has now in great measure been successfully put through, also the nine hours a day work for officials. An official memorandum states that as a result of the introduction of the eight-hours day 147,424, or 21.2 per cent. additional employees were taken into the railway service; into the postal services 51,521, or 14.5 per cent. more.

Some measures contained in the Third Taxation Decree, in particular the regulation of secured debts, are still being vigorously attacked, but the measures may now be considered safe. The right given to the States to impose a rents tax has been liberally taken advantage of; Prussia has suddenly imposed a tax at the rate of 25 per cent. of the pre-war gold rents, and at the same time increased the real property tax; as a result of which tenants from April 1st will pay 67½ per cent. of their pre-war rents, instead of 28 per cent. in March, and in former years anything between 2 and 10 per cent. This will send up the cost of living. Though 10 per cent. of the rents tax yield is to go towards building houses, it seems that very little building will be done; Prussia, for instance, undertakes to build only 20,000 dwellings; though the whole Republic is about 1,500,000 dwellings short. In connection with the disburdening of industrial debts through the prohibition against restoration of bonds and mortgages to more than 15 per cent. of their original value, the following figures are published for share companies only (not limited liability companies):—In 1913-14 against 19,954 million mark shares issued, were 3,871 millions of bonds, and 1,766 millions of industrial mortgages. Federal finances show a set-back in February, the month's deficit

being 138,500,000 gold marks. In the third decade term of the month the net deliveries of taxes by the Finance Bureaux were 140,360,000 gold marks, expenditure 188,000,000 gold marks. The expected yield in February of the property and bonds taxes was 138,000,000 gold marks, and had payments of these taxes not been postponed until March the account would have nearly balanced. Since November 15th, the date of the rentenmark reform, and the date at which Treasury bill discounting at the Reichstag ceased, deficits have totalled 707,500,000 billion paper marks, which is about £38,300,000 gold. Receipts from the sale of rentenmark Treasury bills, which is one means of meeting the deficits, were 192,804,307 rentenmarks, but this resource was adopted late in the day. In the last decade reported 16,285,625 rentenmarks more of these bills had to be met than new bills were sold. In February the subsidies to States and municipalities were exceptionally heavy. The prospect for March is fairly good, and there is no sign of any breakdown due to lack of cash.

The gold value of the whole note circulation on January 31st was 2,277,700,000 gold marks, against 2,273,600,000 gold marks on December 31st. The gold value of the purely paper currencies fell during the month from 607,900,000 gold marks to 550,200,000 gold marks. The gold values of all these currencies were entirely stable during the month, and the decline in gold value is mainly due to a reduction in the circulation of the Federal Railways Emergency issues by nearly half. The value of the "wertbeständig" currencies in circulation, that is, of rentenmarks, gold loan (scrip) notes, Federal railways stable notes and gold loan emergency notes, rose during the month from 1,665,700,000 gold marks to 1,726,500,000 gold marks, the main factor here being the increase in the rentenmark circulation. The Rentenbank's statement for February 29th shows a note circulation of 1,579,370,000 rentenmarks, and a rise during February of loans (for industry) to the Reichsbank from 200 to 400 million rentenmarks. The rentenmark mortgage bonds in circulation total only 178,500 rentenmarks; nobody wants to convert his rentenmark into this theoretical security, which bears only 5 per cent. interest, when he can get much more on Treasury bills. The mortgage bonds, as foreseen, are not effective cover for the rentenmark, which survives alone through limitation of its circulation and consequent maintenance of its home purchasing power. The Bill providing for silver coinage has been published. The one, two, three, and five mark coins will be half silver and half copper, and must be accepted in payment up to not more than 20 marks. In the Reichsbank's return for February 29th no more borrowings from the Rentenbank are shown; but circulation made the big jump of 51 to 588 trillions. The paper mark and rentenmark private discounts again largely increased. The Bank's total claims on the public rose to 1,472 trillion paper marks. Prices have a slight upward tendency.

The January foreign trade report shows a new heavy passive balance. The Government complains that since the abandonment of passive resistance the proportion of foreign trade which escapes Berlin's control has increased; therefore the figures are defective:—

IMPORTS.			
—Value in 1,000 Goldmark.—			
	December, 1923.	January, 1924.	Monthly Average, 1923.
Livestock	3,235	5,964	2,712
Food and beverages	139,641	175,239	100,310
Raw materials	230,938	237,470	258,907
Half-finished ditto	44,344	54,283	67,168

Gold and silver	1,267	1,152	1,230
Total	561,115	431,021	506,596

Reckoned according to pre-war values, January's imports were 451,920,000 gold marks, exports 363,475,000 gold marks. The table shows a great increase in food products

imported and a great decrease in manufactures exported. Nearly every class of manufactured export shows a decline. There is also a considerable increase in value of imported manufactured goods. Personal observation agrees with these figures; Berlin shops are crowded with foreign luxury goods of kinds not seen here for ten years; in particular of Southern fruits and expensive vegetables. The prices of these are extraordinarily high; but they sell readily. By weight January trade was:—

	Imports.			Exports.		
	Dec., 1923.	Jan., 1924.	Monthly Average, 1923.	Dec., 1923.	Jan., 1924.	Monthly Average, 1923.

Total	28,500	26,531	38,810	11,043	7,516	10,606

Ruhr coal production in February rose to 7,050,758 metric tons, against 6,187,481 tons in January, 6,371,451 tons against 5,485,040 tons being mined in occupied territory. The output per working day was 282,030 tons, against 237,980 tons. Coke production rose from 1,097,799 tons to 1,298,556 tons.

ITALY.—GENERAL ELECTIONS—BOOM IN STOCK EXCHANGES—CREDIT FOR EMIGRANTS—RENT RESTRICTIONS—STATE CONTROL OF TRADE UNIONS.

(FROM OUR CORRESPONDENT.)

TURIN, March 2.

ON February 26th the General Election campaign was officially inaugurated. There are 20 parties or candidates' lists in the field—13 national and seven purely local parties. No one, except the Fascist list, aspires to gain the majority (355 places out of total of 535). The 355 candidates placed on the Fascist list, and agreed by Signor Mussolini, are practically sure to be elected at April 6th, as no other list can contest the first place or hope to muster the 25 per cent. of the votes polled, which are necessary for victory. The change from 1919 and 1921, when the electors sent to the House over 150 Socialists and Communists, and over 100 Populists (Catholics) is indeed extraordinary. All the other 19 lists of candidates struggle only for the conquest of the 180 minority places. Fascists will have a share also of minority, as, in four electoral districts out of 15, they offer themselves in an additional minority list. Other parties are: Dissident Fascists (two districts), Democratic Liberals, friendly or neutral towards Fascism (nine districts), Democratic Liberals in the opposition (eight), Catholic Populists (15, or the whole of the districts), small agricultural proprietors and farmers (four), Republicans (12), Democratic Socialists (15), official Muscovite Socialists (13), Communists (14), Independents (five), Social Democrats (five). Among the seven local lists, the only worth mentioning are the Sardinian Party and the Slav-German Party.

The public interest in the electoral contest is, however, not very lively, perhaps in consequence of the absolute certainty of the victory of the Party in power. In economic circles, interest is centring around Stock Exchange quotations. There is developing, on the Italian bourses, a boom comparable in extent, if not as yet in violence, to the famous boom of 1905-6, when the motor-car securities went up from day to day in a frantic manner.

Almost all classes of securities shared in the rise; but textiles, navigation, land and housing, and electrical companies were easily first. The rise is explained, by professionals with a theoretical turn of mind, as a belated attempt of security quotations to adjust themselves to the depreciation of the lira. A great many securities were quoted, until recently, at prices not much higher than pre-war level. Political uncertainty, confiscatory taxation, and fear of Bolshevism co-operated to keep quotations down. As the economic and political horizon seems to-day

clearer, values are bound to rise until equilibrium with the general price level is reached. There is much to say in favour of this theory; but there is the risk that the rise is too indiscriminately affecting both old securities representing gold-lira investments and new securities, with depreciated lira investments and water at the back of them.

New economic and social legislation has been forthcoming during the month. A decree of December 15, 1923, published in the *Gazzetta Ufficiale* of February 2, 1924, creates a National Credit Institute for Italian work in foreign countries. Emigration is on the increase again: 400,000 in 1923, with an increase of 93,000 over 1921 and 104 over 1922. Of this number, 178,000 emigrated to transatlantic countries, 94,000 to Argentina, 58,000 to United States, 15,000 to Brazil, 6,000 to Canada, 2,800 to Uruguay, 1,150 to Australia, 1,100 to Central America. While in 1922 and previous years the greatest number were going to U.S., restrictive legislation diverted emigration currents to South America. The new Institute aims at financing Italian emigrants abroad, their industrial enterprises, colonisation plans, co-operative societies, &c. The Institute will be a semi-public bank, financed by savings banks and public insurance offices, and will cater for emigrants' savings. The State will nominate a part of the directors and guarantee a minimum interest of 3.50 per cent. on debentures issued by the institute, and a minimum dividend of 4.50 per cent. on share capital.

More interesting to the general public is a decree of February 21st on the housing problem. While the decree of January 7, 1923, declared that rents would be freely discussed between proprietors and tenants; and, in case of disagreement, allowed rents to be fixed up to June 30, 1926, by Arbitration Commissions, the new decree adds that Prefets—i.e., representatives of the Central Government in Provinces, have the authority to seize all vacant houses which the proprietor has not seen fit to let within a month after notice has been given. The Prefet will let the apartment to houseless people, according to needs and circumstances. Rents will be fixed by Arbitration Commissions. The requisition right applies to old vacant houses, and also to new houses which have been declared fit for habitation before October 27, 1922. Old regulated rents were much lower than free rents for vacant or new houses—frequently only one-fifth. The new decree aims at equalising the two types of rent; but it is uncertain if it will succeed in lowering permanently rents of new houses to the regulated level of old ones; for who will build new houses now the fear is abroad of being obliged to let them under cost?

Workmen's organisations (trade unions) are much concerned about a legislative decree, dated January 24, 1924, which subjects them to the local representative (Prefet) of the Central Government. Workmen's organisations are defined as those which are maintained by the working-men's contributions. If the "Prefet" supposes that the funds of trade unions are not spent in the interest and for the economic or moral benefit of workers, he can make inquiries, dissolve managing councils, dismiss presidents and secretaries, and entrust assets and management to an official commissioner. The commissioner, within the maximum term of a year, is bound to make a report. On the basis of this report the Prefet can restore the old officers, prolong up to another year the receivership, or dissolve the trade union and distribute assets among associates or hand them over to another institution with purposes akin to those which the dissolved organisation purported to possess. A few days ago the decree was put into force for the first time by the Prefet of Rome, who instituted inquiries into the management of the Agricultural Workers' Federation—i.e., the national organisation of Agricultural Workers' Trade Unions. It appears that the federation had made savings out of past years' contributions. As 1923 and 1924 are bad years for organisations of its political colour (Socialist), managers were using past savings for keeping alive the federation, whose membership was dwindling and whose remaining members were unwilling to pay. It seems that an inquiry will be started by the Prefet about the legality of using reserve funds towards defraying present expenses.

CABLE ADDRESS: BANKTRUST, PARIS

SOUTH AFRICA.—RECORD RAND OUTPUT—GOVERNMENT AREAS' PROFIT—MINERAL RETURNS FOR 1923—BANK EXCHANGE RATES.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, February 11.

THE Transvaal gold industry has started 1924 remarkably well, as the output for January is the largest on record for a straight month, the total being 796,768 fine ounces. In March, 1912, the yield, as announced by the Chamber of Mines, was 830,723 ozs, but this included 70,142 ozs of accumulated gold reserves, which it was thought desirable to discontinue. The largest individual contribution was the 71,500 ozs of the Crown Mines, while the Government Arcas also yielded over 70,000 ozs. New Modder and Randfontein Central were each responsible for 55,000, and the City Deep for 40,000 ozs. The only other mine to produce more than 30,000 ozs was the East Rand Proprietary, which, in contradistinction to those just mentioned, is still entirely dependent on the currency premium on gold for its profits; but two mines, Brakpan and Modder B, closely approached that aggregate. The output represented over 33 Colonial or "short" tons, the Crown Mines and Government Areas each contributing about three tons. The profit of £202,000 made by Government Areas is a record for the Rand, or any other goldfield, as have been, indeed, the results of that company for some months past.

Though over a million sterling is being paid to the Union Treasury in respect of last year's profits of this mine, the controllers are entirely satisfied with their contract with the Government, as there is a very handsome margin. One must, of course, regard the Government participation in the light of the vendor interest in gold mines under the earlier and general system of company formation. Broadly, the Union Government receives about 50 per cent. of the profits of Government Areas, a relatively small percentage compared with that of certain Rand companies. For example, the Nourse Deep, out of a capital of £450,000, issued 237,500 shares to the Rand Mines for 241 claims, and 62,500 shares to the Henry Nourse Deep Level Gold Mining Company for 28 claims, a total of 300,000 shares as vendor consideration, or 66½ per cent. In the Ferreira Deep flotation, out of an original capital of £910,000, no fewer than 780,000 shares went to the vendors, representing over 85 per cent. The original capital of the Robinson was £50,000, 45,000 shares, equivalent to 90 per cent., being allotted to the vendor as purchase consideration. Originally, the capital of the Rose Deep was £400,000, of which the vendors received 200,000 fully paid shares. Of the initial issued capital of the City Deep, £450,000, the vendors received 380,000, or as much as 84 per cent. In the case of the Meyer and Charlton, 32,500 shares out of £40,000 capital went to the vendors, again about 80 per cent.

These figures are given as illustrations. It is rather a complex matter to trace vendor consideration right back to the commencement. There is another salient difference, these older companies were largely financed by issuing working capital shares at a premium of several

pounds, whereas in the case of areas wholly leased from the Government, all the working capital was subscribed at par, subject to a maximum underwriting commission of 10 per cent. Where areas additional to ground originally held were leased, e.g., by Brakpan and Springs Mines, the subscription was at a substantial premium, namely, at £5 and £3 per share respectively.

The value of the mineral production of the Union for 1923 is given at £51,902,264, inclusive of the currency premium on gold, the value of which metal is returned at £41,054,914. On the basis of the difference between standard value and the estimated increased value based upon the Chamber of Mines' monthly assessments, the gross currency premium was £2,216,200. But the cost of realisation, including heavy bank exchange charges in recent months, cut pretty deeply into the premium. In this connection it is significant that the working revenue, as shown by the Chamber, was only £920,000 in excess of the value of gold taken at standard valuation; of course, realisation and exchange charges apply to the whole of the gold output, except such as is retained in London for purchases of stores and payment of dividends, and not merely to the premium portion. The diamond output increased to over two million carats, valued at £6,038,200. This is an increase of £3,771,500 for the year, while the value is nearly twice that of 1921. Practically twelve million tons of coal were produced, selling for £3,714,500; the price realised in Natal has dropped less than in the Transvaal. At £394,500, the value of copper was ten times that shipped in 1922, owing to the restarting of the Messina copper mine. Tin more than doubled in output and trebled in value, owing to enhanced price, totalling £174,000. Silver is obtained from silver lead at the Transvaal silver property, and is also contained in gold; its value was nearly £200,000. Osmiridium valued at £43,500 was also recovered, chiefly in mines of the Far East Rand.

The Rand output of 8,898,731 ounces was only surpassed in 1916 with a yield of 8,971,359 ounces. But the currency premium makes the value of £39,061,604 the greatest in the field's history.

Here is an interesting comparison of results of producing mines in 1914 (for the most part the "pre-war" year) and in 1923:—

	1914.	1923.
Tons milled	25,701,954 ..	26,538,975
Gold recovered	8,033,570 ..	8,898,731
Value of gold recovered (including premium)	£ 34,124,434 ..	£ 39,061,604
Salaries and wages paid	£ 11,711,982 ..	£ 12,389,154
Expenditure on supplies	£ 9,532,360 ..	£ 12,028,882
Total working expenditure	£ 21,943,692 ..	£ 26,553,094
Total working cost	£ 17/1 ..	£ 20/
Total working profit	£ 9/ ..	£ 9/5
Dividends paid	£ 8,073,436 ..	£ 8,411,970
Direct Government revenue from those mines	£ 1,440,223 ..	£ 1,284,024

* In respect of the year's operations. † Estimate.

It will be observed that, although the tonnage is only 850,000 greater, the expenditure is £4,610,000 higher. Dividends are much the same, but the Government revenue is practically double, chiefly owing to the contribution of £1,000,000 by the Government Areas mine, which only commenced crushing in October, 1914.

Much attention continues to be directed to the high rate of bank exchange on London, increased on January 28th to 3½ per cent. on sight drafts. Mr J. P. Gibson, the senior general manager of the Standard Bank of South Africa, has issued a statement dealing with the various criticisms of present banking policy in the Union which have appeared in the columns of the *Rand Daily Mail* and elsewhere. Mr Gibson defended the high rate on the ground that the South African banks were accumulating large balances in London, which, if the Union goes back to the gold standard in June, 1925, would depreciate on transfer to South Africa in accordance with the difference in value between the British and the South African pound. This statement has met with much criticism in the Press. While it may be argued that the banks only make the difference between the buying and selling rate, subject to relative remittances to finance imports or exports, it must be confessed that a margin up to 1½ per cent. (e.g., selling rate £50-£500, 2½ dis., buying rate, 3½ dis.) seems large. In pre-war times there

was usually a difference of only ¼ per cent. or so. The public is by no means satisfied with the balance of trade argument, and suggests that the banks are bound to exploit sources of revenue more intensively now that the Reserve Bank has deprived them of the profits of the note issue, and that this is one of the results.

NEW ZEALAND.—THE GENERAL OUTLOOK—LOWER TAXES—COMPANY TAXATION.

(FROM OUR CORRESPONDENT.)

AUCKLAND, N.Z., January 26.

As some of my previous communications have been rather pessimistic, it is all the more gratifying to record that the New Year opens under the most propitious circumstances, as far as New Zealand finances and trade are concerned. Business for the last year has been good, prices of wool and other local products are rising, conditions in the labour world have been remarkably peaceful and promise to be even more so for the coming year; budget conditions are also improving, and as formerly predicted, the time when New Zealand requires to negotiate outside loans appears to be past.

Financial questions will again be an outstanding feature of the forthcoming session of Parliament. It can be definitely stated that there will be a further reduction in taxation, which has been scaled down in the past three years from £17 4s 4d per head of the population in 1921 to £11 17s 8d in the past year. The most substantial concessions in 1922-23 were in respect of land and income-tax, the aggregate reduction amounting to £929,100. The Prime Minister refused to give any definite answer as to the exact amount which would be deducted from company taxation, but it is believed that it will be substantial.

On account of the ease with which it could be collected, company taxation found favour with the Government. It took the form of an all-round impost of 8s 9d in the £ on the net income (quite irrespective of the capital employed in the business), and was the most crude and preposterous levy in the history of national taxation. By successive reductions this tax has been brought down to 5s 10d in the £, but still compares most unfavourably with the rates ruling in Australia. The tax has been found to have a crushing effect on the working of industrial companies, for though some of these have been able to pass the increased charges on to the consumer, this has not been found possible in every case. Many industries are run by municipal bodies, and such municipal enterprises are not, as in England, subject to the company tax, a differentiation which has further told against private enterprises. But these defects are being gradually remedied as the result of experience.

Mr Massey forecasts a very substantial surplus in the general revenue, though it is still too early to gauge its exact extent. The customs revenue, for example, for the nine months ending December 31st, totalled £5,329,545, an increase of £1,089,161 for the corresponding period of the previous financial year. There have also been large increases during the past year in the receipts from railways and income-tax. The prospect of a surplus in the railway earnings is confirmed by the accounts for thirty-two weeks of the financial year. Thus, after three years of dependence on subsidies, the department is again approaching a self-supporting basis. Nevertheless, it has been starved with regard to capital expenditure during the years of stress, and the general manager states that ten million pounds are required to bring the railways to a proper state of efficiency. Unless the growing congestion caused by increased traffic is relieved, the consequence may be disastrous; the Government, however, now appears to control sufficient funds to overcome this difficulty.

With regard to the distinction made in favour of debenture capital, this seems to be more defensible than the scheme of company taxation on net income. Before the war, corporations like the Auckland Harbour Board were able to borrow money locally at 4½ per cent. To make such loans now retrospectively subject to a confiscatory tax would be not merely unjust, but destructive of public confidence in the stability of what have been universally accepted as trust investments. Already the increased taxation upon corporation debentures has made it difficult

to borrow money locally for municipal undertakings, requiring loans to be placed in London for purposes which could more profitably be undertaken out of the country's own resources. This means swelling the exports of New Zealand produce to meet our external interest bill, which already exceeds six millions sterling upon State and municipal indebtedness.

LEAGUE OF NATIONS.—HUNGARY AND AUSTRIA —THE QUESTION OF ARMAMENTS.

(FROM OUR CORRESPONDENT.)

SWITZERLAND, March 4.

THE League's Hungarian reconstruction scheme goes ahead. The Reparation Commission, following its usual tendency to delay decision until it is just not too late, has eventually raised the liens on Hungary and accepted the average maximum reparation and treaty charge payments, as limited by the League scheme, for a period of 20 years. This was not done until a certain amount of financial panic had arisen in Hungary owing to the delays, but the decision had an immediate tranquillising effect. The League's delegation has gone to Budapest to collaborate with the Government in drawing up the preliminary measures, and the formal signature of the Protocols and the appointment of a Commissioner-General should not now be delayed. There was only one outstanding point remaining to enable the Protocols to be signed, and that, I understand, has now been cleared up.

At this moment there comes also the report of the League's Commissioner-General in Austria that the Austrian Budget is now balanced, some ten or eleven months before the end of the period fixed by the League scheme. But it is at the same time indicated that the balance is on too high a level; in other words, although the revenues from taxation are sufficient to meet current expenditure, this expenditure is beyond what it should normally be and taxation higher than what should normally be maintained. This obviously may be a debatable point, and it will be interesting to see what happens.

Finally, in the matter of reconstruction, comes the fact that Sir Arthur Salter, Director of the Economic and Financial Section of the League Secretariat, has been heard by the Budget experts' Committee appointed by the Reparation Commission on the League's reconstruction methods. There are accumulating signs of greater mental elasticity in the handling of the whole European problem, but it would be vain to live in a fool's paradise. There are some big snags in the way. I gather that the general reparation proposition contained in the *Economist* two or three weeks ago has been receiving close attention in Paris.

The question of armaments has occupied the attention of three League meetings, namely, those of the Temporary Mixed Commission, of the Permanent Advisory Commission, and of the naval experts in Rome. The chief point about the Temporary Mixed Commission, which has appointed a sub-committee to draft a convention on the control of the traffic in arms, was the attendance of the American Minister at Berne on the direct instructions of the American Government, to follow the proceedings and assure the Committee of America's collaboration. This is the nearest approach of America towards the League in any co-operation on political matters, for first and foremost, armaments must be regarded as a political problem. This also strengthens that party in League circles which is in favour of the leading part being played by the civil element, though the Permanent Advisory Commission, composed of military experts, naturally takes a somewhat different view. The meeting of the naval experts in Rome has shown that it is not wise to be optimistic about securing limitation plans by means of experts themselves. Although it was strictly expert, the political problem was always in evidence, and the meeting seems to have demonstrated that the Washington method is the better—namely, a political conference, with the experts at the elbow of each delegation. It is easy to argue that this meeting was a complete failure from the fact that, summoned ostensibly to limit naval armaments, a great many of the most important participating States concerned

demand a limit, in some cases considerably higher than their existing forces—in some cases higher than their pre-war forces—and this despite the fact that it may be assumed that very few of them will ever attempt to build up to the limits for which they have asked. Therefore, to come to international agreement, which would have to fix limits considerably higher than already existing levels, would provide a convenient handle to all defence Ministers desiring to increase their naval armaments. Might it not, therefore, be better to leave the matter altogether alone, trusting to the facts of the situation rather than to theoretical bases for the future?

But it is not quite so simple as that. A good many of the excessive demands, especially that of Russia, were based on purely political considerations. States want their armament requirements to be part of their diplomatic bargaining. Russia, for example, puts up a high figure because she wants to talk about conditions in the Black Sea, in the Straits, and in the Baltic. Sweden naturally depends somewhat upon what Russia does; Greece depends upon what Turkey does; each of the three big South American States depends upon what the other two do, and so on. Spain takes a somewhat particular position, partly of pride, but it is not beyond the power of arrangement. What might, therefore, be possible, and more fruitful, would be a general diplomatic conference like that of Washington, which should then split up into regional committees and endeavour to come to regional agreements, taking in account all political and pride factors. For example, the naval tonnage of Russia has no relation to the naval tonnage of South American Republics, and the tonnage of Greece and Turkey in the Near East has no bearing upon the needs of the Scandinavian countries. Something useful might be done by taking together those countries which are closely related to each other in their naval interests and anxieties, but it is an attempt which perhaps should not be made too soon. There is too great a tendency to put the question of armaments on a purely moral and occasionally purely financial plane, and to separate it in this way from the political plane. In practice, this cannot be done, and the Rome Conference proved it, if proof were necessary.

The League Council meets next Monday. Included on its agenda are the report on the Hungarian scheme, the jurist's report on the interpretation of those parts of the Covenant which had application to the Corfu affair, the conclusions of the neutral commission appointed to examine the possibilities of a settlement on conditions at Memel, and the appointment of successors to the Dane and the Sarrois, who have resigned from the Saar Governing Commission. Lord Parmoor comes for the first time as British representative.

Letters to the Editor.

COMPANY DEBENTURE REDEMPTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to the letter signed by Mr Roger P. Sing, chairman of the directors of the Union Cold Storage Company, Limited, which appeared in your issue of March 8th, I am directed to inform you that my committee took exception to a letter sent by the secretary of the Union Cold Storage Company on September 10, 1923, to certain Debenture-holders, who were clients of members of this exchange, in the following terms:—

"Referring to your holding of £..... 4½ per cent. first mortgage debenture stock in this company, the company is in a position to purchase some of this debenture stock, and I am instructed to offer you £93 per £100 stock, which is the full market price for your holding. If you

will sell, please notify me and I will send you the necessary papers."

The debenture stock of this company was on that date quoted in the Manchester Stock Exchange Official List at £91 to £94, and it will be observed that in making the bid the secretary was making use of the current Stock Exchange quotation.

It has always been one of the conditions on which quotations are granted in the Manchester Stock Exchange Official List that the company and its officials should refrain from dealing in the securities of the company with stockholders direct.

My committee drew the attention of the directors of the Union Cold Storage Company to this condition, but the secretary of this company, at a subsequent date, again wrote to certain debenture-holders offering to purchase debenture stock direct at £94, and my committee then ordered that the quotation for the debenture stock should be removed from the Manchester Stock Exchange Official List, and a similar action was taken by the committee of the Liverpool Stock Exchange.

At the last meeting of the Council of the Associated Stock Exchanges, which represents 21 stock exchanges outside London, the Council recommended each exchange to pass the following resolution:—

"Any company acting as dealers in any of its securities through its officials, either officially or otherwise, shall be liable to exclusion from the Official List."

You will see that there is no intention on the part of the Manchester Stock Exchange to interfere with any company's right "to redeem the debenture stock by purchases in the market, or by asking for tenders or by drawings, which ever may suit it best," but the circular in question was not an offer of redemption, and it is surely an abuse of an official quotation for a company to use that quotation as a basis for fixing a price, and then to write direct to stockholders and endeavour to arrange a transaction direct with the stockholder at a price based on the Stock Exchange quotation.

In the event of a purchase neither the seller nor the buyer pays brokerage on such a transaction. It was the opinion of my committee that the Union Cold Storage Company was making an improper use of the official quotation in writing direct to the clients of the members of this and other stock exchanges, and endeavouring to secure stock from them on the basis of the Stock Exchange quotation without paying brokerage.

Incidentally it may be mentioned that it was stated by Mr Sing that the company had tried to buy stock on the Stock Exchange but had failed to do so. The natural inference is that there were no sellers at the quoted price, and it is a matter of common knowledge that the statement that £93 was a "full market price" for a well-secured 4½ per cent. debenture stock redeemable at par in 1928 was subsequently challenged in the Press (see the *Times*, September 20, 1923, City Notes).—Yours faithfully,

HORACE RICHMOND,

Secretary of Manchester Stock Exchange.
Manchester, March 11th, 1924.

SWISS RAILWAY ELECTRIFICATION

TO THE EDITOR OF THE ECONOMIST.

SIR,—Referring to above, and to the article on page 470 of your issue of March 1st, permit us to draw your attention to the fact that your Geneva correspondent appears not to be fully informed in this matter, in so far as he apporions at the end of the article mentioned the electric engines incoorrectly between the various Swiss electrical engineering firms.

To ensure the service on the lines now being electrified, the Swiss Federal Railways recently placed a contract for 57 electric locomotives—the largest number yet ordered by them at one time; the electrical equipment of 30 of these locomotives is being supplied by the Oerlikon Company. The locomotives in question are of the Ae 3/6 (2C1) type; they are intended for hauling express trains of 480 tons on gradients of 1 in 100 at a speed of 40 m.p.h. The Oerlikon Company has already been executing orders for 20 locomotives of this type, some of which have been delivered while others are still under construction.

It is interesting to note that with this great development of single-phase traction, the various designs of motors have been gradually tending towards an uniform type, and, now no longer differ in principle one from the other. The different methods of connection, which were once nearly as numerous as the makers of single-phase motors, have gradually been superseded by the simplest mode of connection where the motor is a plain compensated series machine, with auxiliary field displaced in phase—a design adopted by the Oerlikon Company already in 1904. In fact, single-phase traction motors are being built on this principle not only in Switzerland, but also in Norway, Sweden, Austria, Germany, and in the United States of America, now that manufacturers have abandoned their former motor designs, and adopted in place a type of machine such as produced by the Oerlikon Company for the last 20 years.

The many methods of speed regulation formerly encountered—regulation by means of induction regulators, by displacement of brushes on commutator, &c.—have also disappeared, the only mode of speed regulation normally used, at the present time, being that by means of tapplings on transformer—a method resorted to by the Oerlikon Company, already, for their trial locomotives on the Seebach-Wettingen line in 1905. It may, therefore, rightly be said that the Oerlikon Company have been the foremost pioneers in the field of single-phase traction.

As above few lines deal with matters of principle in the construction of single-phase electric locomotives, very likely same will be of interest to many of your readers.—Yours faithfully,

G. WUTHRICH

(General Manager and Chief Engineer of Oerlikon, Limited).

London, March 12th, 1924.

Books and Publications.

QUACK REMEDIES FOR UNEMPLOYMENT.*

It is as well that the author of "Unemployment: Its Cause and Cure" hopes to find his market among "those who have not had the benefit of a training in economics." It is only among such that his misconception of the economic organisation of society and his faulty logic could pass muster. An example of the first is his distinction between productive and non-productive labour. The former "is concerned entirely with the production of those things which enter into the standard of life of the mass of the people—simply food, clothing, and shelter, and probably little else." Secondary employments which the author stigmatises as unproductive "minister solely to the wants of the wealthy classes." They are depicted as building palaces, motor-cars, or warships. Mr Hook omits to tell us in which class he includes the listening-sets, of which the aërials are to be seen in enormous numbers on the roofs of any industrial town; the Ford cars and motor-bicycles which find so large a market among the working classes and the large population which ministers to popular entertainment. The author's confused and inaccurate picture of society naturally leads to muddled conclusions. As an example of the author's reasoning, he discusses under the heading of foreign trade what would happen if a monopoly secured control of America's raw cotton. Under present circumstances, it would mean we should have to give more products to America to purchase our raw material. But if Mr Hook's ideas were followed and "the production of the country were increased by transferring workers from unproductive to productive employments," he arrives at the conclusion that "the country would then be able to send to America the additional goods the cotton dealers there were able to extort, and would receive back a quantity of American goods equal to that received before the cotton 'ring' got to work. The net production left for division in England would then not be diminished." Our readers can judge from these two examples whether Mr Hook, in spite of his obvious sincerity, is a sound guide on this supremely urgent question.

EARLY ECONOMIC THOUGHT.*

PROFESSOR MONROE is right in thinking that a knowledge of the history of economic thought is an extremely valuable background for all who are concerned to understand modern economic theory, but for most people such knowledge is almost out of reach. We think, therefore, there is a place for a compilation, such as that before us, of a series of clearly substantial extracts from economic writers prior to Adam Smith. This volume includes translations from 16 writers, starting with Aristotle, Xenophon, and St. Thomas Aquinas, down to Hume, Turgot, and Von Justi. In order to preserve the character of the extracts, Professor Monroe has limited himself to extremely short biographical notes of these various writers, but to the ordinary reader the volume would be more illuminating if the editor had given himself a little more liberty in this respect. For example, in introducing Thomas Mun's "England's Treasure by Foreign Trade," his only comment is: "Though thoroughly mercantilist in spirit, it contains several qualifications of the greatest significance." It would only require a few lines to enable the general reader who is not an expert in early economic thought to find and appreciate what these qualifications are.

HOME MANAGEMENT ON BUSINESS PRINCIPLES.*

A TEXT-BOOK applying business principles to the administration and finance of the household is a reversion to the original etymological meaning of the word economics. It is not every housewife who could read and understand Professor Andrews' 600-page text-book; but those who will devote the necessary time to the task will find much of interest in his analysis of the allocation of household income and expenditure and examination of forms of saving and how the process of saving may be put upon a business basis, guidance as to the value of various types of investment and of life insurance, the economics of food supply, clothing, housing equipment, and service. The reading of what is in the main a solid work is lightened by what appears to be a somewhat pontifical statement about the normal replacing of the household capital, the number of pairs of socks, for example, required by the average business man per year, or the life of the average office suit. Perhaps the most interesting chapter is that dealing with the various means of keeping household accounts. But we are intrigued to know what his reply was to the six out of thirty-eight account-keeping correspondents who reported that they had given up keeping them as "not worth while." We feel sure that Professor Andrews had a very convincing answer.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, March 19.	ACCOUNT, March 20.

The main source of inspiration to Stock Exchange prices this week has been the wild character of the movements in the franc. When the exchange touched 120 on Monday, general depression spread over the markets. Upon the franc rallying to 99, prompt recovery ensued. These vagaries in the French exchange have their effect upon general Stock Exchange business, in that they raise up in the mind of the speculator, more particularly, a fear as to vague and unknown possibilities. The consequence is that while prices have moved sharply in many departments, business throughout the week proved to be on a small scale.

The War Loan has held tenaciously to the neighbourhood of 101, and Conversion, after a dip to 75½, regained most of the fall. The Funding Loan is better, and Victory Bonds came into demand, the former on consideration that the price will look cheap when marked ex dividend at the end of this month, Victory Bonds being popular owing to the approach of the date for drawings. The New South Wales subscription lists for the new issue remain open until next Wednesday. The new scrip stocks in this market, Union of South Africa, West Australia, and Southern Rhodesia, continue at a small discount. India Government stocks reacted in consequence of a hesitation in regard to the favourable Budget figures.

Brazilian bonds have gone back after their recent steady rise, although the missionaries are expected back home almost at once. French Government bonds went acutely flat, taking with them the municipal, railway and shipping descriptions, though the rally in the franc, caused by rumours of substantial financial assistance being afforded to the Bank of France by outside institutions, served to bring about an equally abrupt rally. Germans are neglected. Austrian Sixes, Czechos Eights, Japanese Sixes, and other speculative stocks maintain their prices, and are being steadily spread amongst a wide circle of the public.

Home Railways are very quiet. Central London non-assenting stocks have risen within the past few days from 8 to 15 points, upon the renewed proposal made to holders of the stocks that they should accept the same terms as were offered in 1912, and which the majority of the proprietors accepted at the time. Fears of labour troubles tend to keep away the public from Home Railway stocks, both for investment and speculation, but the market is firm. Grand Trunk Pacific Debenture keeps dull. Mexican Rails are inclined to give way; Nitrate Rails are better. The Argentine railway group, after being good, turned easier, upon the apprehension that the Buenos Aires Western dividend may show a decline when announced next week. Brazilian railway stocks hold their rises, and United of Havana has lost but a little of its recent substantial advance.

There is nothing fresh astir in the rubber market, where the weakness of the raw material has little effect over share values, so dormant is the market. Oil shares have been played upon by the French exchange, prices moving up and down in consonance with the fluctuations in the franc. Industrials are strangely quiescent. The stores shares keep good, owing to the recent dividends, and the hotel shares are steady. Shipping shares hardly move. The changes in banking and insurance stocks are exceedingly small on the week. A number of Trust Companies' issues have risen. Hudsons Bays went better, on talk of oil discoveries in the company's territory. Sudan Plantations hold most of their recent gain.

Textiles are uninteresting. Not even in Courtaulds is there any particular volume of trade passing. Amongst iron and steel shares, Powell Duffryn improved on an excellent dividend

announcement. Baldwins gave way on a report, subsequently contradicted, suggesting possible reorganisation. The group as a whole is heavy. Cammell Lairds have passed their dividend. Amongst electric lighting shares, a rise in Charing Cross is the outstanding feature. Dunlops have gone back after their recent spurt. Gas stocks continue to droop. Wireless and cable descriptions fail to attract notice.

Kaffirs underwent a noticeable weakness a few days ago, but the falls were mostly recovered, on support from the Cape and from Paris alike. Selukwes gave a semblance of activity to the Rhodesian market, by rising from 8s 6d to 12s 6d, relapsing considerably from the best. Diamond shares have followed Paris, and so have Rio Tintos. The various tin markets looked on almost unconcerned when the metal touched £299 per ton. The amount of public interest aroused in tin shares is surprisingly meagre. Mexicans are generally better. Russians eased off. The Indian gold-mining shares, in spite of good dividends, are inclined to droop.

On Thursday next the annual election of the Stock Exchange Committee takes place. Two resignations have been sent in, and five new candidates are in the field. For the 30 seats there are, accordingly, 33 candidates.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

	Nominal Capital.	Cash Subscriptions.	First Payment.	Further Liability.
Amount previously recorded.....	£ 27,699,075	..	..	..
Revised figure.	£ 27,699,075	..	..	..

New South Wales Government 5 per Cent. Conversion Loan, 1935-1955. Issue price, £97½ per cent.—This is an offer of conversion to holders of £16,419,003 New South Wales Government 3½ per cent. inscribed stock, due October 1, 1924, into an equal amount of 5 per cent. inscribed stock, 1935-1955, on the following terms:—Holders converting will receive a cash payment of £2 10s per cent. on October 1, 1924, being the difference between the nominal amount of the maturing stock and the issue price of the new stock, less 15s per cent. (less income-tax), being the difference between £2 10s, the interest on the new 5 per cent. stock, and £1 15s, the interest on the 3½ per cent. maturing stock. Subscriptions in cash are invited for 5 per cent. inscribed stock, 1935-1955, to an amount sufficient to make up, with the 3½ per cent. stock converted, the total of £16,419,003 at 97½ per cent. The 5 per cent. stock will be repayable at par on October 1, 1955, but the Government of New South Wales has the option to redeem at par, on or after October 1, 1935, on giving three months' notice. An excellent trustee security.

Card Clothing and Belting, Limited.—Authorised capital £650,000 in £1 shares, of which £522,675 is about to be issued. There are 450,000 ordinary and 200,000 preference shares. The issued capital consists of £347,675 ordinary shares, issued as fully paid to vendors in part payment of purchase price, and the present public issue of 175,000 7½ per cent. cumulative preference shares offered at par. In addition, there is now offered to the public £250,000 6 per cent. first mortgage debenture stock at 96½. The authorised debenture issue

is limited to £300,000. It will be secured by a trust deed constituting a first charge upon property and fixed assets. The stock will be redeemed by October, 1938, at 102 per cent. The company reserves the right to redeem the stock after October, 1929, at 105 per cent. This company represents a combination of firms engaged in the manufacture of "card clothing for worsted and woollen, silk, jute, flax, &c." Total assets are valued at £646,763. This sum includes property and fixed plant, £99,560. Thus the security provided by fixed assets is not very generous. The purchase price is £646,763, of which £299,088 is payable in cash and the balance in ordinary shares. Combined profits are given for six years. If the average is maintained, the debenture stock and preference share issue are well covered as regards interest and dividends. The prospectus, on the face of it, is an informative document, which does credit to its compilers.

Fairbanks Hotels, Limited.—Authorised share capital £250,000, divided in ordinary shares of 5s each. There is also 7 per cent. first mortgage debenture stock for £150,000. This is an issue of all the ordinary shares at par and the debenture stock at 95. The company has been formed to acquire the Grand Hotel, Harrogate; the Headland Hotel, Newquay; the Shakespeare Hotel, Stratford-on-Avon; and the Grand Atlantic Hotel, Weston-super-Mare. The company will have the right to redeem the debenture stock at 103 per cent. at any time after December 31, 1934, subject to six months' notice. Any stock not previously redeemed will be repaid at 103 per cent. on December 31, 1949. The company is acquiring the four hotels for £302,000, payable in cash. No intermediate profit, it is stated, is being made. A well-known firm has valued the hotels at £341,887, exclusive of goodwill. This is an interesting flotation, and some of the directors show that they possess the necessary qualifications. We see nothing unduly attractive from a shareholder's point of view in the profit figures set out in the prospectus.

Bukit Pulai Rubber Estate, Limited.—Authorised capital £160,000 in shares of 2s each. The prospectus states that over 600,000 shares of the present issue have been applied for by the directors and others, and will be allotted in full. The properties to be acquired are in the F.M.S., and are on the navigable River Kim Kim. They have a total approximate area of 6,228 acres. The planted area is stated to be 3,068, but has not yet been surveyed. The prospectus mentions that the Government grant for one section of 1,401½ acres has not yet been made out, but adds that the vendor company states that all preliminaries have been performed, and the grant should be issued forthwith. The authorised official restricted production of rubber for the quarter ended October 31, 1923, is 76,344 lbs, and the output for the six months to January 31, 1924, as given by the owner, was £28,000 in shares and the balance in cash. "Subject to survey," the property has been valued at £138,827. A speculative proposition.

Charles Chenil and Co., Limited.—Authorised capital, £35,000, divided into 25,000 8 per cent. cumulative preference shares of £1 each, 8,500 ordinary shares of £1 each, and 30,000 deferred shares of 1s each. The present offer is an issue at par of 24,000 preference and 8,000 ordinary shares. The venture is described as "An Artistic, Musical and the artistic world. But we do not quite understand the blend of commercialism with art. Little is told us about the old concern, except that "since its inception, dividends totalling the ordinary shares have been paid." The managing director will be in a happy position if the new company proves successful. With the 30,000 is deferred shares in his possession, he can exercise considerable voting powers, while after 8,500 he will be entitled to two-thirds of the profits. Frankly, we cannot see why capital to the extent of £1,500 should possess of the interests involved.

South-West Suburban Water Company.—This is "an offer for sale by tender" of 3,000 £10 ordinary shares or such number as will, including premiums, realise the net sum of £34,631. The minimum price is £11 10s per share. These shares rank for a maximum dividend of 7 per cent., *pari passu* up to that rate with the original shares, which are now receiving 9 per cent. per annum. The net revenue of the company for the year 1923 was £23,973, and after payment of balance of £13,729 available for dividends, there remained a share. Purchasers can reasonably expect to have a 7 per cent. distribution maintained.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

ACTIVE SECURITIES.

BRITISH EMPIRE STEEL CORPORATION, LIMITED.

REPORT OF BOARD OF DIRECTORS TO THE SHAREHOLDERS.

Your directors submit herewith the consolidated balance-sheet of the corporation and its constituent companies as at December 31, 1923, and the consolidated statement of profit and loss and surplus account for the year ending on that date, certified by the auditors of the corporation, Messrs Price, Waterhouse and Co.

BALANCE-SHEET.

The net increase in the cost of the properties of constituent and subsidiary companies during the year is \$1,280,712. This is the difference between the total expenditure, \$2,293,418 and \$1,012,706, the amount added to reserves for depreciation, depletion and renewals. The total amount of these reserves is now \$28,023,102, and the net cost of properties is \$134,201,384.

Against these properties there are funded and mortgage debts amounting in all to \$37,800,265, or slightly over 28 per cent. of their net cost, as shown on the balance-sheet. There has been an increase of \$1,154,774 in the amount of bonds outstanding. During the year the balance of the issue of Cumberland Railway and Coal Company bonds amounting to \$1,660,000 were sold and bonds of the par value of \$505,226 were redeemed through the operation of the several sinking funds.

The relation of current and working assets continues to be satisfactory, the proportions being nearly five to one, although the excess of assets over liabilities is less than it was a year ago. One reason for this is that in last year's balance-sheet there was a large amount of cash which had been received in December from the sale of bonds, which has since been disbursed, the greater part passing from current to fixed assets. The combined amounts of accounts receivable and cash items, \$6,045,775, exceeds the aggregate obligations of the companies and the corporation in respect to bank loans, accounts payable, accrued interest on bonds and dividends on first preference and preferred stocks by \$1,437,406, or more than 30 per cent.

PROFIT AND LOSS AND SURPLUS ACCOUNT.

The total amount available on this account, including balance carried over from last period as shown on the statement herewith, is \$5,468,544.67. After making provision for depreciation and exhaustion, there remained a balance of \$4,356,029.40, and after deducting payments for interest and discount on bonds and debenture stock a balance of \$2,377,555.30. After provision of amount required to pay all dividends accrued upon first preference stock of the corporation and the preference and preferred shares of constituent and subsidiary companies outstanding, there remained a balance of \$1,031,031.07 at credit of surplus account on December 31, 1923. This amount, added to surplus of constituent companies carried forward, \$21,784,870.32, makes the consolidated surplus \$22,815,901.39.

OPERATIONS AND BUSINESS.

The results of the operations of the constituent companies were more satisfactory in every way than they were in the previous year. The output of coal was increased 857,325 tons. This increase was general, and not confined to any particular operation. A considerable part was due to greater activity in the iron and steel trade.

This was an advantage to the coal business in two ways. The increased output had a favourable influence on cost of production, and the use of slack coal by the steel works furnished the companies with an outlet for any surplus of that grade which they had to dispose of.

Domestic business in iron and steel, though greater in volume than in the previous year, was still unsatisfactory both in volume and results. Competition with imported commodities is more difficult to meet than formerly, when the Customs duties afforded greater protection to Canadian producers. The specific duties upon imports of iron and steel were always lower in proportion to the value of such materials than the average *ad valorem* duty upon other materials, and now that commodity values have largely increased, this disparity in proportion has become very marked. In 1911 the average duty collected on all classes of dutiable goods was 26.713 per cent. The rates upon those classes of iron and steel imports which are dutiable varied

from 6 to 26 per cent., and when used for specific purposes, such as for shipbuilding, the manufacture of agricultural implements, and many other purposes, 99 per cent. of the duty collected is refunded. Several classes of manufactured steel are absolutely free. Last year the average rate of duty collected on all classes of dutiable goods was 24.92 per cent. The rate upon imports of iron and steel which were subject to duty varied from less than 1 per cent. to above 18 per cent. British pig-iron paid 7 per cent.; the maximum rate on steel plates was 7.6 per cent.; on structural steel not less than 35 lbs to the yard, 7.33 per cent.; steel rails paid 18.8 per cent. This condition is not only unfair to the manufacturers of iron and steel in Canada; it has also an adverse effect upon the revenues of the country.

Your directors have brought these anomalies in the tariff to the attention of the Government, and have urged the necessity of taking steps to remedy a condition which must be admitted is not in the best interest of the country. There is no reason why iron and steel should yield a lower percentage of revenue to the country than the average of all other classes of dutiable goods, and it is of the greatest concern to all classes in the community that the iron and steel industry in Canada shall have all the advantage that is incidental to the imposition of duties that are at least sufficient to produce a fair share of the customs revenue.

A considerable trade in wire and wire nails was done with Australia and New Zealand, where the corporation has some advantage in the way of transportation and preferential duties.

Owing to the occupation of the Ruhr by France early in the year, shipments of ore to Germany were greatly reduced. Some sales were made in the United States and Great Britain, but the shipments for the season did not exhaust the tonnage mined for export in the early part of the year.

CHANGES IN ORGANIZATION.

During the year, Mr D. H. McDougall resigned the office of vice-president, and Dr W. L. McDougall resigned from the board of directors. On December 19th, Mr J. E. McLurg, previously general manager of Halifax Shipyards, Limited, was appointed vice-president in charge of the operations of constituent and subsidiary companies.

Being convinced of the importance of strengthening the organisation of the steel-producing works, your directors arranged with Mr Geo. F. Downs, formerly president of the Lackawanna Steel Company to become a director of the corporation, and a member of the executive committee, and later secured the services of Mr Harry J. Kelly, formerly with Bethlehem Steel Company, who was appointed general manager of steel works, and entered upon his duties on January 23, 1924.

PENSION FUND.

Your directors have instituted a fund for the payment of pensions to employees who have given extended service to any of the constituent or subsidiary companies, and who through age or infirmity are no longer able to continue at work. Further means for the benefit of the working force are now under consideration.

INDUSTRIAL RELATIONS.

The necessity for readjustment of wages due to the changing conditions of industry has caused a larger amount of unrest than usual amongst wage earners everywhere, and your companies have had their full share of difficulty in connection with the problems which have arisen from this cause.

During the past year two serious disturbances occurred, which were the cause of much loss to both the companies and their employees.

Your directors are hopeful that better conditions have now been established, and that hereafter more sympathetic relations will exist between the management and the working force.

On behalf of the board of directors,
R. M. WOLVIN, President.
Montreal, P.Q., February 20, 1924.

March 15, 1924.]

THE ECONOMIST.

595

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

COMPANY MEETINGS, &c.

PINCHIN, JOHNSON, AND COMPANY, LIMITED.

SUBSTANTIAL PROGRESS DURING 1923.

The annual general meeting of the shareholders of Pinchin, Johnson, and Co., Limited (incorporating Wilkinson, Heywood and Clark), was held at the registered offices of the company, General Buildings, Aldwych, London, W.C. 2, on Wednesday, 12th inst.

Mr Edward Robson (chairman) presided.

The secretary (Mr A. A. Coldrey) read the notice convening the meeting, and the report and certificate of the auditors (Messrs. Gully, Stephens, Baillie, and Co., and Messrs. Broads, Paterson, and Co.) were also read.

The Chairman said: Gentlemen,—When I last had the pleasure of addressing you I may have been thought somewhat bold in anticipating that the result of our trading for the year 1923 would show a satisfactory advance over the previous year. Fortunately, I am in the very happy position of having my anticipations fully realised.

I would first, if I may, congratulate you upon the excellent showing we are able to present. I propose to take the report and accounts as read, and will first briefly refer to the results indicated therein. You will note that, after providing for all expenses and charges, including depreciation of leasehold buildings, plant, and machinery, also after providing for income-tax and corporation profit tax, the net profit for the past year comes out at £103,544 15s 1d. To this has to be added the sum of £16,905 5s 6d brought forward from 1922 accounts, giving us a total sum to the credit of profit and loss account of £120,450 0s 7d. From this has to be deducted the interim dividend on preference capital already paid, and an interim dividend of 6 per cent. actual already paid on account of the ordinary shares, leaving a net available balance of £94,221 18s 1d, which I am going to propose shall be dealt with as follows:—

DIVIDENDS AND ALLOCATIONS.

That we confirm payment of the half-yearly dividend on the preference shares paid January 1st last; also that we now declare a further dividend of 16½ per cent. actual, less tax, on the ordinary shares, making a total ordinary dividend for the year of 22½ per cent., less tax.

We also propose to deal with the item of preliminary expenses, and to write off the whole amount in our balance-sheet under this heading—namely, £10,415 19s.

We also propose to add the sum of £10,000 to our reserve, which will bring this item up to £50,945 3s 7d.

After making these allocations we propose to carry forward the sum of £23,159 1s 7d to the 1924 accounts, as against the sum of £16,905 5s 6d brought in at January 1, 1923.

I think it will be agreed that the results of the past year's trading, as indicated in these accounts, are a matter for congratulation to all concerned, and reflect the very substantial progress that our business has made during 1923.

There is not a single branch of trade or industry where one or more of our products cannot be employed, and during the past year the basis of our business has been broadened in a most satisfactory manner.

For some time past we have owned the whole of the share capital of the old-established business of Messrs. Wilkinson, Heywood and Clark, Limited, which has a very fine trading connec-

tion all over the world. During the past year your directors have considered it advisable to merge this business within the Pinchin, Johnson organisation. This has meant the voluntary liquidation of the former business.

This development adds materially to the efficiency of our control and administration of the business, and makes it capable of future development along increasingly profitable lines, and I can assure you that our business was never in a sounder or better condition than at the present time.

THE FUTURE.

I do not, of course, pretend for one moment at this date to be able to indicate what the results of our working for 1924 may be, but I can assure you that our business continues to prosper, and already results up to date show that there is every prospect of 1924 recording a further advance over the past year.

CASH RESOURCES.

You will note in the balance-sheet that our cash resources are still very substantial, amounting to no less than £137,000. Your directors are not unmindful of the possibilities of profitable investment of such cash resources, and in this connection all I can say at the moment is that prospects are under consideration.

THE RESOLUTION.

The resolution was then put to the meeting, seconded by Mr C. G. Heywood, and carried unanimously. On the motion of Mr A. R. Keates, seconded by Mr A. Symons, the retiring directors were unanimously re-elected.

Mr Lidstone proposed, and Mr Howard seconded, that Messrs Gully, Stephens, Baillie, and Co. (chartered accountants) be re-elected auditors of the company for the ensuing year. This was carried unanimously.

The Chairman expressed his thanks to his co-directors and his staff for their loyal co-operation, and Mr R. Paltridge (managing director) replied.

On the motion of Mr Percy Braby, seconded by Mr A. Jay, a hearty vote of thanks was accorded to the chairman and his co-directors for their able conduct of the company's business during the past year.

The Chairman having returned thanks, the meeting terminated.

RIVER PLATE TRUST LOAN AND AGENCY COMPANY, LIMITED.

DECREASED DEMAND FOR LOANS.

The forty-third ordinary general meeting of the River Plate Trust Loan and Agency Company, Limited, was held, on the 11th inst., at 52 Moorgate, London.

Mr James Anderson, who presided, said that the accounts under consideration were less favourable than usual. The company's business was of a twofold character—namely, the placing of money on loan in the River Plate and the conduct of trustee and agency business. The loan business had always been by far the most important branch. When the company started, and for long years afterwards, the demand for loans was keen and the rates of interest high. The high-water mark was reached in 1913, when their mortgage loans totalled £4,510,000. From that year a decline set in, until now the amount outstanding was only £2,300,000. The present indications pointed to a still further reduction in their outstandings. The other adverse factor with which the company had had to contend during the past year was the adverse nature of the exchange on England, which had resulted in a loss of £36,000. In addition, there was a depreciation in the value of the dollar assets in the balance-sheet arising from the difference between the figure at which the dollars stood in the books and the

rate of exchange ruling at the date of the balance-sheet. At the close of the year the difference was £172,000, which amount was covered by the balance carried forward. Since December 31st, however, the rate had improved, and it had now reached the book figure, so that all question of depreciation on their dollar assets had, for the present at least, disappeared. With the exception of the cattle-breeding trade the main industries of the country were on a prosperous footing and the outlook satisfactory. The mortgage loans in the balance-sheet were all perfectly good, and not likely to lead to any loss in realisation of the dollars lent. Of the investments, which amounted to £2,871,607, £885,919 was represented by British Government securities and £1,985,687 by investments of a general character. The general investments were of a high class, were well spread, and their market value at the close of the year was well in excess of the book figure. The profit for the past year amounted to £264,431, and the directors proposed to pay further dividends of 11 per cent. on the "A" shares, making 20 per cent. for the year, and 4 per cent. on the "B" shares, making 7 per cent. for the year, to place £20,000 to the reserve fund, and to carry forward £189,535.

The report and accounts were unanimously adopted.

ISAAC WALTON AND COMPANY, LIMITED. NEW PREMISES AT ILFORD AND WATFORD.

The twentieth annual general meeting of Isaac Walton and Co., Limited, was held, on the 14th instant, at the registered office, 169 Newington causeway, London, Mr Charles Stuttford (chairman of the company) presiding.

The Chairman said: Trading during the last three years has been one of great difficulty and prolonged anxiety to your directors. Unemployment and trade depression have been general, stock values have been continuously on the downward grade, and, consequently, we have been obliged to carry on business with extreme caution, and great care has been exercised over all buying contracts. We do feel, however, that we are now at the end of the lean years, and for this reason have maintained our dividend at 10 per cent. This has been done to a small extent at the expense of the carry-forward, which, after all, is surplus profit, and we consider that the ordinary shareholder is fairly entitled to it.

As you will see by the report, the trading profit amounts to £31,887, to which the sum of £11,027, the balance from last year, is added, making a total of £42,914, and, after deducting mortgage interest, repairs and renewals, &c., there is a balance of £28,860, which compares with £30,593 last year. The stock at £58,811 is £7,665 lower than last year, and at what we consider a very satisfactory figure. It is valued at cost or market value, whichever is the lower, and is a thoroughly clean and healthy stock.

Cash in hand and at the bank is £14,207, which is rather less than last year, but you will notice our freeholds are correspondingly higher. We have recently secured a freehold site in one of the best positions in that rapidly rising locality of Ilford and are erecting an up-to-date men's and boys' store there, which we hope to occupy in the near future. Whilst I am on this subject of extensions, I might mention we have also secured very valuable premises at Watford, there again in the best position in the town, and where we hope to commence business in time for the early summer's trade. We have great confidence in these new ventures, and feel they will add greatly to the prosperity of the company.

If you will refer to the appropriation account, on the first page, you will find we have a balance of £28,860 to be dealt with. The preference dividend amounts to £8,400, and to pay a final dividend of 1s per share on the ordinary shares, making 2s per share, tax free, for the year the sum of £5,000 is required, leaving a balance to be carried forward of £10,460.

The report and accounts were unanimously adopted, and the formal business having been transacted, a hearty vote of thanks to the chairman and directors terminated the proceedings.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £30,000,000 in Treasury Bonds and Treasury Bills dated from Mar. 17-Mar. 22 were opened on Mar. 14, 1924, and the total amount applied for was £38,735,000. For bills at three months dated Monday to Friday at 99 4/8 5d, about 45 per cent., above in full, Saturday at 99 4/8 5d, and above in full. The amounts allotted were as follows:—In bills at 3 months, £25,000,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months, Average Rate.	4% Treasury Bonds, Average Price
Feb. 9, 1924.	£ 30,000,000	£ 41,675,000	£ 4 11 3-29	nil
Feb. 12,	30,000,000	43,620,000	3 10 5-71	nil
Feb. 22,	30,000,000	44,535,000	3 8 11-79	nil
Mar. 7,	30,000,000	44,400,000	3 6 4-84	nil
Mar. 14,	30,000,000	45,400,000	3 3 4-05	nil
		38,735,000	3 1 5-43	nil

Tenders will be received on Mar. 21, 1924, for Treasury Bonds and Bills to be issued to the maximum amount of £30,000,000. The amount of Treasury Bonds issued will not exceed £3,000,000.

In India.....	£ Nil
In England—	
Cash at the Bank of England.....	1,882
British Government securities—	
Value as on September 30, 1923.....	9,702,048
British Government securities since purchased (cost price).....	30,717,152
	40,421,082
	40,421,082

SIDNEY TURNER, Accountant-General.

India Office, March 11, 1924.

Messrs Samuel Montagu and Co. write as follows on March 12th:—

GOLD.

A moderate amount of gold came on offer, of which India took a fair proportion. Gold valued at \$13,371,000 has arrived in New York from London, and 10,000,000 gold marks from Germany.

SILVER.

The tendency of the market has kept fairly good. There has been some China selling, but not of a persistent character, and supplies from other quarters have been intermittent, though America has been disposed to close with favourable offers. The buying has been composed of bear covering and a few orders from the Indian bazaars.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

NOTICES.

The Banco Nacional Ultramarino announces that their New York agency has been transferred to a new company, the Trust Company of North America, which company will, in future, represent their interests in New York.

The London and Eastern Trade Bank, Limited, have been informed by Mercubank A. G. Vienna (established 1877) that confusion has arisen between their institution and a bank of a somewhat similar name (Deutsche Mercubank) located in Berlin. Mercubank Vienna wishes it to be known that no connection of any kind exists between the two institutions.

The Midland Bank announces the opening of a new branch at 142 Main street, Bingley, Yorks, under the management of Mr H. L. Atkinson.

The directors of Lloyds Bank, Limited, announce that the Right Hon. Sir George Lloyd, P.C., G.C.S.I., G.C.I.E., D.S.O., has been re-elected to a seat on the board of the bank. It will be remembered that Sir George was formerly a director from 1911 to 1918—and that he resigned in the latter year on appointment as Governor of Bombay.

Barclays Bank, Limited, announce that they have opened a new branch at Court buildings, Station street, Keswick, under the management of Mr B. A. Nuttall. They also announce that Sir John Meadows Frost, J.P., of Upton Lawn, Chester, has been appointed a local director of the bank for the Liverpool and Manchester district. A branch has been opened at 276-8 Scotland road, Liverpool, under the management of Mr R. S. Hume.

Mr C. K. ter Meulen, of Hope and Co., of Amsterdam, has been appointed a director of the Continental Handelsbank.

OIL OUTPUTS.

BRITISH BURMAH PETROLEUM COMPANY.—Production of crude oil by this company and the Rangoon Oil Company, Limited, for the month of February amounted to 58,025 barrels.

CALTEX OIL COMPANY.—Production for February, 8,767 barrels, or 1,391 tons.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during February amounted to 123,821 barrels, or approximately 17,680 tons, including:—St Helen's Petroleum Company, Limited, 41,395 barrels (5,901 tons approx.); Kern Trinidad Oilfields, Limited, 33,874 barrels (4,839 tons approx.); Kern Romana, Limited, 2,681 barrels (383 tons approx.).

MEXICAN EAGLE OIL COMPANY.—Production for the week ended March 1, 1924, was 95,000 barrels. About 5,250 barrels daily were shut in, but wells are being gradually reopened as tankage permits. Production of well No. 3 Cacalilao, now 1,397 feet deep, has increased to 6,500 barrels daily, and is being deepened further.

STEAUA ROMANA (BRITISH), LIMITED are advised that the approximate fields gross production of the Steaua Romana Company (Bucharest) for the month of February was 19,570 tons.

BURMA CORPORATION.—During the month of February 24,850 tons of ore were mined. 23,050 tons of ore were milled in the treatment plant, producing 10,356 tons of lead concentrate. 10,157 tons of lead bearing material were smelted in the blast furnaces, producing 4,276 tons hard lead for treatment in the refinery. Refinery products were 3,976 tons refined lead, and 430,000 ounces refined silver. Of silver production, 12,000 ounces were recovered from treatment of copper matte. Experimental zinc plant produced 1,051 tons zinc concentrates, assaying 11 ozs silver, 6 per cent. lead, and 46 per cent. zinc. In addition to above, 114 tons copper matte were produced ready for shipment from the treatment of accumulated smelter by-products. Production of antimonial lead suspended pending accumulation sufficient stock smelter by-products.

NORTH BROKEN HILL. Feb.—North section—19,500 tons of crude ore were treated, producing 3,740 tons lead concentrates, averaging 65 per cent. lead, 31 ozs silver per ton, and 78 per cent. zinc; also 3,340 tons zinc concentrates, averaging 48½ per cent. zinc, 7 per cent. lead, and 8 ozs silver per ton. British section—14,900 tons of crude ore were treated, producing 2,530 tons lead concentrates, averaging 64 per cent. lead, 28½ ozs silver per ton, and 68 per cent. zinc; also 2,330 tons zinc concentrates, averaging 46½ per cent. zinc, 67 per cent. lead, and 77 ozs silver per ton.

SAN FRANCISCO MINES OF MEXICO.—Feb.—Ore treated, 6,556 tons; lead concentrates produced, 1,506 tons; zinc concentrates produced 1,522 tons. Estimated net smelter return on lead, \$94,695 (U.S. currency); on zinc, \$52,762; total, \$147,457. Operating expenses, \$0,888. Estimated operating profit, \$96,569. Capital expenditure, \$31,190.

ZINC CORPORATION.—February: Lead concentrator treated 15,372 tons of ore, producing 3,155 tons of lead concentrates and 4,350 tons of zinc middlings. Estimated gross profit, with lead at £24 per ton, £7,639. Increase (or decrease) for each £1 fluctuation in price of lead, £2,013.

Reports and Notices.

The Equitable Life Assurance Society has purchased the freehold of 19 Coleman street, comprising larger and more convenient offices. The society will vacate its present leasehold premises at Mansion House street, and move into the new premises within the next few months.

Consequent upon the death of Mr William Edward Mouldsdales, Messrs Cope Brothers and Co. inform us that Sir Benjamin Sands Johnson has been appointed chairman of the company, and also that Mr Arthur Edward Pattinson, of Liverpool—a director of Lloyds Bank, Limited, Royal Insurance Company, Limited, and the Liverpool Warehousing Company, Limited—has joined the board of directors.

We are informed that Lieut.-Col. the Viscount Downe, C.M.G., D.S.O., of Wykeham Abbey, Yorks, has been elected to a seat on the board of the Yorkshire Insurance Co., Limited, in succession to his father, who was a director for nearly 40 years.

We are informed that copies of the recent circular issued by the committee for the protection of bondholders of the Mexico North-Western Railway Company may be obtained from the secretary of the committee, 3 London Wall buildings, London, E.C. 2.

Mr L. E. B. Homan has joined the board of Port of Beira Development, Limited.

The Standard Bank of South Africa, Limited, 10 Clement's lane, Lombard street, announce the numbers of certain debentures of the City of Cape Town 4 per cent. Municipal Loan, drawn for repayment July 1st next.

RAILWAYS.

KANSAS CITY, MEXICO, AND ORIENT RAILROAD.—A general meeting of the British holders of two-year 6 per cent. Gold Notes and 4 per cent. first mortgage bonds of the Kansas City, Mexico, and Orient Railroad Company will be held at Winchester House, Old Broad street, London, on March 18th, at 2.30 p.m., to consider the situation arising from a decree of foreclosure and sale made by the Court in Kansas City, under which the property is to be offered for sale by public auction. The date fixed for the sale is March 27, 1924, and up to the present the committees have been unable to secure any postponement.

BANKS.

BANCO DE CHILE.—The first half-yearly report to December 31, 1923, just issued, shows a net profit of \$10,019,385, which sum, added to shareholders' fund of \$5,151,676, gives an available total of \$15,171,061. This sum is utilised as follows:—Dividend of \$9,000,000, or \$9 per share. The sum of \$667,622 goes to employees' saving and pension fund. Directors' remuneration, \$135,000. To shareholders' fund, \$5,368,438. If these proposals are accepted, the capital and reserves of the bank will be:—Capital paid up, \$100,000,000; reserve fund, \$58,000,000; shareholders' fund, \$5,368,438; reserve fund, in gold of 18d, \$13,333,333 = £1,000,000.

S. JAPHET AND CO., LIMITED.—Balance-sheet, December 31 1923:—

YOKOHAMA SPECIE BANK.—The net profit of the Yokohama Specie Bank for the half-year ended June 30, 1923, amounted to 10,092,411 yen. A balance of 5,015,825 yen was brought forward, the profit and loss account showing a total of 15,108,237 yen. It is again proposed to add 4,000,000 yen to reserve, raising that fund to 73,000,000 yen. The dividend is unchanged at 12 per cent. per annum, and there will be a balance of 5,108,236 yen to be carried forward. The capital is 100,000,000 yen. Reserve fund is 69,000,000 yen. Deposits stand at 479,365,051 yen. Bills payable stand at 424,264,976 yen. The total assets are 1,093,251,489 yen. Cash stands at 78,326,089 yen. Investments are at 154,216,498 yen.

INSURANCE.

BRITISH GENERAL.—The report for 1923 shows that in the fire department the premiums were £342,188, against £293,257 for 1922. Net claims absorbed 51.84 per cent. of the premiums, and, after allowing for unexpired risks, there was a surplus, including interest on the fund, of £39,438. The premiums in the three accident departments amounted to £313,123, as compared with £299,434. Net claims absorbed 46.99 per cent., and the surplus, including interest, amounted to £49,405, after providing for unexpired risks. In the marine account the premiums for 1923 were £380,120, against £294,143 for 1922. The account for 1921 has been closed with a profit of £13,238 from underwriting, and of £11,654 from interest. For the three years 1919, 1920, and 1921 the underwriting profits of £19,532 have been carried to profit and loss. The total free reserves of the company amount to £1,014,060, or nearly 100 per cent. of the fire, accident, and marine premiums, and there is, in addition, a subscribed capital of £700,000. The market price of the investments on December 31st last is stated to have been, in the aggregate, substantially in excess of the book value. The dividend for the year of 25 per cent., less tax, absorbed £33,613, as compared with net available interest earnings of £51,663.

PROVIDENT ASSOCIATION OF LONDON, LIMITED.—The forty-sixth year's report, just issued, shows that the total funds of the association had, at December 31st last, reached the sum of £8,257,144, having increased during the year by £440,914. The payments to policy-holders and certificate-holders during the year amounted to £316,711. The total for 1923 is slightly below the average for the last ten years, which was

£328,687. Advances to policy-holders and certificate-holders upon house property to the amount of £409,228 were completed during the year. The total of advances made by the company upon mortgages on house property is £12,140,429. The premiums for the year amounted to £566,487, and the interest for the year to £405,101 gross, and, after deduction of income-tax, to £341,724 net. The premiums received in the monthly payments branch, representing about 65 per cent. of the total premium income, are paid in small sums averaging about 10s; and more than one-half of the interest receipts is received from the borrowing policy-holders and certificate-holders in small quarterly sums, averaging under £4.

RUBBER, &c.

UNITED SERDANG (SUMATRA) RUBBER.—Good results have been secured by this company, whose report and accounts for the year ended August 31, 1923, has just been issued. The report discloses a net profit of £67,812, against £42,776 in preceding year. The ordinary dividend has been doubled, as shareholders are to receive 10 per cent. against 5 per cent. in preceding year. A credit balance of £12,526 is carried forward. The purchase of the Poelau Ramboeng Estate, announced by the chairman at the last annual meeting, has been duly completed, and the transfer to this company of the Siantar and Simarito Estates, acquired as reported to the shareholders by circular dated October 15th last, is now in course of completion. The acreage statement appended to the report has been brought up to date to include these new properties. As at August 31st last only 300,000 shares had been issued on account of these acquisitions, and the completion of the transactions will appear in the next balance-sheet.

TEA.

BRITISH INDIAN TEA COMPANY.—The directors, after very careful consideration, have decided to recommend to the shareholders that the existing £5 ordinary shares of the company shall be split into five £1 shares, and in addition, it is proposed to give, by way of bonus, two extra £1 shares for every £5 shares now held—that is, the shareholders will receive for each £5 ordinary share held by them seven of the proposed new £1 shares. To provide the sum requisite to pay this bonus, the capital of the company will be increased by transferring to capital account a portion of the company's reserves now employed as working capital, and which can be spared for the purpose.

DIMBULA VALLEY (CEYLON) TEA.—Improved results have been secured by this company. The ordinary dividend for 1923 is 27½ per cent., as against 20 per cent. for 1922. The net profit is £64,681, as against £43,290 in 1922, and £33,810 in 1921. The sum of £10,000 is now placed to estates purchase reserve account, making £20,000 at the credit of this account. The following tabulated results of the last eight years' working will be of interest:—

Year.	Tea Crop.	Rubber Crop.	Cost of Production.		Net Average.		Dividend.
			Tea.	Rubber.	Tea.	Rubber.	
	Lbs.	Lbs.	Cents.	Cents.	s d	s d	%
1916	1,591,629	340,740	34.87	52.06	0 9.54	2 4.37	30
1917	1,458,948	282,920	38.11	57.44	0 10.11	1 10.1	25
1918	1,523,077	273,625	35.43	51.30	0 9.23	1 4.00	15
1919	1,508,217	345,525	37.88	50.14	1 1.78	1 10.01	30

	1,706,729	262,817	50.81	41.70			

JHANZIE TEA.—The directors have decided to recommend to the shareholders that the existing £5 shares of the company shall be split into five £1 shares, and to give in addition, by way of bonus, two extra £1 shares for every £5 share now held—that is, the shareholders will receive for each £5 share held by them seven of the new £1 shares. To provide the sum necessary to pay this bonus, the capital will be increased to the necessary extent by the capitalisation of a portion of the company's reserves.

MISCELLANEOUS.

HARRODS (BUENOS AIRES).—An extraordinary general meeting of this company was held on March 10th, when the resolutions for the reduction of the capital, the funding of the arrears of dividend on the preference shares, and the alteration of the articles of association consequent thereon, passed unanimously at the annual general meeting, held on February 22nd last, were unanimously confirmed as special resolutions of the company.

LAMPART AND HOLT, LIMITED.—The profit for the year 1923 amounts to £51,131, to which must be added £66,825 brought forward from 1922, making a total of £117,956. The board has withdrawn £200,000 from reserve account, and after paying divi-

dends on the preference shares recommends the payment of a dividend of 4 per cent. on the ordinary shares and that the balance of £103,356 be carried forward. The passenger steamer "Voltaire," 13,248 tons, has been delivered by the builders during the year. The steamers "Virgil" (built 1896), "Sallust" (built 1898), and "Camoens" (built 1900), which were no longer suitable to the company's requirements, have been sold. The fleet consists of 47 vessels, besides sundry small craft, the total tonnage being 322,134 gross. Total assets are £8,672,435. Ships and shipping investments comprise £7,462,791. Of this amount general investments are at £948,323. Sundry debtors stand at £217,194, and cash is at £44,126.

POWELL-DUFFRYN STEAM COAL.—This company has had a good year. The net profit for year 1923, after charging debenture interest, corporation profits tax, and income-tax, &c., amounts to £523,762, against £235,803 for 1922. The ordinary dividend has been raised from 7½ per cent., free of income-tax, for 1922, to 12½ per cent. for 1923, free of income-tax. The sum of £100,000 is put to reserve, against nothing a year ago. The sum of £119,349 is carried forward, against £107,906 brought in. An interesting feature of 1923 was the output of coal from the company's collieries, which reached record figures at 4,760,591 tons. We have analysed the balance-sheet, which will be found in another column.

UNITED ALKALI CO.—In presenting their report, the directors say they are pleased to be able to revert to the usual period for the annual communication of results to the shareholders now that the difficulties of the war period have been overcome. After transferring £15,000 to debenture redemption account, and £100,000 to reserve (making a total of £850,000), the certified balance-sheet shows a total at credit of the profit and loss account on December 31, 1923, of £220,375. It is proposed to deal with the balance as follows:—Final dividend for 1923 on preference shares at the rate of 7 per cent. per annum (less income-tax) £76,016; final dividend of 6 per cent. on ordinary shares (less income-tax), £41,513; dividends payable April 11, £117,529; carrying forward to 1924, £102,846. In presenting the results for the year 1923, the directors congratulate the shareholders upon the fact that the demand for the company's products has been generally satisfactory; thus the company's works have been fairly well employed, and costs have, in consequence, been further reduced. The board are pleased to call attention to this fact, which has enabled them to effect reductions in the sale price of many of the company's products, with a corresponding benefit to the company's consuming customers.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Fine open weather conditions accompanied by spells of sunshine enabled farmers to push ahead with field work, and a large area has already been seeded to spring oats. With regard to winter crops early sowings present a healthy appearance, but the later sown is less satisfactory, while backward in growth. Native wheat moved off quietly, and prices displayed an easier tendency both here and at most provincial markets, owing to declining prices for imported varieties. Suitable milling grades quoted at 10s 6d to 10s 9d per 112 lbs, free on rail. Imported descriptions were in less request, and values moved in a downward direction in sympathy with lower c.i.f. offers. No. 1 Northern Manitoba, afloat, quoted 48s 9d, No. 2 ditto 48s, No. 3 ditto 47s 3d, Rosafe, 63½ lbs, 46s 9d, and Australian 49s 6d, all ex ship per 496 lbs. Dull conditions prevailed in the floating and forward cargo section, and prices marked a fairly sharp decline on selling pressure, particularly with regard to North American and Argentine descriptions. White kinds, however, were comparatively steady, owing to scanty offerings. A steamer of No. 2 Northern Manitoba, April shipment, changed hands at 47s 6d to Mediterranean, and Barusso, 63½ lbs, April, to Bristol Channel, at 42s per 480 lbs. Flour in quiet demand, and prices tend easier in sympathy with the wheat position. London standard straight run quoted at 38s 6d, patents 40s 6d to 41s 6d, town households 36s 6d per sack, delivered in. All English country straights 35s to 35s 6d per sack on rail at London stations. Imported dull and values weak. Manitoba patents range from 35s to 37s as to quality, and Australian 36s per 280 lbs, ex store. Barley easier. English malting ranges from 11s 3d to 12s 9d, with feeders 10s to 10s 9d per 112 lbs, free on rail. Imported dull. Californian 44s 6d to 48s 6d, ex store, Chilean brewing 41s 6d to 45s, ex ship.

Authorised.	CAPITAL.	About to be issued.
£450,000	Ordinary Shares of £1 each	£347,675
£200,000	7½% Cumulative Preference Shares of £1 each	£175,000
£300,000	6% First Mortgage Debenture Stock	£522,675
		£250,000

An issue will be made during the week-end of
£250,000 6% First Mortgage Debenture Stock at £96½% (redeemable at £102%)
 AND

175,000 7½% Cumulative Preference Shares of £1 each at par.

The Company is an amalgamation of the majority of firms manufacturing Card Clothing for worsted and woollen, silk, jute, flax, etc. The manufacture of card clothing is one of the oldest industries—carding being a key process in the production of all textile materials. Six out of the eight amalgamating firms were founded more than 100 years ago.

The Prospectus will show that:—

The assets to be acquired are nearly three times the amount of the Debenture Issue, after deducting which the Preference Shares are covered by the assets more than two and a-half times over.

Based on the average profits for six years the service of the Debenture Stock is covered nearly four times, after providing for which the balance remaining covers the Preference Dividend nearly four times.

Prospectuses and application forms may be obtained to-day (Saturday) from Lloyds Bank Limited, Head Office, Lombard Street, London, E.C.2, and Branches; Midland Bank Limited, Head Office, Threadneedle Street, London, E.C.2, and Branches; Coates, Son & Co., 61, Moorgate, London; J. E. Brearley & Son, 8, Crossley Street, Halifax; T. H. Carter & Wilkinson, Powell House, Powell Street, Halifax; from Members of the London and Provincial Stock Exchanges; and from E.S.T., Ltd., 3, Lombard Street, E.C.3.

THE MONEY MARKET.

DESPITE the fact that the taxes are continuing to flow into the Treasury with little diminution in volume as the end of the financial year approaches, the money market has remained quite easy in tone. At times overnight money has been in demand, as the result of incidental transactions, such as the French credits arrangements, but as a rule 2½-2 per cent. has been the charge for day-to-day loans, and 2½ per cent. the general rate for fix-

tures. The discount market has shown a tendency towards even greater ease than was apparent in the previous week, the only explanation being the surmise that most of the Treasury bills allotted recently have gone to fill special requirements, thus leaving the market poorly supplied. This condition of affairs seems to have left a market but ill supplied with those fine bills of which the rapidly increasing number were reported to be responsible for the harder tendency of discounts only a few weeks ago. At the end of the week fine bank bills were no better than 3 per cent. at times, and the Treasury bill rate has been forced down below this figure.

	Mar. 21, 1924.	Mar. 14, 1924.	Mar. 7, 1924.	Feb. 29, 1924.	Previous Rate and Date Changed.

Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	1 $\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills) ..	3	3 $\frac{1}{8}$	3 $\frac{1}{8}$	3 $\frac{1}{8}$	..

The Bank statement showed a decline of £136,300 in the circulation, and a gain of £6,800 in the bullion raised the Reserve by £143,100. Tax collections were reflected in a rise of £4,726,700 in the Public deposits, but Government securities showed an addition of £175,000. Private deposits expanded by the small sum of £197,700, and the chief offset to the addition to Public deposits was a rise of £4,590,000 in the Other securities, again suggesting that special influences have been brought to bear to prevent undue stringency from arising out of the heavy inflow of taxes, for ordinary market borrowing has not been in evidence. Although the Reserve was higher, the enlarged liabilities produced a fall of 0.6 in the proportion of reserve at 17.6 per cent. There was a further rise in currency notes outstanding this week amounting to £455,200. This brings the notes outstanding to £281,046,000, which includes £1,403,000 for notes called in, but not yet cancelled. The fiduciary issue is £230,193,000, or £17,997,900 below the maximum.

THE STOCK MARKETS.

Some trouble was expected this week in connection with the settlements both in London and in Paris, in view of the speculation which has been going on in certain stocks, and of the violent fluctuations of the franc. They were arranged, however, without any serious difficulty, and prices, on the whole, have remained remarkably steady. The volume of business, however, has been small, and there have been no particular features. A more detailed report of market movements will be found in a later column.

THE COMMODITY MARKETS.

There appears to be no consistency in market price movements this week. Coal at Cardiff has advanced during the week. The market for pig-iron is weak. The steel trade is quiet, and export orders difficult to obtain at current prices. Tin and copper declined heavily, but recovered part of the loss before the end of the week. Wheat prices are slightly easier. In the cotton trade prices tend to harden, and many inquiries have been received. Little change is noticeable in the wool trade. Copra fell again, and rubber after being dull developed a steadier tone. The hide market was weaker. Vegetable oils and oilseeds remain steady. Further details of markets and prices will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

In the foreign exchange market the French franc has continued its spectacular recovery, having moved down steadily during the period under review from 92.25 at the close on the 14th to 83.20 yesterday morning. The satisfaction at this "financial victory" remains, however, even in France itself tempered by considerable misgiving. On the one hand, so rapid a recovery has brought confusion and damage to large sections of the manufacturing interests, and the fantastic measures that have been taken to penalise overdrafts, such as 60 per cent. interest charges on delayed payments, is stifling most legitimate financial business. On the other, there is still an uneasy

feeling that it will not be possible to hold the rate for long at this relatively low level, and this fear continues to find expression in forward quotations, which remain at 4f above spot for one month up to 9f for three months. It is true that for political reasons the franc may be supported at its present level until after the elections announced for May 11th, but there is no guarantee that it can be continued much beyond that date, a point far too near to allow the new financial measures to bring any real relief. There should also be remembered the possibility, by no means to be disregarded, of a failure to reach agreement as to reparations policy on the reports of the Experts' Committee, a failure the sympathetic reaction of which would be serious and immediate. After sharing at first the recovery of Paris the Brussels rate has reacted again unfavourably, and yesterday morning stood at 104 $\frac{1}{2}$ as compared with 111 $\frac{1}{2}$ on the 14th and 99 $\frac{1}{2}$ at one time on the 18th. Forward quotations, however, have narrowed again a little to 2 $\frac{1}{2}$ f per month above spot. Dealings in dollars have remained on a small scale, but the rate, in sympathy with the general increase in optimism, has shown a firmer tendency, and has risen quietly on the week from \$4.28 $\frac{1}{2}$ to \$4.30 $\frac{1}{2}$. Forward quotations remain unchanged at 1 $\frac{1}{8}$ cent per month above spot. The lira, after some fluctuations, was quoted yesterday at 100 $\frac{1}{2}$, exactly the same rate as a week ago. In connection largely with franc operations the Dutch rate has moved irregularly, having been up to as high as 11.72 $\frac{1}{2}$ for a short time on the 19th, but relapsing again quickly and standing yesterday morning at 11.60, as compared with a closing rate of 11.54 $\frac{1}{2}$ on the 14th. Madrid, after running up to over 34 on Monday, has shown some recovery, and at 33.27 $\frac{1}{2}$ is now the same as a week ago. To some extent this may have been helped by further restrictions announced on the export of Spanish currency. Switzerland has moved slightly in our favour from 24.77 to 24.87 $\frac{1}{2}$. In Scandinavia Copenhagen, on the announcement of new measures for the assistance of the exchange, has recovered a little from 27.60 to 27.50 $\frac{1}{2}$. Stockholm at 16.29 $\frac{1}{2}$ is very much the same, but Christiania has recovered from 31.74 $\frac{1}{2}$ to 31.25 $\frac{1}{2}$. It is reported that Sweden intends to reintroduce the convertibility of its notes some time during the coming summer. In Central Europe Berlin remains steady at 18 $\frac{1}{2}$ billions, and Vienna is also about the same at 305,000, and Warsaw at 41 millions. Bucharest, after its recent recovery, is back again at 820, as compared with 800 a week ago. In the East the rupee at 15 4 $\frac{1}{2}$ d shows little movement, and the yen is only 1 $\frac{1}{2}$ d dearer at 18 1 $\frac{1}{2}$ d. The silver market has been featureless, with practically no movement in prices, being quoted on the 20th at 33 $\frac{1}{2}$ d spot. Hong Kong stood yesterday at 25 4 $\frac{1}{2}$ d, the same as last week, and Shanghai at 35 2 $\frac{1}{2}$ d, as compared with 35 3 $\frac{1}{2}$ d a week ago. In South America Rio has depreciated on the week, the result, it is suggested in some quarters, of Continental selling to cover franc commitments, and has moved down from 67 $\frac{1}{2}$ d to 57 $\frac{1}{2}$ d. Buenos Ayres, on the other hand, has appreciated from 42 $\frac{1}{2}$ d to 42 $\frac{3}{4}$ d, and Monte Video from 42 $\frac{1}{2}$ d to 43d. Valparaiso, however, has fallen sharply in value, from 43.30 pesos to 45.10 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 15th:—

EXPENDITURE.		REVENUE.	
(000's omitted.)		(000's omitted.)	
Supply Services	£ 13,873	From Revenue	£ 24,507
Interest, &c., on Debt	839		
Road fund	537		
Sundries	775		
Reduction of Debt	8,303		
Increase in balances	180		
	24,507		24,507

Revenue was lower on the week ending March 15th at £24,507,000, against £31,016,000. Customs receipts were £187,000 higher at £1,441,000, but receipts from Excise were greatly reduced at £1,386,000, against £5,724,000. Estate Duties yielded £1,450,000, against £930,000, and Stamp Duties showed a large increase at £1,160,000, against £170,000. Corporation Profits Tax yielded £1,020,000, against £470,000, Post Office receipts being maintained at £800,000. Ordinary and special receipts were considerably lower at £216,476,

against £1,795,497 and £640,000, against £3,117,187 respectively. Property and Income-tax at £13,064,000, and Super-tax at £3,020,000, are very slightly lower than the combined total of £16,464,000 for the corresponding period. The week's operations reduced the National Debt by £8,303,000, and caused the following changes:—

(000's omitted.)			
Public Departments	£ 4,050	Treasury Bills	£ 12,397
Unemployment Insurance	190	Saving Certificates	100
		War Bonds	46
	4,240		12,543

The floating debt was reduced by £8,350,000 to £775,780,500.

FINANCIAL YEAR, 1923-24 (April 1 to March 15, 1924).

£		£	
Total Expenditure ..	742,787,722	Raised by Revenue ..	791,044,697
Net Repayments	50,684,217	Decrease in Balances ..	2,427,242
Total	793,471,939	Total	793,471,939

ESTIMATES for YEAR 1923-24.

THE WEEK IN PARLIAMENT.

MONDAY, MARCH 17TH.—*Commons*: Debate on Army Estimates.

TUESDAY, MARCH 18TH.—*Lords*: Debate on Singapore decision. Committee stage of Criminal Justice Bill, and the Regulation of Advertisements Bill passed. Adoption of Children Bill read a second time.

Commons: Debate on Navy Estimates. Names of National Debt Committee announced.

WEDNESDAY, MARCH 19TH.—*Lords*: Debate on Government plans for unemployment.

Commons: On Civil Service Estimates debates were raised on the Wembley Exhibition, Grants to Northern Ireland, and Ministerial Salaries.

THURSDAY, MARCH 20TH.—*Lords*: Debates on Air Force, and on Northern Rhodesia. Committee stage of Public-house Improvement Bill.

Commons: Debates on Air and Navy Estimates. Questions to Premier on the Wembley Exhibition and Free Trade.

FRIDAY, MARCH 21ST.—*Commons*: Supplementary Estimates. Debate on Wembley Exhibition and Free Trade.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British-Italian Banking Corporation, United Kingdom Provident Institution, the Employers' Liability Assurance, British General Insurance, Railway Investment, County of London Electric Supply, National Bank of Egypt, United Alkali, Radiation, Dickens and Jones, Ashanti Goldfields, and Dimbula Valley (Ceylon) Tea. The speeches at the British-Italian Banking meeting are referred to under "Notes of the Week." At the meeting of the United Kingdom Provident Institution, the Rt. Hon. Walter Runciman referred to the question of investment policy, and said that a revaluation of assets at the end of 1923 showed a very substantial net appreciation. Mr Nathaniel Spens at the Railway Investment meeting forecast a new trust to protect railway shareholders' interests. Sir Harry Renwick, in discussing the negotiations for reorganising London's electricity supply, advocated the group method as the only practical solution. Mr H. J. Yates at the Radiation meeting emphasised the necessity of arousing and educating public interest until the smokeless house is brought into being. Sir Max Muspratt, Bart., at the United Alkali meeting reported a year of steady progress.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a review of the economic position and prospects of Czechoslovakia and a résumé of India's foreign trade in 1923.

"LET IN THE LIGHT."

THE Marquis of Salisbury, writing in the *Times* this week on the foundations of a sound policy for the Conservative Party, has run up, as all such inquirers must, against the root difficulty of our present industrial situation, namely, the lack of confidence between employer and employed, and the fact that each party, in consequence, tends to look too exclusively to its own interest rather than to the joint advantage of the trade as a whole. This suspicion he attributes mainly to lack of candour, and looks for solution to a policy which we have never ceased to advocate in these columns, namely, increased knowledge and publicity. Few will be found to quarrel with Lord Salisbury's indictment. "We have heard of revivals in trade, the knowledge of which has been kept back as long as possible from the workers lest they should claim to share in it. We have read of stock being watered so as to conceal from the men the amount of the profits which are being earned. We have even been told of the creation of a subsidiary distributing company, to which are credited the profits of a producing company, so that Labour may not be aware how profitable the production is. The motive of this concealment may have nothing to do with the worker or his wages, but the effect is the same. Moreover, whatever the motive, the great majority of employers are innocent of such practices as these, but unfortunately it is the misdeeds of the few that poison the atmosphere. Look at the other side. The picture is at least as sombre. We find in certain trades a practice amongst the men of deliberately scamping a full day's work, whilst nevertheless obtaining a full day's pay. But that is not the worst. It used to be said that an Englishman's word was as good as his bond; yet over and over again we have witnessed the spectacle of trade unions, which have promised through their duly accredited representatives to abide by particular conditions, throwing them over apparently without the slightest compunction. Here, again, these extremities are exceptional." Lord Salisbury then proceeds to put some very pertinent questions. "The workers are convinced that they are unfairly treated by the employers; that capital gets an undue share in the reward of industry; that by the concealment of the truth from them they are defrauded of what is due to them. Is there any foundation for the grievance? Is it the fact that capital gets an undue share of the reward, and that it gets it by concealment? Not always, certainly; not generally, I think; but sometimes I verily believe it to be true."

We have recently had a striking instance of the way this suspicion is engendered. Our readers will remember that from time to time we have ventured respectfully to draw attention to inadequate information in shipping companies' reports, and in particular we have mentioned the case of the P. and O. Lord Inchcape at the last meeting of this company referred to this matter, and declared that while some were demanding fuller information, he had no intention of giving it, as directors knew best what resources should be reserved and what resources should be divided among the proprietors, adding that to give fuller information might give rise to a demand for larger dividends. These assertions were seized upon in the recent dock dispute by Mr Bevin, who drew the natural conclusion that this company was making considerably larger profits than its balance-sheet and dividends suggested. It would be difficult to exaggerate the importance of this cause of unrest.

To the ordinary answer given to this kind of argument Lord Salisbury replies that special obligations may reason-

ably be imposed upon joint stock companies. "It may be said that to force a man even in this limited form to disclose the conditions of his business is a grave departure from all accepted principles. That may be true where the employer is an individual or a private firm, but nearly all production in these days is in the hands of limited companies. The law confers great privileges on limited companies. A capitalist is able, through a limited company, to earn dividends without personal trouble by means of the safeguards afforded to him by the law. He performs a very useful function, but the Legislature is entitled to exact some *quid pro quo*. It is not unfair to require that, in return for these advantages, there should be a full disclosure to the workers' representatives of the business conditions under which the work is carried on." We are not sure that this distinction between joint stock companies and private concerns in itself forms a justification for special legislation affecting the former, nor can the result desired be obtained by a simple statutory formula. We have several times suggested in these columns that the time is overripe for the revision of the company laws, but the truth of the matter is that the company form of business has come to embrace so wide a range that it is difficult to formulate rules suitable to gigantic businesses employing thousands of workpeople and to small concerns with two or three employees and a handful of shareholders.

These considerations, together with a large number of problems which arise more specifically on the financial side of the joint stock company's policy, in our opinion afford ample ground for at all events fresh enquiry into our company laws. The information that is required, however, to remove suspicion may not after all prove to be the facts and figures of particular firms, but rather summaries of figures for sections of industries such as the district returns now compiled for the information of the workers and the public in regard to the coal industry. The discussions that are now being carried on in that industry are marked by a much greater appreciation and understanding of the position by the workpeople than was the case a few years ago.

We would add that the policy of which Lord Salisbury speaks is one which is fully appreciated by the Labour Government of to-day. In connection with a series of articles which we published in October and November last year, we received a considerable volume of correspondence from which we may quote the following extracts:—Mr Ramsay MacDonald wrote, "In my opinion your proposal that there should be full disclosure of trading accounts, is good. I am perfectly certain that the more light that is thrown upon all these hitherto hidden transactions of business, the more will we all be in a position to face and settle its problems. Publicity has always been a terror when we have been accustomed to do things in private, but as it has been in our religion, our public health and every department from which at one time or another we have shut out the light of day, sunshine has been a wonderful physician. It will be found to be the same with counting-house transactions. There is only one word of warning I should like to write. When we get the figures, there will be no doubt a good deal of dispute as to what they mean. We need not only figures, but capacity to interpret them. You will remember that the Prime Minister said in the House of Commons a few months ago that, when he was engaged in the last Tariff Reform campaign, he found that figures meant anything or nothing. I am sure, however, in spite of this reservation, that if your suggestions were put into practice they would not be merely a ground for further bickering."

Mr J. H. Thomas said:—"It cannot be too strongly emphasised that in the constant negotiations between Capital and Labour there has in the past been too much secrecy, and my own experience in railway negotiations is that each of our successes has been the result of frankness and the placing of all the cards upon the table. How can workers be expected to trust employers or even their own leaders unless they know the whole truth? Experience proves that they are as willing to face facts as any other class. Mr J. R. Clynes also confirmed the view of these two letters, further adding that "the public would be more reassured if people could see reliable information

on those questions of prices and costs which concern them."

It is not, however, only information as to particular firms or particular trades that is required; if we are to have a sound economic policy we must have information as to the situation of the country as a whole. In a paper to the Royal Statistical Society, last Tuesday, in connection with the forthcoming census of production, Mr Flux called attention to the backwardness of this country in comparison with other Anglo-Saxon countries in securing comprehensive knowledge of production. There has only been one census of production in Great Britain—that of 1907. Our knowledge of the nation's production from that date is based upon estimate and guesswork. But it is extremely difficult to form any certain conclusion about post-war conditions from pre-war statistics. Last week we touched upon the question whether Great Britain was going to maintain her position in foreign competition; yet we know next to nothing about such vital facts in this connection as to the output per head in many of our chief industries. Mr Flux reminded his audience that since the war two false starts have been made in getting a census of production. We sincerely hope that this mistake will not be repeated.

THE GUARANTEE OF FRANCE'S SECURITY.

In recent months the financial crisis, reparations, and internal politics appear to have fully occupied public opinion in France. But we have only to look beneath the surface to realise that anxiety for her military security remains the permanent background of French political thought. We have been reminded of this by the recent publication in Paris of the documents which have passed between France and her Allies on this subject since the Armistice.*

But important and interesting though they are, they are not, perhaps, likely to produce any substantial change of opinion in either of the countries principally concerned. This is made improbable by what is the obvious merit of the collection, namely, that it offers a sufficient sheaf of papers from either side to give a clear notion of the opposing points of view. The historian will doubtless profit by their juxtaposition, but those Frenchmen and Englishmen who take a practical and immediate interest in international affairs, and who are conscious of the vast interests that depend upon these still unsettled issues, will be tempted to concentrate their attention upon the respective elements which harmonise with their own policy. Frenchmen of almost every shade of political opinion will find abundant evidence for the view that Great Britain's hesitancy and procrastination has made it almost impossible to do business with her, and they will take their text from M. Poincaré's remark in the Chamber on November 23, 1923: "La question n'a pas encore varié et depuis lors [March, 1919], chaque fois que nous avons demandé cette garantie, nous nous sommes heurté, je dois le dire, à la même force d'inertie de la part de nos Alliés." Similarly, most Englishmen will find here confirmed the view which has been gradually growing upon them that France is almost impossible to deal with because she refuses to realise that negotiations between equal and independent parties presuppose a readiness on both sides to give as well as to take.

For M. de Saint-Aulaire, hemmed in between the "inflexibility" of his own Government and the "inertia" of the Government to which he is accredited, the lay reader, whether French or English, will feel considerable sympathy. The truth is that the official negotiators have throughout been attempting to bridge a great gulf between the public opinions of their respective countries—a gulf of long standing, which was only temporarily effaced by the pressing common danger from Germany between 1904 and 1918. France, just smitten by a fresh invasion, takes a more uncompromisingly military and Continental view than ever before, while Great Britain will not be per-

* Ministère des Affaires Étrangères: Documents relatifs aux négociations concernant les garanties de sécurité contre une agression de l'Allemagne. (Paris, 1924, Imprimerie Nationale.)

sued that she has ceased to be an island, however much M. Briand and M. Poincaré may attempt to terrify the British Government with the latent possibilities of the aeroplane and the submarine, which cancel (they suggest) the advantages of our geographical position and place us, strategically, in a relationship towards the Continent only a little less exposed than that of France.

Two-hundred-and-seventy-one pages of diplomatic papers unhappily reveal no approach towards a reconciliation between these antithetical points of view, but they deserve study on both sides of the Channel for many reasons. Frenchmen will doubtless be interested to find positive proof that, in January, 1922, at Cannes, M. Briand, on the eve of his fall, had already insisted that Mr Lloyd George's renewed offer of an Anglo-French pact must be modified by making the guarantee bilateral, and by the addition of a technical military convention. Thus M. Poincaré can claim that the French objections, which eventually caused the negotiations to lapse, were not originated by him, and that he has merely been maintaining continuity in a foreign policy which is demanded from successive Governments by French opinion. Is it really the case, however, that French policy, on this question of guarantees, has been as continuous and unvarying as M. Poincaré would wish to persuade himself and his countrymen? Certainly it has approached no nearer towards British policy, but British readers of the Yellow Book may well obtain the impression that it has steadily and inflexibly—not stood still, but moved away. Chronologically, the documents fall into three groups:—(i.) January to December, 1919; (ii.) December, 1921, to July, 1922; and (iii.) July to December, 1923. Between the first and second groups there is an interval of 15 months, between the second and third an interval of 12 months, and French official policy shows signs of having travelled considerable distances when we pick up contact with it again across these relatively wide gaps of time.

During the first period in 1919 (when the dominating personality on the French side was evidently Marshal Foch, although his extreme view did not in the end prevail in the French councils) France was overwhelmingly impressed by two factors—the recent German invasion of her soil and the disappearance of her Continental military ally, Russia—and her formula for securing herself against the repetition of the one and compensating herself for the loss of the other was a military frontier along the Rhine. In Marshal Foch's opinion, the Rhine was so admirable a military barrier from the technical point of view that France could hold it until the tardy reinforcements of her new overseas Allies, with their peace-time voluntary service, could be brought upon the scene. "Ce fleuve règle tout. Quand on est maître du Rhin, on est maître de tout le pays. Quand on n'est pas sur le Rhin, on a tout perdu." Of such capital importance did the military line of the Rhine appear to Marshal Foch, and so eager was he to secure the maintenance of that line under the political, as well as the military, conditions which he prescribed, that he preferred to hold it under these conditions, even if that meant holding it with French forces alone, and sacrificing the military, diplomatic, and moral support of the British Commonwealth and America. This view of Foch's was avowed on September 2, 1919, by M. Tardieu, and he rightly plumed himself on the fact that M. Clemenceau's Government had chosen to accept a reduction of the Marshal's conditions rather than sacrifice Allied solidarity.

This, then, was the situation, as it was summed up by M. Tardieu, after the signature of the Treaty of Versailles, and of the British and American treaties of guarantee. A fresh invasion of her own soil was at that time France's overwhelming anxiety; the Rhine was her bulwark against it; but she still preferred a weaker Rhine bulwark to a Rhine manned only by French defenders without overseas support, and she regarded the support of Great Britain and America as more valuable than any Continental combination now open to her. "Qu'on me montre," said M. Tardieu, on this same occasion, "la puissance européenne qui, dans l'état actuel des choses, pourrait, dans le cas d'une guerre future, tenir à nos côtés la place qu'ont tenu dans la dernière guerre l'Angleterre et les Etats Unis." His challenge does not appear to have been taken up in the Chamber.

Yet when we skip 15 months, and turn to the next document, dated December 14, 1921, in which the French Ambassador in London is reporting to M. Briand a conversation with Lord Curzon, we become conscious on the French side of a very different atmosphere. Lord Curzon complains that non-official British overtures for a pact "n'avaient éveillé aucun écho en France, lorsqu'elles n'y ont pas rencontré un accueil glacial ou même hostile," and M. de St. Aulaire takes little pains to rebut the impeachment. A British guarantee, limited to the case of direct German aggression against France would, as he explains to the Foreign Secretary, be "complètement inutile," for Germany would certainly make her first move against Poland. "Sans doute la France ne le tolérerait pas, et prendrait les armes pour défendre la Pologne et l'équilibre européen sur le Rhin. Mais elle serait isolée, une alliance défensive franco-anglaise, limitée à l'hypothèse d'une agression directe, ne s'appliquant pas à l'hypothèse autrement à craindre de l'agression indirecte." A limited British guarantee will be worse than none at all, for it will simply deflect the German offensive towards the East.

What has happened in the interval? Simply that France has become herself again. The immediate terror of invasion has worn off, and she is once more thinking in the old terms of the balance of continental military power. The continent east of the Rhine is no longer for her a solid world of aggressive barbarians, from which France can only be saved by the Rhine frontier, or by an overseas alliance, or by a combination of the two. The new states born of the treaties, whose destinies seemed, in 1919, too uncertain to be taken into account, have meanwhile come to fill the place, in French calculations, of France's previous ally, Russia. They possess Continental armies which can collaborate with the French army in definite numbers at definite dates, and that is the species of guarantee which France has been seeking from the outset. As for the great British and America armies which were still in being in 1919, where, meanwhile, are they? To the French military mind, British military assistance has become a secondary factor, which is not worth while securing at any sacrifice unless it can be enlisted in support of France's principal allies in Central and Eastern Europe.

What is the next phase to be? In September last the Greek-Italian incident and the ensuing events at Geneva revealed that these client States have a European loyalty as well as a French loyalty. Is the military danger from Germany so imminent as to make it worth while laboriously to cultivate a bristling, but possibly not a very lasting, hedge of armed forces around Germany, if the price to be paid is financial hardship and the surrender of the very real advantages of an Anglo-French understanding? Is there not something to be said for returning to the old view, and securing an assurance of Britain's military support in the only form in which it could now be secured—namely, by the signature of the League of Nations' draft Treaty of Mutual Guarantees, to which Germany could also become a signatory? Recent events, and in particular the publication of these documents now, together with M. Poincaré's phrases about the League in his recent letter to Mr MacDonald, lead us to suspect that this may be the quarter towards which the wind is veering.

THE MONETARY POLICY OF THE SOVIET GOVERNMENT.

(BY A CORRESPONDENT.)

THE Soviet rouble is nearing the end of its stormy career. The work it was called upon to perform in the course of the last few months has proved too much for it, and brought about its utter collapse. In the system of double currency, established in Russia since the issue in 1922 of chervonetz bank notes, the rouble note has had to do the worst part of the work a currency medium has to perform in a country whose financial system is badly disorganised—that is, to fill the gaps of a Budget which stubbornly resists any attempts to make it balance. This was bad enough in itself, seeing that the deficit of the last financial year 1922-23 reached,

according to official sources, 40 per cent. of the total Budget Estimates. Yet this was not the only cause of the collapse of the rouble note. Its sudden fall has been precipitated mainly by its being sacrificed to save the chervonetz bank note from depreciation, of which it began to show clear signs in the autumn of 1923. Since advances in chervonetz bank notes were made by the State Bank mainly to industrial concerns, which accounted for over 70 per cent. of the bills and documentary credits, as distinguished from trade, which generally provides the best banking cover for notes, while the industrial crisis was growing ever worse, the chervonetz notes failed to return to the State Bank and stuck in circulation in continually increasing quantities. This produced inflation, and by the beginning of September last the chervonetz lost over 40 per cent. of its purchasing power in the home market. Measures had to be taken to prevent its further depreciation, which would be bound to affect its rate of exchange and its essential function of a standard of value. An attempt to reduce advances having proved abortive, especially on account of the severe crisis in which the trade of the country was involved, the State Bank used a peculiar expedient to secure the limitation of its issue and the return to its tills of bank notes already issued into circulation. That expedient consisted in making advances in rouble notes at their current rate of exchange in chervonetz, while claiming the repayment of loans in actual chervonetz bank notes. Besides bringing about a great dearth of chervonetz bank notes, which had to be bought at a high premium over the official rate, thus adding considerably to the already excessive cost of credit and to the difficulties of the trading community, this policy resulted in an enormous increase in the issue of rouble notes and their extremely rapid depreciation. The circulation of Soviet roubles, which was 1,994,500,000 millions in January, 1923, and rose to 22,701,900,000 millions in October, reached 178,000,000,000 million roubles on January 1, 1924. The chervonetz, which was quoted at about 12,000 million roubles in November last, rose to over 200,000 million roubles in February. The rouble lost its purchasing power at an appalling rate. Every week brought about a depreciation of over 30 per cent. as compared with the preceding week. Prices were rapidly rising to keep pace with the depreciation, and the market, already badly affected by the crisis, became utterly disorganised. Refusals to accept rouble notes became common, especially in the countryside, and the Government was faced with the necessity of urgent measures for the solution of the currency problem.

It is under these conditions of quite exceptional urgency that the decision has been taken by the Soviet Government immediately to proceed to the completion of the monetary reform, which was started by the issue, in November, 1922, of chervonetz bank notes.

The Decree of February 5, 1924, authorised the Commissariat of Finance to issue currency notes in denominations of one, three and five roubles, which are made legal tender throughout the Union of Socialist Soviet Republics. The total issue is limited to one-half of the amount of chervonetz bank notes in circulation on the 1st of every month, less the amount due to the State Bank by the Treasury. Returns of the currency notes issued are to be published on the first of each month. The notes are inconvertible, and no cover is provided for the issue. Neither is there any rate fixed for their exchange against chervonetz bank notes, which appears to be a wise precaution in view of the probable contingency of their eventual depreciation. Announcements are, however, made in the Press by the State Bank and other banks of their readiness to convert currency notes into chervonetz, and *vice versa*, at par.

The next step was to order the cessation, as from February 15th, of the issue of Soviet rouble notes and the destruction of their available stock. Soviet roubles, however, will remain legal tender pending their redemption at some later date, which is not yet fixed.

The third measure was the issue, in virtue of the Decree of February 22nd, of silver and copper coins. The coinage is generally similar to the former Imperial coins, the only difference being in design. The total amount of metallic

money to be issued in 1924 is fixed at 100 million roubles. In case of need, pending the actual minting of the necessary stock of coins, the Commissariat of Finance is authorised to issue provisional small notes in various denominations, from one to 50 copecks. These notes must be withdrawn from circulation in 1925.

Finally, the decree of March 7th ordered the withdrawal of Soviet roubles from circulation, in exchange for new notes and coins, at the rate of 50,000 Soviet roubles of the 1923 pattern (one rouble of the 1923 pattern is equivalent to one million original roubles) to one rouble in the new currency. The exchange is to close on the last day of April. Old notes are to remain legal tender at the rate fixed till April 10th. The State Bank and the Treasury are authorised to re-issue old notes into circulation up to March 25th.

How far the reform may be expected to succeed remains to be seen, though even Soviet experts admit that its carrying out presents great difficulties, and that it has been started too early. On the face of it, the moment appears to be hardly propitious for the reform. The Budget Estimates for 1923-24 anticipate a large deficit which, to the extent of 180 million roubles, is to be met by the printing of notes. While it is a general rule that Budget equilibrium must be attained and the currency stabilised before monetary reconstruction can be started, in this case the new money is being issued in a chaos of depreciated old notes and in the midst of unprecedented anarchy on the market. Old rouble notes, though their redemption has now been started, still circulate along with chervonetz bank notes, new currency notes and coins, thus creating extremely favourable conditions for speculation, especially in view of the great differences existing between the purchasing power of money in various localities. Particularly grave doubts are raised as to the expediency, under such conditions, of the issue of silver coins, which should, better, have been avoided. Until conditions are improved and stabilised, it would certainly have been better to keep to paper money, while devoting all energies to the restoration of State finance and the development of economic activities in the country. A sane financial and economic policy, with paper money supported by the chervonetz as standard of value, would certainly be less spectacular than the immediate transition to metallic money, but it would be sounder on the long run. As to the present reform, it is to be feared that it will fail to improve the position, and will only result in making the Treasury poorer by the amount of silver issued, which will be a free gift from the State to hoarders and speculators. That this is bound to be so would appear to be clear, and, according to recent reports in the Soviet Press, silver coins are already displaying in many localities a tendency to disappear from circulation. In Petrograd, silver coins are already at a premium of from 20 to 30 per cent., as against chervonetz or currency notes. Coupled with the Budget deficit, this early development is a bad omen for the successful carrying out of the monetary reform.

Apparently aware of the dangers of the situation, the Government descends on the market with drastic measures of control and repression, trying thus to avert the consequences of its own hurry. Regulations and repression, however, can hardly be expected to remove the difficulties, and are rather bound to aggravate them. It is certainly whole economic policy that conditions can be created in which the real restoration of sound currency will become practicable.

DECISIONS OF THE LEAGUE COUNCIL.

(BY A CORRESPONDENT.)

THE Council of the League of Nations concluded last Saturday night, having disposed of a big agenda in six days. Lord Parmoor, who represented the British Labour Government for the first time, was fairly successful on the whole, but it is doubtful whether he will be physically capable of meeting the strain involved in really big League issues. He was given a very friendly reception by the rest of the members of the Council, and his general declaration of the full League policy of the

British Government was noted with great satisfaction in the Press of nearly the whole world.

The two most important points of the Council were the settlement of the Memel question, and the approval of the Report of the Jurists' Commission on the interpretation of the Covenant on points arising out of the Corfu discussions at the Council last September. In disposing of the Memel dispute, and also in securing a settlement of the frontier differences between Poland and Czechoslovakia in the region of Javorina, the Council has once more cleared up two points of considerable importance which the Conference of Ambassadors had been unable to solve. The neutral commission for Memel, under the chairmanship of Mr Norman Davis, former Under-Secretary of State in Washington, after close and continuous application, has secured an agreed convention giving large autonomy to Memel, and applying practical solutions to the problem of the working of the harbour and of transit on the Niemen. This Convention, which is an improvement on the Convention drawn up by the Conference of Ambassadors, and which the Lithuanians declined to accept, should make considerable difference to the economic development of Memel and the hinterland, to which Memel is so important as an outlet to the sea.

The Jurists' report on the interpretation of the Covenant has been received with some criticism, but taking a broad view, it certainly gives a wide interpretation to the general competence of the Council, and the unequivocal adhesion of the Italian Government to its conclusions is significant. It knocks the bottom out of virtually all the arguments produced by the Italians at the time of the Corfu affair. It declares that no plea of national honour or vital national interest can prevent the Council taking up a question referred to it; that the Council is not called upon to inquire whether, in fact, a dispute "is likely to lead to rupture" before considering its substance, and that the responsibility of a State for the commission of a political crime in its territory is only involved if the State has failed to take reasonable precautions. It also declares, obviously within the terms of the Covenant, that when a dispute already forms the subject of arbitration or of judicial proceedings, the Council must refuse to consider it. The main criticism is devoted to the reply that coercive measures "not intended to constitute acts of war" may or may not be inconsistent with the Covenant. It is difficult to see what other answer could be given to an abstract question. It depends, as the reply states, upon circumstances, and what is important is that the Council has the right to recommend the withdrawal of any such measures of coercion as have been undertaken. It might have been possible to specify that no measures of armed force are compatible with the Covenant, but a broad reading of the answer seems to imply that.

At the end of the Council all the signatures were fixed to the Hungarian Protocols, and the scheme is now in force. There remains only the appointment of a Commissioner-General, who was to have been Mr Harding, formerly of the Federal Reserve Board in America, but I understand that he has been compelled to withdraw for reasons of health. The Council noted with satisfaction that the monthly deficit in Austria had diminished, and after hearing Dr Zimmerman, the Commissioner-General, gave a broad hint to the Austrian Government that it should continue reducing its expenses so that budget equilibrium may be established on a solid basis.

Mr Morgenthau, another American, formerly Ambassador in Constantinople and chairman of the Greek Refugee Settlement Scheme, also reported progress to the Council, and seemed to be hopeful that stable political conditions in Greece were not far off, and that by that time further loans might be negotiated to carry on the settlement work. Three million pounds have already been devoted to it.

On the report of the Rome meeting of naval experts in connection with the limitation of naval armaments of which I wrote in my last message, the Council decided to ask the members of the League to give their views on the matter before taking any further step.

Amongst other decisions, the Council voted about £2,000 for the relief of famine in Northern Albania, and made an appeal to the members of the League, to which

Lord Parmoor replied by an indication that the British Government would be prepared to give £5,000. Several difficult points were settled, and some were pushed well ahead towards settlement in connection with Polish-German differences on nationality and expropriation questions in Poland, and on administrative difficulties in Danzig and in the Saar. The Governing Commission of the Saar has certainly been strengthened by the new appointments in the place of the former Saar representative and of the Dane on the Commission, both extremely weak members who had resigned since the Council discussions on the subject last December. Despite somewhat disproportionate criticism in the English Press, the Saar people themselves are not dissatisfied.

These are the main features of a busy week in which, besides the ten members of the Council, ten other States participated.

RAILWAY WORKING COSTS.

In last week's issue we analysed the receipts of the four great British railway companies for the year 1923, using for comparative purposes the composite figures for 1922 of the companies included in the groups which we compiled twelve months ago. The aggregate gross receipts of the four companies for 1923 amounted to £217,506,000, representing a decline of 4.8 per cent. in comparison with the combined figures for 1922. Expenditure amounted to £176,960,000, a decrease of 3.8 per cent., the largest proportionate reduction, according to our figures, being shown by the London and North Eastern, as may be seen from the following table:—

	EXPENDITURE.			
	1922.	1923.	Decrease.	
London, Midland, and Scottish.....	£ 72,983,000	£ 71,019,000	£ 1,964,000	— 2.7
London & North-Eastern.....	58,106,000	54,836,000	3,270,000	— 5.6
Southern.....	21,761,000	21,327,000	434,000	— 2.0
Great Western.....	51,103,000	49,778,000	1,325,000	— 4.3
	183,953,000	176,960,000	6,993,000	— 3.8

While the London and North Eastern shows the greatest reduction in expenditure, an examination of the accounts discloses the fact that this company has transferred £1,523,400 from depreciation account for maintenance and renewal of way and works, locomotives and wagons. Thus the expenditure on wagons was £4,401,800, but only £3,394,500 was charged against revenue. Each of the other companies, on the other hand, has made transfers to depreciation accounts out of revenue, the net amounts being: London Midland and Scottish, £174,100; Southern, £653,800; and Great Western, £204,400.

The following table shows the principal items of expenditure for the four companies:—

	Maintenance and Renewal of Ways and Works.		Maintenance and Renewal of Rolling Stock.		Locomotive Running and Traffic Expenses.	
	Amount.	% of Traffic Receipts.	Amount.	% of Traffic Receipts.	Amount.	% of Traffic Receipts.
London M. & Scottish	£ 8,974,659	11.38	£ 11,310,287	14.34	£ 37,571,130	47.63
London & N. Eastern	6,725,908	11.57	8,984,561	15.46	27,339,936	47.07
Southern.....	3,383,703	14.48	3,050,072	13.05	10,028,368	42.89
Great Western.....	4,587,946	14.44	4,246,850	13.37	14,568,615	45.86
	23,672,216	12.3	27,591,770	14.4	90,108,149	46.9

Figures published by the Ministry of Transport last March show that in 1922 all the railways spent £28.5, £32.2 and £96.2 millions respectively on these three items. These figures represent 13.2, 14.8 and 44.5 per cent. respectively. The abstracts of expenditure show that the London and North Eastern has spent considerably more on maintenance and renewal of wagons than on locomotives and carriages. Each of the other companies, however, has spent considerably more on locomotives than on either carriages or wagons. The L.M.S. spent £5,710,700 on locomotives, but withdrew £470,400 from depreciation fund: its expenditure on carriages was £2,639,500, but a transfer of £538,500 to depreciation fund was charged to this account, while

£3,034,800 was spent on wagons, including a transfer of £28,700 to depreciation fund.

We have reclassified the amounts shown in the above table under the headings of wages, material and fuel, with the following result. The amount spent in rates and taxes has been added, the four items covering over 70 per cent. of total expenditure:—

(000's omitted.)

	Wages.		Materials.		Fuel.		Rates & Taxes.	
	1922.	1923.	1922.	1923.	1922.	1923.	1922.	1923.
London, Mid. & Scottish	34,092	34,494	7,485	6,899	6,305	6,520	2,823	2,835
Increase or decrease	+1.2%	+1.2%	-7.8%	-8.5%	+3.4%	+3.4%	+0.4%	+0.4%
Percentage of expenses	46.2%	46.2%	10.1%	9.7%	8.3%	8.7%	3.8%	4.0%
London and N. Eastern	26,929	27,194	5,545	5,712	4,441	4,757	2,219	2,042
Increase or decrease	+1.0%	+1.0%	+3.0%	+3.0%	+7.1%	+7.1%	-8.0%	-8.0%
Percentage of expenses	46.2%	46.2%	9.9%	10.4%	7.6%	8.7%	3.8%	3.7%
Southern	9,105	8,914	2,156	1,751	2,000	2,074	1,158	1,134
Increase or decrease	-2.1%	-2.1%	-18.8%	-23.0%	+3.7%	+3.7%	-2.1%	-2.1%
Percentage of expenses	41.9%	41.8%	9.9%	8.2%	9.2%	9.7%	5.3%	5.3%
Great Western	13,639	11,937	2,956	2,888	2,229	2,455	1,536	1,431
Increase or decrease	-12.5%	-12.5%	-2.3%	-2.3%	+9.9%	+9.9%	-6.8%	-6.8%
Percentage of expenses	43.9%	40.6%	9.9%	9.7%	8.1%	8.9%	4.9%	4.8%
Total	83,519	84,539	18,142	17,250	14,975	15,806	7,736	7,443
Increase or decrease	+1.2%	+1.2%	-4.9%	-4.9%	+5.4%	+5.4%	-3.8%	-3.8%
Percentage of expenses	46.4%	47.2%	9.8%	9.7%	8.1%	8.9%	4.9%	4.9%

The rise in the cost of fuel is common to all the companies, the aggregate increase being the substantial one of 5½ per cent. Wages, on the other hand, show an increase of less than 1 per cent. in the aggregate, there being a decrease of over 2 per cent. in the case of the Southern. At the meeting of the London and North Eastern, at the end of last week, the chairman stated that after making allowance for variations in the quantum of work performed in the two periods, "we estimate that by comparison with the year 1913 there has been an increase of not less than 148 per cent. in our railway wages bill, brought about by the higher rates of wages, reduced hours, and changed conditions of service." There is a very substantial decline in the total amount spent on materials used for renewals and maintenance, but the L. and N. Eastern is exceptional with an increase. Rates and taxes have contributed nearly £300,000 towards the reduction in expenses. Both wages and coal have absorbed a higher proportion of total expenses.

As we have previously explained, the comparative figures which we have given for 1922 are incomplete, and in all cases fall more or less short of the true figures, but we have thought it worth while to use them in the absence of official figures from the railway companies themselves. From the railway returns for 1922, published by the Ministry of Transport, in which estimates were given for each of the four groups, we gather that our figures for 1922 are within 3 per cent. of the correct total, the London, Midland, and Scottish figures showing the largest error, with a deficiency of about 1 per cent.

INSURANCE IN SOUTH AMERICA.

(BY A CORRESPONDENT.)

THE field for foreign insurance in South America has suffered during the past few years some disappointments and disillusion. While the general business carried on by British, American, and French companies seems to have aroused the jealousy of certain national offices, German interests have been so closely associated with those of Argentina that they have suffered considerably less, or not at all. While a large number of the national companies are undoubtedly well organised and carry on a sound progressive business, maintaining at the same time ample liquid reserves, others present balance-sheets which, in view of the character of their assets (largely composed of speculative building company shares), would hardly survive analytical examination in this country.

Hostile legislation against British insurance companies asserted itself as long ago as 1891. Propaganda (largely instigated by Teutonic-Argentine rivals) was largely resorted to, and was not without its effect. The doctrine preached was that, upon patriotic grounds, national, rather than foreign, assurance should be taken out. To

encourage the adoption of this suggestion, a tax of 7 per cent. (instead of only 5 per cent.) was imposed on all direct premiums charged by foreign fire insurance companies, against 1.40 per cent. recovered upon the premiums of national companies. Upon life insurance policies the premium income of foreign companies was subjected to 2 per cent., in comparison with 0.5 per cent. in the case of national life companies. Additional restrictions were imposed upon non-Argentine offices, such as a considerable increase in the stamp duties and an advance in deposits, thus serving to render foreign insurance business difficult and, in some cases, entirely unremunerative.

At the end of 1922 a clause in the Budget for the following year called for an increase in the taxation already in existence on the premium incomes of foreign insurance companies. The increase was to have been to as much as 15 per cent., and, had the proposal been carried into execution, it would have become impossible for British insurance companies to carry on business. Indeed, the withdrawal of those British companies established was threatened, the feeling being that, while reasonable taxation should be submitted to, the imposition of penal taxes must prove insupportable. Obviously foreign business, which had to pay three times as much in taxation as national enterprise of a similar nature, could no longer be maintained.

As an instance of the discrimination in taxation between national and foreign companies, the figures for 1921 (later statistics are not available) may be cited. For that period the total premium income shown by the national insurance companies was \$44,367,000 (approximately £3,857,000 at par rate of exchange), the taxation thereon coming to \$401,890 (approximately £34,000). On the other hand, foreign companies returning their premium income at \$19,316,820 (approximately £1,679,000) were subjected to a taxation of \$1,102,420 (approximately £100,000). On the face of it, it seems remarkable that foreign companies should meet with unfair treatment in a country which, from the commencement of its economic development, has been dependent upon the capital of European financiers, and, to a great extent, remains so. Moreover, such discrimination is contrary to the agreement providing for "equality of treatment in trading matters," entered into between Great Britain and Argentina a full century ago.

Owing to representations upon the part of British and other foreign interests, the additional taxation threatened was abandoned, the Argentine Minister of Finance, belatedly, arriving at the conclusion that the application of such a tax "would prove impracticable." But foreign insurance companies are not destined to be let-off entirely. Congress has again recommended that foreign insurance companies should be subjected to differentiating taxation. This, it is proposed, shall take the form of an increase in annual licences from the pre-existing rate of 4,000-10,000 pesos to 6,000-15,000 pesos. In the case of national companies the increase is to be raised merely from 2,000-4,000 pesos to 3,000-6,000 pesos. It will be observed that foreign business is to be mulcted to the extent of a 50 per cent. increase; this, if imposed, must prove as damaging as the increase in the taxation of the pre-seen whether the renewed protests from British interests will result in the obnoxious proposal being abandoned.

Brazilian insurance regulations are also being revised. Congress is considering the establishment of registers in which all policies of life, fire, accident, and marine loss insurance will be compelled to register. This enactment would have very serious consequences in the case of fire insurance, which forms an important proportion of the total risks undertaken by British companies in Brazil. The introduction of compulsory handling insurance, which are the essence of good service; business conducted under such conditions could not be carried on. Both British and American insurance interests are protesting against this innovation. Its returns of all policies are already made to the complete Inspection Department of the Brazilian Government, which is thus in possession of a "full register." In Chile, of some 130 insurance companies carrying on

business, 45 are foreign. They comprise 31 British, seven German, four North American, one Canadian, one Norwegian, and one Argentine. Whereas two of the four American companies confine their business operations to fire and two others to life business, the British companies accept all ordinary risks. At the present time there are 105 fire insurance companies operating in the country, 77 native and 28 foreign. Chile, indeed, would appear to be one of the most attractive of the South American countries for foreign insurance enterprise. Business offering has shown a fairly consistent profit for the companies engaged since the earthquake of 1906, when an immense amount of property, in addition to 2,000 human lives, were lost, the greater proportion being uninsured.

Bolivia is considering new insurance legislation, a Bill now before Congress seeking to amend Article I. of the law regarding the carrying-on of foreign insurance companies, promulgated about 20 years ago (September, 1904). The proposed alterations are to the effect that all national as well as foreign insurance companies, agencies, or offices now, or in future, established in Bolivia, must prove that the companies have been legally constituted with an individual capital of not less than 100,000 bolivianos actually invested in the country, the companies being also obliged to invest further in the Republic a minimum of not less than 40 per cent. of premiums collected on their policies in force.

INVESTMENT TRUST COMPANIES.

THE raw material of the Trust Company is the Stock Exchange security. Its task is by careful selection and suitable blending to build up a solid body of assets, which by averaging individual risks will in the first place yield a secure revenue, and in the second, be immune as far as possible from capital depreciation. In some years the latter consideration is a very serious one, but in 1923 there has been little change. The 365 representative securities listed by the *Bankers' Magazine* at the end of December were valued at £6,286 millions. By April the value had climbed to £6,599 millions, gradually to fall to just upon £6,347 millions in August; a rally sent the total value up to £6,407 millions, but by the middle of December the amount had dwindled to £6,256½ millions—a loss of only £29½ millions, or about one half of 1 per cent. in the twelve months. For the purposes of this article the movements of fixed interest securities are perhaps of more vital interest, as the greater part of securities held by these undertakings come under this heading. Taking the position of fixed interest-bearing securities, listed by the *Bankers' Magazine*, as 100 at December, 1921, we find that by January, 1923, a rise to 112.4 is recorded; in April the highest peak of the year was touched when the figures were 116.4. In August a dip to 113.7 is shown, only to rise to 114.8 in August. The closing figures of the year in December were 111.2, a fall of over 1 per cent. in the twelve months. It has to be remembered, however, that the figures for the end of December were calculated at a moment of temporary depression, due to political causes, which has subsequently been fully made good. The story of the year is thus substantially one of stability in security values.

But, though security values fell slightly on the average during the year, the revenues of investment trust companies were not affected. Indeed, it is obvious that whether securities rise or fall the income from fixed interest-bearing securities, which form the greater part of the holdings of these companies, remains constant. Profits made from the realisation of investments are usually transferred to capital reserve, or written off the book value of securities held. This is not necessarily always the case, but is likely to be so for the present, since in most cases the depreciation experienced after the slump of 1920 was so severe that the valuation on current

prices still shows a deficit below book value. Hence there is still a margin to be made good, whether by profit on sales or by appreciation in the value of stocks held, though the difference may be amply covered by a capital reserve fund. An examination of the accounts of 17 investment trust companies reveals the fact that revenue in 1923 totalled £1,481,637, as against £1,288,320 for the previous year. Moreover, as will be observed in the following table, these increases are evenly spread over the whole of the companies in our list:—

Company.	1913.		1921.		1922.		1923.

+1% of this is paid free of income-tax.

Dividends for 1923, it will be seen, are in nearly all cases at a higher rate than in 1913. The reasons for the increased revenues are by no means clearly stated. Mr Robert Flemming, at the general meeting of the Metropolitan Trust, referred to the "continued improvement in revenue and capital value," and said that "we have seized such opportunities as offered to make what we deemed to be judicious exchanges, but the character of our list has not undergone much change either in the class of investment—that is, whether bonds, preferred stock, or ordinary stock—or in the geographical distribution of same." The larger revenue shown by those companies which hold railway securities are the consequence of the exceptional dividends declared last spring. The Railway Share Trust states that the increased revenue shown is also partly caused by the proceeds of the new issue, which has been "profitably invested." As far as we can gather, directors are not inclined to make public the exact causes of the better revenue figures. But as most chairmen are obviously following a cautious policy, the general increase in the dividend list is perhaps significant.

The next table shows the amounts placed to reserve out of revenue and from profits on sales of investments, total reserves, the book value of investments and the margins earned on ordinary stock in each of the past two years:—

Company.	Placed to Reserve, &c.				Total Reserves.		Book Value of Investments.

* No detailed list of investments published.

The last two companies in our list are nominally financial companies, but the distinction between these and investment trust companies is nowadays purely nominal.

Unfortunately, the usefulness of the above table is marred by the absence of a uniform method for treating balance-sheets. A standardised form of accounts for investment trust companies might easily be agreed upon. To illustrate our point we will take the item "Investments." In the balance-sheet of the British Investment Trust the item is shown as "Investments less contingent fund," £5,468,532. There is a reserve fund of £1,130,000; the report of the company says, "A valuation of the investments, made in the usual way, shows that the market value on January 1, 1924, is slightly in excess of the book value of £5,468,532." The Army and Navy Investment shows "Investments at cost, less amounts written off to date, £1,220,269." This is somewhat vague. The Foreign and Colonial Investment Trust returns its investments at cost, less amounts written off, but adds, "There is a depreciation.....at present prices which is more than covered by the capital reserve." The Government stock gives "Investments as standing in the books of the company, £1,997,409." The auditors comment upon this, saying, "Investments are stated in the balance-sheet at cost price, excepting where the cost has been written down, and their value is referred to in the directors' report." On turning to the directors' report we find that "According to a valuation based on prices current on December 31, 1923, there is a depreciation which is not covered by the amount standing to the credit of the revenue reserve fund." The Guardian contents itself with referring to investments "at cost price or under," £1,114,607. The International Investment follows this practice, but it is pointed out that "there is still a depreciation in value which the trustees hope by the application of surplus revenue will disappear." The Merchants' Trust leaves it to the auditors to point out that "Investments and advances are stated at their book values," but are "subject to existing depreciation." True, the directors in their report supplement this by stating that "Quotations still denote a depreciation of assets in relation to book cost." We could go on giving examples, but we feel sure that what we have already shown is sufficient to convince most people of the need for reform in this direction. Of course, it may be pointed out that the current value of these securities is not of paramount importance, that as long as the return from fixed-interest securities remains unchanged, investors have little or no need to worry about changes in capital values. But we do not think that the implication here is sufficient for obscuring the true position of an undertaking.

Our final table shows the movements of investment trust companies' stocks and shares during 1923, together with the yields at the end of February. Prices in July, 1924, are also appended for comparison purposes:—

Company.	Prices of 1923.		Price July 30, 1914.	March 26, 1923.		March 19, 1924.

As compared with values a year ago, an all-round improvement is noticeable. The appreciation has affected ordinary and fixed-interest stock alike. But the outlook for the future is difficult to determine. The outstanding fact is that these investment trusts hold big batches of gilt-edged securities, while holdings of industrial ordinary shares are few and far between. If the international situation improves, and we have a revival of trade and a period of high money rates, which means that fixed-interest securities sooner or later are likely to fall. It will call for great skill to know how and when to avoid this depreciation.

TRUSTS AND ANTI-TRUST LEGISLATION IN THE UNITED STATES.—I.

FOR thirty-three years the Federal Government of the United States has been engaged in efforts to regulate and restrict the development of combinations which aim at or tend towards the elimination of competition in trade and industry. Before 1890 there were rules of the common law as to restraint of trade, and in some of the States of the Union constitutional provisions and legislative enactments against trusts and combinations, but the growth of such organisations had not been arrested. Judicial decisions were, indeed, making the device of the "trust" illegal, but the "holding company" had been adopted in its place, and even expressly legalised in New Jersey. Consequently more general and comprehensive action seemed to be required, and this took the form of the Sherman Anti-Trust Act of July, 1890, which prohibited under heavy penalties every contract or combination in restraint of inter-State or foreign commerce (which alone comes within the sphere of the Federal Government) and every attempt to monopolise such commerce. Thus acts which were at common law merely invalid were made criminal offences, so far as they related to inter-State or foreign commerce, and in addition private parties injured by combinations were given the right to sue for triple damages, and the Federal Government was empowered to bring suits in equity to restrain such combinations.

The Act was not very effective at the outset. In the first case decided under it by the Supreme Court (the Knight case, 1895) it was held that, though the evidence proved the existence of a combination of sugar manufacturers—the American Sugar Refining Company having obtained control by exchanges of shares—there was no violation of the Sherman Act, since "manufacture" was not "commerce." Two subsequent decisions (in the Trans-Missouri Freight and Addyston Pipe cases) declared agreements for the fixing of freights or prices, or for the delimitation of markets, to be illegal—the reasonableness or otherwise of the freights or prices so fixed was held to be immaterial. Attempts at elimination or mitigation of competition by price or marketing agreements were thus discouraged, whilst the Knight judgment appeared to encourage consolidation of manufacturing undertakings; and these decisions were, therefore, an important contributory cause of that rapid development between 1898 and 1901 of industrial consolidations (by the formation of holding companies or mergers) in the United States, of which conspicuous examples were the American Thread Company (1898), and the United Shoe Machinery Company and the United States Steel Corporation (1901).

This phenomenon led to the investigations of the Industrial Commission (1898-1902), whose main recommendations were as to the need for publicity and the equipment of the Federal Government with full powers in that respect. As the result there was established in 1903, in Mr Roosevelt's first administration, the Bureau of Corporations, as part of the Department of Commerce and Labour, to investigate the organisation and conduct of monopolies and combinations engaged in inter-State commerce, other than common carriers (who were subject to the control of the Inter-State Commerce Commission), in order to give information to the President and enable him to make recommendations to Congress.

Before the new Bureau could get actively to work the

decision in the Northern Securities case (1904) condemned the device of the "holding company," with the consequence that consolidation could be attained only by merger; and now the investigations of the Bureau of Corporations, the publication of its reports—of which probably the most notable were those on the petroleum industry (1907), the tobacco industry (1909), and the steel industry (1911)—and the proceedings taken by the Department of Justice as a result of those reports checked the movement towards consolidation. Some substantial victories were gained by the Government in the Courts, particularly in the actions against the Standard Oil Company and the American Tobacco Company, which were based in part on section 1 of the Sherman Act, which declared combinations in restraint of trade to be illegal, but in part also on section 2, which is directed against monopolies. In the Tobacco case, in 1911, a merger as a device for securing monopoly was held to be illegal, and in view of the nature of the business in question the Knight decision lost most of its importance. In this and the Oil case (decided in the same year) the court ordered the defendant companies to be reorganised so as to bring them into conformity with the law. This was done in respect of the Standard Oil Company by dividing up the stocks held in subsidiary companies by the principal company among the stockholders in that company, and as the controlling stockholders therein were few in number, it is doubtful whether the method adopted was effective. In respect of the American Tobacco Company, the Supreme Court required a scheme of dissolution to be prepared by the company and submitted to the Court below for approval; and that scheme, as adopted, provided for (1) the abrogation of numerous restrictive covenants by which various tobacco companies had bound themselves not to engage in the tobacco business; (2) the disintegration of certain subsidiary combinations in particular branches of the business..... (3) the distribution of the stocks of numerous subsidiary companies of the American Tobacco Company among the shareholders of that company; and (4) the transfer of a part of the property and business of the American Tobacco Company to two new companies to be organised," each of the three companies to have a large part of each branch of the tobacco business possessed by the American Tobacco Company. Various methods of combination, such as interlocking directorates, common management, price and marketing agreements, acquisition of shares in one company by another, increase of stock holdings by the principal stockholders, and voting trusts were prohibited by injunction either permanently or for a prescribed period.

A prosecution of the Chicago meat-packers failed in 1912, and in the proceedings against the United States Steel Corporation, in which a decision was not given by the Circuit Court until June, 1915, and not finally confirmed by the Supreme Court until five years later, the Government was also unsuccessful, largely because, whilst the corporation was undoubtedly predominant in the steel trade of the United States, the growth of outside concerns had been so considerable and rapid that its quasi-monopolistic position had been appreciably weakened, and allegations as to price-fixing agreements with its competitors were held not to be made out. But as a whole the investigations of the Bureau of Corporations, which were conducted with much energy and generally with great competence, and the resultant action of the Government checked consolidation, and so the organisers of trade and industry in the United States then fell back on "gentlemen's agreements"—that is, tacit understandings and the exchange of information as to output and prices.

The Democratic administration of President Wilson, which took office in March, 1913, was not satisfied as to the scope of the existing Anti-Trust legislation or the powers of the Bureau of Corporations, and its policy found expression in two enactments of Congress in the autumn of 1914. The first of these was the Act establishing the Federal Trade Commission, whose functions, as described by the Commission itself in its last annual report (for the year ending June 30, 1923), are "to sustain those practices which support the competitive system, as opposed to monopoly, in furtherance of the fundamental object of Congress in the enactment of the Federal Trade Commission Act, the Clayton Act, and the Export Trade

Act," and to protect the public against (a) methods opposed to good morals because characterised by deception, bad faith, fraud or oppression, and (b) methods regarded as against public policy because of a dangerous tendency unduly to hinder competition or create monopoly. The Commission was empowered to investigate the organisation and business of corporations engaged in commerce (but not common carriers, which are under the Inter-State Commerce Commission, or banks, which are subject to the Federal Reserve Board); to require such corporations to furnish annual reports; to investigate, at the request of the President or either House of Congress, alleged violations of the anti-trust laws; to make recommendations to the Attorney-General as to the reorganisation of the business of any corporation alleged to be violating those laws; and to inquire and report as to the manner in which any decree to prevent or restrain violations of those laws is being carried out. The law further declared unfair methods of competition to be illegal, and empowered the Commission to investigate complaints and (subject to appeal to the Courts) to make orders requiring any persons practising such methods to desist therefrom.

The second enactment was the Clayton Act, which prohibited price discrimination in the internal trade of the United States and its dependencies, and leases, sales or contracts made, and prices fixed, on condition that the purchaser should not use or deal in the commodities of any other producer, where the effect of such discrimination or condition might be substantially to lessen competition or create a monopoly—the provision in respect of leasing being obviously directed against such proceedings as those of the United States Shoe Machinery Company. It sought further to prevent combinations in restraint of trade by the device of stock ownership, whether by means of holding companies or in any other way, and prohibited corporations engaged in commerce, any one of which has capital, surplus and undivided profits exceeding one million dollars, from having common directors if such corporations are or have been competitors (the object being to prevent interlocking directorates). It also provided penalties (imprisonment up to one year or a fine up to \$5,000, or both) for the violation of the penal provisions of the anti-trust laws, but left injunction as the sole remedy against violations of the particular provisions of the Act which have been summarised above.

Finally, the Export Trade Act mentioned above (generally known as the Webb-Pomerene Act), passed in 1918—when much attention was being directed in the United States to the need of a "big push" in foreign trade—laid down that nothing in the Sherman Act should be construed as making illegal an association entered into for the sole purpose of export trade, and actually so engaged, if its effect was not to restrain trade within the United

States or the export trade of any competitor, and also modified the Clayton Act by allowing any such association to acquire an interest in any similar association. Every organisation desirous of taking advantage of the Act is required to file particulars with the Federal Trade Commission, and up to June, 1923, 123 associations (of which eight had been formed during 1922-3) had done so.

Notes of the Week.

An Exciting By-Election.—Mr Winston Churchill was beaten by a short head in the Abbey Division of Westminster, the official Tory candidate getting home by 43 votes—with a poll of 8,184 votes against 8,141. Handicapped by a complete absence of organisation which had to be improvised, Mr Churchill, with the aid of the daily Press, made a spectacular and sporting fight, and though the Tory party machine proved too strong for him (in spite of unofficial support from several Tory leaders), the election will not be recorded against him in public opinion as one of his failures. If Mr Churchill had been successful it would have been an event of political importance, for he has cast himself for the rôle of a second Joseph Chamberlain, who is to lead into a Tory alliance a band of Liberals sufficient to put in a "Unionist" Government with an anti-Socialist programme. The scheme conceives of the leader of these reinforcements becoming the virtual—even possibly the titular leader of the new coalition. Whether Mr Churchill would have taken anything more than the merest handful of followers is highly doubtful; but that he would have become virtual leader of the Opposition is highly probable. As events have turned out, however, the situation in the House remains unchanged, while Mr Churchill lives to fight another day.

The Debt and Taxation Enquiry.—About a month ago the Chancellor of the Exchequer announced the appointment of a Committee "to consider and report on the National Debt and the incidence of existing taxation, with special reference to their effect on trade, industry, employment, and national credit." On Tuesday he announced the names of those who will compose the Committee. They are as follows:—Lord Colwyn (chairman), Sir Charles Addis, Sir Alan G. Anderson, Sir Arthur Balfour, Mr Henry Bell, Mr J. W. Bowen, Mr Fred Bramley, Mr W. L. Hichens, Mr J. A. Hobson, Mr H. B. Lees-Smith, Sir William McIntock, Sir Josiah Stamp, and Mrs Barbara Wootton. It is a strong team, and the choice of names has had a deservedly good reception in financial and industrial circles. Lord Colwyn has had a wide experience of presiding over investigations of this kind, including the income-tax inquiry. In Sir Josiah Stamp the Committee contains our foremost authority on taxation, a sound economist and an experienced business man. Banking is well represented by Sir Charles Addis and Mr Henry Bell, and industry equally well by Sir Alan Anderson, Mr Hichens, and Sir A. Balfour. The Labour representative embraces both the intellectual and the Trade Union elements. Committed protagonists of a Capital Levy are conspicuous by their absence, and altogether it is a body from which the business world has no fear of rash recommendations. Whether this well-chosen Committee will be able to produce any practical achievement is a different question. The field over which the terms of reference permits the members to wander is almost boundless. Perhaps we may hope that they will at least succeed in giving the *coup de grâce* to a few popular fallacies.

The Indian Budget Crisis.—When at the end of last week the Indian Government succeeded in passing the Estimates through the Legislative Assembly by means of the closure, it was hoped that the danger of a crisis had been averted. This hope was the stronger because in the debate the Swarajists so far departed from their obstructionist attitude as to indulge in criticisms of a constructive and practical nature. It came, therefore, as an extremely unpleasant surprise when on Monday, on the introduction of the Finance Bill, the Pandit Malaviya moved its rejection in its entirety. The rejection motion was carried by 60 votes to 57, and therefore for the second year in succession the Budget has provoked a first-rate political crisis. The Viceroy had only one possible course

open to him, namely, to exercise his emergency power of "recommending" the Finance Bill. The Bill as "recommended" will be introduced on Monday in the Council of State. It would seem probable that events will then take the same course as they did a year ago. On that occasion the "recommended" Bill was passed by the Council of State, and went back to the Legislative Assembly with a recommendation from the Viceroy to pass it in the form in which it was passed by the Council. The Legislative Assembly then rejected it again, and the Viceroy, using the power accorded to him by Section 678 (1) of the Government of India Act, "certified" the Bill, which thereupon became an Act. On this occasion, however, there seems to be some slight chance that, at the second time of asking, the Legislative Assembly may pass the Bill, for it only requires the turnover of two votes to secure its passage. We very much hope that this turnover may take place, for the exercise of the Viceroy's special powers provides powder and shot for the Swarajists. A year ago we frankly expressed the opinion that the Viceroy was ill-advised to exercise his emergency powers. This time he obviously has no alternative. Last year it was a question of a comparatively small amount of new revenue; this year it is a question of providing the means for carrying on the administration at all. Full comment on the debates in the Assembly which have led up to the present crisis must be deferred until the detailed official reports reach this country. But from the Delhi cables to the British Press we gather the impression that Sir Basil Blackett handled the Budget with considerable astuteness, and the decision to throw the Finance Bill out was only created at the last minute by outbursts in the extremist Press in India. Incidentally, the following analysis of the vital division in Assembly by the Delhi correspondent of the *Times* is worthy of notice:—"An analysis of last Monday's division list in the Legislative Assembly shows how predominantly Hindu is the Swarajist movement, for, of the 73 elected Indian members who voted in the division, 45 Hindus voted with 12 Moslems, two Sikhs, and a Burmese against the Government, while two Hindus voted with nine Moslems, one Sikh, and one Parsee for the Government. Moreover, of the two elected Hindus who voted for the Government, one represents a commercial 'special' constituency." In view of the prominence which problems of Indian finance receive, we may draw our readers' attention to a book on the "System of Financial Administration in British India," by Mr P. K. Wattal, which has just been published.* Here the student will find a detailed account of exactly how the financial machine works, not only in relation to the central Budget, but also to the Provincial Government and railway finances.

Wembley and Free Trade.—A storm in a tea-cup has been aroused by the news that a site at the Wembley Exhibition has been leased for a Free Trade exhibit, and by the publication of a letter signed by Lord Parmoor appealing for funds with which to finance it. Mr Baldwin questioned the Prime Minister about it on Thursday, and yesterday the subject was debated in the House of Commons. For our part, we see little justification for the outcry, which indeed collapsed ignominiously in the House yesterday, when the Premier made a notable Free Trade pronouncement. Free Traders are at least as anxious as the adherents of any other economic policy for the success of the Exhibition, and look to it to produce an expansion of trade within the Empire. But it will surely be helpful and conducive to better Imperial co-operation if the real trades are clearly understood by the hosts of visitors from the North-Western Free Trade Union, or any other organisation, proposed to use Wembley for the spreading of political or party propaganda, we agree that such intentions should properly be ruled out. But if, as we believe, and explanatory, it has a strong claim to occupy a space, that which will be taken up by the scenic railway and the house of mystery. An Empire Exhibition would hardly be complete without an exhibit explaining to Dominion

* *Times Press, Bombay.* Price Rs. 10.

visitors the facts of British trade, on which the British electorate has recently taken decisions which are inadequately understood in many parts of the Empire.

Army Troubles in Ireland.—Our Dublin correspondent, writing on Thursday, says:—Reference was made in these columns last week to manifestations of discontent in connection with Irish Free State Army affairs. The trouble has developed, and is not yet at an end. Although warranting grave disquietude, it does not appear to threaten the painfully achieved stability of the new institutions. It might best be described as an acute attack of growing pains, or, as one Minister has put it, an abscess developed in the body politic which has fortunately become ripe for lancing. Readers of the *Economist* have been apprised from time to time of the drastic steps taken by the Government in its pursuit of economy and of Budget equilibrium—steps so drastic as to have suggested a doubt whether they might cause acute popular discontent. The figures given yesterday show that since August 1, 1923, some 1,890 officers and 27,225 men have been demobilised—a relatively huge number when the total population of about 3,000,000 is taken into account. Last week two senior officers addressed something in the nature of a pronunciamento to the Government, and absented themselves from duty and evaded arrest. Debate in the Dail found Mr McGrath, Minister of Industry and Commerce, arraigning the Ministry of Defence for muddling and incompetent handling of the position, and tendering his resignation. Thereupon a Committee of Inquiry was appointed, and the debate held over until yesterday. It appears that during the week-end the President and Executive Council arranged a *locus penitentiae* for the insubordinate senior officers and those who were implicated with them—a short period during which they might surrender, and upon giving their parole be placed under open arrest pending the Inquiry and investigation of charges, &c. A retired officer, General O'Duffy, was placed in supreme command of the Defence Forces of the Free State, and the Minister of Defence appears to have notified his subordinates of the President's *locus penitentiae* arrangements. Then on Tuesday evening, before the expiration of the surrender period, troops surrounded a house, where certain of the insubordinate officers had been discovered in conference, with a view to effecting their arrest. Bloodshed was narrowly averted, and yesterday the matter was again before the Dail. It thereupon appeared that the troops had acted without the knowledge or authority of the new general officer in supreme command, but upon orders received from the Ministry of Defence and the Adjutant-General, Chief of Staff, and Quartermaster-General. The Executive Council had accordingly demanded the resignations of the three latter officers, and was about to request the Minister of Defence himself to resign when he tendered his resignation on the ground that his colleagues were condoning mutiny by delaying the arrest of the incriminated officers. His colleagues' complaint is, of course, that he was disloyal to their collective decision, and that his three chief officers were guilty themselves of insubordination in disregarding the authority of General O'Duffy, who had been specially appointed with supreme powers to deal with the crisis. It appears now that the Chief of Staff refused to resign, and has been dismissed, and there, for the moment, the matter stands. The Army is stated to be loyal, and the predominance of the civil power in the State is being steadily asserted by Mr O'Higgins, Minister of Home Affairs, who is acting Vice-President during the absence through illness of the President.

China and the Powers.—A correspondent in a later column gives a vivid account of the chaotic conditions prevailing in China even in the neighbourhood of the main ports of commerce. These difficulties obviously cannot be put right by European intervention, but something may be done by the Powers to assist in removing one of the stumbling-blocks—namely, the bankrupt condition of China's finances. Another move towards the end has recently been taken. A note last week from the Peking Government to the signatories of the Nine-Power Treaty of Washington asks them to call a Conference preparatory to that contemplated by the Treaty, but post-

poned through the refusal by France of ratification until the Peking Government consents to pay the French share of the Boxer indemnity in gold francs—a demand which should naturally be submitted to arbitration at the Hague or elsewhere. The postponed conference was expected to sanction the further increase of the Customs duties by a so-called "surtax" of 2½ per cent. *ad valorem*, primarily intended to replace the likin or internal Customs duties, which China is bound by treaty to abolish. But the likin has shrunk into comparative insignificance beside the irregular exactions of the provincial Governments and the Tuchuns, and the consolidation of the floating debt is now a more urgent problem. This debt, including the sums due to foreign firms for goods, chiefly railway material, nominally amounts to some \$800 millions, and the "surtax" is the only revenue available for the service of the Consolidated Debt which should take its place. But the estimated immediate yield of the "surtax" is only \$25 millions, which would be insufficient even after the drastic capital reductions which consolidation would involve. Still, the restoration of order would rapidly increase the yield, and consolidation is the most obvious preliminary step towards restoration. It would enable the Peking Government to borrow—probably from the Consortium—so as to satisfy the Tuchuns and pay off their troops. But it is doubtful if the Powers will consent to the diversion of the "surtax" from its original purpose; and Sir John Jordan, in Thursday's *Times*, contends that they should not do so. Still, the preliminary conference would clear up the situation, and would probably leave little for its successor to do except to agree to its conclusions. Much information should have been made available for it by the Commission, assisted by foreign advisers, appointed last autumn by the Peking Government. Should it negative consolidation, an alternative way towards internal peace has been opened by the visits, during the last three or four months, of Mr Schurman, the American Minister to various insurgent leaders and to the Tuchuns. The British Minister may be moved to follow his example, and should the leaders be persuaded to keep quiet pending a conference of the Powers, there may be some hope for a solution of the Chinese problem. The reply of the Powers to the Note will be awaited with interest, and there is reason to expect it soon.

The Results of Fascism.—On a later page will be found the report of the panegyric of Fascism and its leader pronounced by the managing director of the British Italian Banking Corporation at its meeting on Tuesday last. Most British students of Italian politics will discount his eulogy. Fascism has at best been a desperate and violent remedy for the disintegrating influence of Italian Socialism and the debility of Italian Parliamentary Government. From the first large sections of the electorate had always kept out of politics—the devout Catholics, till recently, through the Papal inhibition, many of the middle-class and peasants, especially in the South, through sheer indifference. Polls were almost always small, even in the enlightened North. Since the "transformism" of Depretis in the 'eighties of the last century, the old parties have survived only in name, the Ministries have been based on weak and unstable coalitions of groups at once of the "Right" and "Left," and until Fascism became political the only well-organised party was the "official" Socialists who repudiated Parliamentary action. Before the war the extravagances of foreign and colonial policy had aggravated the popular discontent, and helped to preclude effective agrarian and social reform; and the tyranny exercised by these Socialists in the State railway services, and in certain localities, chiefly the agricultural regions of Central Italy, was often intolerable, and occasionally brought about a temporary local disturbance approximating to revolution. After the war the cost of living, the popular disappointment, and the general unrest were exploited by the revolutionary sections of the Socialists; wages reached their upper limit, strikes multiplied, and no Government was strong enough to attempt a remedy. The workmen seized factories and controlled them, and Signor Giolitti, the arch-adjuster, temporised with them, so that they might learn their impotence by experience. Then the ex-soldiers, provoked

by Socialist insults, rallied in resistance, and the Fascist movement began. Local committees effectively combated Socialist tyranny; much blood was shed, but Italian quarrels had usually been sanguinary, and the Socialists seem to have been the most guilty. The successive Governments were more and more impotent, and ultimately Signor Mussolini mobilised the Fascists, marched on Rome, and seized the government, after a civil war had been averted by the King. Signor Mussolini has restored order, and eliminated the chief factors of disturbance, and we see no reason to question the sincerity of his patriotism. But the prospect is disquieting. His new electoral law seems designed to establish the tyranny of possibly a very small Parliamentary majority; the new Parliament, his panegyrist tells us, contains few politicians, but many men eminent in the war, in business, industry, and science; but that might stand for a description of the Italian Senate, which has always been politically negligible. And Dr Gorgolini's authorised statement of Fascist policy, reviewed in these columns on June 9, 1923, is a jumble of sound economics (with some inconsistent exceptions), suspicion (an old Italian vice) of Great Britain and other Great Powers, and of the "capitalism" of the League of Nations, militant Nationalism (in the new provinces, and possibly overseas), as Mr Manzi Fé states, repudiation of "internationalism," and coupled with efforts to secure a balance of power in Europe. And if the Fiume settlement is encouraging, the Corfu incident is very much the reverse. Fascism has done evil and brought good out of it, chiefly because its leader is a capable statesman. It does not follow that the good will predominate in the future, and the methods adopted are assuredly not a pattern for imitation.

Cost of Living.—The "cost of living" index number of the Ministry of Labour declined one point in February, after a rise of two points in the previous month. At the beginning of this month the figure was 78 per cent. above the level of July, 1914. How it has moved month by month over recent years is shown below:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items.
(Food, Rent, Clothing, Fuel, and Light, &c.)

Month (beginning of)	1918.	1919.	1920.	1921.	1922.	1923.	1924.
	%	%	%	%	%	%	%
January ..	85.90	120	125	165	92	78	77
February ..	90	120	130	151	88	77	79
March ..	90	115	130	141	86	76	78
April ..	90.95	110	132	133	82	74	..
May ..	95-100	105	141	128	81	70	..
June ..	100	105	150	119	80	69	..
July ..	100-105	105-110	152	119	84	69	..
August ..	110	115	155	122	81	71	..
September ..	110	115	161	120	79	73	..
October ..	115-120	120	164	110	78	75	..
November ..	120-125	125	176	103	80	75	..
December ..	120	125	169	99	80	77	..

For food alone the percentage increase over July, 1914, was 76 at the beginning of March, as compared with 77 at the beginning of February. In retail food prices the principal movement during February was a further fall in the price of eggs, amounting to about $\frac{1}{4}$ d. each on the average; on the other hand the average price of sugar rose by about $\frac{1}{4}$ d per lb. Bacon, butter, cheese and fish became slightly cheaper, but there was a slight hardening in the average prices of potatoes, flour, bread and imported meat.

Employment in February.—The unemployment statistics for February given in the *Labour Gazette* provide further evidence that the two big strikes of the present year have not checked the absorption of labour into industry which has been progressing so steadily over a considerable period. Our official contemporary says:—"After the settlement of the railway dispute on January 29th employment quickly recovered from the decline caused by the shortage of transport, and there was a further and continuous improvement in February." On January 21st (the first day of the railway stoppage) the total number of registered unemployed was 1,253,000; by February 25th it had declined to 1,156,000—a striking fall of nearly 100,000 in under five weeks. The trade union unemploy-

ment percentage, of which the monthly movements over recent years are traced below, moved down from 8.9 per cent. at the end of January to 8.6 per cent. at the close of last month:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.								
	1913.	1918.	1919.	1920.	1921.	1922.	1923.	1924.

September ..	2.3	0.5	1.6	2.2	14.8	14.6	11.3	..
October ..	2.2	0.4	2.6	5.3*	15.6	14.0	10.9	..
November ..	2.0	0.5	2.9	3.7	15.9	14.2	10.5	..
December ..	2.6	1.2	3.2	6.0	16.5	14.0	9.7	..

* Excluding coal miners.

Of all workers insured under the Unemployment Insurance Acts, the percentage unemployed at February 25th was 10.7, as compared with 11.9 on the last day of the railway strike.

Census of Scotland, 1921.—The second volume of the Report on the Census of Scotland in 1921,* which has recently been published, makes interesting reading. The total population of the kingdom on the last census day was 4,882,497, an increase of 2.6 per cent. as compared with 1911. The increase of females was, however, greater than that of males, and the ratio of females to each hundred males, which stood in 1911 at 106.2, had risen to 108.0 in 1921. The inter-censal increase in the male population amounted to 1.7 per cent., while that in the female population was 3.4 per cent. The estimated loss of population by migration in the period 1911-1921, while actually less than that of the previous inter-censal period, was relatively greater, and the migration of females exceeded that of males for the first time since 1871. The average ages of both males and females was greater in 1921 than in 1911, as the following table shows:—

	Average Ages.		
	Both Sexes.	Males.	Females.
1911	28.0	27.2	28.7
1921	29.6	28.9	30.3

One of the most interesting sections of the report, however, is that dealing with housing. The total number of occupied houses shows an increase, the number per 100 of the population being 21.7 in 1921, as compared with 21.3 in 1911. The number of houses building was more than double that registered at the preceding census. The number of windowed rooms has been increasing steadily since 1861, the total per 100 of the population being 70.3 in 1921, as compared with 68.9 in 1911, though the number per occupied house was the same at both periods at 3.24. While the largest actual increase is found in the case of three-roomed houses, the largest relative increase is registered in the case of four-roomed houses. The analysis of population by number enumerated per room is not, however, as satisfactory as might have been desired. Although the number of persons living not more than two per room has been steadily increasing since 1861, and was in 1921 56.7 per cent. of the total population, and although the number of persons living not more than three per room also has increased (from 78.1 per cent. in 1911 to 78.9 per cent. in 1921), the number of persons living more than four per room, which had steadily diminished from 1861 (18.7 per cent. of the total population) to 1911 (8.6 per cent.) has once more risen to 8.9 per cent. in 1921. At the last census, in fact, over 420,000 people in Scotland were living more than four per room.

The Chancellor on National Savings.—In a letter to the National Savings Committee, Mr Snowden records his sympathy with the objects of the Savings movement, and his appreciation of the public services rendered by the large number of men and women who continue to devote time and energy to furthering its objects. While de-

* Report on the Thirteenth Decennial Census of Scotland. Vol. II. H.M. Stationery Office. Price £1.

claring that "experience has shown that the accumulated small savings of the nation can be made an important factor in national finance," the Chancellor rightly emphasises the value of the Savings movement as an instrument of social welfare, tending to develop a sense of responsibility for the right use of wealth. The movement, originally inaugurated as a means of tapping the reservoir of small investment during wartime, was found in practice to have so beneficial an effect in encouraging thrift among large numbers of people, as to justify its continuance in time of peace for that one object. Its continued success seems to have been due to two main factors—the concentration of a large part of its forces on already existing local units, the school, the workshop, the small country village, &c., rather than the isolated individual, and the extraordinarily effective instrument which it found ready to its hand in the shape of the Savings Certificate. The backbone of the movement is the local association, more than 19,000 of which exist to-day. As recently as last month 525 new associations were formed. These bodies are run on a purely voluntary basis, the executive having the benefit of the advice in matters of accountancy, &c., of individual members of a small corps of expert officials of the National Savings Committee, who visit their areas from time to time. Local committees—at present 1,557 in number—whose areas are usually coterminous with those of the local authorities, exercise voluntary organising and administrative powers. Conferences of local workers are held annually, when representatives are elected to serve on the National Committee and to attend the annual assembly, at which matters of interest to the movement are discussed. The Savings Association allows its members special facilities for the purchase, by instalments, of National Savings Certificates, a security now familiar to most people, but none the less unique in British financial history. Its denomination is low, but, at 16s, sufficiently high to the small investor to make its acquisition a distinct personal achievement. Interest is paid, not annually, but monthly, and is automatically added to principal, tax free. No market exists in this security, and though the certificate is payable within a few days of demand, interest accrues in a manner which puts a premium on its being held for the full ten years of its life. Those responsible for its development seem wisely to have recognised that mere lowness of denomination is not in itself sufficient to attract the investor. Most people will agree with the Chancellor of the Exchequer that a movement which was formerly a promising social experiment, and is now a beneficent social institution, deserves every encouragement, and will note with satisfaction that the security of its chief instrument remains unaffected by any political doctrines which have sometimes been ascribed to the party now holding the reins of office.

Stock Exchange Government.—A Stock Exchange correspondent writes:—On Thursday in this week the Stock Exchange held its annual election for thirty members of the House to serve as the Committee for General Purposes in respect of the financial year which begins next Tuesday. The election resulted in the return of the 28 present members, and, in addition, Mr W. F. Hadrill, senior partner in a well-known firm of brokers, and Mr John C. Russell, member of a firm of jobbers in the Consol market. The surprise of the election is that Sir Wilfrid Atlay, who was defeated last March, has again failed to secure a place. Mr Hector Morison, the famous ex-M.P., is another of the candidates whom the House has not elected. Upon this occasion there was no question before the Stock Exchange of sufficiently pressing interest to cause the election to be fought on controversial lines, and it may be said that the result turned chiefly upon the personalities of the various candidates. There is, of course, no obligation upon the Stock Exchange member to vote, and when nothing of domestic consequence disturbs the House what usually happens is that a comparatively small proportion of men take the trouble to walk downstairs into the Settling-room in order to poll. The record of the present Committee, the members of which will go out of office officially on Monday, to return, most of them, to their duties on the following day, has not been of an inspiring character. The twelve months now ending have

National Bank of Commerce in New York

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

resulted in little fresh legislation of importance being placed upon the statute book of the House. The Committee have proceeded along a line of least resistance, and a great deal of their work during the past twelve months was negative rather than active, matters of routine occupying a prominent position in the councils of the Committee. This is not to say that the Committee did all that might have been expected of them. It is frequently urged that in their position of trust the Committee must walk with extreme circumspection in the alteration of existing laws, and in the making of new ones, lest they should inadvertently create precedents, or come into conflict with old ones, in a manner which would embarrass the House as a whole. There is a great deal of red tape still twined round the government of the Stock Exchange. The Deed of Settlement upon which the control of the House is still founded dates back over 120 years, and is admittedly full of absurdities which modern conditions demand should be swept away. Various alterations have been made in the Deed from time to time, but the Committee and the Managers are still to a large extent hide-bound by the tradition set before them, within the limits of which tradition there is not sufficient elbow-room for the government of the Stock Exchange to move freely and in accordance with the requirements of 1924 instead of those of 1801. The public interest claims, demands even, that the Stock Exchange Committee shall act with vigour, determination, energy, and none of these qualities shine very brilliantly in the legislation, for instance, of the past twelve months. The Committee might carry war into the ranks of dishonest share-pushers in the same way as New York has done. It could do much to disseminate a fuller knowledge of Stock Exchange affairs and the manner in which these conduce to the benefit of the public. It could, and ought to be, far stricter in examination into antecedents of companies, individuals, &c., brought within the purview of the Committee's jurisdiction, in order that shares may be quoted, members admitted, and so forth. It is rightly held that experience and knowledge are

amongst the essential qualifications for the office of a committeeman, and that, in order to possess these, men of middle age make the best candidates. But with a Committee of thirty men there is scope for at least a few of the younger generation, just as there is a call for the Stock Exchange, in the interests of the public, to take a more definite and aggressive stand against the swindles, misconceptions and the roguery which, alluringly presented, cause too many of the public to lose their money.

Ruhr Coal Production.—The *Moniteur Belge* has published the following figures of coal production in the occupied Ruhr districts, exclusive of mines under French administration :—

1923.	Metric Tons.	1923.	Metric Tons.
January	7,029,305	September	1,081,129
February	5,684,355	October	1,666,561
March	5,126,677	November	1,317,912
April	3,136,283	December	3,581,873
May	2,024,809	1924.	
June	1,420,015	January	5,485,040
July	1,107,485	February	6,371,451
August	955,274		

The increase in output since "passive resistance" came to an end is noteworthy, but the German Press naturally continues to view with disfavour the operation of the present *modus vivendi*. The *Berliner Börsen-Zeitung's* Essen correspondent characterises the new Ruhr Coal Distribution and Sale Association as a weak edition of the old Syndicate, possessing little more than the external semblance of its mighty predecessor. While Ruhr coal of good quality has not much difficulty in finding a market, the poorer sorts are less readily disposed of, partly because Rhenish-Westphalian industrial consumption is still below normal, and partly because the heavy charges borne by the trade and the inadequacy of available transport facilities tend to discount the ability of Ruhr producers to meet competition from foreign sources of supply. The position varies as between one mine and another. At the Thyssen, Arenberg, and one of the Krupp mines, for instance, the pre-war output is said to have been reached some time ago, but that of other concerns, whose coal is of lower quality, still lags as much as 40 per cent. behind pre-war.

Monetary Circulation in Germany.—The current *Bulletin* of the League of Nations contains some interesting particulars of Germany's currency position. The total circulation in terms of gold marks at the end of each month from October to January last is shown as follows :—

(Millions of Gold Marks.)

	1923.		1924.	
	Oct. 31.	Nov. 30.	Dec. 31.	Jan. 31.
I. Paper marks*—				
Reichsbank notes	144.6	400.2	496.5	483.6
Private bank notes	0.4	0.1	0.1	0.1
Railway emergency money...	25.7	114.8	109.0	64.6
Other legal emergency money..	5.5	3.4	2.3	1.9
Total	176.2	518.5	607.9	550.2
II. Fixed value currencies—				
Rentenmarks†	..	598.2	1,049.1	1,196.3
Gold loan scrip‡	78.0	216.4	240.0	240.0
Railway emergency currency..	..	35.4	141.9	144.2
Emergency currency covered by gold loan scrip	46.1	216.2	234.7	146.0
Total	124.1	1,066.2	1,665.7	1,726.5
General total	300.3	1,584.7	2,273.6	2,276.7
(1913=6,070.0=100)	4.95	26.11	37.46	37.51

* Converted at the dollar rate quoted on the date of the statement.
† Excluding amounts deposited at the Reichsbank.
‡ Small denomination.

When comparing this table with the figures of paper circulation for earlier months, it is necessary to take account not only of the Reichsbank notes and Reichs- and Darlehnskassenscheine, but also of the issues of the private banks of issue and of emergency currency. The relative importance of these different forms of currency

during 1923 may be judged from the following statement :—

(Paper Marks)—(000,000,000's).

	Jan. 31, 1923.	Aug. 31, 1923.	Sept. 30, 1923.
Notes of Reichsbank	1,984.5	663,200.1	28,288.816
Notes of private banks	1.49	5,491.3	15.590
Reichskassenscheine	0.21	0.20	..
Darlehnskassenscheine	13.4	11.1	..
Railway emergency currency	..	..	194,300
Other emergency currency	15.2	23,061.4	213,900

One Rentenmark equals 1,000,000,000 paper marks, according to the fixed rate of exchange now in force. The Darlehns- and Reichskassenscheine are no longer in active circulation, and it is proposed formally to wind up the Darlehnskassenscheine during the course of this month.

American Cotton Crop.—This week the Department of Commerce of the United States Government has published its final ginning report on the cotton crop for 1923-24, the number of bales being given as 10,160,000. A year ago the statement was 9,729,000 bales, the ultimate growth being 10,300,000 bales. On the basis of these figures, it is probable that the crop for this season will amount to about 10,700,000 bales. The figures published this week were much as anticipated, and have not caused any particular change in values. More interest is now being centred on the prospects for next season, as owing to small yields for three years supplies throughout the world have been considerably reduced, and a great deal depends upon a larger output in 1924-25. Farmers in the United States are now preparing the ground, and seed will be planted next month. There is some expectation of a slight increase in the acreage. According to some authorities the severe weather during the winter has had a vital effect upon the boll weevil, and there are anticipations of the plants not being injured in the coming season to the same extent as the last few years. Owing to the high prices, it may be taken for granted that farmers will make big efforts to produce a substantial yield, but the deciding factor will be the climatic conditions this summer.

Non-Ferrous Metal Movements.—Some very violent movements have been witnessed in the non-ferrous metal markets this week. The feeling for some time past has been a little too bullish, with sentiment all on one side. This had the effect of checking the consumptive demand, and near the close last week there were signs that the overdue reaction was coming. At the opening this week all metals were sensitive, and on heavy sales to realise, partly on German account, prices broke very badly. On Tuesday standard tin dropped no less than £20 per ton, and although some recovery ensued the following day, the undertone was still very weak, final rates being unaltered on balance. Later, however, a strong rallying movement set in, and on Thursday prices rose £10 per ton, with York at about £275. The best touched during the recent movement was £298 5s. three months, and at one time fell no less than £35 in about a week. The lower level brought along active buying for American account, and late in the week market leaders here were buying, while bears covered freely. The U.K. stocks at 3,175 tons and the market is all the better for the reaction. There is now talk of a further bull movement being started, but it is to be hoped that this, if attempted, will not be carried too far, as steady markets are more desirable both from the point of view of producers and of consumers. £275 is a very good proposition for most tin-producing companies, and while the statistical position is very sound, higher. Copper weakened considerably, owing to selling from the Continent, but later on the market showed a much better tone, and there should be further recovery. Both France and Germany will want more copper shortly, and the reduction in the American stocks,

with the curtailment of the refinery production in the United States, should help the market to recover still more. The consumptive demand for the commodity is good; Germany is bare of supplies, and the latest return reveals a big shrinkage in the Havre stocks. Lead, after moving last week well above £39 per ton, showed marked weakness, and this week May dropped to £33 17s 6d at one time, and March was no better than £34. From this point a strong upward movement set in, and later in the week March lead made over £36, with the undertone firm. Zinc weakened in unison with the other metals, but showed very little feature. At the worst March sold down to £33 17s 6d, but recovered and forward metal was not much offered.

Railway Tonnage Statistics.—The monthly return of railway statistics relating to December has been published by the Ministry of Transport this week, and we are now enabled to compile the following comparative table of tonnage carried :—

	1922.	1923.	Increase.
	Tons.	Tons.	%
Merchandise	59,884,633	62,825,011	+ 2,940,378 4.9
Coal, coke, &c.	217,474,340	232,199,571	+ 4,725,231 2.2
Other minerals	58,527,222	62,826,518	+ 4,299,296 7.3
	335,886,195	347,851,100	+ 11,964,905 3.6

In 1913 the total carried was over 366 million tons, general merchandise accounting for 69½ million tons. The monthly figures for last year and 1922 will be found in the statistical pages of the Monthly Supplement with this issue.

Cammell, Laird's Year.—In the report and accounts of Cammell, Laird and Co., Limited, for the year ended December 31, 1923, the directors state that, "after meeting the dividend for the year on the preference shares, there will not be a sufficient balance for the payment of a dividend on the ordinary shares of the company." The report proceeds to point out that it is well known that conditions of trade in 1923 were bad, and that, owing to keen foreign competition, prices were, generally speaking, unremunerative. The position was aggravated by the strike of the boilermakers, which lasted from April 30th to November 26th, and dislocated the work at the Birkenhead shipyard for the greater part of the year. Thus ordinary shareholders have nothing this year. In the report of the company published a year ago, the directors pointed out that "trade during the past year has been notoriously bad, and the engineers' dispute, which lasted three months, added to the difficulties experienced." The directors then went on to state that, in view of the large liquid resources of the company and the substantial sum standing to the credit of reserve account, they felt justified in transferring a sum of £50,000 from that account, in order to enable the payment of a dividend of 5 per cent. on the ordinary shares. Some surprise must be felt by shareholders over the optimism of directors. Perhaps this matter will come up for discussion at the annual meeting which is to be held in Sheffield on Tuesday next. The balance-sheet will be found analysed in our usual column. In this it will be noticed that cash and bills are down from £1,550,902 to £590,715; investments, however, are up from £2,066,512 to £2,684,050, these being taken "at their book value—in no case exceeding cost." Some critics may ask what is the market value. The 7½ per cent. five-year notes have been again reduced, and only £350,000 is now outstanding. How the company has fared since 1913 may be seen from the following table :—

	Net Profit.	Prof. Div.	Appropriations.	Ord. Div.	Rate.	Carried Forward.
	£	£	£	£	%	£
1913	169,126	91,892	68,602	28,692	2½	37,775
1914	237,899	61,261	100,000	86,075	7½	25,937
1915	303,841	61,261	100,000	114,768	10	51,460

1923	70,064	61,261	..	Nil	Nil	38,016

The Salt Union.—A substantial recovery in the gross profits of the Salt Union is shown in the report for the year 1923, the total, including dividends, &c., having risen from £336,500 to £410,900. There was very little change in administration and other expenses, and there is a corresponding increase in net profits, namely, from £207,900 to £280,200. The report states that the quantity of salt delivered during the year showed a moderate increase, and that this improvement was due to the rather larger shipments to overseas markets; but, owing to keen competition, the prices realised in India remained very low. Results since 1910 are summarised below :—

	Gross Profits, Rents, and Dividends.	Reserve and Depreciation.	Dividends.	Balance Forward.
	£	£	£	£
1910....	242,937	30,000	25,000*	4,561
1911....	262,006	35,000	37,500*	3,957
1912....	226,333	25,000	nil	5,104
1913....	227,261	25,000	nil	8,896
1914....	232,710	20,000	15,000*	9,338
1915....	275,314	25,000	62,000	8,862
1916....	426,066	127,000	190,000	14,317
1917....	354,817	50,000	190,000	3,597

1923....	410,944	50,000	150,000	36,735

* Preference distribution only.

Debt interest absorbs £43,700, or £5,500 less, owing to a reduction of £26,100 in the total outstanding. The maximum dividend under the reconstruction scheme of 2s 4d per share on the preference capital requires £70,000, and the ordinary dividend is maintained at the rate of 10 per cent. to which it was raised 12 months ago. The reserve fund receives an allocation of £50,000 for the first time since 1920, and £20,000 goes to superannuation fund, as against £10,000 a year ago, leaving £36,700, or £16,500 more, to be carried forward. The company owns practically all the shares of the Mersey Power Company, and has guaranteed the principal and interest of the latter's debenture stock. The report of the Salt Union states that the Mersey Power Company has redeemed the outstanding balance of its 7½ per cent. debenture stock, the Salt Union having provided the necessary funds, and the latter has taken in exchange 6 per cent. debentures for £296,500, "thereby materially lightening the burden of interest for the Mersey Power Company, and obtaining for the Salt Union a higher rate of interest than otherwise obtainable." The guarantee now lapses. An analysis of the balance-sheet will be found in another column.

Savoy Hotel.—A further recovery in profits is recorded for 1923 in the accounts just issued of the Savoy Hotel, Limited. Again a 10 per cent. distribution on the ordinary capital is made, while £50,000 is placed to reserve, and £5,000 to the staff benevolent fund. A year ago £30,000 was placed to reserve, and £10,000 to the staff fund. The following table summarises the company's history for a number of years :—

Dec. 31.	Receipts.	Expenses.	Ratio.	Debt Interest.	Sinking Funds, &c.	Balance.	Ord. Dividend.
	£	£	%	£	£	£	%
1905.....	561,026	408,198	72.5	93,143	34,961	26,724	5
1906.....	567,026	407,985	71.9	93,331	32,314	33,397	5
1907.....	569,711	408,232	71.7	94,283	32,560	33,577	5

1923.....	240,080	..		74,568	14,015	151,497	10

The directors state that the properties have been "maintained at that high standard of efficiency with which the

company's name is associated." In the balance-sheet, which is fully analysed in another column, we notice that the reserve is but £130,000. This seems to be rather a small item when it is considered that the Savoy Hotel appears at £1,886,046 in the accounts. Total assets are £2,745,180, against which the net profit of £151,497 appears modest.

William Whiteley.—The accounts of William Whiteley, Limited, just issued, reveal no striking changes during 1923-24. Profits were slightly lower, but against this the directors had a substantial balance in hand, which, taken together with the better trading conditions in the latter half of the financial year, no doubt, encourage them to increase the distribution on the ordinary shares from 20 to 25 per cent. The table below shows results for a number of years:—

Year end Feb.	1914.	1918.	1919.	1920.	1921.	1922.	1923.	1924.
Trading profit...	129,478	136,325	219,239	331,874	329,339	219,820	268,961	244,152
Net profit.....	70,632	77,745	151,562	258,567	264,989	152,231	204,295	187,065
Brought forward.	13,917	12,345	19,651	54,808	210,016	171,961	203,834	260,582
Prof. dividend...	84,549	90,090	171,213	313,375	475,005	324,192	408,129	447,647

Reserves, &c. ...	31,500	27,000	36,000	63,000	63,000	63,000	90,000	112,500
To man't shrs.	16,000	21,000	19,236	15,006	214,687	32,000	30,000	38,000
Carried forward	2,554	2,189	2,919	5,100	5,108	5,108	7,298	9,122
	14,245	19,651	92,808	210,017	171,961	203,834	260,581	267,774

The balance-sheet will be found analysed in our usual column. Deposits and current accounts keep remarkably even, the figures last year being £532,962, as compared with £532,342 at February 14, 1924. We are glad to find that liquid cash assets are higher. "Cash" has increased from £104,140 to £126,877, while investments are up from £264,135 to £297,442. A satisfactory feature of these accounts is the fact that investments are shown first at cost and then at market value.

William Hollins and Co.—The report for 1923 of William Hollins and Co., textile spinners and manufacturers, shows a net profit of £108,100, as against £125,100 for 1922. The ordinary dividend is maintained at 7½ per cent., and the balance forward increased by £3,000. The company has been particularly unfortunate in its internal politics, acute dissension having apparently been going on amongst the directorate for some little time. In November last Sir William Plender was asked to make an inquiry into the policy of the Board, including its action in removing Mr. A. R. Hollins from the position of chairman and managing director. Since the beginning of this year the latter, by means of circulars to shareholders, has freely ventilated his grievances, and the remaining directors have been obliged to make public the whole story, and to publish the findings of Sir William Plender. These support their action, but it is regrettable that the directorate should have been compelled to wash its dirty linen in public. In the circular to shareholders which the directors are sending with the report, some interesting figures are given which are not obtainable from past reports. They speak of "enormous losses sustained in trading in recent years, losses which would have crippled the company altogether but for the return by the Inland Revenue of Excess Profits Duty, and for the hidden and other reserves created in former years." The figures given in the reports show the following profits:—1920, £179,800; 1921, £103,300; and 1922, £125,100. The circular referred to gives the following figures.—Thirteen months to December 31, 1920, profit, £137,400; 1921, loss of £391,600; 1922, profit, £125,100, making a net loss for three years and one month of £129,100. We are here provided with a striking example of the way in which the true results of a company's trading can be obscured by the abbreviated form of profit and loss account which has become so popular in the last decade.

Rhodesian Mining.—The subject of gold mining in Rhodesia, writes our mining correspondent, has been much in the limelight during the past week.

There was a pyrotechnic display in the share market on the news as to the commencement of crushing by the Sherwood Starr—one of the Abe Bailey group. The profits are likely to be large for a time; but a purchaser of the shares at current price is paying heavily for possibilities. The annual report of the Globe and Phoenix—a concern possessing a most romantic history—has been issued. Owing to the decline in the gold premium, the net earnings fall somewhat short of those for 1922, but the dividends total 60 per cent. in place of 40 per cent. The explanation is that the directors previously followed a somewhat conservative policy in the distribution of profits, whereas on the present occasion they have drawn the carry-forward down to a small amount. These variations in procedure appear somewhat inexplicable, as the financial position has been good for years past. The performance of a considerably increased amount of development has been accompanied by a small increase in the ore reserves, which now stand at 117,000 tons, gross value £622,000. This quantity, however, represents no more than about 1½ years' supply for the mill; hence considerable importance attaches to the development prospects. The consulting engineer observes that "the results which will be obtained during the coming year will have an important bearing on the future of the mine"—an obvious truism—but adds that in his opinion they will be favourable. The Gaika—whose property is near by—reports the discovery of rich ore at and for some distance below the fourth level. For the precise significance of this development the outcome of further work must be awaited. In the meantime, the price of the shares has appreciated to the extent of about one-third. The Cam and Motor has reported a fresh strike of high-grade ore in the Petrol mine, and this has been reflected in the share market.

Ropp Tin.—Our mining correspondent writes:—The results of this company are of special interest by reason of the fact that it is far and away the largest producer in Northern Nigeria. The output is, however, subject to considerable fluctuations, last month's yield of 130 tons of tin concentrates comparing with 190 tons in November, and only 90 tons in September. The accounts for 1923 show a net profit of £93,000, as against £67,500 for 1922. The increase is not, perhaps, so great as might have been expected, but the output of 1,390 tons fell somewhat short of the total for the preceding year, while expenses—the directors intimate—were higher than before. Moreover, the advance in the price of the metal did not become marked until towards the close of the period. The final dividend of 35 per cent. now recommended makes a total of 50 per cent. On this basis the return to the investor is somewhat over 14 per cent., the 4s shares being quoted at 14s 9d. In respect of 1922, a total of 35 per cent. was disbursed. Last year's exploratory work did not open up fresh material fully corresponding to that extracted, the ore reserves being some 800 tons down at 8,590 tons. Still, this represents several years' work, and in the meantime fresh discoveries will doubtless be made on the leases at present held, while the company has applied for further areas.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, Northumberland avenue, W.C. 2, on Tuesday, March 25, 1924, at 4 p.m., when a paper on "The Nile Route to Uganda" (with lantern illustrations) will be read by the Right Rev. Bishop Gresford Jones. Major Sir Humphrey Leggett, D.S.O., will preside.

SIR ALGERNON FIRTH, Bart., and Mr J. E. McCulloch have been appointed as British representatives on a delegation which will represent the views of the International Chamber of Commerce before the committee of experts which has been set up by the League of Nations to consider the question of double taxation, and which is meeting in Geneva on March 24th.

Oversea Correspondence.

UNITED STATES.—IRREGULAR TRADE AND INDUSTRIAL CONDITIONS—DROP IN COMMODITY PRICES—TAX REDUCTION—STOCK MARKET.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 7.

TRADE and industrial conditions throughout this country show a great deal of irregularity. The total volume of business is being well maintained, as is evidenced by record loadings of railroad freight cars for this season of the year. Not all industries, however, are enjoying prosperity. Some are unusually active, doing a big business, and apparently securing a satisfactory margin of profit, while others are slack, operating on part time, and finding it difficult, if not impossible to move merchandise except at uncomfortably close prices, or at an actual loss. With the single exception of the automobile trade and industry, in which production and sales have reached new high records for this time of the year, there is nothing like the marked expansion of business that was witnessed a year ago. Extreme conservatism, if not caution, in purchasing anything beyond current or nearby needs, seems to be the outstanding feature in most lines. Various reasons are given for the lack of forward buying, so noticeable in distributive trades, including the comparatively mild winter, bad and in many sections almost impassable roads, which have curtailed country purchasing, poor returns to farmers in wheat-producing territory, and especially uncertainty regarding the future course of prices of both raw materials and finished products.

Of all the basic industries, none is confronted with such unsatisfactory conditions, or is so depressed, as is the textile industry generally. In primary markets for dry goods, trade in most quarters continues sluggish and light in volume. Competition for business is becoming sharper, and manufacturers find it hard to figure out any profit at prevailing levels. In cotton goods, particularly, hopes that the recent downward price revisions would stimulate demand have not been realised, except to a limited extent in a few directions. Individual orders placed with mills are numerous, but invariably for extremely small quantities. Although admitting that goods at current prices are intrinsically cheap, buyers persistently refuse to cover requirements more than a few weeks ahead, barring certain strictly seasonal lines. Even in the latter, such forward commitments as are being made are far below normal, and there is widespread complaint from manufacturers and selling agents that the piecemeal buying, frequent repetition of small orders, and constant requests for immediate shipments by express or fast freight, are greatly adding to the cost of doing business. The drastic decline in raw cotton—now amounting to 9 cents from the top of last December—has caused pronounced unsettlement in cotton goods markets, and is given as the main reason for the continued hesitancy of buyers, although uncertainty regarding the extent of consumers' demand for goods later on is undoubtedly a contributory factor. Meanwhile, production is being heavily reduced by New England mills, and curtailment is increasing in the South, especially among mills producing coloured cottons. Many plants in that section which have never lessened their output since their organisation are beginning to run on part time, either from lack of sufficient business, or because prices obtainable are ruinously low. The slump in cotton has wiped out the margin of profit for many mills, which purchased raw material early in the season at prices slightly above those now current. Cotton goods are not the only textiles in which trade is backward. Woollens and worsteds for the next autumn season are moving only in moderate volume.

During February, as in the two preceding months, prices of commodities responded to the numerous cross-currents noted in many lines of business this winter. While there have been marked advances in some products, and equally pronounced declines in others, the general trend of prices, on the average, has been downward for the past three months. Bradstreet's index number at March 1st is \$12.8957, representing a drop of 2.2 per cent

from that of February 1st, and of 7.4 per cent. from March 1st a year ago.

The compromise Income-tax Reduction Bill, passed by the House of Representatives late on Friday of last week, provides for a cut in the normal tax rate on net incomes up to \$4,000 from 4 to 2 per cent., on incomes between \$4,000 and \$8,000 from 8 to 5 per cent., and on incomes above \$8,000 from 8 to 6 per cent. The Administration's Bill proposed to reduce the normal rate from 4 to 3 per cent. up to \$4,000, and 6 per cent. above that figure. The House measure also provides surtax rates ranging from 1½ per cent. on incomes of \$10,000 to \$12,000 to 37½ per cent. on those exceeding \$200,000. The so-called Mellon plan, on the other hand, proposed surtax rates ranging from 1 per cent. on incomes of \$10,000 to \$12,000, to a maximum of 25 per cent. on incomes in excess of \$100,000. Present surtax rates vary from 1 per cent. on \$6,000 to \$10,000 to 50 per cent. on those above \$200,000. In both the House Bill and the Mellon plan, personal exemptions are the same as at present. There is still much uncertainty regarding the final outcome of efforts to enact a tax-reduction Bill. Preliminary estimates by the Treasury Department placed the losses in revenue likely to result from the Bill as passed by the House (should that measure become law) at about \$446,000,000, which would entail a deficit of some \$116,000,000. The House measure must run the gauntlet of the Senate where Republicans have only a small majority.

While many new high, as well as new low, records for this year have been reached by individual shares in the stock market lately, the average price levels of representative railroad and industrial issues remain about the same as they were a fortnight ago, since the advances and declines have about balanced. Speculative activity has slackened considerably this week, the daily transactions being well below one million shares, and dropping to-day to about 500,000. Sentiment has been decidedly mixed, and price movements confusing, owing to the irregular conditions in trade and industry, special developments affecting different stocks, some favourable and others unfavourable, and uncertainty as to what may happen in Washington. The stock market community has lately shown a disposition to mark time pending a clearer political and business outlook. The further precipitate decline in French exchange to a new low record of 3.76½ cents, reached to-day, for cheques on Paris, has proved a disturbing factor in securities markets, and is causing much concern in financial circles here. There is a well-defined belief that a great deal of the recent selling of francs has been for the account of speculators, but the violent break in the past day or two is attributed chiefly to the unfavourable impression created by the heavy increase in note circulation, shown in this week's statement of the Bank of France.

FRANCE.—FRANC RECOVERY—THE SENATE AND NEW TAXATION — FLOATING DEBT — WAR LOSSES COMPENSATION AND RECONSTRUCTION —TRADE BALANCE.

(FROM OUR CORRESPONDENT.)

PARIS, March 19.

PUBLIC opinion is now even more confidently optimistic as to the immediate future than it was depressed a fortnight ago, when the franc for a brief period dropped to around 120 to the £. The sudden launching by the Government, as the outcome of a conference with the French bankers at the Elysée, of a vigorous counter-offensive in favour of the franc, and the revelation that this had the active support of the British and American financial leaders had an electric effect on all classes of the public. It has not only brought back the franc from 120 to the neighbour-

hood of 84 within the brief period of ten days, but has convinced the French people that, as the credits accorded by London and New York have not yet been drawn upon, the moral effect of the two great Anglo-Saxon Powers being behind the franc is regarded as an insurance against serious trouble in the future.

It must be admitted that the exchange crisis has proved a valuable factor in enabling M. Poincaré to force his financial proposals safely through the Senate, and on that score also all ground for alarm has been dissipated. Even in regard to the pending General Elections, the outlook is much more satisfactory than it was a week ago. It is now realised that the fact that the German elections are to take place immediately before those in this country is likely to prove a bull point of the greatest importance, as it is argued that if, as appears most likely to be the case, the German pollings result in appreciable gains by the Nationalists, the effect cannot be otherwise than enormously to increase the prospects of the Poincaré Government being again returned to power. M. Poincaré's victory in the Senate can only be regarded as greater than his success in the Chamber. Not only did the Finance Commission of the Upper House report strongly against two of the most important of the financial proposals—those concerning the *décrets lois* and the *double décimes*—but there was a very threatening Radical cabal against the Premier on general political grounds.

In banking circles it is understood that the Government is now considering seriously the problem of the consolidation of the floating debt, which, it is recognised, must be dealt with before the stabilisation of the franc can be accomplished. At the same time, the point at which stabilisation will eventually result is the subject of earnest study by the Bank of France and the other great banking organisations. For the moment, it may be accepted, there is a general opinion that the franc shall remain in the region of between 80 and 85, but for the moment only. With the new financial laws assured, the Government has now at hand possibilities of action whose availability will synchronise with the announcement which it is expected will be made by the end of the month of the plans proposed by the two committees of experts for the solution of the reparations problem. There is a consensus of opinion that in any case a too rapid deflation would be almost as harmful, in view of the general situation, as deliberate inflation, and that if the outlook continues to improve the greatest care will have to be taken to prevent untoward developments in this direction.

Figures announced by M. Charles Reibel, the Minister for the Liberated Regions, show that the total number of claims for compensation for war losses already dealt with by the various local organisations appointed to consider claims amount to 3,000,000, the total amount of compensation asked for being 140,000 million francs. Eighty thousand dossiers, representing claims for between 17 and 18 milliards francs, have still to be examined. The total amount of compensation actually awarded, or to be awarded, to private claimants is about 82,000 million francs, of which 54,000 million francs has been paid, leaving 28,000 millions to be disbursed. Claims by the State for damage done to roads, canals, railways, public buildings, and the telegraph and telephone services (which have now been almost completely restored) amount to about 18,000 million francs, making a grand total in round figures of 100,000 million francs. The Minister asserts that very strict supervision has been exercised over all claims, in proof of which he calls attention to the fact that 1,170 complaints have been laid before the judicial authorities in respect of claims that were regarded as fraudulent. In 310 of these cases convictions have been recorded against the guilty parties, and others have yet to be dealt with.

Out of 741,993 houses and agricultural buildings destroyed, 598,000 have been reconstructed, while 20,500 out of the 22,900 factories, &c., damaged or destroyed have been reconstituted. The population of the devastated regions, which had fallen from 4,690,180 in August, 1914, to 2,075,067 at the date of the Armistice, is now 4,310,000. Of 3,306,350 hectares of agricultural and pasture land rendered unfit for use, 2,915,000 hectares have been restored to cultivation, but about 55,000 hectares which was so badly damaged that it will be unfit

for cultivation for years and perhaps centuries to come, has been acquired by the State and will be utilised for afforestation.

The programme laid down in the Budget Bill for the current year, it will be remembered, provided for the work of reconstruction to be completed within the next three years, but it is now evident that this will be impossible. The credits provided for the current year amounted to 8,000 million francs, consisting of 5,000 millions in cash in the form of a Crédit National loan, 2,000 millions in 10-year bonds, and 1,000 millions payable in annuities spread over 30 years. Four-fifths of the credits in cash were this year to be allocated to reconstruction proper, and a special proportion was to be for *sinistrées* entitled to compensation of less than 80,000 francs each. The Crédit National loan issued at the beginning of the year, however, did not prove successful, owing to the fact that it synchronised with the upheaval due to the recent attack on the franc, and it is admittedly inadvisable to attempt another similar issue for the present, in view of the general situation. The problem of how to bridge over the interval is now under serious consideration.

The French foreign trade returns for the first two months of 1924, which are issued to-day, show that for the first time there is a trade balance in favour of this country. The detailed figures for the two months, as compared with the corresponding period of last year, are as follows:—

	First Two Months of		Inc. or Dec. in 1924.
	1923.	1924.	
Imports—			
Foodstuffs	1,005,758,000	1,177,487,000	+ 171,729,000
Raw materials	2,814,789,000	4,628,277,000	+ 1,813,488,000
Manufactured goods	655,880,000	795,957,000	+ 140,077,000
Total	4,476,427,000	6,601,721,000	+ 2,125,294,000
Exports—			
Foodstuffs	423,795,000	685,359,000	+ 261,564,000
Raw materials	1,340,855,000	1,827,997,000	+ 487,142,000
Manufactured goods	2,165,327,000	3,831,336,000	+ 1,666,009,000
Postal parcels	250,741,000	273,420,000	+ 22,679,000
Total	4,180,718,000	6,618,112,000	+ 2,437,394,000

The total imports during January were valued at 2,887,921,000f, against exports of 2,699,833,000f, while those for February amounted to 3,918,279,000f for exports, against 3,713,800,000f of imports, so that the transformation of the customary adverse balance into a favourable one of 16,391,000f is due to the substantial comparative increase in exports during last month. Exports in February, as a matter of fact, were 1,200 million francs in excess of those of January, and 800,000,000f more than in December. The value of the exports during the two months were 58 per cent. greater than during the corresponding period of 1923, while the imports increased by 47 per cent. Exports of manufactured goods during the two months had a value of nearly 77 per cent. more than in January-February, 1923. The comparative tonnage returns for the same periods are as follows:—

	First Two Months of		Inc. or Dec. in 1924.
	1923.	1924.	
Imports—			
Foodstuffs	Francs. 847,571	Francs. 757,125	— 90,446
Raw materials	6,865,691	7,333,121	+ 467,430
Manufactured goods	254,426	238,416	— 16,010
Totals	7,967,688	8,328,662	+ 360,974
Exports—			
Foodstuffs	185,833	247,508	+ 61,675
Raw materials	3,747,968	3,289,431	— 458,535
Manufactured goods	445,901	553,367	+ 107,466
Postal parcels	4,910	5,024	+ 114
Totals	4,384,610	4,095,330	— 289,280

The fact that exports of foodstuffs increased in tonnage by 33 per cent. and manufactured goods by 25 per cent., suggests that the increase in the value of these two great categories of exports was not due solely to the rise in prices, but, to some extent, to the fall in the franc.

GERMANY.—GOLD BANK—FINANCES—REICHSBANK
—INDUSTRY—PRICES—BOURSE.
(FROM OUR CORRESPONDENT.)

BERLIN, March 18.

The Gold Bank Bill has passed into law, and negotiations have been held between the private banks as to providing the half of the capital (£5,000,000) which falls to these banks. The big banks, which are organised in the *Stempelvereinigung*, will, it is understood, guarantee 56 per cent. of the £5,000,000, the remainder falling to the smaller banks, with the condition that no bank shall subscribe less than £25,000. The banks, it is understood, expect to sell the shares to the public at a small premium, the 8 per cent. dividend being a considerable inducement to private investors, but no inducement, in present money market conditions, to a bank. The striking out by the Reichstag of Dr Schacht's plan of an amnesty for persons who illegally sent capital abroad has not made easier the getting of the necessary money. The possibility of bringing back smuggled-out capital always played a big rôle in considerations of currency reform. It is expected that the banks will be required to pay down 25 per cent. of the money at once, guaranteeing to provide the remainder in quotas of 25 per cent. every three months.

The State financial situation continues to be tolerably good. The Government has reduced the penalty for belated tax payment to 18 per cent. in certain cases and 12 per cent. in others. In cases where the postponement of payment has been officially agreed to, the rate will be from 5 to 12 per cent. The Finance Ministry's return for March 1-10th shows a deficit of 11,887,700 billion paper marks, revenue being 150,094,800 billions and expenditure 161,982,500,000 billions. The deficit in the last preceding decade term was 47,694,500 billions; in the preceding decade 57,002,300 billions. Of expenditure 65,000,000 billions were payments to the States and municipalities, against 63,166,200 billions for Federal expenditure. The greatly varying ratio of these local payments to Federal expenditure accounts for the varying deficits. Thus, while in all February, as in the first decade of March, the two items were about equal, in all January only 94 trillions went to the local governments, while Federal expenditure totalled 222 trillions. Daily expenditure on mere Federal expenditure (with which is counted Peace Treaty mark liabilities) tends to decrease; in December it was 20 million gold marks, January 8½ millions, February 7.4 millions. These figures do not contain payments made by the Finance Bureaux directly out of revenue.

The Reichsbank's circulation continues slowly to increase. The return for March 7th shows an addition of 24,993,543 billions, bringing the total to 312,868,150 billions. The demand for credit continues acute, and the Bank was obliged to borrow another 50 million Rentenmarks from the Rentenbank, thus increasing its Rentenmark debt to 450,000,000 Rentenmarks. Paper mark discounts increased by 25 trillions to 525 trillions, Rentenmark discounts by 92 trillions to 759 trillions, and Rentenmark advances by 1.66 trillions to 187 trillions, paper mark advances slightly declining. The gold reserve, in connection with the gold deposits for credit purposes abroad, declined by 62,000 marks to 464,803,000 marks. It remains a curiosity why the Bank, which now both on assets and liabilities side books Rentenmarks at their real paper mark value, continues to book its gold at nominal value. How much of the increase in circulation is due to exchange of paper marks for emergency issues is not stated. At the close of January, 380 million gold marks worth of emergency money was in circulation, against 815 million gold marks worth at the end of December. Figures for the end of February have not yet appeared. The credit need of industry has increased in consequence of the revival. The vice-president of the Reichsbank has issued a warning, stating that any future credit demand ought to be met out of foreign loans; and it is understood that the question of raising the Reichsbank's discount rate has been discussed. The rates for day money are at present around ¼ to 1 per mille per day. The Berlin banks have raised the rate of interest

HARRISONS & CROSFIELD, LTD.
EASTERN AND GENERAL MERCHANTS.
AGENTS AND SECRETARIES OF RUBBER, TEA
AND PRODUCE COMPANIES.
1-4, GREAT TOWER STREET, LONDON, E.C.3.

on deposits of paper marks and Rentenmarks to 8 per cent. The amount that may be taken or sent abroad, other than through a bank, has been re-fixed at 60 gold marks. The Berliner Handelsgesellschaft, the first important private bank to report for 1923, announces gross profits of 3,396,579 billion marks, nett 1,218,860 billion marks, dividend 10 Rentenmarks per share, equal to 1 per cent.

The industrial situation continues to improve. The last weekly report for Berlin shows 116,301 publicly supported unemployed, against 138,134 persons a week before. In the metal and textile branches, in particular, there is a great demand for skilled workers. Also the building branch shows some improvement. In the West the worst unemployment prevails in the canton of Dusseldorf; but here, also, the rate of improvement is most rapid. Of the Foreign Trade Boards (*Aussenhandelsstellen*) there now remain only those for films, metal, oils and fats, wood, textiles, and rough pottery. Coal production is rapidly increasing; the output per man per day is about 840 kilos, against 890 before the war. Final official figures of coal production—those published formerly being estimates—in all three years in the present area of the Republic (Saar excluded) are:—

	1913.	1922.	1923.
Coal	140,753,158	119,144,522	62,224,535
Brown coal	87,228,070	137,072,707	118,248,735
Coke	31,667,515	29,113,070	12,703,002

At Celle, in Hanover, on the lands of the Deutsche Erdoel Company, has been bored an oil well yielding 300,000 kilos a day, which is more than is yielded by all other German oil sources. The shares of the company had, as a result, a rapid rise.

The increasing industrial activity has brought a tendency to a rise in the prices of certain goods, and this has been helped by the improvement in the French franc, as German iron and steel prices were for some time depressed by cheaper French selling. Bar-iron has been put up to 140 marks per metric ton, after having sold as low as 125 marks, construction forms to 135 marks, thick sheets (over 5 mill.) to 155 marks, and thin sheets (under 1 mill.) to 200 marks. The pig-iron syndicate has raised its prices to 100 marks for hematite, 90 marks for foundry pig No. I., 88 marks for foundry pig No. III. The official cost of living index for March 10th was 106, the same as a week before; the official wholesale index for March 11th 119.8, against 118.7 a week before. The *Frankfurter Zeitung's* index number for March 13th (on the basis of 100 in 1913-14) was 149.39, against 147 on February 28th, 148.4 on January 3rd, and 164.96 on November 29, 1923.

The Bourse last week experienced another sharp drop. Considering the elimination of currency instability as the chief factor formerly governing nominal stock prices, the German Bourse quotations have, during the past few months, undergone very large fluctuations. The *Frankfurter Zeitung's* index for dividend-payers on the 14th was only 697.06 (billions), against 723.30 a week earlier, and 896.35 on February 8th. Home loans have fallen more, to 59.85 on the 14th, from 86.75 on January 4th. Some declines last week were very sharp, reaching 10 or 12 per cent., and there was talk of trouble impending for certain big speculators. The financial newspapers speak of possible suspensions of payment at the end of the month. A reduction of the Bourse transfer stamp duty is being considered, and will probably be conceded. The Berlin Bourse was yesterday weak, but predictions of a new sharp fall to-day were not realised.

Shipping in Hamburg in February was:—Arrivals, 1,134,353 nett tons, against 1,000,256 tons; departures, 1,107,479 tons, against 1,073,155 tons. In Bremen: Arrivals, 340,147 tons, against (February, 1914) 328,457 tons; departures, 338,618 tons, against 338,864 tons. The report on internal shipping in 1923 shows a very great decline. Tons carried were 15,613,000, against 35,974,000

tons in 1922, or without the Rhine and Ruhr districts, 7,905,000 tons, against 10,201,000 tons. Coal carried was only 3,930,000 tons, against 17,280,000 tons.

INDIA.—POLITICAL OUTLOOK—PURCHASES FROM ENGLAND—RAILWAY FINANCES—METHODS OF TAXATION.

(FROM OUR CORRESPONDENT.)

CALCUTTA, February 21.

THREE days after the Government of India's refusal to accept the Swarajist proposal of a Round Table Conference to devise a new Indian Constitution, the Swaraj party in the Bengal Council were defeated on a motion of "no confidence" in the two Mahomedan Ministers, and, by implication, the Ministers' plea for a further trial of the present Constitution was endorsed. I quote the sequence as an index of the attitude of mild unconcern with which the somewhat theatrical defeat of the Government of India in the Delhi Assembly was received in political circles in the ex-capital, for had resentment been keen, this feeling would undoubtedly have been reflected in the critical debate, above referred to, in the Provincial Council. The Swarajist forces at Delhi were well organised, a total of 75 members having been collected in a so-called Nationalist Party pledged to take steps to enforce the early introduction of self-government in India, and in furtherance thereof, adopt a policy of obstruction by refusing supplies, a policy the Viceroy is equipped to neutralise by "certifying" supplies on his own responsibility. In essence the Swarajist conception of Responsible Government is an India wholly independent of Parliamentary control, excluding British goods by high tariffs, but dependent on the British army and navy for defence from external aggression. It might profit the National Council of the Independent Labour Party, which, according to cable messages, is urging full Indian self-government, to ponder the full implications of the foregoing conception. The net result, on the economic side, would be primarily a further extension of that close alliance between British capital and Indian labour which is even now increasingly evident, and which, behind an Indian tariff wall, would result in a measure of industrial growth here as yet hardly conceived. Cotton is heavily taxed; iron and steel, if recent representations to the new Tariff Board are accepted, will soon be more heavily penalised. It is the almost daily boast of Extremist journals that the political boycott of British goods is exerting its effect, and though the boast be vain, the attitude at least is plain, and indicates what will occur when new administrative and fiscal powers are conceded. Whatever political concessions may be made should surely be subject to the elementary condition that, so long as the British army defends India, her fiscal policy, at least, must be subject to some measure of British control.

Pending complete independence, the Indian Legislature is concentrating its efforts upon enforcing the maximum limitations upon the purchase of British goods that present administrative and financial circumstances permit. "Tariffs," the Swarajists are saying, in effect, "are good, but they can be supplemented. We can obstruct, if not abolish, the present system of purchasing official stores through the India Office." In that ambition the Swarajists are supported by the representatives of British commercial and industrial interests in this country. In the debate on this matter in the Legislative Assembly this week, when an Indian member moved that in future all official stores should be tendered for in this country, and that the Stores Department in London should be closed as soon as present contracts expire, Mr W. S. J. Willson, who represents the Associated British Chambers of Commerce in India, moved this amendment:—"That the present system of stores purchase for Government requirements is not in the interests of India, and should be done away with at the earliest possible moment; that in its place should be instituted a system of rupee tender for delivery in India, with publication of results in every case; that this new system should be administered under the supervision of the Government of India by a cadre of qualified officers, and that arrangements should be made in India

for the requisite tests and inspection of the goods purchased." This amendment was carried, despite official opposition, and as indicated by Sir Campbell Rhodes, quite apart from Indian views, it embodies the views "of the entire European commercial community in India." In this case, it will be noted, the principle of buying in the cheapest market is qualified by the determination to support Indian manufactures to the extent of modifying both the purchase rules and the tariff regulations in their favour. It remains to be seen to what extent the India Office will sanction the changes the legislators desire.

In urging in Parliament the necessity of a larger outlay on Indian railway extensions, Sir Philip Lloyd-Greame, consciously or unconsciously, reflected the opinion of the British and Indian commercial communities alike. In 1922-23, only 381½ miles of new lines were opened for traffic, while at the close of the year a total of 862 miles were under construction. At the end of last year, the total capital investment was 669 crores, representing, in terms of route mileage, 37,618 miles of railway. After providing for interest, annuity, and other similar charges, the working of State-owned railways resulted in a net gain of slightly less than Rs.122 lakhs, this result comparing with a net deficit of 9½ crores in the preceding year. This improvement in earnings was primarily the result of enhancements of fares brought into force during the year, the average rate charged for carrying a passenger a mile having risen from 3.32 pies to 3.81 pies, and the average rate for carrying a ton of goods from 5.37 pies to 6.11 pies. The capital programme may be summarised. In 1921-22, the Government of India decided definitely to allot Rs.150 crores for expenditure on the rehabilitation of railways in the succeeding five years. That was the programme, but as is customary with Indian railway programmes, it was not carried out. As a matter of fact, for reasons which, to the official mind at least, appear plausible, less than two-thirds of the annual quota was expended. In his yearly report just issued, the Chief Railway Commissioner recalls that in March, 1923, the Inchcape Committee recommended that, except in the case of commitments already entered into, no further capital expenditure should be incurred on certain lines classified as unremunerative, at any rate temporarily, and further, that if the full amount of the capital could not be immediately employed on remunerative works on open lines, it would be advisable to construct new lines promising adequate return. This recommendation involved recasting the whole railway programme, and it is now intimated that the continued fall in the price of railway materials, coupled with the insistence by the Railway Board on more adequate financial justification of the proposals of the railway administrations, have made it improbable that the whole of the Rs. 150 crores intended for rehabilitation could be economically expended on open line works alone within the period originally prescribed. This, with lower borrowing rates, makes possible a certain amount of new construction, and steps have been initiated to push on with the investigation of the more important projects. Even Government of India at an early date to separate railway finance from the general finances of the administration, a step urged by the Acworth Committee and many similar bodies before it. Subject to certain payments to the Government of India, it is intended to leave the railways free to apply their resources to the accumulation of reserves, development or reduction of rates, as circumstances render advisable.

Our Finance member is nothing, if not a reformer. Sir Basil Blackett announces that the terms of reference of the proposed committee on Indian taxation are:—

- "(1) To examine the manner in which the burden of taxation is distributed at present between the different classes of population.
- "(2) To consider whether the whole scheme of taxation, central, provincial and local is equitable, and is in accordance with economic principles, and, if not, in what respects it is defective.
- "(3) To report on the suitability of alternative sources of taxation.
- "(4) To advise as to the machinery required for the imposition, assessment, and collection of taxes, old and new.

"(5) To prepare rough estimates of the financial effects of the proposals.

"(6) To include in the inquiry consideration of the land revenue only, so far as is necessary for a comprehensive survey of the existing conditions.

"Local Governments have agreed to an inquiry on the lines indicated in the above terms of reference without prejudice to the claims of their respective Governments in regard to the distribution of total revenue. It is expected that the committee in course of their inquiries will find it necessary to examine the systems of federal finance as existing in other countries, and to consider their applicability to Indian conditions."

As financial arrangements are at the root of the acute discontent with the present Constitution, the importance of this inquiry can hardly be exaggerated.

CANADA.—THE GOVERNMENT'S PROGRAMME—THE POPULATION QUESTION—C.N.R. EARNINGS—BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

OTTAWA, March 6.

WHEN the Federal Parliament met on February 28th, the Address from the Throne obviously reflected the precarious position of the King Government. With the elimination of Sir Lomer Gouin and Mr Fielding, who were indisposed to countenance serious tariff changes, Mr King now ventures upon an open bid for the support of the Progressives by promising in the Speech from the Throne a reduction in the costs of the implements of production. In some quarters this is interpreted as meaning free agricultural implements, and Mr Forke, the Progressive leader, evidently takes this view, as in an interview he pledged his support to the Government if the promise were adequately fulfilled. However, if agricultural implements were placed upon the free list, the raw material entering into their manufacture would have to be accorded the same treatment, and the disturbance of over 200 tariff schedules thereby involved would produce very serious confusion in many business circles. Under such circumstances it is possible that binders may be put upon the free list, but the reductions on the other schedules are not likely to be more than 2 or 3 per cent. The implement manufacturers, however, have taken alarm, and have begun a vigorous propaganda against any reductions; it is expected that the Liberal member for Brantford, one of the chief seats of the farm implement industry, will lead a protest from the Government benches against the changes, but if the Ministry secures the united support of the Progressives it can afford to face a few defections. The Government have also committed themselves to an exhaustive inquiry into the Home Bank *débacle*, which will be conducted by the Chief Justice of New Brunswick. The Speech also holds out the promise that the Budget for 1923-24 will be balanced, and forecasts that some reduction of taxation may be possible.

But the population problem to-day overshadows all others. The nine months of the current fiscal year, which constitute the immigration season, showed a great improvement over the previous year's figures, 124,680 immigrants entering the country, as against 60,247 in the parallel period of the previous year, which is an increase of 107 per cent. But the rate of the exodus is increasing almost as rapidly. In the year ending June 30, 1923, 117,011 residents of Canada paid the head tax to enter the United States, but in the six months ending December 31st the number of emigrants rose to 103,616. Since 1924 began the rate of exodus has been in excess of 20,000 per month, which is almost four times as high as it was in 1921. When it is realised that thousands of immigrants cross the boundary without paying the head tax, it is plain that even last year's immigration does not fill the gaps, and the situation is causing general disquietude. The Conservatives are disposed to attribute the exodus to the tariff reductions of the last two budgets, but other conditions must bear a greater responsibility. On the average wages are higher, and costs of living lower south of the international boundary than on its northern side, and the reductions in taxation, which the

U.S. Congress is now putting through, will intensify a spread in the rates of tax burden imposed in the two countries, which was sufficiently serious before. From every quarter in Canada there comes up a fierce cry for resolute economies at Ottawa, and reduction of taxation, and Ministers promise that they will give careful heed to it. But it is easier to talk economy than to practise it.

The earnings of the Canadian National Railways continue to be very satisfactory, and there is every prospect that the President's forecast of operating surplus of 20 million dollars will be fulfilled. For February the gross earnings exceeded those of the same month last year by a million dollars, and the net increase was substantial.

The index number for wholesale prices compiled by the Dominion Bureau of Statistics was almost unchanged for February, being 156.6, as compared with 156.7 in January. Vegetables, non-ferrous metals, anthracite coal and gasoline, were among the commodities which moved upward. Animals, animal products, wood products, fibres, textiles, and iron products, showed a decline.

The tone of business is reasonably good, and wholesale houses report a fair movement in seasonal spring goods. Freight traffic records show that 2,468,311,697 tons of freight moved on Canadian railroads in January, 1924, as compared with 2,093,039,296 tons in January, 1923.

The pulp and paper business continues to show amazing prosperity, and the expansion of newsprint production is phenomenal. In 1923 it was no less than 1,263,000 tons, an increase of 181,000 tons over 1922. Canadian newsprint production is rapidly overtaking the production of the U.S., which for 1923 was 1,485,000 tons. Yet ten years ago Canada only produced 250,000 tons, as compared with 1,305,000 tons in the U.S. The capacity of the Canadian mills is continually being increased, but leading forestry experts continue at intervals to express the fear that the forest resources of the country are being depleted at a dangerous rate. The Royal Commission appointed to investigate this problem is still continuing its sessions, but as it finds a great deal of opposition to the embargo on exports of pulpwood, there is little chance of its enactment. Negotiations have been in progress for some time for a huge merger of the leading pulp and paper companies in the St Maurice Valley in Quebec and its consummation is daily anticipated.

The motor business has been very prosperous, the great American corporations using their Canadian branches to fill their orders for British territories. In 1923 Canada exported 70,000 motor-cars, which is almost half the number of car exports from the United States.

Germany's contacts with Canada are beginning to revive. Germans have been buying freely Canadian food products like flour, packing house products, evaporated milk, boxed apples and canned salmon. German capital is reported to be evincing an interest in the lignite fields along the Saskatchewan-North Dakota border. There is also a prospect of a large influx of German immigrants. Several public bodies in the East have passed resolutions against their admission, but Western bodies, like the Regina Board of Trade, who are more sensible of the need of hardy peasant settlers, have taken an opposite attitude and offered a warm welcome.

HOLLAND.—INDUSTRIAL CONCERNS AND STATE AID—PUBLIC ECONOMY—TAXATION—MONEY AND STOCKS.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, March 18.

THE events of the last few weeks show that the economic crisis in Holland is not yet at an end. In spite of the not inconsiderable orders which have recently been placed—some of which, such as the construction of large motor and steam boats, the building of railway bridges in Siam, and the manufacture of railway locomotives for China, are for foreign countries—there are still only too many concerns which made large extensions of plant during the boom period, and which, now that conditions are beginning to be more normal, are suffering from the heavy charges resulting therefrom. It has frequently happened

in recent times that concerns of the kind, when in difficulties, have received aid from the State or the municipality. Such assistance has only been given on condition that no profit should be made, and in order to afford them a chance of keeping on a large number of workers in such a manner as to enable them to seize any opportunity of work which may later on present itself. Something of this kind is now taking place in connection with the assistance which is to be given to the Royal Dutch Lloyd, the shipping line which runs vessels between Holland and South America. A Bill has been introduced enabling the Royal Dutch Lloyd to receive from the State credits not exceeding 5,250,000 florins, on condition that the municipality of Amsterdam is willing to provide a credit not exceeding 1,750,000 florins, thus making a total advance of 7,000,000 florins. These advances are to compensate the losses sustained by the company during the next five years, the total amount loaned being repayable with interest at the rate of 6 per cent. per annum. The State has made several stipulations in return for this assistance. A Government commissary is to be appointed, who is to exercise supervision over the company's management. A reorganisation of the company is to be put in hand. The bonded debt now amounts to 17 million florins, of which 5 million consist of 4½ per cent. bonds, and 12 million of 7 per cent. bonds. These bonds are for the most part covered up to 35 per cent. by a first mortgage, and on this first mortgage the Government only allows a maximum interest of 4 per cent. It has further been decided that the total charges for interest must not exceed 800,000 florins per annum, so that the interest payable on the remaining 12,500,000 florins of the company's debt (which has been advanced by Dutch bankers and British shipbuilders) cannot exceed 4 per cent. per annum. The share capital, which is now 30 million florins, will in all probability be reduced to 4½ millions. Of the profits obtained in any year, the first half has to be spent in repaying the loans received; the second half may remain in the possession of the company. This, of course, does not mean that this half can be disbursed as shareholders' dividends, since the book value of the vessels will still be too high, even after the amounts released have been used for the purpose of writing off this value. The book value as it stands at present is 47.7 million florins; the amounts which can be used for writing-off purposes are, first, the sum by which the capital will be reduced, namely, 25.5 millions, and secondly, the reserves, 3.3 millions; but from these must be deducted the loss balance, which was shown on the balance-sheet to be 5.3 million florins, so that the net amount available for writing off will be 23.5 million florins. The book value of other property will also have to be written off. Unless, therefore, there is a speedy change for the better in the fortunes of the company, it is probable that it will have to work for years before there will be any prospect of yield on the shares. But it is not the aim of the State to secure profits for individual shareholders. In this case the sole idea of the Government and the municipality is to safeguard the continued existence of a national enterprise which maintains direct communications with South America.

It is possible that the opponents of the Bill will argue that the proposal should be turned down on account of the retrenchment policy which is now going vigorously forward. The reduction in civil servants' salaries, which has already been referred to in these columns, will shortly commence. Strong pressure is being exercised on the municipalities. Parliament has recently decided that no financial aid must be given to municipalities for emergency expenditure; the municipalities will therefore be thrown entirely upon their own resources, and will have to weather the present crisis as best they can. This decision will, for instance, reduce the resources of Amsterdam Municipality by three million florins per year. The Netherlands Bank is co-operating to the same end. It persists in restricting to a low limit the amount of bills which it is willing to discount for the municipalities.

It is computed that the burden of taxation in Holland has increased since 1914 by 67 per cent. If it proves impossible to avoid fresh taxation the preference at the moment is for indirect taxes (tea and beer), although the incidence of these is disproportionately heavy in the case of persons with small incomes. Moreover, enquiries are

being instituted with a view to ascertaining whether it would not be possible to finance more economically social benefits (old age, disablement, and other pensions) without encroaching on the statutory rights of those who are entitled to these benefits. A Government Commission has already been nominated to conduct this investigation.

These plans have not yet exerted much influence on the investment market. The demand for good investments continues to be a large one. The success of that part of the Japanese Dollar Loan, which was issued on the Amsterdam Exchange, was highly satisfactory; there is likewise a great demand for the Japanese sterling loan issued in London. Less success has, however, attended the issue of the 10 million florins 6 per cent. bonds of the municipality of Amsterdam; the loan was not fully subscribed. This was due to the fact that there is a general desire to wait and see how the municipality will manage its finances, now that it can no longer count on State aid. In general, money is easily obtainable, provided that the security offered is of first-class quality.

The stock market presents a considerable reaction, which is largely due to the recent rise of the French franc. Important bear positions were established in francs, and this was especially notable in the case of the German bankers, who have settled at Amsterdam. Considerable sums of money were thus won for a time, these amounts being invested in all kinds of Dutch stocks, especially Oil and Tobacco shares. Now the tendency is the other way round; much of the money won has been swallowed up by more recent losses, and in many cases the newly purchased shares have had to be liquidated, which has had a very depressing effect upon the prices of stock. Fundamentally, however, the market continues to be steady, especially in the case of such stocks as feel the influence of the high prices ruling for Dutch colonial products.

AUSTRIA.—POLITICS AND STRIKES—BURDEN OF TAXATION—TRADE POSITION—PRICES.

(FROM OUR CORRESPONDENT.)

VIENNA, March 1.

THE fact that some industrialists have emphasised the necessity for Austrian workmen to intensify their work has caused the Social Democrat party to declare that they will never permit the revision of the Eight-hour Day Act, which they deem one of the main conquests of the revolution. At their instigation the bank employees, who have the best organised Trade Union, and large strike funds at their disposal, have now brought forward claims which have been rejected by the banks' corporation, and which have led to a general strike in all banks, and thereby to a complete stoppage of all banking business. The employees ask for a general increase in all salaries and wages, and for the definite appointment of all clerks who, up to the present, have been only temporarily engaged; the banks, on the other hand, are prepared to meet their employees in regard to salaries only on the condition that the present minimum work of 41 hours per week should be extended to 43½ hours, and that the cash offices remain open for one hour every afternoon, which condition has been declined by the employees as "anti-social." At present nearly all the bank employees have joined the ranks of the Social Democrats, and it will depend on the result of this strike whether the industrial employees and the State officials, who are both much worse paid than bank clerks, will also come out with new claims. The Social Democrat party can now boast that they have again succeeded in thoroughly disturbing social peace.

Much comment has been aroused by a controversy which has taken place between the Commissioner-General of the League of Nations, Dr. Zimmermann, and the Austrian Finance Minister, Dr. Kienböck. In his last report the Commissioner-General pointed out that the capacity of the Austrian population for paying taxes was strained to the

utmost, that it far exceeded the League of Nations' estimate, and that in future the main stress in the reconstruction work should be laid upon reduction in expenditure by methods for saving. He publishes in his report the following table, which compares the burden of taxation in 1924 with that in 1913:—

Million Goldkronen.			
Public Revenue (Without Monopolies).	Budget Estimate, 1924.	Budget, 1913.	Difference Between 1924 and 1913.
Customs duties	13.23	6.85	+ 6.38
Import and export duties	0.97	—	+ 0.97
Taxes on commodities	5.95	14.32	— 8.37
Direct taxes	16.20	14.77	+ 1.43
Taxes on railway traffic	0.26	0.97	— 0.71
Other taxes and fees (including taxes on turnover)	24.06	8.15	+ 15.91
	60.67	45.06	+ 15.61

The Finance Minister replied in a public speech, in which he stated that, in his opinion, the present burden of taxation is lighter than before the war, because he estimates the total of public taxes per head 121.25 goldkronen in 1913, against 76.69 goldkronen in 1924. Whilst the Commissioner-General in his report emphasised the impossibility of continuing to raise taxes, inasmuch as the actual income of the taxpayer is at present lower than before the war, the Finance Minister is optimistic enough to find the present burden of taxation so supportable that it could even be further increased.

The statements given by the various industries with regard to their business is considerably influenced by the conflict about the new Tariff Bill. Some industries, such as the iron and steel industries, motor-car, cement, glass, and textile industries, claim a higher protection, and are, therefore, interested in making their business appear worse than actually is the case. Some of them, as, for instance, the Alpine Montangesellschaft, were, in fact, compelled to dismiss workmen partly owing to the revival of German competition, partly owing to the high protective duties on their products in the neighbouring Succession States, which render export trade very difficult. In some way or other means must be found of increasing Austria's export trade because the import and export figures for the last three months show that the deficit of the balance of trade was considerably augmented in the last quarter of 1923, as compared with the first three quarters. Judging by the November figures just published, it is estimated that the deficit of the balance of trade for 1923 will amount to about 700 million goldkronen, as against only 544 million for 1922.

The last index figure (for the period January 15th–February 15th) again showed an increase of 2 per cent. in the cost of living. Whilst the index for August last was 94.7 per cent., it is now 107.7 per cent. It is also interesting to note the movement of the index figure for wholesale prices of commodities, which in November, 1923, was 17.795 (as against 1 in August, 1914), and since then is continuously rising; in December to 18.181, in January to 18.748, and in February to 19.158. The present very severe winter has postponed the restarting of the building activity, and thus caused a noticeable increase in unemployment—from 97,573 in January to 119,309 in February.

NORWAY.—GREAT LABOUR DISPUTE—NEW BANKING PROPOSALS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, March 11.

FOR two or three weeks the great labour struggle—partly lock-outs and partly strikes—has now been going on. Negotiations have been going on almost all the time between the parties, but so far without success. Between 60,000 and 70,000 men are involved in the dispute. It is not now a struggle for a reduction or an augmentation of wages, it is a fight for a principle. The practice had become more or less prevalent among the workers of leaving their work without any notice, in spite of agreements, and even contrary to the orders of their leaders. This, notably, is at present the case in the engineering trade. Employers are getting tired of this unsafe and unsettled state of things, and now demand certain guarantees from the trades unions that the agreements entered into with the workmen will be conscientiously adhered to until altered by a fresh agreement. These guarantees the leaders say they cannot furnish—and thus, so far, there is a deadlock. As the strike comprises the port labourers, the export trade naturally has been to some extent hampered, but much less so than might have been expected; there are many unemployed that are happy to have a chance, and also many principals and office-employees are doing cartage and loading and discharging work. In the Storting a new Bank Act is being discussed. It will in several ways introduce changes in the present system of control, &c. In a future letter I shall hope to give further details as to this matter, which is very important for traders.

Letters to the Editor.

COMPANY DEBENTURE REDEMPTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The letter in your issue of 15th inst., from the Secretary of the Manchester Stock Exchange, seems to require an answer from me, if only to correct its errors. I have no recollection of ever having stated "that the company" (i.e., the Union Cold Storage Company, Limited) "had tried to buy stock on the Stock Exchange but had failed to do so"! The exact contrary is the case, as purchases have been made continually, and more than 50 per cent. of the stock redeemed during the last six months has been purchased for the company by brokers.

The circular dated September 10, 1923, was sent to a few debenture holders, and contains no misstatement, as is proved by purchases made by London brokers both on September 12, 1923, and September 19, 1923, at 93 per cent. net. The brokers, to render contracts at this price net, must have bought below that figure. It is also evident that 93 per cent. was a full market price from the Manchester quotation of 91 to 94. On this quotation the Inland Revenue authorities would accept a price of 91½ per cent. as fair value for probate purposes, and it is not often that executors can rely on an immediate sale of stock at a substantial advance on probate valuation! So far as my experience goes, the Manchester Official List has the best reputation of all the provincial exchanges for the reliability of its quotations and for the accuracy of its notices and other information. In purchasing debenture stock for redemption purposes my company's endeavour has always been to offer the full economic value, no more, as that is unnecessary and no less, as that would not only be unfair, but would not be likely to produce any results. This being the case, I hold that to tell our debenture stockholders that the price we bid is "full market value" is quite unnecessary, and probably undesirable. I therefore arranged for those words to be omitted from any further circular. In order to make my company's offer secure from any criticism, as I hoped, I then sent to our London brokers a copy of our circular for approval, and, after submitting it to the Secretary of the Committee of the London Stock Exchange they reported to me as follows:—"The circular issued by the

Union Cold Storage Co., Limited, contains nothing contrary to the London Stock Exchange requirements."

This is the circular on which Manchester turned us down, and they appear to have gone to the Associated Stock Exchange meeting at Windermere last October, where, as they say, 21 provincial exchanges were represented, with the set purpose of getting other exchanges to do likewise. I would suggest a study of *Æsop's Fables*, and more especially of the fable called "The Fox Without a Tail." Liverpool, as mentioned in my previous letter, has followed Manchester's lead, but for what reason I am still unable to ascertain. I hesitate to accept hearsay evidence from Manchester as conclusive. As far as I am aware no other exchange has removed our stock from its list.

The resolution which Manchester quotes as having been recommended to each of the 21 exchanges concerned is surely an unnecessary piece of interference likely to bring ridicule upon those who framed it. Further, it is calculated to obscure the real matter at issue. I have never heard of any company offering to act as "dealers" in its own securities. A "dealer," according to the largest dictionary I can find in the library here, is "one who sells articles in the same condition in which he has bought them," and Webster's Dictionary of 1920 states that a "dealer" (as applied to the Stock Exchange) = jobber, and that a jobber is distinguished from the broker, who acts between him and the public.

Manchester knows quite well, and every debenture holder who has sold his stock to the company knows quite well, that the company's purchases are for redemption purposes, and all stock so purchased has been delivered by surrender of certificates with a discharge receipt, and not by an ordinary transfer deed.

To give up the right to approach its own debenture holders direct would be, in my opinion, too big a price for any company to pay to obtain a quotation in the Manchester List, and I can scarcely take seriously the statement that this is a condition on which quotations have hitherto been granted in Manchester. My company, for one, did not understand this when our quotation was obtained.

Manchester, of course, can take whatever line it thinks right, but I trust the authorities will reconsider the matter and see their way to bring their practice into line with London. It is now well over 40 years since I entered my firm's office; at first I was put to do the Clearing House work at a salary of 10s per week, and I am now senior partner, and although I have never had the privilege of attending Associate Stock Exchange meetings at Windermere, I believe I have as big an experience as anyone living of provincial Stock Exchange matters, and it is my considered opinion that Manchester's action, if persisted in, will inevitably drive away from our Northern exchanges business which ought to be done there, and will put the placing of new issues of our local companies more and more into the hands of London.

Cannot Manchester see that the Stock Exchanges exist for the benefit of the public, and not the public for the benefit of the Stock Exchanges!—Yours, &c.,

ROGER P. SING,

Chairman of the Directors,
Union Cold Storage Company, Limited.
United University Club, London,
March 18th, 1924.

THE CHAOS IN CHINA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I happened to go into my comrade's office this morning to consult him on a matter of business, and found him engaged in earnest conversation with four elderly Chinese. They were undoubtedly of the "old school," and might have stepped out of one of the innumerable pictures of Chinese sages of days gone by. I, of course, withdrew and waited for the comrade to come to me, which he did very shortly after. I asked him who the old fellows were and he informed me: "Oh, they come from my country to ask me help pay for guns." Further interrogation drew forth the usual story of pillage and seduction which is so rife throughout China nowadays, as well we know from our newspapers, but the hideous-

ness of it was brought nearer home to me by a personal narrative. The scene of the tragedy lies about forty miles from here in the fertile district of Heungshan, which, from my home on the Peak, can be seen as a low-lying bank on the other side of the estuary of the Canton river. Nominally the place is within the jurisdiction of Admiral Chan Chak, who is an Admiral without a fleet and is, at the moment, on passable terms with Sun Yat Sen, the self-styled Generalissimo of the Constitutional Government of China. Sun incidentally is, technically speaking, a rebel, but with the aid of a mercenary army rules over a portion of the two Southern provinces of China, although by no stretch of imagination can he be considered to exert authority over this dominion. Well, the village or town in question was raided the other night by soldiers. Whose army they belonged to nobody knew, but they pretty successfully ransacked the place, seized what money they could, burned a few houses and departed with 63 women and girls as captives. One of my shroffs (or clerks) lost two of his daughters in this way, and as soon as the news reached Hong-kong he took the first steamer for Macao and thence by rickshaw to his village. Of course, when he reached his destination he could do nothing, nor was he able to trace any information as to the whereabouts of the troops or their captives. The wretches had swooped down, done their foul work, and departed. My shroff returned, and, poor fellow, has been going about like one in a dream ever since.

The comrade and his four friends considered that steps should be taken to arm some of the villagers, so that any further attacks could be met with some sort of resistance. They asked my advice. What could I say? I knew full well that the cost of a score of rifles was nothing to these four men who, having gained wealth under the protection of a British Colonial Government, had retired to spend their remaining years in their native districts, but I could pretty well guess that it would not be long before the village guardians disposed of the rifles at a good profit. Even if they retained them the chances were that they would do more harm than good through lack of skill. My reply was to the effect that it would be waste of money investing in arms, and that the better course would be to appeal for assistance from Admiral Chan Chak. The advice was received politely but without enthusiasm. Then flashed across my mind Lord Birkenhead's hideous but apposite phrase about the world's glittering prizes for sharp swords, &c.

The chaos which prevails throughout China is a matter which must be dealt with by the Chinese themselves. Undoubtedly it is of grave concern to the foreign nations which trade with China, but it is quite clear that external assistance will be of no avail. Foreign intervention might restore some sort of order in districts around about the Treaty Ports, but it will never be of effect in the interior. The root of the trouble appears to lie in the importation of arms and ammunition, and until the supply is dammed at the source the peaceful and industrious Chinese will be at the mercy of the militarist and his motley army of hired ruffians. As one of our local papers puts it, the Great Powers and the League of Nations are moving heaven and earth to restrict the dangerous drugs traffic with China, while all the time they are allowing and profiting by the trade in vulnerable weapons. Nearly every week there is a seizure of arms and ammunition on reaches Hong-kong. At every assizes Chinese, with a sprinkling of Europeans, are sentenced to terms of imprisonment ranging from six months to twenty years for bringing firearms into the Colony. Yet the wretched an infinitesimal portion of the vast quantity which reaches China through other channels.

Things have come to such a pass that it will take years and years to remedy matters, but if a humble business man might offer a suggestion it is this. Don't worry about the opium smoker, but give a thought to the women and children who are being slaughtered every day by the long before left an American or European factory.

Hong-kong, February, 1924.

PHILIP S. CASSIDY.

BELGIAN POLITICS AND PARTIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with much interest your article about the fall of the Belgian Government in the *Economist* of March 8th. May I, however, point out to you that when your correspondent touches the questions connected with the Flemish movement, he does not always appear to be quite accurate?

I am at a loss to understand why he describes the Front-Party as "Belgian Communists." The Front-Party, or Flemish Nationalist Party, has nothing in common with the Communist programme; it is simply the party of the so-called "Radical Flemings," which asks Home Rule for the Flemish part of Belgium, and is mostly composed of Roman Catholics. Besides this party of Flemish Nationalists, which is very limited in number, we can trace more or less distinct Flemish groups in each of the three other great political parties (Liberal, Socialist, and Catholic)—the Flemish Catholic Group having a distinct existence in the midst of the Catholic Party, of which it forms a part.

Your correspondent is right where he states that the rejection of the Commercial Treaty with France by the Belgian Parliament is not due to the existence of a majority opposed to French reparation and Ruhr policy. Not only the Walloon provinces, but also a strong minority in the Flemish provinces is still—and is bound to be for a long time—subjected to French influence, and it is difficult as yet to foresee the moment when our foreign policy will cease to be a "succursale" (a branch office) of the Quay d'Orsay.

In the Walloon provinces the strong sympathy for France can be explained by the community of language. As to Belgian Flanders, the reason of the spread of French influence in that part of the country will quite easily be understood when one examines the constant policy of the Belgian Governments since 1830, which aimed at unification of Belgium to a French-speaking country, and resulted in favouring the French language and French influence.

French has always been, and is still, in fact, the official language of all State administrations, and this fact, coupled with the education policy which imposed during a long time the French as first language to the Flemish, has made the Brussels agglomeration, which fifty years ago was still Flemish, to a town where the larger half of the population are now speaking and feeling French. Even now, after nearly a century of existence as an independent kingdom, Belgium does not yet possess a complete Flemish university. When we add to the above the growing influence of French capital (e.g., in the new coal-fields of the Campine) it is not surprising that many Belgians begin to fear that our existence as an independent nation may be in the long run endangered by France. What renders the outlook in this respect more disappointing is the fact that, through the educational, economic and military policy of our Governments, a large percentage of Belgians are more and more feeling themselves as really belonging to France.

There is a growing opposition in the Flemish provinces against the Francophile Government policy, but this movement is bound to be very slow, as it lacks capable leaders, the intellectual and leading classes becoming more and more "de-nationalised" under the influence of their French university education, and of the completely French-speaking and French-feeling administration and Government machinery. As this process is going on, they will oppose less and less resistance to French absorption.

I do not hesitate in stating that, unless more account is taken of the language and feelings of our Flemish population, Belgium will simply become a French "department" before another century, and France will then hold the Channel from Calais to Zeebrugge and Antwerp. No Belgian, jealous of our national independence, wishes the interference of any foreign Power in our internal affairs, but it would, nevertheless, be a moral satisfaction to see that the Flemish movement is understood abroad as having a wider horizon than a mere "linguistic movement with a purely provincial outlook."

Lokeren, March 9th, 1924.

G. VAN DRIESCHÉ.

MR BALDWIN ON UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your article on unemployment, in your issue of March 15th, concludes with the surmise that the number of registered unemployed cannot be expected to drop, except in very exceptional times, much below four or five hundred thousand people.

That may perhaps prove to be the case. But it is important not to lose sight of the fact that the unemployment benefit and outdoor relief to able-bodied men are helping to perpetuate and accentuate this state of things. If occasional employment is made enduring by doles, quite a number will endure it without hustling themselves to get away from it.—Yours faithfully, M. F.

Leeds, March 18th, 1924.

[We sympathise with the view of our correspondent to the extent that the position of those wholly or partially out of work must be made less attractive than that of those who are in work, in order to preserve an inducement to find employment. But the day is long gone past for attempting to drive men into work at any price by starvation.—Ed. Econ.]

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET,	ACCOUNT,
April 2.	April 3.

The present week has heard a good deal of talk of possible trouble that was considered likely to arise in connection with the Stock Exchange settlements in London as well as in Paris. In the French centre it was deemed a practical impossibility for the extraordinary gyrations in the rate of exchange and in Rio Tintos to have occurred without causing very heavy losses, to meet which it would have been necessary for the operators to sell other securities at the best prices obtainable: in other words, that there has been a good deal of forced liquidation.

Some of the British provincial centres are said to have strayed into financial trouble in connection with bear operations in Rhodesians; nearer town, the gambling in base metals has resulted, according to rumour, in widespread losses. That the trouble is less serious than report claimed would appear evident from the fact of prices as a whole keeping tolerably steady in the face of disquieting influences at home and abroad. The continual menace of strikes in various industries, the insecurity of the present British Cabinet tenure, and the further fall in rubber contribute to the causes which make for restraint on the part of buyers and a little apprehension on that of holders.

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

The Bank has close working arrangements with Agents and Correspondents in all the principal towns throughout the world, and is in a position to offer complete banking facilities to merchants and others for the transaction of

EVERY DESCRIPTION OF OVERSEAS BUSINESS.

Foreign Exchange transactions arranged.

Manchester Foreign Branch 94, Portland Street, Manchester.
Bradford Foreign Branch 18, Market Street, Bradford.

Gilt-edged stocks rise superior to the malinfluences which dog the financial situation. The War Loan has remained at a trifle above 101, Victory Bonds and the Funding Loan have been in modest request, and small premiums prevail in the cases of the lately-issued Union of South Africa, Western Australia and Southern Rhodesia stocks. Home railway prior-charge issues have not moved.

Brazilians have given way, owing to the disappointing manner in which the milreis dropped back after its somewhat abrupt advance. French Government, railway, municipal and shipping bonds recovered to some extent with the value of the franc, but to the ordinary person the gambling character of these descriptions has rendered speculation extremely nervous. Japanese scrip keeps firm. Russians were better at the beginning of the week, to give way later on. Mexicans are mostly lower.

The home railway market has fallen into a jog-trot condition. The marking ex dividend of the Southern and North-Eastern preferred and deferred stocks on Thursday led to a little buying, but the fear of industrial trouble lays a chilling hand upon enterprise. Grand Trunk Pacifics are lower. Argentine Railway stocks, after a rally, went back a trifle on renewed nervousness in regard to dividend declarations, which should be forthcoming next week. The Central Argentine maintains its previous interim dividend. San Paulo stock is better, on the announcement of a dividend, making 9 per cent., free of tax, for the year. Leopoldinas fell back sharply, in sympathy with Brazilian Government bonds.

Rubber shares are a little lower, in consequence of the produce going under 1s per lb before it recovered again. Lobitos and Royal Dutch are the particular features of strength in oil shares, but the whole list maintains noticeable firmness. The tea market is generally steady, attracting a fair amount of business. The textile group shows a disposition to give way, and tobacco shares are similarly dull.

In the insurance market, Eagle Stars are again flat, on fears as to what the dividend will be. Other insurance shares hold their prices. The banking market is moving within very narrow limits, and shipping shares display a dull tendency, owing to the disappointing results recently disclosed by one or two of the leading companies. Paquin shares rose substantially, on the announcement of a dividend on the ordinary shares. Electric lighting shares keep good; there is nothing much doing in gas stocks. The iron and steel market is heavy because of the fears of strikes.

The new issue of Vickers 5½ per cent. debenture stock at 98½ was promptly subscribed. Armstrongs have lately placed an equal number of three-year notes at the same price. Stores, drapery, and catering shares merely mark time, the qualms expressed in regard to the success of the British Empire Exhibition serving to temper the optimism which had been felt previously. Trust companies' stocks, more especially the ordinary and deferred, have been going up by points per diem.

The Kaffir Circus is curiously inert. Business being so quiet, the natural tendency is for prices to sag. Some of the Rhodesians, however, redeem South Africans from the charge of stagnation. Cam and Motors, Gaikas and two or three others have been moving in lively fashion. De Beers and Tintos fluctuated according to the movements in the franc. Tin shares reacted, on the drop of £20 in the price of the metal. Indian mining shares are better, under the leadership of a brisk rise in Mysore Gold. Canadians failed to attract either interest or support. Neither Mexican nor Russian mines exhibit any appearance of vitality.

NEW ISSUES.

Vickers, Limited.—Authorised share capital £26,500,000 of which £20,679,290 has been issued. This is an issue of £2,000,000 5½ per cent. first mortgage debenture stock at 98½ per cent., redeemable on or before October 1, 1924, at 103 per cent. This £2,000,000 is part of a present authorised issue of £3,250,000, which is subject to an increase to not exceeding £6,000,000. A part of the issue is being issued in exchange for the existing 4 per cent. first mortgage debenture stock as 5 per cent. stock, repayable at par in 1937, with an option to the company to redeem earlier at 104 per cent. The holders of the 7 per cent. seven-year notes of the company, who will otherwise be paid off at par on July 1, 1924, will be entitled to preferential allotment of an amount of stock equal to the nominal amount of the notes surrendered. The note-holders will receive in exchange for each £100 of notes an equal amount of fully-paid 5½ per cent. first mortgage debenture stock (carrying interest from the due dates of the instalments) plus £3 8s 9d in cash, representing (1) £1 7s 1½d, being interest on the notes at the rate of 7 per cent. per annum from January 1, 1924, up to and inclusive of March 31, 1924 (after deduction of income-tax), (2) 11s 7½d, being discount at the rate of 5½ per cent. per annum on the instalments paid in advance (after deduction of income-tax), and (3) £1 10s, being the difference between the issue price of the stock and the par value of the notes. Property and fixed assets are valued at £7,660,149, and total assets amount to £35,282,620. This looks like a comfortable margin of security. A little more information might have been given about past profits. For 1922 these are given as £683,205. Based on these figures, the £2,000,000 of new borrowings are well covered.

The Hoffmann Manufacturing Company, Limited.—Authorised capital £750,000, divided into 250,000 ordinary and 500,000 2½ per cent. cumulative preference shares, all of £1 each. All of this capital has been issued, and this is an offer for sale of 500,000 preference shares at par. Debenture stock The company was formed in 1898, and has an excellent reputation for "Hoffmann" ball bearings. Profits are set out from According to the statement of assets and liabilities, a surplus of £1,001,371 is revealed, after deducting the sum of £394,656 for debenture stock. Thus the share capital appears to be well covered.

Sparrow, Hardwick, and Co., Limited.—Authorised preference £400,000, divided into 200,000 7 per cent. cumulative preference and 200,000 ordinary shares, all of £1 each. This is an issue at par of 200,000 preference shares. The company has been formed to acquire a business of the same name, founded in 1853, in Manchester, of warehousemen, &c. Profits are shown from 1915. These range from £20,500 in 1915 to £103,300 in 1919. The figures are struck before charging

interest and income-tax, but after deducting excess profits duty. Profits for 1920 and 1921 include refunds of this duty; but for this there would have been a loss in the latter year owing to the necessity for writing down stocks. Net profit last year was £78,700. Assets are taken at £422,878. The purchase price is £256,700, and the company assumes liability for obligations amounting to £166,100. The purchase consideration is payable in cash, but the vendors undertake to subscribe at par for the ordinary shares. There is no debenture debt, and none can be created without the consent of the preference shareholders. The net assets acquired as at December 31st last, according to the balance-sheet, amount to £404,800, and include nothing for goodwill. The preference shares are a reasonable industrial risk.

West Hampshire Water Company.—Incorporated by special Act of Parliament in 1893. This is an offer for sale by tender of 1,148 £10 5½ per cent. "redeemable" preference shares. The minimum price of issue is £9 13s per share, at which price the yield would be £6 os 8d per cent. The prospectus states that "the shares will be redeemed at par on June 30, 1933. The authorised share capital is £100,000, of which all will be issued when the present amount is considered. Loan capital for £35,635 is in existence. Interest on loan capital absorbs £1,085. As the income of the company for its last financial year was £6,234, and dividends on all preference capital only need £2,344, a reasonable margin is left for safety.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

THE BRITISH ITALIAN BANKING CORPORATION, LIMITED.

EXPANSION OF BUSINESS DURING PAST YEAR.

RECOVERY OF ITALY.

MANAGING DIRECTOR'S REVIEW OF CONDITIONS IN ITALY.

THE FASCISTA REGIME.

The eighth ordinary general meeting of the British Italian Banking Corporation, Limited, was held, on the 18th instant, at the offices of the company, 12 Nicholas Lane, London, E.C.

Mr J. W. Beaumont Pease (chairman of the company) presided.

The secretary (Mr A. R. Wheeler) having read the notice convening the meeting,

CHAIRMAN'S SPEECH.

The Chairman said: Gentlemen,—Before we proceed to the business of this meeting I wish to refer to the great loss we have suffered through the death of Sir Henry Babington Smith. He was a man of vast knowledge and experience in many directions, and his most kind and unassuming disposition made his valuable and weighty advice available to all his friends. He had been a director of this company since its foundation, and we greatly miss him as a friend and colleague.

Mr Michael Spencer Smith, a director of the Bank of England, having consented to succeed his colleague on our board, the directors have had much pleasure in electing him, and recommend him for final election by you.

RESIGNATION OF SIR GUY GRANET.

Since the distribution of the report to the shareholders Sir Guy Granet has told me, to my great regret, that his election to the chairmanship of the London Midland and Scottish Railway will compel him to resign most of his directorships, and among them that of our company, and that he is unable, therefore, to present himself for re-election. I should like to take this opportunity of expressing, on behalf of the shareholders as well as of his fellow-directors, our deep appreciation of the many services that he has rendered to the company during his long connection with it, and further to express the hope that, should it become possible in the future, we may welcome him once more to our board.

BALANCE-SHEET FIGURES.

If you agree, the report and balance-sheet shall be taken as read, as you have received them together with the notice of this meeting.

The figures of the balance-sheet which is before you give evidence of a considerable development of our business during the past year. Particularly noteworthy is the increase of our acceptances, which stand at—

	£	
As against on December 31, 1922	1,906,608	17 5
	713,438	1 2
An increase of	1,193,170	16 3
The contingent liability for our endorsement on bills negotiated amounts to—	£	
	809,460	10 8
The corresponding figure per December 31, 1922, being	329,804	0 0
An increase of	479,656	10 8
The guarantees, which, as you know, are mainly in respect of tonnage sold by H.M. Government to Italy, stand at—	£	
	2,250,192	5 4
As against per December 31, 1922	2,565,502	3 10
A decrease of	315,309	8 6

In this connection, I wish to say that since last May the four Italian banks who are jointly and severally responsible to us for these guarantees, instead of paying the instalments to the Treasury as they became due, have deposited the money provisionally with the Bank of England pending the result of certain negotiations which have been going on for some time between the Italian ship-owners, purchasers of the ships, and H.M. Government, in respect of the balance still due of the purchase price. Our guarantee to the Government for the instalments so deposited with the Bank of England, of course, still stands, but we hold the necessary indemnity from the Italian banks.

BANK'S LIQUID RESOURCES.

The liquidity of our resources is shown by the following items:—

	£	
Cash in hand, at call and short notice	220,149	
Balance with bankers in London	228,345	
Balance with bankers abroad	170,825	
	619,319	
Bills receivable	966,858	

In the aggregate	1,586,177
As compared with	1,162,083
On December 31, 1922.	

I wish to repeat my remarks of last year, that no exchange risks attach to any funds which are temporarily held in foreign currencies, and that we have no open positions in exchanges.

In accordance with the practice of most banks, and on the advice of our auditors, our engagements in forward foreign exchange contracts are not shown in the balance-sheet.

CLEARING ACCOUNTS.

The expansion of our business is shown by the turnover of our clearing accounts with our bankers:—

	In.	Out.
1917	£4,012,662	10 2
1918	£5,366,068	9 8
1919	£19,826,992	6 6
1920	£24,539,886	5 5
1921	£26,821,127	7 11
1922	£38,953,854	4 8
1923	£57,784,604	5 5
	£57,705,444	12 3

In the year under review we have handled a considerably greater amount of business representing exchange of merchandise between Italy and the British Empire than in the previous year, which indicates that the facilities of many kinds which our organisation is able to provide are better appreciated by the mercantile communities of both countries.

Along with the development of our own business has proceeded the expansion of the activity of our Italian auxiliary, the Banca Italo-Britannica. I shall cause its balance-sheet to be sent to you as soon as published, and you will see from the figures the satisfactory growth of its business. A dividend of 4 per cent. is being declared for 1923 as heretofore.

ITALY'S IMPROVED POSITION.

There is one thing I am anxious to say, because it gives me great satisfaction; that is, how completely events have justified the confidence in the recovery of Italy, to which we have repeatedly given expression even in the darkest hours of the last difficult ten years. It is only right that I should acknowledge on my own behalf, as well as on behalf of my colleagues, that that confidence was inspired by the first-hand knowledge and information which was open to us through our managing director (Mr. Manzi Fè), and his unshakeable faith.

There is nothing which I said last year about Italian affairs that I would not like to repeat to-day. The improvement and increased stability throughout the country are matters on which we can heartily congratulate our ally. I leave it to our managing director to give you a picture of her present political and economic position, and I feel certain that what he is going to say will be of interest to you.

SPIRIT OF CO-OPERATION AND CO-ORDINATION.

I wish also to add a word of congratulation to the Italians for the spirit of co-operation and co-ordination which we have frequently found to exist in many of their trades. There are some striking examples of the success achieved by these methods, quite apart from the co-operative movement in banking and agriculture, in which Italy has long had the primacy under the leadership of her venerable economist and statesman, Luzzatti; I would only refer to one outstanding example: the financial and commercial organisation which the wool spinners' industry set up a couple

of years ago, and which is known as the Istituto Commerciale Laniero Italiano. This institution is entrusted with the purchase, the distribution, and financing of the raw materials required by its members, and to a great extent also with the home and foreign marketing of their products. The advantages of such an organisation are obvious. An incomparably greater efficiency is achieved and great economy of costs.

I now call on our managing director to deliver his address, after which I shall proceed with the business of this meeting.

MANAGING DIRECTOR'S ADDRESS.

Mr George Manzi Fè: Gentlemen,—I very heartily thank our chairman for his kind reference to me, and I trust that the information which I propose placing before you may prove interesting as well as useful.

Everybody whom I come across here in business or socially invariably refers in one way or another to the events which have taken place in Italy since October, 1922, and in most cases I find that "Fascismo," the movement which has brought about so great a change in that country, is not quite understood here. As it may well not only mark a turning point in the history of Italy, but exercise an influence far beyond her frontiers, I believe it to be worth my while to dwell briefly on its origin and its character, and to give you my reading of the political thought which underlies it. The movement was made possible by the general dissatisfaction developed in the after-war period and by the peculiar conditions of Italian parliamentarism. Unlike the British, which is represented by three well-distributed parties with clearly defined characteristics and well-established traditions, Italian parliamentarism is divided into numberless subsections and *clientèles*.

PERSONALITY OF THE ITALIAN PRIME MINISTER.

I am anxious to make it clear at the outset that, in my remarks, I neither wish to take up any particular political attitude, which would be entirely out of my province, nor to make the apologia of one man, however much I admire him. My object is solely to enlighten the business community on this side as to actual facts, and if I am going to deal at some length with the personality of the Italian Prime Minister, it is because "Fascismo" cannot be understood without first understanding the man who is the soul of it.

Mussolini, the creator of "Fascismo," comes of very modest origin, but he is a son of that strong and fierce Romagna which has produced throughout past centuries a host of famous men in every line of human thought. His surroundings since boyhood and his start in life as a manual worker, after a short career as elementary schoolmaster, predisposed him to Socialism. His remarkable natural gifts, coupled with strong and somewhat mystic religious sentiment and an unquenchable thirst for knowledge, attracted him to higher culture, which was favoured by prolonged visits abroad on political grounds. On his return to Italy he devoted himself successfully to journalism. The honesty of his convictions and the power of fascination which he exercised upon the masses made him, in his middle thirties, the most influential leader of Socialism. However, he withdrew from the party soon after the outbreak of the Great War, because of its opposition to Italy's participation in it by the side of France and Great Britain, of which he was one of the strongest advocates. He went into the trenches as a private and was severely wounded; it was apparently there, when fighting, that the evolution of his political thought matured, and he became aware of the fallacies and shortcomings of the doctrines he had cherished. He realised that the violent materialistic teachings of Socialism, as well as excessive individualism, would fatally lead to disintegration of everything sacred, the destruction of all moral values and the abolition even of military discipline, and with it the negation of patriotism.

START OF "FASCISMO."

When, after the Armistice, demo-socialistic tendencies increasingly permeated public life, carrying in their trail the complete subservience of the State to every demagogic speculation, the corruption of Parliamentary customs by undignified compromises, the deliberate destruction of capital, and, on the other side, the vulgar extravagance and ostentation displayed by the new-rich became a provocation to the war-stricken, it dawned on him that nothing but a return to lofty ideals, to the highest conception of State authority, to stern civic discipline and self-sacrifice, to strenuous work and thrift, could save the nation from complete moral and economic disruption. He set out, at first alone, by word of mouth and in his writings, to arouse public opinion, and gradually formed around him a nucleus of deliberate followers, all of whom had fought in the war. This nucleus rapidly grew into the "Fascista" organisation.

The rapidity of the process shows that this line of thought was already deeply rooted in the public conscience; dissatisfaction and disgust were rampant all over the country, originated by the many moral disappointments which public opinion had suffered in its expectations from the magnificent effort and sacrifice of the war,

for which disappointments the weakness of the successive Governments was held responsible. "Fascismo" sprang, therefore, spontaneously into existence, not as a political party, but rather as a kind of gospel. To it rallied men of every calling in life, from the humblest workman to the bourgeois and the aristocrat, without distinction. A striking fact was the rallying *en masse* of socialistic organisations to "Fascismo," in spite of its declared hostility to the methods of extreme Socialism, the failure of which was so lamentably evidenced in 1920 by the seizure of factories and the attempt to run them on Bolshevistic principles.

LEADER'S STRENGTH AND FORESIGHT.

It would be unreasonable to expect that a movement such as this should not carry with it a certain amount of less reputable elements with their passions and ulterior motives, which explains why it is that the party has not been free, and is not even yet free from violent internal dissension which must have wrecked its great aims had it not been for the strength and foresight of the leader.

In order to achieve its final object of sweeping away the then existing state of things and the corrupted section of the body national with as little violence as possible, this organisation had to be armed, notwithstanding that it had little to fear from the Army and Navy, which, although purposely left alone, were sympathetic. This rendered possible the memorable march on Rome, which brought down the Government of the time without bloodshed, the King having refused to sanction the proclamation of martial law. Mussolini's first act was to place himself and his organisation at the orders of the King, who called upon him to form his Government. His second act was to obtain from a moribund Parliament a grant of full powers. The procedure acquired thus a constitutional aspect.

His political conception appears to be highly idealistic, and at the same time truly realistic. The authority and dignity of the State, the prestige of the nation, its spiritual and economic welfare, he places above party strife. Not forgetful of his past, he considers the advancement and well-being of the working-classes, coupled, however, with the formation and protection of capital, as the essential foundation for a modern State, and that it is a function of the State to enforce peaceful and equitable co-ordination of their reciprocal rights and duties, opposing a firm hand to any attempt of violence on either side, and, finally, that it is not the business of the State to carry on industrial undertakings of any kind.

DOMESTIC AND INTERNATIONAL POLICY.

A definition of his *régime* is difficult to express in a few words without appearing contradictory; it is in reality a combination of principles. I would call it strongly nationalistic, in no aggressive sense, however; though undoubtedly autocratic in method, it is decidedly democratic in its ultimate objects, and yet individualistic and capitalistic, not for the sake of capital as such, but for its functions, as the indispensable auxiliary of labour, the initiatives of which, in the shape of co-operative syndicates, he encourages with every assistance.

From an educational point of view, he strongly deprecates the relaxation of religious teaching and practice, and accordingly introduces reforms in this direction. Another moral principle for which he stands is the sanctity of the bonds of family as the cradle of patriotism and national unity. The abolition of all death and succession duties within the family circle, which his Finance Minister has introduced, is intended for the strengthening of these bonds as well as for the encouragement of thrift.

In international relations he represents the dignity and honour of his country, and supports mutual respect between great and small Powers. Although his action on a recent occasion was open to criticism as unnecessarily violent, his policy appears sincerely directed to the attainment of real peace, which is so much wanted.

He is guided by the idea that Italy should expect nothing from outside, and that she should ask for nothing but respect until she has made her greatest effort to put her house in order.

ECONOMIC AND FINANCIAL ACHIEVEMENTS.

As his programme was developed in his speeches and those of his eminent technical collaborators, and especially was finding expression in the actions and legislation of his Government, the consensus of opinion became gradually general. The achievements of this remarkable ruler's administration in less than 15 months of plenary powers are astonishing, more especially in matters which count from the economic and financial point of view.

In this respect some share of the credit pertains to the Governments which have gone before. The technique of Italian finance has always been on sound principles since the foundation of the kingdom; this tradition has seldom, if ever, been departed from, and to it is due the fact, never sufficiently made prominent, that Italy has refrained from resorting to the illusion of a double post-war Budget, as has been done elsewhere. She neither established a "recoverable Budget of expenditure" in respect of war damages, nor did she take credit for reparations except in so far as were actually received in cash or kind. The material damages

A decrease, therefore, of the adverse balance by 285,000,000 lire, as compared with the previous year. An interesting comparison is the following, in million lire:—

	1913.	1923.	
Imports	3,666	17,235	13,569
Exports	2,591	11,058	8,467

Adverse balance 1,075 6,197 5,122

Accounting for the depreciation of the lire, the increase of the adverse balance represents in terms of the pre-war value of the lire only 1,280 millions.

The trade with the United Kingdom included in the above figures:—

IMPORTS INTO ITALY. EXPORTS FROM ITALY

Value Lire 1,620,043,419. Lire 816,005,850, the principal items being, in quantity and value:—

The exports of foodstuffs and fresh vegetables to the United Kingdom should develop very much by the new direct railway and ferryboat service (Zeebrugge-Harwich), via Switzerland, which will be inaugurated in the spring. By this means goods will be taken without transhipment from the South of Italy to Covent Garden in four days.

PORTS TRAFFIC.

	1922.	1923.

THE EMPLOYERS' LIABILITY ASSURANCE CORPORATION, LIMITED.

PREMIUM INCOME INCREASE.

The 43rd ordinary general meeting of the Employers' Liability Assurance Corporation, Limited, was held, on the 19th instant, at Hamilton House, Victoria Embankment, London, Lord Claud Hamilton presiding.

The Chairman, in moving the adoption of the report and accounts, said that the total premium income from all departments for the year 1923 amounted to £5,022,103, showing an increase of £183,498, as compared with the previous year.

The net premiums in the fire account amounted to £334,277, showing an increase of £8,687, and from this there was transferred £40,986 to profit and loss account. The accident account, including the premiums amounted to £360,266, showed a decrease of £9,256, and, after providing for the outstanding claims, there was transferred to profit and loss account a comparatively small sum of £986.

During the past year the directors had been drastically revising this business, especially the health side of it, which accounted for the decrease, and consequently better results were anticipated during the current year. Coming now to the general States of America, the premiums amounted to £4,327,560, an increase of £184,067 over the previous year's figures, and, after providing for their losses and their unearned reserve, there was carried a debit of £227,082 to profit and loss account. The loss arose from the fact that for workmen's compensation insurance had prevailed in the United States for the last three years. The fixing of these rates was controlled by the insurance departments of the various States. New rates would become operative in practically all the States at various dates from January to July in the current year. They could, therefore, look forward with confidence to a considerable and increasing improvement in 1924.

Coming now to the profit and loss account, as a result of the various transfers to which he had referred, and after crediting the dividend, they had taken from the general reserve £275,180 to balance the account. The general reserve, after meeting the present call upon it, stood at the substantial figure of £2,544,930.

The investments amounted to £7,295,999.

The report and accounts were unanimously adopted.

THE NATIONAL BANK OF EGYPT.

SATISFACTORY RESULTS—INCREASED PROFITS.

POSITION IN EGYPT AND THE SUDAN.

The twenty-fourth annual general meeting of the shareholders in the National Bank of Egypt was held on March 19 at the head office of the bank in Cairo.

Mr B. Hornsby, C.B.E. (the Governor), presided.

The directors' report was as follows:—

The directors present to the shareholders the balance-sheet and profit and loss account for the year ending December 31, 1923.

The gross profit for the year, after providing for depreciation on the bank's buildings and furniture, for rebate of discount and for bad and doubtful debts, amounts to:—

After deducting from this sum:	£902,452 2 4
For directors' fees	£11,750 0 0
For current expenses	363,014 5 8

there remains 527,687 16 8

In conformity with Article 49 of the bank's statutes a dividend of 4 per cent. is payable on the share capital 120,000 0 0

After this statutory distribution there remains... 407,687 16 8

Adding to this the balance brought forward from last year 183,013 18 7

the amount available is 590,701 15 3

The directors consider it prudent to allocate to special reserve for contingencies a sum of ... 75,000 0 0

which leaves 515,701 15 3

From this amount the directors recommend the payment of an additional dividend of 11 per cent. on the share capital, which will absorb 330,000 0 0

and leave a balance to be carried forward of... £185,701 15 3

The total dividend for the year will thus be at the rate of 15 per cent., equivalent to £1 10s per share. An interim dividend of 8s having been paid on September 3, 1923, the balance remaining to be distributed will be £1 2s per share.

Governor.

REPORT OF THE AUDITORS.

We have examined the books of the National Bank of Egypt, and in our opinion the above balance-sheet is properly drawn up so as to exhibit a true and correct view of the state of the bank's affairs as shown by the books. We have also verified the cash, notes, and securities at the head office and the Cairo and Alexandria branches, and have found the same correct. The London returns have been audited and certified by Messrs Deloitte, Plender, Griffiths, and Co., chartered accountants.

GOVERNOR'S SPEECH.

INCREASED NET PROFIT.

STEADY GROWTH OF DEPOSITS.

The Governor said: Gentlemen,—You will see from the accounts in your hands that the gross profit for last year was £902,452, which is about £4,000 less than in 1922. On the other hand, expenses are down by £29,000, so that the net profit of £527,687 is about £25,000 more. We propose to place £75,000 to special reserve, as against £50,000 a year ago, and to distribute the same dividend of 15 per cent., requiring £450,000. The balance of £2,600 will be added to the carry forward, which will then amount to £185,000.

The total of our balance-sheet is £5,500,000 greater than in 1922, due in part to an increase in the amount of the Egyptian Government's balance, and partly to an increase in deposits of the public.

LIQUID ASSETS.

These increases are reflected on the other side of the accounts by a larger holding of Government securities, of which a considerable

part consists of short-term bonds. These bonds can be readily liquidated in case of need, and do not involve that risk of depreciation inherent to longer-dated securities. Our whole holding of Government securities appears in our books at a figure considerably lower than their market value, and we have thus a valuable reserve against the future.

The total of our advances does not show much variation. As usual, our accounts have been carefully examined, and full provision has been made wherever there appeared to be the slightest necessity for doing so.

Our holding of foreign bills, which, almost without exception, represent exports of cotton, is again larger than the preceding year, due in part to the higher price of cotton, and also to an expansion of our business in Alexandria.

EX-ENEMY DEBTS.

As we stated last year, we were obliged to institute legal proceedings for the recovery of the sums due to us in Germany and Austria, before the Mixed Arbitral Tribunals constituted in virtue of the Peace Treaties. In one case we arrived at a settlement by compromise; in another case we obtained a favourable judgment from the Anglo-Austrian Mixed Arbitral Tribunal, and the amount of our claim has been settled since the date of our balance-sheet. In the third, and most important, case our German debtors contested the competence of the Anglo-German Mixed Arbitral Tribunal, and a preliminary hearing on that point took place in London last December, but so far judgment has not been given. These long delays are very annoying, but they are due to causes entirely beyond our control. No effort has been lacking on our part to bring matters to a speedier conclusion.

NOTE ISSUE.

The note issue has shown the usual seasonal movement. At the beginning of 1923 the issue stood at £E33,200,000, falling gradually to its lower point of £E24,000,000 during the month of August. During the months of September and October the needs for financing a larger crop and at higher prices caused a rapid expansion, the highest point of £E38,700,000 being reached early in December.

The following figures show the maximum and minimum points of the issue during the last five years; this period still includes the two abnormal years which followed the war, but the last three years show a comparatively steady movement:—

	Highest. £E.	Lowest. £E.
1919	68,200,000	39,900,000
1920	66,000,000	39,400,000
1921	39,900,000	30,400,000
1922	37,300,000	26,300,000
1923	38,700,000	24,000,000

COTTON CROP.

The cotton crop of the season 1922-23 was disappointing as regards both quality and price. Nevertheless it is satisfactory to find, as the following statistics show, that the year 1922-23 showed a favourable trade balance of just over £E9,000,000, and in view of the larger crop this season and the better prices which have ruled, it may be expected that the current year will show even more favourable results.

IMPORTS AND EXPORTS.

September 1st to August 31st.	Imports. £E.	Exports (inc. re-exports). £E.
1918-1919	44,334,720	48,829,051
1919-1920	87,577,985	113,461,806
1920-1921	71,725,677	37,690,260
1921-1922	46,006,529	50,184,140
1922-1923	44,453,116	53,561,788

The steady influx of securities from abroad to which I made allusion a year ago has continued during the last 12 months. Judging from our own experience, these securities are not purchased with borrowed money, and they therefore indicate a real increase in the country's wealth. The steady growth of our deposits confirms this indication, and we can safely say that the financial and economic situation of Egypt compares very favourably with that of any other country.

THE SUDAN.

The following table gives the annual figures of the exports and imports of the Sudan from 1919 to 1923:—

	Imports. £E.	Exports. £E.
1919	4,805,745	3,029,569
1920	7,006,865	5,075,971
1921	5,806,070	2,318,533
1922	4,251,890	2,208,770
1923	4,669,004	2,753,425

The increase in the exports this year is due entirely to increased trade; that of imports is largely due to the resumption of work on the Sennar Dam, which had been suspended, and to the commencement of the work for linking up Kassala by rail with Port-Sudan. The completion of these two schemes, which should take place in 1925, will give a new impulse to the country from which all classes will profit.

The directors retiring this year are Mr M. Salvago and Sir Joseph Saba Pacha, who offer themselves for re-election.

The board desire to thank the sub-governors, the managers, and the staff for the services they have rendered during the year.

BRITISH GENERAL INSURANCE COMPANY, LIMITED. SATISFACTORY YEAR'S RESULTS.

The twentieth annual general meeting of the British General Insurance Company, Limited, was held, on the 19th instant, at the Cannon street Hotel, London, Mr Henry C. Walker, M.I.M.E. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts said that, in spite of the difficult trading conditions, the results for 1923 might be regarded as quite satisfactory. The underwriting profits amounted to £83,632, as against £83,681 in 1922, and interest on investments had produced £67,204, as compared with £58,921. In other words, the total profits from all sources had amounted to £150,836, as compared with £142,602 in 1922. Each department had contributed to that result, and whilst there was a substantial reduction in the profit in the employers' liability department, the profits in the fire and general accident departments had considerably exceeded those of 1922. Fire premiums were £342,188, showing an increase of nearly £50,000, while the loss ratio at 51.84 per cent. was just below that of 1922. Premiums in the three accident accounts amounted to £313,123, being an increase of nearly £14,000. Claims had absorbed 46.99 per cent., which was some five points above the 1922 figures, but was still considerably below the average of other offices. The profit in the three accident accounts amounted to £49,405, as compared with £74,045 in 1922, the difference being due to the reduction in profit in the employers' liability department.

Net marine premiums amounted to £380,120, as compared with £294,143. The 1921 account had been closed as at the end of the third year, and the total profit was £24,892. He did not care to prophesy in marine matters, but from the figures before them up to date it was reasonable to assume that some profit would result when the 1922 and 1923 accounts were finally adjusted. The Scottish Temperance Company, to whom most of their new life business was passed, had had another successful year. New life policies had been issued for £1,285,410 gross sums assured, which was £25,086 in excess of the 1922 figure. Total income from all sources amounted to £618,875, whilst the funds had been increased in round figures to £4,000,000. In the British General life department new policies were issued for £467,000 sums assured, mainly as the result of an offer made to the ordinary life policy-holders of the City Life Company upon the liquidation of that office. The second quinquennial valuation had been made at December 31st last, when a surplus was disclosed of £20,076. The directors had declared a compound reversionary bonus of 32.5 per cent. for each year's premium paid during the quinquennium. For the first time in the history of the company their net premium income exceeded £1,000,000.

At the end of the first ten years their capital was £100,000, their premiums £110,000, their interest on investments under £4,000, and their total funds just £50,000. At the close of their second period of ten years their capital was £700,000, premiums £1,100,000, interest over £60,000, and their funds approximately £1 million pounds. In the first ten years premiums had totalled £396,194 and claims £203,147, while in the second period of ten years premiums had amounted to £5,381,448 and claims £2,884,254. He was glad that it had been possible to pay the shareholders an extra 5 per cent., making the dividend for the year 25 per cent., as against 20 per cent. for 1922.

The report and accounts were unanimously adopted.

NATIONAL PROVIDENT INSTITUTION

The Results for the Year 1923 show INCREASES in the Business transacted, the Premium Income received, and the Rate of Interest realised on Investments, and a DECREASE in the amount paid for Claims by Death.

Full particulars of the Office and the Policies it issues can be obtained from:—

48 Gracechurch Street, E.C.3.

UNITED ALKALI COMPANY, LIMITED.

IMPROVED FINANCIAL POSITION.

CHEAP RAW MATERIALS—ORGANIC CHEMICALS DEVELOPMENT.

The annual meeting of shareholders of the United Alkali Company, Limited, was held, on the 19th instant, at Liverpool, Sir Max Muspratt (the chairman) presiding.

The chairman, in proposing the adoption of the report and balance-sheet, stated that a year ago, when the balance-sheet for the two years 1921-22 was presented, he pointed out that the former year was exceptionally bad and the latter exceptionally good, expressing at the same time the opinion that the mean of the two years would probably represent the position for 1923. This forecast had practically been realised.

After providing £15,000 for debenture redemption, and after payment of debenture interest, the profit was £63,000 in excess of the average of the two previous years. The net balance of profit was £337,000. No further ordinary capital had been issued during the year, and the £300,000 debenture stock lodged with the bankers had been returned. The balance of debts owing to the company, coupled with cash at bankers, as against debts owing by the company, disclosed a considerable improvement in the financial position of the company. Stocks showed a reduction of £17,000, and investments in subsidiary and other companies were £30,000 higher, the latter representing the acquisition of controlling interest in a well-developed quarry in North Wales for the provision of the company's large requirements of limestone.

The general reserve fund, to which £100,000 was added from the profits, now stood at £850,000, and was to be divided into a general reserve of £490,441, and a depreciation reserve of £359,558. The latter would be added to in future years according to amounts allowed in respect of wear and tear by the Revenue authorities.

THE DIVIDENDS.

In August last interim dividends of 3½ per cent. upon the preference shares and 4 per cent. upon the ordinary shares were distributed. This, together with the transfer to reserve, absorbed £203,691, and after the inclusion of £86,734 brought forward, a net surplus of £220,375 remained to be dealt with in conformity with the proposals set out in the report.

The final dividends now recommended would make the dividends for the year 1923 7 per cent. on the preference shares and 10 per cent. on the ordinary shares, or at the same rate as for 1922, allowing for the increased ordinary share capital.

The chairman made a brief appropriate reference to the retirement of the chief accountant, Mr Thomas Clarkson, who had occupied the position since the company was founded, and who, prior to that, had had many years' service with Messrs. Golding Davis, of Widnes, one of the original vendors to the United Alkali Company. Mr Whynates had been promoted to occupy the post.

CHEMICAL DISPLAY AT WEMBLEY.

Generally speaking, the year had been one of steady progress, a feature of outstanding interest being the centenary of the inauguration in this country of the Alkali industry. The effect of the celebration of this event, which aroused expressions of the greatest interest and good feeling towards the company in all quarters of the world, was to be followed by a striking display at the British Empire Exhibition, where, under the auspices of the Association of British Chemical Manufacturers, a survey of the most advanced theoretical developments was being prepared, which was expected to be unique in the history of exhibitions.

The scheme of composite life assurance for the company's manual workers and lower-paid staff had now been in operation for a year. Not only had it proved of value to the dependents of workmen at the difficult period following the death of the breadwinner, but the institution of advisory works' committees had brought about additional benefits, not only in ensuring sympathetic treatment of beneficiaries, but in bringing the company's officials into very close personal touch with the workmen. For the recreation of employees at Widnes 70 acres of land had been purchased, and would be laid out for golf, football, cricket, tennis, and bowls. Shareholders would heartily concur in this as tending to cement the cordial relations existing between the company and its men.

The rates of wages agreed between the company and the men's representatives in October, 1922, were still in operation. There was so much instability about the cost of living that the company had not asked for further reductions.

TWO NOTABLE DEVELOPMENTS.

"From time to time I have referred to our mines in Spain," the chairman proceeded, "and especially to their great utility during the war. Much attention has been given to the close co-ordination of the mines and our consuming works, and the results

of the policy initiated some years ago, and the methods of dealing with our ores then adopted are now in full working order. These results entirely justify the policy of our board, and the company has now available very large quantities of pyrites at a cost much below the price at which this raw material for the production of sulphuric acid can be bought from any other source.

"In the production of organic chemicals we have continued to develop and extend our range of intermediate products. This has followed on the extensive research work which the company has carried out during many years. We have always maintained an efficient research organisation, and, with our large interest in the development of organic chemical business in this country, it has become necessary to increase our research facilities still further. Plans are now under consideration for this purpose.

DYESTUFFS: ANXIETY FOR CO-OPERATION.

"Your directors have watched with friendly interest and with some anxiety the progress of dyestuffs production in this country. They have always been desirous of co-operating with the dyemakers in their efforts towards the success on a great scale of this industry, and they regret that co-operation has not so far in all cases been as complete as, in their opinion, should be possible to great mutual advantage. The possibilities in connection with our own business of this branch of chemical manufacture have the constant attention of the board.

"With regard to the year on which we have entered, the times are still unsettled. Political conditions in Europe, with their financial reactions, still retard the attainment of industrial stability in this country. The great consuming industries at home are still suffering serious depression, but there are some signs of increased activity. The constantly changing circumstances continue to demand the closest attention of your directors, and I trust that next year they will again be able to place a satisfactory report before you."

The chairman, in addition to moving the adoption of the report and accounts, formally proposed the transfer of £15,000 to debenture redemption account, and £100,000 to reserve, and that dividends of 3½ per cent. on preference shares, making 7 per cent. for the year, and 6 per cent. on the ordinary shares, making 10 per cent. for the year, be paid, leaving £102,846 to be carried forward.

SUCCESSFUL FOOT-AND-MOUTH DISEASE PREVENTIVE.

Dr. G. C. Clayton, C.B.E., M.P., in seconding, expressed sympathy with the chairman in the loss of his father, Dr E. K. Muspratt, who was president of the company and a leading spirit in the heavy chemical industry for a great number of years. His knowledge of the industry was unrivalled, and they desired to acknowledge specially the debt they owed to him. Shareholders had every reason to be proud of the company's present position. During the last ten years practically every process employed had been modernised and modified—all resulting in improved costs of production and improved conditions of working for the employees. On the occasion of the centenary celebration visits last year those acquainted with the works in former times were astonished and delighted with the change effected. The company were fortunate in having on their chemical and engineering technical staffs experts capable of carrying out these changes, and to them and other employees who had so splendidly adapted themselves to the new conditions their thanks were certainly due.

Dr Clayton informed the meeting of wonderfully successful results achieved by their staff in recent efforts to protect cattle from infection by foot-and-mouth disease. The process consisted of scientific disinfection with chlorine disinfectant, based on their previous knowledge of their value in other cases. "Altogether" (said Dr Clayton) "some 500 farms holding about 20,000 head of cattle have been treated, and in only two cases—and those where the instructions were not followed—have outbreaks occurred. Bearing in mind that disinfection is only resorted to when the farms are in immediate proximity to an affected farm, I think we have every reason to be proud of the results achieved, and to congratulate the members of our staff, who so ably conducted this campaign."

The motion was carried unanimously.

On the motion of Mr J. A. E. Rayner, seconded by Mr W. A. Short, Sir Max Muspratt, Bart., Sir Edward A. Brotherton, Bart., and Mr James Tennant were unanimously re-elected directors.

The meeting concluded with an extremely cordial vote of thanks passed to the chairman on the motion of Sir Edward Brotherton, seconded by Mr L. Cappel. Sir Max, in acknowledgment, said he was delighted they had been able to present such a very good balance-sheet, and that the shareholders were all amply satisfied with it.

the food is put in no further attention is needed until the end of the cooking period. Now the "New World" Cooker is of so high a grade and made in such sizes as not to be adapted or intended for adoption universally in all classes and sizes of house, and we have been endeavouring to devise a method of embodying the outstanding valuable features of this cooker in a less costly type—in other words, to make cookers for the million at a price for the million. The plant for these less expensive cookers is now gradually being installed. This new gas cooker—which is named the "New World Junior"—has already been inspected by some of the greatest authorities on these matters, and we have every reason to believe from the voluntary encomiums it has received that it will bring to your company an enormous volume of business.

GREAT DEMAND FOR GAS FIRES.

Last year I referred at some length to our "Thermo-XX" Gas Fires and to the vital importance of the ventilation of the apartments to be heated. We have dealt with this in the Radiation advertisements, because we knew that if only the public could be brought to realise that in a gas fire it is possible to have all the advantages of a coal fire—in other words, radiation—and also that the apartment in which the fire was used would have as comfortable and as healthy an atmosphere as that in which a coal fire was used, the demand for gas fires would be enormously increased. Again, our success has been strikingly great. At no time during last year were we able—notwithstanding our vast combined productive capacity—to cope with the orders we received for our gas fires. The usual method of ventilating living-rooms in this country is by the chimney flue, and this is adequately done by the coal fire; but when a gas fire was placed in front of the existing coal grate the ventilation became restricted. The problem we set ourselves was that of evolving a gas fire which would ventilate the room as well as had been done by the coal fire in front of which it was to be placed. The result of our grappling with this problem was the invention embodied in our Radiation "Thermo-XX" Gas Fires, and known by the name of the "Injector-Ventilator." I know that a number of people have a certain notion that electrical heaters are a good thing to use, because, unlike coal fires or gas fires, they give off no products of combustion requiring to be removed, but in gas fires these products possess in themselves a great virtue, because they are a valuable means of ventilating the apartment. An electric heater does not assist ventilation as a coal fire or a gas fire does, and while electric heaters may have their use under certain conditions, yet if the British public want to sit in healthy and comfortable rooms it is difficult to imagine that they would ever become satisfied with this method of heating their rooms—to say nothing of the increased cost. It has to be remembered that one therm of gas equals 30 Board of Trade units of electricity, and if we were to assume that a unit of electricity could be used so as to give 100 per cent. efficiency, and a gas fire, say, only 60 per cent. (which is allowing a much larger margin than Radiation gas fires require for assisting the ventilation of the room), then one therm would still equal 18 Board of Trade units; and if you take into comparison the cost of an electrical unit and the cost of a therm of gas you will see that gas has no cause to fear competition from electricity for heating purposes.

HIGH STANDARD OF EFFICIENCY.

In Radiation we set a very high standard for our goods; and we intend they shall always be the best obtainable in the class of apparatus we make. Our research work has enabled us to produce goods that ensure the highest possible efficiency, and this means a daily saving of money to every user of our goods. It is our aim to make apparatus that shall not only give a higher efficiency than any other apparatus when it is first sent out, but continue to maintain this high efficiency indefinitely. Now all this naturally costs money, and there are people who do not hesitate to copy and use our ideas as far as possible; but the people who merely copy and do not spend money in research generally fail to find out the reasons why we have done things in a certain particular way, and so they are at a disadvantage in trying to produce a copy equal to the original, and while they may cut the price of their copy to some extent, the difference in cost between the article of the original scientific design and the imitation is saved many times over.

SERVICES RENDERED BY THE GAS INDUSTRY.

I am by no means sure that the public at large have any adequate knowledge or appreciation of the immense service which has been, and continues to be, rendered to the community by gas and by the gas industry—and in this connection I am referring more particularly to the gas undertakings. The significance of this and its value will be best interpreted by those who have had the opportunity of knowing the state of things in some other countries where the gas undertakings have shown none of that enterprise which is characteristic of our gas undertakings here; that close study of public requirements, and that strenuous leaving of no stone unturned to meet those requirements, and to develop to the utmost the

possibilities of gas as a means of promoting the convenience of the community. To witness the backward condition of things in some other countries is to realise how very differently the British gas undertakings have viewed their responsibilities and done their work, and to appreciate the state in which things might have been with us had this not been done. No doubt most of you will be visiting the British Empire Exhibition at Wembley during the next few months, and there you will have an opportunity of realising the foresight, energy, and enterprise which the gas industry have brought to the display upon a great scale of the capacities and possibilities of gas for rendering public service in a variety of ways. This Exhibition promises to be the greatest Exhibition the world has even seen, and I think the Englishman will be more than proud when he visits that Exhibition and realises what his countrymen can produce. Those of our shareholders who visit the Exhibition will also, I know, be gratified to feel that they are associated with a firm like Radiation, whose apparatus will be disposed there on an imposing scale. The "New World" Cooker will, of course, be on view, and so also will its consort, the "New World Junior."

As to the future, he who prophesies is generally unwise, but, given a continuance of anything like fair trading conditions, I have every confidence in the future of your company. Our ramifications are great. While the gas-stove business continues to be the larger part of our undertaking, yet we have other irons in the fire—not least amongst them being our Eagle Range business (and the name "Eagle Range" is a household word), and also our various foundry businesses. In some of our works we make a great quantity of materials that are required in all building schemes, and with the extensive building operations now going on and those in prospect, we know that we are receiving, and shall receive, our full share of orders for goods required for this work.

ASHANTI GOLDFIELDS CORPORATION, LIMITED. TREATMENT OF ORE PROBLEMS.

The twenty-seventh ordinary general meeting of the Ashanti Goldfields Corporation, Limited, was held, on the 18th instant, at the Holborn Restaurant, London.

The secretary (Mr Horace Morgan, A.C.I.S.) having read the notice calling the meeting and the auditors' report,

Mr Jeremiah Colman, J.P. (chairman of the company), who presided, in moving the adoption of the report and accounts, said that the profit earned was £36,767 less than was obtained in the previous financial period, which covered 15 months. The reduction was more than accounted for by the drop of £49,682 in premium on gold. Taking the value of gold at par, the mines actually made an increased profit of £12,915 in the 12 months, as compared with the previous period. Working costs per ton, including depreciation written off, showed a reduction of 11s 1d, and the reductions were general in every department.

ORE RESERVES.

Dealing with the consulting engineers' report, the chairman said that the conversion of the timber-way into a main haulage shaft was being proceeded with; the necessary headgear and new winding plant had arrived at the mines, and were in course of erection. The work of conversion was likely to be somewhat slow, as it had to be carried on with due regard for the requirements of current ore extraction. With this work going on, it had not yet been considered advisable to resume shaft sinking. Although the main shaft had not been deepened, and there had consequently been no new level opened up, lateral development had gone a long way during the period under review they had extracted from the mine 88,509 tons of ore, their existing reserve still stood at 502,400 tons, of a gross value of £2,351,600. The decreases were thus only pared with last year's estimate, the grade being about half a dwt.

TREATMENT OF ASHANTI ORE.

The metallurgical treatment of Ashanti ore had caused the management, both here and at the mines, much anxiety. The change-over to wet crushing was made somewhat reluctantly. It was expected that an extraction of about 80 per cent. would be obtained, but, after nearly two years' work, they had not been able to obtain a better average extraction than 74.7 per cent., which, notwithstanding a reduction in costs of 23s 7d, as compared with those of the technical year 1920-21, did not realise expectations. On at least three separate occasions during the year the extractions had approached the 80 per cent. mark very closely, but each time the improvement turned out to be only temporary. That being so, it was evident that the time had come to consider other means than all-wet treatment. Mr Feldtmann, the consulting engineer, referred in his report to a possible alternative, and this he had now further developed. As the treatment of the slime product had always been the most troublesome part of the process, and as the

material which formed the slime was mostly in the fines, he was of opinion that it would be possible, by screening, to separate the most refractory portions of the ore for roasting and subsequent wet treatment. Mr Feldtmann stated that during such months as it might be found possible to roast 100 per cent. of the primary ground ore, the reduction in residues, as compared with last year's results, would be about 17s per ton for an increase in cost of 7s per ton, leaving a balance in favour of the new suggestion of 10s per ton.

REVERSION TO DRY-CRUSHING POSSIBLE.

The advisability of reverting to the old dry-crushing and roasting process had been receiving the careful consideration of the board. Mr Feldtmann thought that the all-dry crushing process would give lower extractions than formerly on the present-day proportions of deeper level ore. In order to determine that point a bulk test of from 2,500 to 3,000 tons per month was now being carried out in two furnaces which had been reconditioned. Assuming the test proved that they could still obtain 93 per cent. extraction by the old process, they would get from the present average grade of the ore reserves an additional 17s per ton, at an increased cost which would not exceed 5s per ton, thus showing an extra profit of 12s per ton, or about £54,000 over last year's results.

The wet-crushing process, of course, could not be abandoned until every avenue had been explored. On the other hand, the board felt that the policy he had now enunciated was an important step towards the resumption of dividends.

It is a matter of much regret that the results have not been so good as we anticipated when I last addressed you, and this is undoubtedly due to the disappointing nature of the wet-treatment process.

Sir George Lawson Johnston seconded the adoption of the report, and it was carried unanimously.

COUNTY OF LONDON ELECTRIC SUPPLY COMPANY, LIMITED. REORGANISATION SCHEME—GROUPING METHOD.

The thirtieth ordinary general meeting of the County of London Electric Supply Company, Limited, was held, on the 18th instant, at Winchester House, London, Sir Harry Renwick, K.B.E. (the chairman), presiding.

The manager and secretary (Mr F. C. McQuown) read the notice convening the meeting and the reports of the auditors.

The Chairman, in moving the adoption of the report and accounts, said: The gross receipts from all sources amount to the substantial sum of £1,078,039, being an increase of over 20 per cent. for the year. The gross profit on the year's working, after deducting all working expenses and general charges, is £678,558, about 30 per cent. over the previous year. The net profit for the year, after providing for all fixed charges, but before providing for depreciation and other reserves, is £614,678, an increase of over 34 per cent. for the year. We are recommending a final dividend on the ordinary share capital of the company of 8 per cent., making 12 per cent. for the year, and, in addition, a bonus of 3 per cent. to the ordinary shareholders, and we are carrying forward £118,295, as against £42,727 brought into the account.

As to Parliamentary matters, early last year negotiations were opened with the London County Council which resulted in certain heads of agreement being come to between the Council and the London companies, which were finally approved by the full Council on July 31st last.

REORGANISATION OF LONDON'S ELECTRICITY SUPPLY.

The final agreement is now being negotiated, and the sliding scale has yet to be agreed. In settling the latter we must all strive for such terms as will enable us to raise our capital in future on the lowest possible terms; we must in fairness be given every encouragement to effect the greatest economies; and we must also be encouraged to develop our business in the widest possible way. In order to give legal effect to the proposed agreement with the London County Council it is necessary to obtain Parliamentary sanction, and your directors are promoting a Bill jointly with the other East End companies already mentioned in the present session of Parliament for that purpose. The aim of all parties, of course, is a reorganisation of the electricity supply of London, and the achievement, by this means, of a cheap and abundant supply. As to the method to be adopted, it is generally accepted that this must proceed by the grouping or combination of stations or undertakings. In the first place, there are the municipal authorities, who are already organised to form one group. Our friends the West-End companies are similarly organised under a joint committee to form a second group. The third, and what I may call the industrial group, includes the companies I have already mentioned—namely, the County of London, the City of London, the South Metropolitan, and the South London. You will note that these four companies operate over a very compact industrial area, and form quite naturally one group or combination, and when we have obtained

the necessary legislative sanction we shall then be in a position to submit to you our definite proposals, which will be largely determined by the Electricity Commissioners' scheme to be issued in draft form in the next few days, following which the usual formal inquiry will be held.

After many years' consideration of the problem, the group method has gradually evolved as the only practicable solution; personally, I feel that it is the right one. I am, indeed, convinced that it is eminently a workable proposition, that it can be put into operation immediately, and, above all that it should at once result in a cheapening of supply to the consumer and a broadening of the demand throughout the whole of London.

EFFECTS ON SHAREHOLDERS.

As to the shareholder, assuming that we are allowed to proceed with our scheme on the lines indicated, and we get what we want, then his position should be much improved—for there will be fixity of tenure in place of the present uncertainty, with a sinking fund for redemption of the existing capital expenditure. It is true that we shall not obtain a perpetual lease, but we shall get the next best thing—a long extension—40 years, and so far as we are concerned, we shall have settled the London problem which has been such a disturbing factor for so many years, and we shall be free to devote our whole energies to the development of our ever-growing business. Another matter of interest to you in connection with Parliamentary matters is that we are promoting a Bill for extension of the company's powers in the County of Essex.

With reference to the prospects of the electric supply industry, some of our good friends confess that they have been taken by surprise at the unexampled progress of electric supply, but that cannot be so with you, for you will recollect that I have expressed the greatest confidence when addressing you at these meetings during the last few years, and I think I may claim that events have justified every hope I then held out, and it is not necessary for me to produce figures to prove to you the correctness of this view, but I may now add that I am to-day even more confident than ever as to the assured development of our great industry. The report and accounts were unanimously adopted.

DICKINS AND JONES, LIMITED.

FURTHER PROGRESS DURING PAST YEAR.

The twenty-fourth annual general meeting of Dickins and Jones, Limited, was held, on the 21st instant, at 29 Argyll street, London.

Sir Woodman Burbidge, Bart., C.B.E., who presided, said that the general results of the past year's business must be considered distinctly satisfactory, for the period could hardly be regarded as a favourable one. There was no doubt that the fact of their having had a full year's trading in the new building had largely contributed to the improvement now shown. The hope expressed a year ago that the additional floor space would assist the further progress of the company had materialised, and while the company continued to hold the confidence of a large and valued clientèle, the general public were realising the advantages of purchasing at Dickins and Jones, as shown by the steady increase in the number of customers. Their policy in offering merchandise at the lowest prices consistent with quality was being continued; in fact, they were trading at a lower percentage of gross profit than had hitherto obtained.

Many of the departments had been considerably developed during the past year and new sections had been opened. The profit of £102,828 showed an increase of £16,665 on the previous year's figure. The directors recommended a final dividend at the rate of 10 per cent. per annum, making 7 per cent. for the year, and thus

maintaining the same rate of dividend as that paid during the last five years. The amount carried forward was £56,769, or nearly £4,000 more than a year ago. The reserve accounts, including this unappropriated balance, would now stand at £212,212, in which figure the special reserve for preference shareholders and the Hanover House employees' investment and bonus fund were not included. The building operations in Regent street were still in progress, but the past year had seen the completion of several of the new premises, and there was little doubt that when the street was finished in the near future it would be the finest shopping thoroughfare in London, and the old-established business of Dickins and Jones should undoubtedly benefit, particularly having regard to the maintained reputation for service and the value of merchandise offered. The current year was to be marked by the opening of the British Empire Exhibition at Wembley, and in most circles there was a forecast of a prosperous year for London as a whole consequent on the influx of visitors from the country and overseas. In this prosperity Dickins and Jones naturally hoped to share.

The report and accounts were unanimously adopted.

DIMBULA VALLEY (CEYLON) TEA COMPANY, LIMITED.

FAVOURABLE RESULTS—INCREASED PROFIT.

The twenty-eighth annual ordinary general meeting of the Dimbula Valley (Ceylon) Tea Company, Limited, was held, on the 17th instant, at 4 Lloyd's avenue, London, Mr T. C. Owen (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the balance of the profit and loss account was £64,681, as against £43,290 for the previous season. In the appropriation account they brought forward the balance from last year £3,243, which gave them £67,924 to dispose of. They had paid the preference dividend, and had already declared an interim dividend of 12½ per cent., and they now proposed to place £10,000 to the estates purchase reserve account and to pay a final dividend of 15 per cent., making 27½ per cent. for the year, leaving £4,591 to be carried forward. Tea showed a profit per pound of 8.97d for the year, as against 6.7d last year, and rubber showed a profit of 6.34d this year, against 5.71d last year.

The present position of the tea market was a very favourable one. During 1923 the average price for Ceylon tea was substantially ahead of that of any other country, and if they continued the present system of careful plucking and attention to manufacture, there was every reason to believe that the present favourable condition of the tea market would continue. Rubber, on the other hand, had been a very great disappointment to them. In that company it was only a by-product, but in former years when rubber was giving the large profit it then did, it added very substantially to the dividends which the company were then able to distribute.

He had recently paid a visit to Ceylon, and when there had taken the opportunity of going over all the properties of the company. As regarded labour they were fully equipped everywhere. There had been some fresh legislation of late years, and many of those interested in the tea industry were a little bit afraid as to what the effect of that legislation would be. In their case there was not an estate that had not got the labour it required. Coolies at the present time were better paid and better looked after than they had ever been before, and he did not see any reason to fear any labour troubles in the future. Speaking generally, the company had got as fine a group of estates as any in Ceylon, and he doubted very much if any company of the same acreage as theirs had got as fine properties. They were in such fine condition and of such value that he believed they would be able to hold their own in future years when other companies might suffer from periods of depression.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £30,000,000 in Treasury Bonds and Treasury Bills dated from Mar. 24-Mar. 29 were opened on Mar. 21, 1924, and the total amount applied for was £36,820,000. For bills at three months dated Monday to Friday at 99 53 rd, about 71 per cent., above in full, Saturday at 99 53 rd, and above in full. The amounts allotted were as follows:—In bills at 3 months, £30,000,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months, Average Rate.	4% Treasury Bonds, Average Price.
Feb. 15, 1924.	£30,000,000	£43,620,000	3 10 5-11	nil
Feb. 22.	30,000,000	44,535,000	3 8 11-79	nil
Mar. 7.	30,000,000	44,400,000	3 6 4-84	nil
Mar. 14.	30,000,000	46,400,000	3 3 4-06	nil
Mar. 21.	30,000,000	38,735,000	3 1 5-43	nil
	150,000,000	167,690,000	2 18 0-98	nil

Tenders will be received on Mar. 28, 1924, for Treasury Bonds and Bills to be issued to the maximum amount of £40,000,000. The amount of Treasury Bonds issued will not exceed £4,000,000.

Messrs Samuel Montagu and Co. write on March 19th as follows:—

GOLD.

A substantial amount of gold came on offer this week, and inquiry on India and Continental account absorbed a moderate proportion. Gold valued at \$6,500,000 has arrived in New York from France. The United Kingdom imports and exports of gold during the month of February, 1924, were as follows:—Imports, £3,293,246; exports, £7,156,899.

SILVER.

Silver has been a quiet and featureless market during the week under review. Sales on China account on the 13th inst. caused a fall of ½d in the prices, to 33½d and 33½d for cash and forward delivery respectively, but since that date the cash quotation varied only between 33½d and 33½d, whilst forward silver remained unchanged at 33½d.

NOTICES.

We understand that Lloyds Bank, Limited, have been appointed bankers to the British Empire Exhibition at Wembley, and in order to afford full banking facilities for visitors a branch of the bank will be opened at the Exhibition.

The necessary resolutions having been passed by the shareholders of the Guernsey Banking Company, Limited, the amalgamation of that bank with the National Provincial Bank, Limited, became effective at close of business on Tuesday, March 18, 1924. Their Guernsey office will be conducted as the Guernsey Old Bank office of the National Provincial Bank, Limited, and their offices at Alderney, St Sampson's (Guernsey) and St Peter's in the Wood (Guernsey) as agencies thereto.

Messrs Brown, Shipley, and Co. announce the following changes in their authorised signatures:—Mr C. W. Heath, their manager, who has hitherto signed for them "per pro-also granted full power of attorney to their chief accountant, Mr S. G. Smith, A.C.A., and limited powers of attorney to Messrs E. W. Jones and R. O. Griffiths, each signing singly. Mr F. S. Miller, who holds their limited power of attorney, will retire after 44 years' service on March 31st, after which date his signature will cease to be operative.

It is with deep regret that we have to announce the death of Mr W. B. Blydenstein, partner in the firm of B. W. Blydenstein and Co., which occurred at Maarn (Holland) on the 12th inst. The business of the firm will be carried on by the remaining partners as heretofore.

The Midland Bank announces the opening of new branches at King George V. Dock, Manor Way, North Woolwich, agement of Mr S. P. Meen and Mr A. F. Vick respectively. The Chartered Bank of India, Australia, and China announce that an agency of the bank was opened in Tokyo on March 17th.

BROKEN HILL SOUTH.—Four weeks ended March 8th.—16,415 tons of crude ore and 5,379 tons of dump slime were treated and produced 4,182 tons of lead concentrates, assaying 55 per cent. lead and 23 ozs silver per ton, also 2,596 tons of zinc concentrates, assaying 44 per cent. zinc.

ELECTROLYTIC ZINC COMPANY OF AUSTRALASIA.—Production during four-weekly period ended March 5th.—3,474 tons zinc, of which 115 tons used at the works. Silver-lead product for shipment to Port Pirie for realisation containing 450 tons lead, 55,000 ozs silver.

SULPHIDE CORPORATION.—During the four weeks ended February 23rd, 2,932 tons of Junction ore and 1,006 tons of slime were milled at the Central mine, producing 445 tons of lead concentrates, which assayed 40 ozs silver, 64 per cent. lead, together with 672 tons zinc concentrates, assaying 16 ozs silver, 13 per cent. lead, 45 per cent. zinc per ton, and 101 tons special slimes, assaying 27 ozs silver, 24 per cent. lead, 21 per cent. zinc per ton.

Reports and Notices.

Messrs Gordon, Leith, and Co. have taken Mr Harold Wooding into partnership.

The offices of Messrs Richard Thomas and Co., Limited, now situated at Caxton House, Westminster, are being removed to Bush House, Aldwych, on and from March 22nd. The City office of the company will remain at Equitable House, King William street, for a few weeks, when they will also concentrate at Bush House.

The next examination of candidates for admission into the Society of Incorporated Accountants and Auditors will be held on May 5th, 6th, 7th, and 8th. Women are eligible under the society's regulations to qualify as incorporated accountants upon the same terms and conditions as are applicable to men.

Messrs Coutts and Co. will pay on and after April 1st the coupons of the Peruvian Corporation first mortgage 6 per cent. debentures at the rate of 4 per cent. per annum, in accordance with the resolution passed at a meeting of holders on March 12, 1896, with the additional interest of ½ per cent., making a total payment of 4½ per cent.

We are informed that Mr O. Morgan Owen, of the Alliance Assurance Company, Limited, has been elected chairman, and Mr Geoffrey Marks, C.B.E., F.I.A., past-president of the Institute of Actuaries, of the National Mutual Life Assurance Society, has been elected deputy-chairman of the British Insurance Association.

Messrs Jourdan and Pawle (stock and share brokers) inform us that owing to the demolition of the present building in which they have been for the last 45 years, on and after to-day their offices will be removed to No. 36 New Broad street. The telephone numbers will remain unchanged.

For reasons of health Mr Herbert Morgan has resigned the chairmanship of the board of the English Sewing Cotton Company, Limited, and Mr T. F. Tattersall has been offered, and has accepted, the appointment. The above changes take effect from the end of the company's trading year at March 31st.

We are informed that the Right Hon the Viscount Pirrie, K.P., chairman of Messrs Harland Wolff, Limited, shipbuilders and engineers, and director of a large number of steamship companies, left by the Royal Mail steamer "Arlanza," which sailed from Southampton on the 21st inst., for a visit to South America.

BANKS.

BANK OF AUSTRALASIA.—The report and accounts for the year ended October 15, 1923, shows a net profit of £618,559, against £620,105 in preceding year. If the sum of £121,869 brought forward from preceding year is added there is £740,428 available.

The dividend and bonus for the year is 13 per cent., free of income-tax, which absorbs £520,000. The sum of £100,000, is added to reserve fund, the remaining £120,428 being carried forward. Since the date of the last report new branches have been opened at 71 Collins street East (Melbourne), and in the Melbourne suburbs of Coburg, Malvern, and Middle Brighton, and at 202 William street and Bondi Junction, Sydney. It is interesting to note that in October last a branch office was opened in the West-End of London at 17 Northumberland avenue, W.C. (next door to the Royal Colonial Institute). The new office is already proving useful and convenient to Australasian visitors in London.

CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.—Little change is revealed in the net profit figures of this bank for 1923, as compared with 1922. The net profit amounted to £782,707, as compared with £789,531 for 1922, and £780,069 for 1921. The dividend and bonus is unaltered at 20½ per cent. for the year, free of income-tax. The sum of £100,000 is put to reserve, raising that fund to £3,900,000. The sum of £25,000 is put to officers' superannuation fund, and the directors propose to write off premises account £50,000, and to carry forward a balance of £222,408, which compares with £222,201 brought in.

COMMERCIAL BANK OF THE NEAR EAST.—The results of the first complete year's working of this bank for 1923 have just been issued. The net profit for the half-year amounted to £5,872, and, adding £1,008, the net profit shown in the balance-sheet of June 30, 1923, there is a total net profit for the period from November 6, 1922, to December 31, 1923, amounting to £6,880. This sum is utilised as follows:—To writing off one half of the preliminary expenses, which will absorb £1,229. To reserve, £1,000. Dividend at 4 per cent. per annum, less income-tax at 4s 7½d per £, absorbing £4,308, leaving £343 to go forward to next account. The total assets are £788,114. Cash in London totals £37,562. Cash in Constantinople amounts to £35,622. Money at call and notice is at £216,500. Balances with foreign bankers and correspondents amount to £66,322. Bills discounted are at £59,901. Investments are set out under two heads—i.e., British Government securities £99,500, and Colonial and foreign Government securities £70,691. Advances are at £138,505. With regard to liabilities, the capital paid up is £140,100, and current, deposit, and other accounts stand at £581,978.

EASTERN BANK LIMITED.—The net profit for 1923 amounted to £121,847, against £120,321 in preceding year, to which is added £31,501 brought forward from preceding year, making £153,348 available. The dividend of 9 per cent. for the year absorbed £90,000. The directors have added £20,000 to reserve fund, making it £340,000, and propose to write £10,000 off premises account, leaving £33,348 to carry forward. A branch of the bank has been opened at Karachi. Assets total £9,668,579. Cash amounts to £2,296,827. Investments amount to £2,077,800, valued at or under prices current at end of 1923. Bills receivable stand at £1,836,091. The paid-up capital of the bank is £1,000,000. Current and deposit accounts stand at £4,942,940.

MERCANTILE BANK OF INDIA, LIMITED.—The net profit of this bank for 1923 amounts to £258,706, against £267,434 in preceding year. The dividend on the A, B, and C shares is again 16 per cent. for the year. The sum of £50,000 is put to reserve, making that fund £1,250,000. The sum of £15,000 goes to officers' pension fund, and £20,000 is written off freehold banking premises. The sum of £157,812 is carried forward, against £152,105 brought in. Branches of the bank have been opened at Simla, Batavia, and Soerabaya.

NATIONAL BANK OF EGYPT.—The gross profit for the year 1923, after providing for depreciation on the bank's buildings and furniture, for rebate of discount, and for bad and doubtful debts, amounts to £902,452, against £906,870. Directors' fees absorb £11,750. Current expenses amounted to £363,014, against £392,839, leaving a net profit of £527,688, against £502,094, to which is added £183,014, making £710,702 available. The sum of £75,000 is allocated to special reserve for contingencies. The ordinary dividend is again 15 per cent. for the year, absorbing £450,000, and the balance of £185,702 is carried forward.

NATIONAL BANK OF INDIA, LIMITED.—The net profits for the year 1923, after providing for all bad and doubtful debts, amount to £534,799, as compared with £535,160 in previous year, and adding £159,256 brought forward, the available total is £694,055. An ad interim dividend at the rate of 20 per cent. per annum, free of income-tax, was paid on September 19th last, amounting to £200,000. The directors now recommend a further dividend at the same rate, and an addition of £50,000 to the reserve fund, raising it to £2,750,000. They propose to write £20,000 off house property account, and to add £25,000 to the officers' pension fund, leaving a balance of £199,055 to be carried forward. The paid-up capital of the bank is £2,000,000. Current and deposits accounts total £31,254,516.

INSURANCE.

EQUITY AND LAW LIFE.—The new assurances in 1923 amounted to £1,221,087 under 473 policies, of which £980,087 has been retained by the society. The gross new premiums amounted to £54,372. The amount of the total assurances in force at the end of the year was £13,417,609. The profit on reversions fallen in during the year amounted to £22,048. Excluding reversions, outstanding premiums and interest and cash at bank, the funds were invested at the end of the year to produce £5 2s 6d per cent. The claims by death under 181 policies assuring 113 lives amounted to £334,953, and 101 endowment assurances, amounting to £128,081, matured. The mortality has been favourable. The total funds amounted at the end of the year to £5,578,758. The expenses of management and commission amounted to £13 17s 6d per cent. of the premium income.

MARITIME.—The report for last year shows that the net premiums were £289,603, against £300,484 for 1922; the claims £269,620, against £301,519; and the expenses £55,417, against £60,230. After a transfer of £20,000 to profit and loss, the underwriting fund was reduced by £55,434 to £494,015. The dividend of 30 per cent., less tax, cost £22,680, against net receipts from interest on the funds of £46,661. The available funds on December 31st last were £1,017,236.

PROVINCIAL.—The report for last year shows that the net premium income was £383,583, as compared with £317,551 in 1922. The fire losses were 47.7 per cent. of the premium income, and after providing for unexpired risks, £9,979, was transferred to profit and loss. The employers' liability, &c., account, with premiums of £251,405, did not yield a larger transfer to profit and loss than £7,225. A dividend of 10 per cent., less tax, on the ordinary shares and the preference dividend cost £9,609, as compared with a revenue from interest of £12,867. The general reserve was increased by £10,000 to £60,000; the funds, exclusive of £140,000 paid-up capital, amounted on December 31st to £236,339.

MISCELLANEOUS.

BRITISH EMPIRE STEEL CORPORATION.—The report for 1923 shows a profit, including the balance brought forward, and after making provision for depreciation and exhaustion, of \$4,356,029. After deducting payments for interest and discount on bonds and debenture stock, there was a balance of \$2,377,555. After provision of the amount required to pay all dividends accrued upon first preference stock of the corporation and the preference and preferred shares of constituent and subsidiary companies outstanding, there remained a balance of \$1,031,031.07 at credit of surplus account on December 31, 1923. This amount, added to surplus of constituent companies carried forward, \$21,784,870.23, makes the consolidated surplus \$22,815,901.39.

COLISEUM SYNDICATE, LIMITED.—The total income for the year 1923 is £43,244, against £47,030 in 1922. The balance of £59,458, brought forward from last year, raises the credit side of profit and loss to £102,702. After charging ground rent on subsidiary properties, debenture and other interest, directors' fees, travelling expenses, general and legal charges, and depreciation, and deducting the interim dividend on the ordinary share at the rate of 25 per cent. per annum (less income-tax), paid in September last, also the dividend on the preference shares for the year to August 27, 1923, and the dividend on the "B" preference shares for the year to October 28, 1923, the net balance to be dealt with is £70,668. The directors now recommend that £3,852 be set aside for redemption of debenture stock, that a dividend be paid on the ordinary shares for the second half of the year at the rate of 25 per cent. per annum, less income-tax, absorbing £6,838, which makes 25 per cent. for the year (less income-tax), and that the balance of £59,077 be carried forward to the current year's accounts, subject to the managing director's remuneration according to his agreement, income-tax on final dividend and corporation profits tax.

LONDON AND THAMES HAVEN OIL WHARVES.—Profits on trading in 1923 of this concern have scarcely changed, amounting to £134,781, as against £131,417 in 1922. The dividend is unchanged at 10 per cent., free of income-tax. The sum of £20,000 has been allocated to reserve, which now stands at £495,000. The sum of £68,825 goes forward, against £67,469 brought in. The company's works have been maintained in good order, and the cost of upkeep and renewals has been charged to revenue.

MEADOW DAIRY.—In comparing results of this concern for the year ended January 5, 1924, with those of the preceding year, it should be pointed out that the ordinary share capital has increased from £175,000 to £375,000. The company has increased its profits from £212,210 to £375,839. Last year the ordinary dividend absorbed £131,250, or 75 per cent. of the capital. The ordinary dividend for the year ended January 5, 1924, absorbed £25,000 more at £156,250, the interim dividend of 4d per share being paid on 3,750,000 shares of 1s each, and the final dividend of 3d per share being paid on 7,500,000 shares. The sum of £21,067 goes to reserve fund, and £35,263 is carried forward against £18,169 brought in.

NEWCASTLE-UPON-TYNE ELECTRIC SUPPLY.—This company has had a prosperous year, despite the fact that the revenue of the

year was adversely affected by the dislocation of trade consequent upon the boiler-makers' dispute, which lasted seven months. The directors are to be congratulated on the way in which they show the 1923 figures. From these figures we learn that the connections horse power, as compared with 527,893 horse power at the end of 1922. The profit for 1923 at £619,665 compares with profit against £120,000 for 1922. The sum of £170,000 is put to reserves, 2½ per cent. to 6 per cent. The sum of £32,442 goes forward against £18,541 brought in.

PARENT TYRE CO., LIMITED.—The following is extracted from a circular issued by the company, dated March 19, 1924:—It is considered desirable to make a further change in the date of the company's accounts, in consequence of a similar alteration recently made by the Dunlop Rubber Company, Limited. The accounting period of that company has now been fixed permanently, it is hoped, at December 31st in each year, and in order that the accounts of those of the Dunlop Rubber Company, Limited, your directors have decided to close the financial year of this company in future an interim dividend at the rate of 5 per cent. per share of the company. It is pointed out that the business of the company continues to improve. Its working expenses, in view of increased business activities, have somewhat increased, but the directors estimate that the profits for the period to April 30th next, after payment of all expenses, will not be less than £150,000, of which approximately £100,000 will be represented by profit on new business and dividends on new investments, pany's holding in No. 2 D.R. Cotton Mills, Limited. No income has been received during the year on the company's holding of Dunlop rubber preference shares, and at April 30th next dividends years and five months, representing a gross sum of £506,326. Some changes have recently been made in the management of this company, which will be duly reported at the annual general meeting of the company.

SCHILL BROTHERS, LIMITED.—In submitting their report for 1923 the directors of this company point out that the opening set in owing to the very unsatisfactory state of European affairs, which resulted in the chaotic collapse of German currency and the heavy depreciation of the foreign exchanges in most of the com- to a two-fold result, namely, very severe competition for trade led business there still was to be obtained and further assistance to the company's clients, whose difficulties were naturally increased by the adverse economic conditions. Recently there have been signs of improvement, and provided that some reasonable solution velop to cripple the country's production, and labour troubles do not de- a better trading year. The results achieved in 1923 show a profit of £9,731, as compared with £16,227 in 1922. The dividend on the preference shares absorbed £18,750 gross. The sum of £11,040 is carried forward, against £20,059 brought in to the accounts.

SPILLERS MILLING AND ASSOCIATED INDUSTRIES, LIMITED.—This concern announces that negotiations have now been completed couver Terminal Grain Company, Limited, Vancouver. This elevator at Vancouver. The order for the foundations has already been placed, and the elevator should be ready in ample time to largely increase the facilities offered at that port for handling wheat via the Western route, and will also be an extremely im- William Edgar Nicholls, chairman of the controlling company. Sir- ciated Industries, Limited, has been elected chairman of directors directors of that company being Messrs R. H. Gale, W. B. Sifton, P. Lloyd Tanner, and D. E. Trehanne (managing director).

STEWARTS AND LLOYDS.—The report for 1923 shows that after providing £90,000 for depreciation, against £70,000 for 1922, there is a net profit of £459,426, against £70,000 for 1922. £150,132 is brought in, making £609,558 available. The sum of £50,000 is put to reserve fund, and £10,000 goes to employees' benefit reserve. The dividend on the deferred shares is again 12½ per cent., free of income-tax, and £101,795 is carried forward. The balance-sheet will be found fully analysed in another column.

MINES.

PANTI CONSOLIDATED.—At £33,000, the amount received last year by interest and dividends nearly doubled the 1922 total; but as there is very little difference between the profit and loss balances of the two periods. On the present occasion £30,000 over reserved for taxation is brought in, also a couple of small items, increasing the balance to £78,600. From this £15,900 is written off to de- recommended. A dividend of 9d per 10s share is again in- cent. The particulars supplied with reference to the company's interests—which are for the most part of a promising character— show a very large expansion in the output of the South African

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Fine open weather has continued throughout the week, which enabled farmers to make rapid progress with cultivation and seeding of spring cereals. Standing crops present a healthy appearance, growth being stimulated by recent spells of sunshine. With threshings on a more liberal scale, larger supplies of native wheat were available, both here and at the principal country markets. Trade, however, remained quiet, and prices tend in buyers' favour. Suitable milling grades quoted at 10s 4d to 10s 8d per 112 lbs, free on rail. Imported descriptions also meet with quiet support, and with some selling pressure, rates were easier inclined. No. 1 Northern Manitoba afloat quoted 48s 6d, No. 2 ditto 47s 9d, No. 3 46s 9d, Rosafe 63½ lbs 46s 9d, and Australian 49s 6d, all ex ship terms per 496 lbs. Dull conditions prevailed in the floating and forward cargo section, and with freer offerings, particularly of Plate descriptions, prices disclosed a weaker tendency. White sales, however, are maintained owing to scanty supplies on offer. Sales included steamers of Barusso 63½ lbs April 42s 9d net, Rosafe 63½ lbs afloat 44s 3d, and Pacific, half-white Western, and half-soft white ditto April 15th-30th at 46s 3d per 480 lbs. Flour in quiet request, and prices were further reduced respecting town made. London standard straight run quoted 37s 6d, patents 39s 6d to 40s 6d, town households 35s 6d per sack delivered. All English country straights 35s per sack free on rail at London stations. Imported dull, and tendency of prices against holders. Manitoba patents range from 35s to 37s as to quality, and Australian 36s per 280 lbs ex store. Barley quiet. English malting free on rail. Imported weak. Californian 44s 6d-48s 6d ex store, Chilean brewing 41s 6d-45s ex ship, both per 448 lbs. No. 4 Canadian Western 35s landed, Algerian-Tunisian 34s 6d, landed Karachi 31s, ex ship landed 32s 6d per 400 lbs. Maize quiet. Plate landed 42s-43s as to quality, red Karachi ex ship 43s 3d, yellow Calcutta landed 43s 3d per 480 lbs. Oats steady for English, and quoted at 9s 2d-10s 4d per 112 lbs free on rail. Imported tends firmer. Plate f.a.q. ex ship 21s 6d, landed 22s 6d, No 2 Canadian Western 26s 9d, No 3 ditto 25s 9d, No 2 Canadian feed landed 24s 3d per 320 lbs. Millers' offals steady. Broad bran quoted 8s 3d, ordinary 7s 9d, middlings 8s 3d, fine ditto 10s, bags included ex mill, light oats 7s 3d, powdered oat husks 7s 9d, feed oatmeal 9s 3d, ground

oats 12s 3d, free on rail per cwt. Oatmeal quiet. London-made flaked, also rolled oats 16s, medium and fine cut 16s 6d, coarse and medium pinhead 16s 6d, ordinary Scottish oatmeal 17s 6d-18s, and American 16s 6d-16s 9d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-1924.	1922-1923.	1921-1922.	1920-1921.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated March 20, is as follows:—Pig-iron: The market for pig-iron is weak and unsatisfactory. The current price is reported to be below cost, and a few orders are being placed by those consumers who think bottom has been touched. The following are the quotations: No. 3 Cleveland G.M.B. 6s 6d, East Coast hematite mixed numbers 99s. Manufactured iron and steel: Steel is very quiet and export orders very difficult to obtain except at prices which producers can hardly touch. Steel ship plates £10 5s, steel ship angles £10, iron bars £12, steel rails £9. Iron ore: Trade is practically dead for the moment. Hematite furnaces have been put out, as stocks of pig-iron were increasing too rapidly. Best Bilbao rubio ore is nominally quoted 24s, c.i.f. Tees.

Our Sheffield correspondent writes:—The market for pig-iron and various raw and semi-materials continues in a moribund state, and in spite of reduced production makers, having completed old contracts, cannot sell their output. The uncertainty of the outlook and the disturbing effect upon business of the movements of the French currency are supposed to be the principal causes of the present depression. Heavy deliveries of Continental iron and steel to this country are proceeding, but no fresh contracts have been fixed up lately. Belgian and French works are said to be fully booked for some time forward. British prices are weak, but not quotably lower. Work in finished steel is steadily increasing, as there are large orders on hand for railway rolling stock, rails, and stores of all kinds, besides public constructional work which consumes steel and tools. The export trade is also picking up. South America is buying local products on a rather more liberal scale than for a long time past. Small engineering work is increasing, and there is much activity at the rolling mills and drop-forges. The lack of business in engineers' small tools, however, is disappointing. Most firms interested in electrical engineering are fairly busy. Plate and cutlery makers are quiet. Unemployment is

Iron and steel prices showed no change this week, but business in the overseas market is more active, and shipments of tinplates are heavier than they have been for some weeks past. The dearth of tin is reacting on values, and it is anticipated that at an

early meeting of the manufacturers the minimum prices of tinplates will be increased.

CUMBERLAND IRON.

BY OUR WORKINGTON CORRESPONDENT.

The Cumberland and North Lancashire hematite pig-iron trade has grown steadily worse since it was known what is the attitude of the Miners' Federation to the employers' offer, and there is little hope that it will not become worse still before the industrial

situation clears. The damping down of furnaces in the Furness district may take place any time next week, and West Cumberland, too, is almost certain to be affected. Production is already in excess of demand. Stocks have begun to accumulate at several of the works' yards. The fact is that consumers have no confidence at all in the outlook, and, therefore, they refuse to do business on other than a hand-to-mouth basis, and even that business had dwindled in extent during the past few weeks. Overseas requirements have shrunk to vanishing point, Scotch needs are exceedingly small, and even the Midlands, which may be regarded as the largest consumer outside the district, is now taking little iron. The eleven furnaces in operation between Workington and Carnforth are smelting more iron than can be absorbed. The position would not be so bad were the steelworks at Workington and Barrow busy rolling railway material. In that case the iron output might have been maintained. But at Workington the mills are this week rolling rails for which it was not intended, except for the threat of a strike, to take delivery until May, and it is stated that when the mills close at the week-end they will remain idle for a considerable period to come. Barrow, also, is only lightly employed on railway material, and the order book is in a far from healthy condition. It may be seen, then, that the prospects of production being kept at the present level are not favourable. Prices are not, in the circumstances, a very important factor. They could not be lowered at a time when labour costs are more likely to increase than decrease, and when no one dare enter commitments far ahead. Bessemer mixed numbers, officially, are at £5 15s per ton, delivered at Glasgow and Sheffield, but are quotably lower. Low-phosphorus iron is in weak request, and is wanted only in the Midlands. Manganese alloys are dull, American as well as home business being lacking. Ferro stands at £17 per ton, f.o.b., and spiegel at £9 10s per ton. The iron ore industry in West Cumberland would be more poorly employed than it is were it not that owners are selling below the prices quoted of late to East Coast coke smelters. An order for 10,000 tons to be delivered at the rate of 1,000 tons per week has been received at one of the mines associated with a steelworks. Superior sorts of low phosphoric ore are quoted at 22s to 23s 6d per ton, and ordinary kinds at 17s to 19s per ton. East Coast coke supplies have dwindled this week to 4,050 tons, and next week the total will be considerably less.

The coal trade is steady, and doing fairly well. The Irish demand is so brisk that a larger output than is being raised at the pits, all of which are working full time, could be absorbed. Lancashire shippers are still in the market for Cumberland coal, but as local shippers cannot get landing dates nearer than three weeks ahead it need hardly be said that there is no coal to spare for them. Best round for shipment is quoted at 28s 6d per ton, but this is not the highest figure that is at command. House nuts are 27s 6d per ton, and steam nuts 26s 6d per ton. The local land-sale trade is picking up. Best house locally is 38s 2d at pit. Industrial fuel is not in sharp request. Best steam is 30s and washed steam 29s per ton, delivered.

The 390 coke ovens are all employed, though not at full capacity. The entire make is taken by the smelters of ordinary iron in the district at 25s to 26s 6d per ton, according to carbon content. Residuals are all a good trade. Sulphate of ammonia is in active demand.

METALS.

Tin suffered a sharp decline on heavy realisations, though a large business transpired at the lower range established. Standard, cash, sold from £285 to £286 to £271, and three months £285 to £262 10s to £263 5s. Eastern cables reported sales on the basis of £266, c.i.f. At Thursday's market values advanced sharply. Cash quoted at £273 to £273 5s and three months sold at £267 to £265 10s to £273 5s. The upward movement was continued on following day, standard, cash, being dealt in at £279 10s to £279 and three months £279 10s to £283 to £279 to £280, while finally registered at £279 10s. English ingots £280 to £281. Copper also declined on liberal offerings, combined with lower American advices. A good turnover resulted, including standard, cash, at £66 17s 6d to £64 and three months £68 2s 6d to £65. Continued in good demand on Thursday, and tendency of prices in sellers' favour. Standard, cash, sold at £66 7s 6d to £66 2s 6d to £66 5s, and three months £67 5s to £67 7s 6d to £67 2s 6d to £67 6s 3d. Electro £72 10s to £73 10s, best selected £71 to £72 5s, strong sheets £100, wire bars £73 10s. Lead easier, while quoted at £37 10s to £36 7s 6d as to position. Spelter lower at £35 10s to £35 2s 6d, according to position. Aluminium firm. Home £120, export £125. Antimony, English special brands, £64 10s to £65

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The course of trade at the London wool sales this week has revealed no new feature. Bradford and Continental buyers are active, but there is practically no support from America. Prices are ruling on the level generally expected after the last Liverpool sale, and as most topmakers had advanced their quotations for crossbreds in sympathy with the raw material position, there is little change in the general situation to-day. Demand for merinos remains restricted, and prices are still below the cost of replacement. On the other hand, a good business is being done in crossbreds, mainly medium and low qualities, and quotations show a hardening tendency. It is manifest that the price factor is all-important in the piece-goods trade, and as manufacturers cannot make remunerative prices for Botany fabrics, there is a pronounced leaning towards the cheaper goods. This explains the comparative activity in crossbreds. Most crossbred spinners have their order-books well filled, and while it is possible to pick up good weights of Botany yarns at quite cheap prices, the tendency in crossbreds is decidedly against the buyer. Good 64's tops are obtainable at quite 2d per lb below the price based on the cost of wool, while 2-48's yarn out of this quality can be picked up at all sorts of ridiculous prices, though the market quotation is nominally about 7s 1d per lb. There has been more doing in men's wear during the last few days, and if the good weather continues there should be a satisfactory turnover for the next few weeks. Wholesale fabric buyers, however, are not disposed to do much with the more expensive worsteds. Both on home and foreign account the demand favours the cheaper lines of woollens, and the outlook for the worsted industry is none too bright.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The event of the week has been the opening of the second series of Colonial sales, which took place in Coleman Street Wool Exchange last Tuesday. There was an unusually large attendance of buyers, the favourable turn in the value of the franc bringing together a

very large number of French and Belgian buyers. It was very patent that a different spirit possessed the majority compared with what was seen at Liverpool a fortnight ago, and the results of the sales confirmed what we anticipated—namely, that France would be a fairly big buyer under favourable financial conditions. When the franc touched 120 to the £ it could not but seriously affect the temper of French buyers in particular, and the more favourable turn of events is all to the good of the raw material. Although France has been a big buyer in Australia and at the Cape, still, trade has been so good and consumption so large that stocks of raw wool are light, and with machinery to be kept running it is patent to everyone that a considerable buy must ensue, otherwise a serious state of affairs will obtain.

The offerings this series are around 119,000 bales, including 13,200 bales of South American crossbreds. Practically speaking there is about 105,500 bales of Colonial wool, and nobody entertains any difficulty in getting rid of these. The offering of Colonial wools for this time of the year has never been known to be so small, and many regard the outlook for the rest of the series this year as anything but inspiring. However, a good strong market will in all probability entice many importers to re-offer their wools, and we are not taking so gloomy a view of future supplies as some.

The series opened under most favourable conditions, merinos making values fully up to the close of last London sales. Of course the selection was very ordinary, and one expected a little more competition from the Continent. We fully expect France to launch out and operate extensively now that the franc has appreciated so materially. Crossbreeds met a particularly keen market, notwithstanding a marked absence of American competition. Bradford is proving to be very keen for 46's and below, while the Continent is giving excellent support for 50's. We consider that fine crossbreeds are a good 5 per cent. higher compared with the close of the first series, medium crossbreeds 10, and coarse crossbreeds 10 to 15 per cent. dearer. New Zealand scoureds and slips have fully participated in this advance.

Messrs H. Dawson and Co. in their "Outlook" stress the difficulty that home trade manufacturers are experiencing in passing on the rise to their customers, also calling attention to the fact that America is by no means participating in the buoyancy and the keen demand for raw wool. All the same, statistically, the position is one of great strength, and it now looks as if there is going to be at least 300,000 bales shortage in the current Colonial clips.

limits. In cloth for China there has been rather less demand, and only scattered sales have been reported in greys and whites. With regard to India, advices from Calcutta are somewhat disappointing, but bleaching, printing, and finishing cloths have moved off to a fairly encouraging extent for Bombay, Madras, and Karachi. Makers of grey shirtings cannot obtain any relief. A restricted business has been done for most of the minor outlets, but fine goods and fancies continue active for the Continent. Quotations in American and Egyptian yarns have gone against buyers, but home users and exporters have resisted the upward movement, and the turnover has not been important. A few more transactions have been put through in twofolds for Germany.

THE COTTON TRADE.

LIVERPOOL OFFICIAL QUOTATIONS—March 14, 1924.

[illegible]

MANCHESTER, March 20.

Prices in the market have tended to harden, and spinners and manufacturers continue to present a firmer front to buyers. Inquiry has been of considerable dimensions, but a large part of it has been at unworkable rates, customers abroad being slow in raising

THE TIMBER TRADE.

Since the last report under the above heading appeared in *The Economist*, the timber market has assumed a more cheerful aspect, and the outlook appears promising for merchants. Stocks of building woods are still of good volume for the time of the year, but on the other hand the demand is on the upward grade, and, with a later opening of navigation, owing to the prolonged winter, the position is more favourable to holders of stocks than was the case a month ago.

The importation of building timbers in February was not so large as that in the second month of 1923, but the decrease last month was more than made up in January. Noticeable increases in our imports of building timbers are from Russia, Finland, and Poland.

Spot prices for building woods, with the exception of deals, which are still in small request, have shown a tendency to firm up over the month, in part due to the demand and also to the firmness in the free-on-board market. The building trade continues to be the principal buyer; the municipalities are building fairly freely, and builders are well in the market for timber for "immediate sale houses." It is interesting to note the wide margins of prices between the accepted tenders for edifices conducted by municipalities and those at which the would-be owners of small houses are asked to pay, but even in the former, tendered for in large quantities, it is reported that prices are advancing, owing to the increased prices of materials.

So far as timber is concerned, f.o.b. prices are a little under the highest rates of last year, and with the additional costs due to the dockers' increased wages to be paid by the consumer, there does not appear much hope of a great reduction in spot prices, unless the weight of supplies in the summer or autumn brings values to a level that will assist in lowering the cost of new houses, which is not unlikely, and Russian, Latvian, Polish and other mid-European timbers therefore should be encouraged as much as possible. In other sources of consumption of soft goods, in the making of packing cases, and for general work, the demand continues very moderate, and will remain so until trade generally is better.

In the hardwood trade supplies of furniture woods have been coming in very freely, and, considering the heavy supplies imported last year, the consumption of this class of material for furniture and general work must be heavy. The remarkable feature of this section of the trade is the very large quantities of oak, ash, walnut, and other hardwoods coming from the United States for furniture, agricultural implement and general work. In mahogany logs the demand continues good for the better quality wood, prices remaining very firm and also steady for the imported sawn mahogany, but for the latter the shippers' high ideas to some extent are restricting consumption.

In the pitwood section of the trade, imports have been lighter than of late. The imports from France still dominate our pitwood market in the South Wales coalfields.

VEGETABLE OILS AND OILSEEDS.

Markets on the whole have been quiet, but prices generally steady. Raw linseed oil at the lower range of values has met with a good demand from the consuming industries, and advanced at one time to over £38, since when it has eased to £37 10s spot, and £37 5s March-April delivery ex Hull mill. Thanks to ample supplies of seed, oil is plentiful and equal to all demands. Cotton oils for the most part have been weak and declining, but have improved towards the end of the week, crude Egyptian offerings at £41 and technical (soapmakers') grade at £43 5s per ton ex Hull mill. Other vegetable oils show but little change on the week except palm kernel oil, which has declined to £39 10s spot. In the oilseed section the tendency of linseed prices has been downward, with only a moderate trade demand. Current value of Plate on passage to Hull is £18 s 6d, while £18 has been paid for March loading to Hull or London. Cottonseed has rallied to the extent of 5s or more per ton. Demand for oilcakes is disappointing and prices easier. Consumers are evidently holding aloof in the hope of further reductions.

HIDE AND LEATHER TRADES.

(BY OUR OWN CORRESPONDENT.)

There was a further weakness in the Bermondsey hide market on Thursday, and little business was done, one class only of light

best ox selling at 63d per lb. Two classes of seconds sold at 73d and 78d, showing a drop of 4d on last prices. Cows remained unsold, and kips showed a drop of 4d. Best calf made from 7d to 153d, declines of 3d to 4d being noted. Wools were firm at 8s to 16s, hogs making 5s to 21s. Tanners are very cautious buyers of foreign hides in view of the weaker market, whilst the Continental demand has dropped off a good deal. Dry hides are also weaker, B.A. Americanos having been sold to the Continent at 10d, c.i.f. The Chicago hide market is still cabled as weak, with 14 cents being quoted for best heavy packers.

Business in sole leather has been rather quieter in Bermondsey this week, the demand for repairing bends being especially slow in view of the dry weather. Ten to 12 lbs average have been going out at full prices, English and wet salted selling at about 26d to 34d per lb. Offal is in a firm position, and light bellies for insole purposes difficult to obtain in bark tannages.

The upper leather position is rather better, and prices on all calf stock show advances in view of the lessened import of German and French box and willow leather. Black glacé kid is wanted as much as ever in the cheaper grades, and of late there has been a better demand for coloured kid. Patent is also very popular, and here again the advance in German and American stock keeps the market very firm. Suèdes are being asked for rather better, but it is even now uncertain whether this class of material will be popular with women this season.

The light shoe trade is improving, but Leeds and Bristol makers complain very much of the difficulty in obtaining orders for men's heavy boots.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, March 21.

SUGAR.—The general tone of the market is quiet, as manufacturers and distributors show no disposition to depart from the hand-to-mouth policy followed for some time past, in view of the near approach of the Budget. Of British refined, Messrs Tate and Lyle's cubes quoted 64s 9d to 65s 9d; crushed, 63s 3d; granulated, fine and coarse grain, 62s 7½d; No. 1, 62s 4½d; No. 2, also London and T.L., 62s 1½d; ditto, month forward, 62s; April, 62s; May-June, 62s 3d; yellow crystals, spot, 57s 7½d; caster, 62s 9d to 61s 1½d; finest 64s 10½d. White Java, spot, 59s 6d to 59s 9d; May-June, steamer 25s 9d; June-July, 25s; July-August, 24s, c.f. and i. terms London. Czecho granulated, spot, 60s 6d; April-May, 30s 6d; November-December, 23s 6d, f.o.b., Hamburg. Cuban basis, 96 per cent., March-April, 27s 6d, c.f. and i., U.K. Cane-jaggery, April-May London, sellers, 16s 6d, c.f. and i. White terminal market easier with transactions on a fair scale. March sold, 32s 6d; May, 29s 7½d; 28s 9d; 30s, 29s; August, 27s 4½d, 26s 9d, 28s, 26s 10½d; November 23s 3d; December, 23s 1½d, 23s 3d cwt.

COFFEE.—A generally quiet tone characterised this market during the week, and any change in prices proved against sellers, who showed some desire to meet buyers. Bold sizes of Costa Rica, sold 139s to 170s; with fancy blue, 181s; with peaberry, 166s 6d to 181s 6d. Nairobi bold, 112s 6d to 129s.

COCOA.—Only retail transactions occurred in spot parcels on former terms. Accra F/F grade, March-May, sold, 35s, f.o.b. terms Grenada, in auction, sold, 50s to 52s 6d; St Lucia, 48s to 50s 6d; low 28s to 30s; Trinidad, 56s.

TEA—A quiet condition of affairs was the salient feature during the week, with only small clearances being made from bonded warehouses, owing to the near approach of the Budget announcement. With the exception of a few fine liquoring qualities, prices were easier. 55,514 packages Indian, 20,600 Ceylon, and 6,500 packages Java and Sumatra were brought to auction during the week. Fine grades steady, but common marked a sharp decline.

RICE.—Quietly steady. Rangoon two stars, spot, 16s 6d. Japanese peas, spot, 21s 6d. Rangoon haricot beans, 10s 6d. - Madagascar butters, new crop, 34s cwt.

SPICE.—Pepper steadily held, but trade rather quiet. Black Singapore, March-May, L.S., quoted 5d; Lampong, August-October 4½d; Muntok, March-May, 4½d; April-June, 7½d; March-May, 8d; Zanzibar cloves, March-May, is ½d. Singapore flake Tapioca, fair quality, spot 3½d; fine Java, 4½d lb. Sago flour, January-March quoted 15s 10½d; February-April, 15s 6d; March-May, 15s. Desiccated coconut, fine cut, spot 41s 6d; medium, 43s 6d cwt. In auction 1,730 barrels St Vincent Arrowroot offered and bulk spot, good to fine, grocery 11½d to 1s 1d; good manufacturing, 10d to 10½d per lb.

JUTE.—This market exhibited quiet features and prices eased, though sellers were not unduly pressing. First grade, February-March, Continent, quoted £26 10s; March-April, £27 10s; April-May, done, £28 to £27 15s; May-June, £28 10s to £28. Hessians and twills quiet, but prices mostly unchanged.

HEMP.—Manila very firm, with few first-hand offers in the market, and a good inquiry was in force. J grade, February-April, quoted

OILSEEDS.—Linseed irregular, but steadier, with a fair demand. Indian: Calcutta, afloat, £20 10s; February-March, £20 5s; April-

OILS.—Linseed irregular. Spot, net, naked, 39s; April, 37s 9d; May-August, 37s 3d; September-December, 36s 9d. Rape dull. Crude, spot, 48s; refined, 51s. Castor-oil quiet. First pressure, spot, quoted 65s; second pressure, 64s; and pharmaceutical, 70s per cwt. Hull, with London 2s per cwt extra. Cotton dull. Crude Egyptian, spot, 42s; Bombay, 41s; common edible, 49s; deodorised, 51s. Chinawood quiet. Hankow, spot (barrels), 93s; March-April, 91s 6d. Coconut easier. Ceylon, spot, 46s 6d; March-April, 44s 6d; Cochin, ditto, nominally 53s. Soya dull. Oriental, barrels, March-April, 41s. Cod firm. English, spot, 36s 6d to 37s 6d. Groundnuts quiet. English, crushed, naked, spot, 49s 6d; deodorised, barrels, 58s 6d. Turpentine firmer, with a better demand. American, spot, 78s 6d; March-April, 78s 6d. Rosin quiet. American, grades B to G, 13s 6d; WG, 17s 6d; WW, 18s per cwt. French WW, 17s per cwt. Petroleum steady. American, standard white, spot, 1s; and water white, 1s 1d per gallon.

Treasury bills has sent the market to the Bank fo

THE supply of short money in Lombard Street has again shown some signs of contraction under the influence of the tax collections, the comparative ease of the previous week giving way to more stringent conditions, up to 3 per cent. being paid for night money and $3\frac{1}{2}$ per cent. for loans until Tuesday. Subsequently the necessity of providing for the taking up of the favoured end-of-June Treasury bills has sent the market to the Bank for

a small amount, on the usual terms. Payments for June 30th Treasury bills will probably increase the demand for money next Monday, while on Tuesday the release of funds after the end of the quarter will be offset to some extent by payment for a line of £5,000,000 Commonwealth of Australia Government bills, which have been placed at $3\frac{1}{8}$ per cent., for the greater part of the proceeds of these will presumably go straight into the British Exchequer to meet the interest payment then due on the Australian Government's war debt to the Imperial Government. In spite of the firmer tendency of money, discount rates have remained at a low level in the expectation of easier money conditions in the coming months, and fine three months' bills have been taken at 3 per cent. Although Monday will provide the last opportunity for securing June maturities, there was not much demand for Treasury bills, and the average rate of allotment yesterday was 3 3-32 per cent.

	Mar. 28, 1924.	Mar. 21, 1924.	Mar. 14, 1924.	Mar. 7, 1924.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses' Notice	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	1 $\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills)	3 $\frac{3}{8}$	3	3 $\frac{1}{8}$	3 $\frac{1}{8}$	..

The Bank statement showed an increase of £497,300 in the circulation and a trifling increase in the bullion stock, which left the Reserve £496,600 lower at £22,453,100. The increasing weight of tax collections was reflected in a rise of £2,986,000 in Public deposits, while Government securities were paid off to the extent of £190,000, and Other securities were £1,602,800 lower, the movement, no doubt, being complementary to the expansion recently shown in this item. Private deposits consequently were down by £5,288,000, to a figure only slightly in excess of the £100 millions, which is now regarded by the market as the minimum working balance, and the movement has been reflected in rather higher charges for short loans. Despite the lower reserve, the proportion remained unchanged on the week at 17.6 per cent., owing to the reduction of the liabilities. Currency notes outstanding were increased this week by £492,000 to £281,537,900, which includes £1,401,900 for notes called in but not yet cancelled. The fiduciary issue is £230,686,100, or £17,504,800 below the maximum.

THE STOCK MARKETS.

Under the many unfavourable influences at work during the past week business in the stock markets has dwindled, and prices have become heavy. Gilt-edged stocks, however, have remained fairly firm, and there was a sharp improvement yesterday afternoon, but the foreign market has been very irregular, the further improvement in the franc having failed to help the prices of French bonds. Home Rails are depressed by fears of strikes, but prices rallied yesterday on bear covering. Disappointment with the interim dividend declared by the B.A. Western Co. depressed Argentine railway stocks. The oil market has been erratic, and dealings have been mostly of a professional nature. Industrials, as a whole, are very quiet, and Kaffirs are dull, being largely under the influence of developments on the Paris Bourse.

THE COMMODITY MARKETS.

In some quarters conditions in the commodity markets are under the influence of foreshadowed labour troubles. The possibility of a strike has continued to influence business on the Cardiff coal market. There is a little more inquiry about for pig-iron, but makers are obliged to cut prices. No. 3 G.M.B. Cleveland can be bought at about 90s per ton. The steel works are experiencing transport difficulties through truck shortage. Tin suffered a sharp decline, and copper was weaker. The markets for both oilseeds and oil and cake products have taken an easier turn. Steadier conditions are reported in the hide market at Bermondsey. Tea was in demand, and prices were firmer. Wheat is better on Continental buying. Although the wide fluctuations in raw cotton rates have rather disturbed conditions, a more active demand is noticeable in the trade. The demand for wool is well maintained, and prices remain exceedingly firm.

FOREIGN EXCHANGES.

In the Foreign Exchange market the dominating influence has again been the French franc, or rather the restrictive measures of the French Government, which has reduced business to a minimum and has produced under the present temporary appearance of stability a feeling of uncertainty and unhealthiness. With the forward market practically dead for the time being, it is useless to comment on prospects which can only be adequately judged when dealings on any scale are again made possible. From 82.30 on the 21st, the rate moved steadily, but more quietly down, until at one time, on the 24th, it stood as low as 76.20, after which, on the same day, there was a sharp temporary reaction to 80. Since that time movements, influenced hardly at all by the resignation of M. Poincaré, have been restricted to a range within 78.15 and 80.20, with less business, the quotation yesterday morning being 78.40. Forward rates, as was to be expected, have shown little response to the improvement in spot, being quoted at 2f per month over spot. The Brussels rate has shown a similar movement, following Paris from 102 $\frac{1}{2}$ on the 21st to 100 yesterday morning. Forward rates have again narrowed again considerably to 15 centimes per month over spot. The lira has again remained very steady, moving on the week only from 100 to 99 $\frac{1}{2}$. New York, which has again been very quiet, has moved only from \$4.30 $\frac{1}{2}$ on the 21st, down at one time on the 24th to \$4.28 $\frac{1}{2}$, but recovering again to just under \$4.30, and being quoted yesterday morning again at \$4.30 $\frac{1}{2}$. Although in the normal course the rate at this time of the year would be moving upward, monetary conditions in New York, the uncertainty as to the franc position, and the unsatisfactory industrial outlook, are likely to prevent any appreciable rise. Forward rates have narrowed to parity for one month, $\frac{1}{2}$ cent. above spot for two and $\frac{1}{2}$ cent. for three months. Among neutral currencies Amsterdam has moved rather sharply in our favour from 11.62 $\frac{1}{2}$ to 11.65 $\frac{1}{2}$. Switzerland is rather lower at 28.84 $\frac{1}{2}$, as compared with 24.88 $\frac{1}{2}$ a week ago, and Spain has continued its recovery from 33.02 $\frac{1}{2}$ to 32.80 $\frac{1}{2}$. In Northern Europe Stockholm has dropped away from last week's rise and stands at 16.25 $\frac{1}{2}$, as compared with 16.32, but Christiania has again depreciated from 31.17 $\frac{1}{2}$ to 31.52 $\frac{1}{2}$. Copenhagen, on the other hand, has recovered from 27.56 $\frac{1}{2}$ to 27.22 $\frac{1}{2}$, after being considerably lower. Helsingfors at 172 shows a slight tendency to rise. Riga has, as usual, moved with the dollar, and Reval remains practically stable at 1630 (marks to £). In Central Europe the German mark remains unchanged at 19 billions. It is now announced that the foundation of the gold discount bank proposed by Dr Schacht will take place in the middle of April, all preparations having been already completed. Vienna has risen slightly to 305,000, and Warsaw has again been surprisingly steady at 40 millions. Prague, on the other hand, has gone against us from 148 $\frac{1}{2}$ to 147 $\frac{1}{2}$. Bucharest at 820 remains much the same as before, but Budapest, in spite of the activities of the League of Nations Commission, continues to depreciate, and now stands at 280,000. In the East the rupee shows little change at 15 4 $\frac{1}{2}$ d, and Japan at 15 11 $\frac{1}{2}$ d is the same as a week ago. In the silver market there has been some selling from China, and a little buying from India, but movements have been small. The Hong Kong rate has fallen $\frac{1}{2}$ d to 2s 4 $\frac{1}{2}$ d, while Shanghai has moved from 3s 3 $\frac{1}{2}$ d to 3s 2 $\frac{1}{2}$ d. In South America, Rio from 6d a week ago has appreciated slightly to 6 $\frac{1}{2}$ d, but Buenos Ayres has dropped from 42 $\frac{1}{2}$ d to 42 $\frac{1}{4}$ d. Montevideo has moved from 43d to 43 $\frac{1}{2}$ d, while Valparaiso has appreciated from 44.80 pesos to 43.40 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 22nd:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	19,161	From Revenue	23,363
Interest, &c., on Debt	1,045	Increase in Debt	210
Sinking Fund	1,109	Decrease in balances	194
Road fund	1,127		
Sundries	1,152		
	23,587		23,587

Revenue was nearly £2,000,000 down on the week ended March 22nd, at £23,253,000, against £25,293,000. Customs yielded £2,967,000, against £3,314,000, but Excise was £2,899,000 higher at £6,641,000. Estate Duties were lower, at £960,000, against £1,850,000, and Stamps only brought in £130,000, against £1,810,000. Ordinary miscellaneous receipts increased £75,000, but special receipts realised only £7,000, against £376,000. Property and Income-tax amounted to £7,629,000, and Super-tax to £2,990,000, against a combined total of £12,747,000 for the corresponding period. The week's operations increased the National Debt by £210,000, and caused the following changes.

(000's omitted.)		£	
Public Departments	+ 9,650	Treasury Bills	- 9,260
Unemployment Insurance	+ 220	Saving Certificates	- 100
Exchequer Bonds	+ 100	Telegraph money	- 400
	+ 9,970		- 9,760

The floating debt was increased by £375,000 to £776,155,500.

FINANCIAL YEAR, 1923-24 (April 1 to March 22, 1924).

£		£	
Total Expenditure ..	766,374,903	Raised by Revenue ..	814,297,573
Net Repayments	50,474,172	Decrease in Balances ..	2,551,502
Total	816,849,075	Total	816,849,075
ESTIMATES for YEAR 1923-24.			
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

THE WEEK IN PARLIAMENT.

MONDAY, MARCH 24TH.—Commons: Army and Air Estimates. Adjournment debate on traffic strike.

TUESDAY, MARCH 25TH.—Lords: Third reading of Legitimacy Bill. Dogs' Protection Bill rejected. Commons: London Traffic Bill introduced. Debate on Singapore.

WEDNESDAY, MARCH 26TH.—Lords: Debate on Relations with Russia. Statement by Lord Arnold on Irish compensation. Commons: The traffic strike discussed in debate on Consolidated Fund Bill's second reading.

THURSDAY, MARCH 27TH.—Lords: Debate on agricultural policy. Commons: On third reading of Consolidated Fund Bill, the questions of Reparations and Anglo-French relations debated. Statement on the traffic strike, and Government plans by the Prime Minister.

FRIDAY, MARCH 28TH.—Commons: London Traffic Bill second reading.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Mercantile Bank of India, Eastern Bank, Norwic Union Life Insurance, Metropolitan Life Assurance, Newcastle Electric Supply, Midland Electric Corporation, United Serdang (Sumatra) Rubber, Coliseum Syndicate, Salt Union, Schill Brothers, London and Thames Haven Oil, William Whiteley, and British Aluminium. Mr J. S. Haskell at the meeting of the Eastern Bank said that the outlook for improved trade in the East generally is distinctly encouraging. Mr Haynes S. Robinson at the meeting of the Norwich Union Life Insurance Society reported a large increase in new business. Sir John B. Wimble at the meeting of the Metropolitan Life Assurance Society announced a 3 per cent. increase in the rates of demand for power. Mr Robert Sloan at the meeting of Newcastle-upon-Tyne Electric Supply Co. stated that, owing to increased demands, extensions to generating plant were being provided for. At the meeting of the Coliseum Syndicate Sir Oswald Stoll criticised modern exchange policies and the entertainment tax.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE STRIKE AND LONDON'S TRAFFIC PROBLEM.

The omnibus and tramway strike, which for the past week has caused much physical inconvenience to hundreds of thousands of London's workers, threatens to develop into a more serious affair. The tube locomotive men cease work to-night (Friday), and it is not possible to be certain that Mr Bevin may not have further successes in "calling out," as he is pleased to put it, his "reserves." So unless the new peace efforts produce an immediate result all the inhabitants of Greater London are to be deprived of transport facilities, and all those hundreds of thousands who live outside and work in the metropolis are to be gravely hampered in their attempts to reach the places where they earn their daily bread. Why? The main facts have been fairly clearly established by the emergency inquiry which sat last Saturday and Sunday, but which, unfortunately, failed to repeat the success of the recent dock strike inquiry in promoting peace. The Court of Inquiry, in their very succinct report, accept the dual contention, first that, on the basis of wages which are being paid in other industries, the men's claim for a wage increase is justified, and secondly that London's transport organisations, particularly the tramways, are financially unable to grant in full the wage increase demanded. It would, indeed, appear that the employer's have gone to the limit of their capacity in their attempt to secure peace by an offer of a five shillings wages increase, and the submission to arbitration of the question of the further three shillings demanded by the men. The only visible effect of this offer has been to arouse suspicion among the men that the employers, who have, after the strike was in full swing, advanced their terms from zero to five shillings, must be in a better financial position than they have made out. The suspicion is, perhaps, natural, but it is largely unfounded. The crux of the position is that the whole London traffic problem has got into a serious tangle. It is handled uneconomically, and until large alterations in the system have been made, and for some time afterwards, the industry will be unable to bear a level of wages to which the workers may fairly consider themselves entitled. It cannot be cured in the twinkling of an eye; the gordian knot will no more be dissolved by co-ordination proposals of the London Traffic Bill hastily introduced this week than a cancer is cured by a dose of medicine. Meanwhile the public suffer, and may have to suffer more, through the support of other unions to the fight of the traffic employees against a condition of things that cannot be speedily remedied.

The position is serious, and with a view to gaining an insight into orthodox Labour opinion regarding it, we have obtained from a well-informed Labour correspondent the following comments:—"About one aspect of the London Traffic strike there is pretty complete unanimity throughout the various sections that make up Labour opinion. Where any industry is in such a position that it cannot pay its workers adequately, the remedy is not for the workers to go on accepting bad conditions. It is to be found in a change in the organisation of the industry. It is from this point of view that Lord Ashfield's evidence before the Court of Inquiry is seen as holding the key to the entire problem. He was definite as to the failure of competition to grapple with London traffic, its incapacity to serve the public or pay the men properly: equally definite as to the impossibility, so long as that competition continued, of paying better wages to the men. The Government Bill, submitted for its first reading on Tuesday, while open to criticism in detail and not more than a transitional scheme, is designed to secure such a reorganisation, such a control and co-ordination, as, according to Lord Ashfield, will, in the end, enable the industry to meet as a first charge the payment of proper wages to its workers. But it will not bring those changes into operation at once. The men are out for an immediate 8s rise, which they claim as justified, partly by the rise in the cost of living, partly by the speeding up of work. For the sake of 3s, Mr Bevin puts it, the employers are holding London up. To secure this 3s, the Transport Union are now calling out their allies, and threaten a complete paralysis of transport. In doing so they are adopting the

normal tactics of industrial strife. Those tactics differ in an essential respect from the tactics of political Labour, and, in the given case, represent a threat which is resented in many quarters. The industrial and the political movement differ in the philosophy behind them. Labour, on its political side, is committed to democracy, the belief in the majority. It can proceed no faster than the public opinion behind it. The Government Bill, and whatever can be secured by negotiations, represent the limit to which political pressure can go. Industrially, however, Labour still employs, whether consciously or not, the method of minority action; strives to exert the lever of a physical hold-up. Industrially it would argue, it has a weapon which it can only be expected to drop if assured that the objects can be achieved by other means. With a majority Government they might rely upon political action; with a minority they cannot do so, nor would they, in so doing, be fair to that Government. Are they, however, being fair to it as it is? Adherence to direct action is a threat to the Government. It is an expression of impatience which, repeated often enough, cannot but undermine the confidence on which any Government has to rely, and which a minority Government has laboriously to create as it goes on."

Our correspondent is patently correct in saying that the strikers are taking the most effective course to undermine the position of the Labour Government which their votes and the support of their unions have placed in power. That is a serious matter, for another quick change of Government or even the weakening of the authority of the Government now in power is most undesirable at the present stage of international affairs. But the public is more interested in another aspect of the trouble, namely, that the constant recurrence of strikes and threats of strikes are already undermining the confidence of the business world, and are already showing signs of checking the trade expansion which has been progressing for many months and which, under conditions of industrial peace, would, doubtless, continue. As regards the immediate question of the particular struggle now going on the public will stand firmly behind the Government, even though they regard its actions as somewhat dilatory, in whatever measures it may take to maintain a skeleton of London's traffic service; and their support to the Government will be the more determined because they regard the present strike as unjustifiable. The existence of wage grievances is not denied; but a strike against a state of affairs that cannot possibly be mended by strike negotiations, which at the same time causes widespread public inconvenience, is not likely to gain the sympathy of the public.

We confess, however, that we have no great confidence in the Bill hastily introduced this week. There would appear to be three lines on which the problem might be approached:—(1) municipalisation, (2) the grant of a monopoly on condition, of course, of fare control, (3) free and unfettered competition. All are open to objection. As regards (1) we do not anticipate that the L.C.C. would handle the matter as successfully, either from the point of view of financial results or of public convenience, as Lord Ashfield and his colleagues. But on the other hand we doubt whether the present House of Commons would agree to the grant of a monopoly to existing private undertakings, even under strict conditions. The third course, free and unfettered competition, is in theory the most attractive. Anyone who could run a service at a profit would obviously be providing a service which the public finds useful. If he was not serving the public need, and merely encumbering the streets, he would be removed by the natural process of economic law. Services that do not pay will go under. That is all very well in theory, but in practice it is common ground that a real solution demands both some measure of unified control, and the elimination of wastefulness. The Kennedy Jones Committee said in 1920, and the Ullswater Committee repeated last year:—"London requires new tube railways, in all cases linking up with the main line railways; new tramway extensions that will make for greater carrying capacity; a more scientific development of omnibus traffic; and, above all, a just and true perception of the proper functions of each form of transit in order that wasteful competition may be avoided, and each used to its highest efficiency." The solution at present

proposed leaves matters very nearly as they are, except for an advisory body with quite inadequate powers. This intricate problem will not be satisfactorily solved by the strike; or, indeed, in the atmosphere of a strike, which militates against calm consideration. It is so easy to legislate in haste and repent at leisure. It is profoundly regrettable that the men did not return to work on the employers' last offer. The best we can hope is that their colleagues in other sympathetic unions may realise this and build a bridge over which Mr Bevin can retrace his steps before the damage to the public has assumed too grave proportions.

THE FRENCH CRISIS.

ON Wednesday morning the French Government was defeated by 271 to 264 on a motion which had been made a question of confidence by the Finance Minister, M. Lasteurie. The vote was on a comparatively minor issue relating to the proposal to economise on the pensions of Civil servants. M. Poincaré at once placed the resignations of the Cabinet in the hands of the President, and at first refused to consider the possibility of continuing as Prime Minister. But the Press, the political parties, and the President seem to have been unanimous that he should continue, and he has now definitely consented to form a new Ministry. The news of the crisis came as a surprise in London, and probably in most other centres, for though it has been appreciated that M. Poincaré has recently been having a most critical fight, it was thought that the danger had been past when the Senate, by a narrow majority, approved the proposal to give the Government power to impose their financial reforms by decree. Indeed, the decision seems to have come as a surprise to the members of the Chamber itself, which voted to a very large extent by means of proxies.

It is too soon to attempt to estimate what effect, if any, this defeat so soon before the elections will have upon French public opinion, or to gauge the trend of events from it. But there are certain reflections which the incident provokes. British Prime Ministers have not found in M. Poincaré a colleague easy to work with—indeed, it is rumoured that some of his own colleagues in his Cabinet may even be of the same opinion. Members of the British Government might, therefore, be excused for thinking that, with another Prime Minister, even though he held the same views and outlook as M. Poincaré, it would be possible to develop more rapidly a common policy. On the other hand, M. Poincaré, whether it be for his personal qualities or because of the consistency of his attitude in foreign affairs, is an immense political force in France, and if he had chosen to put himself in opposition to or to become strongly critical of the actions of a successor, he might have made his progress impossible. In other words, it is possible that M. Poincaré is the only Prime Minister with whom it is worth while to come to an understanding—a view which is apparently held in Germany, particularly by Herr Stresemann.

But it is often asked in this country whether we are not witnessing a similar movement of opinion in France to that which first undermined the immense prestige, and ultimately overthrew the Government, of Mr Lloyd George. Is there, in fact, going on a movement in France which is not apparent on the surface either in the Press or in the public speeches of politicians? To some of those who put the question the wish is perhaps father to the thought. But the course of events alone can supply the answer. There are, however, reasons for doubting whether the analogy holds good. After all, it is equally probable that M. Poincaré may have gained in prestige as the man who stopped the depreciation of the franc. Even this consideration, however, is double-edged. While the recent recovery in the value of the franc was promptly hailed in France as a great victory, there is another side to the picture. The way in which the appreciation has been carried out has produced difficulty not only for bear speculators abroad, but also for Paris financiers and investors.

BANKING FACILITIES

100 Broadway

New York City

Restrictions have been placed on dealings intended chiefly to affect foreigners; but they have not only destroyed speculation, they have also seriously damaged legitimate business in foreign exchange and created the worst crisis which the Bourse has known for many years. These restrictions, as adopted by the French banks at the urgent request of the Minister of Finance, have prevented the granting of credit to a foreigner against any security whatever, and forced him to pay interest at the rate of 60 per cent. on overdrafts. On the Stock Exchange full cover is required from foreigners, and 25 per cent. from French citizens, for all purchases, while first-class securities are only accepted at 65 per cent. of their actual value instead of 80 per cent, as heretofore. The ensuing rush to cover the huge "bear" position which existed on the exchange market has resulted in very high forward rates. On Wednesday last, for example, the discount for one month forward was from 2 to 3½, and for three months from 5 to 6½. Such rates act as a severe check on legitimate business, since the English exporter will hesitate to sell his goods to France if payment is to be in francs, owing to the loss which he will incur if he covers himself by selling francs forward. In the same way, should payment be in sterling, the French importer will have to pay more in order to cover himself by a forward purchase of sterling. Moreover, the lack of credit is a serious hindrance to firms or banks with a large business in France, in view of the difficulty of having to estimate in advance their actual needs at a time when both the rate of exchange and prices are liable to violent fluctuations. Should they, through any unforeseen delay in the provision of cover, find themselves short of francs, they can only make good the position by borrowing at 60 per cent. It is probable that this provision, more than any other, has a deterrent effect on legitimate business.

On the Bourse, the sudden imposition of the restrictions on all transactions, including those already in existence, resulted in heavy sales. Foreign speculators had invested their holdings of French francs very largely in securities in order to escape the depreciation in value of the French currency. When the necessity arose of covering their "bear" position in the exchange market, a tremendous liquidation of these holdings commenced. In fact, though French Government stocks were only slightly affected, industrials fell on an average from 10 to 20 per cent. between March 9th and 25th, while the more speculative international securities—such as Rio Tinto, Royal Dutch, and De Beers—fell from 25 to 33 per cent. During the last few days the rush has eased, but it is not difficult to see the disastrous effects of such a crisis. In both markets the considerable anxiety still exists as to the settlement at the end of this month. One cannot but feel that the situation would have been dealt with more satisfactorily if the over-weighted "bear" position had been allowed to adjust itself without any restrictions on dealings and with even some assistance in the more serious cases.

The difficulties of the situation will not, however, be confined to financial circles, for the country as a whole finds itself faced with the sharp upward movement of

prices which followed the depreciation of the franc, but is unlikely to follow it in the opposite direction. This rise in the cost of living is felt by every voter. Moreover, if any attempt is made to hold the franc in the neighbourhood of 80, this means that the episode of the last few months will have had the net effect of adjusting the internal to the external purchasing power of the franc, and of doing away with the export bonus which has recently been assisting French industry in foreign competition. Such considerations as these make it extremely difficult to foretell what the ballot boxes will reveal in France two months hence.

A feature of the crisis has been the strong attitude taken by M. Millerand, who brought great pressure to bear upon M. Poincaré to remain in office. In this he reflected the immediate attitude, certainly, of Paris opinion. But if the statement in Thursday's *Matin* was, in fact, inspired by the President, as it claims to have been, it betrays a very remarkable conception of the duties of a constitutional President. The statement declares that except as the result of a general election, French policy cannot be changed. That policy is that France will not evacuate the Ruhr until the total payment of Reparations is completed, that she will establish Budget equilibrium, that she will abstain from loans and enter upon no expenditure not covered by receipts. The President will not accept a Prime Minister who stands for any other policy, and if the country at the elections turns it down, he will resign. Perhaps this remarkable manifesto, if authentic, is meant mainly for home consumption, especially as it represents a very radical departure from the accepted ideas of presidential duties. But in its statement about the Ruhr it is more uncompromising than anything we have had lately from M. Poincaré, and if it truly represents what is to be the future Reparation policy of France, it means an end of the hopes of an understanding with England.

THE DISCLOSURE OF ECONOMIC INFORMATION— THE EMPLOYERS' STANDPOINT.

THE hold up of the railways in January, the docks in February, London traffic in March, and possibly the mines in April—to say nothing of minor disputes—form a series which must make men think furiously about ways and means of avoiding industrial disputes. In a recent article on the Canadian investigation law we called attention to a fairly hopeful experiment which is on the lines along which opinion is surely moving in this country. The idea is that of the League of Nations in international affairs, namely, that there must be inquiry and investigation before and not after war is declared—at all events in the case of public services. We believe that the public is getting to the point where it would be prepared to see the fullest coercive powers of the State used to enforce this rule.

But it is equally clear that prevention is better than cure, and attention can, therefore, be directed with even

greater profit on to ways and means of improving industrial relations. One of these is undoubtedly a franker disclosure as to the facts of industry. In an article last week, we quoted letters we have received from leading members of the Labour Government showing how greatly they appreciate the importance of employers taking work-people into their confidence. It would be idle to pretend that the policy has not its difficulties. But in important cases in this country these difficulties have been overcome, notably in the coal trade, which combines with its policy of disclosure a scheme of product-sharing as a means of fixing remuneration. The iron and steel industries have not in a corporate sense gone so far. But the fact that wages are governed by a sliding scale, and that the prices on which the scale is based are certified from the books of the firms by accountants appointed by the employers and workpeople respectively, have been most valuable factors in securing confidence in the system.

Tentative efforts in this direction are being made by many firms and by some industries throughout the country, and it may be of interest to quote the views of two employers who have direct experience along these lines. The first is that of Mr. C. G. Renold, of Hans Renold, Limited, Manchester, who thinks our suggestions are on the right lines, and that "the effects of such publicity would be very far-reaching in improving relations between Labour and Capital. In our own business here we carry this publicity very far. I think it must be recognised that there are some very real difficulties in following this policy, quite apart from the question of secrecy. The presenting of information on which the policy of a business is settled to a committee of workers places a considerably greater strain on the management. Information which would enable directors, who are familiar through long handling with the details of the business, to arrive at a decision may be far from convincing to a committee of workers who have not the same background of knowledge. I am not, of course, suggesting that the policy of publicity necessarily involves obtaining the permission of a committee of workers, but the policy of explaining does, in the end, entail a need for convincing. This difficulty will, of course, vary from business to business, and will depend on the degree to which the workers are taken into the confidence of the management. I think it will usually be found that costing and accounting methods have to be developed to a greater degree of detail and perfection to enable the position to be put before the workers than would otherwise be necessary. This undoubtedly has its good side, provided it does not involve too great an increase in overhead expense."

The second case is that of Sir Peter Rylands, a director of Rylands Brothers, Limited, the Partington Steel Company, &c., and recently president of the Federation of British Industries. He writes as follows:—"There has been a great deal of talk about the importance of greater co-operation between the employers and the workers, but hitherto the results in actual practice have been somewhat disappointing. The fact is that underlying the workers' attitude is undoubtedly a spirit of suspicion, and the worker's idea of co-operation leads him to approach matters of discussion purely from the personal point of view, as distinguished from the broader interests of the industry in which he is concerned as a whole. In these discussions no doubt the employers also exhibit shortcomings, as in many instances they resent suggestions from the men, and at all events are inclined to think that with their experience of management suggestions put forward by the men from a narrow point of view are not likely to be fruitful. However this may be, the difficulty exists. At the same time, it is an ideal at which we should rightly aim, and as a first step I am satisfied that a fuller knowledge of the actual results achieved by the industry in which the worker is interested is most desirable, and might by gradual steps lead to the full co-operation which idealists desire. I myself have held this view for some years, and have on various occasions advocated the desirability of furnishing aggregate statistics by the employers, revealing fully the amount of profits, dividends, and other salient figures. My advocacy of the principle was successful so far as the wire trade was concerned,

and now for the past four years a considerable number of the leading firms have furnished such figures, which are audited by an independent accountant, and as a matter of interest I may say that in my agreement with the men they have been tabulated under the following heads:—

1. Total capital estimated on the principles laid down by the Finance Acts
2. Total wages, wages being defined as remuneration to all workers in the industry.
3. Salaries. This to include payment to all other employees in the industry, including directors.
4. (a) State and local taxation and payment under National Insurance Acts.
- (b) Amount of excess profits duty.
5. Amounts distributed amongst shareholders and debenture-holders, as interest upon capital.
6. Amount of taxed profit allocated to reserve and special depreciation.
7. Total amount paid for traffic purposes.
8. Aggregate tonnage sales output of the wire from factory.
9. Total coal consumption.
10. Units of electricity purchased.
11. Cubic feet of gas purchased for power purposes.
12. Total number of wage-earners as defined in Clause 2.

It is extremely difficult, for the reasons indicated in your articles, to obtain the acquiescence of employers voluntarily in all industries to furnish information of this kind. My own view is that a trade association is of value, and if properly run, tends to increase efficiency, and as a matter of fact to the actual advantage of the worker, and I think it would be desirable that trade associations should be recognised by law, and given corporate powers, and be in a position to sue and be sued. It is, however, manifest that if such recognition was accorded by the State, it would be desirable that such associations should be subjected to a measure of control, and the most obvious measure (and one which would become increasingly important, should the country decide to adopt a tariff) would be to enact that all such associations should return aggregate statistics of the kind under discussion. I believe that nothing would tend to wear down the suspicion of the workers more than exact information as to the profits earned, and the relation which they bear to wages paid, and gradually it might be that with the removal of that suspicion there would spring up in its place a desire to make the best of the economic conditions, and seek improvement in efficiency, appreciating that the result would be to increase the amount of the wages fund. I am satisfied that there could be no real objection to statistics of the kind suggested, except by industries which are making an undue margin of profit. The staple competitive industries are never in that position, and although during a portion of the period covered by the statistics produced by the wire trade the wire industry was enjoying a high measure of prosperity, there has been nothing in the figures to which the workers have been able to take any exception."

THE QUARTER'S NEW CAPITAL.

THE past quarter has the distinction of providing the smallest total of new capital applications in the first quarter of the year since the end of the war; this is partly accounted for by the fact that the borrowings of the British Government during the past three months have been confined to floating debt operations, and these figures are not included in our statistics. British Government borrowings, indeed, as shown in our figures, are a minus quantity for the past quarter, the repayments of National Savings Certificates during the period having exceeded sales by £1,300,000. The total of other issues in the quarter amounts to over £37½ millions, giving a net figure of £286½ millions in the corresponding periods of 1923 and 1922 respectively, or £42½ millions and £74½ millions, exclusive of British Government borrowings. The following table gives the totals for a number of past years, and for the first quarters of those years, showing the

amounts borrowed by the British Government separately:—

	(Million £'s.)			
	First Quarter.	Whole Year.	First Quarter.	Whole Year.
1912.....	nil	48.0	nil	210.9
1913.....	nil	50.3	nil	196.5
1914.....	nil	97.6	332.5	512.5
1920.....	7.5	135.1	37.5	367.5
1921.....	17.0	63.4	202.3	389.0
1922.....	211.9	286.2	369.6	573.7
1923.....	43.8	86.3	77.5	271.4
1924.....	Dr 1.3	36.0	..	..

In the first quarter of last year the British Government sold over £38 millions of 4 and 4½ per cent. Treasury bonds, and there was a net sale of £5½ millions of Savings Certificates. During the past quarter sales of the latter have exceeded repayments in only two weeks.

In the following analysis we give a classification of the quarterly totals since the beginning of 1919, from which it will be seen that foreign and colonial governments have been responsible in 1924 for more than half the new capital raised in London:—

	(In Million £'s.)									
	Total	British Govt.	Foreign and Colonial	British and Foreign Corpns.	Foreign Rail.	Finance, Mines, & Exploration.	Rubber	Oil	Balance	Mainly Home Industry.

* In 15 months after April, 1920, £80,000,000, mostly Housing bonds.

The amount taken for home industry in the past quarter, it will be seen, is the smallest in the period covered by the table, with the exception of the third quarter of 1921. Of the total raised this year by foreign and colonial governments, the former account for the bulk of the total, whereas in the first quarters of the three preceding years the position has been the reverse, as may be seen from the next table. This is accounted for by the big Japanese Government issue in February:—

Analysis of New Capital Applications.

	Total for First Quarters of Years.			
	1921.	1922.	1923.	1924.

Total.....	63,382,100	286,207,100	86,251,500	35,012,800

Our figures do not include loans issued entirely for purposes of conversion, and the New South Wales and Union of South Africa 5 per cent. loans are thus excluded. The total under Colonial Government loans consists of the

Southern Rhodesian issue of £3 millions in 5 per cents. at 98, and the Western Australia £2 millions loan on the same terms. Of the Japanese loan in February for £25 millions, £12 millions was allotted for conversion from the 4½ per cent. loan of 1905. The terms were 6 per cent. at £87½, the figure given in our table for the remaining £13 millions being, therefore, £11,375,000. The Siamese Government loan this week for £3 millions in 6 per cents. at 95½ is the only other foreign government loan during the quarter. Newport (Mon.) is the first British corporation to borrow since the last quarter of 1922. The issue was in 5 per cent. stock at 97½. This week's City of Amsterdam 5½ per cent. loan of £2½ millions at 96½ is the only foreign corporation issue in the quarter. The bulk of the total in the mining group is accounted for by the National Smelting Company's issue of £1,500,000 7 per cent. debentures at 99. Under the financial and investment trust group there were five issues, all in ordinary shares, of which the largest was 50,000 £10 shares by the Caledonian Trust at a premium of 10s per share. The principal issue in the manufacturing group was the Anglo-Newfoundland Development issue of £1,250,000 in 6 per cent. second mortgage bonds at 98. Other important issues were made by the Hoffmann Manufacturing Co., £500,000 in 7½ per cent. preference shares; Vickers, Limited, £2 millions in 5½ per cent. debentures, of which £1½ millions were for redemption of 7 per cent. notes; Sheepbridge Coal and Iron Co., £500,000; United River Plate Telephone Co., £540,000 in ordinary shares; British Columbia Electric Railway, £731,500; S.T.D. Motors, £487,500; Bank Line, £1,775,000 in 5 per cent. debentures; J. Lyons and Co., £575,000; and James Finlay and Co., £1,337,500 in £1 ordinary shares issued at £2 10s.

Our next table shows the destination of the new capital raised in the first quarters of a number of past years:—

DESTINATION OF NEW CAPITAL.

	First Quarters of Years.					
	1913.	1920.	1921.	1922.	1923.	1924.
United Kingdom—Government.....	£ nil	£ 7,450,000	£ 17,073,800	£ 211,833,100	£ 43,775,200	£ Dr 1,300,000
Other.....	7,542,000	111,664,500	24,922,900	28,322,400	10,821,500	9,469,900
Brit. Possessions—Government.....	7,542,000	119,124,500	41,996,700	240,215,500	54,596,700	8,169,900
Other.....	7,626,600	5,470,000	7,399,600	16,490,000	12,567,300	4,900,000
Foreign countries—Government.....	14,327,500	7,518,300	2,373,900	2,357,000	7,711,500	5,562,700
Other.....	21,954,100	12,988,300	9,773,500	18,847,000	20,278,800	10,462,700
Foreign countries—Government.....	3,523,600	nil	1,930,000	3,574,600	5,594,000	14,240,000
Other.....	17,325,000	2,981,700	9,681,900	23,570,000	5,782,000	3,160,300
Grand total.....	20,848,600	2,981,700	11,611,900	27,144,600	11,376,000	17,390,200
Grand total.....	50,344,700	135,094,500	63,382,100	286,207,100	86,251,500	35,012,800

If the borrowings of the British Government be eliminated, we find that the proportion of new capital going overseas has been fairly steady in the past three years; but while the percentage is much higher than in 1920 and 1921, it is substantially below that shown in 1913.

The reception accorded to the various large issues made during the past quarter has been by no means uniform, and does not appear to have borne any very close relation to the actual terms of issue. Underwriters have been left in several instances with large proportions of the issues on their hands, but in the majority of cases prices have not gone to a very large discount. The Japanese loan stands at 3¼ premium, British Columbia Electric Railway debentures at 6¼ premium, Western Australia and Southern Rhodesia loans at ½ premium, and the 8 per cent. notes of S.T.D. Motors at 4 discount.

THE BRITISH LEATHER TRADES.

(BY A CORRESPONDENT).

ALTHOUGH the past year opened up badly for the leather trade, it has shown a gradual improvement, and 1923 closed with a much better feeling in the allied industries. The economy practised by all classes of the community had the effect of increasing the demand for the commonest grades of both sole and dressed leather, whilst the financial position was regarded as extremely weak, credits being restricted even to the largest consumers. Continental demand was also hampered by the fluctuation of the ex-

changes, and imports of American sole leather were affected by the same cause. Towards the half-year, however, an improvement set in, and higher grades of leather were gradually demanded; tanners pursued a cautious policy, and as they worked in only sufficient hides to cope with the demand, prices showed no tendency to fall, and both producers and consumers began to feel more confidence in the future of business. Chrome leather tanners have, however, had rather a bad time owing to the continuous supply of German box and willow calf which, in many cases, was offered at prices often below the cost of production in this country.

Turning to the overseas business done as shown by the Board of Trade figures for 1923, it is satisfactory to report a decided improvement in many directions. The imports of leather and manufactures thereof for last year amounted in value to £11,906,960, or an increase of £633,318, as compared with 1922. On the other hand, exports of leather and leather goods for 1923 were valued at £5,766,159—an increase of £646,796 as compared with 1922. It might be mentioned, however, that quite a large proportion of the value of imported leather is made up of rough tanned leather from India, Australia, New Zealand, and elsewhere, which is further finished, and provides work for thousands of skilled operatives, whilst some of it is, of course, re-exported. Judged by the test of imported hides, it is safe to assume that tanners are in a much better position; in 1922 the total weight of wet-salted hides amounted to 589,265 cwts, rising in 1923 to 791,283 cwts. Dry hides imported also show a decided increase from 521,054 cwts in 1922 to 606,101 cwts last year. Woolled sheep and lamb skins declined from 757,386 cwts to 556,319 for the two years under review, probably owing to the intense demand for sheepskins from America and the Continent. As re-exports of imported hides showed little difference last year as against 1922, it is clear that a good deal more raw material has been worked up by British tanners.

As regards imported leather, the total value in 1922 amounted to £10,727,025, increasing last year to £11,076,463, dressed leather accounting for £6,846,611 and £6,333,182 of the totals. Space will not permit of an exhaustive analysis of the figures, but it is important to note that the German bill for undressed leather was £7,215 in 1922, and advanced to £119,075 in 1923, America's showing a slight decline at £561,863 and £515,845 respectively. Rough leather (hides) sent from British India totalled 140,112 cwts (value £1,007,908) in 1922, advancing to 250,330 cwts (value £2,014,478) in 1923. Colonial heavy leather imports show little alteration on comparison, Australia and Canada sending rather more, whilst New Zealand showed a decline.

Imports of tanned goat skins for 1922-23 reached a total of 34,901 cwts (value £688,505) and 26,582 cwts (value £450,715), the bulk of the supply being of East Indian origin. Imports of tanned sheepskins for the same years were 68,518 cwts (value £918,876) and 68,374 cwts (value £921,057), India supplying tanned sheepskins in 1923 valued at £647,053, as against £600,919 in 1922.

Reviewing briefly the countries of origin of imported dressed leather, the main business has been done by the United States, whilst in certain classes France and Germany have increased their trade with Britain during the last year. The values of imported glacé kid for 1922-23 were £2,028,311 and £1,971,439 respectively, America accounting last year for £1,597,386, France £137,464 and Germany £85,487. Imports of patent leather for 1922-23 were valued at £1,110,472 and £1,078,945, America sending this class of leather last year to the value of £583,727 and Germany £115,875. Under the heading of "All Other Sorts" the value has dropped from £3,707,828 to £3,282,798 for 1922-23; this class includes chrome calf and side leathers, and the value of the German business amounted last year to £670,156, as against £598,841 in 1922, France's share in 1923 being £798,541 and America's £968,675. Boot and shoe imports show an advance from £1,036,234 to £1,147,951 for 1922-23, the bulk of the business being probably due to increased trade with Switzerland, America and Germany.

Imports of leather gloves continued on a larger scale, increasing in value from £1,206,898 in 1922 to £1,357,059 last year. The poor state of overseas trade

is plainly shown by the export figures relating to hand-wear, as the value of exports for 1922-23 amounted to £134,708 and £116,655 only, against the formidable import above mentioned.

Coming down to export business in other sections of the leather trades, the most satisfactory sign is the big increase in the export of boots and shoes during the past year. In 1922 the value of British exports of leather footwear amounted to £2,825,937, increasing in 1923 to £4,320,936. An analysis of the figures, however, shows that the increase is mainly due to Colonial trade, the chief outlets for 1923 being British South Africa with £848,736; East India, £125,341; Australia, £112,404; New Zealand, £821,046; and British West Indies, £135,349. Apropos of the Australian and New Zealand trade, some anxiety is felt here at the agitation now going on in those markets in connection with the rebate given to British-made boots and shoes containing German leather. France, by the way, bought British-made boots to the value of £73,264 only in 1923, as compared with £204,025 in 1922, whilst the trade with the Netherlands has fallen from £178,090 to £88,827 for the same periods.

Although the export in leather has been much hampered by the fluctuations in the various exchanges, yet the latest statistics give cause for satisfaction. In 1922 the weight of exported British leather totalled 230,201 cwts (value £3,752,800), as compared with 260,032 cwts (value £4,123,751) during 1923. The largest consumer of British leather during last year has been the United States with £1,304,727 to its debit, followed by France with £718,372, Germany £167,352, Belgium £145,449, and the Netherlands with £85,564. As leather to the total value of £4,123,751 was sent overseas last year, as against £3,752,800 for 1922; which speaks well for the enterprise of our tanners and curriers at a time when it is extremely difficult to obtain and finance business of any kind.

The less important items in export business include leather belting; the trade is fairly satisfactory, but shows little advance, as its value in 1922 was £519,830, and in 1923, £559,891. This section of the leather business is, however, greatly competed for by America and the Continent, whilst textile substitutes play an increasing part in this direction. In view of the rapid increase in mechanical transport and haulage, much progress in the export trade in saddlery and harness can hardly be looked for. Still, the value of the business done in 1922 has jumped from £184,461 to £289,197 in 1923. The chief customers include the United States with £57,078, South Africa £56,219, East Indies £15,306, Australia £21,461, and other countries £86,117. Under the heading of "Other Sorts," the British export business last year amounted to £793,320, as against £662,272 for 1922, and as this includes an infinite variety of leather goods, such as travelling requisites, fancy goods, &c., it is clear that our manufacturers are fully alive to the possibilities of export business.

So much for a brief review of leather trade conditions during 1923, and as trade at the end of February this year is quite good in most directions, it is to be hoped the efforts of tanners and dressers will be better rewarded than was the case in 1923. The fly in the ointment of the tanner is the high price of hides both here and overseas, and the immense difficulty in obtaining adequate advances for sole leather. Most boot manufacturers plainly state they are quite unable to pay more for leather owing to the lower price of footwear, and at once work in cheaper bends from dry hides if wet-salted are too dear. Still, the peak price of hides seems to have been reached, as there were slight declines at last week's Bermondsey auctions, several classes of best hides, in fact, not finding buyers. Calfskins remain very dear, the cause being—according to light leather tanners—the demand from the United States for them in this market. The prohibition on the export of French skins is also causing the position to assume a firmness which is not pleasing to chrome tanners.

All kinds of upper stock are meeting with a brisk demand, and prices of box and willow calf show substantial advances since the opening of the year. Imports of this class of leather are again shown under separate headings

in the official figures for January last, and it is significant to note that the value fell in January last to £19,220, as against £73,564 in January, 1923. It is, however, known that some of the German leather has been coming in via Holland, and is not therefore shown as of German origin. For the same periods, imports of glacé kid dropped from £202,479 in January, 1923, to £162,139, patent from £108,177 to £92,743, and other sorts from £206,023 to £120,690, so that it is evident our light leather tanners are meeting with less competition from overseas, owing partly to the American exchange, and the refusal in November last of the German Government to pay reparation duty. However, as this has now been brought down from 26 to 5 per cent., some of our chrome leather manufacturers are already prophesying a dump of leather from Germany. This, however, is not likely, as costs of production are advancing in Germany, and, furthermore, tanners are getting better prices on the Continent than is possible here.

Generally speaking, the allied trades seem confident of a better trade this year, and it is to be devoutly hoped no further labour troubles will crop up to destroy confidence.

DEBENTURES—I.—FLOATING CHARGES AND TRADE CREDITORS.

(BY A CORRESPONDENT.)

MR EDWARD MANSON, in his well-known book on Debentures, commenting on the immense sums companies have been able to borrow from the public, remarks that "the security which the company offers in the shape of debentures or debenture stock is one which covers the entire undertaking, property, and assets of the company—a security so advantageous to the holders as to constitute almost an injustice to the general creditors of the company."

A debenture—to adopt one of several judicial definitions that have been given—means a document which either creates a debt or acknowledges it. That is all. An I O U signed by John Smith would be a debenture. Usually the word is associated with an acknowledgment of indebtedness issued by a company, and the obligation or covenant to pay is in most instances accompanied by some charge or security, but these features, it is important to note, are not of the essence of a debenture. The term is not, either in law or commerce, a strictly technical one; it may be applied to any document which is a mere promise, by an individual no less than by a company, to pay, though, in modern parlance, it is most frequently used to denote a promise or covenant issued by a company, which, more often than not, is supplemented by a charge on property.

In some instances—as the sentence quoted at the commencement suggested—the advantageous position of debenture-holders, whose claims are well secured, contrasts markedly with that of the ordinary creditors of a company. This is often so much so in cases of winding-up on insolvency that restrictions have been proposed on the power of companies to charge their property, especially on their power (which is much more extensive than that of individuals) to charge after-acquired property by means of the form of security known as a floating charge.

This question—whether the power of a company to give a floating charge over its whole undertaking, including future property, ought to be abolished—is the main subject intended now to be discussed. At the outset let it be made clear that any proposal for a restriction of the charge-making powers of companies will be based not alone on the ground that the interests of trade creditors should be protected. Floating charges, curiously, are open to challenge not only from the point of view of ordinary creditors, but also from that of investors. The issue of unsecured debentures being unusual, many people assume, almost as a matter of course, that, if they buy debentures, they obtain an investment which is good because secured by an effective charge upon the property of the company.

The fact that there are many degrees of security receives much less attention than it should. Though the Committee of the London Stock Exchange rightly object to debentures being described as "mortgage debentures" unless there is a trust deed conveying the legal estate in the security to trustees for the debenture-holders, the words "debenture" and "debenture-stock" are too loosely used, and the degree of security or priority in the event of the winding-up of the company is too little considered. The public do not sufficiently appreciate that a debenture depending upon a floating charge may prove, in the event of the company's business not prospering, to be very ill-secured, and this false assumption of security is undesirable. The investment aspect will, however, be further discussed after dealing with the creditors' point of view.

In recent years the practice has greatly developed of issuing debentures secured by a charge which "floats" over all the assets, present and future, of the company, but does not specifically attach to any property until, in certain events, such as failure by the company to pay interest, or the passing of a resolution to wind up, the charge "crystallises" and becomes enforceable. A floating charge is, as is well known, a charge not on any specific property, but on the whole undertaking of a company, and in general on such assets as the company giving the charge may from time to time own. The company may freely mortgage or sell and buy afresh, despite the floating charge, so long as what it does is in the ordinary course of its business. If the company prospers, all is well, but, as the Report of the Company Law Amendment Committee of 1906 pointed out, "Cases of insolvency sometimes occur, and then the unsecured creditors very commonly find that they are postponed to creditors having floating charges, whether recently created or not, and that the assets are insufficient to meet such charges. There are, too, some cases in which a floating charge is framed and utilised for the purpose of entrapping unsecured creditors, as where the holder of a floating charge is in close touch with the company and deliberately watches the position, and then, if any unsecured creditor seeks to enforce payment, promptly applies for the appointment of a receiver."

The majority of the Committee thought that for the most part floating charges, while facilitating the raising of money, did not interfere with the general creditors of a company to such an extent as to justify a recommendation for their abolition. The power possessed by a company, as distinguished from an individual, to give a floating charge over its future property, is, it should be remarked, peculiar to companies subject to English law. Neither Scotland, France, nor Germany recognises such a right, and a minority of the Committee of 1906 (after referring to the hardship sometimes suffered, where the power to create floating charges is abused, by ordinary unsecured creditors who have supplied goods on credit) expressed the view that a company ought to be rendered incapable of charging after-acquired chattels, or future book debts, or other property not in existence at the time of the creation of the charge.

The contrast between a company and an individual is that a charge given by an individual is not effective against a trustee in bankruptcy unless possession is taken under the charge before the bankruptcy, whereas a floating charge given by a company is effective in the hands of the holder without seizure before the insolvency of the company. This anomaly has never been favoured by commercial men. The same contrast exists between English and Scottish companies. The latter have no greater power than individuals. In a recently published brochure on the distinctions between the laws of England and Scotland as to companies, Mr G. W. Wilton, K.C., remarks that "It does not seem right that companies should be allowed to trade in England in a way not open to the individual trader." He condemns the "iniquitous results" of floating securities, without which Scottish companies have no difficulty in obtaining financial aid.

If floating charges are not really needed to facilitate the raising of money, the suggestion that the power of a company to charge after-acquired assets should be cancelled can, in the interests of unsecured creditors, be urged on very strong grounds. The interests of investors remain for consideration. That side of the subject will be dealt with in a further article.

TRUSTS AND ANTI-TRUST LEGISLATION IN THE UNITED STATES.—II.

THE Federal Trade Commission has been extremely active since its formation, and its proceedings have given rise to considerable controversy. That it has done much useful work as regards both combinations and unfair methods of competition is beyond question; but it has been fiercely attacked, it appears not to be much in favour with the Republican administration (it was a Democratic creation), and it is evidently viewed with considerable jealousy by the Courts. As regards this last point the Commission, in its most recent annual report, refers to a decision (in the Gratz case) which held the term "unfair methods of competition" in the Federal Trade Commission Act to be inapplicable to practices not hitherto regarded as opposed to good morals or public policy, and thus limited the Commission's repressive powers to precedents established under common law and judicial decisions, and also, in the Commission's own words, "attached to the Commission's procedure a rule of pleading comparable in strictness to that governing a criminal indictment." From the establishment of the Commission to the end of June, 1923, there were 23 cases of appeals to the Federal Courts to set aside orders made by the Commission; in 13 the orders were sustained, and in 10 they were reversed. There had been eight cases in which the Commission's powers to require reports from corporations, and compel access to records, were challenged—they were all decided against the Commission, and all except one were under appeal at the end of June, 1923.

One of the most interesting illustrations of the work of the Commission and its general position is its investigation of the meat-packing industry, which has for many years past furnished the critics of combination with their main subject of attack. It was mentioned in the previous article that a prosecution of the meat packers had failed in 1912, but in 1917 the Federal Trade Commission made a new inquiry, as part of a larger one directed by President Wilson into the "production, ownership, manufacture, storage and distribution of foodstuffs." Its conduct of the inquiry aroused the fierce indignation of the packers; in "Supplying England's Meat," a defence of the packers published (1923) by Mr G. E. Putnam, who is attached to the Swift Company as "economic adviser," the Commission is attacked (p. 103) as "unfair, unjust, and unscientific," and (pp. 104-5) apparently "more concerned with the finding of evidence that would seem to establish a case against the packers than in ascertaining the real facts about their business." However that may be, the Commission did find (July, 1918) that five concerns had a monopolistic control over the American meat industry, and had secured control (similar in purpose though not yet in extent) over the principal substitutes for meat, such as eggs, cheese, and vegetable oil products; that they had extended their operations to meat supplies from other countries; and that a small group of individuals controlled the five concerns. The New Zealand Government then refused to grant a licence to one of the five to engage in the meat export trade from that country, and in reply to a protest by the United States Government it pointed to the Commission's report. The American Department of State then drew attention to the acquittal of the packers in 1912, and the fact that no further judicial proceedings had been taken, and observed that the New Zealand Government attached much greater weight to the report of the Federal Trade Commission than did the American departments charged with enforcing the anti-trust laws. Nevertheless, the five large packers voluntarily agreed with the U.S. Attorney-General in February, 1920, to dispose of their interests in stockyards and market newspapers, and to cease buying tinned fruits, vegetables, and some other products—though the decree giving effect to this formally stated that their consent in no way constituted an admission of

guilt. In 1921 the Packers and Stockyards Act transferred the investigatory powers of the Federal Trade Commission in respect of the packing industry to the Secretary for Agriculture, and practically made the stockyards "public utilities," and put them under his control. But the Commission had not yet done with the packers; in 1922-3 it made orders (now subject to appeal) requiring Armour and Company to divest itself of shares in the E. H. Stanton Company and Swift and Company to divest itself of shares in the Andalusia Packing Company and the Montrie Packing Company.

Another illustration of the Commission's activities is furnished by the iron and steel industry. In 1921 it was announced that arrangements had been practically completed for the consolidation of seven of the largest concerns in that industry outside the United States Steel Corporation. Those were the Midvale Steel and Ordnance Company, the Republic Iron and Steel Company, the Youngstown Sheet and Tube Company, the Brier Hill Steel Company, the Lackawanna Steel Company, the Steel and Tube Company of America, and the Inland Steel Company. But suddenly the Bethlehem Steel Company acquired all the properties of the Lackawanna Company, which withdrew from the proposed scheme; that was abandoned, but the Midvale, Republic, and Inland Companies proceeded to form a consolidation which also included the Cambria Steel Company. The Federal Trade Commission then intervened, and issued formal complaints against the Bethlehem and Lackawanna companies in respect of the acquisition by the former of the properties of the latter, and against the Midvale, Republic, Inland, and Cambria Companies in respect of the proposed consolidation. This seems to have caused the consolidation scheme to be dropped, but the Bethlehem Steel Corporation and Bethlehem Steel Company purchased the properties and assets of the Midvale and Cambria Companies. Finally (January, 1923) the Federal Trade Commission issued formal complaint against the Bethlehem companies and their associated concerns, alleging that the consolidation—of the only large and thoroughly integrated companies east of Pittsburgh—would lessen competition among them, unduly hinder competition in the industry, and put an unreasonable restraint upon trade, particularly in the north-eastern section of the United States. The case is still pending, but whatever the outcome it is evident that the schemes of consolidation have been seriously hampered, if they have not been entirely frustrated, by the action of the Commission—the economic wisdom of that action is another and much more debatable question.

Other examples of the Commission's work are the order, upheld by the Supreme Court, requiring the Aluminium Company of America to divest itself of its holding in the Aluminium Rolling Company; its action in a number of cases in respect of price-fixing among tobacco-wholesalers in combination with tobacco manufacturers (including the American Tobacco Company), the latter being charged with refusing to supply wholesalers who did not adhere to the agreed prices; and the proceedings (not concluded at the end of the report year) in respect of a powerful group engaged in the production, distribution, and exhibition of moving pictures, and charged with conspiracy to dominate and monopolise the industry in the United States. The Commission also receives large numbers of complaints as to various forms of unfair competition; during the year 1922-23 it dealt finally with 126, dismissing 48 and in 78 ordering respondents to cease and desist from the practices complained of (mostly false advertising or misbranding).

A recent case which has attracted considerable attention is that of the United States v. Trenton Pottery Company, *et al.*, which was tried in the Southern New York District Court of the United States in March last. It was a criminal indictment under the Sherman Act of 23 companies—representing about 85 per cent. of the total output of sanitary pottery in the United States—charging them with engaging in a combination and conspiracy in restraint of inter-State trade by forming the Sanitary Potters' Association, which fixed uniform prices. The indictment did not allege that the prices so fixed were unreasonable or detrimental to the public, and the Court held that any consideration of that kind was irrelevant,

Notes of the Week.

Greece a Republic.—Last Tuesday, March 25th, the Constituent Assembly of Greece, by a unanimous vote of all members present, proclaimed the dethronement of the Glücksburg Dynasty, and declared Greece a Republic, subject to the confirmation of this decision by a plebiscite. This is eminently an internal affair of the Greek nation, but the rest of the world is concerned in so far as the step may tend to promote tranquillity or unrest in Greece, and so, indirectly, in South-Eastern Europe as a whole. Foreign observers are to this extent bound to take an interest in the question, and they will be inclined to draw some distinction between the matter and the manner in what has been done. As regards the matter, the Greek Republicans are on strong ground—always supposing that they treat the royal personages concerned with fairness from the personal point of view, and on this point the resolutions are somewhat sweeping. The perpetual banishment of the whole family may be common sense, but the appropriation of their property is not accompanied by any assurance of equitable compensation. On the point of principle, however, it is arguable that a monarchy in Greece is an anachronism. The Greek Constitutional Monarchy was originally established (in 1830) not by the Greeks themselves, but by the Courts of Great Britain, France, and Russia, to whom the Greeks had referred the question after the ill-success of their first experiment in Republicanism under the presidency of Capodistrias. Constitutional monarchy reconciled the parliamentarism of Great Britain with the "legitimist" doctrine of the Continental Powers (who had sedulously abolished all existing Republics in Western Europe in 1815, and had no mind to patronise a new one in the Near East), and the successive occupation of their throne by members of two minor West-European dynasties was valuable to the Greeks themselves, inasmuch as it initiated their new State into the comity of Europe, at that time predominantly united through the personal relationships of sovereigns. During the intervening century, however, that link has become progressively less important, until it has lost almost all significance since "Crowned Heads" went down like ninepins in 1917 and 1918. Indeed, King Constantine's family connection with the Kaiser was extremely awkward for Greece during the War, for it drew a red herring across the King's policy of neutrality, which, if presented purely on its merits, might well have been regarded as the best course for the country. So much for the matter of the decision; but the manner is none the less regrettable, and may well lead to further trouble, for since 1915 the dynasty has become the focus round which the party politics of Greece have grouped themselves in battles. The weakness of Greek politics is that partisanship is carried to extremes, and that considerations of personality too often outweigh principles. After ten years of increasingly embittered vendetta the country's crying need is for an amnesty in the Ancient Greek sense of "oblivion." This can only be achieved if the dynastic question is put to sleep by some soporific which all parties can be brought to regard as wholesome and legitimate. A plebiscite, taken under scrupulously and demonstrably fair conditions, might have proved the remedy, and this was Mr Venizelos's policy. His recent withdrawal was due to his being overruled by the Extreme Republicans on this point in favour of the momentous political change being made by vote of an Assembly whose authority the Monarchists challenge as biased and unrepresentative. It is hardly a mitigation that the plebiscite should be tacked on to this as a sequel. If it records the same result as the Assembly's vote, the Monarchists will never accept it as unprejudiced, while if the opposite result occurs (and Greek politics are fertile in surprises) that will merely plunge the country into further confusion.

The Burden of Taxation.—In a recent issue we printed an estimate by a French expert showing the proportion which French taxation bore before the war and at present to the national income of France. In a comment upon this article a writer in the *Nation and Athenæum* contrasts the figures for France, which show an increase from 14 per cent. of the national income in 1913 to 16 per

any agreement to fix prices being illegal even if the agreement were to reduce them, since the power to reduce prices by collective action implies the possession of power to raise them. The defendants were convicted, a number of individual directors were sentenced to terms of imprisonment (ten months in one case, six months in seven others), various officials of the companies concerned were fined, and all the defendant companies were fined from \$2,500 to \$5,000 each. Appeal has been lodged.

Whilst the Federal Trade Commission and the Department of Justice have thus been engaged in enforcing anti-trust legislation, the Department of Commerce under Mr Hoover is actively occupied with promoting trade associations which shall confine their activities strictly within the law, and has recently issued a report on "Trade Association Activities," which may be described as a handbook for secretaries of such bodies. In an introduction to that report Mr Hoover writes:—

"The trade association as a facility for the promotion and self-regulation of industry and commerce has become, by reason of its scope and activity, an important American business institution....."

"The American Trade Association's Executive have defined a trade association somewhat as follows:—

"A trade association is an organisation of producers or distributors of a commodity or service upon a mutual basis for the purpose of promoting the business of its branch of industry or commerce, and improving its service to the public. Among the methods now in use for accomplishing this end are the compilation and distribution of information, the establishment of trade standards, and the co-operative handling of problems common to the production or distribution of the commodity or service with which they are concerned."

The great development of these associations came in the United States, as in Great Britain, during the war, and for much the same reasons. As the report points out, the War Industries Board in 1917 found it necessary to mobilise many industries, and the most convenient course was to organise each into a trade association; and the "spirit of co-operation rampant from 1917 to 1920, produced many a trade association of mushroom variety that soon died." In 1914 there were about 800 trade associations in the United States, in 1919 there were some 2,000, by 1923 the number had fallen to about 1,800. The questions with which they concern themselves are:—Trade relations, and relations with the Government, the employees, and the public, credit and collection, transportation, insurance, legislation, commercial research, industrial research, cost accounting, statistics, and simplification and standardisation, though admittedly few of the associations cover more than a small part of the field thus indicated. In order that those concerned with running such associations (who, we may remark, have come together in the American Trade Associations Executive) might have some guidance as to the legal position, Mr Hoover consulted the Attorney-General (Mr Dougherty) as to the legality of the activities set out above, provided that they were not used as a cloak for some agreement in restraint of trade. The Attorney-General's reply contains the following passage, which points to the inherent probability that association for one set of purposes may lead to co-operation, avowed or tacit, for other purposes and hints at the conflict which may arise:—"I can now see nothing illegal in the exercise of the other activities mentioned"—(he had expressed some doubts on two points)—"provided always that whatever is done is not used as a scheme to curtail production or enhance prices, and does not have the effect of suppressing competition. It is impossible to determine in advance just what the effect of a plan when put into operation may be. This is especially true with reference to trade associations, whose members are vitally interested in advancing, or, as they term it, stabilising prices, and who through the medium of the association are brought into personal contact with each other. Therefore, the expression of the view that the things enumerated by you.....may be done lawfully is only tentative; and if in the actual practice of any of them it shall develop that competition is suppressed or prices are materially enhanced, this Department must treat such a practice as it treats any other which is violative of the Anti-Trust Act."

cent. in 1923, and 20 per cent. if the present reforms are carried out, with the figures for England, which the writer states have risen from 8 per cent. of our national income to 20 per cent. at the present day. The figure for this country has, however, been higher, for in 1921-22 the national income slumped very heavily owing to trade depression, whereas taxation was kept on at a very high rate after the boom of 1920 was over. The percentage was probably as high as 23 or 24 per cent. But the national income has been recovering fairly rapidly, and taxation has been falling. Professor Bowley, in the "Bulletin of the London and Cambridge Economic Service," recently estimated the rate of production last year at about 93 per cent of pre-war. The present rate is undoubtedly much higher than this, and we think there are reasons for regarding Professor Bowley's figure as an underestimate. For the sake of argument we will, however, accept his figure and assume a 75 per cent. increase in the level of prices since 1913. Starting from a national income in the former year of £2,240 millions, this gives us approximately £3,700 millions at present. But to this has to be added the interest on the National Debt, which, though not income in the same sense as the rest, is subject to taxation, and must therefore be added for the present purpose. This gives a minimum figure of £4,000 millions for 1923; the taxation income in the current Budget is £740 millions, which gives a percentage of 18½ per cent. Unless anything untoward happens the national income for the current year will certainly be substantially greater than this figure, and unless taxation is increased the percentage figure should fall steadily towards 16 per cent. On the other hand, if France is to put her house in order she must collect in taxation 20 per cent. of her national income under the present reforms, and must be prepared to see this rise to a higher figure, unless she adopts a financial policy which will stabilise the franc on a cheaper basis than 75 to the £.

Irish Free State Affairs.—Our Dublin correspondent writes:—The week has been overshadowed by the Queens-town crime, which in wanton brutality and malignity of intention must be almost unprecedented. The object clearly was to precipitate a breach between the Free State and Great Britain—to create a wave of indignation in Britain in which the Free State and the Anglo-Irish Treaty and the new spirit of understanding and friendship between the two countries should be swallowed up. The crime has been repudiated by every section of the community, including extremist Republicans and the leaders of the insubordinate section of the Free State Army. The gorge of the public has risen at the crime, and there is very warm appreciation of the dignity and temperate judgment which has marked the public attitude in Great Britain. The correct attitude of the Irish Ministers is but a reflection of the public desire, and if the public will be translated into action the search for the criminals will be relentless and their punishment condign—so, too, will the compensation for the victims be prompt as well as lavish. The insubordination in the Army, to which reference was made last week, is being dealt with—not without misunderstandings and difficulties—but, still, is being dealt with successfully. Two Ministers out of the seven who compose the Executive Council have resigned, and have not so far been replaced—both were at odds with the majority of their colleagues, but even more were they at odds with each other. The cause of civil control over the military machine has been successfully maintained, and discipline has been enforced by the disappearance of the insubordinate group from the positions which they occupied. These results are of great importance—so, too, is the restraint shown by the protagonists on the side of the malcontents, who have been persuaded to submission and the surrender of purloined arms and munitions. It is even doubtful whether the further threatened resignations will now take place. The actual working out of the trouble has been obscure—but not so its cause. There survived in the Army and behind the Army the remnants of secret, or semi-secret organisations from the period of the anti-British struggle. These have been to some extent in conflict with each other, and to some extent with the State. The matter had to come to a head sooner or later. Viewed from this angle, the whole affair is but an episode

in the healthy development of the national life. The newspapers here to-day report figures given by Lord Arnold in the House of Lords as to the payment of compensation as awarded by the Woods-Renton Commission in respect of pre-truce damage. The number of claims submitted down to February 29th last was 39,475—inclusive of certain duplicate claims. In all, £5,596,488 (exclusive of costs and expenses) has been awarded. All awards are in the first instance payable by the Government here, which is subsequently reimbursed by the British Government in so far as the damage may have been done by the armed forces of the Crown. Down to February 29th last 9,473 awards, amounting to the above figure, have been issued, of which 8,000—amounting to £3,139,175—have been paid. Of this last figure the British Government has refunded to the Irish Government £2,083,024. The difference between the awards and payments is accounted for in part by the fact that £1,246,194 was awarded subject to reinstatement of the property destroyed, and was, therefore, not immediately payable. The other factor is that it is necessary to advertise somewhat elaborately for possible claimants before paying the awards—and the delay on this head works out, on an average, to some six or seven weeks. Allowing for these factors, the payment of awards is complete and prompt.

Conference on Unemployment.—The League of Nations Union has been holding an interesting series of conferences at the London School of Economics this week on various aspects of the unemployment problem. The subjects of discussion ranged from International Trade to Unemployment insurance, and, in spite of the traffic strike, each session was well attended. One of the most interesting events was the Tuesday afternoon session, when Professor Cannan, Mr Henderson, and Mr Keynes discussed the financial factor in unemployment. Mr Henderson and Mr Keynes put forward with much ingenuity and skill their now familiar arguments for a "managed" currency as a means of eliminating the more violent fluctuation of the trade cycle. But Professor Cannan, while admitting the enormous part played by currency inflation in the post-war situation, declared himself unconvinced that the financial factor played such a preponderating part in the causation of the normal trade cycle, and expressed the doubt whether we have yet the knowledge or capacity to enable us to "manage" a currency with any reasonable prospect of success. After what had happened in the last ten years, he was surprised that anyone should still feel any confidence in the likelihood of Governments resisting the temptation to inflate were they allowed a free hand with the currency, and for this reason he still supported the gold standard. The other outstanding feature was the discussion on Thursday of the effects of the disparity in wages in "sheltered" and "unsheltered" industries. This aspect of the economic situation, to which attention has frequently been drawn in these columns in the last two years, is bound to become one of the dominant issues of industrial politics. Mr P. J. Pybus, of the English Electric Company, did not hesitate to describe the basis of selling prices in "sheltered" trades as "economically unsound," and Mr W. L. Hichens, the chairman of Messrs Cammell, Laird, and Co., declared that however people might desire the levelling up of all wages to the "sheltered" standard, ultimately the conditions of our foreign trade would prove the governing factor.

Economic Conditions in Belgium.—The report of the Commercial Secretary at Brussels on economic and financial conditions in Belgium down to December, 1923, which has recently been published by the Stationery Office, bears witness to the great industrial activity of that country, which began in the autumn of 1922 and continued throughout the past year. The unemployment figures during the year, for example, were actually well below pre-war. The prosperity of the export trades is due mainly to the depreciation of the franc, though the elimination of German competition has also been a contributory factor. In certain cases, as, for instance, that of the plate-glass industry, there has been a real increase in world demand, which has been particularly beneficial to Belgian exporters; but in the main it appears to be

realised that this prosperity is somewhat artificial, and thus not likely to last. Attempts are therefore being made to meet the slump, which, it is felt, cannot be indefinitely postponed. Thus, despite the undoubted shortage of labour, the admission of foreigners is being strictly controlled; while manufacturers, for their part, are pursuing a very cautious policy. There is but little accumulation of stocks, and orders are being accepted, for the most part, for immediate or early delivery only. This absence of speculative activity will, of course, make it much easier for Belgian industry to weather the expected storm. Meanwhile the energies of the Government, and of private firms alike, are being devoted to greater and more efficient production. An agricultural policy has been adopted with a view more particularly to improving the quality of seed grain, and to increasing the milk supply. The Minister for Agriculture summed up the views of the Government twelve months ago in the following manner:—"We must," he said, "in order to assure the prosperity of our country, produce more, produce cheaper, export more, and consume less." With this end in view, efforts are also being made to centralise the production and distribution of electricity, while active propaganda is being undertaken abroad for the encouragement of the export trades. A noticeable feature in the development of the industrial equipment of the country is the rapid progress made during the last few years in the exploitation of the Campine coalfield. This basin provides a good coking coal, for supplies of which commodity the country was previously dependent mainly on imports. The daily output of this region was only some 450 tons in 1919, but this had increased to about 1,350 tons in 1922, and to approximately 2,500 tons last year. The "Report" states that it is estimated that this figure will have risen to 6,000 tons daily, or an average annual production of nearly two million tons in two years' time. Meanwhile, the long task of industrial reconstruction necessitated by the war is nearing completion, and Belgian factories are equipped with modern plant and up-to-date machinery. In many ways, therefore, the country seems well qualified to stand the heavy strain which is anticipated to arise when the present somewhat artificial prosperity of the export industries will be followed by the inevitable reaction. In the realm of public finance, however, the outlook is far from bright. The budgets for 1923 and 1924 together show a total deficit of four milliards of francs, even after credit is taken each year for one and a-half milliards on reparation account. The public debt is largely in foreign currencies, and this, of course, increases as the external value of the franc falls. Taxation, which is already very high, hardly brings in more than the amounts requisite to meet the debt service and the pensions charges. On September 30th last the total public debt (foreign debt being converted into francs at the rate then ruling—87.55f to the £) was nearly 40,000 million francs, of which only 16,512 million was consolidated debt. At that date the amount of debt per head of the population was 5,251f, an increase of 11 per cent. as compared with the figure at the corresponding date in 1922. For the current year taxation is estimated to yield 2,788 million francs, as against 2,011 million in 1923. The taxation per head now stands at some 370f, of which approximately one-third is raised by direct taxation. The burden is thus a heavy one, and there is evidence that the country is making every effort to rely on its own resources in the critical period through which it is passing.

Governments and Their Creditors.—The 50th annual Report of the Council of Foreign Bondholders shows a considerable improvement in the financial position of the States of Spanish America. Venezuela, whose default was exploited by the Kaiser to test the strength of the Monroe Doctrine, is now conspicuously solvent, orderly, and prosperous; Colombia, Costa Rica, Nicaragua, and Santo Domingo are fulfilling their obligations; Salvador, through American aid, has settled with her creditors, and is recovering her prosperity; and the half-century of Honduran default will be terminated by whatever legislative body emerges from the present revolution. Guatemala has been less regular in her remittances, but has not defaulted, and promises an eventual settlement of

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised ... £3,000,000
Paid-Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,407,811

Branches: INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.
The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.
Fixed Deposit Rates will be quoted upon application.
On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

the arrears as arranged in 1914. Delay has occurred in the service of the Uruguayan sinking fund, of certain Cuban and Peruvian loans, and of the bonds of the City of Lima. Paraguay is still in default; so is Ecuador on all her external obligations, except the Guayaquil and Quito Prior Lien Bonds. New loans are being negotiated with an American syndicate, and the chronic confusion of the national finances is at last fully recognised by her Government, which is employing an American expert adviser to disentangle them. The Argentine State of Corrientes has settled with its creditors, the City of Rosario has paid its coupons punctually, and some improvement is noted on the part of the defaulting States—though not the defaulting cities—of Brazil. Elsewhere, Liberia shows signs of amendment; but China is in default on the Vickers and Marconi loans. In Europe Bulgaria is attempting to arrange a revised scheme of settlement, and the reapportionment of the debts of Austria and Hungary corresponding to the redistribution of their territories, which was outlined last year at Innsbruck, is not approved by the Council. In Greece, in spite of political troubles, the revenues administered by the Debt Commission have enabled the service of the old gold loans to be maintained as in 1922, with one slight reduction. Soviet Russia still repudiates the obligations it has inherited from the Empire, and the Treaty of Lausanne has made the outlook for Turkish bondholders considerably worse. The Syrian revenues assigned for the service of the Debt are returned by France; those from Irak and Palestine by Great Britain; those from present-day Turkey, excepting from Constantinople and its neighbourhood, are collected and kept by the Angora Government. The retention of the Syrian revenues is avowedly provisional; the eventual application of the rest is uncertain. The question of the payment at the pre-war rate of exchange of the sums deposited during the war in German and Austrian banks to the credit of the bondholders still awaits solution. And the Angora Government now proposes to suspend all payments on the External Debt till after the reapportionment between Turkey and the States which have acquired territory from her through the Balkan Wars and the Treaties of Peace. The Report contains, as heretofore, a list of the eight Southern States of the American Union certain of whose loans have been from 40 to 70 years in default. The stain on the national honour is recognised by many Americans; but the Federal Government has not responded to the suggestion that it should compensate the holders as a set-off to the payment by Great Britain of her American war debt.

The Delivery of Stock.—A Stock Exchange correspondent writes:—Investors, more than speculators, are a good deal puzzled nowadays to understand how it is that their brokers so often tell them in answer to inquiries for particular stocks and shares that the securities can be purchased provided the buyer will not press for delivery. As everyone knows, the Stock Exchange is now dealing for fortnightly settlements, except in the Consol market, where transactions take place for cash. The man who sells stock is aware that he will get the money for it within, at most, a fortnight from the date of his sale, and the buyer receives a contract to the effect that shares have been purchased for a certain date, generally within fourteen days from his bargain. That buyer, however, is constantly being asked whether he would care for his broker to do his business with the stipulation that no

pressure shall be exercised, within a reasonable time, to enforce delivery of the shares. The broker would have difficulty in explaining within the narrow compass of an ordinary letter the reason for this request on the part of the seller. It may be useful to state here that it arises principally from the fact of there being so little stock on offer that, as mentioned previously, jobbers are loth to sell unless they have the assurance of the buyer that more time than an ordinary settlement will be allowed them in order to look round in the hope of getting the shares back again. We have referred to the matter before, but this time would point out that the jobber is in a somewhat difficult position, in that, if he declines to make a price, he is promptly accused by the public of being unbusinesslike, while, if he makes a price in shares which he has not got and which he does not know where to obtain, and the broker buys them from him, the delay which inevitably arises in delivery is charged to his account as a financial crime. The Stock Exchange jobber desires to be as businesslike as anybody else in the City, and, in the majority of cases, dealers recognise that they have a duty to the community in being ready to buy or sell those particular securities in which they deal. This leads them to make prices when markets are flat, knowing that the chances are they will be saddled with stock which they do not want; on the other hand, in a rising market they can count fairly confidently upon having shares bought from them that they are not at all anxious to sell. The average client is inclined to be very aggrieved if his orders are not carried out on the basis of the prices which appear in the newspapers, and for the broker to tell him that no shares are obtainable, because none are on offer, is too often as provocative as waving a red flag in front of a bull. Why this should be the case it is difficult to say, because nobody feels aggrieved if, on entering a shop for a certain article, the merchant says that he has not got it in stock. It is different, however, in the Stock Exchange markets, and members recognise this to the extent that, as already mentioned, jobbers will sell even though they have none of the stock which is being bought, and do not know how long it may be before they can get it. They may have to wait for a deceased account to be realised, or for the arising of some financial crisis when securities are being slaughtered on all sides. Possibly, of course—and this is the jobber's hope—the shares may come in in the ordinary way of business. Experience alone can decide how particular shares are likely to be affected. In the circumstances of a very restricted supply of shares, the jobber, naturally enough, endeavours to protect himself by stipulating that if the broker buys the shares, the bargain shall be effected on the basis of "not to press." And scarcity of stock is so pronounced in a good many cases that the little phrase has become condensed into its initial letters only. If the client insists upon his customary right of having undelivered shares bought in against the seller until he gets his transfer, the jobber is put to what may easily prove to be a serious expense. This is why he, the jobber, in his anxiety to do the broker's business for the client, will often consent to sell only on the distinct understanding that he shall be given more latitude than a fortnightly account affords for completion of the deal.

Simplification of Income-tax Forms.—The Departmental Committee appointed "to consider any simplifications which may be practicable under existing law in the return forms, claim forms, and notices of assessment issued in connection with income-tax and supertax, and to make recommendations in regard thereto" has been unable to make any startling recommendations. In its report* the Committee says: "We may say at once that we are unable to recommend any far-reaching or fundamental recasting of the forms. It is perhaps easy for the individual taxpayer who knows his own circumstances to conceive that a form might be addressed to him which would meet all the requirements of his case for the purposes of the revenue, and which would be extremely simple. Looking at the matter from the point of view of the Board of Inland Revenue, who have to face a vast multitude of taxpayers whose circumstances vary infinitely and bring

them within a great number of separate and complicated provisions, the problem is far different." The Committee has, however, suggested some improvements in the forms, copies of which in the revised form proposed accompany the report, and is of opinion that it is under the head of clearness in spacing and printing, and possibly in the use of rather better paper, that "such improvement as can be achieved" must be looked for. We confess to some disappointment with these new forms. The effect of their introduction towards popularising the income-tax will, we fear, be very small, but there is some satisfaction to be derived from the fact that the total expenses of the inquiry are confined to the cost of publishing the report—namely, £30.

The Position in El Salvador.—A correspondent writes: Apart from the marked improvement in the transport position, economic conditions in El Salvador, which had shown a distinct advancement during the past year, continue. Late reports from the country show that a spirit of optimism prevails, based principally upon the promising coffee crop, which, even if belated, nevertheless affords indications of being both abundant and of an excellent quality. Everything, however, depends upon climatic conditions, for at this time of the year heavy rains and floods are not unknown; upon previous occasions these have considerably damaged an otherwise hopeful coffee crop. The Salvadorean berry, which represents 80 per cent. in the value of the country's total exports, has now become as much in demand as that of Brazil, and is even preferred in the United States (the principal customer for Latin American coffee exports) to that of any other country. By the placing of a \$6,000,000 loan in July last, although upon somewhat onerous terms, the Government succeeded in freeing itself from its most pressing obligations, and indirectly relieving the commercial community, especially the banks. The gold loan, which has a life of 25 years, was issued at 8 per cent., with an 8 per cent. sinking fund (operating semi-annually), interest being payable every January and July. Seventy per cent. of the Customs revenues have been pledged as security, made doubly reliable by the appointment of an American collector, who likewise exercises supervision over the general finances of the country. The Budget for the fiscal year ending in June next, estimates the revenues at 13,736,552 colones and expenditure at 13,606,823 colones, with a probable surplus of 129,728 colones. Of the expenditures the Administration absorbs the larger amount, namely, 2,998,185 colones, while public credit demands 2,900,000 and war and marine 2,543,879 colones. Economies appear to have been effected in several directions, such as the National Assembly, which will require only 69,905, while the General Ministry asks for no more than 200,000 colones. The largest item of revenue is naturally in the direction of customs, which are expected to yield 6,641,010 colones, while export dues are put at 1,614,870 colones. The liquor tax is expected to produce 2,788,000 and the public services 8,064,800 colones. Miscellaneous taxes are placed at 751,052, direct taxes at 535,000, and sealed paper and stamps at 516,500 colones. While by an amendment of the banking law valuable facilities have been provided by which the three principal monetary institutions of the country have received an extension of their note franchises, the arrears of debt owing to the principal railway system, which is British-owned, for unpaid subsidy has been extinguished. Moreover, traffic receipts have shown a satisfactory advance, while operating expenses have been substantially lowered. For the past fiscal year the working result has been the doubling of the railway's profits, a condition which may be contrasted with the previous year, when receipts were not only greatly reduced but expenses were largely increased.

Japanese Trade in 1923.—The statistics of Japan's foreign trade for 1923 clearly show the effects of the earthquake upon the country's overseas commerce. There is a very substantial increase in the adverse balance, which is a result of a shrinkage in exports rather than of an expansion in imports, as may be seen from the table below:—

	1922. Yen.	1923. Yen.	Inc. or Dec. Yen.
Imports	1,890,308,000	1,987,063,000	+ 96,755,000
Exports	1,637,452,000	1,447,749,000	-189,703,000
Excess of imports..	252,856,000	539,314,000	+286,458,000

The principal increase in imports is shown by raw cotton, which rose by over £85 million yen, and wool and woollen yarns, which are up by 52 million yen. Imports of iron and manufactures thereof declined by 31½ million yen, while food imports fell by over 38½ million yen. Raw silk accounts for 103 million yen of the decrease in exports, while cotton yarns contributed 36 million yen towards the decline.

Mixed Companies in Russia.—In view of the forthcoming conference in London with representatives of the Russian Soviet Government, practical interest attaches to the following note on the subject of Mixed Companies in Soviet Russia, which our Moscow correspondent sends to us. He writes:—Reference has already been made (*vide* ECONOMIST for February 16th) to the recent concessions granted in Russia. This list excluded the Mixed Companies said by Lenin on December 13, 1922, "to have no other object than the strengthening of the circulation of our goods and the real protection of our industry. This system alone will be able to improve the defective mechanism of our Foreign Trade Commissariat, for under it Russian and foreign business men work together." The Mixed Companies are administered by private traders or financiers, on the one hand, and representatives of the Soviet Commissariat for Foreign Trade (or in some cases by other State institutions), on the other. The manner of distribution of shares and dividends is contained in the Statutes of the Mixed Company, the general rule being that 51 per cent. of the shares are held by the Soviet Commissariat and 49 per cent. by the foreign business, the whole of the working capital being subscribed by the latter. The privileges of import and export contained in the Statutes of the Mixed Company are usually detailed in separate agreements between the Mixed Company and the Commissariat for Foreign Trade, which contains a list of the goods the company is authorised to export and import. If the company wishes to undertake the import of articles outside the list, a special licence giving no priority must be obtained. Mixed Companies are not restricted to trade in goods, but may by agreement engage in banking or other branches of commerce monopolised in Russia. The policy of monopoly of foreign trade naturally renders the development of purely commercial companies extremely difficult, the work of each being framed within rigid regulations as to restriction of imports, quotas, &c. The Commissariat for Foreign Trade is tempted to turn the general direction of the imports of the Mixed Companies in such a manner as not to interfere with the Commissariat's own interests, and to restrict the Mixed Companies in some measure to the import of goods which are at the moment rather difficult to realise on the internal market. Russian buyers, chiefly State industries and institutions, exact long-term credits which the Mixed Companies have difficulty in finding owing to the small amount of working capital at their disposal. In practice, a type of universal provider society, importing and exporting goods of the most varied character, has been created, but the Government is anxious to suppress as far as possible this type of company and to favour the granting of commercial concessions to societies engaged exclusively in particular branches of import or export. The present situation is in the nature of a permanent conflict between the Mixed Companies and the home industry. On the one side, the Mixed Companies concentrate their attention on articles which can easily be imported, and the sale of which gives large profits, and refuse to import goods which are difficult to realise but on which the V.S.N.K. (Supreme Council of National Economy) place importance, as the Council is aware of the great need in Russia of foreign machines and manufactured goods; on the other hand, the same institution (V.S.N.K.) suppresses the importation of goods which can be produced in home factories. The Mixed Companies were created to show to the West that the S.S.S.R. were embarked on a practical policy of

closer economic relations, and in some measure the Mixed Companies have fulfilled this object. It is highly doubtful, with improved relations between the S.S.S.R. and the commercial world, and the actual difficulties experienced in working companies with "mixed" control, whether the Mixed Company has any future, and foreign capital has recently (*e.g.*, in the case of the English-American Lena Gold Fields group) concentrated along the lines of pure concession.

British Portland Cement.—As revealed by the accounts published for 1923, the British Portland Cement Company Manufacturers, Limited, has maintained its profits. The following table shows how this undertaking has fared over a number of years:—

	1913-14.	1917-18.	1918-19.	1919.*	1920.	1921.	1922.	1923.

* Eight months.

Figures for 1923 closely resemble those for 1922, and the 10 per cent. distribution is continued. The report states that "there was a slight improvement in the demand for Portland cement during the past year. Whilst lower prices were realised in both the home and export markets, reducing the company's trading profits from these sources, a better return from investments was received." This brings out rather an interesting point. With this undertaking we are told that trading profits were less, but yield from investments higher. In the balance-sheet there is an item, "Investments at Cost and Loans, £1,771,142." Is it to be assumed that these investments are mainly unconnected with the cement industry, or that the increased yield represents improved results of subsidiaries? The report proceeds to inform us that in "October last a considerable sum was advanced to an allied company to enable it to purchase the ordinary share capital of the Humber Portland Cement Co., Limited," and also mentions other financial activities. We confess that we should like to know more about these investments and to understand what progress the company is actually making it would be necessary to set out under three separate headings trading profit, revenue from trade investment, and revenue from investments of a reserve nature.

Royal Bank of Scotland.—At a general meeting of the Royal Bank of Scotland, held in Edinburgh on Wednesday, resolutions were passed increasing the capital stock from £2,000,000 to £2,500,000 by the issue of £500,000 of new stock. Of the additional stock, £60,000 is being allotted in part payment of the purchase price of the business and assets of Messrs. Drummond, which was recently acquired by the Royal Bank. The balance of £440,000 of the new stock has now been allotted to present stockholders at the rate of £22 of new stock for each £100 of stock at present held. The price will be payable in full on April 26th, except in the case of stockholders abroad, to whom an extension of time will be granted until May 15th. A feature of the issue is that the additional stock, when fully paid as above, will rank in all respects with the existing stock of the bank, and, in particular, will be entitled to the full half-year's dividend, which will become payable at midsummer, less income-tax. Apart from this special benefit, it may be pointed out that at the rate of distribution for the past year—namely, 14 per cent.—the new stock at the issue price of £250 per cent. gives a yield of £5 12s per cent., subject to deduction of income-tax. The premium on the £440,000 of stock now being issued to the proprietors will be available as an addition to the reserves.

* Cmd. 2019. 1s net.

The Gordon Hotels.—The financial year of the Gordon Hotels, Limited, now ends on December 31st. About 12 months ago accounts were issued for the seven months ended December 31, 1923, thus changing the financial year, which ended before this on May 31st. In our table below we have omitted the accounts for the seven months, these being of little value for comparative purposes. Here is a summary of results for a number of years past:—

	1913-14.	1916-17.	1918-19.	1919-20.	1920-21.	1921-22.	1923.

* Dr 23,625 less £15,500 compensation for Hotel Metropole.

It will be observed that conditions are improving. The directors report that the hearing of the company's claim against the Government for loss of goodwill was concluded on January 22nd of this year, and it was hoped that the award would be made in sufficient time to enable the board to complete the scheme which they have prepared for dealing with the arrears of preference dividend and the re-organisation of the capital of the company. The award, however, has not yet been published, but as soon as it is received the scheme will be submitted to the shareholders. The balance-sheet is fully analysed in our usual column.

The Randfontein Amalgamation.—Official details are now in the hands of the shareholders as to the long-talked-of scheme for fusion of the Randfontein Estates Company with its operating subsidiary, the Randfontein Central. The latter has an issued capital of £4,750,500, with £1,779,100 debentures, and at the date of the last balance-sheet owed £1,399,000 to the Estate company. Of the Central company's securities the whole of the debentures and £2,980,500 of the shares are held by the Estate company. The proposal is that these shall be cancelled, and that outside holders of Randfontein Central shares shall receive new Randfontein Estate shares in the proportion of three for five. This corresponds very closely to the respective market values. Of course the balance of the loan is, in effect, also cancelled, although nothing is said on this point. The proposal, while approved in principle, has been the subject of much discussion on the part of the shareholders. There certainly appears ground for the contention that the terms are distinctly generous to the Central company. In the absence of any scheme for the funding of the debt the Central company's earnings for some three years would have been absorbed in repayment. It is at any rate to be hoped that the Randfontein Estate shareholders will—as expected in some quarters—receive, before the fusion, a distribution out of the £510,000 recovered by actions at law against Sir J. B. Robinson. The idea of amalgamation in itself is excellent. It will wipe out a substantial slice of the present burdensome share and debenture capital, besides making for economies in working.

Rose Deep.—The most important point in the annual statement of this Rand undertaking is the intimation that there are now practically no virgin areas remaining to be developed. It is owing chiefly to this circumstance that the ore reserves have declined 391,800 tons to 1,737,000 tons. The latter quantity represents about 2½ years' supply for the mill. Doubtless this period will be extended by the use of reclamation rock and by some further moderate discoveries; but the exhaustion of the property must be regarded as within sight. The balance-sheet shows surplus cash assets to the tune of £100,000, equal to nearly 3s per share, irrespective of what might be realised by the plant. Last year's dividends totalled 17½ per cent., and the consulting engineer expects operations during the current period to be on about the same scale as in 1923. In view of the position above indicated, the shares at over 13s appear to leave little scope for improvement.

Oversea Correspondence.

UNITED STATES.—RAILROAD EARNINGS—FRENCH CREDITS—GOVERNMENT FINANCING—STEEL ORDERS INCREASE.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 14.

THE combined net operating income of all first-class railroads in January totalled \$51,281,200, equivalent to a return at the annual rate of 4.54 per cent. on their tentative valuation as fixed by the Interstate Commerce Commission. In the preceding month the same roads showed net operating income of \$69,694,744, equal to a return of 4.44 per cent. annually, while in January a year ago they reported \$61,128,970, or 5.58 per cent., on their property valuation. Gross earnings in January of this year amounted to \$468,976,600, according to figures compiled from returns filed with the Commerce Commission, that total representing a decrease of \$33,505,250, or 6.7 per cent., from the same month of 1923, and operating expenses of \$384,984,380 were \$33,993,100, or 5.9 per cent., less. An outstanding feature of the exhibit is the heavy reduction in expenditures last January for maintenance of equipment, the total being about \$12,000,000 less than in the same month of last year. This marked decrease plainly indicates that the carriers' rolling stock, generally, is in far better condition than it was a year ago. Another interesting feature is that the sharp falling off in operating revenues is at variance with the car loading statistics for the same month. For the five weeks ending February 2nd 4,292,000 cars were actually loaded with revenue freight, as against 4,239,000 in the like period a year ago, showing a gain of 1.2 per cent., whereas gross earnings, as indicated above, fell off 6.7 per cent. The only explanation seems to be that a larger volume of low-class freight was moved this year than last, with the result that the railroads suffered a corresponding decrease in revenue.

The United States Steel Corporation's unfilled orders at the end of February showed a larger increase during the month than had generally been expected. The total of 4,912,901 tons represented a gain of 114,472 tons over January 31st. While January's bookings showed a greater increase, namely, 353,000 tons, over those of December, the further substantial gain last month indicates that the heavy volume of business during January was well maintained in February, because shipments increased about 150,000 over January, and there were fewer business days last month. February shipments are estimated at 1,200,000 tons approximately, so that incoming orders probably exceeded 1,300,000 tons, or more than capacity production. During March thus far demand for steel has continued active, although buying, in most instances, has been to fill immediate or nearby requirements.

This week's official announcement that a group of American bankers, headed by J. P. Morgan and Co., had arranged to extend large credits—said to aggregate at least \$100,000,000—to the Bank of France has met with a highly favourable reception in financial circles here. While many banking interests knew that plans were under way to check the recent demoralisation in French exchange, traders in the foreign exchange market lacked definite information before the announcement yesterday. It is not surprising, therefore, that speculators who have been plunging blindly on the short side have rushed to cover their heavy commitments. Such repurchasing is believed to have been responsible mainly for the further spectacular recovery in French francs during the past two days, following sharp advances earlier in the week. But apart from the stabilising effect upon French exchange rates much significance is attached to this extension of American credits to the Bank of France, because the opinion prevails in banking quarters here that the arrangement foreshadows acceptance by the French Government of the findings and recommendations to be made by the Reparations experts headed by Charles G. Dawes.

Whatever doubt may have been entertained regarding a continuance of the great building activity in the United

States has been dissipated by preliminary returns of building permits applied for or granted in leading cities throughout this country during February. Reports received by Bradstreet's from 166 cities place the total value of building for which permits have been granted as \$270,045,981, as compared with \$217,337,774 at the same cities in January, and \$221,753,727 in February of last year.

The annual report of the United States Rubber Co. for 1923, which has been awaited with considerable interest, reflects last year's depression in the tyre industry, but makes a better showing in some respects than had generally been expected. The company's net income amounted to \$7,392,657, which after charges and payment of preferred dividends was equivalent to \$2.28 a share on the \$81,000,000 of common stock, as against \$2.65 a share in 1922. Sales for last year, totalling \$186,261,381, showed an increase of more than 10 per cent., but net income was approximately \$300,000 below that of the preceding year. The gain in sales was in commodities other than tyres, which furnished less than one-third of the company's business. Tyre prices in 1923 reached the lowest levels ever recorded, but since the beginning of this year have shown some recovery.

The Government's March financing took the form of a new issue of approximately \$400,000,000 one-year 4 per cent. Treasury certificates of indebtedness, dated March 15th, which were offered to banking institutions and investors this week. The entire issue was heavily oversubscribed in a few days. The 4 per cent. interest rate was a surprise to bankers and investment dealers, who had expected a 4½ per cent. rate. It is felt, however, that other money rates will not be affected to any material extent by the lower rate on Treasury certificates, which is in line with the generally smaller yields now obtainable from Government securities, as compared with last year. The present issue of certificates, together with income-tax receipts and balances already on hand, is expected to provide for all of the Treasury's requirements until June of this year, when additional financing will be necessary.

FRANCE.—THE POLITICAL CRISIS—REPARATION PAYMENTS—PARIS TRANSPORT.

(FROM OUR CORRESPONDENT.)

PARIS, March 26.

THE defeat of M. Poincaré in the Chamber on Wednesday gives him the opportunity to reconstitute his Cabinet without being in danger of giving rise, immediately before the elections, to complications that might militate against the chances of the Bloc National in the forthcoming contest. It is a matter of general knowledge that, for several reasons, it has become necessary for the Ministry to be largely reconstituted in the near future. The experience of the past year has shown that changes in at least two or three important Cabinet posts are advisable. M. Lasteurie has been much criticised for his financial policy, while fears are expressed that the failure of M. Chéron, the Minister of Agriculture, to cope with the problem of the high cost of living may cost the Poincaré party a good many seats in the urban constituencies. M. Maunoury, the Minister of the Interior, is also regarded as having fallen short of expectations. One of M. Poincaré's proposed reforms is to amalgamate the three existing independent Ministries of Agriculture, Commerce, and Public Works into one, to be known as the Ministry of National Economy. Another proposal is similarly to combine the existing Ministries of War, Marine, and Aeronautics into one, to be called in future the Ministry of National Defence. The advantages of such changes, from the point of view of efficiency, are obvious, and the importance of this factor in the present situation is equally so. The name of M. François-Marsal is universally mentioned to-night as the most probable successor of M. de Lasteurie as Finance Minister. M. François-Marsal, it will be recalled, passed direct from his post at the Banque de Paris et des Pays-Bas to the Treasury when M. Millerand formed his Cabinet in January, 1920, and retained his office as Minister of Finance in the Leygues Cabinet that followed M. Millerand's election to the Presidency of the Republic. As a practical banker, he devoted himself to the problem of the consolidation of the

ESTABLISHED 1836

General Manager W. A. WORKMAN, F.I.A.

floating debt. This problem has recently become acute, and largely, it is held, because no effort at consolidation has been made since M. François-Marsal left office on the fall of the Leygues Ministry. It is understood that M. Poincaré's plans for the immediate future include an important measure for dealing with the problem in question.

The customary half-yearly statement that has just been issued by the Reparations Commission, showing the total amount of payments made by Germany on Reparations account since the Armistice, is chiefly interesting because it furnishes bulk figures that, by comparing them with those issued a year ago, enable us to arrive at the amount that has been received by France and Belgium since the German Government, after the occupation of the Ruhr, refused to continue Reparation payments to those countries. The statement shows that down to December 31st last Germany had made total payments amounting to 8,411,339,000 gold marks in cash (1,903,544,000 gold marks), shipping, cables, State property, and payments in kind, &c. Of this total, however, 2,719,093,000 gold marks remains undistributed or in suspense, and out of the balance of 5,692,246,000 gold marks that has been distributed among the Allies, 2,613,611,000 gold marks has been utilised for the repayment of the cost of the armies of occupation and the control commissions (without taking into account the 1,071,805,000 gold marks which is the estimated cost of the United States Army of occupation), in repaying the advances made to Germany for purchase of coal after the Armistice and other charges distinct from Reparations. Out of the amount which has actually been distributed among the Allies, France has received 1,804,192,000 gold marks (143,995,000 gold marks in cash, 1,358,155,000 gold marks in kind, and 302,042,000 gold marks in ceded property). Out of this total, however, the amount actually applicable to Reparation payments down to the end of 1923 was only 189,777,000 gold marks, the balance (including the repayment of 1,373,496,000 gold marks in respect of the cost of the army of occupation) having been disposed of in other directions.

The amounts distributed to the various Allied Powers during 1923, if the figures given a year ago be subtracted from those now issued, will be seen to be as follows:—

	Gold Marks.
France	13,389,000
Belgium	12,760,000
Great Britain	168,358,000
Italy	155,138,000
Serbia	111,815,000
Roumania	28,770,000
Czechoslovakia	1,963,000
Greece	9,551,000
Poland	415,000
Portugal	10,440,000
Japan	390,000
	507,989,000

The amount actually paid by Germany during the year was 470,913,000 gold marks (of which 462,480,000 gold marks was in kind and the rest in cash). The difference between this total and the total distributed was due to the fact that 37,076,000 gold marks was taken from the accounts previously in suspense. As the cost of the French army of occupation in the Rhineland (exclusive of the Ruhr) in 1923 amounted to 112,495,000 gold marks, it follows that France during 1923 received from Germany 99,106,000 gold marks less than her expenditure on her

army of occupation. The same figures also show that, whereas in the amount received by France down to the end of 1922 there was a balance of 291,031,000 gold marks available for passing to her reparation account, this had been reduced at the end of 1923 to 189,777,000 gold marks. In other words, France had in hand, out of her total receipts from Germany, on December 31, 1923, 101,254,000 gold marks less in actual reparation payments than she held at the end of 1922. It must not be overlooked that the Franco-Belgian receipts from the Ruhr during the past twelve months have not yet been handed over to the Reparations Commission. The bulk, if not the whole, of these, however, down to the end of 1923 were absorbed by the expense involved in the operations there, although it is stated here that the occupation now shows a steadily increasing balance on the credit side. The 13,389,000 gold marks received by France in reparation payments during 1923 represents payments made from January 1st to 11th, when the occupation of the Ruhr began, and from November 23rd, when passive resistance ceased and the Dusseldorf agreements were signed, down to the end of the year.

The chaos that prevails in the London public transport services affords a striking contrast to the apparently perfectly satisfactory manner in which these services are carried on in Paris. This is largely due to the fact that for some years past tramways, omnibuses and electric railways in the capital and surrounding suburbs have been operated under a unified scheme, and are under statutory control as to fares and limitation of profits. The war left the nine or ten Paris tramway and omnibus companies in a state of bankruptcy, with the result that the whole of the undertakings were taken over by the Conseil-General for the Department of the Seine (which closely corresponds to the London County Council). The shareholders in the whole of the old companies transferred their holdings to a new concern, known as the Société des Transports en Commun pour le Réseau de Paris, which received the sole right to operate the lines and rolling stock acquired by the Conseil-Général. The shareholders in the new company were guaranteed their interest of 6 per cent. by the local authority, which in return assumed the right to fix all fares and to receive a proportion of the profits after the share capital had received its guaranteed dividend. It also assumed the right to control the route to be covered by the various omnibus services. Under the Paris system, "pirate" omnibuses, competition between trams and omnibuses and competitive fares have been rendered impossible. The employees received regular monthly bonuses, equivalent to 4 per cent. of the gross receipts (equivalent to about 50¢ per month per head of the working staff), and also extra allowances of about the same amount for each child. The same principles govern the working of the Metropolitan electric railway system, except that in this case the governing authority is the municipality of Paris, which constructed the lines, the cost of which was met by loans guaranteed by the city's credit. Under the system in vogue the whole of the services are developing rapidly, and working with entire satisfaction. Fares are low (30 centimes for any distance on the electric railways, and 25¢ for distances of about a mile on the tramways and omnibuses), and the shares of both companies are undoubtedly sound investments.

GERMANY. — POLITICS — CURRENCY — PRICES — FINANCES — BOURSE — INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, March 25.

THE struggle of parties for the May Reichstag elections has begun. It is generally believed that the Socialists as a whole will lose. The Majority Socialists (most moderate wing) came out of the 1920 Reichstag election with only 113 members out of 466, as against 165 members out of 423 in the National Assembly; but the Independent Socialists, since reunited with the majority, came out with 81 seats, as against 22. The now dissolved Reichstag suffered mainly from the fact that, while having no Socialist majority, it could not provide a "bourgeois" majority without the help of the German-Nationals, whose incorporation in any Cabinet was possible only at the

cost of trouble with the Allies. If, as is expected, the extremists on the Right and Left gain in the coming elections, the prospect of a working Reichstag will be very small.

A strong influence on the result is likely to be exerted by Reparations developments during the next few weeks. The question of the renewal of the Ruhr agreements with France is still unsettled; the latest report is that if before April 15th the Experts' plans have not sufficiently developed to foreshadow the final settlement, the existing agreements will be renewed for a short period. It is impossible to conceive even a temporary condition of no agreement, and the great revival in the iron and steel trades makes the continuation of work a strong interest of employers. The latest semi-official estimate of the burden imposed by the agreements upon all Ruhr industry is 900,000,000 gold marks. No settlement will be satisfactory unless the burden is distributed all over Germany; the present theoretical condition—that the Ruhr employers can distribute the burden by higher prices, &c.—is highly unsatisfactory, and even if realised must result in an unfair, irregular incidence of burden.

Currency conditions remain unchanged. The negotiations between the association of leading private banks (*Stempelvereinigung*) and the Reichsbank as to the Gold Discount Bank are not yet concluded. Subscription for shares in the Gold Discount Bank will begin, it is understood, about the beginning of April. The shares are to be £10 each; and the subscription price, the "Frankfurter Zeitung" states, will be 104, the banks gaining 2½ per cent. in exchange for their guarantee, organisation work, &c. The number of guaranteeing institutions and firms will be about 120. Professor Riesser publishes a reply to certain objections raised in the Reichstag to the Gold Discount Bank plan. He does not think that the bank's proposed note-issue powers involve any serious new inflation; and he says that the notes, not being legal tender, must not be regarded as new money, but as a means of payment in international business. In reply to objections raised against the choice of the pound, itself an unstable currency, Professor Riesser argues that the new institution will not be a currency bank, but merely a credit bank, and that its notes will be handled abroad instead of bills and cheques, which would themselves be mostly in unstable currencies. Further, had sterling been rejected, the plan could not have been carried through at all. The bank is expected to give a strong impetus to import, coming as it will after the Rentenmark, which seems to have had that effect; at present there is a flood of foreign luxury goods, and large German buying at the Lyons Fair is reported. As a curious instance of the effect of the currency reform may be mentioned that four months ago the use of radios was entirely unknown here, being regarded as a special foreign luxury which Germany must not dream of; but in this short space of time the use of the radio has become common, and there is hardly a shopping street in Berlin where apparatus are not sold.

The Reichsbank statement for March 15th shows a decline in the rate of credit increase, but the increase continues, being mainly in Rentenmarks. Rentenmark discounts increased by 108 trillions, paper mark discounts by 38 trillions. Note circulation increased by the small sum of 307,976 billions. The debt to the Rentenbank remains unchanged at 450,000,000 Rentenmarks. Among its assets the Reichsbank holds 37,916,884 Rentenmarks. The Government has abolished the special courts which tried persons accused of charging extortionate prices. The grain market has of late been firm, owing to fear that the exceptional cold has damaged winter crops. Spring sowing will this year be very late. The cost of living index number for March 17th was 107, against a lowest point this year of 103; the official commodities index number for March 18th was 121.4. Under the influence of increasing demand, pig-iron prices have been raised, the new rate for foundry iron No. III. being 88 marks.

The Finance Ministry's report for March 11-20th shows the large surplus of 63 trillion paper marks, revenue from taxes being 197,564,972 billions, and expenditure 134,251,227 billions. Owing to the falling due of heavy tax payments, revenue increased as compared with the

preceding decade by 50 trillions, while expenditure fell, mainly owing to a decline in the subventions to states and municipalities to 35,000,000 paper marks, as compared with 65,000,000 paper marks. The total deficit between November 16, 1923, the date of the Rentenmark Reform, and March 20th was 716,080,000 gold marks, but practically all of this loss was suffered in the first weeks, before the reform had begun to influence favourably the real yield of taxation. Official salaries are being raised, but remain low, the lowest annual salary paid in the regular service being 684 gold marks, the highest 5,610 gold marks (about £280), the latter for a senior official in the 13th, or highest rank of the civil service, while the highest salary for an official outside these classes (minister, &c.) is 17,100 gold marks. These salaries are 13 per cent. higher than those now prevailing. The salaries (compensations, they are called) for Reichstag members, and the free travelling given, will this year cost about 2,500,000 gold marks. The Finance Minister, Dr. Luther, states that the national wealth, which before the war was 300 milliard gold marks, is now 150 milliards; national income before the war 37½, now 25 milliards; and that the total tax burden is 27.7 per cent., against 10.9 per cent. The Prussian Budget for 1924 shows revenue of 2,309,407,723 gold marks, recurring expenditure 1,938,604,686 gold marks, non-recurring 370,803,037 gold marks, all expenditure 2,309,407,723 gold marks, so balancing. A comparison with the paper-mark years is impossible. In 1913, the Prussian Budget was balanced only with the help of 234,100,000 net railways surplus. As compared with 1913, revenue has increased by 58,450,000 gold marks, expenditure decreased by 262,280,000 gold marks, the improvement in the ordinary Budget being 320,740,000 gold marks. Against this the extraordinary Budget has deteriorated by 86,640,000 gold marks. The total Budget for 1924 shows an improvement equal to the railways' surplus of 1913.

The new Rents Tax, which is to yield this year 320,000,000 gold marks, after deduction of 10 per cent. of the tax which is earmarked for encouragement of house-building, has made the balancing of the Budget possible. (The Federal Budget for 1924, which agrees generally with the schematic Budget prepared for the Experts Committee, and which was summarised in the *Economist* when issued, but which is this week reported in a confused, partly unintelligible form, will be dealt with next week.)

After prolonged dullness and weakness, the Berlin Bourse to-day had an improved aspect, with a good deal of buying in by short interests, especially in shipping, banking, metal, mining, and oil securities. The big selling orders, often forced selling, of the last few days suddenly ceased. The chief influence was apparently the new franc weakening. The dullness of the preceding weeks was also largely explained by franc fluctuations. At first the franc declines diverted international speculation to Paris, and created the impression that French industry would profit from cheap prices, to the advantage of French stocks. The franc's recovery hit international speculators, among them Germans, who had been bearing francs. German business men had contracted franc liabilities for goods, and, judging by their experience with the paper mark, expected to get off easily. It was yesterday reported that some Germans had heavy engagements for the end of March based on a franc exchange of as high as 150 to sterling, and some anxiety is felt on this score. The *Frankfurter Zeitung's* index for dividend-payers on March 21st was only 599.78, against 697.06 a week earlier, and 824.50 on January 4th; the index of the so-called "exchange stocks" (of companies with foreign currency earnings or interests) was only 134.36, against 214 on January 4th; and home loans 2.58, against 4.42. Home loans to-day quoted (in milliards), War Loan, 81.5; Fours, 480; 3½ per cents., 260; Threes, 925; Colonial Fours, 2,860 Savings and Premium, 150, Prussian Threes, 425.

To the improvement in the condition of industry there is no sign of a set-back. Though the latest figures are for Berlin only, they are typical of conditions everywhere. The Berlin weekly report shows a decline in the number of publicly-supported unemployed from 116,301 to 97,679

persons. Nearly all groups share in the improvement, particularly metal (foundry work excepted), textiles, clothing, and paper. The report for all Germany for March 1st shows 16.1 per cent. of organised workers fully unemployed, against 21.8 per cent. two months before; 12.9 per cent. of partly unemployed, against 30 per cent. The proportion of textiles fully unemployed fell in these months from 37.5 to 8.84 per cent.

ARGENTINA. — EXPORT SEASON — EXCHANGE — COMMERCIAL RELATIONS WITH BRITAIN — BANKING LEGISLATION.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, February 24.

ARGENTINA is in the full flood-tide of her export season, with grain and seed leaving the country at the rate of a million tons a month. Nor is there any sign of slackening in the demand for her general produce, though by the time these words are in print the bulk of the wool will have been sold, if not actually shipped. This briskness of movement in connection with almost every branch of export activity, coupled with the disappearance of the labour trouble, which seemed possible some six weeks ago, is naturally reflected in many directions, more especially in the traffic receipts of the railways, and the movement of sterling and dollar exchange. If one were to compare the gross receipts, the weekly receipts, and the receipts for each mile per week, for the 1923 and 1924 periods between July 1st and February 23rd, quite a sensational table could be compiled, and the Anglo-Argentine railways depicted as being in a position of remarkable prosperity. Such a conspectus would, however, be misleading, inasmuch as it does not take into account the important sums which all the lines have still to expend on outlay of a capital nature; capital, that is to say, in so far as its immediate effect on revenue goes, though not necessarily included as capital under the Argentine Railway law. That the improved state of sterling exchange comes as a welcome, if somewhat long-delayed, relief need not be laboured here. It would nevertheless be rash to assume that the Argentine dollar will shortly reach parity—47½d—nor, in the general interests of producers, is it altogether desirable that any such sharp movement should be registered, say, in the course of a couple of months. The import trade of the Republic, additional duties notwithstanding, is showing marked expansion, which means remittances, as does the service of the Republic's various foreign obligations. What the exact balance of trade may be none can say with exactitude, but from the recently published returns of the National Statistical Department, which cover 1922, it is evident that even this year's crops will scarcely do more than balance the debits which 1921 and 1922 both registered against Argentina, assuming that prices remain at a fairly remunerative level, though not of necessity those ruling at the present moment. In a word, though present conditions and prospects are good, both for general business and as regards a reasonable hope that the Argentine dollar will appreciate in London and New York, the complex state of the national and provincial finances, taken in conjunction with the uncertainty that must prevail as to the price obtainable for the latter half of the wheat and linseed, to say nothing of the coming maize crop, should act as a check on excessive optimism in the matter of exchange.

The trend of events is indeed moving more and more towards a strengthening of existing financial and commercial relations between Argentina and Great Britain, though it must in justice be added that American interest in Argentine commerce can no longer be viewed as negligible. Leaving the war years out of the reckoning, and also the boom period of 1919-20, one finds, on contrasting the figures of 1913 with those for 1922, that Argentina imported American goods to the value of \$152,597,000 gold, as against \$75,589,000 gold in 1913, this latter being the pre-war "record." Her exports to the United States, making the same comparison, rose from \$24,589,000 gold to \$79,789,000 gold for 1922. Seeing, moreover, that American shipments hither are

largely composed of what may be generally classed as American specialities, and that the 1922 figures do not cover any appreciable quantity of textiles—a line in which a recent U.S. Commerce Report admitted that American trade in Argentina was now virtually “dead”—and next to no coal and rough goods, such as building steel, it would be foolish to suppose that British manufactures will at once be able to compete on favourable terms even if the rate of exchange moves in their favour. They cannot reasonably hope to do so in lines such as harvesting machinery, automobiles, typewriters, and one or two other items in which America is first and the rest nowhere. And it is on this account that one follows with keen interest the course of financial relationships between Argentina and the two countries, America and Great Britain. It is common knowledge that the interpretation of various clauses in the agreements covering recent short-date loans contracted in New York has led to a certain amount of dissatisfaction among Argentine Treasury officials, and the issue of \$40,000,000 United States followed by the conversion of \$20,000,000 will barely be sufficient to meet principal and interest on the \$55,000,000 United States due on March 1st. No clear statement has yet been issued covering the actual amount of money which the Argentine Government disposes of in New York, but what is certain is that offers of money from American bankers will be much more closely scrutinised in future than was done in connection with the short-term loans accepted under the Irigoyen presidency. Far-seeing American business men openly regret the unwillingness of the New York market to undertake a long-term loan of importance for the Argentine National Government, knowing, as they do, that further foreign borrowing must come up when once the question of consolidating the Republic's short-date internal debts is seriously discussed by Congress. That body being in recess, and the holiday season still on, little is heard of the Government plans, though there is good reason to believe that before the sessions open in May the Minister of Finance will have outlined his plan for enforced investment by banks and others in long-term bonds bearing a low rate of interest— $3\frac{3}{4}$ per cent. per annum has been mentioned—together with a scheme for the flotation of an external gold loan which will, so it is said, prove sufficiently attractive to warrant the assumption that London tenders will be forthcoming, and that on terms with which New York is not likely to compete.

It is also generally known by this time that the proposal to combine the Banco de la Nacion and the Conversion Office into one institution, and to remodel the Argentine banking system on lines more or less akin to the Federal Reserve connections of American banking practice, will be brought forward at an early date. Should the project prosper, there will most certainly be a sharp distinction drawn between “national” and “foreign” banks established in this Republic, the effects of which may be left for discussion when the measure comes up in Congress. This trend of Argentine financial legislation has been clearly visible for the past five years, notwithstanding that the possibility of actual change has invariably been scoffed at by those most liable to be affected by it. Granted that the sound and eminently Argentine policy of the leading Anglo-Argentine banks has in the past been of the greatest service to the Republic, it does not follow that this record will be taken into account by the Legislature, which is quite capable of giving the same precipitant despatch to this matter as was characteristic of the Bank Pension Law, which has diminished the wages of the clerks by some 10 per cent. in exchange for future benefits that are now seen to be next to impossible of attainment. There is, indeed, some likelihood that the employees of the foreign banks may form a union for the purpose of putting forward their claims to consideration, though nothing in the nature of a strike is to be apprehended, for the simple reason that the foreign clerks realise that the law also affects the banks called on for their share of the monthly quota. If they have a complaint it is that no endeavours were made by the foreign banks to safeguard the rights of their foreign staffs, notwithstanding that the law itself lay two years before Congress as a “project” or Bill. And, unless every step is carefully watched and full use made of such political

and legal influence as is available, what has occurred in the case of the bank pensions will mark banking legislation in general; with very far-reaching results to the foreign banking interests working in this Republic.

POLAND.—FINANCES—AN ITALIAN LOAN—TOBACCO MONOPOLY—COAL AND IRON PRODUCTION.

(FROM OUR CORRESPONDENT.)

WARSAW, March 15.

On February 1st an official announcement was published by the Press in which the Government promised to discontinue the use of the printing press for covering its budgetary deficits. The return of the Polish National Bank for February 29th shows that the Government kept its promise. Though the circulation increased in February from 313,659 milliards to 528,900 milliards, the advances made to the Government remained unaltered. The additional amount of 215,000 milliards was exclusively devoted to commercial credits, and to the acquisition of foreign currencies. This great increase of circulating notes did not influence the stability of the mark, which remains at the level of 39 millions for the English pound. This stabilisation is not the result of an intervention of the Polish National Bank, which in February did not only diminish its stock of foreign currencies, but increased it by 40 million gold francs—from 52 to 92 millions.

The increase of the circulation, unaccompanied by depreciation of the mark, has brought some alleviation of the capital famine from which Poland was suffering. The real value of the paper mark circulation now exceeds 50 million dollars. A comparison with the situation in 1923 throws much light on the improvement which has taken place:—

CIRCULATION OF POLISH MARK.

	Polish Mark. Millions.	Average Dollar Exchange.	Expressed in Dollars. Millions.
End of December, 1920	49,362	580	85.1
“ “ 1921	229,538	2,950	77.8
“ “ 1922	795,438	17,800	44.6
“ January, 1923	909,160	33,000	27.6
“ May, “	2,733,794	53,000	51.5
“ June, “	3,566,649	101,000	35.3
“ July, “	4,478,709	168,000	26.6
“ August, “	6,871,776	249,000	27.6
“ September, “	11,197,738	319,000	35.1
“ October, “	23,080,402	1,685,000	13.7
“ November, “	52,217,495	3,414,000	15.3
“ December, “	125,371,955	6,257,000	20.0

The announcement of the conclusion of an agreement with the Italian Government for a loan of 400 million lire to Poland is a new success of Mr Grabski's financial administration. The loan will be floated by the Banca Commerciale Italiana, which will hand over to the Polish Government immediately after the delivery of the bonds 40 per cent. of the total amount of the loan. The remaining 60 per cent. will be paid two weeks after the opening of subscription, which will take place before the end of May. The price of issue has been fixed at 87 per 100, and the rate of interest at 7 per cent. The loan is guaranteed by the Italian Government, and is based on the receipts of the Polish tobacco monopoly.

The Italian loan, though not very large in itself, substantially assists the Polish financial position. It makes it certain that during the next few months Poland will be able to cover her expenditure without resorting to the printing press. Mr Grabski is gaining a respite which he can utilise for the consolidation of the Polish financial system.

Statistics which have just been published show that Poland's coal and iron production is steadily increasing, and surpasses partly the pre-war level. The production of coal has been as follows:—

	1913.	1923.	1913.	1923.
	Tons (000's omitted).	%	%	%
Former Congress Poland	6,819	6,875	100	109.4†
“ Austrian Poland	1,971	1,882	100	104.0†
Upper Silesia	31,753	26,480	100	83.4

The output of coal in Congress Poland 9.4 per cent., and in Austrian Poland 4 per cent. higher than before the war. Only in Upper Silesia has the level of 1913 not yet been reached.

SWEDEN.—SEVERE WINTER—TRADE CONDITIONS—WAGES AND PRICES—SOVIET RECOGNITION—BANK RESULTS.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, March 12.

THIS winter has been, and is still, very severe. Such masses of snow and ice all over the country and around the coasts have not been seen for years. The ice-barrier along the coast has been very difficult to force, and although special measures have been taken in order to help shipping, several steamers have been stuck in the ice for weeks. It has even been difficult to keep up the regular service to Finland, as well as of the ferry-boats to the Continent via Trellborg-Sassnitz and Malmo-Copenhagen. The late opening of the shipping season is expected to raise freights, as the timber export will have to be executed within a shorter period. Timber sales are proceeding, and up till the beginning of March 300,000 standards were sold. It seems that Germany will again appear as a buyer in the Swedish market. The pulp market is showing an almost unexpected activity for this time of the year, and a great percentage of this year's output of sulphate-cellulose is already disposed of. The quantity sold at present is considerably higher than the quantity at this time last year. Most of the pulp quantities sold are purchased for U.S.A. The import and export figures for January showed a marked import surplus. An import surplus is a seasonal feature, but compared with January, 1923, imports have increased more than exports. The increase in imports is especially notable in the cases of corn and raw materials, the last item suggesting perhaps that confidence in industry is returning.

The situation in general seems to be a little more reassuring; on the labour market there are at present no great disturbances, but wages are still very high. According to some figures published by *Svensk Finansiell-mirz*, the real value of the wages is considerably higher than in 1914. For last year the increase was estimated to be about 25 per cent.; besides this the eight-hours working day is estimated to have increased labour costs by 10 per cent.; thus the industry has to deal with a not inconsiderable increase in the production costs. There has been an increased activity on the stock exchange lately. The price index figure issued monthly by the Board of Social Welfare, including foodstuffs, light and fuel, is showing a figure of 162 for February (July, 1917); the same figure for January was 163, the decrease thus being about 0.5 per cent.

Some more bank results have now been published, and as I mentioned in my last letter, it seems as if last year has been better than the year before. The very heavy depreciations and serious reconstructions, which in many cases took place last year, seem to have put the banks concerned on a sounder and better basis. For many of the banks the gross profits have not been as large in 1923 as in 1922, but the net profit has been much better. A bank, however, which shows both higher gross and net profits is the Stockholm Enskilda Bank, the net profit being 9.44 million crowns (7.36 last year).

DENMARK.—PROPOSALS FOR EXCHANGE REGULATION—ELECTIONS IN APRIL—BANKING AND TRADE.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, March 15.

THE public discussion of economic and political affairs still centres on the exchange question, which has not yet been clarified. Last week the Government informed the “Rigsdag” Committee of the main points of their exchange scheme, which are the following:—(1) To extend the term of the dispensation given to the Nationalbank from their obligation to redeem their notes with gold. (2) That a notice be published by the Nationalbank—according to previous negotiations with the Government—regarding the restriction of credit-giving, especially in connection with transactions in luxuries and instalment-purchase transactions. (3) That a number of taxes be in-

CABLE ADDRESS: BANKTRUST, PARIS

creased and that new taxes of a similar description be imposed, i.e., (a) a stamp tax on motor tyres and tubes, (b) a temporary increase of the Customs duty on cut flowers, early vegetables and fruit, (c) an additional tax on benzine, (d) an increase of the excise duty on chocolate and confectionery in connection with an increase of the import duty on such goods. The proceeds of the taxes and duties specified under a to d were estimated at 10 or 11 million kroner, which, together with a tax on the sale of motor cars, previously imposed, were intended for part payment of the Home National Debt. In 1923 this amounted to 600 or 700 million kroner.

Further, the Government intended to propose an “exchange levy.” It was intended that for three successive years an annual levy of 3 per cent. of taxable income should be collected, the tax-free limit being 800 kr for unmarried people and 1,600 kr for married men, with the addition of 300 kr for each child. For the amounts levied receipts were to be given, which were to be non-negotiable and non-pledgeable. For the first three years no interest was to be paid, but after that time Government bonds should be issued for the receipts, such Government bonds to be for not less than 50 kr each, and to bear interest at not less than 4 per cent. per annum. After 10 years drawings were to commence, and the entire loan to be redeemed in the course of 30 years. The levy was estimated to yield 55,000,000 kr annually, and was calculated for the entire period of three years to aggregate 173,000,000 kr. This measure was likewise intended to bring about a reduction of the National Debt.

Further, it is proposed to establish a “Foreign Exchange Administration” with the object of watching developments in the exchange market. According to this Bill, the Minister of Commerce will be authorised to order any holder to give information to the Foreign Exchange Administration about the amounts of foreign exchange and credit balances in foreign exchange held by him, whether here or abroad. The Foreign Exchange Administration may demand that foreign exchange (including bonds) which has been acquired after January 1, 1924, shall be supplied to the Exchange Equalising Fund, unless such exchange is required within three months for payment of imports of goods by the holder or to fulfil engagements contracted in the course of his business. Purchase and sale of foreign exchange must take place only through the Exchange Equalising Fund, the Nationalbank, the four leading private banks and banks, bankers, &c., who are authorised by the Foreign Exchange Administration. Finally, there is a proposal to increase the taxation of foreign commercial travellers.

At present, however, it does not look as though the exchange scheme of the Government will be carried through, neither in its original form nor with modifications. The Socialists demand the establishment of an “Economy Council,” with far-reaching extraordinary powers, the task of this council being to stabilise and improve the krone rate and control trade. Further it is desired from this quarter that the exchange levy be altered to a capital levy, with rates increasing from 6 to 17 per cent. on capitals above 50,000 kr. The Radicals criticise the exchange levy proposal, and do not want

the "Foreign Exchange Administration" to regulate imports. Finally, the Conservatives maintain their proposal of the Gold Customs Duties, while they cannot agree to the exchange levy. As a consequence of the political situation which has arisen, the "Rigsdag" will now be dismissed earlier than was expected. The election for the "Folketing" will take place on April 11th, and the electors will have a chance to vote on the economic problems which the "Rigsdag" has not brought to a settlement.

In the actual economic situation no pronounced alteration seems to have taken place. The wholesale price index of the *Finanstidende* showed a rise from 223 to 227 points in the course of February, which is naturally connected with the weakening of the krone rate. The excess of imports in January was 20,000,000 kr., against 41,000,000 kr. in December. A number of annual reports by the principal companies have attracted attention. Of the leading private banks the Handelsbank and the Privatbank each pay 10 per cent. dividends for 1923. The Landmandsbank has during this year, in which it obtained a State guarantee for all depositors and creditors, had earnings amounting to 18,000,000 kr.—which, however, are absorbed by writings off. At the same time a further amount of 12,000,000 kr. has been written off on claims, &c.

ROUMANIA.—FOREIGN TRADE FIGURES— NATIONAL BANK REPORT—INDUSTRIAL BANK. (FROM OUR CORRESPONDENT.)

BUCHAREST, March.

THE official figures of Roumania's foreign trade during the year 1923, which are now becoming available, apparently furnish adequate justification for the improvement in lei exchange from its low point of 1,250 to the £ reached a little more than a year ago to its present value of 810.

A condensed table showing the total export of the principal commodities during 1923, in comparison with 1922, is given below:—

	Exported in 1922.		Exported in 1923.	
	Quantity in Metric Tons.	Value in Millions of Gold Lei.	Quantity in Metric Tons.	Value in Millions of Gold Lei.
Grain and foodstuffs....	1,277,705	142.8	1,844,724	195.5
Timber, raw and worked	1,792,879	53.7	2,048,468	67.5
Do (cubic metres)....	86,559		91,827	
Petroleum products....	435,736	76.6	384,317	66.3
Livestock (head).....	319,314	34.6	102,252	18.9
Plus export taxes.....	..	307.7	..	348.2
Total value of exports (gold lei)	..	54.3	..	126.3
Do (paper lei, milns.)	..	362.0	..	474.5
	..	9,950.0	..	18,615.0

In other words, the 1923 exports (with taxes) were valued at approximately £19 millions, against £14½ millions in 1922; and, if transport conditions had been anything like normal, it is reasonable to suppose that exports last year would have been even greater. It is understood that considerable quantities of grain and timber are still available for export on the re-opening of the Danube, but the rise in exchange during recent weeks will no doubt adversely affect the situation.

The latest import figures available are for the first quarter of 1923, and these are valued at (in round figures) 3,420 millions of paper lei; exports during the same period being valued at 3,983 millions—or an "active" balance of Lei 563 millions, equivalent to about £563,000. Imports for the entire year 1922 were valued at Lei 11,709 millions, with an "active" balance (the first since the war) of approximately 400 millions paper. The trend, therefore, has been running strongly in the direction of increased exports and decreased imports, but rising exchange—if it has not already done so—will soon begin to reverse this movement.

From figures recently made available by the British Commercial Secretary at Bucharest, it appears that exports from Great Britain to Roumania increased from £2,682,000 in 1922 to £2,847,000 in 1923, while Roumania's exports to Great Britain remained stationary at approximately £2 millions. The complete returns will

probably show that there was a great shrinkage in imports from Germany, as German manufacturers are steadily losing the dominant hold on the economic life of the country which they have held for so long.

The directors' report for the year 1923, read and approved at the annual meeting of the Banca Nationala, on February 17th, again sounded an optimistic note. Special emphasis was laid on the fact that there had been no new emissions of currency to cover Treasury deficits during the year. Intimating that currency inflation has definitely ceased, the report states that the directors are now faced with the problem of immediately "devalorising" the currency, or of gradually reducing the volume in circulation. As the actual metallic reserve held by the bank is probably only about Lei 600 millions, against a circulation of almost 18,000 millions, it is likely that only a very gradual deflation policy will be attempted. The report admits that the refusal to inflate the currency last year was certain to provoke a temporary financial crisis, but insists that such a refusal would not have been persisted in had not the directors realised that the active export of grain would greatly improve the country's trade balance and ultimately relieve the credit stringency. The bank reported a net profit for the year of Lei 28 millions on a total capital of 12 millions. Other bank profits already reported for 1923 are:—Banca Romaneasca, Lei 115 millions; Marmorosch, Blank and Co., 45 millions; Banca de Scont, 18 millions; and the Banca Viticola, 5 millions.

The new industrial bank ("Credit Industriel"), which commenced operations on January 1st last, reports that up to the end of February it had received applications for loans totalling Lei 2,650 millions, out of which it had granted 492 millions. Ninety-nine per cent. of the loans granted were to industrial enterprises in the Old Kingdom and Transylvania.

Letters to the Editor.

BELGIAN POLITICS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your correspondent will no doubt himself answer Mr Van Driessche's criticisms of his excellent article. As, however, the letter published in your issue of March 22nd raises some points which were not dealt with in the article, I should like to be allowed to attempt to dispel any misapprehension which might follow.

Mr Van Driessche seems to believe that French influence has been increasing in Belgium since 1830, through the initiative of the various Governments which have succeeded each other since that date. He ought to know that the Flemish movement was unknown before 1850, and, even at that time, exerted a purely literary influence. The political movement is of more recent date, and has brought about a series of reforms destined to satisfy the legitimate claims of the Flemings. Through a recent law the two languages have been placed on the same footing in central administration, and Flemish is now the dominant language at the University of Ghent.

The appeal made by Mr Van Driessche in the last paragraph of his letter is not very clear. Before the Ruhr and since the Ruhr the policy of the various Belgian Governments has always been based on the maintenance and the strengthening of the Entente. In order to achieve this aim they adopted, in several circumstances, a policy independent of that of the French Government. The readers of the *Economist* will remember the circumstances in which, two years ago, the Belgian delegate on the Reparations Commission sided with the British, in order to allow the Bankers' Committee full scope for investigation. This attitude was consistently maintained during the negotiations started last summer by Lord Curzon, and is embodied in the Belgian Technical Studies submitted to the Dawes Committee. No critic having followed events more or less closely will agree with Mr Van Driessche that Brussels has become "a branch office of the Quai d'Orsay," or that the Belgians, whatever their party or language, are less anxious than in the past to maintain their complete independence.—Yours faithfully,
A BELGIAN CORRESPONDENT.

GREEK ELECTIONS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to the reply to my letter to you, published in your issue of the 8th inst., and concerning the recent Greek elections, I beg to point out, as an impartial foreign observer, that the "official figures" of "electors who voted" given to you are those of the Home Office of the military oligarchy that ruled Greece, and which after the blunder and crime of the execution of M. Gounaris, and his colleague, abolished the country's electoral laws, established by arbitrary decrees and shocking electoral regulations, which, by compelling its opponents to abstain from the polls, made it possible for the Government candidates to be elected unopposed.

I was in Athens during the December elections. A man has shown to me fourteen electoral booklets, all bearing his photo, but under various names, and boasted that, thanks to the assistance of the Home Office, he voted fourteen times, in Athens, for M. Venizelos and the Republicans! I also saw a great number of military lorries carrying all day through Athens this kind of "electors."

Under such conditions of appalling illegality the figures given by that Government of military dictators could hardly be taken into account.—Yours truly,

MARCEL GAUNY,
University Professor.

14 Avenue Juste Olivier, Lausanne,
March 20th, 1924.

COMPANY DEBENTURE REDEMPTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Roger P. Sing, in his letter published in your issue of March 22nd, states that he has no recollection of ever having stated "that the company" (i.e., the Union Cold Storage Company, Limited) "had tried to buy stock on the Stock Exchange, but had failed to do so." His statement to this effect was made to the chairman and deputy-chairman of this Exchange in my office, and they remember very clearly that Mr Sing gave as the reason for communicating with individual holders of debenture stock, the fact that the company had failed to secure stock (i.e., sufficient stock for their purpose) through their brokers. Obviously the statement was not intended to apply to isolated purchases such as Mr Sing refers to.

Mr Sing's expression of scepticism on other points raised in my letter are as interesting as his life's history given towards the end of his letter, but they do not appear to my committee to call for comment.

His suggestion that "Manchester should realise that the Stock Exchanges exist for the benefit of the public" is answered in his own words—"the Manchester Official List has the best reputation of all the provincial exchanges for the reliability of its quotations, and for the accuracy of its notices and other information."

My committee believe that their action with regard to the principle involved in the question under discussion is in the best interest of the public, and the Union Cold Storage Company is the first company which has failed to agree to the conditions.

That the attitude of the Manchester Stock Exchange is sound and reasonable is proved by the acceptance of the resolution referred to in my previous letter by the experienced representatives of the Stock Exchanges who attended the annual meeting of the Council. I may say that when the Manchester representatives raised this matter at the council meeting they found that the Birmingham Exchange had already made a similar provision in their rules.—Yours faithfully,

HORACE RICHMOND (Secretary).

Manchester Stock Exchange, Manchester,
March 26th, 1924.

ELECTRIFICATION OF THE SWISS FEDERAL RAILWAYS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The rectification published by the manager and chief engineer of the Oerlikon Company with regard to the correspondence which appeared on March 1st in the *Economist* on this subject has suggested to me the follow-

Rubber Plantations Investment Trust, Ltd.

Paid-up Capital and Reserves over £2,500,000.

TEA — RUBBER — COCONUTS.
EASTERN PLANTATION FINANCE UNDERTAKEN.
NEW ISSUES UNDERWRITTEN.
SECURITIES PURCHASED.
ADVANCES UPON APPROVED SECURITIES.

1-4, GREAT TOWER STREET - - LONDON, E.C.3.

ing points which you will, I feel sure, allow me to make clear in the columns of your valuable newspaper.

It is absolutely true that the Oerlikon Company has been one of the pioneers of monophasic traction, and has contributed most efficiently to the progress made in that particular branch of electrical industry. The Oerlikon Company, moreover, has been supplying electrical locomotives for the Swiss Federal Railways from the very inception.

But, on the other hand, the statement that the Oerlikon Company obtained the order for 30 locomotives out of the 57 recently required by the Swiss Federal Railways is one which might perhaps give rise to a certain misunderstanding.

As a matter of actual fact, the orders for 1923 were given in two lots by the Swiss Federal Railways. When the railways gave the first order in the spring of 1923 the Oerlikon Company did not benefit by that order in any way, and only the Brown, Boveri Co. and Secheron supplied those particular locomotives.

This fact is probably the basis for the slight error which has been made in his report by the Geneva correspondent of your excellent newspaper, for, taking the spring order of 1923 into account, the Oerlikon Company only supplied 30 locomotives in all of the 81 covered by the entire order. Secheron are still among the contractors to the Swiss Government.

Pray pardon me for thus taking up your space, and believe me,—Yours very truly,

ERNEST LUBERBACHER

(Director of the Secheron Works).

47, Park Avenue, Palmers Green, London N. 13,

Books and Publications.

THE ECONOMICS OF CONSUMPTION AND FOOD SUPPLY.

It was for long a matter of complaint in certain quarters that economists paid insufficient attention to the important question of consumption. Judged by the number of books which have recently appeared—more particularly in America—on some branch or other of the subject it might seem that this criticism no longer holds good. Unfortunately, however, a rehash of economic doctrine from the point of view of the consumer does not exactly satisfy the need, while in the present state of knowledge it is hard indeed adequately to estimate the motives of consumption. Professor Comish's text-book* appears to be quite unsatisfactory in both respects. The field covered is of the widest, and the treatment for the most part of the slightest. The advantages of private property, for example, are given in two small pages, while sixteen pages are devoted to the reproduction of answers to a questionnaire purporting to explain the motives which led 200 junior women and 200 junior men in college to buy school dresses or suits. Very many aspects of American economic life are touched upon in the two divisions of this volume, which are entitled "Standards of Living and the Factors Affecting Them" and "The Immediate Sources of Consumptive Goods"—(a horrible term this)—"and the Present and Future Means of Acquiring Them." The need for Federal standardisation of containers for fruit and vegetables is urged pictorially, while the adjoining text examines the irrational manner in which young men determine to go to the "movies." "In such cases," we are solemnly told, "rarely, if ever, are the relative values of movies, theatres, and operas compared"—a proposition

* "The Standard of Living. Elements of Consumption." By N. H. Comish, Professor of Economics, &c., in the Oregon Agricultural College. (New York) Macmillan. xviii + 340 pp. Price 9s.

which we, for our part, would never have thought of controverting. Savings and investment are both treated, and a special chapter is devoted to the desirability, in certain cases, of investments in farm lands in the United States. The book, we are told, is intended for the college student, the statesman, and the general reader—a truly comprehensive audience for an all-embracing text-book. For our part we recommend this somewhat naïve and (unintentionally) humorous medley of statistics and opinions for the light it throws on the mentality of the Far West rather than as an authoritative treatment of the intricate problems connected with the "Standard of Living."

A more thorough-going treatment of one aspect of the question is Professor Hedrick's volume on "The Economics of a Food Supply."† An attempt is here made to tell the whole story of the way in which food comes to the consumer. Here, too, no previous knowledge is expected, and the author even thinks it necessary to define the word "pork," a name which, "together with the term 'lard,' is used to signify the chief foods which come from the widely known animal—swine." Pork, together with wheat, dairy products, and sugar constitute the "big four" of American "food-bearers." After an outline of the principal purposes and values of food, some account is given of the food supply resources of the United States, though the greater part of the book is devoted to the production and distribution of food in America. The typical unit of production is the medium-sized farm comprising some 80 or 90 acres of arable, and almost as large an area devoted to pasture, woodland and waste. The growth of tenant-farming, which is one of the interesting developments in American agriculture during the last twenty or thirty years, is examined from the point of view of the central problem of management. Despite the opposition of public opinion, 38 per cent. of American farmers to-day are tenants, as compared with some 25 per cent. three years ago. Tenancy is one of the rungs of the agricultural ladder, and comes next to the farm mortgage, this latter comprising about a third of all the farms in the country. The new Federal Land Bank system in turn makes it more easy to dispose of mortgages and thus helps the energetic farmer to become a full proprietor.

This volume contains a convenient summary of the agents of food distribution in America, and a special chapter is devoted to Governmental action. Professor Hedrick is inclined to hope for a bettering of market conditions and the cutting out of the private middleman in this manner and points to the war record of the principal belligerents in support of this view. "Food distribution by Government is, then, no longer a mere venture in Utopia. The thing has been done." It may, however, be doubted whether peace time conditions would call forth the energy and self-sacrifice of a sufficiency of men of the calibre of Mr Hoover.

THE SOCIALIST STATE—NEW STYLE.*

THOUGH new worlds stand somewhat at a discount nowadays, Mr Hughes's conception of the post-war Socialist State is calculated to interest many people to whom the vision of a better order—practicable or impracticable—is a welcome relief from too familiar realities; as famished Antarctic sledging-parties have sustained their cheerfulness by recounting the courses of hypothetical Mayors' Banquets. The writer places his Utopia, or, rather, "Equaland," in British East Africa (has he ever visited that rather provocative region?), its constitution being the outcome of an Enabling Act passed by the Imperial Parliament. One observes, however, that "much valuable assistance was rendered by some American business men" who happened to be hunting in that part of the country at the critical time. (Mr Hughes is himself a Western States lawyer.) To this Transatlantic influence was probably due the subsequent organisation of the State, which is neither more nor less than a vast business concern engaged in industrial and development work, every transaction of its citizen-employees being recorded in triplicate, checked and

audited, on the lines of the departmental store. All citizens are bound by law to perform a specified number of hours' work every year, and are provided with (1) housing accommodation in proportion to their earnings, (2) a minimum wage varying with the total income of the State, or, in other words, the net profits of the business, and (3) a "Special Needs" allowance of a certain percentage of their earnings above the datum line—this last an ingenious device for squaring State control with individual incentive which smacks somewhat of "agent's commission." Inheritance being unknown in Equaland, the death of a substantial citizen opens the way for "promotion" of some worthy subordinate, who takes over the property or goodwill of the deceased. All citizens receive a pension on retirement. The writer's case is expounded with much ingenuity, and with an obvious sincerity transcending the rather mundane nature of the expedients suggested. Much of the argument is illustrated by actuarial tables—a new and commendable departure in a work of this sort. Mr. Hughes' book deserves a place between Bellamy and Wells, as a business man's contribution to what has hitherto been the preserve of more imaginative and less "practical" literary architects.

THE STOCK EXCHANGE OFFICIAL INTELLIGENCE.*

THE Stock Exchange Official Intelligence for 1924 is now in our hands, and, as usual, it occupies a prominent position on our bookshelves. We are told that in this—the new volume—there are nearly 300 additional companies which have not appeared in previous volumes. Particulars are also given of 36 loans representing well over £180 million, which have been issued in London on behalf of various authorities since the publication of the preceding volume. This volume also includes a list of brokers who are members of the Stock Exchange, and further information is given regarding gas, water, and electricity supply companies. And, perhaps from the purchasers' standpoint, most satisfactory of all, in spite of the fact that this production has been enlarged, the price has been reduced from £4 to £3. It is to be hoped that the publishers will reap the benefit from this concession in the shape of increased sales. They certainly deserve it.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, April 2. ACCOUNT, April 3.

One unfavourable influence after another has this week hung upon and worried the heels of cheerfulness. The bus and tram strike at home, the resignation of Monsieur Poincaré in France, disappointment with the Buenos Ayres Western dividend, the menace of American coal in the light of a possible coal strike, are a few of the outstanding factors that make for heaviness in prices, stagnation in Stock Exchange business. The public are not likely to be willing buyers of Stock Exchange securities at a time when upheaval in industry seems to be the established order of the day.

That gilt-edged stocks remain firm is due to the fact that money is always accumulating, and when financial disturbances are rife, much of the capital goes into safety and gilt-edged stocks. The recent heavy issue of New South Wales 5 per cents. at 97½ was taken by the public to the extent of 80 per cent., and the price opened on Thursday morning at a discount of about 5 per cent., rising later to ½ premium. The War Loan keeps firm, and the funding stock, quoted ex dividend early this week, recovered a small part of the deduction. In other gilt-edged stocks, the changes are few and unimportant.

Prices of Brazilian bonds gave way, after being a little better, on a rally in the milreis. Mexicans pursued an opposite course, being lowered early in the week and hardening up towards the close of it, on hopes of an April payment of interest. French issues were singularly little affected by the unexpected resignation of the French premier. Nor has the rise in the franc proved of much service to the quotations for French Government or railway bonds. Stock Exchange sarcasm suggested that the resignation of Monsieur Poincaré should be accounted a bull point for German bonds. Subscriptions lists to the new Siam and Amsterdam issues were very promptly closed.

Underground stocks in the Home Railway market were flat, owing to the statement of Lord Ashfield that the District and its four associated railway companies, together with the three tramway companies, are doing very badly. Holders became nervous, and freely sold their Underground incomes and District stock, but there was a recovery yesterday. The Home Railway steam companies' stocks are depressed by fears of strikes. Grand Trunk Pacific debenture has risen substantially by reason of the hope that some announcement will be made shortly of a modest cash return to the proprietors. Argentine railways gave way abruptly, the Buenos Ayres Western interim dividend of 2 per cent. being regarded as very disappointing, particularly as the Central Argentine and Buenos Ayres Great Southern had maintained their previous rates of 2½ per cent. and 3 per cent. respectively. But prices rallied from the worst. Nitrate railways are better, though nitrate-producing shares have scarcely moved. Brazilian railway stocks gave way to a moderate extent.

Raw rubber, remaining about 1s per lb all the week, offered no incentive to investment or speculation. The oil market has been erratic, notification of a new issue of Royal Dutch serving to put up the price of those shares with such a run as brought in profit-takers. Other members of the market enjoy a fair amount of activity, which, however, is largely professional. Tea shares are lower on balance. The Chubwa company is one of the latest to propose capitalisation of its reserves and to divide its £5 shares into others of £1 each. Gas stocks are lower. Electricity descriptions mostly maintain their values, and the companies likely to be affected

by the British Empire Exhibition are somewhat neglected, so far as their shares go, at the present time. Hudson's Bays, Sudan Plantations, and other land shares are mostly lower.

Textiles are moving narrowly, and attracting little trade. One jobber in this market, it may be observed, failed to do a single bargain in two days this week in Courtaulds, which, not long ago, were changing hands with greater freedom than the War Loan itself. Marconis hardened on buying from the north. The cable group is unchanged. Iron and coal shares are weak because of the fear of a coal strike, and the shipping market feels the effect of two or three unfavourable reports recently issued. The slump in Eagle Star shares became arrested, though there has not been much recovery. Other insurance shares, together with those in the banking list, present no fresh aspects of interest. London traction shares are mostly lower, and newspaper shares are flat. Vickers' new debentures are being dealt in on the basis of ½ discount. The tobacco shares show a heavy disposition. Trust companies' stocks are soaring upwards.

The Kaffir Circus is a good deal at the mercy of what is taking place in Paris, where losses on exchange and on base metal gambling are said to be extremely heavy. The tendency of the South African list is therefore dull, and, apart from a little liveliness in two or three speciality shares, Rhodesians are dormant. Diamonds have given way, and so have Rio Tintos. The tin markets, subject to the sharp fluctuations in the price of tin, are lower on balance. No interest has been taken in Russian mining shares, and the Dominion is giving the cold shoulder to shares in Canadian mining companies.

Government of South Australia 5 per Cent. Conversion Loan.—This is an offer of conversion to holders of £1,650,300 South Australian Government 4 per cent. registered stock and bonds, maturing April 1, 1924, the price of issue being £98 per cent. Holders of £1,597,200 South Australian 4 per cent. registered stock and £53,100 4 per cent. bonds due April 1, 1924, are offered conversion into an equal amount of South Australian 5 per cent. registered stock, 1932-1942. Holders of stock and bonds due April 1, 1924, will receive an immediate cash payment of £2 per cent., being the difference between the par value of the maturing stock and bonds and the issue price of the new stock (98 per cent.). The Commonwealth Bank of Australia is authorised to offer for subscription in cash at 98 per cent. South Australian 5 per cent. registered stock, 1932-1942, to an amount sufficient to make up, with the stock and bonds converted, a total of £1,650,300. The principal of the new stock is repayable at par on October 1, 1942, but Government of South Australia reserves the right of redemption at par on or after October 1, 1932.

Royal Siamese Government 6 per Cent. Sterling Loan of 1924.—This is an issue of £3,000,000 at 95½ per cent. The principal will be repayable at par within forty years from March 25, 1924, by drawings commencing in 1930, but the Siamese Government have the option of redemption at par at any time on or after March 25, 1934. The loan, both as regards capital and interest, is exempt from all present and future Siamese taxes. The Siamese Government have undertaken that, if any special security shall be given to any other foreign loan contracted in future, such security shall also be immediately and concurrently applicable to the present loan. The loan is required to recoup expenditure already incurred

* By W. O. Hedrick, Professor of Economics in the Michigan Agricultural College. xiv. + 336 pp. (London) D. Appleton and Co. 20s 6d.

* "State Socialism after the War." By Thomas J. Hughes. Second Revised Edition, 1924. (London) John Bale, Sons, and Danielsson. 4s.

Some interesting figures relating to Siam are given in the prospectus. The total national debt is now £9,723,933. It is satisfactory to find that debt redemption is being carried on, and that a surplus is shown in the Budget for 1921-22 (the latest figures given). Existing Siamese loans are in good favour with the investing public. On the most recent quotation the two pre-war issues yielded round about £5 7s per cent., while the 7 per cent. loan, issued at par, was quoted at 104½. The issue was well received.

City of Amsterdam 5½ per Cent. Sterling Loan.—This is an issue at 96½ of £2,500,000 bearer bonds. These bonds will be the direct obligation of the city, which has undertaken that it will not, during the currency of the present loan, create any charge on its assets or revenues without giving to the holders of the sterling bonds a similar charge *pari passu*. The bonds are redeemable not later than October 1, 1874, by means of a cumulative sinking fund, to be applied by yearly drawings at par; the first repayment will take place on October 1, 1925. The city has the right on October 1, 1935, and on October 1 in any subsequent year, to redeem at par these bonds upon giving six months' notice. Principal and interest will be payable in sterling in London, and are exempt from all taxes created in the Netherlands. The city has for many years owned and operated all the important public utility undertakings. The net revenue from these amounted in 1922 to £478,000. The city's revenue in 1922 exceeded its expenditure by £405,000; its total funded debt, excluding the present issue, is £21,380,000. We welcome a borrowing from this progressive city, and feel sure that investors will not regret participating in this loan. Quickly oversubscribed.

Allied Newspapers, Limited.—Authorized capital £2,000,000 in ordinary shares and £4,750,000 in 8 per cent. cumulative preference shares, all of £1 each. There is a debenture issue of £1,500,000 7 per cent. debenture stock. This is an offer for sale of 4,750,000 preference shares at par. This being an offer for sale, we are precluded from being furnished with much necessary information. The vendors, however, are very candid. The total purchase price is £4,400,000 cash, £1,500,000 debenture stock, and £2,000,000 ordinary shares. It is stated that the price payable by the *Sunday Times* to E. Hulton and Co. for that company's Manchester business is £4,000,000 in cash and £1,500,000 debenture stock, and it is added that "the greater part of the above consideration is payable for goodwill." The brokerage and underwriting terms are interesting. The preference shares now offered have been subscribed for a commission of 7½ per cent., payable in cash, out of which expenses will be paid, including a special overriding commission of 1 per cent. to persons who guaranteed the underwriting. In addition 510,000 fully-paid ordinary shares have been received, out of which are to be distributed to persons "who guaranteed the underwriting" 10 ordinary shares for every 100 preference shares guaranteed. We are told that the issued capital of the *Sunday Times* is 67,257 ordinary shares, and 30,000 preference shares; these are presumably £1 shares. Profits are given from 1918. After making provision for interest and sinking fund in connection with the debentures, if profits for 1923 are taken as a basis, a balance of £705,000 is available for the 8 per cent. dividend on £4,750,000 preference capital. This service requires £380,000 per annum. Thus a substantial margin is left. Newspapers as investments are speculative propositions, as far as the general public is concerned. A glance back at the fate of well-known papers over a long period of years will perhaps prove our point. The chief stock in trade is composed of goodwill and individual personality. There is, however, no reason why these should not be capitalised.

Sir W. G. Armstrong, Whitworth, and Co., Limited.—Share capital £10,012,500. The loan capital consists of £2,500,000 4 per cent. first mortgage debenture stock and £1,757,000 6½ per cent. second mortgage debenture stock, being part of an authorised issue of £5,000,000. Details are announced in the press of an issue of 5½ per cent. notes to comply with the requirements of the London Stock Exchange. This is an issue of £2,000,000 5½ per cent. three-year notes. The notes are to be dated April 7, 1924, and are redeemable at par on April 7, 1927. The notes will be secured by a trust deed in favour of the trustees, and constitute a first charge on £2,000,000 6½ per cent. second mortgage debenture stock of the company, which will be created and issued to the said trustees, and will rank *pari passu* with the second mortgage debenture stock at present outstanding, except that redemption payments on the former will commence to run only if and when the trustees require it. The company has sold these £2,000,000 5½ per cent. three-year notes for payment and delivery on April 7th at the price of £97 17s 6d per cent. These notes are good security in their class.

Anglo-Persian Oil Company, Limited.—A statement has been published in the press in connection with an issue of £2,000,000 6½ per cent. five-year secured notes of the Anglo-Persian Oil Company. The notes are dated March 1,

1924, and will be repayable on March 1, 1929, at par. The company reserves the right to redeem the notes on January 1 or July 1, 1925, on January 1 or July 1, 1926, at the price of 102, and accrued interest; on January 1 or July 1, 1927, at the price of 101½, and accrued interest; on January 1 or July 1, 1928, at the price of 101, and accrued interest. These notes are the direct obligation of the company, and are further secured by the deposit as collateral security with the trustees for the noteholders of £2,500,000 of the company's 5 per cent. first debenture stock, secured by trust deed dated May 25, 1909, and supplemental trust deed. This issue has been sold at the price of 99 to two well-known financial houses. If obtainable at par a fair investment opportunity.

The British Australian Cotton Association, Limited.—Incorporated in Queensland, Australia. Details are issued concerning this undertaking for information only, no shares being offered for subscription. The principal objects of the undertaking are to carry on business in Australasia as cotton ginners, warehousemen, and brokers; to manufacture cotton by-products, to grow cotton, to finance cotton growers, and generally to conduct all business associated with the development of the cotton industry in Australasia. The capital is £1,000,000, having been increased from £200,000 in January, 1923. It is divided into 200,000 8 per cent. cumulative participating preference and 800,000 ordinary shares of £1 each. Of the original 200,000 shares, 50,000 were issued as fully paid to the Australian Cotton Growing Association, Limited, of London, as reimbursement for moneys expended by it in the promotion of and for sums advanced to the British Australian Cotton Association, Limited. After the increase of capital an agreement was entered into for the issue of 91,000 fully-paid-up £1 shares in the capital of the Queensland company to the liquidator of the English company or its nominees.

The Worthing Gas Light and Coke Company.—Authorized capital £216,942, of which £138,000 has been issued. Loan capital for £65,441 has been issued. This is an offer for sale by tender of £20,000 5½ per cent. preference stock, the minimum price of issue being £95 per £100, which would give a yield of £5 15s 9d per cent. There is no preference stock in existence with the exception of this issue. The net revenue of the company amounted last year to £14,041; the interest on loan capital absorbs £3,583, leaving a balance of £10,458 available for dividends on preference stock. As this will only need £1,100 per annum, a wide margin is left for security. An excellent investment, but regard must be paid to the narrow market for such a small issue.

Grigg (1924), Limited.—Authorized capital £150,000, divided into ordinary shares of £1 each. This company has been formed to take over a business of the same name manufacturing motor cycles, power units, gears, &c. This is an issue of 84,220 shares at par, the remainder being part of the purchase price. The assets to be acquired are valued in the prospectus at £92,387. This sum will be satisfied as to £26,607 in cash, and as to £65,780 by the issue of fully-paid shares in the new company. The present issue is expected to give £45,613 for working capital. The vendor company was formed in 1919. According to the information provided by the prospectus, in the year ended June 30, 1922, net profits of the vendor company were 15 per cent. of the paid-up capital, and in the following year 22 per cent. per annum on the capital from time to time paid up. This, however, cannot be considered a satisfactory method of presenting past profits. In the circumstances, an investment in this company must be looked upon as "a leap in the dark."

Fabulosa Mines Consolidated.—Capital stock \$3,000,000 American gold, in shares of \$1 each. The company is incorporated in the Republic of Bolivia, and is the owner of approximately 12,600 acres of tin-bearing mining lands. Profits are given for 1923 as equal to £32,956. These and other details are given in connection with a statement in the Press, published to comply with Stock Exchange regulations. Investors will, however, require more information than that vouchsafed before taking an interest in the company.

COMPANY MEETINGS, &c.

THE MERCANTILE BANK OF INDIA, LIMITED.

CHAIRMAN ON POLITICAL AND INDUSTRIAL CONDITIONS IN INDIA.

INDIA'S FINANCIAL AND TRADE RECOVERY.

IMPROVED OUTLOOK FOR FUTURE.

The thirty-first annual general meeting of the shareholders of this bank was held at Winchester House, Old Broad street, London, E.C., on the 28th instant. Mr J. M. Ryrie presided in the absence of Sir Robert J. Black, Bart., the chairman.

Mr Ryrie: I will ask the chief manager, Mr J. Steuart, to read the notice convening this meeting and the auditors' certificate.

The chief manager read the notice and the auditors' certificate.

Mr Ryrie said: Gentlemen, if you will permit me I will, as usual, take the directors' report and accounts as read.

In the first place, I am sure I express the disappointment all present feel not to see our chairman here to-day, and our sincere regret that his absence is caused by ill-health. At the end of last year Sir Robert Black had a severe attack of influenza, and, as he did not make a good recovery, his doctor ordered him to Egypt early this year, and I am pleased to say he has just returned feeling much better, but not yet quite fit to take up his many duties in the City, and, indeed, we have begged him not to resume his arduous work at the bank without a further rest. I hope, however, that in a very short time his recovery will be complete, and that we shall continue to reap the benefit of his advice and guidance for many years to come.

It is under these circumstances that my colleagues have done me the honour of asking me to preside to-day, and though I appreciate what a poor substitute I am for our chairman, I consented, feeling that you will make full allowance for my shortcomings.

We would have been glad also to have Lord Carmichael with us to-day, but he is in the South of France, and regrets his absence as much as we do.

DEATH OF THE LATE CHIEF MANAGER.

In the next place, it is my painful duty to refer to the sad and untimely death, in November last, of Mr Percy Mould, our late chief manager, to which important post he was appointed in 1913. Mr Mould had been in the service of the bank since 1886, and previous to his appointment as chief manager he was manager at Calcutta, our most important branch. I know I can say without fear of contradiction that with all who came in contact with him, in or out of business, Mr Mould was not only popular, but respected for his ability and character. Your directors, one and all, lament the loss of a chief manager and a friend in whom they had complete trust, and who was always dignified and tactful under all circumstances.

We were, however, fortunate in having as our London manager and second in command Mr James Steuart, who has served the bank since 1889, having been appointed London manager in 1913, and acting chief manager in May last, and as from long experience your directors know that Mr Steuart's knowledge of the bank's business, at home and in the East, is unsurpassed, and that the interests of the bank always come first with him, they had no hesitation in appointing him to succeed the late Mr Mould as chief manager in December last, and in the confident belief that under his control the bank is in good hands.

NEW LONDON MANAGER.

Then we have cause for congratulation in that Mr James Murdoch, another old and able officer of the bank, who has been our Inspector of Branches in recent years, has consented to fill the position of London manager until such time as we can make other arrangements, and I take this opportunity of saying how much we are indebted to Mr Murdoch for agreeing to stand by us for the present.

I have also to mention with regret the death of Mr Scott Smith, who, after vacating the position of manager at Calcutta and carrying out a visit of inspection to our branches in the Far East, had just come home on leave. Mr Scott Smith was a popular and efficient officer of the bank, who will be much missed by a wide circle of friends.

THE PAST YEAR.

In attempting to review the events of last year in which we are interested, I find it difficult to know where to begin, as our operations and interests cover such a wide field, but as our profits depend largely upon the monetary policy of this country I will begin by referring briefly to events at home.

Money has been comparatively cheap, the Bank rate being main-

tained at 3 per cent. until July, when it was raised to 4 per cent., the rate to-day, and consequently rates of discount, which are of material interest to us, have been equally steady.

There have been large and successful issues of capital, indicating that London is still the centre of the money market of the world.

Prices on the whole have been steady, and our imports and exports increased, and, taking invisible exports into account, the balance of trade was in our favour, though the balance available for investment overseas was probably less than in the two previous years owing to payments in respect of our American debt.

TRADE IMPROVED.

Trade generally has improved, there has been some reduction in taxation, and unemployment has decreased, but prospects are overcast by strikes and threats of industrial war, with the result that orders are going abroad. The cost of production in this country is still high, and I noticed that in a recent speech Mr Baldwin said that whilst our imports cost us 53 per cent. over 1914 prices, we have to ask 89 per cent. more for our exports. This is an important point, and unless we can reduce the price of our exports, the cost of our imports must increase. The question of how to deal with the large amount of unemployment still existing is a serious problem, and I am afraid that until there is more self-help and self-reliance, and less looking to the State for assistance, this problem will always be with us. It will certainly not be solved by a settlement of the vexed questions of Reparations and inter-Allied debts or the recognition of Russia.

NEED FOR IMPERIAL PREFERENCE.

As the result of the last General Election it is clear that Protection for home industries is at least out of the question for some time to come, but I venture to say I hope Imperial Preference will survive, particularly in view of the restricted purchasing power of Europe brought about by inflation followed by depreciation of currency, with the result that we have France, Germany and Belgium dumping goods in this country at prices with which our manufacturers cannot compete.

The last Government were, I think, wise to settle the terms upon which our debt to the United States is to be paid, as, apart from the resulting maintenance of our credit abroad, I cannot but think a further result will be an increase in exports from the British Empire to the United States.

It is true the £ sterling as measured in dollars, which at present seem to be the common measure of the value of the currencies of the world, has not appreciated as we would like, but if as the result of our imports from America are checked and our exports to that country increase, there is perhaps not much cause for regret.

THE LABOUR GOVERNMENT.

It is too soon to indulge in remarks upon what we are to expect from the Labour Government, but on the whole they have made a good start upon more or less conservative lines, and if they can see their way to reduce the present high taxation, and thus help to bring down the cost of living, and cost of production, and at the same time devise better machinery than exists at present for the purpose of averting strikes and bringing about confidence as between Capital and Labour, they will deserve our congratulations and thanks.

We may not all agree with their decision to abandon the proposed extension of our naval base at Singapore, but it is satisfactory to know they adhere to the policy of the Cunliffe Committee, and do not intend to proceed with their idea of imposing a Capital Levy. But I confess to not understanding exactly what object they have in setting up an inquiry "to consider and report on the National Debt and on the incidence of taxation with special reference to their effect upon trade, industry, employment, and national credit." I hope there will be no attempt at nationalisation of railways, mines, &c., as if this were carried out political influences would always be at work, and as the motives which lead to success in private enterprise are absent in Government enterprise.

POLITICAL SITUATION IN INDIA.

In referring to India, I feel that I cannot ignore the political situation, which is giving so much trouble and causing some anxiety, as, if it continues, the credit and trade of the country

must suffer, but as a business man I do not like politics, and I will deal with this subject briefly. It is clear that, in spite of the large concessions made, the Montagu Scheme is not working well, as it seems to have done little to curb the ambitions of some of the English-educated Indians who, while demanding self-government at once, can hardly claim to represent the people of India. There are so many races with different languages and religious beliefs in India, that the British Raj must continue to hold the balance for some time to come, and until the time is ripe for self-government. At the moment the new Constitution is threatened, the extremists having stampeded the independents and moderates, and it looks as if the clock of reform has been put back; but it is a period of transition, which is always difficult, and I hope there will be no reactionary steps at present, and that the Government of India will be left to deal with the situation without any interference from this side, as I feel that our Indian friends will settle down and, in the interests of the country, see the desirability of exercising patience and restraint.

FINANCE AND TRADE IN INDIA.

So far as the financial position and trade is concerned, India has made a splendid recovery from the depression of previous years. The Budget for 1923-1924 has been practically balanced, and that for 1924-1925 is expected to show a surplus of over three crores of rupees, and permit of a reduction in the salt duty, this being the result of a good monsoon and economies in administration, and making it improbable that India will have to raise any external loan this year. On March 31, 1922, 54 crores of Indian Treasury bills were outstanding, this amount being reduced a year later to 22 crores, whilst on 31st inst. the amount outstanding will probably not be more than 2 crores. The total imports and exports of merchandise in 1923 amounted to 569 crores of rupees, or at 1s 4d exchange, say, £379,000,000, which is a "record" if the year 1920 is excluded (when the balance of trade was against India, and which proved a disastrous year for many), and the balance of this trade in favour of India was about £76,000,000. But in 1923 the net imports of gold exceeded £26,000,000, and those of silver £13,000,000, against about £20,000,000 and £11,000,000 respectively in 1922, these imports of bullion, of course, reducing the balance of trade and depressing exchange. India imported cotton goods and yarn in 1923 to the value of, say, £44,000,000, of which about £34,750,000 came from Great Britain, and no doubt the imports would have been larger but for the high price of cotton, which is at least three times higher than in 1913.

INDIAN EXCHANGE.

In regard to Indian exchange, the year opened with the rate for telegraphic transfers on London at 1s 4 5/32d and closed at 1s 5 3/32d, touching 1s 3 29/32d in August, which was the lowest point, and 1s 5 9/32d in November, this being the highest level of the year. It is interesting to note that in framing the Budget for 1924-1925 the Indian Finance Minister has adopted a rate of 1s 4 1/2d, which is about the rate to-day, against 1s 4d in the two previous years, but Sir Basil Blackett was careful to point out that he is not indulging in prophecy. As you know, the 2s gold rupee was adopted when conditions were abnormal, and prices generally inflated, and the Government of India have now, it appears, practically abandoned this rate, intending apparently to allow the rupee to find its own level until at any rate sterling is more on a parity with gold than it is at present.

The fluctuations in silver were very moderate, the year opening with the price at 31 1/4d, and closing at 33 7/8d, the highest and lowest points being 33 1/4d and 30 1/4d respectively, with consequently no violent ups and downs in rates of exchange in China. The price of gold, which is influenced by American exchange, touched 96s 11d, the highest point, in November, and 87s 5d, the lowest point of the year, in February. It is also interesting, in connection with Government of India remittances to this side, to observe that of the about £28,000,000 remitted, only £8,738,000 was realised from the sale of Council bills and telegraphic transfers in London, £12,475,000 representing purchases of sterling from the banks and T.T. in India, and the balance made up by remittances on account of the paper currency reserve, and a transfer from this reserve in India to the Home Treasury.

THE BALANCE-SHEET.

I will now turn to the balance-sheet and profit and loss account, but as these are drawn up in the usual form there is not much for me to say.

The total figures on the balance-sheet are very slightly less than at December 31, 1922, and the deposits show a small decline, but the figures disclosed indicate a very strong and liquid position, and, indeed, I would like to see more of our resources invested in our business. The cash in hand represents nearly 28 per cent. of our deposits, and if the investments in Government and other stocks are added to the cash the ratio is 65 per cent. The investments, I may mention, are made up of £3,021,083 in sterling securities, £1,513,957 in rupee securities, and £399,641 in Straits dollar

securities. The large reduction in the amount standing against bills receivable is explained by the fact that on December 31, 1922, we held about £1,000,000 of Indian Treasury bills in India, and none of these bills on December 31st last, our funds in India being then employed otherwise, whilst it is now largely the custom of merchants in India to draw against their shipments by telegraphic transfers rather than by usance bills. The decline of £441,378 in loans receivable and advances indicates less demand for accommodation from our customers, and to some extent the liquidation of old advances. The increase in the item banking premises is accounted for by the cost of our new building at Madras, the balance of the cost of our new premises at Rangoon, and the price paid for the building we have acquired at Simla, less the £20,000 written off last year.

NET PROFITS AND DIVIDEND.

The net profit for the year, after providing for all bad and doubtful debts, of which, I am pleased to say, there were very few, and the usual bonus to the staff, is less by £8,728 than for 1922, but we are able to make the regular allocations to reserve fund and officers' pension fund, and again write £20,000 off banking premises, and not only maintain our dividend for the year at 16 per cent., but carry forward £5,706 more than last year.

CURRENT YEAR'S PROSPECTS.

In regard to prospects for the current year, I can only hope there will be a further improvement in trade generally, and I think it is fair to expect this, but so far as India is concerned, much depends upon the coming monsoon, whilst in the absence of more stability in the exchanges of the countries of Europe to which India exports so much of her produce, we cannot expect a sustained demand from those outlets. Then, of course, the prevalent labour unrest stands in the way of an improvement in trade, and there must be no inflation of currency, which can only result in higher prices when lower prices and increased consumption are wanted, particularly as, so far as I can see, there is no restriction of credit at present. We are, at any rate, ready and anxious to provide all reasonable facilities for any sound development of trade with the East. The shipments of rice from Burma are not likely to be so large as in recent years, but higher prices promise to compensate for this, and as there will be large exports of rice from Siam, the chain of branches we have now completed connecting Singapore, Bangkok, Batavia, Soerabaya, and Hong Kong should benefit. Then at Singapore and Penang trade has improved, and if recent prices of rubber and tin are maintained, the results should be satisfactory, though there is still room for improvement in the price of rubber. But in China business is at a low ebb, and until some kind of order is established the development of that great country must be retarded. At Mauritius a good crop of sugar is expected, and with higher prices than last year, the island should do well. On the whole, therefore, and as stocks in consuming countries must be low, it is, as I have said, fair to look for an improvement in trade generally this year, and, in any case, the position of this bank is so sound that we can look forward to the future with confidence, and our new branches will, I hope, prove helpful.

I cannot sit down without referring to our staff at the head office and branches, from Mr Steuart downwards, and saying how much we owe them for their efficiency and devotion to the interests of the bank. The satisfactory working, and the results achieved, depend largely, if not entirely, upon the staff, and in the first place upon the chief manager, who, in turn, depends upon the London manager, the sub-manager, accountants, and other heads of departments in London, whilst last, but not least, we have to rely upon the judgment and tact of our managers in the East and their subordinates.

I have now to propose:—"That the report of the directors with the audited statement of accounts and balance-sheet at December 31, 1923, presented to this meeting, be and the same are hereby received, approved and adopted, and that a final dividend on the 'A,' 'B,' and 'C' shares of this bank of 8 per cent. be paid, making 16 per cent. for the year, less income-tax, as recommended in the report, and the same is hereby confirmed."

Sir David Yule seconded the resolution, which, in the absence of questions or comment, was put to the meeting and carried unanimously.

The Chairman: I have now great pleasure in proposing the re-election of Mr H. Melvill Simons and Lord Carmichael as directors. These gentlemen are both so well known to you that, in recommending their re-election I need only say that in them you have two directors who have the interests of the bank at heart.

Mr P. R. Chalmers seconded the resolution, and it was unanimously agreed to.

On the motion of Mr J. D. Wilson, seconded by Mr F. G. Jones, Messrs Cooper Brothers and Co. and Messrs W. A. Browne and Co. were reappointed auditors.

Mr E. J. Walker: Before we separate, it becomes us to propose a vote of thanks to the chairman and directors for their able c

duct of the affairs of the bank in the past year. The year 1923 must have been a difficult year for anyone engaged in banking and commerce, and I think the report which we have had put before us is an exceedingly satisfactory one. I shall therefore have pleasure in proposing a vote of thanks to the chairman and directors and staff.

The vote was unanimously accorded.

The Chairman: On behalf of my colleagues and myself, I thank Mr Walker for the kind remarks he has made, and I thank you all for the cordial reception which you have given to this vote of thanks. I have already said that it is to the staff our thanks are due chiefly for the satisfactory results, and I am quite sure that all at the head office as at the branches will appreciate your recognition of their work.

The proceedings then terminated.

EASTERN BANK, LIMITED.

SATISFACTORY RESULTS DESPITE DIFFICULTIES.

The fourteenth annual general meeting of the Eastern Bank, Limited, was held, on the 26th instant, at the office of the bank, 2 and 3 Crosby square, London, Mr J. S. Haskell (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, expressed the pleasure the directors felt at having initiated the holding of their annual general meeting in their own bank offices. He felt confident that the shareholders would agree that their new building reflected great credit on the architects, Messrs Blomfield and Driver, and he anticipated definite practical advantages from their improved surroundings. The report they were considering did not vary much from its immediate predecessor. Although, thanks to another good monsoon and bountiful crops, India had been prosperous, there were many factors that had not made it easy for profits to be earned commensurate with the turnover. They were still labouring under the effect of the great depression, and he thought they might congratulate themselves that the outcome of the bank's operations during the year was well up to the level of the preceding 12 months. They were able to recommend the payment of a final dividend of 5s per share, less tax, making, with the interim dividend of 4s paid last October, 9 per cent., less tax. They also proposed placing £20,000 to reserve, which would then stand at £340,000. The drop in current and deposit accounts of £490,000 was explained by the stringency in the money market in India at the end of the year.

INDIA'S TRADE FIGURES.

They had opened a branch of the bank at Karachi, which was one of the chief ports of India, and which of late years had become of steadily increasing importance. The conditions of Indian trade during the past year had been, generally speaking, of a favourable character, but while the exports showed an increase of something like £32,000,000 over the previous year, the imports were about £10,000,000 down. The balance of trade in favour of India, which amounted in round figures to £76,000,000, had been nearly offset by purchases of precious metals (gold to the value of £27,000,000 and silver £13,700,000), by the sale of Council drafts, purchases of sterling in India and transfers from the gold reserve. The £27,000,000 provided for in the Indian Budget for sterling requirements, which appeared such a formidable item, was more than covered long before the close of the financial year. For about six months of the year under review trade in India remained very slack, but towards the end of the year the great demand for currency to move the crops caused considerable tightness in the money market. Taking it altogether, it had been a very trying and strenuous year, and he thought great credit was due to the managers and staffs for the results attained.

IMPORTANCE OF MESOPOTAMIA.

As regarded Mesopotamia, the situation to day remained practically the same; the treaty with Turkey still awaited ratification by Parliament, whilst in Iraq the Constituent Assembly had not yet been formed. He trusted that H.M. Government were alive to the necessity of guarding and consolidating British interests in that region. The importance of keeping Iraq open and secure for British commerce and industry could not be sufficiently emphasised. Trade in that country during the year had been far from brisk. Owing to the strained relations between Iraq and Persia there had been practically no business doing between the two countries. This had seriously affected the imports of piece goods, North Persia having taken much larger quantities direct instead of obtaining her requirements mainly through Iraq as heretofore. A satisfactory feature was the increased exports of grain, amounting to £1,300,000, against £600,000 in the previous year, and the prospect of further expansion in this direction was considerably improved.

THE FUTURE.

Without attempting to prophesy as to the future, he had no hesitation in saying that the outlook of improved trade generally in the East, and more particularly in India, was distinctly encouraging. Stocks in warehouses showed satisfactory reductions. The accumulations in the "boom" years had been well distributed, leaving the market open for fresh business.

Another welcome feature was the financial position of India as revealed in the Budget for the fiscal year just closing. This, for the first time, after many successive years of deficits, showed a tangible surplus and relief in taxation.

These factors should tend to a trade revival, and, given a continuance of the favourable monsoons, there should be every prospect of increased activity in imports from this side, which was much to be desired after four years of more or less stagnation.

In conclusion, he might say that the bank had never been in a better position than it was to-day for taking full advantage of any such revival when it came.

The report and accounts were unanimously adopted, and the dividend recommended was declared.

NORWICH UNION LIFE INSURANCE SOCIETY.

YEAR'S RESULTS "EMINENTLY SATISFACTORY."

HIGH RATE OF INTEREST EARNED.

The one hundredth and sixteenth annual general meeting was held at Norwich, on Tuesday, March 25th, when the President (Mr Haynes S. Robinson), in moving the adoption of the report, said:—

It is my privilege to be able to inform you that the work carried on by the society has been eminently satisfactory in all respects, but before drawing your attention to the outstanding features of the year 1923, so far as they relate to our business, I desire to refer to the changes which took place in the management of the society on June 1st of last year following on the retirement of Mr Davidson Walker, who rendered to the office yeoman service over the long period of 30 years. He went with the good wishes of all and the hope that he might be spared many years to enjoy his well-earned rest—seized by unexpected and sudden illnesses both Mr and Mrs Walker died within a few days of each other; and this sudden and terrible event has cast a gloom over the whole office, especially among those who had known them best. I am sure you will all join with me in expressing our heartfelt and deepest sympathy to those he has left behind to deplore this irreparable loss.

THE NEW GENERAL MANAGER AND ACTUARY.

To succeed Mr Walker the directors unanimously appointed Mr Mackenzie Lees to the responsible post of general manager and actuary, and promoted Mr H. G. Wilton, who has been in the service for upwards of 27 years, to the position of secretary. Such important changes might have formed a good excuse for a reduction in new business, but thanks to the enthusiastic work of our branch managers and those associated with them, I am proud to be able to announce once more an increase, the first since the "boom" year in 1920, when the net life assurances reached the high-water mark at eight and a-half millions. In the two succeeding years we wrote seven and a-half millions and seven and a-quarter millions respectively, whereas in 1923 the grand total was £8,046,000, of which no less than £6,020,000 was obtained in the United Kingdom and the Colonies. Another feature is that a comparison of the net new sums assured with 1922 shows that our business in Great Britain and Ireland accounts for six hundred and twenty-seven thousand of the total increase of seven hundred and ninety thousand. This result is all the more remarkable when regard is had to the disturbed condition of trade in the early part of the year under consideration, because of the boiler makers' strike—a long drawn-out disaster which affected such industrial centres as Glasgow and Newcastle—while over practically the same period the whole of the cotton industry was in the throes of depression which affected the Lancashire area. The most gratifying part of the increase in new business is that the level expense ratio is only .3 greater than last year at 16.58, and even this increase is chiefly due to altered taxation in South Africa, which has resulted in our paying taxes for 1922 and 1923 in the present account.

RATE OF INTEREST EARNED.

Our funds, which have been growing apace in recent years, now amount to over £21,700,000, and show an increase in the year of more than £1,711,000, and on this large fund we have earned interest at the average net rate of £5 1s 8d per cent. For some years past the net rate of interest earned by the society has increased steadily, and especially during the present quinquennium, beginning at £4 15s 8d per cent. for 1921, £5 1s 3d per cent. for 1922, and £5 1s 8d per cent. for 1923, giving an average rate of

£4 15s 6d per cent. over the three years, and consequently there is a clear profit margin of £2 9s 6d per cent. so far as we have gone, which must of itself ensure a highly satisfactory rate of bonus. Meantime we are paying interim bonus on policies which have matured by death or survivorship at the highest rate we have previously declared, and these bonuses on whole-life policies range from £1 16s—at young ages to £3—per annum at old ages for each £100 assured.

INVESTMENTS.

The money we have for investment in a year not only consists of the surplus of income over outgo, but also of repayments which are made from time to time, and adding these together, we had to find a home for no less than £3,370,000. Some years ago I made reference to the care exercised by your directors in considering mortgage and Stock Exchange propositions, and you will recollect I then informed you that each mortgage or investment proposal is first fully considered by our finance committee, and in the event of practical unanimity being obtained, the matter is then submitted to the full board for final discussion. In this connection it may interest you to know that during the year no less than 566 applications for loans were considered by the finance committee, and 347 new mortgages totalling to £1,450,000 were eventually completed during that period. On the other hand, £1,870,000 was invested in Stock Exchange securities, of which £340,000 went into British Government issues, and smaller sums have been spread over other sections of our investment list, the balance going to policy loans, &c.

FRENCH BUSINESS.

As the question may arise in your minds as to how we stand in regard to our French business, in view of the recent depreciation of the franc, I think it well to explain that as the premiums on French policies are payable in francs, our corresponding investments are made in the same currency, and are controlled by the French Government, with whom the securities are placed on behalf of the French policy-holders. In this way you will see that so long as our assets and liabilities are in francs, there is no cause for anxiety from depreciation, because if the currency goes on depreciating, the effect is the same both in regard to our liabilities and our assets, and consequently all we have to do is to see that our investments in France are well made. It is with no small satisfaction that I am able to say that our investments in France have been so carefully selected, with the assistance of our experts in Paris, that our business there does not give us one moment's anxiety.

MORTALITY EXPERIENCE.

Coming now to the subject of mortality, our experience, as you will know from previous reports, has been relatively light, and although 1922 showed a slight increase at 69 per cent., the ratio this year is 67 per cent. of what was to be expected according to the O.M. mortality table, and this result we attribute to the care exercised by our medical directors in the selection of the lives assured, as is further emphasised by the fact that no less than 1,260 proposals for £1,170,000 were turned down by them during 1923.

MR KERNOT'S VISIT.

Before concluding my remarks, I feel I should like to refer to the pleasure with which we are looking forward to the forthcoming visit of our esteemed manager for New Zealand, Mr A. E. Kernot, who is due to arrive in this country in May, and who has represented the society since the establishment of our branch there in 1908 with most conspicuous success. Mr Kernot has been responsible for the building up of an excellent business in that splendid corner of the British Empire, which has produced highly satisfactory results; and our mortality experience has been up to

the present exceptionally favourable, even allowing for the fact that the branch is still a comparatively young one.

I have much pleasure in moving the adoption of the report.

Major F. Astley Cubitt, one of the vice-presidents, seconded the adoption of the report, which was duly carried.

METROPOLITAN LIFE ASSURANCE SOCIETY.

RECORD AMOUNT OF NEW BUSINESS.

RATES OF ABATEMENT INCREASED 3 PER CENT.

The ordinary general meeting of the Metropolitan Life Assurance Society was held, on the 27th instant, at Winchester House, London.

Sir John B. Wimble, K.B.E., who presided, said that the new business transacted during the past year consisted of 233 policies for a gross amount of £324,291, of which £30,500 was reassured with other offices, leaving a net amount of £293,791, producing a new premium income of £9,180. The new business showed an increase of £36,612, as compared with the previous year, and was greater than that transacted in any previous year. In his opinion, however, the amount of new business was still much smaller than the benefits given by the society merited, and he would again say that, in extending the business of the society, much might, could, and should be done by the members themselves. The claims by death had amounted to £122,422, a sum only 68 per cent. of that expected according to the table of mortality used in the actuarial valuation of the society's liabilities and assets under its policies. No less than one-quarter of the policies which became claims were on lives aged at death 80 and upwards, and a very satisfactory surplus had resulted from this favourable mortality experience. The gross rate of interest earned on the society's funds in 1923 was £5 7s 10d per cent., and the rate, after deduction of income-tax, £4 6s 4d per cent., an increase of 4s 2d per cent. on the net rate realised in 1922. The figure at which the society's investments stood in the balance-sheet was less than their market value on December 31st last, and, in addition, the whole of their investment reserve fund of £100,000 remained intact as provision against possible future adverse fluctuations.

INCREASED RATES OF ABATEMENT.

Summarising the results of the past year's working, the new business was the largest in the history of the society, the surplus derived from a favourable mortality experience was above the average, and, owing to the increase in the net rate of interest earned on the funds, the profit from that source was considerably larger than in many previous years. He took a very hopeful view of the prospects of the society, and felt that never before in its history had it been in such a good position to do so well for its policyholders as it was at the present time. In consequence of these satisfactory results, the directors were able to declare an increase in the rates of abatement of 3 per cent. and to increase slightly the amount carried forward. Full provision had been made in the valuation reserves for the future maintenance of the rates of abatement now declared, which for the year ending April 4, 1925, would range from 8s per cent. in the case of the First Series of policies to 40 per cent. for the Fifth Series. Only on one former occasion—namely, in 1868—had it been found possible to declare an increase in the rates of abatement of so much as 3 per cent. It would be remembered that last year an increase of 2 per cent. was declared, and during the past three years the rates of reduction of premium had been increased, in all, by no less than 6 per cent. The directors proposed, at the special meeting to be held at the close of this meeting, to terminate the Fifth Series of policies and to open a Sixth Series at a rate of abatement 5 per cent. less than that declared for the Fifth Series. This

course was necessary in order to ensure that the older policyholders should receive their proper share of the surplus. The future progress and prosperity of the society depended not only upon the effort of the directors and staff, but also, to a large extent, upon the active interest and goodwill of the members and policyholders. He, therefore, would take this opportunity not only of thanking them for their past co-operation, but asking them to continue to recommend their friends to take out policies in this prosperous society.

The report and accounts were unanimously adopted, and at a special general meeting resolutions were passed terminating the Fifth Series of policies and opening a Sixth Series.

NEWCASTLE-UPON-TYNE ELECTRIC SUPPLY COMPANY, LIMITED.

SUBSTANTIALLY IMPROVED RESULTS. GOOD PROSPECTS FOR CURRENT YEAR.

The thirty-sixth annual general meeting of the Newcastle-upon-Tyne Electric Supply Company, Limited, was held at the Church Institute, Hood street, Newcastle-upon-Tyne, on the 25th instant, Mr Robert Patrick Sloan, C.B.E. (chairman and managing director) presiding.

The notice convening the meeting having been read by Mr M. Short, Joint Secretary, the Chairman said: As our output in the year 1923 exceeded that of 1920, I have not considered it necessary again to exhibit the chart which was shown on the occasion of the last two annual meetings.

PROFIT.

The profit for the year amounted to £619,665, which shows a substantial improvement on the previous year's figure.

Debiture and loan interests stand at practically the same figure as in the previous year, but the transfer from profit to depreciation and contingencies reserve has been increased by £50,000, namely from £80,000 to £130,000. The sum transferred to plant renewals and improvements reserve is again £40,000, which a little more than covers the actual expenditure incurred during the year on this account.

I am pleased to say that the general improvement in our position not only has enabled the directors to increase considerably the amount transferred to general reserve, but also to recommend the payment of a dividend on the ordinary shares at the rate of 6 per cent. for the year, and to increase the sum carried forward to the current year by about £14,000, bringing this up to a total of £32,442—a very desirable increase.

CAPITAL ACCOUNT.

The sum of £218,580 has been expended on extensions to our system, of which £65,487 represents expenditure on power stations and £153,093 on main transmission and distribution.

PROFIT AND LOSS ACCOUNT.

The only item of importance appearing in this account to which I have not already referred is that of interest and dividends on loans and investments. This figure shows a reduction of £11,160 compared with the previous year's receipts from these sources. The major portion of this difference is due to our having received less interest, owing to the sum we had on deposit having been reduced during the year, and the balance represents a reduction in interest received on our loan to the Cleveland Parliamentary Company—the rate of interest in this case being 1 per cent. above bank rate.

RESERVE FOR SPECIAL DEPRECIATIONS AND CONTINGENCIES.

A sum of £9,608 has been added to this reserve on account of contributions received from consumers against cost of connection. The total addition to this fund for the year, therefore, represents £139,608. We have written off the sum of £12,235, being a loss incurred on the sale of certain obsolete generating plant, and, as usual, we have deducted the sum of £30,000 from the balance in this account towards writing down the discount on and expenses of debenture stock issues. This latter is also shown in the general balance-sheet. After making these deductions there remains £604,822 to the credit of this reserve.

RESERVE FOR PLANT RENEWALS AND IMPROVEMENTS.

Our actual expenditure on renewals and improvements of plant amounted to £37,304, as against £25,091 during the previous year. Further, we have as usual maintained our plant in an efficient state out of revenue.

Investments in associated companies have during the year been increased by £24,380, of which £20,000 represents a further investment in the Tees Power Station Company, Limited.

PROSPECTS.

It is usual on these occasions to give some information as to the present position and prospects of the company.

Taking the latest date up to which we have any reliable information, our output shows a fairly substantial increase as compared with the corresponding period last year—during the first 10 weeks of this year the increase represents over 15 per cent.

The recent railway strike and dockers' strike, which, fortunately, were not of long duration, naturally had some adverse effect on this year's output, and, in view of these troubles the increase is, I think, very encouraging.

It is, of course, impossible to say whether, in view of the uncertain state of affairs, this improvement will be maintained throughout the year.

Our supplies to collieries, which, during the past year, returned to a more or less normal level, are still being well maintained.

So far there are no signs of improvement in shipbuilding and engineering, but, unless we have some similar occurrence during the current year to that of the boilermakers' dispute, our position in this section should show some improvement.

The horsepower connected to the system during the past year amounted to a total of 41,272 h.p., which approaches within a few hundred of the record connections made in any year in the company's history. The applications in hand at the commencement of this year represented 43,452 h.p., which is not far below what we had in hand at the beginning of the year 1923.

This rapid growth of the business is, I am sure you will agree, a most healthy sign, and from the steady flow of applications we continue to receive, all of which represent a profitable increase of business, there is every indication that this rate of expansion is likely to continue at least for some time to come. Personally, I think it may well be increased as there can be no doubt that the appreciation by the public of the advantages of the use of electricity is growing from day to day.

During the last five years the associated companies together necessarily have had to expend considerable sums solely for the purpose of providing for this rapid increase in business, and, from what I have just said, it will be clear that we must go on spending if we are to meet the large demands that the public continue to make upon us.

We anticipate that the business we have on hand at the present time will, by the end of the current year, load up the whole of the companies' generating plant, old and new, as well as its distributing system, and, therefore, provision is now being made for extensions. In this connection it has been decided to instal further generating plant at the North Tees Power Station, as it is there that this can be most economically and efficiently employed.

The development of our domestic supply business, to which I specially referred at our last meeting, has been more than maintained, and, in view of the number of inquiries we continue to receive, I confidently look forward to a very substantial growth in this section during the next few years.

You will be interested to hear that the number of new lighting consumers connected during the past year shows an increase of 94 per cent. over the number connected in 1922, and was nearly 160 per cent. in excess of the number connected five years ago.

These figures, I think, speak for themselves.

CHAIRMAN'S ANSWER TO MR GEMMELL.

The Chairman, in replying to the criticisms made by Mr Andrew Gemmell at the last annual meeting and which he has since published in pamphlet form, said that the criticisms made by Mr Gemmell are obviously so full of prejudice that I feel I would be justified in ignoring them, but in case any shareholder, not being fully acquainted with the facts, may have been influenced by them I have thought it well, with your permission, to deal with some of the points he has raised, and correct some gross mis-statements he has made.

I think I can fairly say that the casual reader of this pamphlet would get the following impressions. That much has been done by the directors which should not have been done, and much has been left undone which should have been done; that some of the actions of the directors have been illegal, some contrary to the interests of the shareholders, and others detrimental to the interests of the company's consumers; that there is a desire on the part of the directors deliberately to adopt a policy of systematic secrecy, by which, among other things, they can run up one company or run down another; and, further, that the directors have taken advantage of their position by awarding themselves excessive fees.

I wish to say, here and now, and as emphatically as I can, that the directors' sole endeavour in conducting the affairs of this great enterprise, is to further the interests of the shareholders, the large body of consumers on the North-East Coast, and the public generally. They have not adopted a policy of systematic secrecy. They cannot, in a large business like this, publish every detail of information, nor is it desirable in the interests of the company that this should be done, but, as far as I am aware, no reasonable information asked for by a shareholder has ever been withheld. The directors certainly have not in any way acted

contrary to the law, nor have they abused their position by over-paying themselves or in any other way and in no circumstances would they countenance any transactions of such doubtful character as those suggested by Mr Gemmell.

The Chairman then dealt with the various points raised by Mr Gemmell in detail, and concluded his remarks by saying:—In view of the full statement I have just made on the numerous points raised by Mr Gemmell—many of which have been dealt with on previous occasions—I wish to say that, whether Mr Gemmell is satisfied or not with what I have said, it is not my intention to go over the same ground again on any future occasion, and he must accept my statement as my final reply to the criticisms contained in his pamphlets.

The resolutions adopting the report and accounts and dividends as recommended were adopted, Mr Gemmell alone dissenting. At a subsequent extraordinary meeting a resolution adopting new articles of association was adopted.

MIDLAND ELECTRIC CORPORATION, LIMITED. INCREASED OUTPUT AND SALES.

POSITION AND PROSPECTS.

Mr James Taylor, J.P., chairman of the company, presided over the annual meeting of shareholders of the Midland Electric Corporation for Power Distribution, Limited, held, on the 24th instant, at the Exchange Hotel, Liverpool.

The secretary, Mr Gordon Saies, having read the notice convening the meeting, and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: It will be noted that the net profits for the year amount to £149,550 4s 9d, to which has to be added £44,016 0s 3d, making a total of £193,566 5s. From this we have appropriated the sum of £128,682 2s 2d, as set out in the directors' report, leaving a balance of £64,884 2s 10d available for dividend.

BONUS DISTRIBUTION.

From this balance your directors recommend a further dividend upon the ordinary shares of 5 per cent., making 10 per cent. for the year. In addition they recommend a bonus of 2½ per cent., making a total distribution of 12½ per cent. for the year.

The usual percentage has been written off plant and machinery for depreciation, but in addition we have again written off a special item of £30,000 for the same reason as last year, that in the early days of the company we had not the funds to allow of adequate depreciation. The total depreciation fund now amounts to £193,520.

The directors have placed the sum of £25,000 to reserve fund account. This is a much larger amount than usual, and I am pleased that we are able to do it. In the past we have not been in a position to place much to reserve, and for a company 25 years old, of public importance, an adequate reserve is essential.

After placing these considerable sums to depreciation and reserve, paying a dividend of 10 per cent. and a bonus of 2½ per cent., and giving our customers a considerable reduction in charges, we carry forward the sum of £43,884 2s 10d, a slight decrease on last year.

LARGER SALES AND NEW PLANT.

During the year the demand for power supply steadily increased, particularly in the latter part of the year, the units sold being 42,584,116 as compared with 33,402,183 in 1922. Many inquiries and applications for additional power supply and lighting are still being received.

To meet this extra demand, we are installing another generating set of 5,000 k.w. capacity. This plant is expected to be in commission at the end of April next. In addition, we are spending a large sum of money on additional high tension feeder cables for the purpose of supply throughout the company's area.

The increased profits for the past year are due largely to the increased output, which has reduced our costs. During the year we gave our customers the benefit of a substantial reduction, and they will also receive a further benefit as from the first of next month. In money value the reductions to our customers for the previous year were £35,907, and in 1923 a further £55,004 over 1922.

Since the decision to give a reduction next month, the board are faced with a probable increase in the cost of fuel, and also are faced with the increased demand, and the installation of the new turbine previously referred to, will enable the company to bear the cost without increasing their charges to the public. The directors realise the necessity and importance of a cheap supply of energy for manufacturing purposes.

THE TRADE OUTLOOK.

In the past two years I have referred to our position under the supply of electricity in the North-West Midlands area. This

BUT DOES IT PAY?

This is the title of a new leaflet of particular interest to all Business Men, demonstrating as it does the Investment Value of "GLOBE" Life Assurance Policies.

A copy will be sent by return of post upon your request.

The LIVERPOOL & LONDON & GLOBE INSURANCE CO., LTD.

Head Office:— 1 Dale St., Liverpool. Chief Office:— 1 Cornhill, London, E.C.3.

Branches and Agencies throughout the World.
General Manager and Secretary:—HUGH LEWIS.

matter is still under discussion with the Electricity Commissioners, but there are indications that a final arrangement will soon be arrived at between the various authorised undertakings which it is proposed shall be included in the Joint Authority, and the sanction of the Commissioners received. This company will be one of the principal members of the Authority, and your interests are being carefully watched, especially in view of the fact that the limits of our generating station have now been reached, and a decision as to whether to build another station, or take a bulk supply, in whole or part, from the new authority, will have to be shortly taken.

FUTURE PROSPECTS.

It is difficult to know what the future prospects are. The present position is that the Miners' Federation have given notice to the owners to terminate contracts. This in all probability means an increase in the cost of fuel. The employers of electrical undertakings have also received an application for an increase of 10s per week on basic wages. Both matters are being negotiated.

At present, there being no stabilisation of wages, it is impossible for a power company like ours to know what costs are going to be even for a few months ahead. Our customers are in the same position, and, therefore, not able to quote firm prices for a reasonable period. As one dispute is settled, another arises, and until some more permanent settlement is made, there cannot be business confidence and steady trade.

Sir Harwood Banner, Bart., M.P., seconded, and the motion was carried.

Mr D. Sinclair was re-elected director.

A resolution was carried sanctioning the payment of £12,000 from profits to a special reserve fund for the purpose of establishing a staff benevolent or pension fund.

The chairman and directors and also the staff were cordially thanked for their services during the year.

SCHILL BROTHERS, LIMITED.

RESULTS OF A DIFFICULT YEAR'S TRADE.

EXCHANGE RATES AND UNSETTLED LABOUR CONDITIONS.

The annual general meeting of the shareholders of Schill Brothers, Limited, was held at the registered office of the company, 16 Oxford street, Manchester, on Thursday, March 27, 1924, at 11 a.m. Mr Charles Henry Schill (the chairman) presided.

The Chairman said: The year under review opened in quite an encouraging way, and seemed to offer hopes of a steady improvement over the previous ones. You will remember that I told you at our last meeting, that orders had been and were still coming in quite satisfactorily, and that customers were paying off their old indebtedness by degrees. But I also warned you that it would not do to be too hopeful, as the international situation was still very delicate, and hitches in this connection, or further depreciation of exchanges, might very easily again bring about a period of stagnation and difficulties.

FALL IN EXCHANGES.

There seemed no reason to expect that in March, but unfortunately within a few weeks later the end of that improvement set in. The franc, the Brazilian milreis, the Argentine dollar, and other exchanges all began to fall, in some cases severely. All business became suspended, and customers in several countries again claimed our assistance to see them through. Our turnover dropped materially—at one time alarmingly—so that we began to wonder

whether at the end of the year we should have made our expenses, and so that we thought it wise to relinquish our intention of paying four quarterly instalments of preference dividend which would have been easily possible had the year continued as it began.

Fortunately, matters improved a little towards the end of the year, and have continued to do so since. In the meantime, however, we ourselves had lost quite an appreciable amount of money through the constant and steady fall of the exchanges, and had to write off another large amount in the aggregate, for assistance to our customers. We were, therefore, very much relieved when the year closed, and we found that there was still quite a fair margin of profit after paying expenses and providing for these losses.

IMPROVED CONDITIONS.

We are also pleased to note from reports that there is a more hopeful feeling gaining ground in many of our markets, and certainly of late our trade has again become steadier.

It becomes increasingly difficult to be optimistic about the future, when the hopes on which such optimism is based are constantly being shattered. But we are dealing with such improvement as there is, and are ready to deal with any further improvement, and we can do so with the single object of making and accumulating profits, because we have not, to our knowledge, any weak spots in our accounts that have not been adequately dealt with. There should be no further losses if the present situation remains steady, beyond a comparatively small figure for ordinary bad debts, which no firm can altogether avoid. But our actual bad debts are rarely more than a very small percentage, and that was the case even in this last year.

PREFERENCE DIVIDEND ARREARS.

The one black spot in the books is the preference dividend, which is now three half-years in arrear. Some of you may have noticed the remarks on our report in the *Manchester Guardian*, and may have felt a little sore when they read that we had paid "the arrears of preference dividend." That was, of course, an error on the part of the paper, and the report says no such thing. What we were able to do was to pay three half-yearly instalments of preference dividend, which still leaves three in arrears, including the two due June and December of last year. We intend to pay these off at the earliest possible moment, and we sincerely hope that the improvement in trade will now be maintained, and allow us to still further reduce these arrears, or better still, wipe them out altogether. Steady work can alone help to fulfil that hope, but the absence of disputes—international or labour—will go a long way towards it.

THE NEW PREMISES.

Another point in the balance-sheet, about which you will want to know something, is this new place of business, in which we meet for the first time to-day. We had to incur the expense of moving in spite of the unfavourable times, because our lease expired at Lloyds, and they would not renew it. We cast about most carefully with a view to renting other premises, but could find nothing suitable at all, and finally agreed with Messrs S. L. Behrens and Co. to buy this warehouse, which is very little larger than what we must have when times are normal. It is an old warehouse, as you know, and it required a certain amount of alteration and modernising. But we think the price paid for it was a very fair one, as prices go to-day, and we have made the alterations as economically as we could, with due regard to efficiency and good work, and we believe that we now have a place which will meet our requirements in every way and be well worth its price to us. We have divided off the front of some of the floors, and are in process of letting them to suitable tenants.

The price of the place and of the alteration was naturally a severe drain on us in such a year as last. But we got over the difficulty by raising a part of the money on mortgage, as you will see by the balance-sheet, and taking the rest from our bank, who very kindly facilitated the transaction in a most liberal spirit. The workmen were only finally cleared out during last month, though we actually moved in during November. So we really got no value out of the place for last year, and we have, therefore, dealt with the figures connected with it from the point of view of writing off in last year only such figures as were not represented by assets, such as lawyers' fees, removal expenses, &c., but the building, furniture, &c., we have left to be dealt with in this and future years, as we reckon that the prices paid for them and their repairs are what they are worth to-day. We now have a place entirely under our own control, as we used to have when we were in Portland street, and given a spell of normal trading we have no doubt that it will fulfil our requirements satisfactorily.

UNSETTLED TRADE CONDITIONS.

The times have, of course, changed radically since those days. On the one hand, the large combines have developed to the great detriment of private enterprise, and there is a danger that this

country may be rendered non-competitive through their power to regulate the supplies of goods as required by our customers and enforcing too high a price level. On the other hand, the constant succession of strikes, first in one section of the labour market then in another makes a settled commercial policy almost impossible, and finally plays into the hands of the people who maintain high prices, if for no other reason than the need to have a constant reserve of profit towards the next time when their trade is stopped.

It is to be hoped that some solution may be found to avert this danger to the country. The foreign trade is already difficult enough in these days of strongly fluctuating exchanges, as our own balance-sheet shows. Had it not been for the constant and heavy drop of exchanges in the markets with which we deal, we should even last year have shown a balance sufficient to pay not only preference dividend, but quite a good ordinary dividend. As it was, the losses—or rather loss of profit—of our own branches in having constantly to pay more money for their return remittances than they need have done with a steady exchange, and the same losses which our customers incurred, but which we had to share with them in order to secure at least some remittances and keep their further custom, have robbed us of the chance of showing such a result, which the actual trading of the company did in reality show.

As I said before, we are quite happy as regards the value of our assets and outstandings as they stand in the books, and only require a year of normal trade free from these adverse factors to put a satisfactory result before you.

The following resolution was then passed:—

"That the report of the directors produced, together with the annexed statement of the company's accounts to December 31, 1923, duly audited, be now received, approved, and adopted."

HALF-YEAR'S PREFERENCE DIVIDEND TO BE PAID.

Before going on to the next resolution, I should like to tell you that your directors have decided to pay another half-year's preference dividend immediately, i.e., as soon after this meeting as the warrants can be prepared. It may seem a curious decision in view of the small margin in hand. But there is quite enough in hand to pay this instalment, and we consider it inadvisable to allow this indebtedness to accumulate any longer than necessary, the more so as the increased activity in trade so far indicates a steady turnover for the year, and it is hardly conceivable that the profit should again be sapped by exchanges falling to a still lower level than the one they reached last year.

Mr T. W. Brown, the retiring director, was re-elected a director of the company.

Messrs David Smith, Garnett, and Co., chartered accountants, were re-elected auditors of the company for the ensuing year.

THE SALT UNION, LIMITED.

FEATURES OF YEAR'S TRADING.

HOME AND EXPORT TROUBLES OVERCOME.

IMPORTANT CHESHIRE ELECTRICAL DEVELOPMENTS.

Mr George Henry Cox, J.P., chairman, presided over the 35th annual meeting of shareholders of The Salt Union, Limited, held at Liverpool, on Tuesday, the 25th instant.

The Chairman, in moving the adoption of the report and statement of accounts for 1923, referred at the outset to two personal matters, the first being the retirement from the board of Mr John Rigby, former engineer and works manager, and director since 1903, whom he thanked for his long and useful service to the Union. His place had been filled by Mr. Alexander Miscampbell, manager of the Irish works and business at Carrickfergus, whose appointment to the board, he hoped, would satisfactorily meet the frequent requests of Irish shareholders for an Irish director to look after their interests. Secondly, he deplored the death of the late secretary, Mr Henry Bowman, who had served the Union throughout the whole of his business life. In his stead the board had appointed Mr E. C. Wickes, whose father was the first secretary of the company.

SATISFACTORY FINANCIAL RESULTS.

The board were glad to be able once more to lay before the shareholders a highly satisfactory balance-sheet. "As I shall presently show you," Mr Cox remarked, "we have continued our policy of conserving and strengthening the position of the Union in every possible way. We feel, therefore, entitled to look forward to the future with a reasonable amount of confidence, and we believe that whatever difficulties may arise we shall succeed in overcoming them."

The outstanding alteration in the balance-sheet was that under the heading of freehold, copyhold, and leasehold property. An excess provision having been made for E.P.D. settlement, the balance remaining had been prudently utilised in writing down the value of property, especially in view of changes in the

salt trade in recent years leading to the closing and dismantling of some old works and the concentration of others. Shareholders could feel fully satisfied that the amount of £1,838,572 actually represented the present values of the properties and goodwill.

Other points in the accounts were that investments showed an appreciation of £5,728; debentures amounting to £26,127 had been cancelled—a policy to be continued as opportunities offered; creditors and credit balances showed a considerable reduction; contingencies account remained at £100,000; insurance reserve accounts were up £10,464; and with the proposed addition of £50,000, general reserve was raised to the substantial figure of £450,000, while a grant of £20,000 was to be made to the super-annuation fund.

Gross profits showed the substantial increase of £74,454, and dividends and interest were practically the same.

EXPORT TRADE: AN OLD LESSON.

Dealing with the company's trade in the East, the Chairman pointed out that the high Salt Duty in India, coupled with uncertainty as to its reduction, had lessened consumption, besides which competitors had shipped freely from Germany, Spain, Port Said, and the Red Sea. The company's shipments had exceeded those of 1922, but were still only two-thirds of those of 1913. Coupled with the free shipments, the understanding among sellers as to prices broke down, the fall in values resulting in unprofitable trade for all parties. Of late there had been a rally, prices having advanced Rs. 24 from the lowest for English salt. It was lamentable that shippers had not learnt the old lesson, that when an article was in superabundant supply those engaged in its distribution could only profitably do so by coming to an agreement as to tonnage and prices.

The Viceroy's latest proposal to reduce the Salt Tax by half was calculated to be of great benefit to Indian salt consumers, and should facilitate trade. Shipments to Rangoon had been maintained, and those to Japan (13,000 tons) would have been greater had freight room at moderate rates been available. Considerably more would be sent this year if shipowners would accept moderate freight. Trade with West Africa was fully maintained, but competition from German and Solar salt—which fortunately promised to become less acute—had curtailed that with Scandinavia.

DOMINION TARIFFS.

With the exception of the company's specialities, efforts to ship to Canada and Australia, in spite of the small preference given to British salt, had been seriously crippled by high tariffs. "It is perfectly plain," the Chairman pointed out, "that the Dominions are determined to develop by means of high protective tariffs their own production of salt, which they are quite entitled to do if they think fit, but this policy necessarily raised the cost materially to their own consumers, and in many cases the native salt cannot compare in quality with ours. It follows that the users are obliged to take an inferior article and at a higher price."

HOME TRADE.

The Salt Manufacturers' Association has continued its useful work, and has been loyally supported by all its members, and thus a fair level of prices has been maintained. At the same time there has been a further development in outside competition on the part of several firms who have started new works, and resuscitated old ones. Hitherto efforts to bring them into line with the rest of the trade have not succeeded. There is no justification whatever for extensions of pannage on the part of either new or old makers, because it is notorious that the existing power of production is already far in excess of present requirements for both the home and export trade.

German and Solar salt competition has continued active, and their prices are still very low in spite of the improvement in the exchange. This state of things especially affects our large fishery trade, and we are compelled to meet it with prices which yield no profit to the manufacturer, in the hope that sooner or later our competitors will retire from the contest. I may say that our prices both for home and export trade are based upon the necessity of our maintaining the largest possible amount of tonnage procurable. This is only attained by accepting business for a portion of our output which leaves at best merely a small contribution towards overhead charges.

In order to acquaint the public with the supreme merits of their fine salt, unsurpassed as regards quality and methods of packing, an intensive advertising campaign had been started in the Press and by other means, by which they expected largely to increase their sales.

BIG ELECTRICAL DEVELOPMENT.

Speaking of the progress of the Mersey Power Company, Limited, an important subsidiary company, the Chairman announced that a contract for the supply of ten to twenty million units of electricity to the L.M. and S. Railway

engineering works at Crewe was on the point of being concluded. The railway company for some time had been anxious to obtain the supply at the earliest moment, but difficulty had arisen through the fact that Crewe was included by the Electricity Commissioners in the North Wales Power Company's area. "This is a purely arbitrary boundary (said Mr Cox), and when I tell you the North Wales Company is not in a position to furnish any current at Crewe, whereas ours is immediately available, you will understand what an unnecessary obstacle this has presented to the prompt supply by the Mersey Power Company. Instead of supplying direct we have been obliged by the Electricity Commissioners to pass the current through the North Wales Power Company. The railway company has, therefore, been compelled to wait for the power it so urgently needs, and we have meanwhile been debarred from earning a large revenue." Apart from the important load to Crewe a contract had been entered into to supply Northwich with a substantial amount of current. As trade improved, he anticipated a full load for the power station. It had taken some years for electricity supply companies to come into their own, but nearly all of them were now paying good dividends.

SALT TRADE OUTLOOK.

Concluding, the Chairman said: The immediate outlook for the salt trade is a rather uncertain one, owing to rising costs, on the one hand, and on the other to the additional number of pans and output of salt created by new manufacturers. The costs of production have already risen owing to the higher rates that we have to pay for coal, and will be further increased if the demands of the miners are granted, as they apparently will be. The wages of our salt makers have been stationary throughout the year, and we had hoped that they would have been satisfied with the present level, which is from 100 per cent. to 140 per cent. above 1914. But we received a short time ago notice of a demand for a 10 per cent. increase.

Employers maintain that the state of the trade does not warrant an addition to the wages bill. It is true that the cost of living is somewhat higher than a year ago, but that alone is not sufficient justification for raising wages, though it should be considered to some extent. The rates of wages paid to the makers of salt, or any other commodity, must be regulated by what the particular trade can itself provide, and they can only be permanently maintained so long as a reasonable profit is forthcoming on the exchange of its products. Even now much of our business has to be carried on yielding no actual profit, in the hope that later it may be procurable, and also in order to maintain the efficiency of the plant, which, if idle for any length of time, becomes useless. Nevertheless, under these conditions, Labour receives its full wages, while Capital forgoes its remuneration altogether.

LABOUR'S ATTITUDE TO INDUSTRY.

Perhaps the greatest danger that now threatens the existence of the leading industries of the country arises from the attitude that Labour has lately adopted towards them, by arbitrarily demanding rates of wages without reference as to whether the trades affected can be carried on at the higher costs thus imposed upon them. When these rates are not immediately forthcoming the whole country is held to ransom, by means of direct and sympathetic strikes, and immense losses are incurred, and hardships endured by the general public, which has no direct interest in the matters in dispute. This is a most unfair attack by well-organised sections of the community upon the nation as a whole, and if persisted in will bring about disastrous results, especially to our export trade, by unduly raising the costs of production and lessening our power to compete in the world's markets.

Mr F. W. Clark, deputy-chairman, seconded the motion, which was carried unanimously.

Dividends were agreed to at the rate of 2s 4d per share on the preference shares and 2s per share on the ordinary shares.

Mr Alexander Miscampbell was re-elected director.

The meeting cordially approved of a resolution granting increased fees to the directors. Mr G. Hewetson Nelson, who proposed it, mentioned that in the last three years the profits had been:—1921, £162,000 with 5 per cent. dividend; 1922, £207,000, with 10 per cent. dividend; and last year, £280,000, with 10 per cent. dividend.

A vote of thanks to the chairman concluded the proceedings.

UNITED SERDANG (SUMATRA) RUBBER PLANTATIONS, LIMITED.

GOOD CONDITION OF THE ESTATES.

The sixteenth ordinary general meeting of the United Serdang (Sumatra) Rubber Plantations, Limited, was held, on the 27th inst., in the council room of the Rubber Growers' Association (Incorporated), 2-4 Idol Lane, London, Mr C. Heath Clark (chairman of the company) presiding.

Mr James M. Kemp (representing the secretaries and agents, Messrs Harrisons and Crosfield, Limited) having read the notice convening the meeting and the report of the auditors,

Mr. Kysant, G.C.M.G. (the chairman), presided, and in moving the adoption of the report said that the accounts disclosed that the company was in a thoroughly sound and satisfactory position. The sum of £30,000 had been added to the reserve, and they were

This company may have many advantages over other entertainment companies, but that does not deliver us from economic evils made common to all through war finance. This is the sort of thing that we have to contend against. We may be willing to pay an artiste £100 per week. An American manager may be willing to pay that artiste exactly the same. But it pays an artiste better to accept it from the American manager. If the American manager has to pay it in sterling he can buy £100 for \$430, instead of

Persistence in exchange theories that events have now blown to the winds is responsible for all our own evil days and our gasping industrial problems. It made the war cost many hundreds of millions in sterling more than it need have done; it is causing the failure of every remedy that we try for our industrial troubles; it has made failures of the British Trade Corporation scheme, the T. Menlen credit scheme, the Trade Facilities Act, and all the emergency measures for the net abatement of unemployment. It will bring us down and keep us down. Statements have been made that £100 per week here is a better salary than £115 per week

The Chairman: I take pleasure in moving the re-election of H. J. Thomas and Mr Llewellyn Johns as directors of the company. Mr Thomas, as you know, has been a valued colleague for many years. Unfortunately at the present time he is not well enough to be here, but I have no doubt whatever that the general feeling of the company will be to re-elect him. Mr Johns has been in close personal association with me for 22 years. His efficient services long ago as my personal secretary was only a forecast of the efficient services he has since rendered to the company.

ency cultivated by him at every stage of his advancement. If I know bedrock necessities, practical impossibilities, and varied contingencies peculiar to the entertainment side of our business, I am sure Mr Johns knows them too. My colleagues and I have the fullest confidence that it is in the best interests of the company to raise his status to that of director.

Mr Gordon Michie seconded the motion, which was unanimously adopted.

Messrs Gillespie Brothers and Co. having been reappointed auditors, a vote of thanks to the Chairman concluded the proceedings.

WILLIAM WHITELEY, LIMITED.

COMPANY'S TWENTY-FIFTH YEAR—BONUS DECLARED.

The annual general meeting of members of William Whiteley, Limited, was held, on the 25th instant, at the company's premises, Queen's road, London, Mr John Lawrie (managing director) presiding.

The secretary (Mr F. G. Dann) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, having informed the shareholders of the absence of Mr Wm. Whiteley owing to a bad riding accident, said: I feel sure, ladies and gentlemen, that on the whole you will consider the past year's results to be quite satisfactory. The actual net profit is really slightly more than last year when you take into consideration that in last year's accounts a sum of over £17,000 from profit on realisation of investments was included, whereas this year only £3,600 has been derived from that source. The past year has not been free from difficulties. Political and economic disturbances were both adverse factors to contend with, but, on the whole, I am glad to be able to say the trade keeps progressive and satisfactory.

PROFIT AND ALLOCATIONS.

Turning to the accounts, the net profit to which I have previously referred amounts to £299,064, and with the balance of profit brought in from last year the total available balance amounts to £489,646. We have set aside the sum of £6,000 to provide for corporation profits tax and have added to reserve the sum of £30,000, bringing the total reserve account up to a quarter of a million. The debenture interest for the year, the first half-year's preference dividend and an interim dividend on the ordinary shares have been paid. This being the 25th year of the incorporation of the company and the 25th annual general meeting, the directors felt that they were justified, from the strong financial position of the company, to mark the occasion of a quarter of a century's progress of successful trading by an extra dividend in the form of a bonus. They, therefore, now recommend payment of the dividend for the second half-year on the preference shares, a dividend of 16 per cent. on the ordinary shares, making, with the interim dividend already paid, 20 per cent. for the year, and a further dividend of 5 per cent. on the ordinary shares as a special bonus for the year. This still leaves the sum of £267,774 to be carried forward. You will observe that the balance carried forward and the reserve of £250,000 together amount to £517,774, considerably more than the ordinary share capital. This is, indeed, a position of which we may feel justly proud, and places the company in a very strong position. Amongst the assets the freeholds are somewhat increased by the addition of capital expenditure for providing new tea rooms, which have been built on part of the roof. The other assets are much the same. The stock is slightly higher, but is good, sound value, and has, as usual, been turned over many times during the year.

FAVOURABLE CASH POSITION.

The book debts are substantially lower. The cash position is distinctly favourable. We have purchased £30,000 more Government securities during the year, and our investments now stand at the substantial figure of £297,000, chiefly Government stocks, and the market value of these securities is over £12,000 more than they stand at in our books. The cash in hand is £22,000 more. On the debit side the deposits and current accounts are about the same, and the amount owing to trade creditors is less than last year.

I am sure the shareholders will agree that the accounts generally reveal the company to be in a very strong financial position, the liquid assets being very considerably in excess of the liabilities. This strong cash position is a particularly favourable one from a trading point of view, as it enables us to buy our goods to the fullest advantage for cash terms.

I have no doubt the shareholders will expect me to say a little more about the business and its future, and not so much about figures, which speak for themselves. Well, ladies and gentlemen, the trade is quite satisfactory, and, although last year was not one of the easiest in which to do business, especially the early part of the year, on the whole we did well; in fact, as far as volume of

goods sold, there is no doubt whatever that it was much larger than ever, but in these times of high taxation there is an inclination for customers to be somewhat economical and buy goods of less value. This, of course, makes it necessary to sell more goods to keep up and increase the trade figures.

We are looking forward this year, and making our preparations with confidence, to secure our share of the extra trade which should ensue from the influx of visitors to the British Empire Exhibition, and I feel sure we shall get it. Whiteley's name and reputation as "Universal Providers" are world-wide.

We shall continue our policy of giving the best value at the lowest prices, and we shall also continue to give our customers the best service and facilities it is possible to find in any store in London. This business has been built up on the principle of giving good value, and we shall continue that policy.

Mr Frederick G. Dann seconded the resolution, and it was carried unanimously.

BRITISH ALUMINIUM COMPANY, LIMITED. INCREASED PROFITS AND DIVIDEND.

The 14th ordinary general meeting of the British Aluminium Company, Limited, was held, on the 28th instant, at Winchester House, Old Broad Street, London, Lieut. Colonel Stephen H. Pollen (vice-chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said the net profit amounted to £362,704, compared with £229,235 for the previous year. At the commencement of the year the demand was increasing, but prices were low; as the year advanced the demand progressively improved, but prices for their larger contracts showed a relatively small increase until towards the end of the year. The net result was that though they marketed a larger tonnage the average prices were little in excess of the previous year. By the end of the year prices reached a basis more in accordance with the cost of manufacture, the demand showed no diminution, and there was a pleasing increase in the demand for the products of their rolling mills.

With regard to the interest acquired in a company in Norway having two factories, both these factories had been brought to full production, and this year they anticipated material benefit from the investment. The board had for a long time carefully considered the Lochaber water-power scheme, and was satisfied that the time had arrived to proceed actively with the undertaking. The Trade Facilities Act Advisory Committee had decided to recommend the Treasury to guarantee a loan of £2,000,000 for the purpose of developing the hydro-electric works. The intention was to complete the developments covered by the Act of 1921 in stages. The loan, together with further capital which would have to be provided for the aluminium works, would only complete the first stage. It would be necessary to form a separate subsidiary company to carry out the financial arrangements, and they proposed to give this company's guarantee that the service fund required to meet the annual interest and amortisation of the loan would be provided. They would also have to make arrangements for the capital required to erect the necessary factories.

They were recommending a final dividend on the ordinary shares of 10 per cent., making 7½ per cent. for the year. The accounts submitted and the profits which had been earned for the year 1923 justified the increased dividend on the ordinary shares which they recommended, and it was satisfactory that they had been able to make an increase in the appropriation to the depreciation and reserve accounts, and to inaugurate a staff benefit fund. With regard to the future, they were justified in hoping that next year they would be in a position to lay before the shareholders a statement of the company's operations at least equally satisfactory. The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £40,000,000 in Treasury Bonds and Treasury Bills dated from Mar. 31-April 5 were opened on Mar. 28, 1924, and the total amount applied for was £50,035,000. For bills at three months in full. The amounts allotted were as follows:—In bills at 3 months, £35,000,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months Average Rate.	4% Treasury Bonds, Average Price.
Feb. 22, 1924.	30,000,000	44,535,000	5 8 11-79	104 1-11
Feb. 29,	30,000,000	44,400,000	5 8 11-79	104 1-11
Mar. 7,	30,000,000	45,400,000	5 8 11-79	104 1-11
Mar. 14,	30,000,000	38,735,000	5 8 11-79	104 1-11
Mar. 21,	30,000,000	36,820,000	5 8 11-79	104 1-11
Mar. 28,	40,000,000	50,035,000	5 8 11-79	104 1-11

Tenders will be received on April 4, 1924, for Treasury Bonds and Bills to be issued to the maximum amount of £35,000,000. The amount of Treasury Bonds issued will not exceed £3,000,000.

Commercial Reports.

THE CORN TRADE

Mark Lane, Friday Evening.

Colder weather conditions were experienced in the United Kingdom during the past week, with rain in some districts, but the ground is working well after recent frosts, and spring operations are making good progress. Native wheat continues in moderate supply, but with only a limited demand, both for milling and feeding qualities. Rates displayed an easier tendency. Best milling samples now rule at 10s to 10s 6d per 112 lbs, free on rail, with inferior down to 9s 6d. Imported descriptions also dull of sale, and values moved in buyers' favour. No. 1 Northern Manitoba quoted 48s. No. 2 47s. No. 3 46s; Rosafe, 63½ lbs, 45s 9d; Australian, 48s 6d, all ex ship, per 496 lbs. Slow conditions prevailed with regard to floating and forward cargoes, and prices ruled easier in view of lower foreign advices, together with liberal offerings of Argentine qualities. Steamer of No. 2 Northern Manitoba. April shipment, changed hands at 46s 3d to Mediterranean. Maize cargoes also pressed for sale, and rates lower. A steamer of Odessa, expected to load early April, sold 39s 6d per 480 lbs, and a part cargo of Karachi barley afloat done at 30s 6d per 400 lbs to Bristol Channel. Flour in quiet request, and prices were further reduced for town made. London standard straight run quoted 37s, patents 39s to 40s, town households 35s per sack, delivered in. All English country straights 34s 6d per sack, free on rail at London stations. Of imported, Manitoba export patents

35s to 36s 6d, and Australian 35s to 36s per 280 lbs, ex store.
Barley dull. English malting ranges from 11s 3d to 12s 9d, with
feeder 10s to 10s 9d per 112 lbs, free on rail. Imported inactive.
Californian, 44s 6d to 48s 6d, Chilean brewing 41s 6d to 45s, ex
ship, both per 448 lbs. No. 4 Canadian Western 34s 9d, landed,
Algerian/Tunisian 34s, landed; Karachi 31s, ex ship; ditto,
landed, 32s 6d per 400 lbs. Maize quiet and easier. Plate, landed,
42s to 42s 6d, as to quality; red Karachi, ex ship, 41s; yellow
Calcutta, landed, 42s 9d, per 480 lbs. Oats quiet. English quoted
f.a.q., ex ship, 21s, landed 22s; No. 2 Canadian Western, 26s 3d.
No. 3 ditto, 25s; Canadian feed, landed, 23s 9d, per 280 lbs.
Millers' offals dull. Broad bran quoted 8s., ordinary 7s 6d; midd-
lings, 8s; fine ditto, 9s 6d, bags included, ex mill; light oats,
7s 3d; powdered oat husks, 7s 3d; feed oatmeal, 9s 3d; ground
oats, 12s 3d, free on rail, per cwt. Oatmeal unaltered. London
made, flaked, also rolled oats, 16s; medium and fine cuts, 16s 6d;
coarse and medium pinhead, 16s; ordinary Scottish oatmeal, 17s 6d
to 18s; American, 16s 6d to 16s 9d cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated March 27th, is as follows:—Pig-iron—There is a little more inquiry, but makers are obliged to cut their prices to secure any business, as stocks of pig-iron are still inconveniently large. No. 3 G.M.B. Cleveland can be bought at about 90s per ton, and mixed numbers E.C. hematite quoted 95s to 100s per ton. Manufactured iron and steel—The chief difficulty with our steel works is that of transport through truck shortage. The possible shipbuilding lock-out is also bound to have an adverse effect. Quotations remain at: Steel ship plates, £10 5s; steel angles, £10; iron bars, £12; steel rails, £9. Iron ore—Supplies have been plentiful, and new business is very hard to get. Best Bilbao rubio ore nominally 24s per ton, c.i.f., Tees.

Our Sheffield correspondent writes :—The present week has brought no relief to the acute depression of the iron and steel market, as there is an all-round unwillingness to buy and no forward contracts are being placed for raw and partly manufactured materials. Makers of hematite and basic pig-iron report that their order books are now practically bare, with the result that several furnaces have been damped down, and the closing of others cannot be long delayed. This state of things implies that producers of acid and basic steel are by no means well placed for business. Basic billets cannot be sold except below current quotations already unremunerative. The importation of Continental billets continues on a heavy scale, and so long as this competition exists British material must remain more or less out of the market. British prices cannot possibly be reduced, and will have to go up if the demands for higher wages in the steel and coal trades are conceded, wholly or in part, and such a movement would prove a further handicap to our producers. Large orders are on hand for cast iron pipes of large capacity, but the founders are feeling the competition of reinforced concrete pipes. The tube trade is also more active than of late. Tool and other special steels have not shared in the revival of other kinds of manufactured steel, as no business of any weight in such expensive materials is possible with the European markets. There is a distinct recovery in several branches of engineering, but agricultural machinery and machine tools remain depressed. Exports are expanding in some branches and falling off in others. Rolled steel for general agricultural purposes is experiencing a busy season. The plate and cutlery branches are unremunerative, and generally in an unhealthy condition, competition having brought down the prices of many articles almost to the pre-war level, whereas costs are 50 per cent above those of that period. The patents taken out in France several years ago by the British inventor of stainless steel have been declared invalid by a Court which recently heard an action for revocation brought by a group of steel makers in that country. The coal market continues active, with supplies on the short side and prices high. Railway traffic is still in arrears. Railway companies are taking a heavy tonnage of the best steam coals. Exports also keep up to a high level. House coal is selling freely. The output of coke is going away freely, but there is no scarcity. Prices per ton at pits are :—Best hand picked branch, 36s to 38s; Barnsley Best Silkstone, 34s to 35s; Yorkshire hards, 27s to 29s; Derbyshire ditto, 25s to 26s; rough slacks, 12s 6d to 14s 6d; smalls, 8s to 10s; blast furnace coke, 25s to 30s.

Our Glasgow correspondent writes:—The tone of the pig-iron market is rather better this week. The demand is not great, but sellers have not found it necessary to make any further reductions, and the tendency is to stiffen prices. Last week the shipments from the Clyde were fully 1,100 tons. Within the past few days one or two new orders are reported in this district. An order has been placed in Glasgow for about 500 tons of structural steel work for Burmah, and it is understood that Messrs John Brown and Co., of Clydebank, have contracted to build two Channel steamers for the Western Railway group. Apart from the above, no new business of any importance is reported in the steel trade this week. Makers' order books have not the healthy appearance they have displayed recently. Prices for plates, joists and angles are officially unaltered, but cuts are being made for export orders. French and Belgian competition is not causing any serious perturbation, as deliveries are still an uncertain quantity. Continental works seem to be well supplied with orders, and are refraining from giving quotations in consequence of the erratic movements of the exchange. Bar iron makers and iron and steel re-rollers are active on old orders, but new lines are difficult to secure. Prices are unchanged for home account. Export lines, of which a few for India and Canada have been met with, are being keenly competed for. Black sheets are a steady market, with several very fair orders coming from the Colonies. Canadian buying is becoming more pronounced as the season for direct navigation approaches, but

reports from United States of slackness in all the sheet mills are to hand, and keen competition from that quarter may be expected. Galvanized sheet makers continue to be well employed, and bookings for both home and export are well up to the average. Generally speaking, conditions in the iron and steel trades this week look somewhat more promising.

Our Cardiff correspondent writes:—On the Cardiff coal market this week spot supplies of coal have been exceedingly scarce. The possibility of a strike has continued to influence current business. The pressure of the demand for inland stocking purposes has been considerable, but quite as strong has been the demand for coal for depots, and most of the collieries have found practically the whole of their outputs absorbed by their contract deliveries. In a large number of cases deliveries are in arrear, and unless the wages dispute is definitely settled, the pressure for supply during the next few weeks will be even greater. Under these conditions prices have further improved. Best Admiralties are now ruling at 32s 6d per ton, f.o.b., and ordinary Monmouthshire large coals up to 31s, while best small steams are realising up to 22s 6d for bunkering purposes. The other feature of the market has been the collapse of pitwood, which at 24s, ex ship, was on Thursday lower than it has been at any time during the past two years. This market has been disorganised by the reports of the intention of the French Government to impose an export tax of 25 per cent. *ad valorem* on all pitwood. A decree to this effect was issued by the French Government on the 14th inst., but a few days later it was officially stated by the French Consul at Cardiff that an export tax on pitwood had never been contemplated by the Government, and that the report was due to a misunderstanding. The market found it difficult to reconcile this assurance with the specific inclusion in the Government decree of pit props, and the reproduction of that decree in the *Board of Trade Journal* of last week, but eventually it was explained that the tax applied only to peeled timber, and that the unpeeled timber normally exported from the French ports to South Wales was excluded from the scope of the Order. The disturbance to the market, however, was so great that prices fell and, as stated, touched 24s, ex ship, towards the end of this week.

The following are the current approximate quotations:—Best Admiralties, 31s to 32s 6d; second Admiralties, 30s to 31s; best drys, 28s to 29s; Black Veins, 31s to 32s; Western Valleys, 30s to 31s; Eastern Valleys, 27s 6d to 29s 6d; best bunker smalls, 21s 6d to 22s 6d; ordinary cargo smalls, 19s to 20s; coking smalls, 22s to 22s 6d; anthracite big vein, large, 40s to 45s; machine-made cobbles, 47s 6d to 50s; French nuts, 47s 6d to 50s; stove nuts, 50s to 52s 6d; rubble culm, 11s to 15s 6d; inland blast furnace coke, atovens, 30s to 35s; coke for export, 47s 6d to 52s 6d; patent fuel, 29s 6d to 32s; pitwood, ex ship, 24s to 25s.

The pig-iron market is depressed, but in the tinplate trade business continues active and shipments during the past week have been heavy. The minimum prices of tin plates and sheet bars are unchanged.

METALS.

Tin suffered a sharp decline due to heavy realisations and lower foreign advices, though offerings were well absorbed. Standard cash sold from £261 to £254, and three months £268 to £252 10s to £254. Eastern cables reported sales on the basis of £261 10s, c.i.f. At Thursday's market values ruled firmer. Standard cash sold at £256 5s to £256, and three months £257 to £256 to £256 10s to £255 5s. On the following day the tendency was firmer, though values closed below top points. Standard cash sold at £262 to £262 10s to £261 15s, and three months £261 to £262 to £260 to £261 7s 6d, while finally registered at £261. English ingots quoted at £263 to £264. Copper market displayed irregularity and weakness, dealings being on a smaller scale. Cash sold at £65 5s to £64 to £64 2s 6d, and three months £66 10s to £65 to £65 7s 6d. Very little change occurred on Thursday, while a good business transpired. Cash sold at £64 to £63 17s 6d to £64 2s 6d, and three months £65 to £64 15s to £65 2s 6d. At Friday's session values slightly firmer, but business on a reduced scale. Standard, cash, sold at £64 7s 6d to £64 2s 6d to £64 3s 9d, and three months £65 10s to £65 5s to £65 7s 10d to £65 2s 6d. Electros £70 to £71, best selected £69 5s to £70 10s, strong sheets £68, wire bars £71. Lead easier, and quoted at £35 to £34 15s as to position. Spelter in good demand, while easier on balance at £33 17s 6d to £33 15s. Aluminium, home trade, quoted £120; export, £125. Antimony, English special brands, £65.

THE COTTON TRADE.

MANCHESTER, March 27.

The more active demand in the market has been maintained, and although the wide fluctuations in raw cotton rates have had a rather disturbing influence, a fairly encouraging turnover has taken place. Cloth inquiry for India has broadened, and freer buying has been reported in grey staples, light bleaching descriptions and printed and dyed goods. Rather better support has also been given by China in greys, whites, and fancies. The Near Eastern outlets have been comparatively quiet, and financial difficulties in Egypt have caused some uneasiness. Fine goods and specialities continue in active request for the Continent and the United States. American yarns remain much firmer in quotation, and in small lots a very fair trade has been done. The finer counts in Egyptian spinnings have moved off fairly freely.

No. 6

RUBBER.—Market remained generally quiet, and without new feature. Plantation, spot, sold, is to is o½d; April, is o½d; April-June, is o½d to is o½d; July-September, is o½d; October-December, is 1½d. To New York, standard estate sheet, April-May, is o½d; first crepe, ditto, sold, is o½d per lb, c. f. and i.

MARCH-APRIL, 223 175 ed per ton.
 OILS.—Linseed irregular and easier. Spot, net, naked, 38s; April, 36s 10d; May-August, 36s 6d; September-December, 36s 3d. Rape dull. Crude, spot, 48s; refined, 50s 6d. Castor oil quiet. First pressure, spot, quoted 65s; second pressure, 64s; and pharmaceutical, 70s per cwt. Hull, with London 2s per cwt extra. Cotton easier. Seed Egyptian, spot, 41s 6d; Bombay, 40s; common edible, 48s; deodorised, 50s. Chinawood quiet. Hankow, spot (barrels), 92s 6d; March-April, 91s 6d. Cocoanut quiet. Ceylon, spot, 46s 9d; March-April, 44s 3d; Cochin, ditto, nominally 50s. Soya dull. Oriental, barrels, March-April, 41s. Cod firm. English, spot, 36s 6d; to 37s 6d. Groundnuts quiet. English, crushed, naked, spot,

are:—Australian mutton: Fine, 49s; good to fair, 48s to 46s; dull to dark, 42s to 41s; hard, 49s. Australian beef: Fine, 48s; good to fair, 45s 6d to 44s; dull to dark, 42s to 40s 6d; sweet, 48s. Present shipment from Australasia: Good mixed, 46s. Present shipment from South America, 45s 6d to 43s 6d. Tea: Market letter is unchanged. Tows: Tallow, 41s 6d per cwt. Rough fat, per 8 lbs, 43d; melted suet, 33s 6d per cwt. Quotations are:—Town, 42s, net cash, naked, ex works. Country: Frail casks, 42s; home-made, shipping casks, net, f.o.b., good coloured, 45s; fair to dull,

One Hundred and Eighth Report of the Court of Directors to the Ordinary Yearly General Meeting of Shareholders, held at the City Hall, Hongkong, on Saturday, the 23th February, 1924, at 11.30 a.m.

After making these transfers, deducting the Interim Dividend of £3 per share, paid on 7th August last, viz., £480,000 @ 2/3 = \$4,266,66.67, and Remuneration to Directors, there remains for appropriation \$10,267,206.82 out of which the Directors recommend the payment of a Final Dividend of Three Pounds Sterling per Share, viz., £480,000, and a Bonus of Two

Mr. E. V. D. PARR, Mr. G. M. DODWELL and Mr. A. M. BOWEN-SMITH resign their seats on leaving the Colony, and Mr. N. L. WATSON, Mr. A. H. COMPTON and Mr. J. P. WARREN were invited to join the Board.

These appointments require confirmation at this meeting.

Mr. G. T. M. EDMINS, Hon. Mr. A. O. LANG and Mr. H. P. WHITE retire in rotation, but being eligible for re-election, offer themselves accordingly.

rotation, but being eligible for re-election, offer themselves accordingly.

AUDITORS.

The accounts have been audited by Hon. Mr. A. R. LOWE and Mr. C. BERNARD BROWN, who offer themselves for re-election.

Hongkong, 11th February, 1924. A. O. LANG, Chairman.

A. G. STEPHEN, Chief Manager. F. H. RENTYECROSS, Chief Accountant. A. O. LANG, D. G. M. BERNARD, G. T. M. EDKINS, Directors.

We have audited the above Balance Sheet with the Books, Vouchers, and Securities at the Head Office, and with the certified Returns from the Branches and Agencies made up to 31st December, 1923, with the exception of certain distant offices where the year is closed on 31st October or 30th November.

We have obtained all the information and explanations we have required. In our opinion such Balance Sheet is full and fair, and properly drawn up so as to exhibit a true and correct view of the Corporation's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Corporation.

Witness our hands and seals this 11th day of February, 1924.

A. R. LOWE, } Auditors. } Chartered
C. BERNARD BROWN, } } Accountants.

The Subscription List will be closed on or before Monday, the 31st March, 1924.

Application will be made to the Committee of the London Stock Exchange for permission to deal after allotment, and in due course for an official quotation.

CITY OF AMSTERDAM

5½ per cent. STERLING LOAN OF 1924
for £2,500,000

In Bonds to Bearer of £100, £500 and £1,000

Authorised by a Resolution of the City Council dated the 26th March, 1924, No. 259, and ratified by a Resolution of the Committee of the Council of the Province of North Holland, of the same date, No. 76.

Messrs. ERLANGERS, 8, Crosby Square, London, E.C.3

offer for Public Subscription the above-mentioned Sterling Bonds, at the price of £96½ per cent., payable as follows:—

£ 5 on Application	£35 10s. on 12th June
21 on Allotment	
35 on 15th May	£96 10s. per £100 nominal

Payment in full may be made on allotment, or on any subsequent instalment date, under discount at the rate of 2 per cent. per annum.

The Bonds will be the direct obligation of the City of Amsterdam, and the City has undertaken that it will not, during the currency of the present Loan, give, create, or consent to any mortgage or charge on or hypothecation of any of its assets or revenues or any part thereof without giving to the holders of the above-mentioned sterling Bonds the benefit of such mortgage, charge or hypothecation, *pari passu*.

The Bonds are redeemable not later than the 1st October, 1974, by means of an accumulative Sinking Fund, to be applied by yearly drawings at par; the first repayment will take place on the 1st October, 1925.

The City has the right on the 1st October, 1935, and on the 1st October in any subsequent year, to redeem at par the whole or any part of the Loan (over and above that provided for by the Sinking Fund) upon giving six calendar months' notice.

Interest is payable on the 1st April and the 1st October in every year. The first payment being £2 1s. 2d. per £100 nominal, representing interest at the rate of 5½ per cent. per annum on the several instalments from their due dates, will be made on the 1st October, 1924.

Principal and interest will be payable in Sterling in London at the offices of Messrs. Erlangers, exempt from all stamps, duties, impositions or taxes created or to be created in the Netherlands, whether State, Provincial, Municipal or otherwise.

A copy of a letter from the City authorities giving information regarding the financial position of the City is set out below.

Provisional Scrip Certificates will be issued in exchange for Letters of Allotment, and will be exchangeable in due course for Definitive Bonds.

Applications must be for £100 or multiples thereof and must be made on the accompanying form and lodged with Messrs. Erlangers, 8 Crosby Square, London, E.C.3, together with a deposit of £5 per £100 nominal of Bonds.

If any application be not accepted in respect of the full amount of Bonds applied for, the surplus amount paid on application will be appropriated towards the amount payable on allotment and any balance will be returned to the applicant, and if any application be not accepted the amount paid on application will be returned in full. Failure to pay the amount due on allotment or any subsequent instalment will render the amount previously paid liable to forfeiture and the allotment to cancellation.

Interest at the rate of 6 per cent. will be charged on all instalments in arrear.

A brokerage of ¼ per cent. will be paid on allotments made in respect of applications bearing the stamp of a Banker, Broker or other approved agent.

The original of the letter attached hereto and a draft of the definitive Bond may be seen during business hours, whilst the Subscription List is open, at the offices of Messrs. Slaughter & May, 18 Austin Friars, London, E.C.2.

Prospectuses and Forms of Application may be obtained at the offices of Messrs. Erlangers, and also from Messrs. Panmure Gordon & Co., 1 St. Michael's Alley, Cornhill, E.C.3.
8 CROSBY SQUARE, LONDON, E.C.3. 27th March, 1924.

Copy of the Letter referred to above.

MUNICIPAL OFFICES, AMSTERDAM,
Messrs. ERLANGERS, LONDON. 26th March, 1924.

GENTLEMEN,
With reference to the £2,500,000 5½ per cent. Sterling Loan of 1924 of the City of Amsterdam, which you have purchased and which you are authorised to offer for subscription on the London Market, we have the honour to supply the following information.

POPULATION. The City of Amsterdam, the capital of the Kingdom of the Netherlands, had on the 31st December, 1923, a population of 706,199.

MUNICIPAL ENTERPRISES. The City has, for many years, owned and operated all the important public utility undertakings, including Gas, Electric Light and Power Works, Electric Tramways, Telephones, Water Supply, Docks, etc. These Municipal enterprises which have, since their acquisition, been operated with complete success, have been constantly extended and modernised and are up to date in every respect.

These undertakings with their plant, equipment, etc., represent an actual cash expenditure of over £18,800,000, of which approximately £7,725,000 have, under the City's system of amortisation, been written off out of their earnings.

For the year ended 31st December, 1922, the net revenue from the City's public utility undertakings, after meeting interest on and amortisation of loans in connection therewith and providing for the proper reserves, was £478,000.

The definite figures for 1923 will not be available until after the end of May, but the approximate net revenue from these sources for 1923 is £531,000, and the estimated net revenue for 1924 is £642,000.

MUNICIPAL LANDS. In order to meet the urgent and increasing demands for building sites the City has, particularly during recent years, purchased large areas of land and has prepared them for building purposes.

The City disposes of these lands under building leases—usually for a term of 75 years—and this policy has already proved successful in greatly relieving the congestion in the older parts of the town.

PROCEEDS OF ISSUE. The proceeds of the present issue will be applied to consolidate expenditure already incurred in connection with the acquisition and preparation of such lands.

FUNDED DEBT. The total Funded Debt of the City, excluding the present issue, is £21,880,800, more than three-quarters of which was incurred for productive purposes.

REVENUE AND EXPENDITURE. The Accounts for the year ended 31st December, 1922, summarised under the main headings, showed Revenue and Expenditure approximately as follows:—

REVENUE.		EXPENDITURE.	
	£		£
Rents	465,417	General Adminis- tration	352,583
Public Utilities	1,402,667	Roads, Drainage, etc.	732,500
Income Tax	3,023,583	Police, Fire, Public Lighting	828,667
Other Taxes	1,423,833	Sanitary	908,500
Government Contri- bution for Edu- cation, etc.	1,090,000	Education	1,576,334
Miscellaneous		Poor Law Adminis- tration, Hospitals, etc.	1,411,250
Revenue	800,000	Interest and Amorti- sation of Debt	1,703,500
		Miscellaneous	287,166
		Surplus	405,000
			£8,205,500
	£8,205,500		£8,205,500

All sterling figures in this letter have been calculated at the rate of 12 guilders to the £ sterling.

The Budget estimates for the years 1923 and 1924 show an excess of Expenditure over Revenue. Any balance required can be made up out of the accumulated surpluses available from 1922 and previous years, which are ample for the purpose.

All extraordinary expenditure incurred by the City owing to the European War was defrayed out of Revenue and during the years 1921, 1922 and 1923 the City reduced, by about one-third, the Municipal Income Tax, its largest source of Revenue.

The present issue is the only loan negotiated by the City in a foreign currency, and the City undertakes to make adequate provision in the ordinary annual Budgets for the regular payments of the interest and redemption of the loan in accordance with the terms of your Prospectus, and all the resources of the City are liable to meet such payments.

We are, Gentlemen,
Yours faithfully,

The City Treasurer (Alderman for Finance) de VLUGT.
The Secretary. FALKENBURG.

PRELIMINARY NOTICE.

ALLIED NEWSPAPERS LIMITED.

Amalgamating the following Newspapers and Periodicals:—

“SUNDAY TIMES” (London).
“THE DAILY DISPATCH” (Manchester).
“THE EVENING CHRONICLE” (Manchester).
“THE SPORTING CHRONICLE” (Manchester).
“THE SUNDAY CHRONICLE” (Manchester).
“THE EMPIRE NEWS” (Manchester).
“THE ATHLETIC NEWS” (Manchester).

In addition to a number of other Periodicals.

The combined weekly circulation of these newspapers and periodicals is over 8,000,000, and last year's gross revenue from sales and advertising exceeded £2,500,000.

CAPITAL:

4,750,000 8% Cumulative Preference Shares of £1 each £4,750,000
2,000,000 Ordinary Shares of £1 each ... £2,000,000
£1,500,000 7% Debenture Stock ... £1,500,000

AN OFFER FOR SALE

will be made during the week-end of the above

4,750,000 8% Cumulative Preference Shares of
£1 each at par.

Dividends will be payable half-yearly on the 31st March and the 30th September.

The amount required to pay the dividend on these Eight per Cent. Cumulative Preference Shares is £380,000 per annum. The profits for the year 1923 of the newspapers, periodicals and printing business which will be owned by the Company amounted to £855,000. After provision for interest on the Sinking Fund for Redemption of £1,500,000 Seven per Cent. Debenture stock, this leaves a balance of £705,000, which, subject to Corporation Profits Tax and Directors' and Managing Directors' remuneration, would be available to provide this Preference Dividend of £380,000.

DIRECTORS.

Henriques and Co., 13, Pall Mall, Manchester.

THE RANDFONTEIN CENTRAL GOLD MINING COMPANY, LIMITED.

(Incorporated in the Transvaal.)

NOTICE TO SHAREHOLDERS OF EXTRAORDINARY GENERAL MEETINGS. Notice is hereby given that an Extraordinary General Meeting of the Shareholders in The Randfontein Central Gold Mining Company, Limited, will be held in the Board Room, First Floor, Consolidated Building, Fox street, Johannesburg, Transvaal, on Monday, the 9th day of June, 1924, at 4 o'clock in the afternoon, for the purpose of considering and, if thought fit, of passing with or without modifications, as Extraordinary Resolutions under the Companies Act, 1909, Transvaal, the Resolutions following:—

(1) That it is desirable to wind up this Company and, accordingly, that this Company be wound up voluntarily, and that John Munro, Roderick Lamb Innes, James Huskisson Crosby, Geoffrey Joel, Fritz Leonard Marx and Sir Willem van Hulsteyn be and they hereby are appointed Liquidators for the purposes of such winding-up, with full power and authority for any two of them jointly to act without the concurrence of the others of them.

A Resolution fixing the remuneration of the Liquidators. That the Provisional Agreement entered into on the 15th day of February, 1924, between this Company and the Randfontein Estates Gold Mining Company, Witwatersrand, Limited, and submitted to this Meeting, be and the same is hereby approved, and the said Liquidators or any two of them be and they hereby are authorised to adopt the said Agreement and carry the same into effect pursuant to the provisions of Section 166 of the Companies Act, 1909, Transvaal Province, and to receive as compensation for the transfer or sale of the property and assets of this Company, as contemplated in the said Provisional Agreement, 1,062,005 new shares of £1 each, to be issued as fully paid up, in the Capital of the Randfontein Estates Gold Mining Company, Witwatersrand, Limited, after that Capital shall have been increased to £1,062,553, for distribution (in the proportion of three new Randfontein Estates shares for every five Randfontein Central shares) among the Members of this Company (who together hold 1,770,007 shares in this Company) other than the Randfontein Estates Gold Mining Company, Witwatersrand, Limited, itself, which Company shall receive no share in such distribution in respect of the 2,980,452 shares in this Company of which it is the owner. As further consideration of the whole of the Company's Debenture Issue, now standing at £1,779,100, but subject to reduction by redemption, shall be surrendered and cancelled, and the Shareholding of the Estates Company in the Central Company, amounting to 2,980,452 shares, shall also be surrendered and cancelled with, in each case, the consent of the Trustees for the Debenture Holders of the Randfontein Estates Gold Mining Company, Witwatersrand, Limited, in respect of their holding in terms of a Provisional Agreement dated 15th February, 1924, made between the Randfontein Estates Gold Mining Company, Witwatersrand, Limited, and the said Trustees.

Notice is also hereby given that a further Extraordinary General Meeting of the Company will be held at the same place on Thursday, the 26th day of June, 1924, at 4 o'clock in the afternoon, for the purpose of receiving a Report of the proceedings of the above-mentioned Meeting and of confirming, if thought fit, as Special Resolutions in terms of the said Act the above-mentioned Resolutions.

A copy of the Provisional Agreement aforementioned is open for inspection by Shareholders at the Registered Offices of the Company, Consolidated Building, Fox street, Johannesburg, and at the London Offices of the Company, 10 and 11 Austin Friars, London, E.C.2, during business hours, and the principal terms and conditions thereof are set forth in a circular attached hereto and forming part hereof which has this day been addressed by the Randfontein Estates Gold Mining Company, Witwatersrand, Limited, and by this Company to the Shareholders of both Companies.

The attention of Shareholders is also specially drawn to the fact that the Liquidators of the Randfontein Central Company will be instructed to apply to a competent Court for leave to sell all Randfontein Estate Shares unclaimed for 12 months by Randfontein Central Shareholders and which cannot be delivered to such Shareholders, and to pay the net proceeds to the Master of the Supreme Court.

The Share Transfer Books of the Company will be closed as follows:—

(a) At the Head Office: From 4th to 9th June, 1924, both inclusive.
(b) At the London Office: From 5th to 26th May, 1924, both inclusive.

Holders of Share Warrants to Bearer who desire to be present or represented, at the Meetings must deposit their Share Warrants either:—

(a) At the Registered Office, Consolidated Building, Fox street, Johannesburg, at least 24 hours before the times appointed for the holding of the Meetings, or

(b) At the London Office, 10 and 11 Austin Friars, London, E.C.2, at least 30 days before the dates appointed for the holding of the Meetings.

and shall otherwise comply with the "conditions" as to the issue of Share Warrants now in force.

Upon such production or deposit a Certificate with Proxy Forms will be issued under which such Share Warrant Holders may attend the Meetings either in person or by proxy.—By Order of the Board, Johannesburg Consolidated Investment Company, Limited (London Agents), T. HONEY, Secretary, 10/11 Austin Friars, London, E.C.2, 24th March, 1924.

THE RANDFONTEIN ESTATES GOLD MINING COMPANY, WITWATERSRAND, LIMITED.

(Incorporated in the Transvaal.)

NOTICE TO SHAREHOLDERS OF EXTRAORDINARY GENERAL MEETINGS.

Notice is hereby given that an Extraordinary General Meeting of the Shareholders in the Randfontein Estates Gold Mining Company, Witwatersrand, Limited, will be held in the Board Room, First Floor, Consolidated Building, Fox street, Johannesburg, Transvaal, on Monday, the 2nd day of June, 1924, at 3 o'clock in the afternoon, for the purpose of considering and, if thought fit, of passing with or without modifications the Resolutions following:—

(1) That the Provisional Agreement entered into on the 15th day of February, 1924, between this Company and the Randfontein Central Gold Mining Company, Witwatersrand, Limited, and submitted to this Meeting, for the absorption of that Company in this Company, be and the same is hereby approved, and the Directors of this Company are hereby authorised to carry the same into effect.

(2) That the Provisional Agreement dated the 15th day of February, 1924, entered into between this Company and the Trustees for the Debenture Holders of this Company, consenting to accept the modified security involved in the said agreement, be and the same is hereby approved, and the Directors of this Company are hereby authorised to carry the same into effect.

(3) That Article 29 of the Company's Articles of Association be and it is hereby amended by the addition of the following paragraph thereto:— "The Directors may, and they are hereby authorised and directed to increase the capital by an amount of not exceeding £1,062,005 (one million and sixty-two thousand and five pounds) to be divided into not exceeding 1,062,005 shares of £1 each, which shares shall be allotted and issued by them to the Randfontein Central Gold Mining Company, Limited, its Liquidators and/or their nominees for distribution among Shareholders of the Randfontein Central Gold Mining Company, Limited, other than this Company if and when the Provisional Agreement dated 15th February, 1924, between the Company and the Randfontein Central Gold Mining Company, Limited, and the further Provisional Agreement between the Company and the Trustees for Debenture Holders of its Debenture Issue dated 15th February, 1924, shall have become effective against transfer of the Randfontein Central Company's assets and upon the other terms set forth in the Agreement."

And notice is also hereby given that a further Extraordinary General Meeting of the Company will be held at the same place on Thursday, the 26th day of June, 1924, at 3 o'clock in the afternoon, for the purpose of receiving a report of the proceedings of the above-mentioned Meeting and of confirming, if thought fit, as Special Resolutions in terms of the said Act, the above-mentioned Resolutions.

The Provisional Agreements referred to in the Resolutions are open for inspection by Shareholders at the Registered Offices of the Company, Consolidated Building, Fox street, Johannesburg, Transvaal, and at the London Offices of the Company, 10 and 11, Austin Friars, London, E.C.2, during business hours, and the principal terms and conditions thereof are set forth in a circular dated 24th March, 1924, accompanying this Notice and forming part thereof, which has been addressed to Shareholders in both the Randfontein Estates Gold Mining Company, Witwatersrand, Limited, and the Randfontein Central Gold Mining Company, Limited.

The main provisions of the proposed amalgamation are as follows:— That this Company is to absorb the Randfontein Central Gold Mining Company, Limited, which is to go into voluntary liquidation.

Shareholders in the Randfontein Central Gold Mining Company, Limited (other than this Company itself), will receive three new shares fully paid in this Company for every five Randfontein Central Gold Mining Company, Limited, shares held by them.

This Company will increase its Capital to a sufficient extent (not exceeding 1,062,005 new shares of £1 each) to provide the new shares required, and will surrender and agree to cancellation of its holding in Randfontein Central Gold Mining Company, Limited, shares and Debentures.

The Share Transfer Books of the Company will be closed as follows:—

(a) At the Head Office: From 12th May to 2nd June, 1924, both inclusive.
(b) At the London Office: From 28th April to 10th May, 1924, both inclusive.

Holders of Share Warrants to Bearer who desire to be present or represented at the Meetings must deposit their Share Warrants either:—

(a) At the Registered Office, Consolidated Building, Fox street, Johannesburg, at least 24 hours before the times appointed for the holding of the Meetings, or

(b) At the London Office, 10 and 11 Austin Friars, London, E.C.2, at least 30 days before the dates appointed for the holding of the Meetings.

and shall otherwise comply with the "conditions" as to the issue of Share Warrants now in force.

Upon such production or deposit a Certificate with Proxy Forms will be issued under which such Share Warrant Holders may attend the Meetings either in person or by proxy.—By Order of the Board, Johannesburg Consolidated Investment Company, Limited (London Agents), T. HONEY, Secretary, 10 & 11, Austin Friars, London, E.C.2, 24th March, 1924.

THE RANDFONTEIN ESTATES GOLD MINING COMPANY, WITWATERSRAND, LIMITED.

(Incorporated in the Transvaal.)

NOTICE TO DEBENTURE HOLDERS. Notice is hereby given that a Meeting of the Holders of the outstanding Mortgage Debentures of the Company, forming part of a total issue of £2,000,000 (Two million pounds) Debentures constituted by a Trust Deed or Indenture dated the 19th February, 1909, and made between the Company of the one part and Jan Willem Stuckoris Langerman, M.L.A., and Charles Follett Carrington (as Original Trustees) of the other part, will be held in the Board Room, Consolidated Building, Fox street, Johannesburg, on Monday, the 19th day of May, 1924, at 3 o'clock in the afternoon, for the purpose of considering and, if thought fit, passing the following Extraordinary Resolutions:—

(1) That the amalgamation scheme as detailed in the Provisional Agreement produced to the Meeting, dated the 15th day of February, 1924, and made between the Company of the one part and the Randfontein Central Gold Mining Company, Limited, of the other part, for the amalgamation of the Randfontein Central Gold Mining Company, Limited, with the Company, be and the same is hereby sanctioned.

(2) That the Trustees for the Debenture Holders be and they hereby are authorised to surrender and to consent to the cancellation of certain 2,601,469 (Two million, six hundred and one thousand, four hundred and sixty-nine) shares in the Randfontein Central Gold Mining Company, Limited, and fifty-two thousand, five hundred pounds) Debentures in the Debenture Issue of that Company (at present pledged to them as security) against legal transfer to the Company of the Mining Titles and other assets specifically mortgaged by the Randfontein Central Company to the Trustees for its own Debenture Holders and also against simultaneous registration in favour of the Trustees of a Mortgage Bond or Bonds by the Company, effectively binding as a First Mortgage the said Mining Titles and other assets, in substitution for the said pledged shares and Debentures, and to execute all such deeds and documents as may be necessary in order to carry the said substitution of security into effect.

(3) That the Provisional Agreement dated 15th February, 1924, and made between the Company and the Trustees for Debenture Holders of the Company, embodying the foregoing arrangement, be and the same is hereby approved and confirmed.

This Notice is issued pursuant to the Trust Deed or Indenture, and the Resolutions, majority, shall take effect as Extraordinary Resolutions by virtue of the provisions of the Third Schedule to the said Deed and will be binding on all the Debenture Holders.

THE MONEY MARKET.

In spite of heavy disbursements by the Government at the end of the financial year, there was a strong demand for money on the last day of March, and a large sum was borrowed from the Bank of England. The 1st of April brought the usual interest payments, but the market was by no means flooded, and day-to-day loans have been easy

to place throughout the week at 2 to 2½ per cent. Discount rates were inclined to ease, and July bills could be placed at 3 per cent.

Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2½	2½	2½	2½	1 (Jly. 5, '23)
Houses (Notice	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate (3 months' bills)	3½	3½	3½	3½	..

The Bank return showed an increase of nearly a million in the note circulation, and a corresponding decrease in the Reserve, less an addition of £7,000 to the stock of gold. Market borrowings were reflected in an increase of nearly four millions in the Other securities, Government securities being slightly lower. Government disbursements had reduced the Public deposits by ten millions, and Other were thus thirteen millions higher. There was an increase of £3,700,200 in currency notes circulation this week, making the total notes outstanding £285,238,100, which includes £1,400,400 for notes called in but not yet cancelled. The fiduciary issue is £234,387,700, or £13,803,200 below the maximum.

THE STOCK MARKETS.

The announcement of the Government's conversion offer has been the dominant influence in the Stock Markets this week, and under the lead of gilt-edged stocks there have been rises in the various Colonial Scrips, in Home Railway prior charges, and in a number of other investment stocks. French bonds have been good on the further recovery in the franc, and Mexican Government bonds advanced on the announcement of a payment on April 15th. Home rails have hardened in sympathy with gilt-edged stocks, but Argentine Railway stocks, now quoted ex dividend, have been dull. In the oil market dealings were mostly professional, but the rubber market was a shade harder. Industrials, as a whole, have not received a great deal of attention, and there has been but little activity in mines, the principal feature of which has been the movements in tin shares.

THE COMMODITY MARKETS.

The Cardiff coal market has been entirely under the influence of the miners' wages dispute, and fears of a stoppage have restricted the volume of business. Improved values of French and Belgian currencies have assisted the market for Cleveland pig-iron, and instead of Continental pig-iron being offered here, there is a good inquiry for export. Business is quiet in manufactured iron and steel. Our Sheffield correspondent reports that the position of local industries is improving. The tin market opened easier, but a recovery took place; copper moved on similar lines. The cotton trade has witnessed increased values in sympathy with the higher rates of the raw material. In the wool trade a lack of activity in merinos is noticeable, but the position is otherwise satisfactory. A steadier tone prevails in the wheat markets. Rubber improved, and the hide position is steadier. Further details of markets, together with prices, will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

The foreign exchange market continues to be dominated by the movements of the franc. At the end of last week the rate remained very steady round about 78.45, but with Monday the downward movement in the quotation began again, and the rate fell rapidly until at one time, on the 2nd, it was quoted as low as 70.70, although the closing price was about 71. On Thursday there was a reaction up to 74.65, and yesterday morning the rate was quoted at 74.90. In the early part of the week there was considerable surprise that no effort was made on the French side to steady the pace of this recovery, but that instead any

sign of reaction was stopped by immediate intervention. By Thursday, however, it would seem that wiser counsels had prevailed, and the natural reaction was allowed for the time being to take its course. That the recovery has been too rapid is shown by the distress which is already being felt in many parts of the French export market; that it was hardly justified, at any rate to the extent to which it has been allowed to go, is suggested by this week's figures of the Banque de France, showing a further increase in note issue and in advances to the State. Whether an attempt will be made to drive the rate still lower, inadvisable as this would be, or whether it can be stabilised somewhere about this present level, it is impossible to say. On the whole, most signs would suggest a renewed rise in quotation in the not very distant future. This week the movement of the Brussels rate has been even more dramatic than that of Paris, the quotation falling from 98.64½ on Monday to as low as 82½ at one time on the 2nd, since when there has been a reaction to 89½ yesterday morning. At the time of the rapid fall in quotation there were many rumours of credits being arranged for Belgium in New York and London, but these have now been denied. Forward quotations have narrowed sharply during the week to 40 centimes per month above spot for Paris, and 10 centimes above for Brussels. Italy this week has been influenced somewhat by the franc recovery moving from 99.06 on the 29th to as low as 95½ at one time on the 2nd. Since then, however, it has reacted to 98½, and there is no indication of any real change from the present sensible policy of stationing. The dollar during the week has shown little movement, the closing rate of \$4.30½ on the 28th comparing with a quotation of \$4.30½ yesterday morning. Forward quotations have widened a little to ½ to 1 cent. per month above spot. Largely on New York demand the peseta had a sharp recovery in the middle of the week, moving from 32.45 on the 28th to as low as 31.65 at one time on the 1st. Since then, however, it has reacted again to 32.75. Amsterdam has gone against us from 11.64½ to 11.62, and Switzerland from 24.81 to 24.72½. In Northern Europe, Copenhagen has recovered on its new exchange regulations from 27.10 to 26.05, having been at one time as low as 25.70. Stockholm has moved from 16.23 to 16.28½, and Christiania has moved up again from 31.62½ to 31.69½. Helsingfors at 172½ is unchanged. In Central Europe Berlin for the first time for some weeks has depreciated a little to 20½ billion, and there is a growing anxiety whether the present stabilisation of the Rentenmark can be maintained. In Warsaw the rate remains steady at about 40 millions, and latest reports suggest a much improved internal financial position. Vienna, which is reported to have suffered heavily from the recent franc movements, is also unchanged at 305,000, but Prague has appreciated from 146½ to 144½. Bucharest, on the other hand, shows a reaction from 82½ to 84½. In the East the rupee after falling away a little is back again at 15 4½d, or about last week's figure. Japan at 11½d shows practically no change. The silver market has again been very sluggish, with a somewhat easier tendency. Hong Kong has moved from 2s 4½d to 2s 4½d, Shanghai from 3s 3½d to 3s 2½d. In South America Rio has depreciated a little from 6½d to 6½d, Buenos Ayres from 42½d to 42, and Monte Video from 43½d to 43½d. Valparaiso, however, has increased in value from 43.40 to 42.80 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the nine days ended March 31st:—

(000's omitted.)			
EXPENDITURE.		REVENUE.	
Supply Services	18,467	From Revenue	22,872
Interest, &c., on Debt	2,907	Increase in Debt	1,958
Sinking Fund	34		
Sundries	1,057		
Increase in balances	4,365		
	24,830		24,830

The total revenue for the last nine days of the financial year amounted to £22,871,700, which compares with £23,828,900 in the last week of the financial year 1922-23. Customs yielded £1,692,000, against £1,495,000. Receipts from Excise amounted to £1,607,000, against £827,000. Estate Duties brought in £1,210,000, against only £650,000. Property and Income-tax yielded £10,826,000 and Super-tax £3,570,000, the combined

total of these two items for the corresponding period was £14,198,000. The nine days' operations increased the National Debt by £1,959,000, and caused the following changes:—

(000's omitted.)			
Treasury Bills	9,177	Public Departments	10,850
Other Debt	2,208	Saving Certificates	100
Telegraph Money	2,150	Unemployment Insurance	630
Housing	4		
	+ 13,539		- 11,580

The floating debt was reduced by £1,680,000 to £774,475,500.

FINANCIAL YEAR, 1923-24.

£		£	
Total Expenditure ..	788,840,211	Raised by Revenue ..	837,169,284
Net Repayments	48,515,626	Decrease in Balances ..	186,553
Total	837,355,837	Total	837,355,837

ESTIMATES for YEAR 1923-24.

£		£	
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

THE WEEK IN PARLIAMENT.

MONDAY, MARCH 31ST.—*Commons*: Second reading of National Health Insurance (Cost of Medical Benefit) Bill passed. West India Islands (Telegraph) Money Resolution passed.

TUESDAY, APRIL 1ST.—*Lords*: Church of Scotland Bill passes second reading. Marriages Validity (Provisional Orders) Bill read the third time. *Commons*: Debate on the Lausanne Treaty interrupted at 8.15 by discussion on Motor Taxation. On the adjournment, the Wembley Strike discussed.

WEDNESDAY, APRIL 2ND.—*Lords*: Debates on Territorial Army Recruiting and the recent League of Nations Council meeting at Geneva. *Commons*: Second reading of Rent and Mortgage Interest Restrictions Bill talked out. Motion carried condemning a Capital Levy. All night sitting on Army Estimates.

THURSDAY, APRIL 3RD.—*Lords*: Report stage of Public-house Improvement Bill passed. Performing Animals Bill passes second reading. *Commons*: Bill to amend the Unemployment Insurance Acts 1920-1924 read a first time. Debate on agriculture raised on Civil Service Estimates.

FRIDAY, APRIL 4TH.—Guardianship of Infants Bill debated.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—National Bank of Greece, Bank of Scotland, Chartered Bank of India, Australia and China, National Bank of India, Autocar Fire and Accident Insurance Company, D. H. Evans and Co., Bah Lias Tobacco and Rubber, Mazawattee Tea, Thomas Tilling, and Ceylon Consolidated Estates. At the meeting of the National Bank of Greece, the Governor, Mr A. N. Diomedes, exhaustively reviewed the financial conditions in Greece, and announced an increase in the bank's business. Sir Montagu C. Turner, at the Chartered Bank of India meeting, reported a far healthier state of business in the East. Sir Ralph Anstruther, at the Bank of Scotland meeting, criticised recent suggestions for substituting Bank of England for Scottish notes. At the National Bank of India meeting Sir C. C. McLeod gave an interesting account of Indian trade.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

SURPLUS AND DEBT.

ONCE again the official forecasts of public income and expenditure have been utterly falsified in the event, and instead of showing the minute surplus of less than £2 millions estimated by Mr Baldwin in his Budget of April last, or the deficit of £11 millions into which this was converted by subsequent supplementary estimates, the accounts for the financial year 1923-24 have disclosed a surplus of over £48 millions, which has been used to redeem debt, in addition to the £40 millions provided by sinking fund for this purpose. Twelve months ago, it may be recalled, the accounts showed a surplus of £126 millions, instead of the Budget estimate of less than a million. From one point of view it is all to the good that the Treasury should take a very conservative attitude in making forecasts of its possible revenue and expenditure, and we think that the country is fortunate to have redeemed £216 millions in two bad years in spite of the reduction in the rate of taxation. We believe this policy is even now benefiting British credit and British trade, and will certainly prove profitable in the future. This redemption has already saved us from £7½ to £10 millions in annual interest. At the same time, it is perhaps rather unfortunate that when the taxpayer is bearing a heavy burden, estimates and actual results should display such enormous discrepancies. It gives an opportunity to those who overlook the fact that such surpluses as are disclosed have already gone to the redemption of debt to raise a clamour for the relief of taxation which is altogether unjustified by the present position. We should prefer that the country should follow the financially sound policy with its eyes open.

A year ago Mr Baldwin estimated that revenue would automatically drop by £61½ millions, and granted concessions in taxation which he expected would cost another £34 millions, making a total decline in revenue of £95½ millions. The actual decline in revenue proves to be less than £77 millions, the actual figure being £837,169,000, or £18,669,000 more than was estimated. On the expenditure side Mr Baldwin budgeted for an increase of £5 millions in expenditure, and if the amounts of supplementary estimates since introduced are added to the Budget figure, a total increase of £17½ millions over the actual expenditure of 1922-23 was anticipated, the total figure of estimated expenditure being £829,928,000. The expenditure disclosed in the accounts is £788,840,000, or £41 millions less than the final estimate. In the table below we show how individual items in the completed accounts for the year 1923-24 have varied with the estimates:—

(000's omitted.)					
	Revenue.			Expenditure.	
	1923-24.	Above (+) or Below (-) Estimates.		1923-24.	Above (+) or Below (-) Estimates.
Customs	119,958	+ 3,058	National Debt Services ..	307,309	- 2,691
Excise	147,970	+ 4,120	Sinking Fund	40,000	..
Motor Duties	14,691	+ 1,441	Payments for N. Ireland ..	347,309	- 2,691
Estate Duties	57,800	+ 5,800	Road Fund	14,090	+ 1,440
Stamps	21,570	+ 1,570	Local Taxation Accts.	13,662	+ 3,314
Land Tax, &c.	2,760	- 260	Land Settlement	1,209	- 291
Income Tax	269,331	+ 8,331	Other Cons. F. Services ..	2,803	- 169
Super Tax	60,640	+ 2,640			
E.P.D.	nil	- 12,000	Total Cons. F. Services ..	383,040	+ 8,570
Corporation Profits Tax ..	23,340	+ 3,340	Army, Navy, & Air Force ..	105,800	- 16,445
Post Office	52,800	+ 200	Civil Services	239,366	- 25,384
Crown Lands	920	+ 20	Post Office and Revenue ..	60,634	- 1,839
Interest on loans	12,607	+ 107	Departments		
Miscellaneous receipts ..			Supply Services	405,800	- 45,658
Ordinary	15,981	+ 3,481	Total	788,840	- 41,088
Special	36,801	+ 3,159	Surplus	48,399	+ 58,797
	837,169	+ 18,669		837,169	+ 18,669

On the revenue side all items have exceeded expectation with the exception of a slight drop in the land tax, a deficiency of over £3 millions in special miscellaneous receipts, and an entire absence of receipts from arrears of excess profits duty. The authorities were apparently of the opinion that repayments under the head of excess

profits duty would be more than offset by collections of arrears, but their optimism has so far not been justified. On the other hand, income and super-tax receipts, which were expected to drop by £60 millions, have declined by only £49 millions. Motor-vehicle duties have produced £2,370,000 more than in 1922-23, and corporation profits tax £4,363,000 more. The savings in expenditure have practically all been achieved in the Supply Services, but the debt service, which, with the addition of the £40 millions Sinking Fund, was expected to rise by £26 millions, has increased by only £24 millions. The saving of £41 millions in expenditure, as compared with the final estimates and the receipt of £18½ millions more in revenue than was expected, has resulted in the surplus of £48½ millions, which is £59½ millions better than the estimate, since the final estimates pointed to a deficit of £11½ millions.

A simple analysis of the accounts shows what has already happened to the surplus:—

(000's omitted.)			
RECEIPTS.		EXPENDITURE.	
Revenue Surplus	48,329	War Bonds Repaid	52,764
Treasury Bond Sales	32,658	Other Debt Repaid	9,256
Savings Certificates (Net Sales)	11,900	Treasury Bills Repaid	27,689
Other Debt Created	4,000	Ways and Means A/c. Repaid	7,742
Billion	260	Ordinary Sinking Funds	173
Land Settlement Repayments	315	Exchequer Bonds Repaid	25
Reduction in Balances	187		
	97,649		97,649

Thus while there has been a redemption of £97½ millions of debt, including a reduction of £35½ millions in the floating debt, new debt has been created to the extent of just over £49 millions, and there has been a slight reduction in Exchequer balances. The present total of the National Debt is about £7,760 millions, of which £157 millions in the form of Five per Cent. National War Bonds and Five and Three-quarters per Cent. Exchequer Bonds mature in the current financial year. In the succeeding four years over £1,000 millions of internal debt in the shape of Treasury, Exchequer, and National War Bonds, and Three and a-Half per Cent. War Loan fall due for repayment. This is certainly a formidable total, but the amount is well spread over the period, and the problem of dealing with it will probably be left until maturity comes into view.

The problem of the Five per Cent. War Loan, however, of which there is at present about £2,100 millions outstanding, is a different one. This enormous total would automatically be increased during the next few years as certain bondholders exercise their rights of conversion, and the Treasury, we think, has done well to take advantage of present financial conditions to make an effort to reduce the total by £200 millions. The Five per Cent. War Loan is repayable between the years 1929 and 1947, and the offer now made is likely to appeal to those who do not wish to run the risk of having their capital returned in five years' time. Holders of Five per Cent. War Loan are offered conversion into 4½ Conversion Loan, redeemable 1940-44, at the rate of £103 Conversion Loan for every £100 of Five per Cent. War Loan. Those who take advantage of this offer will suffer a reduction in the yield on their security to about 4½ per cent., but will gain the advantage of holding a considerably longer dated security. We doubt whether the latter advantage will be regarded by the ordinary investor in Five per Cent. War Loan as outweighing the reduction in yield, but all that is needed is that £1 in ten should be converted, and we imagine that, in limiting the nominal amount of Five per Cent. War Loan to be converted under the terms of the present offer to £200 millions, the Treasury feels reasonably certain of the success of the operation; and it seems probable that further offers of a similar, but possibly less favourable, nature will be made during the next five years as the opportunity arises. The advantages to the national credit to be gained from a successful conversion operation to a lower rate of interest are obvious, while among the minor benefits is to be counted the fact that a beginning will be made in a reduction of the unwieldy amounts of interest payments which come to dislocate the money market on each June 1st and December 1st, interest on the new loan being payable on January 1st and July 1st. Full details of the conversion offer will be found in another column, from which it will be seen that the offer will, if necessary, remain open until April 26th. An innovation,

however, designed to speed up the operation has been introduced. This takes the form of offering a five shilling commission to bankers and stockbrokers up to April 12th, a half-crown commission in the succeeding week and no commission in the final week. We are glad that the Treasury are acting as opportunity offers, and not waiting for the result of the discussions which are about to take place before their Committee of Inquiry.

THE RUHR PROBLEM AND THE M.I.C.U.M. CONTRACTS.

Those who appreciate the critical point which we are approaching in Anglo-French relations must be anxious not to say a single word which might make Mr MacDonald's task more difficult. At the same time, if we are to escape from the palace of illusion, we feel bound to confess that M. Poincaré's statement, and the reception it received in the French Chamber on Thursday, leaves a very pessimistic impression. M. Poincaré declared that while it might be possible to agree to a change in the form of economic pledge which France is exploiting in the Ruhr, and to fall in with the expected recommendation of the experts that the economic unity of Germany must be restored, France stands to the view that military occupation must continue till the last gold mark has been paid. The presumption has recently grown in Great Britain that M. Poincaré's various speeches would ultimately be interpreted by him to mean that if the German debt were capitalised and some new form of guarantee for payment devised, the Ruhr could with safety to herself and without loss of prestige be evacuated by France. This course would be in keeping with the British interpretation of the Treaty of Versailles, according to which the Allies are entitled to devise, and, if need be, to impose stringent forms of economic or financial pressure, but are not empowered to extend military occupation which can only be regarded as an "act of war." M. Poincaré is now apparently prepared to relax the economic sanctions—or perhaps we should say to substitute for them more productive measures; but he is not prepared to modify by one iota his attitude on the military side of the question. On this basis there can be no possible agreement which would secure the support of either Labour or Liberal opinion in this country—unless indeed the French Government were prepared to submit the question of interpretation to the International Court of Justice and to abide by its decision.

In the meantime we are rapidly approaching the critical date when the situation in the Ruhr will once again be in the melting-pot through the lapsing of the M.I.C.U.M. contracts on April 15th. We are sometimes inclined to forget that, apart altogether from present events, the settlement of 1919 was dependent on the co-operation of private interests and not merely on the goodwill of the German Government. This aspect of the problem is in some ways a dominant one, and a good deal of light is thrown upon it by a German economist, who writes to us as follows:—

The Versailles Treaty expropriated the German iron and steel works in Lorraine. The people who had created them were ousted, whilst their French competitors were installed by the French Government, in many cases at a very cheap price. As they could not run the works without German coke, the German Government were bound by the Treaty to deliver to them considerable quantities of coke. The German Government were not in a position to do so from their own stocks; they had to get them from the coal mine owners, who of course demanded compensation. They had, moreover, no interest whatsoever in providing the French in Lorraine with their good coke at cheap rates so as to enable them to compete successfully with their own plant they had erected in the Ruhr. They and Spain, thus closing the only market open to the French ores from Lorraine. They had no interest whatsoever in foregoing the advantages of the natural conditions they enjoyed, and saw no reason why they should give their competitors cheap coal after they had got their steel works

at a very cheap rate. The obstruction of the German industrialists against the coal deliveries which became clearly visible at Spa was a natural outcome of the Peace Treaty, which had put the power of execution into the hands of private concerns. The dominating position of the industrialists is a logical outcome of this power given to them.

The French have been complaining about this all the time; they justified their invasion of the Ruhr by the necessity of breaking the industrialists' obstruction, which they themselves had made possible. When the struggle against the invasion of the Ruhr was over, industrial life in this densely populated district was practically at a standstill. Intricate negotiations were needed to start a resumption of work. The French Government refused to negotiate with the German Government. They were willing, however, to arrange terms with the owners of the industrial works. They would not allow them to sell their accumulated stocks if they did not comply with certain terms. They wanted to contest the sovereign rights of the German Government in the invaded area, but as they had to enter into negotiations in order to start work, they showed their willingness to negotiate with the industrialists. They chose as their partners the very same men who ought to have carried out the orders of the German Government, but who, according to the French view, had always obstructed that Government.

As the French Government exercised complete power in the invaded districts, they could press their terms upon the owners of the works. Assuming to themselves the rights of sovereignty, they insisted on heavy payments. The coal mining industry, for example, which has to bear 70 to 80 per cent. of the burden levied on the productive power of the district, had to agree to the following payments in order to get a right to do business again. They had to pay the coal tax to the French Government which was originally imposed by the German Government. It had not been paid during the Ruhr struggle as the French would have intercepted it. The mineowners were forced to pay up these arrears. An agreement was reached for the payment of a lump sum of 15 million dollars. Moreover, for every ton of coal newly mined, a tax of another 8f was payable. Last and not least, the mines must hand over to the Franco-Belgian Commission, which controls the economic life of the Ruhr (this is the so-called "Micum"), a considerable percentage of the coal production. For the month of November this percentage was to be 18 per cent. of the total output. It has now been raised to 27 per cent., or over a quarter of the total output. These deliveries have taken the place of the coal deliveries stipulated in the Treaty for which the German Government was responsible. They are considered as reparations payments, and as such they are not paid for by the French Government.

Similar agreements have been concluded by most of the important industries of the district. The establishments can only work if they are allowed to hand over part of their output to the Micum. The industries concerned have, of course, a claim against the German Government for all goods delivered. For it is not a stipulation of the Treaty of Peace that private people must directly defray the costs of reparation. The German Government, however, is not in a position to make such payments. The total costs per month have been estimated at £2½ million to £5 million. Assuming a delivery of two million tons of coal a month at a rate of, say, 25s per ton, this alone would account for a payment of £2½ million. If the German Government had refunded these sums it could not have brought about the balance of its budget, which it has provisionally attained at the present moment, and without which the maintenance of the stabilised currency is impossible. On the other hand, the works cannot be expected to carry such losses indefinitely. No doubt by cutting down wages and costs they have successfully diminished their losses, and thrown them on the shoulders of the working classes. They may have been able in some cases to raise their prices and to make the general public pay. They have drawn heavily on their resources at home and abroad. They have sold blocks of securities. They have sold their foreign exchange. They have gone heavily into debt. They are very near exhausting their resources, if they have not done so yet. Some of them may be owned by extremely rich people, and some of them may have

grown rich at the public expense. This is used occasionally as an argument that they ought to go on losing money as a kind of "moral atonement." The Micum is a business organisation with a distinct political bias, and as such is scarcely the right organ for the carrying out of distributive justice. What they are doing at present is making war on private property. The owners of the works are blackmailed for the permission to go on working. Even if this method is used against a man held up to public opprobrium by the French as is Herr Stinnes, it does not cease to be blackmail.

The agreements have been concluded for a limited time. They are running out on April 15th. The works say, and rightly say, that they cannot renew them without compensation, as their financial strength has been spent. The German Government rightly declares that it cannot pay compensation at present, for if it does, the Budget equilibrium would go to pieces, the currency would follow and the chaos from which Germany has just succeeded in emerging would start afresh. The French Government insist that the agreements must be renewed. In insisting upon this claim they are achieving two of their objects. They have gripped the throat of the German industrialists, hoping under pressure to bring them to an agreement with the French industrialists on terms suitable to the latter. By their short-sighted use of the provisions of the Treaty of Peace, they have cut asunder the iron industries of Lorraine from the coal industry of the Ruhr. They want to bring about a reunion—a reunion not carried out on natural lines of production and business interests, but under political pressure which gives the control of the Ruhr industries into the hands of the French. Having expropriated the iron industry in the Lorraine under the Treaty of Peace, they want to do some more expropriation in the Ruhr under the title of peaceful occupation.

By insisting on the delivery of goods as a price for letting production go on, they are, moreover, circumventing the Moratorium which Germany has been claiming, and which public opinion all over the world considers essential for the recovery of Central Europe. A delivery of goods wrung from oppressed industrialists which are not paid for by a foreign Government affects the balance of trade and balance of payments quite as adversely as does a delivery of foreign bills for a reparation settlement, and if these goods are paid for by the German Government, it affects its Budget in the same way as does the purchase of foreign bills for similar purposes. This being so, the question whether the Micum agreements will be renewed or not on April 15th is of the utmost international importance, for if they are renewed in the way in which the French insist upon renewal, they will prejudice the reparations settlement worked out by the experts to such a degree as to make its success more than doubtful.

THE FEDERAL RESERVE BOARD'S POLICY.

IN its tenth annual report the Federal Reserve Board of the U.S. takes the opportunity of reviewing, explaining, and defending its policy in a document which is thus of special interest, in view of the discussion that has lately raged, and is still continuing, on the subject of more scientific "management" of currencies. It begins its exposition by observing that the year covered by this report has been less influenced than any previous one by conditions arising out of the war. It considers that, for the U.S., after-war economic readjustment has been proceeding rapidly, and "is now nearing completion. The economic balance as between various industries and sections of the country is not yet fully restored, but during the past two years there has been rapid progress in the direction of a more stable equilibrium, and of a better alignment of prices between different commodity groups." From the Board's point of view, the chief feature of the year was the fact that the volume of reserve bank credit, amounting to over a billion dollars, showed little change between its beginning and its end. This was because the large industrial output, practically full employment, and the sustained consumers' demand for goods requiring a considerable increase in the volume of currency and credit, were successfully financed by the member banks—that is, by the ordinary banks of the country which are members of the Federal reserve system—by means of funds made available by the continued inflow of gold.

Being thus by the force of circumstances "stabilised" in the volume of its aggregate activities, the Board has had a good opportunity for considering and explaining its policy, and the means by which it carries it out. Its exposition is an interesting compromise, that will be probably described as highly sensible by most practical bankers, between the doctrines of those who would "manage" the currency solely with a view to steadiness of prices, and the old-fashioned belief, which was probably always confined to a small and straitlaced sect, that the monetary policy of a central bank should be confined to mechanically putting up the price of money when withdrawals of cash narrow the basis of credit, and lowering it when the tide runs in the other direction. "The Federal Reserve," in the opinion of its Board, "supplies the needed additions to credit in times of business expansion, and takes up the slack in times of business recession. It is its responsibility to regulate the flow of new and additional credit from its reservoirs, in accordance with solid indications of the economic needs of trade and industry. When production, trade, and employment are in good volume, and the credit resources of the commercial banks of the country are approximately all employed, and there are signs neither of speculative business expansion nor of business reaction, Federal Reserve Bank rates should be neither so low as to invite the use of credit for speculative purposes, nor so high as to discourage its use for meeting legitimate productive needs of the business community. It seems clear that if business is undergoing a rapid expansion, and is in danger of developing an unhealthy or speculative boom, it should not be assisted by too easy credit conditions. In such circumstances, the creation of additional credit by rediscounting at Federal reserve banks should be discouraged by increasing the cost of that credit—that is, by raising the discount rate. It seems equally obvious that if industry and trade are in process of recovery after a period of reaction, they should be given the support and encouragement of cheaper credit by the prompt establishment at the Federal reserve banks of rates that will invite the use of Federal reserve credit to facilitate business recovery."

Here we find the Federal Reserve Board definitely recognising the need for the use of Bank rate, not merely in order to protect the gold reserve (a preoccupation from which it is, at present, freed by the possession of an enormous stock of the metal), but in order to protect the business community, and the nation as a whole, which suffers from its vagaries, from the incurable tendency of enterprise to indulge in outbursts of ill-considered exuberance. It may be argued that this semi-ethical use

of Bank rate imposes a difficult and delicate task on those responsible for the policy of central banks, seeing that the line between speculation and legitimate business is often hard to discern; and that it consequently involves a danger that sound expansion may sometimes be checked, because a central bank, in a moment of ascetic fervour, may be wrongly convinced that the business community is being naughty. Such errors are inevitable whenever fallible human beings are put in control of one another's actions. All central banks have to exercise control, and to move their rates with discrimination, and apart from the mere arithmetical calculation of the proportion between reserve and liabilities. But the degree to which they should do so, and the number and extent of the mistakes that they make, seem likely to be a fruitful source of controversy, as long as central banks last.

An interesting and important point, to which the Federal Reserve Board calls attention in this report, is the extent to which it has found it possible to control credit without recourse to changes in its rediscount rate. This question is of especial moment in these times, when most central banks are obliged to finance their Governments to a large extent either by direct advances, or by selling Treasury bills on their behalf. In consequence of this state of things, alterations in Bank rate, designed to check the exuberance of the business community, have the effect of imposing an extra burden on the taxpayer, already staggering under his load (or believing himself to be so), and rises in Bank rate produce a double chorus of criticism. In old days, when Bank rate went up here, the bill brokers, especially those who had been caught with a full bill case, used to protest loudly that the trade of the country was being penalised, and everybody who wanted cheap credit joined in the objurgations. Now there is an antiphonal chorus, which cries out that the extra charge involved by the higher level of money rates for carrying the floating debt is a burden on the whole community, which suffers unfairly because the monetary system is at fault. This extra objection to rises in Bank rates will gradually vanish as floating debts are reduced to something like their pre-war dimensions; but since at all times there is a danger that a rise in Bank rate may hurt legitimate trade, it is interesting to find that the Federal Reserve Board has been able, from the results of last year's operations, to conclude that "open-market operations, when wisely timed and well conceived, are, in a larger measure than has hitherto been generally appreciated, capable of giving effective support to the discount policy of Federal reserve banks without an accompanying change of rates."

By "open market operations" the Board means the "purchase or sale in the general or open market of such classes of investments as it is authorised by the Act to buy or sell." These include cable transfers, bankers' acceptances, Government securities, "and certain types of obligations of minor political subdivisions." Evidently, by buying and selling such securities, any central bank can, within limits imposed by the willingness of the outside market to provide the other side of the bargain, contract or expand credit without making use of rate movements in order to effect its purpose. Measures of this kind, to prevent sudden jerks in the price of money owing to revenue collections or other reasons, have long been a common subject of gossip in Lombard Street, where they are referred to as the machinations of the "hidden hand." With a view to making such operations more generally effective, the Federal Reserve Board in April, 1923, took steps to co-ordinate them with discount business and the general credit policy.

On the subject of America's huge holding of gold, the Board observes that "it is the part of prudence for the United States, and for the Federal reserve banks in particular, as the holders of over \$3,000,000,000 of gold (that is, about three-fourths of the total estimated stock of monetary gold in the United States) to pursue a course which will enable them to part with such portion of this gold as Europe will need to reclaim for currency restoration with a minimum of inconvenience and disturbance to our internal financial and economic situation." In other words, it is apparently the intention of the Board to keep, frozen and unused, such gold as Europe may be expected to want, and to be able to take back.

OUR INDEX NUMBER.

THE general movement in prices in March was in a downward direction, and our Index Number has declined by 28 points to 4640. This total represents an increase of 60 points over the figure for the end of December last, and of 248 points in comparison with that for the end of March, 1923. Last month's decline is the first downward movement recorded since the end of July last, when the lowest point since the Armistice was reached. The turn cannot be attributed to any particular influence. At the same time, it may be said that had the improvement in trade fulfilled the promise of the early days of the year there would not have been the falling away which has been recorded in the quotations of some of the commodities in our list. It may be mentioned, however, that the past few days have shown an improving tendency. The table below shows the position of each of the five groups in comparison with the figures for preceding months:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	%
Basis (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	579	332	616	464	553	2544	115.6
" Dec., 1915	897	446	731	711	848	3634	165.2
" Dec., 1917	1286	686	1684	839	1348	5845	265.2
" Nov., 1918	1289	782	1848	903	1389	6212	282.6
" Mar., 1920	1508	914	2974	1246	1709	8356	379.6
" Dec., 1921	1344	805	1284	1216	1275	5924	269.3
" Dec., 1922	921	636	1106	762	931	4357	198.0
" Dec., 1923	861	706	1184	705	807	4264	193.8
" Mar., 1923	824	752	1178	840	797	4392	199.6

" Mar. "	897	843	1313	805	780	4640	210.9

Changes in primary foodstuffs were mostly downward last month, but owing to a sharp recovery in the quotation for pork to the end of January figure, the decline for the entire group is reduced to 1½ points. All cereals declined, but by small amounts only, and potatoes were lower, but there was a small increase in beef. In other foodstuffs the decline is almost entirely due to a seasonal drop in the butter quotation. In the textiles group movements were more pronounced, the largest being a drop of 20 points in silk, which was nearly offset by a rise of 18½ points in flax. The latter now shows a larger increase over the base figure than any other textile. Home-grown wool is unchanged, but there was a further increase in Australian wool. American cotton declined a little on the month, but Egyptian cotton is a trifle higher, and the price of yarn has advanced. With reference to cotton cloth, the quotation for which is unchanged, Messrs Robt. Barbour and Brother, Limited, write in their monthly circular: "Throughout the month inquiry has been persistent, not in great bulk in the way of individual transactions, but sufficiently large in the aggregate to allow many manufacturers materially to improve their position, and especially so, perhaps, in the case of Burnley, where the production of cloths for printing purposes has shown a very marked increase." In the minerals section, coal prices, after a small decline in February, have again risen a little, but there has been a reaction in non-ferrous metals after the very rapid rise which took place recently. Pig-iron is again lower, but there is no change in steel rails and iron bars. Since our figures were taken out a hardening tendency is reported in steel prices. In the miscellaneous group a further rise in petroleum was offset by a decline in oilseeds.

The table below sets out the changes in each commodity's index number in comparison with that for the

end of February, the figure 50 representing in each case the average prices during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	80	— 4½	Cotton, A	1504	— 5½	Copper	534	— 1½
English	804	— 4	Cotton, E	1414	— 1½	Minerals	805	— 14
Flour	72	— 5	Yarn	133	— 1½			
Barley	904	— 1	Cloth	142	— 1			
Oats	764	— 5	Wool, Eng.	154	— 1	Baltic timber	1034	—
Potatoes	116	— 2½	Do Aust.	148	— 5	Amer. timber	89	—
Rice	113	— 4½	Silk	110	— 20	Leather	504	—
Beef	864	— 5	Flax	1684	— 184	Petroleum	108	— 8
Mutton	89	— 1	Hemp	554	— 1	Oilseeds	82	— 1
Pork	934	— 20	Jute	90	— 1	Tallow	75	— 2
Cereals & meat	897½	— 1½	Textiles	1,313½	— 5½	Indigo	87	—
Tea	144	— 1½	Pig-iron	97	— 5	Crystals	85½	—
Coffee	122	— 1½	Steel rails	75	— 5	Rubber	12	—
Sugar, cane	237½	—	Iron bars	92	—	Miscellaneous	780½	— 2½
Sugar, beet	138	—	Coal, steam	143	— 64			
Butter	854	— 14	House coal	94	— 3	Total	4,640	— 28
Tobacco	1164	—	Lead	148	— 1			
			Tin	1024	— 10			
Other foods	843½	— 15½						

The only group to show an increase on balance is that for textiles. Subsidiary foodstuffs, however, in spite of last month's decline, still stand at a considerably higher figure above the pre-war level, as may be seen from the following table, in which the indices for July, 1914, are taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec. " "	233	229	209	261	230	230.9
Dec., 1921	159	180	180	164	168	169.6
June, 1922	174	192	184	149	160	171.1
Sept. " "	151	194	181	150	148	163.3
Dec. " "	149	200	193	152	146	166.2
Mar., 1923	143	214	191	181	144	171.2
June " "	141	220	191	167	137	167.7
Sept. " "	142	222	197	158	134	167.6
Dec. " "	148	231	225	167	136	178.6
Jan., 1924	157	241	219	170	139	181.8
Feb. " "	155	244	212	176	142	182.0
Mar. " "	155	240	213	173	141	181.0

The increase of 81 per cent. in the total over the pre-war level compares with 71.2 per cent. a year ago and 63.1 per cent. at the end of July last.

NATIONAL INCOME AND TAXATION.

THE renewed discussion of the reparation question will without doubt involve much controversy as to the ability of various nations in Europe to bear their respective tax burdens. The Treaty of Versailles itself brings this question into the picture, for in sub-section 12 B of the annex defining the duties of the Reparations Commission it is laid down that "in periodically estimating Germany's capacity to pay the Commission shall examine the German system of taxation first, to the end that the sums for reparation which Germany is required to pay shall become a charge upon all her revenues prior to that for the services or discharge of any domestic loan, and, secondly, so as to satisfy itself that in general the German scheme of taxation is fully as heavy proportionately as that of any of the Powers represented on the Commission." The word proportionately here can only be interpreted in practice to mean in proportion to Germany's annual income. But the application of this test is an extremely difficult one. Moreover, it has long since become apparent that there are other things to be taken into account than the burden of the nation's budget, and in particular the question of the ability of the country to make payments abroad without producing chaos in the exchange, a disturbance of international price levels, and an abnormal state of international competition. At the same time, there is no doubt in the mind of the taxpayer that a country which, for whatever reason, is able to reduce its budget burden to a very low level, may be at an advantage in international competition. The wiping out of debts by inflation such as that through which Germany has passed is not, however, to be regarded as a simple escape of in-

dustry from unnecessary burdens. Repudiation of private or of public debts can only be made at a heavy price. This is shown at the moment in Germany by the high costs which German industry is experiencing, and in particular by the shortage of capital and the high rate of interest which Germany is bearing, and is likely to bear for some time to come.

At the same time, the proposition in the Treaty of Versailles will need examination. In this connection, we would call attention to a reference by our Berlin correspondent to an interesting statement by the German Finance Minister, Dr Luther, who declares that the national income of Germany, which before the war was 37½ milliard gold marks (a figure which is generally accepted by statisticians) is now 25 milliard gold marks. Assuming that gold prices are about 50 per cent. above pre-war level, this would be equivalent to, say, 16 milliards at pre-war prices. In other words, the real national income of Germany, whose territory and population has shrunk by 10 per cent., is reduced to less than a half—a figure which is too low even in the present state of German industry to be accepted without very clear evidence. Dr Luther continues that the total tax burden, which before the war was 10.9 per cent., is now 27.7 per cent. excluding any payment for Reparations. We cannot attempt to check these figures until the Budget statistics are before us. But the statement is not quite as improbable as it appears at first sight, in view of the facts, first, that the State Budget now carries a large number of forms of expenditure which were formerly paid for by the separate kingdoms of the German Empire, and, secondly, that the burden of taxation has undoubtedly risen at a very rapid pace in the last five months as a result of the stabilisation of the mark. It has also to be remembered that on March 15th Germany had 16.1 per cent. of her organised workers fully unemployed, and 13 per cent. partly unemployed. If a settlement of reparations is reached the national production of Germany is certain to recover substantially from its present low level, and the present percentage burden, whatever it may be, will fall very considerably.

We need not repeat the figures for France recently quoted in these columns. They show that last year, on the basis of the estimate of national income made for us by a French expert, France is paying 16 per cent. in taxation, that she will pay 20 per cent. if the tax reforms are carried into effect, and will have to pay still more if she goes on borrowing for the further restoration of the devastated areas.

We would, however, add a word about the corresponding figures for Great Britain. Last week, quoting an incomplete summary, we credited Dr Bowley with the statement that our national production was 93 per cent. in 1923 of its pre-war amount. What Dr Bowley said was that he estimated production for the home market at from 90 to 93 per cent., production for export at 75 per cent., and total production at 87 per cent. We would, however, suggest certain reasons for thinking that these are underestimates. Dr Bowley arrived at the figure of 87 per cent. as follows:—Taking the population in 1913 as 100, the employable population has increased by 6½ per cent., and 12.3 per cent. of the whole were unemployed in September last, which gives 93½ per cent. in employment. In 1913 there were 2 per cent. unemployed, so that the numbers in employment were in the ratio of 98 to 93½, i.e., there are actually in work to-day slightly over 95 per cent. of the numbers in work before the war. But there has been about a 10 per cent. reduction in hours of labour, and Dr Bowley estimates that productivity has fallen in this ratio, which gives his 87 per cent. This last link in the argument seems to us at fault. There have been reductions of hours in a very large number of occupations, but it would be true to say that in the majority of cases they have not been followed by a corresponding reduction in output. The improvement in output per hour may be influenced to some extent by the worker's ability to produce more in a shorter working day; but it is due even more to the great mechanical developments and improvements in organisation of the last decade. It has been said that the Lancashire cotton trade is at such a stage of mechanical perfection that a reduction of hours cannot produce an increased output per hour.

This is open to doubt; but even if it is true, the cotton trade certainly stands almost alone in this respect. Certainly in all the metallurgical groups of trades the output per man hour is better than ten years ago.

There are two pieces of evidence which, we think, confirm our view that last year's production was better than Dr Bowley suggests. The first is that the total consumption of coal at home in 1923 amounted to 181 million tons, against 193 million tons in 1913, a reduction of 6 per cent. The consumption of fuel is closely related to the total production of the country; but in this particular comparison the figures exaggerate the fall in production, for there has been in the interval in various directions a saving in fuel consumption. For example, the consumption of coal per ton of product in the iron and steel trade, with its modernised equipment, has been reduced. The use of electricity is another influence of the same kind. (The London Electric Companies supplied 298 million Board of Trade units in 1922 compared with 188 millions in 1913.) The second piece of evidence is the general merchandise carried on British railways—leaving out coal and ore, the weight of which is so great as to swamp the figures in any combined total. The figures for Great Britain are 67½ million tons carried in 1913 and 62½ million tons carried in 1923, a fall of about 7½ per cent. But here again the figures exaggerate the decline, for in 1923 there is no doubt that a very large quantity of general merchandise which would have been put on the rail in 1913 was last year carried by road. This more optimistic view of production is in keeping with the individual impression gleaned from different business centres. If one excludes cotton and shipbuilding, there are not many industries in the country whose volume of output is less than in 1913, and there are a considerable number whose output is substantially greater. We, therefore, hold with some confidence that if we look at the national production as a whole it is true to say that the reduction of hours between 1913 and 1923 has been made good by improved methods, not, of course, in every industry individually, but in industry taken as a whole, and that the national output for 1923 was at least 95 per cent. of that before the war. Moreover, as compared with the average of 1923 there has been an improvement up to date, and there is little doubt that we are to-day producing as much as in 1913. This is, of course, quite inadequate. We have a larger population and rising ideas of what constitutes a decent standard of living. The problem of how to increase output, now as always, lies at the root of material advancement. But it will not help matters to get into currency too gloomy ideas of our situation. A 95 per cent. production would correspond with a national income of rather more than £4,000 millions, after adding interest on the debt. Our taxes last year amounted to 18½ per cent. of this sum. This is much lower than two years ago, and the figure is likely to fall. This and the preceding figures are only vague indications; but they may serve to correct the view that we are the only nation in Europe that is or is going to be burdened with heavy taxation.

THE STRUGGLE IN THE CEMENT TRADE.

BELGIAN competition has been a thorn in the side of our cement manufacturers for three years past. After the conclusion of the war, it took some time for the trade to re-establish itself in peace time channels, but excellent progress was made between 1918 and the end of 1920.

In the three subsequent years, however, the efforts of Belgium to extend her trade in the product were keenly felt here. Our makers could only retain their overseas business by considerable reductions in prices, with the result that some of the most important firms here were forced to reduce dividends by one-third or one-half. The struggle appears to be proceeding in our favour now, and this will be welcomed by those who have followed the history of the trade in the past, and perhaps offer encouragement to those who have been disappointed with the announcement this week of the passing of the Associated Portland Cement dividend for 1923.

For it should be realised that this is not the first time Belgian shippers have troubled our cement firms. During nearly 20 years down to 1913 competition from that quarter was so keen that some British companies could

frequently pay no dividends on large amounts of ordinary capital. Here is a brief indication of the struggle that then took place:—

	1897.	1904.	1913.
British exports	£ 647,000	£ 632,000	£ 1,273,000
Gross imports	£ 42,000	£ 393,000	£ 143,000
Excess of exports ..	605,000	239,000	1,130,000

For the first seven years our trade suffered, imports growing largely, while exports slightly declined. During the succeeding nine years, however, our makers improved their shipments by 100 per cent., while at the same time imports were lowered by more than 50 per cent. Once our manufacturers were aroused to the seriousness of the competition, they set to work with grim determination, and met with success all round. Not only did they supply all the increased home demand for those nine years, but also more than half of the amount previously used here from foreign sources, while they concurrently doubled their sales to foreign markets.

Contemplation of such a record should be quite sufficient to hearten our cement producers now. They have repulsed Belgian competition before, and there is no reason why they should not do it again. Indeed, they seem to have made very fair progress already. The following shows the severity of the slump after 1920 (due, of course, to the general trade paralysis), and the degree of subsequent recovery:—

	British Exports.			Gross Imports.		
	Tons.	£	Per Ton.	Tons.	£	Per Ton.
1920.....	618,000	3,724,000	6.0	38,000	220,000	5.0
1921.....	290,000	1,660,000	5.7	106,000	519,000	4.9
1922.....	386,000	1,253,000	3.2	133,000	440,000	3.3
1923.....	562,000	1,519,000	2.7	147,000	395,000	2.7

It will be seen that our shipments for 1923 were not far short of the 1920 level. Only the imports give grounds for concern, and even they are not so serious as in the early years of the present century, when they frequently exceeded 200,000 tons per annum.

At the same time, this little table makes it plain that a severe war of prices has been going on. Last year we sent abroad a much larger quantity than in 1922, but the price received was little in advance of that which the 1922 shipments brought. Concurrently, our competitors sent to us a larger quantity than in 1922 for a considerably smaller total price.

Comparison of the average yearly prices, however, shows that the greatest fall occurred in 1922. In that year the value of our shipments at £3 4s per ton was actually below that of the imports at £3 6s per ton. Last year prices of British and of foreign cement were about equal at £2 14s per ton, which seems to indicate that our manufacturers have now firmly established their industry on a competitive level. This is a remarkable achievement, considering that for some 15 years before the war shipments of British cement were always 4s to 6s per ton dearer than foreign cement landed here.

It will now be interesting to take a bird's-eye view of the trade over as long a period as the existing records permit. Here are the export figures for 70 years, and the imports for 25 years:—

BRITAIN'S OVERSEA TRADE IN CEMENT.

Averages for	Exports.			Gross Imports.		
	Thousand tons.	Thousand £.	£ per ton.	Thousand tons.	Thousand £.	£ per ton.

Every Description of Home and Foreign Banking Business transacted

The steady and satisfactory growth of exports during forty years down to the early 'nineties is notable. Of course, prices declined, but this was a period of falling prices in virtually all trades. It was towards the end of the 'nineties, as our first table shows, that Belgian competition began to be felt severely. Further reductions had to be made, notwithstanding that the index number of commodity prices in general had begun to move steadily upwards. In the five years immediately preceding the Great War, it will be noticed, the five-year average price of exports fell to the lowest point reached in the 70-year period—£1 10s per ton. Foreign imports landed here in that same period were valued only at £1 6s per ton. During the 15 years to 1913 our prices were a few shillings per ton above those of our competitors, yet our shipments were doubled in the 15 years, while imports were largely diminished. Quality of the British product was apparently the decisive factor.

It is to be hoped that the same factor will favour us in the present struggle. British producers have sometimes been blamed for persisting in the maintenance of quality, while their competitors flooded the market with cheaper and inferior imitations. There may be something in this, for the great masses cannot always afford to buy the best. But manufacturers can never err in aiming at production of the highest possible quality at any particular given price. It is this that has built up for Britain a foreign trade containing probably a larger proportion of high-grade goods than the foreign trade of any other country in the world.

Now let us see which overseas markets have contributed most to the recovery of our trade since the slump of 1921. The monthly returns specify only four foreign countries and four British Possessions, all other markets being included in the "other countries" group. It is these "other countries," at present unknown, which have done most towards the revival of our trade. Here are the particulars:—

BRITISH EXPORTS OF CEMENT.

	1921.	1923.	Inc. + or Dec. —.	1921.	1923.	Inc. + or Dec. —.
To—	Tons.	Tons.	Tons.	£	£	£
Holland	8,178	46,812	+ 38,634	46,611	72,488	+ 31,877
France	68	805	+ 737	1,204	2,110	+ 956
Brazil	17,458	28,533	+ 11,075	104,263	77,441	— 26,822
Argentina	6,254	7,117	+ 863	41,116	19,029	— 22,087
	31,958	83,267	+ 51,309	187,194	171,118	— 16,076
British South Africa ..	2,601	24,054	+ 21,453	14,228	60,194	+ 45,966
British East Indies ..	117,644	149,564	+ 31,920	6,605	416,418	+ 269,641
Australia	8,798	26,607	+ 17,809	50,436	72,868	+ 22,432
New Zealand	7,667	1,948	— 5,719	54,717	6,414	— 48,303
	136,710	202,173	+ 65,463	805,440	555,824	— 249,616
Other Countries	121,068	276,941	+ 155,873	667,215	791,693	+ 124,478
Grand total	289,736	562,381	+ 272,645	1,659,849	1,518,635	— 141,214

The fall in prices has been so heavy that it will be best to confine our attention to quantities. Out of a total increase, then, of 272,000 tons, the four European countries have taken 51,000, the four British overseas countries, 65,000, and all the unspecified countries about 156,000. It is satisfactory to find that Holland took so large an amount last year. Only twice before, in the last thirty years, has she bought larger amounts—in 1917 (48,900 tons) and in 1919 (58,600 tons). Brazil shows some recovery, but her purchases are still far short of what they were in pre-war days. In 1913 they reached 124,300 tons. Argentina, too, absorbed 97,700 tons in 1913—a remarkable contrast to the 7,117 tons recorded last year. The great jump from 121,000 to nearly 277,000

tons in the demands of "other countries" is the most encouraging feature of the table, and unfortunately it will be many months before these countries will be specified in the belated volumes of the Annual Statement of Trade. They should be interesting when they do appear.

DEBENTURES—II.—THE INVESTMENT ASPECT.

(BY A CORRESPONDENT.)

In a previous article reference was made to the question whether the power of a company to give a floating charge over its whole undertaking, including future property, should not be abolished in the interests of both trade creditors and investors. Unsecured creditors sometimes find, in cases of insolvency, that they are entitled to little or nothing because of the claims of creditors protected by floating charges, and, on the other hand, looking at the matter from the investment point of view, there is reason to think that debentures depending upon a floating charge are wrongly classed in the public mind with those more substantially secured by a charge upon specific property of a company. The investment aspect of the question was left for discussion in the present article.

The term debenture, it was pointed out, does not literally denote that the indebtedness acknowledged is secured by a charge on property, though, in the great majority of cases debentures issued by companies are accompanied by a charge of some kind. The kinds of charge, however, are numerous. They range from a legal first mortgage on immovable property to a mere floating charge on the trading assets of a company. Moreover, debentures may or may not be supported by a deed appointing trustees for the debenture-holders. The degree of security provided by the different forms of charge varies greatly, and is too little considered by investors. In consequence, there is a danger that the facility with which loans on debentures can be raised by companies may, if steps are not taken to shut out the weaker forms of security, result in ill-secured issues being held with a false sense of security. In turn, this involves the risk that, if some debentures are found to be less sound as investments than was assumed to be the case, a prejudice may be created against this form of security. An indiscriminate prejudice thus arising would militate against the raising of loan capital by means of debentures, and in that way the present unrestricted facilities might ultimately lead to a state of affairs in which legitimate business would be hampered.

If one examines the effectiveness of a charge on property given to secure debentures, the question what protection is afforded by the appointment of trustees naturally arises, along with a further question as to what are or should be the duties of trustees for debenture-holders. There can be no question* that, if there is a mortgage of specific property, a deed vesting the legal estate in trustees is required. The trustees become custodians of the documents of title, and should also exercise continuing watchfulness over the interests of the debenture-holders, and intervene if and when circumstances arise calling for active steps to protect those interests. If debentures depend on a floating charge trustees cannot hold documents of title, and, in that case, therefore, the only protection they afford is by their watchfulness. But do they, in practice, safeguard the interests of debenture-holders in that way? This protection, it is to be feared, is apt to be ineffective or illusory.

So far as debentures depend on a floating charge, they depend really on the prosperity of the business of the company as a going concern. That business, as Mr Manson remarks in his work on Debentures, is the most important interest of the debenture-holders, and "it is plainly the duty of the trustees to ascertain how such business is going." The trustees are usually paid for the discharge of their duties, but, under a common clause in trust deeds, they are not, while business is running its ordinary course, in any way bound or concerned to interfere with the management. They are passive, and though it is commonly and rightly considered that the trustees should be men of good business standing and experience,

it is curious and unsatisfactory that remuneration is usually (to quote again from Mr Manson) "calculated with reference rather to the social status and business credit of the trustees than the services required of them."

While the duties of trustees depend in each case on the terms of the deed appointing them, and are, in general, the same as those of any ordinary trustees who hold property for others, it is apparent, on considering the limitation on the protection trustees can afford where the security is a floating charge, that they cannot in actual fact do much to safeguard the interests of debenture-holders, so long as they stand, where they do and must usually stand, outside the active management of the business. By the time they can intervene it may and probably will be too late. Substantially debentures depending on a floating charge depend on the success of the business, and their holders are really in no better position than that of preference shareholders.

Debentures are even, in some instances, issued with certain profit-sharing rights, and the position of lenders at a fixed rate of interest, with security as far as possible for their capital, thus confused with that of shareholders. The two kinds of investment should be kept distinct for the sake of maintaining the estimation in which debenture issues are held. To attain this end the proposal in the minority report of the Company Law Amendment Committee, 1906, referred to in the previous article, should be carried into effect. That is to say, a company should have no greater facility for borrowing than an individual. It should be rendered incapable of charging after-acquired chattels or future book debts or other property not in existence at the time of the creation of the charge. Under existing conditions—which are unforeseen results of judicial decisions back in the seventies, and are not part of the deliberate scheme of company legislation—companies are, as the minority report pointed out, possibly tempted to exercise their borrowing powers to an unduly large extent. A restriction on debenture borrowing would be compensated for by the fact that companies would "obtain a larger general credit by reason of trade creditors no longer having the fear that the whole of the assets will be swept away by the debenture-holders."

Notes of the Week.

Rents and Unemployment.—The Government have allowed their Rent Restrictions Bill to lead them into a most difficult position, and to bring them very close to an overwhelming defeat, from which they were only saved by the timely loquacity of Mr Pringle, who "talked out" the Bill amid a scene of excitement. The whole trouble arose over Clause I. of the Bill, which reads as follows:—

Notwithstanding anything in the section which, by section four of the Rent and Mortgage Interest Restrictions Act, 1923, is substituted for section five of the principal Act (which substituted section is in this Act referred to as section five of the principal Act), a court shall not make or grant an order or judgment for the recovery of possession of a dwelling-house to which the principal Act applies, or for the ejectment of the tenant therefrom on the ground of non-payment of rent in any case where it appears to the court that the non-payment is due to the inability of the tenant to obtain employment, unless the court is satisfied that greater hardship would be caused by refusing to grant such order or judgment than by granting it.

In effect this meant that, where a man could not pay rent owing to unemployment, the loss was to fall upon the landlord. Not all the eloquence of the Minister of Health, who painted an appealing picture of Glasgow sufferings, could persuade the House of Commons to agree to the principle involved, which is nothing less than discrimination against a particular class of property owner. That was made quite clear at the outset of the debate by the speeches of Mr Asquith for the Liberals, and Mr Neville Chamberlain for the Conservatives. Both reflected the sympathy with the unemployed and the desire to safeguard their homes, of which it is quite futile for Labour to claim a monopoly. But both stood firm to the principle and clothing—for the unemployed should fall on the community, and not one small section. Towards the close of the debate Mr Clynes offered to substitute a new clause;

but, this proving to be contrary to the rules of procedure, he made no explicit promise to the Opposition, and came within an ace of leading the Government into a defeat which would have dealt a very great blow at their position. As it is, that position has been seriously shaken in the public esteem. For the discriminating clause of which Mr Wheatley made light is just precisely the sort of thing which the man in the street has feared from a Socialist Government. Having seen it, his suspicions, which the Premier has been at such pains to allay during the past few weeks, will inevitably revive. If, as Mr Clynes suggested, the Government are really ready to deal with unemployment and eviction on sounder lines, it was a gross mistake to allow any desire to placate the "left wing" to lead them into permitting the objectionable clause to form part of a considered measure. As a result, sane dealing with the housing problem has been postponed, and the Government's credit has suffered a severe blow—results for which the Cabinet has only itself to thank.

Strikes and Public Opinion.—It has frequently been demonstrated in the case of big strikes that the trend of public opinion is a factor whose influence on the issue is too strong to be ignored either by employers or by employees. On the low ground of expediency, therefore, we think that the coal miners and the engineers, and all the other numerous sections of workers who are contemplating strikes, will be wise to take careful note of the direction in which public opinion is tending to-day. The recent strikes have caused an exasperation, which arises chiefly from the view that they have been directed not so much against employers as against the public. Why, asks the man in the street, should I be terrorised, inconvenienced, thrown out of work, and almost blackmailed, by any section of workers who may take it into their heads to try and obtain a big rise in wages, even in cases where the industries in question cannot stand it? Having posed that question, he naturally seeks for a remedy, and in his search reverts to dangerous and fallacious ideas. It is not possible, for instance, to move very far just now without hearing loose and irresponsible, but earnest, talk about the necessity for a dictator, and for the suppression of strikers by force. In the similar strain the deeds of Mussolini, and the services of Fascism to Italy, are hymned and belauded even by men of ordinarily democratic mind, who in calmer moments would lecture eloquently on the Briton's innate loathing of dictators and love of democratic institutions. These mental results of jarred nerves and ruffled temper claim the most urgent attention of the Government, and of all parties in industry. Of the Government because the public (with dubious justice) attribute the present crop of strikes and strike threats to the psychological effect of the establishment in office of a Labour Ministry; and we doubt whether Mr MacDonald would deny that in a succession of industrial disputes lies the gravest threat both to his Government's tenure of office and to its position in the country at the next election. A record of continual disturbance during their term of office would, however unjustly, be tied like a millstone round their necks. Employers and employees, on the other hand, must see in the ruffled public temper a forcible reminder of the overwhelming duty to seek peace and ensue it, remembering that the public is not in the mood to forgive; that, if further serious cause for exasperation is given, constitutional dangers may arise; and that, unless both stoppages of output and sudden wholesale rises of wages and prices can be avoided, the basis on which the recent trade expansion has been progressing will be shattered. In their selfish interest, as well as in that of the nation as a whole, all sections of the community need to do a little hard and calm thinking. We hope that both miners and mineowners may be already indulging in this necessary exercise.

London Traffic Receipts During the Strike.—From the returns issued this week by various London traffic authorities, it is possible to form some idea of the effect on receipts of the tramwaymen's strike. This dispute involved a complete stoppage on the London General Omnibus routes and on all electric tramway systems of London from March 21st to 31st, a period of 11 days, including

two Sundays. Returns are available for (1) the Underground Group, which includes the District Railway, the "Tubes" and the General Omnibuses, (2) the four tramways operated by the same group, and (3) the London County Council Tramways. In the following table the receipts during seven days covered by the strike are contrasted with the average for the preceding 12 weeks:—

	Average, January 1 to March 22, 1924.	Week Ended March 29, 1924.	Differ- ence. £
Underground Group	215,653	95,940	— 119,713
Four Tramways operated by Underground Group	35,473	nil	— 35,473
L.C.C. Tramways	85,180	23,045	— 62,135
* Average of 50 weeks ended March 19, 1924. † Receipts, week ended March 26, 1924.			

The total decrease thus amounts to £217,321. In the week ended April 2nd, which included two days of resumed services, the L.C.C. trams showed total receipts of £20,028, which fall short of the average figure shown above by £65,152. If the Underground and the four suburban tramways' deficits be increased by, say, 50 per cent., as a rough allowance for the other four days of the strike (the figures given above cover seven days only), a total "loss" of about £360,000 is arrived at. This does not include the losses of municipal tramways which do not publish weekly returns. On the other hand, it is a gross figure, which does not take into account savings in the wages bill and in operating costs during the period of suspended activity. How far other means of transport benefited by the strike it is impossible to say. No figures are available covering taxicab and "pirate" omnibus earnings. Increased traffic on the "Tubes" and District Railway evidently failed to compensate for losses on the 'buses, as is shown by the figures already quoted. Receipts of the Metropolitan Railway and the four steam railway systems, on the same basis of comparison as previously adopted, come out as follows:—

	Average Jan. 1 to Mar. 23, 1924.	Week Ended Mar. 30, 1924.	Difference. £
Metropolitan Railway ..	35,143	48,154†	+ 13,011
Southern	356,100	411,600	+ 55,500
L. and N.-Eastern	1,010,000	1,136,000	+ 126,000
L. Mid. and Scottish	1,352,000	1,476,000	+ 124,000
Great Western	529,000	582,000	+ 53,000
† Week ended March 29.			

Obviously, not all the total increase shown can be accounted for by enhanced passenger traffic arising out of the strike. On the whole, however, one would seem to be fairly safe in assuming that the steam railways were the chief gainers by the dispute, as far as traffic receipts are concerned.

The Lausanne Treaty.—There was a certain unreality in last Tuesday's debate on the ratification of the Treaty of Lausanne. It would, indeed, be worse than useless to suspend the treaty with a view to its modification without a clear conception of the diplomatic path which we mean to follow and the sanctions which we are prepared, if necessary, to apply in order to obtain the changes which we desire. The principal objections levelled against the treaty were that the minorities and the foreign residents were left insufficiently protected, while the obligations into which we were entering in return for the demilitarisation of the Straits involved dangerous and indefinite commitments which the Dominions might not be prepared to sanction. On the first two counts, the Prime Minister's general answer was in line with his policy towards Russia and his preliminary attempts to create better feeling with France. "Until this treaty was ratified, there would be no re-establishment of the good relations between this country and Turkey." That is, the gesture of reconciliation must be allowed to introduce a better atmosphere before the concrete issues left open by the treaty could satisfactorily be solved. Mr MacDonald showed insight into the psychology of the Near East when he denied the efficacy of merely formal guarantees and controls. In the history of the relationship between Eastern and Western Powers, these formalities have never, in fact, been efficacious, except when they have been backed either by force on the Westerner's part or

by goodwill on the Oriental's; and, seeing that the use of force has been out of the question since the Nationalists restored Turkey's effective military power, the restoration of goodwill is the only practical alternative. The method indicated by the Prime Minister at the close of his speech was to demand a high standard of honour from the Turks in the execution of the treaty, while scrupulously observing an equally high standard in our dealings with them; and most Englishmen who have had personal relations with the Turks will agree with him that this is the right way to approach them. It is along these lines, if at all, that we can assist the minorities and our colony in Constantinople. People of all parties, inside the House and out of it, will share Mr Fisher's sympathy for the cruel sufferings of the minorities, but the problem is one of ways and means. The safeguards modelled on the Polish Minorities Treaty, which the Turks have accepted, were declared by Mr Fisher to be inadequate; but they can hardly be tested except by experience, depending, as they do, upon the diplomatic tact of the League of Nations secretariat and the moral authority of the Council. The only alternative is force, and, when force is brought into play, minorities are always its first victims. As with the minorities, so with the British and other Western residents. Their charter will consist in a good understanding between their home governments and Angora, not in a written substitute for the Capitulations. The British residents in Turkey are at this moment demanding, first and foremost, not the re-establishment of the Capitulations, but compensation for their losses through Turkish requisitions between the beginning of August, 1914, and Turkey's entry into the war. The case is too complicated for discussion here, but the financial claim is now preferred (on very good showing) not against the Turkish Government, but against the British Treasury. The most important issue, however, which the treaty raises is that of the Straits, which are not merely a Turkish matter, but still remain an international problem, with the broadest bearing and the greatest potential dangers. Mr MacDonald disposed of the doubts regarding the attitude of the Dominions, while Mr Ormsby-Gore showed that our guarantee of the demilitarised zones was a fair, and in any case a necessary, price to pay for the passage of warships through the narrows upon which we had insisted. It is an open question, however, whether the object for which we paid that price was in itself desirable. The policy meant the reversal of a long British tradition, and it was carried through in face of vehement opposition from Russia. The Straits Convention incorporated in the treaty may therefore well need to be revised, but to throw the treaty into the melting-pot would not be the right way to set about it. The Convention itself points the road, since it brings the status of the Straits within the purview of the League of Nations. Let the question be raised in the Council after the treaty has been ratified, and when both Turkey and Russia have become members of the League themselves.

Self-Determination in Iraq.—A correspondent writes:—The opening of the first Parliament of Iraq by King Feisal last Tuesday marks a fresh stage in the development of the new Arab State. The benefits of the internal peace provided by the provisional administration of Sir Percy Cox and Sir Arnold Wilson were beginning to be recognised by the Arabs even before the rising set up by Nationalist impatience and Shia fanaticism in the summer of 1920. The rising created a reaction in favour of stability, and this effect was confirmed by the commencement immediately afterwards of the organisation of the Arab Government. Self-determination has been secured by the establishment of a Parliament really representing the various localities, and of a native Administration taking its orders from the Arab Ministers at Baghdad. The present conditions were graphically described in *The Round Table* for December, 1923. British advisers assist the Ministers, and British inspectors have replaced the British political officers, but have no executive authority. The sheikhs and wealthy citizens travel, not as formerly on horseback with armed retainers, but by motor-car, motor-launch, or railway; the "robber-barons" on the Euphrates no longer levy tolls on passing boats, and the peasant goes to

work unarmed. Order is kept by native levies (loyal, even during the rising, to their British officers), native police, and a voluntary army, and in the last resort (but only under stringent safeguards) by the British Air Force. The Budget balances and the impending development of agriculture will provide for further expenditure on roads, sanitation, and schools. Peace and man-power are the great needs; the latter will come with the increase of the native population, the former with a satisfactory settlement of the Mosul boundary question. British expenditure on the country is steadily decreasing, and will cease with its independence, either four years after the Treaty of Lausanne is ratified, or sooner if Iraq enters the League of Nations.

The Finances and Trade of Portugal.—During its 13 years as a Republic Portugal has frequently suffered from revolution, and, especially since the collapse of the post-war boom in 1920, from a heavy fall in exchange. In 1914 the escudo stood at 48d; in 1923, for reasons to be given presently, at about 2d; now it is about 1½d. Yet, according to the Report (to January, 1924) from the British Consul at Lisbon, just issued by the Overseas Trade Department, the country is prosperous, and needs only improved transport, and the judicious application of capital at home and in its colonies, to make it one of the wealthiest of small countries, and to place its African possessions among the richest colonies in the world. The comparative quiet at present is largely due to Senhor Antonio Maria da Silva, Premier from February, 1922, to October, 1923; but though he provided fresh revenue, he could not reduce expenditure. Budget deficits have mounted up since 1914; so has the official pay roll. Four new direct taxes, and two revised forms of existing imposts, together amounting to 25 per cent. on income, were suddenly decreed in September, 1922; but the deficit for 1924 will be 375,000 contos, owing to the increased cost of the public debt service, the disappointing yield of the new taxes, and the increased pay of Government employees, owing to the higher cost of living. Other new taxes have been suggested, but drastic retrenchment is indispensable. But the fall in the escudo is no sign of impoverishment, and is only indirectly due to the largely increased issue of notes. Large sums, possibly £80 millions, have been placed abroad, chiefly in sterling; gold is hoarded by the illiterate peasantry; a large sum—possibly £2,000,000—is in Spain, as payment for smuggled cattle and tobacco; and the remittances from emigrants in Brazil fell to about £1,000,000 last year, owing to the coffee crisis. The monetary position was unexpectedly made worse by the withdrawal of bank deposits to purchase the new internal loan, and the provisions (which we have no space to describe) for the further issue of currency at home and in Angola may eventually prove dangerous. The multitude of small so-called banks tends to increase speculation in exchange, and the elaborate efforts of Senhor da Silva to steady it were not wholly successful. Its future depends, partly on the tendencies above described to hoard capital and place it abroad, partly on emigrants' remittances, and partly on the amount of wheat imports, mainly from the Argentine, but paid for in sterling. British import trade, however, though discouraged by the fall of the escudo and by the bad debts contracted during the post-war boom, and now exposed to competition from domestic manufactures, was 42 per cent. of the 1914 total. It holds its own, especially in textiles, and Great Britain is Portugal's best customer. But fresh openings abound, provided that they are locally and personally investigated, that advertisements are mainly pictorial, and catalogues and circulars in Portuguese. The descriptions of the vast mineral and agricultural resources of Portugal, largely unexploited (notably the coal and iron) for want of transport and labour, of the condition of the roads and State railways, of the hindrances to the utilisation of water power, and of the discouragement of maritime traffic by insufficiency of harbours and mismanagement of the State shipping and ports, indicate great possibilities of economic expansion. There is no unemployment; the population, 75 per cent. illiterate, is obtaining some sort of education through the cinema and (morally) through football; labour troubles are serious, but mainly in Lisbon, and unfortunately the numerous

emigrants, mostly to Brazil, now tend to remain abroad. The Report is full of interesting details, and specially deserves the attention of all who are interested in our relations with our oldest ally.

Australian Exchange.—According to a *Times* Melbourne telegram a debate on Tuesday in the House of Representatives in regard to the Imperial and Economic Conferences was notable for a speech by Mr. Pratten, "an acknowledged financial and commercial authority," strongly advocating that the Government Commonwealth Bank and private banks should devise a scheme by which the huge volume of imports might be checked by applying the surplus Australian credits in London to the reduction of the external public debt. The amount of Australian credit in London, he said, was estimated at £50 millions, and the exchange difficulties were so great as to be equivalent to an export tax on Australian products. His suggested remedies included "co-ordination of Commonwealth and State borrowings, and a cessation of further external loans, except renewals and conversions." We hear complaints on all sides of the extreme difficulty of making remittances from London to Australia even at exceptionally high rates, and the position appears to be rapidly becoming impossible. The trade balance for 1923 was adverse to the extent of £22½ millions, having been in Australia's favour in 1922 and 1921 for £6 and £8 millions respectively. As our Melbourne correspondent points out in a later column, the main reason for the large import excess in 1923 has been the heavy external borrowing of the past two or three years. Interest and other payments on public debt and foreign capital require fully £25 millions per annum.

Irish Free State Finance.—Our Dublin correspondent writes:—The current number of the official *Dublin Gazette* contains the figures showing, for the completed year April 1, 1923, to March 31, 1924, the receipts into and issues out of the Irish Free State Exchequer. The total revenue receipts for the first financial year of Ireland's independence appear (inclusive of a balance of £197,112 carried forward from the preceding year) at £31,611,367—a figure coinciding with the more hopeful forecasts given from time to time in this column—and other receipts, being money raised by the creation of debt, appear at £14,167,000—or £45,778,367 in all. The issues for central fund services and supply services are given at £38,639,355, while other issues, comprising temporary advances under the Telegraph Acts and the Unemployment Insurance Acts, repayment of floating debt or ways and means advances, are given at £3,744,500. The balance to credit on March 31, 1924, is given as £3,394,512. Thus the revenue has come in well for the whole financial year—surprisingly well considering all the after effects of the but lately subdued insurrectionary movements and the sabotage and business dislocation which followed in their train. Certain of the receipts, however, are not normal revenue; in particular, £2,310,000 was received in respect of "instalment of British contribution towards compensation" for pre-Truce damage done by Crown Forces. On the issue side, too, there was a "payment to Great Britain for adjustment of revenue" which is obviously a remanet from the previous period of joint collection of taxation before April 1, 1923. These two latter figures are not taken from the Exchequer returns in the *Gazette*, but from a White Paper issued from the Ministry of Finance, and bearing date March 28, 1924, entitled "Estimates of Receipts and Expenditure for the year ending March 31, 1925." This White Paper gives comparative figures for 1923-4 in parallel columns, with the estimates for 1924-5, and it describes them as being "revised according to the latest information available," that is, they appear to be a forecast, in the middle of March, 1924, of what the completed figures up to March 31, 1924, would prove to be. There seems to be some confusion in the public mind and in the Press on this head, but it also seems clear that the *Gazette* figures of Exchequer receipts and issues are the actual and authentic figures, and will remain so until the Comptroller and Auditor-General reports on the appropriation accounts for 1923-4, in accordance with his annual statutory duty. His report for the previous year, delayed

as it was by the difficulties and obstacles inseparable from a transition period, has just recently appeared—a salutary document dealing trenchantly and frankly with certain abuses which are not likely to recur in these more settled times. The estimates for 1924-5 are modestly framed on the revenue side—and wisely so, as the country is feeling the pinch of severe agricultural and industrial depression. Tax and non-tax revenue are estimated at £27,687,300, and "additional amount to be found by borrowing or otherwise to cover expenditure as hereinafter set forth" is estimated at £8,658,973, against which, presumably, the Exchequer balance to credit on March 31, 1924, of £3,394,512 may be set off. Estimated expenditure on the Army drops to £3,927,145 from £10,664,510 in 1923-4; public education is down by some £300,000, and Old Age Pensions by nearly £360,000; public works by nearly £600,000; and various other reductions show the operation of a spirit of drastic economy in administrative expenditure which augurs well for the future stability of Irish finance. The item of £1,717,365 for "Superannuation and Retired Allowances" is a reminder that a change of political system causing large changes of personnel involves not inconsiderable burdens. This, of course, is a charge which will gradually expire, and were it not for some eight and a-quarter millions to be paid in 1924-5 for Property Losses Compensation and for Personal Injuries Compensation, there would be an approximate balance between income and expenditure.

Egyptian Cotton Crop.—Our Manchester correspondent writes:—Owing to the fact that half of the exports of raw cotton from Egypt come to this country, Lancashire spinners are always particularly interested in the prospects for supplies. It is rather early for any definite information relating to the growth for 1924-25, but it is understood that planting preparations are well forward. For several years there has been a law in Egypt prohibiting growers from planting more than one-third of their land, but the Government has decided to abandon the restriction. For the current season the area under cultivation was estimated at about 1,600,000 feddans, but according to a cable received in Manchester this week it is likely that the acreage for next season will be nearly 2,000,000 feddans. This, of course, would be a record, and if the climatic conditions are favourable during the growing period, there is a probability of the crop being larger than ever known before. A development of this kind would be very satisfactory to Lancashire, as it would make up for the falling off in recent years in the growth of cotton in the United States.

Index of "Free" Shipping Freights.—For the first occasion since August of last year our freight index registers a reaction. The figure for March is 142.05, representing a fall of 1.4 per cent. on the month. The movements of the component parts of the index are shown in the following table:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).	100	100	100	100	100	100	100
January, 1913.	110.03	113.09	123.37	106.29	117.38	127.89	116.34
February, 1920.	814.31	529.89	757.52	744.81	587.02	712.16	690.95
December, 1921.	268.90	277.17	244.10	256.79	286.72	347.18	280.14
December, 1922.	160.06	164.07	163.72	144.43	141.25	166.47	156.67
December, 1923.	137.09	135.15	129.19	122.61	136.08	159.34	136.57
July, 1923.	132.42	107.20	118.67	122.44	126.10	114.83	120.28
August, 1923.	124.79	109.11	114.33	117.70	117.51	115.73	116.53
September, 1923.	129.83	112.36	116.28	117.77	118.44	124.63	119.88
October, 1923.	133.66	125.46	114.03	119.38	124.40	136.05	125.49
November, 1923.	141.24	135.32	114.64	122.68	124.49	137.89	129.38
December, 1923.	134.03	132.72	120.09	124.35	125.07	144.21	130.08
January, 1924.	130.69	137.49	128.33	124.88	139.45	156.68	136.25
February, 1924.	138.11	146.26	145.36	129.28	142.17	162.91	144.01
March, 1924.	143.72	147.62	145.92	132.08	135.20	147.77	142.05

The month's changes in the Index of each group and subgroup are shown in the following table, the figure 100

representing in each case the average rate during the basic period 1898-1913 :—

	Index No.	Inc. or Dec.		Index No.	Inc. or Dec.
Home trade.....	128.26	+ 4.0	S. America—outwards ..	108.05	+ 2.63
Bay—outwards	145.87	- 2.75	homewards ..	185.79	- 1.52
homewards	159.68	+ 1.62	India—outwards	126.32	+ 12.64
Mediterranean—outwards ..	165.72	+ 19.49	homewards	137.84	- 7.04
homewards	134.56	+ 7.35	Far East, &c.	135.20	- 6.97
North America	147.62	+ 1.36	Australia	147.77	- 15.14

The month was characterised by two divergent tendencies. In the Western Hemisphere a large volume of coal chartering, due to desire to accumulate stocks in provision against a possible stoppage in the British mines, was added to continued steady demand for grain space, particularly from South America. In the Eastern Hemisphere considerable tonnage appears to have been unable to find further employment in the Japanese trade (not included in our Index), and to have gone "seeking" unfixed to Australia and East Indian ports, with, as will be noted, a depressing effect on rates from those quarters. Apart from the release of tonnage from Japanese waters, the importance of which should not be overestimated, it must be remembered that purchases of grain on European account during the past quarter have been on a very large scale, and a temporary lull in buying, having regard to the difficulty of financing current shipments, may reasonably be expected. The Mediterranean trade further improved during March, and freights for ore cargoes, which have been abnormally depressed ever since 1920, are approaching nearer to remunerative figures. The relation of the Index to the average for 1913 may be seen from the following table :—

Month.	1921.	1922.	1923.	1924.
January	194.69	131.60	114.05	117.11
February	164.54	135.76	112.73	123.78
March	162.17	135.53	115.23	122.09
April	147.48	129.46	115.45	..
May	158.42	125.12	114.55	..
June	165.73	117.45	106.82	..
July	169.87	114.52	103.39	..
August	170.60	113.16	100.16	..
September	154.47	110.37	103.04	..
October	141.85	114.42	107.86	..
November	136.47	119.43	111.21	..
December	134.66	117.39	111.81	..
Mean for year	158.40	122.02	109.69	..

The instability of conditions since the war renders attempts to trace seasonal trends in freight movements somewhat questionable. There is evidence in 1920, 1922, and 1923 of a marked seasonal rise commencing in August-September, though this feature did not occur in 1921. Spring movements are even more doubtful. The first six months of 1923 were rendered abnormal by the Ruhr occupation, and in the case of 1921 alone was a fall in March-April, followed by a recovery in the early summer, i.e., before the normal autumnal improvement.

The Stock Exchange Report.—Next Tuesday, the nine trustees and managers of the Stock Exchange face their fellow-shareholders at the annual meeting, at which is to be presented the report of the Stock Exchange for the year ended March 25th last. Many companies might profitably copy the promptitude with which the Stock Exchange issues its accounts less than a week after the financial year has ended. The capital of the House is nominally half-a-million sterling, in addition to which there is an amount of £318,600 in 3 per cent. debentures outstanding, out of an original issue of £450,000. The two items make the total liability for capital £818,600. Last year's interest on debentures called for £9,566, and the item is included by the House in its expenditure and income account. These figures show that the House spent £144,983 last year and received £310,490. Out of the profit of £165,507 a dividend of £8 per share is to be paid on the 20,000 shares, which will take £160,000, the balance being included in the carry-forward of £150,213. Stock Exchange shares being of the nominal value of £25 each, the dividend is 32 per cent., less tax, making the third successive year in which this rate has been declared. There are 3,900 members of the House and 2,336 proprietors, the latter figure comparing with 268 in 1876 when the new deed of settlement took effect. Stock Exchange finance is as simple as it is successful. The

austere will notice with some astonishment that there is no reserve fund, and the investments, which are in Treasury bonds, stand at no more than £119,000. There is nothing to show in what manner the carry-forward of £150,000 is invested, and the liquid cash account looks very small at £13,500, about half, by the way, what it was this time last year. Yet the Stock Exchange is in an extraordinarily sound position financially. Its strength has been built up through the pursuance of a policy which, for a full century, has aimed at keeping the capital down as far as possible, and at increasing assets which are never written up. A few years ago the capital was raised from £240,000 to its present nominal half-a-million pounds, but this was done for the sake of book-keeping, and had no effect upon the price of the shares, or the amount of the dividend paid. The reserve is hidden in the institution itself. The carry-forward is invested in the same manner. Notwithstanding a slight diminution in the number of members, the House continues to flourish, and the receipts from entrance fees for the year just ended were £49,500, an increase of £4,700 over those of the previous twelve months. How greatly the Stock Exchange appreciates the efforts of its managers can be seen from the somewhat backhanded compliment which will be paid them at the meeting on Tuesday, for out of the 2,336 proprietors, it is doubtful if the odd 36 will appear at the meeting, so satisfied are the others with the conduct of their affairs as carried on by the present hands. By slow degrees the fusion between the two Stock Exchange sets, of proprietors and members, is being accomplished. Last year the number of shareholders rose by 67 members, but there are still 1,500 men who do not own a share, and dual control continues to-day, as it has done in the past, to fetter the steps of progress and clog the wheels of energy. Its effect makes itself felt in many directions, for without unification of interests it is impossible—there is no other word for it—for the Stock Exchange to go ahead as it would do otherwise. Members of the Committee take it hardly that their legislation should be deemed narrow or parochial. The criticism, however, readily acknowledges the amount of work which membership of the Stock Exchange Committee involves. There can be no question of the self-sacrifice that is demanded from busy men, who find that committee work takes up more time than even the average Stock Exchange member would think.

Unseaworthiness or Bad Stowage.—In a case recently before them the House of Lords gave an important decision on a question which often has led to dispute between shippers and shipowners. Exceptions in bills of lading, writes a correspondent, usually protect shipowners from liability for damage resulting from negligence of the master in the stowage of cargo, but not for that resulting from unfitness of the ship. Naturally, when damage has arisen shipowners contend that bad stowage caused the damage, and shippers that the ship was unseaworthy. Difficulties have arisen in respect to particular classes of goods; the juxtaposition of another kind of cargo has been urged to render a hold unfit for the carriage of the contractual cargo, as where pungent cheese was stowed next to chocolate; the peculiar nature of the contractual cargo has rendered the ship fittings unfit for its carriage, as where wet sugar filled the bilges with a treacherous mixture, rendering the pumps incapable; the stowage of other cargo in conjunction with the absence of fittings has damaged the contractual cargo, as in the case under discussion. In this case a ship, the *Grelwen*, proceeded under charter to West African ports to load produce, palm oil and palm kernels. She had not traded in such produce before, and did not carry the 'tween decks customary in that trade. The master loaded two or three tiers of barrels of palm oil in each hold and filled the holds up with sacks of palm kernels. Though the barrels were sound, the weight of the kernels crushed in the barrels before she left port. The shippers contended that the ship was unfit for the carriage of their barrels; the ship ought to have had 'tween decks to carry the weight of the kernels; though the master might have avoided the catastrophe by loading less kernels, the danger of an error in judgment on his part in itself made the ship unseaworthy. The shippers succeeded at the trial and before the Court of Appeal, but failed in the House of

Lords. The House of Lords decided, Lord Finlay dissenting, that the damage arose from bad stowage; clearly lack of 'tween decks did not make a ship unfit for the carriage of cargo; no inefficiency to carry palm oil in barrels, the contractual cargo, existed at the time when that cargo was placed on board; the addition of the kernels alone necessitated 'tween decks, and this addition in the absence of 'tween decks constituted bad stowage. The decision discloses and clarifies an underlying confusion of thought, for it confirms the view that the court has to consider, not the fitness of the ship to carry all its cargo when loaded, but its fitness to carry the particular cargo damaged at the time the master accepted it on board. The order of acceptance of cargo may thus affect the result; it may be bad stowage to stow cheese next to chocolate, but a hold half-filled with cheese may be unfit afterwards to receive chocolate. This case fails to decide whether a ship must be fit for the cargo, not only at the moment of loading, but at the moment of sailing, for here the damage occurred before sailing; had the damage occurred later, and had it been decided, that a ship must also be fit for the cargo on sailing, the court might well have concluded that the ship at that time was unfit, loaded as she then was, for the contractual cargo. This point apart, a shipper who endeavours to prove the unfitness of ship for his cargo must apparently direct his evidence to unfitness affecting his cargo only and existing at the moment of loading.

Sugar "Futures"—American Decision.—The result of the American Government's attempt to restrain dealings in "futures" on the New York Coffee and Sugar Exchange is an interesting example of the way in which bureaucratic action in a praiseworthy cause is often distinguished by zeal rather than perspicacity. Following violent fluctuations in the price of sugar futures in February, March, and April of last year, the Government applied to the Supreme Court for an injunction against future dealings on the Sugar Exchange, on the ground that this body was operating in violation of the Sherman Anti-Trust Laws. Speculative dealings are a most important feature of the work of all wholesale markets, and in attempting entirely to prohibit such contracts as an expression of dissatisfaction over the rise in prices last year, the Federal authorities would appear to have been extremely ill-served by their legal advisers. The Supreme Court refused to grant the desired injunction, and the case as a whole seems to justify the comment made by the New York Trust Company in its current bulletin that the application was in the nature of a demonstration of official care for the public welfare rather than a serious attempt to enforce the law.

Commercial Corporation of London.—The liquidator has just published a concise but unpleasant balance-sheet of that unhappy undertaking, the Commercial Corporation of London, Limited, as at October 2, 1923. This concern, it will be recalled, was the successor to the Commercial Bank of London. On the debit side of the balance-sheet the total of nearly £2½ millions is made up of share capital, £2,250,709, sundry creditors, £12,442; and due to Mr C. C. Hatry, £43,024. On the other side, book debts are £31,586; investments, £735,995; and finally a deficiency of £1,537,441 is shown. The liquidator in his report observes that "the directors, in common with many others, failed to appreciate the artificiality of the post-Armistice boom, to estimate its duration, and to gauge the severity of the reaction which was to follow." His further remarks provide an interesting commentary on the balance-sheet. "The book debts present considerable difficulty in realisation, and are not expected to produce the full amount at which they are stated." There is, however, a "possibility" of recoveries in respect of certain debts which have been written off, and a claim is being made for repayment of income-tax. Investments are shown (1) quoted securities at middle market price, £71,910, and (2) unquoted securities, £664,085. Apparently an unstated amount of quoted securities is in the hands of Mr Clarence Hatry, as a pledge. The liquidator is not in favour, at present, of the suggested holding

company, but considers that time should be allowed to dispose of the various holdings, pointing out that "the amount which the large holdings would realise on a forced sale is far less than the nominal market value." He significantly adds "in the absence of specific authority from the shareholders it may be regarded as my duty to sell the shares for what they will fetch." If an authority to postpone the sale is given, it is the liquidator's intention to invite several of the largest shareholders to form an advisory committee to confer with him in regard to realisation.

Lever Bros.—The report for the year 1923 of Lever Bros. shows a further increase in profits, the balance of profit and loss account, after providing for repairs, renewals, and alterations, depreciation and insurance, and it is to be supposed, debenture interest (though this is not mentioned in the accounts), amounting to £5,071,978, as against £4,625,018 a year ago. The following table shows the remarkable growth in the company's earnings since 1895 :—

	Profit Balance.	Depreciation, Reserve, &c.	Employees.	Prof. Div.	Ord. and Pref. Divs.
1895.....	158,576	46,076	..	37,500	75,000
1901.....	278,986	396	..	100,000	178,590
1907.....	405,331	86,555	32,245	138,531	148,000
1908.....	473,132	95,344	37,216	155,572	185,000
1909.....	545,482	106,796	42,436	165,000	231,250
1910.....	637,329	118,986	55,536	185,307	277,500
1911.....	720,748	127,266	39,959	276,023	277,500
1912.....	779,403	135,855	40,069	325,979	277,500
1913.....	988,258	145,493	41,272	402,604	397,869
1914.....	1,152,107	179,205	24,095	499,617	449,190
1915.....	1,265,933	164,278	42,947	529,994	528,714
1916.....	1,354,607	203,279	70,209	545,000	536,119
1917.....	1,608,778	276,241	130,834	562,045	643,658
1918.....	1,553,589	5,953	206,143	610,000	731,492
1919.....	2,439,067	504,038	271,299	740,000	923,730
1920.....	3,270,091	4,936	276,855	2,158,483	829,817
1921.....	4,035,516	250,000	219,715	2,886,080	625,593
1922.....	4,625,018	250,000	196,479	2,889,208	1,233,961
1923.....	5,071,978	250,000	197,427	2,924,503	1,402,355

* After providing for repairs, renewals, alterations, depreciation, and insurance.

The ordinary dividend remains unchanged at 10 per cent. It will be observed that the increase in profits is largely absorbed by the additional amounts required for the dividends on the preference and preferred ordinary shares. This is on account of the capital rearrangement of the previous year, and internal changes which have resulted in the raising of the dividend on the former 5 per cent. cumulative preferred ordinary shares to 8 per cent. It will be seen from the balance-sheet, which is analysed in another column, that the item £476,680 which appeared in the balance-sheet a year ago under the heading of "Discount on Debenture Stock and Expenses of Issue," has been written off the reserve fund. Total assets are now given as £67,915,593, as against £64,397,466 for 1922. Assets mainly consist of investments in associated companies, this item alone amounting to £54,016,556. A little more information here would be welcome. The report concludes with the statement that "The directors are satisfied, after careful consideration of the value of the whole of the assets of the company, that any depreciations in value are amply covered by the appreciation in value of the holdings of the company in associated companies."

British Dyestuffs.—The accounts of the British Dyestuffs Corporation, Limited, for the year ended October 31, 1922, were dated June 22, 1923. Accounts for the year ended October 31, 1923, are issued under date of March 28th. Progress has been made here. Profits are given as £251,423, which compares favourably with £102,657 for the previous twelve months. As before, profits are applied in reducing the debit balance. This now stands at £449,276. But in addition to this sum, preliminary expenses are still shown as £251,552. Although a holding company, the directors issue a summary of assets and liabilities of the associated concerns. The directors state that they "have continued the policy of conserving the financial resources of the company without impairing its efficiency, and at the date of this report there is in cash

THE REVENUE.

I.—An ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM in the undermentioned periods of the Year ending March 31, 1924, as compared with the corresponding periods of the preceding Year.

	Quarter from January 1 to March 31, 1924, compared with the corresponding Quarter of the preceding Year.				Year ending March 31, 1924, as compared with the preceding Year.

Treasury, March 31, 1924.

or invested in realisable securities a sum of more than £2,600,000." In the balance-sheet "cash" shows as £169,808, but in the summary of assets and liabilities it is given as "Cash on Hand," £811. The report states that the trading results for the year under review show an improvement over those for the preceding year, "although the general trade of the country has not substantially changed, and selling prices of your products both in home and foreign markets have fallen." The dye-making plants in this and other countries have a manufacturing capacity greatly in excess of the present requirements of the colour-using industries, and until trade improves the undertaking cannot be worked with that advantage which a larger output would ensure. The directors make the interesting announcement that "Representatives of your company and of the German Interessen Gemeinschaft have on several occasions discussed various proposals with the object of securing a close working arrangement between the two undertakings. All interests concerned may be assured that your directors will not give their approval to any scheme which does not provide complete security for the progress of your undertaking both in research and manufacture. In this connection your directors have under consideration the question of reconstructing the capital of the company. These matters will be placed before the shareholders at the earliest possible date."

Wesleyan and General Assurance Society.—The idea that life assurance companies can give a Health Service to their policyholders, in the interests of both parties to the life assurance contract, has been developed in America though not as yet here to any marked extent. It was indeed not until last year that a few British offices become seized with the notion. It was due to no small extent to the Wesleyan and General, a Birmingham office, which transacts both ordinary and industrial life assurance that progress has been made on this side of the Atlantic. The directors despatched their general manager to investigate the American and also the Canadian practice, with the result that free periodical medical examination is now offered to policyholders of £1,000 and upwards, and a Health Service Bureau has been established for general welfare work. This Bureau is engaged upon health propaganda, and those pamphlets which have been issued by it, and which we have seen, are models of clear and simple exposition of how disease may be prevented. Though some may think it rather indelicate for a life office to try to make its customers live longer so that they may pay to it more premiums, that is not our view. Good health is of more value than long life, and if the Wesleyan and General can teach its working-class clients, and others too, to live more healthily and happily, it will be doing valuable work apart from any financial gain. The past year for the company has been successful. The new business in both departments amounted to £3,578,925, the assurance funds increased by £536,528 to £5,452,314, and a bonus of £1 16s per cent. has been declared for 1923 on ordinary life policies as soon as they shall be two years in force.

Rand Gold Mining Reports.—Our mining correspondent writes:—There have been issued this week the annual statements of several companies of the "Corner House" group, including that of the Crown Mines, the largest gold producer of the world. This company, also the Durban, Geldenhuis, and Village Deep, last year crushed a record tonnage. Important economies in costs were effected. In several cases a modification of the gold-recovery process was carried into effect, while good results were secured from the introduction of new mechanical appliances in development work. In the case of the Crown Mines the additional revenue due to the gold premium represented only 1s 4d per ton milled, as against 2s in 1922 and 6s 11d in 1921. But, thanks to the reduction in expenses and the increase in efficiency, in conjunction with the treatment of a largely increased tonnage of ore, the profit came out at a higher figure than ever before. The tonnage crushed last year exceeded 2½ million tons, while the cost ratio, at 19s 6d, showed a saving of nearly 3s per ton, following upon an economy

of 2s 6d in 1922. Although last year's earnings were of unprecedented extent, the dividend total of 67½ per cent. fell 10 per cent. below the rate for 1920. The explanation is to be found partly in the difference in the special appropriations. Last year the expenditure on property, plant, and debenture redemption totalled £262,200, while taxation absorbed £160,800. For 1920 the figures were £142,800 and £143,300 respectively. Moreover, £459,300 is now carried forward, as against £378,800 brought in from 1922. The ore reserve position is also stronger than before, both in quantity and value, as indicated by the following table:—

CROWN MINES.	1921.		1922.		1923.	
	Tonnage milled	2,177,000	..	1,924,600	..	2,583,000
Working costs per ton	25/-	..	22/5	..	19/6	..
Total working profit	£ 672,030	..	£ 561,320	..	£ 1,133,350	..
Dividends	£ 305,530	..	£ 369,280	..	£ 623,000	..
Do per cent.	32½	..	40	..	67½	..
Ore reserves	tons 8,511,200	..	8,882,100	..	9,076,000	..
Average value	dwt 61	..	61	..	64	..

The outlook for the company has been materially changed by the recent acquisition from the Government of additional ground. In this connection a third deep-level shaft is to be sunk in the south-western section of the property. On the basis of last year's dividends, the shares—which are of the par value of 10s—give the moderate yield of 11 per cent. For the current year the rate should, however, be increased. In the case of the Durban Roodepoort Deep, also, there has been an extension of the property, the company having acquired a large block of the claims formerly owned by the liquidated Princess Estate. This area, however, is not immediately available, the mine workings being at present flooded. It is believed on the Stock Exchange that the claims on the dip of the whole property will eventually be purchased; hence the spurt in the shares of the owning company, the New Steyn Estates. Last year, of course, the Durban Deep was provided with funds by a debenture issue, and was thus enabled to distribute a portion of the profits in a dividend of 1s per share—the first since 1918. The ore reserve position shows little change. As the result of milling a larger tonnage than ever before, in conjunction with economy in costs, the Geldenhuis Deep was able to re-enter the dividend list with a modest 5 per cent. At 935,800 tons, value 5.7 dwt, ore reserves display an expansion in quantity with a further decline in value—both features being due to the inclusion of ore which previously had to be classed as unpayable. In regard to the prospects, much importance attaches to the working-cost factor. The directors of the Robinson Gold Mining Company intimate that, while every effort will be made to extract all payable ore remaining in the mine, it is expected that operations will cease during the current year. Liquidation should yield something in excess of the current market price of the share. The surplus cash assets figure at £260,300; the amount includes 13,400 Crown Mines shares, taken at less than one-third the present price. The Robinson is a mine with a wonderful record. To date it has distributed nearly £12,000,000 in dividends, an average of more than £1 per ton of ore crushed. With the Village Deep saving in costs, plus the increase in tonnage milled, rather more than counterbalanced the shrinkage in revenue arising from decline in the grade of the ore and in the gold premium, the working profit figuring at £148,100, as against £88,200 in 1922 and £112,750 in 1921. The dividends—10 per cent.—leave a somewhat increased balance to go forward. The ore reserves have now fallen below the 2,000,000 level; they represent 2½ years' supply for the mill. This company is one of the oldest producers on the Rand, and its workings are below 6,000 feet.

Mason and Barry.—The sharp cut in the dividend from 7s 6d to 3s 6d does not more than reflect the decline in profits during 1923, the carry-forward of £36,200 being a little less than the amount brought in. Last year's revenue included £2,400 profit on sale of a portion of the company's investments; on the other hand, "balance of income-tax" figures at £4,800 in place of £13,700. The quantity of ore raised was less than in 1922, but the shipments were larger, while the price of copper averaged £65 18s, as against £62 3s. In the light of these figures the decline in profit appears to require elucidation. Further information will doubtless be given at the meeting.

Rio Tinto.—In their report for 1922 the directors referred to the "unduly low" price of pyrites. As this product is a very important one with the group of companies operating at Huelva, considerable significance was attached to a statement current in French financial circles rather over a year ago, that the principal undertakings concerned—the Tinto, Tharsis, and Huelva Copper—had come to a working agreement. In fact, a considerable advance occurred in the quotations of the several shares. In their report for 1923 the directors of the Tinto company on this subject merely remark that "the price of pyrites still continues excessively low." Hence it would seem doubtful if the statement above referred to was accurate. The course of the copper market proved disappointing during the second half of the year, although the average for the whole period exceeded that of 1922. The output of mineral continued to increase, although owing to conditions on the Continent, a greater proportion of the ore had to be reserved for local treatment. In the end a profit of £729,650 was made, as against £670,500 previously. The increase in the rate of dividend from 30s to 35s per share rather more than absorbs the extra earnings, the carry-forward of £440,100 being some £8,000 down. During the year 30,000,000 pesetas were redeemed of the 50,000,000 pesetas loan raised by the company on behalf of the British Government during the war. This transaction, of course, is one which does not really affect the shareholders. On the basis of last year's dividend, allowing for the amount included in the price, Rio Tinto £5 shares at 33 yield about 5½ per cent.

The National Bank of Bulgaria announces that the last date for exchanging Treasury bonds and bank notes of the old issue will be April 14, 1924, inclusive. After this date no exchange whatever will take place, and the value of the bonds and bank notes not given up will be put to the account of the Treasury at the State's benefit.

The Administrator of Bulgarian Property announces that a third and final dividend of 6s in the £, making a total payment of 20s in the £ on all British claims against Bulgarian nationals, in respect of which awards have been given by the Anglo-Bulgarian Mixed Arbitral Tribunal, together with interest to which claimants are entitled under the provisions of the Treaty of Neuilly-sur-Seine, or by virtue of the award of the Tribunal, is about to be paid.

Oversea Correspondence.

UNITED STATES.—DECLINE IN MONEY RATES—STOCKS AND BONDS—FEBRUARY TRADE.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 21.

THE outstanding development in the financial situation here is the pronounced and unexpected decline in money rates this week. On the Stock Exchange, call loan rates, which for some time had ruled generally steady at 4½ per cent. to 5 per cent., fell to 3 per cent., and old demand loans were renewed at the latter figure—the lowest witnessed since the summer of 1922. In the outside money market, day-to-day funds were obtainable at 2 per cent., the lowest in a number of years. The immediate cause of the sudden drop in call money rates is the enormous accumulation of funds in connection with federal income-tax payments, which became due last Saturday. These large sums are in bank vaults awaiting withdrawal or disbursement by the Government. The excessive surplus, therefore, which has greatly increased the supply of funds available for call loans, is likely to disappear, or be materially reduced in the near future, with the probable result that call money rates will show a firmer tendency. The present plethora of funds also caused declines in time rates from the long-prevailing quotations of 4½ per cent. bid to 5 per cent. asked on Stock Exchange collateral for all maturities to 4 per cent. bid and 4½ per cent. asked for 30 to 90-day loans and 4½ to 4¾ for longer periods. Some loans, both call and time, were negotiated at the

lower rates, but borrowing was light in the aggregate, offerings greatly exceeding demand. Brokers' requirements, especially, for stock market purposes were very small. Rates for bank acceptances likewise eased off from 4½ per cent. bid and 4¾ per cent. asked to 4½ per cent. and 4 per cent. for all maturities up to 120 days, with some dealers quoting 4 per cent. and 3¾ per cent. for the same maturities. The decline in acceptances has attracted much attention, because the rate for such loans frequently has a bearing on the Federal Reserve bank situation, and the present open market rate for acceptances is more than one-half of 1 per cent. below the bank rate. Whether or not this fact foreshadows a lowering of Federal Reserve discount rates is uncertain, however. The market for commercial paper, in sympathy with the downward trend of money rates generally, displays an easier tone.

In addition to the temporary accumulation of money at this centre, the continued heavy inflow of gold imports has materially increased the supply of loanable funds, while the larger circulation of gold certificates by the Treasury has naturally lessened demand for other kinds of paper currency. Another factor which undoubtedly has contributed to bring about lower money rates is that demand for commercial purposes in many lines of trade and industry is not active at the moment, and agricultural requirements for seed, fertilisers, and implements have not yet developed to any extent.

This week's statement of the Federal Reserve system quite plainly reflects money market conditions. Total holdings of discounted bills decreased during the past week \$52,100,000, while acceptances purchased in the open market fell off \$48,400,000, and the amount of federal reserve notes in circulation showed a reduction of \$20,700,000. Outstanding note circulation has now dropped below two billion dollars for the first time since 1918. The system's ratio of reserves to note and deposit liabilities remains practically unchanged from that of recent weeks, namely, fractionally above 80 per cent., but the New York Federal Reserve Bank's reserve ratio has advanced to 89½ per cent., the highest level since the war, except in January, 1922.

As invariably happens, easier money rates have caused increased demand for bonds at rapidly advancing prices. Corporate and Government bonds have shared in the vigorous upturn, as have foreign Government issues, notably French bonds, although the principal reason for the recovery in the latter is found in the further sharp advance in French francs. Liberty Loan Third 4½'s this week reached the highest price witnessed since 1922, while United States Treasury 4½'s established a new high record. The stock market, on the other hand, has been considerably unsettled by aggressive and concerted bear attacks, directed mainly against industrial stocks, particularly those whose market position had become more vulnerable owing to unfavourable annual reports for 1923. The selling, which seemed to emanate principally from professional operators, was due to misgivings over the soldier bonus bill, which has just been passed in the House of Representatives, and uncertainty as to the final outcome of efforts to enact such legislation. Stock market sentiment has also been affected adversely by the unencouraging outlook for tax reduction, and by the uncertain political outlook in this country. Testimony before the Congressional Oil Investigating Committee continues to be featured with big and sensational headlines in the daily papers, but nothing has actually been proven yet with respect to charges made against various individuals, including present and former Government officials, and developments at the inquiry are receiving only passing interest in securities markets. The general feeling, so far as the public is concerned, appears to be one of growing disgust over the manner in which the investigation is being conducted.

In cottons, as in practically all other textiles, piecemeal buying is the outstanding feature, reflecting apparently a desire to secure quick and frequent turnover and to carry as small stocks as possible, pending further developments in the price situation. Exports of cotton in February, amounting to 482,146 bales, were 11½ per cent. below those of January, and the smallest reported for any month since September, although they were 34 per cent.

greater than in February, 1923. For the seven months ending with February, exports of the staple totalled 4,359,554 bales, as compared with 3,740,145 for the same period in the year before, representing an increase of 16 per cent. Whereas a year ago domestic consumption exceeded exports, this season exports have been far in excess of consumption. The total of exports and domestic consumption for the seven months of the present cotton year is 7,954,546 bales, against 7,579,740 last season, an increase of nearly 5 per cent. Active spindles last month decreased about 2 per cent. from January, and nearly 7½ per cent. from February of last year.

Foreign trade returns show that there were numerous cross-currents in February. Exports decreased last month from January, owing partly to the fact that it was a shorter month, but imports increased, the gain being attributed to more active operations by manufacturers, which were reflected in inflow of raw materials from abroad. February exports, valued at \$367,000,000, were 5.6 per cent. less than in January, while imports were \$335,000,000, showing a gain of 13½ per cent. over January. As compared with February a year ago, exports gained 20 per cent., but imports were only 10 per cent. greater in value. The excess of exports over imports last month was only \$32,000,000, the smallest since last July. Heretofore, the large exports of cotton at high prices have been mainly responsible for the gains shown in exports as a whole over corresponding months of last year. During February, however, the situation was mixed, since exports of cotton in quantity increased 34 per cent. over the same month in 1923, but the price was fully 6 cents a pound below that of January, and some 2 cents under the February, 1923, level.

FRANCE.—NEW CABINET—EXPERT COMMITTEES REPORTS—STOCKS AND THE FRANCO RECOVERY.

(FROM OUR CORRESPONDENT.)

PARIS, April 2.

THE new Poincaré Ministry, whose completion was announced on Saturday night, largely fulfilled the general forecast I was able to give last week. The real surprise in the crisis was that the Premier jettisoned no fewer than ten out of his twelve former collaborators, and retained only M. Maginot and M. Le Trocquer, his Ministers for War and Public Works respectively. The fact is of unusual significance, because these two Ministers, more than all others, except the Premier himself, have been responsible for whatever measure of success has attended the occupation and development of the Ruhr. Their inclusion in the new Cabinet emphasises the Premier's determination to continue his Ruhr policy at all costs. For the rest, the new Ministry may be summarised, to use an expression which one of its new members made use of in conversation with me this afternoon, as a "Ministry of Negotiation." Analysis of its political composition shows that M. Poincaré has skilfully extended his influence in the direction of the Left, for the support of which he is known long to have been angling, in view of the coming General Elections.

The return of M. François-Marshall to the Ministry of Finance is hailed with general satisfaction, and one of the new banker-Minister's first tasks will be to take up the problem of consolidating the floating debt, in regard to which nothing of this kind has been done since he left office in January, 1921. M. Loucheur's appointment to the Ministry of Commerce, Industry, and Posts is also regarded as satisfactory, from the fact that he also is practically acquainted with the needs of the trading classes. The acceptance of a Cabinet post by M. Bokanowski, the former rapporteur to the Finance Commission of the Chamber, is also regarded as an element of strength (although he takes merely the comparatively negligible portfolio of the Ministry of Marine) as he is generally regarded as possessing sound ideas in regard to the public finances. Another excellent appointment is that of M. Louis Marin as Minister for the Liberated Regions. M. Marin was the author a few months ago of an extremely well-worked-out plan for administrative reform, which is the basis of the extensive proposals which M. Poincaré has now been authorised to carry out under the

much-discussed régime of the *décrets lois*. Another significant appointment is that of M. Henry de Jouvenel, one of the French delegates on the Council of the League of Nations, to the post of Minister of Education. It is understood that this appointment is an indication of M. Poincaré's future attitude to the Geneva organisation, which he expects will figure much more prominently in the coming months than in the past, and which will have in the near future to decide on the thorny question of admitting Germany to membership. For the rest, one cannot but recognise the able manner in which M. Poincaré has utilised an accidental defeat in the Chamber to strengthen enormously his position in view of the coming elections by getting rid of a large number of collaborators who would otherwise, through their failure to pull their full weight in the Cabinet, have caused him serious embarrassment during his forthcoming appeal to the electors.

The real task of the "Ministry of Negotiations" will begin next week, after the reports of the two committees of experts are made public. There is every reason to believe that the reports (which almost certainly will not be handed in until Saturday, and very possibly not before Monday) will prove satisfactory to the French as a working basis for a settlement of the whole reparations problem. So far as the payment of Reparations is concerned, it is believed the plan will be found both practicable and reasonable. There has been no attempt to fix the total amount Germany shall be called on to pay, as that would be outside the terms of reference under which the experts have worked. They have set down merely the figures they consider will be within Germany's capacity for payment, if she is accorded a semi-moratorium for three—or perhaps four—years, to give her breathing time. This amount, there is reason to believe, has been fixed at 2,500 million gold marks per annum, of which 1,000 millions are expected to be derived from the *gross* receipts of the German railways.

The term "semi-moratorium" is used because it is understood Germany will be expected to continue payments in kind from the moment the plan comes into opera-

tion, although for the first year no cash would be expected from her. Neither would she have to make direct Reparation payments in cash in the subsequent two (or possibly three) years, and only after that period would the full scheme come into operation. At the same time, it is proposed that the creditor nations shall be able to derive substantial cash benefit from the plan from the beginning of the second year, as it is hoped by that time they will receive a large total sum from the produce of the international loan which is to be issued on the security of the German railways. The railways are to be capitalised at 26,000 million gold marks, half of this share capital being handed to the Reparation Commission for disposal as it may decide. Six per cent. bonds (1 per cent. for sinking fund purposes) are also to be issued to the amount of 10,000 million gold marks on the security of a mortgage on German industrial and agricultural property, and of these 6,000 millions are to be handed over to the Reparations Commission, which will have the right to mobilise them as it thinks fit. These bonds will be issued for a period of forty years, it is believed. The plan is stated in certain quarters here to aim at providing a means by which, as an immediate result, it would be possible to mobilise an available sum of 125 millions sterling during each of the next three years. The French share (52 per cent.) of this, if the old proportions are adhered to, would be about 5,000 million francs a year, which would provide the greater part of the 7,000 millions a year which this country still has to furnish to complete the restoration of the devastated regions. As it is unlikely the French public could be prevailed upon to furnish this large amount under present conditions, it is not improbable the Government will hesitate a good deal before opposing the adoption of a plan which, if the details I have set forth above be founded on fact, would enable it to find a way out of a serious financial deadlock. Speaking generally, the experts' plan does not appear to differ substantially from the scheme proposed by Mr Bonar Law during the Paris Conference in January last year, which fixed the total amount Germany should pay at £2,500,000,000, including interest, spread over a total period of twenty years, which should begin with a four years' moratorium. The proposal (which the French declined to accept) was accompanied by an offer to cancel the French debt to Great Britain if this country would agree to the total of the German Reparations being reduced to the figure stated.

The following table will enable some idea to be obtained of the effect which the recent remarkable recovery of the franc (from 122.50 on March 8th to 73 on April 2nd) has had on the principal French and foreign descriptions on the Bourse:—

	March 11.	March 20.	April 2.
Pound sterling	115.93 ..	84.13 ..	73.35 ..
Dollar	27.18 ..	19.60 ..	17.05 ..

Raffinerie Say	3,190 ..	2,760 ..	2,315 ..
Sucreries d'Egypt	1,473 ..	1,121 ..	875 ..

From these figures it may be inferred with accuracy that the unexpectedly large recovery in the franc, and the heavy losses that have been incurred by many operators during the past month, have created a situation on the Bourse which will have a long and depressing effect. To-day's market was notable for heavy selling, for the purpose of securing ready-money resources to meet the pending settlement. It was reported this afternoon that

the consortium of French banks, which has had such a powerful influence recently on the exchange market, has intervened again to-day for the purpose of slowing down the too rapid recovery.

GERMANY.—"MICUM" AGREEMENTS—FINANCES—CURRENCY—PRICES—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, April 1.

NEGOTIATIONS concerning the "Micum" agreements have again been held in Berlin, this time with representatives of the Ruhr employees. The representatives submitted data to show that the condition of Ruhr workmen has become impossible, and that the agreements are responsible. The Finance Minister once more repeated that, as the avoidance of new inflation is a main aim of policy, it is impossible for the Federal Government to help with money. The representatives then declared unanimously that in view of the inevitable depression of the standard of living, they will oppose a renewal of the agreements. This does not quite agree with later reports from the spot, which describe the workmen as asking to be represented at the negotiations. It is reported that the "Micum" has decided to alter from April 1st the coal-delivery conditions, compelling instead of 27 per cent. of production (up to end of December 22 per cent.) the delivery of the full Reparations Commission demand, which is 1,800,000 tons a month. It is added that restrictions on the despatch of coal to unoccupied Germany will be imposed only upon concerns which have failed to deliver their quota. Coal production is increasing. The February output in the whole Republic, despite the short month, was 9,726,081 metric tons, against 8,787,393 tons in January, and 8,156,825 tons in February, 1923, the increase being all in occupied territory, but the brown coal production was only 8,327,469 tons, against 9,553,316 tons, and 11,538,032 tons respectively. In the week March 16th-22nd, Ruhr coal production reached 85 per cent. of that of 1913. Contracts for delivery of Ruhr coal to the Swedish State railways in the next three months have been concluded. Domestic consumption of fuel has heavily fallen, but it is likely to recover, as many houses are returning to central heating, which was suspended in the past winter.

The Budget for 1924 is compiled in gold marks. This, as long as the currency remains stable, means the same thing as Rentenmarks or billions of reichsmarks; but the Budget is now considered "valorised," and if new currency depreciation ensues, nominal taxation liabilities will automatically increase in proportion to the depreciation. The Budget has been prepared on the doubtful assumption of "restoration of the economic unity of the occupied and unoccupied territories, and restoration of the administrative and fiscal sovereignty of the Republic and of the States concerned." The ordinary Budget includes the following items from taxes of various kinds:—

	G. M.
Income-tax	1,344,000,000
Corporation income-tax	144,000,000
Property tax	376,000,000
Succession duties	30,000,000
Sale tax	1,440,000,000
Land purchase tax	150,000,000
Boys' transfers tax	62,000,000
Customs duties	160,000,000
Tobacco	320,000,000
Bee	126,000,000
Spirits monopoly	120,000,000
Sugar	232,000,000

Miscellaneous receipts are entered at 60 million gold marks. The other side of the balance-sheet of the ordinary budget includes the following items of expenditure:—

	G. M.
Service of debt	156,000,000
W. pensions and maintenance	810,000,000
Police	208,000,000
Economic and cultural aims	28,200,000
Unemployment support	500,000,000
Social aims	360,000,000
Financial administration	380,000,000
General administration	250,000,000
Subventions to States and Municipalities	1,800,000,000

The General Administration Extraordinary Budget shows revenue of 130,000,000 gold marks, and expenditure, repair of war damage, &c., 6,000,000; public constructions, mainly canals, 44,713,500; liquidation of war expenditure, 20,000,000; liquidation of Ruhr expenditure, 60,000,000. This Budget practically balances. The separate Budget "for execution of the Peace Treaty," shows expenditure of 640,000,000 gold marks, of which 360,000,000 gold marks are for maintenance of the occupying army, 52,000,000 gold marks for Reparations payments, and 34,000,000 gold marks for the Rhineland Commission.

The regulations for execution of the decree requiring compilation of gold mark balance-sheets have been issued. The minimum denomination of a share in a share company is put at 20 gold marks, this if on December 31, 1923, the share quoted on the Bourse at less than 40 billion paper marks per 100 marks nominal; shares which were quoted higher must be in denominations of 100 gold marks, or some multiple thereof. The demand for credit is undiminished; the demand for foreign currency increasing. The rationing of the supply of foreign bills by the Reichsbank has become severer, in most cases being only 1 per cent. of the demand. The reports of heavy German bear engagements in French francs for March 31st, on a basis of 140-150 to the pound, are stated to be untrue. The association of big Berlin banks has circularised clients that the banks will henceforth grant no "unvalorised" credits in any form, which means that the debtor will have to compensate the lending bank for any possible fall in exchange. This applies both to Rentenmark and paper mark credits. The Reichsbank, contrary to expectation, did not last week consider raising the discount rate. The bank's return for March 22nd shows an increase in the total of all discounts and advances by 82.6 trillion to 1,730.5 trillion paper marks. The bank borrowed a further 50,000,000 Rentenmarks from the Rentenbank, for accommodation of business, this bringing the total debt to the Rentenbank to 500,000,000 Rentenmarks. Paper mark discounts increased by 33 trillions to 596 trillions; Rentenmark discounts by 109 trillions to 977 trillions; but Rentenmark advances declined by 43 trillions to 128 trillions; and paper mark advances by 17 trillions to 28 trillions. Circulation declined by 6.6 trillions to 606.5 trillions. The minimum sum guaranteeable by a single bank towards the capital of the Gold Discount Bank has been reduced from £25,000 to £10,000.

The official wholesale index number on March 25th was 120.8, against 121.4 a week earlier; the official cost-of-living index on March 24th was unchanged at 107. Iron and steel prices still move slowly upwards. Wages are being gradually adjusted to the new longer hours of working, but there have been many strikes in the last weeks. The average wage in the metal industries in February for skilled workmen was 0.55 marks per hour, 29.02 marks per week; for unskilled workers 0.43 marks and 22.73 marks respectively. At the end of February the week's working hours in twenty centres varied from 51 to 57 hours, with the exception of one centre, where the 48 hours week remained in force. In all but three centres 54 hours or more were worked. Before the war, working hours in the same centres varied between 54 and 60 hours a week.

The trade improvement is uninterrupted. In mid-March the number of fully unemployed in unoccupied territory was 989,000. In August, 1923, when the industrial crisis first became serious, fully unemployed in unoccupied territory numbered 139,000, and this rose to a maximum of 1,534,000 on January 1st last. Partly-unemployed rose from 192,000 in August, 1923, to 1,800,000 on December 1st, and on February 15, 1924, had fallen to 258,000. Figures are still not available for occupied territory. The Kiel Northern Fair last week was a great success, but home buyers demanded long credit, and foreign visitors would not always pay the high prices asked. The movement in favour of Protection, both in the industrial and Agrarian ranks, continues, and in some quarters the abolition of the import-prohibition system is being opposed. Chief among the opposers are the motor-car manufacturers, who declare that the expected abolition of import-licensing will mean a flood of foreign cars. The rubber industry reports a good year in 1923. Imports of rubber wares totalled 256 metric tons, against 27 tons

STATE EXPRESS

VIRGINIA **555** CIGARETTES

MADE BY HAND, ONE AT A TIME.

in 1922; exports were 18,033 tons, against 16,076. Imports in 1923 were 1/10th of those of 1913, while exports were only 7 1/2 per cent. behind. Imports of raw rubber in 1923 were 19,749 tons, against 28,796 tons in 1922 and 20,500 tons in 1913. The number of share companies in the Republic at the end of 1923 was 16,472, against 5,486 in the same area at the end of 1913; the number of limited liability companies, 74,576, against 26,790. The increase in share companies is in great part due to new foundations in branches such as agriculture, clothing, and building, which were formerly not usually organised as companies; the increase in limited liability companies is largely due to new trading and banking foundations. Both increases are in the end mainly due to considerations of taxation. Shipping in the Kiel Canal in 1923 totalled 15,405,000 net tons, against 10,292,000 tons in 1913.

The downward movement in stocks ended last week, and yesterday also there was an upward movement in War Loan, due to a revival of hopes in a partial restoration of this State debt. The *Frankfurter Zeitung's* dividend-payers' index for March 28th shows 660.50, against 599.78 a week earlier and 824.50 on January 4th. Yesterday, loan quotations were (in milliards of paper marks per 100 marks nominal): War Loan, 108, Fours, 535; 3 1/2 per cents., 310; Threes, 1,010; Colonial Fours, 3,400; Prussian Threes, 480.

SWITZERLAND.—FOREIGN TRADE IN 1923—GENEVA MOTOR SHOW.

(FROM OUR CORRESPONDENT.)

GENEVA, March 24.

THE publication of official statistics makes it possible to take a rapid survey of Swiss foreign trade during 1923. The total value of imports reached 2,224 million francs—an increase of 330 millions over 1922, and of 324 millions over 1913; while exports reached a value of 1,716 million francs, an increase of 27 millions over 1922, and of 340 millions over 1913. These results are generally viewed with satisfaction, as it was expected towards the end of last year that exports would show a serious drop on the previous year's figures. Last year's import and export returns compare with 1922 and 1913 as follows:—

In Millions of Francs.			
Imports.		Exports.	
1923	2,244	1923	1,716
1922	1,914	1922	1,689
1913	1,920	1913	1,376

Compared with 1913—the last normal year—imports show an increase of 16 per cent., while during the intervening period prices have risen by 50 per cent. This comparatively small increase in the value of imports has been caused not only by the economic crisis, but also by the facts that coal consumption has been reduced as a result of the railways electrification, that the home production of wheat has increased, and that the silk industry is using smaller quantities of natural silk.

Coal imports amounted to 171 million francs, which represents the 83 per cent. of the 1913 imports; 44.6 million francs of coal were bought from France, 41.8 from Germany, 28.7 from Great Britain. Petrol imports reached 448,000 quintals, worth 22.7 millions, or three times more than in 1913. The number of motor-cars of every description imported in 1923 was 4,893, compared with 2,953 during the previous year.

As regards exports, their value shows an increase of 25 per cent. as compared with the 1913 returns, while prices have risen by 60 per cent.

The value of the principal export items, in millions of francs, was the following:—

	1922.	1923.
Watches	178	213.4
Silk	172.8	188.4
Embroideries	154.2	159.9
Machines	164.1	147.1
Cheese	68.8	66.8
Silk ribbons	69.5	52.1
Floss silk	37.4	51.9
Condensed milk and children's food ..	33.1	36.3
Chemicals	24.3	29.2
Chocolate	26.6	25.4
Shoes	25.2	25.2
Artificial silk	19.5	14.4

The watchmaking industry, which now occupies the first place among Swiss exports, has improved its position in the past two years, thanks to Government subsidies; on the other hand, the exports of machines, silk ribbons, cheese, chocolate, and artificial silk record important declines, which are mainly due to the high value of the Swiss franc.

The following table shows the trade from the five leading sources:—

	(In Millions of Francs.)			
	Exports to.	Imports from.	Exports to.	Imports from.
	1922.	1923.	1922.	1923.
Germany	192,591	123,443	365,586	416,935
France	240,186	214,192	302,598	394,957
Italy	92,569	100,783	224,464	231,945
Great Britain	347,947	363,385	173,917	181,991
United States	215,367	209,485	190,352	177,856

The above figures show the importance of British trade with Switzerland, as Great Britain comes out fourth among the countries exporting to Switzerland, and first among the countries importing from Switzerland.

The great event of the month was the Automobile Show, which took place at Geneva from March 14th to 23rd, and which met with the greatest success. This show was held for the first time last year, when the number of stands was 98, including 47 motor-car firms and 67 motor-cycle and supplies firms of all countries. This year the number of stands reached 198, representing 74 motor-car and 138 motor-cycle and supplies firms. All the important French, American, Italian, and Belgian motor-car and motor-cycle firms were exhibiting their newest models, while Switzerland was represented by the Martini and Pic Pic motor-car factories, and Great Britain by Rolls Royce, Sunbeam, and Wolseley, which have agents in Switzerland. Despite the economic crisis, very good business has been done this year, especially by the French and Italians, who, owing to the low rate of their currency in Switzerland, are in a position to sell their cars at very low prices with which the British motor industry cannot compete. If the rise of the French franc and of the Italian lire continues it will certainly benefit British exporters, whose prices are very much lower than they were at last year's Salon.

Prospects for the British motor-car industry are good in Switzerland, where there is an increasing demand for powerful and high-grade cars, but British exporters should make an effort with a view to meeting the particular needs of Swiss purchasers.

GREECE. — NATIONAL BANK'S MEETING—THE ECONOMIC SITUATION.

(FROM OUR CORRESPONDENT.)

ATHENS, March.

THE deficit of the Budget for 1923-1924 is expected by the Minister of Finance to reach only 1,700 million drachmæ, instead of the estimated amount of 2,900 million drachmæ. Taxation shows the following development since 1912:—

	(000's omitted.)		
1912	76,587	1920	275,086
1914	135,317	1922	506,663
1917	108,330	1923	1,104,594

Thus taxation increased since 1912 by 1,342 per cent. On the other hand, the depreciation of the drachma (taking the average rate of exchange on New York for 1923)

amounts to 1,147 per cent. The cost of living in Athens was 1,325 in January, and 1,313.6 in February, 1924, as against 100 in 1914, the basis year. The growth in bank deposits since 1912 appears from the following table:—

	(In Millions of Drachmæ.)		
1912	434	1921	3,112
1914	473	1922	3,681
1920	2,290	1923	4,586

The popularity of the Treasury bill has increased recently, absorbing a considerable part of the people's savings, which before were placed on deposit with the banks.

At the annual meeting of the shareholders of the National Bank of Greece, the Governor, Mr A. Diomède, stated that 1923 was an eventful year for Greece. Despite the conclusion of final peace by the signing of the Treaty of Lausanne, the uncertainty of the future, and various unforeseen external and internal events, produced reactions which influenced the monetary situation. The currency, offering the point of least resistance, was disturbed under the influence of impressions which were often superficial. Circulation of bank notes amounted at the end of the year to 4,681 million drachmæ, or an increase during the year of 1,532 millions. Whereas, he said, the increase in circulation in 1922 was due exclusively to the needs of the Treasury, only 750 millions were issued for account of the State during the past year, and this amount has since been reduced by 90 millions, while another amount of 50 millions has been withdrawn from circulation in redemption of older advances to the Treasury. The balance of increase is covered by short-dated credits to trade for productive purposes, and by sound foreign currencies purchased on the exchange market to be used as a defence of the home currency. This substantial change in the circulation has improved the quality of the whole circulation, and may be considered as the beginning of a healthier monetary period. The per capita circulation amounts to £2 12s 8d, a better figure than for many other countries, notwithstanding that the war period terminated for Greece only some months ago, that within a short time the population increased by one-fifth, and that the country had to pass through a series of eventful years and misadventures. The Treasury drew the money required to meet its needs from the following sources:—350 million drachmæ were advanced by the bank, being reduced until the end of the year to 176 millions. More than 600 millions were obtained by the sale of Treasury bills. The increase in the amount of Treasury bills sold is considered as a proof of growing confidence on the part of the public, and has been of great assistance to the State under the circumstances. Another source of assistance to the Treasury, though an indirect one, is the advance of £1,000,000 made to the National Bank of Greece by the Bank of England, on behalf of the refugees. All these sources, however, would have proved insufficient if a great fiscal effort was not made by the country, which increased the ordinary Budget revenue by 1,200 millions. Foreign exchanges were very erratic, reflecting the eventful history of the year, no obstacles having been put to the free movement of the rates. Under the influence of pessimism, of which advantage was taken by speculators, the rates were pushed higher and higher, until exchange on London reached on March 3, 1923, the record figure of 464 drachmæ. On the other hand, the crisis of the exchanges, which took the form of a panic during May, brought down the rate to as low as 125 drachmæ. Both extremes were equally harmful and dangerous, and the National Bank in either case did its best to prevent disaster from falling upon the country, which, however, showed staying power. The policy of the bank is to restrain the fluctuations of the rates within narrow limits, aiming at a slow and gradual improvement of the currency, keeping pace with a general improvement of the economic and financial situation of the country. Unless unforeseen obstacles should arise, the bank hopes to obtain a relative stability of rates. The stock of foreign exchange accumulated by the bank is very useful to that effect. Purchases of foreign exchange by the bank during 1923 amounted to £22,258,552, say £7,183,163 more than in 1922, and sales to £19,087,365, leaving a surplus of £3,168,187.

HUNGARY. — OFFICIAL SALARIES REDUCED — CURRENCY AND EXCHANGE—THE CONTROLLER.

(FROM OUR CORRESPONDENT.)

BUDAPEST, March 22.

THE first step towards economy has been taken by the Hungarian Government in announcing that from April 1st all the preferential rates granted to Government servants will cease. This means that whereas officials have been in the habit of purchasing their domestic necessities, food-stuffs, coal, &c., at a much lower rate than the ordinary public, the privilege will now stop. The consequent reduction in the purchasing power of their salaries will be about 20 per cent. It will be a hard blow, and heavily felt by many of the officials, whose incomes are already burdened with increased prices. A rise in their salaries will be a necessity. The latest increase in railway rates will find its sequel in still higher prices.

The printing press has ceased to function, and the new Bank of Issue is in course of formation. The fiduciary issue has been reduced by some 93 milliards, and is now, in sterling, not above 4 million pounds. The value of the crown remains more uncertain than ever, and the value of the "Sparkronen" has varied between 100 and 118 paper crowns. It is much regretted that Mr Harding has found himself unable to accept the position of Controller; another American is now named in connection with the post, but nothing has been settled yet, and certain objections have been raised by irresponsible persons to the latest nominee. However, before the duties of the latter commence seriously the loan has to be raised, and the atmosphere in Hungary cannot be said to be favourable at present.

Most of the delegates of the League have now left Hungary, their work being finished. Sir Henry Srakosch, before leaving, expressed himself optimistically as to the capacity of the country, but also stressed the point that the people of Hungary must show that they are capable of helping themselves. Once Europe is satisfied of that, there should be nothing to hinder the subscription of the loan and subsequent flow of foreign capital into the country. Steps towards setting up the Bank of Issue have already been started, and there is every reason to hope that the necessary legislation will be passed through the National Assembly by the end of next week.

AUSTRALIA.—IMPORTS AND EXPORTS—BORROWING—BANKING POSITION.

(FROM OUR CORRESPONDENT.)

MELBOURNE, February 23, 1924.

AUSTRALIAN official trade statistics run from July to June, but an unofficial compilation from the monthly returns shows the following totals of Australian trade for the last three calendar years:—

	1921.	1922.	1923.
Imports—			
Merchandise	119,891,647	122,266,693	136,258,283
Gold	20,670	32,441	18,038
Total imports	119,912,317	122,299,134	136,276,321
Exports—			
Merchandise	123,581,500	125,067,686	111,899,740
Gold (inc. premium)	4,098,243	2,945,459	1,952,009
Total exports	127,679,743	128,013,145	113,851,749
Principal exports—			
Wool and tops	31,338,531	57,530,351	55,293,440
Wheat and flour	46,574,302	22,547,193	15,481,400
Frozen meat	4,741,800	5,858,437	4,220,358
Hides and skins	2,429,104	5,480,660	6,246,982
Copper	1,182,383	458,177	1,228,298
Lead	788,642	2,322,525	2,680,462
Silver	492,965	952,590	1,066,765

In 1921 exports exceeded imports by £7½ millions, and in 1922 by £5½ millions, but in 1923 imports have exceeded exports by nearly £22½ millions. It should be noted that exports in 1921, 1922, and the early months of 1923 included wool bought and paid for much earlier by the British Government, and therefore not representing fresh payment at the time of shipment. On the other hand, the exports of wool of current clips have been supplemented by the Bawra payments representing the half-share of profits on the resale of wool purchased by the

British Government, and this factor has not yet ceased to contribute to Australian purchasing power. But the main reason for the large excess of imports during 1923 has been the amount of outside borrowing during the last two or three years, but for which Australian imports would require to be fully £25 millions per annum less than exports in order to provide for interest and earnings on public debts and private capital raised abroad.

At the present moment, unless fresh borrowing outside Australia is to be resumed on a large scale, a substantial reduction in imports is required. Large borrowing, however, is regarded in responsible business circles as undesirable, in view of the rapid growth during late years of the principal and interest of the existing public debts, the tendency to excessive growth of city population in contrast with that of the country, and the fact that country production is hardly more than stationary when the actual volume of production is looked at independently of gross value at high prices.

New Zealand imports for 1923 amounted to £43,486,544, against £35,005,440 for 1922, or an increase of £8,481,104; and exports, inclusive of gold, to £45,967,119, against £42,726,249, or an increase of £3,240,870. The excess of exports over imports has thus declined from £7,720,809 in 1922 to £2,480,575 in 1923. The principal exports from New Zealand compare as follows:—

	1922.	1923.
Wool	11,882,553	10,904,658
Butter	9,041,554	10,689,200
Cheese	4,686,850	6,870,397
Frozen meat	8,387,461	9,012,720
Gold	540,182	698,582

The Commonwealth Government is now offering within Australia a war gratuity redemption and conversion loan at 6 per cent. (subject to Commonwealth taxation, but free of State income-tax) at par, repayable in 1927, 1929, or 1934, at the option of the subscriber to be increased when making application. The amount of the loan is left open. Applications close on March 18th. It was hoped that arrangements could be made with the States to keep off the market while the Commonwealth loan was being issued, but the attempt was a failure, and the principal States are offering 6 per cent., subject to Commonwealth income-tax, but free of State income-taxes, for securities on tap at their respective Treasuries with currencies up to ten years. The Commonwealth issue is a necessary provision for the war gratuity bonds maturing next May, but the constant pressure of the States for loan money is disliked, being one of the principal reasons for the present tightness.

The quarterly average returns to December 31, 1923, of the banks in Australia and New Zealand (exclusive of the Commonwealth Bank) show that, as compared with a year ago, deposits are larger by £12,020,195, and advances by £23,331,553. London and other outside figures are not included in the returns. A comparison of the principal totals with those for the previous quarter and a year ago is as follows:—

	Dec. 31, 1922.	Sept. 30, 1923.	Dec. 31, 1923.
Deposits—			
Australia	221,714,510	230,771,010	231,741,642
New Zealand	44,429,434	48,983,798	46,422,497
Total deposits	266,143,944	279,754,808	278,164,139
Advances (inc. Govt. securities)—			
Australia	193,054,338	211,036,415	213,316,033
New Zealand	49,266,016	48,732,475	52,335,874
Total advances	242,320,354	259,768,890	265,651,907
Cash items—			
Coin and bullion (A. and N.Z.) ..	27,686,456	27,213,001	27,393,510
Australian notes	23,565,130	23,175,604	22,969,183
Legal tender notes of other banks (N.Z. only)	539,592	249,059	350,368
Total cash	51,791,178	50,637,664	50,713,055

Of the increase of £23,331,553 in total advances during the year, £20,261,695 has been in Australia, and £3,069,858 in New Zealand, these movements being somewhat in contrast with those during 1922, when an increase of £10,121,638 in Australia was accompanied by a decrease of £4,241,259 in New Zealand. Both

in Australia and New Zealand there has been a marked increase in imports during 1923, and this has meant an extra trading demand for accommodation to supplement the regular requirements of the country districts, and the requirements of some of the principal Australian capitals, where a good deal of building activity has been in progress, both for residential and industrial purposes. Any tendency to speculation in Australia, however, has been checked by the tightness prevailing during the last few months, and although proper requirements continue to be met, anything further is strictly discountenanced.

The wool export season has made exceptionally heavy demands upon available resources. As against the fact that the Australian clip shows a reduction, the high prices ruling have caused the value of shipments to run into a heavy total. The process of financing the export trade has not been assisted by the policy of currency restriction, which has had a cramping effect upon financial arrangements. The growth of deposits, based upon favourable producing seasons, and upon prices obtained outside Australia for wool and other articles, is accompanied by a practically stationary total amount of coin and Government notes available to constitute the cash holdings of the banks within Australia, and it is consequently impossible to maintain the ratios of cash to liabilities at the level formerly observed. In pre-war conditions, the cash holdings were increased by retaining gold out of current production, but at present the fresh production of gold goes abroad at a premium.

Letters to the Editor.

COMPANY DEBENTURE REDEMPTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I had hoped that my letter of the 18th ult. would be my last to you on the above subject, but the Manchester Stock Exchange letter in your issue of the 29th ult. can hardly be allowed to stand as the last word. I therefore venture to make the following observations, and can assure you that this will close the matter so far as I am concerned.

I went to the interview with the Manchester Stock Exchange authorities, to which their letter refers, for the purpose of trying to make reasonableness and common sense prevail, but I seem to have missed the mark badly, and now the Manchester authorities and I cannot agree even as to the upshot of our conversation! I regret this extremely, but, after all, what was said or not said on that occasion really does not affect the point at issue, which is this—whether a company has the right to redeem an officially quoted debenture stock by private treaty. I hold that the Stock Exchanges exist for the purpose of serving the public, and not for "butting in" where their help is not needed. In a previous letter I quoted two instances of companies whose practice is as nearly identical as it is possible to be with that of the Union Cold Storage Company, Limited, and these Manchester has disregarded. Issuing houses generally and companies which have made their own issues would bear me out in the statement that when a commission is offered to brokers for introducing capital, and is payable on allotments where the application form bears the broker's stamp, it is seldom that the commission earned by brokers is more than 50 per cent. of the total issue, and it often amounts to less than 25 per cent. If brokers can only earn this proportion on issue, why should Manchester insist on 100 per cent. on extinction?

Manchester's plan seems to be to compel submission to its terms, or failing that, to punish the company concerned by deleting or refusing the quotation of its stock, and thereby possibly injuring the company's credit. So far as my company is concerned, Manchester is not likely to achieve either of these results, and this is not the plan on which the reputation of the Manchester list has been built. A good deal might also be said concerning the stockholders' point of view, and Manchester seems to disregard them altogether. I will content myself with saying that I can quite well imagine a stockholder show-

ing considerable resentment at any interference between him and anyone he cares to sell his stock to, and objecting to Manchester instructing him through what channel he should realise his security.

As regards the allusion to Birmingham, I would draw attention to the fact that my company's debenture stock is still quoted in the Birmingham list. If there were any question of the quotation being removed, I take it that Birmingham would approach my company direct on this subject, and not take instructions from Manchester.

In conclusion, may I ask whether it would not be wise for all the provincial Exchanges to consider carefully London's example, and if they cannot follow it, then to suggest a joint conference with London, so that, if possible, a uniform practice may prevail in this important matter?—Yours, &c., ROGER P. SING,

Chairman of the Directors,
Union Cold Storage Company, Limited.
United University Club, London,
April 2, 1924.

A HUNDRED YEARS OF TRADING.*

ON March 29th the one hundredth anniversary of the founding of the Netherlands Trading Society was celebrated, and a handsome volume of its history has been issued. The vicissitudes both of history and policy, which the company has seen, are perhaps almost unequalled in the history of any other company. The company was founded on March 29, 1824, at the initiative of King William I. The king was anxious to see a revival of trade in the Indies, for the Dutch trade in these parts had declined in consequence of Napoleon's Continental System, and had fallen very largely into English hands. The capital of the company was originally fixed at 12 million florins, of which the King was to provide 4 millions. Public interest in the new enterprise was, however, so great (partly because the King guaranteed 4½ per cent. interest on the capital), that on the very first day fully 60½ millions were subscribed. Subsequently the capital was fixed at 37 millions, the King retaining his original number of shares.

The company was to act as trader, commission agent, forwarder and moneylender, but was expressly forbidden to do banking business. The first years were, however, unprosperous, for the Java war was in full swing, and a great economic crisis broke out in Great Britain in 1825. In 1827 the capital of the company had to be reduced to 27 million florins. Until 1830 the company continued to register losses; that was the first year in which there was no need to claim the guarantee offered by the King. When success came, it was at first largely due to the export of cotton goods, chiefly from Belgium, which was at that time united to Holland. Then in 1830 the Belgian Revolution suddenly broke out. The loss of Belgium meant the cessation of the export of cotton goods from Ghent, and the Netherlands Trading Society seemed to have lost its *raison d'être*. But the company went bravely on, helped by the schemes of Van den Bosch, the Governor-General of the Dutch East Indies, who subsequently became Colonial Minister. Van den Bosch introduced the system of Government plantations, based on forced Indian labour, the N.T.S. acting as agent for the sale of the products. Thus the company slowly developed into a Government banking agency. At first advances were only made on goods consigned; later on all the financial transactions between Holland and the colonies passed through the company's hands. Thus in 1839 the outstanding debt owed by the Government to the company amounted to 39 million florins. A Bill to authorise a loan of 56 millions to clear this debt was thrown out. At last it was arranged that an instalment of 5 millions should be paid yearly. In the meantime the Government gradually gave up its plantations, so that by 1870 none were left. Meanwhile, the N.T.S. was beginning to take part in Dutch industry. The loss of the Belgian cotton industry resulted in the establishment of a similar industry in Holland, in the founding of which help was given by an English expert,

country in the world—a fact which will perhaps come as something of a surprise to most of our readers.

Bohemian graphite is made into the world-famous Koh-i-Noor pencils, and the extraction of radium is also an industry of more than local importance. The engineering trades naturally take a very important place in this volume, though the brewing of *Pilsener Urquell* is not forgotten, nor many another industry less well known. Chapters on the Trade Union movement and on Industrial Organisations add still further to the comprehensiveness of this work, which is indeed indispensable to all interested in the economics of the new Central Europe.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, April 23. ACCOUNT, April 24.

At the beginning of the week the Government announced its scheme offering to holders of the 5 per cent. War Loan the option of converting part of the total amount of 2,000 millions into a new 4½ per cent. stock, dated 1940-44, of which £103 will be given for £100 War Fives exchanged. The immediate effect was to cause a substantial improvement in gilt-edged issues as a whole. This came about through prompt recognition of the fact that the Government have restarted the policy initiated when the 3½ per cent. Conversion stock was created—namely, of raising by steady degrees the credit of the country through the medium of offering stock at what is virtually a higher price with each instalment that is issued. The War Loan rose to 102½ at one time, and material improvements occurred in Consols, Irish, and all the stocks in the India Government catalogue, the existing 3½ per cent. Conversion Loan, various Colonial scrip stocks, a score or more of Home Railway prior-charges, and a number of others.

named Thomas Ainsworth. Great Britain's competition could be overcome by the exemption of the Dutch goods from the 25 per cent. import duty on cotton goods. In 1835, however, Great Britain made appeal to a commercial treaty of 1824, which provided that Dutch imports should pay an import duty of 12½ per cent. Still, the Dutch continued to compete successfully by means of a secret contract concluded by the N.T.S. with the Dutch Government; by this contract the Government consented to be responsible for all losses up to 12 per cent. of the invoice value. From 1835 this contract was constantly renewed until 1844, when it was abolished. In 1849, when the results of the Revolution were being felt by the company, new cotton contracts were made, but on considerably less favourable terms. Since then the links with the Government have slackened, and the N.T.S. has extended its activities into the sphere of private trading. The company worked for some time in Japan, from which country, however, it speedily withdrew. It also worked in the West Indies, but its chief sphere of operations continued to be the East Indies.

When it was no longer required to act as banking agent of the Dutch Government, capital was available to support all manner of enterprises, especially the cultivation of tobacco and sugar. The most characteristic change in its activities took place, however, in 1874, when it was decided that the company should be permitted to trade in securities and bills of exchange, which converted it into a bank as well as a trading company. The banking business really originated in Batavia, where the company began to accept deposits in 1883. In Holland its banking business did not develop to any considerable extent before 1900. In 1904 the balance-sheet showed for the first time a special item for deposits. The company has now developed into an enterprise with a capital of 80 million florins, and reserves of 42 millions. Its total balance-sheet for 1922 reached the huge figure of 520 million florins, and it is thus able to play a leading part in the economic life of Holland and her colonies. The volume makes most interesting reading.

THE INDUSTRIES OF CZECHOSLOVAKIA.*

SOME three-quarters of the industries of the former Austro-Hungarian Empire are situated in the territories now comprised in Czechoslovakia. Bohemia is noted for products as various as glass, sugar, and Pilsener beer, and the Skoda engineering works are known throughout the world. It is, therefore, quite appropriate that the first volume of the *Encyclopédie Tchecoslovaque*, which is published in Prague in French with the object of making this interesting country with an unpronounceable name better known to the outside world, should be devoted to "Industry and Commerce."*

The editors have enlisted a large number of specialists to write on the various subjects which fall under this comprehensive title, and the value of these six hundred pages of text is greatly enhanced by the inclusion of a large number of maps and illustrations. A welcome feature, too, is the fact that almost every contributor gives a short historical survey of the industry he treats, and this is usually sufficient for the reader to form some idea of the rapid development of large-scale production in the country during the second half of the nineteenth century. The textile industries, which before the war produced goods to the value of some £70 million annually, of which less than one-third were consumed at home, employ 38 per cent. of the industrial workers of the country, and naturally receive considerable attention. Coal mining is also very important, though post-war production is on the whole decidedly inferior to the 1913 level, despite the increase in the number of workers employed, as the following comparison shows:—

	1913.		1921.
Coal—			
Output (metric tons) ..	14,235,856		11,648,399
Number employed ..	62,407		75,893
Lignite—			
Output	23,017,096		21,050,712
Number employed ..	35,051		51,440

The Republic thus takes rank, after the U.S.A., Great Britain, and Germany, as the fourth coal-producing

* *Encyclopédie Tchecoslovaque.* Vol. I. Industrie et Commerce. (Prague: Orbis. Paris: Bossard, 43, rue Madame.)

The following communiqué was issued by the Committee of the London Stock Exchange on March 31st:—With reference to the information published in the Press on December 12, 1923, the Committee for General Purposes have given instructions for the quotations of the undermentioned loans to be automatically removed from the Stock Exchange Daily Official List of May 2nd unless the Chinese and Roumanian Governments fully resume the service in respect of the bonds in question: Chinese 5 per cent. 1896 loan, Chinese 4½ per cent. 1898 loan, Chinese Hukwang 5 per cent. 1911 loan, Roumanian 4½ per cent. gold loan of 1913.

The new issues of the week and the current year have been as follows :—

Treasury Bonds.—The Treasury announces that the current series of 4 per cent. Treasury bonds, 1923, will terminate on Saturday, April 12, 1924. Bonds issued after that date will be designated Series "C." The first dividend on holdings of these bonds will be due on October 15, 1924, and in the case of each bond will represent interest to that date from the date of the bond. In all other respects Series "C" bonds will rank *pari passu* with bonds of the current series; the series will be consolidated after the close of business on September 15, 1924.

£4 10s per Cent. Conversion Loan, 1940-1944.—Interest is payable half-yearly on January 1st and July 1st. The stock is an investment authorised by The Trustee Act, 1803. This is an offer of conversion to holders of £5 per cent. War Loan, 1929-47. Such holders may apply for the conversion of their holdings, in whole or in part, as on June 1, 1924, into £4 10s per cent. Conversion Loan, 1940-44, at the rate of £103 £4 10s per cent. Conversion Loan for each £100 of £5 per cent. War Loan converted. The total nominal amount of £5 per cent. War Loan of the Bank of England issue (including stock of that issue inscribed or registered in the books of the Bank of Ireland) to be converted in terms of this prospectus is limited to £200,000,000. When applications for the conversion of that amount of stock have been accepted no further applications will be considered. The half-year's dividend due June 1, 1924, on the £5 per cent. War Loan will be paid in respect of converted holdings. The principal and interest of the £4 10s per cent. Conversion Loan will be a charge on the Consolidated Fund of the United Kingdom. The loan will be redeemable at par on July 1, 1944, but his Majesty's Government reserve to themselves the right to redeem the loan at par on any half-yearly interest date on and after July 1, 1940, on three months' notice being given in the *London Gazette*. Interest on the loan will be exempt from corporation profits tax. Holdings may be in the form of (1) inscribed stock "transferable in the books," (2) registered stock "transferable by deed," or (3) bonds to bearer. We refer to this offer in our leading article this week.

Auckland Electric Power Board 5 per Cent. Loan.—This is an issue of £250,000 in debentures to bearer, at £97 per cent. The principal will be repayable at par on April 15, 1945, at the office of the Bank of New Zealand, London, where also the interest will be payable. This loan, which is the balance of the board's authorised loan of £600,000, is issued to provide funds in connection with the board's electricity undertaking in and around the City of Auckland. The present authorised loan capital of the board (including this issue of £250,000) amounts to £1,722,500. The authorised issue of £600,000 (of which this present issue forms part) is secured by a special rate of two-fifths of a penny in the £ on the rateable value of all rateable property in the Auckland Electric Power District. The rateable value amounts to £43,469,650, and the board is also empowered to levy an additional rate should the special rate referred to prove insufficient to cover expenditure in any year. A sinking fund of 2½ per cent. per annum will be provided. This loan is free from all New Zealand taxes, present and future. Zealand. A good investment, but not very attractive at the price offered.

Sena Sugar Estates, Limited.—Issue of £250,000 7 per cent. first mortgage debentures. The following details are extracted from a statement which has appeared in the Press to comply with the regulations of the London Stock Exchange. These debentures "will rank *pari passu* in point of charge with an existing issue of £500,000 7 per cent. first mortgage debentures of the company secured by trust deed dated October 6, 1922, and made between the company and the Law Debenture Corporation, Limited, and will be secured by the said trust deed and a deed supplemental thereto containing a specific charge on the company's lands, cane mills, sugar factories, and

refineries in Portuguese East Africa and Portugal, and on the fixed plant and machinery thereon, a covenant by the company to create similar charges under local laws, and a floating charge on the undertaking and other assets of the company for the time being. These series 'B' debentures will not participate in the sinking fund referred to in the said trust deed, but they will be redeemable on or before December 1, 1955, by purchase at or below par, exclusive of accrued interest, or by drawings at par by the operation of a separate cumulative sinking fund of 1 per cent. per annum, commencing in the year ended December 1, 1924, with power to the company to redeem the whole or any part on any interest date after 1935 on three months' notice at 103 per cent." The issue has been purchased by a London financial house at 88½, less ½ per cent. commission. The information given is insufficient for the outside investor.

The following tables show the movements of the week in the more active securities of the various markets:—

COMPANY MEETINGS, &c.

NATIONAL BANK OF GREECE.

A YEAR FULL OF EVENTS.

IMPROVEMENT IN CIRCULATION.

PUBLIC FINANCES AND FOREIGN EXCHANGES.

THE CREDIT OF THE COUNTRY RESTORED.

INTENSIVE BUSINESS NOTICEABLE EVERYWHERE.

INCREASE OF THE BANK'S BUSINESS.

A REAL ESTATE BANK.

The ordinary general meeting of the shareholders of the National Bank of Greece was held on March 3, at the head office of the bank, Athens, Greece.

The Governor, Mr A. N. Diomède, read, on behalf of the general council of the bank, the report for 1923, the chief points of which are given below.

THE PAST YEAR.

The year just drawn to a conclusion was, like its predecessors, full of events. Our trials have not come to an end, and notwithstanding that the signature of the Treaty of Lausanne signalled our entrance into a period of definite peace, the uncertainty of the future, together with unforeseen events at home and abroad, produced a reaction which had a direct influence upon the currency situation. Our monetary standard, the point of least resistance, was affected according to what were often uncritical impressions. For, unfortunately, people who lack sufficient coolness, are affected by changing influences and fall from the extreme of optimism to unjustifiable pessimism, without carefully weighing the real facts, which alone can restrain them within the limits laid down by reason.

CIRCULATION.

Our maximum right of circulation amounted on December 31, 1922, to 3,698,141,090 drachmæ, and on December 31, 1923, to 5,406,036,200 drachmæ, i.e., it presented an increase of 1,707,895,110 drachmæ. Deducing the disposable funds in the bank's coffers on December 31, 1923, or 724,836,140 drachmæ, the notes actually in circulation amounted to 4,681,200,060 drachmæ, against 3,149,446,274 drachmæ on December 31, 1923. The real increase during the year has thus been 1,531,753,786 drachmæ.

But, whilst in the year 1922 the increase of circulation, 1,150,000,000 drachmæ, was exclusively due to the needs of the Treasury, and supplied the financial requirements of the Treasury only, and consequently had nothing behind it but the credit of the State, in 1923, for the first time—and I call your attention to this point—out of the whole increase of 1,707,895,110 drachmæ the issue of 750,000,000 drachmæ only was provoked by monetary stringency on the part of the Treasury. But this amount also—and this too is worthy of note—commenced during the year to be reduced through the withdrawal from circulation of 40,000,000 drachmæ, to which, later on, a further 50,000,000 drachmæ was added. Besides these amounts, and in accordance with existing conventions, the State returned 49,500,000 drachmæ for cancellation, out of previous loans in forced currency, so that the debt of the Treasury to the bank in forced currency was reduced by 139,500,000 drachmæ.

The balance of the issues during 1923, or approximately 1,000,000,000 drachmæ, was demanded by the needs of the market. That is to say, this issue had behind it either short-dated credits, representing productive work of the community, or sound foreign exchange derived from the market, in order to serve as a strong

protection for the national currency. This substantial change in the conditions of issue is reflected on the quality of the whole circulation, and may with reason be considered as a commencement of a more healthy period.

A COMPARISON.

This change may be clearly seen by a comparison of the two years:—

	In millions of drachmæ.	
	1922.	1923.
Debts of the Treasury	2,074	2,802
In productive business	1,075	1,879

Total of actual circulation 3,149 4,681

Of course the extent of our circulation is not natural, especially as compared with the pre-war circulation. However, it is vain to go back to a period when business was done under altogether different economic conditions. That past can no longer serve as a safe standard of comparison. The only comparison that can enlighten us is one with the present monetary policy of other States, as we must not forget the close solidarity which the common origin of their economic straits has created between the various countries which have close economic relations. It does not seem possible, nor is it economically desirable, to return quickly and suddenly to low limits of circulation, which only a superficial view can represent as beneficial. For a dangerous stringency of money would be created, and money would become dearer owing to the rise in the rates of interest, whilst on the other hand local production would not be able to stand the expenses of cultivation, &c., and competition with foreign markets would become impossible. These evils would bring with them an increase in the cost of living instead of a reduction.

DESIRABLE POLICY.

What is most desirable, and should be the chief object of our efforts, is the qualitative improvement of the circulation with a gradual and systematic quantitative modification. For years to come we shall find ourselves struggling against difficulties which are the result of the complete upsetting of the equilibrium. We shall meet and diminish these difficulties if the active factors of the country—public and private economy—carefully avoid committing mistakes which would strike a heavy blow at the national economy, and would hinder the gradual recovery of the country through the strengthening of its whole economic organisation.

I think that, as Greece has been restrained in time from following the downward path of successive issues, to which countries which have suffered economically and politically so easily betake themselves, she is able without fear to stand comparison with most other States.

Notwithstanding the fact that it is barely six months since a period of war, entailing enormous expense to the country, has come to an end, and within a very short space of time her popula-

tion has been increased by so much as one-fifth; and that for years lamentable internal disturbances, which have impeded her economic restoration, have troubled her, nevertheless the note circulation in Greece amounts to an equivalent of £2 12s 8d per head of population.

The circulation of most other countries is less favourable, although they have for five years past re-entered into conditions of peace, and have been able in the meantime both to restrict their military expenses considerably, and to devote their energies unhindered to the work of rendering their currency sound.

POWERS OF INCREASE USED SPARINGLY.

It must be admitted, after an unprejudiced examination, that the means of increasing the money supplies of the State through increasing the circulation was resorted to during the past year with sparingness. But this was not easy, because both the need was urgent and the temptation to find funds by the issue of more notes was strong. But the consciousness was also strong of the disaster which would overtake the whole national economy unless every possible effort were made to put an obstacle in the way of easy financing. For nothing would then be able to check the fall of the drachma, and the soaring of foreign exchange and the cost of living to fresh inapproachable heights, from which I know not what favourable circumstances could ever bring them down.

METHODS USED TO MEET ENORMOUS EXPENDITURE.

The Government had also to meet enormous expenditure due to the continuance of the state of war, and to the necessity of strengthening the defences of the country in order to avert immediate danger, for the maintenance and settlement of a million refugees, and further to meet daily increasing ordinary expenditure, especially on account of the growing increase in the cost of living. This expenditure was met:—

1. By temporary advances by the National Bank out of its own disposable funds, according to the precedent set in past years. These advances amounted to 343,000,000 drachmæ, but declined by December 31st to 176,630,692 drachmæ in consequence of repayments from the surpluses of the public Treasury from time to time.

2. By the sale of National Defence Treasury bills. Investment in these Treasury bills commenced in 1918, but was of little assistance to the State during past years, amounting as it did in 1918-1919 to 148,000,000 drachmæ; in 1920, to 41,000,000 drachmæ; in 1921, to 119,000,000 drachmæ; in 1922, to 21,000,000 drachmæ. But in 1923 the amount suddenly jumped up to 603,000,000 drachmæ, and raised the balance of the Treasury bills disposed of on December 31st to 934,000,000 drachmæ. It is to be noted that investment in these Treasury bills has not ceased as one might have expected to be the case, owing to the fall of the drachma, seeing that during the last two months of the year a fresh amount of 251,000,000 drachmæ was invested.

INVESTMENTS BY THE PROVINCES.

This fact is an entirely satisfactory phenomenon, the more so as a detailed examination into the source of these funds shows that a large part of them, amounting to 299,911,100 drachmæ out of the 603,000,000 drachmæ invested in 1923, came from the provinces, that is to say, from sources which had not lately been considered favourable to such investments. The confidence which gradually was inspired by this investment, its regular service, and the fact that it was always easy to discount, attracted from its hiding place the formerly unproductive capital of the provinces, and offered it for utilisation by the public. The assistance thus rendered was most valuable to the State. In this manner the country contributed from its own resources, and spontaneously to cover a considerable portion of the deficit which extraordinary expenditure had caused in the Budget.

In other countries many people have considered the increase of the circulation of Treasury bills to show an increase of inflation because many of them were bought not out of disposable funds, but by credits granted by banks. But with us nothing of the kind has occurred, and I doubt if even one such bill has not been bought by free capital not otherwise disposable.

ADVANCES FROM BANK OF ENGLAND.

3. The Treasury has had considerable assistance also from the advance of £1,000,000 indirectly made to it through the Convention between the Bank of England and the National Bank. Owing to this advance, the heavy expense of settling the refugees in town and country had ceased to be drawn from the Budget of the State revenues. This satisfactory result has been achieved, thanks to the powerful intervention of the League of Nations, in the question of the protection of the refugees, and to the ready support accorded to us by the Bank of England. It is my duty here to express my thanks to the Governor of that bank for the ready manner in which he overcame the difficulties which the question encountered owing to the then prevailing conditions.

Of course, an advance of £1,000,000 does not settle the problem, and the decision of the League of Nations provides for a loan of £6,000,000 for fully carrying out the programme. We have, however, reason to hope that we shall obtain this assistance from abroad, even if at first in instalments.

INCREASED TAXATION.

4. All these means, however, would have proved inadequate from both a financial and an economic point of view, to permit the Government to meet the emergencies of the situation unless taxation had not been increased as well. That taxation should remain at its former level was impossible, both because the monetary basis on which it was first founded had radically changed, and no longer represented the ratios formerly laid down, and because production of all kinds, which was developing rapidly, and which found a ready market at high prices, would thus have remained practically almost immune from taxation. Further, so long as the State expenditure was increasing, even the regular and regularly recurring expenditure, it would have been an act of the greatest imprudence if the Minister of Finance should not have assured cover for this expenditure from regular sources derived from the existing and produced wealth. This was, in fact, the policy adopted by the Government. In this way it enriched the Budget by fresh regular revenue amounting to about 1,200,000,000 drachmæ, and gave the impression not only in the country, but especially abroad, that the country was making serious efforts to improve its finances, and to lay sounder financial foundations for the future.

EXCHANGE.

Foreign exchange rates were subject to great fluctuation during the year just drawn to a close, and gave a faithful reflection of the chequered history of the year, ranging from perfect confidence to the most imprudent suspicion. Rates being freed from the artificial restraint of State intervention, followed closely the inspiration of the market. If the regulation of prices had been based solely upon hard facts, harmful extremes would, of course, have been avoided, and the drachma would have acquired a more stable intrinsic value.

Careless observers believe that the evil of sudden fluctuations is exclusively due to dark designs cleverly manipulated by speculation. But it is wrong for them to throw the responsibility for periodical crises mainly upon speculation. Speculation is not the cause of the crises, it is the fatal, and up to a certain point, inevitable consequence of crises. Economic and monetary want of balance, from which not only Greece, but almost the whole world is suffering, favours the spirit of speculation, which is fostered still more by political uncertainty, and the complications and difficulties which such uncertainty threatens. Speculation is a phenomenon which appears at every excitation of the disease with which the currency is afflicted. Whenever the currency shows signs of improvement, as if by magic, the mania for speculation disappears, ready, however, to raise its head again directly fresh symptoms of the disease furnish a favourable ground for its cultivation. It is useless to hope that the evil can be got rid of by artificial means, because such means affect the symptoms only, and leave the cause of the evil untouched.

VIOLENT FLUCTUATIONS.

Under the influence of pessimistic psychological causes, which were purposely exaggerated still more by an unbridled tendency

towards speculation, the rates of foreign exchange mounted impetuously, and on March 3rd they reached the highest point, the pound sterling touching 464 drachmæ, and the dollar 98.61 drachmæ. Securities, even those which are not strong enough to stand a critical appraisal of their intrinsic value, rose in unison with this unreasonable movement. The excessive tension of prices and the overburdening of shoulders not strong enough to carry liabilities daily increasing by leaps and bounds, greatly contributed to the breaking out of a crisis which rapidly developed, especially in the month of May, into a panic. The rate of the pound sterling fell precipitately from 464 drachmæ to a constantly declining level, with still greater leaps, losing tens of units from day to day, until on June 1st it reached the lowest point, 126 drachmæ, *i.e.* within three months it lost 334 units, or, in other words, the drachma rose from five and a-half gold lepta to twenty gold lepta, thus quadrupling its value, more or less.

A convulsion of this extent from day to day upset the whole basis of values and calculation for the future. The forcing up of the rates of exchange to such high levels was clearly a diseased and artificial manifestation of want of confidence, which did not correspond with actual facts, that is, to the intrinsic value of drachma by virtue of the economic strength of the country. On the other hand, however, the sudden and great recovery beyond the limits of the most optimistic reasonableness equally manifested an unsound extravagance, capable quite well of causing irreparable disaster, which might have dealt a mortal blow to nearly every wealth-producing branch of the national economy.

Those who welcomed this unexpected and great improvement in the value of the drachma, as a sign of economic health, did not see that it was just this sudden change in the basis of the standard of every value in the country which was ruinous. For the whole economic synthesis of the country, the conventions concluded during that period, which affected the whole public, and which created a network of complicated interests, had been erected upon a definite value of the drachma. But when this was shaken to its foundations, the fundamental conditions of the transactions were overturned, and there followed a halt in the economic life of the country, the results of which would have been incalculable.

BANK'S AID DURING CRITICAL PERIOD.

During this critical period the National Bank was in duty bound to intervene with the whole weight of its influence. Orders were given that none of its clients should be harassed, and the bank unhesitatingly came to the aid of the market with funds in order to assist it to carry out its obligations intact, and thus to prevent suspensions of payment and threatened failures which would have carried with them a large circle of the working community.* The funds thus advanced in this critical period reached a total of 155,000,000 drachmæ. But the chief care of the bank was to strike at the cause of the evil itself, *i.e.*, the sudden fall of rates. With this object the bank endeavoured by its own resources to absorb as large a portion as possible of the abundantly offered exchange, in order to cover both its own requirements and the liabilities which had been created by the orders for foodstuffs during the immediately preceding months of embarrassment, and in agreement with the Government it set in work the provisions of the Decree-Laws of November 29, 1922, and April 23, 1923, according to which the National Bank on issuing notes was to purchase foreign exchange at current rates in order to return it to the market, against cancellation of the notes issued, when called upon to do so. Through this measure it was found possible really to stop any further decline in exchange, and on the other hand to strengthen the National Bank also by a reserve fund belonging to the State in order that it might be in a position in moments either of slackness of offers or of speculative exploitation, to intervene with the object of checking any manifestation of acuteness. To-day this reserve fund amounts to £2,400,000 in round numbers.

CORRECT EXCHANGE POLICY.

The policy which, in the opinion of the National Bank, ought to be adopted with respect to the course of exchange is that of

endeavouring to keep rates within limits as close as possible. An improvement of the local currency can only prove firmly advantageous if it is gradual and slow, and is accompanied by a simultaneous general improvement in the country with an equilibrium in the public finances, for only in such case would it not affect the equilibrium of values which is anyhow with difficulty achieved and maintained. This is the course of action which the bank has laid down, and it hopes that, unless unforeseen impediments are brought about by extraordinary events, it will be able to achieve a relative firmness in, and, given the conditions assumed, a gradual improvement of, rates. The actual facts warrant such an expectation. The requirements of the Government in exchange—foodstuffs, public debt, and other State liabilities—no longer compete with the demand, and are easily covered by the exchange, quietly derived from the 15 per cent. handed in by the banks on their purchases.

MOVEMENT OF EXCHANGE.

The purchase and sale of exchange effected through the National Bank during the past year shows an increased movement, chiefly due to the fact that from the end of the month of April, after many years of the operation of provisions impeding the freedom of exchange transactions, business began again to be carried out without restriction. But a contributory cause was the gradual return of confidence following on the definite termination of the state of war, and the hopes that quiet would return to the country. A comparison of the last two years will, I think, show this correctly.

Purchases of exchange by the National Bank during 1923 (all currencies being converted into pounds sterling) amounted to £22,255,552. The corresponding figure for 1922 was £15,072,389. (It is to be noted that in this latter amount is included the purchases of all the banks forming the syndicate, for 10 months.) In other words, during 1923 the purchases of the National Bank alone represent an increase of £7,183,163.

	£
Sales of exchange by the National Bank during the year reached	19,087,365
Sales in the year 1922 amounted to	17,702,170

Or an increase for 1923 of 1,385,195

Thus, although the year 1923 has to show sales superior to those of 1922 by £1,385,195 (notwithstanding that the sales of 1922 were effected during 10 months of the year by all the banks of the syndicate), it nevertheless leaves a surplus, owing to the abundance of purchases, as follows:—

	£
Purchases	22,255,552
Sales	19,087,365
Balance	3,168,187

OBSERVATIONS.

The figures which I have given respecting the purchase and sale of exchange during the past year allow of certain definite deductions being made.

There is no doubt that foreign exchange is relatively plentiful in the country, and that it comes from export trade, from foreign remittances (especially from America), and also from reserves in exchange held by Greeks in the country. Whenever confidence is restored, these otherwise concealed funds come to the surface and are invested in drachmæ or in drachma securities. But these waves of suspicion which are periodically caused by that scepticism which is innate in the Greek character, always add an additional demand to the regular demand for the settlement of liabilities incurred to foreign countries. Thus the greatest hindrance to the regular regulation of the price of exchange is the always observable nervous haste of those who wish to turn their funds in foreign currencies into drachmæ, in order to retain the value of their property or to increase it by speculation.

But there are some clear indications that this suspicion is no longer the rule, and the price of the drachma has begun to be

estimated in a more practical manner, and the drachma to cease to be an undesirable currency.

REMITTANCES FROM EMIGRANTS.

Remittances from emigrants are rightly considered as a reliable thermometer of opinion of the world outside Greece as regards the value of the local currency. In 1922 these remittances reached a lower figure than had been observed for years, and amounted to only £2,095,000 (for the National Bank). The year 1923 gave us the first sign of an upward tendency, with £2,809,000 reaching the country through the National Bank alone—*i.e.*, an increase of £714,000. From the data provided by the chief banks, we are able to calculate that funds imported from emigrants during 1923 exceed a total of £5,000,000, whereas during the previous year they barely reached £4,000,000.

RISE IN GREEK SECURITIES.

Another encouraging proof of favourable estimation is the figure to which Greek securities dealt with in England rose in comparison with 1922. Five per cents. rose from £40 to £45 in 1922 to £50 to £55 in 1923—*i.e.*, they approach in value foreign securities, the capitalisation of which takes place at 8½ per cent. or 9 per cent.

This tendency on the part of the London market to take a favourable view of Greek securities is a most valuable asset for our country. For in that market the factors of credit are subjected to a severe test. The economic power of resistance of a country, its social and political stability, are weighed with the measure of unequivocal reality, and the judgment is faithfully reflected in the value attributed to the local currency, and thence to the prices of securities as well. It is unnecessary for me to lay any stress upon the importance of a favourable judgment of this kind to Greece. The general improvement observable on the London Stock Exchange in the rates of Greek securities, the prices of which are steadily mounting, forms another proof of increasing confidence in the credit of the country.

MOVEMENT OF BUSINESS.

The movement of the bank's business presents entirely satisfactory results for the past year. An important improvement is to be noticed in all branches of productive business as compared with the previous year. In spite of the continued care exercised by the bank to assist the Government directly, as well as by undertaking the supply of foodstuffs for the nation, its purely banking action was in no way prejudiced thereby. As a matter of fact, in comparison with 1922, owing to the greater easiness of the Treasury, the amount of the bank's disposable funds absorbed by it was considerably less. For, whilst in 1922 the bank paid over to the Government as definite or temporary loans, a sum of 693,000,000 drachmæ and 50,000,000, and it immobilised a high percentage of its disposable funds in exchange abroad, in 1923 no definite loan was issued, and the temporary advances amounted to 343,000,000 drachmæ, to be restricted by December 31st to 176,000,000 drachmæ, and its disposable funds in exchange not only were not touched, but the circumstances of exchange even permitted it to recover whatever it had advanced in the past, and entirely to free its deposit in actual gold with the Bank of England and to create a strong reserve in exchange.

In this way, with greater freedom of movement, it was enabled to come to the assistance of various undertakings in the country, which required a plentiful supply of capital in view of the prevailing upward tendency, in order to increase their production in both commerce and industry and agriculture. The bank assisted all these branches, and disposed of a total capital exceeding by 528,000,000 drachmæ that of the former year.

The crisis in exchange which broke out in the spring did not disturb the business of the bank. Notwithstanding the important development of commercial investments, they constituted no danger for the bank. The importance of this fact is still more worthy of remark if one takes into consideration the fact that the crisis came upon trade at a moment of intensification in consequence of the regular resumption of business in Macedonia and Thrace following on the restoration of peace.

NEW BRANCHES.

The progressive development of business in both Athens and the provinces, and the need of paying more direct attention to various thickly populated districts with considerable productive trade, obliged the bank to establish an annexe at Athens, which will shortly commence business, and three branches in Macedonia—*i.e.*, at Verroia, Katerina, and Grevena. The management of the bank, however, is considering a programme for the gradual development of the network of branches, on the conviction that they will serve the needs of those populations which are entirely without banking assistance, as well as the interests of the bank itself. The really intensive business which is almost everywhere noticeable is a guarantee of the future productiveness of the branches to be established.

The subjoined table shows the amounts disposed in productive business by the bank during the year 1923 as compared with those of the foregoing year, with the difference for 1923:—

(In Thousands of Drachmæ.)

	1921.	1922.	1923.	Difference. 1923.
				%
Discounts	..	552,778	705,090	+ 27.5
Advances to agriculturists and proprietors	..	92,787	210,722	+ 127.1
Loans and current accounts on pledge of securities	228,668	508,562	387,971	- 23.7
Loans on pledge of merchandise	..	944,184	1,292,027	+ 36.8
Accounts of Ministry of Supplies from orders, of the Supreme Direction of Transport and of sulphur and sulphate of copper	..	677,606	1,211,452	+ 78.7
Loans and current accounts on mortgage	63,106	103,477	127,027	+ 22.8
Loans to municipalities, harbours and other legal persons	..	18,314	25,249	+ 37.7

* Comparison should be made with the figures for 1921, because in 1922 there intervened the granting of loans on the provisional bonds of the Forced Loan provided by law, which increases the amount disposed of during 1922 to 508,000,000. Meanwhile these loans have almost entirely been settled.

REAL ESTATE CREDIT.

Real estate credit, in the shape either of loans to private persons or to legal persons, it was only to be expected would show an unusual increase owing to the exceptional conditions of the greatly increased population.

This line, however, is destined to present a rapid increase in the future. The acute crisis on account of the lack of sufficient house room which is observable not only in Athens but in all the other towns of Greece, even the smallest, especially in the new territories—which deficiency those who know calculate at many tens of thousands of houses—gives rise to a question not merely of economic, but also of the highest social importance. The Government, with the knowledge of the needs, has endeavoured to help the solution of the question by beneficial legislation concerning cheap houses. But everybody looks to the National Bank to assist in solving the question, on account both of the low rate of interest with which the mortgage is burdened, and of the magnitude of the capital which is necessary for such work.

To these needs must be added the reasonable demands of the municipalities, ports, and other Government organisations which, in view of the works that must be executed without delay, apply in mass to the National Bank for the necessary advances.

In view of the intensity of these works, the management of the bank, in execution of a plan which it has been studying for years, came to an understanding with the Government to disconnect this business from the bank itself, and out of the bank itself to found a separate real estate bank. This independent institution, which will be devoted exclusively to the object of attending

to these needs, will be able, according to the example of what has occurred in all other States for a considerable time, to satisfy more completely the needs of the public. The requisite study has already commenced, and will be submitted to your approval as soon as it is ready.

• AGRARIAN CREDIT.

The National Bank followed during the past year the programme it had laid down regarding the assistance of agrarian credit. The capital which is employed for this subject is steadily increasing from year to year, according to a system which assures the productivity of the loans and their regular liquidation, and witnesses to the continual widening of the bank's action in this line of credit for which, on account of its more general importance, no limit as to the capital employed has been set by the bank.

But the National Bank must increase this branch of credit still more, in view of the problems which we shall have to meet in the future. The solution of the agrarian question in Thessaly and elsewhere, and the settlement of the agriculturist refugees make it necessary for the bank to contribute to rendering the settlement as small proprietors of landless agriculturists an economically productive work both for the settlers and for the whole country.

DEPOSITS.

Deposits showed a remarkable progress during the past year.

The following figures enable a comparison to be made between the results of the two years 1922 and 1923:—

	1922.	1923.
	In millions of drachmæ.	
Deposits at sight	925	1,362
Savings bank	197	221
Permanent and at fixed dates	951	944
Total	2,073	2,527

i.e., an increase in 1923 of 454,000,000 drachmæ.

BANK'S PROFITS AND DISTRIBUTION OF PROFITS.

During the year under review the profits continued to be absolutely satisfactory, and they arise exclusively from a strict estimation of the returns from the business of the year. The gross profits amounted to 278,870,749 drachmæ, as compared with 279,595,250 drachmæ for the year 1922.

The net profits of the year amount to 104,115,232 drachmæ. This figure enabled the management to propose this year again an increase of the dividend, which was raised from 800 drachmæ for 1922 to 1,200 drachmæ. The policy of strengthening the bank by reinforcing its reserves was followed faithfully by the management also during the past year. Nobody is unaware of the importance of this policy for the future of the bank. During this period when the profits, owing both to the exceptional conditions and to the fall in value of the drachma, show a substantial increase, it would be madness not to carry a portion of the profits realised to increase the reserve funds in order to render the position of the bank unassailably strong.

Induced by these reasons, the management has decided that 28.50 per cent. of the net profits, i.e., 30,000,000 drachmæ, shall be carried to reserves, which are thus increased to a total of 250,000,000 drachmæ.

The participation of the State in various forms absorbed during the past year as well a considerable part of the profits, amounting to 49,949,794 drachmæ, which corresponds to 47.97 per cent. of the net profits. If we add to this 15,000,000 drachmæ out of the funds carried to reserves in 1923 which fall to the State, the total participation of the latter reaches 64,949,794 drachmæ, or 62.38 per cent. of the net profits. This proportion of the bank's profit falling to the State shows in a practical manner how important is also the closer economic assistance which the National Bank accords to the Treasury, by contributing to it a percentage more than twice that which the shareholders enjoy.

The report was unanimously adopted.

CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.

SATISFACTORY RESULTS OF YEAR'S BUSINESS. CHAIRMAN ON BUSINESS CONDITIONS IN THE EAST. INDUSTRIAL UNREST AND FOREIGN COMPETITION.

The seventieth ordinary general meeting of the shareholders of the Chartered Bank of India, Australia, and China was held, on the 2nd instant, on the bank's premises, 38 Bishopsgate, London. Sir Montagu Cornish Turner (the chairman) presided.

The chief manager (Mr W. E. Preston) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen, I should like to explain, in regard to the concluding part of the auditors' certificate, that the reason why the full details of the Yokohama Agency have not been received is that nearly all our accounts and books were destroyed at the time of the earthquake in Japan. The earthquake occurred in the middle of the day, when business was in full swing. In the space of six seconds the bank's premises were destroyed. It is hardly to be wondered at that the books and papers which were then being used were destroyed by the earthquake and by the fire which followed it; but, thanks to the energy of our staff out there, we are pretty well prepared with all details and statements, so that there is no trouble arising from the destruction of our records.

Having expressed regret at the unavoidable absence of Lord George Hamilton and Sir John Jordan, through ill-health, and also of Sir Alfred Dent, the chairman proceeded:—

TRIBUTE TO LATE SIR DUNCAN CARMICHAEL.

Before dealing with the business before us, I would refer briefly to the loss sustained by the board of directors in the very sudden death of their much-valued and respected colleague, the late Sir Duncan Carmichael. With his long and varied business experience, added to a sound and impartial judgment, although a comparatively young member of the board, Sir Duncan proved himself to be of substantial assistance in the deliberations of the court of directors, especially in all questions connected with Eastern trade. Apart from that, he was to some of us an intimate and appreciated friend of many years' standing, and his passing away created a void which it is not easy to fill.

The vacancy on the board has been filled by the election of Mr Colin F. Campbell, of Messrs Forbes Forbes, Campbell, and Co., Limited, of London and Bombay. Mr Campbell has had a long and honourable business career in London and in the East, and has a deserved reputation as one of the leading figures in banking and commercial life in the City of London. I am sure you will agree with me we are fortunate to secure his services, and you will be asked to-day to confirm his election.

THE PAST YEAR.

Referring to the report and balance-sheet now submitted for your approval, I trust you will agree that, in view of all that happened in 1923 and all that did not happen in the way of revival of trade, and in spite of keen competition, the results shown are not unsatisfactory. The year 1923 was a year of disappointment, and, perhaps, of disillusion, in that we did not experience a substantial revival in trade, nor did we witness any marked improvement in the unsettled political condition or in the financial condition of Central Europe. This state of unsettlement permeated both East and West, and in consequence we experienced a period of great difficulty and, at times, no small anxiety. Thanks, however, to careful and capable management and unremitting attention on the part of our managers and staff, at home and abroad, we have emerged from that period of anxiety and perplexity with some profit and without any serious loss.

BALANCE-SHEET FIGURES.

Turning to our balance-sheet, our total figures at £58,765,547 11s 10d, showing a reduction of £1,387,835 4s as compared with those for 1922, merely reflect the general slacker state of trade during the past year. It is pleasing, however, to note that our current accounts and fixed deposits at £41,590,027 1s 2d compare so favourably with the £42,408,289 10s 11d of the preceding year. Our cash in hand and at bankers at £4,673,004 16s 1s 9d—19s 3d higher than the same item for 1922—viz., £4,515,804 16s 9d—19s 3d higher than in transit at £1,060,190 4s exceeded our whilst bullion on hand and at bankers at £1,060,190 4s exceeded our 1922 figure by £504,498 9s 5d. Our holdings of Government and other securities totalled £14,385,289 11s 4d., an excess of £2,226,275 13s 4d over our closing figures for 1922, due to the fact that we took advantage of a change from Treasury bills to somewhat longer-dated securities, giving a better return, which accounts for part of the decline of £3,987,842 6s 3d in our bills of exchange, including Treasury bills, from £17,932,445 in 1922 to £13,944,602

13s 9d at the end of last year. Our bank premises at £971,050 14s 9d show a small increase over our 1922 figures, but this year's allocation will bring that down.

The net profit is just about the same as in 1922, and enables us to pay the same dividend and bonus to shareholders and to make the same allocations to reserve, officers' superannuation fund, and premises account.

JAPANESE EARTHQUAKE.

The outstanding feature in the Far East has been the disastrous earthquake which visited Japan on September 1st last. No disaster of such a magnitude involving such an appalling loss of life and property, both in Tokyo and Yokohama, has, I believe, previously happened in our generation. Material damage, caused partly by fire resulting from the earthquake, to the extent of many millions sterling has resulted, but, thanks to the marvellous energy and indomitable courage of the Japanese nation, their Government at once took in hand the reconstruction of the two cities, and in a wonderfully short time business was resumed.

From a speech recently delivered in London by Mr Inoué, recently Finance Minister in Japan, it would appear that in Tokyo the number of lives lost was about 85,000, and the number of houses burnt 350,000; but against this loss about 150,000 temporary dwellings had been erected, and of the 1,000,000 people who had left the city during the earthquake about 600,000 had returned. Their energies were splendid.

It speaks volumes for Japan as a nation that the recent loans issued in London and New York—loans issued entirely on the credit of Japan and without any collateral security—met with such a wonderful response and such a success. It is a testimony to the honesty and high commercial standard of Japan as one of the Great Powers of the world.

LOSS OF MEMBERS OF STAFF.

As far as this bank is concerned, I regret to say that, although the material loss in Yokohama resulting from the earthquake was no more than might reasonably have been expected, and which has been fully provided for, we sustained a grievous loss in the most regrettable death of our manager, Mr A. H. Tait, unfortunately killed when a short distance from the bank building. Mr Tait had done excellent service in the bank. He was a man of great promise, an indefatigable worker, and a most faithful servant. His death is a distinct loss to the bank and to all who knew him as a friend. The board of directors and management have already expressed their sympathy with Mrs Tait, but I would take this opportunity of doing so publicly, and also expressing very great sympathy with Mr Nicoll, one of our assistants, in the disaster which befell him in the death of Mrs and Miss Nicoll. We would also sympathise with the relations of those members of our local staff—10 in number—who lost their lives when at their post of duty in the bank building.

BUSINESS AGAIN AT YOKOHAMA.

In spite of the disaster and all the consequences resulting therefrom, the bank's business, which had been transferred temporarily from Yokohama to Kobe, has been again transferred to Yokohama, where we have a temporary office, and an agency has also been opened at Tokyo to meet the requirements of our friends and customers. Our staff, both at Yokohama and Kobe, deserve the highest praise for the manner in which they carried on in circumstances of the greatest difficulty and danger.

As might be expected, the balance of trade is at the moment against Japan, partly due to national causes, such as the import of material necessary to reconstruct the cities of Tokyo and Yokohama, but also the importation of sundry goods, which would seem to have been due to speculation and not to the legitimate requirements of trade. This undoubtedly has caused the fall of the yen to a level below 25, and is only of a temporary character.

As regards other new branches, I may mention that we have recently opened at Samarang, in Java, and Zamboanga, in the Philippines.

CHINA.

The position in China, I regret to say, shows no signs of improvement. Civil war is rife, and huge sums are taken from the revenues of the country to maintain vast bodies of troops, who are a danger to all peaceable citizens, and who consume the revenues which are required for the economic development of the country, after due payment has been made of interest on foreign and domestic loans. Both imports and exports are suffering from the want of security in the transit of goods inland, and business,

both in North China and in Hong Kong, is deplorably dull.

This state of things, I fear, will continue until China is blessed with a really powerful Government, determined to rule and to put an end to the disturbed state of the country.

SIAM AND THE STRAITS.

There was an improvement in trade in Siam during 1923 as compared with the previous year, and the prospects of the new rice crop are considered to be good. The shareholders will be pleased to hear that, in conjunction with the National Provincial Bank, Limited, we successfully issued last week the Royal Siamese Government 6 per cent. loan for £3,000,000. The amount was applied for over ten times, and this was due to the eminently satisfactory financial position of Siam, as evidenced by the table furnished in the prospectus of the revenue and expenditure of the country.

As regards the Straits, the position has much improved owing to the world-wide demand for tin and the comparatively improved position of rubber. The improvement is doubtless due to restrictions in the output, but it is clearly only a matter of time when the rubber industry will come into its own.

INDIA.

As regards India, too much importance should not be attached to the political troubles which at present exist and must cause some anxiety to the Viceroy and those responsible for the good and peaceful government of the country. India is sound at heart and loyal, despite the occasional blasts of hot air which at times cause a overheated atmosphere in the council chambers of our great Dependency. The financial position has much improved, and practically the deficit in her Budget no longer exists.

The tea industry is very prosperous, and jute holds its own. There have been good crops of wheat, cereals, and oil-seeds, but prices require adjustment, quotations from the East being above the level of those ruling in Western markets, and business is thereby restricted. It is interesting to note that the local consumption of certain seeds is on the increase, especially edible oil-seeds, and the quantity available for export is, therefore, not so large as usual.

INDIAN COTTON CROP.

The cotton crop of India at 5,000,000 bales was quite normal, and it is rather interesting to note that the total cotton crop of the world is about 17,000,000 bales. Of that America supplies 10,000,000 to 11,000,000; India comes next with 5,000,000; China supplies about 1,750,000, and Egypt 1,250,000, and now we have, as mentioned in the speech of Sir Charles McLeod yesterday at the meeting of the National Bank of India, East African cotton coming into the market to the extent of about 100,000 bales; that is most promising.

Out of the 5,000,000 bales grown in India, Europe takes about 1,050,000 and China and Japan 1,700,000 bales. Taking the ordinary current price of 10-day for 2,700,000 bales, it means about £65,000,000, and that sum has to be found chiefly by the exchange bankers for financing the export. In fact, owing to the additional price of cotton, the extra accommodation which the banks have had to provide this year has been about 35 crores of rupees.

STRIKES AND FOREIGN COMPETITION.

Taking everything into consideration, the general position of business in the East is in a far healthier state than it was 12 months or 18 months ago. The old stocks of goods have been gradually worked off, and when prices of commodities have been levelled between the producer, the exporter, and the consumer, there should be an improvement in business. How far we may look for an improvement in business in this country is really rather problematical in view of the incessant industrial unrest and the incessant strikes, which are really the heaviest cloud overhanging the horizon of our present and future trade. This increased cost of production, with no increase in the output of manufactured articles, makes it extremely doubtful whether we as a nation can hold our own with other competing countries, especially Germany, France, and Belgium. In any case we must hope for the best, and we can rely on our management and staff, at home and abroad, continuing to show that zeal, energy, and ability which have resulted in the success of this bank, and for which we directors beg to thank them.

The financial position of this bank is such that we are prepared to meet, at any point and at any minute, the increased demands of our friends and customers when the hoped-for revival of trade in the East and in the West has come to pass.

With these remarks, ladies and gentlemen, I beg to move, "That the report now presented, together with the balance-sheet and profit and loss account, be approved and adopted." I will call on Mr. Cuthbertson to second that motion.

Mr. Thomas Cuthbertson seconded the resolution.

Mr. Frederick Tomkinson said that he would like to associate himself with the remarks which the chairman had made regarding

the loss of life during the earthquake in Japan. The shareholders shared the sympathy felt by the directors for the relations of the victims. He congratulated the chairman on the interesting nature of his address, and expressed satisfaction with his expression of confidence in the stability of India.

The resolution was carried unanimously.

DIVIDEND AND BONUS.

The Chairman next proposed, "That a dividend at the rate of 14 per cent. per annum for the half-year ended December 31st last, together with a bonus of 6s 3d per share, free of income-tax, be now declared payable on and after the 9th instant."

Mr. W. Foot Mitchell, M.P., seconded the resolution, and it was unanimously adopted.

On the motion of the Chairman, seconded by Mr. L. A. Wallace, the election to the board of Mr. Colin F. Campbell was confirmed; and, on the motion of the Chairman, seconded by Mr. J. M. G. Proffit, the retiring directors, Mr. Colin F. Campbell, Sir William Henry Neville Goschen, K.B.E., and the Right Hon. Lord George Hamilton, G.C.S.I., were re-elected.

Mr. Robert F. Banks next proposed, Mr. H. B. Henley seconded, and it was unanimously approved, that Mr. D. C. Wilson, F.C.A., and Mr. H. C. K. Stileman, F.C.A., be reappointed auditors.

VOTE OF THANKS TO DIRECTORS AND STAFF.

Mr. Tomkinson, in proposing a vote of thanks to the directors and staff for their successful management of the business, said that, were it not for the able management of Mr. Preston and his staff in London and the managers and staffs abroad, the shareholders would certainly not be receiving a dividend of over 20 per cent.

Mr. B. R. Glover seconded the vote, and it was unanimously accorded.

The Chairman briefly acknowledged the compliment on behalf of the directors.

Mr. W. E. Preston (chief manager) replied on behalf of the staff. They had had, he said, some grey days in 1923, and they hoped that 1924 would provide a reaction.

A cordial vote of thanks having been accorded to the chairman, on the proposition of the Rev. H. A. Raynes, the proceedings terminated.

CEYLON CONSOLIDATED ESTATES (1920), LIMITED. IMPROVED RESULTS OF YEAR'S TRADE.

The third ordinary general meeting of this company was held, on the 31st ultimo, at the Cannon Street Hotel, London, Mr. H. J. Snowden presiding.

The managing director and secretary (Mr. W. Fenton Pugh) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said: The net trading profit for the year amounted to £3,211, against £130 for the previous season, the rubber having realised £9,076, as compared with £6,203, and, with the inclusion of transfer fees, &c., totalled £3,321. Against this has been written off the debit balance brought in and debenture interest, leaving a profit of £711 to be carried forward. The "standard production" fixed by the authorities was 255,283 lbs of rubber, of which 61½ per cent. was allowed to be exported under the restriction scheme—156,360 lbs of dry rubber. The whole was harvested and sold at an "all-in" cost of production of 8.62d per pound, while the average price realised—1s 1.65d per pound delivered Colombo—is conclusive proof that the smoked sheet manufactured on our estates is of high-grade quality. For the current season we hope to be allowed to export over 200,000 lbs. The view is strongly held that the restriction scheme worked inequitably as regards the younger estates, and it is hoped that, with the experience gained, adjustments will be made which will prove more satisfactory.

The first year's working of restriction was undoubtedly beneficial to the rubber industry. It is understood that the Dutch planters may yet decide that it is to their interest to restrict their output to some extent in order to obtain more remunerative prices for the product.

The satisfactory feature of the coconut estate is the large number of palms that have now reached the producing stage. So far this season there has been a 50 per cent. increase of crop, and the estimate of 200,000 nuts should certainly be obtained. Fortunately there is no restriction in the output of copra, and we can expect increasing yields from this source.

A further issue of the debentures has recently been made, and the list is still open, as several shareholders intimated that they preferred to see the report and accounts before sending in their applications; but the list will not be kept open indefinitely, as there would be no sense in paying interests on more than actual requirements.

The report and accounts were unanimously adopted.

BANK OF SCOTLAND. ANOTHER VERY SUCCESSFUL YEAR. SCOTTISH BANKS' NOTE ISSUE.

The annual meeting of proprietors of the Bank of Scotland was held within the head office, Edinburgh, on 1st instant, Sir Ralph Anstruther, of Balcaskie, Bart., presiding.

In submitting the directors' report, the Chairman said:—

I assume that, as usual, we may hold as read the report by the court of directors of the affairs of the bank as at February 29th last, a copy of which you have no doubt received.

TRIBUTE TO THE LATE COLONEL TROTTER.

Before passing to the balance-sheet, I wish to refer to the loss sustained by the death of our greatly esteemed colleague, Lieutenant-Colonel John Moubray Trotter, who had been a director of the bank since 1896. For more than a quarter of a century he had attended our meetings with the scrupulous regularity and zealous devotion to duty which he evinced during his long career, first as a distinguished Army officer, and later in county and other public offices. His unfailing courtesy to all those with whom he had been associated has left behind him a very pleasant memory.

I regret to state that the Governor, Mr. Mure, has been unable to travel from London on account of illness, which we hope will only be temporary; the deputy-governor, Lord Elphinstone, has been detained in London on account of special business in Parliament; and our director, Lord Henry Scott, is also unavoidably absent from our meeting to-day. I am sure it will be your wish that we should express our sympathy with him in his trying illness and our hopes for a speedy recovery.

INDUSTRIAL CONDITIONS.

When we met last year we had hopes that the disorganised state of the Continent and the depression of trade and industry at home would materially change for the better during 1923, but although there were numerous indications of improvement at home some months ago, these, owing chiefly to labour troubles, have not materialised to any extent, and the position on the Continent is not likely to show a substantial advance until the Reparations question has been satisfactorily settled.

The prolonged boilermakers' strike was succeeded by that of the dock workers, and these did a great deal to retard recovery. There can be no confidence until the threatened trouble in the coalfields and the shipyards is out of the way, and better relations are established generally between capital and labour.

FRENCH CREDITS.

On the Continent, France has been passing through a difficult period. The violent depreciation of the franc, which culminated a few weeks ago, has fortunately been checked, and a very substantial recovery made by the arrangements for credits in London and New York. These, however, can only be regarded as a means of temporary relief, and the finances of France cannot be put in order unless by adequate budget and fiscal measures, which will provide the surplus income necessary for the reduction of national debt, and enable a gradual deflation to be established, which will counteract the disastrous effects of prolonged Government borrowings. I am glad to see that steps in this direction have already been taken.

SCOTTISH BANKS' NOTE ISSUE.

In passing, I might also refer to the recent suggestion of the chairman of one of the English banks, when he favoured the currency note issue being made an issue of the Bank of England, and also the substitution of Bank of England notes for those of the Scottish and Irish banks. I do not propose to discuss the currency note question, but I may say that the proposal, so far as the note issues of the Scottish banks are concerned, will be most strenuously opposed. In pre-war days England had a wasteful currency of gold, and people there had no acquaintance with the £1 note. In Scotland it was quite different—the established currency was the £1 note of the Scottish banks, and a long and honourable record has shown that the confidence of the public was well founded.

It is difficult to see on what grounds the change can be advocated. The security of the £1 note issues of the Scottish banks is a first charge on their assets, so that the protection of the note-holder is of the most ample nature, and could not be improved by any change. The present practice of the Scottish banks having their till-money mainly in their own notes means a considerable saving in the expense of carrying on the widespread branch system, and the substitution of Bank of England notes would only

mean additional charges to the banks—in other words, a tax upon the shareholders without any advantage to the public.

I feel sure that you will agree with me that the Scottish people would resent the substitution of the issue of the Bank of England for what they regard as one of our national institutions, which has a reputation of which the banks are justifiably proud. It is to be hoped, therefore, that we shall hear nothing further of the proposal.

BANKING AMALGAMATION.

During the year the North of Scotland Bank has passed into the hands of the Midland Bank, which already owned the Clydesdale Bank, and the English bank having acquired practically the whole of the North of Scotland Bank shares, the number of the Scottish banks left free has been reduced to four institutions. The banks which retain their complete independence are the Bank of Scotland, the Royal Bank, the Commercial Bank, and the Union Bank.

THE BANK'S BALANCE-SHEET.

Turning now to the figures in our report, you will be pleased to see that the fall in our deposits during the year is only £1,462,437, which under the general banking conditions may be regarded as quite satisfactory. The Bank of England rate was raised in July, 1923, to 4 per cent. from 3 per cent., at which latter rate it had stood for about a year, and the better rate allowed on deposits has had a good effect. Our note circulation is down only £32,971, but the decrease was to be expected with less money required for wages and a lower level of prices. Drafts issued show an increase of £79,475, and our acceptances a decrease of £192,421, the latter mainly owing to the fact that our foreign credits are not being required to such a large extent as usual in the present condition of trade.

STRONG, LIQUID POSITION.

On our assets side, cash and bank balances and money at call and short notice amount to £8,646,670, representing close on 23 per cent. of our liabilities to the public. Bills discounted include £2,820,000 Treasury bills, which further increase our liquid assets by 7½ per cent., so that we have in cash or its equivalent 30½ per cent. of our liabilities to the public. Our investments, at £17,052,435, show an increase of £58,386, entirely in British Government securities. We have sold more than half of our holding of other investments during the year, and you will see that almost the whole of the bank's investments are now British Government stocks and bonds, a large portion of which mature between 1924 and 1932. I need hardly add that our investments show a very substantial surplus of market value over our book value.

Advances at £9,534,617 show a decrease of only £390,757. It is satisfactory that our advances, in spite of dull trade, have been so well maintained—the decrease being negligible. Our experience has been that our customers have to a large extent not been using anything like the facilities of normal times owing to business generally being so depressed, but if trade improves the bank is in the position of being able to satisfy all demands that may be made upon it for banking facilities.

A PROSPEROUS YEAR.

I am sure that you will be gratified to see that the bank has had another very successful year, resulting in net profits of £355,726 11s, an increase over last year of £10,548 14s 9d. With a balance from last year of £85,201 13s 10d, we have available £440,928 4s 10d. £125,000 is placed to the credit of the reserve fund, making it £925,000; £25,000 is allocated to bank premises; and £25,000 to heritable properties account. A dividend of 16 per cent. per annum, less income-tax, requires £163,778 16s 8d, and leaves us with the substantial balance to be carried forward of £102,149 8s 2d, an increase of £16,947 14s 4d. The reserve fund and the balance carried forward now amount together to £1,027,149 8s 2d. Every known bad and doubtful debt has been fully provided for.

PREMISES.

During the year various properties have been acquired in order to conserve our business and extend it. The plans for the reconstruction of the property at Renfield street and St Vincent street, Glasgow, purchased last year, have been approved, and the new building will be commenced at the end of May next.

BANK'S STAFF.

Once again I wish to express on behalf of the court of directors their appreciation of the excellent work which has been done by the executive, managers, agents, and staff throughout the service.

The very satisfactory results of the year have been obtained by the co-operation of all members of the staff.

I have pleasure in moving the adoption of the report and balance-sheet as submitted, and that a dividend for the past half-year at the rate of 16 per cent. per annum be now declared, payable on 15th inst., less income-tax, making with the dividend paid in October last for the previous half-year, 16 per cent. per annum, less income-tax.

The motion was agreed to.

Mr. William J. Mure, C.B., and The Lord Elphinstone were unanimously re-elected governor and deputy-governor respectively for the current year, and Mr. Alexander Wallace and Sir James H. Warrack, K.B.E., were re-elected ordinary directors.

Mr. H. L. Usher, C.A., and Mr. C. E. W. Macpherson, C.A., were reappointed to conduct the audit of the books for the current year, and a vote of thanks to the chairman terminated the meeting.

NATIONAL BANK OF INDIA, LIMITED.

SATISFACTORY RESULTS DESPITE DIFFICULT CONDITIONS.

POSITION OF GREAT STRENGTH AND LIQUIDITY.

INDIAN TRADE POSITION.

The ordinary general meeting of the shareholders of the National Bank of India, Limited, was held, on the 1st instant, at the Wesleyan Hall, Bishopsgate, London, E.C.

Sir Charles C. McLeod (the deputy-chairman) presided.

The Chairman: The general manager will read the notice convening the meeting.

The general manager (Mr. C. Nicoll) read the notice.

The Chairman: And also the auditors' report.

The general manager read the report of the auditors.

The Chairman: Gentlemen,—The report of the directors and the accounts for the year ending December 31, 1923, have been before you for some days, and I presume we may, as usual, take them as read.

Your chairman, Mr. Campbell, I am sorry to say, has not been able to come back as we fondly expected, but he is able to give most valuable assistance in the conduct of the bank's affairs. He receives our daily telegrams, and is keenly interested in everything that goes on from day to day. I also regret to say that Mr. Robert Miller is to-day absent owing to illness.

RESULTS OF THE YEAR.

We are glad again to be able to place before you results which we, and we trust you, will consider satisfactory, bearing in mind the times through which Eastern exchange banking has passed. Our net profit of £534,798 19s 11d is practically the same as a year ago. Adding the sum brought forward of £155,289 18s 1d, the total amount available for disposal is £694,054 18s, which is about £5,000 less than a year ago, owing to the fact that we brought forward that amount less to 1923 compared with 1922. I may add that our figures are arrived at after making full provision for all bad and doubtful debts.

We propose on this occasion to place £50,000 to credit of our reserve fund, raising it to the satisfactory total of £2,750,000, £25,000 to the officers' pension fund, and to write down house property account £20,000. We propose paying a further dividend at the rate of 20 per cent., free of income-tax, which, together with the interim dividend, absorbs £400,000, leaving £199,054 18s to be carried forward.

Turning to the balance-sheet, on the liabilities side the items of current, fixed deposits and other accounts, bills payable and acceptances all show a moderate falling off compared with the previous year, but you will agree that the total of current and fixed deposits is a satisfactory one.

STRONG CASH POSITION.

On the assets side our cash position remains strong, showing a total of £5,205,801, about the same as a year ago.

Our holdings of Indian Government, British Government, and other securities amount to the large total of £12,612,805, an increase on the previous year of nearly four millions. These securities, I may inform you, are all gilt-edged, and mostly short-dated, and stand in our books at or under market value.

Our bills of exchange, totalling £6,840,102, show a considerable shrinkage compared with the previous year, which reflects a smaller volume of bills passing through our hands. (As you are probably aware, a good deal of the business is now done by means of telegraphic transfer, which does not involve bills of exchange.) I would also point out that the reduction is further accounted for by the fact that a great part of our large holding of Indian and British Government Treasury Bills, held at December 31, 1922, and included in bills of exchange, has been converted into short-dated securities. This is reflected in the substantial increase in our holding of securities to which I have already referred. I may state that the Government of India discontinued the issue of Treasury Bills in the latter half of last year.

Our total liquid assets, consisting of cash, securities, and bills of exchange, amount to £24,657,000, against deposits of £31,254,516, which, I feel sure you will agree, indicates a position of great strength and liquidity. The only other figure to which I need refer is that of discounts, loans, &c., which show a reduction.

STATISTICS OF GOLD AND SILVER MOVEMENTS.

Last year your chairman gave you some interesting statistics about gold and silver movements, and I am able to add the 1923 figures. The Indian imports and exports of gold and silver for the year 1923 were as follows:—

Gold imported in 1923	£ 26,228,898
Gold exported in 1923	90,488

Surplus of imports

This is about one-third of the estimated world's production.

Silver imported in 1923	£ 15,620,535
Silver exported in 1923	2,306,149

Surplus of imports

The surplus imports of both metals in 1923 were, therefore, over £39,000,000, as against about £30,000,000 in 1922.

Furthermore, between November and February last, a portion of the bazaar demand was met by sales of gold by the Government of India out of the currency reserves to the extent of about £2,000,000.

The price of gold continues to be based on American dollar exchange, the fluctuations of which have not been so wide as in previous years. The highest price for gold in 1923 was on November 10th, namely, 96s 11d per fine ounce, and the lowest 87s 5d on February 21st.

The highest price for silver was on December 18th, namely, 33½d, and the lowest 30½d on February 8th.

During the current year (1924), the exports of gold to India amount to about £2,000,000 up to middle of March, and from South Africa to the same date they are estimated at about £1,000,000.

EXCHANGE FLUCTUATIONS.

Our old friend the rupee continues to fluctuate. The year started with a rupee rate of 1s 4 1-32d, and ended with the rate of 1s 5½d. The highest touched was 1s 5 9-32d on December 28th, and the lowest touched was 1s 3 29-32d on August 22nd.

The question of stability in exchange appears to be as far off as ever, but I am glad to note the sound attitude taken up by the present Finance Minister, Sir Basil Blackett, in addressing the Associated Chambers of Commerce of India and Ceylon, in Bombay, on December 4th last. He said:—

"The Government of India fully appreciate the immense advantages which would accrue from a stable exchange, not only to the trading community, but to the country as a whole. Whatever there may be to say against stabilisation, there can be nothing whatever to say against stability. Exchange fluctuations introduce into business an additional and extraneous risk, which leads almost inevitably to a diminution in the volume of trade. In business the breath of life is confidence; and what is required for confidence is certainty. In this matter of exchange, nothing short of certainty would be of any use. You require to know that unless something happens which shakes the financial system of the country to its foundations, the currency in which trade debts are paid will have a value that can only vary within known and narrow limits."

TRADE POSITION IN INDIA.

The balance of trade in favour of India continues to expand, and, with the exception of two months of the past year, February and October, when adverse balances were recorded, the increase has been considerable, showing a net total of just over 48 crores, or, say, £33,600,000, as against last year's figures of Rs. 11,35,00,000, or £7,600,000. This is a satisfactory feature, for it is an established fact that the greater the exports from India the more she will purchase from this side.

The monsoon has been, for the third year in succession, a favourable one, and increases are shown in cereals, jute, tea, and

various other crops which have greatly helped to restore the balance of trade in India's favour. American cotton continues at a high price, which militates against the export of Lancashire cotton goods.

The following figures are of interest:—

INDIAN IMPORTS OF MERCHANDISE.		Crores.
5 years' pre-war average.....	146	
5 years' war average.....	148	
1920	323	
1923	227	
INDIAN EXPORTS OF MERCHANDISE.		Crores.
5 years' pre-war average.....	224	
5 years' war average	224	
1920	292	
1923	342	

which latter figure constitutes a record export from that country in value.

DISCOUNT RATE.

The year 1923 opened with the Imperial Bank of India rate of discount at 7 per cent., which was further increased to 8 per cent. in the early part of that year. Our funds were in consequence well employed at remunerative rates at that time. The rate gradually came down to 4 per cent. in June, and remained at that figure until November. Bank funds during that period were difficult to employ, but in December the demand for money became more active, and a gradual advance to 9 per cent. was established, at which figure it now stands.

The want of stability in exchange and the uncertainties of the market have made it somewhat difficult to employ London funds in India, but the Indian Government has met the market freely as regards Council Bills and home remittances, and thereby afforded considerable relief in times of pressure.

CONDITIONS IN BRITISH EAST AFRICA.

Conditions in British East Africa have the appearance of becoming more favourable, and I am inclined to think we may see an improvement in that direction within the next few years. Cotton growing is expanding in Uganda, and with the proposed extension of the Mombasa Railway into the interior facilities for getting the cotton down to the shipping ports are calculated to stimulate the trade. The increase since 1904 is of a most encouraging nature. From Uganda the export figure was only 50 bales of 400 lbs each in that year. Ten years later it had reached 21,000 bales. In 1923 the substantial figure of 92,642 bales of 400 lbs each were exported, and 1924 is estimated to show a somewhat similar figure.

It is to be hoped that the Government may at some early date see their way to reduce or abolish the very heavy export duty on cotton, which at 6 cents per lb represents a sum of £111,171.

Coffee estates are coming into maturity and sisal exports are increasing. Maize shipments are also of importance, and, generally speaking, I am not without hope that conditions in that part of the world may show improvement.

TRIBUTE TO THE MANAGERS AND STAFF.

In concluding my remarks I desire to place on record on behalf of my colleagues and myself a warm appreciation of the zeal and loyal work of our managers and staff at home and abroad during the past year. To them is due great credit in being able to produce what I trust you will consider a satisfactory result attained under rather difficult conditions.

I beg to propose:—"That the report of the directors and statement of accounts for the year ended December 31, 1923, be received and adopted, and that a dividend for the six months to December 31, 1923, at the rate of 20 per cent. per annum be paid on the shares of the company registered at this date, the same to be payable, free of income-tax, on and after April 2, 1924."

After this resolution has been seconded by Mr. Williamson, if anyone wishes to ask any questions before I put it to the meeting I shall be pleased to answer them.

Mr. Robert Williamson seconded the resolution.

Mr. Frederick Tomkinson said that the result of the year's working was most satisfactory, and on behalf of himself and fellow-shareholders he wished to express thanks to the chairman for his very interesting speech. He would like the chairman to give the meeting his views on the present position and outlook in India.

The Chairman, in reply, said that he could not give more information on the political situation than was in the possession of all readers of the newspapers, but he might add that the directors were not without confidence that matters might right themselves in time.

The resolution was carried unanimously.

RE-ELECTION OF RETIRING DIRECTORS.

The Chairman next proposed the re-election of Mr. Robert Williamson to the board, adding that that gentleman's ripe experience and unrivalled knowledge of the affairs of the bank were a very

HARRISONS & CROSFIELD, LTD.

valuable asset to them. He could say without fear of contradiction that there was no more conscientious director in the City of London or in any other city.

Mr. J. N. Stuart seconded the resolution, and it was unanimously approved.

The other retiring directors, Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E., and Mr. Robert Miller were also unanimously re-elected.

On the proposition of Alderman Percy W. Greenaway, seconded by Mr. Alexander W. Martin, Messrs Cooper Brothers and Co., and Messrs W. A. Browne and Co. were re-appointed auditors.

VOTE OF THANKS TO THE CHAIRMAN, DIRECTORS AND STAFF.

Mr. J. Irwin Davis next proposed:—"That a vote of thanks be given to our chairman and directors for the care and prudence exercised in conducting the affairs of this bank during the past year, and to the general manager and staff for their valuable services." The shareholders greatly regretted, he said, the absence through illness and advancing years of their honoured chairman, but it was a great satisfaction to them all to know that his ripe judgment and vast experience were always at the services of the bank. In the circumstances, the onerous duties of the chairmanship had fallen on Mr. Robert Williamson, who had really performed a marvellous work for the past three or four years, which demanded their very special recognition.

It would be impossible to exaggerate their gratitude and indebtedness to the directors for the splendid results of the past most difficult year.

TRIBUTE TO THE STAFF.

The shareholders were so accustomed to yearly records of prosperity that they could hardly realise that with less skilful management any one of the last five or six abnormal years might easily have turned out a year of great disaster. On the contrary, it seemed that the greater the difficulties presented the greater had been the achievements, so that the bank stood that day in the very front rank of Eastern banks. Its continual prosperity was due in a very large measure to the conscientious discharge of their duties by the staff. The splendid record of the past year and the years that had gone before was also a record of the strenuous work, devotion, and loyalty of every branch of the service, both at home and abroad. They were, indeed, proud to have such a staff, and welcomed the opportunity of expressing their appreciation and gratitude.

Mr. James Sheriff seconded the motion, and it was unanimously passed.

The Chairman having acknowledged the vote the proceedings terminated.

THE AUTOCAR FIRE AND ACCIDENT INSURANCE COMPANY, LIMITED.

COMPANY'S SOUND FINANCIAL POSITION.

The fourth annual ordinary general meeting of the shareholders of the Autocar Fire and Accident Insurance Company, Limited, was held, on the 3rd instant, at the head office of the company, at 83-84, Queen-street, London, Sir Edward Iliffe, C.B.E., M.P., presiding.

The Secretary having read the notice convening the meeting, the minutes of the last meeting, and the report of the auditors.

The Chairman said:—

Before I move formally the adoption of the report and audited accounts of the company's operations to December 31st last, which I have now the pleasure of presenting to you, I think you will desire that I should make a few general observations in regard to the progress made by the company during the period under review.

After referring to the increase of £1,928 os 9d in the premium income, the Chairman continued:—

Despite the pruning which we are continually applying to this business—it is, I need hardly point out, extremely necessary in the case of companies as young as ours—we are yet able to show a margin on our purely underwriting account of £3,870 18s 10d, after charging up all expenses incurred not only in connection with the acquisition of business, but also in maintaining our organisation and in expanding it. It is to the directors, as I am sure it will be to you, a matter of pleasure that, notwithstanding the many expenses which are naturally incidental to the formation and building up of an insurance company, this company is able at this stage of its progress to present to you accounts which

are entirely free from any figures on its assets side which relate to such items.

CLAIMS PAID AND OUTSTANDING.

Claims paid and outstanding for the past year amount to £118,303 17s 11d, and show a ratio of 57.9 per cent. While on the face of it this would appear to be an increase over that which obtained in previous years, yet this is not, in fact, the case if the question is examined from the standpoint of reserves.

In each year of the company's operations we have provided a full 40 per cent. in respect of reserve for unexpired liability, and if the 1922 accounts are considered, it will be seen that the additional reserves required for that year on account of the increase in premium income absorbed quite a substantial sum, which is bound in turn to produce an increase in the claims ratio in the following year when the business is in the process of maturing. If to the item "Claims paid and outstanding" be added the additional reserve for increased premium income, it will be seen that these two items, when taken together, bear approximately the same relation to net premium income in respect of the years 1922 and 1923.

The Chairman pointed out the test given to the company's business by the income being virtually stabilised as compared with 1922, and stated the commission and expenses represented 39.7 per cent. of the premium income.

The marine account was mentioned, and the opinion expressed last year confirmed, viz., that the allocation then made to this account would be sufficient to enable it to be closed, and that no further transfer would be necessary.

The Chairman referred to the figures in the profit and loss account, and pointed out that the balance from last year amounted to £3,018 8s. 11d., whilst the amount carried forward at the end of 1923 was £8,253 9s.

Continuing, the Chairman remarked that the company was in the happy position of being able to record yet another increase in investments, which now amounted to £142,047, the cash balance at the bankers being £28,491 4s.

After referring to the new head offices, and to the fact that satisfactory arrangements had been made to let the old offices, Sir Edward Hiffe continued:—

TRIBUTE TO STAFF.

The directors desire to take this opportunity of expressing their appreciation of the close attention given to the affairs of this company by the managing director, and the staff, both at the head office and at the branches. I say this with a full personal knowledge of the loyalty and support which has been unstintingly given by everyone.

We are also indebted to our agents both at home and abroad, who are consistently working to ensure the success of this undertaking.

I beg formally to move the adoption of the report and accounts.

Mr Allan E. Messer, in seconding the motion, laid emphasis on the extremely satisfactory nature of the balance-sheet, the assets of the company in the fourth year of its existence being, he said, practically liquid.

The resolution was carried unanimously, and the usual formal business terminated the proceedings.

BAH LIAS TOBACCO AND RUBBER ESTATES, LIMITED. CHAIRMAN OPTIMISTIC OF THE FUTURE.

The thirteenth ordinary general meeting of the Bah Lias Tobacco and Rubber Estates, Limited, was held, on the 2nd instant, in the Council Room of the Rubber Growers' Association, 2, 3, and 4 Idol Lane, London, Mr C. Heath Clark (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The only new item appearing in the balance-sheet to which I might refer is the amount written off as depreciation on mature areas. Regulations have recently been adopted by the Netherlands East Indies Government whereby an allowance for depreciation on capital expenditure on areas now mature can be deducted for the purpose of local income-tax. The basis of this depreciation allowance for this company has not yet been definitely fixed by the Government authorities, but the provision which we have made in the accounts will, we believe, be acceptable to them.

COSTS OF PRODUCTION.

Although, on the face of it, the f.o.b. cost of production shows a fractional increase as compared with the previous year, the actual estate cost, notwithstanding the smaller crop, was lower, the difference being accounted for by the fact that, while in the financial year 1921-22 commission to staff was small, it was a substantial amount in the year under review, and we have also a liability for local income-tax for last year, against nothing for the previous year. It is doubtful whether we can expect to reduce our costs in future years beyond those of last year, and improved results will depend on obtaining a better selling price for our products.

During the year under review we voluntarily regulated the export of our rubber to the same rate as that allowed by legislation in British Malaya and Ceylon, and we have agreed to a further voluntary regulation for 12 months from November 1st last.

All the rubber areas are clean from end to end, and the upkeep of the terraces well attended to. Drainage has been kept in good order on all estates, but it will be necessary to do some heightening to sundry portions of the dyke on our low-lying Soengei Brohol estate, and this will be attended to in due course. The estates' roads have been given the usual attention during the year, and are in good condition. Full attention has been given to the important matter of thinning out, and this work is up to date for the time being. The areas are comparatively free from disease, and the usual strict supervision has been maintained for the detection and treatment of any cases met with.

A commencement was made to manufacture sole crepe, and provision is being made for the percentage of this grade being increased during the current financial year.

COCONUT AREAS.

Turning to our coconut areas, it was not found possible to complete entirely the cleaning-up of this during the year under review, as I had anticipated when I addressed you last year, but very considerable progress was made in this direction, and no unnecessary delay will occur in bringing the estate into a proper state of cultivation.

The crop of nuts harvested during the year under review was disappointing, and it is believed that this is, to a certain extent, due to the inadequate weeding of the area during a part of the year 1921.

Reverting to our rubber estates, I cannot do better than quote you a short extract from our head visiting agent's most recent report. Writing under date of December 19th last, Mr Doughty says: "Present restrictions of crop press very heavily on this company, with its exceptionally high yielding areas, which have always been very conservatively tapped and bark consumption kept below the average. With anything like normal conditions, there is no doubt both Bah Lias and Bah Enda estates would stand out very prominently in comparison with the average rubber property."

The labour forces on the estates are about the same as at the end of the previous year, and the health conditions were satisfactory.

After writing off £6,000 as depreciation on mature acres, the year's working resulted in a profit of £31,925 1s 7d. If we add the carry forward of undistributed profits from the previous year and deduct the small amount of Netherlands Indies war profits tax paid, we are left with an available total to-day of £72,105 10s 8d. The directors recommend that a dividend of 10 per cent., less income-tax, be paid, which will absorb £35,121 6s, leaving to carry forward to the current financial year a balance at credit of profit and loss account of £37,044 13s 8d.

I believe that by the end of the present year all surplus stocks of rubber will be exhausted, and the consumption will then provide for more satisfactory prices to the producer, together with a relaxation of the present restriction.

We have an estate consisting of some of the finest rubber anywhere in existence, and the cost per acre to the company is the exceptionally low one of about £27 per acre, our liquid resources amounting to about £172,000, so that we are in a very strong position to reap all the advantages from the improving prospects in the future.

Mr J. R. Gray seconded the resolution, which was carried unanimously.

At an extraordinary general meeting held later, resolutions increasing the remuneration of the directors and changing the name of the company were carried.

THOMAS TILLING, LIMITED. POLICY OF EXTENSION.

The 27th annual general meeting of the shareholders of Thomas Tilling, Limited, was held, on the 31st ultimo, at Caxton Hall, Caxton street, Westminster, London, Mr Richard S. Tilling, J.P. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: Although I see no reason to visualise any adverse circumstances in the future, I am not optimistic enough to think there is no possibility of such a thing happening again. Of this, however, you may be assured—the same knowledge and the same care will be exercised in the future as in the past, and by the same set of people.

On the assets side, in freeholds and leaseholds there is an increase of £5,455, accounted for by extra properties we have purchased. Vehicles and horses show a decrease of £89,070, which is largely depreciation and reduced number of horses and horse-drawn vehicles.

There is an increase in investments in allied and subsidiary companies of £168,000, due to an increase in our holding in con-

cerns in which we are interested and to our extending our operations. Included in this is our holding in the General Accident Insurance Company, which we shall retain. This is only valued at the original cost of our Road Transport shares, which were sold at a very substantial profit.

In cash there is a decrease of £51,200. This year we paid an interim dividend, and this, with the bonus, amounts to over £100,000 paid to the ordinary shareholders during 1923.

On the other side you will notice we have cancelled over £10,000 of our first mortgage debentures, which now only stand at £28,000, instead of £75,000. This puts the other classes of capital in a much better position.

There is only one other item that calls for notice—namely, trade creditors and reserves for contingencies, which shows an increase of £60,000. Our trading accounts are always paid monthly, and as our operations are larger this item is larger, but there is a considerable sum provided for taxation also included in this item.

In conclusion, I would like to say that our policy is to keep on extending the sphere of our operations. This now covers most parts of England. I think the wisdom of this is shown by the present condition of affairs, for, while London is seriously affected by a strike not arising out of any matter between our employees and ourselves, our provincial interests are not affected.

Mr J. H. Infield seconded the resolution, which was carried unanimously.

D. H. EVANS AND CO., LIMITED. SUCCESSFUL TRADING RESULTS.

The thirtieth annual general meeting of D. H. Evans and Co., Limited, was held, on the 4th instant, on the company's premises, Oxford street, London, Mr Ernest Webb (chairman and managing director) presiding.

The secretary (Mr R. Stannard) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The past financial year has been very trying in more ways than one. Our business is essentially drapery and fashions, and as such is to a considerable extent affected by weather. It is common knowledge that the cold, wet summer season of 1923 restricted the sale of light summer goods, and, added to this, we had a further disappointment in that the railway strike in January last happened to begin on the date fixed for our well-known white sale, and our customers were unable to get to us. A strike of this magnitude naturally had the effect of hampering trade at this (to us) most important juncture. The decrease in our trade during the period of the strike was very great, and also helped to decrease our profits, which would otherwise have exceeded last year's figures.

Notwithstanding these drawbacks, I trust you will agree that the accounts we present to you to-day show a record of continued satisfactory trading and results.

PROFIT AND LOSS ACCOUNT.

Dealing with the profit and loss account, trade expenses for the year show a decrease of £4,394 compared with the previous year. The item of "repairs and depreciation" shows an increase of £5,020; this is partly accounted for by exceptional repairs to the outside and roofs of our premises, and partly by an increased writing-off of the fixtures and plant in the old or eastern block of buildings. When the rebuilding of this block is decided upon it will be refitted throughout, and it is the intention of your directors that by that time the old fixtures should stand in our books at no more than their scrap value.

On the credit side of the account, the gross profits show a reduction of £3,950. This reduction is principally due to the hindrance to trade during the railway strike period. The interest received shows an increase of £926. The final result is a net profit for the year of £123,324.

The balance of profit is carried to the appropriation account, which shows the interim dividends already paid, the reserves for taxation (£6,500 less than last year), the final dividends the directors now recommend, and the usual transfer to reserve account of the sum of £11,132 8s 2d, in accordance with the company's articles of association. After making these appropriations, there remained a balance of available profit of £64,775 19s 4d, compared with the sum of £39,623 1s 10d brought forward from last year. In pursuance of the policy which was referred to at the general meeting last year, and received the approbation of the shareholders, the directors propose that of this balance £38,867 11s 10d shall be transferred to reserve fund towards the cost of rebuilding the eastern block, making, with the sum of £11,132 8s 2d already appropriated, a total of £50,000, and leaving a balance of £25,908 7s 7d on profit and loss account to be carried forward to next year.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, the reserve fund stands at the substantial figure of £235,017, the sundry creditors stand at £93,453, and the staff benefit fund remains the same. On the assets side of the account properties show an increase of £18,701, mainly accounted for by the purchase of the lease of Bentinck House Buildings, Bolsover street. These comprise six houses rebuilt by the then owner, and equipped for our special requirements for sleeping and boarding our women assistants. There was a provision in the lease that at the end of 10 years we were to have the option of purchase, and we exercised that option in May of last year. We are informed by the architect who we employed that to-day it would cost us at least £12,000 to £14,000 more than in the war period to build and fit up these premises. The accommodation is good and up to date, and this purchase was decidedly a good bargain for the company. It is this transaction which accounts for the reduction in rent and the increased capital account.

During the past year £50,000 of 5 per cent. War Loan was purchased, and it is intended to invest the further sum of £50,000 during the present year. These investments will be available when it is decided to commence the rebuilding of the eastern block, and beyond this we have the balance of 19,806 ordinary shares already authorised but not issued, and thus, with any additional amounts we may be able to accumulate, it will not be necessary to increase the capital of the company or to create any further debentures for rebuilding purposes, and consequently your shares will be more valuable.

Sir James Boyton seconded the resolution, and it was carried unanimously.

MAZAWATTEE TEA COMPANY, LIMITED. SUCCESSFUL YEAR—BUDGET AND TEA DUTY.

The twenty-eighth ordinary general meeting of the Mazawattee Tea Company, Limited, was held, on the 31st ultimo, at the Cannon street Hotel, London, Mr Alexander Jackson (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: You will see that the profit from trading account is £68,525, and I am sure you will all agree that this is a very satisfactory figure indeed, more particularly as present-day expenses are on such a very high level and competition is extremely keen.

As you know, we have various departments connected with our business besides tea, which include cocoa, chocolate, confectionery, coffee and coffee extract. The growing popularity of Mazawattee tea is proved by the fact that our sales of Mazawattee again show a very substantial increase. Our general tonnage output has been very heavy indeed, and our turnover for the year under review greater than that of the preceding year. All departments are well equipped, and capable of coping with any expansion of our business, and your directors are always on the look-out for opportunities of development.

Like all other businesses, we have to face the difficulties there are at the present time in connection with export trade, including the question of exchange, and your directors are of opinion that when the various exchange rates of the world become more normal we may look for a considerable increase in our export business.

Since the closing of our books on December 21 last we have had over three months' trading, and you may possibly expect me to say something about business since that date. All I can tell you is that during these three months we have had to contend with a

dock strike and a railway strike, and in order to keep our customers supplied with our goods we had to spend quite a large sum of money in inaugurating a system of road transport to the most important centres, and this, you will realise, must have meant a big loss to us.

Every year when the Chancellor of the Exchequer has a surplus, speculation is rife as to what he is going to do with it. The tea trade is then affected until the Budget statement is made. This year there is throughout the country a great anticipation that the Chancellor of the Exchequer will use some of his surplus in reducing the tea duty, and trade, therefore, is likely to be very quiet until his intentions are made known.

Mr Henry Rose seconded the resolution, and it was carried unanimously.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills dated from April 7-April 12 were opened on April 4, 1924, and the total amount applied for was £59,925,000. For bills at three months dated Monday to Saturday at £99 5s 5d, about 62 per cent., above in full. For Bonds at £94 12s 6d about 50 per cent and above in full. The amounts allotted were as follows:—In bills at 3 months, £30,000,000; in bonds, £500,000.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
1924.				
Feb. 29.....	30,000,000	44,400,000	3 6 4/8	nil

Face in sediment.

MOUNT MORGAN.—Four weeks ended March 18th:—Treated 5,697 tons Mount Morgan ore, 70 tons Many Peaks ore, 4,801 tons concentrates, and 17 tons purchased ore and secondary products. Produced 355 tons blister copper, containing 351 tons copper and 6,621 ozs gold. Concentrator treated 13,104 tons ore for a production of 4,913 tons of concentrates, containing 229 tons copper and 3,290 ozs gold. In addition to above production, have made on hand, containing 70 tons copper and 1,044 ozs gold. Output has been affected by observance two statutory holidays.

SULPHUR CORPORATION.—During the four weeks ended March 22nd, 3,971 tons of Junction ore and 1,329 tons of slimes were milled at the Central mine, producing 603 tons of lead concentrates (including 118 tons from the de-leaching plant), which assayed 42 ozs silver, 63 per cent. lead; together with 876 tons zinc concentrates, assaying 15 ozs silver, 11 per cent. lead and 43 per cent. zinc per ton, and 154 tons of special slimes, assaying 22 ozs silver, 19 per cent. lead and 19 per cent. zinc per ton.

Reports and Notices.

The trustees of the International Investment Trust, Limited, report with very great regret the resignation through ill-health by Mr John Rathbone of his post as secretary, which he has held since the commencement of the Trust in 1888. They have elected, from May 1st, in his place, Mr Basil William Bloomer, at present in the employ of the Bank of England.

Mr H. A. Vernet, of the firm of Messrs Robert Benson and Co., of 24 Old Broad street, E.C., has been elected director of the River Plate Trust, Loan, and Agency Company, Limited, and of the Mortgage Company of the River Plate, Limited, in room of the late Mr E. Ross Duffield.

The Right Hon. Earl Buxton, P.C., G.C.M.G., and the Right Hon. Sir Robert S. Horne, P.C., G.B.E., K.C., M.P., have been appointed directors of the Union Corporation, Limited. Count d'Ayguessives, to the regret of his colleagues, has relinquished his position as a director, a position he has held since the inception of the corporation.

Sir Henry Dennis Readett-Bayley, K.B.E., D.L., J.P., of Nottingham, the coalowner and ironmaster, has joined the board of Low Temperature Carbonisation, Limited. Sir Dennis is managing director of the Digby Colliery Company, Limited.

BANKS.

BANK OF SCOTLAND.—The report and accounts for the year ended February 29, 1924, show a net profit of £355,727, against £345,178 in preceding year. To the net profit is added £85,202 balance from last year, making £440,929 available. The dividend of 16 per cent. for the year absorbed £163,779. The sum of £125,

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated April 3rd, is as follows:—Pig-iron: The improved values of French and Belgian currencies have assisted the market for Cleveland pig-iron more especially. Instead of Continental pig-iron being offered here, there is a good inquiry for export, and the price of Cleveland No. 3 G.M.B. has been advanced by makers to 95s per ton. There has not been the same improvement in East Coast hematite pig-iron. Stocks are still considerable, and will have to be cleared before furnaces can be restarted. Mixed numbers are quoted 95s per ton, but this price could be shaded for definite business. Manufactured

iron and steel: Business is quiet. The threatened shipbuilding lock-out is an adverse factor. Quotations remain unchanged: steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12; steel rails, £9. Iron ore: Business still very dull, and stocks of ore are ample. Best Bilbao Rubio nominally 24s per ton, c.i.f., Tees.

Our Sheffield correspondent writes:—The position of the local industries is improving as regards output and sales, but with increases of wages among steel workers imminent and a certainty of dearer coal there is a good deal of misgiving as regards the future. Producers are still unable to get prices up to a remunerative level, and further additions to costs will increase their difficulties. There is a better inquiry for hematite pig, indicating increased activity in acid steels, but the basic steel department is badly depressed. Rather more foundry iron is selling than of late. Trade remains flat in mild steel bars and rods and bar iron, but steel sheets sell readily, and the mills are well employed. Railway work and steel for motor construction are responsible for the major share of the trade being done in Sheffield to-day. Wagon building shops have booked all the business that they can deal with, and should be well employed until the end of the year, and this activity is benefiting the local axle, tyre, and spring plants. Export trade has improved in some directions and fallen off in others. The requirements of general engineering and shipbuilding are disappointingly small, and makers of engineers' small tools are quiet. The local quotation for soft basic billets has been increased from £8 5s to £8 15s this week. The financial stringency is acute almost throughout the Sheffield trades, and the increased sales accentuates the difficulty. Makers of cutlery and plate report unfavourably, and in a financial sense these trades are undoubtedly experiencing a very bad time. The boom following the armistice was responsible for the starting of several hundred manufacturing firms, mostly on a small scale, and to-day the business coming in, although relatively large, does not suffice to go round, and price cutting is rife. The pressure for deliveries of fuel continues as severe as ever, as the output of the pits is inadequate for consumption and shipments. Railways and other large users are increasing their stocks as a safeguard against the effects of a strike of miners. The demand for house coal exceeds the average for this time of year. Prices are firm all round. Quotations per ton at pits are: best hand-picked branch, 36s to 38s; Barnsley Best Silstone, 34s to 35s; Yorkshire hards, 27s to 29s; best Blyth ditto, 26s 6d to 27s 6d; rough slacks, 12s 6d to 13s 6d; smalls, 8s to 10s; coke, 25s to 29s.

Our Glasgow correspondent writes as follows:—The Continent having practically ceased to be a competitor in the British market, pig-iron is in greater demand, all grades being taken up from Scotch and English works. Prices are distinctly higher, and, with increased cost of fuel, there is no likelihood of a return in the near future to the dull tone of recent weeks. A feature of the market is the increasing sales to Continental countries. Shipments for the week ending March 29th were 3,300 tons. Steel works are not now so well supplied with orders. Most of the old contracts have been wiped out, and although quite a good demand is experienced, and fairly large orders placed, there is nothing in the way of forward or speculative buying. This is accounted for by the labour disputes in the coal and shipbuilding trades. Further shipbuilding, engineering and structural steel orders—although not on a large scale—are reported in this district, involving a considerable tonnage in the aggregate. French and Belgian steel products are not being offered owing to difficulties of exchange, but in any case, we learn that most of the works are fully booked, and are now refusing to quote for three months ahead. Bar iron makers and re-rollers are fairly well employed on home and export work, and both black and galvanised sheets are in good demand for the season's requirements. Overseas specifications coming on the market are being accompanied by low limits, and some makers are accepting cut prices, especially for galvanised sheets, which can now be bought 10s. per ton below March quotations. There is no change in the prices for black and galvanised sheets for home orders.

Our Cardiff correspondent writes:—The coal market this week has been entirely under the influence of the miners' wages dispute. The fears of a stoppage next month have restricted the volume of business. Shippers have been endeavouring to accelerate the delivery of the supplies due to them under contracts, and new business has been practically confined to orders, for which the collieries have been in a position to provide stems before the 17th inst. At the beginning of the week prices were very firm for all classes of coal, with Best Admiralty large coals ruling up to 32s 6d, f.o.b. Towards the middle of the week the position eased appreciably. On Monday the South Wales coal-owners made a further improvement in their offer to the workmen. Under the original offer the subsistence wage of the lower-paid adult workers was raised from 7s 6d to 8s 6d per shift, but that the increase was accompanied by certain disabling conditions. The 8s 6d was payable only to adults with dependents, and even these suffered the loss of their subsistence allowances if they were irregular in their attendance at work. All these disabling conditions have now been withdrawn, and the 8s 6d per day is to be paid to every workman over 21. This concession of the owners improved the outlook for a peaceable settlement, and this more optimistic impression was strengthened later in the week by the strong lead given in Northumberland and Durham in favour of the acceptance of the owners' offer. The consequence was that the buying pressure on the market relaxed, but although prices did not actually give way, the undertone was slightly easier towards the end of the week. The following are the current approximate quotations:—Best Admiralties, 31s to 32s 6d; second Admiralties, 30s to 31s; best drys, 29s 6d to 30s 6d; black veins, 31s to 32s; Western Valleys, 30s to 31s; Eastern Valleys, 27s 6d to 30s; best bunker

smalls, 22s 6d to 23s; ordinary cargo smalls, 19s to 21s; coking smalls, 22s 6d to 23s 6d; anthracite big vein, large, 41s 6d to 45s; red vein large, 32s 6d to 35s; machine-made cobbles, 50s to 52s 6d; French nuts, 50s to 52s 6d; stove nuts, 47s 6d to 52s 6d; rubbly culm, 15s 6d to 16s; inland blast-furnace coke at ovens, 30s to 35s; coke for export, 60s to 62s 6d; patent fuel, 29s 6d to 32s; pitwood, ex ship, 25s to 26s. In the iron and steel trade the position has improved. Eleven blast furnaces are now working, compared with five in February, and the tinplate industry continues very active. Prices are unchanged.

METALS.

Tin market opened easier, due to lower Eastern advices and a falling off in buying orders, though subsequent movements were attended by some irregularity, and the decline was fully recovered by the middle of the week. Standard cash sold at £254 to £261 15s, and three months £251 to £262, while finally at £260 5s. Eastern cables reported sales on the basis of £261 5s c.i.f. The upward movement was continued later with dealings on a moderate scale. Standard cash sold at £264 15s-£265 10s, and three months £263 to £264 10s. On Friday opened firmer but eased, while a fair business transpired. Standard cash sold at £267, and three months £268 to £264 to £265. English ingots quoted at £267 to £268. Copper: After commencing with a quiet and easier tone, the market displayed firmer features on buyers showing more disposition to operate. Standard cash sold at £63 15s to £65 12s 6d, and three months £64 15s to £66 15s to £66 7s 6d. No material change occurred on Thursday. Standard cash sold at £65 7s 6d, and three months at £66 5s to £66 10s to £66 7s 6d. Final business was on a fairly good scale, and prices after opening firmer closed the turn in buyers' favour. Standard cash sold at £65 12s 6d to £65 7s 6d, and three months £66 10s to £66 2s 6d. Electro's £71 10s to £72, best selected £69 15s to £71, strong sheets £68, wire bars £72. Spelter steady, and quoted at £33 17s 6d to £34 6s 3d as to position. Lead easier, and quoted at £34 7s 6d to £33 7s 6d, according to position. Antimony quiet; English £64 10s to £65. Aluminium, home £120, export £125.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There is nothing spectacular about the market; but were it not for the continued absence of activity in merinos, the position would be very sound and satisfactory. As it is, the demand for merino tops and yarns is too restricted to enable sellers to make prices commensurate with the cost of replacement, and the present price of the raw material is maintained solely by the strong foreign demand for fine wool. In the crossbred section of the trade, however, there is a nice steady business, which extends right through to the finished article. While there is not much change in topmakers' quotations as compared with those ruling a week ago, all qualities are very firm, and medium and low sorts are against the buyer. It is interesting to note that warp 64's tops have been at about 6s for several weeks, having advanced 6d since the beginning of the year. Super 60's at 5s 5d show an advance of 4d in three months; 56's average, now quoted at 3s 11d, have advanced 4d in the same period; 46's carded at 28½d have advanced 5d since the beginning of January; and 40's prepared at 27½d show an advance of 6d in the three months. As regards yarns, 2-48's ex 64's are nominally quoted at 7s 1d, compared with 6s 7d three months ago, but considerable weights are available at lower figures. All crossbred yarns, however, are very firm at recent rates, and spinners are well booked up. In the Botany section particulars are irregular owing to the presence on the market of some fair weights of stock lots. The outlook in the piece goods trade has improved somewhat.

BARCLAYS BANK LIMITED.

AGENTS AND CORRESPONDENTS THROUGH-OUT THE WORLD.

and more inquiry is being encountered for the home trade in men's wear and in dress goods. A fair amount of export business is also being booked, but this trade is rather "spotty" at the moment. Wholesale fabric buyers still favour the cheaper lines, and demand is running more on woollens than on worsteds.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The second series of Colonial sales is over, buyers mostly returning home last Tuesday. The series has been the shortest on record for March—at least during the past 50 years, but what has been lacking in quantity has been made up to some extent in the very active demand, and the remarkable prices paid. The last few days of the series saw no important changes, but the series finished with values for everything at the highest point. Notwithstanding adverse factors, such as the political crisis in France, accompanied by violent fluctuations in the franc, and strikes at home, the market, as Messrs. H. Dawson and Co. point out, has been invulnerable, and prices have not suffered in the least. "The real cause of strength was not in the demand, but in the limitation of supplies." That sums up the situation, and we cannot see where any important supplies of wool are coming from to be sold in London this year. We are now at the end of the season in Australia, which has coincided with the finish of the second series of London sales. In pre-war times the May sales were always of considerable length, and usually around 200,000 bales were available, but nothing but a miracle will see anything like that quantity available this year. The comparative quietness of the home trade in its competition for merinos is to a large extent responsible for many second-hand parcels failing to find buyers, and that really is a disappointing factor. Topmakers, who would have been the biggest buyers, had there been the least encouragement, find themselves unable to get rid of their stocks of tops at a profit, and there is no encouragement for them to buy freely in face of such unprofitable prices for merinos in Bradford. In other words, the home trade is more or less handicapped by the strong opposition which is having to be daily encountered by manufacturers from wholesale fabric buyers, and the bitterness of the opposition shows clearly that all is not well with the ultimate buyer. This is all being reflected in the demand for merino wool on the part of the home trade, and instead of spinners being able to take up freely what they have bought, deliveries of 64's tops, which ought to have been made in February, are held up to-day. This is a serious matter where topmakers are landing considerable quantities of direct imports, and are having to meet drafts. However, Germany has been an active buyer during the course of the auctions, and it is patent that that country is finding itself with a considerably revived industry, all of which means that big supplies of raw wool will have to be obtained for some quarter.

THE COTTON TRADE.

MANCHESTER, April 3.

The market this week has been dearer, partly in sympathy with the higher rates in the raw material, and partly owing to spinners and manufacturers having recently improved their position, and there now being more determination to secure remunerative terms for fresh contracts. Inquiry in cloth for abroad has been exten-

sive. An increased turnover has taken place for India, although many offers lag behind the requirements of sellers. Operations for China have been patchy, and individual sales have not been important. A fair sorting-up business has been done for the several minor outlets, and there is no abatement in the activity in fancies and fine goods for quite a number of markets. The general prospects for makers of cloth are brighter. American yarns have been put up in quotation, and although it has been a struggle to secure top rates, a very fair turnover has taken place. Steady buying has again been reported in Egyptian spinnings, especially in the finer counts, there being special transactions in qualities suitable for thread manufacturing.

We are informed that as from March 31st last the old-established firm of cotton brokers, Messrs Wm. H. Cooke and Sons, of 83 Cotton Exchange buildings, Liverpool, is retiring from business. All debts due to or by the firm will be liquidated by Wm. H. Cooke and Sons (in liquidation) at the above address.

VEGETABLE OILS AND OILSEEDS.

Supplies of oilseeds, &c., at the mills are now ample, permitting of the production of oils on a substantial scale. Linseed oil towards the end of the past week eased off to £36 for spot and April-August delivery, but under the influence of a good demand from the trade and the consuming industries has hardened again to about £36 10s per ton naked, ex Hull mill. Foreign demand, however, is only small, supplies in the principal crushing centres on the Continent apparently being equal to requirements. Cotton oils have for the most part been neglected, and values have further declined, crude Egyptian now offering at £39 5s, and soap makers' grade of refined at £42 10s per ton naked, ex Hull mill. Soya oil is in good supply, and about 40s lower on the week, while castor oil (first pressure) has been reduced 20s to £64 (barrels included). Rape oil is also cheaper and in poor demand, with palm kernel oil barely steady round £40.

HIDES, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide position is steadier this week, slight advances having been obtained at a few provincial markets. Values at the Bermondsey auctions on Thursday were unaltered, best ox making 6½d to 8½d, and seconds 7½d, where sold. Heavy cows of best selection sold at 6½d, lights being withdrawn. Calf showed a weaker tendency, two classes only of best finding buyers at 7d to 14½d per lb, or declines of ½d to ¾d as against last prices. This was probably due to the heavy fall in the value of French calfskins at the recent Paris auctions, when values of raw hides and skins declined substantially. Wool skins sold in Bermondsey from 8s to 16s, and hogs from 5s to 21s each. The foreign hide market is firming up, River Plate prices being advanced. Business has been done with this country on a basis of 8½d to 8½d, whilst both Germany and the United States have again been buyers. Dry hides are also in better demand, Cape stock being an attractive line.

Reports vary as to the condition of the sole leather market; some merchants report a falling off in business, whilst others are busy. Germany is still a buyer of low-grade leather, and a fair amount of sole bands are being exported. Demand is still running on low-grade stock from shoe manufacturers, but repairers are cutting a better grade. Tanners are fairly firm on quotations, but here and there I hear of concessions offered to clear big lines of stock. Pinned offal is very firm, with stocks low.

Business in upper leather is moderate; curriers are rather busier, but are handicapped by the high price of E.I. kips, and the demand for low-grade finished leather. Patent is a good seller in the cheaper grades, whilst suede has again become a popular material for ladies' shoes. Glacé kid is wanted in the very best grades and in the lower selections, but medium grades are hanging fire.

The boot trade is improving, women's shoes and sporting goods being wanted in quantities. In men's boots trade is only moderate, although Northampton is doing better with the medium and best classes of goods.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, April 4.

SUGAR.—The market for actual parcels remained in the same quiet state as that previously recorded, as, apart from attending to immediate requirements, manufacturers and distributors alike have no interest in view of the approaching Budget announcement. Messrs Tate and Lyle's cubes, 62s 9d to 63s 9d; crushed, 61s 3d; granulated, fine and coarse grain, 60s 7½d; No. 1, 60s 4½d; No. 2, also London and T.L., 60s 1½d; ditto month forward, 60s; May-June, 60s 3d; yellow crystals, spot, 55s 7½d; caster from 60s 9d to 62s 10½d. Imported kinds dull at about previous rates. White Java, spot, 58s 3d; ditto May-June, steamer, 25s 9d; June-July, 24s 9d; July-August, 24s, c.f. and i., London. Czech granulated, spot, 59s; April-May, 30s 6d; June-August, 30s 6d; November-December, 23s 6d, f.o.b., Hamburg. Belgian granulated, spot, 58s 9d. Cuban basis, 96 percent., April, 26s, c.f. and i., U.K. With regard to the increased acreage to be sown in Europe, it appears that Hungary in particular has made every effort in this connection. White terminal market easier and attended by slight irregularity, but a fair amount of business was carried through. May delivery, sold, 29s 3d to 28s 10½d and 29s 4½d; August, 27s 1½d to 26s 7½d and 27s; December, 22s 10½d per cwt.

COFFEE.—The general tone of this market remained quiet, only moderate transactions being carried through mainly on home trade account, as continental requirements do not extend. Meantime, prices manifest weakness, particularly for the bold sizes of Costa Rica. Nairobi, bold, sold, 104s to 116s 6d; Costa Rica, ditto, 125s to 150s.

COCOA.—Of 10,935 bags offered in auction, about one-half consisted of Grenada descriptions. A slow demand prevailed, and only a restricted part found buyers, chiefly Grenada, at 1s to 1s 6d cwt. decline. Grenada, good to fine, 48s to 49s 6d; St Lucia, 45s to 48s; Jamaica, 47s; Panama fancy, 135s 6d; Accra, F/F grade, April-May, down to 32s, then 33s cwt, f.o.b. terms.

TEA.—Indian auctions during the week totalled 46,240 packages, and in the early part of the week brisk competition ensued at full to dearer prices, especially for the lower grades; but later a quieter tone became apparent, though no quotable decline was established. Some 19,775 packages Ceylon engaged but moderate support, and some 6,700 fine qualities were withdrawn. Others about steady. Some 6,700 packages Java and Sumatra were offered and met a somewhat

irregular market. All really good liquoring descriptions were fairly well competed for at a steady range of values, but inferior parcels manifested a weaker tendency. Pekoe sold, 1s 4d; broken ditto, 1s 7d; pekoe souchong, 1½d to 1s 3½d; orange pekoe, 1s 3½d to 1s 6½d; broken orange, 1s 0½d to 1s 4½d per lb, in bond.

SPICE.—Pepper unaltered for black, with white firm on sustained inquiries. Black Singapore, May-July, steamer, L.S., quoted 5½d; Lampong, August-October, 4½d; Muntok, spot, 8½d; May-July, steamer, 8½d. Zanzibar cloves, spot, 1½d to 1s 1d, as to quality, per lb. Tapioca steady but quiet. Sago flour quietly steady, March-May, quoted 14s 4½d; April-June, 14s 1½d; desiccated coconut, fine cut, spot 42s; medium, 45s; halves, March-April, 39s 0d cwt.

RICE.—All Eastern grain disclosed an upward tendency due mainly to comparatively large operations in the Burma market on Japanese account coupled with the fact of smaller quantities of "Paddy" coming to hand from up-country. Two Stars Rangoon, spot, 16s; afloat, 14s 7½d; April-May, 14s 7½d. No. 3 cleaned Rangoon, April-May, Levant, 14s 7½d double bags. 10,000 tons Japanese S.Q., April-June, sold 12s 3d to 12s 6d f.o.b. Spanish not offered from first hands, while Italian shippers indicate 22s 6d c.f. and i. London. Fancy Blue Rose, for shipment, 32s to 33s 6d c.f. and i. as to quality. Japanese peas, spot, 21s 6d; Rangoon haricots, spot, 9s 6d; Madagascar butter beans, 34s cwt. Rangoon bran, April-May, held for £6 2s 6d per ton ex-ship London/Liverpool.

JUTE firmer, being more sparingly offered, and a fair demand prevailed partially on Calcutta account. First grade, March-April, Continent, sold, £27 12s 6d; April-May, £28; May-June, £28 10s to £28 12s 6d. Reds assortment, April-May, Italian ports, sold, £31 10s per ton. Hessians and twills quite steady, despite slackness of demand, as available stocks are small.

HEMP.—Manila firmly held, and a fair inquiry predominated. J grade, afloat, sellers, £40; ditto, March-May, quoted £39 10s; K, April-June, sold, £33 to £34 10s; L, ditto, £32 to £33 5s; M, quoted £29 per ton. African sisal steady, unchanged.

SHELLAC quiet. T.N., spot, 2-5s; May, 270s per cwt.

COPRA.—Continued to meet with but slow support, and some pressure to sell imparted weakness to values. F.M.S. Straits, February-April, Rotterdam sellers, £27 17s 6d; March-May, sold, £27 10s; April-June, £27 6s 3d. Dutch East Indies, February-April, £27 12s 6d; March-May, £27 7s 6d. Ceylon, April-May, quoted £29 15s; Java, March-April, £27 15s; Cebu, ditto, £27 5s, mixed excluding Padang, March-April, Marssilles, £26 15s; South Sea, April-May, Rotterdam, £26 10s. Palm kernels easier. April-June, to Liverpool, sold, £18 13s 9d to £18 17s 6d per ton.

RUBBER was again accorded good support, and prices advanced while influenced by reports as to the formation of a central selling agency in order to better regulate supplies, also increased absorption by American manufacturers. Slight irregularity prevailed at times. Standard plantation crepe and sheet, spot, also April, sold, 1s 0½d to 1s 1d and 1s 0½d; May, 1s 1d to 1s 1½d and 1s 0½d; June, 1s 1d to 1s 1½d and 1s 0½d; July-September, 1s 1½d to 1s 1d and 1s 1½d; October-December, 1s 1½d to 1s 2d and 1s 1½d. To New York, standard estate sheet, April-May, sold, 1s 1½d to 1s 0½d per lb, c.f. and i. terms.

CARDAMOMS.—Market firm, with supplies generally found wanting.

OILSEEDS.—Linseed quiet but irregular. Indian: Calcutta, afloat, £20 7s 6d; March-April, £19 7s 6d to £19 5s and £19 10s paid; April-May, sold, £18 17s 6d to £19 5s. Plate, afloat, £17 12s 6d to £17 13s; March-April sold, £17 8s 9d to £17 13s 9d; April-May, £17 7s 6d to £17 12s 6d. Rape seed opened firm, but easier since. Toria, March-April, £17 7s 6d; April-May, £17 5s; Jamba, March-April, £13 15s; and real bold Ferozepore, April-May, £17; May-June, £16 17s 6d. Cottonseed: Egyptian, steady, but Indian easier. Egyptian, black, April, £12 2s 6d. Sakellaridis, £12. Bombay, March-April, sold, £9 18s 9d. Gingelly seed quiet. Chinese, afloat, £25 17s 6d; March-April, £26 5s Ground-nuts steady. Coromandel, machine-dried, March-April, £22 7s 6d; Chinese, decorticated, f.a.q., March-April, £22 2s 6d; bold Bombay, March-April, £22 7s 6d. Soya beans easier. Manchurian, afloat, £11 17s 6d; March-April, £11 15s. Castor seed quiet. Bombay, March-April, £23 17s 6d per ton.

OILS.—Linseed opened easier but improved. Spot, net, naked, 37s 9d; April, 36s 10½d; May-August, 36s 9d; September-December, 36s 6d. Rape dull. Crude, spot, 47s 6d; refined, 50s 6d. Castor-oil quiet. First pressure, spot, quoted 65s; second pressure, 64s; and pharmaceutical, 70s per cwt, Hull, with London 2s per cwt extra. Cotton easier. Crude Egyptian, spot, 41s; Bombay, 39s; common edible, 47s; deodorised, 49s. Chinawood quiet. Hankow, spot (barrels), 92s 6d;

THE MONEY MARKET.

MONEY appeared to be very plentiful at the beginning of the week, with balances offered down to 1 per cent. on Monday, in spite of the repayment on that day of a large sum to the Bank of England. This ease, however, only lasted for a few hours. By Tuesday afternoon there was a fair demand for money, and on Wednesday the market had to go to the Bank again for a small amount. On

Thursday semi-official relief was given, through purchases of June Treasury bills, which were also wanted by one of the clearing banks at $2\frac{1}{8}$ per cent., but, nevertheless, 3 per cent. was occasionally paid for loans over the night. Yesterday the position was again easier. Discount rates, after being inclined to droop, stiffened with a jerk, and three-months' bills were not eagerly taken at $3\frac{1}{2}$ per cent., but yesterday rates declined with the ease in money.

	Apr. 11, 1924.	April 4, 1924.	Mar. 28, 1924.	Mar. 21, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills) ..	$3\frac{1}{8}$	$3\frac{1}{8}$	3	$3\frac{1}{8}$	..

The Bank return showed a decrease of £612,000 in the note circulation, and a small increase in the stock of gold, which together left the reserve £613,000 higher, with its proportion 1.7 higher at 18.1 per cent. Repayments by the Government and the market were indicated by decreases of six and four millions respectively in the Government and Other securities, and the Public and Other deposits are thus $3\frac{1}{2}$ and $5\frac{1}{2}$ millions lower. A further increase, amounting to £2,977,500, is recorded in the Currency Notes return this week, making the amount of notes outstanding £288,215,600, which includes £1,399,100 for notes called in, but not yet cancelled. The fiduciary issue is £236,366,500, or £11,824,400 below the maximum.

The monthly statement of the London Clearing Banks of average weekly balances for March, printed in full in a later column, shows a further substantial decline in deposits, as may be seen from the following summary, which gives the aggregate figures of the nine English banks:—

	Dec., 1922.	June, 1923.	Dec., 1923.	Jan., 1924.	Feb., 1924.	Mar., 1924.
Capital and reserves	116.0	116.3	116.3	116.5	117.8	118.7
Acceptances	72.8	73.8	96.1	103.6	102.5	99.2
Deposits (incl. undiv. profits, &c.) ..	1,684.7	1,637.7	1,673.1	1,674.4	1,632.7	1,603.2
Total liabilities	1,873.5	1,827.8	1,885.5	1,894.5	1,853.0	1,821.1
Coin, notes, balance at bank, and cheques in course of collection ..	253.0	240.7	254.2	241.8	233.9	230.2
Money at call	106.0	113.3	111.3	99.5	92.2	93.5
Investments	384.5	355.5	363.8	369.3	365.6	361.7
Discounts	298.3	270.8	276.3	292.5	261.4	224.0
Loans and advances	732.7	746.9	756.5	760.8	770.4	785.5
Cover for accept., premises, &c.	99.0	100.6	123.4	130.6	129.5	126.2
Total assets	1,873.5	1,827.8	1,885.5	1,894.5	1,853.0	1,821.1

The decline of nearly £30 millions in deposits has been accompanied by a shrinkage of over £3 millions in acceptances. The decline in deposits in March of last year amounted to £47½ millions, the total falling to £1,596 millions. Cash and investments are a little lower, and a decline of £37½ millions is recorded in discounts, this item being at the lowest point touched for several years. Advances, on the other hand, with the rise of £15 millions now shown, are at the highest point for nearly three years.

THE STOCK MARKETS.

The Stock Exchange has been disturbed by such events as the Government defeat on Monday, the resignation of the South African Government, and the serious turn of labour affairs, but the report of the Reparations Experts has not excited much influence. The rise in gilt-edged stocks which followed the Conversion offer has been mostly maintained. In the foreign market a feature was the rise in French railway bonds, but Home Railways have fallen sharply. The oil market is better under the lead of Lobitos, but rubbers are still stagnant. Industrials have been irregular, and the Kafir market was disturbed by political events in South Africa.

THE COMMODITY MARKETS.

Business in the South Wales coal market is quiet, and under the influence of labour problems. Makers of Cleveland pig-iron have had good orders, and the price is well maintained. Our Glasgow correspondent reports that business in pig-iron is very brisk, but

that makers of iron and steel are experiencing some difficulty in keeping plants employed. Tin and copper have been steady. The feature of interest in the Manchester cotton trade this week has been the further rise in raw cotton prices, and though sellers of yarn and cloth have put up quotations, some buyers have not been prepared to agree. Our Bradford wool trade correspondent says that the market generally presents a rather quieter appearance, but values are steady. The sugar and tea markets are steady. Rubber disclosed weakness at first, but a steadier tone set in later. Wheat was easier towards the close of the week. Other details, together with prices, will be found on later pages from our special correspondents.

FOREIGN EXCHANGES.

During the week the Foreign Exchange market has been quieter than for some time past, and business has been restrained. Until Thursday the Paris rate continued to improve, falling quietly from 75 at the close of the 5th, with a rather sharper drop at the end to at one time as low as 71 on Thursday. In the afternoon there was a slight reaction to 72.80, and yesterday morning the rate stood at 73.65. The Bank of France figures show some improvement, but, on the other hand, the report of the Expert Committee has been welcomed in Paris with very mixed feelings, natural enough in view of the exaggerated expectations which have been encouraged among the French public for so long as to the sums to be obtained from Germany. Now that the experts have once more reduced the problem to the central question of how much can be actually transferred from Germany, the prospects become small of any considerable relief to the French Budget for a long time to come. Having reached a quotation of $83\frac{1}{2}$ at one time on Thursday, the Brussels rate has also reacted, and stood yesterday morning at $87\frac{1}{2}$, as compared with $89\frac{3}{8}$ a week ago. Forward quotations in Paris have widened slightly (some 5 centimes) to 45 centimes per month above spot; in Brussels they remain the same at 10 centimes per month above. The Italian rate has continued steady, and at $97\frac{3}{4}$ shows some improvement on the figure of $98\frac{1}{2}$ a week ago. Without any other obvious reason than the normal influences of this period of the year, the dollar rate during the week has shown a decided movement in our favour, the quotation rising from \$4.30½ at the close of the 5th to as high as \$4.34½ at one time on the 7th. From that figure there has been a slight reaction, but yesterday's quotation of \$4.33½ is still well above that of a week ago, and the market remains strong. Forward rates at $\frac{1}{4}$ per cent. per month above spot are unchanged. In general sympathy with the dollar, Amsterdam has moved in our favour from 11.61½ to 11.63½, after being higher, while Stockholm has moved up from 16.30 to 16.39½, and Vienna from 305,500 to 307,000. Madrid, after some improvement, has reacted again slightly, and stood yesterday at 32.27½, as compared with 32.30 a week ago. Switzerland, however, has moved somewhat against us from 24.77 to 24.68½. Christiania has again depreciated a little from 31.42½ to 31.54½, but Copenhagen shows the effect of the new measures of exchange assistance by falling from 26.14½ to 26.04½. Helsingfors has moved up from 172 to 173½. In Central Europe the German mark has shown a recovery from its recent weakness, and is back again at 19½ billions, a significant comment on the publication of the Experts' Report. Warsaw, from which city come increasingly favourable reports as to the budgetary position, remains steady at 40 millions. Prague, however, has reacted a little from its recent recovery, and stands at 146, as compared with 144½ a week ago. Belgrade, where the financial situation would now seem well in hand, remains steady at 350, and Bucharest has picked up a little again from 845 to 822½. Budapest, however, in spite of the proposals of the League of Nations Commission, has fallen away again slightly up to 350,000. In the East the rupee rate has been reduced in conformity with the normal movement at this time of the year from 9 per cent. to 8 per cent. The yen, however, is slightly cheaper at 15 11½d, as compared with 15 11½d a week ago. Silver has again been very quiet, with a strongish undertone. Hong Kong

has moved from 2s 4½d to 2s 4½d, but Shanghai has fallen from 3s 2½d to 3s 2½d. In South America, Rio, after being higher, has moved back again to 6½d., the same rate as a week ago. Buenos Ayres has also fallen back from 41½d to 41½d, but Monte Video is slightly higher at 43½d., as compared with 43d. Valparaiso, however, has appreciated somewhat from 42 pesos to 41.10 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the five days ended April 5th:—

EXPENDITURE.	£	RECEIPTS.	£
Supply Services	5,000	From Revenue	27,013
Interest, &c., on Debt	24,324	Decrease in balances	2,861
Sinking Fund	510		
Reduction in Debt	40		
	29,874		29,874

Revenue commenced the new financial year well, as the total for the first five days at £27,013,500 compares with £26,182,000 of the first seven days of the preceding financial year. The larger revenue was chiefly due to Property and Income-tax, amounting to £15,113,000, against £14,776,000, and the increased yield from Super-tax at £2,800,000, against £1,610,000. Customs yielded £1,411,000, against £1,218,000; and Excise £1,378,000, against £1,901,000. The five days' operations reduced the National Debt by £40,000, and caused the following changes:—

	£		£
Public Dept. Advances	+ 25,300	Treasury Bills	- 26,097
Unemployment Insurance	+ 420	Saving Certificates	- 100
Land Settlement	+ 437		
	+ 26,157		- 26,197

The floating debt was reduced by £780,000 to £773,695,500.

FINANCIAL YEAR, 1924-1925 (April 1 to April 5).

	£		£
Total Expenditure ..	29,834,009	Raised by Revenue ..	27,013,539
Net Repayments	40,045	Decrease in Balances ..	2,860,515

ESTIMATES for YEAR 1923-24.

	£		£
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

THE WEEK IN PARLIAMENT.

MONDAY, APRIL 7TH.—*Commons*: Government defeated on Rent Restrictions Bill.

TUESDAY, APRIL 8TH.—*Lords*: Second reading of Industrial Courts Amendment Bill. Debate on strikes and inquiries.

Commons: Second reading of Unemployment Insurance (No. 3) Bill. Debates on British East Africa, and West Indian cables. Premier's statement on Rent Bill position.

WEDNESDAY, APRIL 9TH.—*Lords*: Cadet regulations, and position of Indian officials, discussed.

Commons: Debate on Turkish treaty. Small holdings and Woolwich evictions discussed.

THURSDAY, APRIL 10TH.—*Lords*: Second reading of Agricultural Returns Bill. Queenstown murders discussed.

Commons: Free rail travel for members proposed, debated, and passed. Turkish Peace Bill passes committee stage.

FRIDAY, APRIL 11TH.—*Commons*: Summer Time Bill, second reading.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Hongkong and Shanghai Banking, Commercial Bank of the Near East, Scottish Provident Institution, Legal and General Assurance Society, Rio Tinto Company, and D. Napier and Sons. At the meeting of the Hongkong and Shanghai Banking Corporation the Hon A. O. Lang gave an interesting review of economic and industrial conditions in China and the East. Mr Alfred Shepherd, at the meeting of the Scottish Provident Institution, made an interesting comparison of the advantages of whole-life assurance as against endowment assurance. At the meeting of the Legal and General Assurance Society, Mr Romer Williams announced record new sums assured in both life and general funds.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

ANOTHER CHANCE.

THE eagerly awaited reports of the Expert Committees appointed by the Reparation Commission were officially presented on Wednesday morning, and their contents were made available to the British public on Thursday. We do not propose, after a few hours of study, to pass final or detailed judgment upon the conclusions, which represent the fruit of hundreds of meetings and nearly three months of arduous and unremitting labour. It is not, however, too soon to felicitate the Experts upon their achievement. Whether their recommendations are accepted or not, they have performed a very signal service. Their unanimity adds great weight in the eyes of the world to a document which makes a broad appeal through its obviously sincere pursuit of justice and practical common sense. The Reparations problem has been honestly faced as a business problem of legitimate debt recovery, and the result is a coherent and workmanlike scheme, advocated in unison by distinguished representatives of the United States, France, Great Britain, and Italy. That in itself is a step forward. Europe is given a new, and a final, opportunity of mending her worst trouble and retrieving her worst mistakes. It lies with the politicians to use and develop that opportunity or to abuse and destroy it.

The Committees worked under serious limitations. Questions of policy were naturally outside their purview, and they were precluded from fixing any new total of claims on Germany or from propounding any solution of inter-Allied debts, from which the Reparations problem is inseparable. It is with these limitations in mind that the report of the First, or Dawes, Committee must be read. It starts with the axiomatic assumption that the exaction of reparations on any satisfactory scale is conditional upon the stabilisation of the currency and the establishment of budget equilibrium. To achieve the first object, the chief measure proposed is the establishment of a new Bank of Issue in Germany, with a 50 years' charter and a monopoly of the right of note issue. The notes of this Bank will replace the existing paper money; and the new uniform single currency will be kept stable in relation to gold, and protected by a reserve of 33⅓ per cent. and other liquid assets, the reserve to be held largely in the form of deposits in foreign banks. The new Bank will be the Government's Fiscal Agent, but safeguards and limitations regarding its short-term loans to the Government are imposed, and the administration will be in the joint hands of a German President, a German Managing Board, and a General Board consisting of seven Germans and seven foreigners. We suggest that weighty Allied representatives on the Board, and not too rigid a constitution will provide the best chance of success. Given a stable currency on a gold basis, the Dawes Committee find that the two remaining conditions necessary for achieving budget equilibrium are as follows:—(1) the fixation (with temporary relief) of Treaty charges, and (2) the restoration of the fiscal and economic unity of the Reich. This

last-named condition is the most essential part of the basis upon which the whole scheme is built.

Having outlined these necessary conditions, the Experts proceed to figures of amounts which they think Germany can pay, and the methods by which they can be paid. The figures are as follows:—1924-25, £54 millions (1,000 million gold marks); 1925-26, £61 millions (1,220 million gold marks); 1926-27, £60 millions (1,200 million gold marks); 1927-28, £87 millions (1,750 million gold marks); 1928-29, £125 millions (2,500 million gold marks). By that time, it is assumed, Germany will have returned to normal conditions, and the sum of £125 millions is taken as the standard for future years—a standard which is, however, to be variable in either direction in accordance with the showing of an elaborate index of Germany's economic and financial prosperity. The sources from which these sums are to be derived are railways, industrial debentures, and ordinary budgets under the guarantee of assigned revenues. It is recommended that the German railways be converted into a joint-stock company. This company will issue 11 milliard gold marks of first mortgage gold bonds bearing 5 per cent. interest and 1 per cent. sinking fund, which will be handed to the Reparation Commission. The company is also to have 2 milliards of preference shares and 13 milliards of common stock. The proceeds of the sale of all the latter and 500 millions of the former are to go to the German Government. Reparation payments on account of interest should be 350 million gold marks in the first year, and rise in 1927-28 to a normal standard level of 660 millions. The company is to have eighteen directors, of whom it is suggested fourteen may be Germans. The proceeds of a transport tax are also to be made available two years hence and onwards. The Committee has also been impressed by the fairness and desirability of requiring.....from German industry a sum of not less than 5 milliard gold marks, to be represented by 5 per cent. interest and 1 per cent. sinking fund. This proposal, the Committee points out, is less than the actual industrial mortgage proposal made by Germany last summer, largely because the Experts exempt agriculture from the mortgage.

The broad effect of the proposals is, that so far as Germany's ordinary budget is concerned, it will not feel the weight of reparation cash payments at all for the first two years. In fact, the total payments for the first five years will be made up as follows:—

	(In Million Gold Marks.)				
	1924-25.	1925-26.	1926-27.	1927-28.	1928-29.
Railway bonds.....	200	595	550	660	660
Transport tax	nil	nil	290	290	290
Industrial debentures..	nil	125	250	300	300
Sale of railway shares..	nil	500	nil	nil	nil
Foreign loan	800	nil	nil	nil	nil
Budget contribution ..	nil	nil	110	500	1,250
Total	1,000	1,220	1,200	1,750	2,500

The major part of the first year's contribution is to be provided by an external loan of £40 millions—a practical sum, if the whole experts' plan is really accepted and put into operation with goodwill. The guarantees for the Budget contributions consist of the pledging of the revenues from Customs, alcohol, tobacco, beer, and sugar. Receipts from these are to pass directly into the hands of an impartial and effective control, the Treaty payments being first deducted by the controlling authority on behalf of the Allies, the remainder being handed to the German Government. All Treaty payments are to be paid in gold marks or their equivalent in German currency, into the new Bank of Issue to the credit of the agent whom the Reparation Commission will appoint. Having thus outlined plans for producing the money for Treaty payments, the committee proceed to discuss the machinery for transferring it to the Allies. The transfer is to be regulated by a Transfer Committee of five experts, representing five Allied and Associated Powers, who will also supervise the execution of the programme for deliveries in kind, which do not altogether cease. In converting bank balances into foreign currencies they will co-operate with the President and Commissioner of the bank.

This brief and rapid survey of the Dawes Committee's report (we refer to the McKenna Committee on a later page) is sufficient to show that there is much in it

which might be assailed with meticulous criticism. The Transfer Committee, for instance, is a possible target; it is easy to argue that the yield from the German railways will not be realised, while there will doubtless be scoffers at the "prosperity index." Again, the nature of the control suggested will appear slight in French eyes, and Paris may rightly demand assurance that a strong line will be taken if there is any risk of stabilisation being upset. These and many other points will be thrashed out in due course in the Press and Parliaments of the world. Meanwhile, the really important thing is that the experts have produced a plan which, generally speaking, is cohesive and watertight, recognises essentials, and avoids many stumbling-blocks. They have compiled it with an ingenuity and presented it in a spirit which should gain for it the most careful attention of all parties concerned. Their plan is a long way the best yet produced. It is far better than either the Bonar Law plan or the London schedule of payments fixed in 1921. On the one hand it does not produce a premature strain on the German Budget, and on the other it does not neglect the immediate needs of her creditors, to whom it gives assets that, if the plan as a whole goes through, should be readily realisable. It provides, for the first time, proper machinery for regulating the transfer of Treaty payments to the creditors. Berlin, too, will notice that it is more favourable to Germany than might appear at first sight, because the schedules embrace all payments, including the cost of the armies of occupation, the net amount available for reparation being less than the figures shown.

For three months the Reparations problem has been lifted out of the political arena. To that arena it now returns, bringing with it, we trust, a new atmosphere. It would, perhaps, be rash to hope that M. Poincaré will easily accept the change of Ruhr policy which the report builds upon, or that opposition will not develop from the growing forces of the Right in Germany, both against the scale of payments and against the moderate measure of control involved,—although from the German side, the death of Herr Stinnes improves the prospect of moderate counsels prevailing. Great problems, outside the purview of the experts, remain to be solved. There is, above all, the question of France's physical security; there is the fact that the experts' plan demands, as its very basis, the abandonment of Ruhr exploitation by M. Poincaré; there is the military occupation of the Ruhr, which we have condemned, and cannot now condone; there is the question of the division of the payments among the creditors, the stumbling-block which has wrecked previous attempts at settlement, and which M. Poincaré can hardly fail to raise immediately; there is the problem of inter-Allied debts. That is a formidable list of barriers, which can only be broken down by the supreme exercise of sagacity, tact, and goodwill by Allied and German statesmen. But there are new forces at work which neither M. Poincaré nor the German Right can afford to ignore. The United States Press has acclaimed the experts' proposals as just, as well as sound. The world sees that one more chance has been given to the statesmen of Europe, and world opinion will not lightly forgive the statesman, be he British, French, or German, who does not exert to the full his authority and goodwill to build upon the foundations which the Experts have given us the bridge which will lead Europe at last to peace, security, and settlement. Literally, it is now or never.

THE GERMAN FACTOR.

NATIONS, like individuals, have their proper weight and consideration in the society to which they belong, but the balance of nations in Europe, upset by the war, has not yet been restored. From August, 1914, till Prince Max of Baden's famous speech in the autumn of 1918 an undue preponderance lay with Germany. Since that moment upon the initiative first, for a brief season, of President Wilson, and since then, and for a much longer period, of France. Yet this effacement of Germany in the post-war period has been every bit as unnatural, and almost as undesirable during the war. Neither situation could be per-

manent, unless the ingrained tendency towards a balanced distribution of forces in Europe were to be eradicated. It is more likely, however, that the oscillations will eventually approach towards a balance again, for, after five and a-half years, there is now visible a strong movement on Germany's part to re-assert her will and to obtain a hearing for her opinions. Within due bounds this is desirable, but when a nation begins to recover itself after having been passed under the harrow, there is no knowing how far the movement may go. The immediate task for British statesmanship (a difficult task indeed) is to seize the psychological moment of equilibrium between the rising temper of Germany and the growing desire in France for a practical settlement in order to bring these perilously swaying Continental forces to an anchorage. The difficulty of the task lies in the probable brevity of the time during which this feat may be possible. The danger is that Mr MacDonald, conforming to the habit which successive British Governments have contracted since the Armistice, may keep his attention fixed exclusively upon France. In his anxiety to create an atmosphere of confidence between France and ourselves, and to draft proposals, on the basis of the Expert Committees' reports, which France may find acceptable, it may escape him that the psychology of France is no longer the only relevant factor. In attempting to gain the assent of France to his plans, he may make it inevitable that the new Government in Germany should reject them. Indeed, failure on behalf of the British Cabinet to appraise accurately the currents and temper of German politics might, more easily than anything else, jeopardise the new hope of European settlement with which the Expert Committees appear to have presented us.

This is one of the most serious dangers in the present situation, whatever the exact complexion of the new German Government may be after the May elections. On that question prophecies are of little value. It is too early yet to gauge the part that the Experts' Reports will play in determining the voting, or the weight of the influence that may be exerted by the death of the most powerful of all German industrialists, Herr Stinnes. Moreover, the absence of by-elections and the complicated method of proportional representation under the Weimar Constitution leave even the shrewdest German political observers very much in the dark as to the prospective strength of parties. Five years' experience has, however, resulted in certain general observations. The vast size of the constituencies, for example, makes electioneering prohibitively costly for independent candidates, and crippling for ordinary party funds, and this consequence of a theoretically ultra-democratic system of proportional representation tells in favour of the Industrialists, if they are willing (as they are) to spend heavily on the purchase of political power. On the other hand, the elaborately adjusted electoral machine returns the parties to the Reichstag in a proportion sufficiently close to their respective strengths in the country to prevent any single party from securing effective power. Disintegration into small groups has always been the weakness of German Parliamentary politics, and under the new system this has been accentuated. The nominal Government under the Weimar Constitution has always been at the mercy not merely of the groups in coalition with it, but of the opposition as well, and this has been reflected in the formless and fluctuating character of German foreign policy under the present régime.

As regards the now imminent elections, there appears to be agreement on all hands that there will be a notable shift of forces towards the right. The Social-Democrats are expected (at a guess) to sink from over 160 members to something like a hundred; the Democrats (corresponding to our more radical Liberals, and boasting themselves, again like British Liberals, to be a party not based on class) will be content if they lose only half their numbers and come back 25 strong; the People's Party (financed by the Industrialists, but drawing its voting power from large sections of the minor official classes and the lesser bourgeoisie) has been going through a tug-of-war between its left wing and its right, but the right wing seems now to have pulled Herr Stresemann over; the Conservative Party, based upon the landed interests and the higher officials, remains what it has always been: the Centre

Party, in which people of all but the most extreme political views are united by the bond of Catholicism alone, will presumably reflect the trend towards the right which is affecting the whole country. It is therefore likely that a much more Conservative Government will come into power in Germany next month than has yet emerged there since the Armistice; but, within the framework of the Constitution, that Government will be condemned to much the same paralysis as its predecessors, and this gives an opportunity, in the present national temper, for parties which believe in "direct action." The Communists, for example, will be returned in greater strength than before, but their influence is not expected to be important, and, moreover, the acute and prolonged foreign pressure in the Rhineland and the Ruhr appears to have had the same effect upon German Communists as the attacks of White Russian and Allied invaders had upon those of Russia. It has forced them along the path of Nationalism, and some of them even hover on the outskirts of the new German Fascist movement, which has also drawn recruits from the Social Democrats, and which possibly may profit from the reaction to a greater degree than the established Conservative parties. These "wild men" may find themselves fifty strong in the next Reichstag, and they are expected to make their presence felt by fair means or foul, for, like the Communists, they believe in the sacred right of an armed minority to override the will of the majority by violence. The power of these reckless forces to exercise pressure upon the new Government will probably count for more than the nominal complexion of the Government itself in determining its attitude towards the proposals in regard to "Reparations" and "Security." It is supremely important that British statesmanship should not play into these German extremists' hands through focussing its attention too closely upon France. In our anxiety to satisfy the French formula, "Not a jot or tittle less than the Treaty of Versailles," we must beware of the German formula, "Not a jot or tittle more." Therein lies the danger of the ambiguous word "Neutralisation."

DISCRIMINATION IN LENDING.

An interesting set of principles has lately been laid down by the *Times*, in its City article, for the guidance of those who are responsible for the placing abroad of British capital under the conditions now ruling. The subject was opened by our contemporary in its issue of March 29th, when it observed that since London cannot meet all the demands for capital made upon her, she must discriminate, and then proceeded to lay down the lines on which discrimination should be carried out. "Naturally," it said, "the requirements of the Empire constitute the first claim upon our resources—but Empire financing ought to be restricted to absolutely essential reproductive purposes and the funding of maturing external loans. They ought not to be used, in any event, for refinancing internal obligations. As regards foreign borrowers, loans required for exchange manipulation or stabilisation ought to be ruled out. Loans for reconstruction, if forming part of a sound scheme, are in a different category, while loans for sound reproductive enterprises, the spending of which will directly and immediately assist British trade, deserve sympathetic consideration, and should be satisfied up to the limits of our capacity." The *Times* then pointed the moral by saying that the City of Amsterdam loan was one which ought not to be financed here (the list of subscriptions had already been closed when this ban was published), on the ground that "we cannot afford the luxury of financing municipal building programmes in Amsterdam or any other foreign centre." On Tuesday last it returned to its text, recording, with disapproval, statements to the effect that two more Dutch cities, the Hague and Rotterdam, were negotiating for loans of the Amsterdam type, and that a drainage loan for a French city was also a possibility. It admitted that if there were a surplus of capital seeking investment there would be no need to say a word against these propositions, but went on to observe that the supply of capital—which has to be saved

before it can be lent—is less than the demand, and that “the fall in the sterling exchange last year was widely believed to have been due partly to overlending.” It then went on to repeat the lines that it had already laid down, as quoted above, on which London lenders ought to carry out the discrimination which it considers to be necessary.

It is certainly very desirable that this problem, so opportunely raised by the *Times*, should receive full consideration by those who handle our loan issuing machinery, and by the investors who finally supply the funds that are lent. But gratitude to our contemporary for having so definitely and clearly raised the point does not prevent our venturing to question some of the principles that it enunciates. In the first place, is it quite certain that “the requirements of the Empire constitute the first claim upon our resources”? The *Times*, very rightly, lays especial stress on “reconstruction” as being calculated “to restore the basis of a permanent improvement in international trade, which is urgently needed by this country,” and, we should like to add, by every country and person that is interested in the peace and prosperity of the world. Loans for reconstruction purposes are, consequently, placed next in importance by the *Times* after loans to the Empire. A definition of the word reconstruction would have made our contemporary’s argument clearer. It presumably means loans which will assist the recovery of countries whose finances and industry have been disorganised by the war, and whose power to produce and consume has consequently been disorganised, to the detriment of world trade. If our Dominions were now in that position, and if their needs were therefore as great, and as important to world prosperity, as those of the disorganised countries of Europe, most of us would agree that their claim should come first on our supply of capital. As it is, they are most of them in a comparatively flourishing condition, and with regard to one of them, Australia, it was recorded by our Melbourne correspondent in last week’s *Economist* that “large borrowing is regarded in business circles as undesirable, in view of the rapid growth during late years of the principal and interest of the existing public debts, the tendency to excessive growth of city population in contrast with that of the country, and the fact that country production is hardly more than stationary when the actual volume of production is looked at independently of gross value at high prices.”

A still more emphatic doubt is raised by the ban laid by the *Times* on loans for “exchange manipulation or stabilisation.” Here, again, we need definition, and manipulation is an ugly word which may be begging a question. But whatever it may be meant to mean here, there is surely a case to be made for stabilisation loans, as long as they form part of a well-thought-out scheme that is likely to secure permanent stability in one of the currencies, whose rocketings and collapses have been in the past five years so serious a bar to foreign trade, and the cause of so much internal misery, unrest, and demoralisation. The Austrian loan, which all good publicists blessed with so much fervour, was surely to some extent made for the purpose of exchange stabilisation. But it, presumably, was hallowed by coming under the reconstruction heading, and it will probably be found that the great majority of loans for reconstruction purposes, which the *Times* blesses, include provision for exchange stabilisation, which it damns.

A certain amount of scepticism may also be expressed concerning the belief, alleged by it to be widely held, that the fall in sterling exchange last year was partly due to overlending. If the *Times* is right in saying that capital “has to be lent before it can be saved,” over-lending seems to be hardly possible. But if capital of a fictitious kind can sometimes be lent by means of inflation, then it is surely necessary to show evidences of inflation during last year, which would be somewhat difficult to establish. The fall in sterling exchange last year was very reasonably attributed to a “flight from the pound,” caused in the first instance by Sir Montague Barlow’s historical indiscretion about a programme of inflation for the relief of unemployment, followed by Mr Baldwin’s plunge into Protection, the General Election, and the prospect of a Labour Government, with all the exaggerated apprehensions that followed therefrom.

There is also a certain inconsistency in the contention of the *Times*, that special consideration should be given to loans “the spending of which will directly and immediately assist British trade.” For it is our recollection that when, some months ago, it was urged in the House of Commons that those who borrowed in London should be obliged to spend at least part of the money in Britain, the *Times* was one of the few papers which argued against this restriction as being at once mischievous and wholly unnecessary, because any money that London lends must finally be spent in Britain, if not by the borrower, then by some other party to whom the borrower has passed on the claim on British production that the loan has called into being. In fact, the *Times* on that occasion advanced the very convincing contention, which seemed to clinch the matter, that anyone who borrows here borrows sterling money, which is not legal tender anywhere else and consequently must be spent here. On this point it seems to have some misgiving in enunciating its new doctrine, for in its homily of last Tuesday it went out of its way to admit that all loans made to foreigners involve an export sooner or later of goods or services from this country. But it added that “if a foreign loan is not immediately spent here, the sterling obtained is offered on the exchange market by the borrower, and the result must be to depress the pound until the circuit is completed, i.e., the export of goods or services takes place.” But this temporary depression of the pound would evidently have no permanent adverse effect, and in the meantime would tend to promote British exports.

A Communion Service for the cursing of bad issuing houses may be necessary, but the one drawn up by the *Times* seems to need a revised version. It may be very anomalous for Dutch cities, with the Amsterdam exchange against London, to be borrowing here, but the consequence is that somebody, on our contemporary’s own showing, has to take British goods or services. Discrimination in lending is certainly necessary, but unless it is carried out on the broadest and simplest lines, it is likely to tie up the discriminator in very uncomfortable knots. It may be suggested that (1) not a halfpenny should be lent to anyone that has any chance of being spent on armaments, and (2) no borrowers should be allowed to come here to raise money merely because they are too slack to balance their budgets by taxation. There are plenty of excuses in these times for unbalanced budgets, but a judicious moneylender will only lend to those who suffer from them, if he is convinced that they are determined, and have actually begun, to mend their ways and effect the necessary reforms.

TOWARDS ANNUAL LIFE BONUSES.

THE British life assurance offices are conservative institutions. And most properly, because, strictly speaking, they hold their funds in trust for their policyholders, and must on no account endanger that security upon which all life assurance rests. Any distribution of realised surpluses—which in practice means not an outlay of cash but the assumption of increased liabilities by way of reversionary bonuses on policies—must always be undertaken cautiously, with both eyes upon the uncertain future. During those years of war conditions and after-war disturbance, which caused severe depreciation in the investments of life funds, the majority of the life offices suspended their bonus distributions altogether. Surpluses, such as they were, were carried forward, and no bonuses were paid except “interim” bonuses added to policies which became claims during the period of general suspension. Now that depreciation has happily given place to improvement in values, and the prospects, both of life assurance business and of the earning of profits, are once more favourable, the problem has arisen how best to make up to with-profit policyholders for the suspension of bonuses in the past, and how to devise methods of distribution which will meet most equitably the changing circumstances of a still uncertain future.

The old standard system of a valuation and distribution of profits at intervals of five years suffers from an inelasticity which makes it no longer suited to the conditions of the present day. It involves too long a period of waiting between distributions. Policyholders who found themselves without any bonuses at a valuation have had to wait five years before coming into the fruit of their sacrifices in premiums paid. Several offices have realised this, and seeing surpluses accumulating in the welcome conditions of appreciating investments, low mortality, and higher interest earnings, have cut the five-year interval down to three years, and established a triennial in place of a quinquennial valuation period. Both triennial offices and those which have remained for the present quinquennial, are uneasily conscious that something must be done to allow policyholders who die between valuation periods to participate more adequately in the profits which their premiums have earned. Hence a tendency to raise the level of interim or intermediate bonuses on policies which become claims, by death or maturity, up to the full bonus rate of a favourable valuation. This increase in the rate of interim bonuses does something to restore equity, but since these bonuses are contingent upon a claim arising, they are not bonuses in the full and true sense of those declared at an annual valuation and an annual distribution.

This brings us to the subject of this article, which is a plea for a cut with the leisurely past, for the abandonment of the old-fashioned and outworn five-year, and even three-year, valuation periods, and for the frank acceptance of annual valuations and distributions as the simplest and best of all possible systems. There are no practical difficulties in the way. Life offices are not required by law to make the full Board of Trade valuations, as scheduled to the Assurance Companies Act, at intervals more frequently than every five years. They do, or most of them do, make an annual office valuation at present for the information and guidance of actuaries and directors. They take stock annually, though they may not publish the results to the world. All that we suggest is that the annual office valuation should be made with sufficient exactness to permit of the publication of the broad results, and the declaration of annual bonuses based upon it. Then at intervals of three years, or five years, the full valuation results may be deposited with the Board of Trade, in accordance with the scheduled forms. There is no need to depart materially from present office methods or to incur any serious expense. Modern mechanical devices are now so efficient that a continuous valuation may be made with the minimum of toil to hand and eye and brain. The great industrial life assurance companies, which have ordinary departments, value the whole of their immense business every year as a matter of standard routine. They declare simple reversionary bonuses year by year to their ordinary participating policyholders, and they vary these bonuses year by year in accordance with the profits earned and the outlook for the future. If the Prudential, for instance, can value 24½ million industrial and ordinary policies every year without making any fuss about it—and it has done this for the past 20 years at least—no smaller life assurance office can put in the plea that an annual valuation is impracticable.

In so far as the bulk of the life offices is concerned, other than the industrial companies, annual valuations and annual distributions are the exception. There is an increasing movement from the five-year to the three-year interval, yet the true logical step to an annual system has not been taken by many offices. The London Life Association, for so long as we can remember, always has valued annually. It began the system in connection with its annual reductions in premiums, and has applied it to the reversionary whole life and endowment assurance policies of recent years. The National Mutual, hitherto a five-year office, has announced its intention of making annual distributions in future. The action of several other companies in putting up their interim bonus rates shows that they are standing on the brink of a plunge into the annual pool. As soon as there is a little more movement in this direction there will be a rush. We are almost willing to prophesy that within five years from now the majority of the life assurance offices will have gone right over to annual valuations and annual distributions.

The advantages are considerable, both for the companies and societies themselves, and for their policyholders. An annual investigation does away with the long waits between a period of suspension and a period of bonus distribution, and enables offices to advance or reduce their bonuses according to changing circumstances. As a general rule they will be anxious to declare a rate which nothing except a cataclysm will cause to be subsequently reduced. It is worthy of notice that the offices which have adopted annual distributions have had comparatively brief periods of actual suspension, or no suspension, during the later years of financial stress. The London Life Association—protected by its very low expenses and very high reserves—maintained its rates of distribution and premium reduction all through the war. Most of the industrial companies made no distribution to ordinary life policyholders for three years, and then resumed them on a moderate scale. Since then their rates of annual distribution have rushed up year by year. The Prudential declared a bonus of £1 per cent., even for the melancholy war years 1915-1917, and has for 1923 gone up to £2 per cent.

There can be no question of the popularity of an annual distribution from the point of view of participating policyholders. They pay a specially high rate in order that they may share in the profits, and it is due to them—especially after the patience with which they have borne the five-year suspensions of war—that they should share as quickly as possible and as continuously as possible, in the comparative prosperity of the present days. There are no technical difficulties in the way of annual valuations and distributions, and no good reason why they should not come rapidly into general adoption.

LONDON ELECTRICITY SUPPLY COMPANIES.

THE most interesting points about the position of London electricity supply companies are set out in the words of Sir Harry Renwick, the chairman of the County of London Electric Supply Company. At the annual general meeting of this undertaking the chairman reminded us that “early last year negotiations were opened with the London County Council which resulted in certain heads of agreement being come to between the Council and the London companies, which were finally approved by the full Council on July 31st last.” He continued that “the final agreement is now being negotiated, and the sliding-scale has yet to be agreed. In settling the latter we must all strive for such terms as will enable us to raise our capital in future on the lowest possible terms; we must, in fairness, be given every encouragement to effect the greatest economies; and we must also be encouraged to develop our business in the widest possible way. In order to give legal effect to the proposed agreement with the London County Council it is necessary to obtain Parliamentary sanction, and your directors are promoting a Bill jointly with the other East End companies already mentioned in the present session of Parliament for that purpose. The aim of all parties, of course, is a reorganisation of the electricity supply of London, and the achievement, by this means, of a cheap and abundant supply. As to the method to be adopted, it is generally accepted that this must proceed by the grouping or combinations of stations or undertakings. In the first place, there are the municipal authorities, who are already organised to form one group. Our friends the West End companies are similarly organised under a joint committee to form a second group. The third, and what I may call the industrial group, includes the companies I have already mentioned—namely, the County of London, the City of London, the South Metropolitan, and the South London. You will note that these four companies operate over a very compact industrial area, and form quite naturally one group or combination, and when we have obtained the necessary legislative sanction, we shall then be in a position to submit to you our definite proposals, which will be largely determined by the Electricity Commissioners’ scheme, to be issued in draft form in the next few days, following which the usual formal inquiry will be held.”

In the following analysis of the results of representative London electricity supply companies we tabulate from those reports which give the information the amount of Board of Trade units generated and sold:—

B.T. UNITS SOLD (000's omitted).

	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
Charing Cross, W. End.	13,770	12,390	11,591	12,649	14,563	14,949	17,224	18,979
Do City	22,603	32,209	29,985	34,349	38,358	38,511	41,771	45,018
Chelsea	4,451	4,738	4,491	4,225	4,916	4,829	5,268	5,732
City of London	29,113	29,697	26,656	31,256	36,730	35,931	42,606	49,165
County of London	25,743	37,595	40,326	42,488	49,553	51,220	58,242	65,679
K'ning's & Knightsbridge	5,671	5,149	4,581	4,628	5,811	6,507	7,457	11,331
London	35,336	49,014	46,357	42,908	47,356	47,491	49,676	52,820
Metropolitan	18,109	28,446	26,761	25,127	27,799	26,945	29,624	35,541
St James' & Pall Mall	11,605	11,986	10,594	12,190	13,510	13,464	15,827	23,120
Westminster	21,906	27,813	25,211	24,676	25,659	25,254	30,261	34,890
	187,807	239,037	226,553	254,496	264,265	265,101	297,956	352,275

This is a remarkable record of progress, and illustrates the development of the industry. It is a pity, perhaps, that a little more information is not offered in these reports as to the prices charged to consumers for electricity. The Brompton and Kensington maintains its useful statistical record, which goes back to 1890; in that year the average price per unit was 7.43d, in 1914 it was 3.92d, while in 1921 it was 5.236d, moving to 5.09 for 1923. Also we find an interesting comparative statement issued by the City of London. This company reduced its charges from 4.37d in 1921 to 3.49d for 1923; in 1917 its average price per unit was 2.61d. In the report of this company it is added that: "In view of an application which it is understood the Corporation of London is about to make to the Electricity Commissioners, but more particularly in view of the negotiations with the London County Council . . . your directors feel that they cannot yet announce what further reductions they are prepared to make in the tariff charges."

The next table shows gross annual earnings of the principal London companies for the past seven years. The figures for 1913 are appended for comparative purposes:—

GROSS REVENUE.

	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
Brompton & Kensington	56,482	61,898	58,759	74,045	103,372	110,130	121,458	124,157
Charing Cross, W. End.	151,240	165,136	193,858	265,855	331,045	312,532	333,156	320,333
Do City	149,819	212,542	238,074	331,323	418,746	439,772	437,992	409,533
Chelsea	72,627	86,602	86,628	92,622	115,151	129,616	145,781	153,609
City of London	311,822	347,979	389,859	521,116	649,391	676,456	740,158	734,559
County of London	255,670	379,836	451,811	576,116	698,625	769,634	895,783	1078,040
Kensington & Knightsbridge	81,859	78,711	78,268	95,871	127,141	138,105	150,185	152,559
London	162,864	228,032	245,538	305,102	372,230	393,674	374,032	386,774
Metropolitan	217,626	318,216	346,728	413,054	516,524	538,471	567,086	631,724

This table of gross revenue does not reveal the full measure of prosperity which the companies are now enjoying. The gains on previous years set out above are, of course, welcome, but, in many cases, the more important addition to net revenue has been obtained from a comparatively substantial decrease in expenditure. This is shown in the following table:—

EXPENSES, INCLUDING REPAIRS AND MAINTENANCE.

	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
Brompton & Kensington	24,984	31,580	40,272	44,684	59,469	69,089	70,239	71,284
Charing Cross, W. End.	66,866	103,268	105,267	167,242	208,114	212,116	187,007	172,182

Profits have not increased at the rapid pace which occurred in the previous year. The Brompton and Kensington makes a profit of £52,872, as against £51,220 a year ago. The Charing Cross, West-End shows a profit of £148,151, as against £146,149 for 1922, these results having been contributed to by increased revenue and reduced expenditure; the City undertaking earned £204,130, as compared with £190,072, and for the first time a dividend has been paid on its ordinary capital. Chelsea, with a profit of £60,005, compares with £60,738. The City of London is slightly lower, with profits of £308,892, but the County of London records a surplus of £678,558, as against £521,769 for 1922. As this is the most prominent company in our group, a

closer examination of the accounts may prove of interest. The heavy increased earnings were the result of an increase from £895,783 to £1,078,040 in revenue, and a decrease from £427,432 to £374,014 in expenditure. For just under 65½ million units of electricity the company obtained £938,229, as against £858,317 for approximately 58½ millions. Kensington and Knightsbridge secured total receipts of £152,559; expenses are £103,768, and net profit £48,791. The Metropolitan is able to show a profit of £360,081—an excellent increase on £293,184 for 1922. The London Electric Supply records a profit of £154,452, as compared with £150,199. The St James' and Pall Mall £74,511, as against £80,704, and the Westminster £173,035 and £131,996 respectively for 1923 and 1922. In the concluding table we show the yields obtainable from the shares of these companies calculated on recent dividend distributions. Share prices are also appended over a period of years:—

PRICES AND YIELDS.

(s) 25 shares. (t) £10 shares.

There can be no doubt that in splitting high-value shares into denominations of the more humble pound, the electricity supply share market has been widened to a considerable extent. Apparently stockbrokers, in many cases, have found a difficulty in satisfying the demands of small investors; it is obvious that the value of these shares as a safe form of investment is beginning to be realised by the people at large.

HISTORICAL ASPECTS OF CORNISH TIN MINING.

(BY A CORRESPONDENT.)

ONE of the commonest misconceptions concerning tin is that mining operations have been carried on in Cornwall since the days of the Phœnicians. Such an idea, apart from its being entirely fallacious, has done positive harm when it has been put forward as an argument against the possibility of there being any metalliferous deposits still untouched in Cornwall to-day. In point of fact, it was not until the reign of Elizabeth, or even later, that mining proper began in Cornwall. If the Phœnicians ever traded for tin, and there is no reason to suppose that they did not, it was for the tin found in the alluvial deposits that they came and bartered their Eastern wares with the ancient Cornish.

The early miners in Cornwall, like those of nearly all the young mining districts of the world to-day, were not underground men, but streamers. Their work consisted in laying bare the alluvial deposits of rounded tin stones, which had originally been washed down into the valleys and low grounds from the standing veins or lodes which outcropped in the hillsides above. Throughout the Middle Ages the records show an ever-increasing trade in tin of this sort between Cornishmen and the English and foreign merchants. It was not till the latter decades of the sixteenth century, and more still in the seventeenth century, that the gradual exhaustion of the alluvial deposits led the tinners higher and higher up the valleys towards the lodes from which the alluvial tin had been broken away, till finally the discovery of the lodes themselves induced the tinners to follow them underground. After this point conditions changed more rapidly in the industry, periods of great prosperity interspersed with

times of depression following each other with singular regularity to the present day.

The first trouble the miners had to deal with underground was water. The usual method for draining these early mines by driving tunnels into the hillsides, and by bailing with windlass and buckets, was possible only for a short time, and as the mines increased in depth beyond three or four hundred feet from the surface, the difficulty of draining them became so acute that in the late seventeenth century many mines were forced to close down. Steam was coming to their aid, but its introduction into the Cornish mines was slow. In 1742 there was still only one steam engine to be found in Cornwall, though in the next 36 years more than 60 were erected, and more than half were rebuilt or enlarged. In spite, however, of the great numbers of mines at work at this time, and the skill of the miners, the output of tin remained surprisingly small, according to modern standards. Between 1750 and 1815 the production of tin rarely amounted to more than 2,500 tons a year. One of the chief reasons for this was that, in spite of the introduction of steam-power in many of the mines, the lack of mechanical knowledge of the miners caused it to afford far less benefit to production than might otherwise have been the case. The waste and extravagance connected with the pumping engines and pitwork alone was ruinous. The engines were badly made, and it was a rare circumstance ever to erect a second engine on a mine before the first had arrived at the full extent of its power, or even to provide a spare boiler in case of failure of the working boiler. Owing to bad pit work, in some cases as much as two-fifths of the water pumped to surface found its way back into the shaft. The lower levels of the deep mines were consequently almost always flooded at some period of the winter.

Added to all this, the last decade of the 18th century saw a hitherto unprecedented slump in Cornish tin-mining, produced, amongst other causes, by a falling off in the demand for tin, following on the substitution of chinaware for pewter in household use. Great poverty ensued amongst the tinners, who showed their resentment towards the newly-imported china, which they considered so prejudicial to their trade, by smashing all pieces which came within their way, and cargoes landed in Cornwall at this time had to be guarded by bands of soldiers.

The situation was at length relieved by an agreement of the East India Company to buy up all the surplus tin in Cornwall for exportation to China, where there was a brisk demand for it in the shape of tin paper, "which the people burn morning and evening as an offering to their idols."

In spite, however, of depression in the tin trade, multitudes of people still continued to find employment in mining, for the reason that by this time copper, and not tin, had become the staple commodity of the mines. This metal, which was hardly recognised in Cornwall before the year 1710, had in the space of 70 years become of such importance that tin was at one time actually rejected for it. From the end of the 18th century until the 'sixties of the 19th century Cornish mines bulked largely as copper rather than tin producers. The statistics of this period give a fair idea of the proportionate production of the mines. From 1750-1816 the annual output of tin scarcely amounted, on the average, to more than 3,000 tons. In 1838 the total amount of tin produced by more than 200 mines, employing an aggregate number of 30,000 work-people, amounted to scarcely more than 7,000 tons, as compared with over 151,000 tons of copper ore. By the middle of the century the value of the copper exported annually was over £1,000,000 sterling. During the 'sixties of the last century, however, signs were not wanting that the supply of copper was rapidly falling off, though in the bottoms of the majority of the mines (and this is a significant fact) tin was beginning to appear. Could these mines have continued sinking then and there many more of them would be working as large tin producers to-day. Being worked, however, on the cost book system, and having divided their profits almost to the last penny throughout the palmiest days of their prosperity, few of them had the necessary reserve of capital to do so. The result was that during the 'seventies numbers of Cornish mines which had had long and successful careers as copper producers, and which were

already making tin in their bottom levels, were forced to close down through sheer lack of reserves to enable them to carry over the period required for sinking on to the tin zone below. Others which found the money to do this were just beginning to produce tin when they were finally crushed out of existence by the phenomenal drop in the price of tin, which in 1891 fell from £100 to £86, and finally in 1894 to £64 per ton. At this figure it remained until 1898, when it suddenly recovered to £122 per ton, since which time until the war it never averaged less than £118 for the year.

A few mines only, more fortunate than the last, hung on through the lean years of 1894-1898, and became large tin producers. As such they are working prosperously to-day and are reaping the benefits of their good fortune and determination. From the published accounts of these modern Cornish tin mines we may gain some idea of the comparative smallness of the output of tin from Cornwall in the past, as compared with the possibilities of the future. In 1914, and again in 1916, the output for the year of some ten mines employing about 4,000 men averaged 6,500 tons of black tin, as compared with only 7,000 tons in 1838, when there were more than 200 mines at work.

Thus it has been shown that, in spite of the antiquity of the tin trade in Cornwall, tin-mining proper, owing to the lateness of its start, the inefficiency of its methods according to modern standards, and the lack of vigour with which it was prosecuted during the copper period, is still in its infancy in many districts. The position of the industry since the war, and the developments of Cornish tin-mining in the future, must furnish the basis of another article.

THE "JOHNNIES" GROUP IN 1923.

(BY OUR MINING CORRESPONDENT.)

WITH the group of companies under the ægis of the Johannesburg Consolidated Investment Company, the past year has proved a period of progress in many directions. Increased quantities of ore have been crushed, the total in several cases constituting a record; and while the revenue per ton has fallen off, owing to the decline in the gold premium, the treatment of lower-grade ore, or both, the expansion in the tonnage milled, coupled with reduction in costs, has resulted in the piling up of larger profits than before. It should be mentioned that the factors of grade and costs react one upon the other. During the inflation period of 1920 and 1921, considerable quantities of the material opened up had to be ruled out as unpayable. With the expense ratio six or seven shillings below the 1920 figure, freshly developed material of rather low value can be included in the ore reserve estimates, while blocks previously disregarded can be brought in. Hence—in a greater or lesser degree—arises the expansion shown in one or two of the latest ore reserve statements. As will be seen from the appended table, except with the Van Ryn Deep, the dividends disbursed in respect of 1923 exceeded those of either of the three preceding years:—

	Ore Crush'd	Results per Ton.			Work-ing Profit.	Divs.	Ore Reserves.	
		Yield.	Costs.	Profit.			Tonnage.	Value.
Govt. Areas—	Tons.				£	%		Dwt.
1920	1,515,000	44/9	22/2	22/7	1,709,160	50	10,291,000	8.2
1921	1,625,500	43/4	21/7	21/9	1,762,490	55	10,233,000	8.5
1922	1,357,000	40/11	18/8	22/3	1,508,030	50	10,324,000	8.8

* Loss.

Last year's output of 768,200 ozs on the part of the Government Areas placed the company second in the list of the world's producers. The performance of a considerably increased amount of development work was reflected in the ore reserves, the value of which is again a little higher. No reference is made in the report to any intention of splitting the shares or enlarging the treatment plant. Rumours of such measures were not long ago responsible for an advance in the market price of the shares. It may be mentioned that the Union Government's share of the profits substantially exceeded that paid to the proprietors.

The figures relative to the Langlaagte Estate do not lend themselves to comparison, that company having in the course of the year absorbed the Consolidated Langlaagte. The New State Areas makes its bow as a producer. The company is longer in getting into its stride than had been anticipated, results still being somewhat poor. However, the consulting engineer predicts "a long and prosperous career." The balance-sheet shows loans totalling £220,000, in addition to the £500,000 debenture issue.

After providing for debenture and other interest, the accounts of the Randfontein Central company indicate a surplus of £337,500, all applied to capital expenditure and debenture redemption. The consulting engineer reports that "the reorganisation of this great mine" has been practically completed. The ore reserve computation includes 944,000 tons of Battery reef, to which particular attention was paid last year. In view of the projected fusion, little purpose would be served by further discussion of the position of this company *vis-à-vis* the parent undertaking, the Randfontein Estates. It may be pointed out, however, that of the latter's profit and loss credit balance of £1,172,650, only a small proportion is represented by actual cash.

In the case of the Van Ryn Deep, the fresh decline in the value of the ore reserves is attributed to the inclusion of 475,000 tons of 5.4 dwts stuff in the Western Section. It follows, nevertheless, that development did not fully replace the ore extracted. As regards the Witwatersrand Gold, the progressive shrinkage in the ore reserves indicates the approaching exhaustion of the mine. This event will be staved off for some time by the acquisition of claims formerly owned by the Knights Deep. The New Primrose—not included in our tabulation—is just living from hand to mouth, but may work some time longer.

Notes of the Week.

Germany's Foreign Assets.—The report of the Committee which, under the auspices of the Reparations Commission and the chairmanship of Mr Reginald McKenna, has been inquiring into the nature and extent of Germany's exported capital, is a document which will certainly provoke much interest and some amount of controversy. At the outset the committee rejected the idea of instituting inquiries through bankers and business men in foreign countries where German capital was said to be invested, and proceeded by the following stages:—(1) An estimate of Germany's foreign assets at the outbreak of war; (2) the net reduction in this total at the time of the Armistice; (3) developments between November, 1918, and December, 1923. The committee's conclusions under these three heads are:—(1) A figure of 28 milliard gold marks [about £1,400,000,000] may be accepted as representing German assets abroad in 1914. This total does not include the property of German nationals in foreign residence at the time. Securities have been taken in gold marks at their face value in the compilation of this estimate. (2) During the war Germany's import surpluses and loans to her allies totalled 15.2 milliard gold marks; approximately 16.1 milliards represents the reduction in German assets abroad as a result of depreciation, liquidation, and sequestration measures; the exploitation of occupied areas in Belgium, Northern France, &c., yielded from 5.7 to 6 milliards; one milliard was raised by the export of gold, and something not far short of a further milliard by sales of securities. The revenue derived by Germany from her assets abroad was also considerably

diminished. (3) In the post-war period Germany's efforts to cover her foreign trade deficits and to meet cash payments under the Treaty of Versailles cost her between 9 and 10 milliard gold marks. By the sale, in foreign countries, of mark credits and paper marks, the value of which subsequently depreciated in consequence of the collapse of the mark exchange, profits to the tune of 7.6 to 8.7 milliard gold marks were received. Sales of gold abroad amounted to 1½ milliards, and sales to foreigners of German real property and securities to a similar sum. A certain net gain accrued from the expenditure of foreign nationals inside Germany since the war, and of foreign troops occupying German territory. The committee also took note of income derived from foreign remittances, of the value of German private property in ceded territories such as Silesia, Posen, &c., and of foreign banknotes circulating in Germany (estimated at 1.2 milliard gold marks in December last). The committee's final conclusions may be given in the words of the report:—"After a close examination of all the factors which make up the total sum, we are of opinion that German capital abroad of every kind, including capital of varying degrees of liquidity and capital invested in participations in foreign companies and firms, and after taking into account all credit and debit items, was, at the end of the year 1923, not less than 5.7 milliard gold marks (£285,000,000), and not more than 7.8 milliard gold marks (£390,000,000), and we think that the middle figure of 6½ milliard gold marks (£337,500,000) is the approximate total." The committee records its opinion that artificial methods are quite ineffective in preventing the flight of capital or in bringing about its return. The only practical solution is the eradication of the causes which led up to the exodus, by permanently putting a stop to currency inflation. "Restrictive legislation.....becomes superfluous the moment there is no longer any inducement to evade the law." The report bears the marks of an ably-conducted scientific inquiry, and should serve as a corrective to some of the wild ideas concerning Germany's foreign assets which have lately been current. At the same time, the subject obviously offers much scope for divergence of opinion, depending as it does, for the most part, on a multitude of estimates rather than on verifiable statistical data, and debate is likely to range round this question in the near future.

The Rent Bill Muddle.—The Government entirely failed to take advantage of the respite accorded to them on the Rent Restrictions Bill by Mr Pringle's charity in "talking out time" last week. When the debate was resumed on Monday no new light, no plan for meeting the obvious wishes of the House was forthcoming. The Prime Minister intervened without success. He suffered under the disadvantage of not having been present at the first debate and of concentration on other matters, and showed himself to be out of touch with the House. His long statement really merited Mr Baldwin's epithet of "tenebrosity" and Mr Asquith's phrase "insipidated gloom." These two party leaders clearly indicated the willingness of the House to accept two of the three clauses in the Bill and to co-operate in solving the eviction problem; both appealed to the Government to withdraw the obnoxious Clause I., which threatened to throw on to the landlord the burden of unemployed workers' rents. But in spite of these warnings and offers, the Government sailed on to inevitable defeat, the actual voting of 221 to the entry of a group of Liberals into the Government lobby and the abstention of many others. The Government tactics are difficult to understand. We hesitate to accept the theory of a deliberate and diabolical plot to represent Conservatives and Liberals to the electorate as voting against the eviction of unemployed. But it is difficult to explain on any other ground, unless it be that of Mr MacDonald rightly decided to classify this defeat as conditions, do not imply the resignation of the Government, and proposes to round an awkward corner by adopting and amending Mr E. D. Simon's Rent Bill. In this way he escapes deadlock, but does not rid himself of

political embarrassment. In any case the Government has, through nobody's fault but its own, suffered a serious blow to its prestige at a moment when it needs to have behind it in its approach to European problems all the prestige it can muster.

March Overseas Trade.—The Overseas Trade returns for March, which appear as we go to press, show the following results:—

	(Million £'s.)		
	March, 1924.	February, 1924.	March, 1923.
Imports	103.7	96.7	90.0
Exports	61.1	68.0	60.9
Re-exports	12.7	13.2	9.1
Excess of imports	29.9	15.5	20.0

The import increase in comparison with March, 1923, of £13.7 millions is due mostly to food and raw materials, which increased by £6.8 and £4.4 millions respectively, the latter entirely on account of raw wool imports. The decline in exports in comparison with February is due mainly to iron and steel manufactures and textile goods. We hope to deal more fully with the returns next week.

The Fascist Victory.—The new electoral law in Italy made a victory for Signor Mussolini a certainty, but the result has surpassed the hopes of his followers. The poll was 62 per cent. of the electorate—the heaviest in Italian Parliamentary history, and the official Fascists have not only obtained the 355 seats which they could certainly count on, but will have the 14 votes of a group of "discontented Fascists," who are certain to support the Government. The remaining 161 members elected to the Chamber are split up into about a dozen groups which no pressure can combine. Of these the Catholic Popular party came first with 45, at least three groups of Socialists and Communists—all reciprocally hostile—make up 74, and 29 seats go to the two groups of the regular Parliamentary opposition. The rest consists of small local parties, with from two to seven members each. The Fascists were strongest in the South, where political activity has always been least, and were actually defeated by a majority of 10,000 in Lombardy (and notably in Milan), where it has always been keenest. But in both cases the Fascist vote is rumoured to have been increased by intimidation, and by disallowance of votes on technical grounds. How will Signor Mussolini use his victory? His followers have all but extinguished the local Socialist organisations—some of them deservedly—and incidentally have dealt a heavy blow at the co-operative movement by attacking several agricultural and distributive societies, and destroying or appropriating their goods. As a middle-class movement, Fascism makes for the support of the individual shopkeeper, the distribution (by voluntary sale) among peasant proprietors of the large estates in Southern and Central Italy, lower customs tariffs, the suppression of strikes, and the management of railways and "public utilities" by companies instead of the State. Signor Mussolini's foreign policy must depend largely on the results of the elections in France and Germany; but he is known to believe that peace may be best secured by establishing a "balance of power" in Europe. And he has succeeded, at any rate, in disposing of the question of Fiume. At present he is a despot, supported by the majority of the voters. Will he so use his powers as to conciliate his more moderate opponents, and will Italy develop under his rule into a really democratic nation? Those are the vital conundrums in Italy's position to-day.

The South African Crisis.—The dissolution of the South African Parliament has come as a surprise, but General Smuts has taken the natural course. The South African Party, now in office, absorbed the "Unionist" or British party in 1920, and "racialism" was formally abandoned. At the General Election of 1921 it returned to power with 80 members, while nine Labour members and 45 Nationalists under General Hertzog made up an incongruous Opposition. But the Government has lost seats since then to both these parties, which, moreover, entered into a definite coalition last autumn, though there has since been some friction. In the Wakkerstroom contest the Government candidate lost votes through the reductions it

had effected among the railway men and in the Civil Service, through its alleged substitution on the railways of coloured for white labour, through the cuts projected in teachers' salaries, and through the existing unemployment and heavy taxation. And, as he was the strongest candidate possible—the Administrator of the Transvaal, who had resigned his post in order to stand—both sections of the Opposition naturally did their very best to defeat him. The defeat left General Smuts with a Parliamentary majority of four, so he naturally decided to dissolve. It remains to be seen how the Opposition will fare at the polls, and whether they can hold together if they win. The postponement of the Prince's visit will not help them. South African mining securities have been only momentarily affected, and Union Government stocks not at all.

Safeguarding of Industries Act.—The statement, on Tuesday, made by Mr Sidney Webb, President of the Board of Trade, upon the Safeguarding of Industries Act may not be clearly understood by those to whom the intricacies of this Act are unfamiliar ground. The Act, though divided into two parts, really consists of three distinct parts. The statutory Part I., which applies import duties to wide categories of Key Industries—under which come some 7,000 commodities and chemicals—expires on October 1, 1926, unless extended by specific legislation. No statement has yet been made about the intentions of the Government regarding this Part I., probably because a decision is not a matter of urgency. Part II. deals with two contingencies:—The making of inquiries and Orders to meet foreign competition due to collapsed exchanges, and, secondly, the making of inquiries and Orders to meet "dumping" or sales in this country below cost of production abroad. The collapsed exchange portion of Part II. has given rise to several inquiries, and Orders have been made imposing import duties on fabric gloves and glove fabric, gas mantles, domestic and illuminating glassware, and enamelled and aluminium hollow-ware. This collapsed exchange portion of these Orders will come to an end on August 10th of this year unless continued by legislation. Mr Webb has stated that the Government do not intend to propose legislation, but to let the provisions of the Act lapse. The second portions of Part II., relating to "dumping," are permanent legislation, and are not subject to lapse, as are all the other sections of the Act. One inquiry has been made about alleged dumping, but no Order has been made. This dumping portion, though it has so far been practically a dead letter, will continue indefinitely unless repealed by legislation. It will therefore be seen that, so far, the Government has announced its intentions about one portion only of the Act—the collapsed exchanges. That will lapse on August 10th. The Key Industry provisions will continue until October 1, 1926, unless repealed in the meantime, and the dumping provisions of Part II. will be permanent unless a special Act is passed to put them out of action.

Irish Free State Trade.—For nearly a year the Board of Trade Returns of British overseas trade have lacked their proper value for comparison with previous periods, owing to the fact that last April the external trade returns of the Irish Free State were separated from the British accounts. Light on the effect of this separation is now provided, for the Saorstát Eireann has issued detailed trade returns for January. In brief, these show the following results:—

Country of Origin or Destination.	Imports. £	Total Exports. £
Great Britain	3,308,685	3,183,301
Northern Ireland.....	482,410	534,680
United States	302,424	17,787
Other countries	656,950	20,640
Total	4,750,469	3,756,408

If January be taken as a normal month, the annual external trade of the Free State consists of about £57 millions in imports and £45 millions in exports. Of this trade the preponderating part is done with Great Britain and Northern Ireland. We can now put our own trade

returns for January, 1923 and 1924, on a really comparable basis:—

	Jan., 1923.	Jan., 1924.	Jan., 1924.
	Min. £.	As Published by B. of T. Min. £.	(If Irish Figures had not been Excluded.) Min. £.
Imports	99.8	101.3	98.6
Exports	76.7	77.5	73.9

We hope that as time goes on the Free State officials will be able to produce their trade figures with a promptitude similar to that displayed by our Board of Trade. The most striking point about the Free State's export trade is that, of total exports in January of £3.7 millions, no less than £1.9 millions for "live cattle, sheep, pigs, goats" and £612,069 for "meat," and almost the whole of these exports go to Great Britain and Northern Ireland. The Free State has, indeed, so far as its export trade is concerned, got most of its eggs in one basket.

The Quarter's Shipbuilding.—Lloyd's Register Shipbuilding Returns for the quarter ended March 31 show that the tonnage under construction in Great Britain and Ireland—1,473,629 tons—is about 78,000 tons more than at the end of December, 1923, but there is still a decrease as compared with twelve months ago of about 19,000 tons. The present total, however, includes 101,000 tons on which work is suspended. Deducting this tonnage in order to enable a comparison to be made with figures for normal times, the tonnage actually under construction at the end of March amounts to about 1,373,000 tons. The average tonnage building during the twelve months immediately preceding the war was 1,890,000 tons—i.e., 517,000 tons more than the present total. A slight decrease is shown in the tonnage commenced during the quarter, namely, 227,786 tons, as compared with 244,506 tons during the last quarter of 1923. The tonnage launched during the quarter ended December 31, 1923, amounted only to 114,583 tons, whereas the total for the current quarter reaches 361,508 tons. The total merchant tonnage building in other countries, 1,042,875 tons, includes about 118,000 tons upon which work has been suspended, leaving about 925,000 tons actually under construction; the latter figure is 57,000 tons less than at the end of December, 1923. The figures for the leading countries abroad are:—Germany and Danzig, 299,021 tons; Italy, 130,743 tons; United States, 119,767 tons; France, 111,610 tons; and Holland, 106,505 tons. The total world tonnage under construction—2,516,504 tons—includes 219,000 tons on which work is suspended. The tonnage actually under construction is thus 2,297,000 tons, which total is 1,149,000 tons below the highest pre-war record reached on June 30, 1913, viz., 3,446,558 tons. There are at the present time under construction in the world 33 vessels of between 10,000 and 20,000 tons each, and seven of 20,000 tons and upwards. Twenty-one out of the 33 and all the larger vessels are building in Great Britain and Ireland. The returns show that there are at the present time 35 steamers and motor-ships, each of over 1,000 tons, with a total tonnage of 183,850 tons, under construction in the world for the carriage of oil in bulk. Of these tankers, 12 of 74,600 tons are under construction in Great Britain and Ireland.

Cotton Trade Short Time.—Our Manchester correspondent writes:—At the end of February spinners of American cotton in Lancashire decided to limit production for three months by running the mills only 26½ hours per week instead of the usual 48 hours. The scheme has had a marked effect upon yarn prices, and there has been a welcome improvement in the trade position. The Masters' Federation is very anxious to prevent any of their members increasing production, and on Monday last in Manchester there was a conference between a sub-committee of the federation and representatives of the local banks. After discussion, the banks unanimously decided to support the scheme of the federation, and they promised, as far as possible, to stop any mills breaking away from the regulations. This decision has resulted in a revival of demand for mill shares, and prices have appreciated, brokers reporting a freer buying movement than for a long time back. The optimism which now prevails

in Lancashire trade circles is largely due to the fact that supplies of cotton piece goods throughout the world are comparatively low. Some interesting figures have been received this week relating to the position in Shanghai. It is stated that the stocks of cloth at the end of last year in China were only 1,648,000 pieces, against 2,882,000 pieces at the end of 1922, and 6,828,000 pieces at the end of 1913. In view of these figures, freer buying for the Far East is anticipated at an early date, but trade conditions in China, of course, are affected at the moment by the absence of a settled government and the disorganised political situation.

U.S. Steel Corporation.—Our New York correspondent writes:—Although the combined quarterly statements had indicated that 1923 was a big year for the United States Steel Corporation, its annual report, issued a few days ago, attracted much attention in financial, steel trade, and investment circles, because the exhibit was in many respects one of the most remarkable ever made by the leading steel producer. Gross earnings of the corporation in 1923 amounted to \$1,571,414,483, an increase of nearly \$500,000,000 over 1922, and the largest total for any peace-time year in the corporation's history, with the exception of 1920, when prices were extraordinarily high. Net earnings, after depreciation, sinking fund, and other charges totalled \$128,176,519, or more than double those of 1922 and 1921, while the balance of \$108,471,875 available for dividends was the largest ever reported by the corporation, barring 1920, when the corresponding item was \$109,694,227. Payment of preferred dividends left \$83,487,387 applicable to the \$508,302,500 of common stock, or the equivalent of \$16.42 a share, as compared with \$14.433,778, or only \$2.83 a share in 1922. Last year two extra distributions were made to common stockholders, the first declared since 1918. After deducting both preferred and common dividends, there remained a surplus of \$54,259,994, as against deficits of \$10,981,347 in 1922 and \$14,017,785 in 1921. On December 31st last current assets aggregated \$588,595,473, which, with sinking fund and reserve fund assets, made a total of \$708,244,575. Current liabilities were \$137,403,027, leaving net working capital of \$570,841,548, an increase of some \$34,570,000, as compared with the close of 1922. Cash and security holdings, including those in the sinking and reserve fund account, totalled \$346,226,742 on December 31st, as compared with \$325,709,107 the year before. Expenditures for new construction and property additions during the year amounted to \$60,762,920. After allowing for depreciation thereon, the net addition to capital investment in 1923 was \$54,671,169, making the total of such outlays since the corporation was organised \$1,139,572,515, equivalent to more than \$224 a share on the common stock. The annual report showed that the average wage paid to employees last year was \$1,800, as against \$1,501 in 1922, \$1,736 in 1921, and \$2,175 in 1920, the peak year which marked the culmination of a steady advance in wages from the average of \$905 in 1913 and 1914, and the low record of \$677 in 1904. Elimination of the 12-hour day caused an increase of 17,117, or more than 10 per cent., in the number of employees; of the total increase in the pay-roll resulting from that change, about 60 per cent. was due to the employment of additional men, and 40 per cent. to increased wage allowances to employees whose hours of service were not changed from the 10-hour-day schedule. Unexpended balances for authorised additions, construction and improvements at the close of 1923, plus authorisations made since the first of this year, will call for an outlay on capital account during 1924 estimated at \$90,000,000.

The Cunard Report.—Disappointment at the reduction to 5 per cent. was tempered by the position shown by the accounts when they appeared, and some recovery in the price of the ordinary shares at once took place. Receipts for 1923 from freights and passage-money were £314,400 higher, but the total is still substantially below the receipts of the boom period. Expenditure increased by £321,400, and the profit was thus £7,000 lower at £748,600. The balance brought forward, moreover, was

£74,600 lower than the amount brought into the 1922 accounts, so that the available balance is £81,600 lower at £873,900. The following table shows how these figures compare with those of previous years:—

	1913.	1919.	1920.	1921.	1922.	1923.
Freight and passages	5,659,774	9,201,728	12,260,662	9,286,027	8,313,316	8,527,753

Carry forward	130,578	144,187	163,075	199,890	125,262	158,619

* Including repairs and renewals and insurance premiums.

The reduced dividend requires £111,400 less, and the balance forward is increased by £33,400. The balance-sheet, a serious blot upon which is the lumping together of the fleet and shipping investments into one enormous composite item of £18 millions, shows a reduction of just over a million in sundry creditors, which now stand at £11,913,800, while the fleet and investments are valued at £1,350,900 less, but debtors have increased by £300,300 to £1,792,600. The report states that the company's West-bound passenger business generally showed an increase over 1922, in spite of the operation of the U.S. Immigration Restriction Law, but there was a falling off in the East-bound numbers. The directors point out that "American East-bound freight rates continued depressed, and on an uneconomic level throughout the year," but add that it has recently been found possible to place them on a somewhat more remunerative basis. An analysis of the balance-sheet will be found in a later column.

Associated Portland Cement.—Although an improvement in the demand for cement was experienced last year, lower prices were realised. This is reflected in the accounts and report of the Associated Portland Cement Manufacturers, Limited, for the year ended December 31, 1923. A summary of the company's financial history since 1901 is set out below:—

Year Ending June 30.	Profit.	Debtors & Mortgage Interest.	Preference Div.	Sinking Fund, Reserves, &c.	Balance.
	£	£	£	£	£
1901.....	226,707	84,694	91,213	20,096	30,704
1905.....	310,662	135,063	118,885	61,185	Dr. 4,471
1910.....	316,407	140,938	118,885	60,848	Dr. 4,264
1911.....	369,861	139,237	118,855	109,707	2,032
1912.....	355,507	186,974	122,324	51,751	Dr. 5,542
1913.....	585,645	235,114	124,220	116,292	109,817
1914.....	556,341	229,653	125,133	101,518	100,037
1915.....	450,712	222,335	125,660	101,262	1,455
1916.....	351,174	226,382	..	113,710	11,082
1917.....	367,612	221,381	..	126,641	19,590
1918.....	551,660	215,619	125,660	203,951	6,530
1919.....	683,761	209,859	376,979	161,478	Dr. 64,555
1919 (July to Dec.)	398,123	101,562	62,830	135,000	98,731
1920.....	947,306	200,016	125,660	328,849	292,781
1921.....	658,916	195,513	125,660	229,395	108,348
1922.....	670,116	221,516	125,660	208,881	114,059
1923.....	577,099	232,801	125,660	218,600	39

* Year ended December 31st.

After making provision for sinking fund and depreciation, the available balance is £39. But it should not be overlooked that £227,440 was brought forward from last year's accounts. However, the directors, in view of the position, very wisely we think, are not recommending any distribution on the ordinary shares, but intend to carry forward £227,479. The report states that the company's export trade, which represented nearly 40 per cent. of its aggregate deliveries, was carried on at little or no profit, owing to the severe competition of Continental manufacturers who enjoyed a favourable position by reason of the depreciation of their respective currencies. These factors resulted in a reduction of the profits earned, which at £582,328, including revenue from investments, compare with £675,396 in 1922. These results are ob-

tained after setting aside the sum required to meet the estimated liability for taxation. The balance-sheet will be found analysed in our usual column.

Eagle, Star, and British Dominions Insurance.—This company's report for last year has the merit of frankness. It is a considerable merit. The past year has been unfavourable to the operations of the company, yet no attempt is made to cover them up. A great deal of money was made during the war and after the war, very high dividends were paid; now money has been lost and the position is plainly put before the proprietors and the public. The broad result is that the general reserve fund, which had reached £2,000,000, is reduced by £650,000 to £1,350,000. Of this draft of £650,000 on reserve, £150,000 has gone to strengthen the marine fund and £300,000 to write off "possible losses in respect of bad and doubtful debts and adverse fluctuations in foreign exchanges, &c."; £200,000 has been taken to fill up the gap in the profit and loss account. The operations for 1923 in the various branches may thus be summarised:—In the life department, after taking credit for £102,894, balance of profit on securities realised, the Star fund contributed £86,892 to profit and loss account; the fire insurance account had a deficit of £61,141; the accident, employers' liability, and general accounts contributed between them £82,723 to profit and loss; the marine account took £150,000 from general reserve. The interest from investments, &c., applicable to profit and loss was £110,660, whereas the preference, preferred, and ordinary shares cost £259,132 in dividends during 1923. The moral is obvious. The drain of high dividends, in excess of "assured revenue from interest, has thrown too great a strain upon the trading departments of the company. This has involved too great a rate of expansion, and an effort to maintain in unfavourable conditions the high earnings of the exceptionally favourable years. The fundamental rule, observed closely by the old-established offices, has always been to base dividends upon the receipts from interest, and to advance them only as interest receipts advanced. Surpluses have been carried to reserve and employed for dividend payments only through their interest earnings. The Eagle, Star, and British Dominions Company will have to conform to this rule if the lesson of its misfortunes—we believe temporary misfortunes—is to be learned. The dividend for 1923 on the ordinary shares was 22½ per cent., tax free, against 30 per cent., tax free, for 1922. It was much too high, and that this is realised is shown by the reduction of the interim dividend in a recent announcement from 7½ per cent., tax free, to 5 per cent., less tax. Severe economy in dividends for the next few years is plainly called for by the present circumstances. If the directors prudently came down to an annual 10 per cent., less tax, the company could then meet its preference, preferred ordinary, and ordinary dividends out of receipts from interest and other assured income, and with reasonable good fortune re-establish its finances on a much firmer basis.

The National Railways of Mexico.—The report of this system for the year ending June 30, 1923, dated last October, but only now distributed in England, has been made rather ancient history by the recent Mexican Revolution. The company's own railways and leased lines, 8,440 miles in all, were (and still are) in the hands of the Government. The debit balance accumulated since the default on the company's obligations in 1914 was in-

creased in 1922-23 to 239,520,460 pesos, or \$119,760,230. The debit balance for the year was 23,265,560 pesos. Of this, 21,840,762 pesos represented interest on obligations, collateral trusts, and notes (the last-named, we believe, representing the interest unpaid during 1914), and 22,289,433 pesos the seventh instalment of the sinking fund on the 4½ per cent. prior lien bonds. The rest consisted of office expenses, taxes (chiefly French, on securities listed in Paris), "interest on sundry obligations," and a small debit balance on exchange; but against the total, amounting to 24,939,807 pesos, there were interest and dividends on securities owned by the company (616,602 pesos), interest on pending amounts spent on extensions (493,215 pesos), and miscellaneous earnings (564,489 pesos), chiefly from the rental of lands. This last item, however, had been kept down by the depression at Tampico, which reduced the rent of wharves, and by the encroachments of squatters, especially at Tampico and at Cardenas; in both places the State Governments intend, "as a measure of public utility," to expropriate the company. As its stockholders include both Mexican subjects and the Federal Government, the victims of Mexican rent-strikes and land-hunger are not all foreign. The company also suffers from the irregularity of the Government's payments for the coal it obtains to work the lines from the company's mines in Coahuila, and the lines will not be returned till "the concurrence of certain circumstances and conditions"—an event probably deferred by the revolution. Still, the company is building new lines and planning others, notably a direct line from the capital to Tampico, and will close duplicate lines built when the companies it now comprises or controls were in competition. It is also developing its other properties, and preparing to prospect on them for oil fuel. It has paid its Paris bankers the sum they had advanced for French taxes and is negotiating as to the balance claimed with the French Government. Reference is made to the application of the Inter-oceanic Company, whose lines it works, for their return; but the National Company is not favourable, holding that the claim should come from itself. The interest on the issues in default is included in the Lamont-de la Huerta settlement, as to which the report is hopeful. We may add that, according to an authoritative statement published some three weeks ago in New York, the delay in commencing payments under the settlement has been caused solely by the time taken in printing the various warrants, and that payment on six of the issues comprised will be made forthwith. The issues specified comprise State of Vera Cruz bonds, 1907; Pan-American Railway first mortgage, 1937, and various notes of that company, the Mexican Central, and the National systems. Possibly the printers prefer to get rid of the smallest items first; it may only be an accident that they are held chiefly in America.

Union Corporation Group.—Following close upon the heels of the annual statements of its two South African subsidiaries—the Geduld Proprietary and the Modder Deep—comes the report for 1923 of the Union Corporation. By the declaration of a final dividend of 3s per share, making a total of 4s., or 32 per cent. for the year, the shareholders in the last-named undertaking had been prepared for an increase in the profits; but the strength of the financial position will probably come as a surprise to many. The balance-sheet shows a surplus of practically £1,400,000 over the liabilities other than the final dividend; the amount represents 20s per share, of 12s 6d par value, now quoted at 35s. On the basis of the 1923 dividend, the return to the investor is the satisfactory one of 13 per cent. Appended is a tabulation of the results for the past three years:—

	1921.	1922.	1923.
Profit, dividends, &c. ..	280,360	284,400	336,400
Expenses, taxes, &c.	100,860	42,300	35,100
Net profit	179,500	242,100	301,300
Dividends	140,000	210,000	280,000
To reserve	30,000	30,000	20,000
Carried forward.....	77,870	80,000	81,300

The expenses for 1921 were swollen by an exceptional writing-off. Last year's growth in income is pretty well accounted for by the increased distribution of the two

Rand mining companies and the entry into the dividend list of the San Francisco Mines. The courage and judgment displayed by the directors of the Union Corporation in becoming associated with this Mexican undertaking have been richly rewarded. At the moment the "Frisco" concern is not quite fulfilling the best expectations of last year, the mine position entailing the restriction of the output to 400 tons per day, in place of the 500 tons the plant is capable of treating; but even now the earnings are on a very substantial scale. It is noteworthy that property on the extension of the vein has been acquired. In the case of the Geduld, there is the interesting feature that a fresh increase in the reduction works is to be made to a total capacity of 75,000 tons per month, the extra plant being expected to come into operation about the end of the year. Seeing that the ore reserves on December 31, 1923, totalled 7,500,000 tons, an enlargement of the rate of crushing is obviously warranted. After payment of 27½ per cent. in place of 16½ per cent., the increased balance of £152,000 is carried forward. The Modder Deep last year maintained its ore reserve position, and effected a fair reduction in working costs, although the latter were debited with certain special expenditure in connection with the installation of a minerals separation plant, &c. The dividends, of course, totalled 140 per cent., as against 120 previously. With both companies the saving in the expense ratio compensated both for the decline in the gold premium and a small falling off in yield per ton.

Transvaal Gold Output.—The latest figures of gold output in the Transvaal are satisfactory, showing a good increase on the February output. The figures for the three months to date make a capital showing when compared with the equivalent period of preceding years. The following table shows the output for every month since 1918:—

	1918.	1919.	1920.	1921.	1922.	1923.	1924.
January..	Fine Osa. 714,182	Fine Osa. 676,059	Fine Osa. 670,503	Fine Osa. 661,593	Fine Osa. 639,728	Fine Osa. 764,469	Fine Osa. 736,768
February..	659,759	636,728	625,530	558,137		704,970	720,617
March ..	696,281	712,379	707,036	671,123		761,586	795,671
Total (3 months)	2,070,222	2,025,166	2,003,069	1,880,853	639,728	2,231,025	2,353,066
April ..	717,000	694,944	686,979	681,382	511,338	743,651	785,561

September	708,206	698,598	682,173	681,026	747,089	780,639	780,639
October ..	679,764	733,722	662,472	707,825	778,159	790,712	778,849
November	658,701	677,970	633,737	704,236	764,476		
December	641,245	650,191	632,215	681,847			
Total (12 months)	8,420,560	8,330,091	8,153,625	8,114,516	7,090,110	7,798,959	7,798,959

The following table shows the number of natives employed at the end of last month by members of the Witwatersrand Native Labour Association and Contractors:—

	Aug., 1923.	Sept., 1923.	Oct., 1923.	Nov., 1923.	Dec., 1923.	Jan., 1924.	Feb., 1924.	Mar., 1924.
Gold mines	167,600	174,406	177,047	177,674	177,779	181,659	182,055	176,483
Coal mines	16,156	16,225	16,216	16,246	16,142	16,109	15,958	15,763
Diamond	5,107	5,134	2,911	2,997	3,439	3,482	3,419	3,170
Total	188,863	195,765	196,174	196,917	197,160	201,250	201,432	195,416

It will be noted that the number of natives employed shows a decline on the month.

At a meeting of the Royal Statistical Society, on the 15th inst., Sir A. Lowes Dickinson, M.A., F.C.A., will read a paper on "Publicity in Industrial Accounts, with a Comparison of English and American Methods." The meeting will be held in the hall of the Royal Society of Arts, John street, Adelphi, W.C. 2, at 5.15 p.m.

In accordance with section 9 (1) of the Census of Production Act, 1906, the President of the Board of Trade has appointed the following gentlemen, together with officials of the Home Office and the Board of Trade, to be a Committee for the purpose of advising the Board as to the preparation of the forms and instructions necessary for the taking of the Census, and the making of any rules under that Act:—Mr T. J. Arnold, J.P.; Sir Arthur Balfour, K.B.E.; Sir Hugh Bell, Bart., C.B.; Professor A. L. Bowley; Mr Stephen Easton, O.B.E., J.P.; Sir

Henry J. Gibson, K.C.B.; Mr Kenneth Lee; Professor D. H. MacGregor; Mr R. C. Perry, C.B.E.; Sir W. Peter Rylands; Mr Arthur Shaw. The Committee will hold its first meeting at an early date. The secretary of the Committee is Mr G. A. G. Stanley, Board of Trade, Great George street, London, S.W. 1, to whom all communications should be addressed.

Obersea Correspondence.

UNITED STATES.—SHIPPING BOARD'S LOSSES—CONTROVERSY OVER PREFERENTIAL RATES—MONEY AND STOCKS—BONDS.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 1.

THAT the Government-owned merchant fleet was being operated at a heavy loss has long been an open secret, but it is only recently that official figures have become available, showing the extent of deficits incurred by the Emergency Fleet Corporation in operating its various routes and services. When the Committee on Appropriations in the House of Representatives issued its report last week on the pending Appropriation Bill for the fiscal year ending June 30, 1925, it published, among other things, a detailed statement, submitted by President Palmer, of the Emergency Fleet Corporation, revealing for the first time operating losses by routes and services, including insurance, repairs and administrative expenses, for the eighteen months ending with December, 1923, reaching the enormous sum of \$63,849,870.

President Palmer's testimony also disclosed that the eight voyages made by the s.s. Leviathan in 1923 resulted in a heavy net loss. The first voyage, in July, showed a profit of \$104,000, the second \$31,000 and the third \$138,000. There was a loss of \$6,000 on the fourth voyage, a profit of \$5,000 on the fifth, in September, but a loss of \$6,000 on the sixth, while the seventh and eighth voyages resulted in deficits of \$174,000 and \$164,000 respectively. The total net loss for the eight voyages, therefore, was \$70,898. Although no official figures are available, it is estimated that the recent repairs to the "Leviathan" cost approximately \$200,000.

In its report on the pending Appropriation Bill, the House Committee estimates that the cost of operating the fleet for the current fiscal year will be \$140,000,000, and for the 1925 fiscal year \$125,000,000. Of the latter sum the Committee expects that receipts from operations will provide \$90,000,000. An appropriation of \$30,000,000, the amount of the Budget estimate, and representing a decrease of \$20,000,000 from the sum appropriated for the present fiscal year, is recommended, besides an appropriation of \$6,000,000 for expenses of liquidation of assets, to make up the balance of the \$125,000,000 estimated cost of operations in the 1925 fiscal year. The Committee points out that, in order to keep expenses within the last-named figure, a consolidation of routes will have to be effected by placing certain routes under one operating manager—a policy now being carried out—and by reducing wherever possible the number of ships on such routes. At present, it is stated, the average loss for each cargo vessel on each voyage exceeds \$25,000. The Committee adds that the increase in the price of oil, not taken into consideration when the estimate of appropriations was prepared, may make it necessary to ask Congress for a deficiency appropriation during the next year on that account. During the year ended June 30, 1923, it is shown, the Government-owned fleet carried 131,684 passengers and 13,786,000 tons of freight, and in the first six months of the present fiscal year 102,580 passengers and 5,969,635 cargo tons, at the operating losses indicated. The Emergency Fleet Corporation is now maintaining 78 services, operating 379 vessels.

The proposed enforcement of section 28 of the Merchant Marine Act of 1920 has aroused a storm of protest from domestic shippers, manufacturers, and other interests concerned in all sections of this country. In substance, this section allows common carriers to grant through preferential rail rates on goods and commodities

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3.
Capital Authorised ... £3,000,000
Paid-Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,407,811

Branches: INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS. The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application. Fixed Deposit Rates will be quoted upon application. On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

in foreign commerce, if such products are exported or imported in American ships. As previously stated, the United States Shipping Board recently certified to the Interstate Commerce Commission that adequate American steamship tonnage now exists to warrant the operation of preferential rail rates, as applied to shipments to and from various ports and countries specified by the Board. The Commerce Commission, as authorised by this statute, has ruled that reduced rail rates, allowed in section 28, shall become effective on May 28th. Critics dispute the Shipping Board's statement that there is sufficient ocean tonnage operating under the American flag to handle commerce in different trades. They claim, also, that such preferential rates will cause trade complications, both domestic and foreign, and have a decidedly unsettling effect in many directions. Numerous commercial and shipping organisations throughout the country have already strongly opposed the enforcement of section 28, and others are expected to take similar action, including, possibly, the New York Chamber of Commerce, whose standing Committees on Harbour and Shipping and Foreign Commerce have just prepared and submitted a report urging the repeal of section 28, and the rescinding of the action of the United States Shipping Board. The committee declares that "the mere fact that there are eight or nine hundred Shipping Board steamers laid up is not a conclusive indication that adequate shipping facilities are or can be afforded by American vessels, and certainly the Shipping Board vessels now in commission, together with those privately owned, are not sufficient to give adequate service to the countries named in the recent Shipping Board certificate. A mere supply of the given amount of tonnage is only one of the factors necessary in furnishing the exporters of this country with adequate service." The committees state that the putting into effect of section 28 will, in fact, not be of any real help in building up the American merchant marine, but, on the contrary, will lead to "a degree of chaos in the export and import trade of the United States, besides leading undoubtedly to reprisals from other nations." Members of the Shipping Board have recently issued statements warning American citizens to be sure of the source from which protests may be made against the application of this section of the Merchant Marine Act, and expressing the belief that much of the agitation against its enforcement is the result of propaganda by or in the interest of foreign steamship interests. They point out, furthermore, that the matter is one of statutory provision, rather than of executive function; that section 28 is as much a part of the law as any other portion thereof, and that the only discretionary power lodged with the Shipping Board is that of determining whether or not adequate American flag tonnage exists. The Board, after extended hearings, insists that such tonnage now in operation is ample, and that there are plenty of ships in reserve to meet any necessary addition to present services. Statistics prepared by the Shipping Board show that the 379 vessels of the Fleet Corporation now in service approximate 2,216,742 gross and 3,325,113 deadweight tons, while there are 866 vessels of 4,676,906 and 5,510,354 deadweight tons tied up. The figures show that in private operation under the American flag there are in active service 271 vessels of 1,389,817 gross tons, which will be affected by the application of section 28, while 178 privately-owned vessels of 546,550 gross tons are tied up. Summarised, the statistics indicate a total of 650 ships with a gross tonnage of 3,606,559 in active operation at

present under the American flag, and a total of 1,036 of 6,056,909 gross tons tied up. The law as it stands makes it obligatory upon the Interstate Commerce Commission to enforce section 28, or to suspend its operation, according to the facts as certified by the Shipping Board with respect to the amount of American flag tonnage available. Among owners of American steamships opinion seems to be divided as to the wisdom of putting preferential rail rates in effect, as provided in the section referred to. The Executive Committee of the American Steamship Owners' Association, at a prolonged meeting here to-day, adopted a resolution expressing no opinion as to the desirability of having the section presently enforced. That matter is still under consideration by a special committee of the association. The Executive Committee, however, urged the enactment of certain pending amendments to that section, and many shippers and commercial bodies throughout the country are also advocating proposed changes in the law. One of the amendments provided in a Bill now before the House of Representatives Committee on Merchant Marine would authorise the Interstate Commerce Commission to use its discretion in enforcing section 28 of the existing statute.

Money rates have recovered quickly from the extraordinary slump witnessed a fortnight ago. Call loan rates on the Stock Exchange are now ruling at 5 to 5½ per cent., while fixed-date funds are quoted at 4½ to 4¾ per cent., depending upon maturity. The heavy accumulation of idle funds at this centre has practically disappeared through Government disbursements and withdrawals by interior institutions, which were unwilling to loan at the extremely low levels recently prevailing here. Present indications are that money rates will continue fairly steady around current quotations for some time. Stock market prices declined sharply, and, in the case of many individual shares, violently, last week under more aggressive attacks by bearish operators, as a pretext for indiscriminate selling throughout the active list. They did not succeed in forcing much liquidation of real holdings; on the contrary, the short interest was considerably increased. But prices of leading industrial shares were forced down to 92.28 on the average—a new low record for this year. Rails, though joining in the reaction, were comparatively steady, the average price of representative issues falling to 80.95, which was nearly one point above this year's low. During the past day or two the market has rallied slightly, chiefly on covering by shorts. Irregular price movements, however, are considered likely for some time, pending a clearer outlook in trade and politics, and further developments at Washington, especially in the matter of tax-reduction and soldier bonus legislation. Despite the brisk recovery in money rates, the bond market continues active and generally firm. That there is still an excellent investment demand is evidenced by substantial buying of seasoned issues yielding satisfactory returns, and by the quick absorption of new issues of securities. A noteworthy instance of the latter is this week's prompt subscription to the \$30,000,000 Government of Switzerland 5½ per cent. external loan gold bonds, dated April 1, 1924, and maturing 20 years hence. These bonds were offered by a syndicate headed by J. P. Morgan and Co. at 97½ per cent., and accrued interest, to yield 5.70 per cent.

FRANCE.—THE EXPERTS' REPORT—FRENCH CRITICISM—THE "TRANSFER COMMITTEE."

(FROM OUR CORRESPONDENT.)

PARIS, April 9.

It is as yet too early to be able to gauge accurately how French opinion will mould itself in regard to the plan which the Allied experts recommend for the solution of the reparations problem, as the details of their report became known only this afternoon. Conversation to-day with many people in both official and unofficial circles, however, enables a fairly just conclusion to be arrived at as to what the French attitude is likely to be. In the first place, the utmost satisfaction is felt at the fact that the Dawes Committee has arrived *unanimously* at the opinion that Germany is certainly in a position to pay forthwith a substantial annual instalment of her debt.

Speaking generally, French opinion regards the experts' plan as a thoroughly praiseworthy effort on the part of an assemblage of men of widely differing political views to solve what is very largely a purely economic and financial problem by really practical business methods.

It now rests with the Reparations Commission to communicate the conclusions of the experts to the German and other Governments interested, and then to decide whether, by what means and to what extent the plan proposed shall be applied. According to present arrangements, it is practically certain that no further step in the matter is likely to be taken before Easter, in order to give world opinion time to digest the experts' plan. After the holidays, however, it is regarded as a foregone conclusion that the Reparations Commission will take the question up in earnest, although it is improbable that any definite action can be taken by that body for several weeks to come. What is most likely to happen is that, while the Commission is engaged in threshing out the details of its decision, the whole question will form the subject of earnest conversations between the various interested Governments, and will for the time being be dealt with entirely through diplomatic channels. The outcome of this policy is expected in official quarters here to be the calling together of at least one, and perhaps more, international conferences, which will for all intents and purposes amount to a revival of the meetings of the Allied Supreme Council, either with or without the presence of German representatives, but almost certainly with American delegates "sitting in." It is hoped here, however, that, before any of these pan-Allied gatherings there will be a personal conference, either in London or in Paris, between the British and French Premiers, at which the preliminary bases for a Franco-British security pact will be laid down, and a plan for dealing with inter-Allied debts sketched out, for the details to be filled in later. Once these two problems principally concerned, the way will be clear for the delegates to the Reparations Commission to receive definite instructions from their respective Governments, and to proceed with the discussion of definite proposals for the application of such portions of the experts' plan as may have met with the approval of the Allied Powers interested.

All this will obviously occupy many weeks, and already there are indications that, strong as is French approval of some of the general principles it enunciates, the experts' plan will evoke a good deal of opposition in regard to some of its essential details. It is recognised here that, now that the reports have been handed in, the period of real difficulty has begun. Politically speaking, the plan is acclaimed as acceptable to French requirements, because it does not rule out the principle of the military occupation of the Ruhr and the Rhineland. The fact that the experts have pronounced in favour of France relinquishing her economic grip on that area will meet with no serious opposition here, provided M. Poincaré can be satisfied that the experts' plan will place this country in possession of other equally effective guarantees. Doubts are already being expressed, however, as to whether the plan provides "equally effective guarantees." Theoretically speaking, the guarantees furnished by the mortgaging of the German railways and industrial plant should prove much more practically productive, in view of the vital interest the Germans would have in making them so, than the Ruhr could ever be under present conditions. Practically, nevertheless, the contrary may prove to be the case, by reason of the peculiar character of some of the safeguards which the experts propose should be set up.

A portion of the plan which is regarded here as unsatisfactory is the constitution and functioning of the proposed "Transfer Committee," which would have the duty of receiving and transmitting to Allied countries the money received in Reparation payments. On this committee of six members (including the chairman, to be selected from one of the neutral Powers) France would have only the same voting power, it is complained, as Great Britain, Belgium, Italy, and the United States, despite the fact that she is Germany's largest creditor. It is claimed that, as her debt amounts to 52 per cent. of the total, she

should be proportionately represented on this committee. It was pointed out to me this afternoon by one very highly-placed French official authority that the proposed Transfer Committee will have the right, in the event of exchange rates proving temporarily impracticable, to retain in Germany money that had accrued from Reparation payments, in which case levies on Germany would also be suspended. Such a possibility, my French informant insisted, would obviously offer a great temptation to Germany to do her best to hinder the work of the Transfer Committee, by so acting that the representatives on it of countries not personally interested to the same extent as France would show no anxiety to transfer German money abroad or any special regard for French claims. "The Germans," my informant continued, "will be quick to see the opportunity this Transfer Committee will afford them, and in the circumstances I shall expect to find that the Reich will not seriously oppose the conclusions of the experts, but will endeavour to escape payment by taking advantage of the peculiar mechanism of this Transfer Committee." The criticism is as interesting as it is typical of French mentality in such matters; particularly when it is stated that the same critic condemned the "unfairness" of the Versailles Treaty on similar grounds, namely, that France had been given only one delegate on the Reparations Commission, but totally ignored the fact that by reason of the fact that the President of that body is a French nominee, France can generally rely on having the casting vote of the chairman in favour of herself and Belgium, as against Italy and Great Britain.

A second and less particularist criticism of the experts' plan is that its practicability depends to a very large extent on the readiness of the foreign investor to absorb the proposed German industrial mortgage and railway issues, and to invest in the much-discussed international loan to Germany, the value of all of which securities would depend almost entirely on German good faith in carrying out the Reparation obligations of the Reich. If the German elections, as appears likely to be the case, result in proofs that extreme nationalism is making serious headway, the likelihood of the American and neutral investor absorbing a sufficient proportion of the German Reparation issues to render the experts' plan a success is extremely remote.

ITALY.—MINISTERS ON FINANCE AND BANKING—DEBT INCREASE CHECKED—FOREIGN EXCHANGES—BANKING FIGURES.

(FROM OUR CORRESPONDENT.)

TURIN, February 5.

IMPORTANT speeches were delivered, on the eve of the general elections, by two financial leaders, Signor De Stefani, Finance Minister, and Signor Stringher, Director-General of the Bank of Italy.

The former's speech was marked by the somewhat unexpected declaration that the financial year will close without any new internal debt: so we have improved from 11,864 million lire of new internal debt in 1920-21, to 6,283 in 1921-22, 2,265 in 1922-23, to nothing in 1923-24. This declaration goes a long way towards explaining the firmness of stock markets. While the sum total of internal debts is stationary, its composition is changing. The Treasury issued from July 1, 1923, to February 29, 1924, a sum of 2,704 million lire nine-years and 25-years' bonds, and has repaid 2,309 million lire of short-dated bills from three months to five years, which were falling due.

"No new internal debts" is not technically equivalent to a declaration of a Budget equilibrium, which external debts toward Great Britain and United States may gravely imperil. At the present rate of exchange, and at 5 per cent. interest, the sum annually required for the bare interest service of the external debt would probably reach 5,000 million lire, an unbearable burden for which neither of the two creditor nations will presumably ask. For a complete budgetary equilibrium, from the British point of view, are perhaps wanting also the means for paying sums left over by previous financial years, of which the true value is not completely known.

INTERNATIONAL BANKING
IN ALL ITS BRANCHES

**BANKERS TRUST
COMPANY**

16, WALL STREET, NEW YORK

PARIS OFFICE

3 & 5, PLACE VENDOME

CABLE ADDRESS: BANKTRUST, PARIS

The position of public finance is, however, sound. Italy can face the future without uncertainty as to how to make both ends meet. Some important problems remain to be solved; but they can be viewed with equanimity, as we are on a firm basis.

The Finance Minister also indicated that the proportion between "permanent" and "total" tax income is increasing: from 79.68 per cent. in the second half of 1922 to 87.03 per cent. in the first half of 1924. So we are less at the mercy of extraordinary sources of tax revenue. He also showed that the number of new industrial, commercial, and professional taxpayers was 39,813 in 1921, 47,822 in 1922, and 107,909 in 1923. The taxing-net is filling with new fishes, so that the burden is more equally distributed. Sales of war stores, which gave 1,611 million lire in 1920-21, 1,186 million in 1921-22, and 956 million in 1922-23, will yield only 200 million lire in 1923-24. The Budget is now almost free from this extraordinary non-tax revenue. The State railway deficit fell from 1,258 million in 1921-22 to 906 million in 1922-23, and to less than 374 million in the current financial year, and is estimated at 110 million lire for 1924-25, including in the latter figure the deficit of new provinces hitherto excluded. The total number of civil and military State servants has been lowered, between July 1, 1923, and January 1, 1924, from 509,145 to 477,028, and their total salaries and wages from 4,859 to 4,562 million lire, to which will be added, next year, 65 millions saved by new system of pensions to retired servants.

Signor Stringher dwelt more on monetary and banking subjects. The rates of foreign exchanges in 1923 were characterised by more restricted fluctuations:—

Rates on:	1922.	1923.
New York—		
Maximum	18.38	19.35
Average	21.20	21.74
Minimum	25.96	23.83
London—		
Maximum	81.01	90.18
Average	93.83	99.80
Minimum	115.46	108.82

Whether the two leaders are aiming only at stabilisation, or also at revaluation of the lira, is not wholly clear. Perhaps their policy is not definitely settled. They keep revaluation in the background, and say that it will come gradually; but they assert emphatically that stabilisation is the most urgent necessity. How one aim is to coincide with the other is not stated.

Banks of issue were busier than ever in 1923. The yearly averages for the Bank of Italy were as follows:—

(Millions of Lire.)

	Discounts.	Loans and Advances.	Total.
1914.....	580.3	125.9	706.2
1919.....	862.5	868.2	1,730.7
1920.....	2,432.6	2,123.4	4,747.0
1921.....	3,189.3	2,662.4	5,851.7
1922.....	4,440.7	3,043.0	7,483.7
1923.....	4,954.4	2,462.6	7,417.0
December 31, 1923 ..	6,020.4	3,324.2	9,344.6

The figure for December 31, 1923, is swollen by the inclusion of 2,564.6 million lire of credit granted to the Consortium for the salvage of Ansaldo concerns, Banca Italiana di Sconto, and Banco di Roma. This is a blot on a banking position which had been somewhat inflated

since 1919. Industrial concerns and banking societies are rediscounting at the banks of issue in a measure which previously would have been deemed perilous, and for sums much higher than would be warranted by the devaluation of the lira. Signor Stringher seems to feel that the mass of banking paper will come to a good end. From the net profits of the Bank of Italy a sum of 100 million lire was deducted in 1923 to face losses on the said 2,564.6 million lire granted for salvage purposes. An additional sum of 391.8 million lire was deducted to the same end from the extraordinary tax on excess issue, which should have been paid into the reserves against probable losses. The liquidation of the salvage consortium ought to be finished at December 31, 1932. A Royal decree of January 1, 1924, has formally forbidden the consortium to discount other paper. The State will no more come to the aid—through the agency of banks of issue—of falling concerns.

CANADA.—THE BUDGET AND TARIFFS—THE NATIONAL RAILWAYS—THE ST LAWRENCE DEEP WATERWAY—SIR E. WALKER.

(FROM OUR CORRESPONDENT.)

OTTAWA, March 17.

THE Federal Budget is now expected sometime in the week before Parliament adjourns for its Easter recess, and its contents are a subject of general speculation. The fiscal year ends to-day, and as the revenue for the first 11 months reached 363 millions, the expectation is that Mr Fielding's estimate will be realised, while expenditures are a little below the forecast. Apparently the Government have decided upon a policy of keeping the railway estimates in a separate compartment and meeting any railway deficit by loans. The business and financial world is clamouring for a reduction of taxation, but it will only be possible on a very modest scale.

It is, however, the tariff plans of the Government which are the subject of the keenest speculation, and behind the scenes a strenuous battle is being waged for the body and soul of the King Government. The Speech from the Throne raised high the hopes of the low-tariff Liberals and Progressives, but the Protectionist interests have bestirred themselves with their usual vigour, and, in face of the deluge of protests against tariff reduction which have been pouring into Ottawa through various channels from the industrial centres, there is a suspicion that the Government have abated their earlier fervour for tariff reform. Eastern Canada will, even after the redistribution now overdue, possess almost three-fourths of the seats at Ottawa, and with the steady growth of Protectionist sentiment in Quebec as the result of industrial development, a lot of spadework in fiscal education would have been necessary to convince the average voter in the East that his livelihood would not be adversely affected by serious tariff reductions. No such spadework has been done, apart from some spasmodic efforts by the Progressives, who are mainly a Western group and suspect also of sectional selfishness, and Protectionist arguments and propaganda have had almost a clear field. Under such circumstances, Mr King fears to trouble fiscal waters which might overwhelm him. Confirmation of this view is found in a recent statement of the acting Finance Minister to a deputation of anxious industrialists from Hamilton, to the effect that they need have no fear of serious tariff reductions. The surmise now is that the Government will attempt to liquidate their pledges by the abolition of the 6 per cent. sales tax on farm implements and mining and sawmill machinery, and will rely for the placation of the Progressives, who will claim that they have been fooled once more, on a programme of new branch lines for the C.N.R. It is an old maxim of Canadian politics that if you want to placate a restless constituency or its member, build a new railway through it.

Sir H. Thornton is able to show a very creditable record for his first full year of management of the C.N.R.

The gross earnings of the railway for the calendar year 1923 were \$254,926,456, as against operating expenses of \$234,689,892, which leaves an operating surplus of roughly 20 million dollars, as against an operating surplus of \$4,193,549 in 1922 and a deficit of \$11,847,818 in 1921. Thanks to the continuing outward movement of last year's large Western crop, the returns for February and March, which have heretofore always shown deficits, show a profit of \$262,376, and Sir H. Thornton predicts that the surplus for 1924 will reach 30 millions. But since on December 31, 1923, the fixed capital charges of the system were placed at \$2,101,695,487, which is an increase of 75 million dollars during the year, the country is by no means yet out of its railway morass.

The principle of public ownership of hydro-electric power has received almost unexpected vindication from the Gregory Commission, manned chiefly by avowed critics, which was appointed a year ago to investigate the operations of the Hydro-Electric Commission of Ontario. This body has covered the province of Ontario with a network of hydro-electric enterprises whose value is estimated at \$162,152,470, and waste, incompetence, and graft in its management had been charged. The Commission's summarised verdict is that the value to Ontario of the power developments under the Hydro-Electric Commission's management is inestimable. This report has given fresh stimulus to the demand that the water-powers on the St Lawrence should be reserved for development by the State, and the problem has come once more to the forefront by the simultaneous publication at Ottawa and Washington of correspondence concerning the St Lawrence deep waterway scheme. The Coolidge Administration is strongly favourable to the project, and urged the creation of a joint international committee to report upon the project. But the hostility of Montreal and the whole province of Quebec is unabated, and as their influence is very powerful at Ottawa, the King Ministry has been compelled to move cautiously.

Canada is not seriously perturbed by the recent increases in the duties on wheat and flour, which had been sanctioned by President Coolidge with a view to the placation of the Western American farmer. All the harm which could possibly be done to the trade in grain between the two countries had been achieved by the Fordney tariff of May, 1921, which cut the Dominion's export of wheat to the U.S. from 42,324,000 bushels in 1921 to 16,213,000 in 1922-1923. There is, moreover, a certain irreducible minimum of hard Canadian wheat which the American flour mills must have to grind along with the softer grades produced in the south, and this minimum seems to have been reached when the 30 cent duty, now raised to 42 cents, was imposed. Furthermore, American mills still enjoy the privilege of the 99 per cent. drawback allowed on duties on Canadian wheat which they grind for exported flour. Meanwhile, there is a temporary stimulus to southward exports, as the American mills obviously want to import their full quota before the new duty comes into effect. The general view in the Canadian trade is that if the new duties succeed in their avowed object of raising prices in the U.S., Canadian wheat and flour will enjoy an even greater advantage in foreign markets than it possesses to-day through lower costs of production, lower freight rates, and the exchange situation.

On March 27th the Canadian banking world lost its most outstanding figure in Sir Edmund Walker, the President of the Canadian Bank of Commerce, who died suddenly of pneumonia. His banking career began as long ago as 1861, when he was 12 years of age, and from 1868 he had been connected with the great bank whose upbuilding to its present position was his life-work. He became its general manager in 1886 and its president in 1909. In recent years he was recognised, both in Canada and the world outside, as the Dominion's outstanding banker, and he had to his credit a number of books on banking and economic subjects. But, apart from his banking activities, he was a very public-spirited citizen, whose great and versatile ability, backed by untiring energy, enabled him to render a wide variety of services to the community. At his death he was serving as Chancellor of Toronto University, and it was significant of his whole career that he caught his fatal illness while travelling with the Mendelssohn Choir of Toronto, of which he had been honorary president since its foundation.

INDIA.—THE BUDGET DISCUSSIONS—ANNUAL TRADE FIGURES—NEW IMPORT DUTIES.

(FROM OUR CORRESPONDENT.)

CALCUTTA, March 20.

THE debate in the Legislative Assembly, while taking a zigzag line, ultimately attained its intended objective of forcing upon the Viceroy the odious responsibility of certifying Sir Basil Blackett's financial proposals as essential to the economic welfare and good government of India. It has caused some surprise and resentment in non-Swaraj circles that Lord Reading has decided to sacrifice needed revenue by reducing the salt tax to Rs.1.4as, thereby stultifying his own Finance Member, who on February 29th declared categorically that: "If we reduce the salt tax to Rs.1.4as, we are, in truth, proclaiming to the Provinces that neither in 1924-25 nor in 1925-26 can we offer them any certain prospect of relief. We are at the same time postponing indefinitely the date at which we can foresee any reasonable possibility of reducing other onerous taxes or increasing our expenditure on beneficial services. It is a message of despair to all those who are looking to expenditure, whether by the Central Government or by the Provincial Governments, for the amelioration of the conditions of life, and for improved educational and sanitary services throughout India. The choice is clear and unambiguous. We can, if we like, reduce the salt tax to Rs.1.4as, but by so doing we do a definite disservice to the true interests of India's finances." I think this verdict remains sound. Lord Reading, without placating the irreconcilable Swarajists, has re-imposed for another three years the impossible financial handicap upon Provincial Ministers, which more than any other single factor has rendered the Montagu-Chelmsford Constitution so ineffective and political discontent so acute since the Reformed Councils came into existence.

The official review of the trade of India in 1922-23, issued this week, reiterates that the prospects of real improvement in Indian trade depend mainly on recovery in the purchasing power of Europe. The following figures indicate our trade totals in 1922-23 on the basis of declared values in 1913-14, in which year trade, by the way, was distinctly better than the pre-war normal (in crores of rupees):—

	1913-14.	1921-22.	1922-23.
Imports.....	183	124	138
Exports.....	244	182	214
Total trade in merchandise (incl. re-exports) ..	427	306	352

On the import side, cotton piece goods were an important exception to the general downward trend. The quantity imported increased by 500 million yards to 1,600 million yards, and the value by Rs.15 crores to Rs.58 crores. The total amount Indian buyers are prepared to spend upon imported piece goods is, it may be noted, curiously uniform, totalling 58 crores in 1913-14, 43 crores in 1921-22, and 58½ crores in 1922-23. While quantities vary, aggregate values remain within very narrow limits, making a restoration of pre-war yardage totals dependent entirely upon a much closer approximation to pre-war values than Lancashire has yet attempted or perhaps envisaged. After deducting piece goods, the total imports into India fell by 22 per cent., from Rs.223 crores to Rs.174 crores. While wheat imports disappeared and sugar dropped from Rs.27 to Rs.15 crores, the value of imported machinery and mill-work and railway plant and rolling stock decreased, "owing largely to lower prices," from Rs.34 and Rs.19 crores to Rs.23 and Rs.11 crores respectively, the value of iron and steel purchases declining for the same reason. Among exports, raw and manufactured jute realised Rs.63, against Rs.44 crores in 1921-22 and Rs.69 crores in 1920-21. Rice increased by 700,000 tons and Rs.10 crores to 2 million tons and Rs.35 crores, and wheat by 140,000 tons and Rs.2 crores to 220,000 tons, valued at Rs.3½ crores. Raw cotton exports increased in value by Rs.17 crores. Tea yielded an additional Rs.4 crores, despite a marked diminution in quantities. Oilseeds rose by Rs.10 to Rs.27 crores, though in this commodity a full revival of the export trade must await financial reconstruction and a restoration of settled conditions in Europe. It may not be wholly irrelevant to mention here that in 1922 total deposits in Indian banks

reached Rs.210 crores, against 97 crores in 1913, an increase of 115 per cent.

In the same week in which it rejected the Finance Bill the Legislative Assembly decided to meet in May to consider the Tariff Board's recommendation of higher import duties on iron, steel and connected products, and no doubt is entertained that such duties will be endorsed by large majorities; industrial and political prepossessions coalescing to ensure to the Tata enterprise the protection its directors declare so vehemently to be in effect the sole alternative to bankruptcy, and the extinction (*pace* Indian Protectionists) of a vital national industry. It is claimed, in extenuation, that while jute and cotton manufacturers were allowed to make unrestricted war profits, the Tata works were controlled, thereby preventing accumulation of reserves; a handicap accentuated now, it is added, by dumping incited by the fact that (Great Britain apart) India has now the only unprotected steel industry in the world. Lord Chelmsford is quoted as a witness in favour, having declared at Jamshedpur in January, 1919, "I can hardly imagine what we should have done during these years if the Tata Company had not been able to give us steel rails, which have been provided for us, not only for Mesopotamia, but for Egypt, Palestine, and East Africa." As the Government of India and the Legislative Assembly, notwithstanding importers' protests, hold identical views on this issue, it is calculated that the Secretary of State will not be able to veto proposals suggested by the Indian Fiscal Commission as well as, more recently, by the Tariff Board, which held a public inquiry, and received evidence giving full and authoritative expression to all points of view.

Books and Publications.

WAR AND ARMAMENT TAXES OF JAPAN.*

EACH war in which Japan was engaged since the abandonment of the feudal system left the country with a larger debt, heavier taxation, and more costly armaments. Nearly half the Meiji Era (1869 to 1912) was spent, as Dr. Kobayashi tells us, "in a state of war"; nevertheless, "Japan's economic development after each war was remarkable." This volume, which continues the researches noticed in the *Economist* of June 9, 1923, "has to do with the establishment of new, and with the extension of old taxes, as means to meet the expenses of war and military preparations"; but Mr. Kushida, who carried out the investigations required, draws an arbitrary distinction by leaving out the cost of pensions, and the interest and sinking funds of war loans. At the beginning of the Meiji Era 1,605,734 yen covered the cost of the Army and Navy; at the end the expenditure amounted to 214 million yen, and the ratio of military expenses rose from 5.3 per cent. to 36 per cent. of the annual Budget.

Until the war with China in 1894 Japanese wars were more like faction fights, but now there began what Mr. Kushida calls frankly "contests for economic supremacy incidental to the development of national resources." An indemnity from the defeated Empire not only covered the Japanese expenditure, but provided 196 million yen for a ten-year programme of expanding armaments. Early additions to taxation proved disappointing, though the total revenue doubled in the ten years between the Chinese and the Russian wars. As a result of the victory over Russia, new war taxes were imposed, which were supposed to be temporary, but had, in fact, to be continued to meet increased military and naval expenditure, and be-

* By Ushisaburo Kobayashi, D.C.L. Printed for the Carnegie Trustees by the Oxford University Press, American branch, New York. Price \$2 25.

tween 1904 and 1907 the tax revenue again doubled. At the beginning of the Meiji Era, which Mr Kushida divides into four periods, all the war taxes were direct, the second and third periods added indirect taxation only, and the fourth period raised more than two-thirds by indirect taxation.

In Part II. Mr Kushida shows the remarkable rise in foodstuffs between 1901 and 1910, as a result of the war taxes; tables are given to show how production falls with each addition to taxation, and then gradually recovers. A table on page 56 must somehow have got wrong, for it gives the tax on breweries as yielding 1,609 million yen in 1907, whereas the total revenue for that year was only 527 million yen. Sugar replied to taxation by a decline in consumption and a rise in price. Gradually Protection crept in; a 5 per cent. Customs duty was imposed on wheat in 1904, on the ground that the land tax had been raised; next year it was increased to 15 per cent., and a 10 per cent. duty was put on rice. These taxes were almost doubled in 1911, when the Protectionist movement, stimulated by the record harvest of 1909, finally succeeded.

Working men in Japan have to pay heavy Excise duties as well as Customs, and we are told that the Excise duties on textiles raised the price and seriously reduced the output; the "Three Bad Taxes" which Japanese public opinion condemns most emphatically are the Excise on textiles, the travelling tax, and the salt monopoly. A Land Tax was the most ancient source of revenue, though the present form only dates from the Chinese war, but valuations were reduced, so that the yield was lower in 1898 than in 1873; even the increase of 1899 made the yield only 46½ million, as compared with the 45 millions of 1873. An income-tax was imposed in 1887 to supply the needs of the Navy; it was increased after the Chinese war, again in 1904 during the Russian war, and once more in the following year.

Although Mr Kushida's tables and arguments are sometimes difficult for an Englishman to follow, he seems to prove his contention that the taxation of the peasant proprietor is far heavier than that of the well-to-do professional men; later we are told that "the Japanese land owning, trading, and industrial classes shoulder rather a light burden of war taxation." Japanese Finance Ministers have shared the common delusion that direct and indirect taxation ought to be increased *pari-passu*, even when the indirect taxes were raising 64.2 per cent. of the national revenue. There was plenty of opposition to the Excise taxes, and especially to the Three Bad Taxes, but the Government could always carry its financial proposals.

GOLD AND CIVILISATION.*

MR KEMP holds that the development of "the precious metal standard of exchange" fulfils "a great world-purpose" by creating and regularising individual economic freedom, and endowing mankind with the power of peaceful mobility and intercourse. Gold, as a stable medium of exchange, facilitates trade, and so develops honesty. Silver requires to be refined, and so is only used much later; alluvial gold is widely distributed, pure in comparison with other metals, and easily made into rude vessels or ornaments; so it was probably the first article of individual exchange or personal property, and was specially desired for the ornamentation of the prehistoric woman (!) Thus it was readily exchanged, and also hoarded; the exchange was effected by the primitive trader (possibly also a wandering bard), while the search for it developed distinct classes of gold-seekers and (later) of craftsmen, the latter also supplying it to the traders. Thus it became a standard of value—first weighed, and then as coin. Thus Mr Kemp; and then, with the aid of much quotation from Greek and Roman writers, he sketches the history of money from Babylon and the Phoenicians through Greek and Roman history to the destruction of Jerusalem, which he regards as fixing the destiny of the Jews as the great money dealers of the world. His leading ideas are a refreshing contrast to the ancient lamentations that gold was ever discovered, and to the modern attacks on metallic money, and he writes with enthusiasm; but, unfortunately, he disregards

* "Precious Metals as Money." By William Kemp. (Paisley) Alexander Gardner, Limited. 12s 6d net.

everything that has been written about prehistoric society and about the actual history of early coinage. The first six chapters are purely fanciful, and so is much of the rest. And his style is so fluent, and so discursive, that his conclusions are not always easily understood. Such numismatists as Mr Barclay Head and Professor Ridgeway have fully described the transition from bullion to coin, and the early standards of coinage; other scholars (among them, if we remember aright, the late F. A. Paley) have suggested that gold and silver may have been prized originally from a supposed connection with the sun and moon; and prehistoric archaeologists, working on actual remains and analogies from existing savage tribes, have described primitive society very differently from Mr Kemp. One curious misinterpretation must be noticed. The twelve Apostles are directed (Matt. x. 10) to take neither coin "nor scrip" for their journey. The Revised Version substitutes "a wallet." Mr Kemp takes the word to mean "bills of exchange"!

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET,
April 23.

ACCOUNT,
April 24.

Stock Exchange markets have been considerably flurried by the double defeat of the Government on Monday night, by the resignation of General Smuts' ministry, and by the serious turn which has developed in Labour circles owing to the threatened shipbuilding lock-out. The last-named was expected to be averted, but the clash of opinions which have arisen around it show that Labour remains in a condition of ferment, and this has its effect upon shares in the industrial markets. The strength imparted to gilt-edged stocks by the Government's offer to holders of the Five per Cent. War Loan, that they could partially convert into Four and a-half Conversion stock, suffices to maintain most of the prices in the Consol market. Considering the rises which took place just before, there was nothing surprising in a temporary reaction, which might have easily come whether the Labour Government had been defeated or not. The newly-issued scrip stocks hold their levels well, and Home Railway prior-charge issues show rises on balance.

In the foreign market, an outstanding feature is the way in which the bonds of the French railways have improved, gains of two or three points occurring on Monday, to be

partially wiped out on the next day, while resumption of the previous support led to a rally again on Wednesday. French issues are better on the whole. The report of the Reparations Experts has been discussed with a good deal of interest in the House, but it exerted no particular effect upon prices. Siamese and Japanese Sixes are a good market. On the other hand, Mexicans continue to dwindle. It does not seem to be certain even yet whether there will be a cash payment on Mexican bonds next Tuesday, in spite of the rumour to the effect that the money will be disbursed.

Metropolitans are the strongest member of the Home Railway group. Prices gave way sharply, on the spasm of flatness which overspread the House early in the week. There was, however, a fairly general recovery. Great Westerns have been popular. Nitrate rails are better, on the dividend announcement. Argentines have moved within fairly narrow limits, and show no marked changes on the week.

Rubber shares arouse no particular interest. A new scheme is afoot for securing closer co-operation amongst producers. The Oil market has had a particular star of its own in Lobitos; the price enjoyed sensational rise upon talk of a bumper dividend and bonus. Other oil shares are better as a whole, because the statistical position looks more favourable, American production being lower, while consumption continues to expand. Iron and Steel shares are moving irregularly. The new Vickers' Debenture stands at ½ discount. Banking, Insurance, and Trust companies' issues are mostly higher. The Banking shares attract a good deal of investment money. Insurance shares advanced, in consequence of the excellent dividends now being declared, and the scarcity of supply in the Trust list is the main reason for prices being put up in this department. The Cunard report neutralised the disappointment felt with the reduced dividend, and the shares consequently recovered. P. and O. improved, and the Shipping market as a whole keeps very steady. Textiles are uninteresting, and the Tobacco market, while firm, has lost its charm for the speculator. Cable stocks and shares hold their recently acquired strength. In Marconis there is nothing much doing, and the Brewery group is also tame. Electric Lighting shares and Gas stocks wait a little cautiously upon political events.

Kaffirs were badly shaken by the news of General Smuts' resignation. Nobody knows what kind of successors will come into office if the present Premier and his party are defeated at the polls. Upon the consideration, however, that whatever happened in politics the mining situation would not be greatly altered, there was a general rally, and the Cape sent a good many buying orders, more particularly in Randfontein, upon which a 2s dividend is declared. Amongst Diamonds, Consolidated keep flat, because of the disappointment felt at there being no dividend. A few Mexicans and Columbian mining shares are the merest turn better. Tin shares went back, in company with the metal, and Copper issues have been more affected by the financial sentiment in Paris than by the price of copper. In the Land shares, Sudans have reacted after their big advance. Hudson's Bays keep steady. Ashanti Goldfields, amongst West Africans, attracted moderate support.

NEW ISSUES.

Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Queensland Government 5½ per Cent. Inscribed Stock, 1926-1929.

—This is an issue at 99½ per cent. to the nominal amount of £12,703,734, to provide for the redemption of £4,704,734 3½ per cent. stock and £7,939,000 4 per cent. stock, due July 1st next. Holders of these maturing stocks may surrender their existing holdings, in whole or in part, to be exchanged for a like amount of the new stock. Those who convert will receive on July 1, 1924, a cash payment of 10s per £100 stock (being the difference between the issue price of the new loan and the redemption value of the stock surrendered), and a full half-year's dividend in respect of the 3½ per cent. or 4 per cent. stock converted. The new stock is redeemable at par on July 1, 1929, or, at the option of the Queensland Government, in whole or in part, at any time on or after July 1, 1926, on three months' notice. Queensland Government debentures and inscribed stock issued and payable in London and interest, the property of persons not domiciled in Queensland, are not subject to Queensland taxation. It will be interesting to learn the reception of this loan by the British public in view of the fresh undertakings given by the Queensland Government over pastoral leases.

Pan Ore Company, Limited.—Authorised capital £200,000, divided into shares of 10s each, of which 160,940 are issued and fully-paid, and 40,000 3s 6d paid. Last October the concern acquired from the New Callao Gold Mining Company for £80,000 two gold-mining concessions in Venezuela, with machinery and plant. There is, further, an option until October, 1928, to purchase for £75,000 two other concessions. The Pan Ore Company will also have the right until October, 1928, to the full use of a treatment plant and railway line belonging to the New Callao Company, subject to a royalty of one bolivar per ton of ore transported and crushed. These and other details are taken from a statement made in the Press to comply with London Stock Exchange regulations.

The Egham and Staines Electricity Company, Limited.—Authorised share capital £200,000, divided into 100,000 7½ per cent. cumulative preference and 100,000 ordinary shares, all of £1. Of these 40,000 preference and 40,000 ordinary shares have been issued. This is an issue at par of 35,000 7½ per cent. cumulative preference shares. The company is supplying electric light and power to an extensive district (in the counties of Surrey, Middlesex, and Buckingham). It has also been authorised to supply electric light and power to Feltham and Sunbury-on-Thames, and the necessary work will shortly be completed. Further extensions are also contemplated. It is stated that an agreement has been entered into under which the Metropolitan Electric Supply Company will supply electric energy in bulk to the Egham and Staines Company on favourable terms. The latter company has agreed to supply electrical energy in bulk to the Ascot District Gas and Electricity Company. The Government, under the Trade Facilities Act, arranged a loan under their guarantee of £50,000 to meet the cost of extensions in 1923, and, following the satisfactory completion of such extensions, they are now arranging to grant a further loan of £30,000 towards the cost of the further extensions. The prospectus shows that the gross profits have steadily increased from £4,309 in 1920 to £10,367 in 1923. Dividends of 7½ per cent. have been paid on both the preference and ordinary shares of the company for the past four years. An improving public utility concern.

The Uganda Company, Limited.—Authorised share capital £150,000. Of this, 100,000 ordinary shares of £1 each have been issued and 50,000 participating preference shares of £1 each are now offered, presumably at par. The holders of these participating preference shares are entitled out of the available profits of each year (1) to a non-cumulative preference dividend of 7 per cent. per annum; (2) to receive a further 5 per cent. per annum, payable out of one-third of the remaining profits available for dividend after the holders of ordinary shares have received 7 per cent. per annum. (3) They are also entitled, in the event of a winding-up, to priority of repayment of these shares, but not to further participation in the surplus assets. There are outstanding 6 per cent. mortgage debentures for £21,925, being part of an issue of £25,000. The company was formed in 1903, and is interested in cotton, coffee, rubber, &c., in Uganda. Profits are given from 1917, with the exception of the year 1921, when a loss of £11,500 was sustained. After deducting liabilities, including the mortgage debentures of £21,925 from assets, a surplus of £131,530 is shown, as against the £100,000 issued capital. No mention is made of a Stock Exchange quotation. Nor can we find the company mentioned in the Stock Exchange Official List. Unless a quotation is to be obtained, shareholders may experience considerable difficulty in selling their holdings should the need arise.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

OIL OUTPUTS.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—Total production during March amounted to 101,052 barrels, or approximately 14,46 tons, including St Helen's Petroleum Company, Limited, 40,341 barrels (5,703 tons approx.); Kern Trinidad Oilfields, Limited, 9,209 barrels (1,328 tons approx.); Kern Romana, Limited, 2,919 barrels (417 tons approx.).

UNITED BRITISH OILFIELDS OF TRINIDAD.—Combined production for the week ending April 2, 1924, amounted to 948 tons.

GENERAL PETROLEUM COMPANY OF TRINIDAD, LIMITED.—The estimated gross production of crude oil for the month of March was 28,205 barrels, equal to approximately 4,030 tons, and the oil delivered to United British Refineries, Limited, amounted to about 5,336 tons.

BRITISH BURMAH PETROLEUM CO.—Production of crude oil by this company and the Rangoon Oil Co. for the month of March amounted to 59,244 barrels.

BRIGANDAGE AND PIRACY.

In the neighbouring province brigandage and piracy are still rife, and, apart from the important silk industry, trade is very greatly hampered.

There have been many cases of successful piratical attacks in neighbouring waters on vessels flying the British flag. The efforts of our Navy and of the local police seem powerless to put a stop to them without the co-operation of the Chinese authorities on the mainland, which, so far, has not been forthcoming in any efficient form. It is very humiliating to have to undergo this flouting of the British flag. I am sure our Government must agree with me, and will use its utmost endeavours to devise means of dealing properly with a situation which is becoming intolerable.

In North China general export trade, handicapped by restricted markets abroad, political unrest at home, spasmodic and uncertain supplies, cannot be said to have been satisfactory. On the import side a considerable improvement is reported in piece goods and sundries, but there has been little doing in the engineering section.

CHINESE COTTON MILLS.

The year 1923 has been the worst experienced by cotton mills in China for years, and, with many Chinese mills short of working capital, and faced by severe losses, due to yarn values ruling far below manufacturing costs, it is not surprising that a number of such mills have either closed down altogether or are working short time. At the present level of cotton prices the outlook for 1924 is not at all favourable; we can but hope that a greatly increased demand for both yarn and cloth will restore the market values of these commodities to a reasonably profitable level.

The figures of China's trade for 1923 are not yet available, but it is fairly evident that there must have been a falling off of the totals of exports and imports.

JAPAN'S TRADE.

Owing to the disorganisation and loss caused by the earthquake, figures for the trade of Japan are not available to the same extent as usual, but sufficient is known to form a fairly accurate estimate of the course of trade in 1923, which was chiefly notable for the record-breaking adverse balances and the consequent drain on the country's accumulated wealth. The chief contributing factor to this state of affairs was, of course, the earthquake in September. The total adverse balance of trade for the year amounted to Yen 536,948,000, representing a heavy decrease of Yen 190,445,000, or 13 per cent., in exports and an increase of Yen 94,142,000, or 5 per cent., in imports, raising the unfavourable balance by Yen 284,587,000 as compared with the year 1922.

The main cause for the decline in the export trade is found in raw silk and for the increase of imports by the continued expansion in the principal lines of raw material, a condition which can only be rectified by a revival in the overseas markets—particularly China—accompanied by a real effort in Japan to get down production costs, beginning with raw silk.

After the disaster in September a rush was made for commodities needed in the restoration work, almost all of which are expected to arrive within the ex-duty period on March 31st next. The result was that Japan's exports, visible and invisible, and its available resources abroad were unequal to the strain, causing a serious depreciation in the value of the currency and consequent hardship to many industries dependent on foreign countries for their raw materials.

JAPANESE LOANS.

It was inevitable that the Imperial Japanese Government, while utilising its own internal reserves to the greatest extent, should have had to resort to borrowing abroad for rehabilitation purposes. She has an excellent basis for credit in the resources of the country and in the record she has established for a scrupulous observance of all her obligations. In July last we assisted in floating a loan for £4 millions in London for that great enterprise, the South Manchurian Railway, which, needless to say, was fully taken up. Last week we similarly assisted in the flotation of a loan for £25 million for the Government, which received a very flattering reception, the subscription lists remaining open for only a few hours.

That Japan has received a staggering blow is undeniable; there are very few countries to which such a stupendous catastrophe like the earthquake would not have meant a staggering blow. There may be difficult years ahead, but that Japan will get on her feet and meet the new situation in a spirit of courage, backed by the combined efforts of her people and a sound financial policy, is the hope and belief of her friends.

TRIBUTE TO YOKOHAMA STAFF.

I would like to mention here the appreciation of the directors of the gallant and efficient way our Yokohama staff coped with the appalling state of affairs during and after the great earthquake. The British Navy also rendered us invaluable assistance

in salvage work, and I wish to record our thanks to Admiral Leveson and his officers and men for their untiring efforts which saved a critical situation.

Although matters have not been altogether straightened out, we think our losses will be surprisingly small when the magnitude of the disaster is considered, but in any case a very liberal provision has been made for them.

The management at Yokohama is to be congratulated on having the affairs of the bank there in such a sound position.

STRAITS SETTLEMENTS.

Turning to the Straits Settlements, last year I stated that conditions, although still leaving much to be desired, were certainly brighter than they were a year ago, and the same remark applies this year. The prosperity of the two great ducts, rubber and tin—especially the former—may be considered the trade barometer of Malaya, and during 1923 both commodities have commanded considerably higher prices than during 1922; there has also been a slight improvement in the prices obtained for the next largest export, namely copra.

Rubber restriction has been in force during the whole of last year, and, although errors have been made, it has on the whole worked smoothly, and has undoubtedly served to keep prices on a more steady and profitable level. It can, however, never be an unqualified success without the co-operation of the Dutch Indies.

The tin industry has been prosperous, and prices have shown a steady and marked improvement during the year. Stocks held by the Federated Malay States Government, the Netherlands Indian Government, and the other signatories to the Bandoeng Agreement, have been largely liquidated, and the outlook seems to point to reduced stocks and an increased demand.

As regards imports, the demand during 1923 was better, but the lack of confidence in the local dealers prevented importers from increasing their commitments.

THE PHILIPPINES.

In the Philippines, trade has been prosperous owing to the high prices still obtainable for their principal exports—sugar and hemp. Should their political status remain as it is and their favoured position as regards the U.S. tariff be maintained, a few more years should see a complete rehabilitation of the finance of the Islands.

This favoured position is the mainstay of the export trade of the islands, and, should it be withdrawn for any reason, the outlook for merchants and agriculturists would be extremely disquieting.

CONDITIONS IN CHINA.

The record of events in China during the year 1923, continues to be one of anarchy and political intrigue, in which one searches in vain for any sign of a dawn of better things. On the contrary, the condition of the country politically, financially and economically, has grown appreciably worse. With the exception of the two provinces of Shansi and Chekiang, brigandage has become firmly established throughout the country, and the Lincheng outrage of May last has been followed by a series of similar outrages, at frequent intervals, in which the persons and property of foreigners, so far from receiving the protection to which they are entitled, are made the main object of the raids, while herds of defenceless peasantry are driven off to untold cruelties in the brigand strongholds until released by ransom or by death. At all this the Tu-chuns ruling over these infested Provinces, and with more than ample military forces at their command, look on with indifference. Their one concern and preoccupation is to obtain funds with which to carry on the struggle for military supremacy.

SPOILATION OF THE RAILWAYS.

Railways are robbed of all their accessible revenues and, owing to lack of funds for maintenance, and wanton destruction by troops, have, in several cases, deteriorated to an extent which renders traffic dangerous at anything but the lowest speed. This gradual destruction of the country's greatest potential asset, created by foreign capital, is a symptom of the general process of disintegration that is going on. While the spoliation of the railways happens to be particularly conspicuous by its results, it is but a part of the wholesale appropriation by rival military leaders of national revenues such as salt and wine and tobacco, which should go to support the administration of the Central Government. The latter has, in fact, become little more than an expression, and the groups of officials who function in Peking under the name of the Chinese Government, maintain that position mainly by virtue of the recognition of the Foreign Powers, while their sole monetary resource is the precarious residue of salt revenue after the demands of the militarists and clamorous creditors have been satisfied. Amid such conditions of political chaos, and absence of real central authority, the discussion of schemes for debt con-

solidation, industrial development, and the like can have no concrete results.

STABLE CENTRAL GOVERNMENT ESSENTIAL.

The first essential for giving effect to such schemes, namely, adequate security under the control of the Central Government, is wanting, and must continue to be wanting until there is a stable Central Government, able to assert its authority over the Provinces. Such a stable Government cannot be created or maintained until there has been disbandment of independent military forces and complete readjustment of national and provincial finances. The policy of the Powers towards China has ceased to have any relation to the facts. The scope of the Tariff Conference, whenever it meets, cannot now be limited to the mere consideration of a 2½ per cent. Customs surtax, which is of minor importance, beside the vast and complex problem now calling for solution, and it would be a useless tax on trade unless accompanied by measures for fiscal and administrative reform. The financial problem, which is the direct outcome of the prevailing military tyranny, and which in the minds of foreign creditors overshadows everything else, cannot be effectively dealt with except in conjunction with other reforms, and a Customs surtax of 2½ per cent. is now utterly inadequate for that purpose.

2½ PER CENT. CUSTOMS SURTAX INADEQUATE.

Indeed, it is difficult to see how anything short of the full 7½ per cent. surtax proposed by the Mackay Treaty will meet the case, accompanied by provisions for a just apportionment of revenue to the provinces in return for the abolition of all internal taxation on trade, and the relinquishment to the Central Government of what may be properly classed as national revenues. The price to be paid may seem at first sight large, but it is insignificant compared to the gain to foreign trade resulting from a restoration to peaceful conditions and good Government throughout the country, which must be the indispensable guarantee demanded.

MARITIME CUSTOMS.

Amidst the prevailing internal dissension and civil strife, the Maritime Customs still stands out as the symbol of honest and efficient administration, the bulwark of foreign trade relations with China, and her hope of financial salvation in the future as it has been the foundation of her credit in the past. Any measure which, by recognising the claims of seceding Provinces to a division of the Customs revenue after international obligations secured upon it have been satisfied, would be a retrograde step in the direction of further disunion. So long as the Peking Government continues to be recognised by the Treaty Powers as the "de facto" Government of the country, it must be held entitled to receive the whole Customs revenue. But if its claim to do so is to be challenged by provincial secessionists, and pressed by them to the point of endangering the present administration of the Customs service, as defined by international agreements and the prescriptive sanction of sixty years, then the remedy would appear to lie in withholding the Customs surplus from all contestants, to accumulate in reserve until they have composed their differences, and military operations throughout the country have ceased. Such a step would, I believe, have the approval of all who sincerely desire to see an end to the civil strife now disrupting and ruining a great country which, with no external enemies, and almost limitless potential resources, should be one of the most prosperous in the world.

LONDON MONEY MARKET.

The London money market ruled easy throughout the year, the only change in the Bank of England rate being an advance from 3 per cent. to 4 per cent. early in July, the exact reason for which is obscure, as it did not appear justified by monetary conditions at the time and meant dearer finance for the Government in the weekly renewal of Treasury bills.

The general level of discounts was now about ½ per cent. below the Bank rate, showing that there were ample and cheap facilities available for the finance of trade.

Sterling exchange in America, which is now a factor of far-reaching importance, remained steady during the first half of the year in the neighbourhood of 4.65, but weakened in the autumn owing to the seasonal demand for gold dollars to meet payment of exports from America to Great Britain and Europe. Towards the latter part of the year the weakness in this exchange was accentuated by the uncertain political situation in England and also to some extent owing to the unjustified fear that there might be inflation of the British currency. Although inflation was discussed in some quarters, the authoritative statements that no such policy was contemplated should remove any such fear. The effect on a country's exchange of unbalanced Budgets and unlimited note issues, or, which is practically the same, unlimited Government borrowings, is too apparent and disastrous to tempt British statesmen to follow such a course.

The decline in European productive and consumptive power continued its depressing effect upon British trade, and this has militated against any marked improved demand in Far Eastern and Indian exports, though the actual percentage of British exports to and imports from these places keeps about the same as they were in 1913, an increased monetary value corresponding to the general rise in prices.

RUSSIA'S TRADE.

It is satisfactory to notice amid the maze of contradictory reports that Russia is gradually trading more freely with foreign countries, Great Britain included, and it is to be hoped that the distinct recovery noticed in her exports and imports will continue. If only Europe can put its house in order, and as a result of settled conditions take more Indian and Far Eastern exports, an improved demand for British exports must necessarily follow.

EASTERN BANKS AND TRADING FACILITIES.

It cannot be too widely known to shippers at home that Eastern banks are always ready to extend facilities to traders abroad when markets show any stability. British Government trade credits cannot, we think, have been availed of to any great extent in connection with Far Eastern trade, and it is useless for the Government to advertise as they have done an extension of these credits. Salvation does not lie that way. The Eastern banks have abundant resources available to finance every sound proposal presented to them. Shippers can rely with confidence on these banks, who are in close touch with their customers abroad, to extend credit facilities, while giving every encouragement to open up business on sound lines without hidebound restrictions, which only serve to cripple it.

MR WALTER LEAF ON TRADE OUTLOOK.

It is reported that the speeches of the chairmen of the great London banks are optimistic in tone, but none of them have reached us yet, except a condensed excerpt from that of Mr Walter Leaf, the chairman of the Westminster Bank, whose pronouncements on all matters concerning business and finance command respectful attention throughout the world. We know that £130 millions of foreign and colonial loans were issued in London during 1923, and that London proved to be the best market for the foreign borrower. Mr Leaf's opinion is that these borrowings form the best foundation for an expectation of the expansion of British export trade, but while the outlook is good, any real advance would be conditional upon the absence of serious labour disputes, which constitute the darkest spot on the horizon. It was vain, however, to talk of prosperity while the shadow that veiled war hung over Central Europe. Those are the views of one of the wisest men in the financial world, and we may well subscribe to them.

I think, however, that, like the chairmen of the London banks, I can legitimately conclude with an optimistic note.

Amid all the political and financial disturbances in China and throughout the world the bank stands powerful and flourishing. No disorganisation of exchanges or dislocation of business seem to seriously affect its prosperous career, and I am confident that, as it has greatly grown in strength since the world went to pieces in 1914, it will continue to be equal to any fortune that the future may have in store for it.

TRIBUTE TO STAFF.

Before sitting down I would like to pay my tribute to the staff. In a banking business such as ours, with branches in London, New York, &c., whose transactions are all directed and controlled from one central office in Hongkong, great responsibility rests on the man at the head of your affairs, the Hon. Mr A. G. Stephen, and the accounts we have been able to place before you to-day must be a source of great satisfaction to him. During the last few years many of the senior members of the staff have gone into retirement, and their places have been taken by younger men, and we have found that the spirit of zeal and loyalty to the service has never been more in evidence than it is to-day. I am sure shareholders will agree that the bonus to staff of 10 per cent. on their salaries, which the directors propose to pay, is well merited.

Mr R. M. Dyer said: Mr Chairman and Gentlemen,—It is a great pleasure to second the proposal that the report and accounts of the bank for the year 1923 be adopted. As the chairman has said, the accounts call for little comment. They show a wonderful vitality considering the bad times we are passing through, and they indicate the solid foundations on which the bank has grown and prospered during the last 60 years.

The communities of the Far East may consider themselves fortunate in possessing a powerful bank whose policy is dictated from their midst, and to whom they can bring their troubles with the certainty that they will receive a sympathetic hearing and a decision without reference to the other side of the world, where the ever-changing conditions of business in the East are hard to explain and difficult to understand.

I must congratulate you on your interesting review of world and local affairs, and I think the optimistic note in which you concluded your speech was fully justified. The shareholders will, I am sure, agree with me that we should have every expectation that the bank will go on increasing in prestige and power, and will become more than ever the main foundation of international business and British prestige in China.

Your remarks about the staff will be fully endorsed by the shareholders. It is an asset of the greatest value to the bank, and it is pleasant to think that there is a sufficiency of rising men trained in the traditions of the bank who will in due course direct its fortunes. So long as that is the case, we can look forward with confidence to the future.

I now beg to second the adoption of the report and accounts. The motion was carried unanimously, and the meeting terminated with a vote of thanks to the directors, management, and staff.

EXTRAORDINARY MEETING.

The Chief Manager read the notice convening the extraordinary meeting.

The Chairman said:—

As a result of the natural expansion of our business and of the ever-increasing demand for our notes, it has been found necessary to approach the Government with the request for some modification of our ordinance. I may say that I anticipate no objection to our request from the Hongkong Government, nor from the Colonial Office, nor from His Majesty's Treasury, and if the resolution which

I am about to propose is passed by you, the Attorney-General will prepare a Bill embodying it for consideration of the Legislative Council.

The resolution is:—

That the directors of the Hongkong and Shanghai Banking Corporation be and they are hereby requested and authorised by and on behalf of the shareholders of the corporation to take the steps necessary for the introduction of an ordinance into the Legislative Council of the Colony of Hongkong, and for the enactment of the same by the Governor of Hongkong with the advice and consent of the Legislative Council thereof, to effect the amendments necessary to the ordinance under which the corporation is incorporated and carrying on business, so as to allow of the ordinary note issue of the corporation being increased from \$20,000,000 to \$30,000,000, and to modify the existing requirements as regards the deposit of security in respect of its note issue in the following manner:—

(a) So that the whole of the increase (namely \$10,000,000) of such ordinary note issue shall be secured by coin or bullion or approved securities.

(b) To provide that whatever the total amount of the note issue may be at any particular time the amount of coin as distinct from bullion or approved securities to be deposited by the corporation shall never be less than one-third of the total amount of the bills in actual circulation.

These resolutions were seconded by Mr H. R. B. Hancock, and unanimously agreed to.

The meeting then terminated.

THE SCOTTISH PROVIDENT INSTITUTION.

MUTUAL LIFE ASSURANCE.

GOOD RESULTS OF YEAR'S BUSINESS.

NET PREMIUM INCOME EXCEEDS £1,000,000.

RESULT OF QUINQUENNIAL INVESTIGATION AS AT DECEMBER 31, 1923.

The eighty-sixth annual general meeting of the Scottish Provident Institution was held in Edinburgh, on Wednesday, 9th instant, Mr Alfred Shepherd presiding.

The report for the year 1923 states that new proposals were received for amounts aggregating £3,217,982, in respect of which 3,601 policies were issued for £2,817,049, whereof £340,011 was reassured with other offices. The net new business completed was thus £2,477,038. The total premium income for the year, including the purchase price of annuities, but after deducting premiums on reassurances, was £1,124,776. The total receipts, including net interest, were £1,887,022. The total funds amounted to £17,810,858, showing an increase during the year of £257,001, after writing off £264,710 in respect of depreciation in investments. The claims arising under 985 policies by the deaths of 735 members amounted to £843,010, inclusive of bonus additions, and endowment assurances for £163,543 were also paid at maturity. The aggregate amount of the claims in the year, less reassurances, was thus £1,006,553.

The quinquennial investigation report shows the following state of affairs as at December 31, 1923. The funds, after providing for all existing claims, and excluding the investment reserve fund (now standing at £300,000), amounted to £17,510,858, and the liability for all prospective claims amounted to £15,848,086, showing a surplus of £1,662,772, after providing full reserves and paying intermediate bonuses during the quinquennium. Of this surplus, £1,409,683 belongs to the common fund, and £253,089 to the special endowment assurance fund.

CHAIRMAN'S SPEECH.

The Chairman, having referred to the loss which the board had sustained through the deaths of Colonel Trotter and Sir John Stewart-Clark, said:—

I do not suppose that any chairman of the "Scottish Provident" has had a pleasanter duty to perform than that which falls to my lot to-day. The report which you have in your hands is one which it must be as gratifying for the members to receive it as it is for the directors to present.

ANNUAL REPORT.

To deal first with the transactions of the year, you will see that the net new assurances completed amount to £2,477,000 in respect of 3,601 policies issued. The net new premiums totalled £92,135; while 160 annuity bonds were issued for £12,636. Each of these totals shows an increase over the corresponding figure for the previous year, a proof, I think, that the natural force of this institution has in no way abated.

The business reported in respect of the capital redemption fund is, you will see, not of great dimensions; but, as was explained

last year, this is a class of business which we do not specially seek after, and the *raison d'être* of this fund is really the conserving and extending of our existing connections.

NET PREMIUM INCOME.

The figures of the net premium income of the year, as shown in the revenue account, £1,015,861, mark a further step in the institution's progress, inasmuch as for the first time in our history we have crossed the million line. This is a specially notable achievement when it is remembered that, roughly speaking, three out of every four policies opened under our distinctive system of assurance are subject to premiums which cease after a specified number of payments. Each year, therefore, a large number of policies become free from premiums, and these have to be replaced from new business before any increase in the income can be registered. The popularity of our limited payment system is due to the low rates which are charged, enabling a proposer to secure a policy subject to terminable premiums at a rate that is often lower than is charged by other offices for the full term of life. It is pleasing to note that the mortality experience has continued to be favourable.

So far as the past year's working is concerned, therefore, we have every reason to be satisfied, and I shall not go into further details, as you will probably regard the result of our quinquennial investigation—with which I shall now deal—as being the subject of predominant interest to-day.

QUINQUENNIAL INVESTIGATION.

We can claim for this office to-day, after the searching test of the investigation, that it retains its place in the front rank. Its assets have been minutely scrutinised by the directors. Full provision has been made in respect of investments other than Stock Exchange securities where it was anticipated that a loss might possibly result. Any of the Stock Exchange securities (excepting approved terminable bonds maturing within fifteen years) standing in the books above middle market quotation as at December 31st last have been written down to that value. The approved terminable bonds referred to have been taken at ledger values which are adjusted annually so as to attain to redemption value on the basis of the natural increment. The sum written off is, as you will see, £264,710, and it is satisfactory that this is more than met by the transference of £300,000 from the investment reserve fund which since the end of 1920 had stood at £600,000. Strong as the present, and the directors have deemed it prudent to retain the balance (£300,000) of the investment reserve fund in its present

form, while the aggregate value of the assets is appreciably higher than the amount at which they stand in the balance-sheet. It is of interest to note that some 46 per cent. of the institution's invested funds is represented by British Government securities, while no less than 94 per cent. of these funds is invested within the Empire.

The valuation of the liabilities under the common fund was carried out on the same bases as at last investigation, with the exception that a special reserve has been made in respect of the annuity contracts. Recent experience has shown that annuitants are inclining more and more towards the habit of "centenarianism," which makes it not only advisable but necessary to provide against their increasing longevity.

DIVISION OF SURPLUS.

It will be seen that the available surplus arising under the common fund—embracing all contracts except with-profits endowment assurances—is £1,409,683, and this amount now falls to be apportioned amongst the whole-life policyholders in terms of Article 26 of the laws. First additions have been fixed by the directors, in conformity with the laws, at £1 8s per cent. on the sum assured for each complete year from date of entry (excluding the five war years), in respect of which the office has borne the risk at full tabular rate. The actual amount of first additions varies, of course, with the number of years any particular policy has been in force at December 31st last, and intimation of these amounts will in due course be sent to the policyholders. In cases where the "accumulation period" will not be completed until a date between the end of this year and December 31, 1928, outstanding shares at the above rate have been set apart which will attach to the sums assured at the proper time, and facilities will be given to policyholders to cover the amount of these additions by temporary assurances during the period of their contingency.

In the case of policies participating a second or subsequent time the directors have fixed the bonus at £1 10s per cent. on the sum assured for each year of the last quinquennium.

I have just referred to "first additions," and, theoretically speaking, that is correct; but we have to remember that when we opened our policies we obtained a much larger assurance than we could have obtained elsewhere for the same premium, unless we had been prepared to sacrifice what our report proves to be the valuable right to participation in surplus. In effect, therefore, we received handsome first additions on the day when we paid our first premium.

Intermediate additions to whole-life policies which have participated at this investigation and which become claims during this quinquennium may, in terms of the laws, be paid at a rate to be fixed by the directors from time to time. Such intermediate additions form a charge on the surplus of the quinquennium now current, and they will be allotted in respect of each complete year survived since December 31st last. It is proposed to fix the rate for the ensuing year on the common fund policies at a later date and to reconsider it annually thereafter during the quinquennium.

WITH-PROFIT ENDOWMENT ASSURANCES.

I would now address myself to the policyholders under our special fund for with-profit endowment assurances. The surplus arising under this fund is, as you will see, £253,089. This surplus is arrived at after calculating the liability in respect of the contracts on a 3 per cent. basis, using the British Offices Om tables, but 2½ per cent. has been deducted from the value of the tables, and 2½ per cent. has been deducted from the value of the net premiums taken credit for, thus strengthening the reserves and conducing to the maintenance of satisfactory bonuses in the future.

Bonuses under this fund are allotted on the compound system, and the rate has been fixed by the directors at £1 18s per cent. on the sums assured and existing bonuses in respect of each annual premium paid during the quinquennium. This will absorb £242,023 of the surplus, leaving £11,066 to be carried forward for future accumulation and division.

INTERMEDIATE BONUSES.

As regards intermediate bonuses, it is proposed to fix the rate of these annually as in the case of the common fund, and, the method of allotment under this special fund being in respect of each premium paid, the rate of intermediate bonus to be paid on policies entitled thereto, which mature or become claims during the current year, has been fixed at £1 16s per cent. on the sums assured and existing bonuses.

I have now traversed—I fear at some length—the course of our investigation, and in moving that the report be adopted I do so feeling that the members have indeed good cause for congratulation as regards the past and for confidence in the future. The institution, in company, I am glad to say, with its *confrères*, has emerged from a period of trials and troubles in a position which warrants the anticipation of future results as gratifying as those

reported to-day, and if the members will realise to how great an extent they can further their own interests and confer a boon on their friends by recommending the advantages offered by the Scottish Provident Institution, we shall no doubt report in 1928 figures exceeding the quinquennial records which have just been put before you.

WHOLE LIFE ENDOWMENT ASSURANCE.

I should like to add one word: Why do we wish to assure our lives at all? The obvious answer is, to obtain protection; protection for those dependent upon us; protection over some business transaction; protection or provision for ourselves in our later years of life. The reports of life assurance offices show the increasing popularity of this last form of protection—provision for ourselves in later years. It is effected by what is commonly known as endowment assurance, and I have been wondering whether, desirable and attractive as this mode of provision is, it is not being indulged in to an undue extent in comparison with whole-life assurance. I shall show you what I mean. Take a man at the age of 30 who contemplates a with-profit endowment policy for £1,000 maturing at age 60. This will cost him somewhere about £35 per annum. He may be quite warranted in indulging in this mode of assurance; but, on the other hand, he may now or later have a wife and family dependent upon him, and I would ask that man to put to himself the question whether his circumstances justify the adoption of endowment assurance as against the larger measure of protection, available for the same outlay, under a policy payable at death only. For thirty annual premiums of £35 he can secure a policy, payable at death only, for £1,400, giving those dependent upon him protection greater by 40 per cent. than would be secured by the endowment assurance. The £1,400 would not, of course, be paid to the policyholder at age 60, but it gives him lifelong cover for at least that amount; while under his £1,000 policy he would draw the proceeds at 60—with the temptation to spend them or to risk them in some investment which, should it turn out badly, might deprive those coming after him of the provision he originally designed for them. I do not desire to detract in the slightest degree from the advantages of endowment assurance; but I am inclined to think that it is in danger of becoming too much the fashion, and that there is a tendency in these days for it to supplant whole-life assurance, which in many instances is of more vital importance. I have only touched on this point as a matter of general interest; but I speak from personal experience. As a young man I asked myself the same questions as I have suggested, and as a result I have effected all my assurances on whole-life scale by limited payments—a decision I have never regretted.

The Chairman concluded by acknowledging the services rendered to the institution by the officials and staff at the head office and branches.

The motion for the adoption of the report was seconded by Mr Ernest M. Wedderburn, W.S., Professor of Conveyancing, University of Edinburgh, and carried unanimously.

COMMERCIAL BANK OF THE NEAR EAST, LIMITED. PROGRESS OF THE BUSINESS.

The second annual general meeting of the Commercial Bank of the Near East, Limited, was held, on the 8th instant, at 1 Broad street place, London, Mr C. H. D. Moberly (managing director) presiding.

The Chairman said: On behalf of the board I have to regret, and apologise for, the absence of our co-directors, Messrs Empeccles, Petrocchino and Merlin, who are unavoidably detained by their duties in Greece. We have now completed the first year of the bank's working, and, in view of this and of the difficult times we have been passing through, we trust you will agree that the results are satisfactory. You will observe from the balance-sheet that our total figures are now £788,113, and that our capital, subscribed privately, was increased during the year to £140,100. You will, no doubt, also observe that the balance-sheet shows a good liquid position. The net profits amount to £6,879, after allowing for depreciation on furniture, bad and doubtful debts, and for the considerable depreciation in the values of securities which followed on the results of the Parliamentary elections last December. We have also written off £800, the premium we had to pay for our lease of these premises. These last two items amount to over £4,000, which is a substantial amount for us, and such a charge is not likely to recur this year unless something unforeseen occurs. The development of our business has been such that already we find our present premises insufficient for our purposes, and we are endeavouring to obtain further accommodation, if possible in the same building. The support we have from the Commercial Bank of Greece and their friends is a great factor in the progress of our business. Business at our Constantinople branch has been greatly restricted owing to the unsettled

conditions there, and it is to the credit of the management that they have worked at a profit under such difficult circumstances. The position there appears to be very much in a state of flux, and it remains to be seen how far business will be assisted, or impeded, by Government and municipal action and taxation. Indeed, the Near East generally has been and continues unsettled, and I think I may say that everybody engaged in commerce is tired of it and would be glad to see things settle down, so as to give them a chance of getting on with their business. The Chairman concluded by moving the adoption of the report and accounts, and the payment of a dividend at the rate of 4 per cent. per annum, less income-tax.

Mr D. J. Cassavetti seconded the resolution, which was carried unanimously.

LEGAL AND GENERAL ASSURANCE SOCIETY, LIMITED. NEW SUMS ASSURED RECORD.

The annual general meeting of the Legal and General Assurance Society, Limited, was held, on the 8th inst., at 10 Fleet street, London, Mr Romer Williams, D.L., J.P. (the chairman), presiding. The Chairman, in moving the adoption of the report and accounts, said: Dealing with the most important part of the society's business, that transacted in the life and general funds, the number of policies issued in the past year was 5,221, against 4,645 in the previous year, an increase of 576. The gross sums assured were £3,895,305, as against £2,943,337, an increase of £951,968, and the new premiums £168,605, as against £181,269, a decrease of £12,664. Deferred annuities were granted for £30,985 per annum, as against £50,545 per annum in the previous year. These are gross figures—that is, before deducting reassurances, and the figures of the life and general funds have been combined for the sake of brevity. If we take the net figures, that is to say, the amounts retained by the society after the deduction of reassurances, we have in the combined funds total net sums assured of £3,691,305, with new premiums of £162,406 for 1923, as against £2,862,287 with premiums of £179,151 for 1922. It will be seen, therefore, that there is here an increase in the net new sums assured of £829,018, and reduction in net new premiums of £16,745. This at first may appear inconsistent, but the divergence is due merely to the decrease in the amount of assurances paid for by single premiums (exceptionally high in 1922) and the usual variation in the classification of the policies and ages of entrants. The single premiums in 1923 were £50,602, as against £69,151 in 1922.

If we take the figures in the life fund only we have the following comparison: In 1923, net new sums assured £2,941,868, as against £2,497,344 in 1922, an increase of £444,524; and net new premiums £150,956, against £162,628, a decrease of £11,672.

The total new sums assured for 1923 in the two funds represents a record for the society, taking both gross and net figures, and the business in the life fund only, gross and net, is very little below the highest figure in the society's history. I think you will agree, gentlemen, that this result may be considered highly satisfactory.

NET PREMIUM INCOME.

The total net premium income in the life and general funds was £1,376,740. This shows a trifling decrease of £116 on the income of the previous year, which is explained by the previously mentioned smaller amount received in single premiums and the loss of income from the large amount of endowment assurances that matured in 1922.

The total expenses and commission in these funds amounted to 14.51 per cent. of the net premium income, as against 14.99 per cent. in 1922. This reduction represents nearly one-half per cent., and, although not perhaps as large as could be desired, is a movement in the right direction, and follows a previous reduction upon 1921.

TOTAL NET CLAIMS.

The total net claims in the life assurance fund during the year amounted to £711,175, as compared with £983,203 in 1922. But the previous year's figures were augmented by the maturity of an exceptionally large number of endowment assurances, the figure then being £532,814, as against £265,153 for last year. The total net death claims caused by 302 deaths amounted in 1923 to £446,022, as compared with 286 deaths and claims of £450,389 in 1922. The society's mortality experience during the past year was again favourable, the amount of claims being only 62.9 per cent., and the number of deaths only 60.3 per cent. of the expectation by the Institute of Actuaries' Tables of Mortality. I venture to think that the society's continuously favourable mortality experience affords some evidence of the care with which the business is selected.

The net premium income from the fire and accident business amounted to £200,014, being an increase of £27,771 over the previous year.

In the fire department the loss ratio was 56.4 per cent. of the net premium income, and the expenses and commission were 34.6 per cent. The balance of £79,124 carried forward represents a reserve of 45 per cent. of the net premium income for unexpired risks and an additional reserve of £9,996.

In the accident department the loss ratio, including estimated liability under outstanding claims, was 46.8 per cent. of the net premium income, and the expenses and commission were 38.2 per cent.

The total net premium income of the society from all departments for 1923 was £1,576,754, as compared with £1,549,099 in 1922. The total net annual revenue for 1923 amounted to £2,097,637, as against £2,027,416 in the previous year, being an increase of £70,221.

The consideration received for immediate annuities was £57,331. The total funds of the society have increased during the year by the sum of £971,669, and this again, I think, constitutes a record.

The total assets on December 31st last amounted to £15,817,583. The report and accounts were unanimously adopted.

D. NAPIER AND SON, LIMITED.

IMPROVED RESULTS—FOUND FINANCIAL POSITION.

The adjourned annual meeting of D. Napier and Son, Limited, was held, on the 10th instant, at the registered offices of the company at Acton. The chairman, Mr H. T. Vane, C.B.E., in moving the adoption of the report and accounts, said: In the year under review a net profit of £98,448 10s 6d has been made, whereas the previous year showed a loss of £26,571 0s 2d.

The bank loan, which last year stood at £100, has entirely disappeared. In this connection I would remind you that our bankers, the Midland Bank, were of considerable assistance to us at a critical period of your company's existence, during 1920-1, when they advanced us up to a quarter of a million pounds sterling without any security whatever.

This was very much appreciated by your directors, but I mention it now because it is an instance of how one of our great banks supported an industrial engineering concern at the right time, and it also goes to show the excellent credit in which your company was held.

You will see by the accounts now presented, that instead of owing the bank money, our cash at bankers and in hand at the end of the financial year under review amounted to £172,622, and gilt edge investments at £101,102, which I think you will agree with me shows a good sound financial position.

As regards our aero engine production, we have practically been engaged on one type, namely the 450 h.p. "Napier Lion," and that has certainly earned for itself the reputation of being far and away the best aero engine in the world.

Our designers and engineers are constantly giving careful attention and thought to developing and improving the "Napier" aero engine, with a view to retaining its unique position.

We have other important developments in hand, but you will understand in a business like ours it is not desirable to disclose these publicly.

I would like to pay a tribute to the way in which our staff and workpeople have put their shoulder to the wheel during the past year, and right up to the present time. There has been a return of the old spirit of co-operation and pride taken in work, which goes so far towards making a business like ours successful, and I take this opportunity of recording the directors' appreciation of their efforts.

The motion for the adoption of the report and accounts was unanimously carried, and the meeting closed with a vote of thanks to the chairman.

RIO TINTO COMPANY, LIMITED.

IMPROVED RESULTS—BRIGHT PROSPECTS.

The fifty-first ordinary general meeting of the Rio Tinto Company, Limited, was held, on the 10th instant, at 3 Lombard street, London.

Viscount Milner, who presided, said that during the past year the peseta loan had been reduced from 50,000,000 to 20,000,000 pesetas. The outstanding amount was 20,000,000 pesetas, a little over £600,000 at the present rate of exchange. It caused no anxiety whatever; in fact, the company had money enough in hand to pay it off at once, but it suited them better to do this by instalments at such times as might appear most advantageous. The revenue account bore out the modest expectations of the forecast made at the last meeting. The main item, "Profit on sale of produce," showed an increase of £180,000, being £1,176,000, as compared with £996,000 in 1922. This result was all the more satisfactory because it was not due to any particular good fortune, but, on the contrary, had been achieved in spite of persistently low prices and adverse conditions of trade. The price of copper, which was showing such encouraging signs of improvement when they last met, soon tumbled down again, and in the course of the year even touched the low figure of £60 per ton. The average price of standard for the whole of 1923 was only £65 18s. At the same time, the position of the pyrites market until nearly the end of the year was deplorable. In spite of these adverse influences, however, the company had done considerably better than in the previous year.

While the profit on sale of produce showed this satisfactory development, the net profit was only £60,000 better than in 1922, the total being £729,649. This was due mainly to heavy taxation.

As regarded the future, he would take his stand, as he did last year, on the side of moderate optimism. He looked, though not very confidently, for a better price for copper, and felt pretty sure that the pyrites market would not always remain in its present depressed condition. While they could certainly maintain their present production, both in respect of quantity and quality, for many years to come, and increase it if occasion demanded, they were as yet very far from having exhausted all the possibilities either of reducing cost or getting better value out of the various ingredients of their ore. The prospects were thus undoubtedly bright. The directors proposed to increase the final dividend on the ordinary shares by 5 per cent., making the dividend for the year 35s per share, and to carry forward £440,000.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.
