The discussion on this proposal has been made the occasion for a fine display of party political tactics by the Opposition, who have made great play with the argument that the measure verges dangerously in the direction of setting up a dictatorship, by rendering it possible for Ministers to legislate without Parliamentary control. So far as can be seen, however, the vast majority of the House agrees with the Premier that the proposition is a perfectly rational one for the purpose of saving time and enabling the Government to act in the best interest of the nation without useless discussion. Resolutions continue to come in steadily from Chambers of Commerce and other influential bodies all over the country, heartily approving the Premier's effort to restore the national credit, and expressing the willingness of the taxpayers to support as

much additional taxation as may be necessary to attain the object in view. Nevertheless, the struggle with the adverse minority in the House is proving a severe one, and fears are expressed that M. Poincaré, after the two years of herculean labour which he has performed as Premier and Foreign Minister, may find himself physically unable, in spite of his enormous capacity for work, to support his task to the end. The spectacle is one of the most remarkable ever seen in any Parliament, and the whole nation is watching it with the deepest interest. Adverse criticism of the Government's financial proposals is, as yet, at any rate, practically non-existent.

A Government measure which should attract close attention abroad is one to authorise the Ministry, "among the measures necessary to defend our exchange," to prohibit the importation of foreign merchandise or products. This is a proposal to revive a law which was in force during the war, under which the Government had power to prohibit the entry of products and merchandise "not indispensable to the national life." Under the existing law the Government has power, by mere Ministerial decree, to open and shut the door for the entry of various articles of the first necessity, as circumstances may direct. This power has been several times exercised during recent months, and one of the accusations made against the present Minister of Agriculture is that he has made too liberal a use of this power in the interest of the agricultural class. The high price of several articles of common consumption is alleged to be due to the same cause. Export of certain commodities has been permitted, while the entry of similar commodities of foreign origin has been prohibited. The prices of milk, butter, eggs, potatoes, and other commodities have soared enormously owing, it is alleged, to this possibility of manipulation. The Bill extending this power to imports in general, however, opens up a much more serious prospect, and may possibly raise the whole question of the status of existing commercial treaties.

Provisional figures are now issued by the Comité des Forges showing the total production of iron and steel in

France during 1923, as compared with the output for 1922 and 1913 respectively. These are as follows (in tons):—

	Iron.	Steel.
1913.....	5,207,000 ..	4,687,000
1922.....	5,228,608 ..	4,534,275
1923.....	5,299,581 ..	4,976,869

The figures for the past two years must, of course, be discounted, so far as comparison with the pre-war year is concerned, by the fact that they include the Lorraine output, which amounted in 1923 to 1,867,160 tons of iron and 1,563,059 tons of steel. Including the output from Lorraine, the total production of iron last year was 170,973 tons greater than in the previous year, while the steel total was 505,594 tons higher. The output for December was the best since the armistice. The number of blast furnaces working on January 1 was 125, as compared with 119 on December 1, 1923, and 116 on January 1, 1923. Fifty-one others were ready to operate on January 1 last, and 43 were under construction.

The output of the French collieries continues to progress satisfactorily. The average daily tonnage during 1923 rose from 121,064 tons in January to 139,446 tons in December. The total output for December, however, was only 3,346,690 tons, as compared with 3,506,037 tons in November, owing to the large number of holidays in the months, which reduced the working days to 24. Owing to the reduction of the working day, due to the operation of the eight-hour law, the total number of men employed in the French collieries, which was 203,208 in 1913, had risen to 239,082 in December, 1922, and to 283,097 in December, 1923, or an increase of nearly 20 per cent. in 12 months. The output of metallurgical coke in the French coalfields rose from 113,498 tons in December, 1922, to 189,532 tons in December, 1923, an increase of 76,034 tons.

Figures furnished by the Ministry of Public Works indicate that the Ruhr is now furnishing 700,000 tons of reparation coal and coke per month to this country, in addition to 420,000 tons to Italy, 400,000 to Belgium, and 200,000 tons to Luxembourg. During the last week in December the amount of coal and coke received by this country from the Ruhr was 292,000 tons. It is claimed that France is now receiving from the Ruhr substantially the amount fixed by the Reparations Commission prior to the occupation of the area in question. These deliveries are derived from (1) stocks which have been requisitioned, (2) mines which are being worked directly by the Franco-Belgian régime, and (3) mines which have entered into agreements with the occupying authorities. The kohlsteuer, it is now reported, is yielding about 30 million francs per month, while the railways in occupied territory, which are controlled by the Franco-Belgian régime (representing two-thirds of the total mileage, the other third being in the Cologne district), are now showing a profit on working of 500,000 a day, in spite of the fact that the traffic rates are only one-half those charged in unoccupied Germany. The revenue from other payments in kind, State forests, Customs, &c., is stated to be at the rate of 400 millions a year, while 300 millions is stated to be the amount being received from permits, licences, &c. It is claimed that the Ruhr is now producing, on reparations account, at the rate of 2,260,000,000 a year.

GERMANY.—REGULATION OF MARK DEBTS—GOLD BUDGET—CURRENCY AND PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, February 4.

THE long-delayed Third Taxation Decree, which, it was known, would be of great importance for private debtors and creditors, for Federal Finances, for the financial relations of the Republic to the local self-government organs, for the Housing Question, and finally for foreigners with mark claims on Germany or Germans, has at last appeared. As regards private debts, the Decree is, as was of late expected (contrary to what was at first officially proclaimed), an abatement of the original "mark is a mark" plan. This plan reduced all old gold mark debts, and debts contracted in paper marks of high gold value, to pure paper mark debts of to-day, to one-

billionth of their original value if contracted in gold. For this plan various justifications were put forward. There was no reason, it was said, why owners of private mark debts should be better treated than mark creditors of the State; in practice it was impossible to inquire into the varying degrees of depreciation of debts; only in rare cases would the original creditors gain from a restoration of gold values, &c. The main motive, however, was fiscal. The Republic, while forbidding "Aufwertung" in favour of creditors, could take (in the shape of taxes, levies, or compulsory mortgages) the gain made by mortgagors, bond-issuers, and other debtors. This plan broke down owing partly to the opposition of creditor class, but mainly because Bavaria opposed it. But there could be no question of restoring the whole of the original gold value of debts. In most cases the debtors could not bear that, and often a debtor who gained by depreciation to nothing of a mortgage, lost as much or more by depreciation to nothing of his claims on the others. Hence the rough-and-ready expedient of restoring an arbitrarily fixed, and low, proportion of mortgage debts and bond debts has been adopted, where these still exist, while where they have already been paid off in paper marks the creditor gets no compensation.

The Decree is an elaborate one. It enacts that mortgages, bonds, and other debts in the same class, if contracted before the beginning of 1923, and if not paid off before the end of that year, shall be raised from their present status of worthless paper mark debts to 10 per cent. of their original gold value. If older than 1919 their original gold value is considered to be their nominal value; if younger, their original gold value will be fixed according to the gold value of the paper mark at date of origin. A mortgage debt dating from 1918 of nominally 100,000 marks becomes, therefore, 10,000 gold marks, although contracted in already somewhat damaged marks, while a mortgage debt of the same nominal amount dating from early 1920, when the mark was depreciated to about nine-tenths, becomes 1,000 gold marks. To make easier this sudden, if partial, restoration of the burden on the debtor, it is provided that no interest shall be paid on the 10 per cent. capital in 1924, and only 1 per cent. in 1925, and that not until 1929 shall 5 per cent. be reached, and that the capital cannot be claimed before 1929. Regarding debts where the mortgagors are mortgage banks, and where the real losers are therefore the holders of mortgage-bonds issued by such banks, it is provided that mortgage bonds shall be restored to the 10 per cent. only when they have been in the same hands since January, 1919, or have been compulsorily invested in under the Trust laws.

For depreciation of deposits in Savings Banks, even where the deposit has lain continuously, no "Aufwertung" is allowed. But as Savings Banks which lent their deposits on mortgage would gain from the 10 per cent. restoration of these mortgages, the Decree requires that the gain be taxed away by the States, the yield to be devoted to social aims, in particular in the interests of the classes which use Savings Banks. Where industrial bonds were paid off in paper marks before December 31, 1923, the debtor concern must pay to the Republic a levy of 12 per cent. of the original gold value of the bonds. The vexed question of mortgages on dwelling-houses, which is complicated by the complete expropriation under the Rents Act of 1922 of the landlord's profit (or interest on his capital), is regulated by enacting that gross rents shall gradually be raised to the pre-war level. As mortgages on such houses will be restored only to 10 per cent. of the original gold value, which was usually 60 per cent. of the value of the house, the landlord would gain largely. This gain is more or less to be taken by the States in the shape of a rents tax; that is, part of the gross rent, once it is back at pre-war level, will go directly to the State Government. The states, however, are required not only to fix the tax low enough to allow for maintenance and repair of the houses, but also low enough to allow the landlord interest on his own capital investment. This latter provision, if carried out, means the end of the present expropriation of house property.

The Decree proceeds to the question of public debts. Here all Government announcements up to the end were categorical; for federal, state and municipal loans even a partial "Aufwertung" would under no circumstances

be dreamed of. The real reason for this decision was fiscal—the public finances could not pay even a reduced gold interest; but to make this *de facto* repudiation sound reasonable, it was asked why should a creditor of the State be compensated when a mortgagee was to get nothing? When events compelled the Cabinet to give a dole, as above described, to the mortgagee, the argument turned against itself; there was no reason why the State's creditors should be worse treated, &c. The Decree, therefore, does not announce the expected repudiation of the public debts. But as it is out of the question to pay interest on or think of amortisation of even 10 per cent. of public debts, the Decree simply announces that "until all Reparations liabilities are paid" the interest on and amortisation of these debts is suspended. This, of course, is only a little short of formal repudiation; and the public took it so, with the result that there was heavy selling of loans and considerable declines in their quotations.

The Decree regulates as follows the financial relations between the Republic and the states and municipalities. The Republic will cease to pay the costly donations towards State and municipal salaries, but will hand over to states and municipalities 90 per cent. of the income-tax yield instead of 75 per cent. as at present, and hand over also the yield of the ½ per cent. recently added to the originally 2 per cent. Sales Tax. In addition, the states will get the Rents Tax, which is expected in 1924 to yield 600,000,000 gold marks, but which, when full pre-war rents are restored, will yield very much more.

The Third Taxation Decree is now before the Reichstag's advisory Committee, but it will be issued without Reichstag sanction under the Empowering Law. Another emergency decree will separate railways and posts entirely from the Federal administration and finances, and convert them into independent corporations. The Republic will remain sole owner, and will receive any net profits, but it will not give subsidies to cover losses. For these the railway corporation can borrow on the security of its assets, though in principle it is required to cover its expenditure out of revenue. The Government retains the right to sanction the balance-sheet and profit and loss account, and also, until a Railways Council of Administration is formed, to sanction alterations in the normal rates. Railway receipts rose from 8,000,000 gold marks a day in November to 9,400,000 gold marks in January. Large savings have been made, but as a loss is still being suffered on passenger traffic the third and fourth-class fares will be increased, while the first-class, in order to attract international traffic, will be reduced. The arrangement under which the railways will borrow 100,000,000 gold marks from the Association of German Mortgage Banks has been sanctioned by the Reichsrat.

For the international experts now here the Government has prepared a Gold Budget for 1924, the first Budget for years that gives any idea of the total gold expenditure and revenue and of the proportions between the different items. This gold Budget is based on the assumption that the economic unity of occupied and unoccupied territories will be fully restored, otherwise revenue will be 950 million gold marks less than appears in the table:—

I.—GENERAL ADMINISTRATION BUDGET.

A. Ordinary.		B. Extraordinary.	
Revenue.	Mln. G.M.	Expenditure.	Mln. G.M.
Direct taxes	4,004	Service of debt	156
Customs and excise	1,060	War pensions	810
Administration receipts ..	60	Army and Navy	450
		Police	208
		Economic & cultural aims ..	28
		Unemployment support ..	500
		Other social purposes	360
		Ministry of Finances	380
		General administration out- lay	250
		Subsidies to States and municipalities	1,800
	5,124		4,942
		For war damage, &c.	6
Profits from Mint	90	Public buildings	44
Other receipts	40	Liquidation of war expen- diture	20
		Liquidation of Ruhr ex- penditure	60
	130		130

1-4, GREAT TOWER STREET - LONDON, E.C.3.

II.—EXECUTION OF PEACE TREATY.

	Mln. G.M.
Reparations in cash	52
Clearing	6
Army of occupation	360
Rhineland Commission	34
Other Inter-allied Commissions	18
Restitutions, &c.	10
Home expenditure due to Treaty	160
	640

The total expenditure on Budgets I. and II. is 5,712 million gold marks; total revenue on Budget I., ordinary and extraordinary, is 5,254 millions. From the Peace Treaty Budget are omitted the larger cash and kind liabilities. If all the Peace Treaty liabilities were excluded there would be a surplus of 182 million gold marks. The expenditure shown considerably exceeds the 4,000 million gold marks, which is the estimate usually come to in the past three years, but the present gold price level is much higher than the average price level of these past years.

The currency continues to hold well. Warnings are being issued about symptoms of inflation through ever-bigger demands for private credit, and the Reichsbank statements cause some apprehension on this score, but as long as prices are not rising there seems to be no serious danger. In fact, the home value of the Rentenmark continues to increase, though, in part, the price-cutting announced by staple industries is due to bad business and to compulsion to realise, and does not always mean a corresponding drop in production cost. The cost-of-living index on January 28th had in a week dropped further by 1.9 per cent. to 1,060 milliards, which, in gold and on a basis of 100 in 1913-14, is 106; while the latest commodities index is 114.8, showing a drop in the week of 0.8 per cent. The *Frankfurter Zeitung's* index number for January 31st is, reckoned also in gold, 143.06, or much higher than the official, but well below the maximum of 164.96 on November 29th. The price fall can hardly go much further. The Reichsbank's statement for January 15th shows a drop in note circulation by 12 trillions to 479 trillions; a very large increase, by 114 trillions paper marks to 186 trillion paper marks in Rentenmark private discounts, and an increase by 18 trillion paper marks to 181 trillion paper marks in Rentenmark advances. An alteration in the discount rate was considered last week. The present 90 per cent. per annum rate for discounting paper mark bills on a paper mark basis will soon become obsolete, because no new paper mark bills on this basis have been discounted this year, and none will be. Nearly all of the 100 million Rentenmarks of Rentenmark Treasury bills offered for covering of railways and posts deficits have been sold. In the present fluid state of the money market more Rentenmark Treasury bills could probably be sold if deficits compel the Government to borrow.

ITALY.—WHOLESALE PRICE VARIATIONS—COST OF LIVING—IMPROVING PUBLIC FINANCE—PUBLIC DEBT.

(FROM OUR CORRESPONDENT.)

TURIN, January 28.

AVERAGE wholesale prices have increased a little in the month of December, as the new Milan Chamber of Commerce's index (basis 1913 = 100) shows:—

	Av'rage May- Decem. 1921.	Av- rage, 1922.	Jan., 1923.	April, 1923.	August 1923.	Decem. 1923.	Av- rage, 1923.
Vegetable Foods	516.8	555.2	546.5	567.1	515.3	497.9	513.9
Animals	649.4	587.4	531.6	570.6	562.5	588.8	566.8
Textiles	480.1	583.1	618.9	656.3	661.7	743.9	673.3
Chemicals	440.1	437.2	407.3	525.9	427.8	410.0	421.6
Minerals and metals ..	514.4	524.1	525.6	570.9	544.3	548.2	547.7
Building materials ..	570.3	519.7	529.3	519.4	517.6	531.6	519.0
Miscell. vegetables ..	495.5	508.2	520.7	538.1	499.8	499.1	515.9
Miscell. manufactured ..	537.5	535.8	534.5	533.8	541.9	528.6	534.6
General index	516.5	529.3	523.5	549.7	527.0	534.8	535.8

I have quoted for 1923 the opening and the closing months and the intermediate minimum (August) and maximum (April). The average for 1923 is slightly higher than for 1922, and therefore the purchasing power of the lira is lower. The greatest increase was in the textile group, owing to international change in the prices of cotton, wool, and silk. Cost of living was also slightly higher in 1923. The Index number of the cost of living in Turin of a working family of two parents and three sons, taking the average for the first half of 1914 as 100, is as follows:—

	Food.	Clothing.	House Rent.	Heat and Light.	Miscellaneous.	General Index.
January, 1920	351.0	327.2	100	406.5	344.5	318.5
July, "	409.3	479.0	100	415.0	455.8	384.4
January, 1921	513.1	547.3	110	527.3	513.6	467.4
July, "	446.2	411.4	110	354.2	537.1	404.7
January, 1922	523.7	454.2	120	435.3	590.7	465.6
July, "	487.3	432.6	120	365.3	584.1	436.9
January, 1923	499.0	432.6	120	423.4	574.4	446.0
July, "	498.0	434.6	200	376.1	580.0	453.6
December, "	504.7	470.3	200	460.0	577.3	466.6

The hardening impression is confirmed by the annual averages, which were for the general index 337.73 in 1920, 449.19 in 1921, 448.09 in 1922, and 451.59 in 1923.

Public finance is improving. The Finance Minister has suspended the issue of Treasury bills for six months or less. The current income for the first six months of the financial year (July to December, 1923) was 8,546.6 million lire, against an estimate of only 7,832.3 millions, or an increase of 732.3 million lire, while the expenditure was 8,771.2 millions, against an estimate of 9,362.5 million lire. It was thus possible to limit new debt and to begin making a reduction among various kinds of debt. A comparison of public debts at June 30, 1923, and December 31, 1923, shows that a net reduction of 234 million lire has been effected in internal debt in that period.

The outstanding external debts are exclusively towards the Governments of the United States (8,536.8 million lire) and Great Britain (13,858.4 million lire).

This item of external debt is the only remaining stumbling-block in our public finance, as it means a *paper* debt of about 90,000 million lire, or more than the whole internal debt. Public opinion is increasingly leaning toward the old idea of the contemporaneous adjustment of inter-allied debts and war reparation. The recovery of our national finance would be otherwise impossible.

There has been in the last six months an increase in long-dated loans and bonds (war indemnities loan dated 25 years and nine years Treasury bonds), and a decrease in short-dated Treasury bills. The volume of these latter is too great, but it is hoped that by not reissuing bills of less than six months' currency the total will become more manageable. Italian Bourses have greeted with enthusiasm the news of the suppression of the issue of short bills; 5 per cent. Consols, which opened the new year with a quotation of 80.28 per cent., close to-day at 92.95, and 3.50 per cent. old Rentes rose between the same dates from 76.79 to 80.80. Bourses are very animated, and great advances have been made not only by fixed-interest securities, but also by variable dividend shares.

SWEDEN.—PRICES AND EXCHANGE—FOREIGN TRADE—BUDGET FOR 1924-25.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, January 22.

THE past year did not fulfil the expectations with which it was started. It was rather cheerfully welcomed, and everybody had a faint hope that trade and business would show a brightening tendency. At first this hope seemed likely to be fulfilled, but very soon the general political state of Europe and its effects on trade and industry influenced conditions here in a wrong direction. The high rate of exchange of the Swedish crown has also proved to be a stumbling-block to our export trade. Our costs of productions are so high that it is almost impossible to sell our export goods in crowns. The general depreciation of the £ exchange, the value in which most of our exports as well as freights are liquidated, entails heavy losses as well as great difficulties. Another unfavourable

result of our high exchange is the stimulation of import, which had a serious effect on our trade balance for 1923. Grain imports in particular increased enormously. Imports of oats were three times bigger than during 1922, and wheat imports were doubled. There has also been a large increase in the import of mineral oils and coal and coke. Our exports in 1923 were not as great as in 1922 for most of our standard articles. This was true, at any rate, of timber, pulp, and iron ore, but there was an increase in the exports of newsprint and paper in general. A remarkable increase took place in pig-iron (which, however, has not yet reached the pre-war standard). The decreases in the exported quantities, however, of the goods mentioned are not as great as the decrease in the payment for them, as the prices obtained have been lower during 1923 than during 1922. Roughly speaking, it is expected that last year will give an import surplus of 200 million crowns, while the result for 1922 was an export surplus of 33 million crowns; it will take some time, however, before the exact result for 1923 will be known.

As to the outlook for this year prediction is difficult. The course of business will depend greatly upon the general state of Europe, especially the Ruhr situation, and the movement of the crown sterling exchange. Company results for last year are now appearing, and it seems as if the banks have had a good year. For instance, the board of the Skandinaviska Kreditaktiebolaget declares a dividend of 10½ per cent., the total amount available for distribution being 12.6 million crowns. The Göteborgs Bank shows a net profit of 4.43 million crowns, and a dividend of 10 per cent. is proposed. The gross receipts of the Svenska Handelsbanken for 1923 were 16.1 million crowns, about 3 million crowns will be written off, and a dividend of 10 per cent. is proposed.

The Budget for July 1, 1924, June 30, 1925, has recently been published, and it is, like last year's, a strictly economical one. The total expenditure is placed at 649 million crowns, a reduction of not less than 102 million crowns compared with last year. There will be a reduction in the war bonus paid to all Government servants, which is estimated to save 12 million crowns. No money is reserved for the unemployment fund, as it is considered that unemployment at present has declined to such an extent that it is about the normal. No new taxes are to be imposed. There may be a reduction in the charges for the railways, telephone and telegraph, while the postal fees are to remain unaltered. The chief State income is derived from taxes estimated to yield 455 million crowns, and from the Commercial Government Departments, which are estimated to yield 91 million crowns. These Departments have given good results. For instance, the Post Office showed a surplus of 15 million crowns, and the Board of Dominion Administration a surplus of 11 million crowns for 1923. The latter is expected to give 13 million crowns during 1924. The State railway's income improved last year, but for this department no final figures are yet available.

ROUMANIA.—CURRENCY DEFLATION—COST OF LIVING—NEW PETROLEUM LAW—AGREEMENT WITH FRENCH COMMERCIAL CREDITORS.

(FROM OUR CORRESPONDENT.)

BUCAREST, January 15.

DURING the four weeks ending December 22nd bank-note circulation—as shown by the statements of the National Bank—was reduced from 18,012 million lei to 17,941 million lei. Apparently on the basis of these figures Mr Oromulu, the Governor of the National Bank, is quoted in a Press interview with the statement that Roumania is now definitely committed to a policy of currency deflation, to be brought about by the gradual reduction of the Treasury's debt to the Bank (now slightly in excess of 11,500 million lei), and by the Bank cutting down its discounting of commercial paper—at the same time steadily increasing its metallic reserve by purchasing all the gold which is now being mined in fairly substantial quantities in Transylvania. In the statement referred to Mr Oromulu expressed the opinion that, even if there is no further immediate improvement in lei exchange, he quite expects it to remain stabilised around its present level of 860 to the £. A deflation policy cannot, how-

ever, be expected to go far at this time. Even with the termination of this year's crop movement and the release of funds immobilised for that purpose, banking credit is still obtainable only at prohibitive rates, and the currency shortage grows more acute with the constantly increasing price level. The striking advance in cost of living during 1923 is shown from the following figures, taken from the "Plutus" index number of December 20th:—

	Jan. 1, 1922.	Jan. 1, 1923.	Dec. 20, 1923.
Foodstuffs (21 categories, with bread, meat, and fish subject to maximum price regulation)	1,822 ..	2,494 ..	3,415 ..
Clothing (9 categories, mostly imported)	2,077 ..	3,240 ..	4,245 ..
Miscellaneous (10 categories, including fuel, soap, &c.)	1,012 ..	1,666 ..	2,998 ..
General average	1,637 ..	2,466 ..	3,552 ..

The base of this index is 100 on August 1, 1916—just before Roumania's entry into the war.

The increase shown by this index is a real one, as lei exchange at the end of 1923—measured against dollars—shows less than 25 per cent. depreciation since January 1, 1922. This substantial increase in the cost of living, however, has no serious effect on the Roumanian peasant-farming class, comprising more than 75 per cent. of the population, since their material wants—apart from the food and clothing which they themselves mostly produce—are very scant. It is a serious matter, however, for clerical workers, and especially for Government employees, for whom existence would hardly have been possible if household rents had been permitted to rise with the necessities of life. While the Budget for 1924 provides salary increases for Government clerks, they are still so poorly paid that their efficiency and *moral* do not reflect creditably on the public services.

Following the new regulations in the month of November permitting the free export of those agricultural products (wheat, rye, flour, &c.) which had previously been on the prohibited list, the Council of Ministers on December 18th approved a new Petroleum Law, designed to free the internal and external commerce in oil products. The "freedom to export," however, will not become operative until a new schedule of oil export taxes has been put into effect, and these taxes, apparently, are to be fixed so high that producers will find it equally profitable to sell their products in the internal market, as internal prices are now left free to follow world market prices—i.e., the Government will no longer fix the maximum prices at which refined oil products are to be sold in the domestic market, except for the fuel oil required by the State railways and navigation companies. The removal of internal price restriction is an important concession to the petroleum companies, and is a definite bid on the part of the Government to attract additional foreign capital to the Roumanian petroleum industry, and to induce the companies now established here to extend their operations.

Governmental policy is clearly verging in the direction of complete freedom of trade, but the process of decontrol cannot be other than a long and tedious one, as the violent advance in the internal price level that would doubtless occur with the abrupt removal of price regulation and control of sources of supply might have important political and social consequences. The determination at last to face realities, however, and to proceed along sound economic lines—in so far as the political situation permits—is, at least, a hopeful sign.

Crude oil production in 1923 was approximately 1,500,000 tons, which compares favourably with the 1922 production of 1,368,929 tons and the 1,163,240 tons in 1921, although it is still nearly 400,000 tons below the 1913 level. A notable recent event was the bringing into production early this month at Runcu of a new well by the "Steaua-Romana." This well is reported to have produced 100,000 barrels of crude in 10 days.

In the closing days of December an agreement (which has since been formally ratified) was reached between representatives of French creditors and their Roumanian trade debtors for the deferred payment over a period of 26 years of obligations contracted in French francs between November, 1918, and January 1, 1922. This agreement is substantially along the lines of the British agreements ratified by the Law of June 3, 1923, except

THE COMPANY ACTS AS AGENTS FOR MANUFACTURERS AND OTHERS, AND INVITES CORRESPONDENCE WITH THE VIEW OF DEVELOPING FOREIGN TRADE.

that the so-called "guarantee deposit" of 40 per cent. secured by the French is somewhat larger than the deposit required from those debtors desiring to take advantage of the British agreements. In the case of the French, however, the deposit of 4.00 lei for each franc of debt merely happens to be 40 per cent. because of the depreciation of the franc. Representatives of Italian commercial creditors are to meet with the Roumanian Debt Funding Commission in a few days to endeavour to arrange a settlement of Italian claims.

Letters to the Editor.

PROFESSOR CASSEL ON PROTECTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The letter from Mr L. F. Roussin in the *Economist* of January 12th contains several fallacies that seem to call for an answer.

While it is quite true that tariff barriers must restrict trade in both directions, it does not follow that the exchange should be unaffected. Even in the extreme case considered by Professor Cassel, where the barriers against export are absolute as regards merchandise, there would still continue an export of the currency of the country under blockade, to meet the import of food, raw materials and other necessities. The result could not fail to be that stated by Professor Cassel. And if we do not proceed to the extreme cases of total blockade, the result of restriction of exports from a country with undervalued currency abroad will be a further depression of its exchange, since the export of currency would have to extend in order to meet the deficiency of export bills.

Secondly, the theory of purchasing power parities does not hold without limitation in the case of a country which is exporting other goods than merchandise, such as currency, receipts for loans, coupons for the interest on debt, and so on. This is the case of Germany as regards currency. The rate of exchange in this case will be less than that established by comparison of purchasing powers, in proportion as confidence in the future of the currency becomes less, and as the saturation point of foreign demand for the currency is approached.

Further, it is not necessary to presuppose any foreign holding of the currency in question, speculative or otherwise. If the country had been paying for imports by exports which were suddenly stopped, it would have to start exporting currency or other equivalents to purchase necessities. The result would be similar—a depression of the already depressed exchange.

Again, in his penultimate paragraph, Mr Roussin forgets the hypothesis under which Professor Cassel and he are arguing, viz., that the export of merchandise is absolutely barred. There being no export, there could be no import of the currency held abroad (unless carried in by tourists, &c.), as, indeed, he admits when he says that the foreign holders could make but little use of it. His supposed readjustment will not, therefore, take place.

Finally, Mr Roussin may rest assured that the relation of international to internal values has been and is a very real one, and no bugbear. Amongst other consequences it has led to the enrichment of the exporting community in Germany at the expense of the working class, and, in this country, to competition under conditions so unfair that the Government has found itself impelled to place on the statute-book a law establishing countervailing duties. I doubt if there is in Europe to-day a country which has not felt the effect, in one direction or the other, of the process of depreciation of currency at home or abroad. The elimination of this effect is one of the greatest exist-

ing problems of post-war reconstruction, as Mr Roussin would probably have recognised better had he been more in touch with European conditions than residence in Egypt permits.

Books and Publications.

THE AMERICAN COAL INDUSTRY.*

THE "Annals of the American Academy of Political and Social Science" have long been of considerable assistance to students of economic conditions in the New World, and the January number, which is devoted almost exclusively to the American coal industry, fully maintains the high standard we have learned to expect from this valuable publication. The main subjects dealt with are:—Wages, hours, and working conditions, labour relations in coal mining, costs and margins in producing and distributing coal, efficiency and cost reduction, fuel economy, and, lastly, what is described as "Some Steps on the Way Out."

Nothing, perhaps, strikes the British student of the American coal industry so much as the great difference which prevails between the anthracite and bituminous fields in general organisation, and especially in labour matters. Nearly 60 per cent. of the bituminous workers are native-born white men; another 8 per cent. are negroes, while the greatest part of the remainder are immigrants from Italy, Austria, and Poland. Approximately 172,000 workers are foreign born, and about 413,000 are native born. In the anthracite field, on the other hand, the importance of foreign-born workers is much greater, for of the 147,500 workers employed, 53 per cent. are immigrants, who came mainly from Russia and Poland. Curiously enough about one-third of the foreign-born own their own houses, as against less than 29 per cent. of the native-born workers in this field.

Trade Unionism is more strongly represented amongst the anthracite miners, where the modern movement can really be said to have started about 1897. Five years later a long strike, lasting some six months, led to a 10 per cent. wage increase, and to the institution of a sliding scale based on the selling price of coal. For the nine years of its existence this scale averaged a $\frac{1}{2}$ per cent. increase in wages, but a more important result of Roosevelt's Commission of 1902 was the institution of an Anthracite Board of Conciliation. In contrast with the bituminous industry, "anthracite has been stabilised, highly organised, and not over-developed." Indeed, the principal grievance seems to be that it has become monopolised.

A welcome feature of this volume of the "Annals" is the variety of its contributors. Masters and men are alike represented, and not the least interesting article is that by Governor Pinchot, who writes on "Wages, Margins, and Anthracite Prices," with special reference to the position immediately after his settlement of the big strike in August of last year. He justifies the 10 per cent. wage increase, which the workers then acquired, as being "just and necessary to provide a decent American standard of living." The existing wage schedule is condemned as being cumbersome and unscientific, while the employers are stated to have passed "not only the whole of the wage increase, but much more than the whole of it, on to the consumer." The dividends quoted as having been paid by some of the principal colliery companies of recent years certainly seem amazingly high; though another article emphasises that "the industry performs a useful service, pays high wages.....and takes unto itself a margin of profit which is moderate indeed as business standards go."

In the bituminous fields some 60 per cent. of the workers are unionists, and the principle of collective bargaining is still far from being generally acceptable to the employers. The average daily wage is complained of as being too high; but from the other side it is alleged that

employment is very irregular. Of course, conditions of demand are by no means the same for the two main classes of coal, while the existence of 40 major occupations in anthracite and 20 in bituminous makes it rather dangerous to generalise on wages. Earnings per man-shift worked—are higher in bituminous than anthracite. But more men earn high wages in the latter than in the former fields, as is clearly apparent from Miss Bezanson's able statistical summary in this volume. In 1921 the average time worked by contract miners in anthracite was 250 days, and the average earnings for the year \$1,922. In the two groups of bituminous workers (union and non-union) the average time for tonnage men was only 134 and 151 days respectively; and the average earnings for the year were \$1,034 and \$1,051 respectively. This was however, an abnormally bad year for the bituminous industry; the comparative figures for 1920 being 219 and 221 days worked, with average earnings of from \$1,750 to \$1,800 for the year.

The tonnage men, or actual coal-getters, represent some 60 per cent. of all bituminous employees, and over 40 per cent. of anthracite workers. A comparison between the two industries is more difficult in respect of the other workers, though surface men seem to gain higher wages in the bituminous than in the anthracite fields.

This volume contains an interesting comparison between anthracite wages and wages in other industries. The result of the 10 per cent. increase last September would seem to be that the wages of anthracite coal-getters will now be in the neighbourhood of \$2,165 a year, which compares favourably with other industries. Prior to this increase, however, the day men (surface and other workers) were generally less well paid than workers in approximately similar occupations elsewhere, and the new scale will probably not have done much more than to bring them into line with the corresponding class of bituminous workers and other employees of a similar standing.

A comparison between wages and profits in the coal industry in the United States with those ruling in this country would form an attractive but rather dangerous subject. It is, of course, a commonplace that the technical conditions of production and marketing are for the most part very different in the two countries; but this number of the Annals should nevertheless be read by all who are interested in the coal industry, as well as by those who pay particular attention to the main problems of American economic life.

A STOCK EXCHANGE YEAR-BOOK.*

THIS valuable work of reference has now reached its fiftieth year, and the original objects of the book have been faithfully observed for half a century. The 1924 volume of the "Stock Exchange Year-Book" contains upwards of 3,000 editorial pages, and comprises no less than 10,500 notices of public bodies and joint-stock companies. In the preface we are informed that "during the past year the capital issues which concern investors were somewhat less numerous than in 1922, but they were above the average, if we pass over the great records of 1919 and 1920. Companies newly registered totalled 8,644, with an authorised capital of nearly £116 millions." The following table shows the total number of companies actually existing, together with the aggregate capital paid up at the respective dates:—

	Number of Companies Existing.	Total Amount of Paid-up Capital.
April 30, 1913	60,754	2,425,740,857
" 1914	64,692	2,531,947,661
" 1918	66,456	2,730,594,008
* December 31, 1920	79,541	3,508,012,486
" 1921	79,994	4,100,052,525
" 1922	84,104	4,180,785,838

* England and Scotland only.

The volume is one which can be well recommended to investors who wish to learn about practically any public company or undertaking.

STOCK EXCHANGE NEWS. SETTLING DAYS.

TICKET, February 20. ACCOUNT, February 21.

INQUIRIES are general as to whether the probable rush of new issues and the opening of the new session of Parliament may not combine to lay a check upon the bullishness which has been so much a feature of the Stock Exchange since the Labour Cabinet was announced. Money shows signs of becoming a little tighter, and this, taken in conjunction with the expectation of important new loans in the near future, caused a general reaction amongst gilt-edged stocks, in the process of which Conversion suffered, along with Home Railway prior-charge securities and a few Colonials, though County and Corporation stocks keep up well. Rather marked heaviness in India Government stocks was accepted as a possible pointer to the next new borrower after the West Australia result is known. Southern Rhodesia underwriters of the new 5 per cent. stock at 98 received nearly half of their obligations, a result which occasioned some little surprise. Japan's forthcoming loan is expected to take the shape of 6 per cents., at about 92, with 30 millions offered here, and a similar amount in the United States.

Foreign bonds are active, and in most cases higher. Demand sprang up for Mexicans on the news concerning Huerta. Brazilians came to the fore with a run, mainly because of the Brazilian Government's action in asking tenders in respect of the 7½ per cent. Coffee Loan. Gambling in Germans revived, and a good deal of business has taken place in French issues, without, however, leading to wide variations in prices. Dollar stocks have been marked down by points at a time, especially in the American list of bonds and shares, but these movements have ceased to have anything except an academic interest for most people on this side of the Atlantic. Russian bonds came into favour again, though the rises were not maintained.

Home Railway stocks reflect conditions prevailing in the Consol market, and, after being good in the middle of the week, the tendency was for prices to droop, by reason of the fear lest there should be another big strike. The "Brum" and Great Western dividend declarations will be made next week, on

Wednesday and Thursday. Underground Electric Railways were expected to declare the full 6 per cent. on the income bonds, and the market had looked for 3½ per cent. on Districts for the year.

Mexican Railways have forged ahead for the first time in many months, the disappearance of Huerta being considered likely to lead to a more settled state of affairs. Argentine railway stocks enjoyed a mild boomlet, by reason of the splendid traffics which are now being taken, that of the Central Argentine this week constituting a record. Other foreign railway stocks are good, this market as a whole being less affected than many others in Thursday's general reaction.

Rubber shares are inclined to be better, though public interest continues extremely tepid. Tea shares indulged in another exhibition of strength, on the idea that Russia may come in a substantial buyer of tea in the near future. The oil market engages more attention than any other part of the Stock Exchange. The seventh successive rise in petrol in the United States, followed by the advance on this side, have appealed to the public imagination; people have been buying oil shares with both hands, as the Stock Exchange saying is. The violence of the rise led to a heavy volume of profit-taking. On balance, however, a number of oil shares make a good showing on the week.

The textile market is fairly steady, and tobacco shares improved, to give way later. Advances in banking, insurance, and shipping shares are well held, and testify to the willingness of the investor to take stock in markets where no considerable amount of floating supply can be obtained. Land shares are good, Hudson's Bays on the satisfactory character of the fur sales, and Sudan Plantations on the cotton outlook in Egypt. The iron and steel market received further support from people many of whom had sold their shares on political fears six weeks ago, and who are now buying back, not always at a profit. London electric lighting issues strengthened materially, on bumper dividends declared by the Westminster Electric and the St. James's companies. Gas stocks have also advanced.

Cable stocks are strong, and the wireless group maintains its prices. Cements went ahead because of the expectation that the new Parliamentary session will show ambitious schemes for dealing with the unemployment problems.

Most of the interest in mining shares is centred in the Canadian silver group. The rise in tin caused improvements in Malayan, West African, and Cornish shares, the sluggishness of the market in these issues being at last disturbed by the remarkable advance in the price of the metal. Gold shares are rather uninteresting, and, in spite of the bulk of many leading Kafir shares being quoted ex dividend on Thursday last, this failed to bring in any fresh set of buyers. The diamond market is better, Jagers more particularly being in demand, and in the copper group Tintos have spurred. A few Mexicans are harder; Russian mining shares, with the exception of Russo-Asiatics, are higher on the week. Cam and Motors had a dramatic jump on Thursday afternoon, upon the publication of a remarkable development cable.

NEW ISSUES.

Western Australia 5 per Cent. Inscribed Stock, 1935-1945.—Issue of £2,000,000 at 98 per cent. The proceeds are to be used for railways, harbours, water supply, advances to settlers, and other purposes. The principal is repayable at par on June 1, 1945, the Government of Western Australia having the option to redeem the stock, in whole or in part, at par, on or after June 1, 1935, on giving three months' notice. The stock now offered will be in addition to, and, after May 2, 1924, will rank *pari passu* with, the existing £2,000,000 Western Australia 5 per cent. inscribed stock, 1935-1945. A sinking fund at the rate of 1 per cent. per annum will be provided. The accumulated sinking funds invested in the names of trustees in London now amount to nearly £9,000,000. It is stated that Western Australia Government debentures and inscribed stock issued and payable in London, and interest, the property of persons not domiciled in Western Australia, are not subject to Western Australian taxes. This is an excellent trustee security.

The Anglo-Newfoundland Development Company, Limited.—Incorporated under the laws of Newfoundland. Share capital \$12,000,000, of which \$9,540,020 has been issued. There has been £500,000 5 per cent. first mortgage debenture stock already issued, of which £353,592 is outstanding. This is an "offer for sale" of £1,250,000 6 per cent. second mortgage bonds to bearer at 98 per cent. These bonds form part of an authorised issue of £1,500,000, and will be repayable at 103 per cent. by a cumulative sinking fund of 2 per cent.; the first payment is to be made in June, 1926, and the last in June, 1948. Redemption can be either by drawings or purchase; the company, however, reserves the right of redemption at 103 on or after January 1, 1928. The bonds will be secured by a trust deed containing a specified second mortgage on the properties of the company. Properties are valued at £2,167,607, while total surplus assets, including the proceeds of the present issue, amount to £4,085,537. The vendors paid 98 per cent. for these bonds, but they received a commission of 5 per cent., out of which they bear all charges in connection with the offer. Profits are given from 1919 before charging "interest on loans." The issue appears to be well covered, but we fail to see why the "offer for sale" should be substituted for a prospectus.

James Finlay and Co., Limited.—Authorised share capital £2,000,000, divided into 500,000 6 per cent. cumulative preference and 1,500,000 ordinary shares of £1 each. This is an "offer for sale" of 535,000 ordinary shares at £2 10s per share. It comprises one-half of the ordinary shares held by the trustees of the late Sir John Muir and by the trustees of the late Mr. M. W. Muir. Originally established about 1750, the business of James Finlay and Co. was converted into a private limited company in 1909, and has now been turned into a public one. The principal interests of the company are in India and Ceylon, where it has large holdings in jute mills and jute presses, in cotton mills, and in companies growing tea and other produce, for which it acts as agents. It also acts as merchant bankers. The surplus of assets over liabilities (after deducting the preference capital) is certified at £4,093,981, which represents £2 14s 7d per £1 ordinary share. In arriving at this no credit has been taken for goodwill of the trading or agency business. We should like to have seen in this "offer for sale" a better statement as to past profits. It is, of course, very valuable to know what the assets represent in the price value of the shares, but it is equally important that purchasers should know what dividends may be expected on the capital outlay.

Tavoy Tin Dredging Corporation, Limited.—Authorised share capital £250,000 in shares of £1 each. This is an offer for sale of 142,000 ordinary shares at par, being part of 200,000 shares issued, the remaining 50,000 being under option. The corporation was recently formed to acquire as from November, 1923, tin-bearing concessions in Lower Burma, together with dredges, plant, machinery, buildings, &c. In a letter to the Anglo-Oriental and General Investment Trust, Limited, the chairman of the corporation states that the purchase price of 57,500 fully-paid shares and Rs. 14,37,500 in cash (equivalent to £103,320 6s 3d) has been duly paid and satisfied. It is stated that "the directors and their friends have underwritten firm £75,000 of the shares now offered for sale." An excellent certificate of profits is given by a well-known firm of accountants. We fail to see, however, why it should have been necessary to raise capital by means of "an offer for sale."

OIL OUTPUTS.

THE GENERAL PETROLEUM COMPANY OF TRINIDAD, LIMITED.—The estimated gross production of crude oil for the month of January was 58,281 barrels, equal to approximately 8,326 tons, and the oil delivered to United British Refineries, Limited, amounted to about 9,391 tons. Well No. 12 brought in under control on January 16, since when it has produced 41,933 barrels.

LOBITOS OILFIELDS, LIMITED.—The production for January is cabled as 12,479 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for week ending Wednesday, January 30, 1924, amounted to 1,134 tons.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during January, 17,200 tons. Oil purchased during January from other companies, 9,750 tons.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The estimated gross production of crude oil for the month of January was 83,353 barrels, equal to approximately 11,800 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 9,650 tons.

THE CALTEX OIL COMPANY advises having received the following cable from Mexico:—"January production, 8,463 barrels, or 1,343 tons."

COMPANY MEETINGS, &c.

LLOYDS BANK, LIMITED.

MR BEAUMONT PEASE ON TRADE AND FINANCIAL CONDITIONS.
BALANCE-SHEET FIGURES—"GENERAL AND SATISFACTORY INCREASE."
MONETARY POLICY AND GOLD STANDARD.
IMPROVED TRADE OUTLOOK.
REVIEW OF CONDITIONS IN 1923.

The sixty-sixth ordinary general meeting of the shareholders of Lloyds Bank, Limited, was held, on the 6th instant, at the Queen's Hotel, Birmingham.

Mr. J. Beaumont Pease (chairman of the bank) presided. In moving the adoption of the report, the Chairman said:—Ladies and gentlemen,—The year 1923 has been one of considerable interest both in the domestic history of the bank and in the world at large, and many events have taken place which will have a lasting effect on the future.

TRIBUTE TO LATE DIRECTORS.

Before touching on these I have to deplore an unusual number of deaths and resignations in our ranks. Mr Robert Whitworth, who joined our board in 1919, on the amalgamation of the West Yorkshire Bank with ourselves, died on April 27th, and his death was not very long afterwards followed by that of an old colleague of his in the North, Sir Joseph Kaye. Both of these gentlemen were for many years directors of the West Yorkshire Bank, and brought with them to our deliberations a knowledge of the trade conditions in the territory served by the branches of their old bank which was of the greatest service. Their ever-ready, keen and

whether as the result of increased earning power or of lower expenses, the staff will also benefit. Now, I think the loyalty and willing service of your staff are beyond question—I believe I can say they are a matter of public knowledge—but to make all the members of the staff partners, even to a small extent, with yourselves in the business of the bank cannot but stimulate them into greater keenness. They know that in any increase enjoyed by the shareholders by way of dividend they will share; and few men, however devoted and however loyal, can be so far above all human frailties as not to feel the spur of self-interest when they know that by their exertions they can directly benefit their own position. I hope the principle involved in our scheme will have your hearty support. It has been greeted with acclamation by the staff, and I am sure they will do all in their power to make it a success.

THE BALANCE-SHEET.

Before passing to events of wider interest not so immediately connected with the internal history of the bank, I would like to run through the figures of the balance-sheet. You will see that they show a general and satisfactory increase, and as you have learned from the report, we have opened a dozen new branches at home. It is clear, therefore, that the business of the bank continues to furnish evidence that it is not standing still.

On the liabilities side of the balance-sheet our current, deposit, and other accounts show an increase of £9,611,000, slightly less than was brought in from Messrs Cox and Co.'s amalgamated business.

The profit and loss account I will come to presently. The acceptances, &c., show an increase of £3,616,000. The other two items remain the same.

ASSETS.

On the assets side, our cash and balances with other banks show increases proportionate to the increase of the deposits. Bills of exchange show a decrease of £10,000,000, all of which, and more, has been utilised, as you will see lower down, in giving further facilities to our customers. The decrease is due to Treasury Bills having been allowed to run off, the actual amount of trade bills having shown an increase over last year of more than £3,000,000. In our British Government securities you will notice that there has been a transfer of over £10,000,000 from our long-dated investments to short-term British Government securities, a change which adds to our liquid strength. Indian and Colonial Government investments have increased by £1,400,000.

HOLDINGS IN SUBSIDIARY BANKS.

In our holdings in subsidiary banks the only change of importance is in connection with our investment in the London and River Plate Bank. Owing to the amalgamation with that bank of the London and Brazilian Bank, and its consequent change of name to that of the Bank of London and South America, Limited, the capital has undergone some important variations. Instead of our holding being in partly-paid shares of a nominal value of £25 each, of which £17 had been paid up, we now hold a greater number of shares—namely, 402,620, of the nominal value of £5 each, all of which are fully paid. The liability upon them has therefore entirely disappeared. These shares—which has not been the case hitherto—have now got a market quotation of £8 10s a share. We have therefore written them down in accordance with this quotation, and they now appear in our balance-sheet at the figure of £3,422,270. I think you will agree that this is a conservative and proper step to take, and one that indicates our great internal strength, in that we have made this adjustment without in any way affecting our profit and loss figures.

With the balance-sheet of our bank which has been circulated to the shareholders we also enclosed the balance-sheets of the National Bank of Scotland and the London and River Plate Bank, which you, no doubt, were interested in and pleased to see. The National Bank of Scotland has increased its business, and the profit and loss figure continues to show highly satisfactory results. The amalgamation of the London and Brazilian Bank with the London and River Plate Bank makes the combined business one of outstanding importance in South America. Business in that country, as is generally known, has been less profitable than usual, largely owing to the depreciated currencies ruling therein, but as a result of the amalgamation of the two banks, and with signs of improved business, we feel justified in anticipating a reduction of expenses and an increase in profits.

LLOYDS AND NATIONAL PROVINCIAL FOREIGN BANK.

Our auxiliary, Lloyds and National Provincial Foreign Bank, Limited, continues its satisfactory progress. It fulfils a most useful purpose in directly representing the parent banks in those countries on the Continent where it has branches, and, in addition, is of great service to all those interested in trade between the Continent and

Great Britain by placing at their disposal first-hand information and banking facilities.

Our advances to customers show an increase of over £18,000,000, of which £7,000,000 is accounted for by the inclusion of Messrs Cox and Co.'s figures, and the rest gives an indication of the increased trade activity apparent in the closing months of the year. This last feature is also seen in the increase of £3,600,000 in our acceptance figure. In spite of the allocation of half a million, being part of the profit on the sale of investments during the past year, our bank premises figure shows an increase of £163,000, owing to the inclusion of Messrs Cox and Co.'s figures and also to the expenditure which we have made on our own buildings during the year.

PROFIT AND LOSS ACCOUNT.

Our profit and loss figure, at £2,047,116, shows a reduction of £21,759. To this has to be added £498,342 brought forward from the previous year, making a total of £2,545,458. Out of this an interim dividend has been paid, absorbing £913,281; £100,000 has been placed to staff widows and orphans fund; £100,000 to staff pensions fund, and we propose to pay a dividend at the same rate as the interim dividend, absorbing £928,253, leaving a balance to be carried forward of £503,923. You will notice that the dividend for the last half-year, although at the same rate as the interim dividend, requires £15,000 more, owing to the fact that the income-tax to be deducted from the shareholders' warrants is less this half-year than the previous one.

IMPROVED TRADE PROSPECTS.

I think you will agree with me that these figures show that the bank has made satisfactory progress and increased its strength, even in a year of exceptional difficulty. The indication in our figures of the slightly more favourable trade prospects is confirmed in other directions. The numbers of unemployed until the recent most unfortunate strike showed a downward tendency. Trade returns, export and import figures, the report of the London Bankers' Clearing House for the last quarter of the year, renewed signs of awakening demand, the trade reports from various centres, which I have not included in my address, but which will be circulated separately, all contribute to the hope that better times are in store, and I gladly add my voice to what already has been said by the chairmen of other banks on this more optimistic note. In this connection I would like to record our satisfaction at the appointment of the two Committees of Investigation by the Reparations Commission, and to wish our eminent colleague in the banking world, Mr McKenna, a successful issue to the highly important work to which he has been called. It is a matter for thankfulness and some small wonder that it is possible at the end of a year so little regretted in its passing and so crowded with events of grave import as 1923, to speak with any degree of hopefulness.

RUHR OCCUPATION.

When I had the pleasure of addressing you a year ago, the occupation of the Ruhr had just been commenced, and I stated that we in this country were watching this great experiment with ill-concealed anxiety. Can anyone sincerely believe that so far the expectations of our Allies have turned out to be anything more than a great illusion? A large part of Europe still remains in a state of chaos, and this has repercussions on all parts of the world, while trade channels are blocked or interrupted in every direction. I believe that, of all the causes to which men have attributed the evils through which we have been passing, this is the chief; and until we can get a real peace and a real settlement in Europe, our eyes will be turned in vain to the dawn of a new prosperity which we all hope to see.

THE PAST YEAR.

If we glance at the history of 1923 we notice very little recorded on its pages of a constructive nature. Certainly we read of a peace at long last concluded with Turkey, the successful issue of a loan to Austria, and the improved conditions in that country, and the termination at home of the boiler-makers' strike. The delegates to the Imperial Conferences have come and gone, but whether the resolutions they have passed with the object of increasing the bonds and trading possibilities between all parts of the Empire will turn out to be anything more than pious expressions of opinion has yet to be proved.

But what is there to be found on the other side of the page? Abroad, a grave international crisis between Italy and Greece; revolutions in Rumania and Spain; increasing chaos in China—all evils of man's own making; a terrible visitation on Japan, the only consoling feature of which has been the unflinching courage of an heroic nation which it provoked; and at home paradoxical confusions and shiftings in politics; further misfortunes to our greatest industry, agriculture, reference to the interests of which occupied so much of my address last year; and a recrudescence of labour troubles.

LABOUR.

The railway strike has fortunately been settled, but can anyone truthfully say that it was worth while? And there are signs of renewed strife in front of us. It is no part of a bank chairman's duty to address himself to a political issue, but it is permitted—and indeed is natural—to every patriotic citizen to bring an attitude of co-operation rather than one of criticism to any Government which honestly does its best to ensure the prosperity of the country as a whole. Is it too much to hope that a Government which has often criticised its political opponents for their want of success in dealing with trade disputes may find a better way itself, and that the supporters of that party throughout the country who have been largely responsible for returning it to power may live up to the words of its leader, and, in spite of its name, which associates it with one class only in the State, show itself mindful of the interests of the whole body politic? According to returns supplied by the Ministry of Labour, over ten million working days were lost in 11 months of 1923 owing to industrial disputes, and this at a time when every responsible person was racking his brains to find some cure for unemployment. Peace on the Continent and industrial peace at home are the two great requirements for the reconstruction of this war-shattered world.

SEEKING NEW REMEDIES.

Is it to be wondered at that, in the record of 1923 of dubious adventures, inconclusive experiments and convulsive inconsistencies, men's minds have turned themselves, with every tortuous twist of mental ingenuity, to seek new remedies? It is natural perhaps for a storm-tossed mariner sailing on an uncharted ocean to see in every shadow on the waters the longed-for signs of solid land; but on closer investigation how illusory is the form which the hoped-for refuge assumes! The subversion of our fiscal system, the inflation of our currency, the imposition of a capital levy, the manipulation of our monetary policy, the final abandonment of any idea of a gold standard, and the substitution of an artificial index number as the basis of our currency have of all found advocates who have based great hopes upon them. It is not possible for me to refer to these different proposals at any length, and indeed the first three have been sufficiently discredited by the country, for the time being at any rate. But I would like, in the first place, to draw your attention to the contrast between the striving after complicated remedies and the expenditure of mental agility in propounding ingenious theories on the one hand, and on the other the simple straightforward negotiations one hand, and on the question of the debt settlement between his country and America which were brought to a satisfactory conclusion last year.

Though it is possible to obscure the issue by complicated book entries, or by other ingenious devices, the simple truth remains, and the merits of this somewhat old-fashioned principle have been clearly exemplified in the credit which this country gained in the eyes of the world. It seems to me that the principle exemplified in these negotiations, and the desire straightly to face the facts instead of to find a clever way round them, might well be followed in dealing with all the difficulties with which we are at present confronted. I do not wish to make the invidious comparison, which was fashionable last year between brains and character, but certainly the latter does not, to my mind, come second in order of merit.

MONETARY POLICY.

In addition, I would like to say one word with regard to the question of our monetary policy and the gold standard. I cannot pretend, with the time at my disposal, to go into these questions except to allude briefly to them with special reference to their connection with the operations of a bank. I think there is a tendency to attribute to monetary policy conditions which are often the results of quite other causes, at any rate in this country—I exclude, of course, those countries whose only policy is the printing press. As far as any ordinary joint stock bank is concerned, I do not think it determines its policy consciously on pure monetary grounds. That is to say, its chief concern is to meet the requirements of trade as they arise, regardless of adherence to any particular theory. Its actions are not the cause of trade movements; they follow after and do not precede them. Banks were criticised last year on the quite erroneous grounds that they were retarding an improvement in trade because they were not creating that additional volume of credit which was desirable in order to give trade a fillip. In answer to that, I may say that this bank, and I think I can speak for others also, was only too desirous to make loans and give additional credits, as our proportion of advances to credit accounts was undesirably and unprofitably low; but until towards the end of the year there was no increased demand for them.

BANKS AND INCREASED CREDIT DEMANDS.

If you will not draw a false inference from the fact, I may tell you that hardly a board meeting passes, when we are considering an application for an advance which comes rather near the border line of what is desirable and what is doubtful, that some one does not say, "We want more advances; let him have the benefit of the doubt." I need not add, I hope, that our decisions are based on weightier arguments than that, but it shows our disposition and willingness to meet demands for increased credit when they arise. Even if a bank had a conscious monetary policy in these matters, it is restricted in its actions by its own requirements. If, for instance, we assume the hypothesis recently laid down that every bank loan and every bank purchase of securities creates a deposit, and every repayment of a bank loan and every bank sale destroys one, and that it is desirable from a monetary policy point of view to create additional credits, and consequently additional deposits, when trade is active, it is safe to say that this procedure is readily followed by the banks up to the limit of safe banking possibilities. But there comes a time when banks are ultimately forced, in order to keep up their proper cash ratio, to sell investments, which, according to the hypothesis above, destroys a deposit and thus cuts down the amount of money available in the country at a time when the advocates of this monetary policy think they should be increased.

TRADE SLUMP AND ITS CAUSES.

Again, many critics largely blamed the monetary policy of this country for the slump in trade in 1920, but, seeing that the slump was not confined to this country, but was universally experienced all over the world, is it not more natural to attribute it to the simpler cause that the expectation of demand for all sorts of goods at the end of the war, which induced merchants to place orders and manufacturers to increase their output, was only partly fulfilled, and that the effective demand on the part of the consumer did not come up to expectation? To sum up, my contention is that the monetary policy of the authorities in this country has had less effect on the fluctuations in trade than many people suppose, and that the part which an ordinary bank can play in these matters is necessarily restricted, and in any case follows after and does not precede these movements. Nevertheless, I admit that other banks, apart from the central bank, have a responsibility for playing their part in checking as far as possible the alternate periods of boom and depression. For this reason, in times of great prosperity, real or seeming, they must keep such hold as they can on immoderate demands for credit, and impress caution even on customers who can give ample security for loans. Similarly in times of depression it is their business to stimulate, so far as they can with justice to their shareholders, any enterprises which offer sound possibilities of success.

GOLD STANDARD.

Finally, in regard to the question of a gold standard. I am a little diffident in approaching this subject, as some of the brilliant protagonists of the proposal finally to scrap the gold standard and set up a new standard for our currency, based on an index figure of prices, the currency fluctuating in amount as the index figure moves up or down, state that the intricacies of the theory are beyond the intellectual capacity of bankers to grasp. One drawback to the proposal, even from the point of view of its supporters themselves, is immediately observable. The task of adopting this theory and of putting it into practice will be largely left in the hands of those very people who are considered incapable of understanding it! Another disadvantage is the difficulty of arriving at an index figure which would generally be accepted as accurate. And even if the avowed object of obtaining a stability of prices was realised by these means, it leaves out of account altogether the fluctuations which we would still have in foreign exchanges. To a country like ours, which depends so largely on foreign trade, and which has the burden of a great foreign debt to meet, this is a consideration which vitally affects the whole question. I, therefore, am hopeful that we may gradually get back to our gold standard, which, in spite of some defects and difficulties, has, as a matter of fact, worked well in the past, and still seems to me to offer better prospects in the future than any alternative.

THE RESOLUTION.

I now beg to move:—"That the report just taken as read be received and adopted, and that, in accordance with the recommendation of the directors therein, a dividend for the half-year ended December 31st last of 1s 8d per share, being at the rate of 16½ per cent. per annum on the paid-up capital of the company, be declared, such dividend to be payable on and after February 7th, less income-tax."

LARGE BUILDING PROGRAMME.

Sir Austin E. Harris, K.B.E., Deputy-Chairman, said:—There is only one matter to which I should like to refer. The chairman has called attention to the item of premises in the balance-sheet, which at £5,065,191 shows an increase of £163,000 on the corresponding figure at this time last year, in spite of the large allocation of £500,000 referred to in the report. This is accounted for to some extent by the addition of some of Messrs. Cox and Co.'s premises, and also by the provision of new buildings and additions to our old ones. The shareholders will recollect that two years ago an allocation of £1,000,000 was made to bank premises account.

These large figures are matters which engage the close and constant attention of the board, but in view not only of the competition and building programme of other banks, but also of the large programme which we have in front of ourselves, it is impossible to forecast any reduction of expenditure in the near future. On the contrary, we must be prepared for a further expansion, especially in London, where the question of accommodation in our City office has become acute, owing to the general expansion of business. To meet this and to give more room in Lombard street, we are now arranging to transfer the whole of the head office organisation to the fine new building which we have recently erected at the corner of Gracechurch street and King William street.

Within the next year or so we shall commence rebuilding on our Lombard street site. The architects are already at work on the plans. It will be a slow process, carried out in sections, but we shall hope in the end to possess a fine modern freehold bank, in one square block, which will accommodate both our head office and City office, on a site which will be second to none, if we except that of the Bank of England.

FURTHER LARGE EXPENDITURE.

For these reasons alone we must be prepared to face further large expenditure in the future; but I think that shareholders may rest assured that the figure to-day, large as it is, is a conservative one compared with the real value of the properties which we own.

I have very great pleasure in seconding the resolution.

The resolution was carried unanimously.

The retiring directors, the Right Hon. Sir Robert S. Horne,

G.B.E., M.P., Mr Charles Ker, Mr Kenneth Mathieson, Mr H. B. Sim, Mr Evan Williams, and the Right Hon. Viscount Younger, were re-elected, and Messrs Price, Waterhouse, and Co. were reappointed auditors for the year 1924.

SIR GILBERT GARNSEY ON BANK'S POSITION.

Sir Gilbert Garnsey, K.B.E. (Price, Waterhouse, and Co.) said:—In thanking you for re-electing my firm auditors for the ensuing year, I should like the shareholders and depositors to know that the balance-sheets of this bank are always prepared with the utmost care, and, following the policy consistently laid down by those whose duty it is to direct its affairs, the accounts are shown after provision has been made for every known contingency. The balance-sheet before you to-day is no exception to that rule.

The usual audit, which I need hardly tell you is a very thorough one, has been carried out, and I have only to assure you, if, indeed, any assurance is necessary, that we have found everything in good order. We were particularly struck by the extremely cordial relations existing amongst all the officials connected with the bank, from the highest to the lowest, and this undoubtedly contributes much to its successful working.

RATE OF DIVIDEND.

I should like to say a word here about the rate of dividend paid by your bank. I cannot, of course, speak for other similar institutions, although I have no reason to suppose they are differently situated, but so far as your bank is concerned, I would point out that the rate of dividend is calculated only upon the capital paid up on the shares, which does not by any means represent the total amount subscribed by shareholders or the total capital employed in earning the profits. For example, there is the reserve fund, which is approaching in amount the actual paid-up capital, and which has been largely built up out of premiums on shares subscribed for by shareholders, and the balance out of profits not divided amongst shareholders, but accumulated in the past years. That item alone would reduce the rate of dividend actually paid from 16½ per cent. to less than 10 per cent.

Then there are the inner reserve funds, which are not unknown in banks, and which, when taken into account, reduce still further the rate of dividend to a very modest return upon the total shareholders' capital actually employed. It is as well that these facts

should be stated, especially in these days when one hears so much un instructed criticism.

In conclusion, perhaps I may be permitted to add that, in my opinion, the strength of the balance-sheet before you to-day is such as to place your bank in a position second to none amongst banking institutions in this, or indeed, so far as I am aware, in any other country in the world. (Cheers.)

THE GAS LIGHT AND COKE COMPANY.

EXPANDING BUSINESS—REDUCED PRICE.

INCREASED DIVIDEND—TRUE COAL CONSERVATION.

ALLEVIATING UNEMPLOYMENT—HARMONIOUS RELATIONS WITH LABOUR.

SATISFACTORY PROSPECTS.

The two hundred and seventeenth ordinary general meeting of the proprietors of the Gas Light and Coke Company was held at Caxton Hall, Westminster, on February 1st. Mr D. Milne Watson (the governor of the company) presided. The secretary, Mr W. L. Galbraith, read the notice convening the meeting. The report and accounts were taken as read.

The Chairman said:—

As the report and accounts have been in your hands for some time, I assume that you will take them as read.

You will, no doubt, wonder why the meeting this year is being held at the Caxton Hall instead of at Horseferry road, as has been our custom. The reason is that we are making considerable alterations at our head office in order to bring our offices and showrooms more up to date, and it is, therefore, impossible to hold our meeting there this year.

Before passing on to other matters, I would like to refer to the speed with which the accounts for the year have been got out. We are holding our meeting on the first day of February—the earliest possible date. This promptitude is due to the excellent work and organisation of the accountant's and other departments concerned.

SATISFACTORY INCREASE IN BUSINESS.

With regard to the year that is just ended, the business of the company has been most satisfactory, especially considering the state of depression in trade through which the country has been passing. The sale of gas shows an increase of 5 per cent., which, I am sure, you will agree with me, is very gratifying, particularly when it is borne in mind that this comes upon the top of an increase of 3 per cent. in 1922. It should be remembered that the greater the business grows the more difficult it is to keep up the same percentage of increase. Great credit is due to the gas sales department for the energetic and enthusiastic way in which they have pushed business during the past year. No amount of organisation and push, however, would sell gas if it were not that we have a good article to sell.

When one reads the remarks that are sometimes made about the gas industry one might be tempted to think that its days were numbered, and that our heritage was about to fall into the hands of the electricians. In their case, no doubt, the wish is father of the thought. I think you will agree with me, however, that there are no signs of decrepitude at the present moment in this great company.

A STRIKING COMPARISON.

In this connection it is worth while putting on record the fact that the Gas Light and Coke Company alone produces approximately in a year as much energy (light, heat, and power) as is produced in the form of electricity by the whole of the electrical undertakings in Great Britain.

ELECTRIFICATION INVOLVES WASTE AND MISUSE OF COAL.

There is another most important point which I would like to make while dealing with this question, and that is that, if the Gas Light and Coke Company were to be swept out of existence and to be replaced by an electrical undertaking, that electrical undertaking would require to use at least three million tons of coal instead of the two millions we use. There is also this great advantage in favour of gas, that whereas an electrical undertaking in the production of electricity would completely use up the three million tons of coal, the Gas Company, having treated the two million tons of coal and obtained the gas, would still have remaining million tons of coal and obtained the gas, would still have remaining 1,250,000 tons of coke and breeze, 19 to 20 million gallons of tar, and a large quantity of ammonia. The coke is available for other industries and domestic purposes, and being a smokeless fuel helps very materially to improve the atmosphere of our city. The tar produces materials for dressing the surfaces of roads, dye

A vote of thanks to the chairman for presiding and to the directors for their services during the past year was carried unanimously.

The Chairman, in acknowledging the resolution, asked that a vote of thanks to the general managers and staff might be passed. This was cordially agreed to, and the proceedings then terminated.

stuffs, creosote for pickling timber, benzole spirit for motors, and many other things.

CONSERVING OUR COAL SUPPLIES.

From ammoniacal liquor is produced sulphate of ammonia, a nitrogenous fertiliser second to none in the world. The Gas Light and Coke Company, therefore, together with the rest of the industry, is not only serving its own day and generation well, but is safeguarding the future of the country by conserving to such a remarkable degree its coal supply. Our coal deposits are by no means unlimited, and it is upon them that the continuation of our prosperity as a nation depends. From this it will be seen what an important part gas plays in the life of the community.

All these services performed by the gas industry are apt to be forgotten by the people who wax eloquent as to electricity and its future. We have no desire to deny the many and great uses for electricity, but we do not want the public to lose sight of the outstanding merits of our older but none the less youthful and vigorous industry. As I have said before from this chair, there is plenty of scope for us both.

REDUCTION IN PRICE.

Returning now to the money side. Owing to the lower prices charged for gas during the year—namely, 10d, 9.2d, and 8.6d per therm, or, per thousand cubic feet, 4s 2d, 3s 10d, and 3s 7d—the revenue has decreased by £1,300,000; but, on the other hand, there has been an increase in the profit derived from residual products: coke and breeze, about £200,000; tar, £200,000; and ammoniacal liquor, £70,000; and, on the expenditure side, although we have used more coal and oil, we have saved under these headings £260,000, as we were very fortunate last year in buying our coal before the rise in price took place. There is also a reduced expenditure of £120,000 on repairs and maintenance of works and plant. The expenditure on the distribution of gas has increased somewhat, but this is all to the good, as it indicates growth of business and care and attention to the wants of the consumers of gas.

EXPENDITURE ON EXPANSION.

With regard to the capital account, we have spent £32,000 on land, chiefly for the purpose of building new showrooms, which are urgently needed in several parts of London; there has also been a large expenditure on new and additional mains and service pipes, meters and stoves. This is due to the expansion of our business, and is a sign of the ever-increasing appreciation of gas by the public. It is all business-getting expenditure. Against this capital expenditure there is a credit of £52,000 for depreciation of stoves and of £84,000 as representing the value of plant which has either been demolished or become obsolete. The net increase in the capital expenditure for the year was therefore £178,000.

INCREASED DIVIDEND.

The director declared a dividend in respect of the June half-year of £5 4s per cent. on the ordinary stock, and they recommend to-day a dividend of £5 6s 8d, and the placing of a sum of £11,000 to the reserve fund. There is available a balance of £825,000 to the credit of the net revenue account, so that, after laying the dividend of £5 6s 8d, placing £11,000 to the reserve fund, and contributing £20,000 to the redemption fund, together with the dividends on the preference and maximum stocks, there will be a balance of £227,000 to be carried forward, as against a balance of £244,000 at this time last year.

In the balance-sheet you will notice that the company's investments show a large increase. Compared with the previous year, the company was in possession on December 31st last of a larger amount of working capital to the net extent of half a million pounds. The reason for this was mainly the increased figure on the debit side of the balance-sheet representing "Amounts owing to tradesmen and others."

Telegraphic Address: Kansallispankki.

projects submitted for our consideration during the last year impresses upon us more and more the large volume of business awaiting attention.

It will interest you to know that during the period we have been in existence we have closely investigated numerous proposals and concessions, both in this country and abroad. Many of these we have turned down; others are still being studied, and a few we have carried through to a successful conclusion. We have made advances to or arranged issues of capital for several electricity and allied undertakings, and we are closely in touch with various important developments both in this country and abroad, some of which we are very hopeful of carrying to a successful issue. Generally, I think I may say that to-day we see more clearly than we did even at the date of formation the need of a corporation such as ours.

INVESTMENTS.

At the date of the balance-sheet the investments stood at £706,391. Of these a little more than one-third, or 36 per cent., is invested in sound electrical undertakings with which we are closely in touch. Deeming it to be prudent, pending the development of what we regard as our primary field of operations, we have taken care as far as possible to keep our funds in a reasonably liquid condition. This is confirmed when I tell you that about 20 per cent. of the investment item is represented by British and Colonial Government securities. The electrical power investments and the gilt-edged securities, therefore, amount to 56 per cent. of the whole, the remainder being represented by the Balfour Beatty investment and holdings—mostly in first mortgage debentures of industrial undertakings.

The item of loans and participations—amounting to £132,509—represents to the extent of 73 per cent. advances to electrical undertakings, the balance being a syndicate participation in connection with important electrical developments in this country which we are closely studying at present, and which we believe will be carried through to a successful issue in due course. It is the policy of the board to take from time to time, as opportunity offers, participations or controlling interests in syndicates dealing with developments in various parts of the world, but only where such participations are justified by the importance of the ultimate business likely to result.

The result of our operations for the period of our existence is a gross trading profit of £85,535, leaving, after deduction of all expenses, including taxation, a balance of £65,233 available for dividends and reserves. We believe we have started on sound lines, and I think I can venture to say that, short of any disastrous disturbances at home and abroad, we have every reason to believe that on the sound foundation we have established we can build substantial success.

The report and accounts were unanimously adopted.

APEX (TRINIDAD) OILFIELDS, LIMITED.

UPWARD TENDENCY OF PRICES.

The fourth ordinary general meeting of Apex (Trinidad) Oilfields, Limited, was held, on the 7th instant, at Winchester House, Old Broad-street, London.

Mr Walter MacLachlan (a managing director) presided.

The secretary (Mr S. H. Stacey) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said:—Gentlemen, since the close of our fiscal year we have received further substantial income from the sale of oil, and our financial position to-day is even more satisfactory than is disclosed in the balance-sheet. The profit earned from the production and sale of oil is shown to have been £199,279. From this £67,137 has been written off in respect of amortisation of the wells, and the net London expenditure amounted to £3,505, leaving £128,636 as the net profit for the year under review. Adding to this £64,688 brought forward from the previous year, the total profit we had to deal with amounted to £193,324. Out of this there has been distributed in respect of interim dividends No. 2 and No. 3, each of 10 per cent., less tax, the sum of £80,000, the directors' additional remuneration, consisting of a percentage on the distributed profits, amounted to £3,000, while the reserve for income-tax and corporation profits tax accounts for £21,460, leaving a net balance at the credit of the profit and loss account of £88,864. The directors recommend the payment of a final dividend of 5 per cent., less tax, for the year ended September 30, 1923. This final dividend will absorb £20,000, thus leaving £68,864 to be carried forward in the accounts for the current year. Payment of the final dividend will make the total distribution of profits for the year 25 per cent., representing £100,000, a result upon which we have pleasure in offering you our congratulations. Before leaving this subject, I may point out that the rate of Dominion income-tax relief has now been settled with

the Inland Revenue, with the result that the British income-tax, after reduction of Dominion relief, has been fixed at 3s 8.724d in the £, and this rate, therefore, is being deducted from dividend No. 4. The same rate also applies to Dividends No. 2 and No. 3, and, as a higher rate was deducted when these dividends were paid, a refund of 1s 0.276d in the £ is about to be made to the shareholders who received those dividends. The refund is equivalent to an additional 1 per cent., free of tax, and no doubt this little bonus will prove no less welcome because it is unexpected.

PRODUCTION AND SALES.

The output from our property has been largely increased during the year under review, the production having amounted to 115,346 tons of oil from 23 producing wells, as compared with 64,315 tons from 12 wells during the preceding period, an increase in production of 80 per cent. over the previous year. The total production from the property since the start of our operations until the end of last month has been over 1,860,000 barrels, or about 263,000 tons.

The sales of oil during the year amounted to 111,035 tons, an increase of over 69 per cent. as compared with 1921-22. The disposal of our production has been satisfactory, as although deliveries were restricted during November and December, matters were nearly equalised by excess deliveries being taken in April and May.

A vigorous drilling programme has been maintained, and out of a total footage of 32,784 feet drilled from the start of our operations until September 30th last, 15,606 feet were drilled during the year under review, being an increase of 69 per cent. as compared with the previous year. Eleven new wells were completed, as compared with eight during 1921-22, and production is now being obtained from 28 wells. A considerable extension of the known payable area has been proved to the south-west of our property, and since the close of the year 91 acres have been added to our area, which now comprises about 984 acres.

As you are aware, our production is sold to Trinidad Leaseholds, Limited, and we have also entered into an agreement with United British Refineries, Limited, agreeing terms for the sale of any surplus production. We are, therefore, now in the satisfactory position of being able to dispose of our output to either or both of these two refineries upon terms which enable us directly to participate in the results which attend the treatment and marketing of our production.

PROSPECTS OF THE INDUSTRY.

The Chairman, after referring to over-production in California and Texas, continued. Within the last few weeks, however, a great change has taken place in the position of the oil industry. The flush outputs from the oilfields to which I have referred have suffered and are suffering the decline which sooner or later was inevitable, with the result that the over-production has ceased and the natural balance between production and consumption is rapidly being restored. As a result, higher prices for crude oil may be looked for, and already, since last December, Pennsylvania crude has risen from \$2.60 a barrel to \$4.50. Everything points to this upward tendency of prices being maintained as the result of the increase in the rate of consumption synchronising with the decrease in production, a condition of affairs which must benefit producers of crude oil, such as ourselves. As you have seen from the accounts, our results for last year were extremely satisfactory, in spite of the fall in prices which took place during the year, and it is only reasonable to anticipate that we will reap considerable benefit from the improved conditions which now prevail.

The motion was seconded by Mr George R. Airth, and carried unanimously.

GOVERNMENT RETURNS, &c.

(a) Dividend on increased capital.

BURNELL and Co.—Directors regret inability to pay dividend on preference shares, which is now two and a half years in arrears.

RICHARDSON, DUCK, and Co., shipbuilders, announce with regard to the six months' dividend, which in the ordinary way is payable on February 1st, that, owing to the continued deplorable state of trade in the shipbuilding industry, to the boiler-makers' lock-out having laid the shipyard practically idle for 30 weeks, and other considerations, they have decided not to recommend the payment of the preference dividend on the date named. The company was formed in 1919 with a capital of £275,000, of which £250,000 is in preference shares. No dividend has yet been paid on the ordinary shares.

THE ASSOCIATED EQUIPMENT COMPANY announce that the trading results for the year do not justify the directors in recommending the payment of a dividend. In respect of the year 1922 the directors made a similar announcement.

* Half-year. † Tax free.

March sold 47s 6d, Australian early March 47s 1 1/2d, March early April, 47s 3d, No. 2 Northern Manitoba February 47s, Barusso 64 lbs March 20 loading 44s, early March 44s 1/2d, No. 3 Northern Manitoba loading 47s per 480 lbs. Flour in steady demand, and prices further hardened in sympathy with wheat. London standard straight run quoted at 39s 6d, patents 41s 6d to 42s 6d, town households 37s 6d per sack, delivered in. All English country straightens firmer at 35s 6d to 36s 6d per sack, free on rail at London stations. Imported firm but quiet. Manitoba patents range from 36s 6d to 39s as to quality, and Australian 36s to 37s per 280 lbs, ex store. Maize cargoes were also in better support, and prices advanced sharply. Steamers of new crop La Plata, March-April, sold 39s, April-May 35s 9d to 36s, May-June 34s 7 1/2d to 35s, Dan-Gal-Foxanian, February-March, 41s 6d, ditto March-April 16th at 40s 6d per 480 lbs. Barley.—English firm and making ranges from 11s 6d-14s 6d, with feeders 10s 6d-11s 4d per 112 lbs, free on rail. Imported, Californian 45s-50s, ex store, Chilean brewing 43s-46s, ex ship, both per 448 lbs. No. 4 Canadian Western 36s 6d, landed, Algerian/Tunisian, ex ship, to arrive, 33s 9d per 400 lbs. Maize firmer. Plate, ex ship, 43s 9d, landed 45s 3d, Bessarabian landed 45s 6d, all per 480 lbs. Oats.—English steady at 9s 4d-10s 6d per 112 lbs, free on rail. Imported firmer with a better demand. Plate, f.a.q., new crop, ex ship, 21s 9d. Old crop landed 23s 9d, No. 2 Canadian Western landed 28s, No. 3 ditto landed 27s, No. 2 Canadian feed landed 25s, all per 320 lbs. Miller's offals steady, quiet. Broad bran quoted 8s, ordinary 7s 9d, middlings 9s, fine ditto 10s, bags included, ex mill, light oats 6s 9d, powdered oat husks 8s 3d, feed oatmeal 9s 9d, ground oats 12s 9d, free on rail, all per cwt. Oatmeal, in moderate demand at easier rates. London made flaked also rolled oats 17s 6d, medium and fine cuts 17s, coarse and medium pinhead 17s 6d, ordinary Scottish oatmeal 17s 6d, American 16s 9d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24.	1922-23.	1921-22.	1920-21.
Estimated sales of home-grown wheat—				
1 week to February 2	Owts. 266,409	Owts. 484,712	Owts. 421,265	Owts. 345,718

IRON, STEEL, AND COAL.

The tone of the pig-iron market this week is regarded as fairly satisfactory. On home account, demand has been fully up to the average and prices have been maintained. The buyers have been rather more numerous than sellers, and in some quarters there was a feeling of disappointment that this fact had not the effect of stiffening prices. It is said that in the foreign market consumers have been trying to obtain bargain lots, but this is not an easy matter, and makers are not encouraging the idea that cheap quotations are likely to be forthcoming in the near future. About 1,000 tons of ordinary and varied brands have been sold for early despatch to the United States, or more properly to Pacific Coast ports. It is said steel-makers are not quite so well situated as they were, say, a month ago, although there are orders on hand to keep going for some months. During the present week bar manufacturers have been endeavouring to secure a slight advance for forward delivery, but buyers are holding back, being well able to fill their requirements from the Continent. Inquiries for steel structures are more plentiful this week, both for home and export, and some orders have been placed, but in this department prices are too keenly cut to be satisfactory to the seller. Bar iron makers and the works engaged in making black and galvanized sheets are finding plenty to do, more especially with con-

tracts already booked. The demand continues steady from local shipbuilders, and on account of railways and wagon builders. An important inquiry for galvanized sheets from the Argentine Government, amounting to some 40,000-50,000 tons, is in negotiation with several works in Scotland and England, and is expected to be placed immediately. The placing of this business should have a steadying influence on this important industry.

Our Middlesbrough correspondent's report, dated February 7, 1924, is as follows:—Pig iron: Pig-iron has been rather easier, by reason of the competition of foreign iron, and makers have made a reduction in the hope of attracting buyers. No. 3 Cleveland G.M.B. is 98s per ton. East Coast mixed numbers hematite, 101s 6d per ton. Meanwhile, coke is rather lower. Manufactured iron and steel: Although steel works are fairly active, new business is not plentiful. Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12; steel rails, £9. Iron ore: Ore deliveries are falling off owing to scarcity of prompt tonnage, and higher rates are being offered. Best Bilbao Rubio is quoted 24s per ton, but there is no pressure to sell.

Our Sheffield correspondent writes:—Business has been extremely dull this week in semi-finished steel. Orders are few, and inquiries have fallen off in all directions, and unless there is some early improvement it will be necessary to close some of the open-hearth furnaces. Apparently trade has not recovered fully from the adverse effects of the recent strike, but another cause of the reaction is the cheapness of Continental steel, billets being available at £2 per ton below the cost of British billets. Competition is also keener than for a long time past in mild steel bars, sections and the like. Conditions are also quiet in the pig-iron market, although the furnaces have considerable contracts on hand which were placed in December. Quotations generally are unchanged. In other branches of the local steel trade progress continues, and many departments are fairly busy. The demand is chiefly for railway material, steel for the electrical and motor industries, cold rolled steel, steel castings, and wire. The depression which has hung over the crucible steel and file branches for several years appears to be passing away, although these trades are far from having reached a remunerative basis, and the resources of the industry are far in excess of requirements. The call for tools is brisk from the overseas and home markets. The cutlery trade is disorganised by a dispute with the knife-grinders, most of whom have ceased work, and the execution of orders for table knives is being held up. The railways have made good progress in dealing with the congestion of the coal traffic caused by the strike, but transport is far from being normal and exports have suffered. Coke is extremely scarce and dear. The price to British blast furnaces is still 24s, but for other purposes, including export, 30s is being obtained. There is a strong demand for gas coke, coal nuts for the electric supply plants, and steam coal. Forward business is not possible under present conditions. Local quotations per ton at pits are:—Best hand-picked branch, 35s; Barnsley best silckstone, 30s 6d; South Yorkshire hards, 25s; Derbyshire ditto, 24s; rough slacks, 12s 6d; smalls, 7s.

Our Cardiff correspondent writes:—Business on the Cardiff coal market has been fairly active during the week, and, with free coals scarce, prices have been firm. The fear of a stoppage of work by the transport workers at the end of next week has accentuated the pressure for deliveries before that date. All the South Wales docks would be involved in the event of failure of agreement over the dockers' demand for the raising of their minimum from 10s to 12s per day, and meetings of the local branches of the Transport Workers' Federation have adopted resolutions insisting on the granting of the suggested increase. In some previous stoppages South Wales has proved more recalcitrant than other ports affiliated to the Transport Workers' Federation, and the market is somewhat apprehensive of a revolt on the part of the local dock workers against their leaders if they settle on less favourable terms. In these circumstances, 31s has been realised for best Admiralty large coal, and other descriptions, including small as well as large, have been firm in sympathy. The volume of trade is also considerable. With regard to the dispute in the mining industry, no negotiations are in progress, and it is unlikely that any start will be made with them before the second or third weeks in March. Negotiations for the resumption of a third shift are also in abeyance. For the time being that extra shift has been abandoned by the arbitrary action of the tipplers and trimmers at all the South Wales ports. The employers have expressed their willingness to agree to the reference of the matter to arbitration in accordance with the recommendation of the Industrial Court, but the workmen are pursuing a policy of procrastination, and have not yet stated whether they will or will not agree to arbitration. The approximate current quotations are as follows:—Best Admiralties, 30s to 31s; second Admiralties, 29s to 30s; best drys, 28s to 29s; black veins, 29s to 29s 6d; Western Valleys, 28s to 28s 6d; Eastern Valleys, 27s to 27s 6d; best bunker smalls, 22s to 23s; ordinary cargo smalls, 18s to 20s; coking smalls, 23s to 24s; anthracite big vein large, 40s to 42s 6d; machine-made cobbles, 45s to 50s; French nuts, 50s to 52s 6d; stove nuts, 52s 6d to 55s; rubbly culm, 13s 6d to 14s; inland blast furnace coke at 55s; coke for export, 47s 6d to 57s 6d; patent fuel,

30s to 32s 6d; pitwood, ex ship, 33s to 33s 6d. In the iron and steel trade conditions are again normal after the railway strike. The tinplate market is buoyant and the demand for the heavier grades of steel is comparatively active. Prices are unchanged. At the annual meeting of the South Wales Metal Exchange this week, Mr F. H. Gilbertson, the president for the year, took a pessimistic view of the immediate future in view of the possibility of increased competition from France and Germany.

METALS.

Tin market commenced with an easier tone, but subsequently advanced sharply on liberal buying orders and higher Eastern cables. Cash sold from £251 to £259 15s., and three months £249 to £259 10s. Cables from the East reported sales on the basis £251 to £261, c.i.f. At Thursday's session the advance was continued, while a good demand prevailed. Cash sold at £262 10s to £264 10s, and three months at £260 to £262 10s to £261 15s. At the final session the tendency was again dearer. Standard cash sold at £265 to £265 10s, three months £262 to £260 15s to £263. English ingots quoted at £266 10s to £267. Copper slightly irregular, but fairly steady on balance, with dealings on a liberal scale. Standard cash was dealt in at £60 15s, £61 1s 3d to £61, and three months £61 10s to £61 17s 6d to £61 15s. Values ruled firmer on Thursday, with active trading in force. Standard cash sold at £61 1s 3d to £61 2s 6d, and three months at £61 17s 6d to £62 2s 6d. Copper active and dearer on Friday. Standard cash sold at £61 10s, and three months £62 7s 6d to £62 10s to £62 8s 9d to £62 11s 3d. Electrolytic 66 5s to £66 15s, best selected £65 10s to £66 15s, strong sheets £95, wire bars £66 15s per ton. Lead firmer at £33 12s 6d to £33 7s 6d, as to position. Spelter dearer at £35 15s to £34 15s, according to position. Aluminium quiet. Home trade £115, export £120. Antimony, English special brands, £49 10s to £50 per ton.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There does not appear to be any great activity in any section of the industry, but in the aggregate a nice steady trade is passing, and the general tone remains very good. The outlook would be much brighter if spinners and manufacturers experienced less difficulty in passing on some of the increased cost of production, but as things are, although quotations have been advanced and more money obtained for recent orders, the selling prices of tops, yarns, and pieces still fall far short of replacement costs. This is due to the high price of wool on the one hand, and on the other to the unwillingness of users to pay prices based on the cost of the raw material. However, the demand for wool is as keen as ever, and in the Colonies supplies are being taken up with great eagerness at prices which constantly tend to harden. The real fact is that everyone seems to have the utmost confidence in the strength of the wool position, and topmakers feel that ultimately users will be forced to come into line and readjust their ideas of values. In the meantime business is being conducted with caution. Spinners appear to be fairly well covered, and are confining their purchases as much as possible to current requirements. There is a general belief, however, that several firms would be tempted to buy on a large scale if they could get any concession on quoted rates. It must be confessed, however, that there seems to be little prospect of any easing in prices for some time to come. Yarn quotations are being advanced here and there, but much depends on the position of the spinner. There is a fair amount of new business, but particulars against old orders are difficult to obtain in many cases. The piece goods trade is steady, with a little more doing on export account.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The sales in Coleman street are drawing to a finish, with values slightly below the highest point of the series. In making that statement, we are not ignoring the fact that buyers contend that they are bidding at the same limits as earlier in the series, while owners of second-hand parcels say that buyers are endeavouring to get in at less money. It is also denied by the said owners that their wools are over-limited, though excessive limits are supposed to be the cause of the more frequent withdrawals of merinos this week than last. However, merino holders are by no means concerned at what has taken place in Coleman street, and are satisfied that the trade will buy the wools later in the season at the limits for which they are now held. Unless the market is red hot, buyers are not keen to acquire second-hand parcels which they see have had excessive limits put on them, and with the splendid supply of straight growers' clips from Australia, there is no wonder at buyers' appetites being more or less satisfied for the time being. All the same, one must admit that there is everywhere satisfaction at the way the series have progressed, and most wools are going to finish 7 1/2 to 10 per cent. above last series, with scoured cross-breeds and slipes often 15 per cent. dearer. The daily offerings have been good, and on the whole the demand well sustained.

Those who have consigned wool direct to London for sale cannot but be satisfied with the results, and more than one West Australian clip, part sold in Perth and the balance in Coleman street, will show to the owners which for the time being is the better market.

THE COTTON TRADE.

MANCHESTER, February 7.

Although the tone of the market has continued quiet the undercurrent of inquiry has been fairly extensive. At the moment buyers are not in the mood to place contracts of importance, but there is a steady flow of small orders, which in the aggregate total to moderate dimensions. In many quarters there is a fear of lower values in the near future. For the time being trade in cloth for China is upset by the New Year celebrations abroad, but some special lines have been put through in white goods. Light fabrics of various kinds have been sold to a fair extent for India, but bids in grey shirtings remain poor. There has not been much activity for the minor outlets East and West, and support from the home trade has been limited. There continues considerable irregularity in American and Egyptian yarn quotations and home counts have moved off slowly. Business continues to be done in bundle yarns for India. Spinners as a body tend to lose ground.

VEGETABLE OILS AND OILSEEDS.

The shortage of linseed oil for prompt and February delivery continues to make itself felt, and assisted by a good demand from the consuming industries, prices have again sharply advanced, "spot" oil being quoted £48 ex Hull mill, and £45 late February. There is also a substantial inquiry for March-April delivery around £41. It is a long time since supplies ran so low or that production was unable to cope with demand, both here and in Continental mills. The quantity of seed on passage to the U.K. and the Continent has increased to 168,200 tons, and soon some of this should be arriving in substantial volume, and so relieve the scarcity of oil.

HIDE AND LEATHER TRADES.

BY OUR OWN CORRESPONDENT.

The hide market remains firm, best ox making from 6½d for light to 8½d for heavy at the Bermondsey sales held on Thursday. Slight advances of ½d were noted in three classes. Seconds sold from 6½d to 7½d, but best cows failed to find buyers. Calf were practically unchanged from last week, the high price of lights at 16d still holding good. All classes were in demand, values ranging from 6½d for heavy to 14½d for medium, and as stated 16d for lights. Wools sold from 8s to 16s, and hoggs from 5s 6d to 20s 3d, owing to the high price of wool and sheep pelts, which are very scarce. The prohibition of export of French hides and skins is causing some anxiety in Bermondsey and elsewhere, but importers are hopeful of getting permits from the French Government to handle contracts already entered into. A resolution was passed this week by the Northampton Chamber of Commerce referring to the prohibition, and calling upon the British Government to bring pressure to bear on the French Government to remove the embargo, and failing that, to see that raw calfskins of this country be reserved for home consumption. Trading in imported hides is quiet, home tanners refusing to follow the prices paid by America and the Continent for frigorifics and other classes of raw stock. The market is cabled as strong in the U.S.A., Chicago heavy packers now selling at 15 cents.

Business is quite good in sole leather of all classes; tanners, in view of the firm hide market, are advancing prices, and 1d per lb has been obtained on some classes of bends and butts. Offal is as dear as ever, and tanners are well booked forward in the lighter grades.

Upper leathers are advancing, and curriers of kips are better

off for orders than has been the case for some time. Chrome leather is firm, and the prohibition on French calf leather has had the effect of holders advancing prices. Patent and suede are moderate sellers, whilst the scarcity of sheep leather is as marked as ever.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, February 8th.

SUGAR.—This market gathered renewed strength, prices being further raised in all directions, and with sustained inquiries, both on grocery and manufacturing account, supplies of refined on offer were well absorbed at the higher range. Meantime, American interests continue to dominate the situation, owing to the extremely slow movement of European beet crops, and keen competition is experienced for Cuban raw produce from American and European refiners. Cuban receipts last week cabled 156,584 tons against 165,526 same time last year; exports, 100,739 against 80,835; stocks, 240,622 against 275,135; and factories at work total 165 against 164 at corresponding period last year. Of British refined, Messrs Tate and Lyle's goods advanced 6d per cwt. Cubes now quoted 64s 6d to 65s 6d; crushed, 63s; granulated, fine and coarse grain, 63s 1½d; No. 1, 62s 10½d; No. 2, also London and T.L., 62s 7½d; ditto, one forward, also March, 62s 6d; yellow crystals, spot, 58s 1½d; caster, 63s 3d to 65s 4½d. Of imported, white Java, spot, 60s; ditto, May-June, quoted 28s 7½d; June-July, 27s 6d, c.f. and i. terms, London. Czecho, granulated, spot, sold, 61s, 61s 3d; February-March, 32s 9d; and April-May, 33s, f.o.b., Hamburg. Belgian, granulated, spot, 60s 6d; ready for shipment sold, 33s, f.o.b., Antwerp. Dutch sugars for shipment sparingly offered. Raw refining kinds remain very firm on paucity of offers, and Cuban basis, 96 per cent., March, quoted 29s 3d, c.f. and i., U.K. White terminal market manifested a good deal of activity, and prices were dearer, though attended by irregularity, due to considerable profit-taking at times. March sold, 33s 6d to 33s 3d, 33s 4½d, 33s 1½d, and 33s 3d; May, 32s 9d to 32s 1½d and 32s 6d; August, 30s 9d to 30s 3d and 30s 6d; November, 25s 7½d; December, 25s 9d to 25s 6d per cwt.

COFFEE.—The market remains very firm, especially for the finer qualities of mild liquoring, which are scarce and wanted both on home and continental account. Costa Rica, bold sizes, sold, 158s to 182s.

TEA.—During the week 55,809 packages Indian were offered, and met a demand for the finer grades, particularly when possessing autumnal flavour, and these realised full rates. Low medium and common teas, however, were irregular and mostly weaker. Ceylon sales totalled 18,842 packages, and all the finer invoices went off steadily, but owing to variation in quality, common kinds were irregular. 9,300 packages Java and Sumatra passed off showing similar result as Indian and Ceylon.

COCOA.—The fair quantity of 6,984 bags was brought forward in auction, and same went off somewhat irregularly. Grenada formed the chief feature while actively competed for at from 1s 6d to 4s per cwt advance. Trinidad proved steady, with Ceylon and most other descriptions decidedly slow. Grenada, fair common hard, sold at 43s; fair to fine red, 46s to 50s 6d; Trinidad, good to fine red, 51s to 52s 6d; Uganda, fair, 36s 6d to 37s; Ceylon, fair estate, 82s; native, 65s 6d to 66s; and fine bold attractive Java, 170s. Accra F/F quality, February-April, sold at 33s 6d; March-May held for 34s 6d cwt f.o.b. English cocoa-butter, 1s 4d per lb.

RICE.—Market steady, but buyers are somewhat reserved and business as a consequence kept down. Two Stars Rangoon, spot, 16s 6d; afloat, 15s 6d; February-March, 15s 4½d. Spanish, for shipment, 20s 3d, c.f. and i. Japanese peas, spot, 23s cwt.

SPICE.—Pepper market remains quiet, and generally featureless. Black Singapore, February-April, L.S., quoted 4½d; Lampong, ditto, 4½d; Muntok, January-March, 6½d; February-April, 7d, and March-May, 7½d. Zanzibar cloves neglected at the moment. Tapioca quiet, unaltered. Sago flour, January-March, quoted 16s 7½d cwt. Dedicated coconut dull, unaltered.

JUTE. in quiet request, but sellers required steady prices. First grade, January-February, sold, £23 10s; February-March, £26; March-April, £26 10s; April-May, £27 per ton. Hessians and twills dull of sale.

HEMP.—Manila steady, but demand is generally slow. J grade, January-March and February-April value, £35 5s; K, £27 10s; L, £26 10s; and M, £24 5s per ton. New Zealand nominal, with scarcely anything on offer. African sisal unaltered.

SHELLAC. firm. T.N., March, quoted 280s, and May, 267s 6d to 280s to 275s paid.

GUPRA. steady, but at the same time generally quiet, with crushers content to confine operations to wants of immediate necessity at the moment. F.M.S. Straits, October-December, Rotterdam, buyers, at £33; ditto, November-January, quoted at £31 10s; December-February, £30 10s; January-March, £29 17s 6d, £30 5s paid; and February-April, sold, £29 15s. Dutch East Indies, December-January, quoted £31 10s; January-March, £30 2s 6d. Ceylon, February-March, value £32 15s; Java, ditto, £30 10s; South Sea Islands, £29 10s. Palm kernels met a steady but quiet market. February-April, Liverpool, quoted, £20 12s 6d.

RUBBER.—General quietness again pervaded this market, and while business was confined to moderate limits, prices were irregular. Standard plantation crepe and sheet, spot, also February, sold, 1s 2d; March, 1s 2½d; April-June, 1s 2½d to 1s 2½d; July-September, 1s 2½d to 1s 2½d. To New York, standard sheet estate, February-March, 1s 2d per lb, c.f. and i. terms. Wild descriptions call for no comment, being largely nominal.

FRUIT, DRIED.—Prices remain very firm, but general demand only fair. Australian currants quoted 56s; Pyrgos quarter cases, 46s; Amalia, 50s; Patras, 50s; Voetizza, 70s to 75s. Valencia raisins, half boxes, 50s; quarters, 60s to 80s. The market for dates is steadily rising under active support accorded by Continental buyers. Figs, granules natural, in bags, quoted 38s to 40s.

Evaporated fruits market steady. Californian apricots, standards, 75s; choice, 85s; fancy, 110s. Apple rings, quoted, 75s to 80s; French plums, quarter cases, 90/95, quoted 38s 6d; 81/86, at 41s; 72/77, 47s; Oregon, 30/40, 75s; 40/50, 58s; 60/70, at 45s per cwt.

CANNED GOODS.—Sardines steady, with good parcels very difficult to obtain. Portuguese, ½-flats, quoted 2s 9d to 3s 3d; ¼-clubs, 3s to 3s 6d; 12 oz, 5s 6d to 6s 6d; 18 oz, 9s to 11s per dozen tins. Lobster quiet, but steady, and fancy halves, 130s to 135s. Crayfish, 96 ½-lbs, 76s. Salmon: This market disclosed very firm features, with an increasing demand. 1 lb flat reds, labelled, quoted 56s; ditto, tall, 44s; 1 lb flat pink, 27s; ditto, tall, 26s 3d; and cases of 96 ½-lbs, 29s to 30s per case. Canned fruits were a very firm market, as stocks in general are getting short, though business manifested some diminution during the past few days. Singapore pines, 1½-lbs, quoted 6s 7½d for forty-eights; Hawaiian slices, 2½-lbs, 16s 6d to 17s. Californian apricots, 8s to 11s; ditto, peaches, 9s 6d to 13s; pears, 13s 6d to 15s; Australian apricots, 2½-lbs, 8s 6d; ditto peaches, 8s 9d to 9s 3d. Tomatoes, Italian, 6s 9d per dozen tins.

OILSEEDS.—Linseed in good demand and prices tended firmer for Plate descriptions. Indian: Calcutta, afloat, £22 15s; January, £22 5s; April-May, £19 15s. Plate, afloat, sold, £19 5s, loading, £19; January-February, £18 10s to £18 13s 9d; April-May, £18 2s 6d to £18 7s 6d. Rapeseed firm. Toria, January-February, £19 17s 6d; February-March, £19 12s 6d; and Jamba, January-February, £15 5s. Cottonseed irregular. Egyptian, black, February, £13 17s 6d. Sakellaridis £12 10s, Hull. Bombay, January-February, £11 to £11 2s 6d, paid; February-March, sellers, £11 2s 6d. Gingly seed, steady. Chinese, January-February, £26 10s. Groundnuts quiet. Coromandel, machine-dried, January-February, £23 15s; Chinese, decorticated, f.a.q., January-February, sold, £23; bold Bombay, ditto, £24. Soya beans firm. Manchurian, afloat, £13 15s; January-February, £13 2s 6d. Castor-seed firmer. Bombay, January-February, £24; February-March, £23 10s per ton.

OILS.—Linseed advanced sharply in near positions, with a good demand. Spot, net, naked, 50s 6d; February, 47s 3d; March-April, 42s 3d; May-August, 39s 3d. Rape firm. Crude spot, 48s; refined, 51s. Castor-oil quiet. First pressure, spot, quoted 58s; second pressure, 57s; and pharmaceutical, 63s per cwt, Hull, with London 2s cwt extra. Cotton firm. Crude Egyptian, spot, 45s 3d; Bombay, 43s 6d; common edible, 50s; deodorised (in barrels), 54s 6d. China-wood quiet. Hankow, spot (barrels), 94s; January-February, 100s. Cocoon quiet. Ceylon, spot, 49s 3d; February-March, 49s; Cochiti, ditto, quoted 60s. Soya firm. Oriental, barrels, January-February, 46s. Cod firm. English, spot, 36s 6d. Groundnuts firm. English, crushed, naked, spot, 53s; deodorised, barrels, 61s. Turpentine, irregular and easier. American, spot, 78s 6d; March-April, 78s 9d. Rosin, irregular. American, grade B, 13s 6d; F, 13s 6d; G, 13s 6d; H to I, 13s 6d; WG, 17s 6d; WW, 18s 6d per cwt. French WW, 17s per cwt. Petroleum firmer. American standard, white, spot, 1s; and water white, 1s 1d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on February 6th as follows:—The tallow market was steady during the week, and prices

THE MONEY MARKET.

THE MONEY MARKET.

CONDITIONS of comparative stringency have again obtained in the money market, short loans generally commanding up to 3 per cent., with occasionally still higher charges. Relief seems to have been given by special purchases from day to day of Treasury bills—and even of Treasury bonds with less than 12 months to run—but there is no expectation of easier conditions until after the turn of the fiscal year, for the present position is due

as much to the increasing competition of the trade bill with the Treasury bill as to revenue collections. Five three months' bills have generally been quoted at 3½ per cent., with some houses standing out for a higher rate, according to the view taken as to the course of rates when tax collections cease. Last week's Treasury bills have been on offer at 3½ per cent. to over, with but few buyers.

	Feb. 15, 1924.	Feb. 8, 1924.	Feb. 1, 1924.	Jan. 25, 1924.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate (3 months' bills)	3½	3½	3½	3½	..

The Bank return showed a further return of notes from circulation to the extent of £681,775, and with £2,920 added to the bullion stock, the Reserve was raised by £684,019. The Private deposits were practically unchanged, being only some £156,900 higher, a reduction of £1,948,000 in Government securities having been made possible by reducing Public deposits to the extent necessary to meet such reduction, after allowing for the return of currency which went on to the deposits, and the ratio of reserve to liabilities in the Banking department was raised by 0.8 to 19.0 per cent. Currency notes outstanding were reduced this week by £1,055,300 to £278,789,500, which includes £1,420,200 for notes called in, but not yet cancelled. The fiduciary issue is £227,919,400, or £20,271,500 below the maximum.

The monthly statement of average weekly balances of the London Clearing Banks for January, which is set out in full in a later column, shows a further expansion in acceptances, but deposits are practically unchanged. Below we set out the aggregate figures for the nine English banks:—

	Dec., 1922.	June, 1923.	Sept., 1923.	Nov., 1923.	Dec., 1923.	Jan., 1924.
Capital and reserves	116.0	116.3	116.3	116.3	116.3	116.5
Acceptances	72.8	73.8	72.7	87.3	96.1	103.6
Deposits (incl. undivided profits, &c.)	1,684.7	1,637.7	1,609.6	1,629.8	1,673.1	1,674.4
Total liabilities	1,873.5	1,827.8	1,798.6	1,833.4	1,885.5	1,894.5
Coin, notes, balance at bank, and cheques in course of collection ..	253.0	240.7	230.2	233.3	254.2	241.8
Money at call	106.0	113.3	102.5	104.7	111.3	99.5
Investments	384.5	355.5	361.2	361.5	363.8	369.3
Discounts	298.3	270.8	260.4	268.9	276.3	292.5
Loans and advances	732.7	746.9	744.3	750.3	756.5	760.8
Cover for accept., premises, &c.	99.0	100.6	100.0	114.7	123.4	130.6
Total assets	1,873.5	1,827.8	1,798.6	1,833.4	1,885.5	1,894.5

There is a further increase in advances, and a striking expansion in bills discounted. Investments are also substantially higher. These increases are balanced by reductions in the cash item and in money at call. The former, however, still stands well above the November average.

THE STOCK MARKETS.

Business on the Stock Exchange has remained fairly active, and has been unaffected by the opening of Parliament. Gilt-edged securities have mostly been steady, and foreign bonds show no great change on balance. The quick oversubscription of the Japanese Loan caused no surprise. The Home Railway market was disappointed with the London Midland and Scottish dividend, but more pleased with the Great Western announcement. Argentine rails have been in demand on good traffics. Inactivity has continued in the rubber market, and tea shares have been inclined to droop, but the oil market remains active, though prices are inclined to fluctuate. There have been no particular features in the industrial market, but there has been greater activity in South Africans, thanks to optimism at the Cape.

THE COMMODITY MARKETS.

The menace of the dockers' strike stimulated activity in the coal trade at South Wales ports during the week. In the pig-iron market buyers are holding back and prices have eased a little. There is stated to be plenty of work for

steel works supplying shipbuilding steel, but new orders are scarce. Tin and copper continue to advance. Conditions in the Manchester cotton trade are weak, with values falling. The wool trade is deeply impressed with the remarkable firmness of the raw material; it is pointed out that many buyers are influenced by the possibility of a shortage in supplies towards the end of the year. Hides are still advancing in the home market. Wheat has inclined to weakness, but the sugar market continues to take an upward course. Tea is in demand, but there is little support for coffee. Business in rubber is quiet, and prices remain stationary.

FOREIGN EXCHANGES.

In the foreign exchange market business has again been on a somewhat restricted scale. There have been no movements of great importance beyond a further fall in the value of the French franc, and a still more rapid depreciation in that of Belgium. From a closing rate of 94.75 on the 8th, the Paris rate rose quietly with moderate fluctuations until a maximum of 97.55 was reached at one time on Thursday. From that there has been some recovery and yesterday morning the rate was quoted at 96.50. The passing of M. Poincaré's new financial measures shows how seriously the situation is now regarded, and so long as the Ruhr problem remains unsolved the feeling of uncertainty created by the recent collapse is likely to make itself still further felt. The Belgian rate from 106.90 on the 8th has mounted steadily during the week, until a quotation of 114.50 was reached at one time on the 14th. Following Paris there has now been a partial recovery to 113. Forward rates in Paris have widened again from 22 last week to 35 centimes per month above spot. In Brussels they stand at 6 centimes per month above, as compared with 1 centime below a week ago. The sudden break in German marks a week ago would appear to have been due to a particularly heavy demand for foreign currencies for the payment of raw materials, and to a fear that the strain on the new temporary stabilisation plan was already becoming too severe. Reassuring statements by the Reichsbank and by the Expert Committee in Berlin would seem to have restored confidence for the moment, but it is not likely that the present rate can be held for much longer unless an agreement can speedily be reached to put into force the proposals of Herr Schacht and the Committee. After reaching 22 billions on the 9th the rate has been gradually steadied again down to about 19 billions, but the outbreak in the Palestine has caused a new feeling of uneasiness, and yesterday morning the rate was up again to 19½ billions. The dollar rate has proved unexpectedly sticky, a moderate tendency in New York towards a rather higher rate being generally counteracted each morning by Continental selling. From \$4.29½ on the 8th the rate reached \$4.31½ at one time on the 13th, but since then there has been a slight reaction to \$4.30½, although there would seem now for the moment a somewhat stronger tendency to rise. Forward rates, at 7½ cent per month above spot, are very slightly narrower than the 8 cent quoted a week ago. The lira has again remained fairly steady, moving on the week only from 98.37½ to 98.75. Amsterdam has gone against us from 11.48½ to 11.50½. Switzerland shows little change at 24.74½, as compared with 24.73. Madrid, however, shows a rather greater improvement, from 33.77½ to 33.74½. In Scandinavia, Stockholm has gone in our favour from 16.42½ to 16.46½, and Christiania has continued to depreciate from 32.07½ to 32.10½. In Copenhagen the difficulties of stabilisation at the present level are still proving too great, and the rate has again risen from 26.50 to 27.12½. Helsingfors, on the other hand, which has further strengthened its position by the arrangement of a new exchange credit, has moved from 172½ to 171½. In Central Europe, Vienna, at 305,000, has moved slightly against us, and Prague is also a little lower at 148, and Bucharest also, at 840, shows a slight improvement. In the East the rupee has appreciated from 15 4½d to 15 5d, and the yen has also moved against us from 2s 15-32d to 2s 1½d. With the close of the Chinese new year there has been a sharp demand from that quar-

ter for silver, which brought up both spot and forward prices, the second to the same level as the first. Since then there has been a slight reaction, but rates are still on a higher level. Hong Kong at 2s 4½d is unchanged on the week, as compared with 3s 3½d a week ago, and Shanghai rate stood yesterday at 3s 4d. In South America, Rio and Buenos Ayres have maintained their recent improvement, the first standing at 6½d as compared with 6 25-32d, and the second moving to 42½d, as compared with 42¼d. Monte Video has also improved from 43½d to 44½d, and Valparaiso from 41.80 to 43.10 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 9th:—

EXPENDITURE.	(000's omitted.)	RECEIPTS.	£
Supply Services	7,250	From Revenue	30,455
Interest, &c., on Debt	2,533		
Sinking Fund	500		
Road fund	4,749		
Sundries	270		
Reduction of Debt	14,936		
Increase in balances	217		
	30,455		30,455

Revenue was lower on the week ending February 9, 1924, at £30,455,000, against £32,350,050. Customs yielded £2,068,000, against £2,502,000, and Excise was £111,000 lower at £1,217,000, but motor duties brought in £5,070,000, against £4,353,000. Estate duties reached £2,530,000, against £760,000. Post Office receipts being £250,000 down at £1,250,000. Property and Income-tax yielded £12,351,000, and Super-tax £2,420,000, against a combined total of £19,532,000. Special receipts were higher at £2,005,000, against £1,200,000. The week's operations reduced the National Debt by £14,936,000, and caused the following changes:—

	(000's omitted.)	£
Treasury Bills	+ 2,110	£ 4,750
Bank of England		— 9,750
Public Departments		— 100
Saving Certificates		— 25
Telegraph Money		— 1,750
National War Bonds		— 446
Sundries		— 17,646
	+ 2,110	— 17,646

The floating debt was reduced by £12,345,000 to £827,615,500.

FINANCIAL YEAR, 1923-24 (April 1 to February 9, 1924).

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Midland Railway of Western Australia, Sun Life Assurance Society, British Investment Trust, South Metropolitan Gas Company, Liebig's Extract of Meat Company, South Suburban Gas Company, and the Home and Colonial Stores. At the meeting of the Midland Railway of Western Australia, Sir George A. Touche, Bart., in referring to the sale of the company, said that they were still in touch with the Government on the matter. Sir W. H. Goschen, K.B.E., at the meeting of the Sun Life Assurance Society reported a record increase in the funds.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE LABOUR POLICY.

Two main impressions are produced by the long, comprehensive, and temperate statement of policy made by Mr Ramsay MacDonald in his first speech as Prime Minister in the House of Commons on Tuesday. The first is the enormity of the outstanding problems, both at home and abroad, bequeathed to him by his predecessor; the second is the extensive field of scarcely controversial effort which is open to a Labour Government to explore. Both impressions are confirmed by a perusal of the debate which followed his statement. Mr Baldwin showed a forbearance in criticism, which revealed a recognition of the magnitude of Mr MacDonald's task; and Mr Asquith, who was similarly forbearing—except in the matter of the Poplar decision, to which we will return in a minute—reminded the House that the Premier's programme was largely composed of thunder stolen from the other parties. On the whole, therefore, the Labour ship has set sail in seas which should remain calm if only the great threatened strikes can be avoided; and since its captain knows pretty well where the whirlpools and reefs lie, and the limitations of the narrower course to be followed is reasonably well charted, skilful navigation should be able to assure that the voyage is neither unduly short nor rudely disturbed.

We cannot attempt to follow Mr MacDonald through his long survey of domestic and world problems; but his handling of three or four main questions call for special comment. First and most urgent of these is the question of Anglo-French relations and the German problem. Gentle fun was poked at the Premier for his belief that a new Government working in a new spirit would find it easy to untie the knots that have baffled others. Such a belief doubtless inspired, as Mr Baldwin said, the last Government and its predecessor. But it may be admitted that Mr MacDonald has made a promising start; the new spirit seems to be achieving something, and if, as the Prime Minister believes, the next few days see definite agreement with France over the grave questions affecting our position in Cologne, that will be taken as a promise of larger success to come. As regards the other foreign problems, with which he dealt, Mr MacDonald showed himself to be under no illusions as to the difficulties surrounding an agreement with Russia, on which subject Mr Baldwin pronounced a long and serious warning; but there is little disposition to quarrel with Mr Asquith's opinion that recognition is welcome, because it makes easier and smoother the task of approaching and thrashing out these difficulties. Here, too, the Government's policy seems to have started in the right direction, and also to be marked with the necessary caution. As to the rest of the Prime Minister's review of foreign affairs, it is the spirit rather than the subject matter which is important. It was definitely inspired with what may be called the League spirit—the desire to develop international co-operation and to seek through that policy the peace and security for which the world still yearns. A really effective League of Nations is the keynote of his policy, and its goal to persuade the nations that "the great security of a nation is not in armaments, but in the justice of the position it holds in the world." "I am going to use all the energy I have got to increase the representative character and authority of the League of Nations. I am hoping the League of Nations will be used more and more as the international body for the settlement of questions that two nations themselves find it impossible to settle direct. Many opportunities will arise for giving that belief of mine an opportunity of being tested, and I shall take them. Germany must come in. I hope Russia will come in, too. We ought all to be in." As regards the United States, "as soon as America feels that there is something large, something moral in the spirit in which these problems are being approached..... America will be perfectly willing to take its share in doing this great work for humanity." All men and women of goodwill will share the Premier's hope, and meanwhile the cynic—and, unfortunately, a criticism of Mr MacDonald on the ground of his rosy optimism need not be classed altogether as cynicism—has Mr

MacDonald's assurance, given in his reply to the debate on Thursday night, that, while determined to give the new spirit a real trial, he is not therefore in the meanwhile going to neglect the problem of national defence.

From the Prime Minister's review of home problems we select for notice his references to unemployment, finance, housing—and Poplar. In touching on the first of these problems, Mr MacDonald struck the right note at the outset. "We shall concentrate, not first of all on the relief of unemployment, but on the restoration of trade. We are not going to diminish industrial capital in order to provide relief." And, again, "I wish to make it perfectly clear that the Government have no intention of drawing off from the normal channel of trade large sums for extemporised measures which can only be palliatives." That he claimed to be "sound Socialist doctrine." If all "Socialist doctrine" in Mr MacDonald's hands proves as economically sound as that, the Socialist bogey will indeed lose its terrors. As regards definite measures, the Government proposes to develop the Trade Facilities and Export Credits scheme, and, in fact, as Mr Baldwin said, to do very much what any other Government would have had to do. In his references to finance there were passages in the Premier's second speech equally reassuring to the City. The Capital Levy is relegated to the same position in the background, which, as Mr MacDonald put it, is occupied by Protection. It will not be produced in this Parliament, nor until a majority for it has been given by the country. That is a definite and welcome pledge; and hardly less welcome to the City will be Mr MacDonald's characterisation of both inflation and repudiation as "dishonest means" of dealing with the national debt, and the emphasis laid on the new Chancellor's determination to curb public expenditure. The proposal to appoint an authoritative Commission to investigate the problem of the national debt meets with less general approval. Some will agree with Mr Asquith that such investigation is the duty of the Cabinet, not of a Commission. Others regard reference to a Commission as a traditional method of shelving an awkward problem. We imagine that Mr MacDonald's idea is to get together the strongest possible Commission, and to say to it in effect:—"Here is this huge national debt, which is a terrible burden on industry. It must be dealt with. Our favourite remedy is a Capital Levy. If you find that unsound, give us your reasons, tell us what is a sound and effective alternative, and, above all, report as quickly as possible." If that assumption is correct, the usefulness of the Commission would depend mainly upon its composition.

We come now to two problems in the handling of which the Prime Minister was not so successful. We refer to Housing and Poplar. After reading and re-reading the salient passages we remain without any clear idea of the means by which adequate quantities of "£500 houses with 9s rent and rates" are to be produced by an insufficient body of labour, the only really clear point being that the subsidy is to remain. Mr MacDonald appears to rely here, as in other matters, on "the new spirit" as a driving force. We hope, as profoundly as he does, that the goods, or rather the houses, will be delivered. But remembering that this is not the age of miracles we await with interest further details of the housing programme. We have left the Poplar question to the end, for that is the only real fly in the ointment of Labour's first Parliamentary week. Ten days ago the Poplar decision, of which we have already expressed our strong disapproval, appeared to be a cloud on the horizon, no bigger than a man's hand. To-day it is a storm cloud threatening to burst over the Treasury Bench. Mr Asquith—although, no doubt, he only anticipated projected action from the Conservative benches—performed excellent service in making it quite clear that Mr Wheatley's decision would not be supported by Liberal votes. This quick crack of the Liberal whip puts Mr MacDonald in an awkward position. He cannot ride for a fall, and he cannot drop Mr Wheatley without bringing upon himself the fury of his left wing. The storm will, we believe, blow over, and a compromise be reached which does not sacrifice sound principles; and the whole incident is a valuable illustration of the restraints and safeguards under which Labour rules.

Leaving this one question aside, the first Labour

Government has made a successful *début* in the House of Commons. At the outset of his statement the Prime Minister indicated clearly the "changes in the habits" of the House which the new experiment entails. On a "snap division" the Government will not resign; if amendments of legislation not affecting vital matters of principle and policy are passed against the Government, those who pass them must take responsibility for their incorporation in the Bills in question. But if a direct vote of no confidence is moved by a responsible party leader and carried, then Mr MacDonald will resign. Those are the obvious and inevitable conditions under which alone the new order of three large parties and a minority Government—an order which may have come to stay—can be carried on. If in practice Mr MacDonald shows as clear a recognition of the limitations which the system imposes upon the Government as he did in Tuesday's statement, then the new experiment in British politics will achieve the success which is foreshadowed by its opening phase. It is in any case decidedly preferable to what Mr MacDonald describes as "detestable" and "dishonest" coalitions.

LABOUR, THE LEAGUE, AND REPARATIONS.

(BY A CORRESPONDENT.)

WHAT can the Labour Government do to carry out its intentions to make the League of Nations a greater reality?

The air needs clearing. There is mistrust, bitterness, and a widespread conception that England's part, for example, in the Reparations controversy, has been guided by selfish, financial, and trade interests. Some real demonstration of honesty of purpose in our foreign relations would be of infinite value, and, as this is a consideration of the League side of the matter, some such demonstration on League principles would give a much-needed strengthening to the whole conception for which the League stands. Some nations and many thousands of individuals all the world over would eagerly welcome it. What form could this take? Now the jurisdiction of the Permanent Court of International Justice is being constantly extended by international treaties and conventions. But, broadly speaking, the Statute of the Court does not permit one State to cite another State before it; agreement between the parties is first required. There is, however, in the Statute a provision whereby acceptance of compulsory jurisdiction may be effected by a declaration accepting what is known as the Optional Clause. A State which accepts this recognises as compulsory, in relation to any other State accepting the same obligation, jurisdiction in all or any legal disputes concerning:—

- (1) The interpretation of a treaty.
- (2) Any question of international law.
- (3) The existence of any fact which, if established, would constitute a breach of an international obligation.
- (4) The nature or extent of the reparation to be made for the breach of an international obligation.

This clause is now in force between 15 States, the most considerable of which is Brazil, but no single Great Power has yet accepted it. These four references are not all inclusive, but they cover a very wide field of possible disagreement, and if the British Government declared to the world its readiness to accept their terms, it would be an act of moral leadership and of wise national statesmanship. It would incur no risks which Liberal-minded statesmen would not be prepared to face because it would not be a uni-lateral engagement, but a reciprocal engagement with such other Powers as have signed, or will sign in the future, covering what are known to international lawyers as justiciable questions only. No one could doubt the motives of such action, or would fail to recognise it as a sincere gesture made for the first time by a Great Power in declaring its preparedness to eliminate, so far as is possible under existing machinery,

every chance of hostility and every temptation to enforce its strength upon weaker States. It would have the additional advantage of giving the people of the United States occasion for reflection. The idea is one which has always been present to their minds, and such an example from this perhaps too lightly condemned side of the Atlantic would do more than all the appeals for American assistance. Doubtless the Labour Government will be fully prepared to consider such a step. It would be the broad foundation for a new spirit in international relations, without precisely involving any obvious approach to the particular solution of practical problems.

It may be that there are valid objections to this course, but there is a further possibility which might be either additional or alternative, and which would be even wider in significance. The members of the League bind themselves to submit to arbitration or to inquiry by the Council any dispute between them which is likely to lead to rupture, and they agree in no case to resort to war until three months after the award of the arbitrators or report of the Council. Without entering into precise considerations as to what suggestions should be put forward, some means might at least be contemplated for agreement not only to refer to arbitration, but to accept the awards; it might be too much to expect a general agreement to accept the report by the Council, but if, after studying the question, the Government finds it possible to do so, it might offer to enter into reciprocal arrangements to that effect with such Governments as are prepared to do the same thing on the lines of the Optional Clause of the Court Statute.

One of the declared aims of a Labour Government, and of all progressive people, is the extension of League membership. What methods the Government has in mind to achieve this have not yet been made known. The first importance is that Germany knows unequivocally that the British Government definitely desires her entry into the League, and will work for it, but, for the moment, there is no decisive step to be taken, as new members can be admitted only by the Assembly, which meets annually in September unless specially summoned. It is not likely that the Government would desire a special Assembly for that purpose, at any rate at this period, and the best hope is that a general preliminary settlement of the Reparations question may be reached, including in it a general agreement not to oppose German admission to the League next September, or, if circumstances seem to warrant it, at a special meeting of the Assembly called before that date. The same kind of process may be looked for in connection with Russia. There remains America, who would see before her a Europe at last united in one international organisation, its great outstanding wound healed, and the British Government declaring its belief and practice in the principles of compulsory jurisdiction or arbitration on the widest scale at present possible. Such an evolution could not fail to have a great effect on American opinion.

This presupposes a settlement of Reparations. The time for the League in this matter is not yet ripe, and any endeavour to use the League as a weapon to force a settlement is more likely to be an obstacle than a help. Nor would it be wise tactically to bring before the League the question of the legality of the Ruhr occupation. It would greatly embitter relations with France—occasion might eventually arise when this risk would have to be considered—and France would certainly not withdraw from the Ruhr on any legal point; in fact, the mere submission of the question of the interpretation of the Treaty to the Permanent Court requires France's consent, according to a strict reading of the covenant, if not according to its proper spirit.

The Government's obvious course seems to be first to await the result of the work of the two committees appointed by the Reparations Commission, and to see how far they provide a basis for agreement. There is no great divergence between England and France on the amount to be claimed from Germany, and France's share of it, with the French proviso that this share shall be net receipts; that is to say, France demands just so much or just so little more as she may be called upon for the repayment of her debts to America and England.

There is also not much divergence of opinion on the principle of a moratorium for Germany and of a certain form of financial control over Germany. Then what about inter-Allied debts? Without a settlement on this side of the question a final Reparations settlement is not apparently attainable, but would it not be possible to achieve a provisional settlement for, say, 15 or 20 years, if Great Britain postponed her claims against France and her other Allies for some such period in the hope that meanwhile opportunity would arise for a reasonable all-round and final Reparations settlement? That would give a period of reflection, and it seems the best that can be done without the immediate and direct co-operation of America for whom Europe cannot wait indefinitely. At the very worst, if America refused a 15 or 20 years' moratorium to France, British acceptance of it would at any rate reduce the immediate dimensions of the problem.

The moratorium to Germany to enable her to recover at least sufficiently well to be productive of Reparations could be coupled with a plan of reform with the issue of an international loan, and the control of revenues for the payment of amortisation and such Reparations as might be deemed possible during the earlier years. This is where the League would come in. Such a plan would obviously be based on the model of the Austrian and Hungarian schemes, which have been drawn up by the League. A League Commissioner-General would be in control of the revenues assigned for the agreed international obligations of Germany, and that would be a better gage for France than the occupation of the Ruhr. If France's declared object in occupying the Ruhr is sincere, such a scheme would lead, of course—and on the British side would have to be part of the terms of settlement—to evacuation as soon as the international Commissioner-General had taken over control. Control of finance involves also control over armaments, and gives not only guarantees of payment, but guarantees of security.

These stages are not to be negotiated in a day, and are not suggested as having the finality of a protocol. They are suggestions for a new approach to the urgent problems of the moment, and for a new and liberal spirit in international relations. They do not mean that the new British Government is not to state its firm determination to make its voice and interests heard, but merely, while clearly indicating that it intends to be heard, to show, at the same time, every disposition, by a positive contribution towards settlement, to meet the legitimate claims of France.

Finally, in addition to a carefully organised and co-ordinated Government service for the consideration of all problems upon which the Government is called upon to take decisions within the League, it is greatly to be hoped that the Prime Minister, despite the enormous burden which he has now to carry, will find occasion to represent Great Britain on the Council at one or other of its meetings this year. It is too much to expect him to be the regular British representative. Above all, there is no greater opportunity open to the first British Labour Prime Minister than to attend the Assembly of the League and explain face to face to the representatives of 53 other States of the world the spirit and aims of British statesmanship under Labour guidance. It is a sounding board the value of which no British Prime Minister has yet realised. Its reaction upon the whole League would be enormous, and it would place Britain once more openly in her rightful position of leadership.

THE DIRECTION OF OVERSEAS TRADE.

In a later article we comment on the returns of overseas trade for January. With these are included the usual statistics showing the countries of origin of imports and of destination of exports for the year 1923. In later tables in this article we reproduce the figures for the principal countries, but first of all present a summary table, compiled from these figures, which shows the movement in the visible trade balance with fourteen chief countries over the past three years. A balance favourable to this

country is indicated by a plus and an adverse balance by a minus :—

(Million £'s.)

	1921.	1922.	1923.		1921.	1922.	1923.
France ...	+ 6.2	+ 20.4	+ 12.5	U. States ..	- 211.5	- 146.3	- 126.9
Belgium ..	+ 4.9	+ 12.0	+ 8.0	Argentina ..	- 40.2	- 33.2	- 37.2
Italy	+ 10.2	+ 9.8	+ 7.3	India and			
Switzerland	- 13.4	- 10.6	- 10.8	Ceylon ..	+ 60.7	+ 38.6	+ 11.6
Netherlands	+ 1.4	+ 5.2	+ 8.0	Canada	- 41.8	- 27.0	- 23.1
Germany ..	+ 20.2	+ 22.5	+ 25.8	Australia ..	- 19.4	+ 0.9	+ 12.8
Russia, &c.	- 1.5	- 12.8	- 17.1	N. Zealand	- 3.3	- 31.5	- 21.3
				South Africa	+ 12.3	+ 9.7	+ 14.0

The substantial reduction in the adverse balance with the United States is, perhaps, the most satisfactory feature. The figures for Russia are partly explained by the fact that Finland, Esthonia, Latvia, and Lithuania are included, and that there has been, since 1921, a very substantial increase in our imports from Finland and Latvia, as well as from Russia. In Europe there is a tendency for the balance to become less favourable to us or to move further against us, the only exception among the countries in the first half of the table being Germany. Our balance with Argentina also moved against us last year. There is a remarkable reduction in our export surplus to India and Ceylon, but with the four Dominions given above the movement of the figures is in our favour.

Turning to the separate statistics of imports and British exports, we first show the figures for European countries for the past three years and for 1913 :—

(000's omitted.)								
	Imports From.				Exports To.			
	1913.	1921.	1922.	1923.	1913.	1921.	1922.	1923.

Total	319,407	326,306	329,248	373,388	193,938	238,882	266,641	270,293
% of total	41.6	30.0	32.8	34.1	36.9	34.0	37.0	35.2

* Includes Finland, Esthonia, Latvia, and Lithuania.

The import and export trade of the Irish Free State with foreign countries is not included after April 1, 1923. The heavy increase in imports is accounted for largely by the figures for Germany, Russia, Scandinavia and Holland, the only decline of note being in imports from Switzerland. Total imports from Europe represent a slightly larger proportion of the total than they did a year ago, but the percentage is below that of 1913. The ratio of our exports to Europe, on the other hand, is very nearly up to the pre-war figure, though lower than it was a year ago. A feature of the export side is the substantial increase in the amount sent to Germany, and the decline in the figures for Norway and Holland.

The next table gives the figures for the United States and other foreign countries :—

(000's omitted.)								
	Imports From.				Exports To.			
	1913.	1921.	1922.	1923.	1913.	1921.	1922.	1923.
United States	143,854	276,990	223,710	213,528	30,478	45,061	55,781	60,667
Cuba	3,675	6,425	10,610	8,704	2,214	1,891	1,388	2,934
Mexico	1,880	9,859	8,604	6,345	2,333	4,596	2,213	2,750
Argentina	42,485	68,261	56,520	66,081	22,641	27,622	22,708	28,165
Brazil	10,008	5,866	7,726	5,897	12,465	10,439	10,983	10,998
Chile	5,359	6,564	4,422	5,789	6,010	5,154	5,437	6,677
Peru	3,178	6,437	7,410	8,626	1,488	2,141	1,749	2,571
Uruguay	2,769	6,242	4,748	4,869	2,916	3,094	2,545	3,172
Japan	4,389	8,735	8,649	14,783	21,369	23,974	26,393	..
China	4,672	11,269	9,723	12,284	14,845	26,001	22,734	18,609
Turkey (Asiatic) ..	4,251	343	278	2,000	5,291	140	267	819
Egypt	21,395	..	..	33,085	9,805	..	..	15,019
Other countries	9,917	22,399	14,448	24,364	10,731	18,066	18,292	17,566
Total	257,812	429,390	356,639	398,325	136,000	165,564	168,075	196,340
% of total	33.6	30.4	35.5	36.2	25.9	23.5	23.3	25.8

Egypt has now come back to this category, and to some extent this vitates a comparison of the total figures and of the percentages. Without the Egyptian figures there is a substantial increase on both sides. On the import side, Argentina is prominent with an increase of £9½ millions, and increases are shown by the other South American countries with the exception of Brazil. Imports from China show an expansion, but there is a decline in the figures for the United States, Cuba and Mexico. Increases on the export side are fairly general, but China is conspicuous with a decrease of £4 millions.

Trade with the Dominions is shown in the next table :—

(000's omitted.)									
	Imports From.				Exports To.				
	1913.	1921.	1922.	1923.	1913.	1921.	1922.	1923.	
	£	£	£	£	£	£	£	£	
Canada	30,488	62,287	54,895	53,448	24,795	19,433	25,271	27,566	
Australia	38,065	67,858	64,863	49,068	34,470	45,645	60,457	57,707	
New Zealand	20,338	48,828	48,532	42,969	10,838	14,928	15,868	20,695	
India and Ceylon	56,218	54,926	58,003	79,515	74,458	112,964	95,202	89,888	
South Africa	12,495	19,959	16,152	15,353	22,185	31,062	24,515	27,895	
Egypt		26,927	31,106			18,830	15,562		
West Africa	5,174	10,833	9,760	11,166	6,601	12,442	11,650	11,521	
Mauritius	293	5,034	3,908	5,628	536	2,309	972	1,129	
Strait Settlements	15,880	7,833	7,961	10,681	5,836	8,432	6,644	7,753	
Malay States	3,574	2,921	2,323	2,278		2,669	877	866	
West Indies	2,116	8,111	4,437	5,861	2,439	5,027	3,462	3,678	
Irish Free State				32,738				24,674	
Other Possessions	6,955	16,127	16,101	17,597	14,249	25,341	25,301	27,324	
Total from Possessions	191,516	331,094	318,031	326,303	195,307	298,772	285,781	300,696	
% of total	24.8	30.6	31.7	29.7	37.2	42.5	39.7	39.2	

The figures for the Irish Free State, which are for the last nine months only, together with the re-export figure, show that there is a balance in favour of the United Kingdom for the nine months of £515,800. The ratio of our trade with the Empire to the total shows a decline, although the disappearance of Egypt from the list is more than offset by the addition of the Irish Free State. Imports from India show a substantial increase, but in most cases there is a decline on the import side. On the export side there is a decline under the head of India, but the increase in the case of New Zealand is noteworthy.

The final table gives re-exports to the principal countries :—

RE-EXPORTS (000's omitted.)								
To.	1913.	1918.	1919.	1920.	1921.	1922.	1923.	
France	12,072	13,742	35,814	40,097	12,899	17,915	19,403	
Italy	1,012	4,249	5,689	5,624	1,750	1,730	2,161	
Belgium	7,436	11	17,567	19,522	9,756	10,670	10,260	
Germany	19,823	..	8,491	29,376	22,897	16,986	18,266	
Russia	9,591	10	4,456	4,842	2,387	2,387	3,732	
Sweden	1,014	123	5,238	5,006	1,890	1,525	1,832	
Norway	518	208	2,169	1,942	787	714	730	
Denmark	590	246	6,020	6,148	1,413	1,244	1,738	
Netherlands	5,160	406	26,344	14,578	8,191	6,100	6,916	
United States	30,222	3,481	31,481	53,564	20,394	21,677	25,966	
Japan	297	1,358	1,816	1,912	778	970	254	
Other countries	8,066	2,038	9,585	13,931	8,269	7,180	7,393	
Total to foreign countries	95,801	25,872	154,680	196,940	94,011	88,402	97,651	
British Possessions	13,774	5,084	9,642	25,466	13,041	15,376	20,922	
Total	109,575	30,956	164,322	222,406	107,052	103,778	118,573	

France, Germany and the United States account for the bulk of the increase in the total to foreign countries. The increase under British Possessions is more than accounted for by the Irish figure for the nine months, which amounts to £6,579,500.

WORLD SHIPPING PROBLEMS.

YEAR by year the chair of the Liverpool Steam Ship Owners' Association, the annual meeting of which took place on Tuesday, is filled by one prominent shipowner after another, but for thirty long years the secretaryship was held by Sir Norman Hill, until, owing to overwork, he resigned six months ago. In the report for 1923, presented to the meeting, acknowledgment is made of Sir Norman's services, and stress is rightly laid on the statesmanlike breadth of view which has characterised his public work. The report says that Sir Norman's guidance "has given to the association an influence and authority which could never have been obtained by a body of traders who concentrated their minds on their own immediate pecuniary advantages and ignored the fact that they were deeply interested in the prosperity of all

100 Broadway

New York City

branches of industry and commerce and of peace and good government throughout the world." Sir Norman Hill's reputation as a tower of strength in shipping affairs is international, and he has now been nominated for the position of Vice-President of the Chamber of Shipping of the United Kingdom, an office which usually is the step to the Presidency. Moreover he still, in various ways, represents the Liverpool Association. His retirement indeed appears to amount to no more than a relinquishment of administrative duties by way of securing greater freedom for attention to the broader and more vital problems arising in commercial intercourse across the seas.

All who are familiar with the annual reports of the Liverpool Steam Ship Owners' Association issued in recent years know that in the hands of Sir Norman Hill the survey periodically presented has taken full account of the international aspect of affairs. The present report adheres to the same scheme. The members of the association are mostly engaged in businesses of world-wide scope, and the policy of their association is stated to have been "to turn to the best account in the interests of the international trade of the world, and therefore of the nation, the tonnage under its control." The sequence is noteworthy. General and not national well-being is the first and most important consideration, shipowners' prosperity being "bound up with and a reflection of the prosperity of producers and consumers" throughout the world. The interesting point is made that lack of purchasing power everywhere, rather than the existence of too many ships, is at the root of present difficulties.

The Liverpool Association has, in the interests of international commerce, long supported the principle of equality of opportunity for ships under all flags in all ports—endorsed by the Convention recently signed at Geneva—and in referring to the international character of the work of the association, Mr Richard D. Holt, who presided at the annual meeting, emphasised the importance of the campaign against flag discrimination. All carriage by sea, he thought, should be equally open to all parties. In pursuing its policy of promoting freedom, the association has been strongly opposed to State control or interference. Its support of the proposed legislation to make the set of clauses known as the Hague Rules compulsorily part of the conditions in bills of lading involves an approval of State interference which may seem inconsistent, but this attitude is perhaps justifiable because, in the circumstances which arose, no other means remained of carrying long and difficult international negotiations to a practical result. The Bill for legalising the Rules in this country will, the report suggests, almost certainly now become law as representing the practically unanimous view of commercial, banking, and shipping interests. The intention to reintroduce and proceed with the Bill was, in fact, announced in the Commons this week.

With reference to the action of the United States authorities regarding liquor supplies on ships, the report is critical. The liquor prohibition, it points out, was not

strictly logical. The difficulties there are being compromised, but Mr Holt, following up this question in his speech at the meeting, made a notable point when he called attention to what is really involved. The claim to refuse entry into territorial waters to any ship carrying alcohol, if justified by America, could equally be justified by any other nation, and in respect of any other article of merchandise, with surprising results. On another matter America, on the other hand, gave a praiseworthy lead. The United States, it will be recalled, made the first move towards doing away with the injustice of ships being subjected to income-tax at ports of call as well as in their own country, offering reciprocal exemption. A provision in our Finance Act of last year made it possible to take advantage of this offer, and steps are now being taken to give practical effect to the arrangement, to the benefit of shipping and commerce. "The prevailing and increasing practice in the Dominions," however, of imposing this double or multiple taxation on shipping does not admit of such satisfactory reference. On investigation the Imperial Shipping Committee found that there was sufficient evidence to establish a *prima facie* ground of complaint, but merely suggested that "the whole matter should be referred to some appropriate body for further investigation."

Dealing thus with the principal problems and movements of the year, some only of which have here been referred to, the report conveniently summarises the progress of events, and shows the Liverpool steamship owners pursuing a well-directed policy calculated to help towards the improvement of international trading conditions. Mr A. B. Cauty, of the White Star Line, becomes chairman for the ensuing year.

THE ECONOMICS OF BRITISH SHEEPBREEDING.

(BY A CORRESPONDENT.)

FEBRUARY, besides its traditional task of filling dykes, has other burdens peculiar to itself. At the present moment few are more important than that of deciding whether to increase our flocks or not. The sheep being "a two-purpose animal," the trade in meat and the manufacture of woollens are alike affected, while the number of sheep kept largely controls the area devoted to pasture and the letting of the more extensive farms. Lambs already enliven the Dorset Downs, and have attained quite a goodly size in the Isle of Wight, but for the more numerous flocks February is lambing time.

The year 1924 will see the end of what may be termed "Coalitionism." The last bales of Government-owned wool will probably be cleared by March, and the British farmer will no longer have his own Government competing against his wool in the market. The farmer, therefore, is able this February for the first time since 1914 to consider wool production on a just economic basis. For

the first time for a decade the clip of next midsummer will be sold on its merits. No colossal stores of overseas wool, of which the Government has the control, will be put on sale in Coleman Street at dates designed to swamp the home wool fairs. Will the change justify, will it encourage the saving of the lambs in order that from the greater superficies of the sheep there shall be a larger wool clip? Shall the scarcity of wool at Bradford and at Leicester be relieved by a home clip from well-augmented flocks of sheep?

The writer cannot give an entirely hopeful answer, but he can proffer some facts and figures which make in the direction of hope. Coalitionism struck not one but two blows at British sheep-breeding. The first, that of commandeering all British wool, was officially called "a purely war measure," nor would compulsion have been needed—farmers would have eagerly tendered every tod of their clips—if the wool had been taken at market price. But when the War Office claimed to take the wool without payment and to give at its own time an *ex gratia* donation to the farmer, a course of action was entered upon which confounded alike the individualism of the Conservative farmer and the Liberal agriculturist's ideas as to the natural rights of the subject.

This first blow at sheep-breeding cut down our flocks from 28,770,000 to 25,047,000, and in three years we had as a sheep country lost the ground slowly won in thirty. The second blow came in 1919, when despite the surrender of the enemy's fleet, the one menace to our agricultural imports, the Government announced its intention of buying overseas clips and of trading in them for another three years. This further cut down home sheep-breeding from 25,047,000 to 23,330,000. The combined policies which one has here grouped as Coalitionism reduced, therefore, our flocks from 28.77 millions to 23.33, or in all 5.44 millions. The cost of clothes and carpets naturally rose, with the loss of 30 to 35 million lbs of wool, and mutton was naturally affected also. But the competition of the Government-owned overseas wool prevented farmers getting a scarcity price for wool, and if the times had not changed the British Isles would have become a country for mutton sheep almost exclusively. Our flocks, which had once approached thirty millions, would have probably dropped to about half that total.

To-day, with restored freedom in both branches of sheepbreeding, we can study the prices of wool for January, 1914, and January, 1924, respectively, and with 175 (as against 100 in 1914) accepted as a working hypothesis for the general cost of living and farming, see how far the different breeds pay. Speaking very roughly, the index numbers are long wool, 125; short wool, 165. Long wool seems to disclose a hopeless loss, but short wool is within sight of profit. The following details present six short wool breeds and six races of long wools. The Masham long wools are the type of the Yorkshire uplands:—

TEN YEARS' COMPARISON OF BRITISH WOOL PRICES.
Jan., 1914. Jan., 1924.
Pence per Lb.

South Down	15.50	28.00
Dorset	16.50	27.50
Hampshire	14.75	25.00
Oxfordshire	14.50	24.50
Shropshire	15.25	25.50
Suffolk	14.75	24.50
Kent	13.75	18.00
Lincoln	13.00	14.00
Leicester	12.00	14.25
Blackface	10.00	11.00
Cheviot	13.50	20.25
Masham	11.00	11.50

All washed; unwashed 1d per lb cheaper.

Proceeding to compare prices for mutton we get to the probable net profit on the entire sheep.

TEN YEARS' COMPARISON OF BRITISH MUTTON PRICES.
Jan., 1914. Jan., 1924.
Per 8 Lbs.

Mean of middling and prime	7s	13s
----------------------------------	----	-----

Here we see that mutton, in which Government interference ceased with the close of actual warfare, has fully recovered; the index number is 185.

The short wool sheep present the following index number as a market proposition to-day:—Mutton, 185; wool, 165; average, 175. This coincides with the cost of production index number of 175, and there is very little

doubt that with wool likely to rise 10 per cent. the net equation for 1924 should be in breeders' favour. One may hope, therefore, to see lambs of the six short wool breeds saved and flocks materially increased.

Long wool sheep work out at 155 index number when the mutton is considered. Twenty points in 175 to the bad remains a considerable handicap, but it has been the speculation of the wool control in overseas crossbred wool which has wrecked the market for British long wool. When this ends in March there may be a quick recovery, and it is hoped that the owners of long wool sheep, our most numerous breeds, will face the situation with courage and, like their southern and short wool-keeping brethren, increase their flocks. For one thing, theirs are larger animals and yield more mutton. Not only the United States but the Continent are likely to need more long wool, and even at home the taste for length and "lustre" may revive. Sheep, one ventures to hope, may be an all-round paying proposition by the date of the new clip.

THE CARPET INDUSTRY.

THE weaving of carpets is an industry dating from very ancient times. In Persia beautiful fabrics were produced long before the commencement of the Christian Era, and it is somewhat remarkable that through all the intervening centuries right down to the present day that country has kept well to the fore in this manufacture. The same may be said of Turkey and of India, the other two countries whence comes the bulk of our supplies of Oriental hand-made carpets.

It seems probable that the Crusaders, or even some earlier voyagers to the East, first brought them to England, and for some centuries the only ones used in these islands were imported hither for the use of the wealthy. Precisely when the manufacture began in Britain is uncertain, but in the reign of Henry VIII. one Richard Hicks seems to have been producing here fabrics which may have been meant for carpets or for mural hangings. In the succeeding century the industry became firmly established across the Channel, and the revocation of the Edict of Nantes caused the migration of a considerable number of skilled workers from France to England.

This was well calculated to reinforce the British industry, which was then established mainly at Wilton and Axminster—names which have remained to this day household words in connection with carpets. About 1735, Kidderminster became an important centre for the trade, and it has ever since remained so; while later Halifax rose to prominence.

Records of the overseas trade of the industry are readily available back to the middle of last century (so far as exports are concerned, at all events); and they show that even so long ago shipments of British carpets were, comparatively speaking, very considerable. Here are the statistics:—

BRITAIN'S OVERSEA TRADE IN CARPETS.

	Exports.†		Net Imports.		Excess of Exports.	
	Thous. £	Thous. Yds.†	Thous. £	Thous. Sq. Yds.	Thous. £	Thous. Sq. Yds.
1854-58	533	4,183	..	..	..	..
1859-63	650	5,078	..	..	..	..
1864-68	1,028	6,688	..	..	..	..

† Square yards in 1910 and after. ‡ Exports include carpet rugs in 1910 and after.

* Excess of re-exports, £14,000 per annum, in these years.

These records are not so perfect as might be desired. In the first place, exports were recorded in linear yards down

to 1909, but in 1910 and afterwards they are in square yards. Moreover, carpet rugs had, up to 1909, been grouped along with "travelling rugs, coverlets, &c.," but in 1910 and since they have been grouped with carpets. In the year of their inclusion among carpets, the exports of carpet rugs appear to have amounted to about £250,000.

It will be seen that for the first 20 years, from the middle 'fifties to the early 'seventies, exports progressed very well, but that afterwards there was somewhat of a lull. A subsequent revival led to "record" figures for quantities in the late 'eighties, though, owing to the steady fall in prices which continued right down to 1895, the 11 million yards shipped in the late 'eighties were worth less than the 10 million yards shipped in the early 'seventies.

A survey of the whole of the records conveys the impression that while exports have not been satisfactory in their development, this has not been due to any severity of foreign competition. For if there had been any effective competition from Western nations, it would have shown itself in the imports of our free-trading country. But there is in the above table no sign of any undue growth of imports.

As a matter of fact, we have always had a large import trade in carpets—chiefly from Eastern countries. As a rule, about half of these have been re-exported, the *entrepôt* trade being of considerable value to our merchants. It will be noted from the above table that even in the war years 1914-18, when imports were severely restricted, we kept up the re-export trade to such an extent that re-exports were £14,000 a year greater than the imports. Carpets, of course, are goods that can be kept in stock for years.

This explains an apparent anomaly in the table. Though for 1914-18 values of re-exports were £14,000 a year greater than the imports, quantities were 281,000 square yards smaller than the imports. In other words, the goods reshipped contained a far larger proportion of high-grade carpets than the goods landed here in those years. In addition, of course, there is the profit on the *entrepôt* trade to be allowed for.

As regards the great rise of prices caused by the war, the figures are very remarkable. Here are the export and import average prices, alongside that for imported raw wool:—

	Imported wool per lb.	Carpet exports per sq. yd.	Carpet imports per sq. yd.
1910	10½	2 10	7 3
1913	10½	3 6	7 1
1918	21	8 6	7 9
1920	24	13 1	35 8
1923	15	8 8	11 10

The most striking feature of this table is the astonishing rise in the average value of imported carpets in 1920. Doubtless the explanation is that extravagant profits made during the post-war boom had caused an enormous demand for Oriental carpets of the costliest types. It will readily be grasped that a few extra hundreds of highly artistic rugs at "fancy" prices would considerably inflate the average value of all shipments. Indeed, the average value of imports from European Turkey in 1920 was about 67s per square yard, and from Asiatic Turkey 53s, while landings from Persia averaged 57s per square yard. Remembering that probably 50 to 100 per cent. would have to be added to these prices by the time the goods were retailed to consumers, it is manifest that the higher-priced among them must have been floor coverings for the wealthy only. It is pleasing to note that no less than £1,095,828 worth of them were reshipped to the United States in that year at an average value of 51s per square yard.

The character of these Oriental goods has been dwelt on thus in order to show that such imports can hardly be said to come into serious competition with the products of our own factories. Of these latter we shipped in 1920 6,914,000 square yards, whereas the foreign carpets of all kinds retained in the United Kingdom that year were but 1,290,000 square yards. In 1923 exports of British carpets were 7,058,000 square yards, while only 2,797,000 square yards of foreign carpets were retained in this

Fixed Deposit Rates will be quoted upon application.
On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

country—a certain proportion of which will doubtless be reshipped during this and succeeding years, though, of course, much will be retained here permanently to make good our own shortage during the war years.

In seeking for an explanation of the comparatively poor progress of our export trade in carpets, it should not be forgotten that during the last half-century other floor coverings have come into serious competition with them. In these days, millions of rooms which might have been carpeted are covered with linoleum. British exports of oilcloth and floor cloth in the early 'seventies of last century were only about 4½ million square yards per annum. Our shipments of linoleum and cork carpet alone in 1923 amounted to 20½ million square yards, while of oilcloth we exported 14½ million square yards. Price for price, linoleum is vastly more durable than woollen carpeting, and it is only natural that whenever practicable it should be given the preference.

THE BOOM IN CALIFORNIA.

(BY A CORRESPONDENT.)

In the middle of last century gold discoveries which not only attracted thousands of immigrants from every quarter of the universe, but also notably affected the trend of prices, made California the scene of a famous boom, and laid for it the foundations of a civilised society. In the intervening decades the State has enjoyed varying fortunes; San Francisco became a great maritime *entrepôt*, mining resources were profitably exploited, ranching was carried on extensively, and the fruit industry, with its canning and preserving auxiliaries, was developed with success.

With the present century, however, there began a process of steady expansion; it was slow at first, but its pace has been gradually accelerated, and to-day California, and particularly its southern districts, at a time when most of the world is gasping for economic breath, is enjoying a boom which has few, if any, parallels in history. Its centre is the city of Los Angeles, which lies on a plain between the coastal mountain range and the Pacific Ocean, about 100 miles north of the Mexican border. It has an ancient origin dating back to the Spanish conquistadores, but up till the eighties of last century it remained a small "pueblo," the market centre for a scattered ranching population chiefly of Spanish blood. By 1900, however, it had accumulated a population of 102,479, which had doubled by 1905, and by 1915 reached 391,000. By 1920, despite the war, the total had grown to 576,673. But it is the expansion figures of the last three years which are almost unbelievable; the population bounded up to 722,726 by the end of 1921, to 850,000 a year later, and on December 31, 1923, it was placed at 1,050,000, Los Angeles being now, if this figure is correct, the fourth largest city in the United States. And within the boundaries of Los Angeles County there are a number of important and growing towns, like Long Beach and Santa Monica, which are estimated to bring the total population of the district up to a million and three-quarters.

Naturally, the figures of business expansion are very impressive. Bank clearings in 1912 amounted to \$1,168,941,800; they reached \$2,339,401,197 in 1919,

\$4,211,196,797 in 1921, \$5,152,311,839 in 1922, and in 1923 attained the stupendous total of \$7,024,888,783. Post Office receipts show an almost parallel increment; in 1912 they were \$1,906,398, and in 1923 they were \$7,068,875. In 1908 the value of building permits in Los Angeles was just short of ten million dollars; it climbed to 31 million dollars in the year before the war, but during its progress all new construction was checked, and in 1918 the figure sank to about 8½ million dollars. But it rose to 28 million dollars in 1919, to 60 in 1920, and to 83 in 1921. In 1922 there was new construction to the value of 121 million dollars, and during 1923 of 186 million, which is considerably more than the value of all the building construction undertaken in Canada in the same year. Under such circumstances it is little wonder that ordinary carpenters claim and get \$10 per diem as a standard wage, and that a gigantic real estate boom, in which the whole local population and many outsiders are involved, is in full swing.

But perhaps the most significant figures come from the harbour authorities. Los Angeles proper was originally a dozen miles from the sea, and there was available no natural harbour. But at the mouth of the Los Angeles River there has now been created by a great expenditure of money a fine port, which claims to be the largest between Alaska and Cape Horn. In 1914 only 139 vessels entered the harbour, and its total trade was \$3,795,000. By 1919 the number of ships clearing had grown to 305, and the combined export and import trade to a value of \$7,517,566. In 1922 the ships numbered 1,074, and the trade was valued at \$29,841,498. But in 1923 no fewer than 3,171 ships used the port, and the total trade was \$73,473,000. The Customs returns of the port have grown from \$699,051 in 1914 to \$3,234,554 in 1923.

Here is evidence of an unparalleled growth, and there is at present no sign of its cessation. There is always an annual southward trek of winter visitors flying from the harsh rigours of the northern prairie region, but it is estimated that bona-fide immigrants who intend to become permanent settlers are still pouring into Southern California at the rate of at least 500 per day. The housing facilities do not begin to keep pace with the demand, and a considerable population is living in tents on the outskirts of the city. A large proportion of the new arrivals are Americans from the East and the Mississippi Valley, but there are at least 60,000 Canadians in Los Angeles County alone, and there are also many Britishers. To-day, working-class immigrants are coming out straight from Britain, and are to be met everywhere. Many British vessels come to the port, and the Furness-Withy Line have now established direct connection by sea between Britain and Los Angeles.

The question is often asked, most frequently by intelligent Angelenos, whether the present boom is justified by underlying economic conditions, and whether a crash will not come. Undoubtedly the chief factor in the expansion has been the opening of the Panama Canal, which has given the varied products of Southern California cheapened access to outside markets. Lying in the hinterland of Los Angeles is a huge territory, consisting of California itself and the adjacent States of Nevada, Arizona, and New Mexico; they are all very rich in mineral resources and the science of irrigation is making possible a great expansion of agriculture. But heretofore this territory looked eastward for its commercial outlet, and the long and expensive railway haul was a serious handicap. Now, however, the Panama Canal and the development of modern harbour facilities at Los Angeles have changed the situation and the trade of the States in the hinterland is in a large degree going to be diverted westward. This hinterland, for instance, produces a large quantity of wool, millions of hides, and considerable cotton, but hitherto these raw materials have always been shipped thousands of miles to Eastern factories. Los Angeles now proposes to undertake the manufacturing process for them, and within the city there are already established substantial cotton, woollen, and boot factories. There are also in operation a number of steel and iron works, chiefly devoted at present to turning out material for buildings, and ships are being built at the port. There was a time not so long ago when the "movies" were regarded as the chief industry of Los Angeles, but to-day,

while still an important factor in the suburb of Hollywood, they have receded into the background. Los Angeles, in short, intends to be the great industrial city of the Pacific coast of North America. For the attainment of this goal it has many obvious assets; there is a wide variety of raw material to be drawn from adjacent territory, there is now an ample supply of labour of different kinds, and within comparatively easy access are the foreign markets of the Oriental countries and the Pacific Republics of South America. The industrial situation has one unique feature; after a bitter struggle the labour unions were smashed some years ago, and to-day the proud boast of Los Angeles' captains of industry and finance is that they are citizens of a non-union city. In a period of boom the absence of unions has had no effect in keeping down wages, but if ever immigration ceased and the great army of people now employed in the building trades were thrown out of work, local wages and purchasing power would tumble rapidly. In Mexico there is at hand an abundant supply of comparatively cheap labour, which is recruited to perform the dirtier work, and the difficulty of organising uneducated Mexicans has induced labour to accept the present situation. From the industrial standpoint the one great handicap to Los Angeles is the absence of local coal. It is not, however, needed for heating purposes, and the abundant local supplies of oil and gas make good the deficiency. Hydro-electric power has also been developed on a large scale, and there is now on foot a tremendous scheme for what is known as the Boulder Dam; its purpose is to tame the famous Colorado River for irrigation and hydro-electric purposes.

After the Panama Canal the next most important factor in the California boom has been the oilfields. To-day almost one-third of the total oil production of the United States is being secured within a radius of 50 miles of Los Angeles. Not only is this oil being exported in larger quantities, but it is a great asset for local industrial development. Naturally the growth of Los Angeles has given a great impetus to agriculture. The dairy farmers and cattle ranchers have found a constantly expanding market at their doors. But much of the soil is too valuable for ordinary farming; given a reasonable amount of water, which has in most places to be secured by constant irrigation, it will grow most abundant crops of fruit or vegetable. The Japanese have reduced the business of market-gardening to a fine science, and will often raise from the same ground three or four crops per annum. Fruit-growing occupies the energies of a large population. The citrus fruits, oranges and lemons, claim the chief attention, but the vine is cultivated in many districts, and there is now a huge raisin industry. In fact, practically every kind of fruit can be grown with success in some part of California.

In the light of these conditions the prospects are therefore good for Californian enjoyment of a career of continuing prosperous expansion. There will, within a few years, be a subsidence of the present boom fever, but, in common with the other two Pacific States of the Union, California is bound to increase in power, wealth, and general importance. These three States have a larger area than France and Germany combined; to-day they have a population of about 8 million people, and they are capable of maintaining 50 millions. They have a magnificent position on the shores of the Pacific Ocean, and they enjoy the most uniformly favourable climate in the two Americas. The American people are now for the first time seriously applying their energies and abundant capital to their development, and with such a groundwork available rapid development is assured.

From one aspect the prosperity of California and its neighbours raises a serious problem for the British Commonwealth. The *Montreal Star* recently stated that since Christmas an average of 250 Canadians had paid the head tax necessary for entry into the U.S. at Detroit, which is only one port of entry, and it is safe prophecy that half of these emigrants were bound for the Pacific States. Is Canada, burdened with a heavy war debt, a surpluse of railways and other plant, and static taxation, going to be able to attract many immigrants, or even hold her native population in face of the very strong competitive attractions of California, Oregon, and Washington? Immigration schemes to redistribute population

within the Commonwealth are very desirable, but at present Canada is too much a sieve through which many British immigrants, after serving a profitable apprenticeship to North American conditions, pass through to become efficient citizens of the United States.

Notes of the Week.

The Threatened Dock Strike.—At the eleventh hour, all the resources of conciliation have been assembled to endeavour to protect the community from the disaster of a great dock strike. All Thursday, the employers in one room and the men's leaders in another were at the Ministry of Labour; they were to meet again there late yesterday afternoon. But unless some solution be reached as we write these words—and in view of the reported temper of both sides it is difficult to hope for that—notice will be handed in at mid-day on Saturday. Such a catastrophe would imply a complete failure of that spirit of co-operation to which the Prime Minister has appealed; it would be a deadly blow at the trade restoration on which he relies, as every sincere man must, for any effective remedying of unemployment. Even if, as we still trust, a way out is found on the very eve of crisis, it must be said that, irrespective of the merits of the points at issue, the community has a grave case against both parties for allowing the present situation to have developed. The employers must be held to blame in as far as they failed, or refused, to realise in time facts that were abundantly plain. The unofficial strike of last summer left a dangerous temper and real grievances behind it. When the men's case for a rise was put up in January it was rejected out of hand without any discussion. Lord Devonport's contemptuous gesture did much to create that difficult and obstinate spirit on the other side, which some of the men's leaders have done little to moderate. Some of Mr Tillett's speeches have been anything but helpful or responsible. But had the employers, in January, suggested, as they have done in the last few days, that they would give an immediate advance of one shilling out of the two for which the men stand, and pledged themselves to consider a further rise later, if and when trade revives, and at the same time given facilities to the men's representatives to appreciate for themselves the actual position of the industry—the situation might have been saved. A readiness, then, to approach the whole matter of decasualisation in a conciliatory and sympathetic spirit might have created a totally different psychology—and in all disputes, industrial or other, psychology is all-important. On the men's side, the matter has no doubt been complicated by the existence of the independent union, which arose out of last summer's unofficial strike. There has, perhaps, been a temptation to them to win back authority and popularity. But this danger, too, could have been countered in January; it has grown as the sands have run out. For a month the men's minds have been concentrated on their hardships—and those hardships are real enough—to a degree which has blinded them to the ulterior consequences of their action, both for the whole country and for the Labour Government.

Tories and Tariffs.—Many politicians in the past have had cause to complain bitterly of the fickleness and ingratitude of their followers. Mr Baldwin's experience has been far more pleasant. He sacrificed a comfortable majority and led the Unionist party to defeat and a sojourn in the wilderness, the duration of which cannot be foreseen. But his sins are forgiven, and in spite of Lancashire complaints, his followers re-elected him on Monday to the Conservative leadership at a full party meeting at which, according to the reports, "everything went smoothly," and the audience of 600 sang "For he's a jolly good fellow." It is perhaps not unfair to Mr Baldwin to suggest that, had there been any other obvious candidate for leadership events might have taken a different course. Be that as it may, Mr Baldwin is in the saddle again, but it is none too clear in what direction he intends to lead. It was the adoption of Protection

which caused his downfall. What is the attitude of the Unionist Party to be towards Protection now? Apparently it is not to be expunged from the list of articles of faith, but, in deference to the recent verdict of the country, it is to be officially relegated to the obscure background. It would indeed appear that the Tariff question is back again in very much the same position that it occupied under Mr Bonar Law; only with this important difference that Mr Bonar Law gave a pledge regarding its temporary burial, and Mr Baldwin, so far as we can see, gives no such pledge; which is quite natural, because he is not in power. The only safe deduction for Free Traders is that, however severely they have scotched the Protection snake, they have not quite killed it. It may shuffle off its present coil and grow another. In any case, there is every reason for Free Traders to keep their powder dry. The necessity to do so is made absolutely plain by the frank letter to Mr Baldwin in which Mr Amery, one of the promoters of the fiscal adventure of last November, definitely and defiantly nails Protection to his mast. If any Free Trader requires further reason why he should keep his ammunition in readiness, let him read the following resolution passed at the Unionist Party Conference on Tuesday:— "That, in view of the fact that (a) our existing trade policy was founded eighty years ago on certain assumptions which have broken down hopelessly; (b) the Free Trade between this country and the rest of the world which Cobden preached and prophesied does not exist; and (c) hostile foreign tariffs which had no existence in Cobden's day now abound, leaving the British market alone in the world unprotected, this council urges on the executive committee the duty of educating the electorate on the facts so that at the earliest opportunity the policy of (1) protecting our home market against unfair foreign competition by a scientific tariff; (2) extending to our Dominions a generous preference; and (3) arming our own Government with the means of obtaining freer trade and better treatment for British goods in foreign markets, be triumphantly vindicated."

The Palatinate Problem.—The present week has witnessed important developments, for good or evil, both in the local conditions in German occupied territory, and in the relations between France and Great Britain, which hang largely upon the settlement, or failure to settle, the problems of the Rhineland and the Ruhr. To turn first to the brighter side of the picture, we have the hope, expressed with great confidence by the Prime Minister in his speech last Tuesday, "that a complete agreement will be come to within the next few days" on the questions of the Cologne railway system and of Separatism in the Palatinate. This was followed on Wednesday by an announcement from Paris that the Inter-Allied Rhineland High Commission had appointed a special Commission of three members (all soldiers) to consider the measures which should be taken to re-establish order in the Palatinate. It might be objected, perhaps, that upon this Commission, as upon one of even greater moment, the British member would find himself in a permanent minority; but it is to be hoped that the precedent of voting by countries rather than on the merits of the case will not be followed in the present instance. That contingency is ruled out, surely, by the terrible events that have occurred in the district concerned at the moment when the Commissioners are on their way, and which will

confront them with questions which strike so close to the roots of civilisation itself that they become prior to the highest policy of the greatest Powers. France, indeed, should be the last Power to dispute that the question of urgency in the Palatinate now is to ensure the non-repetition of what occurred last Wednesday at Pirmasens, for—were such horrors to become epidemic—the opinion of the world would lay the responsibility upon the occupying Power, and not, in the last resort, upon the German authors or victims of such crimes of violence. At Pirmasens last Wednesday the local Separatist gang, who had long terrorised the district, but who had recently been caused to abdicate in favour of the legitimate German authorities, brought down upon themselves a terrible doom. The reinstatement of the German police by the French military authorities had seemed to be an official signal that the Separatist reign of terror was to end; but the Separatists, instead of decamping, remained under arms in the Bezirksamt, or Local Government Building, and on Wednesday afternoon they reasserted their power by forbidding the local newspaper to resume publication. An angry crowd collected round the building, and an unequal contest began between a band armed with rifles under cover and a crowd in the open equipped with nothing better than sticks and staves. Exasperated by their growing casualties, the crowd eventually sprayed the building with petrol through a fire hose, threw combustibles in at the windows, set the stronghold of their hated tyrants on fire, and did them to death with barbarous ferocity when the flames finally drove them out through the door. This is a danger-signal to all Europe. The Rhineland lies in the civilised heart of our Western world, but the last ten years have taught us conclusively that, under sufficiently trying conditions, the most apparently invincible traditions of civilised conduct break down. If you terrify or starve or impoverish or insult civilised Europeans to a sufficient degree, you can make sure of causing them to react like savages. The danger is clear, and the moral no less so.

Overseas Trade in January.—The Board of Trade returns for January, though not exciting, contain elements that are moderately encouraging. Compared with the figures of a year earlier, imports are up by 1.5 per cent., and while British exports fell off by nearly 4 per cent., an increase of no less than 35.7 per cent. in re-exports brought the total export figure 1 per cent. above that of January, 1923. The figures are given below:—

	MONTH OF JANUARY.		Increase or Decrease in Jan., 1924.	
	1923.	1924.		
Imports	£ 99,756,240	£ 101,258,668	+ 1,502,428	+ 1.5
British exports	66,938,908	64,235,078	- 2,703,830	- 3.8
Re-exports	9,797,961	13,310,982	+ 3,513,021	+ 35.7
Total exports	76,736,869	77,546,060	+ 809,191	+ 1.1
Excess of imports over total exports	23,019,371	23,712,608	+ 693,237	+ 2.9

Coal exports amounted to 5,440,000 tons, a slight decline in quantity compared with last year's total of 5,612,000, but prices were higher, the month's exports realising £6,679,000, against £6,296,000 a year ago. France took 100,000 tons less than last year, while exports to the United States, which reached 327,000 tons in January, 1923, fell to the very small figure of 31,000 tons last month. Iron and steel exports were down by 16,000 tons, but showed an increase of £500,000 in value. Cotton yarns and piece-goods were £1,741,000 lower at £14,838,000, and woollens and worsteds £378,000 lower at £5,837,000. Among imports the most striking feature is the rise in value of raw cotton from £8,871,000 to £19,244,000, the United States quota increasing from £4,480,000 to £12,915,000. Imports of raw wool were appreciably less than in January last year. Summary tables showing imports and British exports for the past three years are given elsewhere in the present issue.

Irish Affairs.—Our Dublin correspondent writes:—The annual meeting of shareholders of the Great Northern Railway Company of Ireland, held at Belfast on the 13th

instant, showed satisfactory results, and gave prominence to income-tax collection difficulties. The net profit for 1923 was £501,972, as against an earned profit for 1922 of £318,023, being an increase of £183,949. Passenger and live stock traffic (the latter considerably enhanced by reason of the Dublin strikes) are mainly responsible for the increase, as goods traffic, though slightly better than in 1922, was still 20 per cent. below the figure for 1913. The chairman referred to the rise in the cost of transport, while production has been diminishing as inimical to prosperity, and announced reductions in rates for the current year at an estimated cost of about £45,000. The company operates both in the Free State and in Northern Ireland, and is an Irish company registered in Dublin. Income-tax in the Free State stands at 5s in the £, while in Britain (including Northern Ireland) it stands at 4s 6d. Referring to the position of the British shareholders, the chairman said:—"From this you will understand that the company have paid on behalf of the proprietors 5s in the £ income-tax, which is the higher rate of the two countries in which the railway operates, and this is all that anyone should ultimately be called upon to pay. I am informed, however, that when our dividend warrants are presented for payment in Great Britain or Northern Ireland, the British income-tax authorities will insist upon a further deduction of tax at 4s 6d in the £ from the gross amounts of the warrants, and will, for the moment, ignore the payment made by the company in Great Britain on behalf of its proprietors, which payment will not be taken into account until such time as the shareholder submits and substantiates a somewhat complicated claim for refund and adjustment. The main object would appear to be to further investigate how much of the tax payable belongs to Great Britain and how much to the Irish Free State." In the converse case, viz., that of a Free State bank dealing with a British dividend warrant, the practice differs. No second deduction of income-tax (other than the 6d in the £ difference between the two rates) is made so long as the bank's customer assents to its noting and communicating to the income-tax authorities such particulars as to the transaction as are requisite for their purpose. Even so, it has become not uncommon, in order to avoid trouble, for shareholders to open special bank accounts in the country in which they have invested for the purpose of there cashing their dividend warrants without any question being raised. The ultimate adjustment in this case awaits the furnishing by them of their income-tax assessment returns in ordinary course. Apart from income-tax questions, the case of the Great Northern Railway Company is a standing example of certain of the inconveniences of the present position of Ireland. Its lines cross the Customs frontier in fourteen different places. Its wage rates may be complicated by different rates of taxation, different costs of living, different labour organisations, and different labour legislation, whilst different regulations as to public health, migration, diseases of animals, &c., introduce other elements of complexity and expense in administration. Ultimately, too—after some four years—the Council of Ireland upon which Northern Ireland and the Irish Free State will be entitled to equal representation will have some jurisdiction over railway administration in Northern Ireland to the end that uniformity of general conditions may as far as possible be attained and preserved. The conflict as to wages and prices in Dublin still continues. The Corporation has now rescinded its resolution to accept the Government grant of £10,000 for road work in ease of unemployment, because the condition was attached that the wages paid should not exceed 50s per week. This result was due to a combination of extremists of Republican and Labour complexion, and the total vote was a small one. An official announcement has been made, however, that the Corporation will not be allowed to defeat the Government's contemplated aid to the unemployed, and that the matter will be arranged without its assistance. As to prices, there has been a newspaper campaign against profiteering, but no practical steps have been taken towards establishing a reasonable level of prices for the standard articles of the poor man's budget. Employers, labour, and the Government are all equally in default in regard to this matter, which is the essential preliminary to a restoration of reasonable and economic wage levels.

Output of Coal, Iron, and Steel in January.—In spite of the railway strike, the figures just issued by the National Federation of Iron and Steel Manufacturers show that there was a slight improvement in the production of pig-iron and steel in January. The output of pig-iron amounted to 631,500 tons, compared with 626,900 tons in December, and is the highest output attained since July last; the improvement would have been rather better but for the strike, for although one furnace was blown in during the month, 16 furnaces were "damped down" as the result of the strike, so that the number of furnaces blowing at the end of the month was 189; it is understood that most of those damped down have since resumed. The production of steel ingots and castings amounted to 690,100 tons, compared with 653,300 in December and 749,500 in November. The December figures were affected by the Christmas holidays in most districts, while the January figures were affected by the New Year holidays in Scotland. Evidence of the increasing Continental competition is seen in the increase in imports of iron and steel in January, which rose to 141,600 tons, a figure higher than any reached since November, 1921, when they amounted to 169,200 tons. Exports of iron and steel in January amounted to 337,700 tons, compared with 354,900 tons in December. In order that the effect of the Christmas and New Year holidays on the production of coal may be seen, we give below the output of coal in each week in December and January:—

		1923.		1924.	
		8th	15th	5th	12th
December	Tons.	5,728,800	5,956,000	January	Tons.
"	"	5,886,000	5,886,000	"	19th
"	"	3,352,800	3,352,800	"	26th
"	"			February 2nd	5,244,900

In the week ending December 15th output was higher than in any week since 1913, the previous best having been 5,824,900 tons in one week in April last. It will be seen that this latter figure has been twice exceeded since December 15th. Exports of coal decreased from 5,870,000 tons in December to 5,440,000 tons in January, of which 1,284,000 tons went to France, 760,100 tons to Germany, 487,800 tons to Italy, 460,200 tons to Belgium, and 324,100 tons to Netherlands.

The Underground Group.—The better dividends announced by some of the companies in the Underground group of railways last week are explained by the reports. The aggregate receipts of the five companies, including the London General Omnibus Company, declined by £158,200, and expenditure was only £20,600 lower, but owing to an increase of £152,300 in miscellaneous receipts total net income was £14,800 higher. The comparative figures read as follows:—

	1922.	1923.	Inc. or Dec.
Traffic Receipts	£ 12,278,326	£ 12,120,118	- 158,208
Expenditure	9,943,028	9,922,386	- 20,642
Net receipts	2,335,298	2,197,732	- 137,566
Miscellaneous receipts (net)	641,578	793,913	+ 152,335
Total net income	2,976,876	2,991,645	+ 14,769
Deduct—			
Interest, rentals, & fixed charges	865,104	947,686	+ 82,582
Appropriations to reserves	747,500	672,500	- 75,000
Dividends on guaranteed and preference stocks	389,477	389,477	..
Total deductions	2,002,081	2,009,663	+ 7,582
Balance	974,795	981,982	+ 7,187
Add balances from last year's accounts	253,142	324,955	+ 71,813
Total amount available for dividends on ordinary stocks and shares and for other purposes	1,227,937	1,306,937	+ 79,000
Amount paid in dividends on ordinary stocks and shares representing an average rate of 4.80 per cent. in 1923 and 4.69 per cent. in 1922	902,983	923,159	+ 20,177
Balances carried forward to next year's accounts	324,954	383,778	+ 58,823

The figures of the individual companies lose much of their significance owing to the operation of the "common

fund," to which each company pays the balance of its revenue after meeting "revenue liabilities," which include "such sums as might be reasonably necessary for depreciation and reserve." The common fund this year amounts to £1,001,982, as against £1,029,795 for 1922, the difference between these figures and the "balance" shown in the table being due to increases in reserves after the operation of the common fund of £20,000 and £55,000 respectively. The railways showed a drop of £312,200 in traffic receipts, and of £205,700 in expenditure, and their net income was £14,300 lower. The London General Omnibus Company showed an increase of £154,000 in traffic receipts, and of £185,000 in expenditure, but with an increase of £60,000 in miscellaneous receipts, net income was £29,000 higher. In the table below we show movements in the securities of the Underground group:—

Name.	Year 1913.		Year 1923.		Price Feb. 14, 1923.	Price Feb. 13, 1924.
	Highest.	Lowest.	Highest.	Lowest.		
Central London, Def. Stock	86	72½	59½	42½	42½	52½
Do Pref.	62½	56½	56½	56½	56½	60½
City and South London 5% Pref. 1903	110½	94½	95½	86	92½	94
London Electric, Ord. (£10)	80½	70½	74½	4½	5½	6½
Do 4% Pref. Stock	44½	27½	58	45½	49	56
Metropolitan District Ord. Stock	96½	87½	102	86½	95½	102
Underground Electric Income Bonds, red. 1948*						

* Dividend free of tax.

The share market has been active throughout 1923, and prices have advanced considerably. Underground income Bonds have had a good rise on the declaration of the full 6 per cent. dividend, free of income-tax, as against 5 per cent. for preceding year.

Two Railway Dividends.—The declaration by the directors of the London Midland and Scottish Railway Company of a final dividend of 4 per cent., making 7 per cent. for the year, was not quite up to market expectations. At the end of 1922 London and North-Western Railway ordinary stock, which was converted into an equal amount of London Midland and Scottish stock, received a distribution of 8½ per cent. The Great Western dividend for 1923 is at the same rate as was paid at the end of 1922, namely, 8 per cent., and this was more in accordance with market expectations. It is stated that the dividend is being paid after appropriating £150,000 from reserve for contingencies. A balance of £301,000 is carried forward, as against £304,000 a year ago.

London General Omnibus.—The accounts of the London General Omnibus Company for the year 1923 show traffic receipts, "after the operation of the common fund" of the Underground group, of £7,655,413, which compares with £7,501,425 for 1921. The company is now entitled to 25 per cent. of the common fund, which amounted to £1,029,795, its share being, therefore, £250,496. After payment of expenses and placing £375,000 to reserve for contingencies and renewals, the same as a year ago, there is a balance of £373,779, as against £369,953 at this time last year. Interest brought in slightly more, there was a profit of £24,583 on realisation of investments, and £4,000 more was brought forward, so that the balance available for debenture interest and dividends is £33,000 higher at £502,270. The following table summarises results for a number of years:—

	1913.	1918.	1919.	1920.	1921.	1922.	1923.
Total receipts	£ 3,258,198	£ 3,979,799	£ 5,924,905	£ 7,066,137	£ 7,657,342	£ 7,705,525	£ 7,894,361

† Paid free of income-tax.

Interest on the 5 per cent. cumulative income debenture stock requires £87,500, against £56,500 a year ago, £620,000 of the stock having been sold during the year to provide for capital requirements. Capital expenditure during the year was £1,048,000. The balance-sheet shows that the reserve for contingencies and renewals has been reduced from £1,593,800 to £1,140,000. Some explanation of London's traffic congestion is perhaps afforded by the fact that the company's fleet of omnibuses increased by 1060, or 38 per cent. during the year. The number of passengers carried by the company increased by 193½ million to 1,040 millions. The daily average was 3,076,700, an increase of 568,000.

Metropolitan Railway.—The first railway accounts for 1923 to appear are those of the Metropolitan Railway. These show an appreciable decline in receipts, but a larger decline in expenditure. Miscellaneous net receipts were higher, and the total net income at £879,400 shows an increase of £39,400. From the summary below it will be seen that the increase in the dividend from 3½ per cent. to 4 per cent. requires £37,200, or less than the increase in net income:—

	1922.	1923.	Inc. or Dec.
	£	£	£
Total working receipts	1,976,466	1,881,447	— 95,019
" " expenditure ..	1,397,233	1,289,996	— 107,237
Net receipts	579,233	591,451	+ 12,218
Total net income	840,047	879,439	+ 39,392
Brought forward	17,797	33,137	+ 15,340
Surplus Lands div.	82,529	85,830	+ 3,301
Fixed charges	940,373	998,406	+ 58,033
Reserve	292,842	295,607	+ 2,765
Prof. divs.	15,000	15,000	—
Ord. div.	338,985	354,928	+ 15,943
Carried forward	260,409	297,621	+ 37,212
	(3½ %)	(4 %)	
	33,137	35,250	+ 2,113

The full interest on the 5 per cent. preference stock required £12,700 more, and an addition of ½ per cent. to the dividend on the Surplus Lands Stock took £3,300 more. Capital expenditure during the year was just over £200,000, and further expenditure during 1924 is estimated at £593,900. The balance-sheet shows that railway depreciation funds have been increased from £758,600 to £1,041,700. Cash has fallen from £318,600 to £286,800, and investments in Government Securities are £7,000 lower at £939,700.

Imperial Tobacco Profits.—The profits of the Imperial Tobacco Company (of Great Britain and Ireland) continue to break fresh high records, those for the year ended October 31st last amounting to the enormous total of £7,474,700, an increase of £275,500, the figure being arrived at, as in the previous year, after payment of bonus to customers. As will be seen from the table of profits and appropriations appended, profits have more than doubled since 1918 if the bonus to customers is deducted from the profits of the latter year:—

† Free of income-tax.

The allocation to pensions is maintained at £200,000, and that to general reserve is more than doubled. A year ago £500,000 was also written off as special depreciation.

The amount available for distribution is nearly £900,000 higher than it was twelve months ago, but this amount is more than absorbed by the increase in the distribution on the ordinary shares; for although the rate is reduced from 22½ to 20 per cent., free of income-tax, the amount required is £5,990,300, as against £5,056,300. The increase is due to an expansion in the paid-up ordinary capital from £22,472,700 to £29,951,700 owing to a bonus distribution of one new share for every three held in June last. The reserve fund has been reduced by £7 millions for the same reason. On the credit side the principal changes are a reduction of £3,612,400 in stock-in-trade (which still stands at the gigantic total of over £28½ millions), and an increase of £5,059,800 in investments in Government stocks, &c., which have risen from £1,019,400 to £6,079,300. Investments in associated companies, which are given at cost, or below where depreciation has taken place, stand £38,700 higher at £6,056,300. A footnote states that in the aggregate the market value of these investments is "largely in excess of the book value." Goodwill and patent rights are unchanged at £9,422,600. Cash is £234,800 higher at £4,951,200. An analysis of the balance-sheet will be found in a later column.

Borax Consolidated.—A further recovery in profits is recorded in the accounts of Borax Consolidated, Limited, for the year ended September 30th last. A summary of the company's results for the past 12 years is given below:—

Year Ended Sept. 30.	Net Trading Profit.	Depreciation and Reserves	Debt Interest	Total Dividends Paid.	Carried Forward	Rate on Deferred Ordin'ry
	£	£	£	£	£	%
1911	293,086	27,880	65,000	194,750	75,995	13½
1912	293,598	56,732	69,000	194,750	43,297	13½
1913	361,921	78,297	74,164	207,361	45,397	15
1914	344,050	90,692	82,909	147,500	68,345	7½
1915	349,357	81,290	87,678	170,000	74,171	10
1916*	569,907	227,331	87,850	215,000	112,913	15

1921	378,966	70,825	86,392	223,750	117,638	12½
1922	417,900	101,738	86,157	223,750	123,893	12½
1923	442,753	90,825	86,240	212,500	137,081	15

* Excess profits duty, £134,470, included in these figures.

Depreciation and reserve allocations consist of £40,000 to buildings, plant, &c., £5,825 to debenture stock, redemption sinking fund, £25,000 to general reserve, £15,000 to income-tax reserve, and £5,000 to pension and grant fund. The various reserve funds now stand at £891,150. Total assets amount to £6,444,147, as compared with £6,197,386 a year ago; items in the balance-sheet will be found analysed in our usual column. The directors state that "the company's trade during the past year has, on the whole, been satisfactory in volume, notwithstanding the continued restrictions on trade caused by the unsettled state of European affairs and exchanges. Lower prices for its products have been set by the company during the past year, in accordance with its policy to faster consumption by its industrial customers. The strictest economy in the cost of production both of raw and refined material has enabled the company to make considerable concessions, which, it is hoped, will lead to increased demand as trade generally improves."

S.T.D. Motors.—A year ago on assets amounting in value to £4,022,661 the directors of S.T.D. Motors, Limited, could show a profit of only £56,017 for the year, after writing off depreciation of buildings and other charges. The report then published stated that the directors looked forward to being able to submit a satisfactory year's trading, but they regretted that this anticipation had not been realised "for reasons entirely outside their control." Assets are now valued at £4,149,343, and for the year ended September 30, 1923, a profit of £102,179 has been realised. This is certainly an improvement. An interim dividend of 3½ per cent. on the preferred ordinary shares

has been declared, which will absorb £64,043. The directors state: "Notwithstanding the profits earned, the directors have decided to limit the declaration of dividend for the present to the distribution named, having regard to the fact that the dividends on the preferred ordinary shares are cumulative." They point out that "conditions all round have improved, and there is every reason to look forward to this improvement being maintained." It is satisfactory to learn that "a statement as to the combined accounts of this company and its subsidiary companies will be laid before the meeting of shareholders, and in accordance with the promise made at the last annual general meeting the completed balance-sheets of the various subsidiary companies will be available for the inspection of shareholders." A year ago we observed in these pages that "this is a holding company, and one which we think might reasonably publish a consolidated balance-sheet showing the combined assets and liabilities of constituent companies." A complicating point about these accounts are that fixed investments in France are taken at 25.20 francs to the £. The balance-sheet will be found fully analysed in another column.

Harrods (Buenos Aires).—It may be recalled that in December we were promised details of the proposed reconstruction of Harrods (Buenos Aires), Limited. These details are now issued, and are accompanied by the report. The reconstruction of the capital follows a readjustment of the assets by £1,003,813, and it is proposed to write down the 4,014,388 ordinary £1 shares to the value of 15s each. These ordinary shares are entitled to dividends of 10 per cent., and to balance the writing down of the nominal value it is proposed to increase the rate of dividend to 13½ per cent., thus maintaining the right to a dividend of 2s per share, with 20 per cent. participation in the surplus profits. There is no modification of the rights of the preference shareholders beyond the issue of funding certificates in respect of the arrears of cumulative dividend, amounting as at August 31st last to £376,000. The certificates are to bear interest at 5 per cent. from September 1st last, which is to be cumulative and to rank in priority to future dividends on the preference shares. The certificates will be redeemed out of the profits remaining after meeting interest upon them and the preference dividend. The accounts now issued show that a previous loss by the three companies of £393,551 was turned into a profit of £130,238, in respect of the year under review. Thus it may be said that the turn of the tide has set in. Variations of the exchange has worked sad havoc with this undertaking, and shareholders will do well to support the directors in reconstruction.

Life Offices Bonuses.—The declarations of bonuses to policyholders which are coming forward have so far all shown increases in comparison with previous distributions. This, of course, specially applies to offices which carried forward their surpluses owing to the financial disturbance of the war, though the same tendency appears in the case of the annual bonus offices whose number is rapidly increasing. The Refuge Assurance Company announces a reversionary life bonus for 1923 in the ordinary branch of £1 18s per cent. as compared with £1 12s for 1922. The British General, which has made a valuation for the five years ended December 31st last, has declared a compound reversionary bonus at the rate of 32s per cent. per annum, as compared with 30s at the end of 1918. The interim bonus in respect of claims occurring before the end of the current quinquennium has been raised from 20s to 25s per cent. compound, with the exception of endowment assurances maturing, which are to be allotted 32s.

National Provident Institution.—Life assurance offices are showing that for new business last year was rather better than 1922, in spite of the continued depression in many branches of trade. The National Provident in the year ended November 20th last issued 1,878 policies assuring £1,089,503 net, as compared with 1,905 policies

assuring £1,072,343 in the previous twelve months. The net premium income was £633,684, against £624,429, and the expenses were £13 11s 3d per cent. of the premiums, against £12 17s 6d. If the special valuation costs be excluded from last year's expenses, the percentage becomes £12 16s. Mortality was favourable, the death claims paid being 70 per cent. of the amount expected, and the net rate of interest earned by the funds was £4 11s 10d per cent., the highest in the society's history. Funds increased by £75,216 to £8,059,543. It is stated that the total amount of profit divided among policyholders in respect of the valuation for the five years ended November 20, 1922, was £914,542 (32 per cent. of the premiums received).

Sea Insurance Company.—This Liverpool marine company still preserves its independent existence, and continues in these difficult days to earn a small profit. The new report shows that the underwriting account of 1922 was closed by transferring £90,000 to suspense account for unsettled claims, and that the surplus was then £26,219. Receipts from interest, less tax, made the total profit for the year £87,527. The above underwriting surplus for 1922 on a premium income of £416,775 compares favourably with the surplus of £11,758 for 1921, earned on a premium income of £501,760. The premiums taken during 1923 were £424,268, the past year's settlements £100,230, and the expenses £41,929; all three items closely resemble those for the account of 1922. Income-tax and corporation tax amounted to £13,330, against £23,420, and the dividend for the year remained unaltered at 3s a share, less tax. The reserve fund, underwriting account of 1923, and the profit and loss balance amounted on December 31st last to £937,612, in comparison with £912,948 a year before.

A Reinsurance Fusion.—The shares of the Olympic Fire and General Reinsurance Company (Limited) have been purchased by the Tariff Reinsurances (Limited). Both these companies are after-war organisations, and have from their establishment in 1919 been closely allied. The purchase consideration is three £1 shares (15s paid) in Tariff Reinsurances for five similar shares in the Olympic company. The sale is subject to the sanction of the Court under the Assurance Companies Act, 1909.

The Advance in Tin.—The tin market this week has shown remarkable strength, and at times the feeling was somewhat excited. In the late trading standard cash sold at over £282 per ton, representing a rise of close on £50 since the end of 1923. The stocks in the United Kingdom have been reduced to 2,700 tons, and sellers have been scarce. This stringency in the near positions has made the position of the bears very uncomfortable, and it has been a matter of some difficulty to close commitments on the short side. Compared with the best touched last year this commodity thus shows a further gain of over

£40 per ton, and with American buyers still interested even at the higher level the feeling is likely to remain bullish. Forward tin has been dealt in at £280, and the outlook seems favourable to producers, there being a very eager demand from consumers, both here and in the United States, where a lot of activity is noticeable in tin-plate circles. The other non-ferrous metals have all shown a good undertone, with copper firmer and more active. Lead and zinc have been strong, while antimony has further improved, foreign having worked up to about £47 per ton, with English maintained at £55 per ton.

Dock Authorities' Association.—Though established only four or five years ago, the association representing the interests of dock and harbour authorities includes practically all the ports of the United Kingdom other than those which are railway-owned. According to the report presented at the annual meeting, held in London this week, the association comprises 45 authorities, dealing with over 75 per cent. of the shipping tonnage at our ports. The railway-owned docks are not eligible for membership, there being questions on which the two classes of authority are at issue, but, except on these matters, all, it was stated at the meeting, work together. Sir Hugh Bell, chairman of the executive committee of the association, is himself a railway director, though, for the purposes of the association, he represents the Tees Conservancy Board. The report showed that the association has very closely watched the common interests of its members in Parliament, having had a large share in bringing about the shelving of the Petroleum Bill, which would have transferred to a central authority the present powers of local harbour and dock bodies.

Transvaal Gold Output.—The figures of gold output in the Transvaal during January show that a capital start has been made for 1924. The output amounted to 796,768 ounces of fine gold, as against 778,849 ounces in December, 1923, and 764,469 ounces in January, 1923. The following table shows the output for every month since 1918:—

	1918.	1919.	1920.	1921.	1922.	1923.	1924.
	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.

December..	641,245	650,191	632,315	681,947	790,712	778,849	796,768
Total (12 months)	8,490,560	8,330,091	8,153,625	8,114,516	7,020,110	7,798,959	..

The following table shows the number of natives employed at the end of last month by members of the Witwatersrand Native Labour Association and Contractors:—

	June, 1923.	July, 1923.	Aug. 1923.	Sept. 1923.	Oct. 1923.	Nov. 1923.	Dec. 1923.	Jan., 1924.
Gold mines ..	170,865	166,443	167,600	174,406	177,047	177,674	177,779	181,659
Diamond mines ..	15,598	16,020	16,156	16,225	16,216	16,346	16,142	16,109
Diamond ..	3,063	2,893	3,107	3,134	2,911	2,997	3,239	3,482
	189,526	185,356	186,863	193,765	196,174	196,917	197,160	201,250

It will be noted the number of natives employed at the gold and diamond mines shows an increase on the month.

At the meeting of the Royal Statistical Society, on the 14th inst., Mr R. Y. Sangers will read a paper on "Foreign Trade and Shipbuilding." The meeting will be held in the hall of the Royal Society of Arts, John street, Adelphi, W.C. 2, at 5.15 p.m.

Oversea Correspondence.

UNITED STATES.—STEEL CORPORATION'S EARNINGS AND EXTRA DIVIDEND—OIL LEASE INVESTIGATION.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 1.

THE declaration by the United States Steel Corporation of another extra dividend on its common stock attracted a great deal of attention. Although an extra distribution was quite generally expected, the addition of $\frac{1}{2}$ of 1 per cent., or double the amount of last October's additional dividend, came as a surprise. The holders of common shares have been very patient for many years. While stockholders in numerous other industrial corporations were enjoying much larger regular dividends, and frequently extra distributions, holders of the Steel Corporation's common shares received only 5 per cent. annually, although in fairness to the Corporation it should be mentioned that its regular dividend rate was maintained through periods of depression when net profits were not sufficient to pay the full rate, and when many other large corporations reduced their dividends, or passed them altogether. Another big surprise was furnished by the Steel Corporation's remarkably good statement of earnings for the quarter ended December 31, 1923. Net earnings for that period totalled \$49,958,980 after taxes, as compared with \$47,053,680 for the preceding quarter, and \$27,552,392 for the corresponding three months of 1922. The net earnings for the fourth quarter of last year were the largest ever reported by the Corporation for a like period except in the war years. The best previous peace-time showing was that for the quarter ended September 30, 1920, when net earnings amounted to \$48,051,540. The Corporation's income statement for the full calendar year 1923, as compiled from the quarterly reports, compares with that of 1922 as follows:—

	1922.	1923.
Net earnings.....	101,529,310	179,650,910
Depreciation, sinking fund, &c.	42,688,509	51,451,994
Net income	58,840,801	128,198,916
Interest U.S.S. bonds.....	20,107,384	19,704,645
Balance	38,733,417	108,494,271
Preference dividends	25,219,677	25,219,677
Common dividends	25,415,125	29,227,393
Surplus	11,901,385	54,517,579
Reserve for improvements ..	..	40,000,000
Surplus	11,901,385	14,517,579
Adjustments (or.)	920,038	235,189
Surplus	10,981,347	14,282,390

Elimination of the 12-hour day, according to present estimates, will increase the Steel Corporation's operating costs by about 10 per cent. annually, or \$25,000,000 approximately. The increase in costs, however, did not apply to all of the last quarter, since the change to the 8-hour day was not fully in effect during that period. Furthermore there was a decrease in costs as an offset, owing to the fact that the corporation's mills were operating nearer to capacity during the greater part of the quarter. The declaration of another and larger extra dividend on the common stock plainly indicates that the directors of the United States Steel Corporation have confidence in the business situation and outlook.

Just what will be the final outcome of the Congressional investigation into the leases of naval reserve oil lands to the Sinclair and Pan-American companies cannot be predicted. Both the Senate and the House of Representatives quickly and unanimously passed resolutions directing President Coolidge to institute proceedings to annul the leases, and to employ counsel independently of the Department of Justice to "prosecute such other actions or proceedings, civil or criminal, as may be warranted by the facts in relation to the making" of such leases. Thus far nothing has been brought out in the investigation to show conclusively that the leases were other than advan-

tageous to the Government. Their legality or illegality has not been determined, and it has not been proved that the large personal loans to various interests by parties identified with the companies which obtained the leases were made under circumstances indicating corruption. It may be well, therefore, to suspend judgment pending further developments, or until all the facts are presented.

FRANCE.—TAXATION PROPOSALS—PROFITEERING—DIRECTION OF TRADE—TAXATION RETURNS.

(FROM OUR CORRESPONDENT.)

PARIS, February 13.

THE bold effort of the Poincaré Cabinet, in spite of the proximity of the General Elections, to balance the Special Budget and restore health to the franc, by means of a ruthless cutting down of public expenditure and the imposition of heavy increased taxation, appears to be slowly but surely achieving success. It is true that the Chamber, after 16 sittings devoted to the new financial proposals, has so far consented to approve of only two of the 110 articles of which the new Finance Bill is composed; but it is announced to-night that the discussion on the proposal to increase all existing taxes by 20 per cent. is to close to-morrow, when it is intended to take a vote on this particular measure.

The discussion of the proposal to increase existing taxation by *deux décimes* brought strong criticisms from MM. André Tardieu and L. L. Klotz, two former members of M. Clemenceau's Cabinet, who may be regarded as representing such real opposition as the Poincaré Government has to count with in the Chamber. M. Tardieu, who is at all times an unsparing political critic of the present Government, although he does not always vote against it, insisted that an increase in taxation would not remedy the crisis of the franc, and that he would not vote "under the pressure of foreign stockbrokers" (in reference to the accusation that the recent renewed fall in the franc was due to a drive made against it in consequence of M. Poincaré's Ruhr policy). M. Klotz, as might be expected from his past work as Finance Minister, dealt largely with the question from the practical standpoint. He argued that there is no real relation between the fall in the franc and the rise in the cost of living, as proved (he contended) by the fact that, although the pound rose from 27 in March, 1919, to 56 in March, 1922, the highest index figure of the cost of foodstuffs was reached in December, 1920, when it stood at 392, whereas to-day it is only 372, in spite of the fact that the pound is now well over 90f. Even if taxation is doubled, he insisted, the rate of exchange will not be affected; firstly, because French foreign policy is not approved by other countries, and secondly, because of the huge floating debt. He urged that the present floating debt of ten milliards should be got rid of by conversion into a loan which should be subscribed only by French holders of foreign currency and hoarders of French gold. Instead of relying on the belief that "Germany will pay," he said, France had much better look for a remedy in the application of the resolve that "France will work."

Incidentally, M. Klotz once more alluded to the highly controversial subject of the respective status of the British and the French taxpayer. The French taxpayer, he stated, will now pay 445f per head in taxation, the British 403f, and the American 283f. Taking the franc at 50, and regarding an income of £200 as equal to one of 10,000f, and one of £400 as equivalent to 20,000f, it would be seen that out of 781,000 persons assessed in France 763,000 paid income-tax on less than 100,000f each. Taken as a whole, the small French taxpayer, with an income not exceeding 40,000f, will be called on, if the present proposals are approved, to pay in future more than his English fellow, while the larger taxpayer in France will pay at least as much as in England. For this reason the French Government would now be able to demand that Germany, as the Versailles Treaty lays down, should be made to pay as much as the heaviest taxed citizen in Europe, which was the Frenchman.

The new financial proposals have already resulted (as was predicted would be the case) in a perfect orgy of profiteering throughout the country, the prices of many

commodities having been suddenly raised by a flat rate of 20 per cent. on the former retail quotations. The fact, were it not blatantly visible on every hand, would otherwise be incredible. Increased taxation, as experience shows, is invariably followed by a rise in the cost of living, but hitherto the French trader has taken a comparatively modest, although substantial, advantage of his opportunity. One leading Paris merchant, interviewed by one of the newspapers, expressed his astonishment that any surprise should have been occasioned by a 20 per cent. rise in retail prices, in view of the corresponding pending rise in taxation. In reply to questions, he admitted that a trader with a turnover of a million francs would pay about 20,000f in taxation of all kinds, so that under the new proposals his total taxes will be increased by about 4,000f. In the circumstances he saw nothing extraordinary in demanding an extra 200,000f from the public as the price of his wares!

Complete figures showing the comparative value of French commercial relations with the various foreign nations and the colonies and dependencies of the Republic during 1923 and 1922 are now available, and are interesting as showing the influence of the exchange situation on French foreign trade. The details are as follows (in thousands of francs):—

	Imports.		Exports.	
	1922.	1923.	1922.	1923.
Sweden	389,177	424,318	65,643	128,540
Norway	132,476	166,037	41,205	68,913
Great Britain.....	3,407,420	5,272,169	3,960,500	6,154,663
Germany.....	1,297,518	1,048,331	1,969,828	1,085,568
Holland	700,475	1,002,288	395,752	630,551
Belgian-Luxemburg Econo- mic Union	1,738,892	2,404,112	4,015,454	5,808,636
Sarre district	654,071	711,480	366,832	967,110
Switzerland	540,097	601,635	1,001,651	2,113,007
Czechoslovakia	290,526	209,327	62,587	63,672
Italy.....	803,587	1,223,758	797,090	1,181,358
Japan	349,792	607,911	518,099	907,351
Spain	406,500	208,850	100,527	176,337
United States.....	3,863,873	5,049,080	2,006,757	2,490,644
Brazil	484,041	691,303	158,412	251,938
Argentina	796,366	1,271,620	314,245	612,643
Canada	164,844	371,716	111,112	183,017
Other foreign countries ..	5,634,332	8,272,117	2,372,826	3,551,764
Total (non-French)	21,631,987	20,536,032	18,257,520	26,361,904
Algeria.....	970,203	1,225,048	1,716,319	2,068,724
Tunis	199,525	301,428	265,627	426,439
Morocco	78,732	122,063	487,801	486,217
Senegal	202,557	275,627	94,834	194,839
Madagascar, &c.	61,893	150,243	84,813	113,113
French Indo-China	199,030	331,529	267,640	415,973
Other colonies and protec- torates	586,401	666,042	214,389	364,301
Grand totals	23,930,328	32,608,012	21,378,943	30,431,510

The figures show that, while the total imports increased during 1923 by 8,677,684,000f, and the total exports by 9,052,567,000f, the imports from non-French countries increased by, in round figures, about 9,000 million francs, while the exports to similar destinations increased by only about 8,000 million francs.

Taxation returns for the month of January, which are issued to-day, show a total yield of 2,296,064,000f, of which 2,080,571,400f is to be credited to normal and permanent taxation, the balance being from exceptional sources (including just over 200 million francs from the expiring special tax on war profits). The total yield for the month from permanent sources was 300,184,000f in excess of that registered in January, 1923, and included 372,129,100f from income-tax, or 44,555,000f more than in the corresponding month of last year. The revenue from indirect taxation and State monopolies amounted to 1,786,151,000f, which was 251,208,000f in excess of Budget estimates for the month, and 274,055,000f more than in January, 1923. The outstanding feature of the

return is that the revenue from the tax on turnover, which amounted to nearly 303,500,000 for the month, amounted to no less than 72,840,000 more than expected by the Finance Minister, who budgeted that this tax during January would produce no more than in the corresponding month of last year. Registrations proved even more satisfactory, and yielded 103,316,000 more than had been expected, and showed an increase of 107,296,000 on the figures for January, 1923. The only minus figures as compared with January last year were in respect of the yield from Customs, which were over 12 million francs down, the luxury tax (664,000 down on a total yield of 870,000 for the month), sugar and saccharine (5½ million francs less than in January last year), and telephones, which were nearly a million francs down. The rise in the yield from the tax on turnover is explained, of course, by the sharp rise in commodity prices, while the continued poor value of the franc accounts for the persistent falling off in revenue from Customs duties.

GERMANY.—GOLD BANK—CURRENCY AND PRICES —FINANCES—FOREIGN TRADE IN 1923—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, February 12.

THE State elections in Thuringia and Lübeck have resulted in severe Socialist defeats, which are considered to foreshadow voting at the next election to the Reichstag. In both States the Red majorities have been wiped out. In Thuringia the ratio of all the "bourgeois" parties to the Left groups is 38 to 27. The movement is away from moderate Socialism towards Communism and Conservatism, the Communists in Thuringia winning six seats and the "bourgeois" parties twelve. In a statement to a Swedish politician, the Chancellor, Dr Marx, declared that Germany's attitude towards Reparations is essentially the same as that expressed in the Note of June, 1923, that to-day are still offered the same securities (mortgages on State and private property, and Customs), and that the Budget can be balanced and the currency stability maintained only if the Republic's economical and financial sovereignty in the Ruhr is restored. The position as regards the proposed gold bank, or banks, is as follows: The Experts Committee agreed unanimously on the main features of a gold-currency bank. As the plan must be referred to the Reparations Commission, and would presumably take some months at least to realise, the Reichsbank President, Dr Schacht, is going on with his own plan for a provisional gold credit bank. According to a Press communiqué, the experts accept Dr Schacht's plan. Later the gold-currency bank would issue its own notes in exchange for the notes of the Reichsbank, of the Rentenbank, and of the provisional gold credit bank.

The need for a stable currency usable in foreign trade, and quotable on foreign bourses, in place of the present mostly nominal quotations of paper marks, which have all the less meaning because within Germany the paper mark now plays a subordinate rôle, was shown last week by a mild exchange panic. The paper mark temporarily weakened abroad, and the home demand for foreign exchange increased so much that the Reichsbank, which for some time past had rationed only sterling and dollars, and had satisfied 100 per cent. of the demand for other currencies, was obliged to ration also these currencies severely. The crisis seems to have been got over. There was a good deal of talk of manipulation, but it seems (here the history of the spring of 1923 repeating itself, with the difference that then credit was in paper marks) that the very large Rentenmark credits granted of late to business were partly used for buying up exchange. The danger of this was pointed out by good authorities days before the crisis. For even a temporary shaking of faith in the present currency there was no reason, because

the home buying power of the Rentenmark and of the paper mark (at its now fixed depreciated value) are well maintained. That the mere issue of Rentenmarks could produce a kind of inflation was pointed out from here six weeks ago. As compared with the last paper mark days, the Rentenmark brought an enormous increase in buying power.

The increased demand for foreign exchange may also be put down partly to the more liberal import policy of late pursued; at present there are on sale everywhere expensive foreign luxuries which had not been seen by Germans for ten years. The cost of living index number on February 4th was 104 (basis 100 in 1914), against 106 a week earlier and 153.5 on November 26th. The official wholesale index number for February 5th was 113.9, against 114.8 a week earlier. The *Frankfurter Zeitung's* index number for January 31st is much higher, being (converted to a 1913 100 basis) 143.06. The municipal statistician Kuczynski puts the minimum cost of living in Berlin in January for a married couple with two children at 27.74 gold marks, against 30.85 gold marks in December, and 28.80 gold marks in 1913-14. Only 1.10 gold marks a week is allowed for rent, and this largely accounts for the cheap living cost.

The Reichsbank statement for January 23rd shows, for the third time in succession, a decline of circulation, which fell by 21,531,768 billions to 457,190,999 billions. The chief feature of the statement is the continued heavy demand for credits, which led the Reichsbank to borrow 100,000,000 Rentenmark, booked as 100 trillion paper marks from the Rentenbank. A debt to the Rentenbank thus for the first time appears among the Reichsbank's liabilities. Paper mark private discounts increased by 54 trillions to 349 trillions, Rentenmark private discounts by 102 trillions to 288 trillions. Paper mark advances declined by 6 to 134 trillions, and Rentenmark advances increased by 9 to 190 trillions. The Rentenbank's monthly statement for January 31st shows no very great change from conditions at the close of December. The full statements are:

ASSETS.			
	December 31, 1923.	January 1, 1924.	1924. "pro"
Mortgages and bonds on land and industry	3,200,000,000	..	3,200,000,000
Credits to Republic—			
Non-interest bearing	200,000,000	..	200,000,000
Interest-bearing	1,000,000,000	..	900,000,000
Credits to industry—			
Through the Reichsbank	..	..	200,000,000
Through the private note banks ..	33,995,000	..	61,970,000
Temporary credits to Reichsbank and posts	220,000,000	..	210,000,000
Cash balances, &c.	11,268,754	..	4,083,799
Office equipment	51,600	..	54,746
LIABILITIES.			
Capital	2,400,000,000	..	2,400,000,000
Reserve	800,000,000	..	800,000,000
Note circulation	1,241,999,853	..	1,374,084,422

The Republic on January 31st paid back 100 million Rentenmarks of its debt, reserving the right to borrow it again; also the posts paid back part of their debt.

The improvement in the finances continues. The third decade report for January (January 21-31st) shows revenue from taxation 174,143,696 billions, receipts from sale of gold loan 2,911,053 billions, and various administrative receipts 11,713,375 billions; total receipts 188,768,124 billions; expenditure, 199,100,205 billions; deficit, omitting the gold loan borrowing, 10,332,081 billions. Under the new system by "revenue from taxation" is meant net revenue, after deduction of the expenditure of the finance bureau. This report is very favourable, because though covering ten days only, it includes most federal salaries and salary supplements to the States and municipality for half a month. In all January the net taxation yield was 440.8 trillion paper marks, against 164.5 trillions in December; expenditure 442.7 trillions, against 499.4 trillions; daily receipts 16.9 trillions, against 7.2 trillions, and daily expenditure 17 trillions, against 21.7 trillions. Expenditure includes all payments out—for extraordinary Budget, for execution of the peace treaty, and for liquidation of the Ruhr affair. The increase in gold revenue since the currency reform is well shown by the following, it being noted that the paper

mark ceased to depreciate on November 20th, five days after the Rentenmark appeared:—

Terms.	Net Tax Receipts in Goldmarks.
October 21-31	400,000
November 1-10	480,000
11-15	1,720,000
16-20	1,200,000
21-30	6,050,000
December 1-10	14,390,000
11-20	41,050,000
21-31	87,540,000
January 1-10	96,440,000
10-20	150,180,000
21-31	174,143,696

The improvement is almost wholly due to the currency stabilisation.

The foreign trade report for December confirms the recent prophecy that exports in 1923 would prove almost to cover imports. The figures, owing to lack of data from occupied territory, are not quite perfect:—

(In 1,000's.)

	Imports.		Exports.	
	Dec.	Jan.-Dec.	Dec.	Jan.-Dec.
	Gold Mk.	Gold Mk.	Gold Mk.	Gold Mk.
Live animals	3,233	32,544	500	3,122
Food and liquors	189,621	1,203,725	10,741	131,367
Raw materials	280,938	3,106,878	37,652	267,499
Half-finished ditto	44,344	806,016	34,571	362,670
Manufactured ditto	71,002	920,391	476,384	5,199,731
Precious metals	3,207	11,839	1,267	14,765
	492,367	6,081,391	561,115	6,079,154

As compared with 1913, trade in 1923 was small. In spite of the rise since 1913 in gold prices, imports were only 54 per cent. of those of 1913, exports 59½ per cent. If 1923's trade value is calculated on the basis of the prices of 1913, imports were only 43 per cent. of that year, and exports 52½ per cent. December exports of paper, rolling mill products, machines and iron wares show an increase; exports of furniture and wood wares a decrease. Paper exports in 1923 exceeded the pre-war figure. Textiles exports were larger than in 1922.

AUSTRIA.—POLITICS—PUBLIC FINANCE—ECONOMIC POSITION—NEW TAXES—SILVER COINS— MONEY, STOCKS, AND EXCHANGE.

(FROM OUR CORRESPONDENT.)

VIENNA, February 1.

In the Austrian Social Democrat Party two movements are to be observed at present, one, led by the Lord Mayor of Vienna and former president of the Republic, Mr Seitz, favours a more moderate trend, and would be prepared to a coalition with the Christian Socialist Party and to the formation of a Coalition Cabinet, provided that the Chancellor, Dr Seipel, the *bête noire* of the Socialists, resigns. The radical element of the Socialists, however, under the leadership of Dr Bauer, reject every idea of coalition, and still hope to be able to carry through the Marxist theories. For the time being the moderate element prevail, and by the assistance which they have given to the State officials in their fight against the Government for higher salaries they have, without doubt, increased the number of the followers of their party.

The returns of public revenue for the month of October, 1923, just published, show that also in this month the deficit was below the estimate: it amounted to 63 milliard kronen, against 188 milliard kronen in the estimate. However satisfactory this reduction of the deficit may be, no improvement is to be noticed in the development of the balance of trade. In November the deficit of the balance of trade amounted to 85.2 million gold kronen, against 58.7 million gold kronen in October; in the first eleven months of 1923 this deficit amounted to 571.4 million gold kronen, i.e., 27 million gold kronen more than for the whole of 1922. Of the imports, 36 per cent. were foodstuffs, 11 per cent. fuel, 19 per cent. raw materials and semi-finished goods, 34 per cent. finished industrial products; 78 per cent. of the exports were industrial products. The essential point for the further development of the financial situation of Austria is, whether it

will be possible not only to augment the revenue by the continuous increase of rates and taxes, but also to carry through effective measures for public economy. With regard to the latter point, it is said that the opinions of the Commissioner-General, Dr Zimmermann, and of the Austrian Commissioner for Public Economy, do not harmonise, so that the latter is said to harbour the idea of resigning.

The economic conditions have taken a slight turn for the worse during last month. Unemployment and the number of insolvencies have increased. Whilst the number of unemployed in November amounted to 75,810, in December to 77,782, it grew in the beginning of January to 95,069. The reasons for this increase are the winter pause in the building activity and slow business in the metal and timber industries; the motor-car industries especially suffer from foreign competition, so that the employers are considering a reduction of wages, in spite of the accentuated increase in the cost of living. The number of insolvencies shows the following rise during the last month: July 39, August 45, September 51, October 68, November 76, and December 93; frequent insolvencies happened particularly in the textile and clothing lines. The last index again shows an increase of 4 per cent. in the cost of living, and for next month a further rise is anticipated as the prices of flour, bread, and the expenses for rent and clothing have risen. The index figure for January, 1924, as compared with the cost of living in July, 1914, is 14565, i.e., the present cost of living is 14,565 times as much as before the war. Owing to these difficult conditions, it is anticipated that employees and workmen will soon bring forward renewed claims for higher wages.

Parliament will shortly be engaged in the discussion of the new Tax Bill. Whilst the "income-tax" and "earning tax" will be lowered in order to encourage people to give more correct statements of their incomes, a new yearly "property tax" will be introduced, which the taxpayer himself will have to calculate on his capital according to his acknowledged income. This tax is, of course, nothing else but an additional charge on the income-tax. The "tax on the turnover of foreign currencies" will be considerably lowered, as this tax has caused the emigration of the greater part of the transactions in foreign currencies from the Vienna Stock Exchange to the markets of the Succession States. Influential bankers have warned the Government that the proposed increase in the "tax on stocks and shares turnover" will probably have the same pernicious effect on the Stock Exchange.

The necessary amount of silver for the proposed coinage of Austrian shillings has already been purchased in London. The coinage of the shilling, however, will probably last some months, consequently the issue of the new 100 and 200 kronen coins, which are already finished, will also be delayed.

The Vienna Stock Exchange has for some time been in a state of complete stagnation. The Austrian public, frightened by the proposed increase of the "stock and shares turnover tax," stands aloof, and speculation has a predominantly bear tendency at the moment. In addition to this, foreign capital, as well as leading Austrian capital, is at present fully engaged on the Paris market, and considerable sales of Austrian securities have taken place on the part of foreign shareholders. These sales have also caused a noticeable reduction in the National Bank's holdings in foreign currencies, which reduction amounted in the second week of January to 220 milliard kronen, and

is estimated to have been 152-160 milliard kronen in the third week. Money was plentiful during the whole month, and was offered at rates varying between $\frac{1}{4}$ to $\frac{1}{2}$ per cent. per week. Foreign exchanges showed but little fluctuation during the last month. The pound fell gradually, in accordance with its fluctuation on the New York market.

RUSSIA.—STATE INDUSTRIES—FOREIGN TRADE—CONCESSIONS—STATE FINANCE.

(FROM OUR CORRESPONDENT.)

Moscow, February 2.

DURING December and January considerable attention has been focussed on the question of the restoration of agriculture. A decree of January 12th by the Central Executive Committee and the Council of Peoples' Commissars establishes the sale of agricultural machines and implements by State enterprises to the peasants at pre-war prices, the tchervonetz rouble being taken as equivalent to the pre-war rouble. The Finance Commissariat will assign a special sum of 3 million tchervonetz roubles to the State Bank for furnishing one to five-year credits to the peasants to facilitate the purchase of the machines and implements and to cover the loss incurred by the State factories in selling below cost price. During the past year the high prices of agricultural machines produced in Russia have risked a complete stoppage of further production. The necessity of placing manufactured goods on the market at a price at which purchasers can be found has obliged the Government to study more deeply the question of the rise in prices of industrial products in relation to the purchasing capacity of the population. Mr Rykov, who will probably succeed Lenin as President of the Council of Peoples' Commissars, in his reports sees the only issue to this precarious situation in a systematic lowering of prices which would give the possibility of a regular sale of manufactured goods, particularly to the villages, which should take 20 times as much as the towns, whereas as Mr Groman, of the Gosplan, points out, at present the towns are consuming approximately the same amount as the villages. This, however, again raised the whole question of the nationalisation of industries and credit referred to in the *Economist* of December 1st. However, there are obvious wastages which might at once be checked, as is stated in the draft decree of January 16th of the Council of National Economy, the consumption of fuel in the State industries is twice as great as before the war, the number of workers is excessive, e.g., to produce 1 pood of cotton goods 2.14 man days were necessary before the war, whereas now the comparative figure is 3.20, and the supplementary expenses have risen to an absurd height, e.g., in respect of 1 barrel of cement, pre-war 1 rouble 16 kopecks; now 2 roubles 45 kopecks, &c.

During the year ending September 30, 1923, 99,123,476 poods (1,650,000 tons) of grain, &c., were exported from Russia to the following countries:—

	Poods.		Poods.
Germany	29,218,495	England	2,029,843
Holland	17,703,701	Italy	5,801,129
France	11,206,073	Greece	1,116,326
Finland	6,211,025	Estonia	1,359,159
Denmark	6,180,821	Latvia	2,856,903
Turkey	5,687,435	Belgium	3,507,004
Norway	4,664,703	Poland	21,000
Sweden	1,559,859		

The Customs Authorities have recently published calculations in regard to imports and exports during 1922-23, from which it appears that, in thousands of roubles at pre-war prices, imports in 1922-23 were 147,892, against 1,144,396 in 1913, and exports 133,241, against 1,232,752. Of this 50,434,624 poods were rye and 23,690,925 wheat.

The resources from which foreign trade was financed during 1922-23 were as follows:—

	Million Gold Rbls.
1. Provided by various organisations engaged in foreign trade (including co-operative organisation, 15 millions; State trusts, 30 millions; State organisations for development of raw materials, 15 millions)	150
2. Advances from State budget	87
3. Bank credits	145
4. Other credits	76
Total	458

Among the concessions (excluding mixed companies) ratified since September 1st last, the following are the most important:—(1) Smith concession to an American group for exploiting gold-bearing land in the basin of the Amour and the Kharga, tributary of the Selenga. Term, 24 years. The concession holder is to pay the Government on the basis of the number of hectares worked and 5 to 8 per cent. of the gold produced. (2) Germano-Russian Agricultural Society. Concession of 25,000 desiatines, formerly Kobsari and Pchenitchnoe properties, situated at Iershov on the Riazan-Oural Railway. The agreement was not concluded direct with the Soviet Government, but is more truly a sub-concession for 36 years taken over by the German Volga Bank at Petrovsk, which obtained in June last an agricultural concession of 110,000 hectares. In the first two years 14.5 per cent., the following two years 17.5 per cent., and from the fifth year 19.5 per cent. of the gross receipts must be paid to the German Volga Bank. (3) Italo-Belgian Limited Company, for exploiting for 30 years naphtha, natural gas and ozokerite in the Chirakh steppes (Sighnakh district). The company have to deposit a guarantee with the Government for the fulfilment of the agreement. (4) Benz and Wirt Company, for trade with the East, and for taking over for 24 years a factory for colours in Petrograd, formerly the property of the company. The company binds itself to being the production of colours and lithographic ink, &c., up to 35,000 poods within three years. Machinery for the work may be imported free of customs dues, provided machinery on the same conditions cannot be obtained in the S.S.S.R. A yearly rent of 15,000 gold roubles is to be paid to the Government for rent of factory, also 10 per cent. of the production. The number of foreign experts and workmen is to be limited to 10 per cent. of the total workmen employed. (5) The Polish Company Raabe of Warsaw have taken over for 25 years a nail factory at Neretcha, in the Kostroma Government. The Government reserves the right of repurchase within 18 years.

The Otto Wolf concession (German-Russian Trading Company) referred to in the *Economist* of December 23rd after working for one year has been annulled by Mr Wolf on account of difficulties between the Government and the company.

Passing to the financial policy of the Government, Mr Sokolnikov stated on January 15th that of the 1923-24 budget total of 1,750 million tchervonetz roubles, 356,800,000 roubles will be covered partly by credit operations and partly by paper emission which is not expected to exceed 180 million roubles as compared with 399 millions in 1922-23. The revenue in kind is expected not to exceed 3.2 per cent. of the budget as compared with 10 per cent. in the previous year. The revenues from State enterprises which in 1922-23 amounted to 476,810,000 tchervonetz roubles, is anticipated in 1923-24 to reach 803 million roubles. Subsidies to industry are expected to fall from 400 million tchervonetz roubles in 1922-23 to 69 millions in this financial year. The Railway Commissariat received last year a subsidy of 151 million tchervonetz roubles; it is hoped to reduce this figure to 34 millions. Assistance to agriculture this year to the extent of 72 million tchervonetz roubles is estimated.

THE PAST YEAR.

THE following pages, in which the story of 1923 in a great variety of trades and industries is reviewed in detail, will find abundant evidence that the past year was one of definite progress in the economic sphere. This improvement has been achieved in spite of the disappointment in the hope, current when the year began, of a clearing up in the field of European politics. The year was only a few days old when the Paris Conference broke up, Mr Bonar Law and M. Poincaré agreed to differ, and France and Belgium proceeded to put into execution their plans for occupying the Ruhr—an action which has in no small measure dominated the course of economic, as well as of political development. At home the year falls definitely into three periods. The occupation of the Ruhr produced a temporary expectation of higher prices and stimulated certain special trades in this country. This, together with increased American prosperity, resulted in a steady improvement in British trade for the first four months of the year. In May, June, and July there was, however, a setback; the harmful effects of the dislocation in Europe began to make themselves felt, and the checking of the upward movement in America, together with uncertainty in India and the Far East, produced a halt. In August, however, the forward movement was resumed, production and employment steadily improved, until at the end of the year they reached the best point of the last three years. Turning our eyes abroad we find the United States of America exceptional in that they experienced a full flood of prosperity, production in that country being greater than at any time in their history. Canada has enjoyed a good time, though by no means to the same extent. The situation in Australia has steadily improved, and recovery at the end of the year is marked in India, South Africa, and even in South America. Europe received a very serious setback through the occupation of the Ruhr and the gradual strangling of German economic life, but as the year has gone on the world has shown a great power of adapting itself even to the most abnormal conditions, and outside Germany the last half of the year has seen some recovery in most countries. The most outstanding and significant features of the year in Europe are the slow

but definite re-entry of Russia into the world's trade, assisted by a greatly improved harvest; and the success of the League of Nations experiment in Austria in stopping the rot in that country, and in producing a feeling of confidence, justified by experience, that international co-operation is capable of achieving great results in reconstruction. This impression is made the more likely by the adoption just after the close of the year of a not dissimilar scheme for the rehabilitation of Hungary.

Measured in unemployment, the actual progress of the year can be seen in a large absorption into occupation of workers, for the unemployed total, which was 1,408,000 when 1923 began, had fallen to 1,174,000 at the close. Furthermore, the Trade Union percentage of unemployed members, which at the beginning of the year was 14 per cent., had at the close fallen below 10 per cent. for the first time since the early part of 1921. In the volume of our import and export trade there was, according to the calculations of the Board of Trade, an improvement of between 11 and 12 per cent., this being largely due to the increased export of coal. Coal output, which received the greatest stimulus from the occupation of the Ruhr, rose to 280 millions, which is practically at pre-war level, and compares with 250 millions in 1922. Pig-iron output, though not so good as before the war, reached 7½ million tons, compared with less than 5 millions in the previous year, while steel output amounted to 8 million tons, compared with 6 millions in 1922. This figure is substantially better than before the war, though not so good as during the war. Building has steadily improved, thanks to lower prices, and at the end of the year the industry was faced with the problem of an inadequate supply of skilled labour. The textiles trades, particularly cotton, remained in a depressed condition, and though Lancashire reported a little more business towards the end of the year, the financial position of many firms still gives rise to anxiety. The wool trade during the previous years of depression has perhaps been less affected than other industries, but it began to suffer in the spring. The depression in shipbuilding, which is in perhaps a worse condition than any other trade, was exaggerated during the summer by a long-drawn-out dispute with the boiler makers, so that the yards were at a standstill. A certain amount of work, accumulating in the meantime, has produced a little revival even in this industry. It is only honest to say that hopes in this direction are not very high, and cannot be until shipping, which is so much in excess of the world's requirements, is in a better condition. Freight rates have been back somewhere near the pre-war level through most of the year. It is only in the last three months that there has been some small rise as a result of the slow expansion of the world's overseas trade, and a special demand for tonnage in the Pacific, which has arisen in consequence of the disastrous earthquake and fire which destroyed Tokyo and Yokohama in September. The volume of general merchandise carried on the railways of the country and the number of unemployed all confirm the tendency of affairs in the three periods to which we have referred. Prices end the year slightly higher than at the beginning, having dropped to a minimum in July. With the check to the fall in prices came also a check to the long process of wage reductions.

A feature of the business expansion has been that it has been steady and gradual, unaccompanied by inflation or any of the violent attributes of a boom, which lead to inevitable trouble later on. Had there been a boom sufficient to involve a shortage of industrial capital, gilt-edged securities would have fallen, and those with variable dividends have risen. As it was, the two moved together, reaching a peak in April, then falling away in the summer, and enjoying a recovery in the latter part of the year, which, however, was disturbed by the General Election and its results. The course of events shows that money has not been taken from the Stock Exchange, but that prices seem to have been carried up or down mainly on psychological considerations. The year in the money market has been free from great excitement, and only one important

incident stands out—namely, the raising of the Bank rate from 3 to 4 per cent. in July. This was accompanied by a similar movement in the market rates and in the rate of interest on Treasury Bills, but it had little effect upon industry. However, it gave rise to considerable discussion in regard to monetary policy, the outcome of which has been the forceful expression of opinion in several quarters that the Bank should not pursue deflation for the purpose of getting back to par with the dollar exchange while industry remains so far below normal. The distinction, however, between a policy of stabilising prices and one of inflation has not been altogether understood, and some indiscreet words of a Cabinet Minister led to the fear that Great Britain was going to pursue an inflationist policy. This view, though denied by the Government, together with the announcement that the Labour Party still stood for a Capital Levy, had some effect in frightening foreign investors in Great Britain, caused some transfer of capital, and contributed to a very considerable fall in the dollar exchange.

As regards public finance, the year was by no means unsatisfactory, considering the difficulties of the period. The rapid flow of revenue in the early months put the Chancellor of the Exchequer in possession of a surplus of £100 millions, which, as it accrued, was devoted to paying off debt, over and above the satisfaction of the statutory sinking fund. The regular payment of our debt to America has begun, and a statutory Sinking Fund, which next year will be £50 millions, has been instituted. This year, in spite of concession on the beer duty, a further reduction of 6d in the income-tax, and remission in respect of the corporation tax, there is reason to think that there will be an appreciable surplus from the Budget, which will cover the consequential fall in next year's revenue resulting from concessions made last April by Mr Baldwin. Everything, however, depends on the plans for the first Labour Budget, which the new Chancellor, Mr Philip Snowden, has not yet divulged. A study of the facts of British public finance suggests that there is nothing wrong with British credit.

The year 1924 has opened with strong hope of continued progress—a hope enunciated by the leading bankers in their annual speeches. Its fulfilment would be greatly assisted if the expert committee now investigating the problems of German finance and reparations were able to take Europe a real step nearer the solution of her troubles. On the other hand, it may be gravely obstructed if the short-lived railway strike is to be followed by other and more serious national hold-ups. But given an absence of strikes, and a brightening in the European position, 1924 should hold in store a better economic experience than its predecessor.

OVERSEAS TRADE.

The Board of Trade returns show that the total turnover of British merchandise trade in 1923 was £1,984 millions, which compares with £1,828 millions in 1922. The figure is also higher than that for 1921, namely, £1,897 millions; but 1920, the year of booming trade and high prices, remains the peak year with its total of £3,490 millions. But in making these comparisons it must be remembered that they are not exact, because, in April last, the Irish Free State returns were separated from ours. The summary for last year's value figures for imports, exports, and re-exports compares with 1922 as follows:—

	Calendar Year.		Increase in 1923.	
	1922.	1923.		
Imports	1,003,098,899	1,098,015,585	+ 94,916,686	+ 9.5
British exports ..	719,507,410	767,328,656	+ 47,821,246	+ 6.6
Re-exports	103,694,670	118,572,694	+ 14,878,024	+ 14.4
Total exports	823,202,080	885,901,350	+ 62,699,270	+ 7.6
Excess of imports over total exports	179,896,819	212,114,235	+ 32,217,416	+ 18.0

These figures refer to merchandise only, the bullion and specie figures being as follows:—

	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
1921	49,676,047	59,348,158	10,264,443	12,045,422
1922	34,542,167	44,835,292	10,099,890	13,235,269
1923	43,986,655	57,434,355	9,611,055	11,687,714

The year saw a rise in the total of our import excess on the merchandise figures, from £179.9 millions to £212.1 millions, or £17.6 millions per month, which compares with about £111 millions per month before the war. How the merchandise trade balance has moved in recent years is shown below:—

	Excess of Imports.		Excess of Exports.	
	Mlns. of £	Mlns. of £	Mlns. of £	Mlns. of £
1913	133.9	1919	662.8	
1914	171.7	1920	375.4	
1915	367.9	1921	275.2	
1916	344.6	1922	179.9	
1917	467.4	1923	212.1	
1918	783.8			

An estimate recently published by the Board of Trade gives Great Britain's real trade balance for 1923, after allowing for invisible exports, as £97 millions, as compared with £155 millions in 1922.

The following are figures of the quantities of exports of leading British manufactures in 1923, as compared with the previous three years:—

	EXPORTS.			
	Quantity (000's omitted).			
	1920.	1921.	1922.	1923.
Coal	24,932	24,661	64,198	79,449
Pig-iron and ferro-alloys ..	579	136	794	894
Railway material	311	340	480	493
Total of iron and steel and manufactures thereof ..	3,251	1,697	3,401	4,319
Textile machinery	63	157	155	139
Total machinery	462	506	403	432
Cotton yarns	147,432	145,895	201,221	145,019
Cotton piece-goods	4,435,405	2,902,289	4,181,176	4,141,303
Wool tops	238	347	416	389
Woolen tissues	187,233	76,556	121,489	148,641
Worsted tissues	77,355	40,814	62,458	62,948
Linen piece-goods	93,045	39,962	77,421	89,672
Boots and shoes	819	313	492	796
Leather	271	228	232	260
Paper and cardboard	2,350	1,463	2,455	4,348
Locomotives	43	47	32	35
Motor cars and chassis	8	4	3	4

The list as a whole is striking. Perhaps the further expansion of coal exports attracts notice first, last year's high figure having been easily surpassed. The exports of 79,449,000 tons in 1923 compare with 73,400,000 tons in 1913. There is little need to stress what is perhaps the principal cause of the expansion over 1922's figures. The Ruhr expedition has also affected the development in the next three items in the list. In all these, however, as consideration of the details of the destinations of the exports in the official returns shows, there is reason to believe that there have been increases not due to political events. The figures for coal do not include bunker coal, under which head the total for 1923 was 18,158,188 tons, as against 18,259,027 tons in 1922. While the iron and steel manufactures total in 1922 exceeded that of 1920, that of 1923, as will be seen from the table, is above the previous year's. This is one of the most encouraging features of the table.

HOME TRADE.

The most encouraging feature of the year was a slow but steady increase in the volume of business transacted in most trades, with a few exceptions, despite such discouraging factors as unsettled political conditions in Europe, high foreign tariffs, and the impoverishment of many overseas customers. This improvement was marked in the early spring, and after a slight halt during the summer months, a further advance was made which continued to the end of the year. Coal production exceeded the "record" of 1913; the recovery in pig-iron production lagged behind that of steel, the total output of which was larger than in the pre-war year. The cotton trade remained in a very depressed condition, and in some sections of the woollen and worsted industries the prosperity of 1922 was not maintained. Shipbuilding remained comparatively

lifeless, and shipping freights were at one time scarcely higher than in 1913, though a certain amount of recovery was registered by the end of the year. Given freedom from further political complications, however, there seems no reason to fear that the general progress made in 1923 will not be continued in 1924.

Our statistics of the profits of industrial companies, though of necessity a little behindhand, show unmistakably that profits have been on the mend, as may be seen from the following table:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).					
	No. of Cos.	Reports Published in		Increase.	
		1922.	1923.	£	%
First quarter	405	28,482,993	40,276,870	11,793,877	41.4
Second quarter	425	31,874,787	38,945,778	7,070,991	22.1
Third quarter	209	10,469,118	17,317,482	6,848,364	65.2
Fourth quarter	312	23,382,776	26,045,934	2,663,158	11.4
	1,351	94,216,674	122,584,064	28,367,390	30.6

At this time last year 1,371 companies showed a net decline in aggregate net profits of 29 per cent. Moreover, the quarterly increases of 1923, it will be seen, follow heavy declines in the corresponding periods of the previous year:—

	1918.	1919.	1920.	1921.	1922.	1923.
First quarter	-10	+10.4	+26.9	+3.5	-4.4	+41.4
Second quarter	-5.8	-5.1	+37.8	-8.4	-33.7	+22.1
Third quarter	+12.3	-3.4	+41.9	-3.4	-23.5	+65.2
Fourth quarter	+4.7	+10.5	+27.1	-52.9	+3.9	+11.4

The percentage earned on the total ordinary and preference capital shows a distinct improvement, while the average rate of dividend on ordinary shares has recovered, though not to the level of 1921 and the preceding few years:—

	PROFITS ON CAPITAL.			
	Return on Preference & Dividend on Ordinary Capital.	Preference Capital.	Dividend on Ordinary Capital.	%
1909	7.4	4.3	6.3	6.3
1910	8.2	4.5	7.0	7.0
1911	9.9	4.9	8.5	8.5
1912	10.2	5.2	8.5	8.5
1913	11.7	5.1	10.2	10.2
1914	10.9	5.0	10.0	10.0
1915	10.2	4.8	9.0	9.0
1916	13.2	5.1	11.0	11.0
1917	13.3	5.1	10.3	10.3
1918	13.6	5.1	11.1	11.1
1919	13.0	5.3	10.7	10.7
1920	15.2	5.0	12.6	12.6
1921	10.3	5.2	10.2	10.2
1922	7.0	5.2	8.4	8.4
1923	9.8	5.3	9.3	9.3

The average rate of ordinary dividend, though still below the war and post-war years, compares favourably with the average pre-war figure.

The total figures of the Bankers' Clearings cannot be taken as a definite index of the state of trade, since the "town" clearing figures, which represent a preponderating proportion of the total, are affected by so many large financial transactions, such as Stock Exchange dealings and Government operations in connection with the unfunded debt. The "metropolitan" clearing is practically free from these disturbing influences, while the country cheque clearing indicates fairly accurately the course of the general trade of England and Wales. As will be seen from the following table, there were in 1923 declines in the town and metropolitan clearings, but an increase in the country cheque clearing:—

	1922.	1923.	Increase or Decrease.
Town clearing	32,720,325,000	32,270,372,000	- 510,000,000
Metropolitan clearing ..	1,574,667,000	1,546,568,000	- 28,099,000
Country cheque clear.	2,806,165,000	2,810,654,000	+ 4,489,000
Grand total	37,101,157,000	36,627,594,000	- 553,869,000

An analysis of the figures, quarter by quarter, shows that there were decreases in the grand total in the first three quarters of 3.5, 1.7, and 5.4 per cent. respectively, and an increase of 5.2 per cent. in the final quarter. The increase shown in the last three months, coupled with other developments, such as the increase in bank deposits, in commodity prices, and in the volume of

currency notes and commercial bills in circulation, confirms the impression that trade is very definitely on the mend. Too much importance, however, cannot be attached to the bankers' clearing figures in this respect, for out of an increase of £467 millions in the total in the last quarter the town clearing accounts for £456 millions. This is attributable partly to new issues, which call for a considerable turnover of money, especially when they are largely oversubscribed. Four of the ten provincial clearings show increases in comparison with 1922, namely, Birmingham, 3.4 per cent.; Liverpool, 4 per cent.; Newcastle-on-Tyne, 9.6 per cent.; and Sheffield, 19.1 per cent. Decreases are shown by Bristol, 15.4 per cent.; Hull, 0.1 per cent.; Leeds, 4.7 per cent.; Leicester, 7.5 per cent.; Manchester, 1.8 per cent.; and Nottingham, 6.2 per cent. Only four centres show declines in the last quarter, the largest of which are Bristol, with a drop of 15.4 per cent., and Leicester, with a decline of 7.9 per cent.

The tonnage of goods and minerals carried by the railways of Great Britain reflect an expansion of internal trade. They are only available for the first ten months, but these show a substantial increase over the corresponding period of 1922, the largest advance being recorded for other minerals, which, of course, include iron and steel:—

FIRST TEN MONTHS.

	1922.	1923.	Increase.
Tons.	Tons.	Tons.	%
General merchandise.....	48,325,139	52,185,145	+ 3,860,006 + 8.0
Coal, coke, and patent fuel	172,315,107	184,404,184	+ 12,089,077 + 7.0
Other minerals	42,048,594	52,766,305	+ 10,717,711 + 25.5
Total.....	262,688,840	289,355,634	+ 26,666,794 + 10.2

The total tonnage carried in 1923 was over 366 million tons, or at the rate of over 300,000,000 tons for ten months. This is very little more than the figure recorded for 1923, in spite of the fact that a good deal of short-distance traffic has been transferred from the rail to the road.

COMMODITY PRICES.

Although during the greater part of the year 1923 commodity prices were fairly stable, there was a sharp upward movement towards the close in certain articles, which resulted in a net upward movement of 316 points in our Index Number on the year. This compares with a net decline of 93 points in 1922. The lowest point of the year was reached at the end of July, the figure then recorded being slightly below the lowest point reached in 1922. The widest fluctuation in 1923 was 398 points, which compares with 207 points in 1922. In 1921 the difference between the highest and lowest points was 1,260, in 1920, 2,428, and in 1919, 1,656. The following table shows the year's movements in each of the five groups:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, Bor., Oils, &c.).	Total.	%
Basis (avg. 1901-5)	500	300	500	400	500	2200	100.0

" Dec., 1923..	863	815	1382	774	755	4580	208.2

Two groups contribute very largely to the year's increase in the total, other foodstuffs rising by 109½ points and textiles by 198 points. Sugar was the principal factor in the rise in the first, and cotton and cotton yarn and cloth in the second. Minerals increased by 69 points, but steel rails were unchanged on balance, and copper was slightly lower. In primary foodstuffs movements were mostly downward, rice and potatoes being prominent exceptions. In the miscellaneous group, which fell by 52½ points, the chief declines were in leather, petroleum, and indigo.

At the end of the year prices were 78.6 per cent. above the pre-war figure, which compares with an increase of 66.2 per cent. at the end of 1922 and the high record of 225.6 per cent. at the end of March, 1920. At the end of July of last year, the lowest point, the increase was 63.1 per cent. The table below, in which the indices for the end of July, 1914, are taken as 100, shows the movements in each group:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914 ..	100	100	100	100	100	100.0
Dec., 1918 ..	226	222	293	186	241	237.5
Dec., 1919 ..	249	250	396	247	263	287.1
Mar., 1920 ..	261	260	484	269	309	325.6
Dec., 1921 ..	233	229	209	261	230	230.9
Dec., 1922 ..	159	180	180	164	168	169.6
June, 1922 ..	174	192	184	149	160	171.1
Sept., 1922 ..	151	194	181	150	148	163.3
Dec., 1922 ..	149	200	193	152	146	166.2
Mar., 1923 ..	143	214	191	181	144	171.2
June, 1923 ..	141	220	191	167	137	167.7
July, 1923 ..	141	215	181	160	135	163.1
August, 1923 ..	143	216	182	158	134	163.3
Sept., 1923 ..	142	222	197	158	134	167.6

Nov., 1923 ..	144	226	226	166	135	177.0
Dec., 1923 ..	148	231	225	167	136	178.6

Other foodstuffs and textiles at the end of the year were still substantially above the average, while miscellaneous commodities were very low, being only 36 per cent. above the pre-war figure.

Retail prices close the year at much the same level at which they began, as will be seen from the following table giving the Ministry of Labour's cost-of-living figure month by month:—

AVERAGE PERCENTAGE INCREASE since JULY, 1914.—All items.
(Food, Rent, Clothing, Fuel, and Light, &c.)

Month (beginning of)	1918.	1919.	1920.	1921.	1922.	1923.
January	85.90	120	125	165	92	78
February	90	120	130	151	88	77
March	90	115	130	141	86	78
April	90.95	110	132	133	82	74
May	95.100	105	141	128	81	70
June	100	105	150	119	80	69
July	100.105	105.110	152	119	84	69
August	110	115	155	122	81	71
September	110	115	161	120	79	73
October	115.120	120	164	110	78	75
November	120.125	125	176	103	80	75
December	120	125	169	99	80	77

The figure for the beginning of January, 1924, was unchanged at 77.

At the beginning of 1923, railway rates were, on the average, 75 per cent. above the pre-war level, except for coal, and iron and steel products, which were 60 per cent., and iron ore and limestone for blast furnaces and steel works, which were 40 per cent. above. These percentages are somewhat understated by reason of the flat rate additions, varying from 2d per ton to a maximum of 6d. On May 1st, agricultural rates were reduced to 50 per cent. above pre-war, and rates on other commodities which were above 60 per cent. were reduced to this figure. On August 7th, a further general reduction took place to 50 per cent., so that railway rates for traffic generally, apart from the incidence of the flat rate, are now at 50 per cent. above those prevailing before the war, except in the case of

iron ore and limestone for blast furnaces and steel works.

The flat rate addition bears particularly hardly on those industries whose average length of haul is short, and the Mining Association have therefore applied to the Rates Tribunal for its total abolition in the case of fuel, on the grounds that the imposition of the flat rate was a war-time innovation which is no longer justified. It is understood that the National Federation of Iron and Steel Manufacturers has filed a similar application in the case of iron and steel. The reduction to 50 per cent. on merchandise train traffic now also applies to articles sent by passenger train.

Before January 1, 1923, dock dues were still at 100 per cent. or more above 1914; on that rate, however, all railway-owned docks reduced their charges to 75 per cent. above, and on July 1st dock dues were further reduced to 60 per cent. above. These reductions were due to the united efforts of traders through the Traders (Dock Charges) Co-ordinating Committee, and a number of non-railway docks were naturally forced to follow the railway companies. The one outstanding case where dock charges are still over 100 per cent. above 1914 is the Manchester Ship Canal. The rates on inland water-borne traffic were also reduced during the year to 50 per cent. or 60 per cent. above the pre-war figure.

Shipping freights in 1923 were largely unsatisfactory to owners. After remaining fairly steady at about 13 to 15 per cent. above the 1913 level in the first five months of the year, our freight index number fell rapidly during the summer, and in August was down practically to the pre-war level. Thereafter a recovery took place, in which the good harvests of the year in almost every country played an important part, and by December the index had risen to nearly 12 per cent. above 1913. The mean figure for the twelve months, however, showed a marked decline at 10 per cent. over 1913, as compared with 22 per cent. in 1922 and 58 per cent. in 1921.

MONEY MARKET.

The history of the money market in 1923 was uneventful. Bank rate was changed only once, on July 5th, when it was raised from 3 to 4 per cent. This movement was dictated less by considerations of international trade, formerly the main factor in Bank rate, than by the suspicion that easy money here was being used to build up an unhealthy Stock Exchange speculative position both on domestic and foreign account, and the fall in securities which followed the movement rather suggested confirmation of the suspicion and justification for the movement. Our level of money rates was, of course, below that of the United States, where the New York Federal Reserve rate had been raised to 4½ per cent. in February; but, apart from this incident, the home money position has remained remarkably oblivious to fluctuations of foreign Bank rates, a circumstance which to some extent goes to support the contention that under inconvertible paper currencies the influence of Bank rate does not extend much beyond frontiers, whatever may be their uses internally. The rise in our own Bank rate in July naturally affected the price of money here, but not its supply or volume. The supply has still been dependent upon Government finances, the position at any particular moment being determined by the extent to which Government disbursements have been offset by sales of Treasury Bills, or the collection of Government revenues liberated by repayment of Treasury Bills or their purchase in the market.

Neither the banks nor the discount houses were able to make such good profits as in 1922, the latter having been able to do particularly well in 1922 from operations in short-dated securities. Dividends, however, were maintained at the 1922 rates, allocations to reserve funds being on a smaller scale, thanks to the

appreciation in security values. Deposits, which were declining during the first part of the year, show practically no change on balance, there having been a substantial increase in the last quarter. The following table gives the weekly average balances for the last month of each quarter for the nine English clearing banks, and also the balance-sheet figures at the end of 1922 and 1923:—

(Million £'s.)						
	Dec. 31, 1922.	Weekly Averages.				Dec. 31, 1923.
		March, 1923.	June, 1923.	Sept. 1923.	Dec., 1923.	
Capital and reserves.....	1161	1162	1163	1163	1163	1164
Acceptances	730	793	738	737	991	991
Deposits (incl. undiv. profits, &c.)	1,687.8	1,596.4	1,637.7	1,609.6	1,673.1	1,684.6
Total liabilities	1,876.9	1,792.5	1,827.8	1,798.6	1,885.5	1,900.1
Coins, notes, balance at bank, and cheques in course of collection	279.9	232.3	240.7	230.2	254.1	280.8
Money at call	1075	1044	1133	1095	1113	1098
Investments	383.7	357.4	355.6	361.2	363.8	364.2
Discounts	278.9	250	270.2	260.4	276.3	264.4
Loans and advances	728.7	741.6	746.9	744.3	756.5	762.4
Cover for accept., premises, &c.	98.8	106.6	100.6	100.0	123.4	125.7
Total assets	1,876.9	1,792.5	1,827.8	1,798.6	1,885.5	1,900.1

The increase in acceptances gives an indication of some increase in overseas trade, while the expansion in advances must reflect some increase in the demand for trade accommodation.

We append our usual tables of average money rates:—

	1914.	1915.	1916.	1917.	1918.	1919.	1920.	1921.	1922.	1923.

FOREIGN EXCHANGES.

Instead of the quiet recovery for which the market hoped during the period under review, the complete failure to discover a solution for the reparation policy and the forcible entry of France into the Ruhr early last spring has been reflected in the misfortunes of another twelve-month's deterioration in the foreign exchanges. In the case of Germany this has degenerated into complete collapse. With regard to the franc and several other currencies, although measured over the year as a whole the additional depreciation was not much more rapid than during 1922, there was an acceleration towards the end of the period and a growing lack of confidence.

The history of sterling during 1923 has been a disappointing one. During the spring a steady improvement was recorded, which was helped rather than retarded by the conclusion of the arrangements for the repayment of the American debt. In April there was the beginning of a slight retrograde movement, account-

able for a large part by high money rates in New York. In July the rise in the Bank rate brought some improvement, but the pressure of autumn trade, the uncertain outlook in Europe, and the speculative advantage of the purchase of dollar securities, all militated against sterling, and in October irresponsible suggestions of an official policy of inflation frightened holders of sterling in all parts of the world, and caused a rush to convert into dollars. On the top of this, the disturbance of an election and the fear of the introduction by the Labour Party of a capital levy brought still more pressure, and for the first time sterling felt the same threat of a flight to the dollar under which so many European currencies have suffered.

While France, by its actions, succeeded in completely destroying the mark, it has at the same time during the past year gone far to destroy confidence in its own currency. As the year went on, the difficulties of its financial situation became increasingly clear, and it has become equally clear that pressure upon Germany was no effective substitute for neglect to face its own interest problem. A lack of trust in its own currency came at an earlier stage in Belgium, which in August started to run away badly, the movement only being stopped by the announcement of a loan from France. The lesson to the Belgian Government was a salutary one, and since then its weight has been increasingly felt on the side of moderation. Of our three main allies it is only to Italy that we can look with any satisfaction. Depreciation there has continued, but at a very slow rate, and there have been lately increasing signs of stabilisation. By the end of August the German mark had ceased to have any meaning as a unit of international exchange. Its later movements, until the improvement and provisional stabilisation with the introduction of the "Rentenmark," are of little importance, nor can the present phase give any promise of stability until the reparation question itself is settled.

On the bright side of the picture there is Austria, the one shining proof as yet of the value of concerted European action, soon, we may hope, to be followed by a similar experiment in the case of Hungary. It should not be forgotten, however, that the position of Vienna is still a delicate one, and that success is not yet finally proved. Again, the new currency of Lithuania, introduced in the autumn of 1922, has been maintained throughout the year on a virtual parity with the dollar. The currencies of Greece and Bulgaria both stand somewhat better than a year ago. Among the older countries of Europe, Sweden alone among the Scandinavian states has remained roughly on a constant ratio with the dollar, but its balance of trade is growing steadily more unfavourable, and it is by no means clear that it will stand the strain indefinitely. Holland, also, although the movement of German funds has caused some peculiar temporary fluctuations, has remained very stable. At the same time there are signs of uneasiness, and an unfortunately growing tendency to prefer dollar to home investments. Switzerland ended the year at a less favourable ratio to sterling. The Danish rate shows a further depreciation of about 2 kr as compared with sterling, but an improvement on the extreme depreciation of the middle of the year. The record of Norway, with a further depreciation of more than 5 kr on the year, is again an unfortunate one, and the banking difficulties which came to a head in May brought a period of great anxiety.

The same depreciation which is so widespread in Europe has had again serious reactions in South America. In Montevideo the fall in value, measured, at least, in sterling, is smaller, but in Buenos Ayres there has been a sharp decline, as some increase in exports had been more than overbalanced by the heavy burden of foreign obligations, and the outlook remains unsatisfactory. In Rio the rate has fallen even more rapidly, and again difficulties of home finance and the burden of indebtedness more than compensate for any improvement in trade. Substantial hope has been raised by the visit of the British Financial Mission now in Brazil.

The following table is extracted from statistics published by Messrs Samuel Montagu and Co.:

RATE OF EXCHANGE AS COMPARED WITH PRE-WAR PARITY OF THE £ STERLING.

	Pre-War Par Value.	December 31, 1923, Middle Rate.	Compared with its Pre-War Par Value the £ Sterling is at a Premium of		Purchasing Power of the £ Sterling as compared with its Pre-War Value.

NEW CAPITAL ISSUES.

New capital applications in the London market in 1923, apart from British Government borrowings, were £193.9 millions, as compared with £204.1 millions in the previous year. British Government borrowings in 1923 showed a large reduction, totalling £77.5 millions, against £369.6 millions in 1922, this big drop being accounted for by the slackening of the process of replacing floating debt by Treasury bonds, which was one of the chief features of British public finance in 1922. Colonial Government loans, with a total of £69 millions, were the feature of the past year. Of this total India took £20 millions in one operation, while the amount borrowed at various times by the Commonwealth and State Governments of Australia exceeded £25 millions. Other Governments from within the Empire to enter the market included Nigeria, Newfoundland, Sudan, Jamaica, and the Union of South Africa, while the Irish Free State made her first appearance in the last month, with a loan the details of which will be fresh in the minds of our readers. Foreign Governments also figure more prominently than in 1922, having taken nearly £26½ millions, as compared with £14½ millions. The foreign Government borrowers included the Dutch East Indies (twice), Roumania, and Austria. The £14-million Austrian Loan floated in June was the London portion of the international loan floated successfully under the League of Nations plan for setting Austria's finances in order, and, in view of the attempts in contemplation to set finances in order in other countries also, was perhaps the most noteworthy borrowing operation of 1923.

The amount of London's new capital applications in 1923 destined for employment abroad was over £137 millions. This progress in the re-instatement of London as lender to the world is one of the salutary features of the financial year.

As regards borrowers for general purposes, we find only two entries under the heading of British railways, both of them Underground issues made under the guarantee of the British Government in accordance with the terms of the Trade Facilities Act. Oil issues have been much less prolific than in 1922, while electric light and power concerns have borrowed much more. Another big decline comes under the head of docks, harbours, and shipping, and while the iron, steel and coal group total is smaller, the general manufacturing group has increased its figure. After the striking fall during 1922, interest rates were comparatively steady in 1923.

GOLD PRODUCTION.

Thanks almost entirely to an increase in Rand production—the outcome of more settled labour conditions—the world's gold output increased by about 13 per cent. in 1923, as compared with 1922. The output of the earlier year, it may be recalled, was affected by a several weeks' cessation of Transvaal production. According to Mr Joseph Kitchin, the British Empire's share of the total gold production of the world was 70.6 per cent. in 1921, 69.1 per cent. in 1922, and 72.4 per cent. in 1923.

The following table has been extracted from Messrs Samuel Montagu and Co.'s annual bullion letter for 1923, and shows that, while the value of Transvaal production in 1923 was much the same as in 1915, the year of maximum output, that of the world as a whole was still 25 per cent. below the 1915 level:—

GOLD PRODUCTION.

(In millions of £'s, at 84s 11½d per fine oz.)

Year.	Transvaal.	The Rest of the Empire.	British Empire.	Foreign Countries.	World.	Drop as Compared with 1915 (the Max'm) Output.		
						Transvaal.	British Empire.	World.
1913.....	374	21.4	58.8	35.9	947	%	%	%
1914.....	356	20.9	56.5	33.9	904	..	..	..
1915.....	387	23.0	60.7	36.7	964	..	..	..
1916.....	395	20.1	59.6	33.9	936	..	1½	3
1917.....	383	17.8	56.1	30.2	866	1	7½	10½

1923 (est.)	388	13.7	52.5	20.0	725	nil	13½	25

The only recorded issue of gold coin by any branch of the Royal Mint during the year was £3,485,190 issued in Australia. In 1914 the various branches of the Mint issued gold coin to the value of £23,744,549. During 1923, Messrs Samuel Montagu and Co. state, two fresh features appeared with regard to the marketing of gold. The Government arrangements that all the Transvaal gold should be sent to London for realisation ceased to be operative in August, and a quantity—under £2,000,000—still through the intermediary of London, was shipped from Durban direct to India. The Indian Government offered for sale £2,000,000 of gold out of the currency reserves to be delivered in India against payment in London. Contracts have been made for a considerable portion of this amount.

The highest price for gold carrying an export licence was 96s 11d, fixed on November 10th, and the lowest 87s 5d, fixed on February 21st. The price has been governed more or less by the exchange with the United States of America, to which was exported the larger proportion of available supplies, as shown in a succeeding paragraph.

THE STOCK EXCHANGE.

The year 1923 opened in the Stock Exchange markets with a considerable degree of liveliness. The political crisis that arose in regard to France over the Reparations question was for the moment counteracted by very substantial sums of money coming forward for investment on the turn of the old year. Perhaps the most important feature of the stock markets during the first half of the year was the remarkable manner in which the investing public absorbed new capital issues, and to some extent this enthusiasm may have reacted upon Stock Exchange dealings. By April stock and share prices had touched levels which radiated mild optimism throughout the House. A sharp fall occurred in July following the advance in bank rate to 4 per cent., which exposed a speculative position in high-class investment securities. There was a slight rally in September. Unwise inflationist theories put into circulation, combined with the General Election in December, caused considerable uneasiness, and severely depressed prices, the year finishing with a dominant note of depression. Consols started the year at 55½, and finished up at this price; during the 12 months they have fluctuated between 60 and 54½. Five per Cent. War Loan moved in similar fashion, beginning and closing at 100; at one time it was as high as 104½, while during the gloomy period it touched 99½.

The 365 representative securities listed by the *Bankers' Magazine* at the end of December were valued at £6,286 millions. By April the value had climbed to £6,599 millions, gradually to fall to just upon £6,347 millions in August; a rally sent the total value up to £6,407 millions, but by the middle of December the amount had dwindled to £6,256½ millions—a loss of £29½ millions on the year. The following table, taking the position at December, 1921, as equal to 100, shows the movement of these stocks month by month during the year. Fixed interest securities and those securities with variable dividends are shown separately and combined:—

VALUE OF SECURITIES.—(Dec., 1921 = 100.)

1923.	Fixed Interest.	Variable Dividend.	Total.
January.....	112.4	118.0	114.2
February.....	112.9	120.2	115.3
March.....	113.8	121.8	116.4
April.....	116.4	124.4	119.0
May.....	115.5	123.2	118.0
June.....	115.8	122.7	118.0
July.....	112.4	117.5	114.1
August.....	113.7	115.8	114.4
September.....	114.8	117.4	115.5
October.....	114.8	117.0	115.5
November.....	111.8	117.1	113.6
December.....	111.2	115.9	112.8

* 365 securities, nominal value £6,683.4 millions.

Foreign Government bonds moved in sympathy with the exchanges. French issues were particularly susceptible to the movement of the franc, even guaranteed sterling railway securities being affected. German and Prussian bonds followed the mark, but only in a very mild degree. Brazilians at one time were considerably depressed, but the announcement that a mission of British financial experts were about to visit Brazil caused attention to be turned to some of the neglected loans. Chileans moved upward. Naturally the calamity which overtook Japan cast a shadow over all Japanese issues, but later prices moved upward. Italians were weak, owing to the exchange position. Spanish bonds suffered by reason of the political changes in that country.

The large quantities of new Trustee securities in the Home Railway market which arose out of the grouping arrangements of the companies had the effect of keeping prices down to some extent, though when the issues became more familiar their absorption by the investor was only a matter of time. Great Western ordinary stock opened the year at 108½, and closed at 107, but London and North-Eastern deferred opened at 30½ and closed at 31½. Metropolitan ordinary began at 47 and finished at 54½, while Southern Railway deferred ordinary started at 35½ and finished at 38½. United States railway securities of all descriptions moved in sympathy with the dollar exchange. Atchison shares moved from 108½ to 111, Baltimore and Ohio from 44 to 67, and New York Central from 100 to 120. Canadian Pacific opened at 154 and closed at 169. Sharp falls took place in Argentine and Mexican railways.

In the early part of the year the Rubber share market presented a remarkably animated condition, but business gradually fell away. Oil shares held by numerous nervous holders were subject to sudden outbursts of selling, followed by meteoric price movements as reports, canards, or facts were put into circulation. Tea shares have been a strong market, and substantial rises have taken place. British Bank shares have been firm, while Insurance companies have made gains. The Shipping and Iron and Steel groups, however, show declines, and Cable and Telephone companies are not in popular favour, no doubt mainly because of the great interest taken in wireless developments.

At one time considerable interest was taken in Chartered, especially when a possible bonus distribution was talked of; this activity, however, petered out. South African mines finished up the year, with prices depressed all round, although the rise in the value of the precious metal, from time to time, caused upward movements. Copper mines proved disappointing as far as the market is concerned, but the rise in the price of tin compelled attention to tin issues.

THE AGRICULTURAL YEAR.

The year 1923 was marked by a singularly unpropitious June and by an extremely wet October. Sunshine records did not fall greatly below the mean nor rainfall exceed the average materially, but a sunless summer is always the cause of the year being looked back to as gloomy. August helped harvest, October gave a good aftermath and plumped at the roots. Autumn sowings have been the smallest for two decades, owing mainly to the severe fall in prices, the result of heavy crops in leading countries of supply from overseas. The prices of barley and oats have been low, as well as those of wheat, but maize and oilseeds have been comparatively dear. Ruling prices in London per cwt. in the first week of each month have been:—

	Average Wheat.		Malting Barley.		Feeding Barley.		F.A.Q. Oats.		F.A.Q. Maize.	
1923.	s	d	s	d	s	d	s	d	s	d
January	10	0	14	0	10	0	10	3	9	0
February	9	9	13	0	9	9	10	0	9	0
March	9	6	12	6	9	6	10	0	9	0
April	10	6	15	0	9	0	10	0	9	3
May	10	9	15	6	8	9	10	3	9	3
June	12	0	16	0	8	9	10	9	9	6
July	12	0	15	0	8	0	11	0	9	6
August	12	6	15	6	8	0	11	3	9	6
September	11	0	14	6	8	6	10	0	9	6
October	10	0	14	9	8	6	9	9	9	0
November	10	0	15	0	8	9	10	0	9	0
December	10	9	14	0	8	9	10	3	9	6
1924.	s	d	s	d	s	d	s	d	s	d
January	11	0	13	6	8	9	10	6	9	9

Wheat is averaged from English, Canadian, and Argentine, a blend giving a good type of loaf. American and Indian may replace Argentine at will, if cheaper, but the English for flavour, and the Canadian for strength, are indispensable. Imports of cereals in 1923 were decidedly large as regards feeding barley, rough grists, and potatoes, but were much below the average of maize, malting barley, and rice. Very ordinary totals were presented for breadstuffs, pulse, oats, and oilcake. Returns, in millions of cwt, are for three years as below. Shorter surveys of imports are apt to be deceptive.

	1921.	1922.	1923.
Wheat	80.48	96.38	100.93
Flour	15.81	13.47	11.72
Breadstuffs	96.29	110.85	112.65
Maize	36.76	37.20	34.54
Barley	15.81	12.76	18.14
Oats	8.4	9.4	9.7
Rice	6.8	2.7	3.2
Potatoes	3.0	3.4	4.8
Rough grists	43.9	43.6	63.2
Oilcake	7.4	7.5	7.7

The wheat was 32 per cent. American, 29 per cent. Canadian, and 21 per cent. Argentine; the flour was 60 per cent. Canadian, 34 per cent. American, and 5 per cent. Australian. Most of the feeding barley came from North America, and 60 per cent. of the maize was Argentine. The world production in 1923 is thus epitomised on the basis of returns to the International Institute of Agriculture. (Unit one million cwts):—

	Average, 1917-21.	Yield, 1922.	Yield, 1923.
Wheat	1,544	1,659	1,848
Barley	420	430	492
Oats	940	939	1,078
Maize	1,658	1,660	1,779
Potatoes	1,906	2,814	2,520
Rye	1,161	1,249	1,107

The average includes three years of reduced areas, the result of the war, and is perhaps as much as 20 per cent. below the last pre-war lustrum of five years. Rye, of little importance in this country, greatly affects the Continental trade in breadstuffs. The year's yield of the principal crops is estimated to have been as follows for England and Wales:—

Crops.	Estimated Total Produce, 1922.	Average, 1913-22.	Yield per Acre, 1922.	Yield per Acre, 1923.
Wheat .. cwt	33,478,000	29,900,000	17.1	17.2
Barley .. "	19,123,000	18,708,000	14.7	14.0
Oats .. "	26,033,000	26,019,000	13.3	11.6
Potatoes tons	4,012,000	2,656,000	6.0	7.1
Seed Hay .. "	1,828,000	2,541,000	28.4	22.7
Pasture .. "	4,413,000	4,574,850	21.5	18.4
Turnips .. "	10,908,000	10,828,000	12.3	13.3
Mangolds .. "	8,560,000	8,868,000	18.8	20.3

Under the Weights and Measures Act, 1921, which became law January 1, 1923, returns are somewhat differently stated from those under the Act of 1882. The new Act was supported by the three political parties, and will give us in future uniform returns by a fixed weight. Seeds, hay, are also known as rotation grasses and pasture as permanent grass. The importance of the aftermath and last year of a very wet October make hay and pasture returns late, and Government definitive returns are not expected before April. The estimates have taken all those generally current; the Scottish returns, which are issued, also support the view that 1923 production was very near the average. The figures are of much importance, as when hay is scarce a much increased call on dry food is usually registered.

EMPLOYMENT, WAGES, AND DISPUTES.

Although employment remained bad during 1923, there was considerable and steady improvement throughout the year in comparison with 1922. The mean of the twelve monthly percentages of unemployed was 11.5 per cent., which compares with 15.4 in 1922, 15.3 in 1921, and 3.3 in 1914. The monthly figure has shown an almost unbroken decline throughout the year, the Trade Union percentage having dropped from 14 per cent. in December, 1922, to 9.7 per cent. in December, 1923, and the percentage of insured workpeople registered as unemployed from 12.6 to 10.7 per cent. In December, 1921, over 16 per cent. of the members of Trade Unions, and over 17 per cent. of insured workpeople, were unemployed. The total number of applicants for employment on the Live Registers of the Employment Exchange in Great Britain and Northern Ireland at December 17, 1923, was 1,174,397, of whom 889,390 were men and 223,315 were women, the remainder being boys and girls. At the corresponding date of 1922 the total was 1,408,008, of whom 1,129,569 were men and 203,119 women. At the end of the year employment in certain industries, including coal mining, tinplate manufacture, and the carpet and jute trades, was good, and in some others it was fair. In many industries, however, including engineering, shipbuilding, cotton weaving, and the wool textile industry, it was bad. In the engineering trades there was some improvement during the first six months, but in the latter half of the year employment in some sections of the trade suffered from the effects of the prolonged dispute in the shipbuilding industry. In the latter the depression of the two preceding years continued in 1923. A slight improvement was noticeable in the early months, but the industry was then disorganised by a dispute resulting in a lock-out of platers, riveters, &c., in most of the principal districts. Employment in coal-mining was good during the greater part of the year, the number of wage-earners on the books of the collieries at December, 1923, showing an increase of 4.9 per cent., as compared with December, 1922. The appended table shows the monthly percentages of trade union members unemployed since 1918, together with those for 1913, the figures being those published each month by the Ministry of Labour Gazette:—

	1913.	1918.	1919.	1920.	1921.	1922.	1923.
End of—	%	%	%	%	%	%	%
January	2.2	1.0	2.4	2.9	6.9	16.8	13.7
February	2.0	0.9	2.8	1.6	8.5	16.3	13.1
March	1.9	1.2	2.9	1.1	10.0	16.3	12.3
April	1.7	0.9	2.8	0.9	17.6	17.0	11.3
May	1.9	0.9	2.1	1.1	22.2	16.4	11.3
June	1.9	0.7	1.7	1.2	23.1	15.7	11.1
July	1.9	0.6	2.0	1.4	16.7	14.6	11.1
August	2.0	0.5	2.2	1.6	16.3	14.4	11.4
September	2.3	0.5	1.6	2.2	14.8	14.6	11.3

November	2.0	0.5	2.9	3.7	15.9	14.2	10.5
December	2.6	1.2	3.2	6.0	16.5	14.0	9.7

* Excluding coal miners.

There was a further decline on the average of rates of wages in 1923, but the reductions were on a much smaller scale than in the two previous years, and in some industries, including coal mining, iron and steel manufacture, and the tinplate and steel sheet trades,

there were net increases during the year. According to the *Labour Gazette*:—

In the industries and services for which statistics are available, the changes reported in 1923 resulted in an aggregate net reduction of nearly £480,000 in the weekly full-time wages of over 3,000,000 workpeople and in a net increase of nearly £170,000 in those of nearly 1,200,000 workpeople; while 400,000 workers had increases and decreases which left their wages at the same level at the end as at the beginning of the year. In 1922 over 7,600,000 workpeople sustained net reductions amounting to over £4,200,000 a week, and about 75,000 received a net increase of about £11,000 a week. In 1921 nearly 7,200,000 workers had their wages reduced by an aggregate of £6,000,000 a week, and about 80,000 secured net increases amounting to £14,500 a week.

There was considerable variation in the movement of wages in different industries in 1923. In a number of important industries wage rates remained unchanged during the year. In most cases in which they were changed there was a net reduction during the year; but in the coal-mining industry, in iron and steel smelting, rolling, &c., and in some smaller industries, the rates of wages of the great majority of the work-

people were increased. When allowance is made for the relative importance of the different industries, it appears, on the basis of the available information, that the net reduction in rates of wages during 1923 was equivalent to about 3 per cent. of the rates prevailing at the beginning of the year, and that at the end of 1923 weekly full-time rates of wages averaged about 65 to 70 per cent. above the pre-war level. As previously indicated, these figures relate to rates of wages for a full normal week, and take no account of changes in earnings resulting from alterations in the state of employment, the effect of which varied considerably in different industries.

The number of trade disputes, causing stoppages of work, reported to have begun in 1923 in Great Britain and Northern Ireland, was 611. The total number of workpeople involved in these stoppages (including those workpeople thrown out of work, though not actually on strike or locked out, at the establishments where the disputes occurred) was about 397,000, and a further 2,000 were involved in 18 disputes in progress in 1923 which began in 1922. The aggregate number of working days lost by these workpeople in 1923 in the course of the disputes was about 10,640,000; this total is much below that recorded for any year since 1918.

A.—EUROPE.

FRANCE.

General.—The outstanding features of the economic conditions of France during 1923 included a continuation of the remarkable revival of trade and industry; a marked increase in production all round; an absence of both unemployment and strikes; a small but appreciable reduction in the note circulation and in the amount due by the State to the Bank of France; an appreciable reduction in the adverse balance as between imports and exports, due to a large increase in the latter; a serious fall in the value of the franc, accompanied by an equally important rise in the index figures of both wholesale and retail prices; a notable and unexpected increase in the yield from taxation; a general improvement in the material situation of nearly every class of the community, and a simultaneous decline in the position of the national Treasury.

Trade and Production.—French imports and exports showed an increase, roughly speaking, of about 40 per cent. in the value of both imports and exports during 1923, as compared with 1922, and of nearly 10 per cent. in the weight of imports and about 6.75 per cent. in that of exports. The volume of trade was appreciably greater in weight than before the war, and of course, enormously greater in value. The output of iron in 1923 was larger by 170,973 tons than in 1922, and by 92,581 than in 1913, while that of steel was over half a million tons in advance of last year and nearly 290,000 tons more than in 1913. The output of coal, coke, and iron ores also was largely increased. Textile, machinery, and other industries touched equally satisfactory figures. Railway and shipping statistics also showed marked increases both in mileage and tonnage and in traffic returns. Purchases of wool, cotton, and silk largely exceeded those of previous years, in spite of the disastrous fall in value of the franc. The motor-car industry was especially flourishing, sales having broken all previous records.

Crops.—The 1923 wheat crop, although better than that of 1922, still fell short of the country's requirements, and the hope that this year it would be possible to avoid foreign purchases for bread-making purposes was not fulfilled. With the exception of millet, beet for distilling, and grass, the whole of the rest of the 1923 crops showed a considerable fall below the 1922 figures. Sugar beet was over 600,000 quintals short of the previous year's crop, which will involve heavy purchases of foreign sugar again this year.

Prices and Unemployment.—Wholesale commodity prices, which were represented by an index figure of 395 at the beginning of 1923, rose considerably during the year, the figure returned at the close being 468. The retail index figure rose from 309 to 365. Wages remained practically stationary during the year, and there were no strikes worth speaking of, in spite of the steadily rising cost of living. Unemployment was almost unknown, the official returns of workless people having been no more than two and three thousand at any one period during the greater part of the year, although this figure rose to between 10,000 and 12,000 in December.

Money and Stocks.—The rate of the Bank of France remained at 5 per cent. throughout the year until, as a precautionary measure, in view of the sudden renewed fall in the franc, it was raised on December 1st to 5½ per cent., and immediately afterwards to 6 per cent. There were very few public issues during the year, except those for the benefit of the devastated area, but ordinary investment business on the Bourse was exceptionally large, with occasional flurries in connection with foreign securities, owing to the gambling factor set up by the frequent fluctuations of the franc. The unusual abundance of available capital was largely absorbed by the steady issues of short-term Treasury Bonds. The return on these and on the various reconstruction loans rose steadily, giving evidence that the State was, at the end of the year, on a 7½ per cent. basis.

Public Finance.—The Treasury again found itself at the end of the year unable to reduce its indebtedness to the Bank of France by the agreed two milliards, the amount actually paid off being only 800,000,000. At the same time the floating debt was again largely increased, while towards the end of the year the note issue, which stood in the neighbourhood of 37 milliards at the beginning of 1923, was increased to over 38 milliards. The Ordinary (or "French") Budget was balanced, after considerable difficulty, but the Recoverable Budget was again allowed to carry a burden of over 20 milliards of debt, for which no resources had been provided, until towards the end of the year, when the sudden renewed fall in French credit revealed to the Government and the nation the peril immediately facing it, owing to their failure to impose adequate taxation to meet the charges arising from Germany's failure to pay reparations. This led up to the effort that is now being made to raise an additional 7,000 millions from taxation and by reducing expenditure, for the purpose of balancing the Recoverable Budget.

GERMANY.

Currency.—Abnormally rapid currency depreciation, induced mainly by the Ruhr crisis and the inflation necessary for financing passive resistance, ceased only on November 20th. The dollar exchange in Berlin rose from 7,506 marks to 4,200,000,000 marks, after which it remained stable to the end of the year. Sterling opened the year at 34,663 marks, and closed at 18,254,250,000,000 marks. On November 15th the Rentenbank came into operation, issuing Rentenmarks, nominally equal to gold marks, but convertible (at sight) only into gold mark mortgage-bonds (*Rentenbriefe*), issued on the security of compulsory mortgages on agricultural land and of bonds on industry. The bank's capital is 3,200,000,000 Rentenmarks. Its note circulation on December 31st was 1,241,999,853 Rentenmarks.

Public Finance.—The Budget for 1923-24, introduced in the spring, was immediately superseded owing to the rise in expenditure and in revenue, due to the fall in the mark's internal buying power. Revenue from taxation was 678,266,635 milliard paper marks, receipts from increase of Floating Debt 191,580,458,820 milliards, from increase of Funded Debt 1,629,581,333 milliards, from Forced Loan 269 milliards, total 193,888,307,059 milliards. Expenditure was as follows:—General administration 60,130,800,700 milliards, service of debt 17,679,751,071 milliards, subsidies to posts 8,284,236,160, to railways 92,261,051,226 milliards, total 178,355,839,159 milliards. For the period between November 15th and December 31st new accounts were compiled, omitting losses on posts and railways (which, with decreasing deficits, subsist on loans). These accounts show receipts 185,403,460 billion paper marks, and expenditure 715,763,717 billions, the deficit being covered out of credits given by the Rentenbank. Finances rapidly improved after the stabilisation of the currency. The Floating Debt to the Reichsbank, totalling on November 15th 189 trillion paper marks, was paid off at a cost of under 200,000,000 Rentenmarks (nominally about £10,000,000 gold), also advanced by the Rentenbank, and the old War Debt of 64 milliard paper marks was extinguished by the currency depreciation. The Republic, however, in addition to the new 200,000,000 Rentenmarks debt, began to create other stable value debts, first by issuing dollar Treasury bills, next by issuing a Funded Gold Loan, and finally by issuing Rentenmark Treasury bills.

Prices and Wages.—Paper mark prices rose rapidly, and after the adoption of gold-mark calculation in the late summer gold prices also rose, attaining their highest point at about the end of November, after which they fell considerably. The paper mark wholesale index (*Frankfurter Zeitung's* basis 1 in 1914) showed on

January 1, 1923, 2,054, and on January 3, 1924, 1,471,700,000,000. The official cost-of-living index (basis 1 in 1913-14) rose from 1,120, the average of January, 1923, to a maximum of 1,535 milliards on November 26, and fell to 1,147 milliards on December 29th. After the introduction of gold-mark calculation the average real wage fell, owing to the fact that the rise in gold prices outstripped the rise in gold wages. Whereas up to late 1921 the unskilled worker's real wage was higher than in 1913 and the skilled worker's little lower, the last available data (for November, 1923) show the real wage in many industries at around 50-60 per cent. of the pre-war real wage. In December, owing to the stable or rising gold wage and to the sinking gold prices, the real wage again increased somewhat, but figures are not yet available.

Industry and Agriculture.—For agriculture 1923 was a good year. The crop figures, compared with those of previous years, were (on the present area of the Republic):—

In Metric Tons.	1913.	1922.	1923.
Wheat.....	4,043,084 ..	1,957,710 ..	2,896,814
Rye	10,131,807 ..	5,233,945 ..	6,681,622
Barley.....	3,040,218 ..	1,607,624 ..	2,126,846
Oats	8,618,618 ..	4,015,501 ..	6,106,776
Potatoes.....	44,018,758 ..	40,665,360 ..	32,580,553
Sugar Beet.....	13,988,805 ..	10,791,639 ..	8,695,722

In industry the year was full of difficulties. Unemployment increased rapidly in the spring owing to the Ruhr occupation, and was accelerated in the second half of the year by the new high gold prices, which checked buying. The number of unemployed persons in unoccupied territory rose from 85,620 in January, 1923, to 1,485,000 on December 15th, and the number of short-time workers to 1,225,000. In occupied territory, for which exact statistics are lacking, the number of unemployed at the end of December was $1\frac{1}{2}$ to $1\frac{3}{4}$ millions. Before the end of the year there was a certain recovery. Pig-iron production fell to an estimated 4,000,000 tons. The machinery, locomotive, and other metal-using industries were badly hit. The textiles branch also suffered, but began a rapid recovery in December. The chemicals, pottery, and glass branches were depressed, while the rubber branch, judging by consumption of raw material, continued to flourish.

Foreign Trade.—An important event in foreign trade was the abolition of most of the "Aussenhandelsstellen" boards, which licensed imports and exports, and controlled export prices. Monthly statistics of imports and exports by weight indicated an increasing passive balance, but the gold mark figures for 11 months show that exports nearly paid for imports. The official estimate puts the passive balance for the year at only 100,000,000 gold marks:—

	Imports. Metric Tons.	Exports. Metric Tons.
1913.....	74,700,000 ..	75,400,000
1922.....	47,700,000 ..	22,400,000
1923.....	43,700,000 ..	11,600,000
	Gold Marks.	Gold Marks.
1913.....	11,200,000,000 ..	10,200,000,000
1922.....	6,200,400,000 ..	3,970,000,000
1923 (Jan.-Nov. only)	5,589,000,000 ..	5,516,000,000

The 1923 figures are imperfect, owing to the absence of complete information from occupied territory. The great railway and posts deficits have begun to dwindle, and these two services have been thrown on their own resources.

ITALY.

Foreign Trade.—From July 1, 1921, at which date the statistical method of valuing goods imported and exported was changed, to November, 1923, the figures are as follows (in millions of lire, precious metals excluded):—

	Imports.	Exports.	Excess of Imports Over Exports.
1921—July to December	6,645.7 ..	3,939.0 ..	2,706.7
1922—Whole year	15,764.5 ..	9,302.2 ..	6,462.3
1923—January to November	15,365.7 ..	9,454.1 ..	5,911.6

For the whole of 1923 the import balance will be about the same as in the preceding years.

Crops.—Agricultural results were very good. Whereas the average wheat crop was 4,989,600 tons in 1909-13, and 4,831,700 tons in 1919-23, the 1923 crop reached 6,070,000 tons. The yield per hectare was 13.1 quintals, the highest since 1909, and probably since 1860. Grapes were also much better. In the old provinces the yield was 81.7 million quintals, against an average of 59.8 in 1910-21 and 54.4 in 1922; in the new Venetian provinces 2.2 millions, against 1.8 and 1.9 respectively in 1921 and 1922.

Industry.—The silk industry benefited from a good crop of cocoons, amounting to 58,000 tons, against 43,500 in 1922, 42,900 in 1921, and 41,200 in 1920. The total value of silk products, which may be put at 600-650 millions lire before 1914, increased to 2,800-3,000 millions lire in the financial year 1922-23. Cotton was fairly active. The consumption of raw cotton, which was 909 thousand bales yearly in 1911-13, and decreased to 770 thousand in the cotton year 1919-20, reached 893 thousand in 1922-23. The number of bales consumed in 1922-23 per 1,000 spindles was 196, against 172 in 1912-13. The Italian cotton industry may be estimated to have added, in 1922-23, a value of over 3,000 million lire to raw cotton and materials imported and used, against 420 millions in 1909-13. The woollen industry works mostly for the home market, and the value of the total output (40,000 tons in 1923, against 30,000 tons in 1913) may be estimated at 1,500 million lire. Iron and steel had an indifferent year, but not more so than in 1922. A marked decrease has been registered in the number and importance of strikes. For the years ending October 31, 1921, 1922, and 1923, the number of strikes was 1,223,680 and 156 respectively, and of days lost 8,210,811, 7,336,393, and 246,975 respectively. The number of unemployed, 391,974 on January 31, 1923, slowly but continuously decreased to 178,612 in August, and rose again to 199,694 in October.

Prices and Wages.—The following indices have been compiled by Professor Mortara:—

	Paper Issue.	Paper Price of Gold.	Whole- sale Prices.	Cost of Living.	Wages.
Basis 1913-14.....	100 ..	100 ..	100 ..	100 ..	100 ..
1921, 1st half-year..	772 ..	460 ..	551 ..	560 ..	540 ..
1921, 2nd ..	760 ..	455 ..	525 ..	522 ..	520 ..
1922, 1st ..	751 ..	389 ..	517 ..	503 ..	515 ..
1922, 2nd ..	751 ..	430 ..	542 ..	498 ..	505 ..
1923, 1st ..	716 ..	401 ..	539 ..	495 ..	485 ..
1923, 2nd ..	727 ..	442 ..	531 ..	491 ..	475 ..

Both wages and cost of living have increased nearly five-fold since 1913-14. Prices have not risen in proportion to increase in the paper issues.

Money and Stocks.—The official rate of discount has been firm at $5\frac{1}{2}$ per cent. though the call on the money market is increasing. The clearings at the Italian clearing-houses, which in 1920 amounted to 578,030 million lire, were 690,821 millions in 1921, 601,851 millions in 1922, and 829,500 millions in 1923. The price of $3\frac{1}{2}$ and $5\frac{1}{2}$ Consols, which touched bottom in October, 1920, at 67.26 and 69.23 respectively, were 77.86 and 86.96 at the end of December, 1922, and increased almost continuously to 86.96 and 91.58 at the end of December, 1923. Professor Bachi's index number of Italian share-values, on a basis of 100 in December, 1918, rose to 110.02 in the "boom" of 1919, and subsequently reached its lowest point, 56.45, in April, 1922. The year 1923 opened with an average of 72.82 in January. In August the index rose to 80.53, and in December to 85.67. The greatest rise occurred in silk shares (286.74), cotton shares came a good second (246.02), then wool (223.41) and hemp (222.54)—all textiles. At the bottom were shipping shares, which, however, rose from 62.06 in December, 1922, to 67.79 in December, 1923; and iron and steel, which rose from 20.33 to 22.44.

Public Finance.—Excluding foreign debt, new debts incurred for balancing the public Budget amounted in 1918-19 to 11,800 million lire, in 1919-20 to 10,865 millions, in 1920-21 to 11,224 millions, in 1921-22 to 6,232 millions, and in 1922-23 to 2,605 millions. In the second six months of 1923 only 517 millions of new debt were contracted. The year marks a definite improvement in the situation. State and municipal finances are well on the way to equilibrium; the money market has been restored to a normal state; the worst period in the iron and steel industry has passed, and great progress has been made in other staple industries.

RUSSIA.

General.—Increased production and export of Russian goods during 1923 has unhappily been accompanied by the forcing of prices by monopolist State Trusts beyond the consumers' capacity to pay, with the result that demand for manufactured articles almost ceased in the autumn, and factories and co-operative societies remained with relatively large stocks unsold. Any sign of a reviving market for Russian textiles has disappeared, and the peasants have resumed primitive methods of making their own fabrics. Reaction against this situation is seen in demands for lower tariffs with a view to compelling the trusts to produce more cheaply by the introduction of less expensive foreign goods. Meanwhile low grain prices threaten a reduction in cereal acreage, while Soviet grain-exporting organisations are accused of deliberately forcing the peasant to sell at abnormally low prices as the only means of escaping serious deficits on their operations. The deflationary policy pursued throughout the past year is the most satisfactory aspect of the Russian situation, and if carried to its logical conclusion must ultimately break up the present system of State trade and industry.

Foreign Trade.—For the financial year ended September 30, 1923, Russia exported goods valued at 210,000,000 gold roubles, and imported goods to the value of 187,000,000. An adverse balance of 170,000,000 roubles for the first nine months of 1922 (imports 223,600,000 and exports 50,700,000) was followed in 1923 by an excess of exports over imports of 23,000,000. While imports of foodstuffs ceased with the disappearance of famine conditions on any large scale, grain exports were resumed and are said to have totalled over $1\frac{1}{2}$ million tons up to January 1, 1924, 50 per cent. being rye—or 30 per cent. in excess of the small quantity of rye exported before the war—and 400,000 tons of wheat, or only 10 per cent. of pre-war annual wheat export. It is possible that coast-wise traffic is included in these figures.

Crops.—Official Soviet statistics show the yield of the 1923 harvest as 2,794,000,000 poods—approximately 46,500,000 tons, as against the Central Statistical Bureau's final figure of 2,790,000,000 for 1922. As the sown area is said to have increased from 51,000,000 desiatins to 61,000,000, the average yield was far inferior to that of the preceding year. The decreased sowing of winter crops in South Russia last autumn is disquieting, and is said considerably to exceed the 5 per cent. drop officially recorded. Flax is recovering, stimulated by a rise in prices of from 100-200 per cent. since January, 1923. The flax area last year is given as 512,000 desiatins, as against 424,000 in 1920.

Industry and Employment.—For the year ending September 30, 1923, the output of coal in the Donetz Basin amounted to 8,200,000 tons, as against 20,000,000 tons in 1912. As transport has improved somewhat, the inability to dispose of coal stocks—accompanied by considerable losses due to spontaneous combustion of coal at the pit-head—reflects the tardy recovery of Russian heavy industry, and the negligible demand of the general public. The oil output at Baku for the same period is returned at 3,550,000 tons, and at Grozny as 1,500,000 against 2,900,000 and 900,000 tons respectively in 1920. As the metal industry de-

pends primarily on State contracts for existence, the cancellation of orders valued at 40,000,000 gold roubles by the Railway Department—owing to the exorbitant rise in prices—and their decision to cease locomotive construction for five years, confront several of the few great iron and steel works now running in Russia with the prospect of closing down at a time when the impossibility of sparing funds for their conservation is being urged. The year 1922-23 shows a total production of pig-iron in Russia of 300,000 tons, Martensite 600,000 tons, and rolled steel 460,000 tons, as against over 4,000,000 tons in the case of each of the first two and 3,600,000 in that of rolled-steel in 1913. Railways show a goods tonnage transported during 1922-23 of 93,000,000, compared with 68,000,000 in the previous year. Fifty-seven per cent. of the 19,659 locomotives available were unfit for service, and 32 per cent. of the 418,287 goods wagons. Railway receipts rose from 52,000,000 gold roubles for the first quarter of the year to 116,000,000 in the last, although a State subsidy of 150,000,000 roubles is still required. Over 1,100,000 persons are unemployed, partly owing to the discharge of Soviet civil servants, and partly to the return to the towns of large numbers of those who sought refuge in the villages during the revolution.

Prices and Currency.—The All-Russian Index of Wholesale prices—taking 1913 as 1—moved from 19,580,000 on January 1st to 206,000,000 on August 1st, 1,800,000,000 by the end of November, and finally, on January 1, 1924, to 5,387,000,000. As regards currency reform, by January 1, 1924, there had been handed over to the State Bank by its Issue Department bank notes to the value of 28,000,000 chervontsy (1 chervontsy = 11.10ths of £), gold cover being maintained at 50 per cent. instead of the legal 25 per cent. of their face value. The chervontsy remains at a slight premium on sterling, and constituted 80 per cent. of the total value of the currency in circulation on January 1, 1924. As soon as the Budget is balanced, the Soviet rouble Treasury notes now in circulation will be replaced by a silver small change currency.

POLAND.

Agriculture and Industry.—Polish crops in 1923 were very satisfactory. With the exception of wheat, production was greater than before the war:—

Crop 1923.	Percentage of Average of 1909-13.	Percentage of 1921-22.
Quintals (000's omitted).		
Wheat	13,538	79.4
Rye	59,624	103.7
Barley	16,555	109.0
Oats	35,224	124.4

Industry and trade were active, but progress was less rapid than in 1922 and 1921. We give below the number of workmen employed in the textile industry in 1923, as compared with the pre-war level:—

	Cotton.		Woollens.		Jute.	
	No.	%	No.	%	No.	%
1914	63,900	100	31,500	100	5,200	100
October 1, 1922 ..	70,800	111	17,700	56	3,500	68
" 1, 1923 ..	83,900	131	19,700	62	3,100	59

According to the estimates now available, the output of coal in 1923 was 10 per cent. greater than in 1922. For iron ores the increase in output amounts to nearly 100 per cent.

It is estimated that the yield of sugar will be 360,000 tons, as compared with 265,000 tons in 1922-23. The value of imports for the first nine months of the year amounted to 831 million gold francs, while exports reached 953 millions. For the first time since the formation of the new Polish Republic, exports exceeded imports.

Finance.—The year did not bring the expected financial recovery. Political instability at home, and Mr Kucharski's disastrous administration during the second half of the year, put the financial machine com-

pletely out of gear. During the year the note circulation increased from 793 to 125,371 milliards. The revenues from taxes, expressed in gold, were smaller in 1923 than in 1922. Rapid inflation had a very detrimental influence on the value of the Polish mark. The extent of the depreciation is illustrated by the following comparison:—

	End of December, 1922.	End of December, 1923.
Sterling	87,800	27,370,000
Dollars	17,800	6,300,000

The rise of prices kept pace with the depreciation of the mark. The index of the cost of living was, in December, 1923, 7,363 times higher than in January, 1921, and 294 times higher than at the beginning of the year.

HOLLAND.

Trade and Industry.—The past year has not been favourable. Although at the beginning signs of a slight recovery were observable, reaction quickly set in, chiefly caused by the occupation of the Ruhr district and the further impoverishment of Germany. Industry was handicapped by competition on account of the lower exchanges in neighbouring countries. Although German competition gradually grew less severe, Belgian and French competition took its place. Shipping was also under the influence of the depression. As Rotterdam is more especially a transit port, it suffered seriously, the number of ships entering the port falling from 8,363 in 1922 to 8,149 in 1923, measuring 12,292,000 and 11,495,000 net register tons respectively.

The waiving by the French Government of the "sur-taxe d'entrepôt" on goods for Alsace Lorraine from Antwerp also affected the port of Rotterdam.

The end of the year showed some revival, chiefly as regards trade with Germany after the suspension of passive resistance in the Ruhr district.

Foreign Trade.—During the first eleven months of 1923 the ratio of exports to imports was 64 per cent. against 61½ per cent. in the preceding year, the figures being:—

	Tons.	Fls.
Imports—January-November, 1922 ..	17,868,000 ..	1,886,000,000
" " " 1923 ..	17,550,000 ..	1,834,000,000
Exports " " 1922 ..	6,205,000 ..	1,139,000,000
" " " 1923 ..	7,808,000 ..	1,175,000,000

Wages and Prices.—Unemployment is still considerable. The ratio for the large towns was 14 per cent. on January 1, 1923, with 46,168 persons unemployed, against 12 per cent. at the beginning of December, and 32,266 unemployed.

The index number of retail prices at Amsterdam was 148 in November, 1923, as against 160 on December 31, 1922 (1913 = 100). Notwithstanding this the index number of the cost of living remained high, standing in November at 173 against 175 in 1922 (1911-13 = 100).

From January 1st to December 31st 4,292 bankruptcies were registered, against 3,152 in 1922.

Money Market and Stock Exchange.—The money market, which was comparatively easy in the first six months of 1923, hardened in the closing months. The rate for monthly loans, which was 3½ per cent. in September, rose to 6 per cent. in December. The average rate for the year (3.40 per cent.) approximated to that of the previous year (3.50 per cent.). The bank rate, which had been steady at 4 per cent. since July 18, 1922, rose on December 12th to 4½ per cent. The stock market was rather dull all through the year, though the last few months witnessed a slight revival. New issues were few, aggregating 239,000,000 fl in 1923, against 382,000,000 fl in 1922, and 1,149,000,000 fl in 1920. Government and municipal loans absorbed 212,000,000 fl. The Government floated a 6 per cent. loan of 100,000,000 fl, of which 80,000,000 fl were offered to the public at 97½ per cent. The Netherlands Indian Government appealed not only to the Dutch

money market (65,000,000 fl in 5 per cent. bonds), but also to New York (\$50,000,000 5½ per cent. bonds) and London (£11,000,000 6 per cent. bonds, of which £1,000,000 were reserved for this country).

A large banking concern for the middle classes—the Hanze Bank in Utrecht Hertogenbosch—suspended payment, and the Government Postal and Giro Service, which had rapidly expanded of late years, was compelled to close down, to the detriment of its 120,000 customers.

Public Finance.—Though taxation is heavy, the budget shows a deficit for 1924 of 140,000,000 fl, which has not yet been covered. The railway companies—on the share capital of which the State guarantees a minimum dividend—have worked at a severe loss. The consolidated debt of the Government has now reached the figure of 2,845,000,000 fl. The floating debt of the East Indian colonial administration decreased in 1923 from 430,000,000 fl to 225,000,000 fl, and it is hoped to balance the colonial budget by 1925.

Fear of inflation of the guilder induced some investors to convert Dutch into dollar securities. This tendency, however, was less marked towards the end of the year, but a return of confidence waits upon the formulation of a scheme for reducing Government expenditure.

BELGIUM.

Public Finance.—The public accounts for 1924 still show a deficit, but comparison with earlier years is rendered difficult by a reorganisation of budgetary practice. The 1924 figures are as follows:—

	(Thousand Francs.)	(—) Debit or Credit (+).
	Expenses.	Receipts.
Ordinary Budget	3,354,224 ..	3,345,677 ..
Extraordinary Budget ..	501,743 ..	6,839 ..
Recoverable expenses	2,354,966 ..	1,636,415 ..
" Régies " ..		
Ordinary expenses	1,722,783 ..	1,693,178 ..
Extraordinary expenses ..	396,520 ..	427 ..
Renewals, &c.	2,235 ..	4,500 ..
Total	8,332,471 ..	6,687,032 ..

Ordinary expenses in 1923 were put at 2,940 million francs, the increase in 1924 resulting from the transfer of items from other "Budgets." During the past year increases have been made in income-tax, sugar and tobacco excise, the luxury and match taxes, a new stamp tax has been added, and tariff revision is projected. The efficiency of collection of direct taxes has increased, and the actual returns for 1923 are estimated in the neighbourhood of 2,500 million francs. The 1924 ordinary Budget expenditure also includes, for the first time, a charge of 477 millions interest, &c., on roughly eight milliards borrowed for reconstruction purposes, and so-called "after-war" expenses of roughly 157 millions transferred from the Extraordinary Budget. No payment from Germany is expected for some time, so that the deficits of 495 millions and 719 millions on the Extraordinary Budget and the Budget of Recoverable Expenses will have to be met by further borrowing on the part of the State.

Production and Trade.—After a period of uncertainty in the early months of the year, complicated by a strike of railway workers in the spring, Belgian industry experienced decidedly more favourable conditions in the latter part of the year. Coal production, which averaged 1,904 thousand metric tons per month in 1913, and 1,770 thousand metric tons per month in 1922, rose from 1,604 thousand metric tons in February to 2,089 thousand metric tons in November. Pig-iron production rose steadily throughout the year from 165 thousand metric tons in January to 205 metric tons in November, the latter figure being practically equivalent to that of pre-war days. Steel production, which sank to 157 thousand metric tons per month after the occupation of the Ruhr, had recovered by November to 217 thousand metric tons, a figure some-

what in excess of the 1913 average. The flax industry was somewhat uneven, but a noticeable revival, reflected by a general rise in prices, occurred at the end of the year. Cotton was rather more active towards the end of the year, while the glass industry is enjoying a period of exceptional prosperity. Imports of merchandise in the first eleven months of the year were valued at 11,212 million francs, an average of 1,019 million francs per month, against 767 million francs per month in the year 1922. Exports in the same period amounted to 7,844 millions, or 713 millions per month, against a 1922 monthly average of 520 millions. The further depreciation of the franc in 1923 and other considerations render comparison with 1922 figures somewhat illusory. A comparison of "weight" figures, however, reveals an increase in total trade:—

MONTHLY AVERAGE.

(Thousands of Metric Tons.)

	1922.	Jan.-Nov. 1923.
Imports	1,772	2,241
Exports	1,346	1,396

Since May, 1922, the figures have included the whole of the Belgo-Luxembourg Economic Union.

The official price index number rose steadily during the year, being 434 in January, 484 in June, and 531 in November (1914 = 100). The cost of living figure moved from 383 per cent. of 1914 in January to 463 in November.

SPAIN.

Public Finance.—Under the rule of the military Government, Spain has secured the benefit of social peace. Important reductions are being introduced in expenditure which will favourably affect the budgetary deficit. For 1922-23 expenditure reached 3,368 million pesetas, while ordinary revenue yielded only 2,452 millions, leaving a deficit of 916 millions. The deficit in 1921-22 was still larger, amounting to 1,101 millions. For 1923-24 the provisional figures available cover only the eight months April-November, and show expenses of 1,802 millions (73 millions less than for same period of 1922), against ordinary receipts of 1,552 millions, leaving a deficit of 250 millions for the eight months. To fill the gap the issue of Treasury bonds is still being resorted to, the total amount in circulation being now close to 4,000 million pesetas.

Foreign Trade.—Another disquieting factor in the economic position since 1920 has been the unfavourable balance of trade:—

(Million Pesetas.)

	Imports.	Exports.	Balance.
1920	1,421 ..	1,010 ..	411
1921	2,833 ..	1,567 ..	1,266
1922	3,033 ..	1,449 ..	1,584
1922 (January to August)	1,835 ..	869 ..	966
1923 (" ")	1,923 ..	968 ..	955

Commercial relations with most countries have been abnormal since the enforcement of the protective Tariff of February, 1922. In 1923 the only commercial agreement of any importance was that made with Italy, soon after the visit of the King and Queen of Spain to Rome. Negotiations with the United States, Germany, and Portugal have been dropped, while the military Directory is searching for a definite commercial policy.

Exchanges.—Under the depressing influences of the unfavourable balance of trade and a recurrent deficit, the peseta fell steadily throughout the year. Taking the mean quotations per month, the dollar started in January at 6.393 pesetas, and rose steadily month by month, ending in December at 7.675 pesetas to the dollar. Sterling exchange began at 29.736 pesetas to the pound in January, remained practically unchanged during March, April, and May at about 30.37, jumped to 33.374 in August, and finished in December with the average of 33.443.

Prices.—The official index numbers are given below:—

	Foodstuffs.	Industrial Produce.	Total.
1914 (basis)	100	100	100
1920.....	205	237	221
1921.....	181	199	190
1922.....	174	177	176
1923 (January to October)	167	175	171

The fall of prices continued during 1923 in the case of foodstuffs, but was very small as regards industrial products.

Industry.—Social conditions were more favourable, there being no strikes worthy of special mention before September. Although commercial activity revived somewhat, the industrial stagnation of late years shows few signs of improvement. The wheat crop was very good, totalling 39 million metric hundredweights, 12 millions in excess of national consumption.

General Conditions.—The general economic position has improved appreciably as compared with 1922, as the enormous increase of the main adverse factors (budget deficits and unfavourable trade balances) from 1920 to 1922 has been checked. But as their pernicious effects accumulate year after year, nothing is gained until those factors become definitely favourable.

SWITZERLAND.

Balance of Trade.—This was adversely affected by the occupation of the Ruhr region, which sent up the prices of imported coal, coke, steel and iron; by the failure of effective demand in Central Europe; by the competition of countries with depreciated currency, notably Germany, France, and to some extent Belgium; and by the protective tariffs of other countries, notably the United States. For the first nine months of the year the round figures were:—Imports, 1,536 million francs; exports, 1,269 million francs. Export values, however, had been increasing latterly, and were 126 million francs in October.

Public Finance.—The Budget for 1923, as approved by the Federal Council, showed: revenue, 256.8 million francs; expenditure, 294 million francs; deficit, 37.4 millions. The Federal Debt in 1922 was 2,103,024,000f, or 539.15f per head. Of this, 1,902,527,000f was consolidated and 200,497,000f floating debt. Federal, cantonal, and municipal taxation in 1923 was estimated to amount to 1,130 million francs, or nearly 250f per head.

New Issues.—A Federal railway loan of 120 million francs, at 4½ per cent., redeemable 1933-38, was issued in May at 94½. The total authorised was 200 millions: 75 millions was issued to a Swiss syndicate on terms which brought the interest slightly above 5 per cent. A Federal 4½ per cent. loan of 200 millions for the conversion of 6 per cent. Treasury Bonds of 1921 was issued in September at 98. The increased rate at which the Government had to borrow was ascribed to the exodus of capital set up by the fear of a levy in 1922, and kept up by the higher return obtainable abroad.

Exchange.—Dollar exchange in January was 18.95, by October it had declined to 17.80, and by the end of December to 17.51 cents for the franc. Sterling exchange moved during the year (with some fluctuations) from 24.47 in January to 26 in July, and then downwards to 24.85 at the end of December.

Railways.—The Federal Railway figures for the whole year were:—Receipts, 365,437,524f; expenditure, 257,880,593f; surplus, 113,556,921f. The receipts were 21,222,075f more than in 1922, the expenditure 51,406,706f less.

Industry and Trade.—Of the chief exporting industries, the clock and watch trade improved greatly, thanks, in part, to the Federal subsidy granted in 1922; the embroidery trade slightly; silk spinning considerably; but the textile and ribbon branches felt French and Italian competition, and the whole trade

the fluctuations in price of the raw material. The food producing trades (e.g., chocolate and milk) improved, as did the textile and clothing industries, but largely through an increased home demand, set up by the activity of building and the electrification of the Federal railways, which latter also aided the electric industry. The machinery trade seemed to be improving. The winter and summer tourist seasons were excellent, but the latter was short: the summer visitors—chiefly English, Dutch, and American—reached, perhaps, two-thirds of the pre-war numbers. The cereal crops were excellent: the estimated figures (in centals of 100 lbs) were:—Wheat, 3,274,700; oats, 978,900; rye, 921,500; barley, 273,400. The vintage was excellent in quality, though less in quantity than in 1922.

The unemployed in January numbered 76,143; in July, 35,314; in November, 41,397. Of these, the totally unemployed numbered respectively 56,275, 22,792, and 27,079. Part of the decrease in the numbers published is due to lessened registration owing to a more limited distribution of unemployment allowance; but, still, the decline is encouraging.

The index number of cost of living (100 in July, 1914) in September, 1922, had been 156; by November, 1923, it had gradually risen to 170.

SOUTH EASTERN EUROPE.

The year 1923 has, on the whole, witnessed a considerable improvement in the economic position of the countries of the Danube basin. With the exception of Budapest, the exchanges were fairly stable in comparison with those of the previous year, while the general post-war rot seems to have been definitely arrested. More important still, the harvest was generally much larger than in any year since the war, though there still remains a fairly considerable leeway to make up before 1913 figures are attained. Transport conditions generally are rather better, while the success of the League of Nations scheme for the restoration of Austrian finance has done much to restore general confidence.

In the following table we give the London exchange rates for the different centres of South-Eastern Europe:—

		Dec. 30, 1922.	Dec. 31, 1923.	During the Year.	
				Highest.	Lowest.
Vienna ..	Kr to £1	322,500	310,000	350,000	295,000
Prague ..	"	150	148½	171	147½
Budapest ..	"	10,750	80,500	120,000	10,000
Bourest ..	Lei	800	837½	1,200	770
Sofia	Leva	655	600	900	325
Belgrade ..	Dinars	430	385	650	355

CZECHOSLOVAKIA.

Czechoslovakia, as an industrial State, has continued to be affected by the consequences of the world slump, though an excess of deflationist zeal has also contributed not a little to the difficulties with which the young Republic is still faced. The notes in circulation have diminished somewhat during the year, despite the increased volume of business. At the end of 1922 the cover in metal holdings and foreign currency, &c., represented some 36 per cent. of the total note issue, while on December 31st last this proportion had risen to about 45 per cent. Prices meanwhile have been falling slightly, though a small rally took place towards the end of the year. The official retail index numbers stood as follows:—

	Jan.	June.	Nov.	Dec.
Foodstuffs, &c.....	941	933	896	909
Textiles, boots, &c.....	1,061	1,017	1,017	1,030

Unemployment figures have shown a most welcome fall. February marked the highest point of the year, with 203,674 persons in receipt of Government unemployment relief. By June the number had fallen to 91,500, and November marked the lowest point, with 50,400. Since then, however, there was a slight reaction to 54,700 by the middle of December. Of

course, the real total of unemployed is considerably in excess of these figures. One of the most disquieting features of 1923 was the shakiness of some of the banks, a deferred consequence of boom speculations, though the awkward moment was safely passed quite early in the year. Company promotion has been on a much smaller scale, and several concerns have reduced their capital.

With this successful shaking down to more normal conditions, however, production has increased. The output of sugar, for example, stood at 957,350 metric tons (unrefined) in the last three months of 1923, as compared with 703,670 tons in the corresponding period of the previous year. The weight figures of foreign trade show a considerable increase over those of 1922, though the value figures have fallen off enormously:—

	(In Millions.)		Value (Czech Crowns).	
	Weight (Tons).		1922.	1923.
Exports	9.49	11.31	18,086	12,519
Imports	3.19	4.19	12,695	10,130
Balance of trade			+5,391	+2,389

The increase in weights is due in large measure to exports of heavy goods resulting from the Ruhr occupation. The balance of trade was favourable every month, save only in October, and the dependence of the country on its foreign trade is clearly apparent.

The current Budget, with expenditure at 16,994 million Kr and revenue at 16,391 millions, shows a deficit of 603 millions, as compared with 559 millions for 1923.

AUSTRIA.

The League of Nations scheme has worked wonders in the Austrian Republic, and has certainly been much more successful than would have seemed possible twelve months ago. Although there have been great difficulties in the way, the task of reconstruction has been proceeded with steadily throughout the year. The crown has moved, on the whole, with the dollar, though internal prices show a noticeable rise on the year. Thus the wholesale price index stood at 169.86 in January, rose somewhat in the early months of the year, fell again during the summer months, and then rose again, the December figure being 181.81. The cost of living index followed the same general tendency, being 134.97 in January and 155.65 in December (July 1914 = 1). The trade balance is more against Austria than was the case last year. For the first eleven months of 1923 imports stood at 1,408 million gold crowns, while exports were only 842 millions. The number of unemployed fell slightly during the year, 78,390 persons being in receipt of relief in December last, as compared with 82,923 in December, 1922. While much still remains to be done before reconstruction is complete, the experience of the past year gives grounds for measured optimism as to the future.

HUNGARY.

The past year has been a period of considerable difficulty in financial circles, though the general economic position was certainly rather better than in the previous year on account of the excellent crop results, which, for the first time for many years, were almost up to the pre-war level. The foreign trade figures also show a considerable improvement:—

	(Millions of Gold Crowns.)		1923.
	1922.	(10 Months.)	
Imports.....	548	448	
Exports.....	334	348	
Excess of imports	214	100	

There has thus been a marked falling off in the adverse trade balance, while the proportion of imported raw materials has increased relatively to manufactured goods. The budget position, however, has been going from bad to worse, and the continued fall in the crown is making taxation increasingly difficult to collect. The year closed, however, with hopes of the long-awaited external loan being achieved under the auspices of the League of Nations.

ROUMANIA.

The most important feature of the economic life of Roumania during the past twelve months was certainly the improved yield of wheat and maize, which remain much the most important crops of the country.

CEREAL PRODUCTION.

	(In Thousands of Metric Tons.)			
	Average, 1909-13.	1921.	1922.	1923.
Wheat	4,085	2,138	2,504	2,790
Maize.....	5,175	2,885	3,026	4,423
Barley	1,375	985	2,042	1,501
Oats	905	963	1,336	925

These figures refer throughout to the territories of modern Roumania. The area sown to all cereals is now rather more than 90 per cent. of the pre-war average, though the distribution as between the four principal cereals has changed considerably, in part, at least, in consequence of unwise government interference with exports. The abolition of export restrictions, however, combined with the good yields of wheat and maize obtained last year, should do something to encourage these two cereals. Autumn sowings in 1923 were much hampered by the unfavourable weather which prevailed, and represent a slight falling off as compared with those of the previous year.

The steady improvement in the agricultural position has its counterpart in the oil industry, which has shown a welcome activity. The production of crude was 1,508,829 tons (including the provisional returns for December), as against 1,367,478 tons in 1922—an increase of approximately 10 per cent. This is the highest total reached since 1915, though it is still somewhat removed from the 1913 level of 1,885,614 tons. These improved production figures have naturally influenced the trade returns. Exports for the first eleven months of the year stand at 15,411 million lei, as compared with 8,624 millions for the corresponding period of 1922. Of these totals, export taxes claimed 4,014 million and 1,177 million lei respectively. Imports are continuing on a restricted scale, and the small excess of exports registered in 1922 is almost certain to be exceeded in 1923. The Finance Minister estimated this favourable balance for the past year as likely to be in the neighbourhood of 5 milliard lei.

The Budget shows a balance between expenditure and revenue, and the great increase in exports has naturally contributed not a little to this result. At the same time the salaries of State employees remain very low, and out of all proportion to the rise in the cost of living. There has also been a long-drawn shortage of credit facilities, which at one moment seemed likely to develop into a veritable credit crisis, and it is indeed doubtful whether the present supply of currency is really sufficient to meet a further increase in production.

BULGARIA.

The political situation during the past year was one of great uncertainty, and the revolution, accompanied as it was by a series of minor revolts and skirmishes, rather disorganised the public finances. In consequence no actual budget has been published, though it seems probable that there will be a fairly noticeable excess of expenditure over revenue in the current year, as compared with an actual surplus on the ordinary budget of last year. The crop returns were quite satisfactory, and tobacco in particular showed a great advance over the previous year. Bulgaria's markets are, however, in a disturbed condition, and the improvement in her foreign trade position must perforce be somewhat slow. The final solution of the reparations question is perhaps the outstanding event of the economic and financial year, while the establishment of greater freedom of trade is also a welcome feature. The credit position has remained difficult, and though the note issue has increased somewhat over the twelve months, this has probably been counterbalanced by the hoarding of currency on the part of the peasantry.

JUGOSLAVIA.

The exchange policy pursued by the present Government has certainly led to an increase in the value of the dinar abroad, though this movement has been accompanied by a chronic shortage of credit facilities. The Budget position has improved considerably, and the estimates for 1923-24 promise a balance of revenue and expenditure :—

BUDGET.			
(In Million Dinars.)			
	1922-23.	1923-24.	
Revenue	6,935	10,344	
Expenditure	8,135	10,344	

Indirect taxation has been increased greatly, and railway rates have been raised on to a commercial basis. In this manner it is hoped to make good the increase in expenditure, which is specially noticeable in the estimates for the Ministry of War (2,039 millions against 1,491 millions in the previous year).

Foreign trade showed a considerable improvement as compared with that of 1922. Exports for the first nine months are shown in the following table :—

EXPORTS.			
Nine months—			
	Tons.	Dinars.	
1922	1,688,893	2,918,735,470	
1923	2,153,327	5,501,857,652	

Prices rose somewhat in 1923, the index number of the *Revue Economique*, of Belgrade, standing at 2264 in October, as against 2189 in January.

SCANDINAVIA.

General Conditions.—Improvement in trade and industry was retarded by unforeseen difficulties, such as severe labour troubles in Sweden, a loss of confidence caused banking crises in Norway and in Denmark, and the generally unsatisfactory nature of the harvest owing to excessive rain. On the whole, however, the position at the end of the year was better, and there is nothing in the present situation which would necessarily preclude a return of general prosperity in 1924.

SWEDEN.

The financial situation was satisfactory, the gold value of the currency being fully maintained. Money was comparatively cheap, the official discount rate being no higher than 4½ per cent. for the first ten months of the year, with a rise to 5½ per cent. in November. Production was hampered by a series of disastrous strikes and lock-outs, which affected the timber, wood-pulp, and metal industries. In the case of the last named, the dispute extended over six months, and the effect of the terms of settlement was not favourable to a reduction in working costs. Since the conclusion of the lock-out, however, a determined effort has been made by all concerned to make up for lost time, pig-iron and steel production being in November about 75 per cent. above the pre-strike level. Timber and wood-pulp exports declined from the 1922 level, partly owing to the enhancement of their price to customers through the appreciation of the natural currency in terms of the pound sterling. Shipping earnings exceeded those of 1922, but fell short of the 1921 figure. In spite of unfavourable weather conditions, the yields of wheat and oats were slightly greater in 1923 than in 1922, but the totals for rye and barley showed a slight falling off. Total imports were valued at 1,233 million kr in the first eleven months of 1923, against 1,054 millions in the corresponding period of 1922, and exports at 1,011 million kr, 1,032 millions against the visible adverse balance, thus increasing to a somewhat disquieting extent owing to the labour troubles mentioned above.

Government expenditure has been steadily reduced, and is estimated at 649 million kr for 1923-4, a decrease of 102 millions. The national debt increased during the year from the 1,551 million kr to 1,643 millions.

NORWAY.

Although the outbreak of a banking crisis in the spring, labour troubles in the wood industry, and the failure of the harvest, give a somewhat gloomy colour to the story of the year, other factors show that progress was not altogether checked by these unfavourable factors. The fisheries, on the whole, increased their take, though not their profits, exports of props exceeded those of 1922, and the same remark applies to the pulp figures, while exports of paper were only slightly below those of the previous year.

The monetary situation was not entirely satisfactory, the troubles of certain banks in the first part of the year giving rise to a feeling of insecurity. Money was dear, the official discount rate being 5 per cent. in January, and 7 per cent. in December. The krone depreciated, being quoted at 29.82 to the £ at the end of December, against about 25.12 in the previous January. The policy of deflation was brought to a standstill in February, and thereafter the Bank of Norway's note issue increased from 350 million kroner to 415 millions in June, with a drop to 381 millions early in December, succeeded by a further rise to 407 millions at the end of the month. The deficit on the 1922-23 budget has been officially put at 90 million kroner, but it is now announced that the 1924-5 budget will balance, as a result of administrative economies, and an anticipated increase in receipts from indirect taxation.

DENMARK.

The difficulties of the Landmandsbank necessitated the giving by the Government of a five years' guarantee to depositors, which did something to relieve the feeling of distrust which seriously affected business at the beginning of the year. Another adverse factor was the decline in the krone's exchange value, the quotation falling from 23.40 kr to £1 early in January to over 26 at the beginning of July. Although a recovery subsequently took place, the situation was deemed sufficiently serious to warrant the setting up of a conference, the outcome of whose recommendations was the setting-up of a fund totalling about £5,000,000, in London and New York, to be used for exchange stabilisation purposes. The reluctance of the Bank of Norway to raise its discount rate, however, precipitated another fall in the exchange in January, 1924, and the Bank rate has now been raised to 7 per cent.

Imports.—The foreign trade figures are as follows : (Million Kr.)

Jan. to Nov.			
	1922.	1923.	
Imports	1,304	1,702	
Exports	1,050	1,386	
Balance of imports	254	316	

Agricultural exports improved considerably in 1923. In the first nine months of the year live cattle exports were valued at 61 million kroner, against 41 millions in the corresponding period of 1922; exports of bacon, &c., at 368 millions, against 286 millions; eggs at 86 millions, against 79 millions, and dairy products at 368 millions, against 286 millions.

The final figures for the budgetary year 1922-23 show a net deficit of 60 million kroner, instead of the 112 millions estimated. The deficit was met out of available cash, which was thus reduced to 129 million kroner. For 1924-5 the State Budget shows an estimated surplus of 53 million kroner, and the "Capital and loans account" a deficit of 15 millions, a net surplus of 38 million kroner being thus anticipated.

THE BALTIC STATES.

The continued uncertainty of the Russian situation has naturally reacted on the general economic position of the new Baltic States, which would normally derive so much from their position as intermediaries between Russia and the West. Nevertheless, the year 1923 has not marked any very serious halt in the improvement

made since the war, while both Latvia and Lithuania have definitely advanced towards stability and order.

The exchange position has, on the whole, been satisfactory, and, with the exception of Estmarks, the new currencies show a definite improvement on the year, while Lats and Lits are now firmly established on a gold basis. Danzig, too, has created a new gold currency, and the exchange of the Baltic States generally stand out in marked contrast to the chaotic currency situation of their Continental neighbours. Negotiations for a Customs Union have proceeded successfully between Latvia and Esthonia, and it is hoped that Lithuania will also be included in the near future.

ESTHONIA.

Currency questions have caused considerable annoyance during the period under review. Confidence has by no means been established in the estmark, and a policy of credit restriction has been pursued throughout the year. This has greatly circumscribed the sphere of banking activities, and has led to a number of fairly important bankruptcies. On the other hand, the constant efforts which have been made to balance the Budget are beginning to bear fruit, and for the current year the deficit is only 423 million estmarks, with a total revenue of 6,732 million estmarks. Indeed, the deficit amounts to only 6.3 per cent. of the total Budget only, as compared with 19.6 per cent. in 1923. The foreign trade balance, however, is not very satisfactory, and the excess of imports was greater in 1923 than in the previous year :—

(In Millions of E. Marks.)			
	1922.	1923.	
	(10 Months.)		
Imports	5,589.4	7,759.7	
Exports	4,811.6	4,762.1	
Balance	777.8	2,997.6	

A welcome feature in the trade situation is the revival of exports of butter and eggs, which are both much superior to the 1913 level. In the international sphere the Consular agreement with Poland is worth mentioning, while the trade agreement with Finland has led to an increase of Esthonian exports to that country. A real recovery, however, will only be possible when the credit crisis has been successfully overcome.

LATVIA.

The most striking feature of the year has been the continued success of the new currency, the lat, or gold franc. Indeed, in 1923 this was one of the stablest currencies in Europe, and cases are reported of foreigners keeping deposits in Riga banks. The note issue has been kept constant for many months, while there has been a noticeable increase in the cover. Within the country the abolition of the rouble has continued, and the process should soon be completed. The Budget has been in a satisfactory condition since the year 1921-22, while in the coming year revenue should exceed expenditure by a fairly wide margin :—

1924-25.			
	Revenue	147,108,016 Lats.	
	Expenditure	137,001,294 "	

The foreign trade of the country is on the increase, as the following table shows :—

(Millions of Lats.)			
	1922.	1923.	
	(Jan.-Aug.)		
Imports	107	129	
Exports	102	103	

Thus in the first eight months of this year both imports and exports were superior to those of the whole year 1922. Trade has developed with England, though that with Germany has fallen off considerably, as German goods are unable to compete either in quality or in price.

LITHUANIA.

The progress begun in 1922 was continued throughout last year. The Government, with commendable energy, has continued on the path of sound finance. The number of civil servants has been reduced, and expenditure, at 201 million lits, is only 27 millions in

excess of ordinary revenue. The State spirit monopoly is reported to have worked successfully, and proposals are now being considered for the establishment of a monopoly of tea, which should be an important source of revenue. The trade returns for the year are not quite so satisfactory as those for 1922, though the considerable increase in the volume is most strikingly brought out :—

(In Gold Lits.)			
	1922.	1923.	
Imports	74,884,600	156,627,200	
Exports	76,892,400	146,794,700	

The 1922 returns were made for the most part in marks, and have been transferred into lits at current rates. It would seem fairly certain that the favourable balance of that year had been transformed into an adverse balance last year, though there was a great increase in volume even after allowance is made for price rises. The most important event of the financial year was the negotiation of a loan for one million pounds under the export credits scheme. With this sum considerable improvements should be made in the transport equipment of the country, and a number of elevators should shortly be built which will enable the grain to be handled much more efficiently than heretofore. A new and better tariff was also passed, which should shortly come into operation.

FINLAND.

The whole of the National Debt has been consolidated, though the money market has gone through a rather trying year. The demand for credit has been greater than the supply, in consequence of efforts made by the State Bank to improve the currency. The lowest rate of discount is now 10 per cent., as compared with 8 per cent. at the end of 1922. Ordinary revenue more than balances ordinary expenditure, though in the current year a small deficit due to extraordinary expenditure will have to be met out of the Treasury reserve. This latter, however, actually showed an increase at the end of 1923 in consequence of foreign capital borrowed during the year.

The harvest was rather disappointing last year, oats and rye doing particularly badly. The sawmilling industry has, however, had a record year, though the exports of butter and cheese have fallen off for the first time since the war. The preliminary returns of foreign trade over the twelve months are given in the following table :—

(In Millions of Finn Marks.)			
	1922.	1923.	
Imports	3,969.9	4,607.4	
Exports	4,467.6	4,384.6	

While shipbuilding has remained weak, seaborne traffic has increased considerably. The registered tonnage of ships arriving in Finnish ports, for example, was 3,460,573 tons, as against 3,043,950 tons in 1922. The general downward movement of wholesale prices has continued throughout the year, though not on a very large scale. Thus the general index number for January was 1134 (1913 = 100), while that for November stood at 1070. The cost of living has, however, risen slightly during the same period.

B.—BRITISH DOMINIONS.

CANADA.

General Position.—The year 1923 has yielded no sign of a boom in Canada, but the special demand for some of her products and her position in the economic orbit of the wealthiest country in the world ensured for her a satisfactory measure of prosperity. The volume of her field crops was the largest in her history, and though the prices received for them were still disastrously low they put in circulation a large amount of money; the farmers' difficulties are not at an end, but during 1923 there has been a slight betterment of their position. The pulp and paper industry has continued to expand, and the lumber business has also been good.

Mining operations in Northern Ontario are still yielding good results, and the nickel plants in the Sudbury area, which had been virtually closed down for some years, are once more active. The fishing industry is still in a poor way, and the fruitgrowers of British Columbia complain that present prices are quite unprofitable. The motor factories have all been working at full capacity, and their products swell the export figures. Thanks mainly to railway orders the iron and steel plants have had a much better year than in 1922, and the agricultural implement firms have also been busier. Other lines of factory industry have found orders somewhat scarce, and the textile mills have been loud in their complaints that British competition is ruining them. While the statistics of agricultural production, foreign trade, and railway earnings point to considerable prosperity, there are indices of a contrary character available. If the immigration figures for the eight months ended November, 1923, at 118,091 are double the level of 1922, they have not yet begun to fill the gaps left by the southward exodus, which continues in disquieting proportions.

Trade Balance.—Imports were valued at \$904 millions and exports at \$1,028 millions, as compared with \$762 millions and \$898 millions in 1922 respectively. The gain has been greater in imports than exports, but the favourable trade balance which was attained last year still persists. The special preference has helped British business a little, but despite the obstacles raised by the Fordney tariff, the main expansion is in trade with the United States.

Crops.—The value of Canada's principal field crops in 1923 is officially estimated at \$892,572,000, as compared with \$962,616,200 in 1922 and \$1,537,170,100 in 1919, the record year. The acreage planted showed no serious decline, and the yields of most crops were above the average. Failures of crops in Manitoba and southern Saskatchewan were more than compensated for by a record harvest in Alberta.

Public Finance.—The Federal revenues for the nine months of the fiscal year ending December 31st show a substantial gain, the comparative figures being \$308,310,719 for 1923 and \$300,174,050 for 1922. The chief source of increment has been the sales tax, but although it yields revenue it prevents any substantial fall in the cost of living. Despite improved revenues there has been a slight increase in the national debt, which stood on December 31st at \$2,415,538,100, as against \$2,412,496,151 on December 31, 1922. However, there has been a marked improvement in the earnings of the national railway system, and the deficit which has to be provided for will probably be cut to \$50 millions instead of nearly \$78 millions in the fiscal year ended March 31st last.

Money, Stocks, and Exchange.—Money has been quite plentiful, as the success of the Federal and Ontario Governments in placing large issues at home demonstrated. The placing of Canadian bonds in large quantities and at good prices in the American market has continued. In stocks the "bull" market of 1922 was carried over into the spring of the year, terminating in April in a slump which lasted till October. In the last two months there has been a "bull" tendency, and markets have been more active.

Wages and Prices.—In certain trades, particularly in the building trades, there have been slight advances of wages in 1923, required to hold the workers in Canada. Wages of unskilled labour have shown a tendency in the opposite direction, so that there has been little general change. As in other countries, general wholesale prices registered a slight increase, the Bureau of Statistics' index number for December, 1923, being 153.5, as compared with an average of 150.4 for 1922.

AUSTRALIA.

Trade.—The foreign trade figures for the year ended June 30, 1923, were less favourable than those of the previous year, as will be seen from the following table:—

Year.	Imports. £	Exports. £
1913	79,749,653	78,571,769
1920-21	163,801,826	132,158,912
1921-22	101,066,436	127,846,535
1922-23	131,808,673	117,913,083

The "favourable" balance of £24,780,099 of 1921-22 was succeeded by an "unfavourable" balance of £13,895,590 in 1922-23. The returns of merchandise imports (home consumption only) and exports from July to October may be put as follows:—

July-October.	Imports. £	Exports. £
1922	41,024,000	30,120,000
1923	44,683,000	25,410,000

The relative position of imports and exports during recent years has been affected by the large amount of Government and other borrowing, chiefly placed in London. The *Australian Insurance and Banking Record* places the net purchasing power of Australia, based on exports amounting to £118 millions in 1922-23, at about £93 millions.

Production.—The high price and strong statistical position of wool favourably affects the economic situation at the present time. The estimated production for the season 1922-23 was 1,918,000 bales, rather less than that of 1921-22 (2,041,000 bales), but considerably above that of 1920-21 (1,635,086 bales). The average price realised per bale was £22 9s 8d in 1922-23, compared with £15 8s 1d in 1921-22, and £15 12s 7d in 1920-21. The present year's clip is expected to be short in quantity, and not up to last year's in quality, but a continuance of high prices is expected. Last year's wheat harvest was some 20,000,000 bushels less than that of the previous year's, and exports fell off considerably. The present crop is, however, doing extremely well, and is described by the International Institute of Agriculture as 16 per cent. above the average for 1917-21. The vintage year was one of the best ever experienced. Attention is being paid to cotton-growing, about 4,000,000 lbs of unginned cotton being produced in Queensland in 1922.

Industry.—Employment was fairly good in 1923, such unemployment as existed being chiefly confined to skilled workers. In the building trades a shortage of skilled labour exists. Domestic industry is still burdened with heavy labour costs, and little reduction has been made in the wages bill. Textile mills found the year a difficult one, and the iron and steel industry has also complained of insufficient protection against foreign imports.

NEW ZEALAND.

General.—The outlook improved considerably during the year. Many "frozen credits," the legacy of the 1921 crisis, have been liquidated, and though some reconstructions have been necessary, the financial basis of the country's trade is undoubtedly much sounder than a year ago.

Public Finance.—The results of the financial year 1922 showed receipts of £27,579,000, against an expenditure of £26,264,000, the resultant surplus being £1,315,000. On the basis of this result the Government made a number of tax reductions (including a 20 per cent. reduction in income-tax), estimated to cost £1,250,000 in 1923. The returns for the first six months of 1923 were exceedingly favourable. Revenue increased by £516,000, as compared with the corresponding period of 1922, and the surplus of £921,500 was, in fact, greater than the estimate for the whole year. At the end of 1922 the Government applied £3,160,000 of its accumulated surplus of £8,847,000 to the reduction of debt. In May, 1923, an issue of

£4,000,000 on the London market met with a very favourable reception.

Trade.—The trade returns are encouraging:—

	1921. £	1922. £	1923. (9 Months.) £
Imports	42,942,443	35,012,561	31,481,795
Exports	46,823,827	45,583,005	37,591,106

Excess of exports.. 3,886,384 .. 10,570,444 .. 6,109,311

Great Britain has practically recovered her pre-war position in New Zealand's competitive trade, the proportion being 65 per cent. in 1922, against 56 per cent. in 1920, and 67 per cent. in 1913.

Production.—The meat season has been uneven, though the total value of frozen meat exports in the past season, at £8½ millions, was about half-a-million in excess of the previous season. Wool sold in the country realised £7,569,000, against £4,207,000 in the 1922 season. The dairy industry has exceeded all previous records, the produce being valued at more than £17 millions in the 1923 season, against less than £14 millions in 1922-23.

INDIA.

Trade.—The improved conditions manifest in the last few months of 1922 continued to develop in 1923, and the year as a whole was probably the brightest since the collapse of the war boom. The monsoon was again favourable, after an uncertain start, and the satisfactory nature of the crops obtained was reflected in a recrudescence of demand for Lancashire piece-goods in the autumn. During the twelve months ended March 31, 1923, merchandise imports were valued at 233 crores of rupees, and exports at 289 crores, against 266 crores and 231 crores respectively in 1921-22. The balance of trade thus swung round completely in India's favour, an adverse balance of 13 crores in 1921-22 being transformed into a favourable balance of 28 crores in 1922-23. Imports of cotton yarns and manufactures rose from 57 to 70 crores of rupees, Great Britain being responsible for 91 per cent. of the piece goods, but only 52 per cent. (in value) of the yarn. Imports of machinery declined from 35 to 24 crores owing to a fall in average prices, while iron and steel imports amounted to 18 crores, against 21 crores, and sugar imports to 15 crores, against 27 crores. As regards exports, the increase was due chiefly to a better season in India and the improved buying power of certain of India's oversea markets. Raw cotton exports amounted to 3,362,000 bales, valued at 72 crores, half the total quantity being purchased by Japan. Jute exports increased from 14 crores to 22 crores, and grain, pulse and flour from 30 to 42 crores. Raw hides and skins exported reached a total of 5.7 crores. The trade balance has remained favourable during the first eight months of the present statistical year, as the following figures show:—

	(Rupees.)		
April-November.	1921.	1922.	1923.
Imports	1,84,14,01,240	1,61,70,68,848	1,58,70,74,881
Exports	1,52,55,78,793	1,93,60,29,689	2,17,79,79,592
Balance of imports (-) or exports (+)	31,58,22,447	31,89,60,841	59,09,04,711

Crops.—The following figures have been compiled by the International Institute of Agriculture:—

	(Thousand Centals. 1 Cental = 100 Lbs.)		
	Average, 1917-21.	1922.	1923.
Yield of—			
Wheat	198,531	220,192	221,558
Rice	1,057,478	1,143,029	..
Cotton*	17,516	20,784	..

* Ginned cotton.
From the various official final forecasts it would appear that the 1923 jute crop will reach a total of 6,865,000 bales of 400 lbs, a large increase on the 4,108,000 of 1922, but considerably below the average for the "record" years 1913 to 1917.

Public Finance.—The gross revenue and expenditure as set forth in a recent official memorandum are:—

	GROSS REVENUE and EXPENDITURE.		
	Accounts. 1921-22. Rs.	Revised Estimate. 1922-23. Rs.	Budget. 1923-24. Rs.
Revenue	115,21,50,317	120,70,17,000	134,90,43,000
Expenditure	142,86,52,017	137,95,52,000	134,09,57,000
	*27,65,01,700	*17,25,35,000	†80,86,000
	* Deficit.	† Surplus.	

The deficit on the revised estimate for 1922-23 was attributable to a falling of revenue below the estimated total under the heads of customs, taxes on income, railways, and posts and telegraphs. Reductions were effected in civil and military expenditure and interest on debt. Increased amounts were received from opium and salt. The Report of the Inchcape Retrenchment Committee indicated various methods by which expenditure might be reduced, but the Government's proposal to double the salt tax became a matter of acute political controversy, when the Governor-General "certified," and thus gave the force of law to the proposal after its rejection by the Legislative Assembly. Up to the present the tax has not brought in the amount anticipated.

Banking.—The failure, in April, of the Alliance Bank of Simla was a great shock to the business world, though its ill-effects were more severely felt in Bengal than in Bombay. The Tata Industrial Bank subsequently found it advisable to take shelter under the wing of the Central Bank of India, a Bombay institution, with which it amalgamated. During the year the rupee appreciated from 1s 4½d to 1s 5½d, the rise being quite gradual, owing to the success of the system adopted by the finance member, Sir Basil Blackett. The Imperial Bank of India has purchased sterling, on behalf of the Government, from banks and exporters, at prices based on current market rates, in addition to the usual weekly tender arrangements. £2,000,000 of gold, held in the Paper Currency Reserve, were sold in the proceeds invested in sterling interest-bearing securities. India was an active dealer in the bullion markets throughout the year. Money was, on the whole, perhaps, less tight in the crop-moving season than was the case last year. The Imperial Bank of India's discount rate remained at 4 per cent. from June 28 to November 15, reached 6 per cent. on November 29, 7 per cent. on December 20, and was raised to 8 per cent. on January 3, 1924.

SOUTH AFRICA.

Public Finance.—The financial year 1922-23 has not turned out so satisfactorily as was anticipated, the estimated deficit of £349,000 being later put at £900,000, and, according to the Finance Minister, it may now amount to as much as £1,353,000. For 1923-24 revenue was estimated at £27,555,000 and expenditure at £28,561,000. Allowing for a supplementary estimate of £90,000, a total deficit of £896,000 was indicated. Various increases in customs duties and economies in administration were expected to reduce the unfavourable balance to £436,000. At the time of the Budget speech the total public debt amounted to £199,000,000, an increase during the year of £7,500,000. The Provincial Finances Committee has set on record its opinion that "the country's expenditure has grown at a rate quite out of proportion to the increase in resources."

Trade and Production.—The following are provisional trade figures for 1922 and 1923:—

	(Million £'s.)	
	1922.	1923.
Imports	51.5	62.0
Exports	60.5	70.0
Export balance	9.0	8.0

The year's gold production amounted to nearly 7,799,000 fine ounces, worth (at 85s per fine ounce)

£39,000,000, as compared with 7,020,000 ounces, valued at £30,000,000 in 1922, the year of the Rand strike. The diamond industry has made great strides during the year, production for the first ten months being valued at £4,768,000, against £1,792,000 in the corresponding period of 1923. The value of coal obtained in South Africa between January and October, 1923, was £3,096,000, the corresponding figure for 1922 being £2,909,000. Business operations were conducted with caution, in view of the unfortunate experiences of many firms in 1920, and present stocks may be slightly under normal. The last quarter of the year witnessed the beginnings of a revival of demand, and at the end of the year the engineering, building, furniture, and boot and shoe industries were reported well employed. Exports of wool (greasy) in the first eight months of 1922 and 1923 were valued at £5,340,000 and £5,865,000 respectively.

The main feature of the past year has been the decline in deposits and advances. The balance-sheets of the two "commercial" banks reveal the following changes:—

	(Million £'s.)		Bills Discounted and Advances.	
	Deposits.		September 30, 1922.	September 30, 1923.
Standard Bank	51.0 .. 47.0 ..	36.0 .. 31.0 ..		
National Bank	41.5 .. 39.5 ..	26.0 .. 22.0 ..		

In October, 1923, the Union raised £9,000,000 in London, at a rate and fraction over 5 per cent., £5,655,035 of which represented maturing obligations. The loan was quickly oversubscribed.

C.—OTHER COUNTRIES.

UNITED STATES.

General Conditions.—In 1923 the United States once again concentrated its activities on the development of its immense internal resources. In the process all branches of industry obtained a good deal of business, and America is one of the few countries which deserved to be called "prosperous" in 1923. In the spring it was not altogether impossible that this healthy activity might become a boom, but, fortunately, no speculative accumulations of stocks had been made, and the volume of business, as a matter of fact, subsequently showed some contraction. The best evidence of the sound basis on which trading operations were financed is the actual decline in prices, which were 3 per cent. lower in December than in the previous January.

Production and Trade.—A few comparisons between 1922 and 1923 may be given. Lake Superior iron ore shipments rose, in the first eleven months, from 42,613,000 tons in 1922 to 59,037,000 tons in 1923. Pig-iron production rose from 26,880,000 gross tons in the whole year 1922 to 40,059,000 in 1923, and steel ingot production from 29,116,000 gross tons to 41,217,000 gross tons. The net earnings of the United States Steel Corporation in the last quarter of 1923 were \$50,000,000, against \$27,500,000 in the same quarter, 1922. Automobile production reached 3,637,000 passenger vehicles and 376,000 trucks, against 2,339,703 and 245,000 respectively in the previous year. The value of building permits issued in 159 cities, according to *Bradstreet's*, was \$3,086,500,000, against \$2,508,500,000. Net operating revenues of 194 railroads (January to November) rose from \$1,054 millions to \$1,306 millions. Retail sales by "chain-store" systems increased from \$391,000,000 to \$465,000,000.

The following table shows imports and exports of merchandise, by groups:—

	(Thousand Dollars.)		Imports.	
	1921.		1922.	1923.
Raw material	853,047 ..	1,161,727 ..	1,389,033 ..	
Foodstuffs, raw	304,134 ..	329,816 ..	362,791 ..	
Foodstuffs, partly manu- factured	368,840 ..	388,287 ..	529,577 ..

The export balance amounted in 1923 to \$299,214,000, as compared with \$652,587,000 in 1922, and \$1,869,781,000 in 1921.

Crops.—The yield of the main crops, according to the International Institute of Agriculture, was as follows:—

(In Thousand Centals—1 Cental = 100 Lbs.)

	Average, 1917 to 1921.		1922.		1923.	
	1917 to 1921.		1922.		1923.

* Estimated yield of ginned cotton, seasons 1917-18 to 1921-22, 1922-23, and 1923-24 respectively.

Maize, oats, and barley were good crops, but wheat fell off slightly, and the short cotton crop was a great disappointment to Lancashire producers. The total money yield of the 1923 crop has been put at \$880,000,000—1.7 per cent. above 1922—of which cotton accounts for \$400,000,000, and maize \$300,000,000.

Public Finance.—The following summary was contained in President Coolidge's message to Congress, early in December:—

BUDGET SUMMARY.

(Exclusive of Postal Revenues and Postal Expenditure Paid from Postal Revenues.)

	Estimated, 1925.	Estimated, 1924.	Actual, 1923.
Total receipts	\$ 3,693,762,078	\$ 3,894,677,712	\$ 4,007,135,480
Total expenditure (including reduction of the Public Debt required by law to be made from ordinary receipts)	3,298,080,444	3,565,038,088	3,697,478,020
Excess of receipts	395,681,634	329,639,624	309,657,460

The fiscal year ends on June 30th, but Washington figures for the calendar year 1923 show receipts of \$4,165 millions—\$500 millions in excess of 1922—and expenditure of \$3,888 millions, leaving a net balance of \$276 millions at the end of the year. Income and profits taxes yielded \$1,869 millions in 1923, against \$1,502 millions in the previous year. Customs receipts amounted to \$583 millions, the highest total in the country's history.

ARGENTINA.

Trade and Prices.—For the first time within a decade the balance of trade became adverse. Superficially, trade appeared satisfactory, but importers were pessimistic, owing mainly to the new Tariff Revision Bill, put into force on December 3rd, which adds practically 60 per cent. to the tariff values of 1906, and increases by 25 per cent. specific duties on *ad valorem* goods. The cost of living advanced. The textile market was depressed, particularly in hosiery.

Agriculture.—Harvest prospects were exceptionally good, but danger from locust invasion threatened. Exports of Argentine products, including wheat, maize, corn, linseed (with prices highest since 1920), butter, salt ox-hides, frozen beef quarters, chilled beef quarters, frozen mutton carcasses, and frozen lamb carcasses all marked increases. The fall in meat prices was offset by the volume of business done by packing-houses, two plants declaring dividends of 14 per cent.

and 15 per cent. respectively. The suspension of the recently adopted meat law reacted favourably on the industry, which had become partially paralysed. Several land companies increased their profits, though others were unable to distribute dividends. The cotton crop was expected to be worth 50,000,000 pesos, a considerably greater cotton area having been placed under cultivation.

Industry.—Local industries made further strides in every direction. The building boom was maintained, the demand for materials (including cement, steel, iron-mongery, and hardware) being strong. Lumber moved better. Almost without exception the railway systems carried more traffic than for several years. Dividends of 7 per cent. were declared by the B.A. and Pacific, the B.A. Great Southern, and the B.A. Western companies, and 6 per cent. by the Central Argentine upon their ordinary shares. A proposal was made by the Government to expend 365,000,000 paper pesos upon State railway extensions.

Public Finance.—A feeling of anxiety existed regarding the general financial outlook and the ever-increasing national indebtedness, since no settlement of the floating debt appeared imminent. Offers of open credits in London (aggregating £1,200,000 for six-monthly periods at the rate of the day) were received. The sum of \$25,000,000 (gold) six months' Treasury bills was renewed at 3½ per cent. per annum. A fresh internal loan of 175,000,000 pesos at 6½ per cent. was arranged for the Municipality of Buenos Aires, while the Province of the same name authorised the issue of 35,000,000 pesos (gold) at 6½ per cent. Negotiations were entered into, but not concluded, for the renewal of the \$60,000,000 gold loan due October 1st. Little new foreign investment entered the country, while local capital remained shy. Stock Exchange dealings were notably fewer.

BRAZIL.

Trade and Exchange.—The exchange situation again dominated all forms of Brazilian economic enterprise. Towards the close of the year, however, sustained improvement asserted itself. General economic conditions were satisfactory, native products bringing good prices and exports increasing. Several classes of imports correspondingly decreased owing to increased native production. Coffee stocks at the end of the year showed a decrease, both at Santos and Rio de Janeiro, while from Sao Paulo reports represented serious injury to the growing crop from unseasonable rains, and indicated their reduction. During the year the coffee market suffered severe shocks, especially towards July, when a panic prevailed over a prolonged period. A crisis was occasioned by the sudden retirement of the Government as a buyer, a policy followed by private purchasers, while the situation was aggravated by speculators.

Cotton and Sugar.—The cotton market showed firmness, with prices steadily rising, the reason being shortage of the article, and, near the end of the year, the continual fall in exchange. The International Federation of Master Cotton Spinners and Manufacturers' Associations dispatched their general secretary to report upon cotton prospects. His report proved highly favourable, foreshadowing production in Brazil of cotton of a staple of from 1 inch to 1½ inches, and of long staple in several of the States. An improvement in marketing was maintained. The sugar market was fairly steady, available supplies being chiefly required for the United Kingdom, with little export to other markets.

Public Finance.—The foreign debt amounted to 8,298,039 contos (reckoning sterling at 6d to the milreis), or, say, £207,450,996; the Federal debt to £138,702,840; State debts to £43,810,860; and municipal debts to £24,937,266, this indebtedness representing a *per capita* rate of £6.77. Certain administrative

economies are to be effected, and it is believed that revenue will exceed expenditure by over 100,000 contos. For the first half of the year the excess was 75,000 contos. In December a party of British financial advisers (including Mr Edwin S. Montagu, Sir Charles Addis, Lord Lovat, and Mr Hartley Withers) left England for Brazil. The Federal District's municipal finances became "extraordinarily grave," the Prefect requesting creditors for a moratorium for a determined percentage of the city's debts. The State of Amazonas endeavoured to place a loan for \$35,000,000 at 8 per cent., offered at 90, but this was disavowed by the Federal Government. The State of Maranhao raised a loan for \$1,500,000. The States of Sao Paulo and Minas Geraes continued to prosper, although in the former case the financial year closed with a deficit of nearly 48,000 contos of reis.

Industry.—Native industries remained in good condition generally, manufacturing activities increasing throughout Brazil. Crops brought good prices, but the meat packing industry was quiet. Considerable building took place, the demand for material being consistently good. The electrical goods market remained steady, and the hardware market unchanged. Sales of textile and other manufacturing machinery were excellent. Foreign cotton goods experienced fresh difficulties in competing with domestic products, the local textile industry extending rapidly. Automobile sales were reduced, while the paper market was dull.

CHILE.

Public Finance.—The state of the national finances continued to cause some anxiety. The Minister of Finance announced that the year would close with a total deficit of \$108,793,900.93. A draft law was prepared to prevent speculation in exchange, and prohibit dealings in bills on foreign countries except for the purpose of cancelling civil or commercial obligations. A measure was also presented for the establishment of a Central Bank to regulate exchange, and stabilise credits. An Income-tax Bill, imposing 4½ per cent. on all dividends paid, and of 3 per cent. on the net profits of all foreign companies working in Chile, was passed subject to certain modifications which gave rise to political disagreements. Trade collections proved slightly better, while there was a moderate demand for bank, insurance, nitrate, and mining stocks, and a notable improvement in sheep-companies' stocks. The local bond market was weak.

Nitrate.—During the year the nitrate market showed a steady expansion in consumption, averaging an increase of 25 per cent., with a corresponding reduction in stocks. About 81 per cent. of the oficinas were working, compared with 53 per cent. in the previous year. The sugar refiners' determination to fertilise by nitrates had a stimulating effect upon consumption, likely to be largely augmented in future years. Values fluctuated but slightly. The cost of production remained satisfactory, ranging from 5s 9d to 7s 3d per Spanish quintal (plus 4d per quintal due to the pool, to be completed on March 31st next). The average selling price worked out at about 9s 4½d to 9s 6d per quintal. The State income-tax was expected to subject English nitrate companies to a charge of about 7½d in the £ on their net annual profits.

Trade and Industry.—The unsettled exchange situation produced general dullness in trade, relieved, however, by the improvement in nitrate markets. The demand for local agricultural products, both at home and abroad, increased, resulting in firmer prices, while several markets in other industries advanced. On sugar and rice prices ruled at a higher level. Competition in certain lines was keen, particularly textile and industrial machinery and chemicals. Sales of foodstuffs, automobiles, and specialties were satisfactory, while those of rubber goods and iron and steel were fair. Textile imports showed a decline.

Ocean freights to Europe strengthened, while those to the United States eased. The coal market continued depressed, but agriculture (except early hay crops) derived considerable benefit from seasonal rains. Tenders for port improvements at Constitución were invited, the authorised expenditure being £900,000. No foreign tenders being submitted, the Government determined to carry out the work on its own account. A British firm secured a further large contract at Valparaiso. Railway receipts showed improvement, the State lines marking economy in working; the Taltal Railway made a profit of £99,663 (distributing 9 per cent. on its ordinary shares), and Nitrate Railways paid 7s on unconverted ordinary shares, compared with nothing in the previous year.

OTHER SOUTH AMERICAN STATES.

BOLIVIA.

The Bolivian budget estimated revenue at 23,938,533 and expenditure at 38,623,832 bolivianos, a deficit of 14,685,299 bolivianos. While general trade remained stagnant, tin shipments increased, and higher prices were realised. Large quantities of Bolivian ores were smelted in the United Kingdom. From the local banks the Government raised a loan of 3,000,000 bolivianos. The mining industry was prosperous, copper being an exception. Cattle disease broke out, and foreign live stock imports were prohibited.

COLOMBIA.

Colombian conditions proved disappointing, the coffee crop not coming up to expectations. Dullness of trade accompanied further bank restrictions, fewer than 25 per cent. of Barranquilla business houses being able to secure advances. While the cattle industry was active, mining—platinum excepted—proved dull. For the first half of the year foreign commerce showed imports of 42,125,371 kgs, valued at 33,636,918 sucres and exports of 32,448,592 kgs, valued at 23,898,847 sucres. Several engineering projects were delayed through financial difficulties.

ECUADOR.

No recovery occurred in Ecuador, imports declining, with an immaterial increase in exports. Large credits or foreign drafts for cash transactions were difficult to obtain, the Government securing full control. Cacao realised better prices, but stocks on hand remained large. The external debt remained unchanged at 30,000,000 sucres (10 sucres = £1).

PARAGUAY.

While Paraguayan trade showed a favourable balance, "invisible exports" were much less satisfactory. Cotton cultivation was encouraged, seed exports being forbidden. The Peruvian budget balanced at £7,911,072. Greater interest was displayed in the local cotton market, the maximum price reported being 1s 8d per lb. Labour disturbances were frequent, with complete stoppages on some railways and mines. The new freight rate schedule was suspended. Shipping was dull and banking business quieter. Temporary default took place on the 1920 5 per cent. Gold Bonds, the July coupon being delayed notwithstanding that the amount needed reached only £17,000. The Peruvian Corporation enjoyed greater prosperity, with earned profit £356,885, and net revenue showing a balance of £363,673. The preference dividend was raised from 1 per cent. to 2 per cent., and debenture interest increased by 2 per cent. (to 6 per cent.) for the year. Immigration proved disappointing.

URUGUAY.

Although Uruguayan trading conditions remained fairly satisfactory, the financial situation failed to improve. At the commencement of the year the public debt totalled 177,690,120 pesos, the per capita ratio running 119 pesos, or about £28 at current exchange. The budget totalled 43,644,698 pesos (gold). Bank drafts were taxed 1 and telegraphic and telephonic drafts 1 per 1,000. Interior financial conditions were

exceptionally good, local merchants granting credits to interior firms more freely. Abundant grass helped the cattle industry. Hide purchases fell off, but the wool crop was good, with higher prices. The livestock market was weak.

VENEZUELA.

Business conditions in Venezuela improved somewhat owing to increased circulation of funds and advances to coffee growers. While merchandise stocks remained large, future orders were financed abroad. The budget balanced at 62,845,000 bolívares. Collections were facilitated and credit conditions were easier. Coffee remained inactive, growers being disinclined to sell for future delivery at current low prices. Dullness characterised the cacao market, prices averaging only 42 bolívares per 50 kgs. sack. New and promising oil discoveries were made, the industry being well sustained. The United Electric Tramways Company distributed 10 per cent. dividend, while the Puerto Cabello and Valencia Railway's gross receipts improved and expenses decreased, the first charge upon the coupons being paid. La Guaira tonnage improved, the first mortgage debenture stock being paid, but no distribution was made on the deferred interest warrants.

MEXICO.

Finance and Trade.—The greater part of the year proved unfavourable to trade, owing to the Government's financial difficulties and consequent suspension of payments. An improvement ensued upon the settlement of several strikes, and the placing of a Federal loan for 10,000,000 pesos (£1,000,000) advanced by a large oil company. Later on industry declined, however, and at the close of the year indifferent sales were reported. Some banks enjoyed improved conditions in making collections; generally, however, difficulty was experienced except in the case of the larger importing houses. Local cotton mills effected fewer sales in Central and South America, others were admittedly in financial difficulties caused by rising prices. While small mills reduced their production, the larger stopped buying, reporting excessive stocks on hand. The year's cotton crop was estimated at 120,000 bales, slightly under the production of 1921, but larger than that of 1922. The decline in commercial activities was further exemplified by the lower value of transactions in the Public Registry Records. For the first half of the year imports totalled 150,000,000 pesos (of which 107,000,000 pesos came from the United States), and exports, exclusive of petroleum, 124,000,000 pesos (of which 112,000,000 pesos went to the U.S.A.). Petroleum production dwindled, the first nine months showing a decline of 42,000,000 barrels compared with the previous period. The Mexican Eagle Company was unable to make any interim distribution upon the 8 per cent. preference or common shares.

General.—The year proved one of the worst on record in the matter of labour disturbances. At Vera Cruz thousands of tons of merchandise were held up, occasioning serious embarrassment to merchants in the capital. Outbreaks occurred at Orizaba textile mills, and a general strike at the Coahuila coal mines. The Mexican Railway strike reduced the company's earnings by £63,000. Mining interests were disturbed by labour conditions and heavy taxation.

A Bankers' committee fixed a date for the resumption of payments on Government bonds; deposit of the necessary funds was made in New York. A national banking system, combining principles of the Federal Reserve System and the Bank of England, was proposed. A new issue institution with 100,000,000 pesos capital was projected, American, British, Spanish, Swiss and French interests being represented.

At the end of the year, however, an outbreak of revolutionary military activities placed these proposals outside the pale of practical politics, for the time being. Pending the return of stable conditions, the Mexican situation must remain uncertain and unsatisfactory.

CENTRAL AMERICA.

The countries of the Caribbean—Cuba and, perhaps, the two "black" Republics of Haiti and Santo Domingo excepted—suffered with all other Latin-American countries from the vagaries of the exchange. In Costa Rica the favourite coffee crop revived optimism, general trade showing improvement. Increased sugar prices and banana sales helped the upward movement, both London and San Francisco prices being more favourable. The new harvest was estimated at 1,660,000 bunches. Exports of cacao, sugar, pineapples, hides, and other local products advanced. Cuba made a remarkable recovery from the previous year's commercial depression, the sugar industry having regained its supremacy. The currant crop was estimated at 3,500,000 tons, some experts, however, naming a higher figure. Trade remained active, the United States claiming two-thirds of the imports and four-fifths of the exports, the British share being approximately 5 per cent. of the former and 9.5 per cent. of the latter. In El Salvador prosperous conditions prevailed. All crops promised substantially better totals. Heavy mercantile stocks, however, remained unsold, but importers were inclined towards renewed purchases abroad. Unemployment was lessened, while labour difficulties ceased. A loan was placed at par in the United States for \$6,000,000 at 8 per cent., and payment of arrears was made upon 6 per cent. Sterling Bonds of 1907, and 7 per cent. Sterling Funding Bonds of 1915, and railway subsidy arrears were liquidated.

Guatemala showed signs of some recovery, the revenue showing an increase and general expenditure a reduction. The political position, however, still interfered with recovery. Payment was made on the 4 per cent. External Debt to June 30, 1923-24, but nothing was paid on arrears. The deficit remaining totalled 42,000,000 pesos. The British debt balance stood at £1,308,563, interest arrears of £844,603 excepted. Harvesting operations were successful throughout the greater part of the country, abundant rains assisting coffee. Collection of fiscal taxes and duties proved satisfactory.

Haitian finances further improved under the foreign Customs Receivership. Trade on the whole, however, was stagnant. Economic conditions in Honduras remained unsatisfactory, revenue proving insufficient to pay official salaries. Several important local industrial enterprises abandoned the country. Unseasonable hurricanes ruined banana harvests. Silver mining, accounting for 40 per cent. of the total purchasing power of Southern Honduras, was partially abandoned owing to lower prices. A settlement of the Honduras Debt on the basis of £20,000 for each £100,000 of bonds (issued 1867 and 1870) was agreed upon.

Nicaraguan local trade remained unsatisfactory, but a better harvest season was anticipated, coffee prospects (following a delay in seasonal rains) being particularly bright. Approximately the same quantity of sugar was expected to be available for export. A slight improvement was noted in credit conditions, merchants securing a firmer footing. Loan money fetched between 12 and 14 per cent. While Customs receipts increased, expenditure decreased. Cattle breeding revived after the formation of a National Livestock Association.

In Panama a moderate amount of new stock was imported, but little inclination towards large purchases was displayed. America supplied approximately 71 per cent. of the monthly proportion. The receipts of the Canal and its auxiliary agencies made great strides, exceeding all previous records. Profits totalled \$12,063,880 from all sources, the railway and steamship line excepted. Traffic operations increased on a scale rivalling and exceeding the traffics of the Suez Canal. The net tonnage passing through the canal increased from 11,417,459 to 18,605,786; tolls from \$11,197,832 to \$17,508,199, and cargo tonnage from 10,884,910 to 19,567,875. The United States carried 56.5 per cent. of the cargo moving through the canal.

In Santo Domingo trade remained depressed, and many dry goods merchants were in financial difficulties. American competition further increased, but debt collection proved difficult.

THE NETHERLANDS EAST INDIES.

Financial prospects in the Netherlands East Indies have improved during 1923, the floating debt being reduced from 430 fl millions to 225 fl millions, or approximately from £35 millions to £18½ millions. In addition it seems likely, according to latest information, that the ordinary Budget during 1923 will balance, although the estimates showed a deficit of 98,700,000 fl. In 1922 the estimated deficit was 118,500,000 fl, but the actual figure was only 15,700,000 fl. In 1922, there was a favourable trade balance of 383,091,126 fl, as compared with an adverse balance of 40,390,000 fl in the previous year, and an even more favourable result is anticipated when last year's figures are announced, probably next autumn. The general state of trade has improved enormously during the past twelve months, and there has been a small "boom" in many of the export commodities of the islands.

The tea revival has had a very marked effect on the industry in Java and Sumatra, where British interests are large. There is about £3 million of British capital invested in tea in the two islands, while the 50,000 British planted acres represent nearly 22 per cent. of the total. The yield from British estates is 25 per cent. of the whole. Java stands third as a sugar-producing country, the estimate for 1923-24 being 1,720,000 tons, the actual output for the previous season having been 1,788,000 tons. With regard to the rubber industry, the majority of British-owned estates are voluntarily restricting their production, and are losing heavily as a result. During the first half of 1923 the total output increased by over 31 thousand tons, in spite of the curtailment on British plantations. The question of voluntary restriction is now being considered by Java planters.

The revival in the tin market has been felt in the mines at Banka, Milliton, and Singkep, where the output has increased. With the improvement in the export trade of the islands the prospects for the import trade are distinctly brighter than they were a year ago.

MALAYA.

With a marked improvement in the prices of tin and rubber, the position in Malaya has materially amended during the past year. In the first six months of 1923 the aggregate value of trade showed an increase of about 33.33 per cent., as compared with the same period of 1922, owing to the higher exports of rubber and tin. The receipts of the F.M.S. railways showed a net increase of \$206,113 over the corresponding period of the previous year, which adequately reflects the general improvement which has taken place. The effect of the restriction of the rubber crops has been to improve the price, which has been approximately doubled. During the first six months of 1923 the declared value of exported rubber was \$201 millions, as compared with \$112 millions in the previous year, an increase of 79 per cent. At the same time the quantity only rose by 6 per cent.—from 175,500 tons to 186,100 tons. The total gross exports for the year were 252,146 tons, as compared with 248,158 tons in the previous year. Tin has also showed a great improvement during 1923, and prices ranging up to over £240 per ton have been realised. With the decreasing Government stocks, there is every reason to anticipate that the industry will soon be established on a firm basis once again. Up to the end of November, 34,220 tons had been exported as compared with 32,144 tons and 31,011 tons during the same periods of 1922 and 1921 respectively.

Important developments have taken place during the

JAPAN.

Production and Industry.—The rice crop amounted to 23,302,500 centals, or 7.7 per cent. less than in 1922, and 2.9 per cent. below the average of the five years 1917-1922; the barley to 14,746,000 centals, or 1 per cent. above that of 1922, and 3.5 per cent. below the average of 1917-1922. The yield of raw silk appears to have been below the average.

CHINA.

Public Finance.—Practically, the revenue of the Peking Government during the year consisted (1) of the Customs and Salt surpluses, after payment of the charges on these revenues "released" to it by their foreign administrations; (2) of short-term loans from the native banks, whose interest it was to save their chief creditor from total collapse. The Maritime Customs revenue was 63,378,000 Haikwan taels, against 58,634,000 in 1922. As the tariff had been raised in January, 1923, to an effective 5 per cent., the increased revenue did not represent a corresponding increase in imports, and, as the average exchange had been lower, the gold value was only £37,600 more. The Washington Treaty had contemplated the addition of a further 2½ per cent. *ad valorem* to the Customs duties, making a total increase of 7½ per cent., but this so-called "surtax" was blocked by the refusals of France to ratify the Treaty, owing to the disinclination of the Chinese Government and Parliament to pay the French share of the Boxer indemnity in gold francs. Consequently, the Conference which would have considered the surtax did not meet in the autumn as had been expected, and the sanction by the Powers of a further effective increase of 5 per cent. *ad valorem* (making 12½ per cent. in all), which had been regarded as a possibility in the near future, was postponed indefinitely. The revenue of the native Customs under the control of the Inspector-General amounted to

I.—THE CORN TRADE.

BUSINESS STABILISED.

With respect to spring corn and feeding stuffs, the situation seems at a first glance uncertain and unsettled, but those who have frequented the markets week by week are aware of very definite, not to say inflexible currents. Heavy oats will have "first market" when the market can get them, and linseed, with linseed cake, will sell first when prices are at a parity with respect to other oilseeds and other oilcake. Maize will sell freely and travel far inland if it is cheap, but a very little rise in its price brings us to the rooted conservatism of our people, who turn quickly to feeding barley, pulse, and even to the lighter oats as soon as the glamour of real cheapness—say, 7s per cwt, against 9s or 10s—is removed.

A strike in February on the Peking-Hankow Railway was suppressed by force, and one of the leaders executed. Labour troubles seem to have been frequent and largely due to the rise in cost of living. Lack of transport contributed to this and greatly hampered trade, but the crops in 1923 seem to have been generally good.

PRODUCTION OF WHEAT.

	1914.	1922.	1933.
British Isles.....	33.4	35.6	42.9
U.S.A.....	477.5	468.0	262.9
Canada.....	171.2	197.0	198.9
India.....	85.6	118.0	139.5
Argentina.....	20.0	48.8	64.8
Germany.....	77.4	52.5	56.5
France.....	154.8	123.0	156.6
	1,095.7	1,254.1	1,333.3

The International Institute of Agriculture puts the total of its subscribing countries at 1,848,600,000 cwts of wheat for 1923, against 1,659,600,000 for 1922, but accuracy loses not gains by excessive inclusiveness, and many of the minor estimates are exceedingly problematical. That 1923 was a good wheat year is undoubted, and it would be unwise to build on the hypothesis of its figures being repeated in an average year.

THE CONTINUED RISE OF CANADA.

Canadian wheat and flour have continued to increase in importance, not only on the British markets, where they are now accepted as indispensable, but on those of Europe, where they are replacing the grain of the United States. The latter, by erecting a tariff wall against Canadian wheat

entering for "improving" and blending purposes the Republican area of North America, have driven the Dominion growers to invade the Continent, on the markets of which their produce outclasses the American.

REDUCED TRADE IN MAIZE.

The farmers of America are rich; they grow more maize than the rest of the world put together. But their attempt to corner the staple have made an enormous quantity of their own produce unsaleable, and it has—for the time being, at all events—shifted the commercial centre of the maize trade from Chicago to Buenos Aires.

FEEDING STUFFS—IMPORTS.

	1914.	1922.	1923.
Maize	39.0	38.1	34.5
Barley	16.1	12.9	18.1
Oats	15.2	9.5	9.8
Total	70.3	60.5	62.4

It will be seen that we are still under-supplied with feeding-stuffs as compared with 10 years ago. We require to keep more stock. But feeding barley is coming in freely to replace maize, and there are also increased purchases of potatoes, oilcake, and foreign ground meal of all sorts. The changed position in the maize trade of Argentina and the U.S.A. is unquestionably one of the leading corn trade events of the past twelvemonth.

BRITISH IMPORTS OF MAIZE.

	1922.	1923.
From the U.S.A.	14.7	5.4
From Argentina	12.8	19.8

FEEDING-STUFFS PRICES.

The situation has not been easy for those with animals and poultry to fatten for human consumption, and without a greater abundance of feeding-stuffs we cannot have cheap meat or fowls; with fowls, the question of egg supply is also involved. Prices for seven chief feeding-stuffs are subjoined:—

	1914, Per Cwt.	1922, Per Cwt.	1923, Per Cwt.
Feeding rice	12 0	15 0	17 0
barley	8 6	8 6	8 9
Maize	7 0	8 6	9 6
Oats, English	8 0	10 6	10 0
Oats, imported	7 9	8 0	8 6
Middlings	8 0	9 0	9 0
Brans	5 0	6 6	7 0

CROPS OF MAIZE, BARLEY, AND OATS.

Last year space forbade our giving the almost indispensable returns of pre-war production of these cereals, but it is now possible to supply these figures, which time has brought to cover a 10 years' comparison:—

PRODUCTION.—(In Millions of Cwts.)

	Maize.		Barley.		Oats.	
	1914.	1923.	1914.	1923.	1914.	1923.
British Isles	none	none	35.0	28.0	61.0	45.0
United States	1,350.2	1,540.0	93.0	85.5	360.0	373.5
Canada	8.0	8.3	17.0	34.2	90.0	162.0
Australia	4.3	4.0	1.2	2.5	0.6	0.4
Argentina	135.8	100.0	2.0	5.5	27.0	24.0
Germany	none	none	68.0	47.0	1.0	120.0
France	8.6	6.0	21.6	30.0	90.0	110.0
Total	1,506.9	1,658.3	235.8	222.7	810.6	834.9

Many consider that Argentine maize production is underestimated. Last year 53 million cwts were shipped to British and European ports. But undoubtedly the crop is grown mainly for shipment, and the figures before the war may have been incorrect. It is only since 1922 and a new President, who is known and trusted in Europe, that Argentine statistics have become entirely probable. Señor de Alvear installed from his own advent to power an American statistician of accepted repute, and the 1923 figures have general economic acceptance. Oats, no less than maize, appear to have been over-estimated to years ago. Germany obviously has much ground to rewin. Canada shows astonishing progress, but Australian figures are distinctly discouraging.

MARK LANE PRICES PER CWT AT THE BEGINNING OF THE YEARS NAMED.

	1914.	1923.	1924.

FRUIT AND POTATOES.

1923 was a disappointing year in the fruit trade, according to the "Farmers' Red Book." The outlook at the beginning seemed fair, for there was a good show of blossom, but cold, harsh winds at a critical time upset things, and one of the worst attacks of aphid ever known crippled plum trees so much that they looked as if they could never recover. They managed to do this, but all stone fruits, including cherries, were very scarce. Pears were another failure, not only the dessert varieties, but not for many years has there been such a famine of perry pears. Apples were patchy, and all told mustered less than half a crop, and that below the average in quality. Practically no perry has been made in the Western countries, and less cider than has been the case for some years, which facts are particularly disappointing to cider makers, who have done a good trade this year, and the demand for cider remains brisk. Amongst small fruit strawberry growers had no reason to complain either about the yield or the prices, but the conditions in most places were too dry for raspberries. Gooseberries were fairly good on the whole, and the few people who still produce black currants had no reason to complain about the price they got for them, while in the way of stone fruit and apples it was easy to see what crops were like by the good prices realised in the markets.

A heavy crop of potatoes in 1922 and the low prices realised had much to do with the falling off in the acreage planted in 1923, and the substantial enhancement of price. Against an estimate of 4,012,000 tons produced in 1922, the 1923 figure was only 2,756,000 tons, the yield per acre having shrunk from 7.1 tons to 5.9, which is slightly below the average for the last ten years. This falling off was common to most countries, Germany's total, for instance, declining from 40,665 to 31,470 metric quintals, and Poland's (the second largest of European producers) from 33,219 to 26,494 metric tons, according to the International Institute of Agriculture. The same authority places the total yield of the Northern Hemisphere in 1922 at 112,046 metric tons, compared with 141,729, the actual decline being 20 per cent. The range of prices in the United Kingdom has been considerable, Arran Chiefs and King Edwards, which were selling in London at the end of 1922 at 65s and 84s per ton respectively, marking as much as 145s and 170s for the best varieties in the last few days of 1923.

LIVESTOCK.

The following table is published by the Board of Agriculture, showing the numbers of livestock in England and Wales halfway through 1922 and 1923 respectively. These figures are collected annually by the Ministry of Agriculture on June 4th:—

	1922. No.	1923. No.	Inc.(+) Dec.(-) No.
Horses—			
For agricultural purposes (including mares for breeding)	805,100	798,000	- 7,100
Unbroken horses (including stallions)—			
One year and above	230,600	207,400	- 23,200
Under one year	83,900	66,200	- 17,700
Other horses	220,900	209,600	- 11,300
Total of horses	1,340,500	1,281,200	- 59,300
Cattle—			
Cows and heifers in milk	1,934,000	1,974,500	+ 40,500
Cows in calf, but not in milk	288,600	269,000	- 19,600
Heifers in calf	299,300	371,000	+ 71,700
Other cattle			
Two years and above	922,900	1,018,200	+ 95,300
One year and under two	1,167,100	1,108,000	- 59,100
Under one year	1,110,800	1,081,400	- 29,400
Total of cattle	5,722,700	5,822,100	+ 99,400
Sheep—			
Ewes kept for breeding	5,428,100	5,497,200	+ 69,100
Other sheep	2,289,900	2,541,300	+ 251,400
One year and above	5,720,000	5,793,300	+ 73,300
Under one year			
Total of sheep	13,438,000	13,831,800	+ 393,800
Pigs—			
Sows kept for breeding	302,000	388,400	+ 86,400
Other pigs	1,996,900	2,223,000	+ 226,100
Total of pigs	2,298,900	2,611,400	+ 312,500

Horses.—Shires.—The home sales have practically disappeared, only two sales of this description being recorded during the year. Of the joint sales, the Shire Horse Show at Islington produced an average price for mares and fillies of £66 7s 8d, the top prices being 220 gs for a brood mare and 200 gs for a three-year-old filly. The general average for stallions worked out at £95 10s 1d, the best price realised being 230 gs. Sales were held at Peterborough in March, when prices ruled rather lower than at Islington, and in October, when the average was below that of March, though the sale was generally well supported. At Crewe in October filly foals met with a fair demand, ranging from 93 gs, but colt foals were not in request.

Hackneys.—To Mr A. Maitland, of Thornleigh, goes the distinction of securing the top average of the year—£90 7s 6d for twelve—his best prices being 260 gs, 170 gs, and 150 gs. Mr C. E. Kenyon, who sold at Crewe, realised an average of £86 2s for 44 head. Here brood mares realised 250 gs and 210 gs, three-year-old fillies 205 gs and 200 gs, two-year-olds 118 gs, and yearlings 80 gs. The stallions made up to 104 gs, and the geldings to 260 gs and 125 gs. Mr H. B. Brandt, at Capenor, secured an average of £53 4s 9d for 27 head, the brood mares and fillies ranging from 160 gs, 150 gs, and 120 gs. Filly foals made up to 55 gs. The top price for brood mares and also for stallions, so far as we are able to ascertain, at the auction sales of the year was realised by Mr W. J. Tenant, at Doncaster, while the former made 450 gs and the latter 300 gs. Mr D. R. Thomas, who sold at Crewe, realised up to 120 gs for females and 100 gs for stallions. Mrs M. Christoford, who occupies Leyswood, once the home of one of the leading studs of the breed, sold brood mares from 100 gs and stallions from 110 gs. There was good demand for the breed at both September and May sales held at Crewe, brood mares making up to 125 gs and ranging downwards from 104 gs.—*Extracted from "The Farmer's Red Book."*

Fat Stock.—There was a very slight advance in prices during the first six months of the year, followed by a fall, while the highest point was reached in the first week in June, first quality beasts averaging 14s 5d per 14 lb stone, estimated dressed carcass weight, a figure which had, however, been reached previously in February. During subsequent months prices fell fairly steadily, until towards the end of October, when a rise commenced, which continued without interruption up to Christmas. This rise was no greater than is customary with the approach of the Christmas trade, and although markets were seriously depleted during the closing weeks of the year by the prevalence of foot-and-mouth disease, this fact does not appear to have been responsible for any increase in values. The course of prices during 1923 has been very similar to that of the previous year, except that the peak in June was less prominent in comparison with the preceding five months than had been the case in 1922.

As regards sheep, prices rose steadily from the beginning of the year until the beginning of March, when first quality sheep were realising 19d per lb dressed carcass weight. A decline then set in, the average for first quality falling to 15d per lb in the middle of July. During the last six months there has been comparatively little alteration, although the tendency has been upwards, and during December the average price for first quality has been about 16d per lb. In spite of the substantial fall in sheep prices which has occurred since the spring of 1923, the price level at the close of the year was still higher in comparison with pre-war years for sheep than for other classes of fat stock.

Prices of pigs declined steadily, with only two slight checks, until mid-July, by which time they were considerably lower than at any time during 1922, first quality porkers averaging 12s 3d and baconers 12s 4d per stone

dressed carcass weight, a fall in the case of pork pigs of no less than 4s per stone during the year. As was customary before the war, prices recovered slightly during the next few months, and from September to the end of the year average prices have varied between 12s 6d and 13s 6d per stone for porkers and between 10s 6d and 12s per stone for baconers.—*Agricultural Market Report.*

The lifting of the embargo on imports of Canadian store cattle is reflected in the Board of Trade returns, the figures rising from 19,960 cattle, value £567,737, in 1922 to 45,417, value £1,257,191, in 1923. The increase has apparently affected home markets less than was expected, being partly compensated by a substantial decline in imports from the United States. Returns of total imports are useless for comparative purposes owing to the inclusion of nine months' trading with the Irish Free State, the values being £14,028,000, against £1,580 in 1922, for "food" classes, and £1,543,000, against £362,000, not for food. Exports in the two groups were £1,777,000, against £31,000, and £1,400,000, against £1,476,000, respectively.

POULTRY.

Reviewing the fortunes of the poultry industry in 1922, Mr Edward Brown states:—Although prices for produce have fallen, and profits are not so great as in the preceding years, the poultry industry has come through the year very well from the fact that costs of production have also fallen to an equal degree. Abundance of evidence is available that farmers have found poultry the most profitable branch of their operations. Poultry farmers, whether breeders or producers of eggs and poultry, have obtained satisfactory returns and a constant demand. On the other hand, many problems remain to be solved. Complaints are very rife that some of the stock, which has been continuously bred for a high average of egg production, is showing loss of size and vigour of body, and are producing smaller eggs, those which are under the market requirements. A further sign is found in the heavy losses from embryonic and chick mortality, in itself a proof of parental weakness, if not actual infection. A question has lately been very prominent, namely, how far the outbreaks of foot-and-mouth disease may affect poultry, and how this is spread.

Whilst it is difficult to make comparisons of 1923 with 1913, it may be stated that the values of imported eggs and poultry, including Irish, in the latter year amounted to £17,500,000, omitting dried and liquid eggs, the quantities of which were very small, that the average values respectively were:—Eggs, 8s 10½d per gt. hhd., and poultry 68s 7d per cwt. Therefore, the average values in 1923 were higher in eggs by 3s 11d, or 44.2 per cent., and poultry 59s 10d per cwt, or 88.3 per cent. So far as can be seen from the returns, imports of eggs (inclusive of Irish) were in 1923 28.6 per cent. less than in 1913, and poultry 10 per cent. more in 1923 than in 1913.

The following estimate is made of the consumption (wholesale) values of eggs and poultry in Great Britain and Northern Ireland, less exports and re-exports, in 1923:—

Imported produce (including Southern Irish)—	13,819,722
Eggs in shell	1,928,742
Poultry, less re-exports	2,803,676
Eggs, not in shell, less re-exports	18,619,212
British produce—	26,940,000
Eggs and poultry, less exports	45,559,212

The result is arrived at that of eggs and poultry consumed in Great Britain and Northern Ireland during 1923, 59.3 per cent. were of home production, and 40.7 per cent. imported.

II.—COLONIAL AND FOREIGN PRODUCE.

TEA.

For years the tea industry struggled against many and various difficulties. The year 1922, however, saw the inauguration of a remarkable period of prosperity, whilst in 1923 the grower is making profits which have never been equalled. The last year has seen some improvement in labour conditions, but so long as good food crops are grown in the recruiting districts the coolie is reluctant to leave his home, therefore free recruiting is not likely until there is a bad failure of the crops. Further, the establishment of manufacturing and mining concerns in the labour districts is bringing competition into the labour market.

Other difficulties which hampered trade in previous years, such as fluctuating exchange, high freights, &c., have caused little trouble during the year under review. The rupee exchange has been fairly steady in the neighbourhood of 1s 4d, and it is to be wondered at that there is not more agitation to have the official par of exchange fixed at this figure. Freights have been steady, ample tonnage being available from all markets.

The following tables give the exports from India for the

last two seasons and for 1913-14, and the average prices during the last two years:—

	1913-14.	April 1-March 31, 1922-23.	1922-23.
From Northern India—			
United Kingdom	196,334,373	241,124,384	220,024,193
Australia	9,795,053	7,091,364	4,552,092
Canada	6,052,551	13,130,791	10,397,516
United States	1,297,740	7,905,470	4,327,086
South America	78,900	5,895,064	1,398,070
Africa		5,127,172	4,667,508
Bombay	5,264,550	11,615,222	12,636,129
Hong Kong		60,183	2,106
Russia	11,415,690	13,790	No ships recd.
Persian Gulf	23,672,196	2,150,934	6,311,509
Continental ports	1,169,885	390,184	518,010
All other places	4,483,192	2,798,288	3,351,721
Total	271,879,358	290,996,846	267,964,740
From Southern India—			
United Kingdom	12,914,998	23,443,517	26,830,979
Colombo	3,889,234	3,653,442	2,606,110
Other ports	5,223,686	619,947	1,555,895
Total	22,027,918	27,716,906	30,992,984
From all India	293,907,276	318,713,752	298,957,724

The quality of the 1922-23 crop of Indian tea was, on the whole, good, and was remarkable for the small percentage of really poor or common tea. The quality of the new crop is, so far, very good, but later arrivals are likely to be inferior, with a larger proportion of poor tea than was seen last season. An exception to this is Southern India, where improved attention is being paid to work in the factory, and, as a consequence, the general standard of quality shows remarkable improvement. There is little doubt that with still greater attention to manufacture quality would be still further improved.

The following tables give the distribution of Ceylon tea during the last two years, and also the average prices:—

	Aug., 1921— July, 1922.	Aug., 1922— July, 1923.
United Kingdom	116,460,000	117,880,000
Continent	2,100,000	2,050,000
America	20,800,000	24,600,000
Australia	19,300,000	16,700,000
China	223,000	247,000
Other countries	10,800,000	16,300,000
Total	169,079,000	177,647,000

The re-establishment of the Tea Cess in Ceylon has again been discussed, but the decision of the majority of the planters is against it. The industry at the present moment is so prosperous that the need of exploiting new markets is not felt, but the wisdom of this policy is more than doubtful. It is in times of prosperity that any business should be developed and consolidated. It is difficult, often impossible, to do this in times of adversity.

The following tables give the exports from Java and Sumatra for the last two seasons. The Netherlands East Indies now take the third place among the tea exporting countries of the world:—

	Aug., 1921— July, 1922.	Aug., 1922— July, 1923.
From Java—		
Holland	21,487,000	19,882,000
Great Britain	16,028,000	21,351,000
Russia	nil	nil
Australia	20,695,000	24,272,000
United States	5,952,000	8,643,000
Canada	432,000	1,055,000
Singapore	56,000	389,000
China	nil	nil
Continent of Europe	136,000	646,000
Other places	968,000	859,000
Total	65,754,000	77,137,000
From Sumatra—		
Holland	3,273,927	5,293,717
Great Britain	6,116,696	5,940,357
United States	47,627	456,230
Singapore	362,048	441,807
Australia	1,200	264,150
Java	93,830	266,121
Other places	88,154	101,420
Total	9,983,481	13,469,102

In Java the tea industry is suffering severely from blight and pests; the *Heliothrips* (mosquito blight) is ravaging many of the lower lying areas, and each year finds this unwelcome visitor arriving on higher elevation estates.

The following tables give the exports of China tea for the seasons 1921-22 and 1922-23 to July 14th:—

	Season 1921-22.	Season 1922-23.
United States and Canada	1,687,586	3,289,837
Great Britain	1,526,528	5,467,324
Continent	800,922	1,334,512
Bombay and Central Asia	440,830	485,125
South African Ports	643,591	504,523
Russia	20,668	24,164
Total	5,130,222	11,130,485

The unsettled condition of affairs in China is clearly indicated by the comparatively small crop of tea sent down for export this year. The quantity of China tea imported into the United Kingdom is now a very small proportion of the

total amount received. It is very largely composed of common tea, which is used for blending or for export purposes. For the last four years tea has been allowed free export from China. The second period of exemption for two years expired on October 9th. The Chinese dealers are applying for an extension of the period of freedom from duty, but are rather doubtful of success. The teas of the 1923 crop of China tea are, on the whole, satisfactory. The first crop contained some very choice teas, but the second and third crops are disappointing, both in quality and size.

The consumption of tea is increasing throughout the world. In the United Kingdom and Ireland it rose from 312,250,000 lbs in 1914 to 411,848,000 lbs in 1922, or from 6½ lbs to 8½ lbs a head. The tea duty in 1922 amounted to £11,555,000.

Great Britain still does a good trade in the export of tea, although the larger markets are becoming increasingly interested in direct shipments from countries of production. Export trade from London has shown a gratifying increase of late, orders having come from various Continental countries. Russia, too, has been a spasmodic buyer. There is little doubt that quite considerable quantities of tea are now finding their way into Russia by various routes. Consumption in the United States and Canada is increasing slowly—prohibition has not had the effect that was anticipated—but there is no doubt that the quantity of tea taken by these countries will steadily grow during coming years.

—Messrs Brooke, Bond, and Co., Limited.

The Board of Trade figures for the United Kingdom for 1913, 1922, and 1923 are as follows:—

	1913.	1922.	1923.
Imports—			
British East Indies (except Ceylon)	203,459,657	255,160,841	267,700,007
Ceylon	110,936,427	111,614,253	121,033,594
China (including Hong Kong and Macao)	16,272,548	11,009,134	25,172,593
Java, Sumatra, and other Dutch possessions in the Indian Sea, and Netherlands	32,062,717	36,935,258	39,612,086
Other countries	2,332,115	2,285,871	4,180,971
Total imports	365,043,464	419,006,357	457,199,253
Entered for home consumption—			
British East Indies (except Ceylon)	172,843,911	259,106,120	236,785,454
Ceylon	91,517,943	108,933,933	104,717,767
China (including Hong Kong and Macao)	9,682,515	6,877,319	10,957,633
Other countries	31,948,194	41,928,588	36,125,769
Total	305,992,563	411,847,960	387,551,413
Stock of all kinds at Dec. 31st	138,005,000	169,776,000	169,577,256
Re-exports total	67,556,651	41,966,070	63,995,126

COFFEE.

Messrs McMeekin and Co. state that coffee prices remained stationary or declined up to September, the year starting with a substantial, not to say excessive, stock, those interested in the trade being faced with a large increase in production. In the concluding quarter, however, some improvement in the demand developed, and prices responded. While undoubtedly the crop of Brazil coffee is a large one, estimates of the eventual output vary considerably. From equally reliable sources a difference in the estimated quantity of as much as 20 per cent. may be recorded. In spite of the large increase in crop, however, the visible supply in the world's markets declined from 7,877,000 bags at the beginning of the year to 4,410,000 bags at the close. In addition to this, it must be borne in mind that there is an unrecorded quantity of Brazilian coffee stored in Government warehouses in the interior of Brazil, which eventually will have to find its way to the consuming markets. The knowledge of this operated upon buyers in practically all markets to such an extent that stocks have been allowed to fall almost to a dangerous level, and it may become a question in the new year which of the two parties interested will prove itself the more powerful. For the present, at any rate, the Brazilian authorities have been successful (1) in realising the stocks held under valorisation, and (2) in maintaining their policy of restricting arrivals at Santos to 35,000 bags per diem. Further, it must not be overlooked that reliable reports indicate that a certain proportion of the quantity retained inland may be of undesirable quality, owing to excessive rain during the summer months. There is an apparent world's shortage of the finer grades. Estimates at present available for the next season's crop indicate that such is likely to be of moderate dimensions, so that it is probable, taking the average of the two seasons, the quantity available, while being sufficient for the world's requirements, may not prove burdensome. There was a gratifying expansion in the figures of export trade over those for 1922, practically the whole of the increase, 420,000 cwts, having been shipped to France, Holland, Belgium, and Germany. The world's deliveries for the year show an increase of 1,808,000 bags as compared with those of 1922, equal to nearly 9 per cent.

The following are based upon the papers issued by the Board of Trade made up from the Custom House returns:—

	1913.	1919.	1920.	1921.	1922.	1923.

COCOA.

1923, like its predecessor, was a disappointing year for the cocoa planter. Apart from Ceylon, produce supplies, of which were much below normal, there was no lack of raw material available for the markets, but demand fell off considerably, and trade remained dull throughout the year. Trinidad, good to fine, opened at 63s to 70s, had fallen by June to 50s to 70s, and at the end of December was quoted at 46s to 55s—a drop of about 25 per cent. over the year. Grenada, beginning at 47s to 53s, closed the year at 36s to 42s, and Bahia, 60s to 62s in the first week of January, had fallen to 41s to 42s by the end of December. Ceylon plantation cocoa, on the other hand, rose from 70s to 90s in January to as much as 108s for the best sorts at the end of the year. The price of prepared products was not reduced in proportion to the general decline in "raws," and the wide "gap" between the two sets of prices did not pass without comment. It is understood that the visit to this country of a number of representatives of cocoa-plantation areas, in connection with the British Empire Exhibition, will be made the occasion for a general discussion of the position, with a view to finding whether any amelioration can be brought about by more extended organisation, and co-ordination of the activities of different districts.

Total raw cocoa imports in 1923 were 1,338,932 cwts, of which 996,081 cwts were entered for home consumption. In 1922 the figures were 1,280,974 cwts and 1,010,892 cwts respectively. Total imports were valued at £2,856,099 in 1923, and £2,928,220 in 1922. As usual, British West Africa was the chief source of supply, sending 1,087,180 cwts—81 per cent. of the whole, in 1923, against 1,017,659 cwts in the previous year. The West Indian Islands increased their output from 134,553 cwts to 149,221 cwts, and Ecuador sent slightly more than in 1922, Brazil slightly less, while Ceylon's contribution slumped from 22,504 cwts to 9,666 cwts. In spite of the increased price realised, the value of imports from Ceylon declined by 60 per cent., an unsatisfactory result in a year when Ceylon tea planters were earning abnormally high profits.

IMPORTS, CONSUMPTION, AND STOCKS. (January-December.)

SUGAR.

During January the sugar market was dull and disappointing. The Cuban crop had been estimated by both Messrs Guma and Himely as likely to exceed 4,000,000 tons, and U.K. refiners were of opinion that when American wants had been satisfied they would, as in former years, be able then to obtain Cuban sugars on favourable terms. In February doubts began to be entertained of the correctness of the Cuban crop estimates, seeing that in the first week of February the Cuban quotation was raised from 3½ to 3½, cost and freight, New York, and again on the second week to 4 cents, the equivalent of 19s 9d, c.i.f., for the U.K. At the middle of February Mr Guma reduced his Cuban crop estimate from 4,193,000 tons to 3,800,000 tons, and an idea was then prevalent that the world's supplies might fall short of its consumptive demands by 250,000 tons. There was in consequence an active speculative demand in America. During March some natural reactions were experienced, but by first hands prices were firmly maintained at about the equivalent of 27s 6d, c.i.f., for the U.K. American refiners continued to make large purchases of Cuban sugar at 5½ to 5½, cost and freight, and sales of both Cuban and Java sugar were being made to Continental markets. At the end of April, however, new and revised estimates appeared from both Messrs Guma and Himely—the former reducing his former estimate to 3,670,000 tons, and the latter to 3,725,000 tons. During May the quotation for Cubas was maintained at 6½ to 6½, cost and freight, New York, the

equivalent of 31s 3d, c.i.f., for the U.K.—a price above the British market, which was meantime being supplied by large arrivals of British West India sugars on more favourable terms. Early in June the market had a settled appearance, and it was believed that, high though the price was, it could easily be maintained by holders. Past experience, however, has often proved that at a high level of values some unseen and unexpected circumstance is sure to arise and to upset the most careful calculations. In the present case, white Javas became the means of changing the entire course of the sugar market. A large speculative business had been done in these sugars during the excitement of April at 30s to 33s per cwt for May-July shipments, and as these were now coming on, along with large consignments by Japanese operators, it was felt that the supply would largely exceed demand. The Japanese had made extensive purchases of these sugars, having the Eastern markets in view for them, but finding no opening in these markets, also America debarred by the extra 2s per cwt duty exacted on outside sugars, they made large and continuous consignments of them to London, under the weight of which the market there gradually gave way from 30s 3d per cwt on June 8th to 20s on August 10th. This drastic decline of 10s to 13s per cwt had an unsettling and demoralising effect on all markets, and caused a fall in the Cuban quotation on August 17th to 4 cents, cost and freight, New York, the equivalent of 20s 4½d, c.i.f., to the U.K. The low price of 20s for white Javas caused a large demand to arise for them. London refiners in self-defence secured from 8,000 to 10,000 tons, and from all over the Continent there came a demand, even Russia securing 15,000 tons. This caused a rapid improvement in values, and by the middle of September this quotation had recovered to 26s, c.i.f.

From the low level of prices in August all markets have again continued to rally—America especially, the deficiency of whose Cuban crop was beginning to be severely felt, paid high prices for the balance of their sugars, and to augment their supplies became large buyers of full duty sugars—Peruvian, Brazil, St Domingo, and other descriptions—at prices much above the U.K. parity, and by so doing they deprived British refiners of their usual supply of these sugars. Before the slump in American prices several Cuban cargoes afloat and landed in the U.K. were repurchased for New York at prices unobtainable in the U.K. Fortunately, considerable supplies of Mauritius sugars became available at this time for British refiners at about 30s to 33s, c.i.f., the equivalent of 24s 6d to 27s 6d, c.i.f. The scarcity of raw sugar has recently been severely felt; so much so that several refineries were compelled to close, waiting adequate supplies.

The grinding of the new Cuban crop having been delayed by unfavourable weather, the Centrals are only now getting under way. The estimate of the crop by Mr Guma is 3,775,000 tons, and that of Mr Himely 3,813,000 tons, which was generally expected. The Cuban crop has generally been a prosperous one for the planters, and the balance-sheets of the principal companies, so far published, show handsome profits, after payment has been made of interest, taxes, and all other expenses.

The West Indian Colonies.—Trinidad, Barbadoes, Jamaica, and others, along with Demerara, show no signs of increasing their products, which remains stagnant at about 260,000 to 270,000 tons annually. *American Beetroot Crops.*—Notwithstanding the high bounty enjoyed by these crops, they do not show an expected increase. This year they have only produced 750,000 tons, against 616,900 tons and 912,000 tons in the two previous years.

Continental Beetroot Crops.—The crop of the present year was at first estimated as likely to yield 5,294,500 tons, but it was found, in reaping, that the cold weather of June had been most prejudicial to its development, and adverse circumstances since have caused a reduction of its output to 4,725,500 tons. The crop of Germany has proved specially disappointing, and the others more or less so, except that of Czecho-Slovakia, which has exceeded expectations, and is likely to yield 1,000,000 tons.

British Beetroot Crops.—The Cantley factory, which has this season worked up the roots grown for Kelham along with its own, is reported to have had excellent results, which it might well have with its Government bounty of 25s 8d per cwt. With the withdrawal of this bounty, or its reduction to the West Indian allowance of 4s 3d, it might be injuriously affected.

The consumption of America is this year estimated at 4,850,000 tons, against 5,180,000 tons last year. The meltings through all the ports have been 4,146,206 tons, and to this falls to be added sugars which have passed into direct consumption. The following table gives an idea of the total consumption of Great Britain during the past three years:—

	1921.	1922.	1923.
Meltings of raw sugar in London, Liverpool and Greenock	Tons. 960,000	Tons. 1,000,000	Tons. 960,000
Probable consumption of foreign refined	470,000	600,000	540,000
Total	1,430,000	1,600,000	1,500,000

Beet.—Per Messrs Willett and Gray's circular, dated New York, December 13, 1923:—

Decrease in meltings of raw sugar in 1923, 21,990 tons.

Refined.—The number of refineries working in Greenock remains at five. Work for the year did not commence till the middle of January, as there was an accumulation of refined to be disposed of. Thereafter, with the exception of periods in April and December, the weekly meltings were fairly regular.

FROZEN MEAT TRADE.

A Trade Correspondent writes: Supplies of frozen and chilled meats imported into Great Britain in 1923 were heavier than in any previous year. The totals of the various descriptions (the preceding year's figures being shown in parenthesis) amounted to 4,600,654 (3,516,350) quarters of chilled beef, 2,637,534 (2,601,726) quarters of frozen beef, 6,228,328 (6,031,230) carcasses of frozen mutton, and 8,907,557 (8,594,169) carcasses of frozen

lamb. The most notable feature is the increase of 30 per cent. in chilled beef imports, following upon an even greater increase in 1922 over 1921. From Australia and New Zealand smaller supplies of frozen meat were received; but the Argentine Republic amply made up the shortage.

The weight of these arrivals aggregated 925,132 tons, as compared with 821,666 tons in 1922, an increase of 103,466 tons, or 12½ per cent.; while the import value was £49,531,310, or £53 per ton, against £45,809,013, or £50 per ton in the preceding year.

With Home supplies also showing an increase, the inference to be drawn from the foregoing figures is that the consumption of meat in this country during the past year, notwithstanding trade depression and a large volume of unemployment, must have been on a larger scale than ever before. A rapid expansion is taking place in the importation of foreign supplies, while Empire supplies are declining. In 1923, the Overseas Dominions provided only 12 per cent. of our refrigerated beef imports, whereas in 1913 the proportion of Empire-produced beef was 20 per cent. The same tendency is observable in regard to mutton and lamb production, the proportion received from Australasia last year being only 62 per cent. against 74 per cent. ten years ago.

Trade was slow and dragging throughout the greater part of the year, owing to the supply being almost constantly in excess of the demand. Prices opened at a high level, but thereafter followed a downward course, and, although on average they were not lower than in 1922, the result of the year's operations was that heavy losses were sustained by most people engaged in the trade. Average wholesale prices for the year of the best qualities of each description of meat were as follow, viz., chilled beef 6½d per lb, frozen beef 4½d, frozen mutton 8½d, and frozen lamb 1½d per lb, representing increases over the pre-war level of 22 per cent. for chilled beef, 13 per cent. for frozen beef, 72 per cent. for mutton, and 77 per cent. for lamb. Whereas mutton and lamb prices are still very high, chilled and frozen beef is now considerably cheaper than most other foodstuffs, the reason being that beef production was stimulated and sheep-raising was discouraged during the war, with the result that the world's flocks are now greatly depreciated, while cattle growers are suffering from over-production.

The consumption of butcher's meat in Great Britain and Ireland is now estimated at 2,000,000 tons, of which about 1,065,000 tons are home killed, 904,260 tons imported frozen and chilled (less re-exports), 8,537 tons imported fresh meat, and 20,100 tons in the form of imported live stock, the proportions being 53.3 per cent. home killed and 46.7 per cent. imported. In 1913, the proportions were 60 per cent. and 40 per cent. respectively.

TOBACCO.

Consumption has not decreased much. In 1913, 129,221,363 lbs were retained for home consumption, against 133,618,782 lbs in 1922, but to the former figure has to be added for the purpose of comparison the corresponding Southern Irish total. This figure is 2,797,676 lbs for the period April-September, 1923. The returns for October, November, and December are not to hand, but it will be seen that there is not much to complain of as regards consumption for the year. The tobacco companies are holding their own. As the Imperial Tobacco Company have the lion's share it may be recalled that at the annual meeting in February, 1923, the profit for the year was £7,199,076, and the figures forthcoming at the next annual meeting will continue the tale of prosperity. On April 24th last this company gave one bonus ordinary share for every three ordinary shares held. As regards export, the bulk is in the hands of the British-American Tobacco Company, who at their 21st annual meeting in January this year showed a net profit of £4,494,971, an increase of about £94,000 over the previous year. An increased volume of business was reported.

Outside these two major elements an imposing fringe of independent manufacturers are doing well for their shareholders. Both in the home and export markets they have maintained profits, and in several instances increased them.

A notable event in 1923 was the fiscal separation from Great Britain and Northern Ireland of the Irish Free State as from April 1st. The Free State adopted the same tariff on tobacco as that existing in this country. The constitution of Soarstat Eireann as a separate fiscal entity, however, meant that the English, Scots, and Northern Irish manufacturer had to pay a higher tax—that provided on the imported manufactured product—upon importations into Southern Ireland. This resulted in higher prices for the imported manufactured article. Manufacturers in Southern Ireland were in an advantageous position, arising from a tangible degree of protection. This margin moved the Imperial Tobacco Company to start factories by their branches of Wills, Playér, and Clarke on Free State territory. On

the other hand, a prominent Irish manufacturer started a factory in this country, and the Dublin firm of Goodbody and the Liverpool firm of Cope have come to a working arrangement.

† December shipments estimated.

In our last annual review we gave the total net shipments of Eastern plantation rubber for 1922 as 356,000 tons; for 1923 we estimate the net shipments to be 360,000 tons, which includes 25,000 tons stock held over in the East, and also probably 15,000 tons from smuggled rubber and the selling of coupons—this means the proper production under the restriction scheme to have been about 320,000 tons. The trade generally did not expect so much rubber, and American manufacturers bought largely in the spring, no doubt on the basis of a smaller supply. This is the chief feature of the year: that America took 190,000 tons of rubber in the first six months, and although her trade was good, it was not large enough to absorb all the manufactured goods, and she was therefore left with less purchasing power for the remaining six months of the year, and we have consequently had a lower price and a quieter market during this period. We think it will be generally admitted that the Government restriction scheme has been a success, and during the last six months has worked satisfactorily; smuggling has been largely stopped, also the selling of coupons. The one factor which causes some disquietude is the increase from the Dutch unrestricted areas, principally native, and we must expect a further 20,000 tons from these during 1924. We must therefore estimate the production of plantation rubber from the Dutch areas to be about 140,000 tons. Estimating that the production from the restricted areas (including India and Burmah, French Indo-China and Sarawak, which are unrestricted) will be 215,000, allowing for 10,000 tons increase on the year, we reach a total for plantation rubber of 355,000 tons. This is calculated on a 60 per cent. restriction throughout the year, and on the assumption that the young areas are not given a further year's growth by the Committee, as they have already been generously dealt with. We shall have to wait a month or two for the Committee's decision. The Amazons have produced about the same as last year, 21,400 tons, and, with the other descriptions of wild rubber, the total of 25,000 tons is reached. There is little inducement to collect forest rubber at these rates.

As regards consumption, America has absorbed about 200,000 tons; her stock to-day of crude rubber is probably about 9,000 tons less than the end of last year, and her manufactured goods have been reduced since last summer, but are still large. European trade has shown a general increase, especially in England, Germany being the one country to show a decline. We estimate the consumption for the rest of the world, leaving out America, at 105,000 tons plantation, and including Para and other wild rubbers at 110,000. Assuming these figures to be approximately correct, we estimate the world's stocks to be reduced by about 48,000 tons from the end of 1922; calculating a reduction of 25,000 tons in the Eastern stock, which was then abnormally large, 14,000 tons in the United Kingdom, and 9,000 tons in America, though the stocks returned in America are not made up officially by public warehouses. We estimate the total imports into America at 290,000 tons, against 296,000 tons in 1922, 180,000 in 1921, and 249,000 in 1920. As we have already said, the consumption in America has been good, and there is an increase of motor registration there of between one and a-half to two millions during the year, but she overestimated her consumption in the spring, taking 190,000 tons in the first six months. In Europe there is an increase in the consumption, particularly

in the United Kingdom; France and Italy also have slightly increased, while Germany has taken less, probably about 20,000 tons, against 27,500 tons in 1922. Japan has taken rather more, 17,500 tons, against 16,600 in 1922 and 23,100 in 1921. It is evident that there is a natural increase in motor traffic throughout the world wherever roads are sufficiently good for their use, and in Europe there is room for considerable expansion when times become more normal.

The highest price for the year was at the beginning, when it was 6½d on the spot was paid for standard ribbed smoked sheets, and is 6½d for crepe; prices only fell slightly during the next two or three months, but at the end of April they declined to 1s 3½d, and in May fell sharply to 1s 1½d for spot standard grades, which was the lowest price of the year. There were moderate fluctuations through the summer, and in August, with more inquiry from America, the price rose to 1s 4d on the spot, but with American manufacturers having their orders filled largely by the New York dealers, the demand here was disappointing, and prices fell in October to 1s 1½d for spot, and the market has remained quiet since then, with little change in prices, and we close with spot value 1s 2½d per lb. The Rubber Growers' Association has continued active in its propaganda work, and we are glad to report the largely increased use of pure crepe rubber for soles; America has bought considerably. The total consumption for this purpose has been about 3,000 tons. Rubber paving is being tried in Manchester, where 150 yards have been laid down by the old-established firm of Chas. Macintosh and Co. The use of liquid latex has not become general yet, though the United States Rubber Company of America continue to use it. Sole crepe of one-eighth and one-quarter of an inch in thickness, by 36 inches long and 13 inches wide has commanded a premium over standard crepe for the greater part of the year of 6d per lb. The price has for a considerable period ruled around 1s 9d per lb. This high price has only been obtainable for the very best parcels of this rubber, smooth on both sides.

From Brazil, the Amazons, Bolivia, Peru, and (Wild) Medium Rubber.—The last year's crop of Para rubber, July, 1922, to June, 1923, was practically the same as the two previous crops, about 20,600 tons. The fine Para market has continued to follow the course of the Eastern plantation market; the highest price being in January 1s 5½d, falling to 1s 3d in April, and with a slow demand remained about 1s 2d until October, when it dropped to 1s 0½d, which is to-day's price. The use of fine Para has not increased. Caucho Ball has continued relatively high in price, but demand only limited—to-day's quotation, 11½ per lb. A few imports of Mattagrosso virgin have sold at about 11d per lb; the quality is not so regular as it used to be. Imports of wild rubber, except from the Amazons, continue negligible. The total receipts at Para from the Amazons, Bolivia, Peru, &c., were:—

	1918.	1919.	1920.	1921.	1922.	1923.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Receipts at Para (including Caucho).....	34,350	34,300	28,160	20,217	21,512	21,401
Shipments from Para (including Caucho).....	25,400	38,500	29,000	17,900	21,700	21,900

Balata.—The supply of both sheet and block has only been moderate; shipments from Venezuela have been smaller, and the consumption has continued good and equal to the supply. As in rubber, the highest prices of this year were in January for both sheet and block. Fluctuations have not been large during the past twelve months; not more than 4d per lb. We started the year with considerable activity, and the price of f.a.q. sheet on the spot was 3s 7½d to 3s 8d per lb, and block at 3s 5d per lb, with sales to arrive on c.i.f. terms up to 3s 3d per lb. With small fluctuations and a quieter market during the next three months, we declined in May to 3s 5d for sheet and 3s 0½d for block on the spot, and in July prices fell another penny per lb. Since then there has been a quiet market, with little change, the value of sheet being 3s 4½d to 3s 5d and block 3s to 3s 0½d per lb. The Amazons have continued to send shipments, but this quality has not been so much liked, and now does not command a premium over good Venezuelan. Panama has only sent small shipments, some of very fair quality, which is liked. Gutta-percha has again been in limited demand, and realised fair prices throughout the year. Total imports, &c., of all sorts were:—

THE OIL INDUSTRY IN 1923.

The world's production of crude oil in 1923 was prodigious. A conservative estimate of it is 1 billion barrels (approximately 151,500,000 tons). The normal rate of increase in the world's oil production is 10 per cent. per annum, but last year's output shows an increase of 18 per cent. over that of 1922. This was due to the United States, which, according to the estimates of the American Petroleum Institute, produced 745,000,000 barrels—an increase of no less than 187,000,000 barrels, or 33.6 per cent., over 1922. Such a rate of increase is without parallel, except in the early days of the American oil industry. From 1900 to 1920 the annual rate of increase in United States production averaged about 10 per cent., and for 1920, 1921, and 1922 it has been 6.5 per cent., 17.5 per cent., and 30 per cent. respectively. The United States proportion of the world's total has thus risen to 73 per cent., as against 65.2 per cent. in 1922 and 62.3 per cent. for the period from 1857-1922.

This oil deluge was caused by the fact that some of the most prolific fields ever discovered in the United States happened to attain their peak of production about the same time. During 1923 (to quote again from the American Petroleum Institute's report) more new oil pools were brought in contemporaneously than in any previous period of equal length. In the past 23 years 23 oil pools, producing at their peak about 100,000 barrels a day, have been developed. Eight of these pools reached their peak in 1923. This sort of thing, it may be conceded, is not likely to happen very often. To take another example; in October, 1923, 3,800 oil wells in a few fields were producing approximately 1,200,000 barrels per day, whereas a year ago more than 30,000 wells were required to produce the same quantity of oil. The highest daily average production attained in the United States in 1923 over a weekly period was 2,280,700 barrels. The last week of the year showed a daily average of 1,927,750 barrels—a decline of about 15 per cent. Once the peak has been passed in these flush-producing fields, the decline is invariably rapid. In the Los Angeles fields (Long Beach, Huntingdon Beach, and Santa Fé springs), which have been mainly responsible for the deluge, the peak of production was reached in the week ending August 18th, and in 19 weeks thereafter the output declined by 22 per cent. The history of the new Powell field in Texas is more remarkable still. From less than 10,000 barrels daily on June 16th the production was developed up to 346,000 barrels daily by November 5th. Within seven weeks thereafter it had declined by 74 per cent. This is sensational history, even for oil.

It was fortunate for the American oil industry that the crude oil production of Mexico continued its decline. The 1923 Mexican output is estimated at 152,035,000 barrels, as against 185,057,000 barrels for 1922—a decline of 18 per cent. Of this total the light oil production from the "Southern Fields" (Tuxpam zone) was 63,987,000 barrels—a decline of more than 53 per cent. from that of 1922—while the heavy oil output from the Panuco fields was 88,048,000 barrels—an increase of nearly 100 per cent. The sharp decline in the light oil production confirmed the most pessimistic forecast of the salt-water invasion of the formerly prolific "Southern Fields." In the Panuco fields, also, salt-water encroachment has recently been more marked. No new fields outside the known oil zones were discovered in Mexico last year.

Other oil-producing countries pursued a more even course. No important discoveries were made, except by the Anglo-Persian Oil Company of a new field at Mandali, just within the borders of Southern Iraq, but within the confines of the company's D'Arcy concession. It will be some considerable time before this new field is properly tested and connected up to the company's pipeline system. Oil development in Venezuela still waits upon the provision of more adequate means for ocean transportation. Russia slightly increased its output, and still has large areas of oil-bearing territory awaiting exploitation. The following table gives the main details of the world production of crude oil last year as compared with that of 1922:—

WORLD CRUDE OIL PRODUCTION (in Barrels).

	1922	1923	Increase.
	(Estimated)	(Estimated)	%
U.S.A.	557,531,000	745,000,000	33.6
Mexico	185,057,000	152,035,000	18 (decline)
Russia	32,936,000	34,000,000	5.4
Persia	21,909,000	23,780,000	8
Dutch East Indies	16,728,000	17,000,000	1
Romania	9,843,000	9,953,000	1
Others	33,561,000	36,047,000	10
	897,617,000	1,017,795,000	18

The considerable production of oil surplus to current requirements caused prices to slump badly in the United States and in the world markets governed by the American situation. The year strangely began with advancing prices. Pennsylvania crude oil rose from \$3.25 per barrel to \$4.25 by February 5th. The optimism then felt was premature. In April the curve of declining prices began, and continued

as crude oil production rose. Pennsylvania crude was marked down by 25 cents at a time till it reached \$2.60 in November. Then the rapid falling off of the flush production in the Southern California and Powell fields arrested the decline. In December prices began to move the other way. Pennsylvania crude was advanced by 25 cents on December 14th to \$2.85, on the 26th to \$3.10, on the 31st to \$3.25, and now (February 10th) stands at \$4.50. Refined oils followed generally the downward, and finally upward, course of crude. In the case of gasoline, a fierce price-war was waged in the latter part of the year. On account of the high gasoline content of Southern Californian crude oil, which was shipped to, and largely replaced mid-Continental crude in, the refineries on the Gulf and Atlantic Coasts, there was a disproportionate over-production of gasoline. In Great Britain the price of petrol fell to its pre-war level. On July 19th a cut of 3½d per gallon was made, which was followed quickly by a further cut, bringing the price of No. 1 petrol to 1s. 6½d retail and 1s. 4d wholesale. The recent advance of 4½d goes far towards wiping out the whole of the 1923 decline.

It should be appreciated that the oil surplus of 1923 was not due to, or accentuated by, any falling off in consumption. In fact, consumption showed more than its normal rate of increase. Exports from the United States amounted to 3,270,638,102 gallons—an increase of 30 per cent. over 1922. American domestic consumption and exports together showed an increase of 26.7 per cent., which accounts for probably over 80 per cent. of the world's oil trade. As regards gasoline, domestic consumption in the United States showed an increase of 21 per cent., and domestic consumption and exports together an increase of 25 per cent. Germany and Holland excepted, oil exports from the United States increased to all the principal oil-consuming countries. Refined oil shipments to Great Britain gained by about 22 per cent., to France by about 28 per cent., and to Italy by about 38 per cent. Exports of crude and refined oil to Canada were only slightly less than the tonnage exported to Great Britain. These figures indicate that the oil industry is in a sound condition, and that the balance between supply and demand can be, and is now being, quickly restored.

III.—BEER, WINES AND SPIRITS.

BEER.—The chief event of 1923, from the brewers point of view, was the change in the beer duty made in the Budget. The duty of 100s per standard barrel was not altered, but a rebate of 20s was granted on each full barrel of 1.024 degrees or over, the rebate being graded down in the case of beers of less gravity. Messrs Whit Tomkins and Courage write in their annual review:—"The estimated cost of the rebate was £13,000,000 in the current year and £16,600,000 in a full year. Being of opinion that the trade might fairly be asked to bear part of the cost to the Exchequer, the difference between the rebate of 20s and 24s, the equivalent of a penny per pint in the barrel, was left to be borne by the trade. It will be observed that the reduction of the duty by way of rebate, a deviation from the principle laid down by Mr Gladstone in 1880, namely, that the duty should be based on the materials used or contained in the beer brewed. In addition to the condition that retail prices should be lowered, there was an understanding that existing gravities should in all cases be at least maintained. Retail prices were lowered on the morning following the Budget statement, and the pre-Budget gravities were, on the whole, not decreased. On the reduction of only one penny per pint which the rebate allowed, the Chancellor's apparent expectation of an increase of 10 per cent. did not see likely to be realised according to the figures of standard barrelage at the end of the calendar year, which left a quarter of the fiscal year to run. But a higher figure may be reached if there is any appreciable improvement in the unfortunate industrial conditions which characterised the year 1923." From the same source we obtain the following figures relating to barrelage and beer duty:—

Year to March 31.	Duty.	Standard Barrelage.	Bulk Barrelage.	Average Gravity.
1914.....	7 9	35,864,391	37,558,767	1.029-80
1915.....	23 0	33,098,411	34,765,780	1.028-35
1916.....	23 0	30,292,977	32,110,608	1.051-68

WINES AND SPIRITS.—The Budget brought no reduction in the duties either on spirits or wine. The following is extracted from *Ridley's Wine and Spirit Trade Circular*:—"When writing in January last we pointed out the fact that during the concluding two months of 1922 business showed a distinct improvement over that experienced during the previous ten, justified the hope

this greater measure of activity would not only endure, but still further improve. Although complaints of dull trade have been frequent in many quarters throughout the year that has just elapsed, the statistics afforded by the Board of Trade prove that such have, certainly as regards wines, been unwarranted. Thus while the aggregate clearances from bond only amounted to 12,592,639 gallons in 1922, the total last year rose to 13,512,698 gallons, so that the improvement that took place was substantial. Further than this, this increase was participated in by all the various categories with the exception of Spanish Red descriptions and 'Other Foreign Countries'; the decline in the consumption of the last named was, moreover, practically nominal, whilst exportations have also advanced from 611,350 gallons in 1922 to 699,995 gallons last year, an amount which, however, compares badly with the 2,065,176 gallons in 1921. With regard to foreign and colonial spirits the boot is on the other leg, seeing that the total clearances have declined from 5,437,314, 3,510,829 and 2,623,454 gallons in 1920, 1921 and 1922 respectively to no more than 2,247,233 gallons last year; we quote the four years in order to show the continuous nature of the decline; of these spirits, rum has proved the greatest sufferer, the reason no doubt being that the heavy duties now levied on spirits has brought the retail price of rum and whisky almost to a parity, and consequently many former consumers of the first-named have forsaken it for the latter."

From the same source we quote the following condensed information on imports and clearances:—

In Thousands (000's omitted).

Re-exports of foreign and colonial wines from Great Britain in 1923 were 699,995 gallons, against 611,350 gallons in 1922. Exports of British and Irish spirits in 1923 were 7,209,390 gallons (value £9,944,406), as against 5,703,471 gallons (value £7,868,703) in 1922.	12,761	12,593	13,287	13,513

The following reports are condensed from the extended reviews given in *Ridley's Wine and Spirit Trade Circular* of various classes of wines and spirits.

FRENCH STILL WINES.—Business in these wines since we wrote last January has shown a considerable revival, but, unfortunately, the statistics afforded by the Board of Trade do not sub-divide clarets and burgundies, or even red and white descriptions; the relative proportion of improvement that has occurred in these wines can only be surmised. We venture the opinion, however, that clarets have advanced to a greater extent than burgundies, and that white wines have substantially increased in public estimation during the current year. Taken in the aggregate, the clearances from bond have increased from 1,765,069 gallons in 1922, to 1,959,093 gallons last year, thus showing a gain of 104,024 gallons. It may also be usefully noted that the clearances in the last pre-war year, namely, 1913, amounted to no more than 1,812,477 gallons. The importations for last year were 1,973,025 gallons, as compared with 3,499,342 gallons, and 1,760,905 gallons in 1921 and 1922 respectively.

FRENCH SPARKLING WINES.—The clearances of champagne during 1923 rose from 459,744 gallons in 1922 and 350,944 gallons in 1921, to 653,184 gallons. The figures in regard to saumur for the years 1923, 1922, and 1921 were respectively, 49,517 gallons, 53,234 gallons, and 37,871 gallons, and those for sparkling burgundy, 20,897, 16,928, and 14,867 gallons. The foregoing figures in regard to champagne show that a considerable improvement in the demand took place. This has been a natural sequence of hotel proprietors and restaurateurs, and also to a less extent other retailers, lowering their prices to figures of a less prohibitive magnitude than was hitherto the case. As we pointed out last year, we are convinced that too excessive prices in the long run reduce sales and profits, and we are glad, therefore, to note that our views have to a large extent been adopted during the past 12 months. Another factor which has helped in this direction has been the lowering by certain shippers of the price of their non-vintage wines, a very sound policy, to our thinking, and one which has certainly led to a substantial increase in the demand.

PORT.—From a statistical point of view, wines from Portugal show to greater disadvantage than do those from any

other wine-producing country, a remark which applies to both clearances from bond and importations. With respect to the former, duty during the past 12 months was paid on 6,748,767 gallons, as against 6,388,933 gallons in 1922, and 5,450,751 in 1921, whilst the importations for the three years were 6,394,698, 6,388,594, and 4,593,144 gallons respectively.

THE VINTAGE.—Taken as a whole, the vintage in France was far from coming up to early expectations. Irregular temperature ruled everywhere, whilst a period of too much rain was followed by a rather severe drought, so that a good deal of coulure occurred, whilst later on many grapes were so dried up that they produced a very scanty amount of juice, so that the quantity of wine made was below, and in some cases much below, that of an average year. The official figures as regards the Departments of Aude, Gard, Hérault, and Pyrénées-Orientales are already to hand, and show that in the aggregate they have produced 567,010,000 gallons of wine, as against 581,180,000 gallons in 1922. We learn from our well-informed contemporary, *Le Moniteur Vinicole*, that the aggregate yield of France amounted to 1,253,624,000 gallons, as against 1,523,518,000 gallons in 1922. Happily, there was scarcely any disease, and the grapes were, as a rule, fully ripe, although here and there some little inequality was noticeable.

* On December 28, 1923, 21-17.

The past year was one of severe depression in the Egyptian section, and of a certain amount of progress in the Egyptian section. The main difficulty arises from the relative scarcity and high cost of the raw material, which during the year under review reached an entirely uneconomic price level. Raw cotton is peculiarly subject to the delicate attentions of the speculator, and during the latter part of the year excessive price fluctuations had a very unsettling influence over the whole trade. Messrs Robert Barbour and Brother summarise the course of prices as follows:—

January commenced with fully middling spot at 15.40; at the end of February it was 16.45, 14.00 at the end of March, and back again to 15.48 on April 30th. On May 11th it had dropped to 14.18, but was just over 16.00 by the end of that month. From 17.28 halfway through June a gradual decline took place, and on August 1st, at 13.40, the lowest point of the year was recorded. From that date over 2d per lb was added before September came in, and nearly 3d more during the course of that month, whilst in November the price was raised another 4d, from 17.78 to 21.99. The setback in early December reduced the quotation to 18.59, but following the Bureau report bullish activities once more asserted themselves, and the final rate, after sundry disconcerting fluctuations, was only 1d per lb under the highest point of the year, the actual figure being 21.06.

The American crop proved much smaller than had been anticipated. The acreage figures published at the beginning of July were over 12½ per cent. greater than those of the previous year, and constituted a record in the history of the trade. Early forecasts of the United States Department of Agriculture pointed to a crop of 11,400,000 bales, against 10,248,000 bales in 1922-23. Later forecasts, however, were progressively worse, culminating in a final estimate, in December, of 10,081,000 bales only. According to Mr. F. W. Tattersall, the growth for the season, including linters, will amount to about 10,700,000 bales, which, with the 2,500,000 bales carried over at the end of July last, gives a total available supply of 13,200,000 bales. The consumption for 1923-24 is put in the neighbourhood of 11,700,000 bales, so that the world's reserves of American cotton will by next summer be reduced to about 1,500,000. These figures do not, unfortunately, point to a return in the near future to

334 THE ECONOMIST. COMMERCIAL HISTORY & REVIEW OF 1923. [Feb. 16.]

anything approaching pre-war prices. Some authorities have not hesitated to record their belief that the day has passed when the United States is in a position to supply Lancashire with raw cotton at an economic price.

The low price of Egyptian in relation to American cotton during the greater part of the year—in June and July there was practically no difference in the respective prices—facilitated expansion in this section of the trade. On January 2, 1923, the quotation for fully good fair Sakellaridis Egyptian cotton on the spot in Liverpool was 17.80d. Changes in prices during the early months of the year were not important, but 15.40d was posted on May 11th, and 15.25d on July 30th. By the end of September the price had advanced to 18.65d. There was another rise in November to 26.95d on the 29th, and the year closed with the figure at 24.50d. Lancashire's heavy consumption of Egyptian cotton was facilitated by the abundance of the yield last year, which reached a figure of 6,684,000 cantars. Prospects for the present season are less favourable, and the output is not likely to exceed 5,960,000 cantars.

The following table shows raw cotton and yarn quotations for each month throughout the year:—

1923.	Cotton, Fully Middling American.		—American Yarns—		Cotton, Egyptian F.G. Fair Sakellaridis 60's	
	d	¢	32's	40's	50's	60's

November 2	17.79	24	244	27	18.75	30
November 30	21.72	29	29	32	20.75	30
December 7	19.92	27	28	30	24.15	38
December 28	21.17	28	28	31	24.30	38

The scarcity of American cotton—used in 12 per cent. of Lancashire spindles—was further reflected in the large business done in such sorts as Peruvians and the longer-stapled Indian. The objects of the Empire Cotton Growing Association are being actively pursued, and a beginning has been made in the growing of cotton in various British Dominions.

The post-war cotton crops of the world are shown below in comparison with those of 1914:—

(Bales of 500 lbs (approx.) 000's omitted. Linters included in American crop.)

	America.	India.	Egypt.	Russia.	China.	Others.	Total.	% on 1914.

Throughout practically the whole of the past year, Messrs Schwartz, Buchanan, and Co. state, conditions otherwise sound were obscured by the political situation. It speaks volumes for the inherent strength of the wool situation and the healthy state of the trade that values, comparatively speaking, were so little affected. In spite of financial difficulties in Central Europe, a vast amount of unemployment at home, a distinct wave of pessimism in America (which country between May and October re-exported quite a large quantity of wool to Europe) and an industrial dispute in Verviers, which lasted four months, the resultant ill effects were but limited and of a temporary nature.

When the sales opened in January the tone was confident and merinos regained most of the ground they had lost in December, and crossbreds, which, in spite of the improvement in the last three months of the preceding year, were still very cheap as compared with merinos, showed a further material advance. Unfortunately this position was not maintained, as the fears of the result of the projected political action in the Ruhr caused lack of confidence and doubt as to what would be the effect both financially and economically of such action. This weakness was further reflected at the opening of the March sales, but the tide was on the turn already in the second week, thanks to French and American support. The upward movement continued till May, when a set-back, caused by fears of a financial collapse in Germany, and bad trade in England and America, took place in the June-July series, and it was perhaps fortunate that the dockers' strike compelled the abandonment of the second half of the series. The consequent long interval allowed time for digestion, and a gradual and continuous improvement took place from that time forward, less marked in merinos, but very distinct with regard to medium and coarse crossbreds from October onwards. At last crossbreds seem to be coming into their own, for, after long neglect, in spite of their relative cheapness, which one would consider an important factor in the impoverished state of a great part of the world, the increased use of coarser fabrics has only recently become apparent.

We give below our usual statement of the value per lb clean of a few representative descriptions in December in certain years, in July, 1914, just before the war, in April, 1917, which saw the temporary close of public auctions, and in December, 1919, 1920, 1921, 1922, and 1923:—

1923	65	58	53	48	52	42	23	19	19	19

As compared with last December, merinos show a rise of 15 per cent. for combing sorts and 20 to 25 per cent. for short and faulty wools. Fine crossbreds are 15 to 20, medium 20 to 30, and coarse 50 per cent. higher. As compared with the prices ruling in July, 1914, merinos are roughly 100 per cent. higher, fine crossbreds about 85 per cent.; medium, however, are only 40 per cent. and coarse 30 per cent. dearer.

According to Messrs Charles Balme and Co., the quantities of "free wool" and wool for the account of the British Australian Wool Realisation Association, catalogued in the London market during 1923, compare with the figures for 1922 as follows:—

	On Importers' Account.		On B.A.W.R.A. Account.		Total.	
	1922.	1923.	1922.	1923.	1922.	1923.
New South Wales	Bales. 117,337	Bales. 128,411	Bales. 107,802	Bales. 50,734	Bales. 225,139	Bales. 179,145
Queensland	108,997	91,576	54,815	1,845	163,812	93,421
Victoria	76,341	107,017	108,290	131,287	184,631	238,304
South Australia	27,512	97,102	25,851	2,014	53,363	99,120
West Australia	70,597	44,220	25,976	3,693	96,573	49,913
Tasmania	6,058	4,109	9,052	78	15,110	4,186
New Zealand	318,838	313,536	148,252	213,985	467,090	527,521
South Africa	14,390	46,354	43,619	..	58,009	46,354
Punta Arenas and Falkland	84,943	52,526	..	..	84,943	52,526
Islands	3,750	4,778	..	..	3,750	4,778
River Plate	8,418	8,363	731	676	9,149	9,039
Sundries	..	..	..	..	..	..
Total	838,539	828,586	523,388	404,310	1,361,927	1,232,898

In addition to the foregoing the following quantities of wool

were catalogued on account of B.A.W.R.A. at the under-mentioned ports:—

	1922.	1923.
Liverpool	Bales. 150,901	Bales. 194,945
Hull	139,705	119,270
Antwerp	101,523	..

bringing the total quantity of wool offered on account of B.A.W.R.A. during 1923 up to 718,825 bales, as against 915,517 bales during 1922, a decrease of over 20 per cent. As compared with 1922, the total catalogued quantities fell 129,000 bales, or 10 per cent., a decline of nearly 150,000 in Australia's contribution being noteworthy. Supplies from New Zealand were more prominent than in 1922.

The following table, compiled by the "Weekly Wool Chart," shows the amount of wool retained by the trade in the years stated, the figures for 1923 being approximate:—

(Million Lbs.)	1913.	1922.	1923.
Imports, foreign and colonial wool	801	1,106	735
Re-exports, ditto	307	448	415
Retained	494	658	320
British clip retained	95	40	45
Reduction in B.A.W.R.A.'s stocks in U.K.	..	86	190
Total retained by trade	589	784	555

At the end of 1923 stocks of wool in trade hands were probably less than at the beginning of the year, so that the machinery consumption in 1923 was about equal to that in 1913. In 1922 stocks in the hands of the trade increased, so that the figure of 784 million lbs did not entirely represent consumption.

The omens point to a continuance of a firm position in woollen markets. Messrs Edward Dyerson and Co., of Melbourne, quoting estimates made by the United States Department of Agriculture, point out that the number of sheep in the world prior to the war was approximately 550,000,000, but these have since dwindled, and the 1922 estimate was about 465,000,000—a decrease of approximately 16 per cent. Australian flocks (which produce nearly one-quarter of the world's annual supplies) comprise over one-sixth of the world's total. Some of the figures are interesting, and are as follow:—

Country.	—Number of Sheep—	
	Pre-War.	1922.
United Kingdom	28,967,495	23,761,021
Australia	85,057,402	80,000,000
New Zealand	24,191,810	22,222,259
South Africa	30,656,659	26,288,560
Argentina	80,401,486	40,000,000
United States	52,362,000	36,048,000
Uruguay	26,286,296	12,000,000

The reduction by over one-half in the River Plate Republics is due partly to increasing population and improved railway facilities bringing a larger percentage of the country under cultivation, but is chiefly the result of the enormous slump a couple of years ago in the price of crossbred wool, which discouraged sheep farming in those countries.

The present season's prospects do not favour any marked increase in the world's supplies. The new Australian clip, according to Messrs Schwartz, Buchanan, and Co., will show a considerable decrease, 250,000 bales being probably a conservative estimate. This reduction is due not so much to actual losses of sheep as to a light shearing, caused by lack of feed. The lambing, too, has been a failure. In New Zealand the production is likely to remain stationary, as the good season in the North Island would appear to be counterbalanced by the wet and cold one in the South Island. From South Africa no increase can be expected, as the season has been rather dry. The Argentine clip will again show a further substantial decrease, and of the 120,000 bales (roughly 360,000 Colonial bales) held over in Argentina last year only 20,000 remain. Of B.A.W.R.A. stocks there are now but 220,000 bales left, and these will be disposed of in the next few months.

JUTE, FLAX, AND HEMP.

The era of depreciating values which coincided with the liquidation of various stocks, both in the countries of production and at the consuming centres, appears to have been brought to a close in 1923. Values during the year began to improve, and gave evidence that supplies were proving unequal to the demand.

Italian Hemp.—The heavy accumulation of previous years has been entirely liquidated, and the trade has become dependent upon the existing crop. Fortunately, this has proved satisfactory as regards quality, but the quantity does not touch the high-water mark of previous years. The demand from Italian spinners which set in very early has been consistently maintained. Other countries have bought more sparingly, notwithstanding which hemp has almost continually risen in price since the beginning of the year, so that values to-day of good Bologna range from £77 per ton, as compared with £68 per ton at the beginning of the season. Italy is benefiting by a currency which is practically stabilised at 100, and which enables the local mills to

manufacture at a price that can compete successfully in the world's markets, whether for yarns or cloth.

Flax.—The flax spinning and weaving industry in France and Belgium has been active during the whole year, and was assisted by the stimulus of a depreciating exchange on export. Ireland and Scotland suffered from depressed trade conditions and severe competition. An improvement is at last being felt, partly through trade revival and partly through the shortage and dearth of cotton, which is encouraging a more extensive use of linen. The production of flax in most of the producing countries has almost returned to normal except in Soviet Russia, where the cultivation is still far below pre-war, and this season the estimated quantity available for export is only 40,000 tons, against 300,000 tons in pre-war days. It is manifestly impossible for the spinning trade to return to pre-war consumption until Russia is able to increase her production of flax, for this is the principal source of supply capable of expansion to meet the world's requirements.

Prices fell until March, 1923, when Baltic flaxes advanced, owing to heavy buying, but reacted again until October, which was the lowest point. Soviet flaxes continued to fall until October-November, when a large business was done. Since then there has been a steady upward tendency, which seems likely to continue while cotton is at its present high level. Livonian Risten is valued at £100, and Bejetsky I. sort £91, c.i.f. The large accumulations of stocks which existed last year have been completely absorbed into consumption, and the spinning trade is now strictly dependent on the annual production.

East Indian Hemp.—There has been an entire clearance of stocks, both in India and at home. Reports from India indicate that the unprofitable prices of the last few years have caused a considerable diminution in the sowings of this class of fibre, and growers are producing very little more than they require for their own necessities. Consumers hold little or no stock, and as none is available in London any inquiry goes straight to the very sensitive producing markets, which respond with steadily increasing prices. Fine Jubilee pore has advanced in value from £24 per ton to £30 per ton. Benares from £21 per ton to £29 per ton. Other classes of Indian hemp have moved in proportion.

Calcutta Jute.—The 1922-23 crop proved to be considerably larger than the very low official estimate, which brought about wide fluctuations in price throughout the season. The new season opened under satisfactory conditions, with a considerably increased area, and on the expectation of a much larger crop prices steadily declined, until first marks were sold as low as £20 10s per ton in the month of September. The market quickly reacted at this point, and rose to £30 per ton, but has reverted since to the neighbourhood of £27 per ton. An indication of future expectations is to be found in the premium paid for shipments two to three months ahead, which is generally 20s to 30s per ton.

Manila Hemp.—Receipts during the year show an increase of 16.6 per cent. over 1922, viz., from 1,275,000 bales to 1,487,000 bales, but shipments and deliveries have corresponded closely with the increased receipts, and the position of the article is undoubtedly healthy, with a demand apparently fully equal to the supply.

The price of "J" grade at one time fell as low as £30 per ton, but the revolution in Mexico, which improved the demand for Manila, raised the price of "J" to £36 per ton. The lower grades show less appreciation. Unquestionably, the increase

or any pressure to sell from producers, who are booked far ahead.

Henequen.—The consumption of Mexican sisal in Europe was considerably extended during 1923, and shipments totalled some 115,000 bales. The low price and accurate execution of contracts under the well-managed selling arrangement in New York unquestionably added to the popularity of this fibre, together with the improvement in the quality caused by greater care in the production, baling, and grading. Evidences were forthcoming during the latter months of the year that less material would be available for shipment to Europe, if the wants of American manufacturers were to be adequately met. The revolution to which we have alluded brought matters to a crisis, and manufacturers throughout Europe are now seeking to secure early delivery of African sisal to replace the Mexican supplies, which are fraught with so much doubt. It seems doubtful, indeed, whether European mills will return to the consumption of Mexican unless substantial advantages are offered. The price to the grower during the year was gradually raised to 5 cents to the lb, without, however, any increase in the price to the American consumer.

New Zealand Hemp.—Attempts have been made in New Zealand to improve the production of this fibre by closer attention to cultivation and more accurate grading. Growers have been discouraged owing to the continuation of low prices, and openly stated that they were unable to produce it at the prices which were ruling during the first half of the year. The Mexican situation and the difficulty of securing sufficient supplies of African have reawakened interest, especially in America, and the turn of the year sees a considerable improvement in value, which, it is hoped, will lead to an increase of production.

Maguay Fibre.—In common with other fibres of its kind, maguay has steadily appreciated in price, notwithstanding its substantial output, and values close at their best at the end of the year.

DOUBLE YOUR INCOME

ELIMINATE RISK.

Every person whose income is derived from investments knows how harassing is the anxiety entailed by the constant rise and fall in their value. You can get a guaranteed income for life if you purchase a Canada Life Annuity. It is, humanly speaking, equivalent in safety to a Government pension. It cannot shrink. What you contract to get is paid you punctually. And you get a much larger income.

FOR INSTANCE—

A man of 62 who takes out a Canada Life Annuity for £1,000 gets a yearly income of £106 3s. 2d.

OVER 10½% PER ANNUM.

Other ages pro rata, on equally generous terms. You can invest any amount from £100. The Assets of the Canada Life Company are £18,000,000, and are under direct Government supervision. Write at once for full particulars to the Canada Life—the oldest Colonial Life Assurance Company and the office that gives the best value for Annuities.

Write to-night (stating age) to J. R. Wandless,

CANADALIFE ASSURANCE Co.

SILK.

At the close of 1922 the principal feature of the silk market was that production was not keeping pace with a constantly increasing consumption. Stocks of raw silk were very light, and it was generally believed that a serious shortage would be felt before new silk be available. Throughout the first months of 1923 prices rose rapidly. News from America was distinctly optimistic, and consumption there exceeded 35,000 bales monthly. As early as March important contracts were made for new silk, both in China and in Italy, America being the chief buyer. In April business quieted down in Lyons. Manufacturers were alive to the danger of high prices for silk, and turned part of their production towards the use of cheaper textiles, such as cotton, wool, silk yarn and artificial silk. This change resulted in very difficult times for throwing mills and in a sharp reduction in the consumption of Japan silks on this side. Meanwhile, America was still buying freely on the Eastern markets. However, no serious shortage of silk was being felt, and it soon became evident that none would be felt, shipments from the Far East resulting considerably larger than anticipated.

The final result of the crop was up to expectation. The excess upon the 1922 crop was from 10 to 30 per cent., according to the producing centres. Nevertheless, high prices were paid for cocoons all over the world, and the laid down cost of new silk was about equal to prices ruling at the time on the consuming markets. Business remained quiet and prices declining throughout the summer months, with a better feeling at the end of August. On September 1st Japan was afflicted by an exceptionally severe earthquake. Thirty thousand bales of silk were destroyed in Yokohama, and during a few days it appeared as if exports from Japan, which form 60 per cent. of the world's silk production and about 75 per cent. of the silk supplies of America, would cease for several weeks, or even several months. Prices rose in a few days by 25 per cent., and America sent large orders to China and to Italy. However, the excitement did not last long; the new quotations soon appeared prohibitive. The retail trade began to look at silk piece goods with less favour, and jobbers reduced their orders. Meanwhile, the Japanese had managed to resume exports in the course of a few weeks, thus doing away with the fears of a shortage of silk supplies. Less than a fortnight after the disaster prices began to give way, and since then the silk market has remained quiet. Present prices have practically come back to the same level as at the end of August.

Silk prices in gold currency are to-day almost double the lowest prices reached after the heavy fall of 1920; they are very nearly the same as those of the beginning of this year.

HIDES AND LEATHER.

Raw Hides.—The course of business ran more smoothly during 1923 than during the previous year, and was more satisfactory to both importers and buyers. The demand throughout was especially strong for low-priced hides. Values of all hides steadily hardened until about June, and then gradually declined, especially for South American hides, which were quoted at a very low price indeed—frigorific ox at 6½d and cows down to 5½d per lb. These hides have recovered from the worst, but are still relatively cheap. English hides also declined at this period, but not to the same extent, and recovered later, their present weakness being due to the general poor condition of the hides. The export of English hides during the past two years was:—1922, 144,744 cwts; 1923, 156,228 cwts. Imports of foreign hides showed a further improvement, but, as in the case of the English product, shipments were still below those of the last pre-war year:—

	1922. Cwts.	1923. Cwts.
Wet.....	589,265	791,283
Dry.....	521,054	606,101
	1,110,319	1,397,384
Re-exports.....	243,154	238,756
Retained for home consumption	867,165	1,158,628

Tanned Skins.—In spite of the disappointing results shown by many branches of the general trade of the country, in tanned East India skins, the year's business shows no decline in the aggregate sales, while the basis of values has been appreciably raised. There was a steady demand throughout the first six or seven months, after which it gradually improved in successive sales to the close of the year, when the strongest demand and highest prices were recorded. The home trade was steady during the earlier months, and very strong during the closing stages. The end of the year found stocks within a very moderate compass, and the demand active for all descriptions.

Tanned Hides.—During the year there has been an extremely good home trade demand for this article, and prices generally have ruled very steady, as the closing values only show the small average improvement of about 5-10 per cent. on both Madras and Bombay tannages. Export business has been quiet, which is not surprising in view of the fluctuating and adverse exchanges. Through the medium of the public auctions about 957,000 have been disposed of, comprising 430,000 Madras (including 200,000 calf), 490,000 Bombay and 38,000 Colombo and Calcutta hides. With present stocks so limited prospects for the present year are distinctly favourable, and larger shipments than those to hand recently can be readily absorbed by the trade.

Leather.—Trade returns in the United Kingdom show that during the twelve months ended December 31, 1923, the imports of undressed leather totalled 599,213 cwt, valued at £4,743,281, as compared with 444,320 cwt, valued at £3,880,414, in the previous year. India, of course, was the largest source of supply in respect of both hides and skins, and the United States furnished a good proportion of hides, while Australia sent a considerable quantity of both hides and sheep skins. Imports of dressed leather for last year totalled 156,192 cwt, valued at £6,333,182, as compared with 152,280 cwt, valued at £6,846,611, in 1922, the United States again being the most important supplying country, France ranking next.—Mr H. S. Cotton (Culverwell, Brooks, and Co.) in "Chamber of Commerce Review."

Boots and Shoes.—Prevailing industrial conditions were responsible for a demand principally for low-priced goods. In the first few months of the year orders came irregularly, with a burst of activity just before the Easter holiday season. The cold weather of the early summer and the unsettled meteorological conditions prevailing subsequently upset the normal running of the industry and the calculations of manufacturers. Labour troubles in Ireland delayed deliveries in the early autumn, and caused many concerns to miss their market. In the latter part of the year, however, a welcome change for the better took place, demand improved, and business at the close of the year was not unsatisfactory.

The following is a statement of imports and exports of hides and leather during 1913, 1922, and 1923:—

† Under the designation of "Leather" are comprised the following articles, viz.: Hides, tanned, tawed, curried or in any way dressed; Goat skins, tanned or dressed as leather; Sheep skins, tanned or dressed as leather.

CHEMICALS.

The following has been extracted from the annual review of Sir S. W. Royse and Co., Limited, dated December 31, 1923:—

Chemicals.—Though business generally is better now than it was 12 months ago, some disappointment may be expressed that its progress has not been greater, and that prospects of a solid improvement at an early date still remain obscure. There is, however, a feeling that conditions will be better this year, and that some further improvement in trade may be expected. Sulphate of copper has fluctuated little during the year, in spite of the variations in the value of the metal. Twelve months ago the price was £26 10s, and it remained steady up to June, since when lower figures have been accepted, and to-day business has been done at £25 for both early and forward delivery. Home trade requirements have been on a smaller scale. Green copperas has been in plentiful supply, with little change in values. Acetates of lime have been scarce, and whilst in January they were being offered at £8 5s and £16 for brown and grey respectively, to-day £12 10s and £22 are being paid for available supplies. Acetate of soda was £22 15s in January, and advanced to £25 in June, with a shortage of supplies—to-day £23 may be taken as current value. Acetic acid has ruled steady all the year, but latterly has been firmer, especially for delivery into 1924. Lead compounds have been affected by the rise and fall of lead, which commenced the year at £26 7s 6d, has been as low as £24 10s in July, and is to-day £30 7s 6d. White acetate of lead was £39 in January, and is now £43 10s, whilst brown advanced from £34 to £45 per ton, there being a distinct shortage, brought about by absence of shipments from Germany. Nitrate of lead has had little change, but home makers have retained their hold and also done a fair export trade. Litharge and red lead were £38 15s in January, and to-day's price is the highest of the year—viz., £45 per ton. Supplies of carbonate of potash have amply met the year's requirements, which have been only fair, but values have advanced about £3 to £4 per ton. Caustic potash has moved off steadily, and price of solid 88-92 per cent., which was about £29 in store in January, rose to about £35 in April-May, and the present figure is about £31 per ton. Trade in Montreal potashes has been

small; price ruled as high as £93 in April, whilst to-day's value is about £70 per ton. The demand for muriate and sulphate of potash in 1923 was below normal. Trade in yellow prussiates of potash and soda has been disappointing, showing a general decline in consumption, and especially in potash, which 12 months ago was realising 1s 5½d, and to-day is only about 9½d per lb. Soda has also gradually fallen from 10½d to 5½d per lb, with supplies in excess of demand. The export inquiry has been small.

Tar Products.—Benzoles had only a moderate demand, and values gradually weakened; the reductions in petrol in July and September helped to depress the market still further. Creosote commenced the year rather quietly at about 6½d per gallon. The position strengthened in February, and has since been well maintained, values in December being about 8½d per gallon. Crude carbolic acid supplies have been scarce, and readily absorbed in consumption; prices have varied from 2s 4d in January to over 4s in March and April, subsequently remaining fairly steady until November. In naphthalenes the refined product has been erratic, but crude has had a more steady demand, and fair values have been obtained. The easy tone in the pitch market existing at the end of 1922 changed early in January, increased figures being recorded. Continental consumers were compelled to come on the market for large supplies, with the result that by the end of the shipping season prices had advanced beyond all expectations. However, by the end of May a heavy fall in values took place, and little business passed until the autumn. It was reported that Continental buyers carried over from last season stocks of pitch higher than the average, and this, together with the uncertainty of the Ruhr position, affected values, which were again easier in September. October, however, brought considerable inquiries, and for several weeks prices advanced. In November it was difficult to find genuine buyers, and since then the situation has been a nominal one, with business passing at considerably reduced figures. In sulphate of ammonia the demand has been fairly good, both for the home and export markets.

Heavy Alkalies.—Bleaching powder has been in steady demand for the home trade during the year, and makers have met consumers somewhat in price, and further concessions have been made for deliveries during 1924. White caustic soda also has had a better inquiry for the home trade, and there has been some considerable activity in overseas shipments. Makers have had keen outside competition to meet, and prices have been reduced from time to time. Ammonia alkali has been in steady demand, and makers have been well occupied. Bicarbonate of soda and soda crystals have been fairly active. Saltcake has been in good request for export. Trade in chlorates of potash and soda has only been moderate, and at reduced prices—in January 4d and 3d were the respective values, whilst to-day 3d and 2½d per lb are fair market figures.

Dyestuffs.—In the course of an article in the *Chemical Age*, Sir Wm. Alexander states:—The home market has been somewhat livelier than during the year 1922. In some groups of colours there has been a decided improvement. The railway companies appear to be spending more freely on the necessary repairs and maintenance work, and the demand for paint, enamels, &c., stimulates business in the special group of colours which are used for this purpose. So long as raw cotton remains at its present price, probably little hope can be entertained of the trade reaching its normal dimensions. The year has shown a general fall in prices. The average price of dyestuffs during 1922 was 3s 5d a lb, whilst in July of this year a similar average was 2s 6d, and to-day it is somewhat lower still. It is highly satisfactory to observe in the year under review the appearance of brand-new British colours—viz., the Caledon jade-green colours of the Scottish Dyes, Limited, a series of vat dyestuffs, and the Cellutyl series of the British Dyestuffs Corporation, Limited, a group of dyestuffs having the special property of dyeing celanese silk.

Chemical Fertilisers.—Conditions have been largely controlled by the general, world-wide depression in agriculture and the extreme variations of the European monetary exchanges. These two forces combined have prevented the fulfilment of the demand for fertilisers which undoubtedly existed, and at the same time hindered its natural expansion.

During the past nitrate year—July, 1922, to June, 1923—the consumption of nitrate of soda was 2,165,000 tons, compared with 1,528,000 tons in 1921-1922. This figure is undoubtedly smaller than in pre-war years, when the world's consumption approached 2,600,000 tons, but it must not be overlooked that in the earlier period Germany consumed about 800,000 tons, while at present she supplies her demands with synthetic nitrogen products. A most remarkable increase in a country's consumption of nitrate of soda is shown in the case of the United States of America, which in 1922-1923 consumed 984,000 tons, as compared with 550,000 tons in 1921-1922. The use of nitrate of soda in those European countries which are in a financial position to purchase nitrate of soda is gradually reviving, and in a

SCOTTISH AMICABLE LIFE ASSURANCE SOCIETY

Founded 1826.

Funds £8,000,000

A MUTUAL PROFIT-SHARING OFFICE. An Unbroken Record of High Compound Bonus Declarations.

The Society since its formation in 1826 has a continuous record of high Bonus rates, unbroken by the war.

Throughout that long period of nearly 100 years a Bonus has been declared at each of the periodic investigations, and on no occasion has the rate fallen below 30s. % compound. This was the rate declared for the latest quinquennial period ending 31st December, 1920, which included nearly 3 years of war. For the 20 years ending 1915 the rate was 35s. % compound.

short time undoubtedly will reach the normal. With regard to Great Britain, the consumption in 1922-1923 was 81,340 tons, an increase of 15,200 over the year 1921-1922. The increased consumption of nitrate of soda in the world has been largely helped by the policy of the Chilean Nitrate Association in fixing f.o.b. prices for long periods. Their action has tended to control speculation and to give confidence to the importer and merchant.

Great strides have been made during the past year in the production of dry neutral sulphate of ammonia containing 23½ per cent. of ammonia, as compared with 24½ per cent. in the previous acid quality, it being estimated that at least 70 per cent. of the British production is of the superior quality. The total British production of sulphate of ammonia was approximately 340,000 tons, and about 140,000 tons were consumed in Great Britain and Ireland, while the exports to foreign countries increased by some 70,000 tons. The three principal countries—viz., Great Britain, Germany, and America—are estimated to have produced something over 2,000,000 tons; it is impossible to obtain the exact figures, but all the indications of 1922 point to the American total output being in the neighbourhood of 600,000 tons, while Germany is supposed to have produced approximately 300,000 tons of combined nitrogen, although not all of this was in the form of sulphate of ammonia.

VEGETABLE OILS AND OLSEEDS.

The oilseed crushing industry of the United Kingdom in 1923 experienced greater activity than in the preceding year, and so far as trading conditions were concerned had a more satisfactory year than at one time appeared probable. Several world factors, notably the shortage of the linseed and cottonseed crops in the United States and the fluctuating rates of exchange in European countries influenced the markets from time to time, and presented difficulties which, however, were successfully surmounted. Prices generally, though high, were on the whole steady, and were subject to fewer violent variations than in some recent years, and this, coupled with more stable conditions in the consuming industries, greatly helped matters. Happily, also, there were no financial failures. The net imports of oilseeds, oil nuts, and kernels from abroad, all of which found their way into the mills (stocks held being very small), at 1,571,115 tons, constituted one of the highest totals in the history of the industry; and was 242,940 tons more than in 1922 and around 200,000 tons higher than the average of the three preceding years. The gross total of oilseeds was 1,156,095 tons, of which 7,041 tons were re-exported, the principal items consist of cottonseed 543,565 tons, linseed 381,504 tons, soya beans 113,062 tons, and rapeseed 60,898 tons, while that of nuts and kernels was 455,368 tons (less 33,307 tons re-exported). In each case there was a substantial increase over the previous year's receipts, cottonseed being 60,000 tons up on larger imports from Egypt and India, linseed 22,655 tons, soya beans 53,705 tons, palm kernels 50,000 tons, and ground nuts 31,000 tons more. With an estimated yield of 1,750,000 tons of linseed in the two chief exporting countries (Argentina and India), lower prices and larger imports were anticipated, but these were not realised. In the United States the domestic crop was below average, and requirements of linseed oil were much above normal, causing American crushers to make demands on the Argentina crop to the extent of 550,000 tons, or more than double the figure of 1922. Altogether America's linseed oil requirements were, in round figures, the equivalent of a million tons of seed, nine-tenths of which was crushed in the States. More Indian than Plate seed was imported into this country. Russia was represented by less than 2,000 tons. Egyptian cottonseed was an average crop of fair quality, the bulk of which was, as usual, exported to Great Britain, and contributed 338,376 tons to the total import of 543,565 tons. It is satisfactory to note that India's export of cottonseed is expanding to pre-war level, the substantial arrivals from that great Dependency during the year having considerably helped English crushers when they might otherwise have been without supplies. Soya beans appear to be coming into favour again, but the long sea voyage and the small oil content make it difficult to produce oil here as cheaply as that exported in bulk from the native milling centres in Manchuria. The residual cake and meal are, however, a prime consideration, and find a ready market. The comparatively high figure of the imports of nuts and kernels (viz., 422,000 tons net), principally palm kernels and ground nuts from West Africa, indicates that this branch of the industry, which was formerly almost exclusively the monopoly of Germany, is now firmly established in this country.

With increased supplies of raw material, the crushing and extracting mills have been able to produce larger supplies of oils and oilcake to meet demand both at home and abroad. The English demand for linseed oil gradually improved throughout the year, and reflected the rather better times in the paint and varnish, linoleum, and other consuming industries. Cotton, palm kernel and other edible oils were in improved and steady demand from margarine manufacturers, while British soap makers also called for more vegetable oils, though they made large purchases of soya oil imported from Manchuria in the summer months, when shippers offered considerable quantities at low prices. Regarding the export trade, the aggregate sent abroad was around 11,000 tons more than in 1922, but differed much in particulars. The figures for last year and the three preceding years are as under:—

	1920. Tons.	1921. Tons.	1922. Tons.	1923. Tons.
Unrefined oils.....	100,010	93,433	89,608	15,700
Refined oils.....	17,678	12,931	13,149	97,744

Linseed oil exported, at 37,701 tons, compares with 59,388 tons in 1922, when the figure was swelled by very substantial exports to the United States. The operation of a tariff of 3.3 cents per pound on foreign oil imported, however, greatly hampered competition last year, though in the earlier months of the year, when the mills on the Eastern seaboard were caught short of seed, American importers bought freely of English oil for May-August shipment, one effect being to send up the spot price of raw linseed oil ex Hull mill to £52 per ton (naked), the highest point reached during the year. On the other hand, the exports of soft oils, notably cotton and palm kernel, showed a large increase, and more than counterbalanced the falling off in linseed oil. Germany has been very short of fats, and was continually in the market for edible oils, and in the absence of competition from America, which had no surplus of cotton oil for export, English crushers have been able to do a good trade with Northern Europe generally. With the exception of the summer months, the refineries have been more regularly employed, while in the latter part of the year big purchases of crude cotton oil were bought on German and Scandinavian account. The English exports of palm kernel oil (refined and unrefined) were 23,475 tons, against 8,089 tons in the previous year, and of cotton oil 20,622 tons, against 10,576 tons. Prices generally were steady; raw linseed oil ranged between £52 (in March), the highest, and £36 (in August), the lowest, the average for the year being £41 5s per ton, naked, ex Hull mill. Crude Egyptian cotton oil reached the highest in December, when £42 was recorded, with crude Bombay at £40, and the lowest in August, when the values were £32 and £31, the average Hull prices being £37 15s for Egyptian and £36 5s for Bombay. Crude rape oil was £44 in March and April and £36 in August and September, the average for the year being £40 16s per ton; and crude palm kernel oil £47 in April and £35 10s in July, with an average of £39 15s.

The production of vegetable oils in the United Kingdom in 1923, estimated from the commercial yield of oil from the net imports of oilseeds, oilnuts and kernels, was 463,950 tons, or 70,105 tons more than in 1922. The comparative figures are as follows:—

	1920. Tons.	1921. Tons.	1922. Tons.	1923. Tons.
Linseed oil.....	125,000	155,000	117,450	126,275
Cottonseed oil.....	75,200	63,000	81,000	90,585

Total.....	425,980	399,300	393,845	463,950

Imports of vegetable oils from abroad were, as usual, fairly substantial, the total of unrefined being 131,588 tons, principally coconut, palm and soya, which accounted for 107,395 tons of the gross imports. The arrivals of refined were 16,537 tons, consisting mainly of coconut, cotton and olive oils. The re-exports were 20,308 tons, or 14.6 per cent. of the gross imports of refined and unrefined. The position of the nation's vegetable oil supply is shown in the following summary:—

Add net imports.....	187,791	142,054	136,554	127,517
Total remaining in U.K.....	491,286	434,990	427,642	478,323

The production of oilcake and meals in the United Kingdom was over a million tons, but the quantity exported abroad was only 63,446 tons, against 42,142 tons in 1922. At the same time, we had a net import of 317,503 tons, against 316,366 tons of oilcake manufactured abroad. Prices generally were a little more reasonable, but still much higher than in pre-war years.

UNITED KINGDOM PROVIDENT INSTITUTION

FUNDS EXCEED
THIRTEEN MILLIONS

Chairman:
THE RT. HON. WALTER RUNCIMAN.

The Institution is in a strong position as regards every point which makes for future prosperity. Among the more important of these are the following:

- (1) Unimpeachable Security.
- (2) Favourable Mortality.
- (3) Moderate Working Expenses.

The combined operation of these factors keeps intact the sources of future profits, and renders the policies of the Institution highly attractive to present and future members.

Write for Prospectus of Children's Deferred Assurances, carrying an Educational Endowment Option at age 16, and a number of valuable Assurance Options at age 21 or age 25.

House Purchase Scheme, which enables persons to buy their own houses, and in the event of death to leave them free of debt.

TURPENTINE.

The year 1923 opened with turpentine markets advancing everywhere on values that were already high. In the early part of the year the demand from consumers in the U.S.A. was disappointing; also it became apparent that production of naval stores would be considerably higher than during the previous year. Added to this the anticipated great activity in building operations received a severe check owing to the high cost of labour and building materials. This slump weakened the London market, but in consequence of the meagre stocks at that port the decline was more gradual, forward quotations being more affected than spot prices. The lowness of visible supplies for London caused a sharp but short-lived advance in the middle of May, and the spot quotation reached 116s 6d, the highest point of the year. From this point onwards, with London visible supplies increasing, values steadily declined, until at the beginning of September 69s 3d, the lowest spot quotation for the year, was reached. The market rallied towards the middle of the month, and from this period until the end of the year a steady and rather featureless market ruled, spot prices fluctuating quietly between 71s 6d and 75s. The increase in production over last year in the U.S.A. appears to be in the neighbourhood of 21 per cent., although, at the same time, her exports of turpentine show a considerable increase. The total London deliveries for the year 1923 were 92,776 barrels, as against 84,658 barrels in the previous year, an increase of 8,118 barrels. Of the total deliveries only 8,580 barrels were French turpentine. Stocks of turpentine in London at the end of each year were:—

Rosin.—The increased production in America has kept prices lower, although during the last few weeks of the year pale grades became firmer. The demand for rosins, however, appears to have increased, and the exports from the U.S.A. to all countries were much greater than in the previous year. The imports of rosins into the United Kingdom show an increase on those of last year, but, owing to the high prices that ruled in France a greater proportion of orders was placed in America.—*Lowden, Connell and Co.*

TIMBER.

Political unrest, with increasing instability in the exchanges, marked the course of 1923. Timber operations, therefore, continued to be hampered in respect to forward contracts. Reliable shippers of most descriptions of wood have sufficient financial strength to escape the necessity of consigning their products, and therefore obtained their prices for consumption as it arose. Such consumption was disappointing in volume for the first half of the year, but gradually strengthened as the railway mergers were completed, and the necessity for new rolling stock was being faced. Both hardwoods and softwoods have already benefited, and should continue to benefit by the development of this long waited for demand. The timber trade is, generally speaking, in a sound financial position, as the wreckage from the slump years has been cleared off, and the salutary lesson from over-speculation taken to heart. The New Year opens with modest and soundly bought stocks, and with the favourable features referred to above any return to healthier political conditions, both at home and abroad, should lead to a sound development of the world's trade.

TEAK.—There is room for considerable improvement in the teak market generally, which it is to be hoped will manifest itself when there has been time for renewed activity in the shipbuilding yards consequent upon the settlement of the prolonged boiler-makers' strike. There is all the more reason for anticipating more favourable market conditions because the supplies of rough timber which it has been practicable to bring down to the shipping ports from the forests are relatively small. It is therefore reasonably certain that any substantially increased demand will result in a general advance in prices. There is the further consideration that the rupee has appreciated in value, and is helping to make the market stronger. The Continental markets are still more or less stagnant on account of the continued monetary stringency and instability of the exchanges.

MAHOGANY.—The demand for good quality logs has been well maintained, and prices show an increasing firmness for all classes of wood, even the lower grade qualities participating in the gradual upward movement. Honduras.—All the stocks of square wood in brokers' hands have been cleared, but the round logs are not meeting with such

a quick sale, owing to their being held for what are considered high limits. The cargo which has just arrived in London should find a ready market, but it is not expected to have much effect on the present level of prices. Cuba.—Here again stocks are held for high prices, and the quantity available is quite sufficient for the present rate of consumption. African.—The market is practically bare, and any further shipments coming forward should find a good outlet. The small quantities available during the last few weeks have realised high prices, and as there is little prospect of any considerable supplies arriving in the near future holders of this class of wood should have no anxiety.

CANADIAN TIMBER.—Waney Pine.—This is still a very dull market, but there was a little more enquiry as the year drew to a close. Oak.—In the last three months a fair volume of business has been done, though the demand was not so good as during the first six months of 1923. Stocks on hand, however, are quite light, and as further supplies cannot be shipped for many months holders should be able to obtain reasonable prices for their timber. Elm.—The market is subdued, but stocks are moderate, and should be disposed of without difficulty, especially if the hoped for increased requirements for shipbuilding and kindred purposes materialise.

Spruce.—Stocks in the United Kingdom are light, but are considered to be ample in view of the large quantities of Central European whitewood, which have been coming forward regularly during the whole of the past year on a lower basis of cost than spruce. In addition to Central European whitewood, a large amount of Archangel and Petrograd whitewood has been imported in the last few months, and these high-grade goods have also been purchased at sufficiently low levels of cost to enable them to compete freely with spruce.

BALTIC OAK.—Stocks of really first-class material are very light, and, with the present ready market, supplies are inadequate. Owing to the present increased cost on the other side prices should be considerably firmer in the near future. A large quantity of sawn material shipped to this market during the past year, without any appreciation of market requirements, has still to find an outlet.

Pitch Pine.—This has proved generally a steady market during the year just ended, and importers in consequence have been encouraged to buy with more freedom than in the preceding twelve months. At the same time, buying is still on modest lines, and stocks here, whilst sufficient to meet requirements, are not unduly heavy.

Oregon Pine.—Some improvement in demand has been in evidence, but there have been no operations of real importance in the United Kingdom.

Baltic and White Sea Goods.—On the whole, the past year has been fairly satisfactory to importers, although the general demand has not improved to the anticipated extent, and the loss of trading caused by the long dock strikes has not yet been made good. Importers have again this year been caused an undue amount of trouble by so much timber arriving in bad condition through lack of proper seasoning at ports of shipment. Shippers' prices remained firm until the last quarter of the year, when there was a slight easing in some sizes.

The whole of the White Sea and Petrograd stocks which could be shipped this year have been sold, so there will not be a repetition of last winter's experience, when so many unsold cargoes of these goods were sent on consignment to various ports in the United Kingdom, and it is understood that the quantities of overlying goods for shipment during next year will only be small.—*Messrs Denny, Mott, and Dickson, Ltd.*

The *Iron and Coal Trades Review* makes special comment on the absence of serious labour troubles in 1923, and the resultant satisfactory output, so far as the shorter hours of working allow. On the other hand, there was considerable unrest, and much agitation to bring the present wages agreement to an end on account of the low level of wages in some of the districts. This question remained as a legacy to be threshed out in 1924. The inability of certain mines to earn any large margin of profit is regrettable; but it remains to be seen whether the present agreement can be replaced by another more acceptable to the workers without either burdening the industry with more labour costs than it can bear, or closing down altogether the more backward collieries.

The 1923 output, at 278,000,000 tons, was 45,000,000 above 1922, and within appreciable distance of the "record" of 287,000,000 in 1913. The export trade, however, was the largest in the history of the industry, reaching 79,400,000 tons (excluding bunker)—about 2,000,000 tons more than in 1913. Coal supplies on the Continent were low at the beginning of the year, when the French invasion of the Ruhr disorganised the largest source of supply, and threw an immediate strain on English and Scottish markets. The relatively high prices of British coal in late 1922 had caused a good deal of holding back on the part of North European buyers, and the Ruhr crisis precipitated a large volume of overdue orders. The only limiting factors became the physical ability of the miners and the mining plant to meet the demands made upon them, and the capacity of the shipping arrangements at the different ports to deal with the supplies coming forward. Notably in the South Wales and North-East Coast ports a good deal of congestion occurred, and it was only after prolonged negotiation with the workers that the pre-war three-shift system was restored in these areas. The "peak" of the year's export activity was reached in May, but even in the later months, when French coal supplies from Continental sources were more nearly normal, the demand for British coals was well sustained. A comparison between the total purchases of European countries in 1923, as against 1922 and 1913, is given in the table at the end of this article.

Shipments to the chief South American countries—Argentina, Chile, Brazil, Uruguay—were 4,036,684 in 1923, against 3,621,157 in 1922. Shipments for the use of steamers engaged in foreign trade were slightly less than during the previous year—18,158,188 tons, compared with 18,259,027 tons—but were 66 per cent. over the 1921 level.

F.o.b. prices were highest in May and June, and declined to some extent in the later months of the year. The table below shows the average selling prices per ton f.o.b. for all classes of coal at the shipping ports of Great Britain for 1913, 1920, 1922, and 1923:—

Month.	1913.	1920.	1922.	1923.
January	0 13 5	3 8 8	1 3 9	1 2 4
February	0 13 4	3 14 6	1 3 4	1 3 0

December	0 13 10	4 1 2	1 2 7	1 5 3
Average	0 13 8	4 1 1	1 2 8	1 5 3

The following summaries have been extracted from the *Iron and Coal Trades Review*:—

House Coals.—The general position of this section was very good up to about the end of May; June was a moderately good month, but during the latter part of July and for the whole of August the demand was an exceedingly small one. Many pits had necessarily to reduce working to two and three days per week, and there were some large stocks under load in wagons.

From early in September there was a marked revival in the demand, and in many cases prices increased by from 2s to 4s per ton. It is for best qualities that the price advance has been most marked, and collieries closed for the year with a very large weight of orders on the books. The general demand has been accentuated during the past four months by the very small amount of stocking that was done by the

public during the summer. If similar provision to that usual in pre-war days had been made, then collieries would have received the advantage up to the end of August, and since then the demand would have been proportionately reduced.

Industrial Fuels.—So far as the inland demand is concerned, it has, on the whole, been very disappointing, and although since about the middle of December there has been a noticeable improvement, it is, perhaps, rather due to the fact that works were obtaining increased supplies for use during the holidays rather than that they were using larger tonnages. At the same time, the outlook is brighter, and a considerably larger tonnage has been fixed up on contracts than was the case a year ago. This in itself indicates the possibility of an improvement in the industrial position.

Prices for industrial fuels have been somewhat irregular, and with regard to small fuels there has been a recovery in values from 2s to 3s per ton during the year. For instance, best slacks, which in January were quoted at 10s per ton pit, are now somewhere about 12s 6d at pit.

The following reports on conditions in some of the main areas have been extracted from the *Chamber of Commerce Journal*:—

Scotland.—The trade would have been much better off but for the comparative stagnation in the shipyards and engineering works. The yield per man-shift is still low, despite the fact that much of the coal is obtained by coal-cutters, which are much more common in the northern half of the kingdom than in England. Indeed, of the total coal so won Scotland could claim 35 per cent. The number of employees at the pits during 1923 was 139,000, or 9,800 more than in the previous year, and the output had increased from 35,447,422 tons to 38,500,000 tons. During the later part of the year the shipments to Germany and Holland were showing signs of expansion, and those to France were better.

South Wales.—In the Welsh coalfield 1923 was, in the main, a troubled year. There was great discontent amongst the workers, the trade financially was in a poor position, shipments hampered, as has been stated, by the want of elasticity of working arrangements, and generally the struggle was a strenuous one; but doggedness and hard work seem fairly well to have triumphed, but at great cost to the coalowners, for Mr Finlay Gibson, the secretary of the Owners' Association, said recently it had cost them £3,000,000 to bring the wages up to the minimum. The third shift was introduced late in the year, and materially facilitated the shipments of coal. The position at Cardiff at the end of the year—before holiday interruptions—so far as steams were concerned, was reported as excellently strong, and the owners had more orders on their books than could be completed within the year. Deliveries were in arrears, and the three-shift system as worked was said to be quite inadequate. That the position was firming up was shown by the fact that best Admiralties, which a few weeks before were down to 27s, were scarcely obtainable at some shillings advance, and smalls, that had been declined at 18s, were then round 23s.

North-East Coast.—Probably no district benefited more by the events in the Ruhr than the North-East Coast. There the trade is mainly of an export character, and the proximity of the shipping places to the Western European ports, where the fuel was most required, was a further factor in its favour. No sooner had the French action commenced to be effective than the coal shipments began to increase; and not only was all production soon absorbed, but capacities of the shipping places were tested. In March, April, and May there was a good deal of delay in tonnage, owing to congestion of vessels. So considerable was the increase of shipments that in the six months ended June the total shipments had reached 10,562,894 tons, compared with 8,744,800 in 1922 and 9,834,300 in 1913. Every effort to cope with this expanding trade was made. The three-shift system was adopted, and—some months later—West Dunston staiths of the L.N.E.R. Company were opened. By these means huge shipments were maintained, and the total of coal and coke for the 12 months was actually 21,553,964 tons, as against 19,213,117 tons in 1922, an increase of 12.18 per cent. The total was 1,010,281 tons, or 4.92 per cent. over the previous record year of 1911. The destination of our coal exports in 1913, 1922, and 1923 is shown below:—

Destination.	1913.	1922.	1923.
Russia	5,998,434	584,069	476,205
Sweden	4,563,076	2,52,820	3,168,387
Norway	2,298,345	1,566,969	1,608,758
Denmark	3,054,840	2,866,213	3,170,269
Germany	8,952,322	8,345,604	14,806,232
Netherlands	2,018,401	3,489,419	6,794,346
Belgium	2,031,077	3,579,417	18,826,358
France	12,775,909	784,356	766,319
Portugal	1,201,722	1,711,021	1,145,801
Spain	2,534,131	428,647	463,070
Greece	727,899	6,341,743	7,592,735
Italy	9,647,161	55,782,723	48,288,089
Total to Europe	55,782,723	65,394,046	65,394,046

The destination of our European coal exports is shown in the following table:—

P. S. KING & SON, LTD.

AMERICAN BANKING METHODS.

By LEONARD LE MARCHANT MINTY, B.Sc. (Econ.), B.Comm., Certificated Associate of the Institute of Bankers. With an Introduction by SIR DRUMMOND DRUMMOND FRASER, K.B.E., M.Comm. Demy 8vo., 460 pp. Cloth, 15s.

The Financial News: "The book is interesting not only on account of the full and detailed information it affords, and of the similarities and contrasts in practice it presents, but because, incidentally, and apart from definite intention, it throws an instructive light on the financial conditions and influences which have shaped, and are still shaping, business conditions on the other side."

HISTORY OF THE BANK OF ENGLAND.

By Professor A. ANDRÉADES. With a Preface by Professor H. S. FOXWELL, M.A. Demy 8vo., 455 pp. Cloth, 12s. 6d.

Times: "A work of high merit. We are not disposed to quarrel with Prof. Foxwell's pronouncement that it is 'the most comprehensive and most readable account of the Bank yet published.'"

WEALTH AND TAXABLE CAPACITY.

By SIR JOSIAH STAMP, K.B.E., D.Sc. Being the Newmarch Lectures of 1920-21 on Current Statistical Problems in Wealth and Industry. Demy 8vo., 216 pp. Second Edition. Cloth, 7s. 6d.

In the House of Commons, during the Budget Debate of April, 1922, this book was much referred to.

AN ACADEMIC STUDY OF SOME MONEY MARKET and Other Statistics.

By E. G. PEAKE, O.B.E., M.A., LL.B. Demy 8vo., 64 pp. Statistical Charts and Tables. 6s.

The particular series of facts selected for examination are the interest rates in London for floating money, the discount rates on three and on six months' Bank Bills, similar rates in Paris and in New York, and the London-Paris and London-New York exchange.

Catalogue of Books on Commerce contains 500 TITLES

A Selection is given below—a Complete List will be sent, post free, on request.

NEW EDITION.

BANKERS' CREDITS.

And all that appertains to them in their Practical, Legal and Everyday Aspects.

By W. F. SPALDING. Second Edition. 10s. 6d. net.

"The work, being the outcome of the experience of one engaged daily in these transactions, makes it a text-book of real value. It is safe to say that in banking literature this book will take an important place."—*Daily Telegraph*.

BRITISH FINANCE During and After the War.

The result of Investigations and Materials collected by a Committee of the British Association.

By A. H. GIBSON, Fellow of the Royal Statistical Society, Fellow of the Institute of Bankers. Edited by A. W. KIRKALDY, M.A., B.Litt., M.Com. 15s. net.

"No praise could be too high for the volume on British Finance, and it is impossible in a brief review even to suggest the wealth of material . . . which has been so skilfully worked together."—*Glasgow Herald*.

EXPORT CREDITS AND COLLECTIONS.

By GORDON C. POOLE, Lecturer on Foreign Trade Finance in the New York University School of Commerce. 16s. net.

SHARING PROFITS WITH EMPLOYEES.

By J. A. BOWIE, M.A., Lecturer in Economics, College of Technology, Manchester. 10s. 6d. net.

The arguments for and against are briefly summed up and discussed in the light of practical experience.

THE PHILOSOPHY OF MANAGEMENT.

By OLIVER SHELDON, B.A. 10s. 6d. net.

This book gives a panoramic survey of the development of industry, and reviews the fundamentals of management from both the scientific and ethical points of view.

IRON AND STEEL.

At the close of the year 1922 it may perhaps not unreasonably be said that the very guarded hopes entertained at the beginning of the year respecting the recovery of the iron and steel trade of Great Britain have been realised. Not yet has the industry been restored to complete activity, but in the conditions of financial and economic chaos which have continued to prevail in many of the principal markets of the world, the best that was hoped for was a limited measure of recovery, and having regard to the general impoverishment which the war has entailed and the restricted purchasing power of the sister nations, it is a remarkable manifestation of the vitality of British industry and commerce that we should have substantially exceeded our pre-war output of steel, increased our pig-iron production to the extent of over 50 per cent. as compared with 1922, and increased our exports of pig-iron, manufactured iron and steel over the 1922 total by no less than 1,000,000 tons. With the export of 4,400,000 tons of iron and steel of various descriptions, we are the world's leading exporters, having shipped abroad more than any other two producing countries. Again we take precedence over France in pig-iron production, notwithstanding the very large addition to the resources and productive capacity of our French Allies which they obtained under the Treaty of Versailles.

(a) Iron, steel, tinplate, and galvanized sheet manufacture. (b) Pig iron manufacture (blast furnaces). (c) Puddling furnaces, iron and steel rolling mills. (d) middlesbrough quotations, end of month.

Iron Ore.—Imports of foreign ore into the Tees during 1923 have been the largest since 1920, but the increase over 1922 was no more than 20 per cent. There were substantial sales at low prices at the beginning of the year, mine-owners abroad being willing to accept cut prices in order to rid themselves of the large accumulations at the mines in Spain and Northern Africa. Some big sales were arranged immediately after the turn of the year, but thereafter business in foreign ore languished; for a greater portion of the year consumers were embarrassed with considerably greater stocks of foreign ore than they could usefully employ, and there has been a good deal of pressure from time to time in order to delay deliveries under contract. Not till October was much further business possible, but towards the end of that month signs of industrial expansion brought buyers on to the market, and in a few weeks several hundreds of thousands of tons of iron ore were disposed of under contract. At home the development of the Lincolnshire and Northamptonshire deposits has proceeded, and the low cost of winning this stone has made it a formidable competitor with the product of the Cleveland mines. The cost of the Northamptonshire ore works out at about 2s 6d per ton compared with Cleveland's 7s 9d, and although the transport charges from Northamptonshire to Cleveland cost 8s per ton, it can still be delivered rather more cheaply than the Cleveland ironstone. As a consequence, the majority of the Cleveland mines are still idle, and it must be confessed that the prospect of some of these restarting is exceedingly remote. The output of the Cleveland mines for the year 1922 was 1,169,700 tons, and for 1923 the estimated output is 2,040,000 tons.

Pig-iron.—During the months immediately succeeding the first occupation of the Ruhr there was a general rush for pig-iron supplies both from home and foreign consumers, and outputs steadily increased until the peak was reached in the month of May. Hereafter the Franco-Belgian strangle-

hold upon industry began to exercise its effect. There was a rapid decline, the national output falling from 714,200 tons in May to 558,600 tons in September, and since then a revival in the home trade consequent upon the formulation of Governmental schemes for the relief of unemployment has turned the stream of events upon a more favourable course. Even now, however, there are only 204 blast furnaces operating, whereas there were 223 at work in May, and the normal number may be put at about 300.

Manufactured Iron and Steel.—The most encouraging feature of 1923 is the recovery of the manufactured iron and steel trade from the slump into which it was plunged after the post-war boom. From over 9,000,000 tons in 1920 the national production of steel fell to just over 3,700,000 tons in 1921. Such a headlong plunge into the abyss was entirely without parallel in the history of the trade, and the restoration of the industry to even its present measure of limited activity has only been accomplished by a stern determination to spare no effort and no sacrifice in working out the salvation of this important branch of British industry. Progress has been retarded by the paralysis of the shipbuilding industry, and still more by the general impoverishment of Europe. During the course of the past year there have been several periods when our markets were invaded by cheap Continental steel; on the whole, however, British manufacturers have not had very fierce competition to face either at home or overseas. At the beginning of 1923 there were signs of some improvement in trade, but the demand was still very limited, and there was a good deal of price cutting, with the result that scarcely any of the big producing firms have been able to pay a dividend, and some have again recorded an actual loss. Towards the close of the year demand had so far improved, consequent upon the release of very large orders for railway reconstruction and the settlement of the boilermakers' strike, that prices stiffened up all round, and after some months of negotiation a system of price control was re-instituted in the home market. Under this arrangement Scottish makers of steel plates and sections undertake not to invade the English market, the English makers entering into a similarly binding arrangement as regards Scotland. Production is increasing, and more idle plant coming into operation. It should not be overlooked that as compared with pre-war days our productive capacity has been greatly increased. Never yet have we quite attained an output of 10,000,000 tons of steel in a year, but with the large additions to plant which have taken place, probably 12,000,000 tons is not beyond our capacity at the present day. There is thus considerable room for further trade expansion before British steelworks are fully occupied.—*Extracted from the "Iron and Coal Trades Review."*

Prices.—The average ascertained selling price of Cleveland G.M.B. and of steel bars and angles since 1913 is shown below:—

Exports.—The export trade expanded considerably, pig-iron, steel bars, rods and angles, sheets, and tubes alike sharing in the general improvement. Exports, on a tonnage basis, were approximately 25 per cent. greater than in 1922, and only 10 per cent. behind 1913. In some lines exports, as has been stated, were on a tonnage basis approximately 90 per cent. of those in 1913, and it will be seen from the following table that in some lines exports exceeded those of that year:—

	1913.	1922.	1923.
Pig-iron and ferro alloys	1,124,181	753,763	894,298
Iron bars, rods, angles, &c.	141,452	31,403	43,615

1921	141	11 400	20	16 2 59	22	13 10 99
1922	88	1 700	11	7 7 96	12	2 11 38
1923	108	7 770	9	10 1 15	9	19 10 27

Pig-iron is recovering less rapidly than steel from the depression of 1921. The world's pig-iron output for 1923 was only 84 per cent. of the pre-war figure, whereas that of steel ingots and castings rose to 97 per cent., and would have surpassed the 1913 total but for the very significant decline in Germany's contribution, caused by dislocation of the economic life of the Ruhr. Much more than half the

world's pig-iron and steel is now made in the United States, and, for the most part, goes to satisfy the demand for new construction arising out of the rapid development of American resources. The effect of the Ruhr occupation is seen in the drop in Germany's output to about half its 1922 level.

SPELTER.

Messrs. Brandeis, Goldschmidt and Co. state:—At the end of 1922 the price of spelter was quoted at £37 10s, December shipment, and £34 10s, March shipment. The price very gradually receded, with a decreasing backwardation, and on February 17th the market stood at £35 12s 6d for both prompt and forward shipment. A recovery took place to £37, March shipment, with a contango of 10s for June shipment, changing the following week to a backwardation of 7s 6d per ton, and yet again a week later to a small contango. The price then suffered a setback, and values crumbled gradually to the middle of the year, and on July 7th quotations were £28 for July shipment and £28 12s 6d for October shipment. This was the lowest point touched, and a quick recovery occurred to about £32 10s in August and £34 in September. Anticipations of very large purchases for Japan, consequent upon the earthquake, were partly responsible for the rise, but only partially materialised, and the market weakened in October to below £32, recovering again to £33 12s 6d, October shipment, and £33 10s, January shipment. From this point the market fluctuated from a little above £33 to a little below this figure. The following are estimates of the world's production (long tons):—

	1913.	1920.	1921.	1922.	1923.
United States	315,000	410,000	190,000	315,000	470,000
Australia	4,000	3,000	4,000	23,000	37,000
Japan	10,000	7,000	10,000	11,000	13,000
Belgium	194,000	95,000	60,000	115,000	136,000
United Kingdom	58,000	15,000	10,000	18,000	24,000
Germany and Poland	278,000	150,000	110,000	98,000	(?) 96,000
Scandinavia	17,000	7,000	4,000	5,000	5,000
Holland	24,000	3,000	5,000	10,000	10,000
Canada	15,000	15,000	26,000	26,000	28,000
Bundries	91,000	10,000	31,000	57,000	45,000
Totals	981,000	718,000	443,000	678,000	864,000

MINOR METALS.**SILVER.**

We extract the following from Messrs Samuel Montagu and Co.'s annual bullion letter:—

On January 1st the price for cash and two months' delivery were respectively 31½d and 30½d. Thus the year commenced with a premium for prompt delivery, a feature continued uninterruptedly throughout the whole year. On no occasion were the prices identical or their relative positions reversed. This is significant. Inasmuch as no demand of any importance arose for coinage, and trade demand was far from brisk, it indicated the strong and almost continuous demand which came from India and China—sometimes a real absorption, at other times a temporary accumulation by speculators in one of these countries, sometimes in both. The consumption of the Far East was extremely large—considerably in excess of pre-war days. This was only to be expected, for, as Western trade and coinage demand did not increase, there was really nowhere else than the distant Orient where silver could go. Hence details of silver movements have been somewhat monotonous. If silver were shipped it did not always reach its original consignee, for very often—whether shipped from London, America, or elsewhere—it was diverted to India or to China at some part of its journey, just according to the conditions obtaining at the moment. On the whole, the tendency was to maintain bear positions in view of United States mined silver coming into the market before the end of the year. This, of course, accentuated the premium on spot silver. It also accounts for the many sharp twists in the price that are noticeable in looking back upon the daily quotations. From the beginning of the year mining interests in the United States began to show natural disquiet at the prospect of the termination of purchases under the Pittman Act. We say natural because the removal of a bonus of 50 per cent. over the world price of silver could not fail to affect seriously those silver mines in the United States which depend upon silver as a really important source of revenue. To the major part of them, however, this metal is but a by-product—copper, lead, &c., are their mainstay.

During the month of January prices had a tendency to advance, owing to a shortage of stocks caused by the incessant buying of the Indian bazaars. The demand from this quarter was quite healthy, for it was dictated by the

continued prosperity of our great Dependency, which took a good proportion of her trade balance in this metal. Indian prosperity, unfortunately for British interests, has not caused the people of India, as in days past, to purchase British manufactured goods as freely as might be wished. One reason is that the cost of manufacture here, owing to the cost of living, &c., militates against cheap prices for such goods; another reason is that India is learning to supply herself with the cheaper grades. The cash price rose 1½d by January 24th (32½d), but that for two months delivery lagged behind, and only advanced ¼d. The inquiry from India was stimulated by the cheapness of sterling. From this point prices fell away very quickly, considerably below the opening prices of the year, until on February 8th that for cash was fixed at 30½d. The quotation for forward delivery showed only a slight reduction, there being ample stocks in London for the lessened demand then ruling. When the Chinese reopened for business after their New Year festivities, a better tone set in, and some recovery ensued, in the course of which 32d was passed. The cash quotations remained above that figure until April 10th, sometimes within a small fraction of the next round figure. A setback followed, which proved but temporary, possibly owing to the fact that an outbreak of plague in Bombay, fortunately, did not develop to any serious extent. On April 13th the cash price again touched 32d, and advanced further, assisted by speculation in China. Such was the competition between that country and India that 33½ was recorded on the 30th of the month.

This advance only lasted one day. The price returned to the former level, and was maintained over 32d until June 1st, when it dipped below.

In the course of June some irregularity in the monsoon made Indian operators uneasy, and the price began to fall, until on July 2nd (30½d) it dipped below 31d. Refreshing rains, however, redeemed the situation, and again quotations tended upward. They did not remain over 31d, for the expectation of United States mined silver coming upon the market before long made the Indian bazaars prefer to buy silver for shipment and sell for two months rather than to buy it outright. Nevertheless, quotations remained remarkably steady round about 31d until September 4th. From this date distinct firmness set in—primarily owing to a bull movement in the Indian bazaars—and carried the cash quotation for a while well over 32d., and eventually maintained it about that figure until November. By this time the bull account in Bombay approximated 20,000 bars. These were strongly held, and the withdrawal of so large an amount from the world supplies caused considerable inconvenience to bears, who were forced to cover or prolong commitments just when the usual China demand for the next New Year (February 5, 1924) came into competition. This brought the level over 33d, and on December 8th 33½d, the highest cash price of the year, was recorded.

The size of the imports of silver into India and China has been very remarkable, though, of course, these countries are the only outlet for surplus supplies of the metal. The absorption of silver by China has been assisted in recent years by greater mintage of dollars by native mints; obviously, ingots of 56 ounces weight—such as sycee—are very cumbersome compared with coin. Coinage by European mints has been only on a small scale, but there are some indications of a revival. Trade use in Western countries has been far from good. Supplies have been swollen by freshly demonetised metal, yet without much setback in prices, the Orient having drawn these unusually large consignments from Europe and America. Although there have been no purchases for coinage in India for some years, the amount absorbed in that country has been about double the pre-war average, as also has been that imported into China. The world production has exceeded that of 1922. We append a comparative table:—

SILVER PRODUCTION.
(In Fine Ounces.)

	Mexico.	United States.	Canada.	Else-where.	World.	Drop From 1911.

In calculating the actual amount of silver available for sale, the silver acquired under the Pittman Act must be deducted from the world production, and about 40,000,000 ounces must be added for British and Continental demonetised metal (roughly divisible into two parts). We can assume therefore that an amount of about 188,000,000 ounces came into the market during the year.

A fair estimate of the world stocks at the end of 1923 is as follows:—

	Ounces.
London	1,000,000
Shanghai (including dollars)	46,000,000
India	1,000,000
On the sea (from and to London and from San Francisco)	16,000,000
Total	70,000,000

COPPER.

Messrs Brandeis, Goldschmidt, and Co.'s metal report for 1923 contains the following:—The year opened with copper in New York quoted at 14½ cents per lb. The price advanced successively and with minor fluctuations to 17.37½ towards the end of March. By the beginning of April it was about 1 cent lower, and the end of May saw the quotation down to a little over 15.20. Early in June this was reduced still further to 14.70, followed by a temporary upward reaction to about 15.20. Subsequently a renewed fall took place, and by the beginning of August the price was down to a little over 14 cents. Thereafter the fall proceeded, and with few upward reactions 13 cents was touched early in October, falling very rapidly within a week or two to 12.45. This marked the lowest point of the year. It being then recognised that intrinsically this was a very low value for copper, and as in spite of everything low prices do always stimulate consumption, a considerable amount of buying was done, both in the United States and in Europe, and the price improved again quickly to over 13 cents.

The arrangements for marketing copper in the United States are changing, the combination of big interests forming the Copper Export Association having been weakened at the end of the year through the withdrawal of the American Smelting and Refining Co., Messrs Phelps, Dodge and Co., and the Guggenheim interests.

Our estimate in regard to the United States is as follows:—

	1913.	1920.	1921.	1922.	1923. (Est.)
Refined production (including imports)	725,000	730,000	488,000	698,000	960,000
Domestic shipments	313,000	439,000	288,000	500,000	665,000
Exports	418,000	278,000	280,000	332,000	330,000
Stocks refined (at end of year)	41,000	294,000	225,000	133,000	120,000

It can therefore be seen that the stocks of refined copper in the United States decreased in the twelve months by about 13,000 tons, and they would have been considerably lower but for the accumulation since the middle of the year, amounting to about 25,000 tons. Whilst in itself the latter figure is not a light one, in proportion to the total production in America of approximately one million tons, it is not excessive. It means, in effect, that there is at present an excess production in America of between 5,000 and 10,000 tons per month, at a period when economic difficulties in Europe have reached an acute pitch.

Our estimate of the world's production of copper is as follows:—

	1913.	1920.	1921.	1922.	1923.
U.S., from domestic ores	548,000	560,000	218,000	468,000	660,000
Mexico	51,000	40,000	11,000	18,000	37,000
Canada	35,000	37,000	22,000	34,000	26,000
South America	70,000	142,000	103,000	142,000	194,000
Spain	38,000	24,000	30,000	26,000	26,000
Other European countries	68,000	27,000	38,000	42,000	44,000
Australia	47,000	24,000	19,000	18,000	17,000
Africa	30,000	32,000	41,000	48,000	59,000
Asia	65,000	66,000	51,000	55,000	51,000
Sundries	942,000	952,000	527,000	851,000	1,107,000
Total	970,000	965,000	539,000	869,000	1,115,000

LEAD.

Throughout the year there was a very insistent demand for this metal, and only at one period did there seem any probability of supplies being in excess of current requirements. Towards the close of 1922 and during the early part of 1923, the United States had been buying and consuming increasing quantities of lead, and had been taking a growing proportion of the Mexican production. Europe, not excepting Germany, had been regularly absorbing good quantities of the metal, and the value rose steadily from £26 12s 6d in the beginning of January to £28 5s by the end of that month, these prices being for January shipment, whilst there was a slight backwardation of 5s to 7s 6d per ton for April shipment. During this period Spain produced fair quantities that would have sufficed in the ordinary way, except for the prodigious activity in the United States, which caused that country to import lead in February from Europe. The price on the London market rose to £29 7s 6d for February shipment and £28 17s 6d May shipment towards the end of February, and remained at about this price until the middle of March. Meanwhile, the price in America had

LLOYDS BANK LIMITED.

Chairman:
J. W. BEAUMONT PEASE.

Deputy-Chairman:
Sir AUSTIN E. HARRIS, K.B.E.

risen from 7.25 cents per lb to 9.25 cents per lb, and we should probably have gone higher here but for the simultaneous improvement in the sterling dollar exchange. Uncertainties in Europe now began to affect her purchases, but this was offset by continued activity in the United States. The market dropped to £25 May shipment, and £24 10s August shipment, but influential support caused a temporary reaction and the re-establishment of a backwardation. Consumption in Europe was steadily improving, and France began to take a greater interest in the metal. In the United States the price had meantime receded to 7.25, which, by the end of June, was further reduced to 7 cents. Still more Mexican lead was diverted to London, and this, together with larger arrivals from other sources and a further reduction in New York to 6.35 cents, depressed our market even more. We fell back to £23 15s July shipment, £23 5s October shipment. This marked the low point of the year. Probably the lower prices now ruling stimulated and encouraged consumption, and from this time onwards we have to record a slow and steady rise right up to the end of the year. For several months France bought very heavily, and British consumption increased considerably, being, in fact, extraordinarily good. During the last few months of the year considerable orders were booked for Russia, and the cumulative effect produced was to render the market perpetually short of nearby lead. Spain met with labour and political troubles, interfering with her production, which was almost entirely absorbed by France; and labour troubles broke out in Mexico, resulting in the closing down of the principal smelters at Chihuahua. The higher price, at the same time, naturally stimulated sales in the forward position for hedging and other purposes, and by the end of October the acuteness of the position was reflected in the quotations, which were £30 5s for October shipment and £27 2s 6d January shipment, whilst very high premiums, amounting to as much as 30s per ton, were paid by consumers for spot delivery. It is even credibly reported that some works came to a standstill through lack of lead supplies.

This condition of affairs continued more or less for the remainder of the year, and the European market moved quite independently of the United States, where the price quoted at the end of October of 6.75 cents was pounds below European parity. In spite of this, no sales were made from the United States to Europe, and the quotation in New York merely reflected quiet trade conditions, and did not indicate any excess of supplies. These, in fact, in December became very scarce, resulting in a marking-up of the price to 7.50 cents. In Europe continued activity and heavy buying of both prompt and forward further raised the price in the middle of December to £31 15s December shipment, £30 March shipment, the highest point of the year.

The statistical position of lead as regards America is about as follows:—

(Short tons, of 2,000 lbs each.)				
Production.	Imports.	Exports.	Available for Consumption.	
525,000	108,000	44,000	598,000	
Our estimates of production are as follows (long tons):—				
	1913.	1920.	1921.	1922.
United States	398,000 ..	426,000 ..	340,000 ..	415,000 ..
Mexico	69,000 ..	84,000 ..	60,000 ..	120,000 ..
Spain	198,000 ..	138,000 ..	124,000 ..	100,000 ..
Australia	123,000 ..	7,000 ..	78,000 ..	110,000 ..
Burma	16,000 ..	26,000 ..	35,000 ..	40,000 ..

TIN AND TINPLATE.

TIN.—The following figures of the world's production are given by Messrs Brandeis, Goldschmidt, and Co. :—

Actual Production,		1923.
Tons.		Tons.
Banks (1921-3)	14,920	16,820
Britain (1921-3)	11,860	9,000
Straits—Fed. M.S.	35,228	37,000
United M.S.	2,450	2,600
Nigerian exports	5,685	6,000
South Africa	372	750
Australia, 9 tin and tin ores.	1,774	1,700
Bolivia shipments	31,188	30,000
China shipments	12,435	9,000
Cornwall	370	500
Siam, &c.	7,000	7,000
	123,988	130,370

Consumption in 1923 is estimated at 131,700 tons. According to Messrs Sim and Coventry, the average price of tin during the year has been 40 per cent. higher than in 1922, the fluctuations ranging from £176 (on July 4th) to £239 15s (on December 13th), a difference of some £64. It opened in January at £182 5s, and gradually worked its way upwards to an average of £219 12s 7d in March, which dropped in successive months to £181 1s 11d in July (almost the same as January). Thereafter there was a successive rise in the monthly averages to £235 os 5d in December. The average prices for the four quarters of the year were:—January to March, £197 6s 9d, April to June, £202 13s; July to September, £188 14s 2d; October to December, £219 18s; giving an average for the year of £202 3s. The higher prices have naturally helped tin miners in various parts of the world, including Cornwall, which has received considerable attention, and the provision of additional capital for development and extension of the mines. America has been by far the largest consumer of tin during the year, the bulk of her supplies, of course, going direct, and a small quantity from London. It would appear that the world's consumption has now certainly overtaken the production, and it seems quite a possibility that a period of comparative scarcity may be before us, involving a considerable rise in price. The Eastern Tin Pool—involving 17,000 tons of tin and ore—is in process of liquidation, the members of the pool having agreed in April that 5 per cent. of the stock should be released each month. If it had not been for this stock the shortage would have been more pronounced, and prices would naturally have been higher. The stocks in this country are much reduced. The London figures (pre-war) used to be round about 7,000 tons (average), whereas the total of London and Liverpool combined is rather under 4,000 tons, a reduction of more than 1,000 tons in the year. The average during the twelve months has been 1,993 tons in London, and 1,840 tons in Liverpool.

TINPLATE.—So far as the output of the works is concerned, 1923 has been a record year; although the demand has fluctuated considerably during the twelve months—in fact, it fell off in May and June, and in July the export market was reported "practically lifeless"—attention was drawn to the "present depressed state of the industry," and the annual stop-week in August was welcomed as very opportune. However, new business came along from Japan, Canada, &c., and the quiet time was tidied over, and by the end of August many temporarily idle mills had been restarted. The history of the year gives another illustration of the vitality and resiliency of the trade, which seems capable of renewing its youth indefinitely in the face of obstacles of no mean order. It has been stated that our makers have been able to recover the whole of their pre-war markets, which, it will be remembered, were lost to the United States during the war, owing to the necessities of the situation with regard to ocean transport, and other considerations such as availability of labour and steel. Various Welsh works are about to erect new mills, and there has been some talk of the industry being introduced upon the East coast of England.

Prices.—There has been considerably greater fluctuation this year than in 1922. Starting at 20s, the lowest point of the year, the works found themselves busy with a steady demand, which improved as the weeks went on, so that the market became stronger, and in March was somewhat excited, there being a steady flow of orders and the production somewhat handicapped through shortage of labour. Meanwhile the price had been advancing by stages to 23s 6d, and in April went up to 25s. This did not last, however; a quiet time ensued, and the price fell away again, till by the end of May it was back to 23s 13d, where it stayed for nearly six months, although the demand began to improve about the end of August. The schedule minimum price was advanced in November to 23s 6d, and thereafter the selling price has been a little higher than the minimum, as has frequently been the case since the scheme was introduced. The market closed at the end of December at 24s, with a satisfactory outlook.

Bars.—There has been considerable variation during the year. Opening at £7 13s 9d (less the rebate of 7s 6d), there was a rise by successive advances of 7s 3d, 5s, 10s, and 24s to £10 at the end of March. In May the price was reduced to £9 2s 6d, which continued till November 20th, when it was further reduced to £8 18s 9d, which remains in force at the time of writing. There has been a large increase in the import of sheet bars and tinplate bars, which are grouped together in the returns, but the percentage of foreign bars used in the tinplate trade is probably small, as one of the conditions of the rebate granted on British bars is that a maker shall confine his purchases to members of the association.

Exports.—The returns give an increase of about 25 per cent. on 1922, and show that pre-war output is now being exceeded. British East Indies retains its place as our best individual customer, but Canada shows a considerable reduction, counterbalanced to some extent by a trebling of our

The *Glasgow Herald* reviews the year's trade as follows:—From not one of the world's shipbuilding areas are there any reports speaking well of 1923. There has probably never been a year of which shipbuilders all over the world have had to complain so seriously. There was nowhere a demand for new tonnage sufficient to keep the shipyards even moderately busy. Even in Germany, which was supposed to be doing more relatively in the way of ship construction than any other country, less actual work appears to have been done than in 1922; while in America, although emigrating British artisans could always obtain employment, the decline from the high war-time level of output continued, and there has been a great dismantling of recently laid-out works. The industry everywhere is evidently struggling towards stability, and in the process those associated with it are suffering much hardship. Whether stability will be reached in 1924 no one can yet say, but the belief that it will is fairly general. The hopes of a year ago are again being expressed, but somewhat more confidently,

and the statistics of output in the different countries seem to justify these hopes. The grand total of the returns shows that 1,980 vessels of 2,063,959 tons gross were launched, and that machinery of 2,264,359 i.h.p. was constructed, as compared with 1,972 vessels of 2,983,635 tons and 2,718,795 i.h.p. in 1922. More vessels were built because there was no call whatever for big ships, and all those who wished tonnage of any kind tried to get tonnage of smallest and handiest types, while large numbers of motor launches, lighters, and barges were built. The decreases in tonnage and horse-power of 919,676 and 454,436 respectively are large, but if the reduced production helps to improve freight markets it will tend towards the stabilisation of shipbuilding, and so may be something which will ultimately work out for good. The following table summarises the launching tonnage of the year, according to our returns:—

	1922.	1923.

Poor though the year was, Great Britain and Ireland kept their leading place as producers, not only of the largest tonnage of ships but of large ships. They are an easy first with 552 vessels of 682,263 tons and 538,751 i.h.p., while all Germany—even granting that a number of vessels were launched of which no information has been received in this country—makes a poor second with 184 vessels of 415,547 tons and 271,083 i.h.p. The United States total of 209 vessels of 220,557 tons and 337,095 i.h.p. is very poor in comparison with the huge output of that country (nearly 4,750,000 tons and nearly 2,600,000 i.h.p.) in 1919, and it shows the great extent of the slump which has taken place on the other side of the Atlantic. Germany has regained that second place which it lost to America a few years ago, and which it is now likely to retain indefinitely. Japan was sixth in 1922 and is now fourth, Holland was fourth last year and is now fifth, while France was fifth last year and is now sixth.

London: 22, Fenchurch St., E.C.3. New York: 25, Pine St.

unprecedented, as it affected the whole community much more than any previous spell of poor trade, and threw out of work very much larger numbers of men. All the shipyards and engineering shops were very poorly employed, the great majority had little or no work, a considerable number were closed, and such operations as were carried on were heavily handicapped for seven months of the year by the dispute between the Employers' Federation and the Boilermakers' Society. The result was that, month after month, very few vessels were launched, and the total for the year consists of only 122 vessels of 175,528 tons and engines of 166,956 i.h.p. These figures show a reduction as compared with 1922—itsself a poor year—of 21 vessels, 212,953 tons, and 182,373 i.h.p.

WAGES.—The following table has been extracted from the *Shipping Record*, and shows how precipitately wages have fallen since 1920-21. It should be remembered that the working week is now 47 hours, compared with 53 or 54 in 1914:—

Date.	Skilled.		Semi-Skilled.		Unskilled.	
	Weekly Wages (All in.)	Per-centage Increase Over Pre-War Weekly Wages.	Weekly Wages (All in.)	Per-centage Increase Over Pre-War Weekly Wages.	Weekly Wages (All in.)	Per-centage Increase Over Pre-War Weekly Wages.
July 31, 1914....	s d 41 6	% ..	s d 27 6	% ..	s d 23 6	% ..
June 1, 1920 to April 30, 1921..	91 3	120	75 2	173	70 10	201
January, 1923 to January 1924..	48 7	17	39 11	45	38 5	63

Skilled workers have been far more seriously affected by falling wage rates than have semi-skilled or unskilled workers. With the cost of living index number at 77 per cent. above pre-war, it is obvious that the more skilled branch of shipbuilding labour is feeling the depression most acutely, particularly when the general uncertainty as to the continuance in employment is taken into account.

We have extracted the following from an article by Mr R. W. Johnson in *Lloyd's List Review* of 1923:—While the salient fact of the year has been an all-round reduction in freights, two pronounced trade movements have operated, more than usually, to shape the course of the shipping trade. These were the activity in coal exports and the stagnation in grain imports. A heavy and far-reaching demand for coal has scattered shipping over a wide area, only to find extreme difficulty in obtaining freights homeward, and any gain on the outward freights has been lost on the homeward. Outward coal freights were good for a time, but not consistently good, for the reason that laid-up tonnage was attracted into the trade, and coal freights never had a chance to reach figures which would counterbalance the depressed homeward freights. If they had, the effect would have been to check the demand for coal, and probably to divert more trade from this country to America. Hence, coal freights, in spite of the export boom, have, in point of fact, fallen to lower average rates than last year. In the homeward markets, grain is, of course, the chief factor, and, as indicated above, the movement of this commodity was notoriously insufficient until late in the autumn when the seasonal demand asserted itself, and when, owing to the approaching close of the Canadian season, it was necessary to press forward the shipments. The Montreal rate, for instance, fell as low as 2s 1½d per quarter to the United Kingdom, bringing the mean down to 3s 5½d, as compared with 3s 10½d in 1922. Similarly, from the Northern Range the rate was down to 2s 6d per quarter, which, however, is not so low as the lowest rate of 2s recorded for the previous year, though the mean of 3s 1½d is lower by 6d than that of 12 months before. No doubt the demand for coal-carrying tonnage had the effect of keeping the grain rate

from collapsing to the lowest point of 1922. From the River Plate berth boats accepted down to 11s, while the highest rate, 36s 3d, fell short of the 37s 6d returned for 1922; the net result is a mean of 25s 7½d, as against 28s 3d.

The Eastern markets, excluding Australia, constituted an interesting exception to the general rule, for rates were higher as compared with 1922, but in that year freights were exceptionally low in the Eastern trades, being worse than in any other market, and in 1923 the East was less affected by the slump in the European exchanges than most other quarters of the globe; the early improvement in freights was, therefore, not wholly lost. Nitrate freights from Chile developed gathering activity, and offered fairly good prospects for the winter. Rates, however, did not rise, the mean being 32s 3d, as compared with 34s 10½d, though the lowest rate in 1923 was 2s higher than in 1922. The North Pacific trade with the Eastern States and Europe via the Panama Canal developed steadily, and has taken up more tonnage for the carriage of grain and produce to Europe, while a feature in this trade was the shipment of large quantities of wheat, flour, and lumber to Japan. Tanker freights have been higher. Owing to the disappointing output of oil in Mexico, there was a rapid development in the production of the Californian oilfields, and the shifting of the American demand to that quarter led to unusual activity in the trade between the Pacific Coast and the Eastern States via the Panama Canal. Time charter business was extraordinarily dull until November, and rates fell to the lowest figures, down to 3s 9d being done for 12 months in the general trades, while the mean for the 11 months of the year was no better than 4s 4½d, as against 4s 6d in the preceding year.

On the subject of prices, Mr A. Bateman, in the same *Review*, states that coasters have been in fairly good demand throughout the year, and in their case prices have been practically maintained. For large boats of modern build the inquiry has also been good, but not much business has resulted, owing to the higher capital cost, which has acted as a deterrent. There is little or no speculative buying at present, purchases being for investment, with an eye on the future. Prices have not shown any violent fluctuations, but a decidedly downward tendency was noticeable at the commencement of the second half of the year, which has been progressive to date, the result being a total depreciation in value of second-hand tonnage for the whole year (apart from the normal wastage on account of age) of from 15 per cent. to 20 per cent., according to size, age and type.

The year 1923 was, speaking generally, disappointing; hopes and anticipations were not realised, and the trade conditions in most industries did not improve; thus engineering was affected by depression until the last few months. The closing few months of the year were brightened somewhat, and hopes were revived by the notification of important contracts placed, and works in view, for railways, power plants, road improvements, &c., although some of these contracts and works are being forced, or advanced, to relieve unemployment existing in Great Britain.

Railway and Road Works.—The principal railways of the country are now combined into four groups, with the main object of co-operative working and economy. Large sums have been allocated already for reconstruction and development, including track, rolling-stock, reconstruction of stations and depots, and dock equipment. A sum of ten million pounds is the expenditure named in connection with the Great Western Railway alone, whilst no less than 14 million pounds will be expended on the Midland and Scottish Railway; contracts have already been placed for locomotives and parts, wagons, rails and track accessories. It is to be recorded, however, that the locomotive industry generally, apart from the railways' own works, has suffered from depression like other industries, on account of absence of overseas orders, but there is promise of improvement this year, in view of contracts abroad, and India is looked to, as well as by contracts for the development and reconstruction above mentioned. Public works, chiefly in the nature

of new main roads, have been decided upon, which means an outlay of millions, and some contracts in connection therewith have already been placed.

Motor-car Industry.—The motor-car industry, unlike most other industries, was particularly active last year, this being accounted for by the reduction in prices decided on, and intensified production to reduce costs. There was an increase in the value of cars exported, notwithstanding an increase also in the value of imported cars over the previous year. It is to be noted, however, that the export value of motor-cars and vehicles for private and commercial uses averaged over the last two years about one-half the value of those imported; there appear to be opportunities to improve on these figures by a continuation of the progressive policy on the part of British manufacturers, as evidenced last year. Imports and exports during 1921, 1922, and 1923, according to the Board of Trade records, were as follows:—

IMPORTS (Twelve Months).

Electrical Engineering.—Electrical engineering also has fared rather better than some other branches during 1923. This cannot be accounted for by extensive reconstruction in factories, the conditions already outlined not having justified that course. New power and railway electrification schemes, abroad as well as at home, have alleviated somewhat the depression in electrical engineering. Extensive hydro-electric projects have been arranged overseas, but also here in North Wales and Scotland, the former requiring an expenditure of £1,600,000. The national scheme of the Electricity Commission, to reduce the number of small generating stations, to develop and link up large stations in this country, and for the supply of electricity in bulk, has necessitated and will call for considerable expenditure in new electrical machinery, cables and equipment. In addition, the use of electricity for mining equipment is increasing. The past year has been one of great activity in the development of radio or wireless equipment, which has now been brought within use of the public generally.—*Chamber of Commerce Journal.*

BUILDING TRADE.

Although competition is still very keen in all cases where buildings are put out to tender, there is yet an easier feeling, and prices are not being cut quite so closely as at the beginning of the year 1923. This tends to show that builders and contractors generally are busier than they were at the commencement of the year, and are, therefore, not quite so eager to get work at any price in order to keep their permanent staff engaged. It must not be thought that the past year has been among the palmiest days of the building trade. As regards industrial building the activity in the trade must necessarily be dependent on other trades. Thus the slackness in shipbuilding adversely affects the building trade in such cities as Glasgow and Belfast; and the falling off in the cotton trade deters building in Manchester and most of the towns in Lancashire. Building costs at the end of the year are lower than those prevailing in 1922, and this is particularly the case with regard to housing. The decrease in building costs is co-ordinated with the fall in the general cost of living. On June 1 last an almost general reduction of 1d per hour in craftsmen's and labourers' wages was agreed to; but in view of the upward trend of the cost of living it is felt that an increase of 3d. an hour all round is likely to be granted next month. The fall in the cost of materials has also resulted, in a large measure, from the decline in the general living cost, but there can be no doubt that the Inter-Departmental Committee set up by the Government to keep an eye on the cost of materials have exercised a very salutary influence in this respect. A revival in housing was brought about by the passing of the Housing Act of 1923 in July last. This Bill was introduced to correct the errors of existing Acts, and had among its main objects the encouragement of cottage building by private enterprise. In that it shows every prospect of being successful, but actual figures cannot be given at present, as the Ministry of Health returns close with the

year ended September 30—two months only after the passing of the Act. Sir Charles Ruthen, the Director of Housing, however, has issued a statement to the Press in which he forecasts that the output in cottage building in 1923-4 will reach that of 1908, which was a record year for this class of work. The total number of houses erected by State-aided builders and by private enterprise in which no subsidy was paid, was 77,639, this being a larger output than the average annual output for the ten years before the war, which was 63,000. In the matter of cost, Sir Charles Ruthen pointed out that the price of the parlour-type house, which was £450 in April, 1922, was reduced to £370 in May, 1923. This is encouraging to the taxpayer and ratepayer, since 85,000 houses have already been authorised under the 1923 Act, of which 31,500 are being undertaken by local authorities and 53,500 by private builders, all of which are to be subsidised.

FURNISHING TRADES.

According to the *Cabinet Maker*, 1923 shows a certain level of business in the furnishing trade, not very imposing in its volume, but of fair extent considering the conditions of trade throughout the country. The last traces of the spending abilities produced by war-time fortunes have faded, and the after-war desire for profusion and extravagance has resolved itself into a definite demand for serviceable and economical things, and consequently there has been a great deal of what may be called "bread and butter" stuff turned out by many manufacturing firms. The wholesale furniture exhibitions which took place this year at Olympia and at Manchester witnessed a considerable amount of business, and also emphasised the point we made earlier that there is a real demand for simpler, stronger, and more economical furniture this year. Those exhibitions also provided interesting illustrations of the developments of modern design, and disclosed the fact that set styles are beginning to make way for individual character. There has not been a great deal of work done in the making of elaborate and costly furniture, because the market for such productions is temporarily paralysed. The same story is told by the salerooms, for although some very fine pieces came through the principal auction rooms of London, the prices they fetched were not startlingly high, and in some cases fine specimens of old furniture were withdrawn owing to the fact that the bidding did not reach the reserve placed upon them. In the antique trade a curious position has come about, because now the acquirement of plain and simple pieces of old furniture is a much more costly proceeding than it used to be, and while the prices of plain things have risen, unsaleable, ornate examples are going for a song.

VII.—TEXTILES.

THE COTTON TRADE.

According to our Manchester correspondent, cotton spinners and manufacturers in Lancashire have experienced another year of severe depression. The boom which followed the Armistice reached its height in the spring of 1920. The downward movement in prices, and the serious depreciation in the value of stocks brought difficulties of a pronounced character, and since then there has not been any revival, the business available being insufficient to meet the requirements of producers. The past year, however, had some favourable features, a prominent development being the improvement in the finer end of the industry. Producers of Egyptian yarns gained ground, and increased activity also showed itself in fancy cloths of various kinds. Wretched conditions continued to prevail for spinners of coarse yarns, and demand was very poor in the commoner styles of piece goods, especially grey staples. During the latter part of the year there was a marked rise in values as a result of the striking advance in raw cotton rates. Numerous cases of financial difficulties were reported. Probably more failures took place than in any previous year in the history of the trade. There were fears now and again of a financial panic, but such a thing did not happen, and probably on the whole the worst in this connection is over. Many spinning mills, however, are still feeling the effect of money stringency. It is satisfactory to be able to record that during the year no labour trouble of any kind took place.

The *Manchester Guardian* states:—The comparative lack of competition in the fine-spinning section has caused certain mill companies outside Bolton to adapt their machinery to the use of Egyptian cotton. From March to November inclusive the hours of work decreed by the Federation of Master Cotton Spinners were only 24 out of the statutory 48 a week, holidays being added to the enforced stoppage. On many occasions during the period the average number of hours worked must have been less than 24, and, although in November there was a sufficient revival in demand to induce a small minority to defeat the Federation's short-time policy, the freedom gained during December became

fruitless in view of the renewed depression. If, by means of short time, the industry hoped to obtain a more profitable ratio between supply and demand, the experiment of 1923 was a complete failure. Only a small proportion of the reduced output left the mills at prices which covered the cost of production, much less the extra cost of half-time working. This was partly due to the fact that the demand for goods remained smaller than the curtailed supply, but more to the financial difficulties of a number of Oldham mills, whose need for ready money was so great that, as long as they sold yarn, the prices obtained were immaterial. The consequent disorganisation of the yarn and cloth market brought about a serious effort at collective action. Following an unofficial lead, the Federation of Master Cotton Spinners published periodical lists of basic yarn prices, but the underselling of the market continued, and the attempt had to be abandoned. The possibility of enforcing discipline and relieving unemployment by a reversion to the war-time system of control was actively canvassed, but, on being put to the ballot, rejected by a majority of spinners. A joint committee of employers and operators, convened in October by the then Lord Mayor of Manchester, reconsidered the project. In face of opposition from fine spinners and manufacturers, it dwindled to one of controlling the American spinning section alone. No further progress has been reported. On July 15 an Act of Parliament came into force making compulsory the payment of 6d on every bale bought by spinners, the proceeds to be devoted to the cause of cotton growing within the Empire.

The following table shows the Board of Trade figures of total imports of raw cotton and their value during the years 1913, 1922, and 1923:—

Cotton, Raw (except Linters).	Quantity.			Value.		
	1913.	1922.	1923.	1913.	1922.	1923.
Imports from—

Other British Possessions	1,262	15,162	52,191	1,931,963	27,685,769	8,933,514
Total from British Possessions	719,150	3,901,503	1,562,585	70,570,547	85,550,189	91,243,550
Total	21,742,396	14,319,902	12,925,854	138,209,131	143,414,609	173,553,586

The following comparative table gives the shipments of yarn for the pre-war year and the last four years:—

	1913	1920	1921	1922	1923
Lbs.	210,099,000	15,006,291	147,432,400	47,585,814	23,924,879
Yds.	7,075,252,000	97,775,855	2,902,288,900	137,132,298	142,415,686
Square Yards.	4,435,405,000	315,717,631	4,181,176,300	142,415,686	138,354,135

Corresponding figures for cotton cloth exports are:—

	1913	1920	1921	1922	1923
Yds.	7,075,252,000	97,775,855	2,902,288,900	137,132,298	142,415,686
Square Yards.	4,435,405,000	315,717,631	4,181,176,300	142,415,686	138,354,135

It will be noticed that although foreign customers are spending considerably more on Lancashire cotton goods than in 1913, the quantity exported is decidedly smaller, and it may be pointed out that the average price per yard in 1913 was 3.32d, against 8.02d in 1923.

The following is a list of cloth quotations on particular dates:—

	32 inch Printers, 116 Yds., 16 by 16.	36 inch Shirtings, 76 Yds., 18 by 16.	38 inch Shirtings, 38 Yds., 16 by 16.	39 inch Shirtings, 37 1/2 Yds., 16 by 15.

WOOLLEN AND WORSTED TRADES.

The year opened with most branches of the industry in the United Kingdom well employed; in fact, more firms desired overtime permits than the Industrial Council was prepared to grant; but it eventually became evident that there was a certain amount of production in excess of requirements during 1922 and the early months of 1923.

Trade expectations were not fulfilled, and in due course stocks began to accumulate at the various stages of production. Retailers were still buying sparingly, and keeping their commitments in as small a compass as possible. The result was that the industry itself held an abnormally large proportion of the usual quantity of floating stock. The consequence was a slowing-down of production which commenced in the spring, and a policy of stock-reduction became general, within the industry itself and also in the distributive branches of the trade.

One cause of the change of front was a reaction against high prices for merino products. The sharp rise during the latter half of 1922 had brought the cost of the finished article to a point which clearly began to retard trade, and there developed amongst the actual consumers in most of the principal countries a desire for something cheaper. The ordinary channels of trade on the Continent were seriously dislocated, and the lack of stability in Continental currencies created an atmosphere of nervousness that had a paralysing effect upon business. Nobody would buy forward speculatively, and for several months orders in all sections were of a hand-to-mouth character. Germany, our most important export market for tops and yarns, could not take anything approaching normal quantities, and this added to the unemployment in the combing and spinning branches. Meanwhile, the wool textile industries of North France and Belgium were fully employed, and lower cost of production there in comparison with this country, plus the effect of a depreciating currency, resulted in quotations for imported yarns and dress goods in the United Kingdom at appreciably less than the home cost of production. The volume of trade done, as revealed by the Board of Trade returns, was substantially less than in 1913, but lower quotations and the uncertainty as to whether or not there might be a further depreciation in the franc, and still lower prices, reduced the demand for corresponding qualities of home products to a minimum.

Throughout the year there was the utmost difficulty in making remunerative margins in tops, yarns, and piece goods. Wool was always ahead of the Bradford market, and during the last quarter, although there was a very substantial increase in the quantity of tops, yarns, and piece goods sold, the prices paid were always relatively below the prevailing price of wool. The turnover in crossbred yarns in November and December was such that spinners who had been at their wits' end earlier in the year to keep even part of their machinery running, so as to provide part-time employment, found themselves booked up for two or three months ahead.

AVERAGE PRICES OF TOPS.

In Pence Per Lb.	July, 1914.	Dec., 1921.	Dec., 1922.	Jan. 25, 1923.	Mar. 15, 1923.	May 3, 1923.	Aug. 2, 1923.	Dec. 24, 1923.	Dec., 1923, as % of 1914.

In the case of yarns, there was a reduction in margins during 1923, so that values did not run quite parallel with tops. The prices for a few qualities are given below:—

AVERAGE PRICES OF YARNS.

Per lb.	July, 1914.	Dec., 1922.	Jan., 1923.	Aug., 1923.	Dec., 1923.	Dec., 1923 as % of 1914.
1/16's super	8 1/2	1 1/2	8 1/2	8 1/2	8 1/2	163
1/16's botany (70's/80's)	8 1/2	1 1/2	8 1/2	8 1/2	8 1/2	212
2/16's worsted, med. (44's card)	1 8	2 2	2 3/4	2 1	2 6	150

2/60's botany (super 70's)	3 5	8 6	8 6	7 6	7 10 1/2	230

* Per gross.

With regard to piece goods, an effective comparison is difficult to make. It is useful to note that the Ministry of Labour estimate that the average cost of retail clothing as purchased by the working classes showed a rise of 125 per cent. at the beginning of 1923 as compared with 1914, and of 120 per cent. at the end of 1923. Wages in the wool textile trade, reckoned per unit of time, are from 107 to 118 per cent. above the pre-war standard.

Home Trade.—The high price of botany goods has restricted the demand, and manufacturers in the Bradford district who did a large trade in gabardines and women's dress goods in 1922 had their turnover seriously reduced during 1923. The men's wear branch, however, also suffered from the depression in the middle of the year. In the second half of the year there was a decided trend

towards crossbred as against botany productions, and wherever possible a change was made with a view to cheapening the cost of the finished article. Medium and low grade woollens sold very well, and the woollen branch as a whole fared much better than the worsted branch. The hosiery trade also had its quiet time, with a recovery towards the end of the year; and the carpet trade fell off to some extent.

Export Trade.—Exports of British wool in 1923 have been a little less than those of 1922, but about double those of 1913, the United States having taken two-fifths of the total shipments. The exports of tops have been practically the same as in 1922, and roughly 10 per cent. below 1913. The exports of worsted yarns have been a good 15 per cent. less than in 1922, and 30 per cent. less than in 1913. The exports of mohair and alpaca yarns have been a third greater than in 1922, but little more than one-half the pre-war figures. The exports of woollen yarns have been slightly less than in 1922, but nearly double those of 1913. Taking tops and yarns together, the exports to destinations other than Germany are about one-fifth larger than they were in 1913. The exports of woollen tissues (which represent nearly half the value of the total exports) were a good 20 per cent. better than in 1922, and nearly equal to the 1913 figures. The exports of worsted tissues have been about the same as in 1922, and about 10 per cent. less than in 1913. Taking the exports of woollen and worsted tissues together, and comparing them with 1913, the Continent has taken one-half the pre-war amount (the exports to Germany, which accounted for nearly 10 per cent. of the total exports of tissues in 1913, being almost negligible). The Far East has absorbed double the quantity, the United States nearly double the quantity, South America about the same, and the Dominions slightly less.

With regard to imports, woollen and worsted yarns have been imported in about the same quantities as in 1922, and one-half the pre-war figures. The imports of tops are larger than in 1922, no corresponding imports being

recorded in 1913. The imports of woollen and worsted tissues are about 75 per cent. greater than in 1922, but only about one-third of the imports in 1913.—From *The Weekly Wool Chart* (Bradford).

JUTE TRADE.

The following is extracted from Messrs W. F. Soutar and Co.'s circular:—

Jute.—Last January opened with a rosy outlook, and raw material was largely held by spinners and dealers, although prices were on a high level, as the season then was expected to come rapidly to a close. Unfortunately, it did not, and prices gradually dropped from £38 per ton for first marks, until by September month the price was down to £20 10s per ton. The trade was entirely misled by Calcutta and up-country reports; instead of 4,237,000 bales the trade received 6,385,000 bales, including a surplus from previous season's crop. Since September there has been a reaction from the extremely low point, and first marks for the year closed at £29 per ton for grade. Dundee bought largely all along the line, and spinners have, as a year ago, large supplies that will meet the increased demand which has made itself felt regarding most qualities, and particularly so far as fine jute is concerned, which is extremely scarce, as the present crop has shown very little of it. It is to be regretted that quality of the present crop is very poor, and in consequence many arbitrations are taking place, resulting in heavy allowances and many parcels being invoiced back. This state of affairs regarding quality is not confined to Dundee, as equally heavy allowances, in some instances heavier, are being made in London.

Cloth and Yarns.—The first half of the year was lifeless, and the output seriously interrupted by a strike, which necessitated a general lock-out; then came a steady drop in prices, until in October 8-lb. cops were 2s 7½d per spindle, and 40-inch 10½-ounce hessians 3½d per yard. Since then prices have advanced, and cops are now 3s to 3s 1d per

FIXED DEPOSIT RATES
will be quoted upon application.

On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half year amounts to £1.

spindle, and hessians 4½d to 4¼d per yard. Inquiries and orders being placed are for important quantities, which give promise of full employment for several months ahead.

Stocks of jute in Dundee are not so large as a year ago, and we estimate the total quantity at 750,000 bales (including unsold in brokers' hands and a standing stock of practically 200,000 bales in spinners' hands). The consumption in Dundee and district during the last six months has risen to the equivalent of 850,000 bales per annum. Unfortunately, the quality of a great deal of spinners' jute is too poor for the purposes for which it was bought.

THE LINEN TRADE.

Expectations of improved conditions in the linen trade during 1923 have been only partially realised. While the year's total exports of piece goods—nearly 90 million square yards—represented almost three times the bulk exported during 1921, the increase over 1922 was only 15 per cent.

Undoubtedly, with half the peoples of the world striving to exist, there was little superfluous cash for the luxury of linen. Further, the European unsettlement had a twofold adverse effect against British linen buying, since not only are the people unable to buy—last year's general buying of British linen by European countries only amounted to 3.3 per cent. of our total exports—but, even more disastrously, the foreign exchanges favoured the production of linen goods by France and Belgium last year at prices impossible to compete against. As a matter of fact, linen and linen yarns to the extent of £1,861,136 were actually imported into the United Kingdom, the value of imported linen being 1s. 6d., as against an average value of 1s. 10d. for our home product during 1923.

Normally the United States absorbs around 50 per cent. of total British linens exported, but, irrespective of the high price and the effect of the Fordney tariff in imposing an extra 40 to 50 per cent. on sale prices, that percentage has now increased to 63.8 per cent. During last year 33,685 tons of foreign flax and tow valued at over £3 millions were imported, together with 8,514 tons of yarns, valued at considerably over £1 million sterling. Home flax production represented only about 7,000 tons.

One encouraging factor has been the steady patronage of linens by British Overseas Dominions.

During 1923 the unemployment percentage in linen manufacturing decreased from 25 per cent. to be now about 12, and with present orders in hand that figure should soon show decrease. Prospects for 1924 are distinctly good, for with cotton at 20d, compared with flax at 12d, the housewife has every inducement to prefer the flaxen fabric. Moreover, Continental costs of production now prevent any adverse competition. To-day the average price of linen is 17d per square yard, compared with 7d in 1913, 23d in 1922, and 35d in 1921.

APPENDIX.

(A) WHOLESALE PRICES OF COMMODITIES.—SELECTED DATES, 1913-1922; AND MONTHLY, 1923.

NOTE.—The following tables give the variations in prices of the commodities on which the *Economist* Index number is based. In cases where the exact quotation ceased to be given during the war the nearest available quotation has been given.

(B) WHOLESALE PRICES (MAINLY IN LONDON AND MANCHESTER) 1907 TO 1923.—PROPORTIONATE RESULTS 1901-5=100.
 EXPLANATORY NOTE.—In the following table the average price of the various commodities in the five years 1901 to 1905 is taken as basis (100) in each case, and the market price at the various dates given is calculated as a percentage of the basis price. In this way the various quotations are reduced to a common standard, by means of which their respective fluctuations may be compared.

total "savings," i.e., deposits in Italian banks of all sorts—including savings banks, co-operative and "popular" banks, and the Monti di Pietà, which last, we believe, are not, like pawnbrokers in England, merely a resort of the distressed or the spendthrift, but loan offices financing small manufacturers—has risen from 7,822,690,355 lire in 1914 to 25,519,074,933 lire last June. The depreciation of the paper currency has, indeed, converted the increase, measured in paper, into a decrease of more than 852 millions, measured in gold. But that is no reflection on Italian thrift. The work is issued biennially, and should be of great value to foreigners engaged in trade with Italy.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, ACCOUNT,
February 20. February 21.

Business is moderately active in a number of the Stock Exchange markets. The settling down to work by the Labour Cabinet has had no appreciable effect in checking the volume of orders that reach the investment departments, while in the more speculative sections, the feature is the strength shown by gold and tin mining shares. The prompt closing of the Japanese 6 per cent. subscription lists came as no surprise on Wednesday, having regard to the low price at which the bonds were offered. Underwriters of the new Westralia 5 per cent. stock offered at 98 received 48 per cent. of their obligations, the result being much the same as that which followed the issue by Southern Rhodesia of a somewhat similar stock bearing the same interest, and at the same price. Fresh borrowers are in the market, and in addition to those loans on the point of emission, it is known that others stand close behind, ready to seek public subscription at any opportune moment.

The War Loan revolves narrowly in the neighbourhood of par, and Conversion stock, after a drop to 74½, easily regained 10s of the loss. The recent buyers of Consols have finished, and the market in that stock is once more inactive. Colonial and Home Railway pre-ordinary securities hold their ground. Scrip of the Southern Rhodesia and West Australia loans above mentioned, rallied to about 1 discount after being lower.

Mexican Government bonds have gone back for the usual reason, namely, that no satisfactory information is forthcoming as to full recognition being accorded by this country to the Mexican Government. Brazilians, after their burst of strength, halted a trifle, although the 7½ per cent. Coffee Loan, tenders in respect of which had to be lodged by half-past three yesterday afternoon, mounted to 114. Speculation in French and German bonds is languid. Suez Canal shares have risen some 32 points, owing to a fit of share activity on the Paris Bourse. The Home Railway market was disappointed with the London, Midland and Scottish dividend, making 7 per cent. for the year, or ½ per cent. less than was confidently expected. The Great Western announcement of 8 per cent. for the year had, however, a salutary effect, and the company's ordinary stock mounted appreciably. Estimates of a 2½ per cent. dividend on North-Eastern deferred, to be resolved next week, are modified in the downward direction. Underground stocks show a trifling heaviness, although any company which is thought likely to benefit from the British Empire Exhibition is popular with the public just now.

Grand Trunk Pacific debenture has gained a few points. Argentine Railway stocks indulged in something that approached a mild boomlet, the traffics being exceedingly good. United of Havana stock is better, on rumours, extremely vague and nebulous, that the Cuban Government wishes to obtain control of the line. Nitrate railway shares are harder, although shares in the nitrate-producing companies move within narrow limits. The Mexican Railway stocks derived no benefit from the statement that the company's line between Mexico City and Vera Cruz is now open for traffic.

This month there comes into force a qualification of the Stevenson restriction scheme that may temporarily diminish the output of some of the older rubber companies, but this has had no effect upon the market for rubber shares, where, indeed, interest has died down to a minimum. Tea shares are not so good as they were, many people electing to take their profits, though interest is kept alive by the knowledge that the forthcoming dividends are bound to be extremely good. Some little inquiry for coffee shares resulted in several of the Brazilian descriptions advancing in price. The oil market is active and tolerably firm, Shells continuing to absorb the major portion of popular interest. Several Trinidad oils have strengthened, on purchases by speculators, who, willing to take up the shares, think that present prices are low enough to offer temptation. Lobitos touched a record high price upon insistent pressure to buy. Mexican Eagles rallied as bears came in to cover commitments that are known to be extensive. The public are doing more in oil shares than they have done for many months past, but the market is highly sensitive, and prices react very easily.

Banking shares are again on the up-grade, though movements are moderate, and the insurance market is quiet, holding its recent improvements. The shipping group remains strong; here, also, there is not much trade doing. Harrods advanced upon an increase in the dividend, and most of the shares in stores' companies, hotels and other branches of industry likely to be affected by the British Empire Exhibition are in steady demand. Electric lighting shares exhibit pronounced strength, upon the remarkable dividends now being announced. The possibility of amalgamation between the County of London, City of London, South Metropolitan, and South London companies was announced at a meeting of the County of London Company held this week. Harrods Buenos Aires shares went better, in advance of the reorganisation scheme now made public. There is more doing in motor shares, and at rising prices, a not unusual tendency at this season of the year. Shares in land companies keep hard, and a substantial rise in Brazilian Tractions has followed the recent improvement in the milreis.

Greater activity in South Africans is attributable to the optimism of the Cape. Several of the Cape favourites are in favour, and this helped to give the market a good appearance as a whole, until Paris started selling, when part of the previous rise was lost. A spectacular rise in Cam and Motors followed, and rather astonished, the Rhodesian market. Chartered are better, on the hope that before long there may be some distribution of cash. Tin shares of all kinds, West African, Malayan and Cornish, have at last responded to the remarkable jump in the price of the metal, and the market for tin shares is broadening daily, though the public are still coy of venturing far into such speculative counters. The Canadian silver shares are somewhat overshadowed by the new popularity of the tin market, and Russians eased off, while amongst Indian and other miscellaneous mining shares, the movements are few and uninteresting. Most of the copper shares are better under the leadership of Rio Tintos, which Paris has been accumulating with both hands.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded.....	11,705,125			
ISSUES OF THE WEEK—				
NATIONAL SAVINGS CERTIFICATES.				
NET RECEIPTS INTO THE EXCHEQUER WEEK ENDED FEBRUARY 9, 1924.

Imperial Japanese Government 6 per Cent. Sterling Loan of 1924.—Issue of £25,000,000 at 87½ per cent.

This is the largest amount borrowed on the London market since the Indian Loan. Arrangements have been made by which £12,000,000 will be allotted in full to holders of the 4½ per cent. loans of 1905, first and second series, who have agreed to convert. The proceeds will be applied to the conversion and redemption of the existing 4½ per cent. loans of 1905, first and second series, and to meet expenditure in connection with reconstruction work. An issue of \$150,000,000 (dollar bonds) for the same purposes is being made in New York. The Japanese Government undertakes to apply twice yearly a fixed cumulative sinking fund, beginning in July, 1929, and calculated to redeem the entire loan by July, 1959. If the price of the bonds is under par, the sinking fund will operate by purchase, and if at par or over, redemption will be effected by drawings. The Government reserves the right to accelerate the redemption at any time by purchase; also at any time after 15 years from the date of issue on giving three months' notice to repay at par. The Japanese Government undertakes that during the currency of any of these bonds, if a specific pledge of assets be given for any purpose, it will be provided that these bonds shall be secured *pari passu*. Bonds and coupons are payable in London or Japan. Subscriptions may be made in cash or in the bonds of the 4½ per cent. loans of 1905, first and second series. Holders of first series bonds of 1905, first and second series, who desire to convert must lodge their second series bonds with all unmatured coupons attached, and will receive bonds with all unmatured coupons attached, and will receive in exchange for each bond of £100 and the said unmatured coupons, £125 fully-paid scrip (nominal) of the 6 per cent. loan, together with an adjusting payment of £4 2s 4d. These figures are inclusive of (a) accrued interest from February 15th to February 21st, and (b) the equivalent of the discount allowed to cash subscribers who pay in full on allotment. Holders of second series bonds who desire to convert must lodge their second series bonds with all unmatured coupons attached, and will receive bonds with all unmatured coupons attached, and will receive in exchange for each bond of £100 and the said unmatured coupons, £125 fully-paid scrip (nominal) of the 6 per cent. loan, together with an adjusting payment of £4 12s 3d. These figures are inclusive of (a) accrued interest from January 10th to February 21st, and (b) the equivalent of the discount allowed to cash subscribers who pay in full on allotment. The issue was a remarkable success, the subscription lists being closed within an hour of opening. The generous yield obtainable no doubt accounted for this. In the light of the yields on existing Japanese issues the loan was most attractive.

Newport (Mon.) Corporation 5 per Cent. Redeemable Stock, 1945-1965.—Issue of £800,000 stock at 97½ per cent.

The proceeds are required in connection with water works and for other purposes, including the repayment of existing debt. The stock will be redeemed at par on September 1, 1965, unless previously cancelled by purchase in the open market or by agreement with the holders; but the Corporation will have the option of redeeming at par the whole of the outstanding amount of the issue at any time on or after September 1, 1945, on giving three months' notice. The total outstanding debt on the Corporation is £2,524,854, of which £2,008,971 is in respect of reproductive undertakings. The rateable value is given as £595,490, and a rate of 1d in the pound will produce £2,320. Total rates at present levied in the borough amount to 11s in the pound. This is an excellent trustee security.

The Sutton District Water Company.—Sale by tender of £80,000 7 per cent. maximum ordinary stock at a minimum price of £118 per cent. The advertised particulars state that "The existing ordinary and preference stocks are quoted on the London Stock Exchange, and a quotation for the present issue will be applied for in due course." The stock will rank for dividend from April 1, 1924. This advertised statement needs to be supplemented by much other information before a sound test can be applied as to the value of the investment.

Gray's Inn (Jamaica) Central Factory, Limited.—Share capital £5,000, all of which has been issued. There are two 6 per cent. debenture issues, an "A" issue for £45,000, and a "B" issue for £50,000. This company has been formed to acquire a sugar factory in Jamaica now in liquidation. Much information is given about these debentures in a statement appearing in the Press, made to comply with Stock Exchange regulations. It is, however, impossible to get any idea of the true value of these securities from these details.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Now I must say something about working results, and here I am treading upon promising ground. A vista is opening up to us of coal carbonisation as a science. It has been in the past an empiricism. Its practice has been, I think I may say in the main, subject to the exigencies of coal-handling methods or their machinery. We now realise more and more that it should not be subject to, but should govern them, and this in itself is a great step forward to a right conception of the process to which the coal is subjected. In a coke-oven works the conversion of coal into coke is the primary aim; other residual products are secondary to it. In a shale-distilling works major importance attaches to the yield of liquid products, the coke being an unimportant residue. But gasworks' practice must oscillate according to circumstances in a middle area between these two extremes. And the full realisation of the importance of this point of view we owe to the therm system. Tar has fetched good prices. Its uses are mainly for the manufacture of patent fuel or in the construction of road surfaces. For both these uses it is unequalled. Bitumen, which is sometimes put forward as a substitute, is in no way superior for general use on roads, and it is, moreover, an imported, instead of a home-made.

article. As regards the more valuable tar products—I mean those known as intermediates for the production of dyestuffs—the position is one of disappointment, and we are now only making certain special products upon a small scale.

The returns from ammonia are disappointing.

Our most important residual, however, is, and will continue to be, in one form or another, coke. The demand for this continues good, but supplies are none too plentiful. Realising the increasing value with which this product was being regarded for many industrial purposes, we have for some time past given special attention to its quality, and it would appear that our efforts in this direction are now being rewarded by the increased appreciation it meets with in the various markets.

On the other hand, I wish it were possible to speak more hopefully of improvement in the quality of our raw material—coal. Although its cost to-day is almost that of a manufactured article, its freedom from impurity leaves a good deal to be desired.

Turning again to the report, it goes on to deal with the dividends on stocks. The suggested payment of 5½ per cent. on the ordinary stock may be looked upon as hardly all that might have been anticipated, especially remembering the past 10 lean, and some very lean, years, when most other industries were allowed, and even encouraged, to make large profits. But in putting forward the proposal the all-important duty has been, and must, I think, be, that of restoring the undertaking to at least its pre-war stability, and if the immediate present would appear to be in any degree unsatisfying, the advantage to the undertaking of proceeding cautiously will undoubtedly redound to its advantage in the future. This self-same policy is reflected in building up the reserve fund, upon which we had to draw largely during the war, and putting it upon a basis comparable with altered circumstances. The future is full of promise, and so long as the company maintains the traditions of fair dealing which have so long guided it, I do not think the public it serves will be likely to grudge the proportion of profit allocated as dividends.

The report was unanimously adopted.

MIDLAND RAILWAY COMPANY OF WESTERN AUSTRALIA, LIMITED.

IMPROVED RESULTS—QUESTION OF SALE.

The annual general meeting of the Midland Railway Company of Western Australia, Limited, was held, on the 14th instant, at Winchester House, London.

The secretary (Mr W. Tait) having read the notice convening the meeting and the report of the auditors.

Sir George A. Touche, Bart., chairman of the company, who presided, in moving the adoption of the report and accounts, said that the figures were of an encouraging character. They reflected the steady and continuous improvement which the board had been justified in expecting. The gross traffic receipts for the past year were £143,982. This was an increase of £15,909 upon the previous year's figure, but it was not a record, as the highest traffic returns of the company were those of 1914. By 1916—the year after the opening of the Government Wongan Hills—Mullewa line—the figure had fallen as low as £88,000. It was an object lesson in the rapidity with which apparently solid investment values could be evaporated. Progress was being maintained during the current financial year, the gross traffic receipts for the first six months having been £76,093. The net revenue for the period under review was £71,279, compared with £55,456 in the previous year.

The land sales for the year had amounted to 90,697 acres, as compared with 47,186 acres in the previous year. The area sold was an indication of the quality of the land, as the company was at a

disadvantage compared with the Government, who granted loans to their settlers, which the company could not do. The area sold for the first half of the current year was 51,560 acres, and the good harvest season now reported should help the demand. The improved land sales, like the improved traffics, were due to a natural revival after the interruption of the war years, and probably that had been stimulated to some extent by the impetus to immigration through the enlightened policy of the present rulers of Western Australia.

Referring to the question of a sale of the company's property to the Government of Western Australia, the Chairman said that the offer which had been made by the directors had lapsed. The Government, apparently, had not dismissed the subject of a purchase from the realm of practical politics, for it had been announced that Mr Colebatch, the Agent-General, was in possession of their views, and would see the directors on the subject. They had, in fact, already had a conversation with him, and hoped to have others. Whether those conversations would develop into an actual negotiation he (the Chairman) could not tell, but the directors hoped that the matter would be decided one way or another at an early date.

The report was unanimously adopted.

LIEBIG'S EXTRACT OF MEAT COMPANY, LIMITED.

EXCELLENT TURNOVER AT HOME AND ABROAD.

HIGH STANDARD OF COMPANY'S HERDS.

The annual general meeting of Liebig's Extract of Meat Company, Limited, was held, on the 14th instant, at the Cannon street Hotel, London, E.C.

Mr C. E. Gunther, who presided, said that it had been the policy of the directors to work the company's factories to the fullest extent, to minimise costs, and to put through as large a turnover as possible. In the period now under review, besides operating their Colon plant and the Freezer at Fray Bentos, they had successfully put into work their new factory near Asuncion, Paraguay. During last season, including the Paraguay factory, which continued for some time after August 31st, there were killed at the company's factories over 436,000 head of cattle, thus exceeding all their previous records, even during the war period, when they worked at the highest pressure possible in order to supply our troops in France and elsewhere. This heavy working naturally meant a big cash outlay, and to assist in financing a series of 5½ per cent. notes for £600,000 at par were placed on favourable conditions towards the close of last year. The balance-sheet showed a sound position, seeing that the assets were all conservatively valued. The profit account had closed with a balance of about £220,000, and the directors recommended a final dividend of 8s, free of income-tax, on the ordinary shares, carrying forward about £257,000.

GOOD SALES OF WORLD-FAMOUS PRODUCTS.

While the company had had an excellent turnover both at home and abroad, conditions affecting their Continental business had been difficult, in consequence of the fluctuation of the exchanges. Their world-famous products—canned meats, Oxo, Oxo cubes, Lencor, &c.—had maintained their pride of place in the public esteem, sales having been very good, and in many cases showing notable increases, both in the home markets and abroad. Their sales company, Oxo, Limited, had given excellent results, and the directors were justly proud of its highly efficient factory and sales organisation. Their Oxo factories in London had this week been honoured with a visit from H.R.H. the Duke of York, who spent some time going through the various departments, and expressed himself as greatly interested in all he had seen. Since the Fray Bentos Freezer was started in February last year, the company

had received regular consignments of chilled and frozen beef, the quality of which had been well reported upon and had found a ready sale, and they were this year extending operations there to killing and freezing sheep, which should have the effect of spreading working expenses over a bigger output and thus help to improve results.

THE COMPANY'S ESTANCIAS.

As to the company's estancias in the Argentine and Uruguay, generally speaking their camps and cattle remained in a satisfactory condition during the period under review. There were signs of approach to a more normal state of affairs in the River Plate, and that the estancia industry would recover to the satisfactory position that it held for so long. They had again shipped out a number of pedigree animals for the further improvement of their herds and flock, although these had already reached a high standard. Their exhibits at the last local cattle shows in Argentina and Uruguay were again very successful, many high awards being given to the company's stock.

In Paraguay, where they had started operations at the Zeballos Cube factory, it became necessary to secure a camp conveniently situated to serve as a fattening ground for cattle destined for the factory, and a property known as Puerto Loma, consisting of about 100,000 acres, had been secured. The directors believed this investment would prove a sound one.

RANCHING INTERESTS IN SOUTH AFRICA.

As to the company's ranching interests in South Africa, the directors considered that any proposal to develop canning and extract factories in suitable localities was deserving of encouragement, and they had in hand a project for which they hoped to receive the full encouragement of the Government and farming community in South Africa. The meat factories and freezing works in South America had been a big factor in bringing prosperity to that part of the world, and the directors believed that the best interests of the South African farming community would be served if every help and inducement were given to those experienced in the business to set up similar factories there. If the Rhodesian ranching industry was to prosper, it was essential that it would not be left at the present disadvantage in the matter of railway facilities. The opening of Walvis Bay, the construction of the new cold storage there, and the settlement of different questions incidental to the taking over of South-West Africa would afford a good impetus to the cattle industry, and the directors thought they might look forward hopefully to improved returns in future from the company's interests in that country. Their home trade developed smoothly and satisfactorily, but there might be difficulties still to be overcome before improved results might be looked for from their Continental and foreign establishments. The directors would, nothing daunted, continue to tackle these difficulties as and when they arose, having every confidence in the future.

The report was unanimously adopted.

SOUTH SUBURBAN GAS COMPANY.

COMPANY'S SOUND AND HEALTHY POSITION.

The annual meeting of the South Suburban Gas Company was held, on the 15th instant, at the Cannon street Hotel, London, Mr Charles Hunt presiding.

The secretary (Mr Wilfrid Wastell) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said they had a fairly long series of more or less strenuous years to look back upon, and it was somewhat of a relief that the past was a year not particularly marked by any incident worthy of special record. Still it was good sometimes to be able to mark time. Last year he referred to what appeared to be little short of a scandal in the supply of fittings, and expressed a hope that the gas industry would take the matter in hand in such a way as to put an end to dealings of that nature. He wondered how many gas undertakings had acted on his suggestion. This company at all events was doing its best to discourage the use of gas fittings that would not pass muster. They had also recently been the means of introducing a new type of gas cooker, which had proved a great success wherever sufficient room for it was available. He made no apology for mentioning gas cookers, because it was by these and gas fires and other heating appliances that the company lived and earned dividends. They had done exceedingly well in cooking and heating appliances, while the total gas sales for the year had exceeded expectation, thus giving the best of encouragement for the future of their industry.

The reductions in price last year meant a saving to consumers of over £90,000 per annum, but notwithstanding this the accounts showed that the gas rental figures on the credit side of the revenue account were no less than £662,000. This result was helped by the increase made in the calorific value from 460 to 480 B.Th.U. There was also a steady increase in rents received for hire of stoves and fires. The increase in rentals for the year amounted to nearly

£3,000, while the figures, comparing 1912 with 1923, showed an increase of nearly £27,000. Public lighting also continued to show a profit instead of the loss which began during the war, and continued almost until last year. He could say without the slightest attempt at exaggeration that the company's business was in a perfectly sound and healthy condition; additional evidence of which was afforded by the increasing number of applications they received for extensions of mains.

As regards coke, they had done a little better than expected; for tar the year was one of the best they had ever experienced, and with regard to sulphate of ammonia they had to take what the Federation of Sulphate Makers could give them. He offered congratulations to the Gas Light and Coke Company on their success in securing a common-sense judgment in the action taken against them by the Alkali Makers. Cost of coal only showed a reduction of less than £5,000. It was chiefly those items of expenditure in which wages figured more or less prominently that showed reductions. The reductions made during the year had been loyally responded to by the employees. The bonus to co-partners was the largest ever paid; it represented 4½ per cent. of the year's earnings of the co-partners, as compared with 3½ per cent. in the previous year.

The report was unanimously adopted.

HOME AND COLONIAL STORES, LIMITED.

LOW PERCENTAGE OF PROFIT.

The twenty-ninth ordinary general meeting of this company was held, on the 14th instant, at 2 and 4 Paul street, London.

The Chairman (Mr H. G. Emery), in moving the adoption of the report and accounts, stated that the total of the reserve funds would now amount to £652,335. Many shareholders would perhaps like to know why, with such a big reserve, they should have started a special reserve for equalising dividends and continue also to increase the carry forward. His answer was that this was the seventh year in succession in which the company had shown increased profits. With the difficulties with which the company had now to contend, each year they had to realise the possibility of a setback. If that should happen in any year, by carrying out the company's policy they would be ready for it.

The conclusion arrived at by the Departmental Committee on the Distribution of Food was that the difference between producers' and consumers' prices was unjustifiably high. This company's statistical department was asked to furnish figures relating to its business, and these showed that the net profit per lb of goods sold last year was less than one halfpenny, while the results of the two previous years were as nearly as possible the same as for 1923. To put it in another way, had the company sold all the goods at a halfpenny per lb less than they did there would have been no profit.

A great effort was made in Parliament last year to get the duty on sugar reduced, and no doubt this year there would be some reduction. It was now also suggested that the duty on tea should be taken off entirely. He had no intention of speaking against these suggestions, and if the Chancellor of the Exchequer should, next April, find himself in the position, owing to the revenue being in so prosperous a condition, to spare the many millions required, this company would welcome the reductions, for the cheaper they sold the more the public could buy.

As very large distributors of Colonial produce, one might almost say, "Home and Colonial for the Colonies, and the Colonies for Home and Colonial." (Hear, hear.) Shareholders doubtless had seen an account in the Press of the purchase by this company of 3,500,000 tins of Australian fruit, representing practically the entire season's pack available for export. This, he thought, was a striking illustration of the company's policy—from the producer direct to the consumer.

The report and accounts were unanimously adopted.

SIDNEY TURNER, Accountant-General.

India Office, February 11, 1924.

Messrs Samuel Montagu and Co. write on February 13th as follows:—

GOLD.

India has taken a substantial proportion of the rather large supplies of gold on offer this week. The United Kingdom imports and exports of gold during the month of January, 1924, were as follows:—Imports, £4,397,919; exports, £6,281,651.

SILVER.

The resumption of business after the Chinese New Year was signalled on Saturday by a rather keen demand for silver for forward delivery, occasioning a reduction of the difference between prices for cash and forward delivery and a sharp rise in both quotations. The demand continued, and further advances took place in the prices. On the first day to which we refer (the 9th inst.), the quotation for forward delivery became the same as that for cash. This was the first time it had been so fixed since October 13, 1922. The upward movement was rather swift— $\frac{3}{4}$ d and $\frac{1}{4}$ d for cash and forward delivery respectively in two days—and it is not surprising that a reaction took place yesterday. We understand that the reason for the movement was that certain of the less important interests in China found themselves somewhat unexpectedly short of cash resources, hence they hedged by operations in London. The Indian bazaars sold here with freedom, and America was not an unwilling seller, but the Continent did not operate on any scale of importance. To-day's quotation for forward delivery— $33\frac{1}{2}$ d—is the highest since October 25, 1922. At present the rate for forward delivery is at a discount to that for cash, but there are indications that the tendency of Far Eastern buying orders may very easily be such as to drive the price for forward delivery to a premium. Such premium cannot, of course, exceed the amount of interest necessary to carry the silver to the specified date.

BROKEN HILL, SOUTH.—For the six weeks ended Feb. 9th, 23,550 tons of crude ore and 9,174 tons of dump slime were treated and produced 6,346 tons of lead concentrates, assaying 55 per cent. lead and 23 ozs silver per ton; also 3,188 tons zinc concentrates, assaying 45 per cent. zinc.

BURMA CORPORATION.—Jan. 1.—28,676 tons of ore were mined; 23,730 tons of ore were milled in the treatment plant, producing 11,636 tons of lead concentrate; 10,614 tons of lead-bearing material were smelted in the blast furnaces, producing 4,332 tons of hard lead for treatment in the refinery. Refinery products were 3,950 tons lead and 423,558 ozs silver. Of silver production, 3,040 ozs were recovered from treatment of copper matte. Experimental zinc plant produced 1,001 tons zinc concentrates, assaying 10.5 ozs silver, 66 per cent. lead, and 47 per cent. zinc. In addition, 655 tons zinc concentrates were produced from tailings during previous month, assaying 12 ozs silver, 11 per cent. lead, and 43 per cent. zinc. In addition to above, 200 tons antimonial lead were sold and shipped, and 70 tons copper matte produced ready for shipment from the treatment of accumulated by-products.

NORTH BROKEN HILL.—January production:—North section—19,300 tons of crude ore were treated, producing 3,750 tons lead concentrates, averaging 64.7 per cent. lead, 29.5 ozs silver per ton, and 7.7 per cent. zinc; also 3,350 tons zinc concentrates, averaging 49 per cent. zinc, 7 per cent. lead, and 8 ozs silver per ton. British section—11,570 tons of crude ore were treated, producing 2,010 tons lead concentrates, averaging 61.8 per cent. lead, 27.5 ozs silver per ton, and 7.4 per cent. zinc; also 1,790 tons zinc concentrates, averaging 46.5 per cent. zinc, 6.7 per cent. lead, and 8 ozs silver per ton.

SAN FRANCISCO.—Jan. 1.—Ore treated 9,529 tons; lead concentrates produced 2,143 tons; zinc concentrates produced 2,259 tons. Estimated net smelter return on lead, \$122,972; on zinc, \$43,970; total net smelter return, \$166,942. Operating expenses, \$66,461. Estimated operating profit, \$100,481. Capital expenditure, \$14,655.—[Dec. profit, \$120,100.]

THE BROKEN HILL PROPRIETARY.—Report for four weeks ending January 30, 1924. Iron and Steel Works: Coke Ovens: Produced 20,917 tons of coke, 253,271 gallons of tar, and 318 tons of sulphate of ammonia; No. 1 blast furnace: produced 4,581 tons of pig iron; No. 2 blast furnace: produced 9,470 tons of pig iron; No. 3 blast furnace: produced 1,502 tons of pig iron; Open hearth: produced 20,487 tons; Blooming mill: produced 21,285 tons; 28-in. mill: produced 13,712 tons; 18-in. mill: produced 6,505 tons; 12-in. mill: produced 2,213 tons; 8-in. mill: produced 1,219 tons; Hot mill: produced 4,649 tons; Steel foundry: produced 234 tons of castings; Iron Works: shipped 29,332 tons; Broken Hill: crude ore raised 4,455 tons; Crushing plant: crushed 3,990 tons of crude ore, producing 228 tons of jig concentrates; Slimes flotation plant: produced 683 tons of lead concentrates, and 761 tons of zinc concentrates. Figures do not include tonnage of Broken Hill Proprietary Block 14 Company, Limited.

ZINC CORPORATION.—January 1.—Lead concentrator treated 14,821 tons of ore, producing 3,085 tons of lead concentrates, assaying 63 per cent. lead and 4,040 tons of zinc middlings.

Reports and Notices.

Mr John Heaton, owing to ill-health, has resigned his seat on the board of the Anglo-Argentine Tramways Company, Limited, after nearly twenty years of office. The vacant directorship has been filled by the appointment of the Right Hon. Sir Philip Lloyd-Greame, K.B.E., M.C., M.P., who thus resumes his association with the company, which he relinquished in 1920 on becoming one of His Majesty's Ministers.

We are informed that Sir George Sutton, Bart., Sir T. O. Callender, Mr Daniel Sinclair, Mr Francis Hird, and Mr Albert Edgar Tanner have joined the board of the Enfield Cable Works, Limited.

GOVERNMENT STOCKS, &c.

EXTERNAL DEBT OF HONDURAS.—With regard to the External Debt of Honduras, the Council of Foreign Bondholders are informed that, owing to the delay in the election of a President, it has not been possible as yet to submit to Congress the arrangement accepted at the meeting of the bondholders on May 8, 1923. Congress has been dissolved under a dictatorship, but a new congress is expected to be established before long. It is understood that the Debt settlement is considered as requisite by all political parties, and that it will be taken up amongst the first items of new legislation.

BANKS.

BANK OF NOVA SCOTIA.—The report for the year ended December 30, 1923, shows that assets total \$227,880,799, against \$221,647,324 a year ago. Cash and investments amount to \$131,761,385 of the assets, against \$126,986,092. With regard to liabilities, notes in circulation amount to \$15,074,324; deposits not bearing interest, \$34,557,227; deposits bearing interest, \$140,234,470. With regard to profit and loss, the balance December 31, 1922, was \$173,163; net profits for year, losses by bad debts estimated and provided for, \$2,104,532; making \$2,277,695; dividend No. 213 at 16 per cent. per annum, paid April 2, 1923, \$400,000; dividend No. 214 at 16 per cent. per annum, paid July 3, 1923, \$400,000; dividend No. 215 at 16 per cent. per annum, paid October 1, 1923, \$400,000; dividend No. 216 at 16 per cent. per annum, payable January 2, 1924, \$400,000; war tax on circulation to December 30, 1923, \$100,000; contribution to officers' pension fund, \$75,000; 1923, \$100,000; contribution to officers' pension fund, \$75,000; written off bank premises account, \$250,000; balance carried forward, December 30, 1923, \$252,695. The position of the reserve fund is—Balance December 31, 1923, \$19,500,000.

DOMINION BANK (CANADA).—The report for the year ended December 31, 1923, shows a profit of \$1,129,370, against \$1,175,478 in preceding year. The sum of \$758,163 was brought into the accounts from preceding year, making \$1,887,533 available. The total distribution of 13 per cent. for the year absorbed \$780,000. Contribution to officers' pension fund amounted to \$45,000;

Dominion and Provincial Government taxation amounted to \$162,158, while \$75,000 has been written off bank premises. The balance of \$825,374 is carried forward. The total assets amount to \$122,060,752. The paid-up capital of the bank is \$6,000,000, and the reserve fund stands at \$7,000,000. Notes of the bank in circulation amount to \$7,366,384. The total deposits stand at \$88,906,255.

LONDON MERCHANT BANK, LIMITED.—The report for 1923 shows a net profit of £24,576. The dividend of 7 per cent. on ordinary shares (calculated from the due dates of the instalments to December 31, 1923), viz., 1s 4.57d per share, subject to income-tax. The dividend absorbed £3,656, and £20,920 is carried forward. The reduction of capital has received the sanction of the Court, and stands as follows:—Authorised, £1,500,000; issued, £1,314,745; paid-up, £789,545.

INSURANCE.

NATIONAL MUTUAL OF AUSTRALASIA.—The report for the year ended September 30, 1923, shows that the 13,819 new assurance policies were issued for £5,884,786, as compared with 13,186 policies for £5,007,567 in the previous year. The net premium income was £2,953,024 (£977,819 in single premiums), against £1,833,686, and the expenses were at the rate of 14.71 to the premium income, as against 14.56. The net rate of interest earned on the funds amounted to £5 11s 5d per cent., and the life funds increased by £2,310,583 to £18,868,242.

RUBBER, &c.

SENDAYAN (F.M.S.).—The report for the year ended September 30, 1923, shows a net profit of £8,866, to which is added £15,540 brought forward from previous year, making £24,406 available. The sum of £4,500 is put to reserve, making it £12,000. A dividend of 15 per cent. is paid on the ordinary shares, less income-tax at 4s 9d in the £. This dividend will absorb £10,500, and £9,406 is carried forward, subject to corporation profits tax, commission to the manager and estate staff, and directors' special remuneration. Assets total £125,377, of which £27,212 is in Government securities at cost, and cash amounts to £4,950. Mention is made in the report that the directors have in mind the desirability of acquiring another suitable property if it can be obtained on advantageous terms. With a view to facilitating this, it has been decided to ask for power to increase the authorised capital of the company to £125,000.

TOERANGIE (SUMATRA).—The report for year ended October 31, 1923, shows an improvement on preceding year. The net profit has risen from £4,856 to £10,384, and the ordinary shareholders are to receive 5 per cent., against nothing in preceding year. Income-tax will be deducted from ordinary dividend at the rate of 4s 8d in the £. The balance forward is £7,668, against £4,882 brought in. Assets total £175,420. Cash stands at £3,735, and investments at cost in two British Government securities stand at £10,696.

MISCELLANEOUS.

JUTE INDUSTRIES, LIMITED.—The third report for the year ended September 30, 1923, shows that the dividends received from the subsidiary companies, free of income-tax, amounted to £243,694, to which falls to be added: the transfer fees received, £1,377; and the balance brought from last year, £14,297; making £259,368; and from which falls to be deducted the cost of secretarial and other expenses, £5,753, and loss on merchandise, £4,998, making £248,617. Out of which has been paid:—Imperial taxation, years 1921-22 and 1922-23, £3,652; a dividend at the rate of 9 per cent. per annum on the preference shares for the half-year to May 15, 1923, less income-tax, £101,981; and there was also paid on November 11, 1923, a dividend on the preference shares for the half-year to that date at 9 per cent. per annum, less income-tax, £104,625; leaving for disposal £88,358, which your directors recommend should be applied as follows:—In writing off the preliminary expenses, £30,000; in carrying forward to next year, £8,358.

MAPLE AND CO., LIMITED.—The annual report for the year ended December 31, 1923, states that the profit for the year has been satisfactory, and shows a considerable increase, mainly due to expansion of trade and to there having been no necessity to write down stocks. The South American and French companies have again suffered through the adverse exchanges, and it is considered necessary to make a further allocation to the special reserve on this account. In the circumstances, the directors recommend allocating out of profits £100,000 to reserve for depreciation of foreign currencies, making a total reserve on this account of £200,000. After payment of debenture interest and the dividends on preference and management shares there will remain a balance available for distribution to the ordinary shareholders of £203,720 6s 4d, out of which an interim dividend of 2½ per cent., absorbing £45,000, has already been paid. The directors recommend the payment of a final dividend of 7½ per cent., making 10 per cent. for the year, and the carrying forward of a balance of £23,720 6s 4d to the credit of the ordinary shareholders. It is with regret the directors have to announce the resignations, through ill-health, of their esteemed colleagues Mr Frederick A. Dinham and Mr George W. Edwards, who, as directors for many years, have rendered valuable service to the company.

YORKSHIRE ELECTRIC POWER.—This company has just issued its report and accounts for the year 1923, and a noteworthy record of progress is apparent. The net profit in 1921, after payment of debenture interest, is given as £74,316, and it improved to £101,004 in 1922 and to £130,054 in 1923. The dividend on the ordinary capital is again 8 per cent. The sum of £25,000 is put to reserve,

making that fund £154,000, and £34,640 is carried forward, against £26,538 brought in to the accounts.—Sales of energy, rentals, services rendered to consumers and sundries have jumped from £362,543 in 1922 to £431,444 in 1923. Cash stands in the balance-sheet at £162,319.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated February 14th, is as follows:—Pig-iron.—Consumers are holding back until the settlement of the Labour position, and business is, therefore, very quiet. Prices have eased a little, as stocks of pig-iron are tending to increase and makers are a little anxious on that account. No. 3

Cleveland G.M.B. is 97s 6d per ton, and mixed numbers E.C. hematite 101s 6d per ton. Manufactured iron and steel.—There is plenty of work for steelworks supplying shipbuilding steel, but new orders are scarce. Quotations are as follows:—Steel ship plates, £10 to 55s; steel ship angles, £10; iron bars, £12; steel rails, £9. Iron ore.—Business in imported ore is slow. Freighters have held their recent rise and tonnage is not plentiful. On the other hand, prices of ore have not risen. Best Bilbao Rubio ore is nominally 24s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—The flatness of the iron market and the semi-steel department reported last week continues, and the business done this week has been insignificant in volume and generally unremunerative. Recent heavy importations of Continental material have exerted a malign influence upon conditions in this country. Prices, although not quotably lower, are distinctly easier, and producers have made concessions in some cases to secure orders. Some amount of stock is accumulating at furnaces. There has been a sharp reaction in the scrap market, and users of heavy old steel are offering 10s a ton less than the current value of a few weeks ago. As holders of scrap are standing out for higher figures, transactions are on a minimum scale. In the acid steel department conditions are a good deal more active than at any time last year, a large tonnage being used for railway forgings of various descriptions. The demand, however, is irregular. About 65 per cent. of the open-hearth furnace capacity in the district is operating. Conditions in the foundry trade are improving so far as the home market is concerned, and the same may be said of engineering. Agricultural engineers are doing badly in the absence of overseas business. Trade continues steadily to improve in all the hand-tool branches, and the season for garden and farm requisites has opened with excellent prospects. A strike of grinders has caused a partial paralysis of the cutlery trade at a time of heavy demand for table knives. Imports of German cutlery and tools are declining, and the prices of goods advancing. Expensive silver and electro-plated goods are neglected, whereas there is plenty of business in cheap lines. The fuel market is strong in all sections. Quotations per ton at pits are as follows:—Best hand-picked branch, 35s; Barnsley best silken, 30s 6d; Yorkshire hards, 25s; Derbyshire ditto, 24s; rough slacks, 12s 6d; smalls, 7s to 8s; blast-furnace coke, 24s to 30s.

Our Glasgow correspondent, writing on Wednesday, says:—The position in the pig-iron market this week is practically unchanged. Shipments on account of existing contracts are fairly regular, and prices have been maintained, on the whole, though in some quarters there is a tendency to shade prices, but buyers are inclined to be cautious. Shipments of Scotch last week were close on 1,100 tons. In the finished iron and steel branches works are very comfortably placed as regards the immediate future, and are turning out very large quantities of ship plates and sectional materials. New business is not, at the moment, coming forward in sufficient quantity to encourage the view that this satisfactory position will be long maintained. At the same time, prices are being well held, in spite of competition from the Continent. Recent Continental quotations are decidedly higher, and this, taken in conjunction with the disadvantage of uncertainty regarding deliveries—caused by congestion on the foreign railways—is strengthening the position of the British makers, and it is believed that some further good steel orders presently pending will certainly be placed with British works. The demand for galvanised sheets for export continues strong, and few makers are able to offer anything for shipment earlier than April. With prices firm about the market for black sheets is £18 10s, there are steady buyers. The market for black sheets is well filled, with sufficient on hand to keep mills fully employed for several months. Shipments during the past week have been considerable.

Our Cardiff correspondent writes:—The menace of the strike of dockers at the end of the week has stimulated activity at the South Wales ports this week. The supply of tonnage has been enormous. The existing facilities have been inadequate to cope with it, and during mid-week nearly 100 vessels were held up through lack of berthing accommodation. The position might have been eased if the tippers had agreed to resume the working of the third night shift, but the workmen have adhered to their attitude of uncompromising opposition to that shift, and no move has been made by their officials, although it is now several weeks since the employers acquiesced to the proposal of the Industrial Court to refer the issue to arbitration. The result is that, while outward rates of freight have shown further weakness, the prices of coal have been very strong. Actual business, however, has been practically confined to prompt cargoes and parcels. Merchants have abstained from placing orders for future delivery in consequence of the uncertain progress of the negotiations between the port authorities and the National Transport Workers' Federation. If the strike takes place the working of the South Wales docks would be very appreciably affected. Prices of coal have not shown any further appreciable advances, but the steam and bituminous grades have been very firm. The following are the current approximate quotations:—Best Admiralties, 30s to 31s; second Admiralties, 29s 6d to 30s; best drys, 28s to 29s 6d; black veins, 29s to 30s 6d; Western Valleys, 28s to 29s 6d; Eastern Valleys, 27s to 28s 6d; best bunker smalls, 22s to 23s; ordinary cargo smalls, 18s to 20s; coking smalls, 23s to 24s; anthracite big vein, large, 40s to 42s 6d; machine-made cobbles, 45s to 50s; French nuts, 50s to 52s 6d; stove nuts, 52s 6d to 55s; rubbly culm, 13s 6d to 14s; coke for export, 55s to 60s;

inland blast furnace coke at ovens, 30s to 35s; patent fuel, 30s to 32s 6d; pitwood, ex ship, 33s to 34s. In the iron and steel trades the dearthness of tin is reacting on the market for tinplates, and there is talk of a probable advance in the minimum prices. Production is very active, and while the imports of iron ore are above the weekly average for last year, those of foreign blooms, billets, and bars are phenomenally heavy. The imports from Belgium and France last week created a record, and they were consigned chiefly to the manufacturers of steel sheets and heavy steel goods in the Monmouthshire district.

METALS.

Tin market commenced with an easier tone, but later improved on a good demand and higher cables from the East. Cash sold at £264 15s to £275 10s, and three months £260 to £271 10s. Eastern cables reported sales on the basis of £263 10s and £268, c.i.f. At Thursday's market values further hardened under sustained buying orders. Standard cash sold at £281 to £282 to £282 to £280 10s, while finally registered at £281. Three months £277 to £278 10s to £276 5s to £277 10s. After opening easier, values moved in an upward direction on Friday, with buyers less in evidence. Standard cash sold at £280, and three months £274 10s to £276 to £275 10s to £278. English ingots quoted at £282 to £282 10s. Copper was in active request, and prices tended in sellers' favour due to firmer advices from America. Standard cash sold at £62 5s to £62 17s 6d, and three months £63 5s to £63 25s 6d to £63 12s 6d. Again dearer at Thursday's session, with business on a liberal scale. Cash sold at £63 7s 6d to £63 11s 3d, mid-March £63 12s 6d to £64, and three months at £64 5s to £64 10s to £64 8s 6d. Very active trading occurred on following day, and rates, while somewhat irregular, moved in sellers' favour. Standard cash quoted at £64 15s to £65 12s 6d to £65, while finally at £65 15s. Electro £69 to £69 10s, best selected £68 to £69 5s, strong sheets £65; wire, £69 10s, best selected £68 to £69 5s, strong sheets £65; wire, £69 10s. Lead firmer and quoted at £34 12s 6d-£33 15s to position. Spelter dearer while in good demand, and quoted at £37-£36 10s to position. Aluminium, home, £115; export, £120. Antimony, English special brands, £54 10s to £55.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The outstanding feature of the wool textile industry is the remarkable way in which raw material is being sold. No doubt many buyers are influenced to some extent by the possibility of a shortage in supplies towards the end of the year, and before the next clip can be marketed, and this probably means that a fair amount of speculative buying is being done. The fact remains, however, that buyers in every country are keen, and although prices are now on a very high level, it would occasion no surprise if values go still higher before the end of the selling season in the colonies. Under the influence of strong wool markets in all centres, topmakers are naturally adopting a policy of caution in regard to new business. Prices are still below replacement costs, and firms will sold forward are inclined to quote protective rates. On the whole, there has been very little change in quotations during the past week, and in most cases tops can still be bought at about last Thursday's level. The real fact is that the demand is decidedly better for wool in the bale and for matchings, and with every stage of manufacture the margin of profit dwindles. Spinners are now well employed, and some good orders have been booked during the last week or two. Unfortunately, in many cases difficulty is being experienced in getting particulars against orders, and this suggests that a certain amount of the recent business has been of a speculative character. However, quotations for yarns are very firm, and although spinners cannot sell at anything like replacement costs, they are doing fairly well, and extreme undercutting is largely a thing of the past.

COLONIAL WOOL.
(FROM A CORRESPONDENT.)

The first series of Colonial wool sales for the year came to a finish last Tuesday, and the results are worthy of the traditions of Coleman street Wool Exchange. The demand for the raw material remained exceedingly good, there was no falling off whatever in the competition, and prices generally in merinos appreciated 7 1/2 to 10 per cent., fine crossbreds 10 to 15 per cent., and medium and low crossbreds fully 15 per cent. compared with the close of the December auctions. This has carried prices to the highest point since the days of the slump, and at last the price of every grade of wool is well above a parity with July, 1914. In the case of merinos, the advance is well over 100 per cent., and other descriptions, particularly fine crossbreds, are costing nearly double what they were worth at the series before the Great War broke out. The rise in medium and coarse crossbreds since last October also means that these wools are now sensibly higher than before the war; in fact, wool of every quality is now fetching big figures. It simply shows that wool is an article of first importance in the trade of the world, and is being wanted in increasing quantities. The home trade has proved to be by far the biggest buyer, taking all round 88,000 bales; 69,000 bales have gone to the Continent, and 6,000 bales to America. Considering the state of the exchanges, it is certainly creditable that the Continent has purchased such a big weight of wool, the renewed activity on German account being significant. It is also believed that a reasonable quantity will finally find its way to Russia, while the purchases of America are the largest for several series.

VEGETABLE OILS AND OILSEEDS.

The first arrivals of the new Plate linseed are to hand, and with shipments now reaching a high level, the outlook for increased production of linseed oil is much better, and the present stringency should soon be eased. Over 200,000 tons of linseed are on passage from Argentina to Great Britain and the Continent, and

10,000 tons from India. This has had the effect of steadying prices both of seed and oil, the latter of which is 40s per ton down on the week for spot and near positions. Egyptian cottonseed is lower, and little trade has been done. Cotton oils, however, are in less active demand, but late prices are held.

Imports of oilseeds, nuts and kernels from abroad in January totalled 149,956 tons, against 134,955 tons in January last year. The exports of vegetable oils manufactured or produced in the U.K. were: refined 3,296 tons, and unrefined 8,093 tons, against 2,581 tons and 10,247 tons respectively a year ago. The feature was the large exports of cotton, soya and palm kernel oils. Linseed oil at 1,810 tons was nearly 1,000 tons less than in January, 1923.

HIDE AND LEATHER TRADES.

(BY OUR OWN CORRESPONDENT.)

The home market is still advancing in hides, best ox selling from 7d to 8 1/2d in Bermondsey on Thursday. Tanners are free buyers, and competition is keen for the better selections, suitable for sole leather. Calf skins are also very firm, and best grades sold from 7 1/2d to 16 1/2d at the auctions. Wools sold from 8s to 16s, and hogs from 5s to 20s 3d, the competition being very keen to obtain them, owing to the good price fellmongers are getting for pelts and wool. Fregorific hides are still too dear for our tanners to buy in quantity, and they are refusing to follow the South American market, although America and the Continent seem content to pay the high rates demanded. Australians and Africans are in consequence selling freely. The Chicago position is cabled as strong, with best heavy packers now selling at 16c. The French embargo on the export of hides and skins is now in force, and a few chrome tanners are finding the stoppage of supplies of calfskins very inconvenient.

There is a decided briskness in the demand for sole leather, and tanners are obtaining higher prices for bends and offal. No French sole is now arriving, and American supplies are short, so that the home tanners' position is very secure for the time being. A few Swedish bends are now on the market, as some users prefer a hammered sole leather, which suits repairers and sole cutters. Imports of undressed leather—mainly sole—for January last amounted to 1,418 cwts from Germany, 1,764 cwts from France, and 8,060 cwts from the United States.

The demand for upper stock is improving, and curriers are turning out semi-chrome and waxed leather in quantities, the only trouble being the high price of rough E.I. kips. Box and willow

Business
of every description.

London Bankers:—Hambros Bank, Limited; Westminster Bank, Limited; Midland Bank, Limited; Cox & Co.

are wanted, and prices are advancing, the cessation of the supply from France affecting the position.

The boot trade is also more lively, the home trade now ordering spring supplies. Exports of footwear last month were valued at £360,927, and imports £96,218.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, February 15th.

SUGAR.—This market continues on a strong upward course, and fresh advances were registered in all directions, while available supplies of grocery sugars are well sought after, with steady absorption in the case of manufacturing. Another stimulating factor proved a report as to Cuban yield falling off in some districts, and fears expressed that ultimate out-turn will not reach estimates. Of British refined, Messrs Tate and Lyle's cubes, also crushed, advanced 2s 3d per cwt, other kinds 1s 6d, and forward granulated 1s 6d. Cubes now 66s 9d to 67s 9d; crushed, 65s 3d; granulated, fine and coarse grain, 64s 7 1/2d; No. 2, also London and T.L., 64s 1 1/2d; ditto forward, 64s; yellow crystals, spot, 59s 7 1/2d; caster, 64s 9d to 66s 10 1/2d, as to quality. All imported sugars very sparingly offered and held for higher figures. White Java, spot, 61s 3d; ditto, May-June, quoted 29s 6d, and June-July, sold, 28s 6d, c.f. and i. terms London, Czech granulated, spot, 62s 6d to 63s; Cuban, basis 96 per cent. March, quoted 30s 6d c.f. and i. terms U.K. 100 tons Madras, cane-jagerry, March-April, sold 22s 6d, c.f. and i. terms London. White Terminal market again disclosed active movements at firmer though rather irregular prices. February delivery sold 34s 9d; March, 34s 9d to 34s 10 1/2d; May, 34s 3d to 34s 10 1/2d; 34s 9d; 34s 10 1/2d and 34s 3d; August, 31s 9d to 32s and 31s 3d; November, 26s; December, 26s to 26s 1 1/2d and 25s 9d; and October-December, 26s 6d cwt.

COFFEE.—Market generally quieter owing to export demand being adversely affected by fears of threatened dock strike, and prices are barely steady. Futures firm, quiet. March, quoted 82s; May, 84s 6d; July, 83s 9d cwt.

COCOA.—Market steady, unchanged on spot. Accra, F.F. grade forward, sold 37s 3d f.o.b.

TEA.—During the week 54,276 packages Indian were offered, and while all good to fine qualities were eagerly competed for at full rates owing to comparatively small supplies, the lower grade found a fair outlet at recent level of prices. 13,000 packages Ceylon were brought forward and soon cleared to a brisk demand at full prices for most kinds. Java and Sumatra sales of 4,000 packages evidenced a quieter demand, and prices moved against sellers.

RICE.—Market firm, but at the same time quiet, both buyers and shippers alike adopting reserved measures. Two stars, spot, 16s 6d; February-March, 15s 3d, c.f. and i., London. No. 3 cleaned Rangoon, late February to early March shipment, 15s, c.f. and i., Levant, double bags. 8/10,000 tons No. 2, March (singles), sold, 12s 10 1/2d, f.o.b. Japanese peas, spot, 22s 6d.

SPICE.—Pepper market steady, with a moderate demand for forward positions of white. Black Singapore, spot, 4 1/2d; February-April, L.S., quoted 4 1/2d; Lampong, ditto, 4 1/2d; Muntok, January-March, 7 1/2d; February-April, 7 1/2d; and March-May, 7 1/2d. Zanzibar cloves, March-May, 1s 2d per lb. Tapioca steady at late rates but quiet, both with regard to spot and forward. Sago flour, January-March, quoted 16s 6d. Desiccated coconut dull. Fine cut, spot, 44s; medium, 46s; halves, March-April, 42s cwt. Ginger firmly held.

JUTE.—Only a moderate amount of business was effected, at about previous quotations. First grade, January-February, Continent, quoted £25 15s; February-March, sold, £26 5s to £26; March-April, £26 10s; April-May, £27 to £26 12s 6d ton. Hessians and twills steady, but trade moves quietly.

HEMP.—Steady for the finer qualities and firm with regard to undergrades, which for some considerable time past have been quoted at proportionately low figures, thereby attracting attention of buyers. J grade, February-April, quoted £37; K ditto, sold, £29 10s to £30 10s; L ditto, £29 10s; and M, £26. New Zealand nominal. African sisal quiet but firm, at late level of prices.

SHELLAC meets with but quiet support, though prices remain firm. T.N., fair quality, spot, quoted 300s; May, 300s.

COPRA.—There was no fresh development in this market, actual business being confined to a limited scale at about previous quotations. F.M.S. Straits, December-February, Rotterdam, quoted £30 10s; January-March, £30 3s 9d; February-April, £29 10s. Dutch East Indies, December-January, sold, £30 15s; January-March, £29 15s. Other descriptions were nominal y quoted, at previous rates. Palm kernels steady, quiet, and March-May shipment, sold, £20 12s 6d per ton to Liverpool.

RUBBER.—Business proceeded slowly, but prices remained at previous level in most instances. Standard Plantation crepe and sheet, spot, and February, sold, 1s 1 1/2d; and buyers, March, 1s 2d; April-June, 1s 2 1/2d; July-September, 1s 2 1/2d; and October-December, 1s 2 1/2d. To New York, standard estate sheet, February-March, quoted, 1s 2d; and March-April, 1s 2 1/2d per lb, c.f. and i. terms. Wild descriptions dull, and call for no comment.

GAMBIE.—Market steady, quiet. Block for shipment q oted 52s per cwt, c.f. and i. terms.

EGG PRODUCTS.—Only a retail amount of business is proceeding at rates showing no material alteration.

FRUIT (DRIED).—Prices in most directions maintained a firm level, but general demand was only fair. Australian currants quoted 56s; but general demand was only fair. Australian currants quoted 56s; but general demand was only fair. Amalia, 50s; Patras, 52s; Vostizza, 70s to 75s. Pyrgos 1 cases, 46s; Amalia, 50s; Patras, 52s; Vostizza, 70s to 75s. Valencia raisins, half-boxes, 50s; quarters, 60s to 80s. Figs: Genuine natural, in bags, quoted 38s to 40s. Evaporated fruits: Genuine natural, in bags, quoted 75s to 80s; French plums, 1 cases, fancy, 110s; apple rings quoted 75s to 80s; French plums, 1 cases, fancy, 110s; apple rings quoted 75s to 80s; Oregon, 30/40, 75s; 90/95, quoted 38s 6d; 81/86 at 41s; 72/77, 47s; Oregon, 30/40, 75s; 40/50, 58s; 60/70 at 45s. Dates quieter. Hallowee, spot, 30s; Khredrowie, 19s 6d; Siar, 17s.

CANNED GOODS.—The market for sardines ruled steady, with good parcels very difficult to obtain. Portuguese, 1/2 flats, quoted 2s 9d to 3s 3d; 1/2 clubs, 3s to 3s 6d; 12 oz, 5s 6d to 6s 6d; 18 oz, 9s to 11s per dozen tins. Lobster quiet but steady, and fancy halves, 130s to 135s. Crayfish, 96 1/2 lbs, 76s. Salmon: This market disclosed very firm features, with an increasing demand. 1 lb flat reds, labelled, quoted 56s; ditto, tall, 44s; 1 lb flat pink, 27s; ditto, tall, 26s 3d; and cases of 96 1/2 lbs, 29s to 30s per case. Canned fruits were a very firm market, as stocks in general are getting short, though business manifested some diminution during the past few days. Singapore pines, 1 1/2 lbs, quoted 6s 7 1/2d for forty-eights; Hawaiian slices, 2 1/2 lbs, 16s 6d to 17s. Californian apricots, 8s to 11s; ditto, peaches, 9s 6d to 13s; pears, 13s 6d to 15s; Australian apricots, 2 1/2 lbs, 8s 6d; ditto peaches, 8s 9d to 9s 3d. Tomatoes, Italian, 7s per dozen tins.

OILSEEDS.—Linseed slightly irregular, but fully steady on balance, with a fair demand for Plate descriptions. Indian: Calcutta, afloat, £22 10s; January-February, £22 5s; April-May, £19 17s 6d. Plate, afloat, sold, £19 2s 6d to £18 17s 6d, as to position; January-February, £18 8s 9d to £18 12s 6d; April-May, £18 2s 6d to £18 5s. Rapeseed steady. Toria, January-February, £19 15s; February-March, £19 12s 6d; Jamba, February-March, £15 7s 6d; and real hold Ferozepore, February-March, £19 10s. Cottonseed easier. Egyptian, black, February, £13 12s 6d. Sakellaridis £12 8s 9d, Hull. Bombay, January-February, £11 2s 6d, paid; February-March, sellers, £11 2s 6d. Gingelly seed, steady. Chinese, January-February, £26 10s. Groundnuts quiet. Coromandel, machine-dried, January-February, £23 15s; Chinese, decorticated, f.a.q., afloat, sold, £23; bold Bombay, ditto, £24. Soya beans steady. Manchurian, afloat, £13 15s; January-February, £13 2s 6d. Castor-seed firm. Bombay, January-February, £24; February-March, £23 10s per ton.

OILS.—Linseed irregular, while in good demand. Spot, net, naked, 50s; February, 47s; March-April, 41s 10 1/2d; May-August, 39s. Rape steady. Crude, spot, 48s 6d; refined, 51s. Castor oil firm. First pressure, spot, quoted 60s; second pressure, 59s; and pharmaceutical, 65s per cwt, Hull, with London 2s per cwt extra. Cotton steady. Crude Egyptian, spot, 45s 3d; Bombay, 43s 3d; common edible, 50s; deodorised (in barrels), 54s 6d. China-wood quiet. Hankow, spot (barrels), 94s; February-March, 98s. Cocanut quiet. Ceylon, spot, 49s 6d; February-March, 47s 6d; Cochin, ditto, quoted 59s. Soya quiet. Oriental, barrels, January-February, 45s 6d. Cod firm. English, spot, 36s 6d. Groundnuts firm. English, crushed, naked, spot, 53s; deodorised, barrels, 61s. Turpentine easier. American, spot, 77s; March-April, 77s 9d. Rosin, quiet. American, grade B, 13s 6d; F, 13s 6d; G, 13s 9d; H to I, 13s 9d; WG, 17s 6d; WW, 18s 6d per cwt. French WW, 17s per cwt. Petroleum steady. American, standard white, spot, 1s; and water white, 1s 1d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on February 13th as follows:—The tallow market was steady during the week, and prices were unchanged to-day. Spot supplies are approaching exhaustion. Offers for shipment from the Colonies are few, while South American kinds are offered freely. At auction to-day 555 casks tallow were offered, and 404 were sold. Quotations are:—Australian mutton: Fine, none; good to fair, 51s to 48s; dull to dark, 43s 6d to 41s 6d; hard, none. Australian beef: Fine, 47s 6d; good to fair, 47s to 44s 6d; dull to dark, 43s to 41s 3d; sweet, none. Present shipment from Australasia: Good mixed, 46s. Present shipment from South America, 44s 6d to 43s. The market letter is unchanged. Town tallow, 41s 6d per cwt. Rough fat, per 8 lbs, 4 1/2d; melted stuff, 32s 6d per cwt. Quotations are:—Town, 43s, net cash, naked, ex works. Country: Frail casks, 43s; home melted, shipping casks, net, f.o.b., good coloured, 46s; fair to dull, 43s to 42s 6d. Bone fat: White, none; pale, none; benzine, 39s 6d; melted stuff, 39s, f.o.b.

THE SUTTON DISTRICT WATER COMPANY.

SALE BY TENDER OF £80,000 7% MAXIMUM ORDINARY STOCK.

Or such an amount of Stock as may be necessary to procure, including Premiums, the Capital Sum of £100,000.

THE DIRECTORS OF THE ABOVE-NAMED COMPANY invite TENDERS for the Purchase of £80,000 7% MAXIMUM ORDINARY STOCK, in lots of £100 each, at a Minimum Price of £118 per Cent.

A DEPOSIT of 10% of the nominal amount applied for to be paid upon application and the balance of the full amount allotted, together with the Premium, to be paid by 1st April, 1924, from which date the Stock paid for will rank for dividend.

The existing Ordinary and Preference Stocks are quoted on the London Stock Exchange, and a quotation for this present issue will be applied for in due course.

TENDERS, to be made on forms provided by the Company, must reach the Company's Offices not later than Noon of SATURDAY, 1st MARCH, 1924, and be enclosed in a sealed envelope, marked "TENDER FOR STOCK."

Particulars and Conditions of Sale, together with Form of Tender, may be obtained of the undersigned.

By Order,
E. F. COURSE,
Secretary.
Carshalton-road, Sutton,
14th February, 1924.

CANADIAN PACIFIC RAILWAY COMPANY.

DIVIDEND NOTICE.—At a Meeting of the Board of Directors of the Canadian Pacific Railway Company held to-day, the following Dividends were declared:—On the Preference Stock, Two per Cent. for the Half-year ended 31st December last; and on the Common Stock, Two and One Half per Cent. for the quarter ended 31st December last, from Railway Revenues and Special Income; both Dividends payable on the 1st April next to Shareholders of record at 3 p.m. on the 29th February instant.—By order of the Board.

E. ALEXANDER, Secretary.
Montreal,
11th February, 1924.

CITY OF TOKYO

5% LOAN 1912 STERLING ISSUES.

that relief has been afforded by special purchases of bills or short securities. With money in short supply discounts have been fairly firm, though a slightly easier tendency was apparent in the last two days, in view of the belief in easier conditions after the end of the fiscal year, when bills taken at current rates may prove profitable to present holders. Fine three months' bills have sometimes been taken below $3\frac{3}{8}$ per cent., though this figure was the more common quotation until yesterday, when the rate eased to $3\frac{1}{2}$ per cent. May Treasury bills have changed hands at $3\frac{1}{8}$ per cent.

	Feb. 22, 1924.	Feb. 15, 1924.	Feb. 8, 1924.	Feb. 1, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills) ..	$3\frac{1}{2}$	$3\frac{1}{8}$	$3\frac{1}{8}$	$3\frac{1}{8}$	..

The Bank return showed a reduction of £434,600 in the circulation, and an addition of £14,200 to the bullion stock, so that there was a gain of £448,800 in the Reserve. Public deposits were £1,058,200 higher as the result of revenue collections, but the chief feature of the return was the rise of £3,988,400 in Other securities, accompanied by an increase of £3,534,600 in Other deposits. As it is known that no money market borrowing took place during the week, the inference is either that other private customers of the Bank had been borrowers on a remarkably large scale, or that the Bank had been buying securities in the market. As the result of the expansion of liabilities the proportion was 0.3 lower at 18.7 per cent. Currency notes outstanding were reduced this week by £1,664,000 to £277,125,500, which includes £1,408,800 for notes called in, but not yet cancelled. The fiduciary issue is £226,266,800, or £21,924,100 below the maximum.

THE STOCK MARKETS.

A fair amount of activity has developed in the Stock Markets this week, in spite of the deterrent effect on business of the home and foreign political situation. The gilt-edged market has remained steady, Conversion Loan having strengthened a little. Activity in the foreign market has centred in dealings in the scrip of the new Japanese loan, which has gone to a substantial premium. The older Japanese issues have improved sympathetically. French bonds were flat at first on the fall in the franc, but recovered later. In the Home Railway market there has been considerable activity in connection with the dividends on the Southern and North-Eastern deferred stocks. Rubbers are dull, but the oil market has improved after a weak beginning. Among industrials, electricity shares have been in demand, and the insurance and banking lists show an improvement. The Kaffir market has been supported from Paris and the Cape, but, apart from a spurt in Cam and Motors, Rhodesians have been quiet.

THE COMMODITY MARKETS.

The dock strike made itself felt in many directions and cast a gloom over most markets. It had a depressing effect on the Cardiff coal market, and tended to weaken prices of pig-iron. There is sufficient work in hand to keep steel works going, but the outlook for the export trade is not encouraging. At Sheffield the execution of export orders continued at a brisk pace, and best steam coal is in good demand. An increased business is reported from Manchester in the cotton trade. Our Bradford correspondent reports that trade is steady, with prices firm all round. Sugar is steady, while tea buyers are acting cautiously. Rubber maintains its price. A check to the upward movement in tin has been established, and copper was weak. The settlement of the dock strike led to a good demand for wheat. The rapid rise of prices in the hide market received a check. Transactions in vegetable oil and oilseeds have been limited. Other details of markets and prices will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

The outstanding feature of the week in the foreign exchange market has been the depreciation of the franc to over 100, with its consequent effect on the general confidence in France. To the French public the rate of exchange still means the franc-sterling rather than the franc-dollar rate, and the fact of 100 being reached and passed has had a far greater moral effect than the movement of an equal number of francs in the rate at another figure. From a closing rate of 96.70 on the 15th, the fatal 100 line was passed on Monday, when the rate closed at 102. At one time on the following day it rose as high as 105.50, but from this there was a slight reaction, and the three following days showed wide movements, down to a rate of 101.45 yesterday morning. As is now admitted by the soberer elements in France itself, the greater part of this collapse has been due, not to foreign machination, but to lack of confidence at home and a general rush to obtain foreign currency, at the moment at almost any cost. The natural reaction against this hasty buying has brought some improvement, but it remains to be seen, now that confidence has once been severely shaken, whether any substantial improvement will be possible for some time to come, and whether the hurried financial measures which are now being rushed through Parliament have not come too late, at least for the immediate present. The movement of the Belgian franc has been still more violent, the rate having risen from 112.95 at the close of the 15th to 126.50 at one time on the 19th. Since then, following Paris, there has been a sharp recovery down to 115.25 yesterday morning. Forward rates in both centres have reacted violently, the Paris quotation for one month ahead having moved on the week from 35 to 70 centimes above spot, that in Brussels from 6 to 15 centimes above. It is satisfactory to see that in spite of these movements, and in spite of the still more serious threat of the dock strike, the position of sterling has remained so firm. Closing at \$4.30½ on the 15th, the quotation at its lowest has not been below \$4.28½, and improved rapidly on the news of the settlement of the dock strike up to \$4.31½ yesterday morning. Forward quotations at ½ cent. per month above spot are very slightly narrower than the 7/8 quoted a week ago. In spite of its extremely flimsy basis, the German mark has managed to maintain steadily its quotation of 19½ billions throughout the week, buoyed up by the hope of agreement in the expert committee making possible the realisation of Herr Schacht's plans for a new central bank. The lira has moved slightly, in sympathy with the franc, from 98½ on the 15th to a highest point of 100½, from which it has recovered to 99½. Among neutral currencies, the Dutch rate has moved sharply in our favour from 11.50 to 11.54, the Swiss franc from 24.74½ to 24.92½, and Madrid from 33.73 to 33.92½. In Scandinavia the Stockholm rate, following the dollar, stands at 16.49½, as compared with 16.48½, while Christiania has risen from 32.22½ to 32.64½. Copenhagen, however, where the exchange would now seem to be better in hand, has improved from 27.20 to 27.02½. In Central Europe, Vienna has moved in sympathy with the dollar, from 305,500 to 307,000, Warsaw has remained stable, with some signs of improvement, at 38 millions. Prague has gone slightly in our favour, but the value of the dinar has again somewhat improved, and Bucharest shows a surprising recovery from 840 to 770. The Hungarian rate, on fears regarding the possible failure of the League of Nations loan, has broken badly, falling away from 120,000 to 170,000. In the East, the rupee has again depreciated, moving from 15 5 1-64d on the 15th to 15 4½d yesterday. In the same way, the yen has fallen in value from 25 17½d to 25 17½d. The silver market has been weaker on Chinese sales, but towards the end would seem to be steadying. Hong Kong has moved from 25 4½d to 25 4d, Shanghai from 35 4½d to 35 3d. In South America Rio remains at 6½d, while Buenos Ayres has again appreciated from 42½d to 43½d, and Valparaiso is better at 42.30 pesos, as compared with 41.10. Monte Video has, however, moved back from 43½d to 43½d.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 16th:—

EXPENDITURE.	(000's omitted.)	RECEIPTS.	£

Interest, &c., on Debt	706		
Road fund	826		
Sundries	601		
Reduction of Debt	14,345		
Increase in balances	266		
	26,047		26,047

Revenue for the week ending February 16th at £26,047,000 was £4,517,000 lower than in the corresponding period last year. Customs receipts were up at £2,054,000, against £1,291,000, but Excise yielded a considerably lower amount at £2,613,000, against £6,133,000. Estate Duties were £50,000 down at £1,110,000, while Post Office receipts were maintained at £1,500,000. Property and Income-tax reached £14,656,000, and Super-tax £2,650,000, against a combined total of £18,385,000 for the corresponding period. Special receipts brought in nil, against £144,000. The week's operations reduced the National Debt by £14,345,000, and caused the following changes:—

EXPENDITURE.	(000's omitted.)	RECEIPTS.	£
Unemployment Insurance	+ 350	Treasury Bills	9,041
		Public Departments	5,300
		Saving Certificates	100
		National War Bonds	250
		Sundries	4
	+ 350		14,695

The floating debt was reduced by £14,400,000 to £813,215,500.

FINANCIAL YEAR, 1923-24 (April 1 to February 16, 1924).

EXPENDITURE.	£	RECEIPTS.	£
Total Expenditure ..	679,488,522	Raised by Revenue ..	688,039,523
Net Repayments	11,565,403	Decrease in Balances ..	3,014,402
Total	691,053,925	Total	691,053,925

ESTIMATES for YEAR 1923-24.

EXPENDITURE.	£	RECEIPTS.	£
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—London Merchant Bank, Underground Group, Scottish Life Assurance, Chamber of Shipping of the United Kingdom, Trade Indemnity Company, Railway Debenture and General Trust, Railway Share Trust and Agency, Imperial Tobacco Company, Winterbotham, Strachan, and Playne, Borax Consolidated, S.T.D. Motors, and Harrods (Buenos Aires).

THE WEEK IN PARLIAMENT.

MONDAY, FEBRUARY 18TH.—In the Commons the Strike Court of Inquiry was announced, the Unemployment Insurance Bill passed its second reading, and there was a debate on foot and mouth disease.

TUESDAY, FEBRUARY 19TH.—Debates in Commons on Trade Facilities, and on Air policy.

WEDNESDAY, FEBRUARY 20TH.—Commons discussed strike and food supplies. The Diseases of Animals Bill passed its second reading. Resolution on Mothers' Pensions debated. House of Lords discussed preferential tariffs.

THURSDAY, FEBRUARY 21ST.—Administration of Justice Bill, Unemployment Insurance Bill, and Legitimacy Bill passed second reading in the Lords, where the Poplar question was also debated. In the Commons a supplementary estimate for unemployment relief was passed, and the adjournment of the House was moved on the question of the Government's decision to call for tenders for five cruisers.

FRIDAY, FEBRUARY 22ND.—Rent Restriction Bill discussed in the Commons.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a statistical review of the effects of the war on Germany's population.

THE FRANCO-GERMAN DRAMA.

WHILE our attention at home has been forcibly held by labour troubles, the Franco-German drama has been unfolding with increasing rapidity. The week has been marked by a new and rapid deterioration of the franc, which fell on Tuesday to more than 105 to the £, and though it has recovered slightly, it is now rather worse than the Italian lira. Spasmodic efforts are still being made to attribute this slump to deliberate action on the part of German and international financiers; but this is little more than a pretence, and it is now frankly stated by such authorities as the *Journée Industrielle* that the cause of the slump is in France. The movement has hastened the passage through the French Chamber of the Government reforms, and after an all-night sitting the Government secured authority to impose the 20 per cent. increase in taxation. But its majority fell at one time to 60, and it still has a very large number of clauses of the Bill to pass. The debate brought out no new points, and is perhaps chiefly notable for the low standard of economic argument. In a discussion of this kind in any popular assembly one would expect to find many unsound economic arguments employed, but it is discouraging to find such an authority as M. Klotz, a former Minister of Finance, arguing that the rise in the cost of living has no connection with the depreciation of the exchange, and endeavouring to prove the point by observing that the cost of living was nearly as high as it is to-day in 1920, when the French exchange was much better. In 1920 prices all over the world were extremely high. The fact that French prices have not fallen from those high levels as they have in England, but are back at those top figures, shows how much French money has deteriorated in comparison with that of other countries.

But although M. Poincaré has got his taxation measures through the House, and will thereby gain some 4½ milliards of francs this year, the continued fall in the exchange is undoubtedly weakening his hold on the country. The difficulty is that there is no outstanding figure to take his place, the only name that seems to meet with any considerable backing being that of M. Clemenceau. But whether there is a change of Prime Minister or not, there is no doubt that French opinion is eagerly seeking a settlement of the European situation. Indeed, it will not be surprising if before long we see some impatience with the experts, and a desire that they should put forward a plan so that it may have some chance of being discussed and even adopted before the French elections take place.

If France shows desire for haste it will be for internal reasons, but, in fact, there are other, and perhaps more important, reasons why the whole question should be handled with the least possible delay. In the first place, there is the Rentenmark. Since the middle of November Germany has been enjoying the benefit of a stable currency, and, largely as a result of this, the Budget receipts have rapidly increased, and for the first few days of January the Budget actually showed a surplus. But this was rather an accident of dates than a general change in tendency. Revenue always comes in rapidly in the first days of January, and very few payments have to be made.

On the other hand, a fairly favourable condition in the Treasury tends to exist in Germany, as in England, throughout the first two or three months of the year, and it is not a coincidence that German efforts at stabilisation have all been made in the spring. Moreover, the latest figures published by the German Government show that in the last twelve months the balance of German trade has been more nearly favourable than the figures hitherto supplied would suggest. Economic conditions have, therefore, been favourable to stabilisation. The present state of affairs, however, can only continue if Budget equilibrium is maintained, or, at all events, if there is confidence that in the long run this equilibrium can be kept. On the present basis of taxation, and in the absence of an agreement either about reparations or the status of German officials in the Ruhr and Rhineland, this confidence cannot be maintained, and distrust might at any moment develop in the Rentenmark and send it the same way as the Reichsmark. Any such tendency will be resisted in Germany to the utmost; for one result of the great panic of last autumn has been to cure all tendency to think that indefinitely continued depreciation of currency can be an advantage to Germany. The moral deterioration which showed itself so markedly while the currency was falling has, as in the case of Austria, disappeared with surprising rapidity, and the whole country eagerly desires to escape a second experience like that of 1923.

These considerations account for Herr Schacht's anxiety to set going a Gold Bank of issue. He has represented the urgency of the question to the Expert Committee, even going so far, it is rumoured, as to threaten publicly to place upon the experts the responsibility for any new depreciation that may occur if his scheme is rejected or delayed. Financial experts in many parts of the world sympathise with his view, for it is realised that to save German currency a second time would be a desperately hard task, while a further blow to the morale of the country might have quite disastrous consequences. At the same time, it is just in such cases as this that we have to remember the adage "More haste less speed." The French members of the Expert Committee—and we should imagine they will carry their colleagues with them on this point—consider that the problem of the Rentenmark is part of the general German problem, and cannot possibly be separated from Reparations, the Budget, and the occupied areas. The problems are interlocked because no foreign lender could put up money with assurance to protect the Rentenmark so long as the indefinite floating charge of Reparations hangs over the whole of German property. But they are also interlocked because the assistance of foreign countries in stabilising the German mark—and without foreign assistance the present stabilisation cannot last—should only be given subject to certain conditions with regard to the Budget, financial control, &c. If credit were given without conditions, it would make the outstanding problem of Reparations, the Ruhr, and the Budget much harder to solve. The urgency, therefore, applies not merely to the question of the mark, but to the whole Franco-German problem.

France is rapidly getting into a frame of mind in which she wishes to settle. But we are not sure that it is going to be all plain sailing, for there is another party vitally concerned, and there are some indications that Germany may not be quite so ready to fall in with an Anglo-French understanding as she would have been some months ago. We do not attach too much importance to affairs in minor States, but a straw shows in which way the wind blows. In the Mecklenberg Duchy and in Thuringia in recent elections the parties of the Right have gained heavily at the expense of the social democrats, and are polling large majorities on the cry that not a penny more reparations is to be paid, or the cost of a single soldier in the army of occupation. If this temper should be reflected in the forthcoming elections for the Reichstag, our Government may find itself in the position of agreeing with France on an acceptable compromise on the question of reparations, and the occupation of German territory, but faced with a recalcitrant Germany. It has been the tragedy of Europe for the last five years that sooner or later each country has seen reason, and come to the right conclusion, but that unfortunately they have never been in this

frame of mind at one and the same time. We do not wish to look for trouble, but it is as well that this country should be alive to some of the possible difficulties of the situation. Its immediate duty is to try and see if it can reach with France a fair settlement of this eternal question. But the Government must, at the same time, be making up its mind on the further question as to how far it is prepared to go in bringing pressure to bear on Germany to accept an agreed solution. If France can have assurances in this respect it will be the surest way of reaching an understanding rapidly.

MONETARY POLICY.

MR RAMSAY MACDONALD made an important statement on Monday as to the Government's policy on the subject of currency. In reply to a question, he stated that "the re-appointment of a Committee on currency and foreign exchanges at the present time would be premature and inexpedient; the Government are still guided by the conclusions of the Committee on currency and foreign exchanges commonly called the Cunliffe Committee." This reply is of first-class importance, because it indicates that in theory, at all events, the Labour Government is opposed to inflation, a device which might ease their task of raising revenue, lead to a nominal rise in wages, and give a false impression of prosperity. We hope the Government will be strong enough to stand to this view when it faces the difficulty of finding the funds which it will need to fulfil its promises of social reform.

But though the statement has this negative importance, it does not carry us very far on the practical problems of currency policy. The Prime Minister refused to be drawn, or to say anything in explanation of the answer we have quoted. At its face value, the answer implies that the policy of the Government is to bring back the dollar exchange to par and to restore the gold standard. But how rapidly, and in what way? Mr Ramsay MacDonald must be prepared to be a little more explicit than this if he is to satisfy the legitimate curiosity of the business world. Some months ago Mr Baldwin declared that his Government had no intention of pursuing a policy of active deflation, that they believed in stability of internal prices rather than any attempt to regulate prices downwards, with a view to restoring the parity of exchange, and by inference that they were prepared to wait until a movement in American prices occurred which would restore the exchanges to par. In adopting this view the Government were following the recommendation of the Brussels Conference, which declared that "deflation must be gradual." Mr Baldwin so far agreed with Mr McKenna that he thought that deflation must be so gradual as to be almost imperceptible. Does Mr Ramsay MacDonald accept this interpretation of the Cunliffe report? We have no reason to doubt it; but it is very desirable that the Prime Minister should leave no ambiguity on this subject.

We regret that the Prime Minister should have coupled with this statement a refusal to appoint a new Committee on currency and the foreign exchanges. The Cunliffe report itself is so general that very varied policies might be pursued without running counter to its general instructions. It is time that in the light of post-war experience an attempt should be made to define our monetary policy more clearly. Moreover, since the restoration of the gold standard has been so long delayed, new problems have become of first-rate importance. One of them was dealt with very fully by Mr McKenna in his recent speech to the Midland Bank. Without attempting in any way to lecture the Bank of England, he made it quite clear that in the absence of a self-regulating currency the Bank of England must decide to what extent and in what way it will make possible an increase in the money of the country when such an increase is required by an expansion of the volume of trade. It is not easy to say how urgent this question may become, for the needs of expanding trade will to some extent be met by a greater rapidity of turnover of Bank money and of notes, but we do not want to run any danger of holding up trade recovery through lack of elasticity in our money supply. In this connection there is a strong

argument for combining the Treasury note issue with the Bank of England, and of having one monetary control authority instead of two. These are questions which may at any time become urgent, and for this reason we cannot agree that the proposal for a new Committee is either premature or inexpedient.

The truth is, however, that the details of currency policy are so complex and at the same time so far reaching that a Government which has been overwhelmed with numerous important questions—to say nothing of labour troubles—cannot have had time to make up its mind upon them, or even to have digested fully the views and arguments of its expert advisers. For the moment, the City will be well content with the knowledge that in this matter the Government is free from currency fads, and seems little tempted by the attractions of inflation. Whether employers, as represented by the Federation of British Industries, will be quite so pleased is another matter. It is true that in the letter of Sir E. Geddes to the Prime Minister dated February 14th, as in previous communications, the Federation deny any desire for inflation; but it has never been averse to seeing prices rise and has always harboured a sense of grievance on the ground that Government financial policy was responsible for the fall of prices following the boom of 1920. The argument runs that by funding a large amount of Treasury bills between 1921 and 1923 the Government restricted the buying power of the nation. In the latest letter issued by the Federation the thesis appears in this form:—"A policy of active 'deflation' may at any moment be resumed by reducing the amount of Treasury Bills in the hands of the banks, and that if Treasury action in this direction were to prevent the banks from obtaining the necessary cash resources required by an expansion of production, credits must be restricted and the trade revival checked." But the idea that a reduction in Treasury bills necessarily reduces the purchasing power available in the country or that deflation has been brought about by this means is almost pure illusion. In the first place the facts are against it. The big fall of prices occurred between the middle of 1920 and the end of 1921. At the first date the Treasury bills outstanding were £1,050 millions; at the second, £1,060 millions. During the ensuing two years the volume of trade has steadily increased, and the level of prices has slightly hardened—so that the total money value of business done has appreciably increased. Yet the Treasury bills outstanding had fallen from the above figure to £652 millions at the end of December, 1923. Secondly, the theory does not stand much examination. Treasury Bills may be repaid either by exchange for longer-dated securities or by being repaid out of a Budget surplus. If the bills are in private hands (e.g., insurance companies) neither form of repayment affects the monetary situation—though in the second case the character of the National demand may be affected by the transfer of spending power from those who might have bought goods for consumption to those who will probably invest again. If the bills are held by banks the result is not quite the same. A bank which substitutes long-dated investments for its Treasury bills will need to make more of its assets liquid. There will, however, be no reduction of deposits, and its ratio of cash will remain unchanged. If, on the other hand, they are repaid from a Budget surplus, the deposits of its customers will have been reduced by taxation. The balance-sheet will show a fall of deposits and an equivalent fall in "Bills Discounted." But the bankers' balances at the Bank of England will be unchanged, the net result being that the percentage of cash reserves will show an increase. This means that the banks are in a position to increase advances to trade if a use can be found for them. In other words, withdrawal of Government bills puts the banks in a position to substitute trade bills for Government paper. For some time past the banks have been in this position of desiring to substitute trade investments for Government investments.

Apart, however, from theoretical arguments, those who suffer from the Treasury bill scare would do well to make a note of the figure mentioned a month ago by Mr McKenna, who states that his bank only held £9 millions of Treasury bills. If the other banks are in a similar position, it is clear that the great bulk of these bills must be in private hands, and any effect of further payment

upon the banking situation will be very small indeed. We sincerely hope that Mr Ramsay MacDonald will not be deterred from repaying debt or even seizing favourable opportunities of funding operations or conversion by the idea that the monetary machine requires the maintenance of vast quantities of Government obligations varying in date from three months to infinity.

THE GOVERNMENT DEFEAT IN INDIA.

LAST Monday, in the Indian Legislative Assembly, the Viceroy's Government was defeated (by 76 votes to 48) on what was, in effect, a motion for the immediate introduction of full Dominion Self-government. The debate arose on a motion introduced by Mr Rangachariar, a member of the Moderate party, inviting the Governor-General in Council to take early steps—including, if necessary, the appointment of a Royal Commission—for the Revision of the Government of India Act, in order to secure for India full self-governing dominion status within the Empire, and full provincial autonomy. Mr Rangachariar's resolution provoked amendments, the most important of which was moved by Mr Molilal Nehru, the leader of the Swarajist Parliamentary party, and it is this amendment which has been carried, by the substantial majority above mentioned, after ten days' energetic debate.

Briefly summarised, the amendment contained the following three recommendations:—(i) That the Governor-General should take steps to have the existing act revised with a view to the establishment of full responsible government; (ii.) the early convocation of a round table conference to draft a constitution (the rights and interests of important minorities being safeguarded); (iii.) the dissolution of the present Assembly, and submission of the draft simultaneously (a) to a new Indian legislature for approval, and (b) to the Imperial Parliament for embodiment in a statute. Under the existing constitution, the voting of this amendment can, of course, be rendered ineffective from the technical point of view by the executive Power, but the Indian Government's defeat on this issue may be of considerable psychological importance—the more so, inasmuch as the Swarajists have shown marked address in their parliamentary tactics. Mr Molilal Nehru was deliberately moderate, and even suave, in his manner; he did not allow himself to be deflected by the more violent style of some of his colleagues, and he had prepared his ground by securing (the day before the debate began) a combine between his own party and the Independents, who accounted between them for 72 votes out of the 76 which his amendment received. The political prestige of the Swarajists will thus be enhanced by the steps leading up to their success, as well as by the achievement itself. The debate, moreover, was conducted on a high level, and was representative of most elements and opinions in the House—though the House itself, of course, is not by any means fully representative of the country. Meanwhile, Swaraj has been gaining further ground in the politics of Bengal, where the newly appointed minister for local self-government has been beaten in a bye-election by the Swarajist candidate—a relation of the Bengal leader, Mr Das, who reorganised and modified the Swaraj movement after Mr Gandhi's arrest in the spring of 1922.

Having proved their ability in parliamentary tactics, the Swarajists are no doubt alive to the larger problem that would confront them supposing that their parliamentary successes were to lead on, sooner than is contemplated under the present Act, to the full responsible government which they are demanding. That problem may be summed up in the one word "unity." Their recent parliamentary victory itself was the fruit of a successful understanding with a different, though not very distant, political group. Can they carry co-operation progressively across the barriers of province, caste, and religion? Mr Gandhi, who is a man of vision, has always placed unity in the forefront of his programme, and after his release from imprisonment a few days ago, on account of his health, one of his first acts was to write a letter to Mr Muhammad Ali, the leader of the Caliphate Movement, and President of the Indian National Congress, in which he declared that Mr Muhammad Ali's presidency "will be judged solely by what he will do in the cause of union."

Relations between the Hindu and Muslim communities have, indeed, been becoming less cordial than they were—a tendency which is perhaps due partly to the political success of the Swarajists and partly to the fiasco of the Caliphate movement, to which the *coup de grâce* was given not long ago by the Government of Angora. The rise of Swaraj would in any case have revived the Muslims' fear of being swamped by a Hindu majority, and this has coincided with the breakdown of that solidarity between Indian Muslims and the remainder of the Muslim world for which the Caliphate movement stood. That solidarity, of course, was never more than academic, and depended largely upon the mutual ignorance that subsisted between the Turkish Nationalists and the Indian Caliphatis, so long as Angora was cut off from India by the continuance of a state of war between the Kemalists and the British Empire. The essence of Turkish Nationalism was the *état laïc*, sovereign, uncompromising, and clothed in all the political dogmas of modern France; while the Caliphate movement was an archaistic revival of theocratic principles which had never been realised, in their purity, in the historical Caliphates of Baghdad or Constantinople. Since Nationalism and Theocracy are both jealous gods, there was bound to be war in the Muslim Heaven as soon as the two powers made contact with one another; and the denunciation by the Angora Government of the letter concerning the Caliphate which was addressed to them some weeks ago by the Agha Khan and Mr Ameer Ali, must have destroyed the last illusions in Indian Muslim circles regarding any real identity of view between their own community, who think as a minority, and their Turkish co-religionists, who wish to make the Turkish nation as supreme in Turkey as the Swarajists (in some Indian Muslims' belief) wish to make the Hindu community in the future the self-governing national State of India. Thus, deprived of their visionary support from abroad, which had encouraged them to co-operate with Mr Gandhi (in the feeling that they could hold their own at home, even under self-government, with this external aid), the Muslims are bound to revise their attitude, and the results are already apparent. The Swarajists of Bengal are not finding it easy to establish a concordat with the numerically very powerful Muslim element in that province; and there is an equal significance in the cautious opposition to Mr Motilal Nehru's amendment, which was displayed during the recent debate by the Muslim representatives in the National Assembly.

Let it be said at once that this tendency is no more desirable from the British point of view than it is from that of the Muslims themselves and the Swarajists. *Divide et impera* was the device by which the old Hapsburg monarchy prolonged an uneasy existence for one or two generations, but it is not in the political traditions of the British Empire. We have a better ideal, and a better sense of ultimate possibilities, for India. Indeed, the fundamental feature in the situation (and this is what justifies optimism when we are negotiating awkward corners) is the identity of our ultimate object with the object of the principal Indian party now opposing our rule. Great Britain's ambition for India is that very "responsible Government" which is demanded in Mr Motilal Nehru's amendment; and the conflict of wills is over method and speed, and not over principle. Therefore, however acute this conflict may be at times, there is always common ground on which we can meet the Swarajists in order to take stock with them of the situation, or at least to call upon them to take stock of it for themselves.

After the victory of the Swarajists in the Assembly, there are two questions which most responsible Englishmen, from the members of Mr MacDonald's Government on the one side to the moderate Conservatives on the other, will be inclined to put to them: "Do you possess the degree of national unity necessary for the degree of national self-government which you are demanding? And, as would-be responsible statesmen yourselves, can you sincerely maintain that the British nation would be justified in conceding full self-government to you without the assurance that you were already sufficiently united to make it a success?"

This is the next stage, and it is for the Swarajists to make the first move, for national unity is obviously very far from being achieved at present. Apart from the

major division between Muslims and Hindus, the Sikhs are chronically on the warpath in the Punjab—where a restoration of this minority's ascendancy would be equally unpleasant to the Muslim and to the orthodox Hindu elements in the population. There is the anti-Brahman movement in the South, and, apart from the clashes of race and religion, there is the constitutional difference between the British provinces and the native States whose sovereigns are in treaty relations with the King-Emperor. As British India moves towards self-government this difference will become more pronounced, and the obstacle which it places in the way of unity more difficult to deal with. In the course of the recent debate at Delhi, a young member, educated in England, is reported to have alluded to the native States as "medieval survivals." Yet at that precise moment the sovereign of the most important of these States, the Nizam of Hyderabad, was demanding, on grounds of legality, the restitution of the great Province of Berar, which has been under British administration since 1853.

In view of all this, we can only commend the promptness and the frankness of Mr MacDonald's message to India on the morrow of the formation of his Government, for it may soon be necessary for him to "disagree without hostility" in dealing with his Indian fellow-subjects, as well as with his French allies.

COAL PRODUCTION, WAGES, AND COSTS.

It is, unfortunately, too early to give a complete statistical picture of the coalmining industry in 1923, as the final ascertainment for the last quarter have not as yet been made. The returns for the third quarter of the year have, however, recently been published (Cmd. 2,043), and it is possible to form some sort of estimate, at any rate, of the wages paid in the last three months, while production figures are already to hand.

Perhaps the most satisfactory feature of the year is the steady increase in output. In one week in December nearly 6,000,000 tons of saleable coal were raised, while the total for the last three months of the year was close on 72 million tons, which compares with 65½ million tons in the previous quarter, and some 73 million tons in the corresponding quarter of the record year 1913. The total number employed, however, including clerks and salaried persons, was 1,198,000, or some 81,000 more than were employed in the industry immediately before the war.

The number of days lost at the mines which might have been worked showed a welcome fall in the last quarter, and this was particularly noticeable in the case of time lost on account of transport difficulties and want of trade. The only exception to the increase in working time as compared with the previous quarter was provided by the South Wales field.

A general summary of production costs and proceeds (on a tonnage basis) for the country as a whole down to September 30th last is given in the following table:—

	During the Quarter Ended			
	Dec. 31, 1922.	March 31, 1923.	June 30, 1923.	Sept. 30, 1923.
Costs of production—				
Wages*	11 4 95	11 6 63	11 11 50	13 3 26
Stores and timber	2 0 97	2 0 87	2 2 25	2 3 07
Other costs (management, salaries, repairs, office and general expenses, depreciation, &c.)	2 11 64	2 4 68	2 6 64	2 9 33
Miners' Welfare Fund contributions	0 1 10	0 1 09	0 1 09	0 1 08
Royalties (including the rental value of freehold minerals where worked by the proprietor)	0 6 47	0 6 31	0 6 39	0 6 47
Total costs	17 1 13	16 7 58	17 3 87	18 11 21
Deduct proceeds of miners' coal	0 1 33	0 1 41	0 1 24	0 1 12
Total (net) costs	16 11 80	16 6 17	17 2 63	18 10 09
Proceeds of commercial disposals	18 6 19	18 11 48	20 5 28	19 10 31
Balance: Credit	1 6 39	2 5 31	3 2 65	1 0 22

* Including subsistence allowances paid to low-paid day-wage workers.

It will be noticed that the total net costs rose steadily during the first three quarters of the year. As compared with the second quarter of the year, the rise in the quarter ended September 30th was 1s 7.46d per ton, of which increased wages accounted for 1s 3.76d per ton. The credit balance is, of course, divided in fixed proportions between the employers and the men, and thus represents the surplus accruing to the industry during the respective period, and not the profits actually made by the mine-owners. It is important to notice that the proceeds per ton, which rose steadily in the first half of the year, had once again begun to fall, and this tendency continued in October, when, however, there was also a fall in the total net costs, and a noticeable rise in the credit balance.

In view of the dissatisfaction felt by the miners as to the present situation, which has led to their giving the necessary three months' notice to terminate the National Agreement which is now in force, it may not be without interest to give the wages paid of recent months, expressed as percentages of the rates ruling in July, 1914. The wages for November-December were calculated on the basis of the results of colliery working during July and August, 1923, while the results in September-October form the basis of wages now being paid (January-February).

WAGES EXPRESSED AS PER CENT. OF JULY, 1914, RATES.

Coalfield.	Period.	
	Nov.-Dec., 1923.	Jan.-Feb., 1924.
Scotland	135.80	140.78
Northumberland	158.79	149.90
Durham	142.63	139.93
S. Wales	120.63	120.00
Eastern federated area	134.21	141.51

In the Lancashire, Cheshire, and North Staffordshire, the North Wales, the South Staffordshire, and the Cumberland fields, the percentage payable was the minimum guaranteed by the Agreement (= 120 per cent. of the rates ruling in July, 1914); while the same is now true of the South Wales area also.

Wages thus remain regrettably low: the estimated average earnings of workers of all classes and ages being 10s 4d per shift during the last quarter of 1923*, as compared with an ascertained average of 10s 7½d per shift for the quarter ended September 30th last. It must, however, be remembered that the output of coal per man-shift worked is not up to the pre-war standard, and, indeed, the figure for the third quarter of last year, which stood at 17.42 cwts, was actually lower than that of any quarter in 1922. It seems reasonably certain, however, that the ascertainment for the last quarter of the year, when published, will show a considerable improvement in this respect.

The question of production per man-shift is one of the very greatest importance in all discussions relating to the coal-mining industry. At a time when many points are about to arise for consideration, the relationship between the output per man employed and the length of the working day should be carefully examined: for cheaper coal will only be available by means of increased production, which is, indeed, essential for the prosperity of all who are connected with the industry.

RUSSIAN PUBLIC FINANCE.

(BY A CORRESPONDENT.)

EVEN in pre-war days the system of public finance in Russia left much to be desired. That system was, however, swept away in the course of the Revolution, together with the banking, industrial, and trading organisation of the country. It was not until 1922 that an attempt was made to build up again an organised fiscal system, to regulate public expenditure, and embark on the extremely difficult task—in a ruined country—of raising revenue to meet it. This process of organisation is still going on. Much has been done to bring together the remnant of the former Treasury, Inland revenue, and Customs' officials,

and to train up younger men to complete the required staff. Great efforts have been made to establish a clear line of demarcation between State and local finance. Less than a year ago local Soviets were still accustomed to call on Moscow for funds whenever they were short of money, which was the rule rather than the exception, while no proper administration and control of local finances can be said to have existed in the vast majority of cases. The position in regard to this is now better, and if local authorities are still very backward, and often corrupt in their fiscal methods, they have been made to understand clearly that they can expect no help from the Central Government, and must balance their provincial, county, and rural district budgets as best they may.

As regards the State Budget, it is still extremely difficult to determine what importance attaches to the figures published. As A. I. Rykov, Lenin's newly appointed successor as President of the Council of People's Commissaries, aptly remarked, in a recent speech, there has been—and, it is to be feared, always will be—a tendency in Russia to think that to make a plan is to solve a problem. Hitherto, indeed, the Soviet Budget has given so much trouble—last year it was revised three times—that the end of the financial year has approached before it has been finally ratified. Last year, moreover, the serious crisis which developed during the late summer in connection with the abnormal disparity between the indexes for industrial and agricultural commodities, seems to have upset all calculations, and the final Budget returns for the year ended September 30, 1923, have yet to be determined. However, an approximate presentation of the position is attempted in *Economic Life* for January 30th, where a comparison is offered between what is believed to represent the State expenditure and revenue under the Budget for 1922-23, and the estimates which it is hoped to realise for 1923-24:—

(In Millions of Chervontsy Roubles.)					
EXPENDITURE.		REVENUE.			
	1922-23.	1923-24.		1922-23.	1923-24.
	Approximate Results.	Estimated mates.		Approximate Results.	Estimated mates.
Transport	542	670	Taxation, monetary and in kind	378	498
War	226	313	Revenue from other property and enterprises (excluding Railways & Posts and Telegraphs)	48	141
Govt. Departments	371	420	Communications	376	598
Industry	116	69	Posts and Telegraphs	25	38
Agriculture	66	47	Total of ordy. revenue	827	1,276
Electrification	24	39	EXTRAORDINARY REVENUE.		
Co-operation	9	20	Credit operations and realisation of foreign currency	129	253
Treasury operations	54	130	Emission of paper money	390	180
	1,408	1,708	Grand total	1,355	1,709

As will be seen, even after allowing for 390,000,000 roubles of deficit last year, for which paper money was issued, a further deficit of 53,000,000 roubles remains over, which, it appears, will simply be carried over into the present financial year. Even if due allowance is made for some progress towards recovery in Russia during the present year, an increase of 300,000,000 roubles in expenditure seems scarcely justified, and when it is disclosed that this increase is based on anticipations that the national wealth of the country will increase from an estimated 6.5 milliard roubles in 1923 to 7.5 milliards in 1924, and that additional revenue will accrue proportionately, the hazardous character of Soviet fiscal policy stands plainly revealed. In the post-revolutionary conditions of Russia, where the general economic situation remains very unstable, it is obviously a matter of great difficulty to make an estimate of the national wealth likely to be of any practical value. When, on the top of this,

a 25 per cent. increase in State expenditure is justified largely on what is conjectured may be a 15 per cent. increase in the national wealth during the current financial year, it is clear that little confidence in Soviet finance can be entertained.

Analysing the proposed estimates for the current year, the increase of 130,000,000 roubles in the expenditure on transport is said to be accounted for by additions to the wages bill and higher costs of running. The sharp rise in the price of metal has undoubtedly made it difficult for the Railway Department to reduce its deficit, although half the orders given to the State metal trusts have been cancelled in the effort to make both ends meet. As regards railway revenue, if the anticipated 600,000,000 roubles is to be received for 1923-24, the average monthly receipts from January to September will have to amount to nearly 52,000,000 roubles, as the average during the first quarter of the financial year—October-December, 1923—shows an average monthly revenue of 45,000,000 roubles. This latter figure constitutes an increase of 4,000,000 roubles on the September returns, and is a little difficult to credit in view of the restrictive effect on freights of the trade depression, even after allowance is made for the autumn demand for rolling-stock to convey export grain to the ports. The average monthly revenue of the railways before the war was 100,000,000 roubles, and the amount of goods carried last year is given as about one-third of the pre-war traffic. The railway budget for 1923-24 seems to be based on the anticipation of a substantial increase in the volume of this year's traffic. The increase of 90,000,000 roubles in expenditure on war establishments is explained chiefly by higher pay for the general staff and officers of senior rank, and the total of 813,000,000 roubles is claimed as modest compared with war estimates of about one milliard roubles annually in Tsarist times. Higher wages again account for the 50,000,000 rouble rise in the estimates for the various other Ministries. The Treasury has disembarrassed itself of a further batch of industrial enterprises—including the oil industry—which are now left to rely on bank credit and no longer receive State support. The coal, iron and steel industries alone remain dependent on the Budget. Thus an economy of 57,000,000 roubles is hoped for in industry, and a further 19,000,000 roubles is saved on agriculture. In a country so impoverished as Russia, expenditure on electrification seems of doubtful urgency, and an additional outlay of 15,000,000 roubles on it unjustified, while the increase of the State subsidy to the co-operatives from 9 to 20 million roubles is obviously dictated by the desire to bolster up State trading organisations, which have recently shown themselves very inefficient, as against the more successful, though much hampered, private trader. Returning to revenue, the increase of 120,000,000 roubles in taxation seems a far too optimistic forecast, more especially having regard to the opinion expressed by many Soviet economists that the taxable capacity of the population has already been reached. Nor is it any the less a subject for dubious speculation that an additional 92,000,000 roubles should be awaited this year from the forests, the State trusts and trading organisations and the banks, all of which are said to have brought in only 48,000,000 roubles last year. The whole Budget has, indeed, been framed on the assumption that this year the general economic situation will be far more favourable than it was last year, and that accidents—always very liable to occur in a country where conditions still remain highly unstable—will not take place. Meanwhile, in such an important branch of Russian economy as agriculture, apprehension is already being felt for the winter crops, and if nature should chance to withhold her benefits during the late spring and summer a serious situation might easily arise, which could not fail to affect the Budget. When, moreover, it is borne in mind that last year's autumn crisis plunged the fiscal authorities in such confusion that no complete final figures of revenue and expenditure for 1922-23 have yet been published, and when it is remembered that the Soviet Government is on the point of soliciting large credits from Great Britain and other countries, the projection of this year's Budget on so precarious a foundation is difficult to understand.

BOOT AND SHOE COMPANIES' PROFITS.

CONDITIONS in the boot and shoe industry are gradually improving. For 1921 our exports of boots and shoes amounted to only 312,252 dozen pairs, a significant falling off when compared with 818,969 dozen pairs exported in 1920 and 1,452,815 in 1913; in 1922 the figures moved up to 491,749, and last year a further improvement in exports was recorded when the total reached 796,026 dozen pairs.

The home trade, as represented in the figures of a dozen boot and shoe retailing companies, continues to make good progress. Practically all the companies which we have selected as representative of the trade have recovered from the disastrous effects of the slump, while in some cases profit figures have expanded beyond the high-water mark registered in the boom period. The directors of these boot and shoe undertakings are to be congratulated upon the promptitude with which they issue their accounts; most of the accounts dealt with in our tables are made up to December 31st; and, moreover, in the majority of cases there is good evidence that those responsible make some effort to clarify accounts. We have not come across a single case where a policy of concealment is suggested.

In the following table net profits are given for 12 boot and shoe undertakings for the past four years; figures for 1914 are submitted for comparative purposes:—

	1914.		1920.		1921.		1922.		1923.

* Free of tax. † Year ended March 31.
(a) Profits before making allowance for depreciation.
(b) Year 1912-13.

Freeman, Hardy and Willis maintain their lead with profits of £180,428 as against £175,197 a year ago; the dividend is still 17½ per cent., which has been the figure for last four consecutive years. J. Sears, with an increase of profits from £132,778 to £169,695, raise their dividend distribution from 17½ per cent. to 22½. The Lotus Company keep steady at £143,162, as against £142,622 for 1922; in this case there is no change in the dividend at 10 per cent. Stead and Simpson increase profits from £57,841 to £70,418, but cautiously retain a 10 per cent. distribution.

The next table shows how the available balances in hand were distributed:—

	Brought In.	Net Profit.	Prefer. Dividend.	Ordinary Dividend.	To Reserve and Sundry Funds.	Carried Forward.
Freeman, Hardy, & Co.	100,661	180,428	11,532	69,394	91,800	108,663
Greenlees and Sons	17,396	32,489	14,414	5,189	12,500	17,794
H. E. Randall	19,285	36,829	5,100	19,112	5,000	26,574
J. Sears	61,634	92,715	16,486	21,000	99,070	87,900
Lennards	34,007	48,402	2,397	7,500	15,625	10,163
Lilley & Skinner	10,154	5,851	3,019	3,802	10,226	16,315
London Shoe	847	14,408	3,900	52,236	70,000	16,834
Lotus, Limited	14,895	83,012	18,987	6,150	6,000	39,162
Public Benefit	37,840	40,257	36,702	23,230	14,000	561
Salter & Salter	Dr 4,587	3,945	5,400	14,000	64,725	38,430
Stead and Simpson	50,520	70,418	9,793	10,575	18,935	18,935
W. Abbott & Sons	13,166	20,544	4,200	10,575	18,935	18,935

The item "reserve and staff funds" mentioned in our table above requires, perhaps, further explanation. In the case of Freeman, Hardy, and Willis, included in the above £91,500 is £10,000 "amount due to directors and staff," £52,500 "income-tax account," £25,000 "bonus to employees," and £4,000 "local and other charities." It is obvious in many cases that in distributing profits workers have not been overlooked, and in this respect the directors are to be congratulated upon their vision and

commonsense. The Lotus Company place £50,000 to reserve, £10,000 to an "employees' benevolent fund," and £10,000 set aside "for the purpose of establishing a pension fund." J. Sears and Co. allocate £25,000 to reserve, and increase the amount "carried forward" from £63,275 a year ago to £87,900.

Our next table shows principal assets and liabilities in the past three years:—

	Principal Liabilities.					Principal Assets.				
	Ord. and Pref. Capital.	Debts, Liabilities, and Loans.	Reserves.	Creditors.	Property, Plant, and Fixtures.	Stock.	Cash and Bank Balances.	Debtors.

Most of the balance-sheets are well set out. We would suggest that Freeman, Hardy and Willis might show whether investments are taken at cost or at market value. Greenlees record goodwill at £100,000, and show £10,000 under assets as company formation expenses; this last item indicates the absurdity of describing entries on this particular side of the balance-sheet as assets. H. E. Randall present a clear statement of affairs. J. Sears and Co. show with pride that goodwill, which on December 31, 1922, stood at £141,051, is now completely written off out of reserves; we confess that here again we should like to know how "British Government securities" at £262,750 have been valued. Lennards are also proud of the fact that goodwill was completely written off in 1908, while for 26 years trade creditors have appeared in the balance-sheet as "nil." Lilley and Skinner have goodwill valued at £30,000, but there is a reserve account of £105,000. The Lotus Company issue particularly interesting accounts. Investments are taken at £279,902, with a market value of £280,597, while there is a reserve of £120,000, against goodwill estimated at £176,504. The Public Benefit might find that it would please some shareholders if they could separate goodwill from property, which at present are shown together as one item.

With this particular trade in such a sound financial state the future can be faced with a considerable degree of confidence. It was recently pointed out in these pages that the bad weather, while proving very unsatisfactory to pedestrians, was a favourable factor in the boot and shoe trade. This will no doubt be properly appreciated in financial circles. We do not show a table of share prices and yields, as the majority of the ordinary shares either lack quotations or possess a narrow market. Apparently, shareholders are confined to the chosen few.

RECOGNITION IN INTERNATIONAL LAW.

(BY A LEGAL CORRESPONDENT.)

THE disturbed condition of international order during the past decade has given a fresh importance to the various kinds of recognition which are known in international law, so that it may be useful to examine some of the principal varieties of recognition and their consequences. Recognition is essentially an act of policy, but it has important legal consequences, and, when too long delayed or too precipitately granted, may have serious political consequences. We shall deal with the subject under three headings: Recognition of Belligerency, Recognition of new States, Recognition of new Governments.

Recognition of Belligerency need not detain us for long. It occurs when upon the occasion of an insurrection the Government of the parent State or, more frequently, of some third State accords the status of belligerents to the insurgent community. Its principal effect as regards third States granting recognition of belligerency is that from that moment the normal rules of war as between a belligerent and a neutral State come into operation, and the insurgent community may exercise, as against the subjects of the third State, the belligerent rights of visit and search upon the high seas, and of capture and condemnation for breach of blockade, the carriage of contraband, and unneutral service. Readers of the Life of Sir William Harcourt will remember that it is to this question that the famous letters of *Historicus* to the *Times* which established Harcourt's reputation as an international lawyer, were mainly directed. The Government of the Confederate States in 1861 sent a mission to London to ask Earl Russell to recognise them as an independent State. This he very properly declined to do, but granted them recognition of belligerency as they were waging a war both by land and by sea, and President Lincoln had already proclaimed a blockade of the coasts of the Confederate States. This grant of recognition of belligerency was for many years complained of by the Federal Government as an unfriendly act, but largely owing to the powerful reasoning of *Historicus* this view did not gain general acceptance throughout the world. It is usually stated that when an insurgent community has an organised though provisional Government, is in effective control of territory, and is waging war in accordance with the recognised rules for the conduct of war, a third State who or whose subjects are likely to be affected by the hostilities can, without any unfriendliness to the parent State and without expressing approval of the insurrection, grant recognition of the belligerency. An unusual instance occurred in 1918, when the Allied and Associated Powers recognised the belligerency of the National Council of the Czechoslovaks, which, located in Paris and operating through three armies in France, in Italy, and in Siberia, was in control of no territory at all.

Recognition of a new State is recognition by one or more existing States that a new State has emerged and become a member of the family of nations. It can occur in a number of ways, as, for instance, by publishing a declaration of recognition, by receiving or sending an ambassador, by a treaty declaring and establishing the independence of the new State. In 1918 and 1919 the Succession States of the Russian and Austro-Hungarian Empires were recognised as new States. Thus, by Article 817 of the Treaty of Versailles, "Germany, in conformity with the action already taken by the Allied and Associated Powers, recognises the complete independence of Poland."

Recognition of new Governments of existing States.—This is perhaps the most troublesome and controversial of all the varieties of recognition. (a) The existence of a State is something quite apart from the continued existence of any particular form of government which it may have adopted. Changes from a monarchy to a republic or from a republic to an oligarchy, while momentarily interrupting the intercourse of a State with

its neighbours, do not affect its existence as a State. When such changes occur, it is necessary that any other State consenting to or desiring diplomatic intercourse with it should recognise the new Government as the duly appointed organ of the State it professes to govern. Once that recognition is granted, all the attributes of sovereignty are at the same time conceded to the new Government, whose official acts henceforth become conclusive and inexamined in the courts of the recognising State. Thus, three years ago, as soon as the British Government recognised the Soviet Government as the *de facto* Government of Russia, the Court of Appeal was bound to hold, as was held in the *Sagor* case, that an importer of "nationalised" timber bought in Russia of the Soviet Government and shipped to England had acquired a good title to it, and could not be proceeded against by the Russian company to whom the timber belonged before "nationalisation." The Court of Appeal was precluded by *de facto* recognition from questioning the avowedly official acts of the Soviet Government in confiscating the timber and selling it, and, moreover, felt bound to hold that the effect of recognition was retrospective, and related back to the date when they established themselves as the *de facto* rulers of Russia. (b) It is a misapprehension to think that recognition of a new Government is essential to the legality of trade between the subjects of the two States. Trade with the subjects of an unrecognised Government is not to be likened to trading with the enemy. It is perfectly lawful, but, inasmuch as your Government has no official representatives in the country with which you are trading, you have not the same guarantee against unfair treatment by judicial or other State officials. It seems quite a fair assumption to make that the grant of full recognition to a new Government will stimulate trading relations between the two countries, but that is not because until then trade has been unlawful. (c) The effect of recognition being a resumption of official intercourse, numerous political and commercial treaties which during the suspension of diplomatic intercourse have been in abeyance, become once more operative. As the Prime Minister indicated in his recent note to Russia, it is desirable having regard to the lapse of time, and to the changed circumstances, to overhaul our existing treaties with that country, and consider how far they are suitable to the new circumstances. (d) The political difference between *de jure* recognition and *de facto* recognition is very considerable, and it is hardly to be expected that there should exist any active fostering of trade, or any cordial relationships between two countries when the Government of one had merely recognised *de facto* the Government of the other. As a recent writer to the Press has pointed out, "It is rather hard to see what the recognition of a new Government as *de jure* adds to recognition as *de facto*, unless it be the judgment of the recognising Power that no adverse claim remains outstanding, or one which need be seriously regarded for any practical purpose." It is in that assurance and in the guarantee implicit in it, that we have definitely abandoned our former policy of subsidising attempts to overthrow the Soviet Government of Russia, that the chief value of our recent *de jure* recognition seems to lie.

We have been busy during the past few weeks in the matter of recognition. In January we granted recognition to the Government formed by M. Venizelos, after having withheld recognition from the Revolutionary Government which adopted the deplorable practice of executing Cabinet ministers in November, 1922. In February we granted *de jure* recognition to "the Union of Socialist Soviet Republics, as the *de jure* rulers of those territories of the old Russian Empire, which acknowledge their authority." Having granted that recognition, it seems to follow from the concession of the attributes of sovereignty thereby involved that it will be difficult not to accept the assertion of the Soviet Government as to the extent of such territories. In other respects, too, our note contains unconventional language, and makes the reader feel that it would have been more regular to clear up several outstanding points before instead of after granting recognition. Finally, the month of March seems likely to see the recognition of the Obregon Government of Mexico, whose claim to be recognised is certainly much improved by our new Russian policy.

Notes of the Week.

The Dock Strike.—Eleventh hour peace efforts failing, the dock strike became fully effective on Monday in all the ports of the country. By Wednesday morning the deadlock appeared to be so insoluble that a prolonged strike was generally feared, the Government were pushing on with emergency measures for safeguarding food supplies, and little was hoped from the Court of Enquiry which the Minister of Labour appointed on Monday. This Court opened its sittings in public on Wednesday morning, and after Mr Bevin and Sir Norman Hill had stated the cases of the men and the employers respectively, adjourned. What influence the opening of the enquiry may have had is somewhat obscure, but by Wednesday afternoon negotiations had been re-opened, and in the middle of Wednesday night settlement terms were agreed by the respective leaders. The basis of the agreement was as follows:—The rise of 1s a day to take place at once, and a further rise of 1s a day on the first pay day in June; and an enquiry into decasualisation to be set up at once. Originally the employers had offered the first shilling immediately, but had insisted on submitting the question of the second shilling to arbitration. The agreement was therefore hailed as a victory for the men. But in the course of a few hours it became obvious that the temper of the men in some ports was such as to jeopardise acceptance. Fears on this score were quickly justified, for the delegates' conference, which assembled on Thursday evening, adjourned without reaching a decision. It was resumed yesterday morning. After long discussions, it was decided that the delegates should return to their ports, recommend their men to accept the settlement terms, and should then reassemble in London on Monday. It is, therefore, not yet clear when work will be resumed, and the temper in some of the ports seems to be difficult. But, things having gone so far, it may reasonably be expected that the chances of a termination this week-end are fairly good. One cannot recall many instances of disputes, where public opinion has on the whole formed so unfavourable a view of the way in which the approaching trouble was handled by the employers. This fact, and the further circumstance that the cost of living has continued to rise since the men's demands were made, combined to rally a considerable degree of public sympathy to the side of the men. On the other hand, shrewd judges of the economic position are alarmed lest a series of sudden and substantial wage advances should upset the equilibrium of the slow, steady trade improvement which has been in progress, and is likely to continue on sound and durable lines provided the jolts and jars of sudden economic disturbances are avoided. The new Minister of Labour appears to have handled the affair with tact, promptitude, and energy, and to deserve criticism on one point only, namely, an alarmingly weak attitude over the question of His Majesty's mails.

The Five Cruisers.—If the motion for the adjournment of the House of Commons on Thursday did nothing else, it cleared away the misconception that the Government proposed to enter into commitments for war-ship construction without the sanction of the House. That is not in contemplation. But there is no doubt that this question of the five cruisers is one of which much more will be heard when the Naval Estimates come up for discussion, and it has obviously aroused feelings in the Liberal and Labour parties with which the Prime Minister will have to reckon. It is necessary to wait for the Naval Estimates before the contention that this proposed construction means no increase in the naval programme can be tested. So far as the question of defence policy is involved, co-ordination of air and sea strength is the root of the problem, and the Government has not yet perhaps been in office long enough to present a considered view of the whole problem. Meanwhile, we find Mr MacDonald's views on the building of warships as a cure for unemployment unsatisfactory. Where shipyards are in danger of going into disuse owing to lack of business, there is no doubt some-

thing in the argument that it is worth while spending money to keep the organisation together. But the policy of taking money from the taxpayer with the sole idea of absorbing unemployed on the construction of warships is not sound economics, and is in direct conflict with the Prime Minister's recent references to the unemployment problem in the House of Commons.

The Scope of the Debt Inquiry.—The Chancellor of the Exchequer in the House of Commons on Wednesday gave the following as the terms of reference for the Commission, whose appointment the Prime Minister announced last week:—"To consider and report on the National Debt and the incidence of existing taxation, with special reference to their effect on trade, industry, employment, and national credit." The terms are so wide as to allow the Commission to range over almost the whole field of national finance. If the chosen experts can answer all the great conundrums that will be presented to them, the Commission will perform an inestimable service to the nation. But the broadness of the terms of reference also suggests that the inquiry is bound to be of a very protracted nature. The Chancellor has not yet announced the names of the members, and the delay suggests that certain leading experts now abroad on other tasks are being invited to serve.

The Insurance Gap.—Our Labour correspondent writes:—The second reading of the Bill embodying the decision of the Government to abolish the gap, announced by the Prime Minister in his opening statement, has passed through the House of Commons without a division. No one can defend the gap. To the men and women affected it has always represented an unjust and wholly useless hardship. Why or for what purpose it was there has been a dark mystery to them. It seemed no more than a device by which power demonstrated its inhumane authority. It saved the insurance fund very little—not more than half a million—as a "moralising" device, it was altogether out of place in a period of protracted and general unemployment. Originally, the gap was part of the provisional arrangement whereby benefit was granted for "special periods," but it reappeared under the Amending Act of 1923, as if there were some virtue in it. It is there prescribed that, after the first 12 weeks of the 26 weeks' (maximum) benefit, whether covenanted or uncovenanted, there shall occur a gap of three weeks, in the case of those claiming uncovenanted benefit, and this although the special period system was swept away, and the maximum applied to the currency of the year from October, 1923, to 1924. Another indefensible anomaly that is to be swept away is the discriminating power of committees among those claiming uncovenanted benefit. That power, like the gap, can only be defended by those who still imagine that the "dole" is a benevolent grant, made at the expense of the kind taxpayer. This, of course, is not the case. The insurance fund is, to the extent of three-fourths, made up from the contributions levied on workpeople and their employers. Its present debt is the result, partly of unprecedented unemployment, mainly of the fact that, in November, 1920, the actuarial basis was shattered by the sudden transference to the fund of practically the entire working population. Instead of 3½ million (at the end of 1916) it had to support 11½ million persons from 1921 onwards, and this at a time when the percentage of unemployment ranged about 12 for all industries. But that debt is to be wiped off, as and when employment recovers, by the contributions of the workers and their employers. So soon as a man or woman gets back to work, whether or no previously excluded from benefit, he or she is at once levied for insurance. They cannot escape because, when unemployed, they have been refused benefit on the ground that the Minister, or the Committee which carries out his ruling, does not regard it as "expedient in the public interest" that he should receive it. Under this ruling single persons, both juvenile and adult, residing with parents or relatives; married women and married men, whose husbands or wives are in employment; persons on short time, earning half or more their normal rates; persons "unwilling to accept

work" other than that to which they are accustomed; and aliens, with certain exceptions, have been excluded. None of them are excluded from the subsequent obligation to help the fund back to solvency.

Oil and Politics in U.S.A.—Now that Mr Denby, Secretary of the Navy, whose department was concerned with ex-Secretary Fall of the Interior, in the granting of the naval oil reserves, without public bidding, to the Sinclair and Doheny interests, has resigned in the face of the violent attacks made upon him in the Senate, the Democratic fury is now turned hot upon Mr Daugherty, Attorney-General, the hotter because Mr Daugherty had intimated he had no intention of resigning. In a speech which is said to have exceeded in violence and bitterness anything that had gone before, Mr Wheeler (Democrat), of Montana, told the Senate that Mr Daugherty's friends had been taking money "by selling offices and pardons, and dismissing whisky cases in New York," and that "if the Attorney-General had not received such money, the people of the United States would surely think he is a bigger fool than they think he is to-day." From oil to whisky is a far cry, but now that the public conscience is stirred, the Department of Justice may not escape inquiry. The Senate Investigation Committee still widens the scope of the "oil scandal." Senator Walsh, its leader, has now called for the cancellation of the lease held by the Standard Oil Company, on Section 36 of the California Reserve. Thus the enquiry reaches out beyond the Sinclair and Doheny interests, which are "independent," to the vast interests of the Standard Oil organisation. Next, the books of stockbrokers are being examined to ascertain whether Government officials, having knowledge of the naval reserve leases, had dealt profitably in Sinclair or Pan-American stocks. On Monday night the Committee announced that at least one Senator, Mr Elkins, of West Virginia, was involved in speculations in the Sinclair promotions. Finally, there is likely to be the inquiry into the whole foreign oil policy of the United States Government. Mr Sinclair, on his return to America, will be questioned about his concession in Northern Persia, his relations with Standard Oil in that connection, and his dealings with the Soviet Government. Mr Doheny will be called again to tell of his relations with the Washington Government in regard to Mexican oil affairs. The influence of oil on international, as well as on domestic, politics, should now be revealed to the hardened public gaze. So far President Coolidge has kept intact the prerogatives of the Chief Executive, but the Senatorial attacks on Mr Daugherty, one of the powers of the Republican party, are placing him in an exceedingly awkward position.

Foot and Mouth Disease.—Our agricultural correspondent writes:—Mr Noel Buxton's first administrative action does not inspire confidence in his judgment. The most difficult problem left him by his predecessors was that of dealing with foot and mouth disease, and, unhampered as he is by responsibility for the unfortunate spread of the disease during the past two or three years, he had an opportunity of examining the problem with an open mind from a fresh point of view. What he has done is to appoint four members of the Committee which previously inquired into the subject, without making any practical contribution to its elucidation. Obviously, they can be expected only to re-affirm the futile findings to which they are already committed. The real question which excites the interest and curiosity of the public is plain. Why is it that the administrative methods which for thirty years suppressed the disease with complete success have so suddenly and markedly failed to do so? So far as is known, there has been no change in the nature of the disease or its extreme and insidious infectivity. It is admitted that its administrative control is exceptionally difficult. Up to a certain date the difficulties were surmounted; after that date they appear to have defeated the administration. The Ministers who were responsible during the period of failure were Lord Lee, Sir Arthur Boscawen, and Sir Robert Sanders. To them, therefore, it is useless to appeal; but there are several ex-Ministers of Agriculture and Parliamentary Secretaries who were

responsible during the long period of success, such as Lord Long, Lord Lincolnshire, Lord Selborne, Mr Runciman, Mr F. D. Acland, Sir Harry Verney, Sir R. Winfrey, &c. Why should not Mr Buxton invoke the assistance of one or other of these instead of wasting time and money on an inquiry by a jury who have already given their verdict? One of the members of the Committee appointed by Mr Buxton is Mr W. B. Smith. Is there any precedent for the Parliamentary Secretary of a Department serving on such a Committee without being the chairman thereof?

Germany's Trade Balance.—Returns published by the League of Nations, and summarised in the February number of our *Monthly Supplement*, reveal a very slight unfavourable balance in Germany's foreign trade during 1923. The average monthly value of imports for domestic consumption is computed at 506,699,000 gold marks, and that of exports of domestic produce at 506,590,000 gold marks. The figures are admittedly difficult of calculation, but that the import balance should have been so small in a year of acute internal difficulty is a matter of surprise. The returns for January to May showed a decidedly unfavourable balance. No further statistics were issued till quite recently, when a total for the five months May to September was published, showing imports of 2,560 million gold marks, and exports of 2,901 million gold marks, the average monthly excess of exports being about 68 million gold marks. The totals for the last three months of the year were:—Imports, 1,300 millions; exports, 1,637 millions; average monthly export balance 112 million gold marks. Since May, 1923, or possibly a little later, there has been an export surplus of considerable importance. The "Statistical Year Book of the German Republic" gives the trade balance for 1913, 1920, 1921, and 1922 as follows (in millions of gold marks):—

	Imports.	Exports.
1913.....	10,769.7	10,097.2
1920.....	3,928.7	3,709.3
1921.....	5,732.1	2,990.6*
1922.....	6,302.8	6,181.5

* May to December.

According to these figures, imports in 1922 reached an average monthly value of 525 million gold marks, and exports of 515 million gold marks. The League of Nations' *Bulletin* gives monthly averages of 517 millions and 331 millions respectively for the same year. The difference between the two sets of figures is explained by the fact that the Year Book figures are based on 1913 prices, whereas those published by the League of Nations are paper prices reduced to gold marks. If the figures are exact in each case, it would seem to follow that a much greater increase has occurred in the price of imported than of exported commodities. That such an increase has taken place is undoubted, but whether it has attained the proportions indicated by the above figures is open to question. For obvious reasons German exporters may have been tempted to understate the value of their consignments sent abroad. The 1922 balance is now shown to have been only slightly unfavourable; that the balance for 1923 may have been definitely favourable is not improbable. The headlong collapse of the mark during the summer was ascribed to the existence of a large budgetary deficit, and an extremely unfavourable balance of trade. The "Rentenmark" scheme attacked the internal aspect of the problem, but did not and could not involve any direct measure for affecting the trade balance. The success of the scheme, notwithstanding this limitation, supports the view that the supposed excess of payments was more apparent than real.

Traders and Russian Recognition.—In a letter to the Prime Minister, the Federation of British Industries indicate the following six points, which in their opinion must be accepted by the Soviet Government "if there is to be any feeling of confidence in their *bonâ fides*":—

1. A recognition by the Soviet Government of their liability for all debts contracted by previous Russian Governments, either with the British Government or with British subjects.
2. Suitable provision for the payment of interest and arrears on these debts.
3. An undertaking by the Soviet Government to institute satisfactory arrangements for the eventual repayment of the principal of these debts.
4. An explicit recognition by the Soviet Government of their

liability to pay compensation in full to those British subjects who have suffered injury in their persons or property by the events which accompanied the Russian Revolution.

5. The acceptance by the Soviet Government of suitable arrangements for assessing the amount of this compensation and for guaranteeing its prompt payment.

6. An undertaking by the Soviet Government to agree to the establishment of a Clearing House system to deal with debts and interest thereon owing to British subjects by Russian subjects.

"The Federation recognise," the letter continues, "that in the present circumstances the immediate fulfilment of all the promises contained in the above six paragraphs would not be possible, and that it would be reasonable to consider the grant of a period of moratorium so far as some of the claims are concerned. They would, however, point out that no mere promise of eventual payment should satisfy His Majesty's Government, and that the latter should insist upon guarantees which would hold out some promise that any undertakings entered into by the Soviet Government would be duly observed." As regards future safeguards for British traders in Russia, four salient questions are put to the Government, and finally the Federation asks for representation at the coming conference with the Soviet delegates.

Cost of Living.—According to the *Ministry of Labour Gazette*, the cost of living index number rose by 2 points in January, namely, from 77 per cent. to 79 per cent. above the pre-war level. This advance brings it two points above the level recorded a year ago, and ten points above the lowest point touched in June and July of last year. Monthly movements since 1918 are traced in the following table:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items. (Food, Rent, Clothing, Fuel, and Light, &c.)								
Month (beginning of)	1918.	1919.	1920.	1921.	1922.	1923.	1924.	
January ..	85-90	120	125	165	92	78	77	%
February ..	90	120	130	151	88	77	79	%
March ..	90	115	130	141	86	76	..	%
April ..	90-95	110	132	133	82	74	..	%
May ..	95-100	105	141	128	81	70	..	%
June ..	100	105	150	119	80	69	..	%
July ..	100-105	105-110	152	119	84	69	..	%
August ..	110	115	155	122	81	71	..	%
September ..	110	115	161	120	79	73	..	%
October ..	115-120	120	164	110	78	75	..	%
November ..	120-125	125	176	103	80	75	..	%
December ..	120	125	169	99	80	77	..	%

Retail food prices rose from 75 to 77 per cent. above the July, 1914, level. For this potatoes were largely responsible, the average increase in the price of this vegetable during January being 2½d per 7 lbs. Here, presumably, we see the influence of the railway strike. Relatively small increases took place in meat and sugar prices, but eggs became considerably cheaper and bacon fell slightly.

Employment in January.—Circumstances connected with the railway strike make the showing of the *Ministry of Labour Gazette's* January unemployment statistics rather confusing. The trade union percentage of unemployment on the last day of the month was 8.9, as against 9.7 at the end of December. On the other hand, the percentage unemployed among all workers insured under the Unemployment Insurance Act on January 28th (the last day of the railway strike) was 11.9, as compared with 10.7 on December 21, 1923. Monthly movements of the trade union figure may be seen in the following table:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.								
	1913.	1918.	1919.	1920.	1921.	1922.	1923.	1924.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	1.0	2.4	2.9	6.9	16.8	13.7	8.9
February ..	2.0	0.9	2.8	1.6	8.5	16.3	13.1	..
March	1.9	1.2	2.9	1.1	10.0	16.3	12.3	..
April	1.7	0.9	2.8	0.9	17.6*	17.0	11.3	..
May	1.9	0.9	2.1	1.1	22.2*	16.4	11.3	..
June	1.9	0.7	1.7	1.2	23.1*	15.7	11.1	..
July	1.9	0.6	2.0	1.4	16.7	14.6	11.1	..
August	2.0	0.5	2.2	1.6	16.3	14.4	11.4	..
September ..	2.3	0.5	1.6	2.2	14.8	14.6	11.3	..
October....	2.2	0.4	2.6	5.3*	15.6	14.0	10.9	..
November...	2.0	0.5	2.9	3.7	15.9	14.2	10.5	..
December...	2.6	1.2	3.2	6.0	16.5	14.0	9.7	..

* Exclud. ag coal miners.

It will be seen that the trade union figure is nearly 5 per cent. lower than a year ago. On January 28th the total number of registered unemployed, which was 1,289,000, had risen under the influence of the railway strike to 1,322,000, but there was a marked improvement after the settlement of that dispute, and the figure recorded on February 4th was 1,248,000.

New Issues and Underwriting.—In addition to the new Japanese loan and a number of Colonial issues which have been made lately, it is known that various other borrowers are about to put in an early appearance with offers of stock to the public. The success which attended the Japanese loan was due, it need scarcely be said, to the low price at which the bonds were offered. At the same time, the risk of a failure in the case of a loan of such magnitude is hardly worth while running, and for this reason, it is the almost invariable practice to underwrite new issues, however tempting their terms of subscription may be. Knowledge of this fact, writes a Stock Exchange correspondent, is the reason why the demand for underwriting tends to become more and more general on the part of the public, who see that in some instances the commission is like a free gift of money, having regard to the slightness of the underwriters' risk of becoming landed with the stock. Particulars of new issues become noised abroad for a week or more before prospectuses appear. This may be due partly to the enterprise of publicity agents, or simply to circulation, through the ordinary channels, of rumours as to forthcoming appeals for capital. As soon as they are mooted, there is a rush to the Stock Exchange of clients who wish to secure underwriting, and people ask if they can do a thousand pounds, two thousand pounds, and other comparatively small amounts. Regarded as subscriptions to new issues, the sum would be fairly substantial in the aggregate, but underwriting is a business peculiar to itself, and where a large new issue is concerned, the house which is standing sponsor to the stock does not want to entertain applications for what are considered to be too trifling sums in connection with underwriting. This reluctance has led to the practice of lists being prepared, and available, for the purposes of the allotment of underwriting to those firms which are on those lists, and to nobody else. Nowadays, underwriters are frequently not asked whether they care to take any hand in a new issue. They are told that they have been given underwriting; and this they accept as a matter of course, irrespective of what may be the political complexion of the times, the financial uncertainties, or any other of the many chances any one of which might stultify the success of the newcomer. There are, of course, cases in which underwriting floats about in the older-fashioned way, and when City firms hawk it round, as it is called, as much with the determination to secure the over-riding commission for themselves as to do their friends any particular favour by providing them with the underwriting. But with big issues big underwriters are concerned, and that this is appropriate for the making of a good market in the stock will be demonstrated upon a little reflection. If Tom, Dick, and Harry are given £3,000 to £5,000 each in the underwriting of some substantial issue, they will undoubtedly try to sell whatever stock they get landed with in the event of a partial success in the public subscription. Their underwriting commission probably enables them to sell the scrip at a discount, and still to secure a small profit. The consequence is that until these small underwriters are out of the way, the market quotation languishes below the subscription price. Were the issue to be left in the hands of a comparatively small circle of powerful underwriters, the result would be, and is where this practice is followed, that they, the underwriters, would decline to sell it until, in the ordinary course of events, such a public demand arose as would enable them to get out of the stock at something like the issue price. The market would not be worried by the operations of the smaller folks, and big men, indifferent to day-by-day fluctuations, would keep their allotments in the expectation—usually justified—of the stock being absorbed by the public in due course. The price is maintained by this means round about par; the public subscriber is satisfied with his security; and, as soon as the

absorption of stock begins to take place, the way is open for a steady advance as the underwriting blocks are taken into permanent hands. Consideration of these points will enable a better understanding of the position by the man who so frequently grumbles that he is deliberately kept out of the underwriting of good issues.

The Co-operative Outlook.—A correspondent writes:—In the *Economist* of December 29th last the prospects of the revival of the trade of the distributive co-operative societies were discussed, and it was suggested that this, together with the alteration in the rate of depreciation in the fixtures, buildings and land of the Co-operative Wholesale Society, would bring the federation nearer the declaration of a small dividend on the purchases made by the retail stores from that society. This has now materialised, and the directors have decided to declare a dividend of 2d in the £ on the £35,000,000 of sales in the last six months. This represents a sum of nearly £300,000, and is in addition to the usual rate of interest on the share and loan capital. Many of the retail societies obtain from 70 to 90 per cent. of their stocks from the C.W.S., so that it will represent from 1d to 1½d in the £1 on their retail sales—a substantial advantage to the societies that have had to be content with dividends of 9d or 10d to their members. It will enable many distributive societies to raise their dividends to members to 1s. The last dividend on purchases paid by the C.W.S. was in 1920; up to the time of the war the dividends had varied from 2d to 4d; they jumped to 6d in 1915, when societies found the return for loyalty to the Wholesale a great help in maintaining the interest of their members. Then it steadily fell until its total disappearance in 1920. The balance-sheets of the retail societies now being issued for the last half of 1923 prove that more stabilised conditions of business have returned. The figures as to the operations of the C.W.S., which will be presented at the April meeting, will be awaited with special interest to see how far the capacity to pay the dividend on purchases has been created by the lower rate of depreciation, and to what extent it is due to increased business, with consequently lowered rate of expenses. Many retail societies will doubtless shape their future policy with regard to depreciation of their local store buildings, &c., by the results that have followed the application of such a method in their Wholesale Federation.

Conditions in New Zealand.—A Christchurch (N.Z.) correspondent writes:—The wool season has opened successfully in the Dominion, and record prices are being recorded in many lines. The wool is coming forward in very light and good condition, so that part of the increase in values is accounted for in this way, but the bulk of the increase seems to come from heavy buying on Japanese and American account, and to be due to the failure of silk and cotton supplies. The higher prices will relieve a great many farmers. The season's prospects as forecast in the *Economist* some months ago are brighter than they have been for some years despite the aberrations of the weather. A winter of heavy rain and destructive floods has been succeeded by what is for New Zealand a prolonged spell of dry weather. Probably the most serious result will be a shortage of wheat, since the winter floods prevented sowings in the chief wheat districts, and the premature development of spring sown crops has already reduced the prospective yield very materially. Wheat, however, is purely a domestic concern, and there is little, if any, export trade even in good years. Financial conditions remain somewhat uneasy despite the improved prices. It is abundantly evident now that the wastage of capital which is always incidental to a boom such as the Dominion experienced from 1918 to 1920 has not yet been written off as fully as it should have been. Leaving on one side the heavy Public Debt, one may point to the multiplicity of freezing works, which has not only resulted in some of the weaker co-operative concerns going to the wall, but has also embarrassed the older, well-established firms, which, having perforce to compete with the somewhat reckless policies of the marginal buyers, were led into paying prices for stock which left inadequate margins for profit. In the

same way the war and post-war extension of the secondary industries is causing some difficulty now that the tide of British imports at a lower level of values has set in in earnest. An earlier letter to the *Economist* noticed the time-lag that appears between changes in the price-level of exports and imports of the Dominion. At the moment we are temporarily back to the favourable conditions that were typical of pre-war times when the price-level was continuously rising. Export prices are at the moment rising; on the other hand the consumer, and especially the farmer, is getting the benefit of the cheaper imported manufactured goods which reflect his lower prices of the past year or two. His position is therefore eased in both directions, and consequently there is a fair amount of optimism and the possibility of further unwise expansion. As usual, the first danger signals are to be seen in the rapid increase of imports. For the ten months of 1923 the total value of imports was £36 millions, as against £28 millions in 1922. Practically all classes of goods share in the increase, which is, perhaps, most noticeable in apparel and soft goods and in motor-cars. If, as is freely stated, canvassers have booked orders not only from the wholesale houses but also from many retail establishments, it is possible that the end of this import boom has not yet been reached, and another fall in prices would create a difficult position similar in all essential respects to that of 1921. It is very difficult to see how this consequence of the time-lag may be averted. When prices rose steadily, as they did before the war, the Dominion was always, except for rare crisis periods, in the favourable position of debtor and producer, with receipts keeping ahead of costs. Since prices have fluctuated so violently the time-lag between exports and imports has inevitably led to miscalculations, and if the post-war downward trend of prices is to continue, the position of traders in the Dominion will be very awkward at the recurring periods when they have stocked up heavily and are continuing to receive stocks from a rising market at the same time as the purchasing power upon which they depend shrinks suddenly with a fall in export values. The indications point to such a position developing in the near future, and already there are not wanting signs that prudent speculators are safeguarding themselves. The relation between current and fixed bank deposits is altering as owners of capital, reading danger ahead, prefer to fix their deposits for a time rather than trade. This is the ordinary indication of the approach of a slack period in the cycle, and under normal circumstances would give little cause for anxiety. But the presence of even a small number of enterprises which are still overvalued makes every stringency a possible danger period, and will do so till those enterprises are liquidated. In the meantime, however, the prospect has little of foreboding in it. Higher prices, lower taxation, lower interest rates, and the prospect of any amount of cheap money in London for the Government to borrow, all make for optimism.

Panama Canal in 1923.—A correspondent writes:—For the first time since the waterway was opened to the world's traffic the canal, for the full fiscal year, shows an actual surplus. This has been earned after amortisation charges and interest on the outstanding Canal Bonds (representing a value of \$124,901,500) have been allowed for. For the period mentioned, the net profit shown amounts to \$16,031,825.39. The total cost of the canal to date has been \$385,000,000, of which sum \$112,000,000 has been charged to national defence. Upon this portion of the expenditure no interest or amortisation charges are reckoned. Amortisation is provided for on a basis of various periods ranging from 10 to 100 years, according to the life of the unit in which the investment was made. Whereas formerly no account was taken for amortisation, the keeping of the accounts has latterly been so altered that it is possible to determine what costs can be properly charged to national defence and what part to the canal as a commercial enterprise. Apart from the Panamá Railway Steamship Line, which appears likewise to have prospered, the net profits shown by the Canal Administration have amounted for the fiscal year to \$12,063,880, an increase of \$2,862,267 over the preceding period. From tolls and miscellaneous receipts, classed as transit revenue, net

income has aggregated \$10,001,066 against \$3,466,674, while from auxiliary operations the net profits has increased from \$323,259 to \$1,140,642. The Panamá Railroad Company has been no less successful, showing a profit of \$922,171, against a loss in 1922 of \$710,301. While the number of commercial transits through the canal increased from 2,736 to 3,967, the net tonnage from 11,417,459 to 18,605,786 tons, and the cargo tonnage from 10,881,910 to 19,567,875 tons, the tolls have swollen during the twelve-monthly period from \$11,197,832 to \$17,508,199. Among the year's favourable factors was the heavy increase in the transport of Californian oil, and lumber destined for the Pacific coast. While the former item may be expected to show a decline during the current year, the lumber industry has become firmly established and shows signs of an even wider expansion. The immense demand for building material met with from Japan at the present time, destined for reconstruction purposes, has caused the lumber industry to assume immense proportions. Japan had always, however, been a good customer for larger-sized timber. The increase in trade between the two Americas by way of the Panamá Canal marks a no less notable improvement. Cargo moving in both directions has expanded from 793,123 tons in 1922 to 2,954,523 tons in 1923. West Coast States of South America have benefited individually, notably Chile, which has gained 120 per cent. in total exports and imports to and from the United States. Respecting the whole of the Latin-American imports, the improvement shown has been 50 per cent. upon the previous year's total. Of the carrying trade United States vessels claimed 56.5 per cent., British bottoms coming second with 25.2 per cent. of the total cargo. It is confidently predicted that the growth of traffic in 1924 and future years will enormously increase the present volume. Should the volume of transit, however, continue even as at present, the canal should carry approximately 14,000,000 tons of ships' goods within the current twelve-monthly period. At present the canal is worked only in daylight hours, during which only 50 per cent. of the possible transport is carried. The waterway being fully lighted, the transmitting of vessels from ocean to ocean could be conducted easily by night, while the accommodation actually available would enable the waterway to handle four times the present volume of traffic. In the meantime, a new experiment is being tried, namely the passing of two ships simultaneously through the Pacific lock, one in each lock chamber.

Supplies of Wheat Offals.—In the *Agricultural Market Report* issued by the Ministry of Agriculture, attention was recently called to the fact that the external trade in wheat offals (bran, pollard, sharps and middlings) has entirely changed since 1914. Before the war there was a substantial export trade, largely to Denmark. In 1912 we exported 231,000 tons, and in 1913 167,000 tons. During the war the trade was for a time regulated under reciprocal agreements for the return of certain products, e.g., bacon and butter. In deference to popular clamour, however, all exportation was stopped and the trade has not been recovered. In 1920 the exports were 3,000 tons, in 1921 65,000 tons, and in 1922 64,000 tons. On the other hand, imports which were 45,000 tons in 1922 and 30,000 tons in 1913 rose to 147,000 tons in 1920, 141,000 tons in 1921, and 136,000 tons in 1922. We have, therefore, become an importing instead of exporting country. In 1913 the net exports were 137,000 tons, whereas in 1923 the net imports were 150,000 tons. There are no exact statistics of the total supply of wheat offals, and the whole of the imported wheat is milled, a sufficiently close calculation for comparative purposes can be made. On this basis the total supply in the cereal year 1922-23 was 1,853,000 tons, or 120,000 tons more than in the cereal year 1912-13. Notwithstanding this prices in December, 1923, were for bran 45 per cent. and for middlings 29 per cent. above pre-war level, while the price of wheat was 33 per cent. higher. Prices were, indeed, substantially higher than a year previously, notwithstanding that the supply of offals was about 90,000 tons more. These figures clearly indicate increased

demand. The marked increase in the number of pigs in the country, shown by the agricultural returns last June, suggests an obvious explanation.

Brazilian Finances.—A correspondent writes:—An impression would seem to exist that the visit of the British financial mission to Brazil is likely to have some beneficial effect upon the position of bondholders, whose principal and arrears of interest have been outstanding for a good many years past. This, however, is not the case. The discussion of investors' grievances forms no part of the Commission's duties, although there may be hope that their visit will result in some further ventilation and even some eventual relief. At present there are no fewer than six Brazilian State Loans in default, including those issued by Alagoas, Bahia, Pará, the City of Bahia, the City of Pará (Belém), and the City of Manaus. The total of principal outstanding aggregates several millions sterling, apart altogether from the arrears of interest dating back, in some instances, to 1917. On the other hand, the British Financial Mission will be empowered to consider the question of issuing a further loan with the object of consolidating in terms of sterling all existing Brazilian federal debts. It cannot be too strongly pointed out that the Federal Government has again and again repudiated responsibility for debts contracted by provincial or municipal administrations. It is understood that a favourable impression of the general economic conditions of the country has been gathered by the members of the mission, and that reformation of Brazilian finance and assured stability are not despaired of. While the value of the country's exports exceeds that of imports by about \$90,000,000 annually, the debt service and other foreign commitments are exceedingly large, revenues proving insufficient to cover the drain upon the national resources. Under normal conditions the adverse balance would be met with new debt, but the present is not a period in which Brazil can expect to place, with any degree of success, a new issue upon the European market. Those who have studied the situation consider that, were interest on the sterling and dollar Federal debt to be funded for two or three years, deflation of the currency by means of note destruction could be accomplished with little difficulty.

The Position in Mexico.—A correspondent writes:—Though the news from Mexico is scanty and uncertain, there is reason to hope that the end of the de la Huertist rising may not be very far off. The Federal victory at Guadalupe last week protects the north-western approaches to the capital; the Federals apparently hold Tampico and the railroads from Mexico City to El Paso, the American frontier, and Laredo; and their recovery of Vera Cruz, the original focus of the rising, and for a long time earlier a hotbed of disturbance, cuts off any supplies of arms that the insurgents may be receiving from Europe. The Mexican Railway, by the latest accounts, was open and working from Vera Cruz to the capital. Señor de la Huerta's whereabouts are unknown, and the statement made by a correspondent of the *Times* in Thursday's issue that neither side is very keen on fighting confirms the view that the populace is sick of disorder and desires to settle down to work. The *Times* correspondent—whose extremely interesting article is possibly unfavourable to the insurgents' chances—suggests that the conflict might be ended by the mediation, or the acceptance as President of General Angel Flores, Governor of Sinaloa. Meantime, negotiations for the recognition of President Obregon's Government by Great Britain are suspended by the illness of Señor Nieto, the Mexican representative, who will probably have recovered by next week. The case for recognition has been greatly strengthened by the British recognition of Soviet Russia; but the Prime Minister stated in the House of Commons on Monday that the Mexican question is far more complicated. Some of the complication, no doubt, arises out of the difference in the British attitude. Soviet Russia has been accorded recognition as a preliminary to a discussion of its liability for the debts contracted by the Tsarist Governments. President Obregon's Government recognises some of the liabilities of its predecessors, but repudiates others—

notably some of those set up by the expropriation without compensation of foreign holders of oil lands, under the Carranzist Constitution, and of foreign owners of land taken for agrarian reforms. It has also excluded from the debt settlement scheme the "Series C" bonds of the 6 per cent. loan of 1913, issued by Reuter's Bank in 1914, and two issues of bonds of the National Packing Company, which are backed by a Government guarantee. Probably this exclusion is due to the fact that they were issued to obtain funds for President Huerta's Government, which the Carranzists and President Obregon regard as unconstitutional. But the whole of the 1913 loan was authorised by the Mexican Congress, under President Huerta, and his Government, whatever its moral position, was technically legal. There is reason to believe that the Foreign Office and the Council of Foreign Bondholders are pressing for the recognition of these bonds. Meantime, it is reported from New York that an attempt is being made to upset the debt settlement on the ground that it ignores the special pledge of 62 per cent. of the Customs revenue for the service of the 5 per cent. loan of 1899. It also ignores the pledge of the remaining 38 per cent. for the service of the 6 per cent. loan of 1913, including Series C. It would be a pity if the resumption of interest payments should be delayed indefinitely, but President Obregon's Government seems in no hurry to begin it.

The Railway Dividends.—With the announcement of the London and North-Eastern dividend, declared as we go to press, a complete list of home railway dividends is available. In the following table we show the first complete year's dividends of the "big four," together with comparisons of prices and present yields:—

Name of Line.	Dividend for Whole Year, 1923.	Prices of 1923.		Price Feb. 22, 1924.	Present Yield.
		Highest.	Low st.		
Great Western, ord. stk.	8	118½	106½	113	7 4 9
London & N. Eastern—5 % pref. ord. stk. ...	5	89½	75	84½	5 17 0
Deferred ord. stk.	2½	39½	28½	33	7 11 6
London, Midland, and Scottish—ord. stk.	7	108½	101½	103½	6 15 6
Southern—pref. ord. stk.	5	89½	76½	84½	5 18 0
Def. ord. stk.	3½	43½	34½	43½	8 1 9
Ord. "A" stk.	3½	40½	31½	40½	8 12 9
Ord. "B" stk.	..	16½	10½	11½	nil

The dividend on Southern deferred stock of 3½ per cent. was fully up to market expectations. The ordinary "A" stock, which ranks *pari passu* with the deferred up to a maximum of 3½ per cent., receives its full quota. In making the dividend announcement, the directors state that £250,000 has been taken from Railways Compensa-

tion Account, and that £250,096 is being carried forward. The North Eastern withdraws £550,000 from the Compensation Fund and carries forward £572,900. The market has displayed considerable activity in anticipation of this week's dividends, the stocks of the two companies concerned having been the centre of attention.

Bradford Dyers.—Twelve months ago the Bradford Dyers' Association submitted accounts for the two years 1921 and 1922. The report now presented covers the year 1923, and in so far as comparison is possible it would appear that further progress has been made. From the table below it will be seen that the average allocation to reserve and depreciation funds has been maintained, and that the ordinary dividend has been raised from 22½ to 25 per cent. :—

	Net Profit.	Depreciation & Reserve.	Prof. Div.	Ord. Dividend.	Carried Forward.
	£	£	£	Amount. Rate.	£
1906.....	366,086	80,000	91,403	94,953 7	+ 3,592
1907.....	415,141	110,000	104,700	94,953 7	+ 22,221
1908.....	271,375	70,000	116,724	67,824 5	- 51,373
1909.....	357,061	70,000	125,000	67,824 5	+ 33,855
1910.....	407,311	140,000	125,000	67,824 5	+ 14,148
1911.....	428,456	150,000	125,000	81,389 6	+ 4,591
1912.....	410,861	90,000	125,000	81,389 6	+ 49,737
1913.....	430,081	160,000	125,000	94,953 7	+ 17,842
1914.....	387,923	90,000	125,000	67,824 5	+ 35,409
1915.....	568,623	244,628	125,000	135,648 10	+ 6,021
1916.....	741,181	310,000	125,000	203,472 15	+ 102,709
1917.....	748,938	390,000	125,000	237,383 17½	+ 3,445
1918.....	583,804	145,909	125,000	237,383 17½	+ 75,411
1919.....	848,241	305,249	125,000	305,207 22½	+ 112,784
1920.....	892,445	491,102	125,000	271,296 20	+ 5,048
1921 & 1922 ..	1,677,557	749,139	250,000	610,415 22½	+ 68,000
1923	971,425	482,197	125,000	339,119 25	+ 25,108

Special allocations consist of £232,197 to depreciation on buildings, plant and machinery, &c., £125,000 to reserve, raising it to £1,125,000, and £125,000 for the benefit of employees. Profits, after deducting all charges prior to debenture stock interest and preference share dividend, are equivalent to 11.3 per cent. per annum on the capital employed, amounting to £7,064,244, this amount including share and loan capital, reserves and undivided profits. For the two preceding years the figure was 9.5 per cent. The balance-sheet, which is analysed in another column, shows no very striking changes. Investments and loans have been increased by £345,700 to £2,485,000, while debtors have been reduced by £235,700. The report points out that the value of each ordinary share, based on the excess of assets over liabilities (after payment of final dividend) is £2 5s 6d. A year ago the figure was £2 3s 8d.

Manchester Ship Canal.—A further improvement in results is shown in the report of the Manchester Ship Canal for the year 1923. There was an increase in the weight of sea-borne traffic on which Ship Canal tolls were paid of 1,026,077 tons as compared with the previous year, and an increase of £52,253 in the receipts from Ship Canal tolls, ship dues, &c. The following table shows traffic receipts since 1910 :—

Year.	Sea Borne Traffic. Tons.	Barge Traffic. Tons.	Total Tons.	Ship Canal Tolls Ship Dues, and Miscellaneous Receipts. £
1910 ..	4,618,070	319,561	4,937,631	555,735
1911 ..	4,894,670	323,142	5,217,812	580,841
1912 ..	5,021,691	318,193	5,339,884	605,179
1913 ..	5,457,218	322,943	5,780,161	654,937
1914 ..	5,109,285	315,447	5,424,732	656,237
1915 ..	5,115,954	318,092	5,434,046	757,268
1916 ..	4,540,167	318,582	4,858,749	831,684
1917 ..	3,843,324	309,430	4,152,754	861,996
1918 ..	3,229,293	268,702	3,497,995	990,923
1919 ..	3,313,620	275,423	3,589,043	1,203,361
1920 ..	4,099,326	288,037	4,387,363	1,461,909
1921 ..	3,117,469	176,201	3,293,670	1,197,075
1922 ..	4,081,571	191,973	4,273,544	1,332,490
1923 ..	5,107,000	256,292	5,363,292	1,384,743

The gross receipts of the whole undertaking, including the Bridgewater Canals and the railways, amounted to £1,984,500, an increase of nearly £20,000, and expenditure at £1,194,100 showed an increase of nearly £8,000.

Arrears of dues and tolls accrued during the years 1916 to 1922, payable as a result of the judgment which the company obtained against traders on the Weaver Navigation, brought in £56,400, and the net income shows an increase of £77,000 at £869,900. After payment of rentals and other fixed charges, there is a balance of £510,100; of this, £50,000 is placed to reserve for contingencies and repairs, the dividend on the 3½ per cent. corporation preference stock requires £37,100, and dividends of 5 per cent. on both preference and ordinary shares, £387,500, leaving £35,500, or £10,000 less, to be carried forward. A year ago the ordinary shares received 4 per cent., and two years ago 1½ per cent. The surplus from the working of dock labour was less by £10,650 than that of the previous year. According to the report, the reduction made by the company in charges for labour services more than absorbed the savings effected by wages reductions. The result of the working of the company's railways for the year showed a credit balance of £29,300, an increase of £4,800 in comparison with the previous year. In the table below we show the highest and lowest prices of the ordinary and preference shares since 1910, together with pre-war prices and present prices and yields :—

	Prices 1910-1923.	Price July 30, 1914.	Present Price.	Div. for 1922.	Div. for 1923.	Yield.
	Highest. Lowest.					
Manchester Ship Canal	Ord. £10 9½ 8½	1½ 1½	8½ 8½	4 5	5 5	5 13 0 5 16 0

Share prices have advanced in a notable manner over the 14 years. The continued prosperity of the Canal has caused the ordinary £10 shares to rise from £6½ to £8½ in the past year.

Selfridge's Year.—In the report and accounts of Selfridge and Co., Limited, for the year ended January 31, 1924, a slight improvement only is recorded. In the directors' report it is pointed out that "During the year the general trade of the country has been depressed," and "selling space was affected by the demolition of many of the old shops." Mention is also made of the "very thorough development of the branch businesses." In turning to the accounts, it may be recalled that the 1921-22 profits of £342,665 included £50,000 reserved for E.P.D., but not required. This fact should be borne in mind when reading the following summary of the financial results of this enterprising concern :—

	Profits.	Deb. Int.	Prof. Div.	Ord. Div.	Prof. Ord. and Staff Part. Shares.	Balance.
1909-10	£ 14,984	£ 19,310	£ 23,998	£ ..	£ ..	£ 28,894
1910-11	36,261	17,099	23,998	..	..	Dr. 4,836

† 10½ months. * Not including £28,500 contributed by Mr Selfridge.

Thus the usual 10 per cent. distribution on ordinary shares, free of tax, is maintained. The articles of association are to be altered, which indicates the possibility of a bonus share issue in the future. One would have thought that with the rebuilding scheme in hand fresh money would have been needed. In the balance-sheet there is an item "Mortgages and loans from bankers," £448,448, while "Trade and other creditors" are given as £432,453. A year ago mortgages amounted to £209,918, and "Trade and other creditors," £592,526. The balance-sheet will be found analysed in our usual page.

Bovril's Profits.—Bovril, Limited, had another satisfactory year in 1923. Although gross profits were smaller there was another welcome drop in general expenses, and last year's net profit, after paying interest on debentures and short term notes, radiates prosperity. Below are summarised the financial results for the past eight years :—

	1916.	1917.	1918.	1919.	1920.	1921.	1922.	1923.

* 7½ per cent. † 7½ per cent. ‡ Free of tax.

The balance-sheet will be found analysed in our usual column. It is stated that the dividend paid last year by Virol, Limited, was at the rate of 20 per cent. We think, however, that this information would be more useful if we could trace this dividend back to the composite item in the balance-sheet which shows "Goodwill, trade marks, freehold and leasehold properties with interests in associated companies, Government stock, &c.," all together. We should like to see this well-managed and prosperous company set an example in the matter of clearer balance-sheets by breaking up this item and showing the various component parts separately.

Commercial History of 1923.—The section devoted to "Sugar" in our "Commercial History and Review" was extracted from the annual review of Messrs William Connal and Co., and the "Building Trade" review from an article by Mr Herbert Jeans in the "Chamber of Commerce Journal."

Oversea Correspondence.

FRANCE.—THE FRANC AND POLITICS—FOREIGN TRADE—TRADE BALANCE.

(FROM OUR CORRESPONDENT.)

PARIS, February 20.

THE frantic effort that is being made by the Government, through the medium of its new financial proposals, to stop the downward trend of the franc cannot be said to have been attended so far by any measure of success. The rate of exchange, which stood at a shade over 90 to the pound and at 21.34 to the dollar on January 16th, when the new proposals were first mooted, touched new record figures at 105.40 and 24.54 at midday yesterday, and closed to-day at 103.70 and 24.08, in spite of the fact that new taxation to the amount of 4,730 million francs was voted early yesterday morning, and that the Government has been given powers to reduce expenditure on administration by 1,000 millions a year.

The outcome of this greatly aggravated situation has been what might have been expected by all who are familiar with the French temperament, as exemplified in certain kinds of critical situations. There is a continued failure on the part of either the leaders of the nation or the great mass of the public to realise the real facts of the situation and the real cause of the difficulties facing the country; all sorts of wild remedies, from lottery loans to the expulsion of foreigners who are guilty of following the example of their French colleagues and dealing in exchange, are being suggested on every hand; and there is an apparently growing inclination to make the existing Government a scapegoat, and to hold it responsible for the financial shortcomings of all its predecessors since the war began. It may be stated frankly that, in spite of his immense personal authority in the country, the fall of M. Poincaré is now regarded by many people as a probability of the near future, and many newspapers during the past few days have openly stated that the real problem of the hour is the difficulty of finding his successor. As in 1917, the name of M. Clemenceau is on

many people's lips, and the possibility of M. Barthou or M. Klotz forming a new Ministry is also being discussed. The two immediate difficulties facing the Poincaré Government are that they have to force their financial proposals through the Senate, and also the electoral reform proposals sent up from the Chamber. On the latter the Senate is known to be largely hostile, but what its attitude will be in regard to the financial projects is still uncertain, and will probably depend upon many other considerations than those directly connected with the nation's finances.

Much will probably depend upon the nature of the report that will be the outcome of the work of the McKenna and Dawes committees of experts, who are now approaching the conclusion of their task. There is a good deal of optimism, both in French official circles and among the general public, in regard to the recommendations the experts will make—so much so, indeed, that there is a growing feeling that this report (or these reports) will show that a way out of the European muddle has at last been found.

One of the essential conditions of the plan, which it is understood will be proposed by the Committee, will be that France shall relinquish her economic control of the Ruhr (although there would be no question of her renouncing military or political control of the area), in order that German railways and German industrial conditions may be reunited. It is argued that for France to agree to this suggestion would be much more profitable to her than if she maintained her present hold on the Ruhr industries, and it is satisfactory to note that this view is already meeting with a distinctly favourable reception on the part of French opinion. The future of the Poincaré Government, apparently, depends largely on the speed with which the experts complete their reports and make their recommendations known to the public.

The French foreign trade returns for January, which have been issued to-day, are as follows, so far as the values of imports and exports are concerned, as compared with those of the corresponding month of 1923 :—

	January, 1923.	January, 1924.	Inc. or Dec.
Imports—	Francs.	Francs.	Francs.
Foodstuffs	456,238,000	554,888,000	+ 98,650,000
Raw materials	1,369,331,000	1,998,775,000	+ 629,444,000
Manufactured goods ..	310,430,000	334,258,000	+ 23,828,000
Totals	2,135,999,000	2,887,921,000	+ 751,922,000
Exports—			
Foodstuffs	192,192,000	299,615,000	+ 107,423,000
Raw materials	536,189,000	698,384,000	+ 162,195,000
Manufactured goods ..	944,841,000	1,574,949,000	+ 630,108,000
Postal parcels	129,368,000	126,885,000	- 2,483,000
Totals	1,802,590,000	2,699,833,000	+ 897,243,000

The figures show that the balance of trade against this country, which in January, 1923, amounted to 333½ million francs on the month, amounted on last month's volume of trade to only 188,088,000. The outstanding features are a comparative increase of 630,108,000 in the value of manufactured goods exported (or an increase of about 68 per cent., as compared with January, 1923), while the increase of manufactured goods imported amounted to only about 7½ per cent. during the month, compared with the figures for the corresponding month of last year. This increase in the sales of manufactured goods was largely balanced, however, by an almost equally large increase (629,444,000) in the value of raw materials imported. The total amount of coal and other combustibles imported during the month was 2,246,751 tons, as compared with 2,395,333 tons in January, 1923, when German reparation coal deliveries were totally suspended as the result of the occupation of the Ruhr. Although the quantity of foreign coal purchased in January last was 148,582 tons less than in January, 1923 (owing to the amount that is now being received from the Ruhr), the French last month expended 285,091,000 on combustibles of foreign origin, or 65,469,000 more than in January, 1923. The effect of the renewed fall in the franc will, of course, be equally strongly marked in the French purchases of cotton, wool, coffee, and other staple commodities.

An eloquent criticism of the fallacies contained in French comments on the published returns of the nation's

foreign trade is published by that useful educative organisation known as the Comité d'Etudes de la Production et des Economies, which is doing excellent work in bringing public opinion to a realisation of the real facts of the situation in which the country is placed. The Comité, in a study it has just issued, expresses the belief that the deficit of 2,183 millions which the official trade returns for 1923 showed (and which, it is always claimed, was cancelled by "invisible" exports), ought really to be reckoned as at least double this figure. In the first place, the returns include among French exports sales amounting to 1,000 millions made to the French colonies, "which are naturally without interest in respect of the restoration of the franc." On the other hand, the Comité further points out, France has made loans to various foreign countries amounting to 1,040 millions; the repayment of a fraction of the French foreign debt during 1923 involved the purchase of foreign currency amounting to 1,800 millions; the sum of 500 millions was advanced to certain foreign Governments; foreign loans were contracted by towns, railway companies, &c., for 250 millions; some 1,500 millions were sent out of the country in the form of interest payments on foreign capital invested in France. These items make a total of some 7,000 millions, which, added to the "official" 2,000 millions disclosed in the foreign trade returns, bring the total deficit to 9,000 milliards. If from this be subtracted, say, 3,000 millions spent by tourists and other foreigners in France, and 2,000 millions as representing the revenue earned by French people from their foreign investments, the deficit is reduced to 4,000 millions, or double the adverse balance shown in the returns. Even then, the Comité insists, no account has been taken of the fact that in the period 1918-1920 the deficit on the French commercial balance totalled 60,000 milliards, of which at least one-quarter, or 15,000 millions, has not yet been got rid of. "It is these 15 or 20 milliards of commercial floating debt which enables the foreigner to manipulate the franc. The only way to get rid of this deficit is to export, and to export we must produce more."

GERMANY.—POLITICS—FINANCES—CURRENCY AND PRICES—BUSINESS—FOREIGN TRADE POLICY.

(FROM OUR CORRESPONDENT.)

BERLIN, February 18.

THE Socialists have suffered another serious defeat in Mecklenburg, their vote falling to under 50 per cent. of that of 1921. While on the one hand the Communists and on the other the German-Nationals and the new and still more reactionary German People's Freedom Party, have made large gains, the middle groups, the People's Party and Democrats, lost. This election seems to reflect the general dissatisfaction with the moderate parties which, together with the Centre, held power during the past few years.

Optimistic views are held as to the outcome of the Expert Committees' inquiries. Little doubt is felt that Dr Schacht will be able to get capital for his provisional gold credit bank, and that the definitive gold bank will later be founded. This optimism is, however, part of the psychological change induced by the currency stability; and if Reparations are not at the same time settled, a setback is possible. The Bavarian Government has come to an agreement with Berlin. The two Bavarian diehards, von Kahr and General von Lossow, have resigned; and the army conflict has been settled by Bavaria in principle recognising the Constitution of 1919, and the unity of the supreme command at Berlin. This satisfactory settlement is also probably a result of Berlin's gain of prestige through the currency and financial reforms. Industrial groups in occupied territory continue to make agreements under compulsion with the French. The wire branch's agreement provides for a 2½ per cent. export duty. In general the "Micum" refuses to make agreements extending beyond April 15th. The Solingen district's iron and steel branches have made an agreement, and another agreement over tar and tar-products is being negotiated. Ten per cent. of the ammonia and benzol output is to be handed over without being booked to Reparations account, and a tax of 2 per cent. *ad val.* is imposed on both pro-

ducts irrespective of whether they are exported or sold on the spot; while for deliveries to abroad or to unoccupied territory there is a 1 per cent. export duty on tar and ammonia, and a 3 per cent. duty on benzol. The whole of local trade is being gradually regulated, hampered, and sucked dry with no other justification than that if it refuses, the French will revert to the policy of starving the workmen. It is very doubtful whether this can continue, as local industry, not being compensated by Berlin for the French exactions, must attempt to shift the burden on to the general consumer. The burden upon coal from all exactions, including the enforced deliveries of coal itself, is estimated at 8½ to 10 gold marks a ton; that on bar-iron, by way of dearer coal, at up to 30 marks a ton, although this product has of late sold as low as 130 marks.

The already reported conversion of Federal Railways into a corporation (the "Deutsche Reichsbahn") has been effected by decree, one of the last issued under the second "Empowering Law," which expired on the 15th and which has not been renewed. Altogether under this law have been issued about 70 decrees, in addition to about 30 issued under the first (Stresemann) Empowering Law. The "Deutsche Reichsbahn" is described in the decree as "an independent juristic person," operating and managing the railways "which remain the property of the Republic." The corporation is obliged to pay its way; if it does not, it gets no subsidy, but it can borrow on the security of its properties. It cannot alienate any considerable portion of them. It pays no taxes other than those already paid by the railways under the present law. Its employees retain the rank of officials, but the corporation can pay them salaries and wages higher than those of the official schedules—the aim of this is to make it possible to attract first-rate managers from private industry. Except that any net profits from the railways go to the Republic, the corporation's finances are entirely separate from those of the Republic. This decree will be confirmed by a definitive law; until then the Government retains certain rights of supervision, sanction and prohibition.

The Third Taxation Decree as amended after consultation with the Reichstag Commission of Fifteen, differs in some particulars from the draft already described here. The maximum restoration of mortgages and similar secured debts is 15 per cent. instead of 10, as originally; but a debtor can appeal for a lower rate on the ground of "unjust hardship"—which really means on the plea that owing to some change in his economic condition he could not bear the burden of 15 per cent. of his old debt. Mortgages bonds are not, as was planned, to be restored partially only where the creditor was obliged to invest as a trustee, but in all cases, in so far as the debtor institution has gained in its capacity of creditor from the 15 per cent. restoration of mortgages. The earliest date at which the 15 per cent. restored capital may be claimed is now put back to 1932. Savings bank deposits may be restored in so far as the savings banks have gained from restoration of mortgages. While in general public debts, as in the draft, are practically repudiated by means of postponement until after payment of Reparations, a law is promised making an exception for municipal debts. This exception is based on the consideration that the cities still possess the real assets (trams, gasworks, &c.) for the creation of which the debts were often incurred. Of the Rents Tax, to be collected (as soon as net rents are restored) out of the houseowner's gain from extinction or reduction of his mortgages, 10 per cent. is to be used for building new houses. The decree is a patchwork, a compromise between practical considerations and notions of fairness; it will not materially mitigate the losses suffered by certain classes from the great currency expropriation; and many gainers from the same process will surrender nothing of their gain, because while they (e.g., mortgagors who have already paid off in paper) will not be obliged to restore any percentage of their debts, the decree does not, as was demanded by some parties, impose a general increment of wealth tax. Against doing this the Government pleaded that it is no longer possible to determine the amount of an individual's wealth some years ago. A later tax of the nature of an increment tax is, however, foreshadowed.

The first decade term of February witnessed a deficit of 33,914,385 billion paper marks. Revenue was 79,576,482

billions, including 36,599 billions from the sale of gold loan, all the rest being taxes, while expenditure was 113,490,867 billions. Tax receipts, owing to the fact that no big tax fell due, declined by 110 trillions (110 million gold marks) behind those of the foregoing decade. Receipts from the issue of Rentenmark Treasury bills were 47,653,502 billion paper marks. The renewed deficit is no cause for anxiety, as the decade expenditure included exceptionally large payments over to States and municipalities. The second decade of February will see heavy tax payments, including part of the advance quarter of income-tax, the sales tax for January, and the Bourse turnover tax. By selling Rentenmark Treasury bills since December 15th 207,784,907 billion paper marks have been raised. New inflation for Budget purposes will not be necessary. The Republic has so much cash that it was able to pay off 100 million Rentenmarks of its debt to the Rentenbank, retaining the right to re-borrow it; meantime the Rentenmark Treasury bill transactions has provided a nest-egg against contingencies or against a possible temporary return of deficits.

The currency situation continues to be satisfactory. The 4 per cent. mortgages upon land, which form one-half of the Rentenbank's capital, have yielded 2 milliards of Rentenmarks (theoretically of gold marks). As the capital and reserve of the Rentenbank are 3,200 millions, and as industry and trade are to supply half the capital, the 4 per cent. rate has yielded too much. Probably the rate will be cut down. The first half-year's interest at 6 per cent. a year will be paid by mortgagors and bond-debtors on April 1st. In connection with the minor exchange crisis which was threatened last week, it is demanded that the Exchange Regulation Decrees be put into force in occupied territory—it is from occupied territory that the danger of over-buying of exchange usually comes. The demand for industrial credits—mainly in Rentenmarks—continues heavy. In order to satisfy it, the Reichsbank was obliged in the week ending February 7th to borrow another 50,000,000 Rentenmarks from the Rentenbank; the whole debt of 250,000,000 Rentenmarks now appears separately among the Reichsbank's liabilities. The Darlehnskassen will cease operations on May 1st. They have been in existence since August, 1914, but their operations have of late shrunk in gold value to almost nothing. Farmers, owing to the fact that food prices are below those of 1914, whereas general prices are higher, are short of money, and have almost ceased using fertilisers. The Potash syndicate has arranged to give them eight months' credit, and an all round credit will also be given by the nitrates producers. The stock market is dull. Although money is fairly plentiful, borrowing rates are too high to attract speculators.

Employment conditions continue to improve. Between December 31st and January 31st the number of publicly supported fully unemployed in unoccupied territory fell from 1,551,000 to 1,429,000, of partly unemployed from 643,000 to 401,000. From December to January the proportion of fully unemployed among Trades Union members fell from 22.1 per cent. to 20.5 per cent., of partly unemployed from 24.5 per cent. to 14.8 per cent. In occupied territory, whence come no exact statistics, the number of unemployed and partly unemployed is estimated at 1,000,000. This figure also represents an improvement over conditions in December. Unemployment conditions are worst in the Palatinate. In Berlin the improvement is rapid. In the week ending February 9th the number of publicly supported unemployed, however, still numbered 196,457. The Leipzig Spring Fair promises to be a great success. The greatest interest is shown by Austria, Czechoslovakia, Hungary, and Switzerland, which now see opportunities for selling goods to Germany as a "high-exchange" country. From Leipzig it is reported that the home demand has of late changed from cheap goods to quality goods.

Considerable talk was lately roused by a statement of the Minister of Agriculture, Count von Kanitz, that Germany must return to Agrarian Protection, food prices being too low for satisfactory farming. The Minister of Industry, Dr Hamm, adds that, as Germany is abandoning the system of import-prohibitions, she must in general replace it with a Protectionist tariff. Dr. Hamm also

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

declared that the policy of "police and political regulation" of home business must come to an end; the new aim is economic freedom. With this object most of the foreign Trade Boards have been liquidated, export and import licensing has been largely abolished, and the Eight Hours Day law practically revoked. The Socialists look on these changes with distrust and helpless anger, but the non-Socialist bourgeoisie seems of late to have entirely got the upper hand.

CANADA.—HOME BANK AFFAIR—REVENUE, EXPENDITURE, AND DEBT—RAILWAYS—GRAND TRUNK AND SHAREHOLDERS—DOMINION BORROWING.

(FROM OUR CORRESPONDENT.)

OTTAWA, February 1.

THE failure of the Home Bank, and its consequences, continues to be the most interesting topic in financial circles here, and much will be heard of it at the coming session of Parliament. The liquidator of the bank states that the depositors are likely to receive only from 37 to 40 per cent. of their deposits, and the shareholders have been notified that they must pay up the amount unpaid on their shares, and also double the amount in addition, under the "double liability" clause of the Bank Act. This week a large deputation of shareholders and depositors waited upon the Government here with a somewhat singular proposal. They prefaced their submission by contending that, if considerations of national stability during the war years had not prevented an official investigation of the Home Bank's assets in those years, when doubts were expressed as to its ability to carry on, it might have been wound up without loss to depositors; and that, this being the case, Canada as a whole should assume the liability incurred in the bank's failure. They proposed that the Government should loan \$17,000,000 to the associated banks of Canada, as a guarantee for the depositors, and half of this sum should be loaned to the Home Bank to cover its deficit and reimburse depositors.

It was estimated that within forty years interest on this loan would repay the amount loaned to the Home Bank. There is very little likelihood of this proposal being seriously considered. It would involve complete indemnification for depositors and freedom from financial responsibility for shareholders. The banks have responded to some degree to the criticisms being made. Hitherto they have always strenuously fought the suggestion of Government inspection and audit, now some leading bankers are stating that they do not object to it, but the Government must bear the consequent responsibility, which it is very averse from doing.

The financial statement which will be presented to Parliament when it meets on February 28 will be for the fiscal year ended March 31, 1923. It will show, as has been the case in recent years, that all the efforts of Finance Ministers to produce a surplus are liable to be brought to naught by the two great Government utilities, the Canadian National Railways and the Canadian Government Merchant Marine, to which the Government advanced last year a total of over eighty-three million dollars. For the current fiscal year there is a likelihood, judging by the statements of earnings of the Canadian national system which have been published, that this drain will be considerably reduced, but it will still be heavy. The total revenue of the Dominion for the year was \$394,614,900,000, and the total expenditure on both capital and consolidated fund accounts, \$346,565,616, leaving a surplus of \$48,049,284. The increase of debt during the year is given as \$31,641,067; so that over fifty millions must have been taken out of revenue to meet the railway demands. The total gross debt at the end of March was \$2,924,199,338, a decrease of \$10,564,037; and the total net debt was \$2,453,776,868, an increase of \$31,641,067. The increase in net debt for 1922 was \$81,256,818; for 1921, \$92,010,359; and for earlier war years, still greater.

Revenue for the year showed an increase of \$12,662,514, while expenditure decreased \$15,266,958. The only items showing increased expenditure were interest on public debt (which was \$137,892,735), and increased \$2,644,886; and agriculture, which increased less than half a million. The chief reductions were in pensions, \$3,191,253; public works, \$7,084,132; post office, \$882,374; soldiers' land settlement, \$462,888; soldiers' civil re-establishment, \$4,416,169; and miscellaneous, \$8,886,747. The principal increases in revenues were: Customs, \$12,369,824; Excise, \$993,210; Post Office, \$2,616,414; Inland Revenue, \$32,826,230. There were decreases of \$9,784,205 in business profits tax and \$18,972,816 in income-tax. For the current fiscal year, the Minister of Finance has asked from income and the expiring business profits tax the sum of \$55,000,000, and it is stated that that sum has already been secured, with several months still to run.

That there is something to hope for in the way of a better fiscal showing for the current year is shown by the statement recently issued by Sir Henry Thornton, giving the increase in net revenue for the Canadian National Railways for the calendar year 1923 as \$17,646,935, the total net operating revenues being over twenty million dollars. President Thornton has expressed the belief that this betterment will be followed by one of nearly thirty millions for 1924, and that by the end of 1925 the burden of deficits now being carried by the Canadian taxpayers will have been removed. There are not many in Canada so optimistic. Sir Henry has kept to the first year of his schedule, but it is pointed out (by those who are critical of Government ownership, it is true) that a considerable proportion of the betterment shown in the 1923 statement has been due to economies effected in administration and operation incidental to the consolidation of the system, and a progressive gain by the same means cannot be expected. Simultaneous demands for increases in wages and decreases in freight rates may interfere with Sir Henry Thornton's calculations.

The Commissioner appointed by and on behalf of the Government to investigate gratuities and other matters in connection with the Grand Trunk Railway has presented his report, and it contains some pretty severe strictures on some of the officials and directors. The Commissioner's report says, with regard to gratuities,

that in view of the pending acquisition of the road by the Canadian Government the propriety of President Kelly's act in recommending to Sir Alfred Smithers the payment of a large sum in gratuities may very properly be questioned. Dealing with the payment of £37,500 to the directors of the Grand Trunk, the report says such payment "in no way affected the company's assets as acquired by the Dominion Government," and any question with regard to it is one to be dealt with as between the shareholders and the directors. With regard to the payments of interest on March 1 and 2, 1919, on the four per cent. Grand Trunk Pacific debentures and five per cent. secured notes, it is pointed out in the report that such were made out of funds to be used for working expenses, and not for interest payments. "It is quite evident," the report says, "that the Canadian Government was unwilling to finance payments of interest, and they (the directors) should have governed themselves accordingly, notwithstanding their strenuous plea that Canadian credit would be seriously affected if default were made in payment of interest." It was also made plain by the Canadian Government that it would not authorise the payment of interest falling due on March 1 and 2, on the guaranteed debenture stock and secured notes, and the directors of the company must assume responsibility for their action. These interest payments in London gave rise to obligations which later had to be honoured by the Government receiver.

During 1916-17-18, Grand Trunk Pacific officials in London had been accumulating a surplus of funds on hand, the surplus cash balance on January 1, 1916, being \$18,753.90, on January 1, 1919, \$624,063.91, and on February 28, 1919, \$717,621.25, but there were liabilities of \$642,101.56 to meet, so that only \$75,519.69 could be properly used for payments accruing due on and after March 1, 1919. A total of \$650,136.98, however, was paid out in interest, and an additional \$274,310.82, making an aggregate of \$924,447.80 paid out of the company's funds. The legality and propriety of such payments are called in question by the Commissioner.

The latest Government issue of fifty million dollars Dominion of Canada guaranteed five per cent. railway bonds has created renewed confidence in Canada's financial condition. Before it was issued there was considerable discussion in financial circles as to whether the loan could or should be placed here. The argument was advanced in some quarters that the sale of such a quantity of Government securities here tends to make money scarce for the development of industry. The bond houses, on the other hand, pointed out that notwithstanding the \$200,000,000 loan in the autumn, followed by a \$40,000,000 Ontario loan, savings deposits increased by more than \$1,000,000 in the succeeding two months.

There has been exceptional activity in the bond market in Canada recently.

HOLLAND.—THE FINANCIAL POSITION—SEVERE RETRENCHMENT—BANK RATE INCREASED—INDUSTRIAL OUTLOOK.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, February 11.

The Minister of Finance has recently issued a note outlining the various retrenchment measures which he intends to adopt in order to enable Holland to balance her budget within the next few years. This is, in point of fact, the second note which has been issued by the same Minister. The first, however, came out before the Government crisis which followed upon the throwing out of the Navy Bill by the Dutch Parliament. This incident gave rise to a very singular position. Thanks to the large number of political parties which exist in Holland, it was found impossible to form a new Ministry, so that, after the lapse of 2½ months, the very same Government, quite unchanged in constitution, again took over the reins. For the moment the Navy Bill has been dropped, and it has also been found possible to effect some slight changes in the original retrenchment plans, because there have been slight changes in the estimates of the yield of some of the chief items of the budget. It was originally estimated

that the deficit for 1924 would be 116 million florins, but this has now been reduced to 106 millions, in consequence of an increase in the estimate of the income-tax yield. Efforts will be made to cover this deficit, firstly, by withholding from the budget the charges for old age pensions (20 million florins) and for disablement pensions (18½ million florins), and secondly, by a provisional 10 per cent. reduction of the salaries of civil servants (the amount thus saved this year will not exceed 17½ million florins), while the balance must be covered by fresh taxation. To this end it is proposed to revise the tariff of import duties, and to introduce indirect taxes on beer, tea, coffee, cycles, and articles of luxury, and also a tax on turnovers. But even now it may safely be predicted that the 1924 deficit will not be wholly wiped out. In the first place, the yield of the new taxes is estimated at not more than 40 million florins, and in the second place both the reduction of salaries and the fresh taxes must first be sanctioned by Parliament, and unless the former is made retrospective (which is very improbable) the estimated amount will not be realised during the present year. The prospects for 1925 are, however, somewhat better. The deficit for the year is estimated at 130 million florins (originally 140 millions); and it will be met partly by the above-mentioned new taxes, partly by a further 10 per cent. reduction of salaries (making a total of 20 per cent.), partly by a reorganisation of the State services (education, national defence, &c.), so as to effect a provisional saving of 10 millions, and finally by the elimination of the deficit on the railways and postal service. There will then remain a deficit of 20 millions, which in 1925 will again be met by the withholding of grants for disablement pensions. After 1925, however, the budget should balance, as the reorganisation of the State services, by that time complete, will make it possible to save 30 instead of 10 million florins.

One proof of the necessity for such energetic economies is to be found in the fact that for the second time it has been found impossible to place the whole of the offer of Treasury Bonds and Treasury Bills. On December 20, 1923, 115 million florins were offered, of which the public only subscribed 79 millions; on January 21, 1924, the corresponding amounts were respectively 100 and 81 million florins, although the amounts offered had on previous occasions been over-subscribed for more than a year. This is no proof of a lack of confidence in Government capacity; it is due to the fact that the amounts hitherto available for State finance are no longer so easily obtainable, and this again is mainly due to the heavy withdrawals of German balances. The rise in the interest on Treasury Bonds from 4½ to 5 per cent. and the facilities for obtaining these bonds over the counter are of too recent date for it to be possible to gauge their effects.

As the demand for money showed little sign of diminution, even after the increase of the bank rate from 4 to 4½ per cent. on December 12, 1923, it was found necessary to make a further increase from 4½ to 5 per cent. on January 23rd. It is clear, therefore, that the Netherlands Bank will in its turn do all that it possibly can to prevent inflation, and to safeguard the guilder.

If all signs are to be trusted, the drastic measures which will undoubtedly be adopted will be attended with complete success. This view is shared by all the leading banking circles, both in Holland and abroad. One proof of this universal confidence is the establishment of various international institutions, all of which will transact business through the medium of the guilder. The most important of these institutions are the Netherlands Acceptance Company (founded with an original capital of 5 million florins by the Netherlands Trading Company, the Rotterdamsche Bankvereeniging, Messrs Pierson and Co., all of Amsterdam, and Messrs Mendelssohn and Co., of Berlin); the International Bank of Amsterdam (with an original capital of 10 million florins, founded by the Amsterdamse Bank and the Twentsche Bank of Amsterdam, the Stockholms Enskilda Bank of Stockholm, the Darmstädter and National Bank of Berlin, and Lloyds Bank, Lazard Brothers and Co., and the Whitehall Trust Company, of London); and the International Credit Company, in which Messrs. Kleinwort and the Westminster Bank are among the participants, and the capital of which

is 20 million guilders (11 millions paid up). The founding of the International Bank has attracted especial attention, inasmuch as, for the first time since the war, British and German interests are here brought together in one organisation. The founding of such institutions cannot fail to redound to Holland's advantage, for she thereby becomes to an increasing degree a centre of international finance. On the other hand, criticism is not lacking. It is even alleged that the German institutions may acquire a predominant influence, and force into the background the financial needs of the other countries concerned. Quite apart, however, from the high standing of the above-mentioned Dutch, British, and Swedish firms, which affords adequate guarantee that the interests of their respective nationals will be admirably safeguarded, this criticism forgets that present-day economic conditions compel the adoption of this course, and that, if the above-named non-German institutions had chosen to stand aloof, the German banks would in all probability have taken the initiative themselves, and would have founded German concerns in the guise of Dutch, as has so often been the case in various branches of industry.

There is some improvement, too, in industrial prospects. The blast furnaces of Velzen have now been started. When working to the full extent of their capacity they will have an output of 150,000 tons of pig-iron per annum; so that, if we estimate the home consumption at about 50,000 tons, there will be about 100,000 tons available for export. Moreover, an order from Siam for 42 bridges has been placed in Holland. French competition may be a handicap on account of the depreciation of the franc, which has already caused the Dutch shipbuilding industry to lose the Netherlands Steamship Company's order for a new steamer. The French shipbuilding yards at St Nazaire sent in a tender which was about 1½ million florins lower than the lowest quotations of the Dutch and British shipbuilders. The sole cause of this undercutting is the fact that the purchasing power of the French franc is greater at home than abroad, so that wages in France are much lower than in most other countries. Efforts will, however, be made to prevent any recurrence of this incident. One of the remedies suggested is the granting, in the case of ships built for foreign orders, of a subsidy of 30 per cent. of the total amount expended in wages. Of this 30 per cent., half would be paid by the State, and the other half by the municipality concerned. The grant would further be made conditional upon the renunciation of all profits on the part of the firm, as the latter would gain sufficient advantage by being thus enabled to maintain its staff at full working strength, so that, when normal times return, it would be in a position to compete with foreign firms. Moreover, the subsidy would work out at considerably less than the sums which would otherwise have to be paid out as unemployment relief. If, therefore, political and economic factors combine to effect the restoration of Europe, the prospects before Holland are by no means unfavourable.

NORWAY.—BUDGET—TRADE BALANCE—BANKING AFFAIRS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, February.

QUESTIONS of financial or economic bearing will form the main subject of the deliberations of the present session of the Storting. The outstanding question is that of the Budget for 1924-25. Comparing the amount of the ordinary Budget for 1923-24, which was Kr.499,400,000, with the present one, Kr.587,000,000, the man-in-the-street at first sight was disagreeably surprised because he had expected the present Finance Minister to reduce the Budget, whereas there is an increase of a sum which is in

itself as large as a Budget of some years ago, viz., Kr.87,600,000! The extraordinary Budget, which last year was about Kr.52,000,000, this year is Kr.44,000,000. Consequently the net increase is round Kr.80,000,000.

A closer examination, however, brings considerable comfort, in so far as it reveals that very important sums not included in the previous Budget are now included, e.g., Kr.30 millions of the deficit on last year's Budget; about 58 millions more in connection with the Public Debt, and various other sums. Altogether, very nearly 99 millions are included in this year's Budget, which more or less have reference to previous expenditure, so that in the ordinary outgoings an actual saving of 11 millions has been effected. This certainly is not much, but it is in the right direction. The main thing about the new Budget proposal, however, is that there is a feeling that, barring extraordinary circumstances, there is no fear of any deficit. The Finance Minister has faced the facts, and the taxpayers shoulder the certainly extremely heavy burden, trusting that the corner has been turned and the burden will gradually become lighter.

The Bank of Norway, and the larger private banks, have joined in issuing a letter to all the spending authorities of the country calling upon them to evince the greatest economy in managing the public funds. This, certainly, is necessary, for the Public Debt has risen to a very high figure. The State debt on December 31 was round Kr.1,500,000,000, and the municipal debt about Kr.1,400,000,000. The increase during the last ten years is enormous, but, of course, the actual value of these sums is not half of what it would have been in pre-war times. And then, against this increase in liabilities there are also very considerable increases in assets, such as electric works, railways, telegraphs and telephones and public buildings, and a splendid refit of the merchant fleet. Besides, the State and the municipalities have acquired very valuable forests, waterfalls, &c. The position, therefore, in spite of all, is sound, but the present generation, of all classes, must make up their mind to retrenchment and hard work to get out of the maze into which financial affairs have drifted. It has been calculated that last year the country earned 16 millions on tourists. This is only half of pre-war earnings on this account, but it is very likely that the stream of tourists will again increase, though perhaps slowly, as, of course, few tourists from Central Europe, formerly numerous, will come for years.

At the end of 1922 there were 576 savings banks in the country, with deposits of about 2,657 million kroner. Out of each 1,000 individuals in the country 673 persons had a savings bank account, with an average deposit per head of 1,340 kroner, which means very nearly 900 kroner for every individual in the country. If the private banks be included, the total saved-up capital of the country at the end of 1922 was about 5,150 millions, which is 1,910 kroner for every soul in the country—more than was, perhaps, expected. The Central Union of the Savings Banks have proposed to the Government the preparation of an Act making it incumbent on every savings bank in the country to contribute towards a fund which is to amount to 1 per cent. of all deposits, to serve as a security for the depositors.

The Statistical Central Bureau has published some figures concerning the last year's trade. Including re-exports and sales of ships, the total export amounts to about 832 millions (in 1922 about 787 millions). The total imports are estimated at 1,350 millions, including about 96 millions for ships. There is for 1923 a small improvement in the state of the trade balance, but there is room for more improvement before the pre-war position is reached—the balance was then 50 per cent. against 61 per cent. for last year. This adverse balance, of course, is mainly covered by freights, which probably amount to 91 per cent. of the trade deficit. Since the war very marked changes have taken place in the country's markets. Thus, in 1913 Germany took about 20 per cent. of the goods exported; in 1922 less than 10 per cent. To counterbalance this, the exports to Great Britain and America have increased, and these two customers now almost equal one another as buyers of Norwegian goods, chiefly pulp and paper.

The Finance Committee of the Storting had reported

upon a proposal to establish a Bank Board (or Council) of seven members as a controlling and consulting institution attached to the Government to assist in the management of the banks that have come under the Administration Act. Defended by the extreme Radical parties, it was defeated by the moderate elements, and this result is greeted with pleasure by the country, the more so as the composition of the board was to have been decidedly on political lines.

The port strike now has been going on for nearly three weeks, and so far as can now be seen there is no prospect of any immediate end. Though a good deal of shipping is going on, yet the strike is causing inconvenience in many quarters, and not a few mills, notably wood-pulp and paper mills, most likely will have to stop working, as they can no longer warehouse the accumulating stock. No sign of riots or other troubles of a similar kind have developed.

The banks are beginning to publish their results for 1923. The issue of fresh capital has been very small, totalling only just under 123 million kroner. Out of this sum about 71 millions were bonds, most of which were placed during the first half-year.

So far, the most noteworthy bank result is that of Den Norske Handelsbank. This was one of the "big seven." Everybody knew that it had fared badly. The result is that 45 million kroner have been written off as loss sustained or anticipated, leaving half of the share capital, or 20 million kroner, and 5 millions of the reserve fund, untouched. The men now at the helm are enjoying confidence, and with the necessary time and a reasonable share of assistance by the business world and public authorities good results may be expected of the operations of the bank, which will hereafter be carried on on a more limited scale.

JUGOSLAVIA.—THE NEW TREATY—EXCHANGE—BUDGET—LOAN NEGOTIATIONS.

(FROM OUR CORRESPONDENT.)

BELGRADE, February 7.

THE treaty with Italy and the settlement of the Fiume problem are events of first-class political importance, and are also bound to have very great influence on the economic life of Yugoslavia. Politically, they contribute to the pacification of the Balkans and Yugoslavia's further consolidation. Many politicians profess to see in the treaty the sign of a change in Yugoslav political orientation gradually approaching the British view—that European reconstruction should be conceived as an economic rather than as a political problem. The opposition to the French armament loan and the sudden recall of the French Minister at Belgrade are adduced as proofs of this. Economically, the treaty opens to Yugoslavia its natural seaport, and also paves the way for a commercial and railway convention with Italy. Freed from constant external anxiety, the Government should now be able to devote itself to some long-needed reforms: a drastic simplification of the present clumsy administration, the reduction of the too numerous and underpaid officials, a radical reform of the very unequal burden of taxation, the construction of railways, the promotion of international postal intercourse, workers' legislation, economic education, &c.

The favourable impression of the treaty abroad is evident from its influence on the exchange. The dinar, which has been stabilised for over four months at 385 to the £, shows signs of renewed strength, and has advanced to a sterling rate below 370. Its dollar rate has improved from 86.25 in October to 84.50 on February 6.

As the obstruction of the Opposition in the Financial Committee made the passing of the 1923-24 Budget impossible before the end of February, the Minister of Finance introduced three more "twelfths" (till the end of March), and proposed that the Budget for 1923-24 should be adopted for 1924-25, at the same time moving the beginning of the budgetary year from July 1 to April 1. The estimate both for revenue and expenditure is 10,405,000,000 dinars. The slight difference between this and the previous Budget (see the *Economist* of December 29) is chiefly due to an increase in the salaries of civil servants and officers, to the payment of interest, and the

amortisation of State loans. Expenses on loans claim only 5.66 per cent. of the whole Budget.

In his speech introducing the Budget, the Minister of Finance declared himself a strict deflationist. He pointed out that deflation has resulted in a 20 per cent. improvement in the dinar. He also emphasised that last year not only left a favourable balance to the Exchequer, but even allowed him to cover extraordinary expenditure on armaments and railway construction from the regular receipts. For the twelve months August, 1922—July, 1923, State receipts amount to 7,158 million dinars, and expenditure to 6,693, thus giving a surplus of 465 million dinars. The budgetary estimate for the same period, both for receipts and expenses, was 7,035 million dinars. August, 1923, shows similar promising signs, receipts being 679 million, and expenditure 619 million dinars. He attributed the favourable trade statistics to the economic policy of the Government. Exports for the first ten months of 1923 amount to 6,467 million dinars, as compared with 3,179 in 1922, the respective tonnages being 2,487,000 and 1,847,000. As imports during the first six months of 1923 amount to 3,334 million dinars, a favourable trade balance seems to have been attained.

The money shortage is still as severe as ever, and industry is affected by it most acutely. Both the Government and business circles are gradually adopting the view that the introduction of foreign capital must be encouraged if national industry is not to suffer. The State Mortgage Bank, having concluded a loan of 5 million Swiss francs, is now negotiating with the same group for another loan of at least 10 million. The Belgrade Municipality is negotiating with a view to launching a loan in London. The new Minister of Communications desires the construction and exploitation of railways by foreign capital in order to extend the network of lines in the country, and negotiations have been begun with some large British firms. In addition to the Czech capital already introduced, business circles also hope to attract British capital for the opening up of the numerous unexploited mines, for large construction works, and for building operations.

Letters to the Editor.

BRITISH SHEEP BREEDING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The article from a correspondent on the "Economics of British Sheep Breeding," which appeared in your issue of February 16th, calls for correction on many important points.

It is not true that the War Office at any time claimed to take British wool without payment and to give at its own time an ex-gratia donation to the farmer. In the case of wool, as of a host of other articles, a limit was fixed to the rise of market prices under the stress of war conditions. The wool was taken by the Government at prices ranging between 40 per cent. and 60 per cent. over 1914 prices, and the full value was paid in cash at the time of delivery. In the case of the wool re-sold, the selling price was very slightly above the purchase price. The community got the whole benefit of these Regulations, and nothing can be more certain than that any future Government, Conservative, Liberal, or Labour, would in case of a great war limit the rise of market prices in an even more stringent manner than was done from 1916 to 1918.

It is not true that the Government bought the Overseas clips in 1919 after the surrender of the enemy's fleet. The last purchase of any importance was made in June, 1918, though it covered a period extending to one year after the war closed.

It is not true that the dates of the wool sales at Coleman street were at any time designed to swamp home wool fairs. The sales of wool at Coleman street during the period 1919-24 were fixed, as always was the case in the past and always will be in the future, in relation to the quantity of Overseas wool available for sale and to meet the convenience of buyers and sellers.

There is no evidence that the interference of the British Government, under the emergencies of war, in the whole-

sale purchase of Australian and New Zealand wool either increased or diminished the competition of that wool with British wool. The ups and downs of the market from 1919 to 1924 were due to a number of factors which I shall not attempt to analyse in this letter, but I confidently make the following assertions:—

1. At no time has the British farmer been in any way prevented from obtaining a price for his wool fully proportionate to the price of Colonial wool at the time.

2. The influence of the British Wool Department and its successor, the British Australian Wool Realisation Association, Limited, was continuously exercised, and with a certain degree of success, in the direction of breaking the fall of prices in 1920-1921 which it was foreseen would be necessarily followed by a correspondingly sharp rise in the succeeding years.

Your correspondent takes a moderately hopeful view of the future. I think he would have been justified in giving a more decided encouragement to British sheep breeders. There never has been a time when the wool market promised better things for the future than it does at present.—I am, &c.,

A. H. GOLDFINCH.

(Late Director of Raw Materials.)

London, E.C., February 21st, 1924.

Books and Publications.

WORKS OF TURGOT.*

If any man should go about in years to come to produce a new and complete edition of the writings of Turgot, with emendations and "additional matter never before printed," may he and his project be instantly and painlessly extinguished! We know our Turgot. Whatever record leaps to light may be published separately, if it is worth while, but of one thing we may be assured in advance, it will not modify our estimate of his character, his principles and his opinions. He was, as his countrymen say, "all of one piece." The spotless purity of his life, the unswerving rectitude of his conduct as citizen, administrator and statesman, the logic and clarity of his economic philosophy, the courage, directness and honesty of his reforming zeal, cannot be shaken by any new evidence. When he died in 1781 his friend and disciple Du Pont de Nemours hastened to write his life in two volumes, which appeared at Philadelphia in 1782. This *Life with the works of Turgot* was published for Du Pont in Paris in 9 vols. 1809-1811. The works were rearranged with additions by Daire and Dussard in two volumes. Paris, 1844. Portions of his work, in French and in translations, have been frequently printed, and the books which have been written about Turgot and his life and activities would fill a good-sized library. To many people in France Turgot is as great a national figure as Jeanne d'Arc, but even among these he is more admired than read, and it was assuredly not a commercial motive which inspired M. Schelle to devote years of his life and to expend his erudition and industry upon the prodigious task now happily completed. It may fairly claim to be definitive. Much of it is mere reprint. Some portions have been collated anew with the originals and slightly corrected. These are marked with an asterisk. The remainder is new matter, marked with a double asterisk. The reader who is already acquainted with the works of Turgot thus finds his task of examination of this volume facilitated. It will, nevertheless, take him the best part of two days to read what is presented as new. If he is a Turgot enthusiast he may consider some of this interesting, but can hardly believe it to be important. If Turgot could arise from the dead to edit his own works we may be sure that he would strike out many of the little papers whose only ground for inclusion is that they incidentally mention his name, the street ballads compiled from a printed collection which make parenthetical allusion to him among others, his metrical experiments in translating some Odes of Horace, &c. It is possible for a ballad to be printed without its ever having

* "Oeuvres de Turgot, et Documents le Concernant." Avec Biographie et Notes par Gustave Schelle. Tome V. Pp. 754, large 8vo. Paris: Librairie Félix Alcan. 1923.

The life funds increased to £3,762,000, showing an addition of £260,000. In only one previous year—1922—had there been a

larger addition, and it was then £3,000 more. The total income of the company from all sources amounted to £637,000.

A STRONG POSITION.

In the case of a life office, the valuation of investments required to be dealt with only at the time of a division of profits, and with them that was once in five years, but he thought he might take the opportunity of stating that an investigation made at December 31st last showed that the market value of the investments was very largely in excess of the total shown in the balance-sheet. In unsettled times such as the present it was pleasing to know that they were in a strong position, and that they could, if necessary, stand quite a heavy fall in Stock Exchange values, although he trusted that nothing of the kind would occur.

The bare statement of the facts which he had given was sufficient to show how satisfactory the present position of the company was; he knew of no weak spot, and could say with confidence that the report for 1923 was all round the best that the company had issued.

A NON-DEPRECIATING INVESTMENT.

Their action at last annual meeting in increasing the intermediate bonus to the rate of £2 per cent. (in view of the improved prospects of a return at next valuation to their 30 years' pre-war record of a £2 per cent. declared bonus) had pleased their policyholders. In life assurance was to be found the one great non-depreciating investment; indeed, in a company such as theirs, which had never failed to pay a bonus to its policyholders, such an investment had shown a constant appreciation in value by the addition, quinquennially, of a substantial bonus to the holders of with-profit policies.

The report was adopted.

TRADE INDEMNITY COMPANY, LIMITED. CAPITAL TO BE INCREASED.

The sixth ordinary general meeting of the Trade Indemnity Company, Limited, was held, on the 18th instant, at the offices, 13 and 14 Austin Friars, London.

Mr C. E. Heath, O.B.E., the chairman, presided, and in the course of his speech in moving the adoption of the report and accounts, said: It is with a good deal of satisfaction that we have presented to you the accounts for last year. You will notice that, for the first time, not only have you a balance-sheet, but also an underwriting profit and loss account. That is really the most interesting part of the document. The premiums have increased, and are still increasing; we have 50 per cent. more this January than last. We still only retained £22,000 out of a total premium of £69,000—this in view of our small capital. Our balance carried forward is £29,800, and our known losses £12,000, so that we have no less than £17,000 with which to pay for any future losses on 1923 account. Inasmuch as at least half of our liability has run off, we are in a very good position.

VALUE OF PRESENT SHARES.

You will see from the report that, in deference to a good deal of urging from various sources, we have decided to increase our capital from £100,000, with £20,000 paid, to £250,000 fully paid. It was necessary, therefore, to arrive at the real break-up value of the present shares. After fully going into the question, we have settled that, after allowing for all unexpired liability, both for losses and unearned premiums, there is an unallocated profit of at least £12,000, in addition to £3,000 already put to reserve. This is quite apart from the £20,000 originally put in for forming the original reserve. In other words, the original shareholders' capital has increased by 37½ per cent. in the five or six years of the company's existence. In addition, we shall have paid two dividends of 10 per cent. each on the shares. That, I think you will agree, is a very good result for a new company.

When it was decided to increase the capital we came to one definite conclusion. It seems clear, in view of the growing importance of the business, that we should no longer stand alone, and that the sympathies and help of the banks and insurance companies should be enlisted. I am glad to say that this sympathy and assistance have been forthcoming to a very gratifying extent. Not only from the Governor of the Bank of England, but from all the large banks we have approached we have had the greatest encouragement. The insurance companies, too, have responded as I hoped they would do, and I have no doubt at all that a great step has been taken to make London the centre of what promises to become a very large and important industry. Since our last meeting we have had communications from correspondents abroad, of the very best type, who are prepared not only to share with us their internal business, but to advise us as to the standing of their nationals, to bear part of the risk with us, and to take over a bad debt and sue in their own names. You will see how important that is. In fact, in a short time there should be an intelli-

gence department for our use of the best description, with this great point about it, that those who are giving us their advice will be backing their opinion.

The chairman read a letter from the late President of the Board of Trade, in which Sir Philip Lloyd-Greame said: "There is no objection whatever to your saying that the Trade Indemnity Company acted for a time officially as the adviser of the Export Credits Department in respect of the assessment of the premia for guaranteeing bills under the export credits scheme, and that the experience of the officials of the company, derived, I believe, from many years' activities in this business, has been of great utility to the Department."

INSURANCE FOR CATASTROPHE HAZARD.

The chairman continued: The problems which have to be considered are so varied, and so many are the difficulties which a Government Department has to face owing to its rules and regulations, and the control which must necessarily be exercised over it, that I believe insurance by such a Department can never have anything but a very limited scope. I believe, too, that it is impossible for a Government Department to make such arrangements for foreign co-operation as I have outlined. As in most things, private initiative and management will produce the best results. But there is one way in which a Government can undoubtedly help. There are many would-be insurers who dread a catastrophe. I think our business is on such safe lines that nothing of the sort should be feared. Indeed, we have gone through many world crises in our time without damage, but there it is. There is undoubtedly this fear. The market could, I believe, be almost indefinitely extended if the Government would reinsure us against this catastrophe hazard. The Government should be paid for it; a percentage of our premiums might easily be made over to cover the risk. I would like very strongly to recommend the idea to the powers that be. If it is really hoped to reduce unemployment by increasing trade, then the relieving of the merchant and manufacturer of part of his risk is going to be one of the vital problems. I believe we can solve it, but we shall solve it on much better lines with a little Government help.

Mr A. G. M. Dickson seconded the motion, which was unanimously approved.

UNDERGROUND GROUP.

INCREASE IN PASSENGERS—BUS COMPETITION PROBLEM.

The ordinary general meetings of the Metropolitan District Railway Company, the London Electric Railway Company, the City and South London Railway Company, the Central London Railway Company, and the London General Omnibus Company, Limited, were held, on the 21st instant, at the Caxton Hall, Westminster, London, the Right Hon. Lord Ashfield, P.C., presiding.

The secretary and treasurer (Mr John C. Mitchell) having read the notices convening the meetings,

The Chairman, in the course of his speech, said that the gross traffic receipts for 1923 were £158,000 less than those for 1922, a small decline of just over 1 per cent. The passengers carried were, however, increased by 173,000,000—a large advance of almost 15 per cent. It was far more than a normal advance due to growth of population and other regular causes, and indicated a renewed growth of the travel habit, which was welcome and encouraging. There were several reasons why, with such increased volume of travel, traffic receipts were reduced. There would seem to have been a transfer of season ticket holders to the slightly cheaper workmen's return tickets, and a general shortening of the average length of journey taken, but the chief cause had been the reintroduction of 1d fares upon the omnibuses.

It was unfortunate that the increase in the number of passengers carried was wholly attributable to the omnibuses. Their increase was 193 millions, whereas the railways showed a decrease of 20 millions. The City and South London Railway had only contributed 11 millions of passengers, as against 25 millions in the previous year, so that the partial closing of that railway accounted for much more than half the loss. Making every allowance, however, for the temporary failure of that link in the underground system, the railways had rather fallen back than advanced. That was the disappointing feature, but, for what consolation it might be, he would point out that it was not a feature confined to their own railways, and it also appeared on tramways.

INCOME AND DIVIDENDS.

The total amount of net income was £2,992,000, as against £2,977,000 in 1922. While the amount required for the dividends on the guaranteed and preference stocks was unchanged, the amount required for interest, rentals, and fixed charges was more by £83,000, due to a variety of items. They had reduced the amount appropriated to reserve for contingencies and renewals by £75,000, so that, as a result, the balance in respect of the year's

working available for dividends on ordinary stocks and shares was approximately the same as a year ago at £982,000. The London Electric Railway Company, the City and South London Railway Company, and the Central London Railway Company would be invited to declare dividends at the rate of 4 per cent., as in 1922. The Metropolitan District Railway Company, which had paid 3 per cent. in 1922, would be invited to raise that dividend to 3½ per cent. The London General Omnibus Company would be asked to pay 9 per cent., free of income-tax, a ½ cent. more than in 1922. When those dividends were paid, the average rate of return on the ordinary capital of the Common Fund companies would be 4.8 per cent., and upon all the capital of whatever class in the Common Fund companies 4.5 per cent. They were committed to the policy of a reasonable return upon that capital and no more, but they were still seeking that reasonable return. In the past their policy had been, with due regard to satisfying the claims of the public for service, to work railways, tramways, and omnibuses to the greatest mutual advantage.

BUS COMPETITION.

Unluckily the year 1923 had introduced a new factor into the situation. A number of omnibuses working largely in independence one of another, and, so far as could be ascertained, not in any regular manner, but changing routes daily—one might without exaggeration say hourly—had appeared upon the streets, growing slowly week by week, until at the end of January there had been 208 of them in seventy-four separate ownerships. Their intention appeared to be to secure a doubtful gain by snatching at the cream of the traffic, without a thought of what was to be done for the thin milk, and without a care of what was meant by public service. It was a strange situation that within the Metropolitan Police area there should be no power vested in anyone to control the working of public service vehicles. Anyone could acquire an omnibus which, so long as it complied with the structural requirements of the police, must be licensed by them, and might then be employed upon any route within the area which was not physically dangerous, without regard either to the capacity of the route, or the vehicular traffic that is already carried, or to the provision of a regular scheme of transport facilities. There was no limit to the number of licences which might be issued. The Underground Railways, built at immense cost, were in reality streets beneath streets, which should afford immense relief to the congestion above by withdrawing a large proportion of the passenger traffic. Yet the surface street was allowed to be filled with streams of omnibuses until the speed of movement had fallen in this last year to an alarming extent, and London, which from being perhaps the fastest traffic city in the world, was now about the slowest.

POLICY CHANGED.

The co-ordination that had been the cardinal principle of the Underground policy had had to be abandoned. They had had to change their policy. No longer were they able to look at omnibus routes and services in relation to railways and tramways. Now they must work the omnibuses to their full economic limit, regardless of other transport facilities. It was that change of policy which accounted for the 24 million more omnibus miles, the 193 million more omnibus passengers, the fewer passengers carried on railways and tramways, and the poor financial results, not only for their own companies, but for others. He had no fear for the "General" omnibuses in competition with stranger omnibuses, because their own vehicles were at least as good as those of their competitors, and were more efficiently and economically worked. He had, however, some fear for the railways and tramways.

The choice before them was to hold their hand with the omnibuses, and let those competitors multiply and prejudice the railways and tramways, or to expand their fleet of omnibuses and prejudice them, if it must be so, themselves. They had chosen the latter course, and at December 31st last they had an active fleet of 3,869 omnibuses, as compared with 2,809 at the end of the previous year. They were still pursuing their construction programme, and adding vehicles at the rate of about twenty-five per week in preparation for the coming summer. Yet the dilemma remained that successful omnibuses were insufficient compensation for starved tubes and impoverished tramways. London wanted all the facilities it now enjoyed and more. Some remedy must be found for the competition that was destructive, or sooner, rather than later, London would wake suddenly to find that its traffic facilities were growing less instead of greater.

RAILWAY DEVELOPMENT AND TRAFFIC CONTROL.

Development was the very heart of the problem, and it concerned not so much omnibuses as railways. London could not grow except upon a framework of railway lines. The larger it grew, the more it must depend upon the speedier form of transport for its essential services—that was the railway. Their companies had made great efforts in the direction of railway development. The policy which

they had pursued had, he submitted, been a bold and a right policy, but it could not continue. There was a limit to the amount of capital that could be issued, unless the circumstances were wholly favourable, and that could not be the case if the scramble for traffic was to be pursued without any adequate scheme of control. Development could only continue if the existing railways were able to work on a sound financial basis.

London transport had served the public well, and had not failed in its obligations to its employees, but it had still to earn a fair return upon the capital invested in it before it could count itself wholly successful. Because they lacked an ordered scheme of traffic control, the goal seemed farther off than it ought to be in common fairness. London traffic could and would be self-supporting if dealt with as a whole.

The reports and accounts of the several companies were unanimously adopted, and at subsequent special meetings of the Metropolitan District Railway Company, the London Electric Railway Company, and the Central London Railway Company the Bill deposited in Parliament for the present session for extension of powers and other purposes was approved.

CHAMBER OF SHIPPING OF THE UNITED KINGDOM. IMPROVED TRADE OUTLOOK.

The 47th annual general meeting of the Chamber of Shipping of the United Kingdom was held, on the 22nd instant, at the Leathersellers' Hall, St Helen's place, London, E.C.

The retiring president (Sir Ernest W. Glover, Bart.) proposed the adoption of the report and accounts for 1923.

Sir George Higgins, C.B.E., seconded the resolution, which was carried unanimously.

Sir Alan G. Anderson, K.B.E., was elected president for the ensuing year, and Sir Norman Hill, Bart., was appointed vice-president.

PRESIDENT'S SPEECH.

The new President, in the course of his address, said that the depression which began so suddenly in 1920 still prevailed. With all respect, however, to the opinion expressed a year ago by Sir Ernest Glover, his (Sir Alan's) view was that there was a definite bottom to the abyss of bad freights, and that they had now touched bottom. When laying-up point was reached, freights would not drop further unless expenses fell, and freights in 1923 only fell 4 per cent. below those of 1922, because on the average of the year there was a small drop in expenses. That was the only comfort he could give about the general freight position of 1923; it was definitely the worst that could be. In the early months of 1923 French action in the Ruhr and the resulting demand for coal gave a fictitious appearance of prosperity, which was quickly followed by a renewed drop. There had been, and still was, a redundant fleet of vessels in all countries, ready at short notice to put to sea when freights rose and, by flooding the market, to bring about an immediate relapse of freights. After so long a depression, one's eyes got used to gloom, and possibly for that reason it was easier to see a few spots of light on the horizon than a year ago. As a whole, the British mercantile marine had up to date weathered the storm with extraordinarily few casualties, and, without wishing to appear too hopeful or to encourage anyone to speculate on an early return to prosperity, there was evidence that their position was improving and that they had profited by the medicine of adversity.

He noticed that in their last days the late Government started lending money to shipowners or shipbuilders on easy terms in order to bring about employment in shipbuilding centres. While sympathising with the anxieties of shipbuilders, masters and men, he felt sure that the best informed among them would agree that it was dangerous to apply this artificial stimulant to the shipbuilding trade in its present condition. If shipbuilders and shipowners were left to work out their own salvation according to the economic laws, the orders for ships would gradually increase, but if shipowners who had had such severe lessons of bad trade, due to an excess of ships in the world, gained the impression that their business was to be made a cockpit for non-economic Government activities, it seemed probable that every ship that was built before its time by Government action would postpone a dozen or more other orders which would otherwise have been placed if the Government had kept quiet.

NO INTERFERENCE WITH TRADE DESIRED.

While signs existed that in this great nation of ours and in the world trade had touched bottom and was beginning to improve, and while we might hope that a financial adjustment might bring about a swift recovery in other great communities which were at present practically excluded from the world's trade by bankruptcy, the health of international trade was still precarious. If the patient were left to himself he should pull through, but if an attempt were made to hasten this recovery by strong medicines or magical panaceas, a dangerous relapse must be expected.

Sir Frederick W. Lewis, Bart., proposed a resolution expressing appreciation of the steps taken to improve port facilities throughout the country, and the hope that immediate effect would be given by the Port Authorities to the suggestions made to this end, and urging that every effort should be made still further to reduce port dues, charges and expenses.

The resolution was seconded by Mr David Jones, J.P., and carried unanimously.

Sir Ernest Glover, Bart., moved a resolution expressing the opinion that H.M. Government should seek to secure confirmation by Parliament of the resolutions, for which their predecessors jointly with the Dominion representatives were responsible, passed at the recent Imperial Economic Conference. He said that if, after such elaborate arrangements had been discussed, and after mutual agreement had been arrived at, a change of Government should involve the cancellation of everything, it seemed to him that our kinsmen overseas would in future regard it as a pure waste of time to come here to discuss business.

The resolution was seconded by Sir Kenneth Anderson, Bart., K.C.M.G., and passed unanimously.

BORAX CONSOLIDATED, LIMITED. COMPANY'S TWENTY-FIFTH YEAR—FINE RECORD.

The twenty-sixth ordinary general meeting of Borax Consolidated, Limited, was held, on the 19th instant, at the Cannon street Hotel, London, the Right Hon. the Earl of Chichester (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the net profits had amounted to £442,753, or, adding the amount brought forward, £566,646 in all. Interest on the first and second debenture stock absorbed £86,240; the dividends paid on the preference and preferred ordinary shares had amounted to £80,000, the interim dividend on the deferred ordinary shares to £57,500, and the sinking fund to £5,835. The sum of £40,000 had been placed to building and plant depreciation reserve, and they were left with a balance of £297,081. It was proposed to deal with that by placing to general reserve fund £25,000, to income-tax reserve £15,000, to pensions and grants fund £5,000, and by paying a final dividend on the deferred ordinary shares of 1s 6d per share, and also a bonus of 6d per share, or 2½ per cent., making a total of 15 per cent. That would leave £137,081 to be carried forward, or £13,188 more than the amount brought forward.

COMPANY'S FINE RECORD.

This was the silver wedding year of the company—the twenty-fifth year since its formation. Looking back over its records and results during that period, it was gratifying to be able to state that the company had never passed a dividend during these 25 years—a record which, for an industrial company operating on so large a scale in so many countries over so long a period, must, even if not unique, be considered one of which to be proud. During the 25 years the net profits had amounted to £8,388,995, or an average over the whole period of £355,560 a year. The company had given employment to many thousands of people in various countries, and had paid a huge sum in wages.

In his speech in 1920 he had pointed out that for each pound paid to the deferred ordinary shareholders the company had paid three pounds for labour. In making those profits they had also kept in mind the interests of their customers as well as those of the shareholders, and had made the profit on a very large turnover, and on a reasonable and not on a profiteering basis. On the capital used now, including the debentures, reserves, and the carry forward, the company's earnings amounted to about 8 per cent., not an unreasonable figure, looking to the character of their business as miners, refiners, and traders. During the 25 years they had intermittently been faced with various forms of competition, some legitimate and some otherwise; they had had to defend themselves in a number of instances against property-stealers, known as claim-jumpers, in more than one country, but the board had succeeded in maintaining the property of the company intact.

RESULTS OF THE PAST YEAR.

He thought that the shareholders would consider the trading result for the past year entirely satisfactory, taking into account the conditions under which the company had had to do business. Political conditions and violent exchange fluctuations had seriously affected trading in certain countries, but, on the other hand, there had been compensations in increased business in other places. He could not promise that under such varying conditions it would be possible to maintain profits, but shareholders might rest assured that nothing would be left undone to ensure a continued prosperous career for the company. The company's financial position was very strong; it was essential that it should be so. To that end the board had, since the close of the financial year, issued on favourable conditions further second mortgage debenture stock to the

extent of £297,784. They had been adding to the manufacturing capacity of the company, and, in order not to deplete liquid resources, the board had considered it advisable to obtain that further money.

The board had succeeded in arranging a compromise with the Angora Government, by which shipments from the company's Turkish mines would be resumed. During the past year they had been unable to make shipments of ore from those properties, owing to the dispute with the Turkish Government over the company's claim for damage to its property and the matter of royalties retained by the company. The arrangement of that matter would facilitate refining operations.

As to the dividend proposed, which made 15 per cent. for the year, looking to the disturbed condition of trade, seeing that the profits admitted of so doing, the board had decided, as they were dealing with the twenty-fifth year of trading, to mark it by paying the bonus of 2½ per cent. It was proposed to place to general reserve £25,000, which would bring that fund up to £425,000.

Colonel J. W. Reid, the vice-chairman, seconded the motion, which was carried unanimously.

IMPERIAL TOBACCO COMPANY (OF GREAT BRITAIN AND IRELAND), LIMITED.

GOOD RESULTS OF YEAR'S TRADE.

INCREASED TRADING PROFIT.

The annual general meeting of the Imperial Tobacco Company (of Great Britain and Ireland), Limited, was held, on the 19th instant, at Bristol, Sir George A. Wills, Bt. (the chairman), presiding.

The secretary having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—Turning to the balance-sheet, you will observe on the credit side that the total assets of the company at October 31 last are shown at a total of £67,106,047.

The first item on the balance-sheet viz., land, buildings, plant, and machinery, has been increased by £62,196, represented by extensions at some of our branches and by additions to buildings and machinery in America. I might mention here that we shall also incur some further expenditure on buildings in connection with our trade in Ireland. Since I last addressed you the Irish Free State has set up its own separate system of Customs duties, and this has made it necessary for us to undertake the manufacture of our goods in the Irish Free State for the supply of our customers there who, under the old conditions, drew their supplies direct from our English factories.

As usual, depreciation of buildings and plant has been provided for in the accounts, but no amount has been written off during the year beyond normal rates of depreciation.

Goodwill and patent rights remain unchanged at their book figure.

The investments in associated companies stated at cost, or below cost in those cases where depreciation has taken place, and current accounts with those companies stand at £6,056,331—an increase during the year of £38,719.

As stated in the balance-sheet, the aggregate market value of investments in associated companies is largely in excess of the book figure.

STOCK-IN-TRADE.

Stock-in-trade now stands at a net figure of £28,386,450, as compared with £31,998,859 in the previous year's balance-sheet—a decrease of £3,612,409. Our balance-sheet happens to be made up at a date about half-way through the leaf-buying season, and, although it chanced that at October 31, 1923, our total stocks of leaf were somewhat lower than at October 31, 1922, this reduction would probably be found to have been fully made up by the end of the buying season. We have, as you know, always considered it wise to hold large reserve stocks of leaf, and this policy has been fully maintained.

Payments on account of leaf in transit, &c., amount to £1,534,593, as compared with £1,246,673 for the previous year—an increase of £287,830.

Debtors stand at £6,445,945, as compared with £5,860,413 for the previous year—an increase of £585,532.

Investments in Government and other stocks, valued at prices ruling on October 31, 1923, stand at £6,079,262—an increase of £5,059,846. This is represented by large purchases of British Government stocks which we have made during the year. I regard Government stocks which we have made during the year. I regard this as a strengthening of our balance-sheet, and I think you will agree with me that it is prudent for a company like ours to hold a certain proportion of its assets in liquid form invested in securities entirely outside the company's business.

Cash at bankers' and in hand, amounting to £4,951,208, has increased by £234,843.

LIABILITIES.

Turning to the liabilities side of the balance-sheet, you will notice that the issued capital of the company is £42,809,633—an increase over last year of £7,479,039. This is accounted for by the issue to the shareholders of 7,479,039 ordinary shares of £1 each fully paid, in accordance with the resolution passed at an extraordinary general meeting of the company held on June 19, 1923.

Creditors, including provision for taxation, bonus to customers, estimated capital liability under dividend guarantees, employers' liability, marine and other funds, stand at £12,640,307—an increase of £1,497,722, as compared with last year.

The provision for pensions, &c., £1,814,738, has increased by £204,376. This increase is made up of £200,000 which we have transferred from the profit and loss account, and £4,376, being the difference between the interest credited to the fund and the pensions actually paid during the year.

The premium on issue of ordinary shares and the general reserve, which last year together amounted to £12,000,000, have been reduced by £7,479,039, being the amount appropriated for the purpose of issuing the fully-paid ordinary shares already mentioned.

We have transferred an amount of £479,039 from profit and loss account this year, making the reserve up to a round figure of £5,000,000.

PROFIT AND LOSS ACCOUNT.

We will now deal with the profit and loss account, which you will find set out on pages 10 and 11 of the print.

The net trading profit for the year, after fully providing for all charges, including income-tax, corporation profits tax, and bonus to customers, amounted to £7,474,686, as compared with £7,199,076 for the previous year—an increase of £275,610. This net trading profit includes a very large sum derived from dividends on investments in companies operating abroad. We have received this year a larger contribution from this source than in any previous year.

On the debit side of the profit and loss account are charged the items of provision for pensions, £200,000, and transfer to general reserve, £479,039, to which I have already referred, leaving a balance of profit for the year of £6,795,647 16s 10d.

THE DIVIDENDS.

In the appropriation account you will notice that the profit for the year, added to the balance of undivided profit from the previous year, gives an amount of profit to be dealt with of £7,364,091 18s 11d.

Out of this sum the dividends upon the preference capital have been paid—that is to say, 5½ per cent. upon the "A" cumulative preference shares, 6 per cent. upon the "B" non-cumulative preference shares, and 10 per cent. upon the "C" non-cumulative preference shares.

Upon the ordinary shares an interim dividend of 7 per cent. was paid, free of income-tax, on September 1, 1923, and it is now proposed to declare a final dividend of 8 per cent. and a bonus of 1s per share, both free of income-tax.

After providing for these dividends, there will remain a balance of £5,215,431 18s 10d to be carried forward to next year.

SATISFACTORY RESULTS.

The figures which I have quoted serve, I think, to show that the results of the year's trading now under review are very satisfactory, having regard especially to the condition of business throughout the country. They also show that the prudent policy which the directors have pursued through a long series of years has established the company in a strong financial position, which I hope will enable it to discharge its responsibilities in the future as successfully as in the past. With a business so widely spread throughout the country, we cannot but recognise that we have a heavy responsibility, not only to the public who smoke our goods, but also to the wholesale and retail traders who distribute them, and last, but not least, to our own staff and workpeople, who by their efforts help us to maintain a uniform standard of quality in all our output. I have acknowledged on many occasions in the past our indebtedness to our staff and workpeople, and I am glad to acknowledge it again to-day.

GIFT TO STAFF AND WORKPEOPLE.

The directors are confident that, as on many occasions in the past, you will approve their decision to make a gift to the staff and workpeople over and above their ordinary salary or wage. Under this gift each person who has been in receipt of a salary or wage from the company during the 12 months or any lesser period ended October 31, 1923, and who still remains in the service of the company to-day, will receive a sum equivalent to 15 per cent. of the total salary or wage received by him or her during the said 12 months or lesser period. The general conditions of the gift will be the same as in past years, the directors reserving to themselves a discretion to grant or withhold a share in the gift in any case which may appear to them to demand exceptional treatment.

Mr H. Wills Gunn (deputy-chairman) seconded the resolution, which was carried unanimously, and the formal business was transacted.

VOTE OF THANKS TO THE CHAIRMAN.

Mr W. H. Blandy, in proposing a vote of thanks to the chairman for presiding, suggested that the terms of the motion should be broadened in order to express their appreciation of the way Sir George had directed the affairs of the company during the last 22 years. Sir George had now been associated with the tobacco trade for 50 years. Those years had been years of progress, owing to his good judgment, sagacity, perseverance, enterprise, tact, and, in fact, all the virtues that went to make a successful business man and a successful business. They were indeed fortunate in having so able a leader to direct the affairs of the company. Their chairman had won the respect, admiration, and even affections of his fellow-directors and the members of the staff and workpeople. The past year had been a strenuous one for him, but he hoped he would survive to serve them for many years to come.

Mr Stephen Mitchell seconded the resolution, and it was carried with acclamation.

The Chairman, in reply, said that he had been interested in the business many years, but he supposed that his time was drawing to a close. He still had great interest in the company, and he desired to thank all those who had been associated with him in its successful work during the whole of the time that he had been chairman. He also wished to acknowledge the kindness he had received from all connected with the company, from the heads down to the youngest employee. No company had a better staff of work-people than the Imperial Tobacco Company.

WINTERBOTHAM, STRACHAN, AND PLAYNE, LIMITED. SATISFACTORY RESULTS OF YEAR'S TRADE.

The fourth ordinary general meeting of Winterbotham, Strachan, and Playne, Limited, was held, on the 22nd instant, at the registered office, 7 Argyll street, London, Mr Herbert B. Winterbotham, J.P., presiding.

The secretary (Mr Ernest G. Barrett) having read the notice convening the meeting, and the report of the auditors having been read,

The Chairman, in moving the adoption of the report and accounts, said that they claimed, allowing for all the difficulties encountered which had emanated from the Great War, and considering the general condition of the woollen trade, that they had fairly achieved the anticipations held out in their prospectus four years ago. The year 1923 had proved a most trying and disappointing one, in which manufacturers had experienced the greatest difficulty of any year since the slump of 1920 in keeping operatives and machinery employed.

He would remind the shareholders that the company derived its profits from dividends paid by the three subsidiary companies, by whom income-tax was borne. In view of the admittedly deplorable conditions, the directors regarded the £41,021 profits earned by the associated companies as highly satisfactory, but would emphasise that those profits were largely due to the increased wool stocks they had carried. The dividends paid, and recommended to be paid, did not absorb the actual amount earned by the associated companies this year by £2,480. The sum of £46,227 surplus for the year compared with £46,062 shown in the previous year, and was arrived at after provision for income-tax, corporation profits tax, and depreciation. The total reserves of the associated companies continued to stand at £56,292, the same amount as last year. Stocks at £308,660 showed an increase of £3,855, and, in view of the extraordinary advance that had taken place since November last, were very considerably under to-day's replacement value. The liabilities of the associated companies at November 30th last were £235,895.

DIVIDEND AND ALLOCATIONS.

If to the excess of assets over liabilities, remaining after the payment of £46,472 in dividends, free of tax, £548,014 be added, the advances to associated companies, £43,000, and the amount of cash at bank and in hand, £63,791, and the company's holding in War Loan, £9,732, and excluding altogether any amount for preliminary expenses, it would be seen that the assets totalled £664,537. From that figure must be deducted creditors, £722, and the amount distributable in dividends to date, £38,541, and there remained the sum of £625,273 as representing the £550,000 issued capital, after providing for writing off all preliminary expenses, and that the assets contained no items whatever for goodwill. The directors recommended that the balance of £56,320, as shown in the report, be dealt with as follows:—Dividends on preference shares, less tax, for the year ended January 31, 1924, already paid at their due date, £11,562; in payment of a dividend of 10 per cent., less tax, on the ordinary shares, £26,979; to write off preliminary expenses £7,500; and that the balance of £10,278 be carried forward to next year's account.

During the year the board had appointed Mr J. N. Tod as an additional director of the company. Mr Tod already had a seat on the board of each of the associated companies, and his practical experience of a life's connection with the woollen trade made him a very useful director.

Mr J. Margetson seconded the resolution, and it was carried unanimously.

The retiring directors, Mr E. Dalton Parsons and Mr J. N. Tod, having been re-elected, the Chairman moved the resolution for the payment of the dividends.

TRIBUTE TO CHAIRMAN AND BOARD.

Mr W. H. Armitage, in seconding the motion, said that he thought the shareholders might congratulate themselves on being associated with the company. They had to thank the chairman for the very exhaustive address he had just given them, and they complimented the board on the way in which the business had been conducted. It was very satisfactory to get 10 per cent., and they desired to thank the directors for all the hard work they had put in during the year, because all that time, as everybody knew, the price of wool had been very much against the company. So far as he could learn, all the fine cloth manufacturers had suffered considerably in regard to the price of wool. It was well known that the particular wool which they used had advanced in price more or less all the year, and now there was another advance. He thought that if the company did as well during the current year as they had done during the year under review, which was a very wonderful year considering the difficulties with which they had had to contend, the shareholders ought to be well satisfied.

The resolution was carried unanimously.

The auditors, Messrs Armitage and Norton, were reappointed, and the proceedings terminated with a vote of thanks to the chairman and directors.

HARRODS (BUENOS AIRES), LIMITED. SCHEME FOR CAPITAL REDUCTION AGREED TO.

The tenth annual meeting of Harrods (Buenos Aires), Limited, was held, on the 22nd instant, at the head offices, Brompton road, London, Sir Woodman Burbidge, Bart., C.B.E., chairman and managing director, presiding.

The Chairman, in moving the adoption of the report and accounts, said:—

I am pleased to be able to present accounts which show an all-round improvement over those of the previous year. At our last meeting I had to tell you for the first, and I hope the only time, that our trade had not been maintained. The set-back was but temporary, for our sales during the past year ended August 31, 1923, showed an increase, and we served many more customers. The profits for the year amounted to £97,501, which compares with a loss of £52,908 in the preceding year, and we have, therefore, made an improvement of £150,409. Moreover, if we take the results of this company, the South American Stores (of which you hold practically the entire capital), and their subsidiary, the Chilean Stores, the aggregate profit is £130,238, against a loss of £203,313.

There is a heavy charge of £52,400 for loss on exchange, which is greater than last year by £30,600. This was caused by the low value to which the Argentine dollar fell during the financial year, a very serious matter to us. We have charged to revenue the whole of the losses incurred on remitting money to England, but, over and above such losses, by reason of the fall in the value of the Argentine currency, our floating assets in Argentina have depreciated, and, as mentioned in the auditors' certificate, there is a difference or deficiency amounting to £103,400 which has not been provided for. For this reason we are unable to distribute any of the year's profits by way of dividend.

Our liquid assets compare as to £248,000 this year with £221,000 in the previous year, which indicates the strong financial position of the company.

As will be seen, we are making profits, and naturally our desire is to distribute them to the shareholders. In view, however, of the reduced value of the company's floating assets in Argentina, the directors are advised that the profits of the company should not be distributed by way of dividend until there has been a corresponding reduction of the capital of the company. Your directors, after conferring with some of the principal holders of each class of shares, have drawn up a scheme which deals comprehensively with the situation, and which they consider is fair and just to each class of shareholder.

As the result of the scheme, the reserve of £31,000 will disappear. £27,800 being utilised towards meeting the exchange loss and £3,200 towards writing down the preference shares held in Thompson's. This opportunity is being taken of writing off the

preference share issue expenses, which consist mainly of stamp duty and underwriting commission.

The scheme provides for the issue of funding certificates to the preference shareholders in satisfaction of their arrears. These funding certificates will be for the gross amount of the two years' dividend in arrear, down to August 31, 1923, viz., 16 per cent. on the preference capital, or £376,000 in all, and will carry interest on the gross amount at the rate of 5 per cent. per annum from September 1, 1923, until redemption, in priority to dividends on all classes of shares.

The resolutions which you will be asked to pass provide that the interest is to be the first charge on each year's profits, and that, after providing for such interest and the 8 per cent. preference dividend, there is to be set up a funding certificate redemption fund out of the profits remaining.

The total charge for interest and redemption of the funding certificates will not exceed £36,624 in any year. It is calculated this sum will be sufficient to pay the interest on and redeem the whole of the funding certificates in 15 years. The resolutions give powers to redeem the certificates either by purchase in the open market or by drawings, and, of course, when the certificates are drawn they will be paid subject to deduction of income-tax.

Full consideration has been given to the rights of the preference shares, and it will be observed that in funding the arrears of dividend, which will receive a reasonable rate of interest until redeemed, these rights have been fully recognised and protected, and I hope you will agree that the proposals are fair and reasonable.

Judging from the results to date and the assurances given to us by the local management, we anticipate that the profits of this current year will be sufficient to allow of the payment in December of the interest on these certificates, the full preference dividend of 8 per cent. for the year, and the first year's instalment of the redemption of the certificates.

The ordinary shareholders are asked to agree to the writing down of the nominal value of their shares from £1 to 15s each, but their dividend right is being preserved by increasing the rate from 10 per cent. to 13½ per cent., and they will therefore still be entitled to receive a fixed dividend of 2s per share, and under the scheme the holders will be entitled to receive 20s per share in a winding-up.

Though there is no prospect of the ordinary shareholders receiving a dividend in the current year, I hope the anticipated improvement will materialise, and enable us to recommend some distribution next year.

The report and accounts were unanimously adopted, and the scheme of capital reduction agreed to.

S.T.D. MOTORS, LIMITED.

IMPROVED POSITION—SATISFACTORY PROSPECTS.

The eighteenth annual general meeting of S.T.D. Motors, Limited, was held, on the 19th instant, at Winchester House, Old Broad street, London, Mr James Todd, J.P., F.C.A. (the chairman) presiding.

The secretary (Mr A. A. Yeatman, F.C.A.) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said that a year ago the directors had reason to anticipate being able to submit a more satisfactory result at the end of last year's trading. While all their hopes had not been fulfilled, sufficient progress had been made to justify the belief that the worst of the long-continued trade depression had now been passed, and that conditions all round had improved to an extent which permitted them to indulge in the belief that the improvement was permanent and would be maintained. They had recently made an interim distribution of 3½ per cent. dividend on the preferred ordinary shares. A larger distribution was not considered advisable at present, having regard to the fact that the dividends on the preferred ordinary shares were cumulative. Another reason which justified the directors in adopting this policy was the fact that, although the year's results as shown in the balance-sheet were not altogether unsatisfactory, they, nevertheless, did not include the whole of the profits earned by the subsidiary companies, part of which had not been distributed. The complete reorganisation of their French works and redesigning of models produced there, although a long and very expensive process, had been an unqualified success. Their French works at Suresnes were now employed to their utmost capacity, and there was no difficulty in selling the whole of their output in France. The reputation of the car had been entirely re-established, and stood to-day much higher than ever. The 1924 models were deservedly described as the best light cars in France to-day. The two big international road races for cars in France to-day, the French Grand Prix for light cars and the Spanish Grand Prix for light cars, were both won during the past

year, for the second year in succession, by models produced at their French works. A satisfactory trading profit at the French works was anticipated for the year ended December 31st last.

SUBSIDIARY COMPANIES.

Dealing with the principal of the subsidiary companies of S.T.D. Motors in this country, the chairman said it was evident at the beginning of 1923 that the Sunbeam new models, which were just then coming into full production, were going to be a great success. Despite working under considerable disadvantages at the beginning of the year, the Sunbeam net profit for the twelve months amounted to £101,000, only a portion of which, however, had been brought into the S.T.D. balance-sheet. During the past year the greatest international road race in Europe, viz., the French Grand Prix for big cars, was won by a Sunbeam. The three Sunbeam cars which entered for the race achieved the extraordinary performance of finishing first, second, and fourth against the pick of the world's racing cars. A Sunbeam car also won the Spanish Grand Prix for big cars. Jonas Woodhead and Sons had again had a successful year, and the net profits would amount to approximately £24,000, being £9,000 in excess of the figure brought into the S.T.D. balance-sheet, and £7,000 increase on the previous year's profits. This business, ever since they bought it, had been remunerative, and there was every reason to anticipate not only a continuance of this profit, but a steady increase. Heenan and Froude had shown a small profit on the year, and prospects were certainly improving all round in this branch of engineering. Several big contracts had been obtained lately. The works of the Darracq Motor Engineering Company were solely confined to the building of bodies for Talbot chassis, and for chassis imported into this country from their French works. It was anticipated that there might be a small loss on the year's trading. W. and G. Du Cros showed a loss on the year's results. A considerable part of the works was occupied as a central repair and spare part department by the Sunbeam, Talbot, and Darracq Companies. The profits shown on the working of this department were remitted direct to their respective companies, and did not go into the coffers of W. and G. Du Cros. It was also necessary to explain that during the last three years that company had been gradually liquidating a considerable stock of W. and G. motor lorries, which had been manufactured and partly manufactured when this company took the place over. Those lorries had been sold on a falling market, but the liquidation of stocks was now almost completed.

The assets of S.T.D. Motors, incorporating the constituent companies in which they held the whole, or practically the whole, of the share capital, showed on the figures of the last available balance-sheets of the various companies, a surplus of £3,386,775 over the liabilities, as against the issued capital of £3,224,408, and it was estimated that the figures would show a very considerably increased value if taken up to the end of 1923.

The report and accounts were unanimously adopted.

RAILWAY DEBENTURE AND GENERAL TRUST COMPANY, LIMITED.

DIVIDEND INCREASED TO 7 PER CENT.

The fifty-first ordinary general meeting of the Railway Debenture and General Trust Company, Limited, was held, on the 21st instant, at Winchester House, London.

Mr Richard S. Guinness, who presided, having referred to the death of his predecessor in the chair, Sir Vesey Holt, and the addition of Mr Martin Holt to the board, said: The interest from

KANSALLIS-OSAKE-PANKKI

(National Joint Stock Bank).

ESTABLISHED 1889.

Head Office: HELSINKI (Helsingfors),
FINLAND.

Capital and Reserves - - Fmk. 252,000,000
Deposits and Cheque Accounts
(30/6/23) - - Fmk. 1,587,000,000

129 BRANCHES AT ALL IMPORTANT BUSINESS CENTRES IN FINLAND.

Telegraphic Address: Kansallispankki.

investments amounted in the year to £123,313, which shows the satisfactory increase over last year of £4,460. After payment of expenses, interest on debentures and debenture stock, and preference dividend, there is a balance of £50,972, compared with £45,943 last year. We have reserved for income-tax £2,000, and provided for the premium on the 5 per cent. debentures drawn for payment on February 1st, and after transferring £13,000 to the reserve account there is, with the balance brought forward, a little over £49,000 to deal with. After full consideration of all the company's holdings and a careful review of the revenue likely to be received in the coming year, your directors have come to the conclusion that they are in a position to recommend an increase of the annual dividend on the ordinary stock from 6 per cent. to 7 per cent.

I will only add, in anticipation of any comments there may be on the addition we are making to the reserve account, that it is true that the capital, taking into account the reserve, is now intact—and that is satisfactory so far as it goes. But a large portion of the reserve account must still be set off against the depreciation existing on the investments. Some of the stockholders may consider that those who direct your affairs have been too conservative in building up this reserve account, but if it had not been for this policy we should not to-day be in the happy position of recommending to you an increased dividend. Any distribution of the reserve account, even if that reserve were not required for depreciation, would not, in our opinion, be justified to-day, and in these uncertain times common prudence demands that we should continue to make allocations thereto. I do not say that a time may not arrive when your directors of the future may conclude that world and trade conditions are of so settled a character that the capitalisation of a portion of your reserve funds is justified, but it is surely unnecessary for me to point out to the meeting that such conditions do not prevail to-day, and, therefore, it is the settled policy of your directors to maintain and build up the reserve—a policy which I trust you will support and endorse.

The Chairman concluded by paying a tribute to the work of the managers, joint secretaries, and staff.

The report was unanimously adopted.

RAILWAY SHARE TRUST AND AGENCY COMPANY, LIMITED IMPROVED RESULTS—INCREASED DIVIDEND.

The thirty-fifth ordinary general meeting of the Railway Share Trust and Agency Company, Limited, was held, on the 21st instant, at Winchester House, London.

Mr Richard S. Guinness, who presided, after referring to the death of Sir Vesey Holt, in moving the adoption of the report and accounts, said:

Turning to the balance-sheet, the only comment I need now make is as to the debenture stock outstanding, which has been increased since last year by £145,574 to a total of £400,000, bearing interest at 4½ per cent. We have thought it well to write off forthwith from the reserve account the discount on this issue, and the amount so debited has been made good by carrying to that account a profit balance on change of investments and by a transfer from the profit and loss account. The maintenance and increase of our reserve fund is, in the opinion of the board, a fundamental policy if we are duly to safeguard your interests and uphold your dividends.

The proceeds of the issue have been profitably invested, and are reflected in the increased revenue shown, and the net result of the year's working is that, after paying all expenses, interest on the debenture stock, and dividend on the preference stock, £31,709 is left, as against £23,947 in the previous year. Adding £15,456 brought in from last year, £47,165 remains to be dealt with. Of this we transfer £8,861 to the reserve account, and, after careful consideration of the company's investments and revenue prospects in the immediate future, the directors feel justified in recommending an increase of the dividend for the year on the ordinary stock from 5 per cent. to 6 per cent. The interim dividend of 2 per cent., already paid, amounted to £8,000, and the final dividend of 4 per cent. now proposed to be paid calls for £16,000, leaving £14,304 to be carried forward.

On the subject of the value of the company's investments, the following statistics as to the geographical division of those investments may be of interest to you, although it would be possible for you to obtain this information by close analysis of the list sent out. The average investment in any one holding is about £5,000, and the investments (which include Government loans, railways, and industrials) are spread over the following countries (approximate percentages):—Home investments, 42; U.S. of America and Canada, 13; South America, 24; other foreign and Colonial investments, 19; mines, 2.

Sir Reginald MacLeod, K.C.B., seconded the motion, which was carried unanimously.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £30,000,000 in Treasury Bonds and Treasury Bills dated from Feb. 25-Mar. 1 were opened on Feb. 22, 1924, and the total amount applied for was £44,535,000. For bills at three months dated Monday at £99 3s 2d and above in full, and Tuesday to Friday at £99 2s 11d, about 51 per cent., above in full, Saturday at £99 2s 9d, and above in full. The amounts allotted were as follows:—In bills at 3 months, £30,000,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months, Average Rate.	4% Treasury Bonds, Average Price.
Jan. 18, 1924.	£ 35,000,000	£ 48,420,000	3 7 3/72	nil
Jan. 25, 1924.	30,000,000	40,500,000	3 7 11/46	nil
Feb. 1, 1924.	35,000,000	45,115,000	3 5 7/83	nil
Feb. 8, 1924.	30,000,000	41,675,000	3 11 3/29	nil
Feb. 15, 1924.	30,000,000	43,620,000	3 10 5/71	nil
Feb. 22, 1924.	30,000,000	44,535,000	3 8 11/79	nil

Tenders will be received on Feb. 29, 1924, for Treasury Bonds and Bills to be issued to the maximum amount of £30,000,000. The amount of Treasury Bonds issued will not exceed £3,000,000.

Total declared value of imports	875,873	Total declared value of exports	1,118,266

Messrs Samuel Montagu and Co. write, on February 20th, as follows:—

GOLD.

There has been a moderate demand on Indian account for the fair supplies of gold available this week. Gold valued at \$3,500,000 has arrived in New York from London.

SILVER.

The market has not been so robust, chiefly owing to easier exchange rates in China, resulting in sales on account of that quarter. These have not been much in the way of fresh commitments, but have consisted mostly of purchases made since the Chinese New Year. Indian inquiry has been slight; America has been a fair seller, but the movement of the U.S. exchange has retarded American selling with freedom, and has even rendered an occasional purchase possible. The Continent is inactive. On the whole, the tone of the market is not very promising at the time of writing. Mail advice from Bombay under date of the 2nd inst. states as follows:—"The principal feature of the Bombay silver market this week has been a heavy offtake. This demand has been created by the commencement of the marriage season, and some silver is also held with a view to take a chance of duty on silver as the Budget is now drawing near. The January 26th settlement has progressed satisfactorily. There was good forward business doing in the bazaar on some days, as the bulls have commenced buying, up-country demand for the metal being very good.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

NOTICES.

At an extraordinary general meeting of the National Provincial and Union Bank of England, Limited, held at the head office of the bank on February 15th, the resolutions for changing the name to National Provincial Bank, Limited, and altering the memorandum of association were duly confirmed. The change of name will take effect forthwith. The National Provincial Bank, Limited, make the following announcements:—Sir Alfred Lewis has been appointed chief general manager. Mr G. H. Whitehurst, Mr H. S. Eltenton, and Mr F. Waller have been appointed joint general managers, and will join Mr McClelland and Mr Cornwall in that capacity.

The Right Hon. Walter Runciman and the Hon. Walter Durant Gibbs have been appointed directors of Westminster Bank.

The Midland Bank announces the opening of a new branch at 80 Salisbury road, Queen's Park, London, N.W. 6, under the management of Mr H. S. Pike.

The directors of Lloyds Bank, Limited, announce that Mr Ernest Ridley Debenham, of Addison road, W., has been elected to a seat on the board.

The Commercial Banking Company of Sydney, Limited, notify that Mr Vance Burnett Jones, formerly manager of their Brisbane branch, has been appointed assistant manager at London office, and has arrived in London to take up the appointment.

A branch of the Banque Française et Italienne pour l'Amérique du Sud has been opened at Santiago (Chile).

Reports and Notices.

Mr William Hutton, general manager of the Scottish Amicable Life Assurance Society, has been appointed a director of the society.

We are informed that, as from Tuesday, February 19th, the transfer offices of the Amalgamated Anthracite Collieries, Limited, will be situated at the registered offices of the company, St Stephen's House, Westminster, and not as heretofore at 29-30 King Street, E.C.

The San Paulo (Brazilian) Railway Company, Limited, announce that, in accordance with the terms of the quarterly adjustment to tariffs under the sliding scale, an increase of 76 per cent. on basic tariffs will come into force on the 1st proximo in place of the 86 per cent. increase at present in force.

The directors of the Employers' Liability Assurance Corporation, Limited, have elected the Rt. Hon. Sir Samuel Hoare, Bt., C.M.G., M.P., to be deputy-chairman of the general board in London of the corporation.

GOVERNMENT STOCKS, &c.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 14 to December 31, 1923, compared with those from January 14, 1923, to January 13, 1924:—

	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
Gross receipts, Dec., 1923.....	9,108,787.70	(a) 24,537,612.10
Do do do 1922.....	6,274,607.55	23,349,827.10
Estimated receipts for twelve months (Law of Control) ..	23-27,870,685.00	23-10,319,890.46
Actual receipts for twelve months, 1923 ..	22-28,900,000.00	22-10,700,000.00
Actual receipts for twelve months, 1922 ..	98,609,889.65	(b) 272,095,102.25
	74,689,417.70	147,489,090.60

NOTE.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49.15 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1881 to 1893. (a), (b). In addition to these amounts, import duties equivalent to £23 in the case of (a), and to £42,967 in the case of (b), were paid in gold at the Piræus Customs. Owing to the change in the Greek calendar from old to new style, both the estimated and actual receipts in the above statement are for 13 days less in 1923 than in 1922. As regards receipts subject to the system of plus-

values, all increases in duties and prices are excluded therefrom in the above table. Minimum receipts have, however, been fixed, in order to guarantee the plus-values against eventual diminution in the consumption.

GREEK EXTERNAL DEBT.—The Council of Foreign Bondholders have received information that the minimum rates of interest and sinking fund on the old Gold Loans will be increased in 1924, in respect of 1923, by the following percentages of the original interest:—Loans of Group I.: Interest, 42 per cent.; sinking fund, 20 per cent. Loans of Group II.: Interest, 42 per cent.; sinking fund, 20 per cent. Loans of Group III.: Interest, 42 per cent.; sinking fund, 18 per cent. With the addition of the above percentages, the total interest payable in 1924 will be:—3.40 per cent. on the 4 per cent. Monopoly Loan; 3.70 per cent. on the 5 per cent. Funding Loan; 3.70 per cent. on the 5 per cent. loans of 1881, 1884, and 1890; 2.06 per cent. on the 4 per cent. Renten. The whole of the above additional interest is payable:—On the April coupon in the case of the Funding Loan and Renten; on the June coupon in the case of the 5 per cent. loan of 1890; on the July coupon in the case of the Monopoly Loan and the 5 per cent. loans of 1881 and 1884.

BANKS.

ARCOS BANKING CORPORATION.—The first balance-sheet of Arcos Banking Corporation, Limited, established in June last to assist in the rebuilding of the Russian foreign trade, shows loans and advances of £748,400, deposits of £1,836,600, and acceptances to the amount of £296,400. The authorised and paid-up capital is £250,000, and there is a reserve fund of £12,500.

SWISS BANK CORPORATION.—The net profit for the year ended December 31, 1923, is £430,681, against £421,085 for 1922. At the annual general meeting, which is to take place on March 14th, the board will propose the payment of a dividend of 8 per cent., as last year, and to allocate £20,000 to the pension fund. The Swiss exchange has been taken at 25 francs to the £.

UNION BANK OF CANADA.—The 59th annual balance-sheet just issued shows total assets \$128,299,679 on November 30, 1923. Gold and silver coin amounts to \$1,108,197, and Dominion Government notes stand at \$8,977,191. Other current loans and discounts in Canada stand at \$53,488,949. The capital of the bank is \$8,000,000, and the rest account stands in the balance-sheet at \$1,750,000. Notes in circulation amount to \$10,357,650. Deposits not bearing interest stand at \$28,179,661, while deposits bearing interest are at \$67,441,589. The net profit for the year amounted to \$1,033,432. The balance at credit of account November 30, 1922, was \$483,175, but this amount was reduced to \$151,265, owing to \$331,910 being transferred to contingent reserve account June 19, 1923. The amount available is thus \$1,184,607, which is dealt with as follows:—A dividend of 9 per cent. for the year on the capital stock, absorbing \$720,000; the sum of \$10,000 goes to officers' pension fund; war tax on bank-note circulation and reserve for income-tax absorbs \$137,622 and \$317,075 is carried forward. The bank has 341 branches, and also agents in all parts of the world.

INSURANCE.

PROVIDENT AND MUTUAL LIFE.—The report for last year states that 15,974 new assurances were issued for £1,680,791, at annual premiums of £75,357. This compares with 11,945 policies, assuring £1,223,447 in 1922. The net premium income was £581,511, as compared with £542,269, and the funds increased by £308,269 to £4,239,924. The board have decided to increase the rate of interim bonus for the current year from £1 5s to £1 10s per cent. per annum.

SUN LIFE OF CANADA.—In pursuance of its declared policy of reducing, so far as possible, its foreign commitments, the New York Life Insurance Company has placed the administration of its British business in the hands of the Sun Life Assurance Company of Canada. The rights of the policyholders are stated to be in no way altered. The conditions of the policy contracts and the bonuses are to be the same as if there had been no change in administration. The policyholders now have the guarantee of both the New York Life, and through that company of the Sun Life of Canada, instead of that of the former company only. There are financial arrangements between the two companies, including the deposit of a fund exceeding £2,000,000 in value with the Bank of Scotland, which will have the effect of actually increasing the policyholders' security. A more detailed announcement is being communicated to the policyholders individually.

WESLEYAN AND GENERAL ASSURANCE SOCIETY.—The directors of the society have determined to declare a revisionary bonus in respect of the society's ordinary department with-profit policies for the year 1923 at the rate of £1 16s per cent. This is an increase of 6s per cent. over the rate for 1922. Recent revisionary bonuses per cent. have been:—1919, £1; 1920, £1; 1921, £1 4s; 1922, £1 10s. Bonus certificates will be issued as soon as possible after the annual meeting.

RUBBER, &c.

TAIPIING RUBBER PLANTATIONS.—This company has made good progress during the past year. The report for the year ended September 30, 1923, discloses a net profit of £10,266, to which is added £17,194 brought forward from preceding year. The dividend of 6 per cent. for the year absorbs £13,316, and £14,144 is carried forward, subject to income-tax and corporation profits tax (if any). In the preceding year, a debit balance of £24 was revealed in the report, and ordinary shareholders had to go without a dividend. The restricted output of dry rubber during the year was 523,830 lbs, as compared with 628,677 lbs in previous year.

Of the rubber produced, 331,750 lbs were sold in London at an average gross price of 1s 3.04d per lb, and 135,600 lbs locally in the East at an average gross price of 8.54d per lb. The corresponding figures for 1921-22 were 105,620 lbs at 11.73d per lb and 522,271 lbs at 7.59d per lb respectively.

MISCELLANEOUS.

COPESTAKE, CRAMPTON, AND CO., LIMITED.—The net profit for the half-year ended December 31, 1923, after charging interest on deposits, directors' and auditors' fees, and depreciation of leaseholds and machinery, amounts to £25,767, to which must be added the balance of £3,949 brought forward from the previous account, making a total of £29,716. After setting aside the sum of £11,717 to provide for income-tax and corporation profits tax, there remains a credit balance of £17,999, out of which it is proposed to pay a dividend for the half-year at the rate of 5 per cent. per annum, less income-tax, absorbing £15,500, leaving £2,499 to be carried forward. Assets total £1,087,047. Debtors stand at £523,722. Stocks are at £267,895, and cash is at £115,649. With regard to liabilities, deposit accounts stand at £180,725, and creditors at £88,323. The capital is £800,000 in ordinary shares of £1 each.

CROSSLEY BROTHERS, LIMITED.—The directors, in a circular to shareholders dated February 19, 1924, state that they are glad to report that there has been a small trading profit for the year ended December 31, 1923. On the other hand, there has been a loss in the capital value of the company's investments owing to the liquidation of one of the concerns in which the company had a large interest. The directors consider, therefore that the time has now come to write off past losses, and to write down the assets and investments to present value. They propose to put before shareholders a scheme involving a reduction of capital which they consider will be of advantage to both classes of shareholders, and enable an earlier payment of dividends out of future profits than would otherwise be possible. With that object in view, it has been decided to postpone until the end of March the annual meeting usually held this month. In the meantime, the scheme will be carefully prepared and set before shareholders, together with the accounts.

ELECTRICAL DISTRIBUTION OF YORKSHIRE, LIMITED.—The following table reveals an interesting record of progress of this concern:—

	1921.	1922.	1923.
£ s d	£ s d	£ s d	£ s d
The net profit is as follows..	8,085 11 0	14,419 6 3	19,232 16 4
And the balance brought forward, after deducting directors' remuneration, is	1,570 8 7	2,723 14 8	3,541 5 8
Making a total of.....	9,655 19 7	17,143 0 11	22,774 2 0

The directors recommend a dividend on the ordinary capital at the rate of 7 per cent. (free of income-tax) for 1923 (of which 3½ per cent. was paid in August), amounting to £10,500; an addition to the reserve fund of £5,000 (increasing this fund to £19,000); and to carry forward the balance of £7,274. All the 25 undertakings of the company have been extended during the year to meet the continued and growing demand for electricity, the number of new connections being the largest made in the history of the company. As a consequence of the increased demands, and of the economies made in working expenses, the directors have been able to make reductions in the price of electricity for lighting purposes. The development made during the past year and now projected necessitates an immediate increase of capital. It is proposed to make an issue of 100,000 shares at a premium of 5s per share. These will be proportionately allotted to the shareholders registered on February 19, 1924, on conditions which will be made known shortly after the shareholders' meeting.

SUB NIGEL, LIMITED.—It is announced that a provisional agreement is being entered into between the Sub Nigel, Limited, and the Nigel Gold Mining Company, Limited, whereby, subject to a further claim area being acquired on reasonable terms from the Government on the farm Grootfontein, the two companies will merge their respective interests. The proposed terms of the amalgamation are broadly on the following lines. The present capital of the Sub Nigel, Limited, namely, £905,000, will be reduced to £678,750 (equivalent to three shares for four), and thereafter increased to £965,500 by the creation of 286,750 shares of £1 each. Of the newly created shares, the Nigel Gold Mining Company will receive 148,737 fully-paid shares (equivalent to two shares for three) for its assets, such assets to include £25,000 cash, and 100,000 shares will be offered to shareholders at par, the issue being guaranteed by New Consolidated Gold Fields, Limited. The remaining 38,013 shares will be held in reserve.

W. T. HENLEY'S TELEGRAPH WORKS.—This company has maintained its record of net profit during 1923, as compared with 1922, as the report just issued shows that the net profit secured in 1923 was £187,843, as against £187,710 in 1922. The ordinary dividend is unchanged at 15 per cent. The carry forward is £379,175, which compares with £323,988 brought into the accounts. The sum of £25,000 has been put to reserve, making total reserve account £270,000, and £1,156 has been transferred to reserve against trustee securities. The balance-sheet reveals total assets £2,542,065. Treasury Bills and cash comprise £447,936 of the total assets. Stocks stand at £534,602. Investments in National War Bonds amount to £158,437. The company has 250,000 shares of £1 each in Henley's Tyre and Rubber Company, which are shown in the balance-sheet at £250,000.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions have been cold but dry during the week, so that farmers were enabled to push ahead with field work, which is backward for the time of year, so that a spell of open weather is desired to make up arrears. Cereal crops generally present a healthy appearance. General course of trading was considerably curtailed owing to the difficulty attaching to delivery arising from the strike of dock operatives, and prices consequently were largely nominal, though the undertone is quite steady for all cereals. English wheat continues in small supply while held for full rates. Suitable milling grades range from 10s 9d to 11s 3d, and inferior 8s 9d to 9s 9d per 112 lbs, free on rail. Imported descriptions quiet and somewhat irregular, though closing with a steady tone. No. 1 Northern Manitoba afloat quoted 51s 6d, No. 2 ditto 50s 6d, No. 3 ditto 49s 6d, and Rosafé 6½ lbs 48s 6d, all ex ship, per 496 lbs. In the floating and forward cargo section prices responded to a better demand both on home and Continental account. Steamers of Rosafé 64 lbs 45s 1½d to 45s 3d, Barusso 64 lbs just sailed 43s 9d, ditto February loading 42s 4½d, No. 2 soft white Pacific (half cargo) April 46s 6d, a steamer of Western and soft white Pacific March 11th 46s 1½d, No. 1 Northern Manitoba arrived out to load 47s 1½d, combined with No. 2 ditto at 46s 1½d per 480 lbs. Maize cargoes steady, but generally quiet. A steamer of Odessa, March 15th shipment, changed hands at 42s. Plate April-May 35s 9d, and May-June at 34s 9d, all per 480 lbs. Flour fully steady. London standard straight run quoted at 39s 6d, patents 41s 6d-42s 6d, town households 37s 6d per sack delivered. All English country straights 35s-36s free on rail at London stations. Imported tends firmer. Manitoba patents range from 37s-39s as to quality, Australian 36s-37s per 280 lbs. Barley.—English quiet, and malting ranges from 11s 9d-14s 6d, with feeders 11s-11s 6d per 112 lbs free on rail. Imported slow. Californian 45s-50s, ex store, Chilean brewing 42s-45s, ex ship, both per 448 lbs, No. 4 Canadian Western 36s 6d landed, Algerian-Tunisian, ex ship, to arrive 33s 6d, Karachi, ex ship, 33s 9d per 400 lbs. Maize steady. Plate, ex ship, 43s 6d, landed 46s, Bessarabian, ex ship, 43s 9d, landed 46s per 480 lbs. Oats.—English quiet and quoted at 9s 2d-10s 4d per 112 lbs, free on rail. Imported firm for Canadian qualities. Plate f.a.q. new crop, ex ship, 21s 6d, old crop landed 23s 6d, No. 2 Canadian Western 28s 3d, No. 3 ditto 27s 3d, No. 2 Canadian feed 25s 3d landed per 320 lbs. Millers' offals maintained. Broad bran quoted 8s-8s 6d, ordinary ditto 7s 9d-8s, middlings 9s, fine ditto 10s 3d, bags included, ex mill, light oats 6s 9d, powdered oat husks 8s 3d, feed oatmeal 9s 9d, ground oats 12s 9d, free on rail, per cwt. Oatmeal steady, with a fair demand. London-made, flaked, also rolled oats 17s 6d, medium and fine cuts 17s 6d, coarse and medium pinhead 17s 6d, ordinary Scottish oatmeal 17s 6d-18s, and American 16s 9d-17s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated February 21st, is as follows:—Pig-iron: The unfortunate dockers' strike, now near settlement, has stopped all shipments of pig-iron, and, therefore, tended to weaken prices somewhat. Prices are, however, nominally as follows:—No. 3 Cleveland G.M.B., 95s per ton; East Coast Mixed Numbers hematite, 101s per ton. Manufactured iron and steel: There is sufficient work on hand for our steel works, but the outlook for export steel is not encouraging. Prices remain unchanged. Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12; steel rails, £9. Iron ore: Buyers are not keen, having quite sufficient ore arriving and bought. Best Rubio is nominally 24s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—The strike at the docks did not check production at the Sheffield works, as the execution of export orders was continued ready for despatch when circumstances permitted. The demand for steel material, tools, and cutlery from Colonial markets and South America had exhibited some degree of briskness just when the trouble broke out. Deliveries of Continental iron and steel having ceased for the moment, producers of basic billets and some other materials advanced their prices, and United Steels, Limited, have started two additional open-hearth furnaces in anticipation of buying by consumers who have been getting their wants supplied in France and Belgium. The principal local industries have not been showing much elasticity lately, and as regards the heavy branches and raw materials the position is rather worse than before the railway strike. An improved demand for crucible steel and tools reflects busier conditions in various parts of the country, especially in engineering, foundry, and constructional work. A local firm recently booked an order for eight heavy locomotives for Chile in direct competition with the United States, who have been supplying this market with engines for some years past. Arrivals of tools and cutlery from Germany continue to dwindle, but the exporters in that country advise their customers here that the difficulties of supply may be overcome, partially if not wholly, in the course of a short time. The cutlery industry is being disorganised by a strike of grinders, which has now lasted a month, and one effect of the trouble is to give an impetus to the adoption of grinding by machinery. The export of coal and coke having ceased in consequence of the strike, there have been larger supplies of fuel for the home market, and this has eased the scarcity. Working at the pits is still irregular owing to the difficulty of obtaining empty wagons. Best steam coal is in good demand, the railways taking the maximum quantities, and the requirements of British works have increased. Small fuels are selling freely. The recent improvement in the house coal market is maintained. Prices per ton at pits are:—Best hand-picked branch, 35s; best Silkestones, 30s 6d; Yorkshire hards, 25s; Blythe hards, 25s 6d; rough slacks, 12s 6d; smalls, 7s 6d to 8s 6d; blast furnace coke, 25s to 29s.

Our Glasgow correspondent writes:—Owing to the deadlock in the business in pig-iron, Scotch producers report rather poorly as to actual business. On Saturday the quantity of Scotch brands interchanged was about the smallest on record. At the close of the day the sales for the week represented 716 tons, of which about 300 tons went to American consumers. For the corresponding week last year the total of all sorts dealt with reached over 6,000 tons. It is reported from leading Scotch and English markets that inquiries for raw material are very light, without prospect of early improvement. Of course, in that respect nearly everything depends on the course of events with the dockers, and until their position is defined little change one way or another can be looked for. In the finished iron and steel trades, although makers are well placed as regards the immediate future, works being still fully employed on good orders in hand, the position is not developing, so far as new business is concerned, as satisfactorily as had been anticipated. This state of matters is tending to weaken prices somewhat, although Continental quotations for heavy and semi-finished steel incline to stiffen, and the question of getting delivery from abroad remains a stumbling-block to any freedom of buying on the part of merchants. Bar iron manufacturers are well booked in home and export business, but here also new orders are not too plentiful. The dockers' dispute, if it continues for any time, will have a serious effect on iron and steel producers, owing to stoppage of shipments, and many works may find it necessary to slow down to avoid congestion in stocks.

Our Cardiff correspondent writes:—The dockers' strike has had a slightly depressing influence this week on prices on the Cardiff coal market. The stoppage has had only a slight adverse effect on the volume of the coal export trade. The lock gates were kept open and the tippers and trimmers remained at work. Discharging work on pitwood vessels was suspended, but as the collieries were fairly well supplied, they were able to continue working. The uncertainty of the general position, however, deterred business. Transactions were practically limited to spot parcels for the completion of cargoes, and as more coal was reaching the dock sidings than the market could absorb, salesmen were prepared to make concessions for spot shipment. Prices eased to the extent of from 6d to 1s per ton, but only for immediate business; for backward positions the collieries were adhering to their pre-strike quotations. In view of the fact, however, that shipments last week were exceptionally heavy, and of the smallness of the number of dealings

concluded this week, it is quite likely that prices will remain at their slightly reduced levels for the next two or three weeks. Another depressing influence has been the fall in the exchange rate of the franc, for the Bristol Channel ports are the chief source of the foreign coal imports of France, and with the exchange at over 100, French buyers have been restricting their orders. The Egyptian State railways have placed orders for only 50,000 tons of the contract for 200,000 tons of Monmouthshire coal for which they invited tenders a few weeks ago. A report is prevalent that the balance has gone to the United States, but it is not confirmed. The following are the current approximate quotations:—Best Admiralties, 20s 6d to 30s 6d; second Admiralties, 28s 6d to 29s 6d; best drys, 28s to 28s 6d; Black Veins, 28s 6d to 29s; Western Valleys, 28s to 28s 6d; Eastern Valleys, 26s 6d to 27s 6d; best bunker smalls, 22s to 23s; ordinary cargo smalls, 18s to 20s; coking smalls, 23s to 24s; anthracite Big Vein large, 41s to 45s; machine-made cobbles, 45s to 47s 6d; French nuts, 47s 6d to 50s; stove nuts, 50s to 52s 6d; rubby culm, 14s to 14s 6d; coke for export, 55s to 60s; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 30s to 32s 6d; pitwood, ex ship, 33s to 35s. The dockers' strike reacted on the exports of tinplates, but demand was normal, and in view of the increase in costs, and particularly in the price of tin, it is expected that the minimum prices of tinplates and sheet bars will be increased. The imports of iron ore continue heavy.

METALS.

Tin commenced the week with a firmer tone, due to higher cables from the East, with business on a fairly liberal scale. Standard cash sold at £284 to £283 10s, and three months £284 to £280 10s to £282 10s, while finally at £282. Eastern advices reported sales on the basis of £285 c.i.f. Subsequent movements were attended by some irregularity and weakness on sellers showing more disposition to press, though offerings were well absorbed. By the middle of the week standard cash sold at £272 5s to £276, and three months £270 to £271 to £269 10s, while finally registered at £273. Further sales occurred in the East at £277 10s c.i.f. On the following day the tendency was firmer, while somewhat irregular, with sales on a liberal scale. Standard cash quoted at £278 to £278 10s, with dealings in near dates at £278 10s to £278, and three months £276 10s, £278 10s, £274 10s to £276. At final session values were easier, standard cash being dealt in at £276 to £273 10s to £274 10s and three months at £275 10s to £272 10s. English ingots quoted at £274 15s to £275 5s. Copper was actively supported at opening, and prices ruled in favour of sellers. Standard cash sold at £65 10s to £65 17s 6d, and three months £66 10s to £67. Later, however, the tendency was easier, and liberal dealings were put through. By the middle of the week standard sold at £64 and three months £64 7s 6d to £64 2s 6d to £65 2s 6d, while finally at £64 17s 6d. At Thursday's market values after opening firmer gave way, while a good demand ensued. Standard cash sold at £64 to £63 12s 6d and three months £65 to £65 5s to £64 10s. The tendency was again easier on following day, with sales on a liberal scale. Standard cash sold at £63 10s down to £62 17s 6d, and three months £64 10s to £63 15s. Electrodes £69 to £69 10s, best selected £66 to £67 6s, strong sheets £97, and wire bars £69 10s per ton. Lead firmer, and quoted at £35 5s to £34 12s 6d, according to position. Spelter easier at £37 to £35 15s as to position. Aluminium, home £115, export £120. Antimony, English special brands, £59 10s to £60.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Some surprise has been created by the action of the French Government in imposing an embargo on the export from France of wool, hair, wastes, and rags. The decree was quite unexpected, even in French wool textile circles, and there is naturally much speculation as to the probable results. Normally a considerable quantity of wool is brought to this country from Mazamet, and in the meantime these supplies will be cut off. The decree has doubtless been issued with the object of improving the franc, but it remains to be seen whether the desired result will be attained. It will mean that French users will have at their disposal a larger supply of wool in their own country, and to this extent it may have the effect of curtailing French buying in the Colonies, but as the selling season is now rapidly drawing to an end, and as British users and foreign buyers have still considerable requirements to supply, it is not thought that raw material values will be much affected. At present

NATIONAL PROVIDENT INSTITUTION

The Results for the Year 1923 show INCREASES in the Business transacted, the Premium Income received, and the Rate of Interest realised on Investments, and a DECREASE in the amount paid for Claims by Death.

Full particulars of the Office and the Policies it issues can be obtained from:—

48 Gracechurch Street, E.C.3.

there is some uncertainty as to whether the decree embraces tops, but the general impression seems to be that the embargo will include tops. In some quarters it is thought that the action of the French Government may actually lead to higher prices, especially as France has been doing a large trade with Germany. It is understood that a protest has been lodged by the Roubaix-Tourcoing Chamber of Commerce, and it is stated that wool sold for export up to the publication of the decree will be permitted to leave the country. Business in this centre remains steady, and prices are firm all round. Spinners are rather better employed, and the settlement of the dockers' strike will doubtless encourage buyers to operate more freely.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

It seems at last as if wool values had stopped rising, and a slight reaction has set in at both Melbourne and Sydney. We are glad that buyers have seen the futility of constantly pushing values higher and higher, and now that America and Japan have largely retired, prices are down a good 5 per cent. for practically all qualities. We are well aware that cables only speak of superior merinos and comebacks being cheaper, but, according to clean scoured costs, practically all classes are in the same category. But after all, what does 5 per cent. really amount to? It is neither here nor there with values where they stand to-day, and it is going to have very little effect upon the price of tops, yarns, or pieces. We have no doubt that Australian selling brokers will see to it that prices are not allowed to ease a great deal, because they are determined to hold values, and will not hesitate to withdraw wool unless they make all around to-day's prices. We have been urging for weeks the consolidation of recent rates, and frankly think that wool values for all qualities are as high as the consuming world can stand. There is not the slightest need to push any class of raw material to any higher level, and we emphasise this notwithstanding that the cry of shortage is still being persistently raised, emanating, no doubt, from those who are carrying stocks and have big weights of wool to arrive from overseas, hoping thereby to rush buyers into operating at still higher prices.

MANCHESTER, February 21.

Conditions in the market during the week have been unsettled by the wide fluctuations in raw cotton rates and nervousness with regard to industrial matters. Notwithstanding these disturbing influences, the undercurrent of inquiry has been extensive, and an increased business has been done. A considerable demand has been met with in light cloths of various kinds for India, some encouraging sales being arranged in bleaching, finishing, and printing styles for Calcutta and Bombay. More lots have been sold in grey shirtings. Buying continues to take place for China in white shirtings, and certain producers have now more work to go on with. The smaller outlets, both East and West, have not been active, but scattered transactions have been reported for South America and the Continent, chiefly in fine goods. There has been some irregularity in yarn quotations, but in one way and another more business has been done in American and Egyptian qualities for home consumption, with moderate lines in export bundles for India.

THE TIMBER TRADE.

The heavy imports of building timbers during 1923, mostly arriving between September and December, thus causing heavy stocks on the market in the New Year, were supplemented by large supplies last month, amounting to over 67,000 loads more than for the first month of 1923, and in which Russia and Finland and other countries showed decided increases. Good quality wood has not been arriving in any large quantity, and stocks of this description are only moderate, but there is an abundance of ill-conditioned wood that will, no doubt, find its market before f.o.w., if not in house work, in the form of packing-case, box, or crate. The long delays occasioned in the discharge and eventual piling of timber are to some extent accountable for this poor quality wood, but in general the inferior grades have found a better market, because of the price question, which generally still keeps perhaps just within 100 per cent. of f.o.b. prices of early 1914. Wood for the erection of houses is still the principal item of consumption; the railways are buying fairly largely, but packing-case makers are not well employed, and though the latter use the most common varieties, the latter are commanding what makers consider high prices. Though there are great expectations from the building trade, the timber trade will not find a satisfactory consumption until trade generally is better.

In hard woods for the furniture trade importers are still receiving large supplies, particularly from the United States, and to a lesser extent from the British East Indies. Mahogany boards and planks have also been received in good volume, and with a large import in 1923, and only a fair demand, stocks in the country must be large. Prices, however, keep very steady for these descriptions, and are likely to remain so.

Pitwood supplies have not been imported so largely, but the strike is having ill effects on the coal trade, and the demand for props has fallen. In home timber the demand is fairly good for fine quality material, but, like the foreign timber trade, native timber merchants are waiting, not for a seasonal, but a general improvement in trade.

VEGETABLE OILS AND OILSEEDS.

Business has been under the shadow of the dock strike all the week. Mills unable to get delivery of seed ex ship have been compelled to curtail oil production, and it has been reflected in the market for linseed oil in particular. Supplies of this commodity at present are very small, and dependent for expansion on the new Plate seed which is now arriving in port in substantial volume. Oil on spot at Hull sharply advanced to £50, naked ex mill, and February to over £47, but these eased £1 per ton on Thursday in consequence of profit-taking and the brighter outlook in the dock situation. Nevertheless, oil in near positions is still at a big premium over March delivery, but this will tend to disappear when production is resumed, and on a substantial scale. Crude Egyptian cotton oil has been in poor request, and has lost 30s per ton on the week. Other vegetable oils are about steady, and values not materially altered.

CITY SAFE DEPOSIT

and Agency Company Limited
THROGMORTON AVENUE, E.C.2

TRUSTEES FOR DEBENTURE ISSUES, ETC.
FINANCIAL AND TRUST BUSINESS

Safes and Strong Rooms from 25/- to 2 guineas per annum
Extensive Vaults for temporary deposits.

Telephone: London Wall 4005. Telegrams: Unassailable, Stock, London.

In the oilseed section crushers have, in the uncertain position, refrained from operating, and very little business has been done in linseed. Better reports from Argentina have steadied the market, prices closing a shade higher on the week. Egyptian cottonseed, after a period of weakness, is showing a firmer tone.

HIDE AND LEATHER TRADES.

(BY OUR OWN CORRESPONDENT.)

The rapid rise in the hide market had a check on Thursday in Bermundsey, when values were practically unaltered. Best ox again sold from 7d to 8½d per lb, and seconds from 6½d to 7½d. Calf, however, were again dearer, and best sold from 7½d to 10½d per lb, two classes showing an advance of ¼d. The calfskin position is causing some anxiety; no French skins are available, and it is well known a large portion of the British supply is now bought up on American account. No official action has yet been taken by the federations, but I hear this is probable. In overseas hides our tanners are doing little, as prices asked at origin, and paid on the Continent and in America, are too high for their liking. Latest prices paid for Liebig hides by inscription were to 10½d to 10½d. Cables from New York report the Chicago position as strong, with best heavy steers selling at 16 cents.

The leather market is firm, and tanners are in a strong position. Little American sole leather is arriving, whilst the import of French bends has received more or less a check owing to the embargo. I hear, however, a certain quantity are now arriving as licences are granted. Bends of medium and light average are selling readily, and advances of 1d to 1½d per lb are being asked and obtained. Offal shares the firmness, and prices very firm. The boot trade is improving, especially for ladies and sports work, but export business has received a set-back this week owing to the dock strike, now happily settled.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, February 22nd.

SUGAR.—The market in general displayed a very steady tone, and of refined sorts a fair clearance was effected in British at previous rates. Messrs Tate and Lyle's cubes, 66s 3d to 67s 3d; granulated, 63s 7½d to 64s 1½d as to quality, forward 63s 6d; yellow crystals, spot, 59s 1½d. Imported kinds quietly steady. White Java, spot, 61s 6d; May-June, steamer, quoted 29s; June-July, 28s; July-August, 26s 6d, c.f. and i. terms, London. Czecho granulated, spot, 62s 9d to 63s; ditto, reopening of navigation, 34s 3d; April-May, 34s 6d, f.o.b., Hamburg. Belgian granulated, spot, 62s; Dutch ditto, 62s 6d. Raw refining sugars firmer, while sparingly offered. Cuban basis 96 per cent., March, quoted 29s 6d, c.f. and i., U.K. White terminal market generally active, and dearer in sympathy with higher American advices and reports of labour unrest in Cuba. March delivery sold, 34s 9d; May, 33s 9d to 33s 10½d, 33s 9d, 34s 1½d; August, 31s to 30s 10½d, 31s 3d; November, 25s 4½d; December, 21s 4½d cwt.

COFFEE.—Business was reduced to a minimum, and a nominal state of affairs largely prevailed, owing to the dock strike and delivery of goods uncertain.

TEA.—Quantity of Indian in auction totalled 61,340 packages, and with buyers acting cautiously an irregular and easier market resulted. Particularly with regard to the commoner kinds. 18,000 packages Ceylon met a good inquiry for the finer liquoring parcels at steady rates, but inferior proved slightly easier in some instances. Java and Sumatra steady for fine, but common lower in price.

COCOA.—Quiet, unaltered on spot. Accra, F/F quality, March-May, sold 36s 6d to 34s 6d, f.o.b. terms.

RICE firmly held, but demand is rather quiet. Two Stars, spot, London, nominally quoted 17s; February-March, 15s, 15s 3d. Japanese peas, spot, 21s 9d. Madagascar butter beans, new crop, spot, 32s 6d; old, 27s, 30s. Rangoon haricot beans, to arrive, hand picked, 9s 6d, f.a.q., 8s 4½d cwt, c.f. and i.

SPICE.—Pepper steady, with a moderate demand for whites. Black Singapore, February-April, L.S., quoted 48d. Muntok, February-April, buyers, 7½d; March-May, sold 7½d. Zanzibar cloves, March-May, 1s 1½d lb. Tapioca quiet. Singapore flake, February-April, 32s 6d, to Havre, and Penang, fair seed, to London, 30s 9d. Sago flour dull. January-March, quoted 16s 4½d; February-April, 16s; March-May, 15s 9d. Desiccated coconut quiet. Fine cut, spot, 43s 9d; medium, 45s 9d; half s, March-April, 42s 3d. Ginger firm. F.W.R., Ceylon, spot, 9s for sound per cwt.

JUTE market generally quiet, but dearer. First grade, February-March, Continent, quoted 26 12s 6d; March-April, 27 2s 6d; April-May, 27 10s 10s. Hessians firm, with a fair demand, while heavy goods claimed good support up to April shipment. 10 oz Hessians, afloat, sold 30s; February, 29s 6d; March, 29s 6d; 8 oz, March, at 23s 9d 100 yards. A twills, March, quoted 89s; April-June, sold 86s; B, March, changed hands at 78s 3d to 78s 6d; April-June, at 76s 6d. Sugars, April-June, done 86s 6d. Flour, March, 92s 6d per 100 bags.

HEMP.—Prices further advanced for Manila sorts under active support accorded and reserve of sellers. J grade, February-April, sold 33s 10s; K, ditto; also March-May done 32 10s to 33; L, ditto, 33 5s to 33 12; M, ditto, 28 10s to 29; G, March-May, quoted 44; H, 43. African Sisal, No. 1 Tanganyika, March-May, quoted 43 10s; Kenya, 42 10s a ton c.f. and i. terms.

SHELLAC.—Steady. T.N., fair spot, 290s; March, quoted 290s; May, sold 285s to 287s 6d.

OPERA steadily held, and a moderate demand ensue. F.M.S. Straits, December-February, Rotterdam, quoted 30 10s; January-March, 29 17s 6d; February-April, sold at 29 15s; Dutch East

Indies, January-March, quoted 29 12s 6d; South Sea, February-March, 22 5s; Ceylon ditto, 23; F.S. Straits, January-February, 23; 30 5s to 30 10s. Palm kernels steady, quiet. Mar h-May, to Liverpool, quoted 20 11s 3d per ton.

RUBBER steadier, and quite a fairly good volume of business was carried through. Standard plantation crepe and sheet, spot, also February, sold, 1s 1½d; March, 1s 1½d to 1s 1¾d; April-June, 1s 2d to 1s 2½d and 1s 2d; July-September, 1s 2½d to 1s 2¾d and 1s 2½d; October-December, 1s 2½d. To New York, standard estate sheet, March-April, quoted 1s 2d per lb, c.f. and i. Wild sorts quiet, unaltered.

GAMBIER firm, with few sellers. Block, February-March, quoted 56s per cwt, c.f. and i. terms.

FRUIT (Dried).—The market is very steady but quiet. Australian currants quoted 53s; Pyrgos quarter cases, 46s; Amalia, 50s; Patras, 52s; Vostizza, 70s to 75s. Valencia raisins, half boxes, 50s; quarters, 60s to 80s. Dates quiet, owing to demand on Continent account subsidizing. Hallowee, spot, quoted, 30s; Khredrowie, 19s 6d; and Siam, 17s. Figs, genuine naturals, in bags, 38s to 40s. The market for evaporated fruits bids fair to remain comparatively high in price, as stocks are well cleared into consumers' hands. Californian apricots, choice, quoted, 85s; fancy, 110s; pears, extra fancy, 105s; apple-rings, 75s to 80s; French plums, quarter cases, 90/95, quoted 3's 6d; 8/186, at 41s; 7/177, 47s; Oregon, 30/40, at 73s; 40/50, 58s per cwt.

CANNED GOODS.—The general tone of this market is firm but slow. Portuguese sardines, ½-flats, 2s 9d to 3s 3d; ditto clubs, 3s to 3s 6d; 12 oz, 5s 6d to 6s 6d; 18 oz, 9s to 11s per dozen tins. Lobster quietly steady. Fancy halves, spot, quoted 130s to 135s. Crayfish, 96 ½-lbs, 76s. Salmon was a firm market under sustained inquiries; 1 lb flat reds, labelled, quoted 56s; ditto, tall, 44s; 1 lb flat pink, 27s; ditto, tall, 26s 3d; and cases of 96 ½-lbs, 29s to 30s per case. Canned fruits continue to sell readily. Singapore pines, 1½-lbs, on spot, 6s 7½d for forty-eights; Hawaiian slices, 2½-lbs, 16s 6d to 17s. Californian apricots, 8s to 11s; ditto, peaches, 9s 6d to 13s; pears, 13s 6d to 15s; Australian, 2½ lbs, 8s 6d; ditto peaches, 8s 9d to 9s 3d. Italian tomatoes, 7s per dozen tins. Meats firm, quiet.

OILSEEDS.—Linseed firm, with a fair demand for Plate descriptions. Indian: Calcutta, afloat, 23; February-March, 21 10s; April-May, 20. Plate, afloat, 19 2s 6d; January-February, sold, 18 15s; April-May, 18 5s. Rapeseed depressed. Toria, February-March, 19 5s; March-April, 19 10s; Jamba, February-March, 15 2s 6d; and real bold Ferozepore, February-March, 19 12s 6d. Cottonseed quiet. Egyptian, black, March, sold, 13 8s 9d. Sakelardis, 12 3s 9d to 12 5s. Hull, Bombay, January-February, 11; February-March, sellers, 11. Gingly seed, steady. Chinese, afloat, 26 15s. Groundnuts quiet. Coromandel, machine-dried, January-February, 23 15s; Ch nese, decorticated, f.a.q., February-March, 23; bold Bombay, February-March, 23 7s 6d. Soya beans steady. Manchurian, afloat, 13 15s; January-February, 13. Castor-seed quiet. Bombay, February-March, 24 2s 6d per ton.

OILS.—Linseed firmer, especially for near positions. Spot, net, naked, 54s; February, 47s 6d; March-April, 42s; May-August, 39s. Rape quiet. Crude, spot, 48s; refined 51s Castor oil firm. First pressure, spot, quoted 62s; second pressure, 61s; and pharmaceutical, 6s per cwt, Hull, with London 2s per cwt extra. Cotton steady. Crude Egyptian, spot, 45s 3d; Bombay, 43s; common edible, 50s; deodorised (in barrels), 54s 6d. China-wad qu'et. Hankow, spot (barrels), 94s; February-March, 96s. Coconut quiet. Ceylon, spot, 49s; February-March, 47s; Cochin, ditto, quoted 59s. Soya quiet. Oriental, barrels, February-March, 44s 6d. Cod firm. English, spot, 36s 6d. Groundnuts steady. English, cru-hed, naked, spot, 53s; deodorised, barrels, 60s. Turpentine steadier. American, spot, 77s 6d; March-April, 78s. Rosin, firm. American, grades B to G, 13s 6d; WG, 17s 6d; WW, 19s per cwt. French WW, 17s per cwt. Petroleum steady. American, standard white, spot, 1s; and water white, 1s 1d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on February 20th as follows:—The tallow market was steady during the week, and prices were unchanged to-day. It was not worth while holding auctions to-day as there was too little available. Shipments of tallow from Australasia during January amounted to 2,400 tons, against 4,500 tons during the same month last year. Quotations are:—Australian mutton: Fine, none; good to fair, 51s to 48s; dull to dark, 43s 6d to 41s 6d; hard, none. Australian beef: Fine, 47s 6d; good to fair, 47s to 44s 6d; dull to dark, 43s to 41s 3d; sweet, none. Present shipment from Australasia: Good mixed, 46s. The market letter is unchanged. Town tallow, 41s 6d per cwt. Rough fat, per 8 lbs, 44d; melted stuff, 32s 6d per cwt. Quotations are:—Town, 43s, net cash, naked, ex works. Country: Frail casks, 43s; home melted, shipping casks, net, f.o.b., good coloured, 46s; fair to dull, 43s to 42s 6d. Bone fat: White, none; pale, none; benzine, 39s 6d; melted stuff, 39s, f.o.b.

The Story of Coal.

The Foundation of the British Empire.

Two hundred years ago Great Britain was an agricultural State supporting only about six million people.

To-day it is the greatest manufacturing and trading State in the Old World, with a population of forty-three millions.

That change has been wrought by the enterprise and energy of the private individuals who make up the Nation and by the development of abundant resources of fuel so situated that they could easily be mined and moved.

In other words, by Private Enterprise and cheap coal.

Existence in our climate without plentiful supplies of cheap coal would be unendurable.

Gas and Electricity are both produced from coal.

Everything we wear and use depends for its manufacture upon coal and for its cheapness upon the price of coal.

The supremacy of our shipping was built and rests upon cheap coal of good quality.

Four-fifths of the food we eat comes from abroad. It is paid for by the export of goods manufactured in our Country—which manufactures depend upon coal—and of coal itself.

On sixty-four days in 1922 the whole of the food we imported was paid for by exported coal.

To coal more than any other material factor, we owed our ability to withstand the strain of the War, to support the weight of our alliances, and finally to emerge victorious.

There is at present no satisfactory substitute for coal, nor are there any substitutes for the energetic management and persistent optimism of Private Enterprise. Destroy Private Enterprise, make cheap coal impossible, and the British Empire falls; British trade, commerce and industry dwindle; and the population of Britain drops to a third of its present numbers as a result of emigration and starvation.

If you are interested in The Story of Coal cut this advertisement and file it. It will be followed by others telling other parts of the Story. Look out for them. They are being issued on behalf of the Colliery Owners of Great Britain by PHILIP GEE, 10, King Street, Covent Garden, London, W.C.2, from whom further information about the Coal Mining Industry can be obtained.

FRENCH LINE, Compagnie Generale Transatlantique,
82, FINE MALL, LONDON, E.C.4.

The prices in the following list are revised with the assistance of an eminent firm in each department:

THE easier conditions which were noticed at the end of last week, following a period of distinct stringency, have continued. Short loans have been in comfortable, but not too ample, supply at round about $2\frac{1}{2}$ per cent., which has also been the general charge for fixtures. The greatest case is apparently the result of skilful management of

Government finances, the movements in which find some reflection, though an incomplete one, in the figures of the Bank return. In the belief that the ease may continue, and in the view that apprehensions of a rise in the value of money after the close of the fiscal year may be dismissed, the market has allowed discount rates to fall away, and fine three months' paper has sometimes been taken at as low as $3\frac{3}{8}$ per cent. On Friday private tenders were invited to a line of Port of London bills to the amount of £2,500,000, of which £500,000 represented new borrowing. The easy tendency influenced the rate at which the weekly offer of Treasury bills was allotted, and also resulted in a very favourable rate for the Port of London offer.

	Feb. 23, 1924.	Feb. 22, 1924.	Feb. 15, 1924.	Feb. 8, 1924.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	1 $\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills)	3 $\frac{3}{8}$	3 $\frac{3}{8}$	3 $\frac{3}{8}$	3 $\frac{3}{8}$	..

The Bank return showed an increase of £814,700 in the circulation, and, with £8,700 added to the bullion stock, the Reserve was £806,000 lower. Maturing Treasury bills have apparently not been fully replaced by new bills in the hands of the market, for Government borrowing has been necessary, Government securities being £6,163,300 higher on the week, though the heavy fall in Other securities, which were £5,198,300 lower, suggests that the unreplaced maturities were largely in the hands of the Bank. Public deposits were £2,418,500 lower, and Private deposits gained £2,547,000 as the result of the week's transactions, thus explaining the easier condition of the short-loan market. While the aggregate liabilities were not much altered, the fall in the Reserve produced a decline of 0.7 in the proportion at 18.0 per cent. Currency notes outstanding were increased this week by £342,500 to £277,468,000, which includes £1,407,100 for notes called in but not yet cancelled. The fiduciary issue is £226,610,000, or £21,580,900 below the maximum.

THE STOCK MARKETS.

While there has been a substantial falling off in business in some departments, the stock markets have still displayed a moderate amount of activity. Gilt-edged stocks, with the exception of Conversion Loan, which is inclined to give way, maintain their firmness. The relapse of the franc after its recent recovery brought down the price of French bonds, but Austrian Sixes continue to be a good feature of the foreign market. Japanese Six per Cent. Scrip has remained steady at about 3 premium. Public interest has deserted the Home Railway market, and the prior charges are rather lower. Argentine rails have fluctuated. Rubber shares are inclined to go better, but the Oil market is languid after its recent activity. In the Miscellaneous section, Bank and Insurance shares have been strong, but Shipping shares are quiet. Whiteleys rose sharply on the increase in the distribution, and other stores have improved a little. Kaffirs are dull, but Cam and Motors have again been buoyant.

THE COMMODITY MARKETS.

The commodity markets are in varied mood. A depression in prices is reported on the Cardiff coal market, as an aftermath of the dockers' strike, and our Middlesbrough correspondent, referring to conditions in the pig-iron market, states that there appears to be a lack of confidence in the future. Business in steel is very quiet. In the cotton trade, although material rates have been easier, the general tone of the market is firmer. The wool trade appears to be settling down to the idea that wool prices will continue strong. Jute hardened on cable advices from Calcutta, and tea was firm. Wheat finished the week in demand. The rubber market is without feature. Tin regained strength, and copper improved. There is an inclination to weakness in hide prices, while oilseeds are lower.

FOREIGN EXCHANGES.

In the foreign exchange market interest during the week has again centred on the movements of the Paris rate, business as a whole being on a restricted scale. From a closing rate of 100.85 on the 22nd, the franc recovered on Saturday to below 100, and at one time on Monday reached as low as 96.75. From this, however, there has been another reaction, and the announcement of the fall of the Belgian Cabinet brought up quotations with a run to a new record figure of 105.60. Afterwards the market steadied again somewhat, but yesterday morning's quotation of 102.60 shows little promise of real improvement. The course of the Belgian franc has been still more unsatisfactory. From 115.75 a week ago it recovered on Saturday to 113 $\frac{1}{2}$, but has since mounted up again, until 123 $\frac{1}{2}$ was reached at one time on Thursday, and the recovery of yesterday morning had not brought it again lower than 120 $\frac{1}{2}$. Now that political developments in Belgium have added their emphasis to the uncertainty of the French outlook, there is little necessity to explain these expressions of a growing lack of confidence. Forward rates in Paris have jumped again from 70 centimes last week to 1.10 francs per month above spot, in Brussels from 15 to 25 centimes above. The dollar has moved somewhat uncertainly within narrow limits, and at \$4.30 $\frac{1}{2}$ yesterday morning compares unfavourably with \$4.31 $\frac{1}{2}$ a week ago, after being as low on the 26th as \$4.29, a demand for sterling in New York being slightly more than balanced by the continued offering of sterling from the Continent. Forward rates at $\frac{1}{2}$ cent per month above spot are again slightly narrower than the $\frac{3}{8}$ cent quoted a week ago. In spite of the movement of the franc the lira has again remained relatively steady, moving on the week only from 99 $\frac{1}{2}$ to 100, while the German mark maintains its remarkable stability at 19 $\frac{1}{2}$ billions, buoyed up still by the hope of the success of Herr Schacht's central bank proposals. Among neutral currencies Holland has this week moved against us from 11.53 $\frac{1}{2}$ to 11.52 $\frac{1}{2}$, and Switzerland is also slightly dearer at 24.84 $\frac{1}{2}$, as compared with 24.90. Spain, however, has depreciated further on growing uncertainty as to the immediate future of the internal situation, from 33.96 $\frac{1}{2}$ to 34.06 $\frac{1}{2}$. In the north, Stockholm has increased in value from 16.50 to 16.47 $\frac{1}{2}$, and Copenhagen, after some sharp movements, has also moved erratically, ending the week at 32.57 $\frac{1}{2}$, as compared with 32.82 $\frac{1}{2}$ on the 22nd. Finland at 171 $\frac{1}{2}$ is unchanged. In Central Europe, Warsaw is maintaining its provisional stability at 39 millions, and Vienna shows little change at 305,000, as compared with 305,500. Prague has gone against us from 148 $\frac{1}{2}$ to 148, but Bucharest at 820, as compared with 750 on the 20th, has again lost practically the whole of last week's recovery. In the East, the rupee, as the result of the seasonal swing and heavy Government remittances, has again weakened to 15 4 $\frac{3}{8}$ d, as compared with 15 4 27-32d a week ago, and the yen has also cheapened from 25 1 5-32d to 25 1 $\frac{1}{8}$ d. The silver market has been quiet and uncertain, with some China sales and bear covering from India. Any hardening of prices, however, is at once met by offers from the U.S.A. Hong Kong stands at 25 3 $\frac{3}{8}$ d, as compared with 25 4 $\frac{1}{2}$ d a week ago, and Shanghai at 35 3d, as compared with 35 3 $\frac{1}{2}$ d. In South America, Rio has weakened a little from 6 40-64d to 6 $\frac{1}{2}$ d, and Buenos Aires is also cheaper at 43 $\frac{3}{8}$ d, as compared with 43 9-32d. Monte Video has fallen from 43 $\frac{3}{8}$ d to 42 $\frac{3}{8}$ d. Valparaiso at 42.50 pesos compares with 42.30 pesos on the 22nd.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 23rd:—

EXPENDITURE.		RECEIPTS.	
	£		£
Supply Services	7,500	From Revenue	25,814
Interest, &c., on Debt	804		
Sinking fund	500		
Sundries	151		
Reduction of Debt	16,530		
Increase in balances	329		
	25,814		25,814

Revenue receipts for the week, at £25,814,000, compare with £29,762,000 for the corresponding week of last year. Customs were slightly down at £2,929,000, against £3,050,000, but Excise was £2,500,000 higher at £5,719,000. Estate duties yielded only £620,000,

against £1,130,000, and Post Office receipts were £250,000 lower at £1,000,000. Property and Income-tax reached £11,263,000, and Super-tax £2,600,000, against a combined total of £18,141,000 for the corresponding period. Nothing came in from special receipts, as against £1,500,300 a year ago. The week's operations reduced the National Debt by £16,530,000, and caused the following changes:—

(000's omitted.)	
Unemployment Insurance....	+ £ 60
Treasury Bills.....	- 12,140
Public Departments	- 4,350
Saving Certificates	- 100
	+ 60
	- 16,530

The floating debt was reduced by £16,515,000 to £796,700,500.

FINANCIAL YEAR, 1923-24 (April 1 to February 23, 1924).

Company Meetings of the Week.—On later pages of this issue will be found a letter by Mr P. A. Carmine on his recent visit to South America giving his views on the financial and industrial conditions in Brazil, also the reports of the following companies:—London Midland and Scottish Railway, Great Western Railway, Manchester Ship Canal, National Provident Institution, British Trade Corporation, Selfridge and Co., Bovril, Henley's Telegraph Works, Jeremiah Rotherham and Co., Maple and Co., and Spencer, Turner, and Boldero.

THE WEEK IN PARLIAMENT.

MONDAY, FEBRUARY 25TH.—In the Commons, Diseases of Animals Bill considered in Committee. Five Supplementary Estimates. Adjournment debate on London Traffic. Questions on Imperial Economic Committee, Jubaland, new cruisers, Germans Reparations (Recovery Act).

TUESDAY, FEBRUARY 26TH.—The Commons debate the Poplar order. Questions on Census of Production, Bank Amalgamations, Air defence, and Kenya. In the Lords, Government statement and debate on India.

WEDNESDAY, FEBRUARY 27TH.—In the Commons, Diseases of Animals Bill read a third time. Debate on second reading of Trade Facilities Bill adjourned. Adjournment debate on Mr Henderson's Burnley statement on Versailles Treaty. Old-Age Pensions and Unemployment benefit discussed. In the Lords, debate on India resumed.

THURSDAY, FEBRUARY 28TH.—Mr Buxton, in the Commons, stated Government's agricultural policy. Board of Agriculture supplementary estimate passed. Questions on Reparations Recovery Act and Soviet recognition. The Lords debate the Lausanne Treaty.

FRIDAY, FEBRUARY 29TH.—In the Commons, Representation of the People Act (1918) Amendment Bill debated.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE TROUBLES OF THE GOVERNMENT.

The revival of confidence which was felt throughout the country when Mr Ramsay MacDonald announced his new Ministry has not been checked by the experience of a month of Labour government. On the contrary, the country fully realises the honest efforts that are being made by the Prime Minister and his colleagues to fill the difficult rôle of a minority Government, and to give proofs of their moderation. In the House of Commons, on the other hand, the situation is not quite so satisfactory. The Government are meeting unexpected difficulties both within their own party and in their relations with the Liberals and Conservatives, and are making rather heavy weather with their task. This is partly the result of blunders due to inexperience on the part of many of the Ministers; but it is also to some extent due to the fact that both the older parties, which have much greater experience and nimbleness in using Parliamentary procedure to their own advantage, have been tempted by a natural exuberance to make the most of the weakness of the Government. This has led to waste of time, and, if it is continued, may end by making the position of the Government untenable. A series of semi-crises is extremely wearing to Ministers, and in particular to the Prime Minister, who is carrying far too heavy a load on his own shoulders. Of the three main issues on which the Government has up to the present been challenged—namely, the withdrawal of the Poplar Order, the decision to go on with the building of five cruisers, and Mr Henderson's unfortunate remark at Burnley as to the need of revising the Versailles Treaty—the first raises the point of greatest permanent importance. The debate on Tuesday was, however, unsatisfactory; for it failed to bring out the real point of principle involved. Since 1921, and largely as a result of difficulties with Poplar, out-relief in London, which has been needed to supplement Unemployment Insurance, has been paid for from a common fund. But the amount that can be spent by any Board of Guardians out of this fund is limited to a fixed scale per head or per family. The new Minister of Health quite properly points out that his action does not affect the extent to which Poplar can draw upon this fund. But this is not really the point which was raised by Sir Alfred Mond when he tried to control the expenditure of the Poplar Guardians three years ago. Under the arrangement to which we have referred any Board of Guardians can, if it likes, increase outdoor relief payments above the fixed scale, provided it raises the surplus out of its own rates. Sir Alfred Mond's Order, based upon the Act of 1834, attempted to dictate to Poplar the total scale which the Guardians might pay to individual recipients, and by so doing affirmed the principle that the Central Authority has an interest in the scales of relief which are given in a particular locality. His action was little more than a demonstration, for neither he nor his successors attempted to enforce the views of the Central Authority by actually preventing these additional payments, and though Sir Wm. Joynson Hicks said that he had a Bill in preparation for dealing with the position, Mr Wheatley was only recognising the existing situation in repealing the Order. The repeal, however, does alter the situation; for it means that the Ministry of Health has abandoned the claim to dictate to individual Boards of Guardians whether they may or may not supplement the official scale. In our view, though the Mond method may have been ineffective, the principle raised was a sound one; for the claim of the Poplar Guardians that outdoor relief may be used to compel the employer to pay higher wages is one which cannot be admitted. It is hard enough as it is to arrange with anything like equity the wages rates of different trades and localities. But a further element of confusion would be introduced if any Board of Guardians, backed by the power of taxing their particular locality, could set up any level of maintenance for persons out of work which it may think fit. Last Tuesday's debate never came to grips with this problem. The debate on the five cruisers was to a large extent a sham fight, for the attackers never had sufficient information to substantiate their case, and we may doubt whether they would have taken any different action if

they had had the responsibility of a decision. Mr Arthur Henderson's statement about the Treaty of Versailles is in a different category. As Mr Baldwin observed, with a sly dig at one of his late colleagues, "a man is called Home Secretary to show that he deals with Home Affairs, and for a Home Secretary to talk as he did of foreign affairs is quite as dangerous as for a Minister of Labour to talk about finance." The Home Secretary has been in politics long enough to know that he cannot now speak as a private individual, and it is surprising that he fell into the trap which has enmeshed several less experienced members of the Government in the last month. His statement has been repudiated by Mr Macdonald, and will serve its purpose in driving home the doctrine of Cabinet responsibility which seems to be not well understood in the Labour Party. His slip, however, has not prevented his election at Burnley by the handsome majority of 7,000—a result which shows that the Liberals of this typical industrial town endorse by a big majority the decision of the Liberal members in the House to put a Labour Government into office.

The Government has, however, survived its infant ailments, and is making a beginning with the introduction of some modest measures of reform which, on the whole, have been received with general approval. These measures will call for comment in their place, but at present they do little more than indicate that the Government are feeling their way in the various departments towards legislative action. The first really big effort will, however, be the Budget. Two months ago we estimated that there would be a surplus of at least £20 millions. The indications now are that the surplus will be nearly double that figure. The remissions of taxation made last April do not take full effect in the current year, and will cause a further loss of revenue next year of £23 millions. On the other hand, special receipts, which were estimated at and seem likely to bring in £40 millions this year, will certainly be down by £10 millions, and possibly by £20 millions. But it seems fairly certain that, in drawing up the 1923-4 Budget, Mr Snowden will be able to assume that, on the basis of existing taxation, and estimating the yield to be the same as this year, the revenue would cover existing expenditure. There are, however, a certain number of automatic reductions which will take place on the expenditure side, for example, in pensions, and, as we have from time to time pointed out, the demands for the ordinary Civil Services are not yet down to their proper ratio over pre-war figures. The two senior fighting services also seem to have over-budgeted in the last two financial years, and the Government may possibly be able to finance the new construction of the Admiralty and the increase in the Air Force without any gross increase in the total figures for the fighting Services. If this hope is realised, the Chancellor will have a margin to dispose of. But this margin must not be put too high, and we would sound a note of warning against exaggerating it by assuming that there will be any automatic expansion in the revenue next year on account of trade recovery. We believe that, in fact, there will be a handsome recovery of trade. But it will not affect income-tax or super-tax yield next year, and though Customs and Excise are more subject to variation, even under this head the yield has not fallen in recent years in anything like the same proportion as the trade depression and will not rise much as trade increases. The reason is that far the largest of our duties are on articles of general consumption, and as family receipts of most working-class houses in the country have been more or less maintained throughout the depression in various ways, consumption of these articles has not fallen off. If there is increased earning power in the coming year, it will show itself in the main in the purchase of goods not subject to duty. The effect upon the budget of increased prosperity is therefore likely to show itself slowly.

The conclusion, therefore, is that the Chancellor, though he may be able to estimate a surplus on existing taxation, will not have anything like enough to meet all the claims which are being made upon him for housing, for removing the thrift disqualification in old-age pensions and for widows' pensions. He certainly will not have means to lower taxation. In these circumstances he will have to pick and choose, and we cannot pretend to anticipate his de-

cision. We will only say that, if there is anything in the rumour that he proposes to make substantial concessions on the Entertainments Tax by removing the duties on seats up to 2s, he will, in our opinion, be making a great mistake. The idea that we should aim at a system of relieving the working-class family of all taxation is a thoroughly unsound one. Taxation should be graded, and graded steeply, but it is surely undesirable for any large class of the community to be entirely relieved. The Entertainments Tax is the luxury tax of the working classes in the same sense that motor taxes on private vehicles are a luxury tax on the well-to-do, and in both cases they form a very valuable supplement to the main means of taxing those two sections, namely, graded direct taxes (income-tax, super-tax, death duties, &c.) and taxes on articles of general consumption respectively. There may be a case for changing the incidence of the tax upon high and low-priced seats. But we can see no case at all for the abolition of the tax on any particular section. Mr Snowden will also undoubtedly be pressed by the insistent demands from the various departments to raise an increased revenue from direct taxation, but we think he would be best advised to hold his hand for the current year and to prepare a well-thought-out policy for the budget of 1925. Moreover, this course would seem to be the appropriate one in view of the Chancellor's intention to appoint a Committee to inquire into the National Debt and the incidence of taxation—an inquiry which, we take it, is intended as a serious examination of a very complex subject, and not a mere piece of window-dressing.

THE FOREIGN POLICY OF THE UNITED STATES.

THE international outlook of America at this moment is of peculiar interest to the rest of the world. Not only are there better prospects of escape from the *impasse* in the European situation than there have been at any time since France occupied the Ruhr, but there are indications that these prospects may not this time be clouded for want of American co-operation. American experts are sitting on the two committees engaged upon the financial problems of Germany, and in this connection President Coolidge has made a significant statement. "Without doubt," he said in a recent speech in New York, "any settlement would call for a European funding and financing which would be of doubtful success without American participation." European readers will therefore turn eagerly to the address on "Recent Questions and Negotiations" delivered on January 23rd last by Mr Hughes, the Secretary of State, before the American "Council on Foreign Relations"—a non-official but authoritative body which corresponds to the "British Institute of International Affairs."* They will be correspondingly disappointed to find that what (to America, surely, as well as to Europe) is the crucial question of international relations is passed over, and that Mr Hughes confines his survey to the important but still secondary questions of the Liquor Traffic, Mexico, and the Near East. Did he, in fact, take his countrymen into his confidence on the central theme in passages which may have been omitted, conceivably, from the published version of his address for reasons of discretion? If so, the secret has been well kept, and we must content ourselves with a glance at the points which he does discuss (which, after all, are sufficiently interesting in themselves) before discussing the general state of American public opinion.

The Liquor Traffic Convention between the United States and Great Britain (representing all the constituents of the British Empire) was actually signed on the day on which Mr Hughes' address was delivered. His remarks on it show the legal acumen and the understanding of the other party's case which are to be expected from a distinguished lawyer and statesman, and they explain the basis on which the bargain has been struck. The United

* "Foreign Affairs." Special Supplement to Vol. II., No. 2.

States reaffirms in principle its adhesion to the "Three Mile Limit," and consents to the import of alcoholic liquors into American waters by foreign vessels in transit and under seal, in exchange for British consent to the pursuit of detected or suspected contrabanders beyond territorial waters for a distance of "one hour's steam." There is, of course, a variable element in this limit which leaves a loop-hole for controversy, but happily both the nations concerned have a high standard of common-sense. They are both anxious to remove this source of friction between them, and now that a diplomatic agreement has been arrived at by the Governments, the latter may reasonably trust their respective nationals to make it work in practice.

Mr Hughes' discussion of the Mexican problem reminds British readers that, while the frontier between the United States and Canada is happily exceptional in giving rise to none of the phenomena characteristic of land frontiers in the Old World, America is less fortunate on her southern border, where she suffers all the inconveniences and anxieties of a continental Power separated by an artificial line from a turbulent and comparatively uncivilised neighbour. Thus Americans are able to imagine more vividly than Englishmen what Germany feels about Poland or Poland about the Soviet Federation—except that, in America's case, the nuisance is not aggravated by fear. On the other hand, it is sufficiently acute to induce the United States Administration to take active measures with a view to maintaining in being any well-intentioned Government with reasonable prospects of stability which may arise in the territories of her southern neighbour, and Mr Hughes explains very clearly how this consideration has governed Washington's attitude towards President Obregon, who has not only been recognised by the United States, but has been allowed to purchase a limited quantity of munitions for the suppression of the insurgents, and even to move Mexican Federal troops across United States territory in order to facilitate his military operations. It is interesting to learn that such considerations have affected the American attitude towards the international regulation of the arms traffic. "One of the grounds," Mr Hughes tells us, "upon which, under President Harding's administration, this Government declined to become a party to the Convention of St Germain relating to the traffic in arms was that the Convention not only left the signatory Governments free to supply each other with arms *ad libitum*, but prevented the sale of arms to Governments not signatory, and it was then pointed out that this would prevent our Government from selling arms to our neighbouring Republics not parties to the Convention, however necessary that course might be to the maintenance of stability and peace in this hemisphere."

In regard to the Near East, Mr Hughes justifies the policy of the United States Government in not recognising King Constantine during his restoration in 1921-22, and again in concluding peace with Turkey last August on the same lines (save for the omission of territorial clauses) as had been followed in the Treaty of Lausanne—that is, on a basis of equality of status and reciprocity of advantages, which involved the abandonment of both the theory and the practice of the capitulations. His incidental strictures on the irresponsible encouragement of Near Eastern nationalities by outside Powers are so admirable as to deserve quotation. "It should be remembered that a large part of the distress in the Near East has been caused by encouraging action which failed of adequate support. At various times the Armenians and Greeks have been encouraged to take up arms, later to be left to their own devices. This Government, however, would not be justified in promoting such a policy on the part of others which it was not prepared itself adequately to sustain." The Near Eastern peoples, severally and collectively, might well pray that such clear-sighted honesty might guide the policy of all the Great Powers on whose action their destinies depend. Mr Hughes is perhaps less clear, however, in his incidental observations in connection with the "Chester Concession":—"Opening the door for American nationals, we give them impartial and appropriate diplomatic support in the assertion of what appear to be their legal rights, but without other-

wise involving this Government." Students of economic imperialism, such as the American author of a brilliant work on the Baghdad Railway†, will hardly be impressed by the limiting clause of this formula, and will judge that the United States Administration will owe more to national tradition and common-sense than to officially formulated policy if America is to escape burning her fingers (that old story!) by attempting to pull her citizens' chestnuts out of other people's fires.

Certainly, Mr Hughes' address is an interesting document, but the fact remains that, on the point which most whets our curiosity, he has preferred to be silent. We know that this silence does not mean indifference on the part of the Government which Mr Hughes represents. Indeed, Europeans in touch with the solid technical and administrative elements in international relations (as far as these can be distinguished from the more specifically political aspects which receive prominence in the newspapers) are aware that the United States Government has co-operated in this field, all along, with Governments on this side of the Atlantic, and with the Secretariat of the League of Nations to a greater extent than is commonly realised by the public on either Continent. It is a different matter, of course, when we turn from the Government to the people, for, as far as American public opinion goes, there are signs that, just at present, there is less interest in European affairs than at any time since the withdrawal of America from our concerns in 1919-20. The remarkable level of prosperity which American business has latterly attained—and seems likely to retain for a great many months to come—prevents the question of the restoration of overseas markets from becoming an acute question of home politics, as it now is in Great Britain with our problem of unemployment. As far as the degree of public interest in a subject can be gauged by the relative amount of space devoted to it in newspapers and magazines, the American interest in Europe has sunk to a very low point indeed, and the "Oil Scandal" has recently supplied a positive preoccupation which intensely and even passionately interests the American mind. The dramatic circumstances of its detection, the prominence and the increasing number of the personalities involved, and the magnitude of the national stake at issue—which is that of "Clean Government" in almost all its bearings—combine to focus the attention of the American people upon this single subject of interest. This absorption may continue for some months, and will undoubtedly be of capital importance in the presidential election. For foreign observers, it is a delicate matter to discuss what is so essentially a domestic affair of the United States. Our practical concern is to know whether its influence upon American internal politics will have repercussions upon American policy in international affairs. But, as far as can be seen at present, the answer to any such suggestion is in the negative. It is true that both the existing political parties are in different degrees implicated in the oil scandal, but the opportunity thus presented to a third party finds no candidate to seize it. The power of the Farmers' Party in the Middle West, of which much was expected several years ago, appears to be on the decline. The Labour Party "is not." When the oil scandal subsides, it will probably be found to have left American politics unaffected as far as foreign affairs are concerned. Meanwhile, we may look to the Administration to carry forward their policy of co-operation in technical matters on the present lines.

SOCIAL INSURANCE.

In these days, when social insurance upon a national scale is becoming of increasing importance, we welcome public aids to the comprehension of it, such as Sir William Beveridge's little book "Insurance for All and Everything."* What the author sets forth to do is to describe the systems which now exist, to explain how they leave gaps at present uncovered, and to suggest some co-ordination between them, so that "their edges may fit, neither overlapping nor leaving holes through which

† E. M. Earle: "Turkey, the Great Powers and the Baghdad Railway A Study in Imperialism." (New York). 1923. Macmillan and Co.

* "Insurance for All and Everything." By Sir William Beveridge K.C.B. "The New Way" Series, No. 7. Price 6d. The Daily News, Limited.

people can drop undeservedly into destitution." These systems should, he adds, "be amalgamated only so far as this can be done without harming their efficiency for their specific tasks."

The four emergencies for which statutory provision is at present made are:—industrial accident, sickness, unemployment, and old age. There are two others closely allied for which there is no provision, except by private insurance, namely: widowed motherhood and the death of the wage-earner other than by industrial accident. Public opinion, in so far as it is represented in the House of Commons, seems to be practically unanimous on the provision of pensions for widows, graded in accordance with the number of children which they may have to support. Sickness and unemployment insurance are contributory, by workpeople, employers, and the State. Industrial accidents are a liability of employers, and are, by them, voluntarily insured against in the insurance market. Old-age pensions, at present at 70, are non-contributory, and are hedged about with a poverty qualification which is a direct discouragement of thrift, and is generally condemned as unjust and vexatious. As Sir William Beveridge points out, contributory insurance has won on its merits. It accords with popular sentiment against giving or getting something for nothing. If we were to begin over again we should, in all probability, make old-age pensions contributory as, without a doubt, we shall make widows' pensions contributory when they come within the circle of statutory systems. After all, the provision of widows' pensions is simply the life insurance of the husband, which can be done at present most economically by means of "ordinary" life assurance at monthly premiums. The best and most efficient way to work the widows' pensions will be by means of the existing insurance organisations. Old-age pensions might also be brought into operation at age 65, instead of 70, by adding to the existing pension system a contributory benefit.

Sir William Beveridge, like most other people who have examined the seductive proposal for "insurance by industries" against unemployment, thinks that not much will come of it. His opinion is that the "most hopeful field for its operation lies in schemes for adding to the basic State benefit, as trade unions already do." That is also the view of the representatives of the National Confederation of Employers' Organisations, who recently reported upon the working of the Unemployment Insurance Acts. Unemployment insurance on a national scale at flat rates of contributions—by employers, workmen, and the State—is at present rather under a cloud. The system, established in 1911, and much extended in 1920, has not been able fully to cope with the volume of unemployment during the past three years. "Uncovenanted benefit" has had to be tacked on to it by special legislation, and the Insurance Fund has been compelled to borrow considerable sums from the Treasury. The word "dole"—a question-begging word of evil sound—has been employed very generally in relation both to the payments of "uncovenanted benefits"—which, to some extent, are of the nature of a dole—and also to the covenanted unemployment pay, for which employers, workmen, and the State have provided the statutory funds, and to which the workmen are fully entitled. Thus the insurance part of the fund has been confused with the emergency, or dole, part, to the discredit in the public mind of the whole scheme.

The national scheme itself, omitting for the moment the emergency additions, for which the fund has had to borrow from the Treasury, was commended, we think justly, by the representatives of the National Confederation of Employers' Organisations, who were invited by the late Minister of Labour, in 1922, to examine and report upon it. The Confederation have no doubts upon the merits of the scheme in principle, and they hold that its working has demonstrated the feasibility, in normal times, of making provision, by way of insurance, for helping the genuine workman over periods of temporary and unavoidable unemployment. Let us, for our part, illustrate this conclusion of the Confederation by a few figures drawn from other sources. During recent years the annual revenue of the Insurance Fund from statutory contributions has

been, approximately, £50 millions sterling. Of this large amount, employers have contributed 19 millions, the workers about 17½ millions, and the State rather more than 13 millions. The statutory contributions, even in these distressing days, are more than sufficient to maintain the solvency of the fund so long as the number of unemployed in receipt of statutory benefits do not much exceed a million. Even with the present abnormal unemployment of between 1,100,000 and 1,200,000, the fund has been steadily paying off its debt to the Treasury incurred by meeting "uncovenanted" benefits. It follows that in normal times, with contributions as at present, the fund would show a large surplus, which Sir William Beveridge thinks should be used for filling existing gaps in our social insurance.

There are many objections in principle to a flat rate system of contributions and benefits. It is easy to riddle it with criticism. But the moment one gets down to hard facts and the circumstances of industry one is forced to the conclusion—which is that of the Confederation—that nothing except a national scheme at flat rates is practicable. Unemployment insurance by industries cannot, in times like these, be brought within practical consideration—how, for example, could the shipbuilding industry maintain its own unemployed?—and if one attempted to isolate the good risks from the bad risks, the unfortunate men who were bad risks must be left stranded, without the possibility of being able to provide unemployed benefit. The good risks have to pay for the bad, in normal as in exceptional times, and this the Confederation fully recognise. They bluntly declare that "the whole industrial population should stand together upon a uniform basis." With that principle conceded, we have merely to consider how the compulsory national system may be improved. Perhaps the most important recommendation of the Confederation—with which we do not wholly agree—is that the State should pay the same rate of contribution as the employer and the workman, instead of less, as at present. Under the existing scale, the State provides about one-fourth of the fund, and the other two contributors nearly three-fourths. We may doubt if it be desirable to divert any more of the burden of insurance from industry to the general taxpayer. When trade depression is very severe the taxpayer might come to the help of the unemployed, but his capacity to be a source of help in time of need is lessened by the increase of his burdens in normal times.

The Confederation, of which the representatives included such able and experienced industrialists as Lord Weir, Sir Andrew Duncan, Mr Evan Williams, and Mr Milne Watson, regard the Employment Exchange as an indispensable part of the scheme, and are opposed to the amalgamation of unemployment insurance with the totally different systems of health insurance, workmen's compensation, and old-age pensions. Sir Wm. Beveridge, however, suggests ways in which the various schemes may be usefully co-ordinated without amalgamation. The Confederation condemn "contracting out" of the national scheme—at present suspended, and of which only one industry (Insurance itself) has taken advantage. But they propose to meet the rather hard cases, under a flat rate, of the more highly skilled industries, by encouraging the development of supplementary schemes as authorised by the Act of 1920. This plan we believe to be a most promising line of development. The general effect of the Confederation's report is to give national unemployment insurance, as we have it in this country, a handsome testimonial of efficiency.

POLISH FINANCIAL REFORM.—I.

THE attempt which is now in progress in Poland to stabilise the exchange is of greater interest than has perhaps been appreciated abroad. It may be described as a compromise between the experimental policy of Germany and the more orthodox methods followed in Austria. It is certainly a serious attempt. The circumstances of its origin are as follows.

Throughout 1923 the Poles were greatly impressed by Austria's success in solving her currency problems, and

Polish opinion lighted upon the creation of a Bank of Issue as the key to the enigma. During the autumn, whilst the dollar rose from 285,000 to 4,200,000 marks in three months, the demand for a new bank of issue and a new money gathered overwhelming force, and it was only the opposition of Mr Hilton Young's mission which prevented M. Kucharski, the Minister of Finance, from introducing a Bank of Issue and a new currency in circumstances which would have ensured their downfall. The ejection of the Coalition Government, whilst preventing this folly, precipitated a financial crisis. The President of the Republic, however, displayed great insight in interpreting public opinion, and much skill in dealing with the situation. The new Government appointed at Christmas exists for no other purpose than to reform the finances. The Prime Minister is also Minister of Finance, his colleagues are not politicians, and their main purpose is to play their part in the financial reorganisation.

M. Grabski has had experience as Finance Minister previously, and is recognised as a man of great erudition, outstanding honesty, and an obstinacy which is useful to any Finance Minister. Consequently, though often criticised as a professor, he evoked a wave of confidence which has not yet spent itself. He was thus able to obtain from the Diet "full powers," which enabled him to take all necessary action in financial matters without further specific authority from Parliament. Unfortunately, as we shall see, these powers are limited to a period of six months. One result of this is that M. Grabski is bound to act with a haste which even for Poland appears somewhat precipitate.

M. Grabski's plan will stand or fall by the results of his currency policy, and his action in this respect is interesting for what it has done, and still more for what it promises. M. Grabski must appreciate that the immediate founding of a Bank of Issue in the present condition of the Polish national finances is at best a hazardous experiment. In his first speeches he expressed himself as in general agreement with the English experts on this point. Since he sees no prospect of obtaining foreign credits on a sufficient scale in present conditions, he is compelled to rely on the efforts which he is making to effect a substantial and immediate improvement in the Budget position. He might thus have concentrated attention on the Budget, and diverted it from the Bank of Issue but for one event which has profoundly affected Polish policy. This is the temporary success of the Rentenmark. By a coincidence of great importance, at the moment when Polish policy was being decided, the cash accounts of the German Government showed a surplus, whilst prices in Germany were reported to be stable. The Polish people saw the most difficult of currency problems solved, as they thought, in a few weeks by the application of the specific for which they had so long clamoured, and without that international control which is to them so distasteful. It was impossible in such circumstances for the Government to avoid commencing immediate action for the foundation of a new Bank of Issue. The statutes were accordingly passed, and an organising committee is now seeking the capital for the new Polish National Bank, which is expected to start operations this spring.

So far as the statutes go (they are modelled on the statutes of the Austrian National Bank) the bank is not open to much criticism. It would probably benefit by having a foreign adviser associated with it, and opinion in Poland is favourable to this course. But the bank's success will depend not only upon the direct play of economic forces, but also, and very largely, upon the movement of confidence in the country, and this in the future, as in the past, will be influenced to a considerable extent by developments in German currency.

The new Polish money, however, will operate in conditions very different from the Rentenmark. It will be secured on commercial bills and a metallic reserve of 30 per cent. The existing gold reserve, worth some five million pounds, will now for the first time be available for exchange operations. But the factors which have supported the Rentenmark scarcely exist in Poland. The miscellaneous currency issues which are so numerous in Germany have no counterpart in Poland. Dollar bills, it

is true, are common, but they do not serve to replace the national currency to any extent, save on the eastern borders. Their total quantity is generally much exaggerated, and the amount which may be brought in to the new bank is doubtful. The Polish peasant is suspicious of any attempt to deprive him of his dollars. It is most improbable, moreover, that the Polish Government could succeed in imitating Germany's action of paying in arrear the salaries of State officials. The risks to the State revenue and administration are too high with the existing Polish Civil Service, which, though very patriotic, offers a great contrast to the German administration. Nor has Poland large foreign balances which can be drawn upon, as is said to be happening in Germany, to maintain the exchange value of the new currency.

In the most important matter of all, however, conditions are in M. Grabski's favour. Poland's foreign trade position is sound. The statistics for the first ten months of 1923 show a decided balance in Poland's favour, and although these figures require much interpretation the net result (chiefly owing to under-estimation of export values) is probably to improve the situation. In addition, the lucrative smuggling into Russia must be taken into account, and, most of all, the remittances from Poles abroad. These may be estimated at about 25 to 30 million dollars per annum from the United States, and at least five or six million dollars per annum from Polish workmen in France. Against this "invisibles" include certain payments abroad reckoned at about 20 million dollars per annum, but the net result is definitely favourable to Poland, whose position compares very well in this respect with that of any European country. The maintenance of this strong foreign trade position during the next few months is essential to M. Grabski's success, and as some 60 per cent. of Poland's foreign trade has been with Germany, here is perhaps an element of precariousness in the economic situation. Examination, however, is reassuring. On the one hand, Poland's exports are chiefly raw materials and foodstuffs, which are almost sure to find markets in Germany or elsewhere (a recent reduction in the German demand for Upper Silesian coal has been entirely covered by orders from elsewhere), and on the other, Poland is less dependent on Germany now than formerly, and has perhaps passed through the worst of her German experiences. It is arguable, indeed, that Polish foreign trade will benefit from any improvement of the German financial situation which may be effected this year. The Russian market, though it should certainly benefit Poland, especially perhaps the textile industries, cannot develop quickly enough to play a part in M. Grabski's problem. The exports of timber should benefit from the opening of Memel, but the time this will take and the present condition of the timber market make it unlikely that Poland will gain therefrom in the near future.

Consequently M. Grabski's financial problem is easily defined. With a favourable trade position, but with practically none of the adventitious aids which have assisted the Rentenmark, he must rely for success solely upon his skill in handling public finances and on the confidence he thereby creates.

Nor do the public finances appear to present a very difficult problem. The estimated expenditure in 1924 and the actual expenditure in 1923 are each rather less than the eleven hundred million Swiss francs, so that the Polish Government costs about 32s per head per annum (population over 27 millions). As Government in England costs some twelve times as much and in France five or six times as much, this is certainly cheap even for Poland. Moreover, it can be reduced by economies, though not perhaps below, say, 25s a head. The revenue collected in 1923 (the estimates for 1924 show a surplus of revenue, but this is not serious) was about two-fifths of the expenditure, so that the Budget can be balanced at the cost of increasing the burden per head from about 12s 6d to 25s (this includes not only taxation, but revenue from all other sources). This burden would need to be increased if the Government extended its activities, which on the social side are in great need of development. Difficulties will also arise unless the railway deficit is covered. Railway rates have been put on a gold basis (the rate changes once a fortnight) since January 1st, but even now they are only

from one-half to two-thirds of the rates in Germany, Austria, Czechoslovakia or in pre-war Poland. A Railway Loan is being issued, secured on the receipts of the Galician Railways, but this is naturally a palliative rather than a remedy.

The Polish army is often supposed in England to be the chief cause of Poland's financial troubles. This is no longer the case. The standing army numbers 240,000 men, which for a land frontier of 2,000 miles does not appear excessive. In 1923 it cost about £20,000,000, which does not seem exaggerated. Economies in its administration can no doubt be made, and M. Grabski is supposed to be prepared to fight for them, but the Russian bogey cannot be altogether conjured away, and it is hoped that the recent appointment of General Sikorski (who defeated the Bolsheviks in 1920) may increase confidence. The Polish army in 1923 cost more than the entire revenue, but the remedy lies far more in increasing revenue than in reducing military expenditure.

It appears, then, that the Budget problem lies within manageable dimensions. The most rapid results can be obtained from economies, but a great increase in the sums received by the Government is a necessary condition of success. Such increase must be rapid and must be maintained. This involves other questions than merely raising the rates of taxation.

The manner in which M. Grabski is handling this problem, and his prospects, will be examined in a succeeding article.

TIMBER IMPORTS IN 1923.

(FROM A CORRESPONDENT.)

IN these days when all classes of the community are watching with so great interest the progress, or otherwise, of housebuilding schemes, large and small, attention is directed more than ever to that indispensable material for the dwelling—palace or cottage—timber, from whence it comes (for our native grown woods are a minor factor in our timber supplies), whether stocks are heavy, and whether they are and will remain sufficiently cheap to play their part in the great "push" the Government apparently intend to make in providing more housing.

It is very satisfactory to be able to state, therefore, that so far as supplies of timber from abroad for building work are concerned, the imports for 1923 were of large volume, and stocks generally in all parts of the country are in sufficient quantity to supply fairly full requirements, though under the natural laws of supply and demand prices must have a tendency to rise should the call for timber increase to any extent. At present the prices are roughly double those ruling before the war.

Timber imports into this country during the years 1921, 1922, and 1923, according to the Board of Trade Returns, were as follows:—

(000's omitted.)

	1921.		1922.		1923.	
	£	£	£	£	£	£
Hewn hardwoods (cubic ft.)	3,668	1,582	4,546	1,376	5,206	1,438
Hewn softwoods (loads)	130	1,019	154	849	250	1,142
Sawn hardwoods .. (cubic ft.)	8,704	3,847	14,153	4,139	20,451	5,785
Sawn softwoods (loads)	2,057	13,557	3,999	20,949	4,670	26,622
Planed or dressed "	235	2,053	381	2,591	426	3,066
Pitwood	1,296	3,224	2,811	5,486	3,677	7,685
Staves	51	1,411	75	737	84	564
Sleepers	322	3,252	211	1,114	294	1,339
Veneers	1	49	1	52	2	90

The grand totals of all our wood supplies amounted in 1923 to £47,736,863; 1922, £37,321,017; 1921, £30,021,962.

The purport of this article is to show above all the imports of timber for use for general purposes—sawn softwoods in deals, battens, boards, scantlings, and ends for, principally, building construction work, for wood containers, from large packing cases to boxes of small dimensions (the latter consuming considerable quantities of timber annually), and for ordinary general purposes applicable to almost all industries. In this connection the appended table, showing the imports of sawn softwood timber, will be of interest, giving, as it does, a general idea of export-

ing countries and quantities and value of wood received from each for 1922 and 1923, together with percentages of increases and decreases last year, compared with 1922:—

	Quantity.		Value.		Quantity.		Value.	
	1922.	1923.	1922.	1923.	1922.	1923.	1922.	1923.
	Loads.	Loads.	£	£	%	%		
Russia	392	602	2,333	3,464	+ 53.57	+ 48.47		
Finland	1,026	1,165	4,689	6,325	+ 13.54	+ 34.89		
Latvia	252	422	1,148	2,010	+ 67.46	+ 75.09		
Sweden	1,148	1,013	5,659	5,427	- 11.75	- 4.09		
Norway	147	110	821	661	- 25.17	- 19.49		
Poland (inclg. Danzig)	105	188	534	1,006	+ 79.05	+ 88.38		
Germany	38	50	216	258	+ 31.57	+ 19.44		
United States of America	176	263	1,520	2,429	+ 49.43	+ 59.08		
Canada	467	426	2,758	2,896	- 8.77	- 5.00		
Other countries	245	426	1,267	2,141	+ 73.87	+ 68.98		
Total, sawn soft	3,999	4,670	20,949	26,622	+ 16.77	+ 27.08		

A feature of our sawn softwood imports was the falling off in the Swedish imports last year, and the remarkable increase in our purchases from Russia, which country exceeded expectations, and from all accounts is likely to make still further improvement in her exports to this country this season. It will be observed, too, that whilst Russia's imports increased by nearly 54 per cent., the value improved by but 48 per cent., which goes to some extent to confirm the opinion previously expressed in the *Economist* that the Russian imports greatly assisted in keeping spot prices of Swedish and Finnish productions down last autumn. Of Finland's exports to this country there was an increase of nearly 14 per cent., whilst the improvement in value amounted to 34.89 per cent. Norwegian imports show a great decline, but Latvia and Poland show large increases, and it is plain that these smaller States can successfully compete to a large extent against Swedish and Finnish productions, particularly when the latter are inclined to be "pushed up" in price on the free on board market, as was noticeably the case in the first half of 1923. So far as large timber supplies go, we have to be thankful to these smaller mid-European countries, including Czechoslovakia, some of whose timber is shipped via German ports, and Russia for keeping our buying markets much cheaper than they would otherwise be if Finland and Sweden had to accommodate us with more than the 46 per cent. of our building and general sawn timber sent by those countries last year.

The United States increased their supplies and at higher prices. There was slight falling off in Canadian arrivals; Canada feels acutely the effects of European competition, but the totals of other countries are very significant, showing an increase of over 73 per cent. in the volume and of nearly 69 per cent. in the value. Taken collectively, our building timbers in 1923, compared with 1922, were higher in volume by 16.77 per cent., and in value by 27.08 per cent.

Of the sawn and planed wood imports, a not unimportant feature of building supplies, the total imports of 426,688 loads came principally from Sweden (265,044 loads) and Norway (130,937 loads), other countries being but poorly represented. The hewn softwoods in 1923 totalled 250,260 loads, valued at £1,142,652, compared with 154,842 loads, valued at £849,072, in 1922. The most striking increases in this section of timber imports in 1923 were from Russia, 56,459 loads, compared with 11,544 loads in the previous year; Finland, 38,250 loads, against 19,005 loads; and Norway, 32,352 loads, against 16,699 loads in 1922.

In the sawn hardwood section of the trade the imports, as with building woods, were very large, amounting to 20,451,783 cubic feet, against 14,153,147 cubic feet in 1922, of which 1,313,014 cubic feet and 1,043,291 cubic feet respectively consisted of mahogany boards and planks. Of the above 1923 figures, and not including mahogany, we received 12,294,344 cubic feet of sawn hardwoods from the United States, as against just over eight millions in 1922; "Other Countries," 2,655,344 cubic feet, Canada, 2,426,479 cubic feet, British East Indies, 1,206,687 cubic feet, being the only countries to go over the million mark. If the returns gave the shipping districts under "Other Countries," it would be found that we get our furniture cabinet and decorative wood supplies from all parts of the world—a great tribute

to our Free Trade system and an assurance that the ships bringing these woods take something back.

Imports of pit timber in 1923 reached the large amount of 3,677,016 loads of 50 cubic feet, valued at £7,685,026, against 2,811,876 loads (£5,486,308) in 1922, and 1,296,925 loads (£3,224,152) in 1921. France was the only country to export to this country over a million loads (1,566,294), valued at £1,950,461, which were principally for the South Wales coalfields.

The prospects of imports of building timbers for the coming year are very promising, there being every desire of timber producing countries to ship largely to England, and, as already intimated, increased efforts will be made, particularly in Russia, to increase shipments. Of furniture woods, however, we must express ourselves more cautiously, as the bulk of this material comes from the United States, whose domestic demand increases every day.

The present article would be incomplete without a word of warning. We are receiving enormous quantities of timber from countries whose home demands must also be increasing. Though our heavily stocked markets do not help us to realise it, the world's timber capital is being used up more than slowly, a fact which our new Government and Colonial and foreign Governments should take notice of in the interests of those coming after us.

THE POSITION OF COPPER.

DURING the past few weeks there has been a very welcome expansion in the amount of interest shown in the copper market, and taking the commodity on the whole the outlook may be regarded as better. About the middle of February there was a good burst of buying witnessed on the London market, and the price of standard cash was lifted to over £66 per ton, with three months commanding a premium of about 20s. The following table gives the highest and lowest touched on the London Metal Exchange over a period of years, and at the present stage this is of more than usual interest:—

COPPER—STANDARD CASH DELIVERY.

	Highest.			Lowest.		
	£	s	d	£	s	d
1913	77	2	6	61	15	0
1920	122	5	0	70	0	0
1921	75	12	6	65	5	0
1922	66	2	6	57	0	0
1923	76	17	6	59	5	0
1924 (two months)	66	3	9	60	8	9

From the above it will be seen that the price this year already has actually dipped below the lowest figure recorded in 1913, and in view of the very high price level reached by other non-ferrous metals this is a very peculiar development. The only explanation is that whereas the supply of tin, lead, and zinc has, generally speaking, not been keeping pace with demand, copper exceptionally has been produced on a very full scale in the face of some diminution in the world's consumption of the commodity. Both the totals relating to the world's copper output and the United States refinery production reveal a big expansion, and there is no doubt that this has been the main reason why buyers have been holding back. The table appended gives production, deliveries, exports, &c., over a number of years:—

COPPER PRODUCTION, DELIVERIES, &c.

	Total U.S. Production.	Domestic Deliveries.	U.S. Exports.	World's Copper Production.
	Tons.	Tons.	Tons.	Tons.
1913.....	736,000	350,000	389,000	970,000
1920.....	732,000	470,000	278,000	965,000
1921.....	507,000	304,000	265,000	539,000
1922.....	675,000	490,000	330,000	849,000
1923.....	965,000	675,000	350,000	1,110,000

The increase in the world copper production from 539,000 tons in 1921 to 1,110,000 tons last year is a very striking feature. Thus in two years the figures have been more than doubled, and bearing in mind the disturbed state of Europe last year, the chaotic condition of the exchanges, and the adverse effect on industry brought about by the political tension engendered by the occupation of the Ruhr by armed forces, it may truly be claimed

that the fundamental position of this commodity is remarkably sound seeing that it only fell a few shillings below £60 at its worst last year. The United States' production in 1923 was no less than 458,000 tons heavier than in 1921, and the increase in the domestic deliveries during the same period amounted to 371,000 tons, which expansion is larger than the total deliveries under the same heading in 1913. Turning to stocks, the following table shows the position of stocks in this country and the United States:—

	COPPER STOCKS.		Great Britain.	
	U.S.A. Refined Copper.	Lbs.	Refined and Rough.	Tons.
January 1, 1913.....	105,500,000		27,000	
" 1920.....	631,000,000		10,000	
" 1921.....	659,000,000		12,000	
" 1922.....	459,000,000		16,655	
" 1923.....	216,000,000		26,780	
" 1924.....	310,000,000		30,211	

It will be seen from the above that the tendency is for stocks to accumulate, but this was due to the slackness seen in the consuming trades late in 1923. It is estimated that since the beginning of the present year the stocks in the United States have been reduced a little. The domestic deliveries in January amounted to 145,000,000 lbs, which would be well above the monthly average for all last year, and in the same month the refinery output dropped off to the extent of 13,000,000 lbs. Early in February a genuine buying movement started for American domestic account, and this will probably continue for another month or two, as the industrial demand for the commodity in the United States is very brisk. Thus, if Europe joined in while the American copper users were restocking, the refinery surplus of 13,000 to 14,000 tons would not go very far, nor would it present anything in the nature of a problem to the producing industry, seeing that the 659,000,000 lbs left over from 1920 was reduced to 216,000,000 lbs by the close of 1922.

Of the 350,000 tons sold by the U.S. for export last year, France took the largest quantity, viz., 81,780 tons, while Great Britain absorbed 73,669 tons and Germany 59,274 tons. China and Japan between them bought no less than 23,656 tons, and no doubt some of the metal exported to Holland went to Germany. The British takings show a big expansion, being practically double the figures for 1922, but France only bought about 21,000 tons more, and Germany took over 30,000 tons less. If the franc should begin to improve again, this would lead to more American copper being purchased, while the financial position of Germany may perhaps undergo a marked change for the better during the next six months, thus adding to the benefit received already from the establishment of the gold mark, and making the importation of American copper easier than it was at the end of 1923. Italy will shortly buy a fairly big tonnage of copper for making sulphate, and thus the outlook is not altogether unfavourable for a renewal of European buying of the commodity. The reduction this week of the New York price of electrolytic to 13 cents per lb, both for spot and March delivery, should aid the buying movement, and there is no doubt that further business will be done once buyers are convinced that bottom has been reached. Germany should be able to consume fully 100,000 tons per annum, and although efforts are being made to increase the domestic output, users will have to depend largely upon imported metal. Other potential buyers of copper are Sweden, Switzerland, and Czechoslovakia.

Taking a long view of the commodity, a revival seems to be assured. Statistically the metal is healthy enough. The heavy production in the United States, coupled with the big South American output, is a factor that calls for caution, but the American producers are not likely to allow the market to fall much below current level. The Copper Export Association has decided not to issue the return of production, domestic deliveries and sales on foreign account in the future, but the statistics will easily be forthcoming from other quarters; thus there will be no obscurity about the general position. The big American selling agencies are still able to control the situation, and the theory that the recent changes made in the firms connected with the Association would lead to competition and prices that favoured buyers has been knocked on the head.

The market value of copper just now is decidedly low, and thus consumers are bound to take advantage of the position once the industrial and political outlook is clearer. The extraordinary activity witnessed in building, manufacturing, and electrical circles in the United States will call for a great domestic consumption, and if the export total averages 30,000 tons per month production on the present scale will not prove unwieldy.

LONDON GAS COMPANIES.

No more fitting introduction could be made to this article than the first paragraph of the directors' report to the proprietors of the South Metropolitan Gas Company, in which we are informed that "the important part played by all gas undertakings, municipal and otherwise, in the improvement of the atmosphere of large cities and in the elimination of smoke pollution, is becoming day by day more widely recognised." Most reasonably minded people will heartily support any movement which has as its object the improvement of the air in and around our big cities. Indeed, we should like to see existing legislation more strictly enforced in order to procure an abatement of smoke nuisances.

During the year under review the selling price of gas has been reduced all round. The Gas Light and Coke reduced its price from 10d per therm (4s 2d per 1,000 cubic feet) to 9.2d per therm (3s 10d per 1,000 cubic feet) in the first half of the year, while in the second half it was reduced to 8.6d (3s 7d per 1,000 cubic feet); this is a total reduction of 14 per cent. in the year. It is stated that the Commercial Gas has "made a further reduction in the price of gas as from January 1, 1924, of 4.5d per therm, equalling 3 4.5d per 1,000 cubic feet, making the present price of gas 8 4.5d per therm, or 3s 5 4.5d per 1,000 cubic feet." The South Metropolitan mentions the sale of gas "at 9d, 8½d, and 8d per therm." The South Suburban reduced gas prices twice during the year, and the price is now 9 4.5d per therm, or just over 3s 11d per 1,000 cubic feet. The Wandsworth, Wimbledon, and Epsom informs us that its price was reduced by 3.5 of 1d per therm, which is equivalent to nearly 3d per 1,000 cubic feet, from midsummer last, and later by a similar sum dating from Christmas last.

The Departmental Committee of the Board of Trade which inquired into the method of charging for gas on a thermal basis presented its report in February of last year, and recommended that this method should be continued and extended to all statutory gas undertakings wherever possible. This committee also made other recommendations with the object of helping consumers to understand the thermal method of charging. Most London undertakings appear to have given support, but it could be wished that the comparative statistics were made more simple. Dr Carpenter, of the South Metropolitan Gas, in his annual speech commenting upon the thermal method of charging, said: "When I addressed you a year ago I expressed my firm conviction as to the outcome of the inquiry by the Board of Trade into the working of the therm system of evaluating gas. I have not been disappointed. The report of the committee has since been issued; and although in these fast-moving times it may already seem ancient history, it is worth remembering that it emphatically supported the therm as a standard of computing gas values and prices. A curious circumstance is that it was first condemned by the gas industry, and then by the public Press, but it has proved itself to be founded on sound principles and has in consequence become firmly established."

The London County Council gave notice in August of its intention to apply to the Board of Trade for a revision of the Gas Light and Coke Company's standard price, according to its powers under the Gas Regulation Act of 1920; the Board of Trade held a public inquiry into the matter in November last, and issued an order in December reducing the company's "standard price" as from the

last day of 1923 from 15.2d to 11d per therm. There is other evidence abroad which denotes the activity of the London County Council in this direction.

The following table shows the total gas sold by five representative London gas companies during the year ended December 31st last, together with the comparative figures for 1921 and 1922:—

TOTAL AMOUNT OF GAS SOLD.

	1921.	1922.	1923.	In. or Dec.
	Therms.	Therms.	Therms.	%
Gas Light and Coke	147,549,334	160,077,324	167,686,238	+ 4.8
South Metropolitan	78,551,114	81,340,985	84,057,306	+ 3.3
Commercial Gas	17,055,478	17,054,125	17,658,566	+ 3.6
South Suburban	13,566,922	13,845,888	14,557,793	+ 5.1
Wandsworth, &c.	13,541,936	13,375,519	14,137,459	+ 5.7

An interesting increase is revealed in these figures. Moreover this, be it remembered, is an increase of steady growth, and one which is not the outcome of any sudden publicity "stunt." We can fully understand the chairman of these gas companies giving way to little breezes of exhilaration in this age of electricity, but we should like to hear some views from the other side on the statement that "electrification involves waste and misuse of coal." The chairman of the Gas Light and Coke Company recently stated that if that company "were to be swept out of existence and to be replaced by an electrical undertaking, that electrical undertaking would require to use at least three million tons of coal instead of the two millions we use." He added that "there is also this great advantage in favour of gas, that whereas an electrical undertaking in the production of electricity would completely use up the three million tons of coal, the Gas Company, having treated the two million tons of coal and obtained the gas, would still have remaining 1,250,000 tons of coke and breeze, 19 to 20 million gallons of tar, and a large quantity of ammonia."

In the table given below we analyse the revenue and expenditure of five representative London gas undertakings for the past five years. The Act of 1920 provided for annual accounts and returns to be submitted to the Board of Trade. In consequence companies now publish accounts for the whole year in the place of the half-yearly accounts previously issued. The half-yearly accounts of the South Metropolitan and Wandsworth Companies for 1919 have been shown as annual returns in the undermentioned table for comparative purposes:—

Company.	Revenue.				Expenditure.			Balance
	Sale of Gas.	Rentals.	Residuals.	Total Receipts.	Manufacture.	Distribution.	Total Expenditure.	
Gas Light and Coke	£	£	£	£	£	£	£	£
Year ended Dec. 31, 1919	6,528,127	588,066	2,721,473	9,835,666	6,809,139	1,238,966	8,048,105	849,864

1923	548,768	133,739	225,343	908,850	658,878	164,096	807,890	101,005

From our tables it will be gathered that, though prices have been reduced, the increased consumption of gas was not on such a scale as would enable companies to maintain profits on the previous year's scale. Indeed, profits are lower in every case. But receipts from rentals are higher, while "Residuals" is an excellent feature which indicates the trend of companies' activities in by-products.

Our final table shows dividends over the past three

years, together with present prices and yields as compared with a year ago:—

Name of Company.	Dividends.			Price, July 27, 1914.	Price, End of Feb., 1923.	Yield %.	Price, End of Feb., 1924.	Yield %.
	1921.	1922.	1923.

South Suburban, Ord.	5 1/2	6	6 1/2	115	98 1/2	5 1/2	97 1/2	5 1/2
Wandsworth, Wimbledon, &c.—								
"A" Stock	6 1/2	8	8 1/2	153	132 1/2	6 1/2	137 1/2	6 1/2
"B" Stock	5 1/2	6 1/2	7 1/2	131	117 1/2	5 1/2	114 1/2	5 1/2
"C" Stock	4 1/2	5 1/2	6 1/2	102 1/2	85 1/2	4 1/2	100 1/2	4 1/2
Wimbledon Stock	4 1/2	5 1/2	6 1/2	119	111 1/2	4 1/2	109 1/2	4 1/2
Epsom Stock	5	6 1/2	7 1/2	123	117 1/2	5	117 1/2	5

This is certainly a list of attractive yields providing gas production is not looked upon as a dying industry. And good evidence in support of this pessimistic theory is difficult to find. We consider that gas companies would be performing a useful service to investors if they endeavoured to make perfectly clear what the exact rate per cent. is of the dividends which they pay, and what amount is actually utilised for this purpose. The amount paid for preference dividends might be set out separately from the ordinary dividend, and the "carry forward" might be clearly stated. Attention to these details would make gas accounts much clearer, considerable confusion would be avoided and incidentally much valuable time saved to statisticians who have to examine gas accounts. It is true that the returns of gas companies have to conform to a statutory form; but there is nothing to prevent the companies elucidating their accounts for the benefit of their shareholders. The investor is also apt to be a little confused by the fractional rates of dividend declared as compared with the round figures which constitute the general practice. This feature is, however, due to the sliding scale system, which establishes a ratio between the dividends which may be declared and the price of gas per unit, and compels the companies to lower the latter at a definite rate for each fractional advance in dividend.

STATE CONTROL IN RUSSIA.

(BY A CORRESPONDENT.)

SINCE the present economic crisis in Russia reached its climax in the course of the last few months, it was generally expected that some important changes would be effected in the economic organisation of the country. The inadequacy of State capitalism was so conclusively proved by the events of the last two years, that further evolution towards the establishment of an economic system based on private enterprise and free competition seemed absolutely unavoidable.

These expectations, however, proved premature, and were recently disappointed by the publication in the Soviet Press of a resolution on the current problems of economic policy, passed by the Political Executive of the Russian Communist party, on December 24th. The resolution traces the main lines of the economic policy to be followed by the Soviet Government in the immediate future. To those uninitiated in the details of the present political régime in Russia it may seem strange that, what is in fact an enactment of decisive political importance, may emanate from a party executive. Yet, since in that body is vested the supreme power of the so-called dictatorship of the proletariat, it is on it that the final decision in all matters political actually depends. It should be remembered that the most important decision hitherto taken under the present régime, that is the inauguration, in 1921, of the new economic policy, was also taken not by the Congress of the Soviets, but by the Tenth Communist Party Conference. Accordingly, the present resolution is tantamount to a legislative enactment, and is treated as such in the Press.

The resolution is an utterly disappointing document, since, far from removing the obvious inadequacies of State capitalism, and allowing more freedom to private enterprise, it tends to consolidate that disastrous system.

The resolution strictly adheres to the policy of nationalisation with regard to the large industrial concerns, on the ground that "the development of large nationalised industries is the only solid foundation of the dictatorship of the proletariat." In spite of the overwhelming evidence of the utter commercial failure, which has been forthcoming in the course of the last two years, and, especially, in the present crisis, nationalisation is to be adhered to at all cost. To reduce the burden imposed by it on the Budget, the "concentration" of the industry, involving the closing down of the less efficient concerns, and the dismissal of their staffs, is to continue. So far the policy of "concentration" increased unemployment enormously. The number of unemployed industrial workers rose from 64,000 in January, 1922, before "concentration" began, to 402,000 in June last, or to 20 per cent. of the total number of workers, and is still steadily increasing. Including the employees, the number of persons out of work rose during the same period from 135,000 to 875,000. Thus, it would appear that nationalisation, instead of improving the position of the proletariat, has tended to reduce it to a condition of permanent unemployment, since nationalised concerns cannot pay their way, and have to be closed down.

With regard to internal trade, the resolution advocates the support of State and co-operative trading, as against private trade which is ousting them from the market. While recognising the inefficiency and high costs of State and co-operative trading, as compared with private enterprise, it aims at regaining the ground lost to the latter by means of a special policy of price control.

The attitude to private capital in industry and trade generally is also very far from suggesting any evolution towards greater tolerance. Of private industrial enterprise it is, indeed, hardly necessary to speak at all, since, according to the latest information, it is represented by less than 5,000 leased concerns with a total of 70,000 workers, or about 15 each on the average. Private trade is far more developed, involving about 25 per cent. of wholesale and as much as 80 per cent. of retail business done. While in the case of industry, there was of late a marked tendency to contraction, and cancellations of leases were steadily increasing, the private trader was steadily gaining ground in his competition with the State. Now, the resolution emphasises the necessity of checking the accumulation of private capital and the extension of its activities by means of price control and of heavy taxation, with a view to ensuring in future the absolute supremacy of the State in the economic domain.

With regard to foreign trade, the system of State monopoly is emphatically endorsed as "one of the principal elements of the Party's economic policy," and a means "to protect the wealth of the country from spoliation by native and foreign capital." This point is the more disappointing since the monopoly of foreign trade is, among the features of the present economic régime, one of the most disastrous for the country. It is particularly so for the peasants, whom it places entirely at the mercy of bureaucratic incompetence, of which that system has become a by-word. Its operating costs are enormous, and they have to be paid by the producer. According to the Soviet Press, overhead charges in the export of grain are now on the average about 60 gold copecks per pood, that is, three times as high as they were before the war. The prices paid for grain on the spot, on the other hand, are ridiculously low. All buying being done by what are practically Government agencies, the peasant is faced on the market by a powerful combination, and is, consequently, forced to pay the heavy bill of State monopoly of foreign trade. For the Government, as distinguished from the people, the arrangement is, certainly, a gold mine so long as there is agricultural produce to export, but whether the country can ever recover under this system is open to grave doubt. In any case, this policy can hardly be expected to stimulate agricultural production and the extension of the Russian market for manufactured goods, either produced at home or imported, since it deprives the peasant of all incentive to increase the area under cultivation.

The concluding portion of the resolution deals with the necessity of stricter Government control of economic

activities, and may, accordingly, be described as to some extent a relapse into that system of *étatisme* which was characteristic of the earlier stages of Communism in Russia. It emphasises the necessity of exercising stricter control over the market, for which purpose it proposes to reinforce the State Planning Commission (Gosplan), and to entrust that institution with the task of the "systematic study of the current conditions of trade and the working out of the principal measures of intervention in the market." Combined with what had been said in the earlier portions of the resolution with regard to price control as a means to combat the development of private capital in industry and trade, this section is ominous, since such measures would certainly make the extension of the activities of private enterprise well-nigh impossible in Russia, and would greatly hinder her reconstruction. Besides, has it not been conclusively proved that the less the market is subject to bureaucratic interference the better it is for all those concerned, including the workers? Yet it is apparently still to be learned from further bitter experience. The present crisis does not appear to have taught its lesson to those now in power in Russia.

To quote the *Economicheskaya Zhizn*, "this resolution will form the basis of all economic work in the immediate future, and will be unswervingly applied by all responsible workers in the economic domain." All those, however, who want to see the speedy restoration of healthy economic activity in Russia will certainly wish that sounder counsel may prevail at an early date, before this fit of recurrent fever has time to do much harm to her shattered economic system.

Notes of the Week.

The Indian Problem.—The House of Lords on Tuesday and Wednesday discussed the political position in India, and although interesting speeches were delivered by Lord Olivier, the new Secretary of State for India, Lord Curzon, Lord Meston, and the Earl of Balfour, the debate suggests little of a general nature to be added to the analysis of the position which was attempted in these columns last week. But the discussion serves a useful purpose in showing that statesmen of varying shades of political opinion are in close agreement on the fundamental point that India is not yet ripe to make a success of complete self-government, and that Great Britain has no option but to devote herself to working out the policy of the Act of 1917, namely, the policy of bringing India, by stages as speedy as prove possible and by growing co-operation with Indians to the ultimate goal of responsible self-government. How to secure the growing co-operation necessary to progress with the task, in place of the growing obstruction which is presented by the Swarajist movement, is, of course, the baffling task with which the Government are faced. We gather from Lord Olivier's speech that the Government, in consultation with the Government of India, are diligently and cautiously searching for "the best means of establishing closer contact and better understanding." A statement on the subject is promised before long. Meanwhile, it may be hoped that the debate will have assisted to remove the misunderstandings which are so rife. Helpful in this direction may be Lord Olivier's analysis of the causes of the present irritation, his condemnation of the Dyer debate in the House of Lords in 1917 (also condemned by Lord Curzon) and of Mr Lloyd George's "steel-frame" speech in 1920, and his rather cautious statement on Kenya. Unfortunately Lord Olivier's statement does not appear to have had a good Press in India. The practical unanimity of the speakers on the main issue was very marked. The Secretary of State described the India Act not as "ideal," but as "a transitional instrument for carrying on the public service." Lord Curzon said that we must "proceed cautiously along the lines laid down." Lord Meston pronounced that we must either adhere "to the policy of gradually fitting India for self-government, or we must hand over India to men who had no programme or considered creed of national welfare." The Earl of Balfour said (*Times* report, February 28th):—"There was no alternative to

that adopted by Parliament in 1919. They were all one on that. In insisting on seeing how the experiment worked, they were not delaying free institutions in India; they were doing what they could to make one of the most difficult tasks ever undertaken possible. It might prove that the thing was impossible. He hoped for better things. But the idea that it could be done by a stroke of the pen, that it could possibly happen if our hands were forced, was one of the most fantastic dreams that had ever entered the mind of man." The immediate task of finding some means of establishing a *modus vivendi* with Swaraj is intensely difficult. The method of a round-table conference, suggested by the Legislative Assembly, was roundly condemned by Lord Meston, but Lord Olivier mentioned other possible means of approach. His promised statement in the near future will be awaited with keen interest. In their efforts to reach a *dénouement* of the present menacing position the Government may be sure of the support and sympathy of all parties, so long as such concessions as may be necessary to obtain reconciliation do not lead them fundamentally astray from the line of policy already laid down.

The Reparation Recovery Duty.—In answer to a question in the House of Commons on Monday, Mr Graham, the Financial Secretary to the Treasury, announced the reduction (as from Monday night) of the levy on German imports from 26 per cent. to 5 per cent. The German Reparation (Recovery) Act, under which this levy is made, came into force on April 1, 1921, and provides for the payment to the Customs of a proportion of the purchase price of German goods, the official receipt for the amount so paid "operating *pro tanto* as a good discharge to the importer against the person to whom the purchase price of the goods is due." At first the proportion of the purchase price to be paid to the Customs was fixed at 50 per cent., but was shortly afterwards reduced to 26 per cent. Originally the Act was meant to apply to all goods of substantially German origin; but, this being found impracticable, the application of the Act was restricted to direct imports from Germany. For the past few months the German Government has refused to reimburse German exporters in respect of this levy, which has, therefore, fallen upon the British importer, and, through him, no doubt, in part at least, upon the British consumer. We have, therefore, apparently been in the position that the British consumer has been paying in indirect taxation considerable sums, which are credited to Germany as reparation payments. In order to put an end to this intolerable position the British Government has come to an agreement with the German Government, under which the former reduces the levy rate to 5 per cent., and the latter agrees (1) to arrange for the compensation of the German exporters at a later date, and to make it a punishable offence to charge any part of the levy to the British importer, and (2) to reimburse in gold bonds Customs receipts paid by the British importer before February 26. Full details regarding these gold bonds are set out in the current issue of the *Board of Trade Journal*. The Government's decision has been severely criticised from different angles. It is urged on the one hand that the Government is "letting Germany off," opening our markets to a flood of German competition, and reducing the duty to a level at which it is not worth collecting. To this it may be answered that the agreement at least ensures that the German Government will pay something, whereas since November it has paid nothing. The Treasury expect to collect on the 5 per cent. basis £150,000 per month. Secondly, it removes the burden of a quite indefensible protective duty from the British consumer; and finally, the provisions of the agreement between the two Governments are only to have effect up to April 15th, or for about six weeks. Presumably they are then subject to renewal or revision, and any change which experience suggests can then be made. Then again, the retrospective clause of the agreement invites the obvious criticism that if, during the period in which the German Government has ceased reimbursement, the British importer has succeeded in passing on the levy, in whole or in part, to the consumer, the gold-bond compensation by the German

Government is jam for the importer to which not he but the consumer is entitled. Then there are other critics who ask why the Government does not wipe out the levy altogether, since it has proved itself likely to be more of a nuisance than is warranted by the small expected receipts. The answer here is that the time when the whole question of reparation collection is under review is not a favourable moment for the complete scrapping of any existing machinery. Moreover, it is unlikely that a decision to abandon the principle of the Act would receive the sanction of the House of Commons. In our view the upshot of the whole matter is that, while it is easy to riddle the Government's decision with criticism, it is probably the best thing that could have been done under the present complex circumstances.

Imperial Economic Committee.—At the Imperial Economic Conference last November, Mr Bruce, the Prime Minister of Australia, proposed the formation of an Imperial Economic Committee. This Committee was to comprise representatives of all the Governments taking part in the Conference, and responsible to those Governments. Its function, Mr Bruce suggested, would be to consider and advise upon any commercial or economic matters outside the purview of the Imperial Shipping Committee, which might be referred to it by any of the constituent Governments. This proposal was welcomed by Sir Philip Lloyd-Greame on behalf of the British Government and was eventually adopted, with Canada strongly dissenting. In the House of Commons on Monday Mr J. H. Thomas, the new Secretary for the Colonies, announced that the Government would not support the proposal. In answer to a question he said:—"After careful consideration, His Majesty's Government have come to the conclusion, particularly in view of the fact that the Imperial Conference itself did not reach unanimity on the subject, that a standing Economic Committee with general terms of reference would not really assist co-operation between the Governments. They feel that, in all the circumstances, they cannot support adoption of the recommendation." Supplementary questions elicited two points, that Canadian opposition to the idea strongly influenced the Government decision, and that, in accordance with the Prime Minister's pledge, the matter will be brought before the House of Commons along with the other decisions of the Imperial Economic Conference. The question of this Committee has wider significance than would at first sight appear, for its establishment would have been regarded as a possible forerunner of the establishment of liaison machinery in the political sphere.

The Treasury and the American Debt.—The Chancellor of the Exchequer has been closely questioned this week in the House as to the means by which we are paying the Interest and Sinking Fund on our debt to the United States, whether we were paying, and if so how much, in gold, what effect the payments have upon our trade balance, and other similar conundrums. But he very wisely refused to be drawn. The time may come when a statement can be made in general terms as to the way in which the Treasury is handling this problem, but though, as our readers know, we are in general keen advocates of publicity, this is one of the few cases where it would be very unwise to divulge when and how the British Government has become possessed of the necessary dollar funds. To do so would put the market on its guard, and would make it very difficult for the Treasury to do as it has done up to the present, and to take advantage of favourable market conditions. The Treasury is always able to draw upon the best financial advice in London, and it has been so far successful that, except to those who are in its confidence, it has not been known either in London or New York when the Government obtained the funds with which the instalments hitherto paid have been secured.

A Census of Production at Last.—The *Board of Trade Journal* states that a Census of Production is to be taken by the Board of Trade in 1925 in respect of the year 1924, and the necessary notice has been given through Parliament to all persons and firms who will be required to

furnish information on schedules to be issued later. This Census will cover Great Britain, and it is understood that corresponding steps are being taken by the Government of Northern Ireland for the taking of a similar Census within their area. As in the case of the first Census of 1907, the inquiry will cover not only manufactures, but also agriculture, fishery, mining, and building; but, whereas at that date all undertakings, however small, were included, on this occasion it is under consideration whether only those employing more than five persons (including the employer) will be required to furnish information. This will be the Third Census to be taken. The Second was taken in respect of the year 1912. It is explained that "when the returns were in process of examination and tabulation the European War broke out, and work on them had to be suspended, owing to more urgent requirements. When the war ended it was found impracticable on account of the lapse of time, which made it impossible for employers to amend or complete defective returns, to produce a Report of the same thoroughness and accuracy as the First Report, and consequently the data furnished for the Second Census have not been worked up into a Report. They will still, however, be available for utilisation in making comparisons, at least in some cases, with the information obtained regarding 1924. Another Census fell due in 1917, but could not be taken, owing to war conditions, and in the years immediately following the Armistice the conditions of industry were too abnormal and fluctuating to make a Census desirable. Now, when some progress has been made towards a normal state of trade, when wholesale prices have been relatively stable for a considerable period, and when there are signs of a revival of trade, it is felt that the time has come for a renewal of this periodical review of the facts of industry." The preliminary results of the 1907 Census were not presented until the end of 1909, and it is to be hoped that a similar period will not be allowed to elapse before the 1924 figures are published. In the meantime, why have the 1912 figures not been published?

Bank Amalgamations.—The Chancellor of the Exchequer questioned on Monday as to the policy the Government would adopt towards any proposal for amalgamation between any of the "Big Five" joint-stock banks, replied that "Further amalgamation of the larger banks would not be likely to be viewed with favour." Whether Mr Finney thought any such amalgamation likely or not we do not know. His ground for raising the point—namely, that the concentration of banking into a few hands creates a "virtual monopoly," and that the commercial community complains that the limitation of credit facilities operates to the disadvantage of trade commerce and employment—is a mare's nest. In our view, the movement has operated in precisely the opposite sense. At the same time, the Chancellor's conclusion is sound for two main reasons. On the one hand, it would be a mistake to put too many eggs in a single basket, for the most careful selection cannot ensure for ever that the wisest financial brains shall be found on the boards of one or two private companies; and in the second place, there is a limit to the size to which businesses can grow without involving red tape and an excessively costly administrative control. The following figures of total resources show that the "Big Five" are already large enough to satisfy any reasonable ambition:—

	£
Barclays.....	333,069,700
Lloyds	385,150,200
Midland	420,096,600
National Provincial	253,737,500
Westminster	301,065,000
	1,733,117,000

These resources are of about the same order of magnitude as the paid-up capital, reserves, &c., of the railways (e.g., London Midland and Scottish £509 millions and Great Western £201 millions), which with the banks are the largest joint-stock enterprises in the country.

The Civil War in Mexico.—A correspondent writes:—With the Federal occupation of Tuxpam on Tuesday, following its evacuation on Monday night by the insurgents, the only oil region that is known to have suffered in

the rising is cleared of its disturbers, and the de la Huertists have met with a very serious defeat. The chief officers of the beaten army have left by sea for New Orleans; the rank and file have scattered, and are not likely to rally. Federal troops are moving from two directions on Jalapa, in northern Vera Cruz, an important station on the Inter-oceanic Railway, which should soon be reopened from Vera Cruz to the Federal capital. From the Pacific side the reports are less favourable. The U.S. cruiser "Milwaukee" has gone to Acapulco, to protect American residents, and a number of American mine-owners and officials, after traversing an insurgent region, have reached Mexico City under Federal escort from Guerrero, together with the State Governor. The news given above, which is taken from Thursday's *Times*, points to sporadic disturbance in Guerrero and Morelos, the latter formerly the chief field of peasant revolts. Señor de la Huerta himself was last heard of, we believe, in Yucatan, where he can do little to revive the rising in the rest of Mexico. The *Times* telegram also states that the Mexican Eagle Oil Company has filed claims for damages against the Mexican Government amounting to \$5,000,000. It must be remembered, however, that the company, though British in ownership, is Mexican in domicile, and therefore cannot rely on British support for its claims to the same extent as the American companies can rely on support from Washington.

Cotton Wages Dispute.—Our Manchester correspondent writes:—A relatively small wages dispute in the Lancashire cotton industry may have serious consequences within the next week or two. The trouble has arisen at the Thornham Mill, Royton. Three machines in the cotton room have been worked by two women, who, during the war, replaced one man. An additional machine has been put in, and the trade union made a claim for the payment of 16s 6d per week for attending the new machine. The request was declined on the ground that the amount of cotton dealt with by all the machines had not altered. As a result of further discussions the employers made an offer of 8s 10d per week increase in wages. This proposal was refused by the trade union, and the mill was put on strike on February 12th. Later, the union reduced their claim from 16s 6d to 15s 4d, but the employers could not accept this suggestion. On Tuesday last there was a special mass meeting of the members of the Master Spinners' Federation, when the facts of the situation were reported. It was pointed out if the principle underlying the claim of the union is conceded, all other firms making additions to the machinery in the cotton room will undoubtedly be called upon to increase the wages of the workers without regard to present wages paid, or to any change in the amount of work performed by the operatives. The members of the federation pledged themselves unanimously in the event of work not being resumed at the Thornham Mill within seven days to give support to the firm by posting the usual notices to terminate the contracts of service with the workpeople, and to keep their mills closed until the operatives on strike return to work. On behalf of the Masters' Federation, it was stated that it was still hoped that it may not be necessary to put the resolution into effect, the employers still being anxious to avoid any extension of the dispute. It is expected that further negotiations will now take place, but if there is no agreement it is probable that the lock-out will begin on March 8th. The dispute affects the whole of the 700 spinning mills in Lancashire, and about 180,000 operatives are involved.

Agricultural Prices.—When the agricultural index number for the year 1923 was made up it was found that the general level of prices of farm produce was about the same as in 1916. The percentage increase on the average of the three years 1911-13 was 57 in 1923 and 60 in 1916. Grain, hay, and potatoes last year were lower than in 1916, but milk, dairy produce, eggs, fat sheep, fruit and hops were considerably higher. Farm prices generally reached their lowest level since 1914 in June last. There was then a slight recovery, followed by a relapse in October to the June figure of 51 per cent. above the pre-war level. During the past three months there has been a distinct recovery, and the figure recorded for

January was 61, or a gain of 10 points since October. All grain prices have risen markedly during the current cereal year, wheat by 14 points, barley by 9 points, and oats by 13 points. But the main cause of the rise by 5 points in January of the general index number was the rapid advance of potato prices. During the last two months of 1923 prices in the wholesale markets rose by nearly £2 per ton, while January prices averaged nearly £2 per ton more than those of December. Potatoes are now 129 per cent. above the pre-war level. The *Agricultural Market Report* states that no serious shortage has been felt in the wholesale markets, and suggests that the recent advance in prices was in part due to anticipation of a railway strike. It seems more probable that the dominant factor is the knowledge that the home crop this year was barely equal to the normal demand. Last year there was a large surplus over any possible demand, and the contrast is well marked by the fact that prices a year ago were at the pre-war level. There was a substantial increase in the prices of fat cattle and sheep during January, which was contrary to the usual tendency to fall after the Christmas trade. Fat pigs are cheaper than at this time last year, when they made more than double pre-war prices. They are still 43 per cent. above the average of 1911-13, and notwithstanding the general extension of pig-keeping, it still represents, with careful management and modern methods, a paying proposition. All feeding stuffs except American maize and maize meal were cheaper in 1923 than in 1922. Feeding barley and oats, which in 1920 were 200 per cent. dearer than before the war, were last year 15 and 35 per cent. respectively above the pre-war average. Wheat offals were from 23 to 35 per cent., and feeding cakes from 35 to 42 per cent. above the average of 1911-13. Somewhat curiously, brewers' grains showed the greatest fall on the year, the price dropping by 22 points. All descriptions of fertilisers fell very markedly in price. High quality basic slag, which was 95 per cent. above the pre-war price in 1922, was 40 per cent. above in 1923. Sulphate of ammonia was practically at the pre-war level, and nitrate of soda and superphosphate were 28 and 30 per cent. respectively above the average of 1911-13. Kainit, indeed, on the year's price, was 20 per cent. below the pre-war average, although there was a rise at the end of the year, which closed with prices 15 per cent. higher than before the war. Inferences from index numbers have to be made with care, but, looking at both sides of the account, it appears fairly certain that the materials which farmers use have fallen in price in a somewhat greater degree than the products which they sell. It may be added that the labour bill—which looms so large in agricultural discussion—cannot be reckoned at more than 40, or at most 50, per cent. above the pre-war level, and in some districts even less if the number of men employed, as well as the wages per man, are taken into account.

Chamber of Shipping Report.—Coinciding with the settlement of the Dock Strike, the issue last week of the annual report of the Chamber of Shipping occasions more than the usual interest. The report contains an instructive summary of the varied activities of the Chamber in respect to what may be termed the political side of shipping during the past year, particularly with reference to international recognition of the policy of free ports and the withdrawal of flag discrimination. An account is also given of the efforts made by the Chamber to reach a settlement on the vexed question of the double taxation by different countries of shipping profits, while the industry's blessing is conveyed in somewhat guarded terms to anticipated legislation ratifying the Hague Rules. The economic position of the industry is rather cursorily presented in the report, and the address of the newly-elected president of the Chamber last Friday formed a valuable commentary on present tendencies. The report states that in 1923 "international ocean-borne trade, as a whole, has been transported not only without profit to the shipowner, but at a heavy loss." In modification of this sweeping assertion, which seems to savour a little of propaganda, the introduction of which into a report of this nature is to be deplored, Sir Alan Anderson ventured the opinion that while 1923 was still a year of depression, the position of shipping was improving. The year had wit-

nessed no important depreciation of assets, foreign trade was expanding, and the British Mercantile Marine as a whole had weathered the storm with extraordinarily few casualties. Sir Alan appeared to share the view which has recently been expressed in this paper that the effective surplus of tonnage is much smaller than commonly supposed, while the relative physical condition of the British Merchant Fleet compared with foreign owned ships is not unsatisfactory. On the other hand, the competition of Continental shipping, whose labour costs are temporarily below the British level, and whose fixed charges have through currency inflation been greatly lightened, is a matter of some concern. The President strongly deprecated the artificial stimulation of shipbuilding by Government credits, and expressed the opinion that non-economic building might result in the withholding of commercial orders by managements who felt that calculations as to the course of values might be falsified by Government activity. The President's address was followed by an interesting speech from Sir Frederick Lewes, who dealt with the investigation (not yet concluded) of existing port facilities by a special committee of the Chamber, and urged that no better object for Government plans of work, designed to absorb unemployment, could be found than in schemes to improve and increase port equipment. The issue of the Dock Strike resulting, as it has done, in a settlement inevitably increasing labour charges per ton handled, seems to lend additional point to the view that no opportunity of improving the technical and mechanical equipment of our ports should be neglected. The publication of the Chamber's report on present facilities will be awaited with interest. It is to be hoped that in addition to examining mechanical facilities the committee has also considered whether something cannot be done in the nature of more scientific "costing" in the docks. It seems by no means clear, judging from the statements at the Dockers' Court of Inquiry last week, that there exists at present any adequate costing system through which waste and overlapping in ports as a whole should be detected.

London's Electricity Supply Companies.—For the prices of London electricity supply shares to have weakened, if anything, after publication of a batch of dividends which is extraordinarily good, would seem to call for a more adequate explanation than that of the ordinary reaction which so often takes place in a Stock Exchange market upon previous hopes being realised. The reaction in the electricity market has been a mere trifle, but the dividends declared for 1923 by London companies are so good, in most cases, as to render even this slight decline a matter for surprise. It may be recalled that expectation two or three months ago looked for little better than a repetition of the excellent results secured by the London undertakings in 1922, when substantial increases in dividends were made over the payments in the preceding 12 months. For 1923, however, there are further improvements. The Metropolitan dividend is increased by 1½ per cent., St James's and Pall Mall and Westminster both 3 per cent., South Metropolitan and County of London by 5 per cent., Chelsea and Kensington both 2 per cent., South London 4 per cent. At the current quotations of the shares, allowing for inclusion of the dividends, the returns on the money employed in the 12 leading London concerns range from 5 per cent., free of tax, on Brompton and Kensington ordinary, to £7 16s 6d per cent. on South Metropolitan ordinary. The average works out to about 6½ per cent. over the whole group, which may be regarded as a reasonably good return, though not perhaps sufficiently striking to encourage new investors to come in and take the shares at to-day's levels. The industry stands on the verge of extremely interesting developments, to understand which with any degree of fullness it will be necessary to refer to particulars of the London Electricity Bills set out fully in the *Economist* of February 2nd, page 194. The companies look forward to being permitted to extend their tenure of existence for 40 years, from 1931, upon the terms set out in one of the Bills, which, briefly, provides that if the Bill is passed, in 1971 the companies shall become the property of the Joint Electricity Authority free of cost to the latter, the value of the valuable assets being liquidated by a sinking fund by or

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000

Paid Up Capital ... 1,050,000

Reserve Fund and Undivided Profits 1,352,105

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

before 1971. Provision is made for a sliding scale to regulate the profits of the London companies, and to secure reduction in rates to customers. This provision is held in some quarters to be a warning to such optimism as might look for continual expansion in dividends. All the 12 companies mentioned pay dividends ranging from 10 per cent. up to 17½ per cent., five giving their shareholders the comfortable rate of 15 per cent. People who are aware of the way in which gas profits were regulated by the sliding scale, are beginning to ask whether the electricity supply companies can maintain these extremely good returns, and there can be no doubt that the announcement of the dividends has been followed by a little profit-taking by those who, being able to secure excellent prices, consider they will accept their profit and leave whatever may be over for the benefit of the next man. The amount of opposition which has arisen to some of the companies' bills now before Parliament is somewhat remarkable, and that all-round reductions in prices will have to be made is already obvious; some of the companies, indeed, having already reduced their charges since the beginning of this year. It is possible that if the 40 years extra tenure of life is conceded by Parliament, this would mean the entry of electrical power development on a stage more appropriately spacious than that which has hitherto confined the energies of the companies. Free to work out their own salvation, the companies would be able to expand in a manner which the importance of London obviously demands, but whether the companies could do this and maintain, at the same time, the extremely generous dividends which they are now distributing is a question that the future will have to solve. The companies, the shareholders, and the directors can be congratulated upon the results achieved for 1923, which have come about largely through the fact of expenditure on coal, wages, material, and other necessities having fallen to a much greater extent than the cost of the current has been reduced to consumers. Given new powers and a fresh lease of life, the London electrical industry will demand millions of new money, which makes another factor worthy of consideration by those who are attracted by the industry's prospects, and by the liberal dividends that are now in course of distribution.

Mortgages on Scuttled Steamers.—Although the recent epidemic of scuttling which broke out among Greek steamers seems to have worked itself out, our courts of law are still busy tidying up the legal consequences. On Monday of this week the House of Lords delivered an important judgment in the case of the *Grigorios* (P. Samuel and Co., Limited, v. Dumas). The action was brought by a firm of insurance brokers on behalf of the Greek shipowner and a mortgagee upon a marine insurance policy. Mr Justice Bailhache held that the steamer had been scuttled by the master and engineers and some of the crew, with the connivance of the shipowner. So clearly the shipowner could not recover upon the policy. The learned judge held, however, that the mortgagee, as he took directly from the insurers and not indirectly through the shipowner by assignment of the policy, was entitled to judgment. The shipowner did not appeal, but the underwriters went to the Court of Appeal and succeeded in reversing the judgment given against them in favour of the innocent mortgagee. The House of Lords has now upheld the Court of Appeal on a variety of grounds, only

one of which need be mentioned here, and the innocent mortgagee sustains a heavy loss, to say nothing of costs. The ground for the decision which will give most concern to lenders of money secured on shipping is this: that when a ship has been willfully scuttled by the owner the loss is not due to a peril which is covered by the ordinary marine insurance policy. The proximate cause of the loss, the *causa causans*, is not the inrush of the water deliberately let into the ship, but the act of scuttling itself, which when occurring by the owner's direction is not one of the perils insured against. The effect of the decision, therefore, seems to be that a mortgagee of a ship who directly insures the ship upon the ordinary marine policy cannot recover upon it when she is scuttled by the direction or with the connivance of the owner. This has always been the case where the mortgagee took a policy by way of assignment from the owner as further security, but it has hitherto been thought that the case was otherwise when the mortgagee had himself independently insured the ship. That view is now shown to be wrong. The moral is that banks and others who lend money on the security of ships must, unless they have absolute confidence in the integrity of the owners, expressly insure against the risk of scuttling by the shipowner's direction, or with his connivance. In times of rapid declines in value the temptation to scuttle is apt to prove in certain quarters too great to be resisted by a desperate man. Another important point was involved. There was a warranty against over-insurance of freight which had been broken. This by itself was sufficient to bar a claim on the policy unless waived. Their lordships differed as to whether, in fact, there had been a waiver by the underwriters of the breach of warranty. The majority view, stated by Lord Cave, was that the respondent underwriter must be assumed to have been aware that the assured was prevented by the terms of the policy on the vessel from taking out policies on the freight in excess of a certain sum. Notwithstanding this he joined in the issue of policies for double that amount, and took his share of the premiums on those policies. "I can conceive no conduct," said his lordship, "more inconsistent with an intention on his part to enforce the restriction." He therefore held that the respondent and the other underwriters who took that course were precluded by waiver or acquiescence from treating the marine policy on the vessel as void for breach of the warranty. Although, on the main point of scuttling, the decision finally went in favour of the underwriters, the judicial observations on acquiescence in over-insurance were not, from the underwriters' standpoint, equally satisfactory.

Swiss Railways and Electrification.—A Geneva correspondent writes:—The provisional accounts of the Swiss Federal Railways for 1923 show a great improvement on the previous year, and the Administration Board hopes that the long series of deficits is now closed. From 1914 to 1922, the aggregate deficits reached a total of £12,688,976, which was reduced to £8,430,285 at the end of 1922. Last year's receipts amounted to £14,617,501, as against £13,328,618 in 1922; owing to the reduction of salaries and of the number of officials, and to the decrease in the price of coal, expenses reached £10,075,224, compared with £12,251,492 during the previous year. The 1923 surplus is, therefore, of £4,542,377, as against a deficit of £1,820,547 in 1922. Owing to the increase in the number of foreign visitors during the last winter and summer seasons, the railways transported 86,883,670 persons in 1923, compared with 81,032,550 in 1922; goods traffic has also been on the increase, the number of tons carried in 1923 being of 14,652,370, as against 13,245,115 during the previous year. Last year's profit is exclusive of interest on loans and of subsidies to several funds so that, after all, this profit will be nearly entirely swallowed and the Federal Railways are about to issue, towards the second half of February, a loan of £6,000,000 which will enable them to replace debt and to have the necessary cash money for current expenditure. The high deficits of the past nine years are a consequence of the war: they are due to the rise in the price of coal, of raw material and rolling stock, to the increase in salaries, to the drop in passen-

gers' and goods' traffic, and to the expenses for electrification. The electrification scheme of the Swiss Federal Railways was to have been started in 1914, but owing to the war it was delayed until 1918. Electrification was begun under difficult circumstances resulting from the scarcity and high price of metals, as well as from the high cost of labour. It has been estimated that nearly £2,000,000 might have been saved if electrification had been begun two or three years before the beginning of the war. Up to the end of 1922, £8,800,000 had been spent on the electrification, out of which £3,560,000 was for rolling stock; the electrification scheme was to be completed in 1930, but in September last the Swiss Parliament accepted a proposal to effect an acceleration of the work so as to complete the scheme by the end of 1925. £2,600,000 were to be expended in 1923 (£760,000 on rolling stock) and £2,800,000 (out of which £1,000,000 on rolling stock) will be spent up to the end of 1925. The total scheme which provides for the electrification of nearly 510 miles will cost £17,760,000, which have been obtained partly by means of Government subsidies but for the greater part by means of loans. Electrically-driven trains are now running on the Saint Gothard line from Chiasso (Italian frontier) to Lucerne and Zurich, a stretch of 151 miles which, in spite of steep gradients, the fastest train covers in 4 hours 37 minutes, while it took 5 hours 19 minutes to make the same journey when steam engines were used. The Lucerne-Olten line (35 miles) was opened on February 20th, the Arth Goldau-Zoug (10 miles), Immensee-Rothkreuz (5 miles), Berne-Thun (19 miles) have been electrified since last year as well as the Simplon line from Isella (Italian frontier) to Sion (36 miles). Work is steadily progressing on the Sion-Lausanne (57 miles) and the Olten-Basele (26½ miles), sections which will be probably opened before next summer. Two other sections, Thalwil-Richterswil (10 miles) and Lausanne-Yverdon (24 miles) will also be completed in a few months, and work will begin this year on the Zurich-Berne (81 miles) and Renens-Geneva (35 miles) lines which should be electrified in the course of 1925. The electric engines which are giving excellent results are built by "Brown, Boveri and Co." at Baden (Canton Aargau) and by the "Sécheron" works at Geneva. Contracts for the construction of 104 engines are to be placed this year so that, at the end of 1924, the Federal Railways will be in possession of 174 electric engines and 983 steam engines, as against 124 and 1,063 respectively in 1923. The completion of this scheme will not put an end to the electrification of the Swiss Railways, but some time will elapse before another extensive scheme is started as the financial means of the country are not unlimited. On the other hand, it will be necessary to harness more mountain rivers and to create new artificial lakes in the Alps in order to get the necessary electrical power, and the investigations of this subject are not terminated.

Blast Furnaces in Holland.—An Amsterdam correspondent writes:—In its number of January 31st the official journal of the Dutch Chambers of Commerce and Industry publishes information concerning the new blast furnaces of Holland. The following, supplemented by figures taken from other sources, is based on this article. The appearance of Holland in the world records of iron and steel production reopens a chapter in the economic history of that country which was closed just 40 years ago, for it was in 1884 that the last blast furnace extinguished its fires. The establishment at Velsen of the Royal Dutch Blast Furnaces and Steel Factories, which were started at the beginning of the present year, finds its chief justification in the great increase in the metal industry of the country. (The import of pig-iron amounted in 1922 to 32,599, and in 1923 to 42,759 tons.) The year 1917 saw the drawing up of the plans for the new enterprise. The scheme was further stimulated by the participation of the State in the share capital (fixed at 30 million florins) to the extent of 7½ million florins, while the municipality of Amsterdam, as a much-interested party, took up shares to the amount of 5 million florins. Agreements were then concluded with the Phoenix Bergbau A.S. of Düsseldorf, from which the Dutch blast furnaces had in 1920 taken

over Phoenix shares to the value of 30 million marks, paying for them 6 million florins; and also with the Société Anonyme Carrières de Namèche, and a Dutch steel factory. The total amount of the shares taken over was stated in the last balance-sheet to be 9,315,629 florins. The object of the Dutch blast furnace concern is to provide at least for the requirements of the home industry. Before the war the consumption of pig-iron in Holland was estimated at 70,000 tons per annum; it may now be put at about 50,000 tons. Each of the two Velsen furnaces has an output of 250 tons of pig-iron per day, so that the annual output, when in full working order, should be 150,000 tons. This will leave a surplus of about 100,000 tons per annum for export purposes. The moment chosen for the installation of the new blast furnaces can scarcely be called a favourable one. A survey of the iron and steel production of the world would certainly give the contrary impression, for it would seem to suggest that the production of pig-iron in 1923 has not overcome the slump of 1921 so rapidly as has been the case with steel products, and it is precisely pig-iron, with a comparatively small percentage of phosphorus, that the Velsen concern is primarily designed to supply. The greater part of the Velsen output must find a sale outside Holland. Keen competition is expected, both from the home and foreign markets, and especially from the French and German concerns. Nevertheless, markets have already been secured in Belgium, Italy, Switzerland, Scandinavia, and America (California). This fact affords satisfactory proof that the Netherlands Blast Furnace Works may look forward to a place in the world market.

Underground Electric.—The report for 1923 of the Underground Electric Railways Company of London, Limited, which is purely a holding concern, shows a decrease of £41,600 in income from investments, but with a reduction of over £13,000 in expenditure, net receipts are only £28,300 lower at £734,700. Moreover, the report explains that the reduced income from investments is attributable to the sale of certain debenture and preference stocks, out of the proceeds of which the 6 per cent. Three-year Secured Notes have been paid off. The following table shows the company's financial results since 1919:—

	1919.	1920.	1921.	1922.	1923.
Revenue from—					
London Electric Railway	196,932	154,118	344,578	410,854	376,560
District Railway	61,950	47,250	94,465	130,095	139,003

	(4 %)	(2 %)	(4 %)	(5 %)	(6 %)

Ine. or dec. in balance forward

By the terms of the issue of the 4½ per cent. bonds and the 6 per cent. income bonds, the interest is made payable either in London in sterling or in New York and Amsterdam at par of exchange. Thanks to the decline in these exchanges, the "loss in exchange" is over £16,000 greater, at £40,600, than it was in 1922. The income bonds receive their full 6 per cent. for the first time since 1916, and the carry forward is substantially increased. The principal changes in the balance-sheet are a reduction on the liabilities side of £300,000 in temporary loans and an increase of £384,000 in the holding of Treasury bills. The proprietors will perhaps be told next week why administration expenses have doubled in five years.

Home Railway Stockholders.—One natural consequence of the grouping of the British railways into four great companies is that the stocks of each of the undertakings are held by a vast army of stockholders. In the report of the London, Midland and Scottish Company the directors, in

announcing that they consider it inadvisable to issue passes to proprietors to attend the meeting, mention that there are a quarter of a million stockholders in the company. This number, we should imagine, almost equals the total staff of the line. At the meeting of the Great Western Company, on Wednesday, Viscount Churchill gave an interesting classification of the stockholders in his company. Out of 52,000 holdings of Great Western ordinary stock 34,534, or 66 per cent., are for amounts of £500 or less. Taking the limit to £1,000, the number is approximately 44,000, or 84 per cent. Taking the ordinary, preference, and guaranteed stocks together, the total number of holdings is 104,000, of which 60 per cent. are for £500 and under, and 79 per cent. for £1,000 and under. These figures do not take into account the considerable holdings by insurance companies, societies, and other institutions. In the absence of the London and North-Eastern report we are obliged to defer our usual examination of the accounts until next week.

Courtaulds Year.—The directors of Courtaulds, Limited, in their report and accounts for the year ended December 31, 1923, state that after carrying the sum of £400,000 to special reserve account for insurance profits amount to £2,916,950. To what extent this is a provision against a possible liability we are not able precisely to determine. Obviously, if this figure were included in profits, the year would have been better than the previous 12 months. Financial results for seven years are summarised below:—

	1917.	1918.	1919.	1920.	1921.	1922.	1923.
Profit	1,173,891	1,184,938	2,280,861	1,804,796	1,684,593	3,018,432	2,916,950
Brought forward	315,894	62,935	148,211	229,078	383,874	418,467	636,899
Debit interest	1,489,785	1,247,873	2,429,072	2,033,874	2,068,467	3,436,859	3,553,849
Ordinary dividend	512,502	650,002	1,200,001	1,450,000	1,350,000	1,800,000	1,800,000
Reserve	911,300	445,660	999,993	200,000	300,000	1,000,000	1,000,000
Carried forward	62,935	148,211	229,078	383,874	418,467	636,899	763,849

* Free of tax.

The report says that the result of the year's working of the textile business may be considered fairly satisfactory, allowing for the fact that the pressure of foreign competition has been more severe than ever. The company's business in artificial silk has increased in volume, though, as foreseen, foreign competition has resulted in a lower margin of profit. In many countries production has grown rapidly, and importations from abroad are now met with on an important scale. There can be little doubt that competition will increase and profits tend towards a lower level. On the other side of the Atlantic similar conditions obtain, but the American company has, of course, the advantage of a tariff. The company has purchased a site at Cornwall, Ontario, and is proceeding to the erection of an artificial silk plant, which is designed to meet the requirements of the Canadian market. Turning to the balance-sheet we find assets total £21,032,673, of which £15,187,252 represent investments. The general reserve is £3,000,000, while a new item, special reserve account for insurance, makes its appearance with £400,000 to its credit. Creditors and special reserves for taxation amount to £3,828,824. The balance-sheet will be found fully analysed on another page.

Harrods Progress.—A slight increase in gross profits and a substantial increase in net profits are the most prominent features about the accounts of Harrods, Limited, for the year ended January 31st last. The following table compares results for the past six years:—

Year Ended Jan. 31st.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
Gross profit ..	£1,204,700	£1,879,201	£2,209,213	£1,623,392	£1,924,290	£1,950,621
Net profit	335,143	552,955	532,503	196,072	479,750	563,502
Brought fwd.	35,102	66,481	208,890	220,768	10,985	13,636
Reserve	370,345	619,436	741,393	416,840	490,735	577,138
Prof. dividend ..	77,514	79,295	39,000	..	..	25,000
Ord. dividend ..	60,000	60,000	142,500	286,233	300,000	300,000
	166,250	261,250	335,125	95,750	153,200	210,650
	(17½ %)	(20 %)	(17½ %)	(5 %)	(8 %)	(11 %)
Carried forward	66,481	218,890	224,768	34,857	37,535	41,488

The gradual improvement recorded above will be welcome by shareholders, especially the allocation to reserve and higher dividend. The directors state that the profits of the Manchester "branch"—Kendal, Milne, and Co.—have been satisfactory, while the associated companies—Dickens and Jones and Swan and Edgar—have made better profits. The reserve account now stands at £694,097. Deposit and current account balances total £956,635. Against this, however, investments and securities amount to £1,806,832, of which over £460,000 is comprised of gilt-edged securities. The balance-sheet will be found fully analysed in our usual column.

Vickers and their Mortgage Debenture Holders.—An informative circular-letter has just been issued by Vickers, Limited, to holders of the 4 per cent. first mortgage debenture stock. It is pointed out that, "Since 1897, when this company's 4 per cent. first mortgage debenture stock was created, the company has issued upwards of £19,000,000 of additional share capital. In 1897 the book value of the company's assets was upwards of £2,500,000 only as against the figure at December 31, 1922, of over £35,000,000, showing an increase of £32,500,000. It will thus be seen that the company's assets and the security for the stock have enormously increased since the debenture stock was issued in 1897." The letter then proceeds to state that, "With a view to facilitating the future finance of the company, and in particular the speedy redemption of the company's 7 per cent. notes, the directors propose to create an entirely new issue of first mortgage debenture stock, and they are calling a meeting of the holders of the existing 4 per cent. first mortgage debenture stock under the provisions of the trust deed securing that debenture stock, to consider, and, if thought fit, pass a resolution whereby the existing 4 per cent. first mortgage debenture stock will be exchanged on April 1st next for new 5 per cent. first mortgage debenture stock, on the basis of £100 of the new stock for each £100 of the existing 4 per cent. stock." Existing first mortgage debenture holders will thus find their securities merged into a larger issue of £6,000,000 first debentures if they give the company the necessary powers, in return for which they will receive an extra 1 per cent. The directors are perfectly correct when they point to the growth of assets, and we think that the offer to first debenture holders is reasonably fair.

Scottish Widows' Fund Valuation.—Five years ago this well-known office carried forward the valuation surplus after making special provision for past and prospective depreciation in securities. The prudence of this policy is shown now. At the valuation just completed for the five years 1919-23, there is an available surplus for distribution to participating policyholders of no less than £2,626,126 on life and annuity funds of £24,247,072. The directors have accordingly declared a bonus at the high rate of 40s per cent. per annum for the five years 1919-23 on sums assured and existing bonuses; this will absorb £2,564,000, leaving £62,126 to be carried forward, in addition to the general reserve fund of £350,000 (not included in the life funds). The rate of intermediate bonuses on claims paid in the course of the five years 1924-28 has been fixed for the present at 35s per cent. per annum compound. The report of the society for the past year shows a net new business of £2,403,079, against £2,110,253 in 1922. The average rate of interest earned was £5 4s 5d gross and £4 7s 11d net, after deducting income-tax. The death rate was very low, the claims paid working out at 64 per cent. of the amount allowed for by the valuation tables. The expenses and commissions, which in 1920 had risen to 13.5 per cent. of the premium income, have been pulled back to 11.9 per cent. Both the report for 1923 and the valuation report for 1919-23 are excellent, and indicate the vitality of a mutual society which dates back to Waterloo Year, 1815.

Standard Life Office Valuation.—The investigation into the liabilities of this office as at November 15th last was made at 2½ per cent. interest, instead of 3 per cent. as formerly adopted. The assets were revalued, and the total book

value, after allowance for possible losses and depreciation, was found to be less than the market value on November 15th. The total surplus was £711,321, of which the directors have decided to divide £572,925, and to carry forward £138,396. The amount allotted to policyholders permits the declaration for the three years November 15, 1920, to November 15, 1923, of a reversionary bonus on all ordinary participating policies at the rate of 35s per cent. per annum. Intermediate bonuses in respect of claims on or before November 15, 1926, will be at the same rate.

Bourse Charges in Germany.—Now that comparatively stable monetary conditions prevail in Germany, many charges which were scarcely noticeable during the days of rapid inflation are coming to be felt extremely burdensome. An example of this is provided by the growing resentment at the high scale of the various charges and commissions incidental to share transactions, which by many is held to be a factor in the present stagnation on the Bourses. The *Frankfurter Zeitung* for the 23rd of last month publishes a table showing that these charges are now more than three times as high as those prevailing elsewhere, being 5½ per mille in Germany, as compared with 4½-6 per mille in Holland, 15½ per mille in London, 2-4 per mille in New York, 12-16½ per mille in Vienna, 14-16½ per mille in Budapest, 3 per mille in Prague, and 4-10 per mille in Agram. Of this figure 3.3 per cent. is Government stamp duty, 2 per cent. brokers' commission, and ½ per cent. "courtage." The *Zeitung* concludes that on both fiscal and business grounds a reduction is desirable. It is high time, says the paper, that the maxim "smaller charges, greater turnover" returned to honour.

United Fruit Company.—Continued and increased prosperity, writes a correspondent, has attended the operations of the United Fruit Company (which next month, March, will reach the twenty-fifth year of its existence), in connection with the vast and varied enterprises engaged in, including shipping, fruit-growing, and merchandising operations throughout the countries of the Caribbean. British capital is interested not only in the bonds of this corporation, but in connection with its shipping representatives in this country, Messrs Elder and Fyffes, Limited. The financial position of the corporation shows that operating profits, after a depreciation charge of \$6,000,000 has been allowed for, exceeded last year \$23,000,000, compared with \$18,851,000 in 1922, a period ranking as the second best in the company's history. The best twelve months' trading experienced, however, was in 1920, when the total net receipts amounted to \$44,615,274, and profits, after all charges had been deducted, to \$29,000,000. The substantial banana crop now coming to market is handsomely swelling the company's receipts. It is expected that the current Central American banana season will witness the handling of 38,000,000 stems of fruit, compared with 35,000,000 in 1923, and 34,000,000 in 1922. The widely-extended cultivation of the tree undertaken by the United Fruit Company in Honduras is, however, threatened by political disturbances in that country. But for that fact production from that field might easily have exceeded that of Jamaica, which, last year, contributed over 10,000,000 stems. The prosperous financial conditions of the company have enabled an increase to be made in dividend from \$8 to \$10 per share, and this may now be regarded as the lowest future rate of distribution. The average balance per share for the last four years has been \$21.98, while since its inception the company has paid dividends exceeding a sum of \$149,000,000. Strengthening of the financial position and earning power of the undertaking have been consistently aimed at. The cash holding at the end of last year reached \$21,775,000, apart from governmental and other securities, which brought up the equivalent total to \$31,376,000. Within a seven-year period the total assets of the company have been almost doubled, now standing in the books at \$182,815,000, against \$98,025,000 in 1916.

Sugar Beet and Potato Crops.—According to information supplied by the International Institute of Agriculture, the production of sugar-beet in 1923, as far as can be ascer-

tained from available returns, showed slight variation from the previous year's figure, the total for the Northern Hemisphere being 36.6 million metric tons in each case. The following table shows the yield in some of the most important producing countries:—

Countries.	1922.	1923.	Percentage. 1922 = 100.
Belgium.....	1,695.4	1,808.5	106.7
Czechoslovakia.....	5,240.1	5,159.1	98.5
Denmark.....	572.4	820.0	143.3
France.....	3,289.4	3,222.4	98.0
Germany.....	10,791.6	8,510.4	78.9
Hungary.....	711.1	881.5	124.0
Italy.....	2,255.7	2,750.0	121.9
Netherlands.....	1,818.0	1,713.8	94.3
Poland.....	2,671.4	2,574.6	96.4
Serb. Croat. Slov. State.....	312.7	300.0	95.9
Spain.....	1,473.6	1,220.0	82.8
Sweden.....	456.5	995.0	218.0
United States.....	4,701.9	6,048.2	128.6
Total (inc. other countries).....	36,583.1	36,569.7	100.0

The percentage figures are calculated on the basis of the original data, of which the table here given is a summary. The United States increased her output by nearly 30 per cent. last year, and is now second only to Germany, whose production fell off very considerably last year. Czechoslovakia now takes third place. The potato yield in the Northern Hemisphere fell off considerably last year. The crops of 1922, however, were usually good. The respective yields are compared in the table which follows:—

Countries.	1922.	1923.	Percentage. 1922 = 100.
England and Wales.....	4,076.4	2,800.2	68.7
Scotland.....	1,210.1	833.2	68.8
Northern Ireland.....	1,271.8	900.0	70.8
Austria.....	1,398.3	1,289.6	92.2
Belgium.....	3,931.4	2,418.2	61.5
Czechoslovakia.....	9,069.2	6,288.6	69.3
Denmark.....	1,340.3	1,240.0	92.5
France.....	12,646.1	9,534.1	75.4
Germany.....	40,665.4	31,469.8	77.4
Hungary.....	1,319.7	1,715.8	130.0
Italy.....	1,461.2	1,793.0	122.7
Lithuania.....	1,848.0	1,408.8	76.2
Netherlands.....	3,718.3	2,351.8	63.3
Poland.....	33,219.0	26,494.2	79.8
Spain.....	2,955.5	2,599.0	87.9
Sweden.....	2,035.4	1,667.0	81.9
Canada.....	2,712.7	2,383.8	87.9
United States.....	12,279.4	11,223.7	91.4
Total (including other countries).....	141,729.1	112,945.9	79.7

Returns of the 1923 crop in the Irish Free State are not yet available. British production declined by about 30 per cent., and French and German by about 25 per cent. in each case. In Australia and Italy, on the other hand, an appreciable increase was recorded.

The Administrator of Austrian Property announces that under the Treaty of Peace (Austria) Orders, 1920-23, a third dividend of 2s 8d in the £ will be paid to all creditors who are entitled to participate. The first distribution of the dividend will be made on February 29, 1924. An individual notice will be sent to each creditor as and when he becomes entitled to participate.

The Institute of Bankers announces that on Monday next, at 5.30 p.m., Mr Oscar Rydbeck (of the Skandinaviska Kreditaktiebolaget) will deliver an address in the theatre of the School of Oriental Studies, Finsbury circus, E.C., on "A Swedish Banker's Experiences with regard to Inflation and Deflation." The chair will be taken by Mr Walter Leaf. A limited number of visitors' tickets is available on application to the secretary of the Institute of Bankers, 5 Bishopsgate, E.C.

A PUBLIC meeting in connection with the annual meeting of the Sound Currency Association will be held at the Mansion House, E.C. (by courtesy of the Lord Mayor), on Wednesday, March 12th, at 2.30 p.m. The Right Hon. the Earl Beauchamp, K.G., President of the Association, will preside, and will be supported by Sir Hugh Bell, Mr C. Birch Crisp, Mr Laurence Currie, Sir D. Drummond Fraser, Sir George Paish, Sir D. M. Stevenson, Mr D. M. Mason (chairman of the executive committee), and others.

UNITED STATES.—JAPANESE LOAN—UNFILLED STEEL ORDERS—COTTON CONSUMPTION—AGRICULTURAL FINANCE CORPORATION.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 15.

PREDICTIONS that this week's offering in the American market of \$150,000,000 Japanese Government 30-year 6½ per cent. bonds would be quickly absorbed were fully realised. Advance applications were so numerous and in many cases for such large blocks that to-day's opening of the subscription books was little more than a formality. Indications are that the issue was over-subscribed to a considerable extent. The bonds were offered at 92½, and interest to yield 7.10 per cent. It is expected that most of the proceeds from the American-Japanese loan, available for reconstruction needs, will be spent in the United States, thus providing an added stimulus to trade and industry in various lines.

Although weekly trade reports have told of steady expansion in the steel industry since the first of the year, the United States Steel Corporation's statement of unfilled orders on its books at the close of January shows that the improvement last month was greater than had generally been realised. On January 31st, the corporation's unfilled business aggregated 4,798,429 tons, the largest total reported since the end of September, and representing an increase of 353,090 tons during January. The gain last month is attributed partly to the booking of orders for tin plate and other products contracted for late last year, but not specified against at that time. Such contracts are not included in the corporation's unfilled tonnage report until specifications are actually received. Those contracts probably accounted for about 150,000 tons of the January increase, so that actual new business approximated 200,000. At the close of January the Steel Corporation's plants were operating at about 90 per cent. of capacity, as against 55 per cent. late in December. The January exhibit shows that the month's orders slightly exceeded capacity business. Thus far in February incoming business is said to have been at least 15 per cent. above capacity.

The Census Bureau's report on cotton consumption in the United States during January has caused much surprise. The total consumption last month is given as 576,644 bales, representing an increase of 24 per cent. over December, but a decrease of only 5.5 per cent. from January a year ago, which witnessed the third largest consumption ever recorded. Despite the gain in consumption over December, the number of spindles active during January, namely, 33,296,513, is the smallest since September, 1922, and compares with 34,044,870 in December and 35,240,853 in January of last year. In view of the extensive curtailment of production by cotton goods mills last month, many authorities are puzzled by the Census Bureau's report of such a large increase in January consumption, which exceeded the highest forecasts, while in the same month the number of active spindles decreased sharply. In some quarters it is believed that the Bureau's figures represent total "takings" of cotton by mills, rather than the amount of cotton actually consumed, the view

being expressed that mills may have increased their supplies of the staple in preparation for a larger production later on. The Silk Association of America issues similar monthly statistics, showing stocks of raw silk in warehouses in New York and vicinity and the amounts delivered from such warehouses to silk goods manufacturers; but the association has repeatedly pointed out that those deliveries do not necessarily mean that the silk has gone into consumption. Possibly the Census Bureau's figures on cotton, likewise, do not mean actual "consumption." Exports of cotton for January were 546,253 bales, representing a loss of 35 per cent. from December, but a gain of 15 per cent. over those of January, 1923 and 1922. Stocks of cotton in manufacturing establishments and warehouses on January 31st, amounting to 4,599,798 bales, compare with 5,149,617 on December 31, 1923, and 5,469,804 at the end of January a year ago. January's exports of merchandise had a total value of \$394,000,000, while imports were valued at \$299,000,000. Exports showed a decrease of 7.5 per cent. from those of December, but were 17 per cent. greater in value than in January a year ago. Imports, on the other hand, showed a gain of 4 per cent. over December, but a decrease of 10 per cent. from January, 1923. The export surplus, it will be seen, did not fall off much in January of this year. Although the excess of exports, amounting to \$95,000,000, was smaller than the \$138,000,000 surplus of December and the \$127,000,000 of September, it compares with only \$5,500,000 in January of last year and with \$61,000,000, approximately, in January of 1922. The large shipments of cotton at prices much higher than a year ago account for a substantial part of the increased value of exports last month.

Representative banking, industrial, and railway interests from various sections of the country held a meeting in Chicago this week, at which plans were completed for organising the new Agricultural Finance Corporation, which has been formed at the request of the Administration to relieve the serious credit situation in north-western agricultural States. Total subscriptions, it was announced, exceeded the \$10,000,000 capital required by the corporation. Of that amount one-half was provided by banking interests and large industrial and railway corporations whose headquarters are located in New York; the other half of the capital was furnished by similar interest in Chicago, Minneapolis, Cleveland, Detroit, and Pittsburgh. Bankers and corporations in Boston, Philadelphia, and other centres offered to subscribe liberally, but their contributions were not required. According to leading bankers, the corporation will be able to start functioning in about a fortnight. Since it is empowered to borrow from the War Finance Corporation in amounts up to ten times its capital, a maximum sum of \$100,000,000 will be made available shortly to relieve the situation in the North-west.

FINANCE.—POLITICS.—RECONSTRUCTION.—OIL SHARE PURCHASES.—RAILWAY DEFICITS.—BANK OF FRANCE.

(FROM OUR CORRESPONDENT.)

PARIS, February 27.

M. POINCARÉ, by his sheer personal authority, and by treating no fewer than 11 votes as votes of confidence in the Government, has succeeded in forcing his new financial proposals through the Chamber, while he has been equally successful with the electoral reform proposals in the Senate. For the moment, therefore, the opposition has been cowed, and there is no longer any talk of who is to succeed the present Cabinet. The financial proposals, it is true, have yet to pass the Upper House, but now that the other two obstacles have been safely crossed, there is a widespread feeling that the Premier will be able to achieve similar success with the third, and that he will be able to face the electors with much more prospect of victory than was believed possible a week ago.

To-morrow the Chamber will again have before it the Budget of Recoverable Expenditure for 1924, in the form of a demand for the vote of a third *douzième provisoire*, to meet proposed expenditure on German account during the month of March. This, it is expected, will bring up the whole question of whether there is a probability—as

has been persistently reported—that the Government will be unable, owing to the present financial position, to carry out, for want of available resources, the programme already laid down for continuing the work of restoring the devastated area. The facts may be put in a nutshell. The programme for the year would involve an expenditure of 4,000 millions. As matters stand, only one-quarter of this sum is available. The question has arisen whether the best course will not be to cut down the work planned for the current year by, say, 25 per cent.; in other words, to slow down the rate of progress, rather than to suspend reconstruction work entirely. Even this reduction, however, would still leave a deficit of 2,000 millions to be provided from some source or other. The suggestion has been made that this sum might be raised by a lottery pure and simple, under the auspices of the Credit National, and it is asserted to-night that this project was seriously considered at to-day's sitting of the Ministerial Council.

The deficit is due to the fact that, in pursuance of the policy of curtailing expenditure, Parliament has this year reduced from 3,500 millions to 2,000 millions the National Defence Bonds which the Finance Minister is authorised to issue during 1924 for direct payments to *sinistrés*, while the Crédit National has been authorised to issue only 5,000 millions of bonds and obligations this year, in place of the 8,000 millions issued last year. The amount which the Finance Minister is authorised this year to pay in annuities, further, has been reduced from 1,750 millions to 1,000. In face of the situation that has arisen, contractors and architects interested in restoration work have passed resolutions calling on the members of their associations to refrain from undertaking new contracts until the work already done has been paid for in full. The approximate financial situation of the restoration problem may be summed up in the fact that although three-quarters of the actual reconstruction work is reported to have been accomplished, the Finance Minister stated recently that only 41 milliards, out of the 85 milliards which is estimated to be the total of the indemnities to be paid, had been paid down to the end of 1922, leaving a further 44 milliards, or well over 50 per cent. of the total, to be paid during the immediate future.

One of the most remarkable instances of the failure of the various departments of the Treasury to co-operate in carrying out the existing law has been revealed in connection with the outcry that has recently been raised over the flight of French capital abroad in consequence of the enormous purchases of Royal Dutch, Shell, and Mexican Eagle shares which are known to have been made in this country since the war ended. These purchases, which are estimated at hundreds of millions of francs, are at present the subject of judicial proceedings against certain English and other bankers, who are accused of having illicitly introduced the shares of the companies mentioned into France, in contravention of the law of April 3, 1918, prohibiting the export of capital from the country, and with remitting abroad something like half a million sterling in payment for them. The controversy has revealed that, although the shares could not be legally brought into this country in the ordinary course of business, the Treasury Department responsible for affixing the stamps to them, for the purpose of giving them legal currency here, had received no instructions to refuse continuing stamping such instruments or to report their existence to the judicial department of the Treasury whose duty it would be to prevent them from being dealt in. As a result of this lack of co-operation, some hundreds of thousands of these shares were handed in and stamped for sale in this country without the slightest question being raised. The Treasury has now acted on the proposal made two years ago, and issued orders that if future no securities of foreign origin of any description are to be stamped for legalisation in this country without written authorisation by the Comité de Contrôle de l'Exportation des Capitaux.

In response to urgent appeals that have been made to it by the various French railway companies and by the State Railway Department, the National Conseil Supérieure des Chemins de Fer has decided to recommend (by 57 votes against three) increases of 50 per cent. in all first-class railway fares, of 48 per cent. in second-class, and of 47 per cent. in third-class, and an increase of 12½ per cent. on all goods rates. The recommendations have been approved by the Minister of Public Works, and

will come into force almost immediately. The various companies, as a matter of fact, are still faced with enormous annual deficits on their working, and it is hoped that the new scales of rates will enable them to balance revenue and expenditure within about six years. The net result of the working of the different systems during the past three years will be seen from the following table, which shows (in millions of francs) the deficit registered by each:—

System.	1921.	1922.	1923.*
State	642 ..	383 ..	460
Alsace-Lorraine	78 ..	..	50
Nord	247 ..	119 ..	188
Est	159 ..	7 ..	55
P.L.M.	407 ..	244 ..	180
Paris-Orleans	369 ..	237 ..	215
Midi	186 ..	156 ..	140
		1,146	
Less cr. bal. Alsace-Lorraine ..		32	
	2,088 ..	1,114 ..	1,288

* The figures for 1923 must be regarded as merely provisional, as the accounts have not been definitely completed later than March.

In view of the statement often made in the course of discussion that the occupation of the Ruhr has resulted in a direct financial loss to this country, the Minister of Finance has endeavoured, during the recent financial debates in the Chamber, to prove that this widespread belief is unfounded. He insists that, so far from showing a loss, the operation during 1923 resulted in a balance-sheet showing total revenue amounting to 1,010,000,000 f against total expenditure on all accounts amounting to 863,000,000 f, or a credit balance of 147,000,000 f. The detailed figures are as follows:—

EXPENDITURE.		REVENUE.	
Cost of Army of Occupation on Rhine	493	Paper marks and other requisitions	149
Supplementary cost for occupation of Ruhr	171	Sale of coal	259
Cost of Civil Services	20	Deliveries in kind	189
Franco-Belgian Régie	82	Five-sixths of receipts from Customs, permits, forests, M.I.C.U.M., &c.	385
Coal Office expenses	17	Sundry receipts	28
Sundries	147		
Credit balance	147		
Total	1,010	Total	1,010

These figures, the Minister claims, show only amounts actually expended and sums actually received in cash. If to this be added a further sum of 359 million frs. represented by bills in the hands of the Treasury, and stocks of merchandise in course of liquidation, he shows that the credit balance will be increased to 506 million frs. as the profit on the operation down to December 31st. Figures which are now available in regard to the operations of the Bank of France during 1923 are suggestive as indicating the remarkable difference between banking methods here and elsewhere. The total sum involved in revenue-producing transactions carried out by the bank during the year was 82,247,000,000f, of which total 66,648,000,000f was in the form of bill discounting and advances to commerce and industry. The number of bills discounted was 26,869,000, for a total amount of 41,633,000,000f, the average amount of these bills being 1,549f, and the average term of the bills being 24 days. In 1910 (the last normal year before the war, as monetary tension had not then begun) the total value of the bills discounted was 14,581,000,000f, the average value of the bills being 620f. The number of current accounts has trebled within the last ten years. The volume of transactions in connection with current and deposit accounts has risen from 685,130,000,000f in 1919 (when these accounts numbered 250,200) to 1,320,300,000,000f in 1923 (when these two categories of accounts totalled 326,100).

GERMANY.—FINANCES.—CURRENCY AND PRICES.—WAGES.—FOREIGN TRADE.—AGRICULTURE.

(FROM OUR CORRESPONDENT.)

BERLIN, February 23.

THE political situation is unchanged. The Socialists have submitted to the Reichstag resolutions in favour of amendment or revocation of parts of the decrees issued by the Cabinet under the second Empowering Law, and demanding the ratification of the Washington Eight Hours Day

INTERNATIONAL BANKING
IN ALL ITS BRANCHES

3 & 5, PLACE VENDÔME
CABLE ADDRESS: BANKTRUST, PARIS

convention, and the prohibition of longer working hours than eight except in case of urgent necessity, and then only in each case on its merits. The "Aufwertung" of mortgages and bonds to 15 per cent. of their original gold value is considered insufficient by certain interests; while other interests hold that no "Aufwertung" should be allowed at all in view of the fact that the real incidence of the burden imposed by the currency inflation is incalculable, and that partial attempts to redistribute the burden may only make things worse. It hardly seems that this part of the Third Decree will be revoked. The Cabinet, owing to the improved finances and stable currency, for the moment enjoys the strength of prestige. Emergency estimates providing for the raising of 800,000,000 gold marks have been sanctioned by the Reichsrat. Already in the local self-governing organs vehement disputes are going on as to the proportion of rent which is to be taken by the new Rents Tax. As the landlord's profit (net rent) is still abolished, all the Rents Tax must necessarily be distributed among tenants. Gross rents are now around 30 per cent. of those of 1914; but about a third of this is already taken by a State "landed-property tax." Before the war all rents in Germany totalled about 5,500,000,000 marks; and when pre-war rents are restored it seems that about half this sum may be collected as Rents Tax by the States, as probably in no case will the landlords be allowed to retain more than 50 per cent. of the gross rent.

The financial situation is still satisfactory. Taxes yielded in January 503,463,908 gold marks, which is at the rate per year approximately of £300,000,000 gold; but a considerable part came from temporary imposts, mainly from the Rhine-Ruhr Levy and the Bread Supply Levy. Income-tax yielded 164,800,000 gold marks, Sales Tax 104,200,000 gold marks, Rhine-Ruhr Levy 70,800,000 gold marks, Bread Levy 39,800,000 gold marks, Company Income-tax 34,900,000 gold marks, Extraordinary Levy on Industry and Agriculture (also a temporary tax) 11,400,000 gold marks. Customs yielded only 9,600,000 gold marks, tobacco 4,000,000 gold marks, beer 7,900,000 gold marks, sugar 8,800,000 gold marks, the State spirits monopoly 3,400,000 gold marks, wine tax 4,900,000 gold marks, Bourse transactions tax 22,700,000 gold marks. Altogether direct taxes and stamp duties, Bourse tax, &c., yielded 422,559,091 gold marks, while Customs and Excise yielded only 39,678,064 gold marks, this although, as compared with December, Customs receipts doubled, indicating increased import activity. The whole tax yield in December, during which the currency was already stable, was 312,321,968 gold marks. The difference between the above figure of 503½ million gold marks and the 422½ million gold marks already reported to be the total of the three decade returns for January, is due to the fact that the former figure contains the gross tax receipts, whereas the latter shows the net delivery to the Treasury after the Finance Bureaux have deducted the cost of assessment and collection. The Government does not publish any definitive figures of the month's expenditure, but only the provisional figures in the three decades of each month, so that it is not possible to give the exact surplus or deficit.

The currency continues to hold well. The last report shows a rise both in wholesale prices and in the cost of living. On February 18th the cost of living (100 in 1913-14) was 104, against 103 a week earlier; the wholesale index on the 19th was 117.5, against 115.4. This rise is probably only a reaction from the big drop since late November; and it could go a bit further without prejudicing seriously the currency's home buying power. Necessaries and products of general consumption with big open markets continue to be cheap; luxuries and special goods and services of all kinds are extremely dear. The Reichsbank is considering the issue of silver coins in denominations of one, three, and five gold marks. The heavy credit strain continues. On February 7th outstanding Reichsbank credits to private debtors totalled 1,166,400,000 gold marks, of which 542,900,000 gold marks were granted in paper marks on condition of "wertbeständig" repayment (i.e., at gold value of the date of lending), while 623,500,000 gold marks were lent in Rentenmarks. There are no longer any outstanding paper mark credits repayable as paper marks without the "wertbeständig" clause. On December 31st the corresponding paper mark credits were equal to 448,800,000 gold marks, Rentenmark credits to 142,200,000 gold marks, so that in six weeks the debts of business to the Reichsbank increased by 575,400,000 gold marks. All but about 100 million gold marks of the increase was on the Rentenmark side. These large credits are unfavourably commented on; and have brought an interpellation in the Reichstag. As it is known that some of the borrowed money went on purchases of foreign currencies, it is suggested that the remedy is a foreign loan. Bankruptcies in January numbered 29, against 17 in December, and eight, the lowest figure touched, in November. The increase, in view of the currency stabilisation, is normal; it is indeed surprising that the increase was not greater.

Home trade continues to improve, and, as all along, the chief gainers are the textiles and clothing branches. In these branches many concerns have orders for a long time ahead, and some actually refuse orders as they did at the height of the "Catastrophe boom." In general, however, industry is still insufficiently occupied, and unemployment declines slowly. Official figures concerning the industrial real wage show that (on the basis of 100 in 1913) the real wage of skilled workers in April, 1922, was 71.9, fell to 48.7 in January, 1923; rose to 78.7 in March (temporary mark exchange recovery); fell to 48 in July; and recovered to 70.1 in December. The unskilled wage rose to 102 in March, 1923, fell to a lowest point of 62 in July, and recovered to 85 in December. The real wage of underground miners in December was 74.9 per cent. of that of 1913, builders 69.5, skilled wood workers 72.3, skilled metal workers 69.8, unskilled 87.9, male spinners and weavers 70.9, female 74.

A comparative analysis of the foreign trade figures for 1923, already reported, shows that in gold marks imports were 54.3 per cent. of those of 1913, exports 59.6 per cent. Taking German imports and exports in 1913 at 100, British trade in that year was 134, and the trade of the United States 84. The corresponding figures for 1923, as here officially calculated, were 57, 177, and 158. Comparisons according to groups of goods are:—

(In 1,000 Gold Marks.)

	1923.	
	Imports.	Exports.

IV. Finished goods	46.5	66.7
V. Gold and silver and coins ..	24.7	14.4
Together	43.1	52.5

Shipping in 1923 in 19 ports was: In the Baltic, arrivals, 6,044,500 net tons; departures, 6,298,400 tons; ratio to shipping of 1913, 79.3 per cent. North sea, arrivals, 24,705,400 tons; departures, 24,967,300 tons; ratio to that of 1913, 105.5. Shipping in Hamburg was 239.9 per cent. of that of 1913. Shipping in all 19 ports was 99 per cent. of that of 1913, against 82 per cent. in 1922.

In connection with the Minister of Agriculture's demand for a revival of the Agrarian Tariff, instructive, if partly controversial, figures are published by various organisations of farmers. In 1913 imports of food and drinks totalled 2,796.5 million gold marks, exports 1,068.7 million gold marks, the import surplus being 1,727.8 million gold marks. In 1923 the corresponding figures were 1,122.7, 125.3, and 997.4. Whereas the present average price of wheat, rye, and cattle taken together is 84 per cent. of that of 1913, the average price of fodder, fertilisers, and farm machines taken together is 48 per cent. over that of 1913. According to an official memorandum prepared for the Dawes Commission, the *per capita* per annum consumption of food and liquors (including consumption for industrial purposes) was:—

	1913.	Now.
Meat	43.15	26.71
Rye	153.1	91.9
Wheat and spelt	95.8	47.6
Barley	108.0	30.0
Potatoes	700.2	575.0
Rice	2.49	1.64
Herrings	2.89	1.73
Beer	103.0	50.0
Brandy	5.4	2.0

ARGENTINA.—PENSIONS LAW—FINANCE AND BANKING—TRADE POSITION.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, January 22.

ARGENTINA'S midsummer sees all official business more or less at a standstill. The legislative body is in recess, while the majority of its members, and the various Cabinet Ministers, are out of town. Hence the stir which the new pension law is creating in all trade circles goes, for the time being, unnoticed in Government circles. Drafted and passed with the best of intentions and with a minimum of discussion, the law establishes a series of pension funds for practically all trades and mercantile employment, the capital being built up by joint contributions from employers and employed, and the administration left to boards composed of representatives elected by both parties, but presided over by a Government nominee. Details as to benefits are to be settled by the board thus created, and are not yet forthcoming, but the collection of contributions will begin on January 31st, the employee's quota ranging from 5 per cent. to 10 per cent. of his salary. As at least three trades have publicly announced that they will not comply with the law, and dissatisfaction is general, trouble may be expected. The chief causes of complaint are that the Government, while making the presidency of the various trade boards a political prebend, expressly states that it does not guarantee the benefits to be secured. Furthermore, the amounts to be deducted are beyond the ability of the average contributor to pay. It is in no sense a socialistic measure; indeed, the Parliamentary representatives of that body are its bitterest opponents, and are urging their members to refuse payment. At the time of writing the only fund in actual operation is that of the bank employees, who have already been mulcted in three monthly quotas, and are now seriously preoccupied at the course which events are taking. A local auctioneer having no connection with banking but warmly affected towards the party in office, has been named president of the board, the members of which are to be chosen by the convocation of a college of electors which will then proceed to appoint three of its members on behalf of the employees; somewhat similar procedure being used to complete the administrative body and appoint three representatives on behalf of the banks. In practice this may mean that important foreign institutions will be without any direct representation, and as the provisional board, all Government nominees, has applied for 50 per cent. of the funds already subscribed, for the purpose of installing offices,

staff, &c., considerable uneasiness is felt, especially since it has become known that the salary of the president aforesaid is fixed by the Government at \$2,000 paper a month, and that the official idea of administrative charges, including the salaries of the board, is between \$20/24,000 paper monthly. The banks fund is cited in detail as it serves to give some idea of what is projected for other trades. One cannot say what will happen, but that drastic revision will be called for, and in no uncertain voice, seems safe to predict.

Heavy exports notwithstanding, the immediate outlook for Argentine finance is not as clear as one would wish it to be. The American bankers charged with the issue of the long term loan which was to be used to retire the \$55,000,000 gold Treasury notes issued in New York last October are not finding the task of unloading as easy as they anticipated. \$40,000,000 have just been issued at 96½, the interest being 6 per cent., with 1 per cent. cumulative amortisation and the customary term, viz., 33 years, but this is only part of the \$60,000,000 which, it was understood, the group interested had agreed to handle. As no particulars of an authoritative nature have yet been published, the doubt has arisen as to whether the original agreement included a stipulation that \$60,000,000 should be taken firm, or whether there is some clause enabling the issuing banks to shelter themselves under the plea of an unfavourable market, continuing meanwhile to carry the short-date obligations until such time as the full amount of the long term bonds can be satisfactorily disposed of to electors. In plain language, the business has been badly bungled, and it is evident that the absorptive capacity of the New York market for Argentine bonds has been over-estimated, as least as far as the private investor's interest is concerned. That it complicates the whole position of the official finances is self-evident; and as the general banking situation is also suffering from a plethora of deposits, which nevertheless must be kept unusually liquid owing to the difficulties that may attend the proposed reduction by 50 per cent. of the capital of the largest banking institution after the Banco de la Nacion, judged by the amount of its deposits, uneasiness prevails. It is also becoming plainer every day that the load on the Banco de la Nacion is heavier than it should be, thanks to the Re-discount Law which has virtually cast on its shoulders the bulk of the short-date Treasury bills discounted for the Government by the Argentine banks and at once re-discounted with the institution named at a difference of 1 per cent. The ratio of cash to total deposits—clearing figures excluded—of the Banco de la Nacion on December 31st stood at 12½ per cent., as against 24 per cent. on September 30th. Hence in the event of any financial flurry in the market this institution will almost certainly make use of its privilege, under the emergency legislation passed in October, 1914, and itself re-discount its portfolio to such an extent as it may require with the Conversion Office, the limit of its operations in this direction being \$500,000,000 paper. In other words, a reduction of the percentage of the gold reserve from 80 per cent.—its actual position—to 40 per cent., the difference being naturally covered by the rediscounted bills which, however safe they may be as regards eventual payment, cannot be considered in the same light as a metallic backing. Moreover, if this step is taken, it is to be feared that the partisans of a complete alteration of the actual banking legislation in Argentina will have their way, the Banco de la Nacion be transformed into a central bank of emission, the Conversion Office disappear by being embodied therein, and an attempt made to copy the Federal Reserve system of the United States. For the past two years such a possibility has been imminent, and has grown nearer and nearer, despite the refusal of Anglo-Argentine financial interests to admit its importance. The fact that Argentine and American banking fundamentally differ in their main outlines, as well as in the needs which they respectively serve, has either not been grasped, or has been deliberately suppressed by the new school of local economists, who only see in the Federal Reserve system a facile method of increasing what they deem to be purely internal credit, the charges upon which, they argue, will, after all, be spent in the Republic. To those who thus reason the fact of Argentina having an immense and ever-growing service to pay abroad, charges on

loans and invisible imports, is as negligible a quantity as is the *raison d'être* of the Federal Reserve up North, to wit America's tremendous internal trade movement generated by the wants of a population of a hundred and twenty million people. Here there are barely nine millions, no industries to speak of, and the whole wealth of the land lies in the export of prime materials to be consumed out of the country! Money is still comparatively cheap, but the last lot of Treasury bills renewed, some \$9,500,000 paper, was done at 4 per cent., which is a quarter per cent. better than was obtainable for immediately previous renewals, and the private borrower is also becoming less exigent, and more anxious to make certain of obtaining such credit as he may need than was the case a month ago. Difficulties such as can at present only be treated generally are restricting the field for the borrower, and, should they come to a head, a sharp rise in rates is inevitable. Moreover, the firmer exchange, now 42d on London for banks' sight drafts, is bringing out a certain amount of overdue remittances, as is the slightly improved position of the Argentine dollar in New York, the rate being now \$135.50 Arg. gold p. \$100 U.S. The Continental quotations have moved in sympathy with the fall of the French franc, and, roughly speaking, there is about 5 per cent. improvement all round when compared with last month's rates, considered from the Argentine standpoint. A word of warning may, however, be uttered on the subject of sterling rates. Further improvement, should it come, cannot in reason take the quotation much higher than 44d, and even that is likely to be but an ephemeral rise of the briefest duration. To explain the reasons on which this hypothesis rests would take too much space, but careful study of the Argentine Balance of Payments compiled by Señor Tornquist, and reprinted in the Supplement of the *Economist* of December 22nd, will supply the answer. Crops, both wheat and linseed, are now all harvested, and are moving out of the country at a rate of 200,000 tons a week. Maize prospects are excellent and almost reasonably safe as regards yield. Reports of locust damage are now found to be both exaggerated and in some districts premature, while the area sown, 3,425,440 hectares, is not only the largest ever known but is also very conservatively estimated. Between six and seven million tons should therefore be the season's yield. In the wool market, although some prices, chiefly coarse cross, have eased off a trifle, the quotations in general are still highly satisfactory.

DENMARK.—EXCHANGE AND BANK RATE—BALANCE OF TRADE—RISING PRICES—NOTE CIRCULATION—BANKERS AND CREDIT POLICY.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, February 18.

SHORTLY after January 17th, when the Nationalbank increased the Bank rate, it proved that the equalising of the Danish krone rate could not be maintained along the lines previously adopted. For a long time the Nationalbank had maintained a stable sterling rate of 24.45, but the daily demand for foreign exchange—for instance, in cover of documentary credits maturing at future dates—gradually increased to such an extent that the Bank and the Board of the Equalising Fund did not consider it warrantable to supply sterling at this rate. Subsequently the restrictions on the trade in foreign exchange, agreed upon between the banks and the private bankers, were cancelled, and the rate rose considerably, at first under the pressure of speculation. Later on a more quiet tone prevailed, but, as will appear from the daily quotations in London and here, the level is considerably above the stabilisation rate.

The Government has intervened only in some isolated fields, certain luxury duties being increased, such as those

on silk, silk goods, and tobacco, while a tax on the sale of new motor-cars has been introduced. As will be seen, both measures aim at some restriction of consumption. A general regulation of the balance of trade, however, has neither been attempted nor foreshadowed, except for the Bill brought in by the Conservative party for the collection of all Customs duties in gold. The balance of trade for the entire year of 1923 has just been computed, and this shows an excess of imports for consumption over the export of Danish goods amounting to 374,000,000 kr. Imports amounted to 1,907,000,000 kr, and exports to 1,533,000,000 kr. The import excess was somewhat larger than in 1921 and 1922, the figures for these years being 139,000,000 kr and 280,000,000 kr respectively. In the summary of foreign trade by the Statistical Department, it is pointed out, however, that the goods, of which the quantity imported has increased, were mostly raw materials and auxiliaries for agriculture, industry and building construction, although the imports of some goods for direct consumption also increased. Imports of coals were 3,244 million kilos, as against 2,842 million kilos in 1922, and the value of the mineral fuel imported was 167,000,000 kr, as against 125,300,000 kr in 1922. The coal imports nearly exclusively emanated from the United Kingdom.

As a consequence of the rise of the exchange rates, a rather considerable advance in the price of goods has taken place. The retail price index figure has not been greatly affected, the January figure being only five points above the level six months ago. The figure is now 209, as against 100 in July, 1914, and as a consequence of the rise during the half-year July, 1923, to January, 1924, the Government expenditure for salaries to officials has increased by 1,500,000 kr for the half-year commencing April 1st. Further, the wages of about 70,000 labourers were increased by 2 per cent.

In wholesale prices there has been a rather strong rise. In the course of January the index of the *Finanstidende* showed an increase from 210 to 223, and the paper states that the increase this time is particularly heavy for potatoes, partly owing to the frosty weather and partly owing to the increased export possibilities. Other goods, like butter, sugar, cereals and cattle food, hides, wool, coals and artificial manures, show rather considerable rises. Practically the only decline is for eggs, which for some time have found a poor market in London. The Danish wholesale prices are now about 27 per cent. higher than in September, 1921, when the minimum after the war was reached, and 16 per cent. higher than at the end of January, 1923.

In connection with the increase of the Bank rate, the Nationalbank has considerably restricted its credit policy, and accordingly the private banks practise every restriction which they think compatible with consideration for their customers. At present negotiations are taking place between the Government, the Nationalbank, and the private banks, on this subject. A tendency to restrict credit has been traceable in the last few reports on the note circulation. This was noticeable in January, and at the end of the month it proved that the increase was less than last year at the corresponding time, and that the total note-circulation at that time and a week later was less than in 1922. The note circulation on February 2, 1924, was 454,100,000 kr, but the following week it dropped to 432,000,000 kr, and as the bullion reserve was practically unchanged, viz., 218,000,000 kr, the percentage of cover has been increased from 48 to 50.4. The Act of August 30, 1919, requires that a bullion reserve of 33½ per cent. only (gold in coin and ingots, and other coins) must be maintained, while the remainder of the cover may be other assets of the bank. It may be regarded as certain that the Nationalbank will endeavour to reduce the note circulation still further. Whether a further rise of the bank rate is impending cannot be said with certainty, but in some quarters this is regarded as doubtful. Generally it is expected that for the time being the Nationalbank will try working on the previous interest basis, at the same time effecting credit restrictions.

Quite reasonably the exchange situation causes some pessimism, which is increased as a consequence of the rather considerable decline of the prices of bonds. On the

other hand, it is correctly pointed out that large sections of the trade, especially the exporting farming industry, show good results, and are working on a sound basis. As regards the equalising fund, which is based on the sterling and dollar credits obtained in London, these resources have not been exhausted. The fund has been availed of to a great extent, especially during the last period before the stabilisation rate was abandoned, but it is still able to exert its influence when intervention in the market appears expedient. This was the case last week when the sterling rate rose above 27.

GREECE.—DEBT POSITION—BUDGET AND TAXATION—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

ATHENS.

FINANCIALLY, the outlook is more hopeful than it appeared a year ago. The public debt of Greece, at the end of 1923, was composed as follows:—

(In Millions of Drachmæ.)	
Loans and Advances in foreign currencies (at par of exchange).	1,650
Loans and Advances in paper drachmæ	7,300
Floating Debt (of which Treasury bills 985 million Dr.)	1,030
Total debt	9,980

The debt in foreign currencies requires an annual service of some £2,700,000. Of the debt in paper drachmæ a sum of 4,100 millions represents issues of banknotes, and bears no interest. The service of the whole debt is estimated roughly at 925 million drachmæ (calculating the pound sterling at 250 drachmæ). The foreign debt is mostly in Greek hands. The yield of the assigned revenues, out of which the service of the loans subject to the International Financial Commission, and of some other loans, is effected, rose from 208.2 million drachmæ in 1920 to 774.1 millions in the first ten months of 1923.

The budget estimates for the fiscal year 1923-1924 were as follows:—

(In Millions of Drachmæ.)	
Ordinary revenue	3,031
Extraordinary revenue	910
Total revenue	3,941
Deficit	2,683
Ordinary expenditure	2,961
Extraordinary expenditure	3,663
Total expenditure	6,624

The accumulated budget deficits up to the end of March, 1924, were put before the signing of peace at 3,550 million drachmæ, and would have to be met one way or the other. It is expected, however, that this amount will be reduced in consequence of the signing of peace, and that extraordinary expenditure for the current fiscal year and henceforth will decrease substantially. Two important items will disappear, namely, war expenditure and expenditure in connection with the maintenance and the settlement of the refugees. The importance of these items may be gauged from the following figures:—

Drachmæ.	
Budget expenditure from April 1st to October 31, 1923	2,282,000,000
This amount includes the following extraordinary expenditure:—	
War expenditure	515,000,000
Refugees	435,000,000
Italian indemnity for the Janina murders	110,000,000
Total	1,050,000,000

Despite the appreciation of the drachma, the cost of living in Athens for December last, taking 1914 as basis year, was 1,262.8, as against 1,034.8 in December, 1923, and 1,348.1, the record figure for April, 1923. This high figure reflects the heavy taxation and the adjustment of the internal purchasing value of the currency to its external value. As regards foreign trade, the figures for the first eleven months of 1923 compare as follows with those for the corresponding period of 1922:—

(In Millions of Drachmæ.)		Excess of	
January-November.	Imports.	Exports.	Imports.
1922	2,583	2,028	555
1923	5,557	2,240	3,317
Increase	2,974	212	2,762

The Department of Statistics offers the explanation that the great increase in imports shown by the above figures is nominal, and is due to the depreciation of the drachma during the first half of 1923, as compared with the corresponding period of 1922, the average half-yearly rate of exchange on London for these two periods being 341.08 drachmæ and 103.77 drachmæ respectively. On the other hand, exports lag behind owing to the fact that large quantities of tobacco, though sold, have not been exported in consequence of the export tax levied by the Revolutionary Government. It is now reported that, in view of the competition of foreign markets, this tax will be reduced to 5 per cent. for the crop of 1922, and will be entirely abolished for the crops of 1923 and subsequent years.

Greece offers many opportunities for foreign industry and capital. A French group has already undertaken works at the port of Piræus, and another one the utilisation of the waters in Peloponnesus. But much remains to be done. The railways needs repairing and extension. Roads have to be constructed. Water power in Continental Greece and Macedonia should be utilised. Large irrigation works must be made for supplying water to Athens, Piræus, and other towns. Communication has to be developed. The army and the navy must be equipped, and aeroplanes have to be bought. These are a few of the needs of the country which require quick satisfaction.

Books and Publications.

TRUSTS IN THE UNITED STATES.*

IN this substantial and valuable work Dr Eliot Jones has confined his attention to a particular class of trade combinations; for his purpose a "trust" is defined as "a combination" in any industry "of a sufficient number of plants to secure practical control over the supply and thus over the price," or more briefly, "a horizontal combination possessing monopolistic power." He distinguishes "trusts" from "pools, trade associations, and other organisations which, though they may temporarily possess some power over prices, do not interfere with the substantial independence of the concerns involved." The proportion of industry which must be in the hands of a combination to give it practical control of prices is left indefinite, the author contenting himself with the remark that "it seems fairly certain that as a general rule the production of from 70 to 80 per cent. of the national supply, and perhaps even less, is quite ample." This is a considerably lower proportion than British organisers of price conventions have usually thought requisite, and it makes the inclusion of any organisation within Dr Eliot Jones' definition dependent upon the particular circumstances. The point is of some importance, since—particularly in his discussion of the economies anticipated from trust organisation—the author constantly urges that the trust offers no advantages over large scale undertakings or "combinations not possessing monopolistic power," and the uncertainty of the line of demarcation is sometimes a little confusing.

Despite his obviously great effort to present an impartial survey, Dr Eliot Jones does not leave the reader in any real doubt as to his hostility, on economic and social grounds, to the trusts. He is quite clear (Chapter XI.) that the hope of "monopoly prices" was the primary motive for their formation (most of the other reasons advanced he obviously regards as after-thoughts), and that "both history and general reasoning establish the tendency of the trusts to increase prices," and, despite some considerations which have made them less grasping than they might have been, to continue to charge prices "higher than the public would pay under competitive conditions." The prospect of promoters' profits he regards as the second most important cause of trust formations (Chapter XII.).

The book contains six chapters (pp. 46-259) setting out in much detail the history of six of the best-known Ameri-

* "The Trust Problem in the United States." B. Eliot Jones, Ph.D., Professor of Economics in Stanford University. New York: The Macmillan Company. 1922. Pp. xii, 598. 14s net.

can trusts; these are based largely upon the voluminous reports of the Bureau of Corporations and are a useful summary which incidentally brings out the diversity of conditions which have brought about the formation of trusts in the respective industries. Six other chapters (pp. 300-498) give an exhaustive survey of the development of United States common law and statute law in respect of combinations and trusts, and include a critical account of the operation of the dissolution decrees which the Federal Government have obtained in some important cases. The author's general conclusion as to the effectiveness of legislative efforts at trust control is on the whole decidedly more favourable than that of a good many other observers; "the mere existence of the (Sherman) Act and the possibility of prosecution under it have reduced the necessity for its exercise, just as the conferring on the Federal Trade Commission of the power to prevent unfair methods of competition has given it less occasion to use that power. It is worthy of note that practically no new trusts have been formed since the Government energetically began to avail itself of the provisions of the Anti-Trust Acts, and that many of those already organised have been less active in maintaining their position by unfair means."

The book has a bibliography (pp. 567-585), and should be on the shelves of every student of the problems of trade organisation.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, March 5.	ACCOUNT, March 6.
---------------------	----------------------

Activity in the Stock Exchange markets has been moderately maintained, though in some departments there has been a noticeable falling-off in the volume of orders. Members of the House say that the quantity of their orders is better than the quality, but from the manner in which most gilt-edged stocks retain their strength, it is obvious that substantial investments in War Loan and the newly-issued scrip stocks of Southern Rhodesia and West Australia have taken place. The Conversion Loan is dull, because of sales by holders who had bought on the assumption that the price would promptly recover part of the interest-deduction made last Tuesday. This it has failed to do, and stock was accordingly turned out by

disappointed bulls. India Government and Railway issues have gone easier, by reason of a somewhat serious debate in the House of Lords. Several new issues are said to be on the point of appearance, not only from the colonies, but also from foreign Governments.

German bonds hardened up, on the proposal to reduce the Reparations contribution from 27 per cent. to 5 per cent., but public interest in Germans has evaporated, and the movement aroused no attention. French bonds, after being better, relapsed with the further descent of the franc. Brazilians are making progress upwards. Japanese 6 per cent. scrip, excitement over which has considerably cooled, kept steadily in the neighbourhood of 3 premium. Austrian Sixes are a good feature, and Czech Eighties improved with them.

Settlement of the dock strike had no effect upon Home Rails, public attention in the market having dwindled to meagre proportions so far as active dealings are concerned. There is a little speculation going on, but nothing of any consequence. A good many holders of stocks are known to be waiting before making sales, for the prices to be quoted ex dividend. This usually brings in buyers, who are attracted by the cheap-looking character of ex-dividend quotations. Prior-charge stocks are rather lower, possibly on sales with which to meet super-tax claims.

Mexican Rails are heavy, the strongest spot in the foreign railway market being United of Havana, where the price spurted owing to fresh rumours as to a possible fusion of Cuban railways and their subsequent placing under Government control. Argentine rails moved up and down in accordance with the daily fluctuations in the tone of markets. Grand Trunk Pacific debentures are a little easier.

Rubber shares inclined to go a shade better, on the disposition reported from Java on the part of some of the Dutch planters to look with a friendly eye upon the proposal to restrict their output in the same way as is done on British-owned estates. The proposal, however, is too nebulous at present for it to exercise any real effect upon prices. The oil market, after its recent show of strength, reacted to some extent, the end of the week bringing in a few profit-takers, who had failed to get out at the top and who are disappointed at the languor into which the list has fallen.

Banking shares are better, and there has been a strong tendency in the insurance market. Shipping issues are very quiet. Gas stocks lean a trifle to the lower side, and electricity supply shares, after their recent abounding strength, halted in their stride, some of the leaders looking back. The Courtauld dividend, maintained at the same rate as that of last year, failed to realise optimists' hopes, and the shares gave way sharply, though speculative operations led to the price moving in jerky fashion.

Whiteley's increase of dividend, to 25 per cent. for the year, brought about a material rise in the price. Lyons, Aerated Breads, Barkers, Harrods, and similar shares are mostly better. Dunlops are again neglected, though the motor market gives evidence of a little attention being paid to it by the public. The tobacco market is exceedingly quiet. Breweries have been moving up. Marconis went over 2, failing, however, to stay the pace. The report of the Wireless Committee was eagerly awaited. Vickers 4 per cent. debenture rose on the proposal to increase the interest to 5 per cent. under a scheme of re-arrangement of part of the company's pre-ordinary capital. Iron and steel shares, after showing hardness, mostly lost their small advances. Enthusiasm for tea shares has subsided, though after a slight shake-out a few of the popular descriptions came into renewed favour. Hudson's Bays eased off. Sudan Plantations went ahead briskly. Trust companies' stocks have risen.

The Kaffir market is listless, Paris selling a few Rand Mines, and the Cape doing little to support its usual favourites. Another burst of buoyancy in Cam and Motors is the outstanding feature amongst Rhodesians. There is rather more doing, too, in Chartered shares. The Canadian silver group marks time, with prices sagging in the absence of public interest. A drop in tin, although followed by immediate recovery, seemed to disturb the nerves of speculators who had been following tin shares in the various markets, and prices have been disposed to react. The Malayan list, however, shows a strong undercurrent. Copper shares have been heavy. Russians hardly moved all the week, and Indian mines maintain their previous modest improvements.

Union of South Africa 5 per Cent. Inscribed Stock, 1933-1943.

This is an offer of conversion of £4,000,000 Union of South Africa 4 per cent. debentures, due June 1, 1924, into an equal amount of Union of South Africa 5 per cent. inscribed stock, 1933-1943. Holders of debentures exercising their option to convert will receive a cash payment of £1 per cent. on June 1, 1924, being the difference between the nominal amount of the debentures maturing and the issue price of the new stock, and a further payment on the same date of £1 10s per cent. (less income-tax), difference of interest. Holders converting must lodge the prescribed forms of assent with the debentures and relative coupons due June 1, 1924, at the Westminster Bank, 41 Lothbury, E.C. 2, and will receive in exchange fully-paid scrip with coupon attached for 10s per cent. Any portion of the maturing debentures not converted will be paid off on June 2, 1924. Of the £4,000,000 debentures, £1,225,300 are held by the Public Debt Commissioners of the Union, and will be converted. Subscriptions in cash are invited for Union of South Africa 5 per cent. inscribed stock, 1933-1943, to an amount sufficient to make up with the debentures converted by the public the total of £2,774,700, at 99 per cent. The stock now offered will be in addition to and, after May 2, 1924, will rank *pari passu* with the existing £9,000,000 Union of South Africa 5 per cent. inscribed stock, 1933-1943. This is a trustee security, and holders not domiciled in South Africa are exempt from South African taxation. An excellent investment.

British Columbia Electric Railway Company, Limited.

Share capital issued and fully paid £4,320,000. This is an issue at £95 per £100 (or \$450) of £770,000 5 per cent. (income-tax free) 1944 debenture stock. When fully paid the stock is interchangeable, at the option of holders, into sterling stock, or stock in Canadian currency at the rate of \$45 per £10 of sterling debentures. As in the case of several other well-known undertakings, the prospectus is a complicated document, which must be difficult for the average investor to follow. It is stated that this "debenture stock is secured by a trust deed dated February 19, 1924, in favour of the British Empire Trust Company, Limited, as trustees, under which there has been deposited and charged by way of specific charge £1,100,000 of British Columbia Electric Railway Company, Limited, 4½ per cent. perpetual consolidated debenture stock, ranking *pari passu* with the £2,788,170 of this stock already issued, and which stock is secured by way of floating charge according to English law on the whole of the company's assets and undertaking. This floating charge is subject only to the existing mortgages and charges created to secure the £197,200 4½ per cent. first mortgage debentures and £207,000 4½ per cent. Vancouver Power debentures now outstanding, of which £105,700 are held by the trustees for the 4½ per cent. perpetual consolidated debenture stock. The 4½ per cent. perpetual consolidated debenture stock was quoted in the London Stock Exchange Official List of February 18, 1924, at 78-81." After reading this, some investors may wonder why these financial operations are necessary. It is provided that the amount of the 5 per cent. debenture stock shall be limited to £770,000, and shall be repayable at par in 1944, or earlier, by a sinking fund, commencing in 1934. On the basis of the net earnings for the year ended June 30, 1923, there remained, after paying all bond and debenture interest, including the amount required to cover the interest on the present issue, £382,489 of surplus net earnings available for depreciation, renewals, maintenance, and other reserves and dividend. The issue is not over attractive.

Heppells, Limited.—Authorised capital £250,000, divided into 150,000 7 per cent. cumulative participating preference shares of £1 each, 95,000 ordinary shares of £1 each, and 100,000 ordinary shares of 1s each. This is an issue of 150,000 preference and 95,000 ordinary shares, all of £1 each. Preference shares are offered at par and ordinary at 21s 6d each. The preference shares are entitled to a fixed cumulative preferential dividend at the rate of 7 per cent. per annum, and rank in respect of the surplus profits of each year *pari passu* with the ordinary shares after the latter have received a dividend at the rate of 7 per cent., until both classes of shares have received 10 per cent., the ordinary shares being entitled to the balance of profits. The business is a well-known one of chemists, &c. Profits are given from 1920, "earlier figures not being available," which is a somewhat curious statement in view of the fact that these are old-established businesses. Assets are valued at £249,301, including £75,166 for goodwill. This goodwill plays a large part. The purchase price may cause some misunderstanding amongst investors unskilled in prospectus reading. The prospectus states that the purchase price payable by the company for the "businesses and premises, with fixtures, fittings, plant, machinery, furniture, implements, utensils, and stock at valuation as at February 18, 1924," and the share capital of Proprietary Articles, Limited, is £116,000 (£60,000 being for goodwill). We are informed that the stock is to be paid for in addition to this £116,000. It will also be observed that the holders of the 1s shares will control the company. This is a prospectus which should not have been published until some revision had been made.

Incomati Estates, Limited.—Authorised capital £350,000 divided into 50,000 7 per cent. non-cumulative preference shares, 100,000 10 per cent. preferred ordinary, and 200,000 ordinary shares, all of £1 each. All shares have been issued. Information is given in the Press with reference to an application to the London Stock Exchange in connection with the 10 per cent. preferred ordinary shares. It is stated that "the existing charges on the assets of the company consist of (1) £17,800 trust certificates (the balance of an issue of £60,000). The instalments due from the Mocambique Government are sufficient, and are specially charged for the payment off of these certificates; (2) £10,000 (the balance of an issue of £20,000) 7½ per cent. debentures, which issue, until paid off, confers on the holders the right to 5 per cent. of the net profits of the company in each year, up to and including the year 1926; and (3) £100,000 8 per cent. debentures (forming part of a total authorised issue of £125,000) redeemable at 102½ by January 1, 1937, by the operation of a sinking fund commencing in the year 1926, to be applied by annual drawings at 102½ or by purchase at or below that price. The company has the right, on giving six months' notice, to redeem at 105 per cent. on any interest payment date on or after July 1, 1924, all or any part of the debentures then outstanding, and also the right at any time to purchase from any holder willing to sell any debentures held by him at any price below 105 per cent. Profit-sharing certificates have been issued to the holders of £30,000 of the 8 per cent. debentures, conferring on the holders a participation each year in a proportion of the net profits of the company (calculated as therein mentioned), which at present amounts to 6 per cent. of such net profits until December 31, 1932. If these debentures are paid off prior to that time, the participation in the profits is reduced to half the above proportion as from the date of payment off." These existing charges would seem to indicate that dividends on share capital may be postponed again.

The Harpenden District Gas Company.—Authorised stock capital £84,000, of which £45,027 has been issued. Authorised loan capital £28,000, of which £15,010 has been borrowed. This is an "offer for sale by tender" of £7,000 additional capital stock ranking for a standard dividend of 6 per cent. On existing similar stock the last dividend paid was £7 8s per cent.; thus, at the minimum price of issue—namely, £105 per £100—the yield would be £7 os. 11d per cent. Subject to the narrow market, this stock is an excellent investment in its class.

Kadar Tea and Produce Company, Limited.—Capital £30,000, divided into shares of £1 each. This is an issue of 25,272 shares, of which 10,272 shares will be allotted to the vendors, fully paid, as purchase consideration, while 15,000 shares are now offered to the public at par. The company has been formed to acquire two properties in the Kadar district of Mysore Province. The total acreage is 988, and over the past five years there has been an average crop of coffee of 38 tons, of a quality that would command 120s per cwt in the present state of the market. It is proposed to erect a tea factory as soon as possible, and nearly all the present planted tea acreage will be ready for plucking when this is available. The present tea acreage is 161, but it is intended to extend this area to at least 500 acres. There are no intermediate vendors and no promotion profit is being made. The properties have been valued at £10,272. This is a speculative proposition.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

LONDON MIDLAND AND SCOTTISH RAILWAY.

FIRST ANNUAL MEETING OF NEW GROUP.

THE COMPANY'S LARGE RESERVES.

EFFECT OF REDUCED RATES.

SCHEMES FOR ALLEVIATING UNEMPLOYMENT.

The first annual general meeting of the London Midland and Scottish Railway Company was held at Euston Station, London, N.W., on Friday, February 29, 1924.

The Rt. Hon. Lord Lawrence of Kingsgate, chairman of the company, presided.

The Chairman, in opening the proceedings, said: I will ask the secretary to read the notice convening the meeting.

The secretary (Mr R. C. Irwin) having read the notice, The Chairman said: Our next business is to read the minutes of the extraordinary general meeting of July 26, 1923, which I presume you will agree to take as read.

TRIBUTE TO LATE SIR JOSEPH KAYE.

Before dealing with the ordinary business of the meeting, I must refer to the death of Sir Joseph Kaye, which took place suddenly on December 24th last.

Sir Joseph joined the board of the Lancashire and Yorkshire Company in 1914, and was a most energetic and enterprising business man whose services were of the greatest value to the board.

He was a gentleman of high character and great ability, and the board deplore the loss of a valuable and loyal colleague.

It is not proposed to fill the vacancy on the board caused by his death.

CONGRATULATIONS TO SIR ARTHUR WATSON.

I cannot pass to the business of the company without referring, with a sense of gratification, to the honour of Knighthood which has been conferred upon Mr Arthur Watson. We who have been in close and daily contact with him know how hard he has worked in the service of our company, and I am sure that we all extend our congratulations to him on his thoroughly deserved honour.

In this connection I regret to inform you that Sir Arthur Watson has asked to be relieved of his duties owing to ill-health. His connection, first with the Lancashire and Yorkshire, then with the London and North-Western, and finally as the general manager of this great amalgamated company, has been distinguished, and we owe him a great debt of gratitude for his untiring industry and success in the amalgamation and absorption of our various companies, and for his efforts in consolidating the same, but, unfortunately, his health has broken down in this colossal task, and in thanking him for all he has done for us, we wish him every happiness in his retirement, and a speedy return to a normal condition of health.

MR H. G. BURGESS.

In considering the appointment of a successor to Sir Arthur Watson, your directors have been saved any anxiety, as they have in the person of Mr H. G. Burgess an officer of proved ability and experience, and in addition to possessing a wide and varied knowledge of railway administration Mr Burgess has for some time past acted as deputy general manager. Notwithstanding over 40 years of service, and of his having reached an age which fairly entitles him to find in retirement the leisure which he has so well earned, Mr Burgess has consented to shoulder the responsibility of management. The proprietors will realise that his age will prevent him from carrying on his onerous duties for an indefinite period, but he has placed his services at the disposal of the board for such time as may be found necessary to complete the final organisation of the group, a task upon which he has been engaged on Sir Arthur Watson's behalf for some considerable time.

Having regard to the fact that the company, as the London Midland and Scottish Company, has only existed from January 1, 1923, it is not possible on this occasion to supply in the accounts any comparative figures; these will be available on future occasions, but, in view of their voluminous nature, it is extremely doubtful whether any useful purpose will be served either to-day, or in future, by going through the accounts in detail.

RECEIPTS AND EXPENDITURE.

It will, however, no doubt interest the shareholders to know that the gross receipts on revenue account amounted to £87,317,070 (equal to the revenue of the Indian Empire prior to the War), and

the expenditure to £71,019,175, leaving the net receipts £16,297,895.

Miscellaneous net receipts were £3,414,099, and your directors have decided to utilise of the amount received under the Railways Act a sum of £200,000, so that our total net income from the sources I have mentioned amounts to £19,911,994.

DIVIDEND.

The various companies now forming the amalgamated company carried forward, twelve months ago, £340,266, so that we have available a total sum of £20,252,260, of which £5,154,614 is required for interest, rentals, and other fixed charges, and £8,091,927 for the dividends on guaranteed and preference stocks, leaving the amount available for the dividend on the ordinary stock £7,005,719, which enables us to pay a dividend for the year of 7 per cent. on the ordinary stock, and to carry forward a sum of £341,549.

ARREARS OF MAINTENANCE.

Many shareholders have raised questions as to the necessity for the large invested sums which are held at present by all the railway companies, and this matter cannot be better set at rest than by explaining that these are at their present figure largely owing to what, in the railway world, is termed "arrears of maintenance." During the war period, and for a year or two after the armistice, owing to the shortage of experienced workers and material, it was impossible for the railway companies to carry out their usual programme of renewals and repairs, with the result that the equipment generally was necessarily allowed to get below its usual standard. The cost of wages, and material of all sorts, is still extremely high, but notwithstanding this, your company have now placed orders, to which I will refer subsequently, for additional plant, which will make a very serious inroad into our liquid funds. I should also explain that of the thirty-eight millions sterling held in Government investments, a considerable sum represents amounts placed in our keeping by the staff through our various savings banks and the balances of superannuation and pension funds, which in the course of years will be required to meet pensions towards which the staff themselves have contributed. I am anxious that the proprietors should be under no misapprehension in this matter, and I am dealing with it at some length in order to remove any feeling of doubt that they may have as to the board retaining any sums which might legitimately be divided amongst the shareholders. The money, which as I have pointed out, is invested in the finest securities in the world, is earning good interest which ensues to the shareholders.

CAUTIOUS POLICY NECESSITATED BY STRIKES.

You will notice we have only taken £200,000 (which is at the rate of 4s per cent.) out of the funds we received from the Government, to support the dividend. At the present time your directors are decidedly of opinion that it is necessary to husband the company's financial resources, having in mind the definite loss in traffic we have sustained by the recent enginemens' and dockers' strikes, and having regard to the further possible trouble in the mining world. In addition to the ascertained loss, these periodical strikes are doing untold harm in retarding the improvement in trade generally, and your board would, in my opinion, be neglecting their duty if they failed to take notice of the political, financial, economic, and commercial uncertainties of the future.

After all, the two main factors upon which shareholders should be satisfied are:—

1. As to the rate of dividend they receive, and on this point I may say that, under the circumstances, and with all the uncertainties of the future, your directors look upon the dividend they recommend you to declare as being satisfactory.

2. As to whether the dividend has been honestly earned, and on this point I cannot do better than refer you to the auditors' certificate which appears on the accounts, and which reads as follows:—

"We hereby certify that the foregoing accounts contain a full and true statement of the financial condition of the company; and that the dividends proposed to be declared on the several stocks are bona-fide due thereon, after charging the revenue of the year with all expenses which ought in our judgment to be paid thereout."

From a perusal of this certificate, and from the details I am giving in my speech, the proprietors will be able to gather that the board have a thorough grip of the situation.

GROUP CONSTITUTION COMPLETED.

The constitution of the group company has been completed, with the exception of the absorption of the Leek and Manifold Valley Light Railway Company, in which case a legal question has arisen and the matter is at present *sub judice*. I am pleased to say that we were able to agree terms for the merging of all the various companies into the London Midland and Scottish Company, excepting in the case of the Caledonian and Knott End Companies, in which the terms were settled by the Railways Amalgamation Tribunal.

REDUCTION OF RATES.

It will be within the knowledge of many of you that both Sir Guy Granet and I, as chairmen of our then respective companies, expressed the view when we met our proprietors in February of last year that the time had arrived when a further substantial reduction in rates, &c., should be considered by the boards of the new group companies. At that period there was a very slight indication that the trade and industry of the country was taking a turn for the better, and very strong claims were made by the larger associations of trade that a further reduction in carriers' charges would provide the required stimulus, and that increased business would benefit both the country and the carriers. Your board very seriously considered the problem, and they decided that if anything of a helpful nature was to be done, it must be on the lines of the largest reduction the company's revenues could stand, and that the figures had been closely investigated, on May 1st a general reduction was made in goods train rates, from 75 per cent. to 60 per cent. over 1919, with reductions in the charges for parcels, livestock, and other passenger train traffic. On August 1st the percentage increase in goods train rates was further reduced from 60 per cent. to 50 per cent., and a similar reduction was made in coal traffic, together with further modifications in the passenger train charges.

RESULTS OF REDUCTION.

The proprietors will possibly remember that at the time when the railways passed from Government control the additions to the rates stood at percentages which were calculated to raise in 11 months the deficiency which was expected to accrue in 16 months. This deficiency had been produced very largely by Governmental action in standardising the rates of pay and hours of duty of railway servants throughout the land, and the cost was sought to be recovered by increasing generally the revenues of all companies by certain percentages, irrespective of whether the increased labour costs affected them equally or not; and this being so, it is clear that there must be difficulty in agreeing between the companies generally what all-round reductions should be made if the net income was to be preserved. As the outcome of various negotiations the reductions to which I have referred were made, and you will doubtless desire to hear something from me as to what the result of that policy has been. The risk your board had to take was that in the event of there being no increase in traffic what would be the effect upon the gross receipts of the year by the reductions advocated and made from time to time. If we had merely carried the same amount of traffic as was carried in the year 1922, our gross receipts would have been 11 millions less than they were in that year.

IMPROVED TRAFFIC.

The actual decline is only one-half that figure, and it can thus safely be said that improved traffic has occurred to the extent of 5½ millions sterling. Whilst it is very difficult to prove whether reductions in rates do of themselves cause traffic to flow which would not flow otherwise, there are some indications which show that extra business follows cheaper transport, *i.e.*, up to the end of September last the company had carried passengers in excess of those of the year 1922 by no less than 19 millions in numbers, and practically the whole of this extra volume was produced by the increased cheap excursion and tourist facilities that did not exist in the preceding year, and caused no apparent diminution in the carrying of other classes of passengers. Another feature is that as soon as effective reductions were made in the rates for the heavy mineral classes of traffic, *i.e.*, raw materials of industry, the traffic which had fallen to a very low ebb began to show signs of recovery, and you will observe from the company's published traffic returns that the revenue from that traffic shows a substantial increase over last year, notwithstanding the considerable reductions in rates.

We have thus demonstrated that under certain conditions and in certain commodities it is good business to reduce rates, but it does not necessarily follow that it would be in the interests of the shareholders to interfere with the rates in the absence of such conditions, and, further, the effect of any alteration is so great that it does behoove us to move cautiously in this matter.

It may be said that if the reductions had not been made, or had been made to a lesser degree than they have, the company's financial position would have been better than it is; but, ladies and gentlemen, when you realise that if the rates and charges of the year 1922 had applied throughout this year, in 1923 the net revenue of the company would have been increased by upwards of 11 millions, a sum which would have more than doubled the dividend on the ordinary stock, I think you will agree that the company would have been in an untenable position in the eyes of the traders, the Government, and the workers.

RATES AND PRICES TO CONSUMER.

It may be opportune, whilst dealing with the question of rates for carriage by rail, to have regard for a moment to the controversy that is continually taking place as to the effect of such rates upon prices to the consumer. It may be possible to show in individual cases that increased railway charges enhance prices, but these are not the instances upon which to base a considered judgment. During and since the war the principle has been established that there is an affinity between wages, the chief element in most business costs, and the cost of living. We have heard a great deal about the cheap breakfast table, and I have been interested (and I am sure you will be) to ascertain the extent to which the charges imposed by the London Midland and Scottish Railway for the conveyance of commodities, such as bacon, ham, butter, cocoa, coffee, margarine, sugar, tea, and fish, figure in the home budget. What do I find? For every kind of commodity to which allusion has been made, collected by the London Midland and Scottish Railway, conveyed by goods train, and delivered to the consignees' addresses, the average charge does not exceed one farthing per pound avoirdupois. We all know the price that has to be paid for the retail purchase of those things which have become necessities to practically the poorest home, and to say that the present railway rates generally put up the prices against the consumer is to disregard the real facts.

Broadly, the proposition is, that where there is demand, and there is the wherewithal to supply that demand, traffic will pass, however high the charges may be. On the other hand, if there be no demand no traffic will pass, however low the rates are. But there comes a time when the demand exists and the resources of the customer are not sufficient to meet it. Then is the opportunity for the carrier to lower his charges so that the seller can produce either without loss or with just a sufficient margin of profit to extend business which goes to the reduction of the carrier's loss. That opportunity presented itself to your board during the course of the year 1923, and largely led them to the advocacy of a reduction in rates, with a result which I think the proprietors will see from a perusal of the statement of accounts is not unsatisfactory.

STANDARD REVENUE.

The proprietors will doubtless remember that during the passage of the Railways Act, 1921, through Parliament, the question of the standard revenue was raised, and it may be of interest to know exactly to what this refers.

Prior to the passing of the Railways Act the charging powers of the railway companies were strictly limited by the Railway and Canal Traffic Act, 1888, which was defined and slightly amended by the Railway Rates and Charges Order Confirmation Acts, 1891 and 1892, as well as by the Railway and Canal Traffic Acts of 1894 and 1913. Under this legislation maximum rates were fixed, which could not be exceeded except by further legislative authority; and if the companies were charging rates below the maxima, they could not increase the rates, even within the maxima, without probable challenge and having cast on them the onus of proof that the increases were reasonable and justifiable.

Under the 1921 Act, however, an independent body—the Railway Rates Tribunal—consisting of experts, was set up, and the duty of this tribunal is to fix in the first instance such standard charges as will secure to the railway companies their 1913 aggregate net revenue, with certain additions in respect of capital expenditure incurred since 1913. The Rates Tribunal are then to review annually, unless the Minister of Transport directs to the contrary, the operation of the charges so fixed since the appointed day, subject to the review being limited to the experience of the operation of those charges during the preceding three years.

BASED ON REVENUE RECEIPTS AND EXPENDITURE.

The standard revenue will undoubtedly be based largely upon Account No. 8, "Revenue Receipts and Expenditure," and will embrace *inter alia* the amount received under the heads:—Railway, Omnibuses, Steamboats, Canals, Docks, Harbours, and Wharves, Hotels, Refreshment Rooms, and Restaurant cars, for the year 1913.

If the revenue derived, after making provision for an allowance to remunerate adequately any additional capital which may have been raised in respect of expenditure on capital account, is more than that derived in 1913, it is the duty of the Rates Tribunal to modify all or any of the standard charges so as to effect a reduction of the net revenue in subsequent years to an extent equivalent to 80 per cent. of the excess. On the other hand, if the

revenue falls below the standard of 1913, it will be the duty of the Rates Tribunal to so adjust the rates as to increase the revenue to the standard figure, though, of course, it does not follow that an increase in charges is automatically effective in increasing the revenue, as there are definite limits to the rates which the traffic can bear.

In simpler words, the idea is that of any excess over the standard revenue of 1913, the company shall have the benefit of 20 per cent., the remaining 80 per cent. going to reduce their charging powers. Proprietors will perceive that whilst the decision to increase or decrease charging powers is left to the discretion of an independent body, the railways have, on the other hand, a means provided for them, whereby the revenue of 1913, which I may say was not a bad year from the railway companies' point of view, may at least be maintained.

COMPANIES AND UNEMPLOYMENT.

A further contribution which the railway companies, in common with other large corporations, have made towards improving trade and solving the problem of unemployment, has been the orders they have placed for works and stores and equipment.

You will doubtless have seen in the Press a reference to the fact that we have pledged the company to an expenditure of about £14,000,000, which, I am sure you will agree with me, is a substantial contribution towards dealing with unemployment. We have placed orders for rolling stock, steel rails, sleepers, steamships, machinery, &c., covering our approximate requirements over a period of two years, and further, we have taken in hand many large schemes of accommodation which might otherwise have waited some time longer.

In doing this, we have been actuated by the fact that industry needed a stimulus such as could only be given by concerns like ours. In every case your board has given the most careful consideration before the orders have been placed over all the industrial centres, and we are satisfied that the schemes to which we have agreed are in the interests of the shareholders, as net revenue will benefit by more economic working, which will result from the expenditure we are incurring.

DEVELOPMENT WORK.

The following are amongst the largest schemes which have been included in this arrangement:—

Electrification of railway between Manchester and Oldham.
Widening of line between Chevet Junction and Snydale.
Widening of line between Crewe and Weaver Junction.
Sundry widenings of the line between Preston and Carlisle.
Remodelling of stations at St Annes, Thornton, Manchester (Victoria and Exchange), Bangor, and Walsall.

Orders for four new steamers for the Goole and Continental service, which have been placed with firms at Barrow and on the Clyde.

The result of these orders will, I am sure, be cumulative, and will tend to bring traffic on to your line. At the same time we are taking every opportunity of standardising the equipment, and whilst, after an amalgamation of the character such as that now embraced in the London Midland and Scottish line, this work of standardisation of equipment will be a matter of years, we have made a beginning towards the desired end.

RELATIONS WITH STAFF.

Our relations with the staff during the period covered by the accounts have generally been good, and your board are alive to the fact that it is in the interests not only of the employees themselves, but also of the shareholders, that the relationship between the administration and the employees should be of the most friendly order.

A Bill will be presented to Parliament during the present session asking for powers to establish a new superannuation fund for new staff, as foreshadowed in the Railways Act of 1921, and further powers will be asked to allow of the present superannuation funds being merged into the new fund, provided members request this to be done.

Further, we are seeking powers to advance money on loan to members of the staff who are anxious to acquire their own houses. It is proposed that the company shall advance up to a limit of 90 per cent. of the value of the houses, the amounts so advanced being repaid over a period of years by means of deductions from the salaries or wages. In this way it is hoped that not only shall we aid in the provision of better and more comfortable home conditions for our own employees, but also make a substantial contribution towards the general housing problem of the country. Until parliamentary powers are obtained, however, your directors feel that they cannot take any definite action in the matter.

We have, further, embarked upon a scheme of welfare, the object being to ensure that the conditions under which the staff carry on their daily work are of the highest order; that proper provision is made for promptly treating cases of temporary in-

disposition; and that all reasonable facilities are afforded for the recreation of the staff during their leisure hours.

By these means we hope to secure, and keep, a happy and contented staff, and we are satisfied, after the most careful inquiry, that any improvements the company is able to bring about in the direction I have indicated will be reflected in the greater efficiency with which the staff will carry out their duties.

LABOUR AND REDUCTION IN COSTS.

This is at least one way in which we may secure increased production, which must mean reduced costs. Our prosperity is bound up with increased demands for our services as carriers; and if we are to stimulate that demand, we must get down our costs. We can prove to our employees that reduction in costs, brought about by increased production, is to the advantage of labour as a whole, inasmuch as bigger business means bigger staffs all round, and thus tends to reduce general unemployment. It is for this purpose that we have adopted the schemes to which I have referred, and consistently reduced rates, and we feel certain that it can have nothing but a beneficial effect from the shareholders' point of view.

NATIONAL WAGES BOARD AND THE STRIKE.

Whilst it is true that our relations with labour during the past twelve months have been, as I say, good, during the last few weeks we have had a dispute with a certain section of our employees. The railway interests, following a set course of procedure, applied to the National Wages Board for certain reductions in wages and alterations in the conditions of employment. As some of you are aware, the wages now paid on our railways are on a very much higher level than the wages paid in other industries, and after the most careful consideration, the railway administration came to the conclusion that the time was appropriate for such wages of be somewhat reduced. As I have stated, the application was made through the proper channel, and was considered by the National Wages Board, consisting of an independent chairman, six representatives of the railway companies, six representatives of the railway trade unions, together with four users of the railways nominated, as follows:—

One by the Parliamentary Committee of the Trades Union Congress.

One by the Co-operative Union.

One by the Association of British Chambers of Commerce.

One by the Federation of British Industries.

This Tribunal is recognised as being thoroughly impartial, and when I tell you that in response to the railway companies' application, which covered a total sum of £4,000,000, they only received findings giving a reduction of approximately £500,000, of which this company's proportion was about £175,000, you will see that the result was not as satisfactory as we could wish. Recognising, however, the impartiality of the Tribunal, we accepted the findings, as did two of the unions concerned, viz., the National Union of Railwaymen and the Railway Clerks' Association. The executive of the Associated Society of Locomotive Engineers and Firemen, two of whose members had signed the unanimous report of the Wages Board, recommended its acceptance to their delegate meeting, but they declined, and decided to take a ballot of their members, the result of that ballot being that rather than submit to the reduction in wages and alterations in the conditions which had been imposed, they would cease work.

I need hardly tell a body of shareholders like yourselves that, inasmuch as the members of this society constitute some of our most expert employees, viz., the drivers and firemen of our trains, we experienced some difficulty in maintaining our services. With the goodwill of our other employees, we did run a reasonable service, which, I am sure, was appreciated by the public at large. I am glad to say that after a stoppage lasting just over a week an agreement was arrived at.

SPLITTING OF ORDINARY STOCK.

At the final meeting last year of the old London and North-Western Company, when I had the honour of addressing some of you, I was asked to bring the question of splitting the ordinary stock of the new company that was then about to be formed before the notice of the board when it met, and in compliance with this desire on the part of some proprietors the matter was fully considered by your board in April last, and an intimation was issued to the Press that it had been decided not to split the company's ordinary stock into preferred and deferred stock. There were many reasons for this conclusion being arrived at, but amongst the most cogent of them was the fact that the aim during amalgamation was the consolidation of stocks and the elimination of anything in the nature of "watering"; many of the old company's stocks have been held in the same families from generation to generation, and it must not be overlooked that if the company creates an artificial value of its capital for speculative purposes without any additional assets, it does so with no benefit to continuing stockholders, and, in fact, with obvious disadvantage to

the genuine holder in that it increases the death duties, and might have the further disadvantage of seriously affecting the position of trustee investments under the Trustee Act, 1893. Although, as I have said, the views expressed by some of the shareholders at the annual meeting last year have received the careful consideration of the directors, it must not be lost sight of that there are many proprietors with large holdings who are strongly opposed to any interference with the existing ordinary stock.

ISSUE OF PASSES TO SHAREHOLDERS.

I must now turn to a matter which is personal to some of you—that is, the question of the issue of passes to shareholders, to enable them to attend the meetings.

The chairmen of two or three of our constituent companies, some twelve months ago, promised to bring the question of the issue of passes to shareholders before the new board. This pledge was fulfilled, and I need hardly assure you that your directors gave the matter their most careful and sympathetic consideration. Your board were quite alive to the fact that it had been the practice of some companies—the principal one being the Midland—to issue passes to their shareholders for the purpose of attending the annual meetings, and whilst we should have been only too pleased to continue this practice, it was felt that it was not a practicable proposition.

I am sure, when you know that we have 250,000 shareholders in the London Midland and Scottish Company, more than 40 per cent. of whom live north of Crewe or Derby, that you will agree with me that it would not have been practicable, without very gravely interfering with our ordinary traffic, to have put on a vast number of special trains with a view to bringing our proprietors to London.

Assuming we could have surmounted this difficulty, a further problem would immediately await us in the matter of providing a hall large enough to accommodate the shareholders. The Metropolitan has attractions for almost everyone, and in this respect differs from provincial towns, such as Derby, and we felt that the problem with which we were faced was an insuperable one, and whilst, as stated, we have given the matter our most careful and sympathetic consideration, we felt it would not be the wish of the shareholders generally that free tickets should be issued for this purpose.

I am sure this decision will commend itself to the shareholders present as being the only practicable solution to the matter.

EXCHANGE OF CERTIFICATES.

After the Railways Amalgamation Tribunal approved the amalgamation of the Caledonian, North Staffordshire, and London Midland and Scottish Railways at the end of June, all the consequent conversions of stock had to be carried out. These were completed during the autumn, and the exchange of certificates was then taken in hand, in accordance with my remarks on this subject at the final meeting of the old London and North-Western Company, when it was pointed out that the exchange of certificates was a very large operation, and would take some considerable time. From estimates that have been made, it is probable that two million certificates will have to be exchanged before the conversion is completed. We are now exchanging about one thousand a day, taking them in fixed order, so that all proprietors receive the same consideration. An advice is issued immediately we are in a position to deal with the certificates of any person, and it will save proprietors from making inquiries if they will kindly bear this remark in mind. Shareholders may criticise this statement by pointing out that it will take a very long time to complete the exchange if only one thousand a day are dealt with, but we cannot under existing circumstances see our way to increase this number at present. I hope, however, it will be possible to make a decided improvement in the rate of exchange before very long.

The new company with which we are associated is a vast one, but notwithstanding this, the administration, through the organisation which has been set up, is in constant touch with every portion of it, and it is, perhaps, unnecessary for me to inform the shareholders that we are quite alive to their interests, and anything that we as a board or our officers can do to influence traffic or improve our revenue will be done.

We are anxious to get into close and personal touch with the traders on our line, and if they will only communicate with our officers when they want transport facilities they would, I am sure, be met with courtesy and obtain facilities of which in many cases they were not aware, with good results both to themselves and to our company.

THE NEW POSTERS.

The proprietors will have noticed a statement in the Press to the effect that we have engaged the services of several noted artists to produce for us some posters illustrative of many of the beauty spots on our line.

For some time past we have felt, in view of the cultivated taste of the British public, that it was necessary to strike a higher note

in our advertisements, and from the pictures which are arranged round the room, which are the originals from which the posters will be taken, I feel sure you will agree that the experiment has been an undoubted success, and should be continued.

We have also made arrangements which will ensure the true facts in regard to the London Midland and Scottish Company being kept before the public through the Press, and our efforts in this direction also have met with unqualified success.

We are a great corporation, owning over 7,000 miles of railway line, and extending from London to Wick, from Southend to Donegal, and from Swansea to Goole.

Our total capital is almost £400,000,000, and our annual passenger train traffic receipts £32,500,000, derived from over 353,000,000 passengers, 319,000 season ticket holders, and mails, parcels, &c. Our goods traffic receipts amount to over £46,000,000 a year, and we have 269,000 employees.

ENORMOUS NUMBER OF SHAREHOLDERS.

I would also point out that, contrary to what is often considered to be the case, we have, as I have already stated, as many as 250,000 shareholders, with an average holding of under £1,200 stock, and in addition, 60,000 debenture stockholders, and if it were possible to arrive at the number of persons interested in each account, the average interest would be found to be small. Very many of our own employees are interested in the company as shareholders, and the opportunity is taken when it occurs of encouraging the staff to take a financial interest in the company.

I place these facts before you because your directors are of opinion that it is necessary, in the interests of the travelling public and the traders, that the principal statistics of such corporations as ours should be impressed upon the minds of the public, and that they should also be informed publicly of the facilities which are available, feeling certain that it cannot but result in increased revenue to the company.

The company's interests are the interests of the shareholders, and I would urge you to keep this fact in your mind, that no business is too small for us to cater for, and no trouble too much for us to go to with a view to improving our revenue, and I trust that the results which have accrued during the past 12 months, and which, in themselves, are not unsatisfactory, will in the coming year be improved.

THE DIRECTORATE.

Under the last amalgamation scheme it is provided that the directors elected by the constituent companies shall hold office until the date of the first ordinary meeting, when the proprietors shall elect a board of not exceeding 28 members, of whom one-third shall be re-elected at each subsequent annual meeting. Owing to the exceptional circumstances existing to-day, as every member of the board is concerned, it will not be possible to follow the usual procedure, and I shall ask two shareholders in the body of the hall to move and second respectively a resolution proposing the election of the whole of the directors on the board.

THE AUDITORS.

It is also necessary for us to make arrangements for the carrying on of the audit work of the company, and a resolution will shortly be moved as to the appointment of Sir Nicholas Waterhouse and Mr F. D. Morris as auditors of the new company, at a fee of 800 guineas each per annum.

Each of the gentlemen named has had great experience in dealing with railway accounts, and your board thoroughly recommend them for the appointment.

At the same time, following the practice which has been previously adopted in every case, we are suggesting for your approval that an *ex-gratia* payment equal to two years' fees shall be paid to each of the auditors whose office is abolished by reason of the amalgamation, and on this point a resolution will be moved in due course.

IRELAND.

With regard to Ireland, I am happy to be able to say that the country has now settled down, and that we may look forward with increased confidence to a substantial improvement in its trade. This company has expended from time to time large sums of money in connection with its Irish business, and a large proportion of our stock is held—and not unprofitably held—by Irish people. Therefore, we are anxious to do everything possible to assist in the full development of the resources of that country.

The possibility of development is, of course, dependent on the policy of the Governments with respect to transport facilities, and we are satisfied that if arrangements are made along wise and well considered lines prosperity will be assured.

Ireland, irrespective of its large industrial enterprises, is a magnificent food-producing country, and even with the most intensive development, markets exist on this side of the Channel

which can absorb all the Irish output, and if proper transport facilities exist, suitable services can be given through the ports on the West Coast of England, which our railway serves, viz.:—Holyhead, Liverpool, Garston, Manchester, Preston, Heysham, Fleetwood, Barrow, Ayr, Gourock, Greenock, and Glasgow. As a result, Ireland will get the advantages of markets which are now largely supplied from other places.

In addition, Ireland is in a special sense naturally a tourist country, and it may be expected that with good and comfortable services, reasonable fares, &c., tourists in large numbers will be induced to visit its many beauty spots and various sporting centres.

QUINQUENNIAL VALUATION.

Under the provisions of the Valuation and Rating Bill, it is proposed that special properties such as railways shall be re-valued *in cumulo* quinquennially by a central valuation authority to be constituted with a chairman who has held judicial office, together with nominees of the London County Council, County Councils' Association, Municipal Corporations' Association, Urban and Rural District Councils, and the Association of Poor Law Unions.

The Central Valuation Authority is to fix the valuation of the railway as a whole, and then apportion that valuation out among the parishes in which the property stands.

If the Valuation and Rating Bill is not proceeded with, it is recognised on all hands that a Bill must be promoted in Parliament to deal with the valuation for rating purposes of railways, because in two instances, the London Midland and Scottish, and the London and North-Eastern Railway Companies, the system extends into Scotland, where the law of rating differs very much from that in England. Consequent upon the grouping of the railways, the revenue and expenditure in Scotland cannot be ascertained in such form as will meet the requirements of the Assessor of Railways in Scotland.

TRANSITION PERIOD.

As it will take at least another twelve months to get this somewhat thorny question settled, it has been necessary for the local authorities and the railway companies to decide upon some scheme to cover the transitory period. With such object in view, for some months past conferences have been taking place between the National Conference of Assessment Committees, the County Councils' Association, the Municipal Corporations' Association, and the railway companies, and it has now been agreed that the transitory provisions which have been in force for the past two years shall, subject to certain modifications, be extended for a further period of twelve months.

Your board are very carefully watching this matter, and you may rest assured that every step will be taken to safeguard the interests of the shareholders.

So far as the political situation is concerned, I am sure that the new Government are as anxious as any preceding Government to promote the interests of this great country.

TRADE LEGISLATION NOT DESIRED.

This is not the time for rash experiments in economics, and, in my opinion, what is required is that the Government should leave the business concerns to work out their own salvation, which they would be able to do effectively with an improving international situation and its direct connection with trade. Of course, to this I should add that any improvement would be retarded in the event of the Government introducing legislation which would impose onerous conditions upon trade. British credit to-day stands higher than at any time during or since the war, and the only real danger I can see at the present time is that unemployment may become a habit if the conditions under which the unemployed can obtain support are made too easy.

The exercise of economy and work are the royal roads to prosperity, and if the Government would cut down expenditure and thereby reduce taxes, it is conceivable that more revenue would be provided for the State than can be gained by maintaining taxation at a level which destroys productive enterprise and development, and I am convinced that we can, with our usual British determination, face the future with confidence and hope, that is if we all, employers as well as employed, work cordially together for the common interest.

IMPROVED RELATIONS BETWEEN EMPLOYERS AND EMPLOYEES.

Slowly but surely a new and higher conception of the economic solidarity of the nation, a conception of employers and employees working as a genuine household, and not as a mere multitude of competing individuals, is making headway in all classes of society. That ideal may be hard to realise; it can never be realised at all except by gradual stages, and to force the pace would be to invite

disaster, but against such precipitancy there is a great safeguard in the temper of the British people, in their good nature, their hatred of violence and respect for individual rights, and in their preference for the immediately practical, rather than theoretical perfection. That temper has helped this nation in less than a century completely to transform our political institutions, without any of those sudden and catastrophic changes by which the same transformation has been carried out in other lands, and so it is not unreasonable to hope that in this country, where there is so much practical Socialism, the work of social organisation still before us will be accomplished in a similar spirit and by similar methods, and that, in that respect, we may set an example to the world.

TRIBUTE TO OFFICERS AND STAFF.

I think it would be your desire, before I sit down, that I should express on your behalf, as I certainly do for the board, and especially myself, our appreciation of the services rendered by the officers and staff during the past 12 months. The changes consequent upon amalgamation have placed further burdens upon the officers, and many have had their duties very considerably increased, and others—through circumstances over which we have had no control—have undertaken fresh duties. I think we can congratulate ourselves upon the fact that, so far as it is humanly possible, things are shaping well, and whilst in a few isolated instances the final arrangements with regard to the staff generally have not yet been made, this is a natural corollary to the amalgamation, and I have little doubt that before the next annual meeting the whole of our organisation will have been perfected, and the machine will be functioning as a whole. The officers and staff have worked loyally for you, and I feel certain that it will be your wish that we should recognise this in our proceedings to-day.

And now, ladies and gentlemen, one word in conclusion, and that of a personal character. This is the first occasion on which I have had the honour to address you at the annual meeting as chairman of the London, Midland, and Scottish Railway Company, and it will be the last in which I shall do so in that capacity, though I shall still hope, with your permission, and at all events for the present, to remain an ordinary director of the company.

It is now 40 years since I entered this building as a director of the old London and North-Western Railway, under the chairmanship of my revered master, the late Sir Richard Moon, and during that long period I have had frequent opportunities of addressing its shareholders, so I wish to take this opportunity—the only one I shall have—to thank them for the unvarying courtesy and consideration with which they have always received me.

You, ladies and gentlemen, I have also to thank for the patience with which you have listened to this long, and I fear wearisome, address; but at our first annual meeting of the new company it was necessary to give you a detailed review of its position as it exists to-day. Long may it continue to prosper and be a credit to all who are connected with it, whether as shareholders, directors, officers, or staff, and anything I can do to further that object in a humble capacity I shall consider as a privilege, and not as a perfunctory duty.

I now beg to move:—

“That the report now read, with the statement of accounts, be received and adopted.”

SOBER POLICY COMMENDED.

Mr. E. B. Fielden (deputy-chairman) seconded the motion. Some discussion followed, in the course of which Mr Sutcliffe Thomas said that in view of the trade conditions the board had had a difficult task, and, therefore, the satisfactory character of the report was much to their credit. In spite of a certain amount of carping criticism, he believed the shareholders generally were perfectly satisfied with the proposed dividend.

Sir Charles Wakefield, chairman of the English Railways Stockholders' Protection Association, said they had heard with deep regret the chairman's announcement of his retirement from the chair. With regard to the report, he thought that the sober financial policy therein disclosed was absolutely right, and, as the previous speaker had said, the dividend declaration was highly commendable, having regard to the future capital requirements and other considerations.

Sir Fortescue Flannery and Sir William Fry supported the motion, and paid a warm tribute to the chairman's services.

Sir W. F. Russell (chairman of the Scottish Railway Stockholders' Protection Association), after congratulating Lord Lawrence on his lucid statement, said that the accounts showed the company to be in a very strong financial position. Accordingly, the appropriation from the reserve of £200,000 to make up the dividend of 7 per cent. was more or less a drop in the bucket. He rather thought most of them would have been better pleased if what he might call two additional drops had been taken out of the bucket, and the dividend had been $7\frac{1}{2}$ per cent.

References were constantly being made by certain politicians to railway capitalists, plainly meaning to infer that the railways were owned by large capitalists. As a matter of fact, the railways were, in the main, composed of small investors, and the average dividend on railway holdings was something like $3\frac{1}{2}$ per cent. Now that rates and fares had been reduced to 50 per cent. over pre-war rates, it appeared to him that the companies and this company

had met very handsomely the needs of traders and the general public. There were, he said, very few traders to-day who were selling their wares as low as 50 per cent. above pre-war rates, while, on the other hand, the increased on-cost on the railways was probably now heavier than that in any other industries.

After further discussion, the report and accounts were adopted unanimously and the proposed dividends agreed to.

GREAT WESTERN RAILWAY COMPANY.

VISCOUNT CHURCHILL'S REVIEW OF YEAR'S WORKING.

REDUCED RATES AND THEIR EFFECT.

LABOUR AND STRIKES.

The annual general meeting of the proprietors of the Great Western Railway Company was held, on the 27th ultimo, at Paddington Station, London, the Rt. Hon. Viscount Churchill, G.C.V.O. (chairman of the company), presiding.

The secretary (Mr A. E. Bolter) having read the notice convening the meeting,

The Chairman, after expressing regret at the death of two of the directors—Lord Plymouth and Mr Charles Mortimer—said:—

Now, before commencing to go through the accounts, I feel sure you would all like to join me in offering our most hearty congratulations to our general manager, Sir Felix Pole, on the honour which has just been conferred upon him by the King. It is an honour of which we of the Great Western Railway are justly proud, as we know that the recipient of it has by hard work, perseverance, and outstanding ability thoroughly earned it, and we wish him many years of health and happiness to enjoy it, and we hope that his working life may be always associated with the Great Western Railway.

THE ACCOUNTS.

I will now go through the accounts in the usual manner, and I will ask you to turn first to the capital account, No. 4 on page 7. This shows an expenditure during the year of £4,654,350. The details are set out, but by far the greater portion of the amount is in respect of the purchase of the undertaking of the Swansea Harbour Trustees, and this transaction also accounts for the item of £2,889,784 on the other side of the account, which is the amount of stock of the company issued as part of that transaction.

Now, going to the revenue account, you will find the figures in Account No. 8 on page 10. It will be seen that the receipts for the railway and other businesses for the whole year amounted to £36,723,331, and the expenses to £29,778,508, leaving as net receipts £6,944,823. The miscellaneous receipts from rents, interest, &c., amounted to £1,292,200, thus increasing the total net revenue to £8,237,023. This is carried to the next account (No. 9) on the same page.

DIVIDENDS.

Now this amount would not have been quite sufficient to maintain the same dividend, viz., 8 per cent., as was paid last year, and it was felt that in the circumstances an appropriation could very properly be made from the reserve for contingencies—which I will refer to shortly—of £150,000, and, with the balance brought in of £304,932, this makes the total of £8,691,955.

After payment of interest on the debenture and rent charge stocks, rents of leased lines, &c., particulars of which are shown and which amount together to £2,415,111, a balance is left available for dividends of £6,276,844. After allowing for the dividends on the guaranteed and preference stocks, amounting to £2,578,564, a balance of £3,698,280 remains available for dividend on the ordinary stock. The interim dividend of 3 per cent., which was paid for the half-year to June, absorbed £1,273,222, leaving a balance of £2,425,058, which enables the payment of a dividend on the ordinary stock for the last half-year of 5 per cent., making a dividend of 8 per cent. for the whole year and carrying forward a balance of £301,963.

Now, you will have noticed that we have not yet reverted to the old practice—and I think a very useful one—of showing for purposes of comparison the figures of the preceding year. Although the present accounts, practically speaking, cover the second year's working of the Great Western Group, comparisons between 1923 and 1922 are vitiated by the inclusion in the group of a number of the smaller lines at different periods in the two years, including the Swansea Harbour undertaking, which was absorbed on July 1st last, and we must wait another year—that is, to the end of the current year—before reintroducing the old practice.

YEAR'S FIGURES.

As a matter of fact, the gross receipts of the railway and other businesses for 1923 were less than for 1922 by about £1,800,000, and the working expenses were less by £1,325,000.

This gives a net reduction of £475,000, which is equated largely by the miscellaneous receipts—consisting principally of rents and interest—having brought an increase of £436,000. The chief item, namely, general interest, is £380,000 more than last year, owing mainly to the second instalment of the Government compensation money having been received at the commencement of 1923. Owing to the absorptions, there is an increase in the capital, calling for a corresponding increase in the interest and dividend, with the result for the year which I have already mentioned.

RATES AND CHARGES.

At our last meeting I referred to the policy which the railway companies were pursuing of reducing rates and charges concurrently with—indeed, in anticipation of—a reduction in expenditure. To assist a revival of the trade of the country, we felt that this was the right course to take, and I am glad to tell you that last year the traffic originating on our system increased by 12,600,000 passengers and 7,800,000 tons of merchandise. Naturally, however, the reduction of rates has had the effect of reducing our receipts per passenger and per ton of goods. Our hope was, of course, that this would stimulate traffic, and this has to a large extent been the case, but not sufficiently, in fact, to cover the whole of the diminution in gross receipts brought about by the reduced charges. Our passenger fares and rates for goods and mineral traffic are now about 50 per cent. above the pre-war level, with certain flat rate additions, which, after full inquiry, the Minister of Transport decided should be added to compensate for the extra cost of working short distance traffic, and which also had been reduced with the rates. Having regard to the enormous increase of wages and of materials as the result of the war, I feel that the public and the traders must admit that in thus reducing our charges we have done nearly—if not entirely—all they could possibly expect in this respect.

FLAT ADDITION PROTEST.

Perhaps not unnaturally, the traders who have enjoyed the benefit of the extremely small railway rates in respect of short distance traffic do not like the flat addition, and in the latter part of the last year certain associations of traders in South Wales made applications to the Railway Rates Tribunal for the removal of the flat rates on coal, coke, and patent fuel traffic. This would have involved a serious loss of revenue to the company, and, after a full hearing, the tribunal dismissed the applications. I am personally sorry that the traders felt it necessary to take the course they did, because the policy of the company is to endeavour to settle such matters in friendly conference between their officers and the traders, and I hope we shall continue to do this. In this particular case we saw no practical means of meeting the wishes of the traders, more especially as the very carefully compiled statistics which are published by the Ministry of Transport show that the average receipt per ton per mile on coal traffic in South Wales compares most favourably with other parts of the country. A general application as affecting all the companies is now before the Railway Rates Tribunal, and, therefore, I will not comment upon it pending the delivery of their judgment.

It is anticipated that at an early date the tribunal will be proceeding with the ascertainment of the standard revenue to which the various companies are entitled, and the fixing of the charges to produce it.

QUESTION OF CHARGING POWERS.

You will realise that this question of charging powers is of vital importance to the railway industry. The basis of the Railways Act is that the companies are to be entitled to earn a standard revenue equal to the aggregate net revenues of the railways in the group for the year 1913, with certain additions in respect of interest on capital expenditure, which I have explained at previous meetings.

Whilst on the one hand we are ready to afford our customers the benefit of reduced expenses in materials and wages by reducing

rates and charges—and in doing this to make as much allowance as we feel justified in doing in the hope of attracting an increased volume of traffic—it is our duty to proceed with due regard to the interests of our proprietors. The Act itself is designed to protect their interests concurrently with the interests of the traders, and in its operation it should have the effect of stabilising the return on railway capital, thereby placing it on a level of solid and permanent security.

LARGE PROPORTION OF SMALL INVESTORS.

Now, ladies and gentlemen, there is a feature which ought not to be lost sight of in connection with railway undertakings, and that is that the capital is very widely spread among the people of the country and is held in a very large number of accounts.

I find from a return which I have had prepared that out of 52,000 holdings of Great Western ordinary stock 34,534, or 66 per cent., are for amounts of £500 and less; and, if we go to a limit of £1,000, the total number of holders of that amount and less is approximately 44,000 out of the total of 52,000—being 84 per cent.—a very remarkable figure. If we take the ordinary, preference, and guaranteed stocks together, the total number of holdings is 104,000; 60 per cent. are for £500 and under, and 78 per cent. for £1,000 and under.

These figures do not take into account the considerable holdings by insurance companies, societies, and other institutions, which they hold in the interest of great numbers of people of very small means.

I think it well to mention these figures to show how large a proportion of railway capital represents investments of small holders, who rely upon a sound and permanent security.

THE REPORT.

It will be convenient, perhaps, that I should, as usual, go through the paragraphs in the report. No. 1, which refers to the accounts, we have already dealt with. No. 2 refers to the four railways which were absorbed last year under the Railways Act, and which completed the group, and I think calls for no comment; also to the final amalgamation scheme, which was settled by the Amalgamation Tribunal to constitute the Great Western Company the Amalgamated Company for the group.

No. 3 records that the vesting of the undertaking of the Swansea Harbour Trustees took effect as from July 1st last, on the terms which were approved by the proprietors in February. We are quite satisfied that the taking over of this property—thus bringing the whole of the larger docks in South Wales under one control and management—is to the advantage of the users of the docks as well as of the company. Nos. 4 and 5 refer to the various works which are in hand, and which are really much overdue, principally in connection with the extension of the accommodation at certain important stations. But for the war, these works would have been long since taken in hand, and they are absolutely essential for the conduct of the traffic and for the carrying on of the business of the company.

DEVELOPMENTS IN SOUTH WALES.

Paragraph No. 6 refers to developments in South Wales. The most important of all has reference to the carrying capacity of the wagons used for mineral traffic. The company last year hauled to the docks 36,000,000 tons of coal in 10 or 12-ton privately owned wagons. It is obvious that, if the carrying capacity of the wagons could be increased, the capacity of the railway lines would be correspondingly increased, while the work involved in shunting out the wagons at the ports would be less. Hitherto, owing to the fact that there were three interests involved—namely, the railway, the colliery proprietor, and the dock owner—practically no progress has been made in this direction. Now that the docks and railways are owned by the Great Western, we felt that the time had come to make a real effort to remove this blot upon our arrangements. With this object we are taking in hand the tipping appliances, many of which would require renewal in the ordinary course, and are adapting them to take 20-ton wagons, and an earnest appeal has been made to the colliery proprietors to adapt the colliery equipment for, and to provide, 20-ton wagons. We have offered a reduction of rate in respect of coal conveyed in fully loaded 20-ton wagons, and satisfactory progress in this direction is being made.

RENEWALS AND UNEMPLOYMENT.

Paragraph 7 relates to another important matter. Owing to the war the renewal of the rolling-stock has got seriously in arrear, while stock has not been provided for the growth of traffic. Active measures are being taken to overtake arrears in both respects.

Paragraph 8 refers to the provision of two new steamers for the Channel Islands traffic, in replacement of boats which are over 30 years of age.

Now, these various matters obviously involve considerable expenditure.

As you are already aware from statements which have been made in the Press, the late Government urged the railway companies to

do what they could to assist in the effort to alleviate unemployment by carrying out as much work as possible. We were already doing all we could to overtake arrears of renewal work, and I had no difficulty in submitting to the Minister of Transport a detailed statement of the Great Western position in regard to new works involving capital expenditure, expenditure on maintenance and renewal work, and the placing of orders for stores in anticipation of our requirements. In all these matters, while endeavouring to assist the Government, the interests of the shareholders were kept very fully in mind.

BRITISH MANUFACTURERS' PRICES.

Ladies and gentlemen, this leads me to a point of very considerable importance. In placing orders for stores, the company has consistently followed the policy of dealing only with British manufacturers, but it is useless to ignore the fact that materials of many descriptions can be purchased abroad at prices considerably below those of British manufacturers. I feel certain that the shareholders will approve the course which has been taken by the board in the interests of British trade and to relieve unemployment. Of course, what the future may have in store for us no one can tell, and I can only hope that, to enable us to continue this policy, the prices charged by British manufacturers may before long come down to a more reasonable level as compared with their competitors abroad.

Reverting for one moment to the letter which I sent to the Government in regard to relieving unemployment, I recall that we took the opportunity of placing before the Government certain schemes for new railways, in regard to which great pressure was being brought to bear upon the company. From a commercial standpoint, the company could not undertake the construction of these lines, but it was recognised that there was a great local need for some of them, and, having regard to the very large expenditure which the Government and local authorities are now incurring upon road maintenance, it was thought that a fair offer to the Government would be that, if financial assistance were forthcoming from the State similar to that given to local authorities under the Roads Act, 1920, the company would be prepared to undertake the provision of a certain number of new lines in districts where they were most required. You will be interested to know that, although this letter was specially drafted in response to an urgent appeal to assist to relieve unemployment, no reply has yet been received from the Government.

PARLIAMENTARY BILLS.

Paragraph 9 relates to the special general meeting which is to follow this meeting—but it is convenient, perhaps, that I should follow the usual course of explaining shortly the several Bills which are to be submitted for your consideration at the special meeting.

The first is our General Powers Bill. Powers are sought by this Bill for the construction of two short lines in the neighbourhood of Pwllheli, at the northern extremity of the Cambrian Railway, and for various other works, and the acquisition of additional lands.

The next Bill is to obtain power to continue the increased rates, dues, tolls, and charges in respect of our dock undertakings after the present powers, under Orders made by the Minister of Transport, expire in February, 1925.

The third Bill is to be submitted because it contains a clause which would enable this company and the Southern Railway Company jointly to work traffic to and from the Channel Islands, if it were found desirable to do so.

The last is an order to authorise the company to abandon the construction of the authorised Callington Light Railway.

THE RECENT STRIKES.

You will expect me to say a word as to the recent strikes of enginemen and firemen—members of the Associated Society of Locomotive Engineers and Firemen—and of dock employees.

I should prefer to say as little as possible about these unfortunate incidents, especially as the circumstances of each of them were fully reported in the Press.

As regards the railway strike, I can only express my very great personal disappointment that, after all our efforts to establish machinery for negotiating wages settlements with the trade unions, we have apparently so far failed to prevent strikes.

In the case of the dock employees, the arrangements for dealing with labour matters are perhaps not quite as complete nor are the service conditions so definite as in the case of the railways. I am sure, however, that it is the wish of the proprietors—as it is of the board of directors—that every possible effort should be made so to improve our conciliation—and, I would venture to add, arbitration—arrangements as will lead to settlements without strikes.

It is not customary at these meetings to refer to politics, and what I am going to say must not be regarded as a breach of this unwritten law, but I cannot refrain from remarking that, as we now have a Labour Government, it seems to me that they could do no greater service to the nation than seriously to consider ways and means whereby, if strikes are not to take place, there shall be found some greater means than at present exists of preventing them.

"BLACKLEG" TRAFFIC.

One word more on this subject. A good deal has recently been said about "blackleg" traffic. As a railway company we have a public duty to perform as carriers, and, if our men are to be allowed to pick and choose in regard to traffic handled and to refuse to deal with consignments because there is a strike in a particular industry, railway business will be most seriously interfered with. I would, therefore, invite the trade unions concerned in railway labour matters seriously to consider this point, and I say this without the least desire to be provocative, because it is necessary that our position in this respect, and the action which we shall be forced to take if circumstances arise should be fully appreciated by them.

After outlining the steps the company was taking to improve the housing position for employees, and after paying a tribute to the general manager and staff, the Chairman concluded by moving the adoption of the report and accounts.

Sir S. Ernest Palmer, Bt. (deputy-chairman), seconded the resolution.

The report and accounts were unanimously adopted, the dividends were approved, the directors were re-elected *en bloc*, and certain gentlemen were appointed to the audit committee.

At a subsequent special general meeting resolutions were passed approving certain bills before Parliament.

The proceedings terminated with a cordial vote of thanks to the chairman, directors, officials, and staff.

MANCHESTER SHIP CANAL COMPANY.

ISSUE OF 5 PER CENT. BONDS.

The annual meeting of shareholders of the Manchester Ship Canal Company was held in the Houldsworth Hall, Manchester, on Thursday, February 28, 1924, Mr W. C. Bacon presiding.

The Chairman, in moving the adoption of the report and accounts, said: One gratifying feature of the accounts is the increase in tonnage. We have got back to over 5,000,000 tons of seaborne merchandise traffic, a figure which was first reached in the year 1912 and was maintained up to 1915, but, owing to the effect of the war, has not again been attained until the year under review.

The gross receipts from the Ship Canal, consisting of Ship Canal tolls, dues, and miscellaneous receipts, amounted in 1923 to £1,384,743, which, with the exception of the record year 1920, is larger than any other previous year. The year 1920 was, of course, a boom year.

As stated in the report, the surplus from working of dock labour was less by £10,650 than in the previous year. There were reductions made in the wages of dock workers, and the reductions made simultaneously in the company's charges fully absorbed the savings thus effected. The additional traffic, however, would probably have maintained the amount of the surplus had it not been for the strike in July last year, which, of course, adversely affected this account.

The result of the working of the Bridgewater Canals was very disappointing, the balance being only £8,089, as compared with £20,418 in the previous year. In addition to this, however, there were receipts from the Bridgewater railways, rents, and miscellaneous receipts amounting to £4,762 included under their appropriate headings.

WESTON MERSEY ACCESS LITIGATION.

Just a word about the result of the Weston Mersey Access litigation.

When I spoke to you a year ago the opponents had appealed to the House of Lords. As you are aware, the judgment, which was

given in the House of Lords on May 11, 1923, was favourable to the company, as was the case in the first court and in the Court of Appeal. As a result of that judgment, we have been able to collect arrears of dues and tolls for the use of the Ship Canal which accrued during the years 1916 and 1922. As explained in the report, these have been included in the net income for the year, but not in the gross receipts for the year. It was thought that for purposes of comparison it would be misleading to include the figures in the gross receipts. The amount so included in the net revenue account is £56,416, after deducting the outstanding balance of law costs. I am glad that this matter is now entirely disposed of.

With the exception of some small accounts still to be collected, dues and tolls have been paid in full, and the taxed costs settled at an agreed figure.

A satisfactory agreement as to working in the future has been made with the Weaver Navigation trustees and the traders on the Weaver Navigation. Arising out of this agreement, the company are taking powers in the Bill, which will be submitted to you later, to light and buoy the access between the navigable channel of the Mersey and the Weston Mersey Lock. The expense of such buoying, which, it is anticipated, will not be a great matter, will be borne equally by the Weaver trustees and the company.

NET INCOME FOR THE YEAR.

The net income for the year (including the arrears of tolls just mentioned), as you will see from account No. 8, is £869,875. To this must be added the balance brought forward of £45,375, making a total income of £915,250 12s 3d. From this must be deducted interest, rentals, and other fixed charges, amounting to £405,109, leaving a balance of £510,141.

There has been appropriated to reserve for contingencies and repairs the sum of £50,000, practically the whole of the arrears of tolls which I have just mentioned, leaving a balance of £460,141.

As stated in the report, the dividends recommended are as follows:—

3½ per cent. on the Manchester Ship Canal Corporation preference stock.

Ten shillings per share (5 per cent.) on the preference shares.

Ten shillings per share (5 per cent.) on the ordinary shares; leaving a balance to be carried forward to next year's accounts of £35,451.

It is very satisfactory to have got back to our 5 per cent. on the ordinary shares, which we paid for the first time for the year 1920, and I hope that we shall be able at least to maintain it at that figure in the future.

The capital expenditure during the year amounted to £243,867 net, after deducting £82,006 proceeds of sales of land and other matters.

ROCHDALE CANAL COMPANY AND THE COMPANY.

As you are probably aware, the Oldham and Rochdale Corporations made an arrangement with the Rochdale Canal Company to acquire reservoirs belonging to the Rochdale Canal Company in Yorkshire, and a Bill was promoted in Parliament for this purpose.

Under the terms of the Rochdale Canal Act, 1800, the Bridgewater Canals were entitled to all the waste water from the Rochdale Canal, and it was obvious that if these reservoirs were sold the quantity of waste water would be very much reduced. The company, therefore, petitioned against the Bill, and the matter was eventually settled by negotiation between the Rochdale Canal Company and the Ship Canal Company on terms that the Rochdale Canal Company should pay to the Ship Canal Company in respect of these water rights 25 per cent. of the amount of compensation received from the Oldham and Rochdale Corporations. The Ship Canal Company's proportion amounts to £98,333, and half this amount has already been received, and is included in the accounts, as I have explained.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves exceed £13,000,000

OFFICES IN ARGENTINA, CHILE, URUGUAY, PERU, MEXICO AND SPAIN.

Represented in U.S.A. by the
ANGLO-SOUTH AMERICAN TRUST COMPANY, NEW YORK,

(Incorporated under the laws of the State of New York);

and in FRANCE by the

BANQUE ANGLO-SUD AMERICAINE, Société Anonyme, PARIS.

Head Office:—62, OLD BROAD STREET, LONDON, E.C.2

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

It has been suggested, apparently because the company's rights arise under an Act of Parliament dating as far back as 1800, that the Ship Canal Company have been rather hard on the Rochdale Canal Company in enforcing their rights. This is an argument which I am quite at a loss to understand. The Act of 1800 provided that all the waste water from the Rochdale Canal should at all times pass into the Bridgewater Canal. This, of course, was a very important matter because there have been in the past (and there will be in the future) times of drought when there has been a shortage of water in the Bridgewater Canals and the barges could not be loaded to their full capacity because of the insufficient depth of water to float them when fully loaded. There is no ambiguity as to this question of waste water from the Rochdale Canal because it was the subject of litigation with the Rochdale Canal Company in the year 1898 in connection with the sale of water from the Rochdale Canal by the Rochdale Canal Company.

The Ship Canal Company were successful, and in the year 1899, when the Rochdale Canal Company obtained an Act giving them power to sell water from their canal, the Act provided that such powers should only be exercised on the terms that half the receipts from such sales should be paid to the Manchester Ship Canal Company.

Having regard to all the circumstances, I think, and my colleagues agree with me, that the payment of 25 per cent. to the Ship Canal Company of the compensation received by the Rochdale Canal Company for the sale of the reservoirs was a very fair settlement between the two companies.

FUTURE CAPITAL EXPENDITURE.

It is proposed to deepen by a further two feet the Ship Canal itself from the entrance locks at Eastham up to Stanlow as far as the River Gowy, making a minimum depth of 30 feet to the point named. This deepening is extremely important if we are not only to retain the large ships already coming to the Port, but attract still larger ones, which will be able to finish their loading at Ellesmere Port.

I may remind you that we have made no addition to transit shed accommodation at the Manchester docks since the construction in the year 1912 of transit sheds Nos. 7 and 9 at No. 8 dock. After careful consideration it has been decided to proceed with the construction of two reinforced concrete transit sheds of five floors on the north side of No. 9 dock—each of the sheds will be 450 feet long by 110 feet wide.

MANCHESTER SHIP CANAL 5 PER CENT. BONDS.

In order to carry out these works, it will be necessary to issue some additional loans which were authorised at the extraordinary meeting last year, and Manchester Ship Canal bonds carrying interest at 5 per cent. for periods of five or ten years are now being offered. I would urge upon any of the shareholders in the company whose intention it is to invest the dividends to be declared to-day to take up some of the company's bonds, as thereby they would be not only assisting in the development of the port, but also their own money already invested in the company either in preference or ordinary shares.

Both the capital and the interest ranking, as it does, before the Corporation Loan of £5,000,000 are extremely well secured.

On last year's figures there was a surplus of £623,526 available for the payment of interest on £1,018,500 remaining to be issued.

I am glad to say that at last we are in sight of securing regular steamship services from the Pacific Coast of North America, via the Panama Canal to Manchester.

A start has also been made in getting traffic from South Africa. The Ellerman-Harrison-Clan lines are now booking cargo direct to Manchester, and several steamers have discharged part cargoes here.

The regular lines trading to and from Manchester have continued to maintain their sailings.

PROSPECTS FOR 1924.

I find it exceedingly difficult to prophesy as to the future. I am optimistic, and I hope, cheery at that, but neither my colleagues nor myself would venture to hope that we can do better than last year, and, indeed, at present no one can tell what will be the effect of the trade of the port after the advances in charges necessary to cover the increase in wages conceded to the company's workers in order to end the strike in the public interest. No company or port can afford to work at a loss, nor should they be expected to do so. I fear, however, a rise in wages generally will hit many firms very hardly indeed, particularly those who have made large contracts ahead on very close margins, or just covering cost, and which have been based on rates of wages current during the autumn of 1923.

The resolution was seconded by Sir Wm. Kay (deputy-chairman), and carried unanimously.

NATIONAL PROVIDENT INSTITUTION.

PROGRESS UNDER ALL HEADINGS.

The eighty-eighth annual meeting of the members of the National Provident Institution for Mutual Life Assurance was held, on the 29th ultimo, at Cannon street Hotel, London.

The Hon. Vicary Gibbs (the chairman) said that the report submitted by the directors was evidence that a most satisfactory start for the new quinquennium had been made, progress being shown under all headings. New business had been well maintained both in quality and in amount. The new net sums assured, amounting to £1,080,503, carried annual premiums of £43,494, and in both cases the figures were an improvement on those of the previous year. These results were attained in a year when the general trade of the country was bad. The mortality experience during the past year was very favourable, the amount paid in death claims being only 70 per cent. of that expected according to the tables employed in estimating the liabilities. The number of deaths—302—among the policyholders who had assured for the whole term of life included an unusually large number of those who had lived to very advanced ages: there were 111 deaths in the seventies, 87 in the eighties, and five in the nineties. The estimated profit from this light mortality was £73,000, which was a very substantial contribution to the profit fund. The net rate of interest earned had again increased, being £4 11s 10d per cent., against £4 11s 5d per cent. for 1922, enabling the directors to repeat the statement they had made several times in recent years, that it was the highest that had been recorded in the history of the institution. For a good many years it had been the practice of many leading life offices to offer policies without medical examination, and the experience of these offices having proved that, subject to proper safeguards, it could be conducted with success, this institution had commenced to transact this class of business. The revenue account showed that the premium income had increased by £9,000, and interest income by £8,000. The assurance fund had increased by £75,000—a smaller amount than usual owing to the fact that last year they paid away £152,000 in cash bonuses.

With regard to their Stock Exchange securities, the substantial margin in values reported at the last meeting was still in hand on November 20th last, although there had been some shrinkage in values since that date. By actual sales and realisation they added last year a sum of quite £30,000 to the profit and loss account. He could conclude his remarks by making the simple, but highly satisfactory statement that the institution had never before had a more prosperous year in the first of a quinquennium.

The report and accounts were unanimously adopted.

W. T. HENLEY'S TELEGRAPH WORKS COMPANY, LIMITED. FACTORIES RECORD OUTPUT.

The forty-fifth ordinary general meeting of W. T. Henley's Telegraph Works Company, Limited, was held, on the 29th ultimo, at the Abercorn Rooms, Great Eastern Hotel, London, Sir George Sutton, Bt., M.I.E.E. (chairman and managing director), presiding.

The Chairman said: I think we may congratulate ourselves upon the successful results of the year's work, not much better as regards profit than the previous year, but in other respects, which I will endeavour to show you, much more satisfactory.

RECORD OUTPUT.

Comparing with past years the prices of the commodities we employ in our business and the rates of profit, we find that the output of our factories for the year is the largest in the company's career, ranging in the various departments from 15 per cent. to 50 per cent. increase over the previous year. A moment's thought will show you that this means that employment and wages have considerably increased, and that the rate of profit has decreased, or, to put it in another way, an increased demand has enabled us to lower our prices to our customers, to employ more people, and to maintain the same distribution to the shareholders. But perhaps the happiest feature of the year is that this increased employment, increased output per head of the workers in our cable factories. Our factories have been busy, and our experience is that a factory well stocked with orders yields a better output per head of the workers than a factory with a shortage of orders. I believe, too, that our workers realise, at least many of them do, that industrious application to their work, by increasing output, enables more work to be obtained.

I would not have you, however, suppose that the demands upon our factories have been entirely satisfactory. The foreign trade, which was an important part of our turnover before the war, has not been recovered. It now represents but a small percentage of our total. It is no use shutting our eyes and supposing that all is well all round because we have such a good balance-sheet to submit to you. That balance-sheet represents the prosperity of our home

and imperial overseas trade. In foreign countries many new works have been erected, and tariff walls put up against us; countries which were importers of our goods before the war are now ambitious to manufacture for themselves. This applies even to some of our overseas dominions. We no doubt possess great advantages in experience, skill, and organisation, and if tariffs against us are not outrageously high, if our competitors' goods are not offered for sale with the advantages of greatly depreciated exchanges, and if we can utilise our home markets to keep plenty of work in our factories, and so keep down the cost of production, I do not despair of regaining, at any rate, a large part of the lost foreign trade. There are many "ifs," but we are up against them all.

There is a paragraph in the report concerning the Henley's Tyre and Rubber Company, Limited. I will not take up your time by saying again what I said on the last occasion I addressed you. The position is the same, or a little worse. We have the goods, but the selling prices are much too low to enable us to trade at a profit. It is not pleasant to learn from your works manager that men he has had to discharge for want of orders are engaged across the river unloading tyres from ships from America. We do not like it, neither do the men, I expect. The country has decided, at any rate for the time being, not to give tariff protection from dumping by foreign countries. The decision is unfortunate for our pneumatic tyre industry; the outlook is not promising, and we are now seeking other means to enable the factory to meet its expenses.

CONSERVATIVE FINANCE.

For 35 years of annual profit we have set aside a very considerable part for the purpose of providing extensions to increase our output. Year in and year out the figure has grown; most of it is in land, buildings, machinery, and plant, and some of it is in more liquid assets, such as cash, stock, debtors, &c. This company was started with assets and liabilities on an equality in values. You may remember that three years ago we published an account showing a surplus of assets over liabilities amounting to a million and a quarter sterling. We have no interest to pay on a large portion of that sum; the shareholders could have divided amongst themselves those surplus profits instead of leaving them to fructify in the business, and if you will trouble to make a calculation, you will find that the 15 per cent. we are paying pans out at about 6 per cent. on the capital shown by the balance-sheet to be employed in this business.

As to the outlook for the future, it is unwise to be too optimistic, but we have more orders on our books than we had a year ago, and that shows trade improvement. Our relationship with our workpeople continues to be satisfactory, but, of course, disputes in other industries are detrimental to us both, by reason of loss of output and increased cost of production.

The report was unanimously adopted.

BRITISH TRADE CORPORATION. CHAIRMAN OPTIMISTIC OF THE FUTURE.

The seventh ordinary general meeting of the British Trade Corporation was held, on the 27th ultimo, at the Institute of Chartered Accountants, Moorgate place, London, Lord Faringdon (the chairman) presiding.

The secretary (Mr G. de B. Brounlie, A.C.A.) having read the notice calling the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said he had pleasure in drawing attention to the liquid position of the corporation. Their total liabilities on current, deposit, and other accounts amounted to £969,498, while the liquid assets—consisting of cash £157,051, money at call and short notice £280,000, and Government securities £406,250—totalled £843,301, or equal to 87 per cent. of those liabilities. Their investments, taken at market price, or (where not quoted) at a fair valuation, together with their interest in subsidiary companies and their shareholding in the National Bank of Turkey, amounted to £563,049, or, after deduction of the reserve made against them of £325,000, to £238,049.

The principal part of the item "interests in subsidiary companies" consisted of their stake in the Trade Indemnity Company, and the chairman of the company stated that the company had fully justified its existence, and proposed at an early date to increase its capital.

Under the heading of "investments" was included their interest in the new capital of the Levant Company. That concern has been reorganised quite recently. The managing director reported that up to December 31st it had, after providing adequate reserves for contingencies, made a small profit.

Their branches at Danzig, Belgrade, and Zagreb had made some progress.

Turning to the profit and loss account, it would be seen that they had a credit balance of £74,387, from which it had been necessary

to transfer £25,000 to "reserve against shareholding interests," making that amount, with the balance carried forward from last year and the capital writing down that the shareholders had authorised, £325,000. The balance remaining upon profit and loss account was, therefore, £49,387 11s 5d, from which there had to be provided £38,906 4s 11d for dividend upon the "A" shares, leaving £10,481 5s 6d to be carried forward. A full year's dividend upon the "A" shares was only £30,000. The £8,906 additional, which was chargeable to the year's account, represented the dividend upon instalments received in 1922, but which was not paid last year. He regretted that they had no dividend for the other shareholders, but the directors hoped that, having cleaned the sheet of past misfortunes, a favourable future was before the corporation. The report and accounts were adopted.

SELFRIDGE AND COMPANY, LIMITED.

SPLENDID RESULTS OF YEAR'S BUSINESS.

GOOD PROSPECTS FOR CURRENT YEAR.

The sixteenth annual ordinary general meeting of Selfridge and Co., Limited, was held, on the 29th ultimo, at the company's stores, Oxford street, London, Mr H. Gordon Selfridge (chairman and managing director) presiding.

The secretary (Mr A. H. Youngman) having read the notice convening the meeting, and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen,—

While the year just passed has contained its full share of those elements which make the doing of business difficult, it will in commercial history count as perhaps the best period since the abnormal year of 1919. It shows progress—not very much yet—but a certain progress towards more normal or reasonable conditions.

BUSINESS ADJUSTING ITSELF TO CHANGED CONDITIONS.

We must forget what was accepted as normalcy during the period before the war, just as men of business of the early years of the twentieth century were obliged to forget the times of 30 or 50 years before. The world of commerce changes as does the world as a whole, and we all who are carrying on the business of the Empire now are adjusting ourselves to these changed conditions. Just as it requires much time for the sea again to become quiet after a great storm, so it requires more time than we anticipated to bring quiet to the commercial world after the four or five years of terrible war.

During those years the nations at war destroyed most of their accumulated wealth, and when peace finally came the whole world, and the people in it, were poorer—much poorer—than on August 1, 1914.

And now the individuals of nearly every country are endeavouring again to build their wealth. This is slow work, and is doubly difficult because of the fact that while their resources were being destroyed, a much greater loss lay in the awful destruction of life of those who could have helped so splendidly to reconstruct the nation's wealth. This, then, is where the world stands.

This country accumulates money chiefly by manufacturing for and selling to those outside of her own borders, and until these customers in foreign lands again make and save money with which to buy, our trade with them must be limited.

This shows itself in our great list of unemployed, and is reflected in the local business. Everyone feels that he must economise. Free buying is, therefore, out of the question, and is almost entirely confined to what one feels one must have. All of this makes business more difficult.

Very well! This is the condition. We must make the best of it, and that is what men of business are all trying to do.

SPLENDID RESULTS DESPITE DIFFICULTIES.

Here in this business we are unitedly working harder, more intently, more scientifically than ever before. We are trying continually to give better service. We are watching the multitudinous details with greater care. We must do it. The result as shown by the balance sheet, which has been in your hands several days, indicates somewhat of the result of these efforts.

For 11 months of the past year we have been deprived of nearly half of the selling frontage in Oxford street, and when one realises that selling space is vital to this business, the loss of that floor area becomes more evident.

Notwithstanding that reduction, we are able to show—everything considered—one of the best years in the history of the house; but this result should, with the help of our new building—now approaching completion—be far outstripped during the next 12 months.

DEPRECIATION.

The balance-sheet speaks for itself. The depreciation which we insist on taking is as great as ever—greater than in most years—

and depreciation means keeping the capital in the business, because our rate of depreciation is far higher than is usually taken, and much greater than the items so depreciated are entitled to. On this point, it is interesting to note that in depreciation, reserve fund, excess profits duty, and corporation profits tax this young business has in 10 or 12 years written off over £1,200,000, and as profits grow larger—as they surely will—this rate of depreciation will be increased rather than reduced. We have also during these years retired about £100,000 in debentures.

Our wholesale department has shown the best results in its history, and our group of branches have also done their best since they passed into our control.

TRIBUTE TO STAFF.

Our staff have, as an entirety, done splendid loyal work, and have grown to feel almost to a man or woman a sentimental ownership in this business organisation of which they are highly respected members. The status of the young man or woman member of the organisation of a great distributing house has absolutely changed from that of 15 years ago, and such membership is now looked upon by society and the public, as a whole, as an esteemed and very interesting career, which not only encourages, but engenders a delightful self-respect. This is as it should be.

The preference shares are as widely spread as before—great numbers of holders possessing fifty shares, or even less—and quoted prices on the Stock Exchange indicate the esteem in which they are held by the investing public.

The early addition of selling space, so badly needed, will help us to make of this store one which we have more nearly had in mind, and one which we feel certain the buying public will enthusiastically applaud.

We look forward, therefore, to this year of 1924 with a new optimism—a reasonable optimism consistent with after-war times and conditions.

Mr Ellis W. Davies, M.P., seconded the resolution, and it was carried unanimously.

The dividends as recommended were approved, the retiring director (Mr H. Gordon Selfridge, jun.), was re-elected, and the auditors, Messrs Deloitte, Plender, Griffiths, and Co., were reappointed.

A cordial vote of thanks was accorded to the chairman for presiding, and a tribute was paid to the memory of the late Mrs Selfridge, the shareholders standing in silence.

BOVRIL, LIMITED.

BOVRIL'S ANTI-PROFITEERING POLICY.

Presiding at the twenty-seventh annual general meeting of Bovril, Limited, held on the 27th ultimo, Sir George Lawson Johnston (chairman) congratulated the shareholders on having had a successful year.

He mentioned last year that there was no "sinking feeling" about the exports of Bovril. Every year since the war had shown an increase upon its predecessor, and again for 1923 he could say that their overseas shipments of Bovril had exceeded those of 1922 by over 20 per cent., whilst the period from January 1st to February 16th of this year showed a good increase on the whole two months of January and February, 1923.

He should, perhaps, also mention that the home sales of Bovril in the current year show a marked advance on those for January and February of last year. The importance of all this extra trade is that it is from the last half-million or so of sales that the increased ratio of profit is made, the main sales having covered the overhead charges. Those who have not studied the subject carefully have sometimes suggested that the public have to pay for the advertising of an article, but, far from this being the case, it is only the enormously increased sales obtained by the assistance of advertising that can ensure large scale manufacture, economy in production, and rapid distribution. Bovril passes through the shops so quickly that the average period from factory right through to consumer is under six weeks; any lock up of capital is thus avoided. Without these advantages in a one-line article like this, Bovril would never have been able to maintain its famous non-profiteering record.

£30,000 TO HELP THE HOSPITALS.

They would have noticed that the British Charities Association (an association formed by persons specially interested in hospitals) have been running a Bovril Poster Competition for the benefit of the hospitals. Bovril, Limited, made this possible by giving £30,000 for the prizes, and also expended a large sum on the advertising campaign. Not only had they given this £30,000 to encourage contributions to hospitals, but they had advertised extensively the usefulness of hospitals and the necessity for a larger proportion of the population to do their share in subscribing, and thus keeping active and efficient that unique institution, the British voluntary hospital system. He would not for a moment conceal the fact that

all this had cost them something, but the atmosphere created by the doing of a startlingly big charitable act was a favourable one to the donor, and, if the hospitals were satisfied and the great, kind-hearted element of the population of this country felt that they had done the right thing, then he thought they were reimbursed by an inestimable, but very definite addition to Bovril's goodwill.

It was often said that a company had no soul. He hoped that Bovril had been able to prove that the human touch was possible in the case of a corporation. The public were very far from forgetting their non-profiteering attitude—that they stuck to their pre-war price right through the war, and were not only willing to forgo excess war profits, but definitely, and on principle, spoke against them. Their example and precept were no doubt of some value, and having been linked with the name of Bovril in the memory of millions, gave them a new post-war foundation of goodwill upon which they had built an annually increasing success.

Those present might have glanced at the map of England in this morning's papers, with a section marked out equal to the size of the Bovril ranches in Australia and the Argentine. The large area would probably suggest why Bovril's raw material was not produced from cattle raised in this country. One could not spare from a quarter to a third of the whole of this country merely to run a few hundred thousand cattle on, and that would be brought out more plainly when it was mentioned that the human population of the 10,000,000 acres of estates was only two or three thousand; that is, if some of the aborigines on the Australian estates are excluded.

SIR JAMES CRICHTON-BROWNE ON INFLUENZA.

Thanking the shareholders for his re-election to the board of Bovril, Limited, Sir James Crichton-Browne, M.D., J.L.D., F.R.S., said he was warmly interested in Bovril, professionally as well as personally. Bovril repelled influenza—that insidious and destructive malady that was still hovering about—for, by maintaining nutrition, it fortified the system and heightened its resistance to the inroads of the disease. But it did more than that. For Bovril helped to expel influenza when that had effected a lodgment, by supporting strength and assisting the body to throw the malady off, and it helped to dispel influenza by dissipating the injurious and debilitating effects it so often left behind it. If there was a demon of influenza, he fancied it trembled at the name of Bovril. The cattle from which Bovril was derived—living all their lives on vast ranches in the open, in sunshine and fresh air—were singularly robust and healthy, and they were converted into Bovril under ideal conditions of cleanliness and purity. At every step in its manufacture, from the Estancia to the "Alas! my poor brother" stage, Bovril was scrupulously and punctiliously safeguarded, and it might always be consumed in quiet confidence. It was a gilt-edged security.

The report was adopted.

JEREMIAH ROTHERHAM AND COMPANY, LIMITED.

INCREASE IN STOCK EXPLAINED.

The twenty-sixth annual general meeting of Jeremiah Rotherham and Co., Limited, was held, on the 26th ultimo, at the Shoreditch Town Hall, Shoreditch, London, Mr Herbert H. Piggin presiding.

The Chairman, in moving the adoption of the report and accounts, after conveying the chairman's regret for his absence from the meeting, said:

The net profit for the year, after providing for all expenses, including income-tax, interest on debenture stock, directors' remuneration, trustees, and auditors' fees, amounts to £110,014, as compared with £121,989 for the previous year—a decrease of £11,975. The balance brought forward from last year, after deducting £7,164 for corporation profits tax for the year ended January 15, 1923, added to this profit, gives the total of £181,740. From this must be deducted the interim dividends on the preference and ordinary shares paid in September last. They absorbed £35,000, leaving a disposable balance of £146,740. The directors proposed placing to the general reserve account the sum of £20,000—the same as last year—bringing the total reserve accounts to £141,000, a very respectable amount, seeing that a comparatively short time ago we distributed £200,000 out of that fund amongst yourselves. We now recommend a further dividend of 5 per cent. per annum on the preference shares—which amounts to £5,000—and a final dividend on the ordinary shares at the rate of 10 per cent. per annum for the half-year to January 15, 1924, and a bonus of 2 per cent., making, with the interim dividend, 12 per cent. for the year. These distributions will absorb £42,000, making, with the reserve, £67,000, leaving to be carried forward, subject to corporation profits tax for the year ending January 15, 1924, £79,740, as against £78,891 last year.

I should now like to refer to the stock. The stock shows an increase on last year of £10,166, and, for the comfort of our friends who very wisely considered that the item of stock should be kept as

low as possible, I should like to say that, had it not been for the necessity of arranging earlier deliveries of certain classes of goods, the item would have shown a considerable reduction. It was not without grave thought and considerable consultation between ourselves that we decided, having regard to the state of the market in respect of certain goods, that in the interests of the company we ought—in fact, we felt bound—to have deliveries earlier than would otherwise have been the case. Various troubles we have had in some spheres also weighed in our minds, and we hardly knew what was going to happen from day to day, and, in view of these circumstances, we thought we ought to be prepared to make good deliveries for the opening spring trade.

Mr Richard Bowden seconded the motion, which was unanimously approved.

MAPLE AND CO., LIMITED.

CONSIDERABLE PROGRESS MADE.

The annual general meeting of Maple and Co., Limited, was held on the 27th ultimo, on the company's premises, Tottenham Court road, London.

Mr C. H. Regnart, J.P., presided, and in moving the adoption of the report and accounts, said he had again the pleasant duty of placing before the shareholders a satisfactory statement of accounts. The board were proposing to pay a final dividend of 7½ per cent., making 10 per cent. for the year. Considerable progress had been made since the meeting twelve months ago, and the board had not been confronted with the problem of writing down stocks, as was the case in 1921 and 1922, and that had made a considerable difference in the company's favour. In addition, prices had reached a point at which they had fluctuated very little, so that the company had been able to buy on better terms. The company's factories had been very busy throughout the year, and had produced a much larger quantity of high-class furniture. Of the future, it was a little difficult to speak at that moment, but as regarded their company he felt that the prospect was quite healthy. A considerable extension was being made in the company's freehold premises in Euston road, thereby enlarging and improving the antique and second-hand departments, which were making rapid strides.

The board were expecting a large influx of customers from among the many thousands of visitors who would be coming to London in connection with the British Empire Exhibition at Wembley, where the company would have a most interesting and unique exhibit. He would also like to draw attention to the new series of showrooms which had lately been installed and furnished to represent suites of flats at a range in price from £275 to £750. He was confident that the departure would be of the greatest utility to people intending either to set up housekeeping or to change their residences, or to rearrange their rooms. He could confidently say that in no other house in the trade were prices lower than in their own, and he made that assertion from his own personal observation and from the remarks made by many of the company's customers who had taken the trouble to inform the board of experiences in other directions. The balance-sheet disclosed an exceptionally strong financial position. In conclusion, he would emphasise the fact that no effort was being spared to maintain the efficiency both of the business itself and of those engaged in carrying it on.

Mr C. C. Regnart, the vice-president, seconded the motion, which was carried unanimously.

SPENCER, TURNER, AND BOLDERO, LIMITED.

IMPROVED RESULTS—INCREASED DIVIDEND.

The thirtieth annual general meeting of Spencer, Turner, and Boldero, Limited, was held, on the 28th ultimo, at the offices, 18 Duke street, Lisson Grove, London.

Mr John Boldero (the chairman) presided, and, in moving the adoption of the report and accounts, said that from a commercial point of view 1923 had not been an eventful year. It could best be described as a twin brother to 1922, the figures walking almost in step, and giving a unique example of the rate of gross profit shown in two years differing by only 1.64 per cent. The spring was cold and backward. Summer, when it did come, had been a great help, and, although the autumn, which was seasonably cold, was rather wet, trade was fairly good.

During the year they had had various economic questions to answer, one of which had been knocking at the door for years—the question of paying the carriage on goods. In conjunction with their contemporaries they had been able to settle that question to the benefit and relief of their customers. A contract had been signed for their new garage, and within a few months they would

add materially thereby to their efficiency, and would save time and labour.

The trading profit amounted to £69,115, against £67,273 in the previous year. That appeared to the board to be a very gratifying result, which should give the shareholders something more than satisfaction, especially as it was not accompanied by a single adverse comparison. The amount carried forward, after paying an increased dividend of 8½ per cent., as compared with 8 per cent. last year, and making various allocations to reserve, &c., amounted to £39,658, which was in the nature of a handsome insurance fund.

With regard to the profit and loss account, the result must be considered very gratifying. The present outlook, in his opinion, did not indicate any fall in cotton and wool prices.

Mr Henry J. Turner (managing director) seconded the resolution, which was carried unanimously.

MR P. A. CARMINE ON HIS RECENT VISIT TO SOUTH AMERICA.

INDUSTRIAL AND FINANCIAL CONDITIONS IN BRAZIL.

After a voyage of 4½ months in South America, visiting Brazil, Uruguay, the Argentine and Chile, where my numerous relations in the financial world required my presence, I have now returned to London.

I must confess that this voyage has been most interesting and instructive; I will now proceed to give a résumé of my impressions.

South America generally is suffering the consequences of our own disturbed condition in Europe. The present position of our affairs is one of the principal causes of these countries not having been able recently to dispose promptly of all the products they have for export, our importers being afraid to hold very large stocks.

South American countries derived great advantages during the war, as they obtained exceptional prices for their goods, but they never really considered that this would have an end, and that we would find ourselves faced with a serious crisis after the war.

They, therefore, have continued to live in grand style, spending more than they should, having recourse to credit, as in South America people particularly depend on credit, their capital being generally acknowledged to be insufficient for business. The commercial balance, which formerly was in favour of the exports, has now become in favour of the imports.

The latest news is, however, more reassuring, there being generally a certain resumption of business.

BRAZIL.

This country is the one that has made constant progress.

Thanks to the extremely low cost of labour on account of the cost of living being lower than anywhere else, thanks to Protection and thanks to the low rate of exchange, industry has made untold progress, producing an increasing number of articles required by the Brazilian people, and thus becoming every day less dependent on foreign goods.

Agriculture has likewise progressed, producing all that is necessary to meet the requirements of the country, and exporting the great surplus abroad.

To give you an idea of the prosperity of Brazil, I may tell you that both industry and agriculture are making, even recently, net profits of 200 per cent. per annum. However, in the event of the rate of exchange rising considerably and suddenly, it would bring, as a consequence, an immediate reduction in the prices in milreis, and I am afraid that industry, which is still very new, would suffer through this, as it would have to contend still further against foreign competition. As regards agriculture, it would not suffer so much, but it would have to be satisfied with smaller profits.

We have therefore before us two quite distinct problems; industry and agriculture require a low rate of exchange; on the other hand, the Federal Government, the various States, the Municipalities, and the various industrial concerns, which have borrowed money from abroad and which consequently must make remittances, require a high rate of exchange, let alone foreign industries exporting to Brazil, and the home consumption.

These opposing interests call for deep study for the purpose, on the one hand, of permitting the Federal Government to put its finances in a straight position, by consolidating its debts—which previous governments have left as a heritage—and, on the other hand, to avoid taking any rash measure which would arrest the further development of the country's industry and agriculture.

Brazil is essentially an agricultural country, its natural wealth is proverbial, and if the Federal Government succeeds in convincing the British Commission, at present in Rio de Janeiro, consisting of our greatest financial experts, that it would be greatly in the interests of our country to assist Brazil and provide it with the necessary means, there is to be foreseen within a short period an extraordinary economic development.

There is urgent need of establishing a larger number of railway lines in order to better connect the interior with the large centres and the coast, thus largely increasing the facilities for output, as the present means of communication are very defective.

COTTON.

The cultivation of cotton is a vital question for England, being the raw material absolutely necessary for its great industry. The United States of America, owing to the increase of population, every year require more and more of this article, and as the production does not increase at all, there will be no surplus for export, consequently it is necessary to look for the shortage elsewhere. Now, Brazil possesses all the necessary conditions to meet all

the requirements for the world's consumption, the soil and the climate cannot be better and if at the present moment the production is only between 750,000 to 1,000,000 bales, it would be easy to produce to great advantage 20 times more. In the United States of America the crop takes six months to gather in, whilst in Brazil it only takes three months. The difference is enormous. However, to attain this result it is necessary to establish better means of communication so as to allow the full development and exportation. It would also be necessary to considerably increase the labour resources by facilitating immigration. The present price of cotton is so high that it would be most advantageous to develop this cultivation energetically if it is possible to establish good means of communication. The British Commission, no doubt, will closely consider this matter, and will say what should be done.

COFFEE.

Coffee is for the present the largest production of Brazil; by itself it represents about 75 per cent., not only of the entire total production of the country, but also of the world's total production of coffee. To maintain the present prices, the Federal Government has had to establish the "Valorisation Department," which controls the sendings from the Interior. In fact, the Federal Government only allows the going out from the province of Sao Paulo for Santos of 35,000 bags of coffee and 15,000 bags from the province of Rio de Janeiro for the port of Rio de Janeiro or, say, a total of 50,000 bags per working day. It is estimated that the total quantity of coffee retained in the Interior is from 4,000,000 to 5,000,000 bags.

The object of the valorisation has been attained, as the high prices have been maintained up to the present. However, people in the trade claim that the prices have been made artificial, as they are not the result of the supply and demand. Many had sold coffee for delivery they expected to receive from the Interior, but as this coffee could not come to the coast, because their turn for despatch had not yet arrived, the sellers for delivery, in order to carry out their contracts of sale, had to buy on the Santos market, and on this account not only did they help to bring up the prices, but they also sustained heavy losses.

The coffee crop in 1923 for the province of Sao Paulo is estimated at 14,000,000 bags, and that of the province of Rio 3,500,000 bags. There is, moreover, to be added 1,500,000 bags for the other provinces of Brazil. The total would be about 19,000,000 bags.

The coffee production in the other countries of the world is estimated at about 6,000,000 bags, so that the total world's production would be in 1923 about 25,000,000 bags.

In consequence of heavy rain at the time of the last crop, a great deal of coffee was damaged and lost.

I was told that in this last crop the quality leaves much to be desired.

After a large crop one always expects, as a natural result, a small crop—the trees require rest. These trees are now in full production, and the crop for 1924 can be estimated approximately. The experts who constantly visit the principal fazendas estimate that the Brazilian coffee crop for 1924 will only give 8,500,000 to 9,000,000 bags for the province of Sao Paulo, 3,000,000 bags for the province of Rio, 1,000,000 bags for Victoria, Pernambuco, Ceara and Bahia—a total of 13,000,000 bags.

If we add 6,000,000 as a minimum produced by the other countries of the world, we have a total of 19,000,000 bags.

The two seasons of 1923 and 1924, together, compared with the total world consumption of 19,000,000 to 20,000,000 bags per annum, will give as a minimum a surplus of 4,000,000 bags for the whole world.

I may add that certain fazendas (coffee plantations) in the province of Sao Paulo are this year in a very precocious state of maturity, and this will cause a considerable loss of coffee, considering that it is materially impossible to save it, as it would not be possible to pick the beans which are already ripe apart from those which are not yet ripe; the loss due to this cause is estimated at 1,000,000 bags.

On the other hand, we must not forget that the North-West (Parana) is a new district as regards the cultivation of coffee. The soil here is virgin, and is in a sound and very vigorous condition. So far no estimate has been made as to what it can produce, but it should not be lost sight of as a factor of production.

There are fazendas which give a large production and others which give less, everything depending on the soil and on the manner in which the property is kept up—the pruning knives and the fertiliser contribute largely to the result.

Also, we must not overlook the United States of Colombia, which likewise are engaged in the cultivation of coffee.

People in the trade have told me that these high prices of coffee enable the fazenderos (planters) to make 200 per cent. net profit per annum, and that this can only tend to encourage all the other countries to increase their cultivation of coffee, so that the total production in the future may easily exceed by far the real requirements for consumption, and thus bring about a heavy fall in the prices.

As a result of the valorisation of the coffee, the Brazilian Federal Government has already repaid the whole of the £9,000,000 sterling borrowed from London. Now the question is asked, What is the Government going to do in the future? Is it going to release all the coffee retained in the Interior, or is it going to continue its present policy. There are great doubts about the future, as it is not known if the Government will be inclined to buy coffee at the present high prices.

It is said that the Federal Government will have recourse to the issuing of paper milreis in order to finance the valorisation, and that for these very reasons not only the exchange on London has fallen, but also money is in greater demand and dearer. In fact, when I was there in November and December last, commercial paper in milreis was discounted at Sao Paulo and at Santos at the rate of 12 per cent. per annum, and loans on coffee warrants were currently made at 10 per cent. and 12 per cent. per annum.

I have had the honour of having several interviews with Senhor Cincinnato Braga, president of the Banco do Brazil. I must thank him for the great courtesy which he has always extended to me, and for all the information he has been good enough to give me.

Senhor Cincinnato Braga is a great patriot. He adores his country. When he speaks of Brazil he does so with such enthusiasm and deep conviction that you soon recognise his honesty and his sincerity. He will tell you, and rightly so, that the position of Brazil is excellent and unique in the world, as the soil is one of the richest existing and its climate one of the most favourable to allow cultivation, on a very large scale, of all products of primary necessity which are so much needed everywhere else. On several occasions he has expressed to me the regret that his country is known so very little, and that the necessary propaganda in this respect has never been made in Europe. In fact, Brazil, with all the raw materials it possesses and with fertile and vast soil, can easily maintain a population 10 or 20 times larger than the present. Not only can it supply its own requirements, but it can become the great source of supply of the whole of South America. However, the question is in my mind whether the Monroe doctrine would be an obstacle for us to take a very high position in the economic position of Brazil, which would inevitably give rise to consequent political influences.

Very frequently I have been told in South America that they prefer England to America for placing their loans on the market, because they find that they are better treated here. I have also noticed that the London financial market still holds first rank, and that the pound sterling is preferred to the American dollar.

Certain financiers pointed out to me that before making further loans of money to Brazil for industrial enterprises, it will be necessary to make quite sure that the head management will be ensured to the lenders, and to stipulate that any eventual fiscal measures shall not later on affect the interests of the lenders.

I have been told that generally, as soon as the foreign concern gives good results, the Brazilian Government creates difficulties for it in the sense of securing for itself the head management and of increasing the fiscal charges. The country desires that the control shall rest entirely in their hands, and not in the hands of the foreigner.

Brazil is also very rich in minerals, as it produces gold, silver, iron, diamonds, topaz, as well as other precious stones. Manganese offers great scope for export, the forests are immense and contain very rare kinds of wood greatly sought after; cattle-breeding is a very important industry, the number of head in 1920 amounting to 34,270,324. The principal agricultural products are coffee, sugar, cotton, hides, cocoa, oil seeds, maté (tea), tobacco, rubber, maize, beans, &c. The production from national industries was estimated in 1922 at £45,000,000 sterling, the half of which being in textiles.

In 1922, the exportation of goods was classified as follows:—

1.—Animals and the products therefrom	£ 5,398,269
2.—Minerals and the products therefrom	1,060,076
3.—Vegetables and the products therefrom	62,119,265

In 1921, there were 28,828 kilometres of Railway already constructed and 2,273 kilometres under construction. The principal ports are Santos, Rio de Janeiro, Pernambuco, Bahia, Rio Grande, Manaus, Pará, Maranhão, Victoria, Maceio:—

	1919	1920
Receipts	£ 37,730,400	41,155,429
Expenditure	40,817,887	40,686,815
External Debt (December 31, 1920)		117,751,596
Internal Debt (December 31, 1920)		67,144,050
Floating Debt (December 31, 1920)		90,351,700

The capital, Rio de Janeiro, had in 1920 a population of 1,157,873 inhabitants, and amongst other large cities the population was respectively: Sao Paulo, 579,033; Bahia, 283,422; Recife, 238,843; Belem, 236,402; Porto Alegre, 179,263; Niteroy, 82,238; Fortaleza, 78,536; Manaus, 75,704; Maceio, 74,166.

The United States of Brazil comprise a total area of 3,298,870 square miles, with a total population in 1920 of 30,635,605 inhabitants.

Senhor Cincinnato Braga told me that the Banco do Brazil is authorised by law to issue up to 600,000 contos on paper milreis, but that the Supervising Commission has decided that the issue

should not exceed half of that amount; that is to say, 300,000 contos.

The latest balance-sheet of the Banco do Brazil showed that notes had been issued for 240,000 contos, but recently there was a further issue of 30,000 contos, so that the total was 270,000 contos; that is to say, 30,000 contos below the limit fixed.

Senhor Cincinnato Braga pointed out to me that this sum of 300,000 contos—about £8,000,000 (at the present rate of 6½d)—is not at all excessive for a country so vast as Brazil, where communications with the Interior are so defective, and, as a consequence, the notes remain in circulation a very long time. Also, most of the foreign workmen in the Interior, instead of bringing their notes to the bank, keep them. Also we should take into consideration the vast requirements to finance the crops and the industries which have to pay for certain raw materials considerably enhanced prices. The Brazilian bank-notes are covered by one-third in gold and the other two-thirds in commercial paper or warrants.

I have questioned several banks about this matter, and they have confirmed the truth of the foregoing. The manager of one of the largest foreign banks, which has numerous branch offices in the interior of Brazil, told me that he is frequently obliged to send employees to the interior to take there banknotes in milreis, as there is a complete lack of them frequently. I have also heard from several Englishmen, who constantly travel about the interior, that frequently they are unable to exchange 1 Conto notes, and at times even half Conto notes in towns having 10,000 inhabitants, which for Brazil are considered as important towns.

BANCO DO BRAZIL.

Owing to the fact that the Brazilian Government has given to the Banco do Brazil the authority to control and direct the foreign exchange market in the whole of the country, it results that the other banks suffer on this account a veritable inquisition, as they are thus obliged to disclose their position. Their books are subjected to regular inspection, and each bank is required to give all necessary explanations about all its operations, and if by chance the limits for certain prices are exceeded the bank is warned to be more careful if it does not want to see its business stopped.

Again, what causes considerable annoyance to the banks is that all cheques or drafts are subject to stamp duty and that the stamp can only be obliterated by the signature of a revenue officer, who is constantly going from one bank to another. Without such signature the document is not valid. It is said that the Government is afraid that the stamp in question may not always be affixed, but really the banks see in this a further proof of the Government's inquisition to find out everything that the banks do, thus rendering it more complicated and delaying the service.

The city of Sao Paulo has at present a population exceeding 600,000 inhabitants, and ten years hence it is likely to be doubled. It is a very nice town, quite cosmopolitan, of which the Italian colony represents the great majority of the inhabitants. The Italian language is heard everywhere to the extent that anyone would almost believe that he is in Italy. The industry, the genius, and the attributes of the Italians are the elements which have particularly contributed to the development of the economic wealth of Sao Paulo. Moreover, the whole of the province of Sao Paulo has experienced the influence of the Italian people, who work very hard, and who generally leave all their savings in their businesses, in order to constantly increase same. The leading Italian firms at Sao Paulo are "Matarazzo," "Crespi," "Scarpa," "Gamba," who have attained a colossal industrial development. The number of workmen employed by them amounts to tens of thousands.

I have visited works, and was astonished at their up-to-date organisation and at their quite modern plant. These works can compare with the best we have in Europe.

A very great factor which has enabled the whole of Brazil to develop is the use of "white fuel." The electric energy distributed by the "Brazilian Traction, Light and Power Company" is not only most abundant, but also cheap. Further, the splendid lighting system which makes the city of Rio de Janeiro one of the most beautiful in the world is due largely to the said company.

PUBLIC FINANCES AND BUDGET FOR 1924.

Being desirous that the Finance Commissions of the Chamber and of the Senate should know in detail the financial situation of the country before discussing the Budget for the financial year 1924, the President of the Republic, Senhor Arthur Bernardes, submitted to them a statement, of which we give here a résumé:—

"To obviate a deficit it is necessary to restrict the expenditure and rigorously control the collection of imposts. Now, the Government has adopted the following method for this purpose:—

"1.—To make known to the National Congress the exact financial position of the country, so that the Legislative Authority may be able to co-operate closely with the executive in order to eliminate the present difficulties.

"2.—To carry on the Administration with strict economy, this being already in the way of being realised, thanks to the steps taken by all the Ministries, including therein the employment of existing supernumeraries to fill vacant posts, as will be shown from an examination of the approaching reports and of the documents annexed thereto.

"3.—To take the most efficient measures, so that the accountancy of the National Treasury be up to date, to enable the Government to know at any time the exact financial position; the work is duly carried out, as is proved by the publication of the balance-sheet for the first six months of this year.

"4.—To ensure that the Budget of the Republic be sincere and reliable, for which reason the Minister of Finance has set up a Commission consisting of members of Congress and of competent officials from each Ministry, so that the estimates of receipts and expenditure be drawn up without omissions or reductions, because

inaccuracy has hitherto produced a false and pernicious impression of the Budget of the Republic.

"Imposts which cannot produce the revenue desired must not be shown as giving a certain income.

"The unavoidable expenses decreed by the Legislative Authority must appear in the Government measures.

"There may result an apparent increase of expenditure, but such increase would express the reality of the situation.

"In this respect numerous expenses might be mentioned which have hitherto been covered by extra-Budget of extraordinary credits.

"Further, the Government intends to allot to each item the really necessary sums, the shortage of which has hitherto been covered by supplementary credits, which could only cause great misunderstandings at the time of voting the Budget; as a matter of fact, this did nothing but create a deficit each financial year, the Budget for which, not being reliable and sincere, one could neither rely on the receipts, which were very optimistic, nor on the expenses, which were estimated at a figure below the reality.

"The advantage of the new procedure consists, therefore, in placing before the Congress the real position of the Treasury, so that Congress may be able to make such provision as may be necessary in accord with the Government.

"To see to the strict and honest collection of impost, whilst putting a stop to the scandalous concealment of wealth by severe measures which have been adopted.

"5.—To aid the economic development of the country by restoring its financial position.

"For this purpose the Government adopted the following measures:—

"(a) To meet as quickly possible within the measure of present possibilities the requirements of the Central Brazil Railway, the Great Western Railway Company, and the North-Western, by providing them with the indispensable material for the transport of produce.

"(b) To improve the administrative conditions of the Lloyd Brasileiro.

"(c) To found the Central Issuing and Discount Bank, fixing a term for the Treasury issues, giving an outlet for the circulation of the deposits at banks, and permitting of a great development to the industries of the country.

"The issuing bank would operate strictly within the schedule fixed for it, and the Government would not allow it to be otherwise, as it would be a crime.

"However, the fact which most affects the general public is the depression of the exchange.

"Although other causes may have had an influence on this depression, the real cause must be found in the ratio between the credit and the debit sides of the international balances.

"Some of these factors are transitory, others are permanent, others exist at present, and others are yet to come, but their effects are tangible; they are known to everyone who interests himself in these delicate matters.

"For example, it is not possible to recover the foreign capital used in the 'auxiliary' and 'Sud de Minas' Railways, which constitute, owing to the repurchases effected an unforeseen and extraordinary strain against the normal possibilities of the exchange market with the natural repercussion during the years which followed these repurchases. The need of purchasing material of these great working concerns represents enormous sums in money which everybody knows.

"We must bear in mind the charge for interest on the new loans of the Union, of the prefecture, of the federal district, and of the States which make their influence felt on the rate of exchange.

"To these debit items there should be added those due to the natural 'reserve' of stock of the coffee valorisation department, which guarantees the loan obtained in London of £9,000,000 sterling, the interest on and the amortisation of which are paid by means of the partial sales of coffee.

"What follows hereunder will easily explain the causes of the fall in the rate of exchange.

"For the purpose of protecting this product the Government has been obliged to withdraw from the market a considerable number of bags of coffee. As this produce is the most important source of supply of the bills of exchange needed by the money market for its requirements abroad, it results that these drafts having been to a great extent taken away from the market in order to be remitted direct to the London bankers, according to the valorisation contract, this source has become reduced.

"Naturally, the ingress of gold produced by the loan of the £9,000,000 has helped the Exchange, but this improvement could only exist during the year of the loan to the detriment of the exchange in the present year.

"The Government, in order to keep up the prices, has had to buy over 5,000,000 bags of coffee, and the influence of this transaction brought about the fall in the exchange through it having been necessary to finance the transaction by increasing the circulation of notes.

REAL DEFICIT.

"According to the explanations given in the speech of the President, Dr Bernardes, it is possible to estimate approximately that the real deficit will exceed £50,000,000—that is to say, more than 25 per cent. of the yearly average value of the whole of the country's exports at the rates ruling during the last four years.

"It should be added that the Government has had to pay at this year's rate £13,000,000 (£9,000,000 for coffee and £4,000,000 for short term bills to be taken up), which payments, having had to be made at exchange.

"The payment of £13,000,000 should be added to the said

deficit of £50,000,000, thus making to date a total deficit respecting exchange, of £63,000,000 as a minimum. In view of this situation, which could only become worse in view particularly of the existence of the Treasury's obligation of £4,000,000 to the Banco do Brazil, and the latter relying upon receiving payment at maturity, had availed itself of this obligation to issue drafts on foreign countries, the Government took the following measures:—

"(a) To reserve for the Treasury the gold values derived from the imposts on imports, which enables the Treasury to have available the necessary gold for its obligations abroad, without having recourse to the exchange market.

"(b) To send a trustworthy emissary to Europe in order to find a remedy for this defect, in spite of the monetary difficulties of the world.

This emissary was also instructed to obtain two modifications to the contract for £9,000,000 in respect of the contract, which contained two onerous clauses.

"One of them prohibited, during the next ten years, on any kind whatsoever through any intermediary other than any operation for the valorisation of coffee, the Commission House representing the Committee.

"The other clause prohibited the repurchase of the loan before ten years' time, the proceeds of the sales of coffee remaining in the hands of the bankers for payment of the debt in 1932, Brazil paying interest at 7½ per cent. per annum during this period, whilst receiving interest of only 3 per cent. per annum on its deposits of money derived from the sales.

"The emissary went to London provided with all the data showing the procedure of the new Government. It suffices to say that, in spite of the enormous difficulties which the London market presented, and owing to the energy of the emissary and the goodwill of Messrs Rothschild and Sons, financial agents to the Brazilian Government, Brazil has now regained its complete liberty to look, without foreign interference, after the protection of the coffee, and will be able to pay, without availing itself of the ten years, the £9,000,000, which will be repaid before the end of the present year. By way of information, it can be said that this loan has already been repaid.

"The success of the Government's emissary has, therefore, been complete.

"Such have been the measures taken by the Government, which declares itself to be ready to consider any new measure which may be submitted to it by the Finance Commissions of the two Chambers.

"The Government would not keep up the exchange artificially, as it does not desire to launch the Treasury into any adventures, nor does it think of launching an external loan, being of the opinion that it would be a dangerous policy for a country whose foreign exchange suffers constant fluctuations, and whose international returns show an adverse balance.

"The Government intends to accumulate reserves from now, in order to resume in 1927 payment of the redemption of interest of the debt which the 1914 'Funding' left in suspense.

"The service of the external debt alone will cost Brazil Rs. 80,000,000,000 (eighty thousand contos) per annum."

I may add that the present President of the Republic of Brazil, Senhor Arthur Bernardes, has all over the country the personal reputation of being a thoroughly honest man.

Dr Sapeio Vidal is the Minister of Finance; he is said to be very straightforward, and up to his position.

These two important personages would surely take steps to organise without delay a real and independent issuing bank, which would be no longer dependent on politics, as, according to the public idea, the Banco do Brazil and the Government are one and the same thing. Accordingly, the new institution would not have to experience all the irksome influences of the Government. It is precisely on account of this obscure situation that the financial world harbours great mistrust. It is also necessary that all these inquisitions at the banks concerning operations in exchange should cease, and that the banks should be given the full liberty of action which they need. As soon as these hindrances are put an end to, confidence will be imparted generally and the Government will receive all the assistance needed.

Mr Cincinnato Braga, president of the Banco do Brazil, told me that the Government was determined to pass at once a law to authorise the issue of 7 per cent. Treasury bonds, either paper or gold, and that the latter would be thus denominated in order to better attract the foreign investor. The value of these bonds would have as a basis the mortgage on property, together with the State guarantee.

I have also had the honour of having a long interview with Dr Epitacio Pessoa, the preceding President of Brazil. He impressed upon me the great attention and the great efforts which he has incessantly devoted, during his office, to the agriculture of the country, as he considers that therein lies the real interest and the financial welfare of Brazil. He trusts that the present Government will devote their energy to this purpose. He has recognised the fact that there is the need of creating as soon as possible for the Banco do Brazil a position independent of politics.

I have also had an interview with Dr Custodio Coelho, a great financial expert in Brazil, and who held twice the position of Chief of the Securities Department of the Banco do Brazil. He does not seem to approve all the financial measures taken by the present Government, but he agrees that the country has an exceptional economic situation, if only looked after.

On my part, I wish the Brazilian Government all the prosperity that their exceedingly interesting country calls for.

In one of my next bulletins I shall endeavour to refer to the other South American countries which I visited.

28 Throgmorton street, London, E.C. 4.

680,738	1,863,645

Messrs Samuel Montagu and Co. write on February 27th as follows:—

GOLD.

The Bank of England gold reserve against its note issue on the 20th inst. amounted to £126,270,560, as compared with £126,259,895 on the previous Wednesday. Nearly all of this week's moderate supplies of gold was shipped to the United States of America. Indian trade figures (private account) for January, 1924, are as follows:—

(In Lacs of Rupees.)

	Exports.	Imports.	Net Exports.	Net Imports.
Merchandise	3,695	2,261	1,434	..
Gold	..	230	..	229 1/2
Silver	10	233 1/2	..	223 1/2
Total net exports	3,705	2,491	981	..

SILVER.

Owing to rather sharp fluctuations in the U.S., as well as the China exchanges, the market has been disposed to vacillate. The fact that most of the buying came from bears, and varied in amount considerably on different days, naturally increased the irresolution of the market. America was inclined to sell freely yesterday, and the tendency of prices to be checked at any marked advance is evident. The Continent is not at present figuring as a factor:—

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Feb. 7.	Feb. 15.	Feb. 22.
Notes in circulation	18,340	18,644	18,606

Securities (British Government) ..	1,400	1,400	1,400
Bills of exchange	800	1,200	1,200

The silver coinage during the week ending 22nd inst. amounted to 4 lacs of rupees. The stock in Shanghai on the 23rd inst. consisted of about 26,100,000 ounces in sycee, 40,000,000 dollars, and 940 silver bars, as compared with about 25,700,000 ounces in sycee, 38,500,000 dollars, and 1,260 silver bars on the 16th inst.

THE GREAT ALTERNATIVE:

Saner Politics or Revolution.

By LEONARD J. REID, M.A.

PRESS OPINIONS:

"Studiously moderate."—*Economist*.
 "Sane and thoughtful writing."—*Daily News*.
 "His indictment of the criminal folly of Bolshevism is most effective."
 —*Morning Post*.
 "A sound and rational contribution to political controversy. . . . We recommend every thinking politician to read it."—*Saturday Review*.
 "An able plea for a great New Liberalism."—*Scotsman*.
 "To unsettled and troubled Liberals we would heartily commend it. It is a finely suggestive discussion of certain vexing questions with the solution whereof Liberalism is vitally concerned."—*Liverpool Daily Post*.

JOSEPH RODGERS AND SONS, cutlery manufacturers and silversmiths, announce that it is decided not to pay any dividend on either the preference or ordinary shares.

VICKERS, LIMITED.—Final dividends for the half year ended December 31st of 2½ per cent. on the preferred 5 per cent. stock (less tax), 2½ per cent. on the 5 per cent. preference shares (less tax), and 2½ per cent. on the cumulative preference shares (free of tax). Payment will be made on March 31st.

WANDSWORTH GAS.—The directors propose to pay dividends for the latter half of the year at the rate of 2½ per cent. on the preference stock, at the rate of 5½ pence 9d per cent. on the Wandsworth "C" stock and the new ordinary stock, at the rate of 7½ pence 9d per cent. on the Wimbledon stock, at the rate of 7½ pence 9d per cent. on the Wandsworth "B" stock, at the rate of 7½ pence 9d per cent. on the Epsom stock, and at the rate of 4½ pence 9d per cent. on the Wandsworth "A" stock.

Reports and Notices.

We are informed that Mr T. E. Baring has been appointed a director of the Guardian Investment Trust Co., Limited.

The Right Hon. Lord Wargrave, of W. and H. M. Goulding, Limited, and Mr R. G. Perry, C.B.E., of the National Sulphuric Acid Association, Limited, have joined the board of the National Smelting Company, Limited.

On and after March 1st the registered office of the San Francisco Mines of Mexico, Limited, will be at the offices of Union Corporation, Limited, Pinners' Hall, Austin Friars, E.C. 2, who will act as secretaries to the company.

We are informed that the staff of the Rhodesian Section of the British Empire Exhibition—namely, Sir Bouchier Wrey, Bart. (in charge), Messrs. J. Collyer, B. Lightfoot, and C. Mainwaring—arrived in England on Monday, February 25th, from Rhodesia. Their temporary office is at Rhodesia House, 2 London Wall buildings, E.C. 2, ground floor.

RAILWAYS.

MANILA RAILWAY (1906).—The accounts for year 1923 show net receipts from holdings in the Manila Railroad Company (including £16,798 17s 4d profit on exchange), £224,123; from interest, £1,282, and from transfer fees, £62; total £225,467. After deduction of London expenses, £5,203, and provision for income-tax, £11,414, which together amount to £16,617, there remains £208,849, out of which there has been paid and has accrued interest on the "A" and "B" debentures and the debenture stock of the company, £175,647, leaving a balance of £33,202, out of which there has been applied to the sinking fund for "B" debentures £7,714, showing a balance of revenue for 1923 of £25,488. To this is to be added the balance brought forward from last year, £31,435, less dividends paid, £26,542—£4,892, making a total available of £30,380. The directors recommend a dividend of 3 per cent., less income-tax, on the preference capital, which will absorb £27,667, leaving a balance of £2,713, which the directors recommend should be carried forward.

BANKS.

BRITISH LINEN BANK.—The net profits for the year ended January 15, 1924, after providing for bad and doubtful debts, interest due to customers, and rebate on bills current, were £309,664; add balance from previous year, £50,676—together, £360,340. The dividend is 16 per cent. for the year, absorbing £153,884. In reduction of bank premises and other heritable property £50,000 is applied, and £100,000 is transferred to reserve fund, which will leave £56,457 to be carried to the credit of the current year's profit and loss account. Including the reserve fund and the pension reserve fund, the undivided profits will then amount to £1,606,457 7s 3d. All the bank's investments have been taken at or under the prices ruling at January 15th, and their market value is in excess of the amount at which they stand in the balance-sheet. During the year four branches and nine sub-branches have been opened.

IMPERIAL BANK OF INDIA.—Some interesting particulars concerning monetary conditions in India during the last half-year of 1923 are given in the latest report of the Imperial Bank of India. The governors of the bank point out that the half-year opened with a 4 per cent. Bank rate and money easy. Dullness of trade characterised the period up to November 15th, when the seasonal demand for the finance of the cotton crop set in, and the Bank rate was raised to 5 per cent. From then onwards money rapidly became scarce, and the Bank rate was raised to 6 per cent. on November 29th, and 7 per cent. on December 20th, when it was found necessary to borrow 4 crores from the paper currency reserve against trade bills in order to strengthen the cash resources. This was subsequently increased to 8 crores on December 28th. The average Bank rate for the half-year was 4½ per cent. The accounts

for the half-year ended December 31st show that net profits amounted to Rs. 49,13,332. The balance of Rs. 19,07,826 brought forward gives a total of Rs. 68,21,158. The dividend, at the rate of 16 per cent. per annum, free of tax, is the same. The governors have transferred Rs. 10,00,000 to reserve, and Rs. 3,00,000 to pension funds. The balance of Rs. 10,21,158 has been carried to the current half-year.

LONDON AND EASTERN TRADE BANK.—Interesting developments have recently taken place in connection with the London and Eastern Trade Bank, Limited, of which Mr Gustav Nobel has accepted the chairmanship. A new bank has been established in Paris, under the title of the Banque Generale pour le Commerce Etranger, with offices at 7 Rue du Helder, having an initial paid-up capital 15,000,000f. The founders of the new bank are the Banque de Paris et des Pays-Bas, who will be represented on the board, and Mr L. Davyoff, whose reputation as an international banker is well known. The London and Eastern Trade Bank, Limited, which will act as London representative of the Banque Generale pour le Commerce Etranger, also participates in its formation, and will be represented on its board, while Messrs L. Davyoff, J. C. Kaestlin, and W. Novitsky join the board of the bank in London.

INSURANCE.

MARINE AND GENERAL LIFE.—The new policies issued last year numbered 853 for £331,097 net, as compared with 705 new policies assuring £309,377 for 1922. The net premium income was £215,533, against £211,812; and the funds increased by £125,342 to £2,578,362. The expenses and commissions were lower at 17 per cent. of the premiums, as compared with 17.4 per cent. in 1922 and 18.4 per cent. in 1920.

PEARL ASSURANCE.—The report of this company for 1923 states that the annual valuation of the life assurance business has been made. After providing for all liabilities, a surplus of £745,159 is shown, which includes £116,423 brought forward from the previous year. The directors propose to distribute £449,938 among the participating policy-holders and ordinary shareholders, that £100,000 be added to the staff pension fund, and that £100,000 be carried to profit and loss account, leaving £95,221 to be carried forward. The premium income amounted to £8,235,085, an increase of £522,911. In the ordinary branch the number of policies issued was 37,602, assuring £7,152,313, and producing a new annual premium income of £427,738. In the industrial branch the premium income amounted to £5,002,952, an increase of £313,140. After making the usual provision of 40 per cent. for risks unexpired at the close of the year, the fire branch showed a credit balance of £47,309, which is added to additional reserve. The fire fund now stands at £262,023. The total income was £9,500,592, an increase of £721,051. The total funds, at £29,404,341, show an increase of £3,676,661.

WESLEYAN AND GENERAL ASSURANCE SOCIETY.—We are officially informed that on and after March 1st the rate of interest charged by this society on loans issued under its house purchase scheme will be 5½ per cent. per annum instead of 6 per cent. per annum, as hitherto, whenever the loan is for £500 or more.

RUBBER, &c.

VAL D'OR RUBBER ESTATES.—The accounts for the year ended October 31, 1923, show the balance from the previous year is £12,257. The profit for the year is £6,083, making £19,240. Deduct corporation profits tax (1921-22), £148, leaving £19,092. The directors recommend the payment of a dividend of 12½ per cent., subject to income-tax, £11,007, leaving a balance to be carried forward of £8,085 (subject to corporation profits tax and directors' further remuneration in accordance with the articles of association). The restricted output of rubber amounted to 252,625 lbs, as against 352,795 lbs for the previous year. Tapping was spread over 829 acres, and the average yield was at the rate of 335 lbs per acre per annum. The cost of production, including depreciation of machinery, and a proportion of the estate management and general charges, amounted to 8.43d per lb, f.o.b., and the net average sale price was 14.80d per lb.

MISCELLANEOUS.

JOHN BRIGHT AND BROS. LIMITED.—Messrs J. S. Blanckensee and Co. inform us that active steps are being taken by them on behalf of the large body of the debenture-holders they are representing, through the committee that has been formed. They hope to will be issued by their clients, and a meeting will be called of all the debenture-holders. In the meanwhile, their clients would be glad of further support.

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, February 20, 1924, amounted to 1,075 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have been cold and frosty, which, however, proved of great benefit to heavy lands, and will tend to facilitate seeding operations later on. Meanwhile, sowings are proceeding where circumstances permit. The growth of winter wheat has been retarded by adverse weather, and a spell of sunshine is needed in order to make up arrears of farm work. English wheat continues sparingly offered at firm rates, best milling grades being held for 10s 6d to 11s per 112 lbs, free on rail. Imported descriptions displayed slight irregularity and weakness in sympathy with c.i.f. offers, trading being generally on a moderate scale. No. 1 Northern Manitoba afloat quoted 50s 9d, No. 2 49s 9d, No. 3 ditto 48s 9d, and Rosafé 63½ lbs 48s 6d, and Australian 49s 6d, all ex ship per 496 lbs. The floating and forward cargo section remained dull and rather featureless, and prices tended in buyers' favour. Steamers of Rosafé 64 lbs, March 6th loading, sold at 45s 3d, Barusso 63½ lbs afloat 45s 3d net, and 43s 6d as to position. Maize also dull, and values weak. A steamer of Dan-Gal-Foxanian and Bessarabian combined afloat

sold 44s per 480 lbs, and a cargo of black barley early March at equal to 33s 3d per 400 lbs. Flour steady, with a fair trade passing. London standard straight run quoted at 39s 6d, patents 41s 6d to 42s 6d, town households 37s 6d per sack, delivered in. All English country straights 36s 6d per sack, delivered in. London stations. Of imported, Manitoba patents range from 37s 6d to 39s 6d as to quality, and Australian 36s 6d to 37s 6d per 280 lbs, ex store. Barley generally slow. English malting ranges from 11s 9d to 14s 6d, feeders 11s to 11s 6d per 448 lbs, free on rail. Of imported, Californian 45s to 50s, ex store, Chilean brewing 41s 6d to 45s, ex ship, both per 448 lbs. No. 4 arrive 32s 6d, and Karachi ditto 34s per 400 lbs. Maize in fair demand, but prices easier for Plate descriptions. Plate ex ship quoted 43s 3d, landed 44s 9d, Bessarabian ex ship 44s, landed 45s 6d, red Karachi ex ship 43s 6d, all per 480 lbs. Oats: English quiet and ranges from 9s 2d to 10s 4d per 112 lbs, free on rail. Imported easier. Plate f.a.q., new ex ship, 21s 6d, old landed 23s 6d, No. 2 Canadian Western 27s 6d, No. 3 ditto 26s 6d, No. 2 Canadian freed landed 25s per 320 lbs. Millers' 7s 9d, middlings 8s 9d, fine ditto 10s 3d, bags included, ex mill. Light oats 7s 3d, powdered oat husks 8s 3d, feed oatmeal 9s 9d, ground oats 12s 9d, free on rail, per cwt. Oatmeal in moderate demand and prices easier. London-made flaked, also rolled oats, 16s 6d, medium and fine cuts 16s 6d, coarse and medium plain-head 16s 6d, ordinary Scottish oatmeal 17s 6d, American 16s 6d to 16s 9d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24.	1922-23.	1921-22.	1920-21.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated February 28th, is as follows:—Pig-iron: The immediate outlook is still unsatisfactory. Although the dockers' strike is a thing of the past, there are other disturbing factors, the chief of which would appear to be lack of confidence in the future. Until this is in some degree restored, we cannot hope for any permanent improvement. The price of No. 3 Cleveland G.M.B. is nominally 95s, but less would be accepted for genuine business. The quotation for mixed numbers on old contracts. Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12; steel rails, £9. Iron ore: The demand for imported ore is very quiet, and prices are nominal. Best Bilbao Rubio ore, 24s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—Trade movements as a whole are unsatisfactory, and, while some branches are expanding, the tendency of the rest appears to be reactionary, and the financial stringency is very pronounced. Buying is on the quiet side in pig-iron, bar iron, steel billets, crucible steels, and scrap. In no direction is there any disposition to contract forward, and orders are generally for small quantities. Quotations, although unchanged, are understood to be easier, sellers being willing to shade their prices to secure a good order. This district did not benefit by the holding up of Continental materials by the dockers' strike. The announcement that five cruisers are to be built has not created much enthusiasm here, as the work it is likely to send to Sheffield will not suffice to affect the trade position to any appreciable extent. An improvement in the overseas demand for certain classes of hand tools is reported. Engineers' requisites are selling more freely than of late, and the electric branch is buying steel freely. Makers of cold-rolled steel are busy. The railway steel branches are now fairly well supplied with work. Large numbers of wagons are in course of construction. Makers of tools used in excavation are fully employed on orders from home sources. The silver and electro-plate trade is extremely quiet, the turnover being below what it was a year ago. The fuel market maintains a strong position, there being a brisk demand from railways and manufacturers for steam coal, and fairly good sales for export. Owing to the congestion at the ports, less bunker coal is being specified. The home demand for coke is quite good. Current quotations per ton at pits are:—Best hand-picked branch, 35s; Barnsley best silkstone, 30s 6d; best South Yorkshire steam, 25s; ditto Tynes, 23s to 27s; ditto Derbyshire, 24s; rough slacks, 12s 6d; smalls, 7s to 9s; blast-furnace coke, 30s.

Our Glasgow correspondent writes as follows:—During the past week the output of pig-iron has been further reduced, but the supply exceeds the demand, and stocks are increasing. Prices remain unchanged. At the same time, there is a want of confidence in the quality of Continental supplies, and orders are not going out of the country. Shipments from Glasgow for the week ended Saturday last totalled only about 270 tons. In the manufactured iron and steel trades, while the dockers' strike resulted in generally holding up export business, it was the cause of one or two orders being placed with home suppliers which would otherwise have gone abroad. The situation as regards deliveries from the Continent does not improve, and on all sides complaints are heard, from merchants and others who have purchased Continental material, of the delays caused by the well-nigh hopeless congestion at Antwerp and on the Belgian railways. In view of this it might have been expected that more orders would have been placed with home makers,

but consumers are still maintaining an attitude of caution, and, although works are fully employed on existing contracts, there is a feeling of disappointment over the scarcity of new work from the shipyards. This will soon right itself, as the business is there, and the general impression is that the orders for steel will be placed with home makers. Prices for home trade are unchanged, but makers have found it necessary to shade prices to overseas buyers in order to secure business. Sheetmakers have also been forced to make some concessions for export orders, but home prices remain firm. Bookings of galvanised and black sheets have been quite satisfactory, and a considerable improvement has been observed in the tonnage placed for the thicker gauges of black sheets. Several moderate orders for steel structures have been placed with local works during the last day or two.

Our Cardiff correspondent writes:—The dockers' strike has left an aftermath of depressed prices on the Cardiff coal market. The stoppage of work at the South Wales ports last week was responsible for a general disorganisation of colliery stems. There was plenty of tonnage in dock, but the proportion of it immediately available for the shipment of coal had steadily declined, and normal conditions have not yet been restored. The result has been that the amount of coal for which the collieries have been requiring immediate outlet has increased considerably, and competition for spot vessels has brought down values by from 6d to 1s per ton, and in individual cases by nearly 2s per ton. At these reduced prices, however, only a small volume of business has been transacted. The collieries are sold over March, and there are indications that railway and other important inland consumers are accumulating stocks to meet the contingency of a stoppage in April. For next month, therefore, prices are very steady at figures from 6d to 1s per ton above current quotations, and this firmer tendency in backward prices is being supported by a reaction in outward rates of freight. The market does not share the fears of the outside public that there will be a stoppage in April. The negotiations will be resumed next week, and if the dispute can be narrowed down to the question of the distribution of the surplus there is every confidence that a settlement will be arrived at without intervention in any shape or form by the Government.

The following are the current approximate quotations:—Best Admiralties, 29s to 30s; second Admiralties, 28s to 29s; best dries, 27s 6d to 28s; Black Veins, 28s to 28s 6d; Western Valleys, 27s 6d to 28s; Eastern Valleys, 26s 6d to 27s 6d; best bunker smalls, 20s to 21s; ordinary cargo smalls, 17s to 18s 6d; anthracite Big Vein, large, 41s to 45s; machine-made cobbles, 45s to 47s 6d; French nuts, 47s 6d to 50s; stove nuts, 50s to 52s 6d; rubbly culm, 14s to 14s 6d; coke for export, 55s to 60s; inland blastfurnace coke at ovens, 30s to 35s; patent fuel, 30s to 32s 6d; pitwood, ex ship, 33s to 35s.

The tinplate trade is recovering rapidly from the effects of the dockers' strike. Prices are becoming increasingly sensitive to the increase in the cost of material. The minimum prices of tinplates and tinplate bars have not yet been raised, but this week the minimum prices of terneplates have been advanced by 1s per box. It is expected that the prices of tinplates will also be raised. The foreign demand is not quite as active as it has been; the market has been adversely affected by Continental rates of exchange, but a moderate amount of export business is taking place, and there is a fair inland demand.

CUMBERLAND IRON.

Our Workington correspondent writes as follows:—The depression in the Cumberland and North Lancashire hematite pig-iron trade has deepened during the last few weeks, and present indications are that business will diminish rather than increase. The explanation is simple. Consumers are deterred by the threats of further labour troubles from seeking to cover future requirements. They do not know even what they will require; and so the first quarter of the year, like the corresponding period a year ago, is likely to pass without any forward buying movement at all. And as the old contracts are fast running out and current needs are not sufficient to absorb the iron that is being produced, there is some likelihood that in a week or two smelters will be compelled to restrict their output. Two furnaces have remained damped down since the railway strike, and the total blowing between Workington and Carnforth is only 11. The steel trade is so poorly engaged that local consumption of iron has fallen. Scotland and South Wales are taking very little metal, and the Midland users alone are taking a considerable tonnage, while business with the Continent is almost non-existent. The result has been a depreciation of values, and Bessemer mixed numbers, while still quoted nominally at £5 15s per ton delivered at Glasgow and Sheffield, and £6 at Birmingham, are a little below these figures. Manganese alloys likewise are a lifeless market, though ferro is maintained at £17 per ton, f.o.b., and spiegel at £9 per ton. The rail mill at Workington has not rolled two weeks in four since the beginning of the year, and will be idle until the middle of March. The iron ore industry is very quietly employed, as very little metal is wanted outside this district, and prices are lower, superior sorts being quoted at 23s to 25s per ton, and ordinary kinds from 17s 6d to 19s 6d per ton. There has been a boom in the coal trade, due chiefly to the anxiety of Irish merchants to accumulate stocks, and export prices are higher, best round commanding 28s 6d; house nuts, 27s 6d; and steam nuts, 26s 6d. At these prices owners have been more disposed to ship smalls that were formerly reserved for the coking plants, and the weekly cross-Channel shipments have averaged 12,000 tons. There is no heavy call for industrial fuel, but prices are unchanged, best steam being 30s and washed steam 29s per ton delivered. Best house locally is 38s 2d per ton. The make of coke is below the maximum, and is all going to the smelters of ordinary iron in the district at 25s to 26s 6d, according to carbon content. East Coast coke supplies are lower at 4,200 tons per week.

METALS.

Tin commenced the week with a firmer tendency, buyers being well in evidence, while some irregularity was noticeable with regard to forward positions. Standard cash quoted £275 5s to £275 15s, with business in three months at £272 10s to £271 5s to £275 10s, while finally registered at £275. Eastern cables reported sales on the basis of £272 15s, c.i.f. The upward movement continued later, due to higher Eastern advices, combined with a good inquiry. By the middle of the week standard cash sold at £281 5s, and three months £280 to £279 to £279 10s. Further sales occurred in the East at £281 15s, c.i.f. Values, after opening easier, improved at Thursday's session, standard cash being sold at £280 to £279 10s to £282 5s, and three months £278 10s to £277 to £280 5s. The tone was again firmer at final session. Standard cash sold at £287 10s to £287 5s to £288 5s, and three months £283 to £285 15s to £284 10s, while finally registered at £284 15s. English ingots quoted at £288 15s to £289 5s. Copper: The market, under the influence of higher American cables and reserved sellers, ruled about 12s 6d per ton dearer. Business was on a liberal scale, including standard cash at £63 7s 6d to £63 11s 3d, and three months at £64 5s to £64 10s. Trading continued active, and prices further responded, standard cash on Wednesday being dealt in at £64 to £64 10s, and three months at £64 10s to £65 15s. An easier tone prevailed on following day, with dealings on a fairly good scale. Standard cash sold at £64 17s 6d to £65; three months, £66 2s 6d, £65 12s 6d. Copper was active and dearer on Friday. Standard cash sold at £65 18s 6d, and three months £66 7s 6d to £66 17s 6d to £66 15s to £67. Electrodes £70 10s to £71 10s, best selected £69 to £70 5s, strong sheets £97, wire bars £71 10s per ton. Lead firmer, and quoted at £37 10s to £36 10s as to position. Spelter dearer at £37 15s to £36 7s 6d, according to position. Aluminium steady. Home, £115; export, £120. Antimony, English, £59 10s to £60 per ton.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Glowing accounts continue to be received from the colonies regarding the demand for wool, and prices remain exceedingly firm. There is now a general feeling that raw material values cannot depreciate during the comparatively brief period before the end of the selling season, and it looks as if wool will continue to dominate the entire trade for some time to come. In Bradford demand for merino tops is of a hand-to-mouth character, and although topmakers' quotations are very firm, selling prices remain well below the cost of replacement, based on current values of wool. A moderate turnover is being done in fine crossbreds, but in medium and low sorts there has been a burst of activity during the last few days, and quotations are anything from 1d to 1½d up on the week, with some topmakers inclined to quote protective rates. The opinion is gaining ground that medium and low crossbred wool will go to a higher level, especially as B.A.W.R.A. stocks are being rapidly absorbed. Some big business is reported in crossbred yarns, and in many cases spinners are now well provided for to the end of the year. A satisfactory feature is that particulars against old contracts are now coming in much better, and crossbred spinners have no longer any anxiety about being able to run their machinery. The Botany section, however, is in a less fortunate position, and present prices appear to check demand. Some fairly big stocks are available at prices well below market quotations, and even where quoted rates can be made prices are far below what they ought to be having regard to the high cost of merino wool. All by-products are selling at extreme prices, this being especially noticeable in the case of noils.

COLONIAL WOOL.
FROM A CORRESPONDENT.

Last Tuesday it was decided to postpone the opening of the forthcoming London sales from March 11 to March 18, this being found necessary as a result of the congestion at the docks following the recent dockers' strike. We are not surprised at this in view of the heavy arrivals of direct imports and the arduous work of sorting out the bales of wool as they are discharged from the ships. The work cannot be very largely accelerated by the employment of additional men, it requiring something more than a casual labourer to handle wool cargoes. The marks and identification numbers are legion, all of which mean that great care must be exercised in order to sort out the bales for the respective owners, and as the latter to-day are more numerous than ever, the work is becoming increasingly difficult. All the same, it is really amazing how few mistakes are made, and it is doubtful if 100 bales a year go astray out of the 2,000,000 bales comprising the Australasian clip. Well over 100 years of handling colonial wool in London has no doubt afforded time for the development of an elaborate and comprehensive system, but even when due allowance has been made for that, it is remarkable how few bales go astray.

The arrivals clearly indicate that at the forthcoming auctions there will be available a very nice offering of new clip merinos and crossbreds. In all probability there will be a considerable quantity of second-hand parcels, and also several well-known Australian new clip wools. Judging by the course of the auctions in Australia and New Zealand, it looks as if wool values are established on a very firm basis, and although Bradford to-day is responding somewhat poorly, we are looking forward to firm, steady values.

MANCHESTER, February 28.

Although raw material rates have been easier this week, the general tone of the market has been firmer than for some time back. This has been chiefly due to the resumption of short time in the spinning mills, and the determination of yarn sellers to secure more remunerative rates. Some cloth manufacturers have more work to go on with than at the beginning of the year, and definite attempts are being made to improve prices. In piece goods for India there has been a considerable inquiry, and fair sales have taken place, especially in light fabrics, but rather more difficulty has been experienced in arranging terms of fresh contracts. A steady demand has continued for China in greys and whites. Moderate lines have been put through for Egypt. A scattered business has been done for South Africa and the Continent. Fancies have attracted a little more attention for the home trade. American yarn quotations have been much steadier, and spinners have derived some advantage from the fall in raw cotton, but the sales have not been important. A very fair business has been done in Egyptian spinnings, at easier rates.

VEGETABLE OILS AND OILSEEDS.

The settlement of the dock strike released large quantities of oil-seeds, which had been held up in steamer and lighter, and enabled the mills which were very short of materials, particularly linseed, to resume the production of oil. This naturally reacted on the prices of linseed oil which for spot and in near positions had ruled at an abnormally high level owing to extreme scarcity. Up to £50 was actually paid for raw linseed oil, ex-Hull mill, last week, since when prices have fallen to £43 10s spot and £41 15s March, at which business was done on Thursday. Trade in Egyptian cottonseed has not been at all large, supplies of oil being good, and more than sufficient to meet the present slow demand for crude, which has eased off to £43 per ton ex Hull mill.

HIDE AND LEATHER TRADES.

(BY OUR OWN CORRESPONDENT.)

Although hide prices are nominally firm, the tone at the Bermondsey sales on Thursday last was weaker, as three classes in best ox failed to find buyers. One class which changed hands at 8½d. showed a fall of ½d, as against last prices, the 59 lbs and under class also declining by the same fraction. Best cows were also unsold, and bulls dropped ½d to 1½d per lb. Calf were decidedly easier, making from 7d for heavies to 16½d for lights, all selections showing declines of ½d to 1½d. Wools sold from 8s to 16s each, and hogs from 5s to 21s each. The demand for Argentinian wet salted hides remains quiet, but as prices of Argentinian show a weaker tendency, it is likely our tanners will soon come into the market again. The Chicago packer hides market is calmed as easy, although best native steers are quoted at 16 cents.

The demand for sole leather remains quite good, and prices are advancing in many directions. Dry hide bends are up by 2d per lb for best grades, and merchants in view of the strong position have been operating freely of late. Offal is also dearer, and some tanners have little to offer in the better selections of shoulders and bellies. The business doing in upper leathers has been of a general character, and calf leathers have advanced in price. The reduction on German goods of the reparations duty from 26 to 5 per cent. is causing some anxiety at Bermondsey, but the view is taken that it will affect deliveries of leather very little, as German prices are now approximating British. Glacé kid is selling better in the low and best grades, but difficulty is found in shifting the medium selections at a profitable price. Suède is again coming in for attention, and prices of sheep leather are gradually advancing. As a matter of trade interest, I have to report that Sir Samuel Barrow was elected on Thursday as chairman of the United Tanners' Federation.

The boot trade is improving, and orders for home and export have come to hand freely of late.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, February 29th.

SUGAR.—The market for British refined goods remained unchanged, and a moderate amount of business was transacted in spot parcels. Messrs Tate and Lyle's cubes, 66s 9d to 67s 9d; granulated, 64s 1½d to 64s 7½d, as to quality; March delivery, 64s; April, 64s 3d; May, 64s 6d; yellow crystals, spot, 59s 7½d. Imported descriptions met a quiet sale, but sellers adhered to previous asking prices. White Java, spot, 61s 6d; ditto, May-June, steamer, 28s 9d; June-July, 27s 6d; July-August, 26s 9d; ditto, reopening of navigation, 34s; April-granulated, spot, 62s 9d; ditto, reopening of navigation, 34s; April-granulated, spot, 62s 9d; ditto, reopening of navigation, 34s; April-granulated, spot, 62s 9d; ditto, reopening of navigation, 34s. Cuban exports being prohibited. Raw refining kinds quiet, steady. U.K. basis, 96 per cent., March quoted 29s 9d, c.f. and i. terms U.K. basis, white terminal market continued rather unsettled, and a fair number of sales occurred. March sold 34s, 34s 3d, and 34s; May, 33s 3d to 33s; August, 30s 7½d to 30s 4½d; November, 24s 10½d; December, 24s 10½d cwt.

COFFEE.—There is only a quiet movement in spot parcels, but prices remained steady at previous level.
COCOA.—Quiet, unchanged, on spot. Accra, F/F quality, March-May, sold, 35s 6d cwt, f.o.b. terms.

TEA.—In auction, 4,300 packages Java and Sumatra were offered, and met a generally good demand, though prices on balance disclosed some irregularity. Pekoe, sold, 1s 3d to 1s 4d; broken, 11½d to 1s 7½d; pekoe souchong, 1s 3d to 1s 3½d; broken orange pekoe, 11½d to 1s 3½d per lb, in bond.

SPICE.—Pepper market steady, though business was again kept down. Black Singapore, L.S., March-May, 4½d; Lampong, ditto, 4½d; Muntok, ditto, 7½d, sellers; April-June, buyers, 7½d. Zanzibar cloves, spot, 1s 2d, 1s 2½d; March-May, 1s 1d. Tapioca quiet, but steady. Singapore, fair flake, spot, 3½d; fine Java, 4½d per lb. Singapore, February-April, Havre, quoted 33s 6d; fair Penang, seed pearl, spot, 35s; March-May, steamer, 31s. Sago flour, January-March, quoted 16s 3d. Desiccated coconut slow. Fine cut, spot, 43s 9d; medium, 45s 9d; halves, March-April, 42s, buyers; 42s 3d, sellers. Ginger firm. F.W.R., Cochin, spot, 95s cwt.

JUTE.—This market hardened, on stimulating cable advices from Calcutta, where local mills continue to operate with marked freedom in loose jute. First grade, February-March, Continent, sold, £27 2s 6d; ditto, March-April, £27 15s; April-May, £28 5s ton. Hessians firm, quiet. 10 oz, April, sold, 29s 6d per 100 yards. Twills fully steady, though rather quiet of sale.

HEMP.—The market for Manila was again quiet, but steady, as sellers were not pressing. J grade, March-May quoted, £38; K ditto, £32; L, £31; and M, £28 5s. New Zealand, H.P.F., March-May quoted, £36 10s; fair, £34 10s. African Sisal No. 1 Tanganyika, March-May, sellers, £44; and No. 1 brushed Kenya ditto, £43 ton.

SHELLAC continued in a quiet state, Fair T.N. orange, spot, quoted 290s; March, 280s; May, 275s cwt.

COPRA.—Sellers were not unduly pressing, but buyers were by no means frequent, and a weaker tone predominated. F.M.S. Straits, January-March, Rotterdam, sold, £30 7s 6d; ditto, February-April, £29 17s 6d. Dutch East Indies, January-March, sold, £30; ditto, February-April, sellers, £29 13s 9d. F.M. Straits, February-March, Marseilles, quoted £29 17s 6d; mixed excluding Padang, £29 13s 9d. Ceylon, February-March to Rotterdam, quoted £32 15s. South Sea Islands, ditto, £29 7s 6d; Java ditto, £30 15s. Palm kernels, March-May, Liverpool quoted, £20 12s 6d; an April-June, sold, £20 10s ton.

RUBBER.—General course of trade moves very slowly, and the market is without new feature. Standard plantation, crepe and sheet, spot, also March, sold, 1s 1½d; April, 1s 1½d; April-June, 1s 2d; July-September, 1s 2½d; October-December, 1s 2½d. To New York, standard estate sheet, March-April, 1s 2½d; and ordinary, April-May, 1s 2d per lb, c.f. and i. terms. Wild sorts very quiet. Fine hard Para, spot, 1s; soft fine ditto, 11d. Caucho ball, 11d per lb.

EGG PRODUCTS.—This market remained in a quiet and featureless condition. Prime hen liquid yolk, spot, 92s 6d to 95s per cwt. Prime hen albumen, spot, 4s 10½d to 4s 11d; ditto, for shipment, 4s 6d; dried yolk, spot, new import, 1s; old, 10½d per lb.

LEAGUE OF NATIONS

THE
MONTHLY BULLETIN OF
STATISTICS

Annual Subscription 18s. (post free). Single numbers 1s. 6d. net.

A synopsis of the economic position of all the leading commercial countries in the world in a convenient and concise form; showing coal, iron, steel production, foreign trade, price movements, cost of living, unemployment, gold reserves and note circulation, exchange and discount rates, etc., etc., based on official information specially supplied each month.

MENTHOL.—Spot lots quoted 58s 6d; forward, 53s. Japanese peppermint oil, spot, 14s; aniseed, spot, 1s 9d; slab camphor, 24 lbs, 3s 5d; crude camphor, 3s per lb.

OLSEEDS.—Lined, in fair demand but prices tended easier for Plate descriptions. Indian: Calcutta, afloat, £22 10s; February-March, £21 5s; April-May, £20. Plate, afloat, £19 10s; January-February, sold, £18 17s 6d to £18 16s 3d; April-May, £18 5s to £18 2s 6d. Rapeseed quiet. Toria, February-March, £19; March-April, £18 15s; Jamba, February-March, £15; and real bold Ferozepore, March-April, £18 5s; April-May, £17 17s 6d. Cottonseed steady. The City of Calgary announces that the COUPONS falling due 1st April, 1924, on the above-mentioned Debentures may be PRESENTED on and after the 17th March, 1924, between the hours of 10 and 2 o'clock (Saturdays excepted), at the Bank of Montreal, 47, Threadneedle street, E.C.2. Three clear days required for examination. Lists may be obtained on application at the Bank.

PROVINCE OF ONTARIO

4% REGISTERED STOCK, 1947.

For the purpose of preparing the Interest Warrants due 1st May, 1924, the BALANCES will be STRUCK on the evening of the 1st April, 1924, after which date the Stock will be transferred ex-dividend. For BANK OF MONTREAL, G. C. CASSELS, Manager, 47 Threadneedle street, E.C.2, 1st March, 1924.

The WORKS and LIFE of WALTER BAGEHOT

Edited by Mrs. RUSSELL BARRINGTON

LONGMANS, GREEN & CO., 39, Paternoster Row, London, E.C.

A Prospectus has been filed with the Registrar of Joint Stock Companies, which states amongst other things that Application will be made to the Committee of the London Stock Exchange for permission to deal in the Shares of the Company after allotment, and application for an official quotation will also be made. The SUBSCRIPTION LIST will OPEN on THURSDAY, the 28th day of February, 1924, and will CLOSE on or before MONDAY, the 3rd day of March, 1924.

HEPPELLS, LIMITED.

(Incorporated under the Companies Acts, 1908 to 1917).
BRITISH AND FOREIGN CHEMISTS, AMERICAN DRUGGISTS, PROPRIETORS OF "CLARK'S BATH SALTS," "URELLAC," AND LAMPOUGH'S SALINE.

CAPITAL £250,000

Divided into 150,000 7 per cent. Cumulative Participating Preference Shares of £1 each ... £150,000
95,000 Ordinary Shares of £1 each, and 100,000 Ordinary Shares of 1s each ... £100,000
of which the Ordinary Shares of 1s each have been applied for by and will be issued at a premium of 7½ per cent. to the Vendors, the 50,000 Ordinary Shares of £1 each have been applied for or underwritten by the Directors and their friends, at the same premium, viz., at 21s 6d each.

The Preference Shares are entitled to a fixed Cumulative Preferential Dividend at the rate of 7 per cent. per annum on the amount paid up thereon, and rank in respect of the surplus profits of each year pari passu with the Ordinary Shares after the latter have received a dividend at the rate of 7 per cent. for such year on the amount paid up thereon, until both classes of shares have received 10 per cent. dividend for such year on the amounts paid up. Ordinary Shares being entitled to balance of profits proportionately to amounts paid up on such shares. In a winding-up Preference Shareholders have priority in repayment of capital, and any arrears of fixed dividend, whether declared or not, up to the commencement of winding up, but no further right of participation in profits or assets.

ISSUE OF 150,000 7 PER CENT CUMULATIVE PARTICIPATING (up to 10 per cent.) PREFERENCE SHARES OF £1 EACH AT PAR, AND 95,000 ORDINARY SHARES OF £1 EACH AT 21s 6d PER SHARE. Preferential Allotment will be made so far as is possible to Customers on the Books, to the Trade, and Shareholders in their Companies.

Messrs. COUTTS and CO., of 15 Lombard street, E.C.3, 440 Strand, W.C.2, and 1 Park lane, W.1; and the NATIONAL PROVINCIAL BANK, Limited, Head Office, 15 Bishopsgate, E.C.2, and Branches, as Bankers of the Company, are authorised to receive subscriptions for the above issue, payable as follows:

2s 6d per Share on Application (in case of Ordinary Shares, including Premium).

7s 6d per Share on Allotment; 10s per Preference Share and 11s 6d per Ordinary Share, on 1st April, 1924.

If paid in full on allotment, or on any date thereafter in advance, interest will be allowed at the rate of 5 per cent. per annum on the amount prepaid. Fully-paid Letters of Allotment will be exchangeable for Share Certificates, which will be ready on or before 1st May, 1924.

BROKERS.—SHAW, LOEBL and CO., Pinner's Hall, Austin Friars, E.C.2, and E.C.2.

SECRETARY (pro tem).—T. S. REARDON, A.S.A.A., REGISTERED and TRANSFER OFFICES, SPENCER HOUSE, SOUTH PLACE, E.C.2.

ABBREGE PROSPECTUS.
The Company has been formed primarily to acquire and extend the well-known and important business of HEPPELLS, originally founded in Haymarket nearly half a century ago, British and Foreign Pharmacists, owners of the Empire rights in "CLARK'S BATH SALTS," "URELLAC," and "BOISSARD'S" Perfumes and other proprietary articles, and trade marks of the Wholesale and Manufacturing Chemists' business of FRANCOIS DRAKE and CO., and the Share Capital of PROPRIETARY ARTICLES, LTD., owners of the old-established proprietary rights of "LAMPOUGH'S PYRETIC SALINE," and other preparations.

The businesses and premises comprise those of De Castro Watson and Richards, 53 Knightsbridge, and 38 Wilton place, S.W. (Established 1838); the goodwill of Waugh and Co. (late of Regent street and Burlington arcade, who were Chemists by appointment to Her Majesty Queen Alexandra, and Hoppells' branches at 224 and 165 Piccadilly; 71 and 73 Knightsbridge; 5 Buckingham Palace road; 38 Chandos street, Strand; 77 and 78 Strand; 9 Bloomsbury street; 35 Haymarket; 106 King's road, Brighton; The Regent Palace Hotel Pharmacy, and the manufacturing and wholesale branch at Nos. 1, 2, 13, 14 and 15 Eden street, N.W.

Spencer House, South place, London, E.C.2. 21st February, 1924.
Gentlemen.—We have prepared Profit and Loss Accounts of the business of HEPPELLS from 1919, earlier figures not being available, and beg to report that the Turnover and Net Profits as shown by those accounts for the years 1920, 1921, and 1922, and the three months ending 31st March, 1923, after debiting all charges, but before providing for depreciation on fixtures and fittings, taxation, Bank interest, and Directors' fees and remuneration, are as follows:—

Turnover.		Net Profits.	
	£ s d		£ s d
12 mths. to 31st Dec., 1920	169,109 8 9	24,413 12 6	
" " " 1921	126,150 1 7	12,154 18 0	
" " " 1922	127,823 17 5	18,373 18 0	
3 mths. to 31st Mar., 1923	30,481 1 5	6,831 9 0	
or at the rate per annum of	121,924 5 8	27,325 16 0	

The turnover and profits above do not include those of the Brighton branch, which has only been recently established, or those of the Regent Palace Pharmacy and Lamplough's Saline, which have only been recently acquired.

The Assets acquired by the Company are:—

Freehold and Leasehold Buildings (as valued by Mr. J. Trevor, F.A.I. Surveyor) ... £ 48,000 0 0

Fixtures, Fittings, Plant, and Machinery (as estimated by Proprietor), subject to valuation Stock-in-Trade, as certified by Proprietor at last stocktaking (at cost or market price, whichever was the lower), subject to valuation as at 18th February, 1924 ... 99,225 0 5

Goodwill (as valued by Messrs Orridge and Co., Chemists' Valuers), including Trade Marks, &c. Share Capital of Proprietary Articles, Ltd., at cost ... 75,165 12 6

... 8,000 0 0

£ 249,390 12 11

To which must be added the balance of the proceeds of the issue of share capital after deduction of the purchase consideration ... 23,274 19 7

Net Assets ... £ 272,665 12 6

The Vendors discharge all liabilities up to 18th February, 1924. The subscription of this issue will, subject to expenses and valuation adjustments, provide the Company with £122,500 stock and working capital.

NEWMAN, OGLE, ASHWORTH AND CO., Chartered Accountants.
The General Manager estimates net profit for the year ended December 31st, 1923, to be upwards of £31,000 (subject to audit), current rate of profit to be on an increasing scale, and that from the business of Lamplough's Pyretic Saline an additional revenue should be derived of not less than £2,800 per annum, which should increase as have the important net profits from other proprietary businesses acquired in 1921—the revenue from which was in 1923 substantially double that of 1922—and is continuing to increase.

PROFITS.
The actual and estimated profits of the Company are summarised as follows:—
Heppells' average of net profits for 4 years ended 31st December, 1923, as shown by above-mentioned Report, and estimated by the General Manager £21,485 10 1
Lamplough's Saline estimated net annual profit 2,800 0 0

224,285 10 1
which is subject to administration expenses, sufficient to cover more than twice over the fixed dividend on the Preference Shares of this issue. In 1921 (the record year of universal trade depression) the profits were more than sufficient to pay the fixed Preference Dividend. On the basis of last year's actual and estimated profits of upwards of £31,000, with the estimated additional revenue, such dividend is over three times covered.

Application may be made on the accompanying form and lodged with Coutts and Co., 15 Lombard street, E.C.3, 440 Strand, W.C.2, or 1 Park lane, W.1; or with the National Provincial Bank Limited, 15 Bishopsgate, E.C.2; or any of their branches, with the amount payable on application. Prospectuses, upon the terms of which applications for shares will alone be entertained, can be obtained at the offices of the Company or of its Brokers or Bankers. Dated 27th February, 1924.

THIS FORM OF APPLICATION MAY BE USED.
This Form of Application should be sent to COUTTS and CO., 15 Lombard street, E.C.3, or 440 Strand, W.C.2, or 1 Park lane, W.1; or to NATIONAL PROVINCIAL BANK Limited, 15 Bishopsgate, E.C.2, or any of its Branches, with a remittance for the amount payable on Application.

HEPPELLS, LIMITED.
No.
To the Directors of HEPPELLS, Limited.
Gentlemen.—Having paid to your Bankers the sum of £..... being a Deposit of 2s 6d per Share on application for.....Preference shares of £1 each at par,.....Ordinary shares of £1 each at 21s 6d per share, of the above Company,
I request you to allot me Shares in accordance with such application upon the terms of the Company's Prospectus, dated 27th February, 1924, and of the Memorandum and Articles of Association of the Company, and I hereby agree to accept the same or any smaller number that may be allotted to me, and to pay the balance due from me by the instalments specified in the said Prospectus, and I authorise you to place my name on the register of members of the Company as the holder of the Shares allotted to me.

The application may be for Preference or Ordinary Shares or both.

PEARL

ASSURANCE COMPANY, LIMITED,

HIGH HOLBORN, W.C. 1.

Summary of the Sixtieth Annual Report FOR THE YEAR ENDING 31st DECEMBER, 1923.

The Directors have great satisfaction in submitting the Sixtieth Annual Report and Balance Sheet of the Company, recording all round progress.

INCOME.

The Premium Income for the year amounted to **£8,235,085 9s. 5d.**, an increase of **£522,910 12s. 4d.** over that of the previous year.

In the Ordinary Branch, the Premium Income amounted to **£2,648,478 15s. 0d.**, which is **£187,258 18s. 7d.** greater than that of the previous year. The number of Policies issued during the year in this Branch was 37,692, assuring the sum of £7,152,313, and producing a New Annual Premium Income of £427,737 18s. 4d.

The Industrial Branch Premium Income amounted to **£5,002,952 1s. 4d.**, and shows an increase for the year of **£313,139 10s. 10d.**

In the Fire Branch the Premiums, after deduction of re-insurances, amount to **£514,403 6s. 3d.**, and the Losses, less recoveries under re-insurances, absorb the sum of £293,848 19s. 6d. The Fire Fund of the Company now stands at **£262,023 4s. 2d.**

The Premiums in the Personal Accident, Employers' Liability and General Business Accounts amounted to £67,160 3s. 11d.

The Total Income for the year amounted to **£9,500,592 9s. 10d.**, being an increase of **£721,051 5s. 4d.** over that of the previous year.

CLAIMS.

The Life Claims and Matured Endowments paid and outstanding numbered 233,848, and amounted with Bonuses to £2,708,419 7s. 9d. In the Fire and Accident Branches the Claims paid and outstanding amounted to £326,581 7s. 2d. The Total Claims paid by the Company amount to **£35,470,787 5s. 3d.**

FUNDS.

The Total Funds amount to **£29,404,341 5s. 11d.**, which is an increase of **£3,676,661 4s. 9d.** over those of the previous year.

F. D. BOWLES,
Chairman.

THE MONEY MARKET.

ONLY at the beginning of the week was any ease apparent as the result of the disbursement of the March 1st dividends, so well are large Government payments now balanced by offsetting charges by skilful management of the market's liabilities for Treasury bills, revenue collections, and other payments to Government account. Daily loans have been quoted at 2-2½ per cent., and weekly fixtures at 2½ per cent., without there being much margin

over requirements. On Thursday there was a large turn-over of money in connection with revenue payments, but despite this, the usual week-end ease began to show itself. Discounts have been quiet, with the rate for fine three months' bills steady at $3\frac{3}{4}$ per cent., while June Treasury bills have changed hands at $3\frac{1}{4}$ per cent.

	Mar. 7, 1924.	Feb. 29, 1924.	Feb. 22, 1924.	Feb. 15, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	5 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses' Notice	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	1 $\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills)	3 $\frac{1}{4}$	3 $\frac{3}{8}$	3 $\frac{7}{16}$	3 $\frac{1}{2}$	..

The Bank statement showed a further increase in the circulation to the extent of £441,100, and there was a loss of £4,500 in the bullion stock, so that the Reserve was £445,600 lower. Government disbursements on March 1st in respect of dividends were so well managed as not to be evident in any borrowing from the Bank, Government securities being actually £1,790,000 less than in the previous return, and Government deposits were only £348,200 lower. Other securities were £2,024,200 higher, though there has been no money market borrowing, and the expansion presumably means that securities have again been bought to ease the position during the heavy revenue collections. These transactions were so balanced as to leave Private deposits only £29,400 higher. The proportion was 0.3 per cent. lower at 17.7 per cent. There was an increase of £2,484,500 to £279,952,500 in currency notes outstanding this week, which includes £1,405,800 for notes called in but not yet cancelled. The fiduciary issue is £229,096,800, or £19,094,100 below the maximum.

THE STOCK MARKETS.

Business in the Stock Exchange this week has been fitful, and so far March has only brought a very moderate volume of trade. Changes in the gilt-edged market are slight, but French bonds are flat upon the renewed collapse of the franc. Home railway stocks are now quoted ex-dividend, and the market is idle, but there has been some activity in South American rails. Rubber shares attract no attention, and the oil market has thoroughly quietened down. The shares of London store companies have been good, and the insurance and banking group is slightly better. There appears to be little doing in the mining section, though Chartered shares have risen on hopes of an early repayment of 5s a share to shareholders.

THE COMMODITY MARKETS.

On the whole, the general tone of the commodity markets is better. Our Sheffield correspondent reports that the demand for steam coal rather exceeds the present output, and deliveries are in arrears. From Cardiff a slight improvement in the coal market is reported. Recent reductions in pig-iron prices have caused some improvement in the demand. The steel trade is quiet, and little new business is coming forward. Tin opened well, but was subsequently inclined to weakness; copper followed in similar fashion. Not much business is taking place in the cotton trade. Wool prices remain firm. There is no change in the sugar market, but brisk competition is shown for tea. Rubber is inclined to be slightly erratic, opening steadily, but closing quiet. The hide market is weak, and linseed oil has eased off in price. Details of markets and prices will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

Business has been dull during the week owing to the Continental holidays on Tuesday and Wednesday. During the last two days, however, interest has been especially focussed on the fall of the franc. The Paris rate of 102.60 last Friday recovered slightly on Monday morning on the publication of the MacDonald-Poincaré correspondence, but weakened again in the afternoon. The rate rose steadily till Wednesday, when the closing rate was 105.50, then soared to 107.90 on Thursday and 110.50

yesterday morning. The French and Belgian political situations, and the increase of nearly one milliard in the note issue, bringing it to within $\frac{3}{4}$ milliard of the legal limit of 41 milliards, have contributed to bring about this state of affairs. Nor can any sustained amelioration be looked for. The Belgian rate has followed the same unsatisfactory course, though perhaps the political crisis is more directly responsible, and stood yesterday at 127.25, as against 122 on Wednesday and 117.40 a week ago. Forward rates in Paris have jumped from 1.10 to 2.80f per month above spot, and in Brussels from 25 to 75c per month above spot, but even at these rates there are practically no buyers of forward francs on the London market. Another important movement of the week has been the continued depreciation of the Spanish peseta, which now stands at 35.25 as against 34.10 a week ago. This is to be attributed to the fresh outbreak of hostilities in Morocco, coupled with the unsettled political situation. The New York rate has not shown any marked tendency, but has moved between 4.29 $\frac{1}{2}$ and 4.30 $\frac{1}{2}$, standing slightly lower on balance at the former figure yesterday. Forward rates are steady at $\frac{1}{4}$ cent per month above spot. Italy is at 100 $\frac{1}{2}$, compared with 99 $\frac{3}{4}$ a week ago, while Berlin is also slightly weaker at 20 billions. Of the neutral currencies, Holland moved in our favour from 11.52 $\frac{3}{4}$ to 11.54, but reacted yesterday morning to 11.53 $\frac{1}{2}$, while Switzerland at 24.83 has moved slightly in our favour from 24.84 $\frac{1}{2}$. In the Scandinavian countries, Christiania, after recovering further from 32.50 to 31.40, relapsed slightly to 31.72. Copenhagen, where the situation is still somewhat obscure, after varying between 27.15 and 27.30, stood yesterday at 27.20. Finland remains steady round 171. In Central Europe, Warsaw shows little variation at 40 millions, while Vienna remains steady at 305,000. The Hungarian krone continues to depreciate, the rate having risen from 200,000 to 230,000 sellers on the week, while 250,000 was touched on Thursday. Prague has been steady at 148 $\frac{1}{2}$, while Bucharest has weakened slightly from 820 to 830. In the East the rupee has remained around 15 4 $\frac{1}{2}$ d, but the yen at 28 0 6-8d is $\frac{1}{2}$ d cheaper. The silver market has been quiet and the price steady, since there has been little New York or Continental selling. The report that Germany was about to buy silver for currency purposes has been denied on the ground that the Reichsbank holds sufficient. Hong Kong is $\frac{1}{4}$ d dearer at 25 4 $\frac{1}{2}$ d, while Shanghai, after touching 3s 3 $\frac{1}{2}$ d, is once more at 3s 3d. In South America, Rio is steady at 6 $\frac{1}{2}$ d, and Buenos Aires at 43 $\frac{1}{2}$ d, while Monte Video has risen slightly from 42 $\frac{3}{4}$ d to 43d. Valparaiso at 42 pesos compares with 42.50 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 1st:—

EXPENDITURE.		RECEIPTS.	
	£		£
Supply Services	10,019	From Revenue	26,643
Interest, &c., on Debt	10,734	Decrease in balances	326
Sinking fund	1,523		
Bond issues	247		
Reduction of Debt	4,446		
	26,969		26,969

Revenue was £1,545,000 higher at £26,643,000, for the week ending March 1st, compared with the corresponding period. Customs were down at £1,533,000, against £1,975,000, but Excise amounted to £1,333,000, against £1,164,000. Estate duties were £610,000 up at £1,430,000, and corporation profits tax yielded £720,000, against £480,000. Post Office receipts were £150,000 more at £1,000,000. Special receipts brought in £527,000, against nil. Property and Income-tax amounted to £13,384,000, and Super-tax to £2,990,000, against a combined total of £14,723,000 for the corresponding period. The week's operations reduced the National Debt by £4,446,000, and caused the following changes:—

(000's omitted.)		£	
	£		£
Public Departments	+ 9,600	Treasury Bills	- 13,206
Unemployment Insurance....	+ 110	National War Bonds	- 150
		Telegraph Money	- 600
		Saving Certificates	- 200
	+ 9,710		- 14,156

The floating debt was reduced by £3,620,000 to £793,080,500.

FINANCIAL YEAR, 1923-24 (April 1 to March 1, 1924).

Total Expenditure ..	£ 710,967,218	Raised by Revenue ..	£ 740,496,761

ESTIMATES for YEAR 1923-24.

Ordinary Expenditure ..	£ 801,013,000	Ordinary Receipts ..	£ 778,500,000
Special Expenditure..	15,603,000	Special Receipts....	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

THE WEEK IN PARLIAMENT.

MONDAY, MARCH 3RD.—Commons: Supplementary estimates and debates on British agriculture, Kenya railways, and Phosphate Islands. Legitimacy Bill read a second time.

TUESDAY, MARCH 4TH.—Lords: Debate on air policy. Commons: Debates on second readings of Local Authorities (Emergency Provisions) Bill, and Trade Facilities Bill. Consolidated Fund Bill (No. 1) read a second time. Mr Snowden announces rejection of the betting tax.

WEDNESDAY, MARCH 5TH.—Lords: Debate on Irish compensation. Commons: Trade Facilities Bill second reading resumed and passed. Second reading of London and North-Eastern Railway Bill.

THURSDAY, MARCH 6TH.—Lords: Committee stage of Legitimacy Bill concluded. Royal Assent given to Diseases of Animals Act. Commons: Debate on German Reparations Recovery Duty raised on Civil Service and Revenue Departments Vote on Account.

FRIDAY, MARCH 7TH.—Commons: Merchandise Marks Bill second reading.

Company Meetings of the Week.—On later pages of this issue will be found the annual report of the American Telephone and Telegraph Company, also the reports of the following companies:—Southern Railway, Underground Electric Railways of London, Britannic Assurance, Prudential Assurance, Refuge Assurance, Scottish Widows' Fund Life Insurance, Charing Cross Electricity Supply Company, Harrods, National Mortgage and Agency of New Zealand, British Automobile Traction Company, B. Morris and Sons, General Investors and Trustees and United States Debenture Corporation. At the Britannic Assurance meeting Mr. J. A. Jefferson reviewed a successful year's working, and said that the revenue exceeded the outgo by over a million sterling. Mr H. E. Richardson, at the Scottish Widows Fund meeting, said that the new business in the last quinquennium was a record. At the National Mortgage and Agency of New Zealand meeting, Mr Robert Logan spoke of the year as a prosperous and profitable one for New Zealand. Mr A. C. Thompson, at the Prudential meeting, in referring to the continued progress of the company, stated that the total income for the year exceeded £33,000,000. Lord Ashfield, at the Underground Electric Railways meeting, spoke strongly of unfair competition, and the necessity for omnibus control.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE NEW DIPLOMACY.

THE correspondence between Mr Ramsay MacDonald and M. Poincaré which was published last Sunday is a matter of some importance in the development of the European situation. On the surface it might appear that the correspondence leaves matters very much as they were. Mr Ramsay MacDonald's letter frankly enumerates the points on which British opinion is critical of French policy. Many of these comments have been made officially, and all of them have been conveyed unofficially to France many times before. M. Poincaré's reply is couched in

his usual friendly terms, and leads up to the reiteration of his usual refrain that the occupation of the Ruhr "will cease, as we have announced, on the day when Germany pays off her debt." But diplomatic documents are often less important for what they say than for their influence upon opinion. Mr Ramsay MacDonald's letter calls attention to the economic effect on Great Britain of the delay in settling the reparation question. It says that this country regards with anxiety what appears to be France's determination to ruin Germany. It expresses apprehension of France's military and air preparations, and anxiety caused by the French interest shown in the military organisation of the States of Central Europe, and finally comments critically on the fact that France is financing these new States while making no effort to pay even the interest on her debt either to England or America. But the Prime Minister's exposition of these points, and of the conditions under which Great Britain thinks France can get security and reparations, are couched in terms which have made a good impression in France, and, except in a small number of cases, appear to have given no offence. As a diplomatic document, indeed, Mr Ramsay MacDonald's note gets higher marks than the essays of the experienced diplomat who conducted a similar correspondence for the late Government. The very much more favourable impression which it has made is due partly to its frank, yet sympathetic, tone; but also, of course, to the more receptive frame of mind of those to whom it is addressed. We have said that we find in the French note nothing new which could contribute towards a settlement. But we should, perhaps, except the paragraph in which M. Poincaré speaks in extremely friendly terms of the League of Nations. Into this paragraph we may perhaps read that M. Poincaré himself is now drifting towards the view that the League must be entrusted to a considerable extent with the supervision of a settlement when it is finally made.

The correspondence has greatly enhanced Mr MacDonald's prestige in Europe, and has revived the hope that co-operation between England and France may again become possible in carrying out a policy which harmonises British and French interests. This is evident from Press notes in various countries. In Belgium, for example, the Socialist leader, M. Van der Velde, in commenting on the defeat of the Belgian Ministry, declared that his Party had not acted on anti-French motives, but was anxious to co-operate with the new effort that Mr Ramsay MacDonald was making to restore harmony and to produce a settlement in Europe. The same conviction that the diplomatic situation has changed is revealed in a different way by the not very friendly comment in some of the Italian Press, which fears that England and France are once more getting together, and that if they succeed they will between them control Europe, and that Italy will be left out of the picture. Whether the policies of France and Great Britain have really come closer together will be tested when the committees of experts report. The correspondence of last week, while it perhaps contributed nothing concrete, has produced an atmosphere in which any recommendations of these committees will have the most favourable consideration.

In the meantime, there are two currents which can be distinguished in the course of events. On the one hand M. Poincaré seems steadily to be losing ground in France. The crisis, possibly the last before the French General Election, will come on Tuesday. The Senate, always very jealous of any increase in the power of Ministers, is instinctively opposed, as we have previously pointed out, to those clauses in the Financial Reform Bill which confer upon the Government power to act by decree. This opposition has just been reaffirmed by the Finance Committee of the Senate, and M. Poincaré has declared his intention of resigning if the Senate does not yield by Tuesday next. This is probably the most serious storm that M. Poincaré has to face, for the dispute raises issues deeprooted in French history. On the other hand, the situation in Germany gets, if anything, more obscure. It was hoped in Germany that it would be possible to postpone the elections until after the French elections had taken place. But this has now proved impossible, and the elections

will probably take place in the middle of April, at which it is expected that the Socialists will lose considerable ground, and that there will be a marked drift to the right. It is not yet possible to forecast what effect this will have upon German policy. But it will certainly not make it easier to come to an understanding. A hint of the difficulties to come is given in the statement made on Thursday by the Foreign Minister in a speech to the Reichstag to the effect that Germany cannot agree to the setting up of a Committee of Guarantee for military control—the scheme which the Allies propose ultimately to substitute for the present Commission of Control. The proposal is favourable to Germany, for it will be a charge upon the Allies, and not upon Germany, and holds out hope that the supervision will ultimately be taken over by the League of Nations. But Herr Stresemann takes his stand on the letter of the Treaty of Versailles, and claims that Germany was practically disarmed a year. He suggests no way in which he would give France and Britain permanent safeguards. The German Foreign Minister also objected to the proposal for a Buffer State. But British opinion has never conceived of this as a solution. All it has proposed is military neutralisation of the territory on both sides of the Rhine. He would be a bold man who would prophesy what the next few weeks will bring forth. The only thing that can be said with certainty is that the situation is changing rapidly. We wish that Mr Ramsay MacDonald were free from Parliamentary duties and able to give his whole mind and time to this problem of supreme importance.

THE BUDGET OUTLOOK.

THE issue of the Army, Air, and Civil Service Estimates for the coming year and a forecast of the savings to be made in Admiralty expenditure enables us to form a fairly precise idea of the Budget problems with which Mr Philip Snowden will be faced. The Civil Service Estimates are £24 millions less than those issued last year, but during the twelve months the figures for the current year have been swollen by £13 millions of supplementary estimates, so that the present figures show a reduction of nearly £37 millions on the final estimated expenditure for 1923-4. The Army Estimates are £7 millions down; the Navy Estimates are expected to show a saving of £2½ millions, but the Air Estimates are £2½ millions up. An appreciable reduction in expenditure was to be expected, for a number of items fall automatically, while in many others the economy campaign of the last two years and a-half only takes effect gradually. We do not know whether the present Government will claim to have made any substantial cuts, and, if so, how much; but it is evident that in the main the present estimates are those of the late Government. Mr Stephen Walsh, for example, in his memorandum on the Army Estimates says: "On taking office I found the Army Estimates for 1924-5 in an advanced state of preparation, and in the time at my disposal it has not been possible to do more than to satisfy myself that they have been framed in accordance with the policy of the late Government, and with due regard to efficiency and economy." The reductions now proposed are considerably less than those of recent years, the estimates and expenditure having shown the following changes in the last four financial years:—

	Fighting Services.		Civil Services.	
	Estimated.	Actual.	Estimated.	Actual.
	Mln. £.	Mln. £.	Mln. £.	Mln. £.
1921-2	185	189½	590	530
1922-3	136	111	383	348
1923-4	122	..	314	..
1924-5	114½	..	290	..

It seems likely that the actual expenditure of the fighting services in 1923-4 may prove to be less than the estimate. That of the Civil Services may prove closer to the final figure, which may even be exceeded. As to the current estimates, they are a step in the right direction. But the amount of reduction is getting very small; they are very far from being the last word in economy. The chief items in the Civil Service figures in which reduction is being made in million £ are:—Pensions 6½, Royal Com-

missions 1½, Middle East 3, Colonial Services 7½, Ministry of Labour 2, liquidation of railway, shipping, and coal mine agreements 4½. A fuller comparison of the estimates class by class with those of previous years is given in a later column.

It is still not possible to forecast very accurately the balance that will be shown in the completed accounts on March 31st, for at the end of the year there is not only a rush of income, but there are very heavy payments in the last two weeks, which vary rather widely from year to year. Thus in the last fortnight of March, 1921, the Treasury paid out £109 millions, in the last fortnight of 1922 £93 millions, and in the last fortnight of 1923 £67 millions. It is probable that these very heavy payments will not be quite so big when there are no more war liquidation bills to be paid, but the last weeks will usually be abnormal. We anticipate, however, that the surplus will be at least £35 millions, with expenditure at about £800 millions and income at £835 millions, but this may be an underestimate of the surplus. It is hardly necessary to remind our readers here in parenthesis that the discussion which always arises in some quarters when a surplus is expected on the Budget as to "what the Chancellor will do with the surplus" is beside the point. This year's surplus is not and never will be available for the taxpayer, but has automatically gone in the redemption of debt. If there is a surplus of £35 millions this year in addition to the £45 millions which has been paid out regularly during the year under the Sinking Fund clauses of last year's Finance Act, we shall have redeemed £80 millions of debt through the current year. This, together with the £125 millions used in the redemption of debt in the last financial year, brings the total for two years of stagnant trade to the not insignificant total of over £200 millions. This sum, the repayment of which had automatically had its effect on the amount of interest to be paid in the future, has undoubtedly found its way back into the capital market. It does not mean, as some would have us believe, that industry has been handicapped by deflationist measures; but, on the contrary, it has coincided with a steady and substantial increase in the volume of production.

Apart from any new item of expenditure which the Government may decide to include in their Budget, the sum which the Chancellor will have to provide will amount to £785 millions, made up of £290 millions for the Civil Services, £115 millions for the Fighting Services, and £380 millions for the Consolidated Fund. The £380 millions for the Consolidated Fund, which includes £350 millions for interest and sinking fund on the debt, is entered at the same figure as a year ago, for although the Sinking Fund automatically rises under the Act of last year to £45 millions in the ensuing year, against £40 millions this year, the increase may be off-set by the saving in interest as the result of the redemption of debt. It is, indeed, possible that the Treasury may take a different view and make larger provision against the possibility that there may be an increase in money rates, which would mean that they would have to pay more on the floating debt. But the increase would certainly be very small.

What is the revenue that the Chancellor will have with which to meet this expenditure? Starting from the £835 millions which we have suggested will be the total revenue for the current year, we have first to deduct certain automatic losses of revenue resulting from last year's Budget. In a full year the Treasury estimate that the remissions made a year ago will cause a loss to the Treasury of £20 millions; but of this, £10 millions is in respect of corporation profits tax, which will not be felt until 1925-6. The immediate loss is £13 millions, so that on the figures of this year the Chancellor could count upon £820 millions for the coming year. There remain two other considerations; the first is the loss for which he must certainly allow under the heading of "special receipts," mainly the liquidation of war commitments. The other unknown factor is what view the Treasury will take of next year's revenue. The item Special Receipts may fall by anything up to £20 millions, and as for the forecast of future revenue it is possible to take very varying views. Unless there are very serious labour troubles, there is reason to anticipate improvement in the state of trade. But we gave reasons last week for thinking that this will not

The New York Trust Company

Capital, Surplus & Profits - \$27,500,000

COMPLETE INTERNATIONAL BANKING FACILITIES

100 Broadway

New York City

immediately affect Customs and Excise, while income- and super-tax will still be assessed upon years of very moderate prosperity. On the other hand, whether from increased efficiency of collection, or from the fact that the effect of the depression on profits has been exaggerated, the fact remains that the yield of the income-tax has been under-estimated considerably in the last two years by the Inland Revenue. There is also the consideration that the country appears to have been paying off some of its war and post-war arrears of taxation. On the whole, the Chancellor would not be guilty of unduly optimistic budgeting if he assumed a surplus next year of £20 to £30 millions. How he will make use of this margin is a matter on which it is at present hopeless to speculate.

THE FALL OF THE BELGIAN GOVERNMENT.

THE fall of the Belgian Government, of which M. Theunis was Premier, has caused important repercussions in Continental politics. However erroneous it may be to regard this defeat as an expression of Belgian disagreement with the French policy towards Germany which M. Theunis supported, it has, in fact, been regarded somewhat in that light by French public opinion, and therefore the event has assumed considerable importance in its bearing on the European situation. It is desirable, therefore, for the British public to be acquainted with the circumstances of the Government's defeat, of which our Brussels correspondent sends us the following review. Since our correspondent wrote, M. Theunis has, contrary to his original decision, been persuaded to form another Cabinet, and it is very significant of the future orientation of Belgian policy that he has appointed as Foreign Minister M. Hymans, Belgium's representative on the Council of the League, and President of the First Assembly, and a statesman who has been the protagonist of the League idea in Belgium. Our correspondent writes as follows:—

The Cabinet has fallen, defeated by a few votes—95 to 79, with seven abstentions—on a project for a commercial treaty. This proposed treaty, without being very favourable to Belgium, was not a bad one. France agreed to certain reductions on the minimum customs-tariff, which favoured Belgian exporters to some extent; but those who were to receive the concessions wanted more, and were not satisfied, while those who were to get nothing were naturally discontented. In short, the industrial and commercial world, of which each branch saw only its own particular interests, was dissatisfied. But that would have been the case whatever had been the text of the treaty. On the other hand, protectionist France had to overcome a fair amount of opposition in order to get the French Parliament to vote for this convention, which was certainly antagonistic to the principles of her customs policy.

But it is not because of the treaty alone that the Government was defeated, in spite of what was said by M. Van der Velde, the chief of the Belgian Socialist party, and by M. Van Cauwelaert, the chief of the Flemish—a new party in Belgium, composed mainly of Flemish

Catholics—which are the two groups which have brought about the fall of the Government. It must not be forgotten that the Belgian Cabinet was formed of Ministers chosen from among the Catholic and Liberal parties. These differ chiefly on religious questions, but as regards their programmes, especially in matters relating to foreign affairs, their views are not very dissimilar. The Socialists are the opposition party, and their chief mission is to try to turn out the middle-class Government. It is certain that whatever had been the terms of the Franco-Belgian treaty, which had already been settled and signed by the Minister for Foreign Affairs, the Socialists would have declined to vote for it on principle. In fact, any other measure proposed by the Government would have met with the same fate. Certain of the members of the "Right," known as the "droite flamigante" (the Catholic party is called the "Right"), have at their head a very ambitious man, M. Van Cauwelaert. By allying himself with the Socialists, he has succeeded in obtaining a slight majority on the Antwerp Communal Council, of which he is a member, and has been elected Burgomaster of Antwerp. This local success encouraged him to repeat the same manoeuvre in Parliament as soon as possible, without appearing to be unpatriotic; for he has insisted on the fact that in directing the vote of his party he did not vote against the foreign politics of the Government, but only against the economic treaty under discussion.

The two parties referred to above, allied with the "frontistes" (Belgian Communists), have thus succeeded in overthrowing the Government, but no one party is strong enough to assume the responsibility of governing the country; nor has either of them the necessary authority from the country to conduct foreign policy. Nevertheless, they are satisfied. M. Theunis is defeated, and all these parliamentarians are all the more satisfied because M. Theunis is not a parliamentarian. He was chosen by the King as Finance Minister in 1918 on account of his standing. An ex-Army officer, he resigned his commission to enter the financial world in partnership with Baron Empain (the creator of Heliopolis—a modern city in the desert), whose bank, now the Banque Industrielle, controls a number of other industrial concerns—particularly tramway and railway companies. M. Theunis was a director of many companies when the war broke out in 1914. He rejoined the Army, and was soon sent to London to assume control of supplies for the Belgian Army. As Minister of Finance in the Carton de Wiart Government in 1919, he quickly proved the extent of his abilities, and was chosen as Prime Minister in 1921. He is reproached with not having prevented the fall of the franc; but who could have done so, and where would the franc be to-day without the measures which have been applied under his administration?

According to his familiar expression, M. Theunis has dealt with the affairs of Belgium as he would have dealt with the affairs of "Belgium, Limited"; but a Parliament cannot be conducted like a joint-stock company. In a company, not all the shareholders aspire to become directors; but M. Theunis had to deal with his fellow members of Parliament—in other words, with the share-

holders of "Belgium, Limited"—who all think themselves suitable to take on his post, and are quite willing to replace him if necessary.

Thus the ex-Prime Minister could not always achieve what he would have liked to do as a business man and financier. He had to bargain for votes in Parliament, and sometimes to make concessions on questions of importance, in order to get a law passed. His task was all the more ungrateful because he was constantly asking for further sacrifices from those who had the means to pay, and because many members of Parliament in Belgium, as in most other countries, I presume, think of their seats before all else, and dare not displease their constituents.

For some time past these manoeuvres have hung heavily on the Premier, whose position in life in no way depends on the high office he holds in Parliament, and the last speech he made to rally the votes of the hesitating, before passing to the vote on the economic treaty with France, was full of energy. After briefly describing what has been done since 1918, he recalled that at a recent Cabinet meeting it was decided to reduce expenditure in the current Budget by one milliard francs (1,000,000,000). Further he said: "If Germany does not pay, are we incapable of coming through the crisis? No, certainly not. In such an eventuality we have already decided on several necessary measures, and more will follow."

It is stupid to say that the franc might easily follow in the footsteps of the mark. The printing press has never functioned in Belgium as in Germany. The Government has never asked for a single bank note from the Banque Nationale except to cover the heavy loan contracted in 1918 for the purposes of exchanging the marks left by the Germans at the Armistice. There is no State inflation in Belgium, and even in respect of this loan we have repaid 500 millions, i.e., 10 per cent., and that during the very difficult period of reconstruction.

Wishing to finish once and for all with these bargainings, Mr Theunis seized the opportunity which was presented in connection with the vote which was to take place, and I can do no better than give a textual translation of the concluding passage of his speech:—"You must in reality vote both on the reparations policy which we have pursued with the consent of the large majority of the House, and on the financial policy we have developed during the past three years. You must say whether the progress made is meritorious or insufficient, whether the plan I have just sketched is wise or not. At the present period, in the midst of the difficulties of which you are aware, and of those which you conjecture, a Government cannot successfully carry on in the uncertainty of a confidence which hesitates and hides itself. If the occasion to tell you this had not presented itself on the question of the vote on this economic treaty, I would have had to seek another. In the midst of the storm we are weathering, one thing only supports us—the assurance of having done our best. We have never endeavoured to delude you. We have never promised anything that we could not fulfil—no miracle, no prodigy, but hard work, good will, and devotion to the public cause—and I do not think that you can accuse us of having grudged that. If, however, you are not of that opinion, say so plainly by your vote as soon as possible, so that we can pass on to others the task of doing better. May they succeed! It is our most ardent wish."

The Belgian Government crisis is all the more unfortunate at the present moment because the experts are about to publish their conclusions on the inquiry they have instituted in Germany, and grave decisions, perhaps, may have to be taken. Mr Theunis has said that he would definitely refuse to form a fresh Ministry, and that his desire is to retire from political life. Nevertheless, some time has passed, and no solution has been arrived at; and it would appear that there are considerable difficulties in the way of forming a Ministry without him, even a business Ministry to govern during the period that must elapse before a general election. It is certain that many efforts have been made in the endeavour to get Mr Theunis to revoke his decision, but up to the present without success.

Finally, English readers should realise that the rejection by the House of the Treaty in question is in no way

anti-French, any more than the refusal to accept the English point of view on other questions means a break with England. As proof of this, it is the Walloon party (pro-French) who count the most members amongst the Socialists, who all voted against the Treaty through party discipline. The most typical example is that of M. Souplit, who has just founded in his district a branch of "Les Amitiés Françaises," which is incontestably a society for French propaganda in Belgium.

HOME RAILWAY RESULTS.

THE reports and accounts of the four great Home railway companies for 1923, which are the first to appear since the grouping provisions of the Railways Act of 1921 came into force at the beginning of last year, do not contain the usual comparative figures. They are presumably omitted owing to the fact that the overlapping which may have occurred in the statistics of the constituent and subsidiary companies would vitiate accurate comparison. We should have thought, however, that such inaccuracy would be small in relation to the advantages to be derived from comparative statistics. The London and North-Eastern Company has, throughout the past year, published a comparative figure with its weekly returns of gross receipts, and we can think of no reason why the other three companies should not have done the same; and if weekly comparative figures are available, surely annual figures should be obtainable without great difficulty—at least, so far as the main totals are concerned. Having thus drawn attention to the sins of omission of the accounts, we will now proceed to an examination of the results. Twelve months ago, in examining the reports of the British railway companies, we classified the figures of the constituent companies into the four new groups, and have now used the four aggregates then obtained for comparative purposes in the tables which follow. In so far as our totals for 1922 included only ten "constituent" and not the "subsidiary" companies, our comparative figures are inaccurate, and allowance has accordingly to be made. They should be, however, sufficiently accurate to show the general tendency of the figures. The Great Western Company, it should be added, published accounts a year ago which embraced the operating results as from the beginning of 1922 of the whole of the constituent companies and of certain of the subsidiary companies, and also, as from July 1, 1923, of some of the subsidiaries. The comparative figures for the Great Western Company are therefore probably more nearly accurate than those of the other three. In the table below we set out the gross receipts, expenditure, and net income of the four lines:—

(000's omitted.)

	Gross Receipts.		Expenditure.		Net Receipts (incl. Miscell. Receipts).	
	1923.	Dec.	1923.	Dec.	1923.	Dec.
£	£	£	£	£	£	£
London, Mid., & Scottish ..	87,317	— 4,934	71,019	— 2,803	19,712	— 1,322
London and North-Eastern ..	67,026	— 3,998	54,836	— 3,270	14,047	— 88
Southern ..	26,440	— 1,132	21,327	— 434	6,252	— 267
Great Western ..	36,723	— 1,800	29,778	— 1,325	8,237	— 39
	217,506	— 11,864	176,960	— 7,832	48,248	— 1,716

The feature of the table is the substantial decline in gross receipts (which include receipts from omnibuses, steamboats, canals, docks, &c., and hotels and refreshment rooms), and the smaller decline in expenditure. At the same time, however, there has been an increase in "miscellaneous receipts (net)"—principally rents and interest—sufficient to reduce very considerably the decline in total net income. The decline in gross receipts is to be ascribed entirely to the reductions in fares and freight rates. Passenger fares were reduced as from January 1, 1923, by over 14 per cent.—namely, from 75 per cent. to 50 per cent. above the fares in operation in 1919. The charges for parcels and perishable merchandise by passenger train were also reduced. As from May 1, 1923, goods train rates for commodities not already lowered were reduced from 75 per cent. to 60 per cent.

over the rates in operation in 1914, and as from August 1st a further reduction to 50 per cent. was made. The figures of the tonnage carried by the railways for December have not yet been published by the Ministry of Transport, but the statistics for the eleven months show a total of 319½ million tons for 1923, as compared with 293 million tons in the corresponding period of 1922, an increase of 9.1 per cent. The number of passengers carried also shows a considerable increase. Lord Lawrence of Kingsgate, in the course of his speech at the meeting of the London, Midland and Scottish, referred at some length to the question of freights, and said that if the company had carried the same volume of traffic in 1923 as in 1922, the gross receipts would have been £11 millions lower. The actual decline, however, was only £5½ millions (comparative statistics are, apparently, available!), so that traffic has improved to the extent of £5½ millions sterling.

The ratio of expenditure to gross receipts, including those from other businesses, shows a slight increase in three cases—the L.M.S. from 80 to 81.4 per cent.; the Southern from 78.9 to 80.7 per cent.; and the Great Western from 80.8 to 81.1 per cent.; but that of the L. and N.E. has dropped from 81.8 to 81.2 per cent. In the aggregate the ratio works out at 81.3 per cent., as against 80.6 per cent. for 1922 and 64.1 in 1913. A large proportion of the miscellaneous net receipts which have helped to swell net income consists of "general interest." The miscellaneous receipts of the Great Western, for example, amounted to £1,292,200, as compared with £856,200; "general interest" accounted for the bulk of this increase, amounting to £930,700 in 1923, as against £549,200 a year ago. Viscount Churchill explained at the Great Western annual meeting that the increase of £380,000 in this item was due "mainly to the second instalment of the Government compensation money having been received at the commencement of 1923." The miscellaneous receipts (net) of the London Midland and Scottish amounted to £3,414,100, of which £1,888,700 was "general interest." The increase is, of course, due to the expansion in the holdings of Government securities, shown in a later table.

We next show how net income has been appropriated:—

(000's omitted.)

	Net Income.	Fixed Charges &c.	Reserve, &c.	Guaranteed and Preference Dividends.	Ordinary Dividend.			Carried Forward.
					Amount.	Inc. or Dec. on 1922.	Rate, 1923.	
£	£	£	£	£	£	£	%	
London, Midland & Scottish ..	19,712	5,155 Dr	200	8,092	6,664	— 3,162	7	1
London and North-Eastern ..	14,047	4,620 Dr	550	6,925	3,011	— 1,600	24	41
Southern ..	6,252	1,736 Dr	250	2,335	2,428	— 25	24	3
Great Western ..	8,237	2,415 Dr	150	2,579	3,356	— 19	8	42
	48,248	13,926 Dr	1,150	19,931	15,499	— 4,768	..	+

* On deferred stock.

Each of the companies has drawn a small amount from reserves, and has thereby preserved almost intact the balance forward. The London Midland and Scottish appropriates £200,000 from reserve, the London and North-Eastern takes £550,000 from the "Compensation Fund," the Southern appropriates £250,000 from "Railways Compensation Account," and the Great Western takes £150,000 from "Reserve for Contingencies." The amount required for ordinary dividend shows a substantial decrease, but this arises to a considerable extent from the conversions of stock. The Great Western ordinary dividend is at the same rate as for 1922. The London and North-Eastern and the Southern distributions on the deferred stocks were quite up to market expectations, but some disappointment was apparently felt in the market with the London Midland and Scottish rate, London and North-Western ordinary stock, which was exchanged into an equal amount of L.M.S. stock, having received a dividend of 8½ per cent. for 1922. All the dividends paid at the end of 1922, however, were recognised as being of a special nature, and not a basis for a calculation of possible rates on the new stocks. Fixed charges show a drop in comparison with last year, and a glance at the two reports of the Great Western reveals a drop of over

£60,000 in rents of leased and worked lines and guaranteed interest. This is probably the case with the other companies, and illustrates at once one of the benefits of the grouping system.

In the next table we summarise the main items of the balance-sheets of December 31, 1922 and 1923:—

(000's omitted.)

	Capital Expenditure.	Reserve and Other Funds.				Cash in Hand and on Deposit.	Government Securities.	Stocks of Stores and Materials.
		General Reserve.	Depreciation Accounts.	Government Compensation.	Total (incl. Superannuation and Other Funds).			
£	£	£	£	£	£	£	£	£
London, Mid., & Scottish—								
1922	421,564	7,578	25,015	15,636	£ 480,222	7,668	97,681	9,763
1923	438,029	12,588	28,883	..	£ 479,500	8,709	38,205	8,984
London & N.E.—								
1922	325,741	2,700	16,270	15,269	£ 359,980	10,210	7,867	6,515
1923	338,788	1,978	16,665	12,754	£ 369,185	13,348	13,272	6,135
Southern—								
1922	143,458	444	6,228	2,948	£ 153,078	5,472	3,881	2,293
1923	148,308	1,750	11,857	..	£ 161,915	6,154	8,119	1,898
Gr. Western—								
1922	158,389	1,800	13,748	9,802	£ 183,739	6,460	14,378	3,573
1923	167,805	4,150	19,745	..	£ 191,700	4,240	21,920	3,282
Total—								
1922	1,049,152	12,522	61,261	43,655	£ 1,166,589	29,810	53,807	22,174
1923	1,090,930	20,466	77,150	12,754	£ 1,201,299	32,451	81,516	20,299

Stress should not be laid on the comparison of the figures of capital expenditure, as last year's figures are admittedly incomplete. The Government compensation accounts have disappeared from the balance-sheets, and been dispersed over other reserve accounts, except in the case of the L. and N.E. This company's balance-sheet shows that £2,356,200 has been expended during the year on arrears of maintenance, and £149,200 on expenses of amalgamation and compensation to retiring officials out of this fund. The investments in British Government securities have been very substantially increased, and the cash holdings are still on a very large scale. Big renewal and development works are, however, to be undertaken, which, as the chairman of the L.M.S. said, "will make a very serious inroad into our liquid funds." He went on to explain that "of the thirty-eight millions sterling held in Government investments, a considerable sum represents amounts placed in our keeping by the staff through our various savings banks and the balances of superannuation and pension funds, which in the course of years will be required to meet pensions towards which the staff themselves have contributed. I am anxious that the proprietors should be under no misapprehension in this matter, and I am dealing with it at some length in order to remove any feeling of doubt that they may have as to the board retaining any sums which might legitimately be divided amongst the shareholders. The money, which, as I have pointed out, is invested in the finest securities in the world, is earning good interest which ensues to the shareholders."

THE TEAPOT DOME SCANDAL AT WASHINGTON.

(FROM AN AMERICAN CORRESPONDENT.)

OIL, long a recognised ingredient of international politics, has now invaded the domestic arena at Washington, and to-day the politics of the United States are floating confusedly upon a very malodorous sea of this commodity. What is popularly known as the Teapot Dome scandal has stirred the whole country to an outburst of moral indignation, upset the plans and calculations of the managers of both the historic parties, and brought to the forefront the whole question of how, under a democratic system, the activities of great predatory corporations can be controlled in the public interest.

The history of the scandal is relatively simple. Under what were known as the "conservation policies" initiated by President Roosevelt and continued by President Wilson, certain oil-bearing areas, included in the nation's unalienated lands, had been set aside as permanent oil reserves for the Navy. One of these was the Teapot Dome reserve, in the State of Wyoming, so-

called from a curious eminence within its bounds, and another was the Elk Hills reserve in California. The Teapot Dome reserve, officially designated No. 3, has given its name to the scandal, but the volume of oil available in it, estimated originally at 25 million barrels, makes it comparatively insignificant in comparison with the Elk Hills Reserve (No. 1), whose resources have been put at 250 million barrels; at any rate, Mr E. L. Doheny, the petroleum magnate whose operations in Mexico and elsewhere are familiar to the oil world, testified that he expected to make a profit of 100 million dollars out of the Elk Hills field.

Apparently, under the Wilson administration, various abortive attempts were made to secure access to these fields for private corporations, and the argument was used that they might as well be leased to deserving friends of the Democratic Party, because the Republicans, as soon as they came to power, would, in the absence of a "conservation" champion like Roosevelt, soon dispose of them. These forebodings were all too speedily justified. Mr Harding had admitted to his Cabinet, amid the criticisms of many of his Press supporters, Senator Albert Fall, of New Mexico, a politician who had distinguished himself by his chauvinistic attitude towards Mexico. In his constant demands for intervention he was interpreted as voicing the views of powerful oil interests, but when he became Minister of the Interior he was able to render them a more practical service. The oil reserves were under the supervision of the Navy Department, and the first move was to urge their transfer to the Interior Department, on the ground that the latter possessed more adequate supervisory facilities. To this course Mr Denby, the Secretary of the Navy, and his assistant-secretary, Theodore Roosevelt II., assented, and the transfer was carried out by executive order of the President. Mr Fall lost no time in meeting the wishes of the oil interests. The discovery was suddenly made that private wells adjacent to the national reserves were threatening their serious depletion through drainage, and the Minister of the Interior reached the conclusion that the national interests could best be served by leasing the reserves. Eminent geologists, however, including the head of the U.S. Geological Survey and the chief of the oil and gas section of the Survey, have testified that the danger of serious drainage was very doubtful, and its reality could be proved by very simple measures. In any event, there is an accepted method of defence, the sinking of "offset" wells just inside the boundary of the area to be protected, directly opposite the wells exercising the drainage. In California the offending wells belonged to the Standard Oil Company, but as it was only operating opposite the boundary of the Elk Hills reserve for a distance of two miles out of a perimeter of 60, the threat was not of an alarmist nature. But Mr Fall called for competitive bids or a contract for defensive drilling, and in June, 1921, three months after Mr Fall assumed office, the contract was awarded the Pan-American Company, the chief corporation of Mr Doheny. Mr Doheny had made two alternative bids, and the one which was accepted embraced a preferential right to lease half the No. 1 Reserve. In December, 1922, Mr Doheny exercised this preferential right of lease, but Senator Fall generously leased him the whole reserve, amounting to 32,000 acres, on the ground that a more serious threat of drainage had occurred in the centre of the reserve. To this second threat there hangs a strange story. In 1914, local government officials informed Washington that the Standard Oil were claiming this part of the reserve under a grant from the State of California, and ouster proceedings against the corporation were commenced. But they were discreetly halted in their initial stages, and the Standard was allowed to pursue its designs unmolested; the excuse was that vital papers had disappeared. In 1921 an official in the San Francisco Land Office discovered the lost papers, which had been "inadvertently placed in the wrong file," and the lapsed proceedings were revived. There is a process of appeal in such cases to the Minister of the Interior, and Mr Fall gave a decision sustaining the Standard Oil Company's claim to this particular section. With the drainage menace thus increased by his own act, Mr Fall hastened to save the reserve by leasing it to Mr Doheny.

A similar excuse was alleged in the case of the Teapot Dome, which was, in April, 1922, leased to the Mammoth

Oil Company, a corporation organised for the special purpose of securing this reserve by Mr Harry F. Sinclair, the oil magnate, who is chiefly known outside America by his manoeuvres in Persia. For this lease there was no competitive bidding, the contract being signed after private conversations between Fall and Sinclair. It permitted drilling of the whole reserve on the basis of royalties on a graduated scale. Naval officers who protested were sent to sea. Under both the Sinclair and Doheny contracts the lessees were authorised to erect storage tanks for the royalty oil which they were to deliver, and were allowed to pay themselves for this construction out of the oil itself. Storage for a barrel of oil costs the current price of two barrels, and the estimate has been made that if Teapot Dome yielded 25 million barrels, and the royalty rate, which so far has averaged 17 per cent., were to reach 20 per cent., the State would only receive 1,666,666 barrels of oil. This contract was peculiarly disadvantageous, because the private wells threatening drainage in Wyoming were under lease from the Government on royalties averaging 25 per cent.

Any Minister might be guilty of an administrative error in such matters as leasing oil reserves, but suspicions were aroused by the fact that Mr Fall, after having been in such serious financial straits that taxes on his ranch in New Mexico were eight years in arrears, suddenly experienced a change of fortune; he paid his taxes, made expensive improvements on his ranch, put valuable new pedigree stock upon it, bought an adjoining property for \$91,500, and in general displayed signs of surprising affluence. However, he retired from the Harding Cabinet in the autumn of 1922, ostensibly on the grounds of ill-health, but the presumption now is that the late President had become apprised of something of the truth.

A large part of this truth has emerged within the last month at the sessions of the Public Lands Committee of the Senate, before which Senator Thomas J. Walsh, of Montana, an able Democratic lawyer, has now built up a colossal record of evidence to show that the country has been looted of enormous oil resources through a fraudulent conspiracy between Fall and the two oil magnates. Mr Doheny has admitted that in 1922 he lent Mr Fall \$100,000 on a note, not a cent of which has been repaid. Mr Archie Roosevelt, another member of the famous family, and other Sinclair officials, have testified that Mr Sinclair presented Mr Fall with some valuable pedigree stock for his ranch and \$25,000 in Liberty bonds. Mr Fall at first attempted an explanation of his sudden affluence, but its complete falseness was easily proved.

A nation which ought now to be inured to political scandals was profoundly shocked at the revelation that its affairs were in such feeble and corrupt hands, and that predatory wealth was at its ancient tricks. The parties involved were national figures. Mr Fall was an intimate of the late President Harding, Mr Doheny had been a candidate for the Democratic nomination as Vice-President, and Mr Sinclair was famous as the owner of the celebrated racehorse Zev. The threat to the easy victory which the Republicans were counting upon for President Coolidge in November was obvious. The President had, while Vice-President, attended all the meetings of the Harding Cabinet, and thereby was involved in partial responsibility for the leases, although not so directly as Mr Fall and Mr Denby. Democratic spokesmen also argue that the leases, in the absence of the authority of Congress, were quite illegal, and it is stated that eminent counsel connected with the oil companies have shared this view.

The President first met the crisis by issuing a public statement, in which he reviewed the transactions, admitted the need for complete investigation, and appointed two special counsel to examine the whole affair in its legal aspects, with a view to the cancellation of the leases and the prosecution of guilty parties. The senatorial inquiry is still proceeding, and further strange revelations are presaged. However, Mr Fall, whose health is alleged to be precarious, has refused to answer any questions of the committee on the ground that it lacks proper authority and that the case is now a legal one for the courts to determine.

Deeply embarrassed as the Republicans are, they find some comfort in revelations made by Mr. Doheny, who has obviously not relished the rôle played by his own party, the Democrats, in the business. Mr W. G. McAdoo, the former Secretary of the Treasury, is the leading candidate for the Democratic nomination for the Presidency, but Mr Doheny testified that soon after Mr McAdoo left the Wilson Cabinet in 1918 he induced him to accept a retainer of \$25,000 per annum, and has in the last four years paid him and his firm for law services about \$250,000. Mr McAdoo admitted to the Senatorial Committee the receipt of these huge fees, but contended that they were given for services which his special knowledge of Mexico and the South American Republics enabled him to render the Doheny interests, and that he had not concerned himself with their domestic difficulties. His defence is very reasonable, but the general impression is that, if the Democrats want to get the full use of the political capital available in the scandal, they must abandon the idea of nominating a candidate who has enjoyed such a profitable connection with the oil interests. The late Mr Franklin K. Lane, Secretary of the Interior in the Wilson Cabinet, retired from it to accept a huge salary from Mr Doheny, and Mr T. W. Gregory, Attorney-General in the same Cabinet, had to give up the brief given him as one of the special investigating counsel in the present *affaire*, because he had been lucratively employed by Mr Doheny and his associates. There is, accordingly, ample evidence that in one way or another the oil magnates have acquired great influence in the counsels of both the historic parties. Naturally, such a situation delights the heart of Senator La Follette, the leader of the insurgent radical group, and he has now at his command ample ammunition to destroy the power of both these parties in the Middle- and North-Western States, where his following is already strong. He has always taken a special interest in the oil problem, and it is probable that he will seize the opportunity to revive his old programme of rigid national control of all oil resources. Meanwhile the Senate, by a majority of 47, which included eight Republicans, to 34 has passed a resolution urging the dismissal of Mr Denby, whose acquiescence in the first transfer involves him deeply, but Mr Coolidge has categorically declined to take any cognisance of it on the ground that until some greater culpability than is now known can be laid at Mr Denby's door he must stand by his colleague. Mr Denby has not improved matters by declaring that the leases were sound and proper transactions, and refusing to contemplate resignation.* The inquiry is still proceeding, and Mr Sinclair has just sailed from Europe in obedience to a summons to give his story. From the *affaire* there has emerged some illuminating evidence about the incomes of executive officers of the great oil corporations. Mr Doheny gets an annual salary of \$1,000,000, and Mr H. G. Wylie, his second-in-command, \$81,666. Mr H. F. Sinclair is content with a modest \$75,000, but seven of his subordinates receive \$49,999.92, a figure which conveniently puts them in a lower income-tax grade. All the American papers are featuring prominently the developments of the scandal and the daily revelations at Washington, and the credit of the politicians, which was dangerously low already, has been further depressed. Oil stocks have naturally suffered an unfavourable reaction, and the Sinclair companies have been specially affected. But for the moment the political effects of the scandal are the most important. Mr Coolidge's prospects of reelection have been suddenly clouded, and a great impetus has been given to the movement of radical protest which has been slowly gathering headway in the Middle-Western States under the influence of agrarian depression.

CHANGES IN THE MATCH TRADE.

(BY A CORRESPONDENT.)

GREAT changes have been brought about in the match trade by the Great War. In the year 1913 our imports of safety matches—mainly from Sweden and Belgium—were 8,180,799 gross of boxes, valued at £404,028. This was slightly under 1s per gross, or 1d per dozen

boxes. There was then no tax on them, and foreign matches of good quality were retailed by the great majority of grocers at 1½d per dozen boxes. Boxes then contained 60 matches, or 720 per dozen boxes. At that time similar matches of English make were being sold at 2½d per dozen boxes. In 1923 imports of "safeties" amounted to 3,249,140 ten-thousands of matches, valued at £672,891, or a shade under 5d per thousand matches. The usual contents of a box of imported "safeties" is now 45 or 50—540 to 600 matches to the dozen boxes; so that the imported price of a dozen boxes is at present between 2½d and 3d. It will thus be seen that the landed price of imported safety matches has risen since the war by nearly 200 per cent.

We have now to consider the duty, imposed during the war. This is 5s 2d per 10,000 matches, or 3½d on a dozen boxes, containing 600 matches, and rather over 3½d on a dozen boxes containing 540 matches. It may therefore be said that the total cost of the imported matches, duty paid, would average about 6d per dozen boxes. This being the average cost, some qualities will be higher in value and some lower. For example, matches from Poland are entered at about half the cost of those coming from Sweden—the one cost being about 3 3-5d per thousand matches, and the other 7½d. Some of these cheaper brands are so low that after duty is paid and all intermediate expenses and profits provided for, they are sold to the public at 6½d per dozen boxes—usually containing only 540 matches. Manifestly, these must cost a good deal less than 6d per dozen landed and duty paid.

Incidentally, we have here a good illustration of the cumulative effect of import duties on retail prices. Before the war, goods landed at slightly under a penny per dozen boxes were sold at 1½d per dozen—an addition of 50 per cent. for intermediate expenses and profits. We have seen that the average cost now, landed and duty paid, is 6d per dozen boxes. Retail selling prices range all the way from 6½d to 10½d per dozen boxes, so that we may fairly assume the average to be about 8½d. This is an addition of about 41 per cent. to the cost price. But the 41 per cent. now means 2½d per dozen boxes, whereas the 50 per cent. before the war and before the duty meant only ½d per dozen boxes. In other words, the margin between cost and retail price has increased fivefold—for all the intermediate traders would aim at making profits on the duty as well as on the bare cost price.

Now let us inquire how these radical changes have affected English manufacturers in their competition with foreign producers. Here are the British exports since the early seventies of last century, contrasted with the net imports (goods retained for home consumption) since these have been recorded:—

BRITAIN'S OVERSEAS TRADE IN MATCHES OF ALL KINDS.

Five-year Averages.	(Thous. £; 000's omitted.)		Excess of Imports.
	British Exports.	Net Imports.	
1873-77	169		..
1878-82	154		..
1883-87	149		..
1888-92	137	208	71
1893-97	83	248	165
1898-02	89	295	206
1903-07	66	396	330
1908-12	105	426	321
1913-17	139	533	394
1918-22	119	989	870

Until the early 'eighties, while the safety match was still decidedly uncommon and even exceptional, our manufacturers appear to have held their own very well. But with the appearance of the "safety" things went against them. For the first 13 years of this century our makers progressed fairly in the manufacture of non-safety varieties, lowering imports very considerably during that period. But as regards "safeties," they seem never to have been able to put up a fight that counted much. Mostly, English safety matches are being retailed now at 10½d per dozen boxes. They are very little better than foreign ones sold at 7½d, and certainly no better than those sold at 8½d. This kind of thing won't do, and the sooner our manufacturers realise it, the better it will be for them.

Let us now glance at the overseas figures for safety

* He has, of course, since resigned.—ED., *Economist*.

and other matches since the two varieties have been entered separately by the Board of Trade:—

SAFETY and OTHER MATCHES.
(In Thous. £, 000's omitted.)

	Safety Matches.			Other Sorts.		
	British Exports.	Net Imports.	Excess of Net Imports.	British Exports.	Net Imports.	Excess of Net Imports.
1903-7.....	10	200	190	56	196	140
1908-12.....	29	284	255	77	142	65
1913-17.....	65	438	373	75	96	21
1918-22.....	42	717	675	77	271	194

It will be seen that there is a marked difference between the two groups. In "safeties" our makers have all along had the worst of it. Contrariwise, they made in "other sorts" excellent progress right down to the war. Since the great struggle, however, there has been a heavy increase of imports even in this department, which our manufacturers would do well to attend to at once. It is difficult to see that our own industry is handicapped in any way. We have to import our raw materials, it is true; but so does Belgium, which country sends us some of the cheapest matches we get from abroad. Some may urge that a depreciated exchange rate for the franc helps Belgian exporters. If it does, it also greatly increases the cost of raw materials imported by manufacturers of the matches.

Moreover, the point really does not arise at all, for Belgium enormously increased her shipments of "safeties" to us before the war, when there was no depreciation in the franc. In 1904 we received from her safety matches to the value of only £42,392, but in 1913 the value had grown to £101,079. Long before the great struggle she had become the second largest supplier, ranking after Sweden.

There seems to be no escape from the conclusion that our own manufacturers have only themselves to blame for the fact that matches imported and retained here for sale were worth £1,098,000 in 1920, £1,225,000 in 1921, and £1,347,000 in 1922 (gross imports were £1,225,000 in 1923, but exports and re-exports will not be published for some time yet). The leaders in the English industry have the freest access to all raw materials required, their goods bear a slightly lower duty than is paid on imported articles, and yet they cannot so far compete with foreign suppliers. It is a position that is not edifying to those who have been wont to look upon English business men generally as among the most efficient in the world.

THE RUBBER TRADE IN AMERICA.

(BY A NEW YORK CORRESPONDENT.)

NOTWITHSTANDING the present quiet market a more optimistic feeling on the outlook in the near future is gradually becoming apparent, mainly due to the belief that the consuming demand this year will show an improvement over 1923; moreover, the industry is now undoubtedly in a sounder position than for several years past. The better sentiment is not yet reflected in the price, which at about 25½c here and 1s 1¾d in London is only a little better than the lowest since restriction.

The sounder underlying conditions can best be appreciated by a comparison with 1923. It is not surprising that restriction should have misled the market last year. Certainly an exaggerated idea of its effect on available supplies caused manufacturers here to purchase their requirements in a hurry, and, as events proved, they also over-estimated the capacity of the public to absorb their manufactured goods. This resulted in unduly heavy inventories in the manufacturers' hands, whose principal efforts had to be devoted to realising their stocks and curtailing fresh output as far as possible. Even before the end of 1923 inventories had been reduced to such proportions as to justify many of the larger manufacturers in increasing their production, and this movement has since developed generally and to a satisfactory extent. The

public is now buying on a considerably larger scale than a year ago, and anticipations of the spring and summer demand are distinctly favourable.

Apart from other factors, it may be mentioned that the winter of 1922-23 was so protracted as to curtail motoring by two to three months, while this season the weather has been so mild that there has been little or no interruption in tyre consumption.

At the beginning of 1923 there were some 12,250,000 motor-cars and trucks in operation here, while on January 1, 1924, the number had increased to 15,250,000. The output of cars and trucks in 1923 had greatly exceeded anticipations at some 4,000,000, and far outstripped all previous production records. Almost without exception the motor and truck manufacturers have already increased their output over last year, and have prepared substantially larger production schedules for the remainder of this year. It is said that even on this basis public demand is ahead of supply, and some manufacturers have advanced prices.

Such a rapid and enormous increase in motor transportation naturally causes some questioning in the minds of thoughtful people. It is asked at what number "the saturation point" will be reached, and doubts are expressed as to what proportion of the industry can be looked on as extravagance rather than utility. Even a severe critic, however, after full investigation of conditions here, would find it difficult to give answers to these questions. It is perhaps satisfactory to know that the increased use of trucks for commercial purposes is even more marked than the increase in what are somewhat misleadingly described as pleasure cars. It should also be remembered that something like 50 per cent. of the latter are Fords, which are mainly in the utility class.

The rubber manufacturing industry here has grown so rapidly (for it is only within the last ten years that it has developed to its present magnitude) that manufacturers have been forced to lock up far too large a proportion of their capital in increasing their plants, and consequently have been to too great an extent dependent on temporary financing by the banks. In its rapid growth it has passed through many vicissitudes, and bankers are apt at times to look with somewhat over-doubtful eyes on providing funds for their business. This attitude became particularly marked last year in view of the heavy inventories carried, and manufacturers were thus virtually compelled to limit the buying of their raw materials, particularly rubber, to the smallest proportions, and were discouraged from carrying out their normal policy of securing their requirements by contracts for forward deliveries. They, therefore, adopted a "from hand-to-mouth" buying policy, and have shown so little interest in the market that prices have remained depressed, notwithstanding that the facts appear to justify more satisfactory levels for the producers.

The "hand-to-mouth" method of buying is not without its dangers, and may at any time develop considerable trouble for those manufacturers who have continued to purchase their requirements only for their actual needs for immediate consumption. Up to now they have succeeded in finding someone to supply their necessities, but the stocks carried by importers here are so comparatively small at the present time that a very little demand would absorb them and call for immediate shipment in volume from London. For the last three or four months a substantial tonnage has been drawn from London stocks, but this, with the normal direct imports from the East, is estimated as only sufficient to take care of about 65 to 70 per cent. of the current consumption. It is reported that one of the largest consumers recently stated that his sales to the public were now four times larger than those of a year ago, while his purchases of rubber amounted to less than one-half. It is not suggested that all the other manufacturers are in a similar position, but it does appear that at no time during recent years have consumers covered such a small proportion of their requirements.

Quite an important factor, in direct contrast to the position of last year, is that there does not appear to be any speculative interest in the market at present. In 1923 speculators sought to take advantage of restriction, and purchased heavily for the rise. The course that the market took involved them in heavy losses, and the liquidation of their interests did much to exaggerate the

decline in prices, but now no fears are felt on this ground.

Because American manufacturers were misled over the effects of restriction early last year, they cannot now be induced to take the subject very seriously. Yet a clearer understanding of what restriction has accomplished, and an appreciation of the facts which at times have appeared to falsify the results expected from it, might serve to cause them to revise their attitude, for it appears very probable, if not certain, that without an advance which will hold prices above 1s 3d in London for a continuous period of six months and permit additional exports from the restricted areas, the stocks available for consumption will, at some period of the year, be so seriously depleted as to cause dangerously high prices, with a subsequent inevitable slump. It is perhaps the most serious criticism of the whole plan of restriction that such results are within the bounds of probability. On the other hand, restriction may well receive some credit for the fact that, compared with last year, London and Liverpool stocks have been reduced by some 15,000 tons, and American stocks by about 17,000 tons. Moreover, some 30,000 tons held in the East before November 1, 1922, and therefore not subject to restriction, have gone into consumption. Consequently it appears fair to say that the world's visible supply at the end of 1923 was approximately 60,000 tons less than at the beginning, while all signs point towards an increase in consumption this year.

In view of the more favourable conditions outlined above, it may be asked why market prices have not yet responded, and remain at such depressed levels? The answer is that there is no effective or intelligent market balance-weight between producers on the one hand and consumers on the other; prices, marketing, and distribution are permitted to take their own course in a most aimless manner. The comparatively small number of merchants and importers existing in the rubber markets, actively competing with one another and, individually, of no great financial strength, cannot provide any such balance, and producers, as a body, have always proved quite incapable of protecting the value of their own commodity.

Seeing that British interests have a preponderating direct and indirect control over the rubber producing-end of the industry, it is to be regretted that so much of the benefit of its manufacturing should have been allowed to be diverted abroad, and that the British manufacturer has developed very slowly in comparison with others. But apart from this, it is surprising to consider how a great national asset, the annual export of which to this country is alone almost sufficient to provide for the interest and sinking fund on England's debt, to say nothing of its value on sterling exchange, should be so inefficiently administered. All the periodical crises to which rubber has been subject for so long are due to the same cause, and there is no doubt that, with any kind of broad business leadership in the trade, a much sounder solution of the troubles of 1920 to 1922 than restriction could have been formulated.

POLISH FINANCIAL REFORM.—II.

In a previous article on the financial reform now in progress in Poland it was shown that the foreign trade balance of Poland is favourable, and its success will therefore depend upon public confidence and upon the immediate covering of the Budget deficit. This latter is not theoretically difficult, since the cost of Government in Poland is small (about 32s per head), and can be further reduced. The Government's problem is chiefly to obtain and maintain twice its present revenue. Confidence will depend primarily on success in this attempt, though it will certainly be influenced by currency developments in Germany, to which Poland is very sensitive. It remains to examine M. Grabski's plan and to estimate his chances.

M. Grabski appreciates the rôle played by confidence, and has acted with courage. After one month in office he has stopped the printing of notes for Government needs,

and announced that he can balance the budget and see his way to instituting the Bank of Issue at an early date. This has naturally produced a great effect, which has been skilfully maintained by statements in the Press. The exchange has remained stable for over a month without, it is said, any support from the Government. This assertion is confirmed by the sight of queues of persons selling dollars at the banks.

Besides calling out confidence, M. Grabski is relying chiefly on the fact that the bulk of Polish taxes are paid in spring and autumn instalments. Any Polish Government should be in a strong position in March and April. M. Grabski counts on greater receipts than previous Governments in virtue of the fact that all taxes are now on a gold basis. This reform, initiated by M. Grabski in his last tenure of office, was the dying act of the previous Government, and took effect as from January 1st. Taxes are assessed in złote (gold francs), and are paid in Polish marks at the rate of the day, which is announced in each of the "Cassa" throughout Poland every day. Comparing the actual receipts from taxation in 1923 with the heavy fall in the exchanges (especially in October, when the autumn taxes are collected), there is reason to expect a great increase in the yield under this new "valorisation," but much will depend upon the administration, which is unfortunately far from perfect. So long as the exchange is stable the working of the new arrangement cannot be properly tested. The weak point of the present revenue system is that defects of administration may falsify the estimates and diminish the receipts precisely at the moment when, owing to a break in the exchange, the Budget position becomes unstable.

For a time, however, the Government can count upon a definite increase of receipts, and the next point in its programme is the acceleration of the payment of various taxes so as to tide over the period till the usual spring influx. Various arrangements are made to induce or compel payment of certain taxes in anticipation of the normal date. They would be inadequate, however, but for the first half-yearly payment of the property tax.

This is Poland's third capital levy, and is estimated to produce over 300,000,000 Swiss francs in each of three successive years. Its payment will be attended with great difficulties, especially by landed proprietors and those who cannot easily mobilise their revenues or sell property in a difficult market. Much has been made, too, of the difficulties which will be caused by the shortage of currency. It is pointed out that the total value of Polish currency, turned into dollars at the present rate of exchange, is about half of the total proceeds of the present instalment of the property tax which has to be paid within a period of about two months, and it is argued that the currency cannot circulate quickly enough to render these payments possible at a time when other large tax payments are in process. Such an argument finds ready reception in Poland, but it is rather theoretical, especially as other methods of paying taxes (by gold tax bonds and gold deposits in the national savings bank) are available. It seems probable, in fact, that M. Grabski will obtain a large part of the sum budgeted for, and this will enable him to carry on until the spring taxes come in.

Receipts from taxation may be supplemented by receipts from loans. Hitherto there have been practically no internal loans in Poland, which is the more surprising as all Poland seeks daily some stable values in which to invest surplus cash. M. Grabski is evidently conscious of the importance of calling out savings, though much may depend upon the persistence and skill with which plans are made, and, still more, carried into effect. Here, as elsewhere, indeed, it is clear that M. Grabski's success will depend far more on his ability as an administrator than on his technical financial skill.

By these various methods M. Grabski will probably, in spite of obstacles, obtain the bulk of the necessary revenue in the spring.

The dangers of the immediate future are to be expected more from the expenditure side of the Budget. To restrict the normal expenditure will be difficult—the Army, the railways, and education may all spend more than the Estimates, if not closely controlled, and though the various Ministers have probably the will, it is not certain that their Departments have the power to curtail in the right

places. And new expenditure may be created by the stabilisation of the exchange. The "valorisation" is now rapidly extending to all commercial transactions (bills may, in some cases, be drawn in gold francs), and this has been accompanied by a panic rise of prices. In the first few days of January, although the exchange moved little, all prices practically doubled. This wave of profiteering has now passed its height, but the effects upon industry and upon the Government finances will be felt for some time. Industry, especially in Lodz and Upper Silesia, suffered a severe shock and unemployment rose rapidly. Should it continue, as it may if the exchange remains steady, the Government may be involved in fairly considerable unforeseen expenditure. Moreover, since all official wages and salaries move with a fortnightly cost of living index, Government expenditure will continue to increase with the rise of prices for some time after the exchange has stopped falling.

In spite of these difficulties, however, it is probable that M. Grabski will be able to hold the position for some time. The critical month is February, and as this is drawing to an end without a break in the exchange, it is likely that the Budget will balance without aid from the printing press until the spring taxes are exhausted, i.e., till perhaps the end of May.

After this exhaustion, it is not impossible that M. Grabski may obtain certain further sums from various sources with which to face his crisis. For this crisis must come in the summer. Poland has before now kept herself afloat on the equinoctial tide of revenue. It is in the low water between the two half-years that previous efforts have gone aground. To meet this situation, M. Grabski may have certain resources which his predecessors had not. Chief of these will be the new Bank of Issue, which should be started at no distant date, with or without Government or foreign capital. Its efficiency will depend on many factors as to which it is still too early to prophesy, though the importance of one, namely confidence abroad, is perhaps not sufficiently appreciated in Poland. But it is evident that the Bank may be subjected to a very severe test almost as soon as it has been founded.

The summer months will be especially critical for another reason. As we have mentioned above, M. Grabski has obtained full powers from the Parliament for all financial action. By what seems to be a great mistake, these powers were limited to six months, so that they should expire about the time when the revenue falls off and the great testing period begins. Even if this Government of experts can avoid political questions for these six months it is doubtful whether in a country so politically-minded as Poland a crisis can be avoided as the full powers expire. If the financial difficulties foreseen above mature about the same time, the gallant experiment of M. Grabski may be endangered.

Should the Polish Government weather this storm and carry on until the autumn taxes flow in, the Polish exchange may remain stable and the Budget be balanced for nearly a year. Unfortunately this would not be the end of Poland's difficulties. The reduced Budget which is a condition of this achievement cannot be maintained for a long period. Poland's requirements for railway expenditure, education, social assistance of all kinds, and municipal finance will necessitate a considerable addition to the Government expenditure in the next few years and the salaries of her officials must be raised.

For her years of consolidation Poland must have a much larger budget than at present. But it is most doubtful whether, under present administrative conditions, such a total revenue could be collected. Owing to the many defects in the machinery of tax collection, the nominal rates of taxation required to yield the necessary amounts would have to be so high as to be disastrous to those who were compelled to pay them, even could a Parliament be found to impose them. Economic necessity indeed must compel Poland to concentrate upon financial policy for some years to come, but fully as important as policy is administration.

Even with stronger and more stable Governments, the difficulties of administration in the three parts of Poland, each for a hundred years separated and excluded from the functions of Government, would be gigantic. They have been rendered more difficult by the complete withdrawal of the best administrators, the Germans, and

Poland has had to make shift with a small number of Austrian officials, supplementing them as best she could. Such a machine is not calculated to succeed in the difficult task of extracting revenue from a largely agricultural country. In moments of patriotic excitement, as at present, it may obtain the moderate receipts which are essential at the moment, but a considerable improvement in the financial administration will be required before Poland can count upon the increased revenue which the future requires, or will in consequence be able to offer adequate securities for the foreign loans which the true development of this rich country necessitates.

Notes of the Week.

Civil Service Estimates.—The Civil Service Estimates for the financial year 1924-25, including those for the revenue departments, have been issued this week, and show a total of £289½ millions. This compares with £327½ millions, the total estimates for 1923-24, the actual decrease being £37,338,000. In the table below we show the reductions in the estimates for the various classes. The figures for 1923-24, it should be noted, include supplementary estimates:—

	ESTIMATES.		
	1924-5.	1923-4.	Inc. or Dec.
Civil Services—			
Class I.—Works, &c...	6,709,931 ..	7,533,621 ..	— 823,690
Class II.—Administrative Services	10,022,361 ..	13,803,888 ..	— 3,781,527
Class III.—Law & Police	11,645,562 ..	11,904,661 ..	— 259,099
Class IV.—Education ..	49,859,068 ..	49,894,118 ..	— 35,050
Class V.—Diplomatic Service	9,138,091 ..	20,331,634 ..	— 11,193,543
Class VI.—Pensions, &c.	95,608,266 ..	104,137,984 ..	— 8,529,718
Class VII.—Health and Labour	36,222,534 ..	38,447,409 ..	— 2,224,875
Unclassified	8,367,010 ..	18,696,826 ..	— 10,329,816
	227,572,823 ..	264,750,141 ..	— 37,177,318
Revenue Depts.—			
Customs & Excise.....	4,740,000 ..	5,009,000 ..	— 269,000
Inland Revenue	6,480,804 ..	6,582,211 ..	— 101,407
Post Office	51,081,100 ..	50,871,520 ..	+ 209,580
	62,301,904 ..	62,462,731 ..	— 160,827
Total	289,874,727 ..	327,212,872 ..	— 37,338,145

The principal reduction in the first class is one of nearly £400,000 in the estimate for public buildings. In Class II. the Board of Trade is responsible for a drop of £500,000, the Ministry of Agriculture and Fisheries for a decline of £2,700,000, and the Mint for a reduction of £450,000. Four out of the five votes for Scotland in this class show an increase. In Class V. Colonial Services have decreased from £8,951,300 to £1,263,400, Oversea Settlement from £1,206,200 to £886,000, and Middle Eastern Services from £8,673,500 to £5,719,000. In Class VI. Old Age Pensions at £24,201,000 show an increase of nearly a million, but the Ministry of Pensions requires £6½ millions less, and there is a saving of a million on Irish Sailors and Soldiers Land Trust. The saving in Class VII. is practically all under the Ministry of Labour. In unclassified services, grants in aid for Northern Ireland, which figure in 1923-24 for £3,393,300, have disappeared, as have also agricultural credits for £500,000, while Shipping Liquidation has dropped from £2 millions to £10. There is a reduction of £1½ millions on Railway and Canal Agreements Liquidation, and of a million in Coal Mines Deficiency.

The Army Estimates.—A reduction of £7 millions is shown in the Army Estimates for 1924-25, the total being £45 millions, as compared with £52 millions for the current year. The bulk of the reduction, namely £3,923,000, occurs under Maintenance of Standing Army. The number of men serving shows a reduction of 9,200 at 161,600. The Secretary for War's memorandum states that the numbers include 4,100 in 1924-5 and 10,500 in 1923-4 for Indian troops employed by the Air Ministry in Iraq, for which the War Office has no responsibility. The reduction in the War Office sphere is thus 2,800 men, and represents "administrative economies effected in ancillary

services, consistently with the announcement made in Parliament by my predecessor in June last, to the effect that while such economies would be continued, no policy of further reduction of the fighting armies was in contemplation." The Secretary for War incidentally mentions that recruiting for the Regular Army during the current financial year "has not been entirely satisfactory." Referring to the question of the supply of officers, he states that it has been definitely decided to introduce a new form of Army entrance examination in June, 1925, on the general lines recommended by Lord Haldane's Committee, and at the same time to raise the lower age limit for entry into the Cadet Colleges from 17½ to 18 years of age. Slight modifications in the present clothing of the men of the Army are to be adopted. These involve no alteration in the dress of officers, and no reopening of the question of a general return to the pre-war patterns of full dress. The present rule that the Army is to wear, on all occasions alike, service dress of uniform war pattern, with no concession to either smartness of appearance or to the attachment felt by the soldier to the national and regimental traditions embodied in the time-honoured emblems of his regiment, has led in practice to the adoption of unauthorised 'improvements,' with undesirable results."

The Indian Budget.—A year ago the laudable intention of the Indian Government to produce a Budget balance involved the doubling of the salt tax, the rejection of the tax proposals by the Legislative Assembly, and, finally, the use by the Viceroy of the emergency power of certification. This sequence of events has rightly been given a prominent place among the causes of Indian political unrest. Fortunately this year's Budget, introduced in the Legislative Assembly by Sir Basil Blackett on February 29th, is not likely to cause a repetition of last year's political storm. Thanks partly to the full adoption of the economy recommendations of the Inchcape Committee, and partly to a "windfall," Sir Basil contemplates a small surplus for next year on the existing basis of taxation, and proposes to use the margin for taking off a part of last year's increase in the salt tax and giving relief to the Provinces. The "windfall" referred to was an item of about £3½ millions sterling, representing the profits accruing to India from control of enemy ships. This sum has been in suspense, but is now definitely credited to India. Of this amount Sir Basil proposes to appropriate 244 lakhs (say £1,650,000) for the current year, and carry forward the rest to 1924-25. With the help of this he estimates a surplus of 3.86 crores (nearly £2½ millions) for next year, revenue, on the existing tax basis, being placed at 107.93 crores (£75 millions) and expenditure at 104.57 crores (£72½ millions). This prospective surplus it is proposed to apply in the first place to reducing the salt tax from Rs2 8a per maund (to which it was raised last year) to two rupees per maund (82 lbs). This will absorb considerably more than half the prospective surplus, but will leave rather more than £1 million sterling to be applied to meeting the claims of the Provinces for reduction in their contributions to the Central Government. Cabled reports of the first stages of the debate reveal the existence of some strong opposition and a demand for the further reduction of the salt tax to the level at which it stood before being doubled last year. But Sir Basil Blackett pointed out that, if that course were to be pursued, the whole of the prospective surplus would be swallowed up, and the possibility of giving any relief to the Provinces would be postponed for at least two years. Opposition may be mitigated by the fact that the giving of relief to the Provinces is a popular aim, and also by the statement of the Finance Member that the estimates for military expenditure next year had been reduced to a figure nearly £450,000 lower than the figure assumed by the Retrenchment Committee. Lord Rawlinson made it quite clear that the limit of reduction in combatant strength had been reached, and that further military economies were only possible in connection with subsidiary services. Sir Basil, we notice, made it clear that the decision of the disposal of the surplus would be left to the Assembly, which, presumably, is equivalent to a pledge that the overriding of the Assembly's authority by the Viceroy's emergency powers will not be repeated in

any circumstances. Whatever happens, therefore, the Budget will not this year produce a political crisis comparable to that of a year ago. Among the important features of the Finance Member's statement was his discussion of a scheme for separating the railway finances from the Budget, framed on the lines suggested by the Acworth Committee. Of interest, too, was his reference to the substantial growth in the saving habits of the community.

The Abolition of the Caliphate.—The repudiation of the Caliphate by the Turks marks an epoch in the expansion of Western ideas over the non-Western world, for our Western principles of national sovereignty and self-government are the real forces to which the unfortunate 'Abdu'l Mejid Efendi has fallen a victim. Both by tradition and by theory, the Caliph is an absolute monarch over a united Islamic world, and it is therefore almost impossible to find a place for him in a national state (whether it be called a republic or a constitutional monarchy) in which the sovereignty is vested in the parliamentary representatives of the people. The banishment of even the "spiritualised" Caliph (as contrasted with the "temporal" Caliph-Sultan who reigned at Constantinople down to the autumn of 1922) is the logical consequence of the policy which has been steadily pursued by the Turkish Nationalist (or "Defence of Rights") Party since its foundation in the summer of 1920. Mustafa Kemal Pasha and his associates have always had two main ends in view: that the Turkish nation should be absolute master in its own house, and that it should retain neither pretensions nor liabilities outside what it regards as the proper boundaries of its own "national home." This policy has the merit of being definite in its purposes and limited in its aims, and it has undoubtedly arisen out of the Turkish nation's painful experiences in the past. Under 'Abdu'l Hamid—and, indeed, for a full century before that skilful exploiter of the Caliphate ascended the throne—the Ottoman Government had ruled over broad lands, both in Europe and in Asia, and over numerous peoples, both Muslim and Christian, outside the Turkish territories and the Turkish population which were the foundations of its power; and at the same time its rule was everywhere ineffective, its sovereignty imperfect, and its power a shadow. Between these two phenomena, the Turkish Nationalists are now convinced that there was a profound logical connection. The Ottoman Empire, they maintain, was top-heavy, and the Turkish nation was attempting an impossible task in trying to support it, like Atlas, on its unaided shoulders. The nation was bowed down, and its vitality was exhausted, while the Empire continued to crumble and crack. What is the use of sacrificing oneself for an unattainable object? The Turkish nation will only be able to stand erect and to exercise its limbs when it has flung the useless burden of empire from it, and it should therefore divest itself of Sultanate and Caliphate, and should thank its enemies for having relieved it already of the Arab provinces and Macedonia. On the other hand, for its proper national domain, and for the nation's complete sovereignty within that domain, it should fight to the last drop of its blood, for this is the national heritage on which depends the national future. This is the new orientation of Turkish Nationalism since 1920, in which it departs completely from the policy pursued by the Committee of Union and Progress between the Revolution of 1908 and the Armistice of 1918. The Union and Pro-

gress group, who are now in opposition, made the Revolution in order to save the empire; they differed from 'Abdu'l Hamid on questions of method and constitution, but not in ultimate aims. They pursued (and this far more actively than he had done) the policy of "Ottomanising" the Macedonians, Albanians and Arabs, and their opponents claim that their record during these ten years sufficiently proves the bankruptcy of their programme. The Nationalists are, therefore, not impressed by the present opposition of the Unionists to the repudiation of the Caliphate. They regard this as a continuation of the Unionists' general policy of grandiose "Ottomanism," as opposed to limited Turkish Nationalism, and as being just as wrong-headed as the other points in their programme. The Unionists, however, retort with some justice that the Nationalists are regarding the problem purely from the internal point of view, without considering its bearings upon Turkey's relations with the rest of the Muslim world. The banishment of the Caliph will not, perhaps, prejudice the friendship between Turkey and such countries as Egypt, Persia, or Afghanistan, where compact and fairly homogeneous Muslim peoples are just now awaking to national consciousness, and are following Turkey's example in reorganising their political life on national lines. For all these peoples the Western idea of nationality is in the ascendant, and the Caliphate is losing its power over the imagination. But what of the vast Muslim populations in India, Russia, China, and the African colonies of the Western Powers, who are "dispersed abroad among the Gentiles," and subjected to alien rule? For these Muslim subject minorities the spread of Nationalism throughout the world means submergence if not extinction, while the Caliphate carries a message of salvation through an international Muslim solidarity. This is the explanation of the Indian Muslim's distress at the Turkish Nationalists' action. We are possibly on the eve of a profound cleavage of policy within the Muslim world.

Liquor Traffic Convention with U.S.A.—In his last speech as Prime Minister, Mr Baldwin announced that an agreement was about to be signed with the United States. The text of this Convention has now been issued as a White Paper (Cmd. 2063, price 2d.). It accords with forecast. In principle the three-mile limit is upheld. But "His Britannic Majesty agrees that he will raise no objection to the boarding of private vessels under the British flag outside the limits of territorial waters by the authorities of the United States, its territories or possessions, in order that inquiries may be addressed to those on board and an examination be made of the ship's papers for the purpose of ascertaining whether the vessel or those on board are endeavouring to import or have imported alcoholic beverages into the United States, its territories or possessions in violation of the laws there in force. When such inquiries and examination show a reasonable ground for suspicion, a search of the vessel may be instituted." If the search provides reason for believing that an offence is contemplated, the seizure may follow. The distance from American territory within which these rights may be exercised is that "which can be traversed in one hour" by the suspected vessel. "In cases, however, in which the liquor is intended to be conveyed to the United States, its territories or possessions, by a vessel other than the one boarded and searched, it shall be the speed of such other vessel and not the speed of the vessel boarded, which shall determine the distance from the coast at which the right under this article can be exercised." This delimitation is vague enough, it may be feared, to lead to many disputes. But whether it proves workable or not depends on the spirit in which the rights are exercised. If the American authorities temper zeal with tact, reciprocated on the British side with a willingness to co-operate in putting down "bootlegging," troubles should be avoided. The Convention is subject to ratification, and is to remain in force for one year thereafter. In spite of the loopholes which it leaves for possible troubles, it is to be heartily welcomed as a means of removing what threatened to become a really serious cause of friction between this country and the United States.

Our Index Number.—Practically no change is shown in our Index Number of wholesale prices as at the end of February, the total being 6 points higher at 4668. There has been a fair number of changes in quotations in both directions, but it is not easy to trace any upward movement as directly due to the dock strike. The following table shows the changes in the five groups and in the total:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, &c.).	Total.	%
Base (avg. 1901-5) ..	500	300	500	400	500	2200	100.0

Home-grown cereals have been in somewhat small supply, and prices are a little higher than a month ago, but there is no change in imported wheat. Potatoes have reacted slightly after the sharp advance in January, but beef and mutton show no change on the month. A sharp decline in pork more than counterbalances the rise in cereals. Among subsidiary foodstuffs, coffee and sugar are a little higher, but tea and butter have eased a little. The largest changes are shown in the textile group. Cotton prices are lower, both for the raw material and for yarn and cloth. Messrs Robt. Barbour and Brother, in their monthly circular, state that "more or less liquidation, rumours of curtailment of output by American mills, and the scarcity of replacements locally, each contributed its quota to the weakness and unsettlement. The improbability of any active speculative support until something more became manifest concerning the big expectations in respect of new crop acreage, and what sort of send-off it was to be favoured with, also tended in the same direction." Silk prices also show a decline, but wool, flax, hemp, and jute are all higher on the month. The rise of 30 points in the minerals group is entirely due to non-ferrous metals, for pig-iron is slightly lower, steel rails and iron bars are unchanged, and coal is slightly easier. In the miscellaneous section the principal change is an increase in petroleum. The table below sets out the changes in each commodity's index number in comparison with that for the end of January, the figure 50 representing in each case the average prices during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	84	— 7	Cotton, A	156	— 22	Copper	55	+ 3

Dec.	148	231	225	167	136	178.6
Jan., 1924	157	241	219	170	139	181.8
Feb.	155	244	212	176	142	182.0

The last figure compares with 71.6 per cent. a year ago and 63.1 per cent. at the end of July last, the lowest point touched last year.

Irish Free State Finance.—Our Dublin correspondent writes:—The Revenue Returns, as published in the official *Gazette*, show receipts from April 1, 1923, to March 1, 1924, at £28,543,450, as against £23,949,478 under the old system, for the corresponding period of the previous financial year. This points to about £31,000,000 for the present year when completed. In this very substantial total there are included, it must be remembered, certain arrears both of income-tax and of land purchase annuities, as well as certain payments by Great Britain—a million and a-half or thereabouts—in respect of compensation for war damage. But, even so, the true revenue will show a handsome excess over the official Budget estimate. With business resumed under normal conditions, and the disappearance of the various dislocations due to civil commotion, the several heads of revenue should prove even more fruitful in the future. The balance to credit in the Free State Exchequer on March 1, 1924, was £7,032,966, and Irish Free State bills to the amount of £900,000 have been paid off. Whether or not any remissions of taxation may be looked for in the coming Budget remains obscure; the Free State still has a 5s income-tax, 2d postage, and beer duty at the 1922 British level. The Minister of Finance has expressed the opinion publicly that an abatement of income-tax would be good policy, and would probably lead to an increased yield in the near future. A difficulty in the way of this attempt to coax back *émigré* incomes into the Free State taxgatherer's sphere is to be found in the disproportion—from the British standpoint particularly—between direct and indirect taxation. Thus in the 11 months' revenue returns above referred to, Customs and Excise receipts amount to £16,445,000, while Income-tax (including super tax and mineral rights duty) stands at £4,593,000, in which a large sum of arrears is included. It is therefore difficult, when cost-of-living problems loom large and indirect taxation is voluminous, to increase the disproportion between the two by lowering direct taxation. The economy policy of the Government is pursuing its drastic course—Army, Civic Guard, Dublin Metropolitan Police, Teachers, and Old Age Pensioners all being subjected to "cuts," while the Civil Service has to work longer hours with weeded-out staffs at the previous rates of salary. So strong a passion for financial propriety and orthodoxy is heroic, but many are beginning to ask how far it is conducive to popularity. The General Election is still a long way off, but three by-elections are pending, of which one is in Dublin City and one in Dublin County, which will afford some reflection of the public mind. The Government is well supported in the Oireachtas, and, so far as retrenchment is anywhere criticised, that criticism concentrates on the reduction of old age pensions from 10s to 9s per week. Doubtless the calculation is that, with established credit—and the 5 per cent. National Loan still changes hands at 99, or 4 points above its issue price—and a balanced Budget, the Government will be able to embark upon reproductive outlays of capital which will set all the wheels of productive industry in motion,

and that in revival and expanding trade, and with a growing prosperity, the grudges and the bitter memories of the retrenchment period will be forgotten. But, unquestionably, Ireland is feeling the pinch to-day. Agriculture—the basic industry of the country—has been hard hit from every quarter—rates, taxes, high prices for buying, low prices and diminished facilities for selling, dear and unaccommodating transport, and labour troubles; it is obviously subsisting upon its savings from better years. The whole question of Ireland's fiscal policy is virtually in abeyance until agriculture wins through its temporary difficulties. That is publicly avowed by the Minister of Agriculture, who also stated that some minor measures of Protection are under consideration for fostering industry subject to that condition. The promised measure for bringing values and prices into some reasonable relationship, to paraphrase President Cosgrave's description, or, as the public regard it, the Anti-Profiteering Bill, is in an advanced stage of preparation but has not yet seen the light. It is coming none too soon, for, if it prove effective, it should help towards restoring reasonable wage-levels and normal industrial activity.

Stock Exchange Membership.—The Stock Exchange stands within a fortnight of the end of its financial year, writes a Stock Exchange correspondent, and notices are now posted in the House announcing the ballot to be held for election of thirty members to serve as the committee of the Stock Exchange for the year starting March 25th next. Two of the present members are resigning, and two fresh names, those of Sir Wilfrid Atlay, ex-chairman of the Stock Exchange Committee, and Mr W. F. Hadrill, are mentioned as likely to be candidates for the vacant seats. The number of new men elected to membership of the Stock Exchange in respect of the year which is now ending is 103. It is very likely that this number will turn out to be more than balanced by the deaths and resignations that have occurred during the period. This time last year there were 3,896 members. For the new financial year which begins on March 25th, about two dozen fresh names of candidates for membership are posted. The price of Stock Exchange shares, £25 paid, is about 101½, and a nomination costs, roughly, £50. Candidates for membership are required to provide themselves with three Stock Exchange shares, three sureties who shall guarantee their obligations for a period of four years up to £500 apiece, and to produce the necessary qualifications in respect of nationality, &c. The entrance fee for new members is 600 guineas, and the annual subscription a hundred guineas. Provided a man can find the three sureties already mentioned, and is able to satisfy the Stock Exchange Committee as to his eligibility for membership, the total cost of becoming a member of the House will not exceed £1,200, a sum that seems small in comparison with the money required nowadays for apprenticing lads to various professions or launching them in different branches of industry. As a rule, the prospective candidate for the House prefers to spend four years as a clerk in the Stock Exchange, because this will enable him to claim the right of admission for an entrance fee of 300 guineas only, provision of two sureties instead of three, and an annual subscription of fifty guineas. It is at this period of year when most of the changes take place in Stock Exchange offices, and therefore those who are contemplating a Stock Exchange career for sons, or others commended to their charge, will be well advised to make inquiries now as to the openings which may present themselves for the budding broker or jobber. Circumstances will probably determine whether the young fellow develops into a broker or into a jobber when he takes up the responsibilities of his membership. When business is brisk, there is something of a rush to acquire membership. This naturally reflects upon the prices of Stock Exchange shares and nominations, but when markets are as quiet as they have been during the past twelve months, taking the period as a whole, it usually happens that newcomers balance those who are retiring from the Stock Exchange, or who have been removed by death or other reasons. Every member of the Stock Exchange has to be re-elected annually. The Committee of the House have—and occasionally exercise

—the undisputed prerogative of refusing re-election to an applicant, and of declining to furnish any reason whatever for so doing. There are few semi-public bodies where the rights of the governing power are so autocratic as those of the Committee of the London Stock Exchange.

Index of "Free" Shipping Freights.—Our Freight Index registers a rise of 5.7 per cent. in February. The figure for the month is 144.01, representing a general level of freights for "free" shipping exceeding the average of either 1923 or 1922. The movements of the component parts of the index are shown in the following table:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.

North America.....	146.26	+ 8.77	Australia.....	162.91	+ 6.25

A satisfactory feature of the month has been the recovery of rates in European waters, and generally in outward coal freights. The dock strike may to some extent have contributed to this rise by keeping tonnage off the market, but the tendency, even with this qualification, seems to negative the conjecture which we made last month that an excessive quantity of idle tonnage was, perhaps, being re-commissioned. The month was again dominated by the strength of the River Plate market, where chartering proceeded in undiminished volume with fixtures extending as far forward as the end of May. Other routes homeward, in consequence of the absorption of tonnage by the Argentine, have a firmer tone than would seem to result directly from expansion in the volume of business. Spring prospects are clearly satisfactory save for the threatened trouble in the mining industry, but the further outlook when harvests in the Southern Hemisphere have been moved is still obscure. The relation of the index to the average for 1913 may be seen from the following table:—

Month.	1921.	1922.	1923.	1924.
January.....	194.59	131.60	114.05	117.11
February.....	164.54	135.76	112.73	123.78
March.....	162.17	135.53	115.23	..
April.....	147.48	129.46	115.45	..
May.....	158.42	125.12	114.55	..
June.....	165.73	117.45	106.82	..
July.....	169.87	114.52	103.39	..
August.....	170.60	113.16	100.16	..
September.....	154.47	110.37	103.04	..
October.....	141.85	114.42	107.86	..
November.....	136.47	119.43	111.21	..
December.....	134.66	117.39	111.81	..
Mean for year.....	158.40	122.02	109.69	..

The February figure is the highest for nearly two years.

The African Diamond Industry.—The diamond trade began to recover from its depression during the second half of 1922, and further and more rapid progress was made during 1923. The recovery was largely due to the

increased demand from America. That the African diamond industry reacted quickly to the improved trade position may be appreciated from the following figures of exports for the ten months of 1923, as compared with those of 1922:—

EXPORTS OF DIAMONDS FROM PRINCIPAL AFRICAN PRODUCING COUNTRIES FOR 10 MONTHS ENDING OCTOBER 1922 AND 1923.

	Carats		Values	
	1922.	1923.	1922.	1923.
Union of South Africa.....	1,066,028	2,010,406	3,517,333	5,894,321
Rhodesia.....	..	290	..	1,671
South-West Africa.....	106,994	344,997	249,433	1,131,606
Total.....	1,203,022	2,355,693	3,766,766	7,027,668

It will be seen that the exports for 1923 showed an increase of 95 per cent. in carats and 87 per cent. in values over the corresponding figures of 1922. The recovery was most marked in the case of South-West Africa. Here the increase was 222 per cent. in carats and 353 per cent. in values. The big four African producers are De Beers Consolidated Diamond Mines, Consolidated Diamond Mines of South-West Africa, Premier (Transvaal) Diamond Mining Company, and New Jagersfontein Mining and Exploration Company. The output of all these companies is sold through the London Diamond Syndicate. For 1922 this syndicate's sales were divided into the following quotas:—De Beers, 51 per cent.; Consolidated of South-West Africa, 21 per cent.; Premier, 18 per cent.; and Jagers, 10 per cent. The quota of the Consolidated Diamond Mines of South-West Africa, which company is the merger of the 10 principal German companies operating in South-West Africa before the war, will presumably have been increased in 1923. The diamonds of South-West Africa occur in alluvial deposits, can be produced more cheaply than the South African, and can be cut with the minimum of loss. This may explain the extraordinary increase in the South-West African exports. A coming producer is Portuguese West Africa (Angola). The Angola Government is interested as to 5 per cent. in the Companhia de Diamantes de Angola, which holds a diamond concession covering practically the whole of that colony, and is in the blessed position of being exempt from all taxation, present or future, and from import duties on plant and materials and from export duties on diamonds. Angola diamonds are of good quality, and costs of operation are low. The output of the Angola company is now to be handled by the London Diamond Syndicate, and it is a point worth remembering that the Anglo-American Corporation of South Africa, which is heavily interested, both in the Angola company and the Consolidated Diamond Mines of South-West Africa, has been admitted as a member of the London Syndicate since January of this year. The demand for diamonds is not yet back to its pre-war level, but is still recovering.

Brazilian Finance and Trade.—British investments in Brazil amount to nearly £270 millions—far more than those of all the rest of the world put together; and, pending the return of the British Commission, their holders may find comfort in the Report (to September, 1923) just issued by the Overseas Trade Department from the Commercial Secretary of our Embassy at Rio Janeiro. It contains much valuable information, but its main interest lies in its bearing on Brazilian public finance. It describes the situation as difficult, but the general condition of the country as sound; the leading export trades (except rubber) are prosperous; the low exchange stimulates home manufactures—textiles, clothing, matches, beverages, tobacco; exports in 1923 exceeded imports in value by £19,000,000. Exchange, indeed, fell from 18½d in 1920 to 5½d in 1923 (it has now recovered to 6½d), but though the fall, as affecting foreign investments, is specially emphasised by outside observers, the Report contends that a low exchange is less dangerous than a high exchange, which encourages over-importation. The effect of the export surplus is counteracted by the remittances for dividends and those of immigrants, the expenditure of rich Brazilians in Europe, and most of all by the commitments of the Government. President Bernardes took office three months after an abortive revolt (which had no great effect on business), and was faced by a low exchange, a large deficit, and heavy commitments abroad

and at home. After relaxing the restrictive supervision over banking and insurance, his Government set up a small Congressional Committee to frame and submit Budget proposals for 1924, and published a statement which inspired confidence; it also began to economise, and to collect the taxes much more carefully. Its estimates are now based on actual past revenue; and it has prevented the State of Amazonas from raising a loan to the detriment of its present creditors, and on onerous terms. Details are given of the new function of the Bank of Brazil as a bank of issue (based on entirely sound principles), of the new Federal Mortgage Bank, which is to help agriculturists, of the chief products of all the States, and of the leading industries. We can only mention that the coffee valorisation scheme is commended, that Brazil stands second in the world as a producer of tobacco, and produces the maximum of cotton fibre per hectare, but the American saw-gin must give place to the British roller-gin, and there is lack of labour and capital. New cotton land may be provided by the regulation of the Rio Sao Francisco. The iron and steel industry will probably require Federal aid in its establishment, and the lack of transport and of coal (which seems to be scanty, and of poor quality) may retard its development until the abundant electric power, now being slowly exploited, is applied more extensively. The chilled meat industry has disappointed expectation, partly through foreign competition, partly through inadequate attention to the breed of cattle used. While emphasising the movement towards sounder finance and the great resources of the country, the Report notes that there is no labour difficulty, and no reason to suppose that immigration will slacken. Japanese and negro immigrants are not desired; the 700,000 "Germans" (nearly all native born) are apparently not being reinforced from the Fatherland, and the immigrants will come, as heretofore, chiefly from Portugal, Italy, and Spain. With sound public finance and judicious expenditure on development, the prosperity of Brazil and her foreign investors should increase without interruption. And, as 83 per cent. of the public revenue is supplied by five States out of the total of 20, there is plenty of room for increase. But it is noted that some of the public works—especially the irrigation works in the north-east—are very costly and of doubtful value; and that the expenditure on the Army and Navy in 1922 was nearly 4s per head of population, and nearly 20 per cent. of the total. Possibly this is required by the national dignity; it certainly cannot be necessary for national defence.

Bank Deposits in Soviet Russia.—Some interesting commentaries on the difficulties experienced by private banks in Soviet Russia are made by Mr Dezen, of the Russian State Bank, in the *Moscow Economic Review* (*Ekonomicheskaya Obozrenie*) for January 10th last. He writes:—"The small part played by current accounts (nine-tenths per cent. of the total balance-sheet) in the Russian Commercial Bank (founded in December, 1922, by Aschberg, the Swedish banker, on Swedish and German capital) and in the Societies of Mutual Credit—that is to say, credit institutions organised on private capital—calls for a careful examination of the character of current accounts at the present time. The fact that deposits are greatest in the State, the Industrial and the Moscow Municipal Banks (all quasi-official institutions) finds its explanation in the flow of resources from State departments and State industrial and commercial enterprises into these banks. An analysis of the current accounts of the three banks mentioned above shows that in the case of the State Bank, 53 per cent. of current accounts are in the name of State departments, 27 per cent. in that of State industrial and commercial concerns, 13 per cent. in that of transport and ways of communications, and only 7 per cent. relates to other clients, including co-operative societies, private persons and credit institutions. In the Industrial Bank, 84.5 per cent. of the current accounts are represented by State industry, 9 per cent. by State departments, State trade and transport, and the rest by other clients. The Moscow Municipal Bank presents the same picture—for the month of September 93 per cent. of the current accounts are those of State departments or enter-

STATE EXPRESS

MADE BY HAND, ONE AT A TIME.

prises." The writer adds that these State cash balances cannot be regarded as liquid resources in the sense which usually attaches to this expression. "A considerable part of the current accounts of pre-revolutionary banks consisted of the cash balances of industrial and commercial firms, and of these resources some portion, after lying a certain time on current account, would be utilised to buy shares—that is to say, became invested capital. At the present time our State industry and trade are experiencing an extremely acute shortage of working capital, and in such conditions it is obviously impossible to talk of their investing money on any important scale, and their current accounts thus remain cash balances and nothing more. This statement may seem to be contradicted by the circumstance that industrial and commercial concerns participate in forming the foundation capital of new joint-stock companies, and the example of the Industrial Bank—founded on the capital of State industry—may be quoted. But, in point of fact, the foundation capital of the Industrial Bank consisted almost entirely, not of the liquid monetary resources of State industry, but of remnants of State funds hitherto unutilised, or of goods which, in our conditions of continuous trade depression, is by no means the same thing. Thus current accounts, the vast majority of which are cash balances of State institutions and enterprises, show an extraordinary instability, far greater than was the case before the war." The general situation, which Mr Dezen thus describes, operates with peculiarly restrictive effect on private financial institutions like the Russian Commercial Bank and the Mutual Credit Societies. "As is common knowledge, the rôle of private capital in industry is negligible, and is chiefly confined to cottage industries which do scarcely any business with the banks. Even such private liquid capital as there may be finds its way very slowly into the banks, chiefly owing to the fear of taxation, connected with the uncertain guarantee of bankers' secrecy which is being violated in the provinces. Finally, when the discount rate in existing circumstances attains 10-15, and sometimes even 20 per cent., calculated in gold per month, the placing of available resources on current account is one of the most unprofitable forms of investment."

The Revolution in Honduras.—A Presidential election is due this year in Honduras, as in Mexico, and the three parties are conducting the campaign by the time-honoured methods of Spanish America. The capital is threatened; the three adjacent Republics are tendering mediation; American warships are protecting their nationals at the two chief ports on the Caribbean Sea, and American marines are on the Nicaraguan frontier to prevent the smuggling of arms. Yet, as the Council of Foreign Bondholders three weeks ago announced in these columns and elsewhere, the plan for the settlement of the External Debt arranged last year is supported by all the contending factions. Its ratification will be among the first acts of the new Congress, or of whatever legislative authority may be set up by the eventual victors. American intervention is improbable, and would not interfere with the settlement.

Argentine Bank Trouble.—It has long been known that all was not well with one of the largest banks in Argentina, and it is now possible to give details of the position. Under date of February 7th, our Buenos Ayres correspon-

dent writes:—"It is now public property that the Banco Español del Río de la Plata has, at an extraordinary general meeting, held on February 2nd, written down its capital by 75 per cent.—from \$100,000,000 Arg. paper to \$25,000,000—and admitted losses which at the lowest reckoning total \$103,000,000 Arg. paper, and are generally believed to be in effect nearly thirty million more than this sum. The tale of irregularities, to use the mildest term possible in this connection, probably constitute a record in the history of modern banking, and only to the Latin temperament would it be possible to condone a half of the evil done, and to prophesy a bright and prosperous future for a concern standing on what must still be reckoned a very shaky base. That a new directorate and a complete change of management has been provided for goes without saying, but it will be some time before one can safely say that all danger of disaster is past. Argentine trade would suffer, no doubt, were the concern in question to close its doors, but not to an undue extent at the present time, given the generally favourable prospects and the exceptionally powerful position of the Anglo-Argentine banks and the majority of their colleagues. Whereas, if the trouble does come to a head anew later in the year, to break when the export season is over, the ill-effects are still more to be dreaded, and may well be more far-reaching both in banking and mercantile circles." The "irregularities" to which our correspondent refers make astounding reading. It is difficult to know where to begin the story, or what instances to select from Argentine Press accounts of the report read to the shareholders at the meeting. We read of bank managers and employees engaged in clandestine gambling in sterling, dollars, pesos, and other currencies. These gambles, when discovered, had already realised a loss of \$7,000,000 m/n, and were ultimately responsible for a loss of \$24,800,000 m/n. A purchase of 140 million marks was made just at the moment when the mark was taking its great plunge, and a loss of \$5,000,000 m/n resulted. As far back as 1914 the bank, taking the view that to suspend the dividend would have led to closing down, decided to pay dividends out of "funds other than profits," i.e., presumably, out of capital. Being unwilling to repeat this performance in 1918, the bank indulged in the purchase of ships (trying by hook or by crook to obtain the necessary profits). But the Armistice came along, and the only result of the shipping speculation was a further loss of \$3,000,000 m/n. There is no need to prolong this catalogue of examples of the bank's troubles. It has been saved from complete disaster by the unstinted aid of the Banco de la Nación. Obviously, the entirely new directorate and management that has just been installed have a very stiff uphill task before them.

Prudential Assurance Company.—Both in size and in efficiency the Prudential continues to make substantial progress. It is an institution in which a very large proportion of the people of these islands is directly interested. In the ordinary branch there were in December 31st last 1,117,564 policies in force, assuring over 159 millions, and in the industrial branch the policies numbered no less than 23,668,404, assuring over 390 millions. It is no exaggeration to say that more than one-third of the entire population of Great Britain and Ireland is assured in the Prudential. We are glad to note that the directors of the Prudential, and also the directors of other important industrial life assurance companies welcome the coming into force on January 1st of the Industrial Assurance Act of 1923. This Act should purge industrial assurance of many of its defects in the past, and gradually squeeze out companies and collecting societies which are not up to a high standard of efficiency in working and of financial strength. In its valuation of both branches for 1923 the Prudential reveals ample surpluses which permit the bonuses on ordinary with-profit policies to be increased, and a scheme to be started of allotting reversionary bonuses to industrial policyholders. In the ordinary branch, with funds of £69,753,108, there was a surplus of £2,428,648, and in the industrial branch, with funds of £80,763,928, the surplus was £2,534,013. The industrial valuation was stiffened by adopting the

English Life Table No. 8, in place of the older Nos. 3 and 6, and the rate of interest throughout was taken at 3 per cent., though the actual rate earned was £4 13s 9d net, after deducting income-tax. The ordinary branch with-profit policyholders will receive a reversionary bonus on sums assured of £2 per cent. for 1923, as compared with 32s per cent. for 1922, and 26s per cent. for 1921. A scale is published under which industrial life policyholders also participate in the profits. As a pioneer in the "block system" of canvassing and collection in respect of industrial business the Prudential has made notable reductions in the rate of expenditure to premiums. The high rate of expense in this class of business was always a serious blot upon it. In 1920 the Prudential's expenditure in the industrial branch was 40.5 per cent. of the premiums, in 1921 it was 36.92 per cent., in 1922 32.12 per cent., and last year under 30 per cent. (29.74). A reduction of 10 per cent. in the course of four years represents a saving of many millions in working-class contributions. The improvement in the position, combined with the situation caused by the Industrial Assurance Act, has led the Company to prepare and issue a revised industrial branch prospectus, which, it is stated, "contains a set of weekly and monthly tables which embody industrial assurance policies in their simplest form, combined with more favourable benefits than it has hitherto been possible to grant under this class of life assurance policy." In the general branch the premium income has nearly reached a million sterling, and increased during last year by £121,979. The assets, which exceed 150 millions, have been revalued, and it is stated that the investments stand in the books at a figure which is below their market value. Any depreciation which may occur has been provided for by the building up of investment reserve funds of three millions in the ordinary branch, and of two and a quarter millions in the industrial branch.

United Kingdom Provident Valuation. This mutual life office has made a valuation for the three years ended December 31st last, and taken into account the appreciation in securities since December 31, 1920. Three years ago, when no bonus was declared, the sum of £1,350,798 was written off the value of the investments, and five years before that (December, 1915) £732,144 was written off. A revaluation as at December 31st last showed that an appreciation had taken place of £1,198,479, and this sum—less £300,000 transferred to an investment contingency reserve fund—has been added to the book values of the life funds, bringing them up to £12,976,501. The liabilities were valued at 2½ per cent. interest, and the surplus upon the assets as written up was £1,578,511. It has been decided to divide £1,417,689 among the with-profit policyholders, and to carry forward £160,822. It will thus be seen that, with the transfer to investment reserve, £460,822 of the surplus has been retained undivided. The system of distribution in bonuses is designed so that the policies issued before January 1, 1920, shall get the highest rate, those issued in 1920 the next rate, and the newer policies effected since December 31, 1920, a lower rate. The three rates of bonus on whole-life policies (Temperance section) are 54s per cent. per annum, 46s, and 38s. In the general section the corresponding rates are 51s per cent., 43s, and 35s. This method of differential rates of bonus has much to be said for it, because it gives the highest rates of addition to those who got no bonuses at all for the five years ended December 31, 1920, and who suffered from reduced rates of bonus in the previous five years. The report of the institution for last year shows new assurances of £2,081,979, under 4,691 policies, as compared with 3,975 policies in 1922, assuring £1,826,307. The average rate of interest earned was £4 10s 8d per cent. net, as against a valuation rate of 2½ per cent. The death rate, as usual, was very low. The total claims by death last year were 57.2 per cent. of the number and 62.5 per cent. of the amount expected.

British and Foreign Marine Insurance Co.—The underwriting account by this company for 1922 was closed by transferring £70,000 to suspense account for future claims, and the surplus was then £40,591 on a premium

income of £619,964. Interest yielded £131,813 net, so that the total profit was £172,404. A loss of £44,009 was shown on the sale of investments. The dividend cost £113,272, which was less than the net revenue from interest. The premium income for 1923 was £589,465, as against £619,964 for the previous year, the first year's claims £148,023, against £151,150, and the expenses £118,646, against £130,566. On December 31st last the reserve fund, the underwriting reserve, and the balance of profit and loss amounted to £1,629,137, or nearly three times the premium income.

American Telephone (Bell System).—Detailed particulars of the progress made by the American Telephone and Telegraph Company in 1923 have now reached us. This undertaking, after meeting all operating charges and making provision for depreciation and federal and other taxes chargeable against 1923 earnings, had available for interest and dividends \$95,389,918.03. Interest charges were \$13,697,736.66, a reduction of \$1,800,275.22 from 1922. Dividends paid to stockholders at the rate of \$9.00 per share per year, amounted to \$63,274,388.10; this was an increase of \$10,303,136.17 over 1922. The following figures show the state of the balance-sheet at December 31st last; figures of the previous year are appended for comparative purposes:—

ASSETS.		Dec. 31, 1922.	Dec. 31, 1923.
Stocks of associated companies ..	\$	662,529,358.73	756,463,932.11
Bonds and notes of and net advances to associated companies ..	\$	115,671,082.98	178,147,274.02

Total capital liabilities ..	\$	941,688,654.22	1,063,327,006.96

During the year investments in stocks of associated companies increased \$93,934,573.38. This increased stock investment represents the acquisition of stock, by way of permanent investment, either direct or to replace notes of the associated companies previously held. Investment in bonds and notes of and net advances to associated companies shows a net increase of \$62,476,191.04, resulting in a balance of \$178,147,274.02 at December 31, 1923, which is made up almost entirely of outstanding advances by this company to the associated companies for the extension of their telephone properties. The number of stockholders on December 31, 1923, was 281,149, an increase of 32,224 during the year. In the space of three years the number has more than doubled, there being 139,448 at the close of 1920 and 281,149 at December 31, 1923.

Gopeng Consolidated.—Our mining correspondent writes:—As only to be expected, this Malayan tin enterprise fared better last year than in the twelve months ended September 30, 1922. The difference, however, is not great—an expansion of £10,400 in the working profit to £65,200. Of course, the big rise in the price of the metal did not commence until towards the end of 1923.

Moreover, although an increased quantity of ground was treated, the average yield fell off slightly. This partially offset the better price obtained for the product. No change is made in the dividend rate, the year's distributions again totalling 15 per cent.; but, unless a serious set-back should occur in the white metal, the shareholders may expect an enhanced return for the current session. It may be pointed out that the very low ratio of working expenditure, even as compared with other Far-Eastern producers—£27 5s per ton of tin ore, equal to about £40 per ton of metal—is due to the circumstance that the company operates by hydraulic instead of by dredging. Small profits were last year derived from two rubber estates. Prospects for the current period are described by the consulting engineers as "good."

The Swiss Industries Fair will be held at Basle from May 17th to 27th next.

The City of London College announces a lecture on New Zealand by the High Commissioner for New Zealand, Colonel the Hon. Sir James Allen, K.C.B., on Monday, March 3, 1924, at 5.30 p.m.

The Chartered Institute of Secretaries announces that the Right Hon. G. H. Roberts will give an address on "Co-operation in Industry and the Relation of Whitley Councils Thereto," on Tuesday, March 11th, at 5.30, at Gresham College, Basinghall street, E.C. 2.

Obersea Correspondence.

UNITED STATES.—INCOME-TAX REDUCTION BILL—AGREEMENT REACHED IN SOFT COAL INDUSTRY—WAGES AND COST OF LIVING.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 21.

DEMOCRATIC members of the House of Representatives, aided by several Radical Republicans, succeeded this week in substituting their own income-tax reduction plan for the schedules proposed by Secretary of the Treasury Mellon, and strongly advocated by the Republican Administration. In many respects the Bill in its present form, and as accepted tentatively by the House, differs widely from the measure originally introduced and supported by President Coolidge and other Administration leaders. For instance, it would lower the normal taxes to 2 per cent. on incomes up to \$5,000, to 4 per cent. on incomes between \$5,000 and \$8,000, and to 6 per cent. on incomes above \$8,000. Exemptions would be raised from \$1,000 to \$2,000 for single individuals, and from \$2,500 to \$3,000 for heads of families. The so-called Mellon Bill called for a reduction in normal taxes from the present 4 per cent. and 8 per cent. to 3 per cent. and 6 per cent., allowing the exemptions to stand as at present, while the maximum surtax was cut to 25 per cent. The democratic measure, substituted this week, increases the maximum surtax to 44 per cent., that rate to apply to incomes exceeding \$92,000. The latter surtax maximum is much higher than the compromise rate which had previously been discussed, and which last week seemed likely to be accepted. The Democratic-Radical coalition further demonstrated its control over the tax Bill situation in the lower branch of Congress by adopting an amendment extending the proposed 25 per cent. reduction on earned incomes to small merchants and farmers, and another amendment that would tax profits from sales of stock dividends at regular income-tax rates. Evidently these drastic changes were designed to gain supposed political advantages. As it now stands it is unacceptable to the Administration, and in all probability would be vetoed by President Coolidge if enacted by Congress. What may happen in the Senate is uncertain. Any changes made by the Senate will necessitate consideration of the measures adopted by both branches, with the object of ironing out differences and agreeing upon a compromise Bill.

Apprehension of a soft coal strike this spring has been removed, and peace in that industry seems to be assured for at least three years as a result of the agreement reached this week by representatives of bituminous miners and operators in what is known as the Central Competitive Field. The agreement, which is to become effective on April 1st, and which provides for the renewal of the present wage scale, and all other features of the existing contract for a period of three years, is a compromise of the miners' demand for a four-year contract and the operators' offer of a renewal for one year. This settlement was unanimously approved by delegates at this week's conference; it must be submitted to a referendum vote of the United Mine Workers, but no doubt is entertained as to its acceptance by that body.

On January 15th of this year the cost of living in the United States had decreased two-tenths of 1 per cent. from the level of December 15, 1923, according to data compiled by the National Industrial Conference Board. During that period there was an increase in the average cost of clothing, and decreases for fuel and food, each of those changes being less than 1 per cent. Between July, 1920, when the peak of the rise was reached, and January of this year, the cost of living decreased 19.5 per cent., but the increase since July, 1914, has been 64.6 per cent. The same authority finds that the purchasing value of the dollar, based on the cost of living in January, 1924, was 60.8 cents, as against one dollar in July, 1914. Another interesting report, just prepared by the Industrial Board, shows that industrial activity at the beginning of the present year was at the same level as last November, according to results of the latest survey of wages, hours, and employment in 23 of the leading American industries. Average hourly earnings of all wage earners in December, 1923, were found to be 55.9 cents, or 11.1 per cent. above the figure of 50.3 cents for December, 1922. Unskilled male labour gained slightly in hourly earnings, while skilled labour and women registered a slight decrease. At the beginning of the current year, average weekly earnings of all wage-earners stood at \$26.94, or 7.2 per cent. higher than at the same time a year previously. Employment remained practically unchanged in December, as compared with November, but was 1.2 per cent. greater than in December of 1922.

FRANCE—THE FALL OF THE FRANC—PUBLIC OPINION—SANE PROPOSALS—IRON AND STEEL.

(FROM OUR CORRESPONDENT.)

PARIS, March 5.

WITH the exception of an extraordinary outbreak last Friday, which culminated in something very much like a free fight on the floor of the Chamber, Parliament has been to some extent marking time for the past few days, and active work will not be resumed until to-morrow. Meantime, the renewed drop in the franc, which has again reached fresh record levels, has focussed more closely than ever the attention of the whole nation on the financial situation. It is now becoming evident that public opinion, as a whole, is beginning to awaken, under pressure of soaring prices and progressively depreciating currency, to the essential factors of the situation, and to acquire the conviction that it is useless any longer to ascribe all the evils to which the franc is heir to spectacular "raids" by wicked British, American, German, and other "financial enemies" of France. Both the newspapers and ordinary private conversations show that the French, as a people, are now grasping the fact that the warnings that have been uttered for years past to the effect that no nation can afford to persist in living beyond its income without risk of speedy disaster, have good foundation in fact. The lesson, it is becoming clear, has gone home, and the leaders of all sections of the nation are now anxiously searching for the necessary remedies. The *Temps* to-night asks why it is that the pound has lost only 12 per cent. of its nominal value, while the franc has lost nearly four-fifths, in spite of the absence of unemployment in this country. The reason, it insists, is that Great Britain is not borrowing, while France has persisted down to the present in spending more than her income. There is still a marked tendency to expect

salvation to come from the reports of the two committees of experts, which it is anticipated will be ready next week, and which it is believed will be favourable to this country. Nevertheless, many recognised authorities are now urging that immediate steps should be taken, without waiting for the expected settlement of the reparations and inter-allied debt problems, to deal with the purely French financial problems that threaten the country with disaster.

The well-known economist, M. Georges Raphael Lévy, insists that the reason why the pound has now gone up from 50 to over 100, and the dollar from 12 to over 24f, is because the French Treasury, without counting the advances it has had from the Bank of France, or its English and American loans, owes between 70 and 75 milliards in short-term bonds, and is making no attempt to consolidate this debt, a part of which may be presented for redemption at any moment. (Nothing in the way of consolidation has been done, as a matter of fact, since M. François-Marsal by this means, in 1920, reduced the proportion of the floating to the consolidated debt, which was 104 per cent. at the end of 1919, to 70 per cent. at the beginning of 1921.) M. Lévy insists that if the public were now given the opportunity, it would readily absorb an issue of 50 milliards of 4 per cent. Rente, provided it were issued free of all present and future taxation and (for 25 years) succession duties. In view of the fact that some of the State's recent issues capitalise at 8 per cent., this would result in a gross saving of 2,000 millions, and in a net saving (after allowing for loss of taxation on the new stock) of 1,300 millions. Such a loan, he points out, would furnish the money necessary to complete the restoration of the devastated regions and enable the redemption of 25 milliards of floating debt. Incidentally, such a plan would probably render it possible to reduce the interest on the remainder of the floating debt, while it might also be expected to improve the market value of the Rente and give elasticity to the Treasury.

Another proposal which is giving rise to a good deal of controversy is that the paper franc should be stabilised at its present value, and that all commodity prices should be brought back to a gold basis. This suggestion to adopt the gold franc in place of the existing paper one is due, apparently, to the fear on the part of certain leading economists here that the Government may be tempted—in view of the arbitrary power given to it by the authority (if the proposal is approved by the Senate) to legislate by decree—not to re-establish the gold franc as a circulating medium. That such a proposal should have been seriously mooted is significant, and will perhaps convey, almost better than anything else, a pretty clear idea of the semi-panic that has been caused here by the persistent fall in the franc. Opponents of the gold-franc proposal insist that its application would result in worse evils than those it is sought to remedy. For one thing, they say, it would be impossible to fix on a gold basis values now counted in paper francs, while shopkeepers would find it impossible to calculate from day to day the selling price in paper of each article whose value was fixed in gold francs. If the prices prevailing in 1914 were taken as the basis of present gold values, it is asked, then the present rent of a flat let at 3,000f before the war would now be 15,000 francs-paper, whereas actual rents payable in paper have not risen to anything like this extent.

The statistics issued by the Comité des Forges show that the output during January last was again the most satisfactory since the Armistice, and that the French metallurgical industry is now in a much better position than it was either before the occupation of the Ruhr or even in 1913. The number of blast furnaces in operation on February 1st was 134, as compared with 125 on December 1, 1923, and 116 in January, 1923; while 42 others were ready to be started up, and 43 were either under construction or repair. The total output of cast iron in January was 585,978 tons, against 564,655 in December, 1923, and 513,288 tons in December, 1922. The output of steel was 541,022 tons in January last, or 15,513 tons more than in December, 1923, and 126,425 tons more than in December, 1922. The output of steel in the recovered portion of Lorraine during January was 187,810 tons, against 172,977 tons in December, and

of iron 227,911 tons, against 212,147 tons. The present situation of France, apart from the recovered provinces, so far as iron and steel production is concerned, as compared with pre-war circumstances, is that whereas the average monthly output in France of 1913 was 434,000 tons of iron and 390,000 tons of steel, the returns for January, 1923 (after deducting the tonnage for the recovered portion of Lorraine), are still 76,000 tons behind the 1913 mark in regard to iron, and 37,000 tons in regard to steel.

GERMANY.—RUHR AGREEMENTS—FINANCES—PRICES—BOURSE—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, March 4.

THE subjugation of Germany's western industry is now pretty nearly complete. The *Frankfurter Zeitung* publishes a list of 34 agreements with the "Micum," or the Rhineland Commission, beginning with the Becker concern's agreement of November, and ending with a metal industry agreement of February 23rd. Apart from the heavy industry, including coal and iron, raw, and half-finished materials, the chief agreeing industries, in order of date, are chemicals, leather, Solingen steel (renewed in February), wine, cellulose and paper, textiles, shoes, sugar, wood, wire, cement, and bricks and tiles. The wood agreement is for one year, sugar until October 31st, and most of the other agreements for three months, or until April 15th. In general the underlying principle, as shown in the latest agreement with the metal industry, is a fusion of export duties with obligations to deliver goods without receiving compensation from the Federal Government. Supplements to the export duties (which include all duties on transport to unoccupied territory) go into a Reparations Fund, each sub-group paying its own percentage of supplement, the general calculation being that the payments should be about 2 per cent. of the total sales. This meant imposing the highest supplements on groups with low proportions of export and transport. The Fund will be spent on paying the deliverers. The ultimate burden on industry is very heavy, and must, if production is to continue, be transferred to consumers'—probably native consumers'—shoulders. The renewed agreement with the Solingen industry imposes similar conditions, from which this branch has been hitherto freed. In connection with plans for Reparations monopolies, the following facts about the tobacco industry are published:—In 1922 there were 6,721 tobacco factories, with 150,202 employees; or counting home factories about 8,000, with 200,000 employees. Most of the factories were very small concerns. In 1921 there were about 5,000 wholesale and 350,000 retail tobacco dealers. Including employees in accessory trades, about 1,000,000 persons depend from the tobacco industry.

A Bill transferring Posts, Telegraphs, and Telephones to an independent corporation to be called the "Deutsche Reichspost" has been submitted. In principle this reform follows the lines of the railways reform. Posts will be managed by a council of 25 members, five nominated each by the Reichsrat and Reichstag, one by the Finance Ministry, and 14 by the Minister of Posts. As with railways, no subsidies will be given to cover deficits, and the new corporation is allowed to borrow only in order to extend or increase its equipment. A reserve equalling 20 per cent. of annual expenditure is to be accumulated out of profits; after half of this reserve has been created the Republic will take half the net profits; after the whole of the reserve has been created, all net profits will go to the Republic. A Berlin court declared null the restriction by the Third Taxation Decree of "Aufwertung" of mortgages to 15 per cent. of the original gold value, the ground for the decision being Art. 153 of the Constitution, which guarantees inviolability of property rights. The Federal Appeal Court has since declared the limitation to be legal and constitutional. Despite the attacks of political parties upon this decree, and upon other features of the recent financial reforms, it seems almost certain that the reforms will not be rescinded. Business organisations have appealed to the Government to stand firm for its regulation of mortgages

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

and bonds, declaring that a change would create new uncertainty and instability.

The second ten-day term of February shows in the Federal finances a deficit of 57,002,300 gold marks, intakings being 120,088,900 gold marks, of which only 225,100 gold marks came from sale of Gold Loan, while payments out were 177,091,300 gold marks. The deficit is due mainly to postponement of the date of payment of property tax, and to the fact that in expenditure was a fortnight's salaries. Though this is the second deficit in successive ten-days' terms, it caused no alarm, and the Government has enough cash in hand to meet several more deficits. The Reichsbank's statement for March 3rd shows a drop of 17 trillions in circulation to 536.6 trillions. The large demands for credit compelled the Bank to increase its debt to the Rentenbank from 350 to 400 million Rentenmarks. Private paper mark discounts increased by 25 trillions to 469 trillions; private Rentenmark discounts by 80.5 trillions to 508 trillions; paper mark advances by 1.5 trillions to 133 trillions; Rentenmark advances by 13 trillions to 182 trillions. The Bank held 172,501,931 Rentenmarks on its assets side.

The currency continues to hold. Prices are still slightly upward. The *Frankfurter Zeitung's* commodities index is, for February 28th, 147.25, against 144.58 on February 14th, and 164.96 on November 29th, 1923. The official commodities index for February 26th is 118, against 117.5 a week earlier; and the official cost-of-living index for February 25th, 105, against 104 a week earlier. Railway freight rates were reduced 10 per cent. on March 1st. The freight rates index (on basis of 100 in 1914) is now 151.56, against a maximum of 163.98 on January 3rd. Although prices of necessary foods, and of some other commodities for which there are large open markets, continue to be low, the most extravagant sums are still being charged for special goods and services. Nominal wages have, of late, been slightly downwards, but less downwards than prices, so that there has been an increase in the real wage. The official wage data show for January an average for skilled workmen of 28.81 Rentenmarks, and for unskilled 23.05 Rentenmarks,

against 24.27 Rentenmarks. For skilled workmen the real wage has risen to 73.6 per cent. of that of 1914, for unskilled to 88 per cent. Of 18 wage groups, nine skilled and nine unskilled, only the unskilled miner has a higher real wage (with 106.5) than in 1914.

The Bourse has, of late, been extremely dull. Since the beginning of the year the volume of transactions has been small and confined to speculators, while the general public has held aloof. The Bourse Visitors' tax, and the high stamp duties on transactions, have also depressed business. On February 29th the average price of all stocks quoted in Berlin was (in billions) 22.93, against a lowest point this year of 19.74, and 13.46 on November 30th last. The only strong bull factor of late has been the legal compulsion to issue gold mark balance-sheets; it is assumed that this involves ultimately gold mark dividends, which, however small, must be worth more than the paper mark dividends of recent years. Also it is expected that the first gold mark balance-sheets will show companies in strong positions. The Reichsbank has requested the private banks to return to the pre-war system of publishing balance-sheets once every two months, though for the present only the main totals will be required. The Reichsbank's own statements are now coming out fairly regularly. Bond prices to-day were (in millions): War Loan, 105.25; Fours, 550; Three and a Half per Cents., 350; Threes, 1,025; Colonial Fours, 3,600; Prussian Threes Consols, 615.

Business is still improving. The textiles position has so far improved that many mills have orders for months ahead, and in one branch, velvets, it is reported that orders are being refused. Textiles and boots usually lead any wave of German depression or revival. The iron and steel branches, which usually come fairly late in such movements, have now, as in the world-market, begun to recover; prices are slowly upward; some kinds of material are already short; scrap iron is again in demand, and there is active selling of bars, sheets, and wire-rods. In the railway construction branch stagnation still prevails. Present (dealers') prices are around (marks per metric ton): Bars, 133; construction forms, 128-130; thick sheets (over 5 mil.), 150; thin ditto (under 1 mil.), 185. The rolling-mill concerns in unoccupied territory have created a Rolling Mills Association, with the aim of fixing homogeneous prices daily. The Leipzig Fair promises to be a great success; the number of exhibitors is over 14,000, against 4,253 at the spring fair of 1914. As a result of the agreement to give eight months' credit to farmers, the potash industry has undergone a great revival. The Nitrates Syndicate is giving only 56 days' credit. Farmers are extremely short of working capital. Regarding bank credit conditions generally, the Federal Ministry of Industry has intervened, declaring that interest rates on loans of 6 to 10 per cent. (on some days of 30 per cent.) a day are unreasonable under present conditions, especially as they are sometimes charged on "valorised" loans, in which case the bank takes no risk of loss from currency depreciation. The Government refuses to attempt to regulate the private interest rate, but it promises to proceed against offending banks under the usury laws.

The railways are stated to have paid their way in January and to have yielded a small surplus. Herr Oeser, Minister of Communications, declares that the Government will not consent to international management of the railways.

O'N A D A.—PREFERENCE DISCUSSIONS WITH AUSTRALIA—ST LAWRENCE RIVER PROJECT—ECONOMY—TARIFFS—STATE OF TRADE.

(FROM OUR CORRESPONDENT.)

OTTAWA, February 12.

SENATOR WILSON, representing the Australian Government, and Major Oakley, chairman of the Australian Tariff Board, have arrived in Canada to discuss trade matters, make a survey of the trade relations of Canada and Australia, and, possibly, clear the way for reciprocal tariff arrangements. Last winter Hon. J. A. Robb, Minister of Trade and Commerce and now acting

Minister of Finance, went to Australia on behalf of the Government of Canada in the hope of bringing about reciprocal tariff arrangements between the two countries, but his efforts failed. At the last session of Parliament, Mr Fielding undertook to clear the way by placing raisins and currants on the free list under preference, and raising the intermediate and general duties on those articles from two-thirds of a cent to three cents a pound. This was in addition to the general offer made by Mr Robb, which was to extend to Australia the preference Canada now gives to Great Britain on condition that Australia would reciprocate. The change can be made effective by Order in Council whenever Australia accepts the Canadian offer. It is not likely that Canada can go much further at the present Conference, although the delegates in speeches which they have been making since coming here have been laying some stress on the cotton and wool production of Australia. Canada already has the balance of trade with Australia enormously in her favour. For the twelve months ended December, the imports from Australia to Canada were only \$1,121,646; the exports from this country to Australia were \$21,238,620, an increase of nearly 30 per cent. during the year, while imports remain almost stationary from year to year. Canada is not progressing in the Australian market, however, nearly as rapidly as the United States. It is estimated that during the present year American exports to Australia will amount to nearly \$120,000,000, an increase of nearly 50 per cent. in the past year. Much of the above total consists of goods which Canada could supply if preferential treatment were arranged. As it is, Canadian and American exporters are having a close race in the matter of automobile exports.

The great difficulty in arranging a reciprocal trade treaty between Canada and Australia is that Canada is not only a manufacturing but an agricultural country. Australia produces little, outside of dried fruits and a small quantity of cotton, that Canada does not itself produce. Last year Canada imported nearly \$31,000,000 worth of raw cotton from the United States, over \$5,000,000 worth of dried fruits, and about the same amount of raw wool. In those three items there is, conceivably, an opening for Australian exports to Canada. Much of the wool was Australian, although it came through American channels. The impression which prevails in Government circles here is that little is likely to come out of the present negotiations, although Australia may offer a partial preference in the hope of being able to take advantage of Canada's offer with regard to dried fruits.

The long-discussed question of the improvement of the St Lawrence river as an international project for the development of power and the extension of navigation to the great lakes for large vessels, was given an impetus this week, when the Canadian Government agreed to the appointment of an international joint engineering board to make a final report covering the engineering features and cost of the scheme. Two years ago, when the late President Harding approached the Canadian Government in the matter, he suggested either a treaty or the establishment of a joint Commission to prepare a plan of development acceptable to the people of both countries. The reply of the Canadian Government was that it did not appear to be expedient to deal with the matter at that time. Opinion in Canada is divided regarding the advisability of the project. Toronto and the province of Ontario is strongly in favour of it; Montreal appears to be about as strongly opposed, while the Maritime Provinces and the Prairies are generally in favour of the scheme. Apart from the development of enormous supplies of power, it would enable ships to penetrate, without breaking cargo, to the very centre of the American continent. In the United States opinion is divided also. Eighteen States, representing 40 per cent. of the population and 77 per cent. of the wheat growers of the United States, have passed formal resolutions favouring the

project. Opposition has been confined mainly to the big American ports, like New York, Baltimore, Philadelphia, which, like Montreal, fear loss of business and prestige.

For the past two or three months there has been going on all over Canada what would almost seem a concerted protest against extravagant expenditure by Governments and high taxation. The Government at Ottawa has responded by announcing that an energetic attempt will be made to clean up the Civil Service, which has long been notoriously overmanned and expensive. For this purpose it has appointed a new auditor-general, at a salary higher than that of the Prime Minister, and given him power to form an organisation and proceed to the work of reducing staffs and expenditures. It is also announced that heavy cuts will be made in the coming estimates, and an earnest attempt made to balance the budget; but it is difficult to see how this can be done so long as the annual deficits on the Government railways have to be made up, largely out of general revenue. The Government's announcement with respect to reduction of staffs and expenditure is about the most popular move it has made since assuming office.

The frequent prophecies that some pronounced cuts are to be made in the tariff at the coming session has stirred up various protected interests not only to protest against reductions, but to counter by asking for increased duties. The woollen manufacturers are particularly vocal, issuing announcements to the public showing how their industry is suffering under British competition. A recent announcement points out that there were \$112,444,724 worth of textile products imported into Canada last year, the bulk of which could be produced in Canada. "The reason why the bulk of these goods was not made in Canada," says one published statement, "is that the customs duties are so low that the low-paid workers in Great Britain and Europe have an advantage in our home market over the better-paid workers of Canada. The wage scale in Canada is determined by the wage scale in the United States. Goods partially or completely manufactured by workers in European countries can be shipped into Canada from Great Britain under the British preference. Depreciated currencies from Great Britain, France, Belgium, and Italy have the effect of actually lowering the already too low duties." The implement and other manufacturers have also been protesting against any decreases, but there is a strong impression that the duty on agricultural implements, in particular, will be heavily reduced.

Trade reports generally appear to be growing more favourable weekly, but the betterment appears to be more in sentiment than in actual volume of trade. Hon. T. A. Crerar, formerly leader of the Western farmers' party, and head of the wheat selling and other commercial undertakings, gave an optimistic interview a few days ago, in which he expressed the opinion that the West had turned the corner, and that with care and economy it should be in a sound position in a year or two. The heads of the large banks express similar views. Commercial travellers are reporting increased orders for spring delivery, with buyers exercising care. Wholesale prices have shown a slight rise during the past two months, and the general price level is higher now than at any time since the middle of last year, and shows an increase of 19 per cent. over the low point reached in 1921. They are about 58 per cent. over the pre-war basis. Recently issued figures show that wages have not followed the cost of living downward in Canada. The latter is to-day at 154, as compared with 100 before the war, while the average wage is at 178. The chief increase has come in coal mining, in which wages are nearly twice as high as before the war. Factory workers are almost equally fortunate, their wages being 196 per cent. of the pre-war figure; printers are 186, metal workers 174, lumbering 170, building trades 166, and railways 157 per cent. The index number of wholesale prices compiled by the Dominion Bureau of Statistics and weighted according to the commercial importance of the 238 commodities included, shows a rise of one point for 1923. The flour milling industry seems to be sharing with the pulp industry the greatest prosperity in Canada at present. Most of the flour mills in Canada are operating at capacity, the export market absorbing a very large part of the output.

AUSTRALIA.—DEARER MONEY—GOLD PRODUCTION—GOVERNMENT STEAMERS—RAILWAYS.

(FROM OUR CORRESPONDENT.)

MELBOURNE, January 24.

THE monetary position in Australia has continued to show a hardening tendency, and a readjustment of banks' lending rates has been in progress during the last few weeks. The hardening is the result partly of the considerable pressure arising from Government competition to borrow locally, partly of the private demand for accommodation, which has continued active, and partly of the position of the currency. While bank figures are expanding with the growth of population and other circumstances, the total amount of currency in Australia has remained practically a fixed quantity after the reduction in the note issue effected during 1922, and the consequence is that the banks are working on smaller ratios than formerly. During the war period there was an arrangement by which additional notes could be obtained to enable the seasonal requirements of trade to be met, and if this were still in force the possibility would be sufficient for practical purposes without much actual use being made of it. As it is, the absence of some such arrangement has helped to produce more stiffness in lending policy than otherwise would have been necessary. Under pre-war circumstances the increase in the cash holdings of the banks took the form of an enlargement of their gold stocks in proportion to the growth of deposits from year to year, the ratio of cash to deposits being thus maintained in a manner not possible under the restrictive system now followed by the Note Issue Board of the Commonwealth Bank, gold being at the same time unobtainable by the ordinary banks owing to the premium. The idea of basing an increase in the note issue (to provide for seasonal fluctuations) upon assets in London has been rejected by the Board. During the past year an increase of about 1½ millions has been made in the gold reserve against the note issue, but this is practically without effect on the amount of currency, though it is a step towards ultimate return to gold. The total Australian note issue on December 31st amounted to £52,182,093½, of which £24,625,491 was in the hands of the public and £27,556,602½ was held by the banks (including the Commonwealth Bank issue department), while the gold reserve was £24,982,157.

The gold production of Australia and New Zealand for 1923 was approximately 835,431 ounces fine, value £3,548,681 (exclusive of premium), showing a decrease of £195,719 as compared with 1922. The 1923 total includes 708,261 ounces (or £3,008,499) in Australia, while New Zealand is reckoned at £540,182, or the same as for 1922, pending actual returns. The total value of £3,548,681 for 1923 compares with £10,836,072 for 1913, and £18,340,563 for 1903. Issues from the three branches of the Royal Mint at Sydney, Melbourne, and Perth during 1923 consisted of £3,051,024 in sovereigns and £167,615 in bullion, together £3,218,639, against £3,624,480 in 1922.

The accounts of the Commonwealth Government Line of steamers for the financial year ended June 30, 1923, shows that after providing £766,161 for depreciation, there was a loss of £1,789,651, against a loss of £1,171,569 for the previous year 1921-22. Setting these losses against the profits shown in earlier years, the net loss throughout is shown as £656,778, after providing for depreciation, partly at 10 per cent. and partly at 5 per cent. on various classes of steamers. These figures are arrived at after crediting earnings of requisitioned enemy vessels in the war period, amounting to a few millions sterling. On the other hand, the losses on working of the Commonwealth Government wooden vessels have not been debited. Provision has also to be made for loss on

realisation of those steamers which the Government has decided to sell, and on the writing down of capital value of those to be retained, these losses requiring between seven and eight millions sterling.

The reports in detail of the Government railway departments in Australia and New Zealand for the financial year 1922-23 show an improvement on the two previous years, gross revenue being larger than in 1921-22 by £1,390,019, and the final deficit smaller by £1,533,897, after providing for interest. The results for the last three financial years compare as follows:—

	1920-21.	1921-22.	1922-23.
	£	£	£
Gross revenue.....	42,743,932	44,743,803	46,139,822
Working expenses.....	35,791,544	36,254,832	35,224,020
Net revenue.....	6,952,388	8,488,971	10,915,802
Interest.....	11,878,757	12,925,936	13,818,870
Deficit.....	4,926,369	4,436,965	2,903,068

Interest is charged at varying rates, but the tendency has been upward of late years, owing to the high rates of interest paid both for new capital expenditure and conversion of old loans as they mature. In the above figures, the interest on the Commonwealth Trans-Continental railway is reckoned at 4 per cent., and on New Zealand railways at the same rate. Setting aside New Zealand, the railways in Australia earned 3.76 per cent. on capital during 1922-23, and the average rate of interest payable being 4.65 per cent., the deficit was equal to 0.89 per cent. In 1921-22 the net earnings were 3.25 per cent., and the deficit was 1.25 per cent.; and in 1920-21 the net earnings were 2.36 per cent., and the deficit 1.89 per cent.
