[April 12, 1924.]

WORLD AUXILIARY.—In the fire, accident, and general account for last year the premiums were £157,689 and the claims £94,090. The fire fund was increased from £67,803 to £72,058, which was carried forward as a reserve for unexpired risks. In the marine account the premiums were £149,671, and the total claims on 1923, 1922, and previous years £105,353. The marine fund increased from £191,392 to £199,734, after a transfer of £30,000 to profit and loss. Interest and commission yielded £25,029 and miscellaneous receipts £13,577. A sum of £10,000 was transferred to investment reserve, and £20,000 to the reserve fund (making it £40,000). The directors recommend a dividend of 5 per cent., tax free, for 1923.

TEA AND RUBBER.

GALAH Ceylon TEA ESTATES.—This company has had a good year. The 1923 report is just out, and shows a gross profit, after providing £1,500 for depreciation of machinery, of £77,693, as against £61,403 for 1922. The ordinary shareholders are to receive a 20 per cent. dividend, against 12½ per cent. for 1922. The sum of £5,000 is again put to reserve. The tea crop was 2,367,639 lbs, against 2,324,346 lbs in preceding year. The rubber crop was 138,638 lbs, against 180,595 lbs. The yield from cardamoms was 3,306 lbs, against 2,889 lbs. The net average price secured per lb for tea was 1s 4.88d, against 1s 2.08d for 1922; for rubber, 1s 1.36d per lb, against 9.78d; and for cardamoms, 3s 10.07d, against 1s 8.39d. The balance-sheet shows total assets of £564,096. Cash stands at £51,855. Stocks stand at £55,151. Debtors are at £29,979. Properties are at £420,809. With regard to liabilities the total share capital is £352,000. Of this sum, £292,000 is in ordinary shares and the remainder in 6 per cent. preference shares. The debenture debt is £96,300. The reserve fund is at £20,000. Creditors stand at £59,621.

KASINTOE RUBBER.—A better year has been experienced by this concern. The net profit for 1923 is £8,556, against £2,349 for 1922, and the ordinary shareholders are to receive 6 per cent., against nothing for 1922. The sum of £5,995 goes forward, against £4,549 brought in to the accounts. The cost of production, free on board at port of shipment (including depreciation of buildings and plant, staff bonus, and London administration), was 9.47d per lb, as compared with 8.92d per lb in 1922. The average net sale price, taking in at a valuation the portion of the crop unsold or not yet accounted for, was 1s 2.37d per lb, as compared with 10.09d per lb in 1922.

POONMUDI TEA AND RUBBER.—This company has increased its net profit from £8,002 for 1922 to £11,149 for 1923, also its dividend from 10 per cent. for 1922 to 12½ per cent. for 1923. The report points out that up to date a total amount of £22,765 debenture stock (10s paid) has been converted into 113,825 shares of the company, thus making the issued capital £64,689 10s, which ranks for the final dividend of 7½ per cent. The crops amounted to 609,224 lbs tea (against 660,861 lbs last year), which was produced at a cost of 7.90d f.o.b., and realised 1s 1.54d net per lb, and 57,896 lbs rubber (against 54,073 lbs last year), which was produced at a cost of 7.31d f.o.b., and realised 11.98d net per lb. The tea crop was adversely affected by the drought in the spring of the year and by the long spell of rain which followed, whilst attacks of mosquito blight were recurrent. The latest reports show that blight is quiescent, and prospects for crop are satisfactory.

UNITED SUMATRA.—The following table provides an interesting illustration of the results of this concern since the year 1912:—

	Crop.	Divs.		Crop.	Divs.
	Lbs.	%		Lbs.	%
1912	199,955	25	1918	868,723	16½
1913	354,348	33½	1919	1,110,063	39½
1914	473,417	20½	1920	1,077,610	nil
1915	648,155	33½	1921	860,211	nil
1916	841,128	41½	1922	715,397	8½
1917	997,105	29½	1923	835,086	10

The net profit for 1923 is £42,125, against £1,590 in 1922. The report states that "costs of production show a satisfactory reduction to 6.83d per lb, f.o.b., as compared with 9.89d per lb in the previous year, this improvement being due in part to the reorganisation of Serapoh and Tanah Abang Estates and the adoption of alternate day tapping thereon. The average price realised was equivalent to 1s 1.71d per lb net, as compared with 11.02d per lb for the previous year. For the year 1923 the crop of coconuts throughout the East was poor. The crop obtained on Serapoh Estate yielded 6,018 piculs of copra, 809 piculs less than in the previous year, but the cost of production shows a considerable decrease (£4 16s per ton) and a gross profit of approximately £1,500 was secured. The net price realised for the crop was £20 11s 10d per ton, London."

MISCELLANEOUS.

FAIRBAIRN, LAWSON, COMBE, BARBOUR.—This company has not done so well for the year 1923 as it did in 1922. Its net profits, after payment of debenture and note interest, have declined from £179,882 to £19,727, and its ordinary dividend has been reduced from 14 per cent. to 5 per cent. A balance of £185,204 is being carried forward, against £226,466 brought in to the accounts. The report points out that since the close of the year there has been a distinct improvement in the volume of orders. The total assets are £2,555,860. Cash stands at £117,643. Victory Bonds at cost are at £20,400, investments at cost stand at £165,400, debtors stand at £190,682.

GOLDSMITHS AND SILVERSMITHS.—This company has more than doubled its net profit during the year ended January 31, 1924. The net profit is £40,209, against £18,965, and the ordinary dividend

has been raised from 4 per cent. to 5 per cent. The sum of £20,783 is carried forward, subject to corporation profits tax. The total assets are £816,604, in four items—i.e., goodwill, lease, furniture, and fittings, £395,308; debtors, £99,091; stocks, £276,605; and cash, £45,600. With regard to liabilities, the share capital is £600,000. Creditors stand at £61,334. Reserve is at £115,000.

MAPPIN AND WEBB, LIMITED.—This company has experienced a rather difficult time during the year 1923. The report points out that it has been necessary to make a further provision to reduce the stocks to present-day values, and that profits have again been seriously affected by the continued fall in foreign exchanges. The profit and loss account shows that the gross profit amounted to £23,817, against £59,744 for 1922, and £125,265 for 1921. No dividend is being paid on the ordinary or the preference shares. For 1922 the ordinary shareholders received 2½ per cent., which was paid as an interim dividend. The 8 per cent. cumulative preference dividend has been paid to June 30, 1922. The sum of £19,850 has been transferred from the general reserve, leaving no general reserve in the balance-sheet. The sum of £14,271 has been written off plant, &c., while £33,475 has been utilised to provide for depreciation of stocks. The sum of £5,888 is carried forward. The directors report a considerable improvement in the financial position, together with a substantial reduction in the stocks. The company have acquired during the year the freehold of the new factory at Sheffield. The total assets amount to £1,785,939. Stocks now stand at £391,785, against £588,258 at the end of 1921.

Commercial Reports.**THE CORN TRADE.**

Mark Lane, Friday Evening.

Climatic conditions were less favourable to agricultural operations during the week, but with bright intervals farmers were able to push ahead on field work, and a considerable area is now laid down to spring cereals. General course of trade marked no improvement, buyers showing little disposition to operate owing to the uncertain course of prices. English wheat was in moderate supply, and suitable milling grades ruling up to 10s 6d per 112 lbs free on rail. Imported grades moved off slowly, and prices tend in buyers' favour in sympathy with lower c.i.f. offers. No. 1 Northern Manitoba quoted 47s 6d, No. 2 ditto 46s 6d, No. 3 ditto 45s 6d, Rosafé 63½ lbs 46s, and Australian 47s 6d, all ex ship per 496 lbs. A generally quiet demand prevailed for floating and forward cargoes, the demand being chiefly on Continental account, and prices for the most part ruled in buyers' favour. Rosafé 64 lbs afloat sold at 43s 9d, Barusso 63½ lbs. afloat 42s 6d, Baril ditto 42s 6d, and Australian afloat at 46s 10d to France. Flour moved off slowly at about late rates. London standard straight run quoted 37s, patents 39s to 40s, town households 35s per sack delivered. All-English country straights 34s 6d per sack free on rail at London stations. Imported steady. Manitoba patents range from 35s to 37s 6d as to quality, and Australian 35s to 36s per 280 lbs ex store. Maize cargoes dull of sale, and prices easier on liberal Plate offerings. Plate steamer, April 25th shipment, sold 37s 7½d, April 30th 37s 4½d per 480 lbs. Barley, English, firm, with a fair inquiry for malting descriptions at 11s 3d-12s 6d, with feeders at 10s-10s 9d per 112 lbs free on rail. Imported steady. Californian 48s-52s as to sample, Chilean brewing 44s-46s ex ship per 448 lbs. No. 3 Canadian Western 33s 6d ex ship, Karachi 31s ex ship, ditto landed 32s, Plate ex ship 31s 9d, all per 400 lbs. Maize quiet. Plate 41s 6d-42s 6d landed as to quality, red Karachi ex ship 41s, yellow Calcutta 42s landed per free on rail. Imported weak. Plate f.a.q. ex ship 20s 6d, ditto Canadian feed landed 23s 6d per 320 lbs. Millers' offals firm, with ordinary 7s 6d, middlings 8s-8s 3d, fine ditto 9s 6d, bags included, 9s 3d, ground oats 12s 3d per cwt, free on rail. Oatmeal steady. London-made flaked 16s 6d, rolled oats 16s, medium and fine cuts 16s, coarse and medium pinhead 16s, ordinary Scottish oatmeal 17s 6d, and American 16s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated April 10th, is as follows:—Pig-iron.—Makers of Cleveland pig-iron are so well sold for the near future that the seller's price is generally maintained at 95s per ton for No. 3 G.M.B. Stocks of East Coast hematite pig-iron still weigh rather heavily on the market, and the price of mixed numbers is 99s per ton, at which they are sellers. Manufactured iron and steel.—The postponement of the shipyard lockout tends to make things more cheerful. Business, however, is still quiet. Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore.—Until we get more hematite furnaces going the foreign ore trade must continue dull. Best Bilbao Rubio is nominally 24s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—While no general improvement in the market for raw and partly manufactured iron and steel can be reported, the continued absence of foreign competition has improved the outlook of the trade very considerably. Continental prices have now been advanced to a point which practically

shuts it out of the British market, and no business of any consequence has been placed for a long time, so that when existing contracts are completed users of billets and similar material will have no inducement to buy abroad. Home producers appear confident of a large buying movement in the course of a few weeks. Prospects of higher prices and the unsettled labour outlook continue to influence the general trade situation adversely, and the tightness of money constitutes a serious handicap to manufacturers. There is great activity in the building of railway rolling stock, and the manufacture of axles, tyres, and springs. Export trade is looking up in some branches, but is stagnant in others, and the European markets are buying nothing of any consequence from the makers of special steels. The motor industry continues to be a good customer for Sheffield steel, and the same may be said of the electrical industry. Iron foundry, while tending to improve in certain directions, is quiet as a whole. Crown bar iron has been advanced this week from £12 10s to £13 per ton. This material is in request for wagon building, but not much is being sold for other purposes. The plate and cutlery branches are quiet, and business generally unremunerative. The season for farm and garden tools started well, but is not expanding so much as was hoped for. In the coal market little free fuel is on offer, and the situation as regards delivery is still adversely affected by bad railway working. Home consumers of steam coal are pressing for deliveries, and the position is generally one of scarcity. Cokes are in moderate demand, with ample supplies. Prices per ton at pits are:—Best hand-picked branch, 36s to 38s; Barnsley best Silkstone, 34s to 35s; Yorkshire hard, 27s to 29s; Tyne steams, 27s 6d; rough slacks, 12s 6d to 15s; smalls, 8s to 10s.

Our Glasgow correspondent writes as follows:—Business in pig-iron is very brisk, and at advanced prices for all grades there is steady buying. Exports have been up to the average, and the demand for overseas trade is still in evidence. Makers of iron and steel generally are now experiencing some difficulty in keeping their plants employed on account of the scarcity of new orders of any consequence. Specifications for structural steel and for shipbuilding material against existing contracts have come

forward and helped the situation so far as the immediate needs of the mills are concerned, but the demand for forward delivery necessary to create confidence in the market is wanting. This is not to be wondered at in view of the shipbuilding crisis. If the lockout announced to take place this week is not averted, this industry, which was just showing signs of steady revival, will in all likelihood receive a set-back from which recovery will be a long and slow process. It is encouraging, however, to find that the following new contracts have been placed on the Clyde, viz., a twin-screw vessel with Scotts' Shipbuilding and Engineering Company, Limited, Greenock, and a large oil tank vessel to be built by Messrs. John Brown and Co., Limited, Clydebank, both of which are to be propelled by internal combustion engines. Export business is spasmodic, and the demand, although fairly steady from some quarters, is not what it might be at this season. Some merchants have been obliged to re-order steel bars and sheets from British works on account of the impossibility of getting their deliveries from Belgium and Germany, and are losing considerably thereby. For the general home and export trade the demand for black steel sheets continues good. Galvanised corrugated sheets are, however, being keenly competed for, and prices for good export lines have been cut 20s per ton below the quotations of a month ago. The tonnage of galvanised sheets exported last month was the largest for any one month for some considerable time.

Our Cardiff correspondent writes:—The South Wales coal market this week has been marking time. Buyers and sellers have been waiting on the course of events in connection with the miners' ballot. On Saturday last the principal leaders of the workmen advised acceptance of the employers' offer, but other leaders urged rejection, and the figures announced on Thursday gave a considerable majority against the acceptance of the proposed terms of settlement. The market realised that the ballot did not in itself involve the issue of a national strike; any case, that must be subject to a second ballot. But in view of the uncertainty of the position little forward business was done, and attention was directed chiefly to the shipment of contract coal before the Easter holidays. Best Admiralty large coals maintained a firm tone throughout the week, but the second and inferior qualities subsided slightly under the pressure of an increasing supply of free coal, and a still greater easiness is anticipated after the holidays unless the unexpected happens. The situation in the Ruhr is a disturbing factor. A renewal of conflict in that district would doubtless be followed by an increased demand for British coals; but while operators are acting cautiously, in view of possible contingencies, they incline to the view that neither France nor Germany desire to see another suspension of work in Westphalia, and that, therefore, some arrangement will be made that will avoid that calamity.

The following are the current approximate quotations:—Best Admiralties, 31s to 32s 6d; second Admiralties, 30s to 31s; best drys, 29s 6d to 30s; black veins, 31s to 32s; Western Valleys, 30s to 31s; Eastern Valleys, 27s 6d to 30s; best bunker smalls, 22s to 23s 6d; ordinary cargo smalls, 18s to 20s; coking smalls, 22s to 23s; anthracite big vein large, 41s 6d to 45s; machine-made cobbles, 50s to 52s 6d; French nuts, 50s to 52s 6d; stove nuts, 47s 6d to 52s 6d; rubbly culm, 15s 6d to 16s; inland blast furnace coke, at ovens, 30s to 35s; coke for export, 60s to 62s 6d; patent fuel, 29s to 32s; pit wood, ex ship, 25s to 26s.

In the steel and tin-plate trade prices are unchanged, but inquiries are less active, and the volume of exports declining.

METALS.

Tin lower at commencement, due to heavy selling pressure, though offers were fairly well absorbed. Values, however, marked some improvement by the middle of the week. Standard cash sold at £266 15s to £253 to £254 15s, and three months at £263 to £265 15s to £250, while finally registered at £254 15s. Eastern cables reported sales on the basis of £261, c.i.f. A moderate demand prevailed on Thursday, and values firmer, though closing below the best. Standard cash sold at £256 17s 6d to £257 15s to £256 10s, and three months £255 10s to £255 to £257 to £255 5s, while finally at £255 10s. Values suffered a sharp relapse at final market, standard cash being dealt in at £242 to £241, and three months £250 to £251 to £239 10s. English ingots quoted at £242 10s to £244. Copper ruled easier on liberal offerings and lower American advices. A good turnover resulted chiefly with regard to forward positions. Cash sold at £64 12s 6d to £63 18s 6d to £64, and three months £65 15s to £64 12s 6d to £64 15s. At Thursday's session dealings were on an active scale and tendency of prices in sellers' favour. Standard cash quoted at £64 7s 6d to £64 10s, and three months sold at £65 2s 6d to £65 10s. Copper was in good demand, and prices easier at close. Cash sold at £64 and three months £65 to £64 17s 6d. Electro's £69 10s to £70, best selected £68 5s to £69 10s, strong sheets £98, wire bars £70. Lead easier, and quoted at £32 10s to £31, as to position. Spelter lower at £32 to £31 17s 6d, according to position. Aluminium firm. Home, £120; export, £125. Antimony, English special brands, £57 to £57 10s.

THE COTTON TRADE.

MANCHESTER, April 10.

The feature of interest in the market this week has been the further rise in raw cotton rates. Sellers of yarn and cloth have been compelled to put up their quotations, but some buyers have not been prepared to follow the advance. A persistent inquiry continues to be met with in piece goods, especially for India. Light fabrics and fancy materials continue to attract more attention than standard grey makes. Stocks in China are very low, but shippers remain cautious. Advances from Egypt tend to improve, and rather more demand has been about for South America. Home trade buyers have displayed rather more interest in prices. Manufacturers as a body remain more favourably situated, but it is a struggle to obtain higher rates. American yarn quotations have been firmly held at the advanced figures, but a rather restricted trade has been done. Certain counts and qualities are scarcer than ever. Steady buying has continued to take place in Egyptian spinnings.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market generally presents a rather quieter appearance, but values are steady, and, in the case of crossbred tops and yarns, against the buyer. Demand for merinos is still disappointing, and with the gradual accumulation of stocks of fine count yarns prices are more irregular. In some cases very low figures are being accepted, and it is becoming increasingly difficult for spinners to keep all their machinery running. Most top-makers, however, have full confidence in the raw material position, and are looking to the time when users will be more prepared to pay prices in keeping with replacement values. The active demand for crossbred yarns is keeping top-makers busy, and medium and low qualities continue to attract most attention. While there is hardly any quotable change on the week, all crossbreds are firm at recent rates. Some good orders have been booked in the hosiery trade. Business in piece-goods shows signs of improvement, more especially in the home trade. Deliveries of spring goods are being taken up with greater freedom, and wholesale fabric buyers are keeping in touch with makers' quotations. The demand, however, still leans strongly to crossbreds, and in the finer worsteds it is impossible to make prices based on current costs of productions. The woollen section is relatively better employed than the worsted, and the same tendency is pronounced in the American trade. All home-grown wools, both fleece and skin, are getting into small compass, all round. The recent spurt of activity in noils has apparently collapsed, and the extreme prices paid a fortnight ago are no longer obtainable. For definite business concessions can now be obtained for both merino and crossbred noils.

THE STORY OF COAL

1914-1923:

The Real Comparison

Output per Person
Employed and Wage
per Ton

More miners are producing less coal. Each ton of coal costs more to get. Every addition to wages increases that cost. National Prosperity depends upon Cheap and Abundant Coal.

If you are interested in "The Story of Coal," cut this advertisement out and file it. It is issued on behalf of the Colliery Owners of Great Britain by PHILIP GEE, 40, King Street, Covent Garden, W.C.2, from whom further information about the Coal Mining Industry can be obtained.

UNION CORPORATION LIMITED.

(Incorporated in the Transvaal.)

ABRIDGED REPORT OF THE DIRECTORS.

In submitting to the Shareholders the Accounts of the Corporation for the year ended December 31st, 1923, the Directors state:-

The realised net profit for the year, after deducting all outgoings, including commissions and bonuses paid to the management and staff, is £301,299 3s 5d, to which £79,996 8s 10d brought forward from 1922 has to be added, making a total of £381,295 12s 3d. An interim dividend of one shilling per share, equal to £70,000, was paid on November 30th last. The Reserve Account has been increased by £22,375 16s. representing the premium on the re-issue of some of the ex-enemy shares in the Corporation acquired from the Custodian of Enemy Property as the result of war legislation, and the Directors have decided to set aside out of profits an additional sum of £20,000, making the

amount standing to the credit of the Reserve Account £222,375 16s. They have also declared a final dividend of three shillings per share, involving an amount of £210,000, and making a total distribution of four shillings per share, or 32 per cent. for the year. The balance of £81,295 12s 3d is carried forward to new account.

The working profit of the Modderfontein Deep Levels, Limited, which was 4d per ton higher than in the previous year, combined with an increase of 80,300 tons sent to the mill, enabled the company to increase its profit earnings by about 20 per cent. to a total of £812,369, with the result that the dividends declared during the year amounted to 140 per cent., as compared with 120 per cent. in 1922. The following table summarises operations for the last five years:-

	Tons milled.	Gold output and per ton.	Working costs and per ton.	Working profit and per ton.	Dividends.
1919	507,200	£1,224,384 (48/3)	£466,841 (18/5)	£757,543 (29/10)	£575,000 (115%)
1920	507,700	1,466,595 (57/9)	575,287 (22/8)	891,308 (35/1)	725,000 (145%)
1921	509,300	1,477,610 (58/0)	560,786 (22/0)	916,824 (36/0)	750,000 (150%)
1922*	444,700	1,102,456 (49/7)	423,345 (19/0)	679,111 (30/7)	600,000 (120%)
1923	525,000	1,268,414 (48/4)	456,045 (17/5)	812,369 (30/11)	700,000 (140%)

*Results affected by strike of white miners.

The feature of the year at the Geduld Proprietary Mines, Limited, was the extension of the mill which was put in commission on April 24th, thus increasing its capacity to about 800,000 tons per annum, the rate at which ore was treated during the last half of the year. Since the close of the year it has been decided to increase the reduction plant still further so as to enable it to treat 900,000 tons per annum, but it is not

expected that this extension will be available until late in 1924. With this addition, the milling capacity will have been doubled since 1917. The working profit was £469,319, or £168,377 higher than for the previous year, and the company was thus able to raise its dividend to 27½ per cent. The results of operations during the last five years may be summarised as follows:-

	Tons milled.	Gold output and per ton.	Working costs and per ton.	Working profit and per ton.	Dividends.
1919	516,000	£285,406 (33/1)	£531,327 (20/7)	£322,079 (12/6)	£187,397 (16%)
1920	526,700	1,023,354 (38/10)	635,280 (24/1)	388,074 (14/9)	205,296 (17½%)
1921	537,800	1,004,023 (37/4)	634,457 (23/7)	369,566 (13/9)	220,916 (17½%)
1922*	460,700	771,626 (33/6)	470,684 (20/5)	300,942 (13/1)	£15,808 (16½%)
1923	722,500	1,167,564 (32/4)	698,245 (19/4)	469,319 (13/0)	366,214 (27½%)

*Results affected by strike of white miners.

The mill of the San Francisco Mines of Mexico, Limited, has been increased to meet current and future requirements, and is now capable of dealing with 180,000 tons of ore per annum. Other equipment has been or is to be overhauled and enlarged. Development and shaft sinking is receiving due attention, while two adjoining properties have been acquired with the knowledge that one at least contains the extension of the San Francisco main vein to which operations are at present directed.

The main effect of the rebellion in Mexico has been to cause a shortage of labour which has reduced the scale of operations. The operating profit for the five months to February 29th has been £563,635, comparing with £840,253 for the whole of the year to September 30th. As a result of the exercising of options, the Corporation's share holding in this company has been materially increased.

Holders of Share Warrants to Bearer can obtain copies of the full report and accounts on application at the London Office, Pinners Hall, Austin Friars, E.C.2.

THE ROBERT SIMPSON COMPANY, LIMITED.

PREFERENCE SHARE DIVIDEND NOTICE.

Notice is hereby given that a DIVIDEND has been declared upon that portion of the Capital Stock of the Company consisting of Preference shares, being a half-yearly Dividend at the rate of 6 per cent. per annum upon the said Preference Shares, and that the same will be PAYABLE at the Midland Bank Limited, 5 Princes street, London, E.C.2, England, or, at the option of the Holder, at the office of the Union Trust Company, Limited, Toronto, Canada, on and after the 1st day of May, 1924, to Shareholders who appear on the register on the 16th day of April, 1924.

The Transfer Books will be closed from April 16th to April 30th, both days inclusive.

FRANK HAY, Secretary.
Toronto, 21st March, 1924.

RANDFONTEIN ESTATES GOLD MINING COMPANY, WITWATERSRAND, LTD.

(Incorporated in the Transvaal.)

Notice is hereby given that the Directors have declared a Dividend of ten per cent. (2s per share), payable to all shareholders registered at the 30th April, 1924. The TRANSFER BOOKS of the Company will be CLOSED from the 1st May to the 10th May, 1924, both days inclusive. The approximate date for payment of the Dividend will be announced later. By Order of the Board,

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LTD.,
London Agents.

Dividends Nos. 12 and 13 of 30% each 840,000 0 0

Leaving a Balance unappropriated of £171,337 13 2

The Ore Reserves at the end of the year were estimated at 10,640,000 tons of an average value of 8.9 dwts. over a stopping width of 74 inches; they exclude ore of a value of under 4 dwts. over the stopping width.

The full Reports and Accounts may be obtained from the London Agents, The Johannesburg Consolidated Investment Company, Limited, 10/11, Austin Friars, London, E.C.2.

VAN RYN DEEP, LIMITED.

(Incorporated in the Transvaal.)

Issued Capital, £1,196,892 in 1,196,892 Shares of £1 each.

DIRECTORATE.

J. MUNRO (Chairman). S. B. JOEL, J.P. J. G. LAWN, C.B.E. SIR WM. DALRYMPLE, K.B.E.
J. H. CROSBY. SIR ABE BAILEY, BART., M.L.A., and G. J. JOEL, M.C.

Extracted from the Annual Report to 31st December, 1923.

	Tons Crushed, 735,400.	Per ton, based on Tonnage Crushed.
Total Working Revenue (including Estimated Premium on Gold)	£1,477,464 2 11	£2 0 2
Total Working Costs	730,249 4 3	0 19 10

Working Profit £747,214 18 8 £1 0 4
Rents, Interest, Sundry Revenue, &c. 11,519 9 11
Balance unappropriated at 31st December, 1922 217,158 0 10

This amount has been dealt with as follows:-
Income Tax, Dividend Tax, Employers' Tax, Miners' Phthisis Sanatoria, and Donations £106,966 12 1
Funds appropriated for Capital Expenditure ... 170,256 10 5
Dividends Nos. 20 and 21 of 25% and 27½% respectively 628,368 6 0

Leaving a Balance unappropriated of £70,301 0 11

The Ore Reserves were recalculated at the end of the year, and were estimated at 3,508,300 tons, of an average value of 8.0 dwts. over a stopping width of 80 inches

The full Reports and Accounts may be obtained from the London Agents, The Johannesburg Consolidated Investment Company, Limited, 10/11, Austin Friars, London, E.C.2.

NEW STATE AREAS, LIMITED.

(Incorporated in the Transvaal.)

Issued Capital £1,500,000 in 1,500,000 Shares of £1 each. Six per Cent. Debentures £500,000.

DIRECTORATE.

S. B. JOEL, J.P. (Chairman). J. G. LAWN, C.B.E. J. MUNRO (Deputy-Chairman).
J. H. CROSBY. Sir F. D. P. CHAPLIN, G.B.E., K.C.M.G. G. J. JOEL, M.C.

Extracted from the Annual Report to 31st December, 1923.

Tons Crushed, 282,000.		Per ton, based on
Total Working Revenue (including Estimated		tonnage crushed.
Premium on Gold...	£366,850 11 11	£1 6 0
Total Working Costs...	462,778 3 9	1 12 0
Loss for eight months...	£95,927 11 10	£0 6 10
Debiture Interest and Expenses of Issue, Stamp		
Duty, &c. ...	31,155 19 0	
Interest on Loans ...	6,558 18 11	
Employers' Tax, Miners' Phthisis Sanatoria,		
Donations, &c. ...	3,539 6 11	
	£137,181 16 8	
Less Rents and Sundry Revenue...	2,266 19 6	
Loss Carried Forward ...	£134,914 17 2	

The **One Reserves** were recalculated at the end of the year and resulted in an estimate of **2,585,700** tons of an average value of **8.3** dwts. over a stoping width of 64 inches. The ore reserves exclude ore valued at under 4 dwts. over the stoping width.

The erection of the Reduction Plant approached completion in May, 1923, and crushing commenced in that month.

The usual difficulties in starting up a new plant were somewhat accentuated, owing largely to the plant being of new design and strange to the builders and operators. These difficulties have been overcome, and the plant is now running satisfactorily.

At the end of the year the mine was making satisfactory progress, and the Company has now entered upon what promises to be a long and successful career.

The full Reports and Accounts may be obtained from the London Agents, The Johannesburg Consolidated Investment Company, Ltd., 10/11, Austin Friars, London, E.C.2.

LANGLAAGTE ESTATE AND GOLD MINING COMPANY, LIMITED.

(Incorporated in the Transvaal.)

THE MONEY MARKET.

MONEY was more plentiful in the early part of the week, though there did not appear to be any considerable margin of abundance. Discount rates showed an easy tendency, with commercial bills somewhat scarce.

	Apr. 16, 1924.	Apr. 11, 1924.	April 4, 1924.	Mar. 28, 1924.	Previous Rate and Date Changed.

THE STOCK MARKETS.

The Stock Exchange has been influenced by the approach of the Easter holidays, and business has been slack. Gilt-edged stocks have drooped a little, but neither the Reparations developments nor the visit of the Russian delegation had much effect on the foreign market. French bonds are good on the improvement in the franc, but Russians and Germans are unchanged. Home Rails have been steady. Oil shares have been fairly strong under the leadership of Lobitos. Gas stocks have experienced some investment demand, and Bank shares have improved, but elsewhere in the Miscellaneous section there have been no features. Kafirs are out of favour at the moment, owing to the political situation in South Africa.

THE COMMODITY MARKETS.

In most cases the commodity markets have settled down to a period of quietness until the holidays have passed. The renewal of contracts for delivery of "Reparation coal" has deprived the Cardiff market of support, and prices are easier. Good business has been done in No. 3 Cleveland pig-iron, but the demand for East Coast hematite is not all that could be desired. The steel trade is still disturbed by Labour disputes. Our timber trade correspondent points out that the building woods market, "left to function without official interference," has been in favour of consumers. Developments in the cotton trade have been somewhat checked by the wide fluctuations in raw cotton rates; it is stated that many merchants appear to be afraid of depreciation in values. Our Bradford correspondent reports that business is quiet in the wool trade, in view of the holiday break.

FOREIGN EXCHANGES.

On the foreign exchange market the short period under review has again been one of relatively quiet business, with the further recovery of francs and of sterling as the outstanding features. From 73.50 on Friday last the Paris rate has shown a further steady recovery to 69.85 yesterday morning, and in Paris at least the quotation is talked still lower. To a large extent this improvement is a sentimental reaction to the rapid acceptance in principle of the proposals of the experts. It will be interesting to see the effect of M. Poincaré's latest pronouncement on this question, although the funds at the disposal of the Government may prevent the reaction which would naturally be expected. The recovery of Brussels, from 87 to 81½, has been even more marked. Forward quotations in Paris have narrowed sharply to 20 centimes per month above spot, from 45 centimes in the preceding week, while Brussels has moved from 10 to 5 centimes above. The dollar from \$4.33½ on Friday last has been as high as \$4.35½ at one time on Tuesday, and yesterday morning was firm at \$4.34½, also mainly on an optimistic appreciation of the Reparation question. Forward rates are ⅞ narrower at ⅞ cent per month above spot. Italy has remained very steady, as usual, moving only from 98.49½ on Friday to 97½ yesterday morning. On Tuesday the Amsterdam rate showed a remarkable jump upwards to 11.73½, and at 11.72 yesterday is still well above Friday's quotation of 11.63½. In part the movement is due to the change in the dollar rate, but it is probable that special operations are also involved. Berlin, in expectation of a settlement, shows an appreciation from 19½ to 18½ billions, and Austria, in sympathy with the dollar, has depreciated from 306,000 to 310,000 krone. Switzerland, at 24.69½, has appreciated slightly, and Spain has also moved down from 32.33 to 32.09½, after being rather better. In Scandinavia, Christiania and Copenhagen show little movement, while Stockholm, following the dollar, has gone slightly in our favour. In Central Europe, Warsaw remains fixed at 40 millions, and it is now announced, after the successful flotation of the new central bank and the remarkable financial recovery during the current year, that a conversion into the permanent zloty currency is shortly to take place at a rate of 1 zloty to 1,800,000 marks. Prague shows a slight depreciation, Belgrade no change, while Bucharest, at 830, is a

little higher than on Friday last. In the East the rupee, at 1s 4½d, is fractionally dearer than the 1s 4 9/16d quoted on Friday. The yen, on the other hand, has depreciated sharply from 1s 11½d to 1s 10½d, for reasons not yet explained. Silver has been quiet again, but a little firmer on some demand from China and the Continent. Hong Kong remains the same at 2s 4½d, Shanghai has moved from 3s 2½d to 3s 2¼d. In South America, Rio, at 6½d, compares with 6¼d on Friday, while Buenos Aires has recovered slightly from 41½d to 41¾d. Monte Video is unchanged at 42½. Valparaiso has again appreciated slightly from 41.10 pesos to 40.40 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 12th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	7,350	From Revenue	18,550
Interest, &c., on Debt	1,519		
Sinking Fund	250		
Sundries	260		
Reduction in Debt	9,000		
Increase in balances	151		
	18,550		18,550

Revenue was £2,698,900 higher than in the corresponding week last year at £18,550,400. Receipts from Property and Income-tax contributed largely to the increase, amounting, as they did, to £8,655,000 as compared with £6,306,000 in the corresponding period. Super-tax receipts also increased from £1,690,000 to £2,030,000. Special Receipts, however, declined by £500,000. Estate, &c., duties yielded £940,000, against £780,000. Customs yielded £2,018,000, against £1,830,000, and Excise £944,000, against £688,000. The week's operations reduced the National Debt by £9,020,600, and caused the following changes:—

(000's omitted.)		(000's omitted.)	
Unemployment Insurance	+ 350	Public Dept. Advances	— 365
4% Treasury Bonds	+ 473	Treasury Bills	— 3,84
		Saving Certificates	— 100
		Telegraph Money	— 250
	+ 823		— 9,844

The floating debt was reduced by £9,460,000 to £764,235,500.

FINANCIAL YEAR, 1924-1925 (April 1 to April 12).

THE WEEK IN PARLIAMENT.

MONDAY, APRIL 14TH.—*Commons*: Supplementary Vote of £70,000 for M.P.'s' free railway passes debated and passed. School Teachers (Superannuation) Bill read a second time. Trade Facilities Bill considered in Committee. Conveyancing (Scotland) Amendment Bill read a second time.

TUESDAY, APRIL 15TH.—*Lords*: Unemployment Insurance (No. 3) Bill passed. Royal Assent given to that Bill, and also to the Army and Air Force (Annual) Act, and the Treaty of Peace (Turkey) Act. House adjourns for Easter.

Commons: Premier announces Cabinet approval of Experts' Reports. Committee stage of Trade Facilities Bill. Debate on India.

WEDNESDAY, APRIL 16TH.—Trade Facilities Bill third reading. Adjournment for Easter.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Eagle, Star, and British Dominions Insurance, Pekin Syndicate, Joseph Travers and Sons, World Auxiliary Insurance, Jugra Land and Carey, Rolls-Royce, John Barker, Birmingham District Power and Traction, British Electric Transformer, Godfrey Phillips, and Fair-

bairn, Lawson, Combe, Barbour. Sir E. M. Mountain, Bart., at the meeting of the Eagle, Star, and British Dominions Insurance Company, stated that with the conservative policy which the directors intended to pursue, the shareholders might look forward to the future with confidence. The chairman at the meeting of Jugra Land and Carey commented on the results of the rubber restriction scheme. Col. B. J. H. Fitzgerald, C.B., at the meeting of the Pekin Syndicate, dealt with criticisms of the board's policy in the French and Belgian Press. Lord Wargrave, at the meeting of Rolls-Royce, announced big aero engine contracts.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

ECONOMIST BUDGET SUPPLEMENT.

We publish this week a special Supplement, summarising the facts and figures connected with the forthcoming Budget. The statement covers the completed accounts of the past year, the Revenue situation, Expenditure, the National Debt, and some International comparisons.

LABOUR'S FIRST TERM.

To no one will the Easter holiday be more welcome than to the Government, whose first term of responsibility in the Parliamentary school has been at least as full of embarrassments as its enemies could reasonably have hoped. Of these embarrassments some have been sheer misfortune, but others, and among them the most serious, have been courted, if not created, by the Government itself. Among the fortuitous difficulties the strike epidemic has been the most formidable. A railway strike, a docks strike, a London traffic strike, a shipyard lock-out, and threats of trouble in other leading industries, including the coal mines (where, fortunately, the outlook is now much brighter)—that makes an almost unique list of industrial difficulties for any Government to handle within the first three months of its tenure of office. On the whole, it has faced them with courage and promptitude, and has succeeded in conveying the impression that, like Governments of other party colours, it was determined in all these crises to place the national interest first. Nevertheless, this unfortunate succession of industrial stoppages has damaged the Government's credit, for there is a tendency among the general public to attribute it, at least in some measure, to the mere fact of a Labour Government being in power. In the main, we believe that assumption to be unfair to Mr MacDonald and his colleagues. They found the railway strike actually in being when they took over the reins from Mr Baldwin. The docks, shipyards, and London traffic troubles had been looming on the horizon for some time, and would in all human probability come to a head whatever the Government in power. On the other hand, it is highly probable that the establishment in office for the first time of a Cabinet in which leaders of the Trade Union movement are so well represented has had some psychological effect upon the workers, and inclined them to the belief that the moment was very favourable for pressing their claims. To what extent this psychological influence has been, and is, at work, it is impossible to say.

If Mr MacDonald is to make the most profitable use of the Easter recess, it is on the Parliamentary mistakes, for which his Government and no one else is responsible, that he will devote the reflection of his leisure moments. When the new Parliament opened, we pointed out, and, indeed, it was obvious, that if the new system of three strong parties and a minority Government was to be successfully worked, Government tactics in the House of Commons would have to be based far more than in the past upon consultations with the leaders of other parties. The possession of so many platform planks in common with the Liberals made it in particular essential that con-

sultation with the Liberal leaders and whips should be frequent and frank. As it happened, Mr Clynes, who has proved himself an inadequate substitute for Mr MacDonald in the leadership of the House, has allowed an exaggerated *amour propre* to prevail against practical common sense in this vital matter. The result was seen first in the Poplar muddle, next in a perfectly unnecessary defeat on a motion to suspend the eleven o'clock rule on the Army estimates, and finally in the defeat on the Rent Restriction Bill. This defeat was the most serious blow to prestige which the Government has sustained, and how easily avoidable it was became immediately clear when, in place of the rejected measure, the Government promptly adopted the Bill of a private Liberal member. On several other occasions, such, for instance, as the debate on the five cruisers, disaster was only averted by the reluctance of a large body of Liberals to go to the length of inflicting actual defeat on a question where the broader issues were wrapped in unnecessary obscurity. Almost the final event before the adjournment has been a Liberal party meeting, at which the strongest resentment was expressed against the Government's contemptuous neglect of reasonable consultation. We believe that neither Conservatives nor Liberals wish to eject the Government at this juncture, but Mr MacDonald, unless there is a change of methods, may find that the exasperation of the Liberals has signed his death warrant. Having criticised the Labour tactics, it is only fair to recognise that there also appear to have been serious shortcomings in the management of affairs by the Liberal whips. But that fact is not a full excuse for the mistakes in Labour's conduct of business.

On the eve of the Easter recess the adopted Liberal "Evictions" Bill has passed the Committee stage. But even now it is by no means clear that a wise thing has been done. In its amended form it becomes similar in effect to the more or less uncontroversial Clause 2 of the original Labour Bill. But the amendment introduced makes it impossible for a landlord to obtain possession unless he can show that inability to obtain possession causes to him a greater hardship than that which the tenant would suffer through eviction. Surely the Attorney-General should realise that the legal interpretation of differences of hardship is a hopeless task for the county courts. The original intention of the Liberal Bill was to provide that purchase of a house after the passage of the Bill should not carry with it the right of possession. Purchasers of houses would then at least have known where they stood, and the plan was preferable to the one now adopted. We shall hear more of this clause after the recess, although it is probable that a Bill in something like the latest form will eventually go through. But in spite of many debates and ministerial speeches, and the lubrications of the Chancellor of the Exchequer in a New York paper, the Government's general principles on the questions of housing and rents still remain more or less of a mystery.

On a general view, the Government, largely from the causes mentioned, emerges from its first Parliamentary spell with its prestige distinctly impaired. From the original public uneasiness which followed the General Election the country, after the announcement of the names of the Cabinet, swung over to a very pronounced expression of confidence. The reasons enumerated above have caused that confidence gradually to ebb. Prophets are consequently disposed to shorten their estimates of the Government's probable life. Whether the prophets are to be confounded or not depends very largely on three things:—Firstly, the Premier's handling of the Reparations problem and of the Russian negotiations; secondly, the Budget proposals; and thirdly, the future tactics in the House of Commons itself. As regards the Budget problem, the large surplus for the past year makes the way much easier than was expected, and this is perhaps the only real slice of good luck that has come the way of the Government. In gauging the future, as in looking back, one of the most serious Parliamentary features from the Government's point of view is that, with, perhaps, the sole exception of Mr Wheatley, no new reputation has been made, and few, if any, old reputations enhanced. But, fortunately for the Government, the two older parties have equally failed to strengthen their Parliamentary position, or to turn the weakness of the Government to account.

DEBT.

PROF. ALLYN YOUNG, of Harvard, has written a thoughtful article in the current number of *Foreign Affairs* on the subject of War Debts, in which he examines the question, What are the essential differences, if any, between the external and internal debts of a country? With his final conclusion that in the long run the United States cannot stand apart and regard its claims upon Europe "as a separate and inviolable and sacrosanct item," and that "in this, as in other ways, the reparations problem is in part our problem," we are in hearty agreement. But in the course of his arguments, which contain a number of striking generalisations, we find ourselves at times in disagreement with his deductions, and with his presentation of recent history, as, for example, where he says that "the turning-point in Germany's financial fortunes came in the first half of 1922, following upon the adverse decision with respect to Northern Silesia late in the autumn of 1921." For our part, we should have put as the immediate cause of the turning the attempt to provide for the payment of the milliard gold marks of reparations which became due on September 1, 1921. Professor Young emphasises the points in common between external and internal debt, but he appears to omit one or two of the vital differences. If we asked an official of Somerset House to define the difference between the two, he would at once put his finger on the point that when interest is paid on internal debt it can be taxed, whereas when it is paid to a foreign government, and, indeed, often when it is paid to foreign private individuals, it cannot be taxed. This point, moreover, is of more significance than a mere Treasury matter, for it leads to the really important distinction that the interest paid on internal debt is spent within the country, whereas on external debt it is spent outside. Putting the matter another way, it means that interest on external debt requires a certain amount of the nation's produce to be exported without any return; on an internal debt it means that some of the national product is taken in taxation from those who produce it, but it is transferred to others who consume it in the country. There may be a disposition to argue that after all it does not much matter to the worker bees of industry whether they have to provide honey for the bee-keeper to take away or to feed the drones in the hive. But from the point of view of national economy this is a very false conception. In the first place, in so far as interest on an internal debt is paid to the well-to-do, it is fairly certain that this transfer of a part of the national income leads to larger annual savings than would otherwise be the case. But even in so far as it is consumed it enables a standard of consumption to be maintained in a country, whereas if it were paid abroad it would tend definitely to reduce that standard. Nor do we accept the common assumption that it changes consumption within the country in favour of the well-to-do. So far as Britain is concerned, the tax system of the country constitutes a graduated one, falling particularly heavily on the well-to-do, but the disbursement of interest has the widest ramifications, and cannot even be said off-hand to be paid mainly to the well-to-do. Indeed, most of it now forms an integral part of the money machinery—a chief means of investing the savings of the country. We have no precise data as to who holds the war debt, but we can pick out a number of very substantial items. According to the most recent table, the total of the war debt, after deducting £115 millions of assets, is about £7,650 millions nominal. But for purposes of analysis we will take it at £7,700 millions, which takes no account of assets, but excludes what the Treasury call "other capital liabilities," i.e., "items in

respect of which there is a liability, but in many cases a specific asset on the other side. The following is an estimate of the holdings of the largest creditors:—

	Mln. £
The Government of the United States	958
Colonial Debt	22
Debt to other Allied Governments (which is more than offset by the debts due to us)	128
	1,108
British Joint Stock Banks and Foreign Banks with offices in London (including an estimate of £100 millions of Treasury Bills)	750
Bank of England	70
Post Office Savings Bank (£285 millions less £125 millions in guaranteed or other securities not forming part of the deadweight debt), and Trustee Savings Bank (£80 millions, less £30 millions)	315
Government Securities purchased for depositors through the Savings Banks (£210 millions), and Trustee Savings Banks (£30 millions)	240
Treasury Note Reserve	240
Ways and Means Advances Public Departments £160 millions, less amount included under Treasury Note Reserve, say	70
Insurance companies, approximately (of which the Prudential holds £70 millions)	350
Railways	80
	3,323

These items total £3,223 millions, but as a number of the items are entered at market value or less, we must add, say, £275 millions to bring the statistics to a basis of nominal value—making approximately £3,500 millions in all. But in these items we have not taken full account of Treasury Bills, practically none of which are privately held. The amount included in the statistics from which the above are calculated will not exceed £300 millions. The balance of £300 millions is held by various concerns, bill brokers, and others needing liquid resources, largely as part of the floating money system of the country. These bring the above total to £3,800 millions nominal.

The second large section on which we have indirect information is the holding of private persons. The inland revenue records that in 1921-22 wealth passing at death included £63½ millions in the form of Government securities. The ratio of estates passing at death in a single year to estates in existence was calculated by Sir Bernard Mallet before the war at 1 to 30. This figure has been criticised as being too low, and, moreover, mortality has since tended to improve, and the high rates of death duty tended to encourage gifts *inter vivos*. We shall probably be near the mark if we put the amount of Government securities privately held at £2,200 millions—a figure which includes a part of the £240 millions invested for individuals through savings banks. But the death duty figures, in fact, omit the mass of very small estates, and there is probably not much overlap. This figure is, again, one of market value. It may be assumed that it represents, say, £2,350 millions of nominal debt. We have thus accounted for £6,150 millions. There remain £1,550 millions, to be allocated in the main between the holdings of British public companies other than those included in the above table; secondly, the endowments of colleges, hospitals, and other charities, and the investments of trade unions, friendly societies, and trusts of all kinds, and finally, the investments of foreigners and colonials. We know of no means of estimating these respective holdings. The second category must be very large indeed.

The above analysis contains many uncertain items, but it is sufficient to show that there is no reason to suppose that the taxation which is due to the necessity for paying interest on debt is a force tending to concentrate wealth into the hands of the well-to-do at the expense of the poorer members of the community, especially when it is remembered that the tax system itself is graduated to fall heavily on the wealthy. But it is evident that the burden on the community would be much heavier if a much larger proportion of the debt were payable overseas.

Prof. Young proceeds to draw a parallel between internal and external debt from the point of view that both tend to lead to inflation. Thus, he writes, "the history of the German mark illustrates and confirms the principle that a stable currency and an excessive external debt are incompatible," and, later, "an excessive internal debt makes it difficult to balance the Budget, and an un-

balanced Budget calls for further advances by the banks or for further sales of Government securities, attended by an increase in the volume of Bank credit. These new creations of purchasing power, as we know, exert a continued upward pressure on prices." As a matter of fact, in recent history it is true that internal debts have probably exerted a much more important influence in the direction of inflation through causing Budgets to be unbalanced than external debts have done, for very few of the latter have, in fact, been paid since the war. But Prof. Young's phrase "excessive" is, of course, a question-begging epithet, as to which an opinion can be based not on argument but only upon consideration of the facts. Prof. Young does not go into figures at all, but as an expert his opinion is of importance. He says: "I am convinced that the present debts of European nations, including reparations, inter-Allied debts, and internal debts, are so large that, as they now stand on the books, they cannot be paid in full. Moreover, no considerable part of them can be paid without perpetuating and perhaps increasing the disorders of the currency." He admits that they might be reduced within the next generation to manageable proportions by the persistent use of taxation of unprecedented severity. But he doubts whether this is politically practicable, or even worth the effort involved, since there would be "long periods of political depression, lowered standards of living, and new injustices in the distribution of wealth." We venture to think, however, that his view, at all events as far as Great Britain is concerned, is unduly pessimistic, and that our experience has shown the nations of Europe what can be done by determined effort. Prof. Young's arguments suggest, without categorically asserting it, that steady debt redemption out of revenue necessarily involves deflation, for he observes that "complete recovery will be delayed indefinitely if there are to be either further increases of debt and further inflation, or a steady general reduction of debt and deflation of currency."

But, as a matter of fact, redemption of debt by no means necessarily involves deflation if it is carried out by means of a sinking fund provided out of revenue. It is true that our national debt forms the basis of a great deal of the credit machinery of the country to-day, but it is not the only basis of credit. Most forms of wealth can be used for this purpose. Provided taxes are not paid at the expense of existing capital, a sinking fund means that it must be provided out of the margin between the nation's consumption and production. In other words, the national savings must be increasing at least by the amount of the sinking fund. Debt cannot steadily be reduced unless the nation's capital is growing at least as fast as the redemption. But where this is the case—and it certainly is true of Great Britain, who has redeemed over £200 millions of debt in the last two years—new forms of capital wealth are coming into existence, and they will be able gradually to replace Government debt as the basis of our credit structure.

We therefore do not feel disposed to take so pessimistic a view of the debt problem as Prof. Young. At the same time, the issues he raises are of great importance, and particularly at the present moment, when talk of capitalising reparations is in the air and all kinds of schemes are being mooted for the purpose. In this connection, there is one very relevant consideration, which we have mentioned in these columns before, but which cannot be too often repeated; it is that the capital for the restoration of the devastated areas has already been supplied for the most part out of French savings. The way to adjust the reparations problem with the least disturbance is by finding if possible some means by which the capital provided for this purpose may become a direct liability on the German Government instead of on the French Government. In other words, what is wanted in some form or another is a conversion operation for transferring the French Reparations Loans into German debt. Even if it were practicable, the raising of a vast German loan in the London or New York markets would be a new disturbing factor, for the transfer of either the capital or even of the interest to France would induce a new disturbance of the exchanges. The experts have evidently had this danger in mind in stressing the difficulty of transferring wealth from one nation to another.

INDUSTRIAL PROFITS.

OUR quarterly statistics of the profits of industrial companies, compiled from the weekly summary of profit and loss accounts, continue to show expanding profits, though the rate of increase is slowing down. During the past three months the reports of 419 industrial joint-stock companies have been analysed, and these show aggregate net profits, after payment of debenture interest, &c., of £40,382,901, as compared with £37,155,048 earned by the same companies in their preceding financial year, an increase of £3,227,853, or 8.7 per cent. In the last quarter of 1923 an increase of 11.4 per cent. was shown by 312 companies, and in the third quarter an increase of 65.2 per cent. by 209 companies. In the corresponding quarter of last year 405 companies showed an increase of 41.4 per cent. The actual figures for the past five quarters read as follows:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports published in		Increase.	
		1922.	1923.	£	%
First quarter	405	28,489,993	40,276,870	11,786,877	41.4
Second quarter	426	31,874,787	38,945,778	7,070,991	22.1
Third quarter	209	10,469,118	17,317,482	6,848,364	65.2
Fourth quarter	312	23,382,776	26,043,934	2,661,158	11.4
	1,351	94,216,674	122,584,064	28,367,390	30.6
		1923.	1924.		
First quarter	419	37,155,048	40,382,901	3,227,853	8.7

As we have pointed out before, the periods covered by the reports appearing in any one quarter vary considerably, but the great bulk of the 419 reports published in January, February, and March refer to the financial year ended December 31st or September 30th. The percentage increase in profits recorded during the last quarter is very much below that for the whole of last year, but the comparison in 1923 was with a period in which profits were on the downward grade. This may be seen from the following table, which sets out the quarterly increases or decreases shown since the beginning of 1918:—

	1918.	1919.	1920.	1921.	1922.	1923.	1924.
First quarter	-10	+10.4	+26.9	+35	-43.4	+41.4	+8.7
Second quarter	-5.8	-51	+37.8	-84	-33.7	+22.1	
Third quarter	+12.3	-42.9	+42.4	-23.5	+65.2		
Fourth quarter	+4.7	+10.5	+27.1	-52.9	+3.9	+11.4	

Thus, although there were increases in the first quarters of 1923 and 1924, these have not been sufficient to counter-balance the decline shown in 1922, and the level of profits according to these figures is still some 10 per cent. below the 1921 level. In the next table we classify the past quarter's figures into a number of groups:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Quarter Ended March 31.		Increase.		Decrease.	
		1923.	1924.	£	%	£	%
Breweries	16	1,225,974	1,263,278	37,304	3.0		
Electric light & power	30	2,786,512	3,446,814	660,302	23.8		
Gas	33	3,042,626	2,931,553			110,073	3.6
Hotels, restaurants, &c.	8	266,128	289,962	23,834	9.0		
Iron, coal, and steel	30	2,266,376	2,511,399	245,023	10.8		
Land, mortgage, &c.	18	849,643	896,478	46,835	5.5		
Motor and cycle	6	236,781	175,723			161,058	68.0
Rubber	35	944,748	385,410			559,338	59.2
Shipping	5	342,883	271,780			71,103	20.8
Shops and stores	31	2,861,348	3,372,330	510,982	17.5		
Tees	4	58,316	84,659	26,343	45.2		
Textile	18	4,375,052	4,689,968	314,916	7.4		
Tramways	11	505,596	525,307	19,711	3.9		
Trusts	33	1,851,141	2,131,194	272,053	14.7		
Water	12	470,553	477,182	6,630	1.4		
Miscellaneous	129	16,046,502	16,998,614	952,112	5.9		
	419	37,155,048	40,382,901	3,227,853	8.7		

Only two groups show lower profits than in the first quarter of 1923. The decline in the shipping group is due to two companies—the Cairn Line and Lamport and Holt. In the gas group increases and decreases are fairly evenly divided. The motor and cycle group has turned a debit balance into a net profit, substantial improvements being recorded by the S.T.D., Crossley and Leyland companies. The rubber and tea groups each show substantial increases, and the electricity group is prominent with an increase of nearly 24 per cent., which follows an expansion of 45 per cent. twelve months ago.

The method of distribution of profits in each of the past five quarters is set out in the next table:—

	Net Profits.		Ordinary Dividend.		Preference Dividend.		To Reserve, &c.	
	£	%	£	%	£	%	£	%
1923.								
First quarter	40,276,870	21.934,234	54.4	9,501,074	23.6	8,841,562	22.0	
Second quarter	38,945,778	21,038,627	64.3	7,734,685	19.9	6,172,466	15.8	
Third quarter	17,317,482	9,653,961	55.8	3,039,838	17.5	4,623,682	26.7	
Fourth quarter	26,043,934	16,422,422	63.1	4,592,984	17.6	5,027,521	13.3	
	122,584,064	73,019,252	59.5	24,869,581	20.3	24,665,231	20.2	
1924.								
First quarter	40,382,901	24,069,835	59.6	7,291,653	18.1	9,021,413	22.3	

The past quarter's allocations are similar to the average for the year 1923, but more goes to reserve and less to preference shareholders. The last column, it should be mentioned, includes, in addition to specific reserve allocations, the amounts by which balances carried forward are increased. An analysis by groups of the distribution of profits in the past quarter is given in the next table:—

	Net Profits.		Ordinary Dividend.		Pref. Dividend.		Carried to Reserve, &c.	
	£	%	£	%	£	%	£	%
Breweries	1,265,228	608.352	48.2	404,168	32.0	250,708	19.8	
Elec. light & power	3,446,814	1,101,015	31.9	541,807	15.7	1,803,992	52.4	
Gas	2,863,553	2,239,581	78.2	354,017	12.4	269,355	9.4	
Hotels, restaurants, &c.	289,962	137,577	47.5	31,518	10.9	120,837	41.6	
Iron, coal, and steel	2,511,399	1,913,381	76.2	455,542	18.1	142,476	5.7	
Land, mortgage, &c.	936,478	558,634	62.3	170,462	19.0	167,382	18.7	
Motor and cycle	1,75,723	9,000	5.1	63,243	38.8	98,480	56.1	
Rubber	385,410	352,274	91.4	4,324	1.1	28,812	7.5	
Shipping	271,780	215,225	79.2	145,625	53.5	85,252	26.7	
Shops and stores	3,372,330	1,546,848	45.9	958,230	28.4	14,017	16.6	
Tes	84,659	69,844	77.7	4,798	5.7	1,681,454	35.9	
Textile	4,689,258	2,510,333	53.5	497,481	10.6	123,229	2.4	
Tramways	525,307	307,025	58.5	95,053	18.1	361,623	13.4	
Trust	2,131,194	1,137,921	53.4	631,650	29.7	64,096	3.0	
Water	477,182	281,515	59.0	111,571	27.6	3,118,190	18.3	
Miscellaneous	16,998,614	11,083,310	65.2	2,797,114	16.5			
	40,382,901	24,069,835	59.6	7,291,653	18.1	9,021,413	22.3	

In the matter of reserve allocations, the motor and cycle group makes the best showing; but this is not surprising, in view of the bad period through which the industry has passed and the unsatisfactory state of many of the balance-sheets. The electricity group reserves over 50 per cent. of net profits, while the hotel and textile groups also make a good showing. The decrease in reserves in the shipping group is due to the accounts of the two companies mentioned above, which withdrew £225,000 from reserve funds. The very low percentages of profits going to preference shareholders in the rubber and tea groups is due to the fact that preference capital is rather a rarity in this class of company. Neither group, however, has been very conservative in profit distribution, and ordinary shareholders have taken a large slice of profits. The iron, coal, and steel group has also been more generous to shareholders than to reserves.

In the next table we show the ratio to total ordinary and preference capital of net profits, and of the amounts reserved:—

	Total Ord. and Pref. Capital.		Net Profits.		Carried to Reserve, &c.	
	£	%	£	%	£	%
1923.						
First quarter	406,793,000	40,276,870	9.9	8,841,562	2.2	
Second quarter ...	396,675,400	38,945,778	9.8	6,172,466	1.6	
Third quarter	195,420,900	17,317,482	8.9	4,623,682	2.4	
Fourth quarter ...	255,094,800	26,043,934	10.2	5,027,521	2.2	
	1,253,984,100	122,584,064	9.8	24,665,231	2.0	
1924.						
First quarter	390,545,500	40,382,901	10.3	9,021,413	2.3	

The percentages for the past quarter are slightly better than those for the last quarter of 1923, and appreciably higher than the averages for the whole year. A quarterly comparison of the average rate paid on the three classes of capital since the beginning of 1921 reads as follows:—

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1921.	1922.	1923.	1924.	1921.	1922.	1923.	1924.	1921.	1922.	1923.	1924.
1st quarter	4.43	4.70	4.61	4.62	5.0	5.3	5.7	5.3	10.3	8.5	9.2	9.6
2nd quarter	4.61	4.70	4.61	4.62	5.0	5.3	5.7	5.3	12.6	8.8	9.9	9.9
3rd quarter	4.45	4.51	4.90	4.90	5.0	4.5	4.3	4.3	9.7	7.6	7.9	7.9
4th quarter	4.52	4.83	5.03	5.03	5.1	5.6	5.1	5.1	7.6	8.6	9.6	9.6

The average rate on ordinary capital has been maintained at 9.6 per cent. This compares with an average of 9.3 per cent. for 1923 and 8.4 per cent. for 1922. The figures for the last quarter in each group are shown in the final table, the average rates relating to ordinary capital a year ago being given for comparison:—

	Deben- ture Capital.	Rate of Interest.	Prefer- ence Capital.	Rate of Dividend.	Ordinary Capital.	Rate of Dividend.	Rate a Year Ago.
Breweries	£ 6,741,569	5.1	£ 6,561,881	5.8	£ 5,408,329	11.2	11.6
Electric light and power	12,863,071	5.0	10,956,487	5.0	11,967,470	9.2	7.6
Gas	11,686,556	3.9	8,513,783	4.2	46,842,449	5.5	5.4
Hotels, restaurants, &c.	1,269,330	4.4	2,084,554	1.5	1,581,036	8.7	8.7
Iron, coal, and steel	5,264,536	5.5	8,700,817	5.2	24,360,358	7.9	7.4
Land, mortgage, &c.	4,309,223	4.1	4,229,207	4.0	5,353,083	10.4	9.3
Motor and cycle	146,000	4.7	3,939,800	1.7	4,156,568	0.2	1.5
Rubber	144,549	7.4	79,850	5.4	5,932,553	5.3	4.2
Shipping	2,950,000	5.0	2,375,000	6.1	5,065,000	4.3	5.1
Shops and stores	6,069,960	4.8	15,943,278	6.0	17,532,336	8.8	9.2
Tes	10,200	5.0	73,280	6.5	222,276	29.5	20.0
Textile	1,782,000	4.1	8,711,871	5.7	22,551,303	11.1	11.2
Tramway	3,411,087	4.5	2,283,325	4.2	4,366,017	7.1	5.9
Trust	21,419,171	4.3	15,863,792	4.0	18,004,255	6.3	6.3
Water	2,143,097	4.0	3,040,584	4.3	3,708,352	7.6	7.7
Miscellaneous	12,760,509	5.0	44,788,151	6.2	81,000,577	13.7	13.2
	93,075,854	4.6	138,493,560	5.3	252,051,962	9.6	9.2

The exceptionally low rates on preference capital shown in the hotel and motor groups are due to the passing of preference dividends by one or two large companies with a large amount of preference capital. Only five groups show a lower average rate of ordinary dividend than a year ago, but the only substantial increase is that recorded for the tea companies, whose average rate is exceptionally high at 29½ per cent.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

SINCE the beginning of the year cotton spinners and manufacturers in Lancashire have made some progress towards better times. Demand in most departments has been more active, and an increased business has been done. Spinners of American cotton have again had to resort to organised short time, but the smaller production of yarn has resulted in a distinct improvement in the prices ruling. There has been a tendency for cloth manufacturers to re-start idle looms, and unemployment has been reduced. Some labour disputes have arisen, and in connection with one case there was a danger of a general lock-out, but an agreement was reached without drastic action being necessary. Although it is now open for the employers to claim a general reduction in wages it is not thought likely that any move of this kind will be taken just at present.

During the three months wide fluctuations have occurred in raw cotton prices, and after a downward movement a rising tendency has shown itself. On December 29, 1923, the quotation for fully middling American on the spot in Liverpool was 21.06d. By the end of January the rate had fallen to 19.47d, and there was a further decline by February 29th to 17.63d. Values continued to favour buyers, and 16.46d was registered on March 28th. Since then a much stronger feeling has prevailed. By April 9th the price had advanced to 19.13d, and the quotation on the 14th was 19.13d. There are now indications of bullish sentiment during the remainder of this season as demand for the article has broadened, and owing to the small crop supplies are being depleted. A feature of the situation is that there is a difference of about 3d a lb between May and October futures, and merchants are afraid to commit themselves to contracts in manufactured goods, as anything bought now will not be ready to go into consumption until the autumn. Preparations for the new crop in the United States are somewhat backward, but reports during the last few days have been rather more favourable. A slight increase in the acreage is expected, and the purchases of fertilisers have been larger than a year ago. The extent of the yield will depend upon the weather conditions in the belt this summer. It is believed in most quarters that farmers will make big efforts to produce a substantial growth. With regard to Egyptian cotton, the quotation for fully good fair Sakellarisid on the spot in Liverpool on December 29, 1923, was 24.50d.

On January 31st the figure was 23.15d, and on March 3rd 19.65d. A rising tendency showed itself towards the end of the month, and 21.20d was quoted on the 29th, with 22d on April 7th, and 22.30d on the 14th. There has been a larger demand for Egyptian cotton during the quarter. Encouraging advices are being received relating to the growth for next season. There is a possibility of an acreage of nearly 2,000,000 feddans, against 1,600,000 feddans for the current year.

During the past quarter the feature of interest in the Manchester cloth market has been the revival of demand for India. Although business has ebbed and flowed there has been a big inquiry from week to week, and latterly an increased turnover has taken place. Dealers in the bazaars on the other side have been more anxious to replenish supplies. Extensive buying has occurred in light fabrics, especially for Calcutta, and producers of dhooties have extended their engagements. Although makers of grey shirtings are still doing badly, more trade has been done in this class of goods. Freer buying has taken place in fine goods and fancies, and Lancashire firms are doing more business in high-quality cloths. This development seems to indicate that the standard of living in India is improving. Operations for China have been irregular. Now and again we seem to have been on the point of a distinct revival, but buying has not been maintained for any lengthy period. Stocks in Shanghai, however, are very low, and immediately there are indications of a more settled Government, and a less disturbed political situation, there is every promise of a much larger trade. Dealers in Egypt bought heavily last November at high prices, and some difficulties have been experienced in effecting satisfactory clearances. Fresh business, therefore, has been of limited dimensions, but according to recent reports the position in Cairo is mending, and more offers are being received in Manchester. Some improvement has shown itself in the turnover for the outlets of Central and South America. Fine goods and fancies have attracted considerable attention for European countries, and further buying has taken place for the United States and several of our colonies. Manufacturers of special cloths such as warp satins, poplins, voiles, and brocades have experienced a healthy trade, and many producers are deeply sold. Although the process has not been very rapid, more looms are running in Lancashire than at the beginning of the year, and probably in this respect the most prominent improvement has been in Burnley and district, where printing cloths are produced. There has not been any general activity in home trade goods, and buyers seem to be afraid of committing themselves to contracts of weight at current prices.

The following is a comparative table of cloth shipments from the United Kingdom, the figures being given for the past three months, and for previous years:—

	Yards.		£	
	1913	1924	1913	1924
1913	1,773,424,100		24,040,540	
1922	894,929,700		34,463,325	
1923	1,079,958,200		35,991,088	
1924	1,105,019,200		37,435,246	

The event of importance in the spinning section of the industry has been the adoption of organised short time by the owners of mills using American cotton. It was decided at the end of February to run the factories only 26½ hours per week instead of the usual 48 hours. This drastic curtailment of output at once had a marked effect upon the trade position. Spinners were enabled to reduce their stocks very quickly, and during the last week or two there has been quite a scarcity of certain counts and qualities. It will be realised that in the circumstances prices have improved, and many companies have now a slight margin on the right side, even when allowance is made for the higher standing charges due to short-time working. Demand has broadened as a result of the increased activity in cloth circles. The local banks have decided to support the Masters' Federation in their policy, and it is understood that as far as possible the banks will prevent mills from increasing the output without the consent of the Federation. Quite an encouraging business has been done in yarns made from Egyptian cotton. Firms engaged on the finer counts have added to their engagements, and good profits are being made. Practically all the mills in the Bolton district are busy and

fully employed. With regard to shipping yarns, a very fair business has been done for India, but recently the turnover has fallen off somewhat. Demand has broadened for certain Continental outlets, especially in two-fold descriptions. According to the reports published at the end of March by 67 cotton-spinning companies in Lancashire, the directors of 49 concerns were not able to declare any dividend on the ordinary shares. The ordinary share capital of these companies amounts to £8,653,450, and the dividends paid by 18 firms totalled £70,405.

The following is a comparative table of shipments of cotton yarn from the United Kingdom, the figures being given for the three months ended March 31st:—

	Lbs.		£	
	1913	1924	1913	1924
1913	53,067,000		3,725,282	
1922	48,470,100		6,811,612	
1923	36,726,500		5,129,987	
1924	35,825,400		6,388,726	

Lancashire traders are in a more cheerful frame of mind than for a long time back. Since the beginning of this year there has been a definite improvement in the cotton industry. It is not satisfactory for spinners of American cotton to have to curtail production by nearly 50 per cent. in order to make a profit, but this policy is a temporary expedient to relieve the situation. There are now indications of more looms being worked, and before very long there is every likelihood of an increased amount of yarn being required. Producers of fine yarns made from Egyptian cotton have nothing to complain about, and manufacturers of fancy piece goods are doing quite well. In the weaving section difficulty is being experienced in obtaining relief by manufacturers of "bread and butter" styles of cloth, but their turn will come in due course. The increased optimism which now prevails in Lancashire is very largely due to the fact that stocks of manufactured cotton goods throughout the world are comparatively low, and there is plenty of evidence for the belief that dealers are being compelled to replenish supplies. Values are on too high a level for a really big trade to be done. Leading authorities are of opinion that there is a chance of lower prices in the autumn, but, of course, everything depends upon the success or failure of the crop in the United States. If an opportunity could arise of selling yarn and cloth on the basis of 1s per lb, for American cotton there is every probability of a buying movement in manufactured goods of considerable volume.

THE QUARTER'S OVERSEAS TRADE.

THE March returns of Overseas Trade show signs of being affected by the strikes of the first two months of the year. Imports, at £103.7 millions, are £7 millions higher than in February last, while British exports, at £61.1 millions, are £7 millions lower. The substantial increase in imports is presumably due to the holding up of goods at the docks owing to the dockers' strike. It is accounted for very largely under the head of grain and flour and other foodstuffs. The decline in exports as compared with February occurred mostly under the head of manufactures, decreases being shown under almost every group. It should be borne in mind, however, that while import figures need not be returned

until fourteen days after arrival, export figures have to be returned within six days after the ship's departure. As compared with last March, imports are up by £13.7 millions, British exports are slightly higher, and re-exports are £3.6 millions up. The figures for March and for the first quarter are compared with those of last year in the tables below:—

MONTH of MARCH.				
	1923.	1924.	Increase or Decrease in March, 1924.	
Imports	£ 90,027,550	£ 103,728,633	+ 13,701,083	+ 15.2
British exports	60,920,690	61,102,767	+ 182,077	+ 0.3
Re-exports	9,085,642	12,700,756	+ 3,615,114	+ 39.8
Total exports	70,006,332	73,803,523	+ 3,797,191	+ 5.4
Excess of imports over total exports	20,021,218	29,925,110	+ 9,903,892	+ 49.7

FIRST THREE MONTHS.				
	1923.	1924.	Increase or Decrease in 1924.	
Imports	£ 273,674,766	£ 301,692,790	+ 28,018,024	+ 10.3
British exports	185,369,502	193,312,756	+ 7,943,254	+ 4.3
Re-exports	28,706,926	39,242,502	+ 10,535,576	+ 36.7
Total exports	214,076,428	232,555,258	+ 18,478,830	+ 8.6
Excess of imports over total exports	59,598,338	69,137,532	+ 9,539,194	+ 16.0

The bulk of the increase in imports for the quarter is in raw materials, which are over £19 millions higher, towards which cotton contributes £13.4 millions and wool £4.3 millions. Food imports are £5.2 millions higher, although grain and flour shows a decrease of £3.8 millions and meat a decrease of £4.3 millions. Sugar imports are £5 millions higher, but this was to a considerable extent a matter of higher prices. As a result of the exclusion of the Irish Free State figures there is a large increase (from £368,400 to £5,011,400) in imports of living animals for food. The following table shows the quantity figures for the quarter for a number of the principal items on the import side in comparison with those of the two preceding years:—

IMPORTS. Three Months Ended March 31.			
	Quantity.		
	1922.	1923.	1924.
Raw cotton.....centals	3,169,042	3,891,114	4,641,763
Sheep and lamb's wool ..	3,251,866	2,592,207	2,599,741
Flax, hemp, and jute.....tons	57,919	89,558	124,442
Rubber.....centals	365,698	431,240	392,222
Beef.....cwt	2,779,987	3,391,468	2,983,481
Mutton and lamb	947,132	1,872,593	1,356,677
Wheat	21,348,100	24,057,500	24,129,145
Sugar	8,295,883	6,838,867	8,625,217
Butter	1,311,200	1,401,451	1,333,901
Tea	121,089,565	120,822,560	129,295,993
Tobacco	50,252,120	56,128,529	52,755,057

Large increases in cotton and sugar imports are the principal features of this table. Wool imports, though slightly higher than last year, are considerably below the 1922 figure. Of the increase of £7.9 millions shown in the quarter's exports, £4.7 millions is in manufactures and £4.4 millions in food. Coal exports are down by £2.7 millions, the figures for France, Italy, and Germany showing a substantial decline. Among manufactured exports, machinery declined as compared with the March quarter of 1923 by £2.4 millions, while ships exported declined in value from £4.1 millions to £183,000. In the first quarter of 1922 the value was £13.2 millions. Exports of iron and steel and manufactures thereof increased in the quarter by £1.9 millions, and cotton yarns and manufactures rose by £2.7 millions. The quantity figures of some of the principal exports read as follows:—

EXPORTS (000's omitted). Three Months Ended March 31st.			
	Quantity.		
	1922.	1923.	1924.
Coal	13,236	18,694	15,706
Pig-iron and ferro-alloys ..	118	272	125
Railway material	159	91	121
Total of iron and steel and manufactures thereof	773	1,039	956
Textile machinery.....	50	42	25
Total machinery.....	119	114	104
Cotton yarns	48,470	36,726	38,285
Cotton piece goods.....sq. yds	894,930	1,079,958	1,105,019
Wool tops	98	98	116
Wool tissues.....sq. yds.	26,599	35,905	40,697
Worsted tissues.....	15,783	18,099	16,284
Linen piece goods.....	23,133	21,946	29,724
Boots and shoes.....doz. pairs	95	151	207
Leather	54	66	74
Paper and cardboard	404	1,022	1,087
Locomotives	13	7	8

Exports of coal in the first quarter of last year were exceptionally heavy, owing to the initiation of the Ruhr occupation. The decline this year was probably accentuated by the dockers' strike. The table as a whole does not make very cheerful reading. In the re-export list, increases are almost universal, the largest being shown by raw cotton and raw wool. Exports of bullion and specie in the March quarter were £21,447,100, against £18,697,600 a year ago, and imports were £12,152,900, against £15,543,900.

CORNISH MINING SINCE THE ARMISTICE.

(BY A CORRESPONDENT.)

In order to understand the position of Cornish tin mining since the Armistice, it is necessary to glance back over the war period and the years which directly preceded it. Ever since the slump of 1894-1898, which we mentioned in our last article, Cornish mines, though reduced in number, continued to hold their own successfully against foreign competition. In 1912, out of some six large mines at work in the central mining district of Camborne and Redruth, five were dividend payers, whilst others were operating equally successfully in different parts of the county. In 1914 the output of black (unsmelted) tin from Cornwall amounted to over 6,500 tons, which, though only a small part of the world supply, was nevertheless won at a profit to the owners, and gave a livelihood to some six or seven thousand persons directly connected with the mines. In 1915 and 1916 very nearly the same output of tin was maintained, whilst the production of wolfram (tungsten ores) rose from 180 tons in 1913 to 347 tons in 1916, and arsenic from 1,500 tons in 1913 to nearly 2,300 tons in 1916.

This largely increased production, in spite of enhanced prices, was regarded by those who knew the internal economy of the mines as a not wholly unmixed blessing. The demands of the Government, who called at the same time for many of the best miners for the army and an increased production of tin, wolfram, and arsenic from the mines, could only result in a policy suicidal to mining. It meant that the highest grade ore alone could be worked, the "eyes of the mines had to be picked," and the development and exploration of fresh ore reserves became almost an impossibility. It was not till later that the evil effects of this were felt. In the meantime the price of tin continued to rise till, in August, 1918, it touched £380 a ton. With the Armistice, however, a reaction set in. The price of tin dropped steadily day by day till within less than two years it had fallen to £40 a ton lower than it was in 1914, whilst coal, instead of being 15s a ton, was now more than 53s. Under these conditions the mines had either to cease working at once, or else to receive some form of subsidy to carry them whilst their ore reserves were being once more developed and working established on a normal economic basis. This help, however, which the Government granted to the coal miners when they struck, was refused to the Cornish miners who did not strike.

The mines were accordingly closed down, some being allowed to flood altogether, others, who could afford to bear the pumping charges, keeping the workings drained in the hope of a return to normal conditions before long. Thus things remained for two dark years, during which time, though extreme distress resulted in the mining areas, the orderliness and good behaviour of the men won the tribute of all who knew them. It was not until the early months of 1923 that a rise in the price of tin and the gradual falling of the price of materials made it possible for the mines to resume production once more. Those mines which had managed to keep their pumps going were, of course, the first to resume operations and to reap the benefit from the high price of tin during the last year. Some six or seven mines are in this position to-day, and on certain other properties capital is being spent which will enable them to reach the producing stage before long. That Cornish mining has once more come back into existence is thus due solely to its own merits and the fact, still only partially realised outside the county, that the temporary failure of the industry was due, not to any sudden exhaustion of its great mineral deposits, but to the utterly abnormal conditions produced by the war.

This being the case, the reason why even more capital is not coming into Cornwall to-day seems to lie in the lack of any definite statement of policy for Cornish mining in the future, and the consequent idea, which was fostered by the late closing down of the mines, that existing ore deposits are no longer known in the county. This last conception is probably less true now than it has ever been in the history of Cornish mining. More valuable study has been given to Cornish ore deposits during the last twenty years than ever before, and one outstanding principle has emerged. This is that round the foot of the granite outcrops of West Cornwall the aureole of metamorphosed rocks, which produced the great copper deposits of the last century, contain tin in depth. In other words, the copper mines, which were becoming worked out about 1860 at a depth which rarely averaged more than 800 feet, have been proved conclusively to be rich in tin below this depth.

This fact was first made absolutely clear at the great Dolcoath Mine, which, after having produced over £2,000,000 worth of copper, became so poor about the forties of the last century that the shareholders were on the point of abandoning it. As, however, small quantities of tin were being won from the bottom of the mine, it was decided to sink some little way deeper, with the result that rich tin lodes were discovered, and the first new dividend paid in 1853. From then on until 1895 tin was extracted to the value of over £3,000,000 sterling. To quote other examples would be unnecessary; it will suffice to say that the same principle held good in East Pool and in Levant, both mines which have been working continuously for ninety or a hundred years, and that it led more recently to the successful reworking of South Crofty and Tresavean, all of them originally copper mines, and all working to-day. In addition to these, there are at this moment two new shafts, in the Camborne Redruth

district, sinking at a cost of over £100,000, with a view to working the tin deposits below certain other copper mines, whilst on the main run of lodes the mining rights have been taken up for seven miles east of Camborne for the same purpose. These, however, constitute only a part of one district. There still remain great numbers of old copper mines or groups of mines which, lying in the same geological formation, have equally sure prospects of becoming tin producers in depth. If examples were needed, one might quote the Gwennap mines, which for many years employed thousands of workpeople upon one square mile of country, which was said to be richer in metallic produce than any piece of ground in the Old World. Though nearly all of them showed traces of tin in depth, these mines were never worked below the copper zone, on account of insufficiency of capital, and the poor price which tin was fetching at that time.

The opening up of a large area such as this will form a big proposition, and though it will certainly be done one day, should not be attempted at all until it can be done adequately. Too often the failures of mining enterprises in Cornwall (as in all other areas throughout the world) have resulted from half measures or from the mismanagement of the capital at the disposal of the company. Under good management Cornish mines can and are being made to pay. The South Crofty mine is a well-known example of this. Whereas under the old management, or possibly mismanagement, a sum of over £130,000 was expended for a return of less than £5,000 in dividends over a period of about fifty years, since 1906, when the mine was taken over by the present manager, it has paid more than 360 per cent., free of income-tax, in dividends, in addition to sinking and equipping two large vertical shafts.

The revival of many more Cornish mines in this way is a question only of time. The loss of confidence in home mines which was engendered by the depressions of 1870 and 1894 and the subsequent direction of capital into foreign fields was natural enough at the time, but it is frequently forgotten that when many Cornish mines closed down at the end of the nineteenth century the price of tin averaged £87 a ton, whilst now it is fluctuating between £250 and £300. To-day it is no longer the home country which dictates the price of tin, but America, and her demands are greater than the world's production. The gradual revival of sound propositions, however, and the spread of a wider knowledge of the industry amongst the public, may be expected to remove a prejudice which has now become sufficiently out of date.

THE RAND MINES GROUP.

DISAPPOINTMENT was expressed at the absence of any further increase in the Rand Mines' dividend for the second half of 1923, although the total of 120 per cent. compared with 100 per cent. in respect of the preceding year. An explanation was put forward to the effect that the distributions were being restricted to the amounts received as dividends on the company's shareholdings, other

revenue being kept free for fresh business. The accounts for the past year show an increase of £207,100 in the dividend receipts, and a decline of £231,550 in the profits on realisation of investments. Expenses tend to become slightly less, but taxation in 1923 absorbed a substantially increased amount. There was, however, no further appropriation to bad debt reserve. Below is a contrast of the results of the past three years:—

	1921. £	1922. £	1923. £
Dividends on shareholdings	502,840	391,920	599,050
Sundries	66,630	74,770	86,010
Investment realisation profits	36,920	386,860	155,310
Total income	606,390	853,550	840,370
Administration expenses	30,260	27,170	25,610
Taxation	18,880	12,150	43,950
Bad debt reserve	21,910	20,780	..
Prospecting	16,670	4,980	5,750
Net profit	518,670	788,470	765,060
Dividends	372,050	512,540	614,190
Rate per cent.	70	100	120
To reserve account	..	441,780	187,190
From reserve account	274,520	..	341,940
Brought forward	627,770	300,000	842,130
Carried forward	499,420	842,130	1,147,750

* Including forfeited dividends.

Share interests—below market value—now figure at £2,075,400, as against £2,214,700 at the end of 1922. The principal variation in the items consist in a somewhat drastic reduction in the number of West Springs shares held, although the company has also cleared out its holdings in the Brakpan and the Robinson Deep—two undertakings whose future is generally regarded as promising. As a result of the re-financing of the Modder East, the debentures held in that concern now amount to only £39,500 in place of £150,350. But in like manner the company possesses £35,500 debentures in the Durban Deep as an outcome of the issue made last year. Nothing is said in the report with reference to embarking upon new enterprises, or the acquisition of new interests. On last year's dividends the shares give 10 per cent.—a yield which may be regarded as attractive, seeing that the risks are spread, and that no provision has to be made for amortisation.

The annual statements of two more of the company's more prominent subsidiaries are now in the hands of the shareholders. Next to the Crown Mines—although a long way behind—the City Deep is the most important producer of the Rand Mines group in the Central area. Last year witnessed the crushing of a record tonnage of ore for a record yield, and the performance of a record development footage. A modest increase in the ore reserves was accompanied by a further shrinkage in the average value. This is explained as due to the exhaustion of certain high-grade blocks in the upper levels of the mine, and to the somewhat lower value of the ore opened up during the year. Still, it seems clear that as greater depth is attained the gold contents of the ore diminish. At the end of 1920 the value of the reserves was given as 9.9 dwts, or nearly 2 dwts above the present average. Appended is a summary of the results for the past three years:—

	1921.	1922.	1923.
Tonnage milled	995,100	840,300	1,137,500
Working costs per ton	29/11	27/3	23/5
Total working profit	711,520	504,040	764,700
Dividends	485,630	337,230	551,720
Do per cent.	37½	27½	45
Ore reserves	2,428,300	2,815,000	2,963,900
Average value	8.8	8.4	8.0

Last year's distributions were conservative, a balance of £294,200 being carried forward, as against £227,300 brought in.

In the case of the Modderfontein "B" Gold Mines, developments are the crux of the position. The directors frankly report that no improvement has taken place in this respect, "excepting that indications point to the possibility of a block of high-grade ore being located west of the South-East shaft." The ore reserves show a small increase in quantity, but a decrease of nearly ½ of a dwt—fully 3½ per ton—in the average value. This will affect the returns of the current year. A summary of the results for the past three periods follows:—

	1921.	1922.	1923.
Tons milled	687,500	575,000	778,000
Yield per ton	10.53	10.75	9.95
Revenue per ton	55/6	51/3	44/3
Costs per ton	26/-	24/-	20/2
Profit per ton	29/6	27/3	24/1
Total working profit	1,012,730	782,220	939,050
Dividends	665,000	595,000	770,000
Per cent.	95	85	110
Brought forward	294,900	308,490	397,380
Carried forward	308,490	397,380	485,240
Ore reserves	2,773,300	2,609,600	2,683,400
Value	9.6	9.3	8.6

As with the City Deep, the distributions for 1923 by no means absorbed the whole of the profits, the carry-forward being £87,800 up at £485,200. The whole of this is represented by cash and cash assets, the bulk available. Such a balance seems a large one for a mining company to keep in hand unless the directors contemplate heavy expenditure of a special kind. It represents nearly two-thirds the capital of the company. On the basis of last year's dividend total of 110 per cent., the yield is the high one of 22 per cent. The uncertainties of the future are responsible for this position. Even now the shares are quoted in the market at about five times their par value.

Notes of the Week.

Russians in Downing Street.—The first concrete result of Mr MacDonald's recognition of the Soviet came to pass on Monday, when Moscow delegates visited the Foreign Office for the beginning of the long-projected conference on Anglo-Russian relations. The conference was opened by the Prime Minister in a speech, the tone of which was quite unexceptionable. After emphasising that his recognition of the Moscow Government was unqualified, he proceeded to classify under four heads the main subjects for discussion. These are: (1) "Liquidation of the past" (including the question of holdings of Russian bonds, claims of property holders in Russia, &c.), (2) previous treaties, (3) substitution of a commercial treaty for the trade agreement, (4) propaganda. The Prime Minister was exceedingly frank. He dwelt upon the difference in methods of government between Moscow and London, and as regards propaganda and "hostile activities," he remarked:—

It is my duty to make it plain that the people of this country will require more than formal undertakings, and, as you know, I myself have too intimate a knowledge of international movements to be deceived by false distinctions. This will have to be discussed firmly, but I hope in the most amicable spirit, and I also hope settled in the same spirit.

On more material questions there was nothing in his speech to offend the bankers who, in view of the conference, had forwarded to him a memorandum demanding as conditions of agreement the recognition of debts, restitution of property, freedom of trade without Government interference, and abandonment of propaganda. This memorandum outlined the needs of Russia, and the means of supplying her with credit, under proper conditions, and will doubtless receive from the conference the attention it deserves. In reply, M. Rakovsky, who leads the Soviet delegation, said: "We are ready to submit the question of pre-war debts and private claims to detailed discussion," and "thought that nothing stood in the way of solution." He talked of the need for the revision of peace treaties, and said that while the Soviet did not look with favour on the League of Nations, they "would be prepared to associate themselves with a plan of an international organisation which should exclude measures of coercion and reprisal." It was perhaps to be expected that in his preliminary speech M. Rakovsky should skate over difficulties and confine himself to vague optimism. But it is obviously too early to begin building up hopes of tangible results from the conference. All that can be said at this stage is that Mr MacDonald, by the frankness, commonsense and proper spirit of his statement, has given it as favourable a send-off as possible.

The Reparations Report.—The reports of the experts on Reparations have had a most favourable reception, and have undoubtedly succeeded in creating an atmosphere

highly favourable to a settlement of the questions which have held back the reconstruction of Europe so long. Mr Ramsay MacDonald announced on Tuesday that the British Government had promptly intimated to the Reparations Commission its adhesion to the plans of the Experts. The German Cabinet has given a general approval as a basis of discussion, though it is probable that attempts will be made to secure some modifications in her favour. Belgium and Italy approve. There is every indication that France is favourably inclined, and opinion in the United States evidently regards the scheme as likely to lead to concrete results. The Reparations Commission itself met on April 11th and approved the report. This decision means that on the Allied side there is not likely to be much quarrelling over the technical details of the report itself. It does not, of course, touch the political problems which must inevitably arise for discussion forthwith. But it has had a considerable effect in Germany and, in particular, in the occupied territories, for it has led to provisional renewal of the M.I.C.U.M. agreements, the negotiations of which had reached something like a deadlock. The German negotiators assume that a settlement on the financial issues is in sight, and for the sake of preventing complete stoppage of production will carry on under conditions which, if continued, would inevitably destroy the industry of the Rhineland. There is some disposition in Germany to complain that no final sum has been fixed, and Herr Schacht, the new President of the Reichsbank, who is showing much greater determination than his predecessor, considers that the new schedule of payments is too heavy, and that Germany should have been given a complete moratorium for several years. At the same time, he is conscious of the danger of the rising spirit of nationalism in Germany and the urgent need of a very early settlement with France. Repeated disappointments have developed a strong vein of scepticism in Europe. Nevertheless, the report has succeeded in reawakening some hope of a happy issue out of her affliction. Tangible evidence of this revival may be found in the all-round improvement of the foreign exchanges.

The Mines and the Shipyards.—There is, for the present at any rate, to be no miners' strike. The notices terminating the coal industry agreement, which fell in on April 16th, have been suspended, and the miners remain at work. For this happy avoidance of disaster credit must be apportioned between Mr Shinwell, the Minister of Mines, who has shown marked aptitude for the handling of delicate negotiations, and the leaders of both sides for the mutual forbearance shown. When the Federation Executive rejected the owners' revised offer, and recommended their members to do the same in the ballot taken last week, they coupled with this rejection the application, to the Government, for an enquiry into miners' wages, now, and in 1914; such enquiry to take into account the changes in the cost of living, and the relative wages of other workers. The Court of Enquiry has been promptly appointed, with Lord Buckmaster as chairman, and pending its report, owners and miners are meeting to decide the terms on which the industry shall be carried on for the time being. The miners believe that the disclosure of the actual facts as to their earnings will enlist on their side the powerful support of public sympathy. An analysis of the ballot, taken last week, reveals a difference of opinion between the districts on the owners' offer, which corresponds to the great and, sometimes, tragic difference in conditions. Thus, while Durham voted for acceptance by 7 to 1, and Northumberland by 3 to 1, South Wales voted against by 2 to 1, Scotland by 3 to 1, and Lancashire by 3 to 1. The votes of these three areas, in fact, accounted for the small majority—16,000 on a poll of 661,000—by which the proposals were actually turned down. The smallness of this majority surely means that a strike has not only been temporarily averted but may ultimately be prevented. In holding their hand, the miners have not only saved the Government from what would have been a very serious danger, they have really greatly strengthened their own position. Unfortunately, no such verdict can be passed in relation either to the Wembley strike, or to what has happened at Southampton. In both cases there has been an attempt at direct action of

the crudest kind, and the main result has been to undermine the disciplined co-operation upon which effective Trade Unionism depends. The Southampton case is an instance of the breakdown of Trade Union authority, and as such the General Council of the T.U. Congress has regarded it, rejecting, as has the Ministry of Labour likewise, the appeals for "intervention" put up to them by the Communist and Syndicalist leaders who have been exploiting the psychology of mass meetings. At present only boilermakers (who have, since the protracted lock-out of last summer, been outside the Shipbuilding and Engineering Trades Federation); shipwrights (whose Union expelled their Southampton members, eight weeks ago, when the trouble started), and woodworkers (whose union, late in the day, took the same line), are at work. This applies not only to Southampton, but to all the other ports working under the federated employers. In all of them, men in the other trades are locked out, in enforced sympathy with the action of Southampton. The employers have, from the first, taken the line that they would negotiate only when the men came back to work. Southampton has suffered the most; the removal of the "Mauretania" to Cherbourg means that weeks of work have been lost to Southampton. The members of the Amalgamated Engineering Union, and of the unions other than the Shipwrights and Woodworkers inside the federation (which is an affiliation of some five and twenty unions) have defied the authority of their leaders, and, whatever be the merits of their claim, dealt a deadly blow at the federation itself. It was severely shaken by the boilermakers' lock-out; the present emergency is a much more dangerous one. These events are, of course, serious in their effect on trade, but the cumulative damage which they cause is in no way comparable to that which would have resulted from a stoppage of the coal mines.

Co-operative Progress.—A correspondent writes:—The return of the Co-operative Wholesale Society to a dividend-on-purchases stage suggests a better condition of trade for retailers generally. Although the dividend recommended by the directors is only 2d in the £ it totals £263,914, rather more than half of the net profit of the last six months, after paying interest on capital and depreciating in accordance with the new rules as set forth in the *Economist* three months ago. The sales for the past half-year were £34,504,861, of which £10,683,308 were supplies from the society's own productive works. These totals represent increases of 2½ and 1½ per cent. respectively. The profit rose to £1,305,193; but, in accordance with the Co-operative policy, interest on capital, amounting to £549,100 (inclusive of £133,364 on shares) and depreciation on property £252,223, had first to be satisfied. This left a net profit of £503,870, the allocation of which is interesting as suggestive of the continued view of keeping the resources well intact. The dividend to society members at 2d in the £ absorbs £263,914; a similar distribution at 1d in the £ on non-members' trade accounts for £602; £54,529 is devoted to writing off buildings and fixtures; £34,824 added to the reserve fund, which now stands at £723,367, and the remainder £150,000 is transferred to next half-year's account. So that a dividend on the current year's trading is practically assured—a fact that is giving a new value to the loyalty of the retail societies. Reflection of the improved trading conditions is seen in the figures of the C.W.S. Bank; the deposits and withdrawals being £252,562,658, an increase of 3½ per cent. This section is dealing with a growing number of current accounts, including 8,533 trade unions and friendly societies; 3,264 clubs; 1,026 co-operative societies, and 4,646 individuals. The repayment of the Development Bonds occurring on July 1st, it has been decided to accept investments from societies for five years at 4½ per cent. The Northern and Midland areas have shown the more distinct trading recovery, and in the Tyneside area the trade has increased by 8 per cent., but in London and the west and south of England the grocery and provision trade has declined somewhat. The output of some typical co-operative works for the past half-year is interesting. From the tea blending department 25,240,213 lbs of tea were sent out; from the biscuit works at Crumpsall and Cardiff 54,287 cwt; the weekly average weight of soap sent out

was 787 tons; 1,522,809 sacks of flour and wheatmeal from the eight mills, as well as 1,279,536 sacks of offals; 283,138 cwt. of margarine and lard; 1,048,386 pairs of boots and shoes and substantial supplies from the woollen mills, weaving sheds, shirt and clothing factories, furniture works, &c. This is the year of the Diamond Jubilee of the C.W.S., and the directors are well satisfied, after the recent lean years, to have returned to a profit-distributing stage.

Who are the Unemployed?—The Ministry of Labour has recently carried out an investigation designed to answer this question, into the "Personal Circumstances and Industrial History of 10,000 Claimants to Unemployment Benefit." The Report, issued the other day by the Stationery Office (price 3s), contains a great deal of suggestive material, which, so the Director of Statistics assures us, can be regarded as a "reliable sample" of the whole field; the 10,000 may be taken as representative of the million and a half. They are here classified from various points of view. In the first place, an attempt was made to group the claimants from the point of view of their employability. It appears that 89.4 per cent. of the men and 88.2 per cent. of the women were normally in steady or fairly steady employment, while only 3.6 per cent. of the men, and 2.0 per cent. of the women were "verging on the unemployable." Of these, a heavy proportion suffered from poor health and physique (it is possible that throughout the health factor has been somewhat over-stressed by the investigations, important as it is), while the majority were elderly or aged. More than half of the men, and more than a third of the women, in this category were 60 or over. Of the whole body of claimants reviewed, less than half the males were under 35; over four-fifths of the women. Of special interest is the analysis of their education. All claimants under 30 were specially interrogated on this point. It appears that among them no less than 94.0 per cent. of the boys and young men, and 91.3 per cent. of the girls and young women, left school at or under the age of 14; only 5.5 per cent. of the boys and young men, and 7.4 of the girls and young women, had attended any sort of secondary school. Another surprising fact is the comparatively small proportion of claimants who were actually in receipt of poor relief. Contrary to the common belief, only 10.3 per cent. of the men and only 0.8 per cent. of the women were in receipt of poor relief. "The cases which most frequently occur among males in receipt of poor relief over and above their unemployment benefit are of men drawing from 20s to 24s a week in benefit (which means men with a dependent wife, or with a wife and from one to four dependent children), and in receipt also of poor relief ranging from 2s 6d to 12s 6d per week." Of the men in respect of whom dependents' benefit was being paid, 18.2 per cent. were drawing it in respect of four or more children.

Iron, Steel, and Coal Production in March.—The figures just issued by the National Federation of Iron and Steel Manufacturers show that pig-iron production in March (668,600 tons) was higher than in any previous month since June last, and that steel production (825,200 tons) was higher than in any month since September, 1920. Gratification at such records must, however, be tempered by the knowledge that, having regard to the cost of production, prices were far from satisfactory, and that the exports of iron and steel in March were lower than in any month since September, 1922. The first point is made clear from a study of the Board of Trade Wholesale Index Number, which shows that in March coal, which enters so largely into the cost of production of iron and steel, was 89 per cent. above 1913 prices, while iron and steel was only 47 per cent. above, the average for all commodities being 65 per cent. That exports were unusually low in March naturally results from the heavy sales made by France and Belgium in January and February, when the franc was at such a low level, and this is also reflected in the imports, which totalled 165,200 tons, which though less than in February, compares with an average of 110,000 tons per month throughout last

year. The explanation of the comparatively high production in March would therefore seem to be that it was the culmination of the stimulus afforded by the railway and other orders placed at the end of last year with a view to alleviating unemployment. Since the number of blast furnaces operating at the end of last month was only 194, compared with 202 at the beginning, the output of pig-iron in April will necessarily be less, while even if demand were maintained, and unfortunately it is not, steel production would be less in April on account of the Easter holidays. Fortunately, the competition from France and Belgium is hardly likely to be so acute as recently, as not only has the franc improved, but French and Belgian manufacturers cannot guarantee prompt delivery, but with the increased working hours and the increased wages recently agreed upon in Germany, increased competition from that quarter may be looked for. The production, imports and exports of iron and steel in the first quarters of 1913, 1920, 1923, and 1924 are given below:—

	1913.	1920.	1923.	1924.
	Tons.	Tons.	Tons.	Tons.
Production of pig-iron.....	?	2,009,000	1,744,900	1,917,900
" steel ingots & castings ..	?	2,392,000	2,143,700	2,287,100
Imports	585,300	217,200	362,500	497,200
Exports	1,186,200	772,800	1,039,000	956,400

The output of coal in the four weeks ending March 29th averaged 5,763,000 tons per week, compared with an average of 5,785,000 tons for the previous four weeks. The output for the first quarter shows an increase compared with the first quarter of 1923, the figures being 72,214,700 tons in 1924 and 71,042,500 tons in 1923. Exports of coal were slightly in excess of the previous month, and amounted to 5,190,300 tons, of which 1,381,500 tons went to France, 620,600 tons to Germany, 593,000 tons to Italy, 288,200 tons to Irish Free State, 274,000 tons to the Argentine, 255,000 tons to Denmark, 220,300 tons to Netherlands, and 205,700 tons to Belgium.

International Cotton Federation.—The International Cotton Federation has published its quarterly bulletin, which contains a mass of interesting information to those engaged in the industry. The half-yearly statistics show that the consumption of all kinds of raw cotton throughout the world during the six months ended January 31st was 10,434,000 bales, against 10,759,000 bales in the previous half-year, and 11,384,000 bales in the six months ended January 31, 1923. The stocks of raw cotton held by spinners on January 31st last amounted to 4,088,000 bales, as compared with 3,932,000 bales on July 31, 1923, and 4,851,000 bales at the end of January, 1923. During the past half-year Great Britain has increased her consumption of American cotton by only 22,000 bales, but during the same period she has increased her total consumption of all kinds of raw cotton by 113,000 bales. It is a matter of interest that, during the past six months, over 1,000,000 spindles in Lancashire have turned from American cotton to Egyptian. With regard to the extent of short time, statistics reveal the fact that Great Britain, France, Italy, Czechoslovakia, Belgium, Switzerland, Poland, Finland, Japan, Canada, and Mexico have curtailed production on a smaller scale during the past half-year than in the previous six months, but Spain, Holland, Sweden, and China have increased their stoppages of machinery. Arrangements are now being made for the holding of the twelfth congress of the International Cotton Federation at Vienna in June next. The chief subjects for discussion will be international courts of arbitration, the effect of the 48-hour week on the cotton industry, labour-saving appliances in cotton mills, damp in raw cotton, cotton-growing in Brazil, and cotton-growing in the Colonies and Dependencies of the countries affiliated to the International Federation. A year ago the Federation Committee made an important development in its work in that they appointed a mission to the United States for the purpose of reporting on the growing cotton crop, and the delegates supplied the members with valuable information. At the congress a review of this journey will be given, and it will also be decided whether this work should be undertaken each year.

Czechoslovakian Trade.—A correspondent writes:—In comparing the trade figures of Czechoslovakia and Hungary some weeks ago, it was recently shown in these columns that the exports of the former were 50 per cent. less than those of the year before, while Hungary for the same year had an export balance of several milliards of crowns. It would seem fair in the circumstances, therefore, to continue the examination of the figures for the ensuing months of the present year. In January, 1924, the exports of Czechoslovakia show a falling off of no less than 943,777,600 kc. from December, while the imports also declined by a value of 705,210,375 kc. About this striking difference there are several things to be said. In the first place, December was an extraordinarily good month, showing an increase of 50 per cent. over the average month of 1923. Secondly, there was in January a great difficulty in transport owing to the freezing of the rivers, especially of the Elbe, which interfered seriously with the export trade of the month. It has been suggested in addition that some merchants may have been waiting to take advantage of the lower railway tariffs coming into force on March 1st. Should this have been the case, the merchants would seem to have changed their minds, inasmuch as the trade figures for the month of February are as satisfactory as they were the reverse for January. In February the exports, both in bulk and value, show a striking improvement—957,376,175 kilograms and 336,193 pieces were exported, as against 729,322,700 kilograms and 405,894 pieces in January, the respective values being 1,254,172,930 kc. and 800,273,845 kc. The imports also show a remarkable increase in value, viz., 1,245,519,169 kc., as against 809,787,918 kc. for January. Of the increases in the exports for February, cotton and cotton goods were doubled; wood and coal were 40 per cent. more; wool and woollen goods 70 per cent. more; iron and iron goods 50 per cent. more; glass, &c., 30 per cent. more; fruit and vegetables nearly trebled in value; and flax, hemp, &c., more than doubled. Of the countries interested, Germany took 17.30 per cent. of the exports and supplied over 35 per cent. of the imports; Austria took over 25 per cent. of the exports, supplying nearly 70 per cent. of the imports; Italy came next to Germany in supplying imports with a value of 121,441,669 kc., taking about 6 per cent. of the exports; the United States came next, supplying 7.56 per cent. of imports, and taking exports to the value of 71,339,375 kc., or 5.69 per cent.; France and the United Kingdom between them took something over 6.50 per cent. of the exports, while France supplied about 42 million crowns' worth of imports, Great Britain no more than 30 million. Thus February showed an "active" balance of 8,653,751 kc. as a set-off to the passive balance of 9,514,073 kc. for the previous month, practically wiping it off, so to speak. The figures do not come up to those of December, but December seems to have been a good month for exports for other countries in Central Europe besides Czechoslovakia, as witness, even Hungary. Still, the February improvement is a hopeful sign for the progress of the country. Whether the financial state of the country is as good as would appear from these figures is a matter that does not require to be considered here. This much may be said. There is no sign of the fall in the currency which was persistently rumoured a short time ago, and these February returns should have some effect in giving the rumours their quietus.

Conditions in Cuba.—For the financial year 1924-25, the Budget of revenue and expenditure estimates receipts at \$76,719,000, and expenditure at \$66,400,282, or a surplus of \$10,318,718. If this should be realised, writes a correspondent, the Government will be asked to use the funds for paying bonuses to Government employees instead of it going to the paying-off of the island's internal debt. Strong opposition, no doubt, is expected from financial circles to this policy, since any modification would be deemed to prejudice both the guarantees enjoyed by foreign loans and the security of the internal debt. The economic position of the island being exceptionally good, however, at present it may not be necessary for the Government to adopt this method of satisfying the insistent demands of its employees. Provided no political upheaval occurs, Cuba should enjoy a period of renewed commercial prosperity,

especially in view of the sugar outlook; the crop is expected to be as good as, if not better than, that of last year. A halt has at length been called in the damaging operations of certain United States' speculators in the sugar market. Their huge profits, derived from compelling needy producers to accept very much reduced prices (as low, indeed, as about 1d per lb) had brought fresh speculators into the field. It has been pointed out that at the time that local sugar planters were receiving for their produce the low price of a fraction above 1d per lb, sugar was selling in England at between 8d and 10d per lb. Efforts are being made to cultivate closer relations with Europe, so as to overcome the obstacles offered by the Fordney tariff. A pronounced revival in the mahogany-timber trade with the United Kingdom is, for instance, to be noted, Cuban logs—like those from Mexico—finding a ready sale for medium to large pieces at the port of Liverpool. While it is but natural, owing to geographical proximity, and the preferential rates granted to the United States, that trade with Cuba should flow largely towards North America, the strong position held by British trade for something like a century is still regarded as a valuable asset. No effort should be spared, therefore, to maintain our position, secondary though it may now have become. In many directions British manufacturers are enabled to compete successfully with their keen American rivals, particularly in connection with textiles, steel manufactures, certain food-stuffs, and manufactured leather goods.

Competition for Latin-American Trade.—British trade with Latin America, writes a correspondent, continues to make progress, following upon a pronounced revival during the latter part of last year. The keenest rivalry now exists between Great Britain and the United States, running a neck-to-neck race to secure supremacy in some of the principal markets. From both these countries exports to Argentina, Brazil, and Chile are approximately equal in value on the current exchange basis; in regard to their imports, however, the proportion of increases for the first nine months of 1923 over the previous year showed greater variation. In the case of Argentina, the United Kingdom maintains its supremacy; exports to the premier South American State, in 1923, reached £19,854,971, compared with \$88,676,547 (£17,735,309) claimed by the United States. These figures show an increase of about 13 per cent. in favour of the United Kingdom over the previous year; but, on the other hand, the imports into the United States from Argentina increased by about 70 per cent. In the case of Brazil, the United Kingdom exported to the value of £7,545,476, while the United States claimed \$33,160,386 (£6,632,077). The export trade position of the United Kingdom in Chile was slightly less favourable, representing £4,714,949, while that of the United States was \$24,186,530 (£4,837,306). Taking the whole of the Latin American Republics, including the lesser West Indies and the Guianas, the total trade of the United States for the period mentioned was largely in excess of that of the United Kingdom, the figures being as follows:—U.S.A. exports, \$521,260,229 (£104,252,045), against £46,347,425 (say \$231,737,128). The total value of the trade of the United States with the 20 Latin American Republics for the whole of 1923, according to official statistics, came out at \$1,685,000,000 (£337,000,000), compared with \$1,315,000,000 (£263,000,000) in 1922, an increase of \$370,000,000 (£74,000,000), or 28.1 per cent. Both the United Kingdom and the United States are meeting with stronger competition from Italy. With a view to finding further markets in South and Central America, a syndicate of 25 leading manufacturing firms, representing the most important industries of the kingdom, have, with the practical assistance of the Government, despatched the Italian naval vessel "Italia" to 27 ports of Latin America, carrying an immense variety of sample goods. The voyage of this floating fair will occupy 210 days, covering a course of 23,000 miles.

Politics and Finance in Ecuador.—The approaching political elections in Ecuador, in which General Leónidas Plaza (President in 1901, 1912, and 1917) is expected to

[April 19, 1924.]

play an important part, are calculated to interfere still further with the economic progress of that country, already sufficiently disquieting. The Federal Government is said to be practically without funds, while the heavy adverse trade balance is little likely to be reduced within the near future. During the past year imports were largely in excess of exports, and the supply of export drafts requisitioned by the Administration proved insufficient to meet the demand of importers. Unliquidated accounts have considerably increased during the last few months. At the end of last year the banks at Guayaquil disclosed deposits exceeding 25,000,000 sucres (roughly £1,000,000), as collateral for undischarged accounts, to be used for the purchase of foreign drafts whenever they might become available. The monetary institutions held also about 4,000,000 sucres left upon deposit by foreign merchants and manufacturers, who were unable to find a field of investment deemed to be sufficiently safe. One hope upon which the country's economic future depends is its agricultural and pastoral richness, up till now unsystematically developed. Too much reliance has been placed upon the mineral wealth, which, while undoubtedly existing, defies successful exploitation owing to the remoteness of most of the deposits and the unrelieved difficulties of transportation. The Government is endeavouring to enlist the financial co-operation of foreign financial syndicates, with a view, not only to providing the country with increased railway tracks, but to develop upon an extensive scale the agricultural, horticultural, and pastoral possibilities of the State. As a preliminary, bananas and live stock have now been placed on the tax-free list. Cacao, which still forms the principal article of export, reached, during the first six months of 1923, 19,429,385 kilos, valued at 14,300,069 sucres. Initial attempts at cotton-growing have proved encouraging, the exports of this product showing a slow but steady increase. United Kingdom purchasers are apparently ready to take all the Ecuadorian cotton offering, and recently a sale of 121,000 kilos was effected. Another hopeful market is that for oil, in the development of which, notwithstanding some serious disappointments encountered, a considerable amount of British capital is becoming interested. Deeper drilling is contemplated, the two pioneer companies (the Anglo-Ecuadorian Oilfields, and the M.H. Oil Exploration Company) having decided to proceed with further experiments.

The Indian Cotton Crop of 1923-24.—The present crop is officially estimated as likely to produce 5,042,000 bales of 400 lbs, compared with the forecast a year ago of 5,196,000 bales, a decrease of 154,000 bales. But the actual amount brought into sight last season is officially shown to have been 6,270,000 bales, an excess of 1,074,000 bales, or 20.7 per cent., while commercially the present one is estimated at 5½ to 5¾ million bales.

AREA and YIELD in BALES of 400 lbs.
(000's omitted)

Years.	Acres.	Official Feb. Forecast	Approximate Crops.	Excess or Deficiency.	
		Bales.	Bales.	Bales.	%
1916-17	21,745	4,502	4,985	+ 483	10.7
1917-18	25,299	4,036	4,499	+ 463	11.5
1918-19	20,997	3,671	3,991	+ 320	8.7
1919-20	23,352	5,845	5,343	- 502	8.6
1920-21	21,341	3,556	4,941	+ 1,385	38.9
Mean of 5 years	22,547	4,322	4,752	+ 430	10.0
1921-22	18,454	4,479	5,972	+ 1,493	33.3
1922-23	21,792	5,196	6,270	+ 1,074	20.7
1923-24	22,941	5,042	..	..	..

The yield of Oomra descriptions, though less than last season, still accounts for more than half the crop (52 per cent.) and 8 per cent. more than the mean of the five years ending 1920-21. Over a million bales are looked for from Berar and the Central Provinces, the same quantity from Hyderabad and the Bombay Deccan, and over half-a-million from Khandeish and Central India. Of Bengal-Sinde, 850,000 bales (17 per cent.) are expected, 155,000 more than last year, but 137,000 less than the average. The decreased area has evidently been devoted to the production of Americans, of which the present outturn of

237,000 bales (4.7 per cent.) is the largest yet recorded, while the quality is very favourably reported upon. Drought accounts for the poor yields of Dholleras, only 288,000 bales (5.7) being looked for. The supply of Broach (203,000 bales, 4 per cent.) is 78,000 below the last crop, and 56,000 less than the five years mean. Comptas and Dharwars promise well, and the anticipated supply is larger than last season, but below the average. Westerns and Northerns (170,000) are expected to be about the same as last year, but 52,000 bales below the mean. It is satisfactory to see that the yield of Tinnevellys, Salems, and Cambodias is placed at 335,000 bales, compared with 294,000 bales a year ago, and the five years' average of 283,000 bales. With Americans the supply of the best stapled Indian cottons promises to exceed 572,000 bales, and with Broach 775,000 bales.

The distribution of last season's crop, that of the one before and the previous five years' average, is shown below:—

DISTRIBUTION in THOUSANDS of BALES.

	Bales.			Percentage.		
	1921-22.	1922-23.	(a) Average	1921-22.	1922-23.	(a) Average
Exports to U.K.	67	223	153	1.12	3.55	3.22
" Cont. of Europe ..	827	(b) 1,045	402	13.85	16.66	6.33
" Far East	2,197	2,135	1,401	36.78	34.05	29.47
" Other Countries ..	79	(b) 70	45	1.33	1.13	4.07
Total Europe	3,170	3,473	2,001	53.08	55.39	42.09
Home consumption—Mills ..	2,159	2,109	2,039	36.15	33.64	42.89
" Local	750	750	750	12.56	11.96	15.81

Approximate crops	5,972	6,270	4,753	100	100	100

(a) Average 5 years ending 1920-21. (b) Subject to correction.

Of this 6,270,000 bales accounted for last season, 3,473,000 bales (55.4 per cent.) were exported, and 2,859,000 bales (44.6) retained for home consumption, compared with 3,170,000 (52 per cent.), and 2,909,000 bales (48) respectively, the year before. As was the case a year ago, the shipments to the continent of Europe have been wrongly entered. We have reduced the exports to "other countries" from 614,000 bales to 70,000 bales, and increased those to the Continent of Europe from 501,000 bales to 1,045,000 bales. Why the despatches to Germany and Belgium should be added to those of "other countries" and omitted from "Europe," we fail to understand.

The Ministerial Crisis in Denmark.—The composition of the new Folketing, elected last Friday, increases the uncertainty as to the solution of the Danish exchange problem. (The rival schemes of the various parties were fully set forth by our Copenhagen correspondent in our issue of March 29th.) The Conservative-Liberal Coalition, on which M. Neergaard's Ministry rested, has had its numbers reduced by Liberal losses from 79 to 72, while the Socialists and Radicals have increased theirs to 55 and 20 respectively, forming a bare majority of 75 in a House of 149. A recount may make the numbers 74 on each side, in which case the single German member from Slesvig will hold the balance. M. Neergaard's Ministry has resigned, and M. Stauning, the Socialist leader, is attempting to form a Government. The Socialists desire a capital levy, and an extended State control of exchange and foreign trade. The Radical attitude to both seems doubtful. Swiss experience has shown that the flight of capital set up by the proposal of a levy continues after its rejection, because it is found that a better return can be obtained abroad. In Denmark this effect seems likely to be intensified, because the undeveloped resources of the country are not nearly so extensive.

A New Rubber Move.—Details will be announced shortly, writes a Stock Exchange correspondent, and possibly this week, of one more effort that is to be made with a view to "saving" the rubber industry. It seems to owe inspiration, at least in part, to the recent activity of the Commission appointed by the U.S. Government, with power to spend \$500,000, and which has been diligently collecting exhaustive data with regard to the whole in-

dustry of rubber-growing. Besides this incentive, however, the sellers of rubber have also had to face a long-continued dwindling, by eighths of a penny at a time, in the price of the produce. Shareholders have exercised unusual patience. The invitation towards yet another reform has come mainly from within the trade, and half a dozen schemes have been but lately examined by people belonging to inner circles that are not satisfied with prevailing conditions. As is generally known, there exist groups of rubber companies, acknowledging one direction by particular houses, in much the same way as South African mining concerns are frequently controlled by the "shops," colloquially named. But whereas gold can always be sold, rubber, on the other hand, may become a drug in the market. This factor brings down the price, by reason of sales at competitive rates, on behalf of producers; some of them acting under restriction, some of them free; some of them private owners, and others unscrupulously extravagant in their output. At home, jealousy and suspicion have thwarted, time and time again, the efforts of well-meaning reformers who have laboured to reconcile the clash of jarring personal interests. Bitter adversity went some way towards helping to bring about consent to a restriction scheme, but the old trouble still rankles, and the task of uniting the sellers, as the buyers are united, would appear to be as hopeless as it is essential. Nobody has the courage to strike at the real root of the trouble; nobody dares to risk the certain failure which would attend the only scheme that promises success to the industry as a whole, at the expense of vested interests, jealously guarded and closely preserved. Agents for rubber-producing companies possess means of profit other than those of commission and brokerage upon the sale of the output. The companies require stores, machinery, insurance, freight, a score of other things, in the supply of which it would be surprising, and unbusiness-like, if agents were to find no source of profit. To throw the selling of all rubber into one set of hands, presents difficulties that will leap at once to the eye of an imagination which realises the quick fear of one company, or group, lest another may obtain more favourable treatment than is accorded to itself. Central selling might easily prove the first step towards a demand on the part of rubber shareholders for the same principle to be applied to other branches of the industry, such as those already enumerated. Amongst the schemes under present discussion, that proposal has the best chance of general acceptance which, while avoiding the dangerous ground of interference with special interests, will throw a gloss of unity over the sellers. That the present time for action is propitious may be willingly conceded. The American users are uneasy at their unofficial ring of rubber-buyers standing in danger of being deemed an association acting in restraint of trade. This is why they sent over to Europe and the Middle East the Rubber Commission that has lately returned to them. If the rubber sellers cannot—for reasons which shareholders may learn without enthusiasm—agree to the principle of fusion of interests for the common good, then some line of least resistance to the objections may yet be found before it is too late. It is to be hoped that the new movement will be managed by men of experience, freshness of ideas, and superiority to hide-bound prejudice, otherwise it will be doomed to disappoint the mild optimism that is ready to attend its advent.

Manganese Ore.—From an examination of available statistics, writes a correspondent, it seems impossible to escape the conclusion that a world shortage of manganese ore will develop before the end of this year. Manganese is an essential ingredient in the manufacture of high-grade cutting and resisting steel. The manganese ore is first smelted into ferro-manganese, and this alloy is then added in certain proportions to the molten steel. In this country about 2½ tons of manganese ore are used to make up one ton of ferro-manganese, which in turn is the amount required in the manufacture of 100 tons of steel. What proportion of the steel produced in the world in 1923 was steel containing manganese is unknown, but the total steel output of 72,573,000 tons was only 4 per cent. below the output in 1913, which was a record year, whereas the world production of manganese ore in 1923 (estimated at

under 1,000,000 tons) was about 56 per cent. below the 1913 figure. This is the basis of the manganese ore famine. Again, the world's production of steel in 1923 showed an increase of 15 per cent. over that of 1922, whereas the exports of manganese ore from the chief producing countries showed a decline of 22 per cent. over those of 1922. This was mainly due to the falling off in the output of Brazil, where heavy rains interfered with mining. The position in the United States, which is the chief steel manufacturing country, emphasises strongly the danger of a manganese ore shortage. The United States last year produced 44,400,000 tons (61 per cent.) of the world's total steel output. Its production of ferro-manganese in 1923 is estimated at 256,221 tons, and its imports of ferro-manganese at 95,000 tons, a total of 351,221 tons, which are equivalent to the manufacture of 35,122,100 tons of steel, leaving the quantity of steel produced without ferro-manganese at 9,277,900 tons. Now, for the production of 256,221 tons of ferro-manganese the United States domestic production, plus imports of manganese ore, should have been 640,552 tons. Its domestic production of manganese ore is small, so that it would be safe to estimate that 600,000 tons of manganese ore were required from abroad. In fact, only 200,000 tons were imported, so that 400,000 tons must have been withdrawn from stock. The invisible supply of manganese ore in the United States is, therefore, believed to have practically disappeared by the end of 1923. If the production of steel in America continues at its present pace, the shortage of manganese ore this year will be acute. For the first two months of 1924 the United States produced 7,500,000 tons, a monthly rate of output higher than the average for 1923. Even if the output of steel, both in the United States and in this country, slackens off in the course of this year, the production of manganese ore has a considerable gap to make good. The experience of companies in the manganese trade confirms this statistical impression of an approaching famine. Supplies of manganese ore for this year are practically sold out, and supplies for 1925 are already being contracted for. The only manganese ore company with which the London Stock Exchange is familiar is the Central Provinces Prospecting Syndicate, which showed an increase in net profits last year of 60.6 per cent., declaring total dividends of 25 per cent., plus 5 per cent. cash bonus, all free of tax. The outlook for manganese ore companies is distinctly promising.

Argentine Government's Oil Budget.—Few Governments, writes a correspondent, in framing their Budgets, have to estimate such incalculable items as the revenue to be derived from drilling for that most elusive of minerals—petroleum. The Argentine Government has, however, attempted the impossible, not lightly, but wholeheartedly. It has estimated not only the future production from its oil reserves over a period of four years, but the revenue to be derived from refining and disposing of that production. It has made out its oil budget as follows:—

	Production. Tons.	Net Profits. \$
1924	692,000 ..	(14,230,667 loss)
1925	1,140,000 ..	9,031,085 (paper)
1926	1,640,000 ..	14,885,245 ..
1927	2,240,000 ..	24,346,429 ..

Last year it produced 415,557 tons, out of a total for the country of 530,057 tons, so that for 1924 it has budgeted on an increase of 66 per cent. This calls for a very extensive drilling campaign, and an enormous increase in tank storage and tank steamships. On the Government reserve in the Comodoro Rivadavia field 81 wells are to be drilled this year, 106 in 1925, 156 in 1926, and 206 in 1927—in the Plaza Huincul reserve in Neuquen 18 wells this year, and so on. This year's addition to the tank storage is laid down at 156,000 tons. The tanker fleet is to be enlarged by the purchase over the next four years of nine vessels of 10,000 tons capacity. The much-discussed Government refinery at La Plata is now definitely decided upon, its construction is to be begun immediately, it is to be ready for the treatment of 1,000 tons of crude oil per day from the Comodoro Rivadavia field by the end of the year, and its capacity next year is to be 2,000 tons a day. A smaller refinery is to be built at Plaza Huincul. This extensive storage, shipping, and refining programme

covers the estimated requirements not only of the Government, but of the two private companies which are producing in Comodoro Rivadavia—the Astra Company (German) and the Cia Ferro-Carrilera de Petroleo. The production of the Government and of these two companies over the last four years has been as follows:—

	Government Production. Tons.	Private Companies. Tons.	Total. Tons.
1920	226,545	31,964	258,509
1921	277,725	44,330	322,055
1922	348,936	101,264	450,200
1923	415,557	114,500	530,057

Undoubtedly the Argentine Government has set itself a big task, and is keenly determined to carry it out. The success of its past drilling operations both in Comodoro Rivadavia and in Neuquen, and the high yields of its wells, justify its confidence. It only remains for the Government to win the confidence of private oil companies by greater wisdom in its oil legislation. The Bill it has put forward still leaves the granting of firm titles to oil lands in an unsatisfactory position.

The Scottish Provident's Valuation.—Five years ago this life assurance society was obliged to suspend its general distribution of bonuses, and to carry forward the surplus which was available after meeting depreciation of investments. A new investigation made at the end of last year shows a much improved position. After a full examination of the investments £264,710 was written off and £300,000 taken for the purpose from the investment reserve funds. The market value of the assets was then considerably in excess of the values in the balance-sheet, and £300,000 still remained in the investment reserve fund as a provision for the future. The life funds of £17,510,858 were £1,662,772 in excess of the ascertained liability under policies and annuities, and of this surplus £1,409,683 belonged to the common fund and £253,089 to the special endowment assurance fund. Whole life policies, participating for the first time, are to get a reversionary bonus at the rate of £1 8s per cent. per annum (excluding the war years 1914-18), and whole life policies, which have previously participated, are to be allotted reversionary additions of £1 10s per cent. per annum for the five years since December 31, 1918. The bonus on special fund endowment assurances is to be at the rate of £1 18s per cent. per annum on sums assured and existing bonuses in respect of each annual premium paid since December 31, 1918. Intermediate bonuses payable on endowment assurances maturing in the current year have been fixed at £1 16s per cent. In accordance with the society's system for whole life policies in the common fund, the policyholders pay very low rates of premiums, and do not participate in profits until they have earned their right by survival to do so. Under these circumstances the surplus earned and the bonuses declared are highly satisfactory. The new business done last year amounted to 3,601 policies assuring £2,477,038 net, and the funds increased by £257,001 after writing off £264,710 for depreciation. The mortality experienced was less than 72 per cent. of that "expected," and the net rate of interest earned was £4 8s 5d per cent., after deduction of tax.

British Oil and Cake Mills.—The twenty-fifth annual report and accounts of the British Oil and Cake Mills, Limited, will not be received by shareholders with any considerable degree of enthusiasm. Trading profits for the year ended December 31, 1923, "including dividends from allied companies, after adjustment of reserve for contingencies," amount to £267,571, as compared with £322,338 a year ago. In addition to this amount, under the item "interest," £22,039 is brought into the accounts, as against £11,202, while "dividends on investments" provide £50,149, as compared with £60,001 in 1922. Another item of £30,968, "profit on realisation of investments," brings the total of gross revenue up to £371,222, as compared with £399,939 shown in the previous accounts. This profit on realisation of investments, the gross amount of which is £105,968, is arrived at on the sale of £250,000 4 per cent. Funding Loan and £250,000 3½ per cent. Conversion Loan. The report states that "out of this sum £75,000 has been set aside to extinguish the

loss on the margarine business, which has been closed down, and of the balance, the sum of £30 has been transferred to the reserve account." This accounts for the substantial allocation to reserve given in our statistics. A comparative table of the company's results for the past six years, and for 1913, is given below:—

	1913.	1918.	1919.	1920.	1921.	1922.	1923.
Trading profit	£189,860	£333,552	£605,064	£425,267	£349,496	£322,338	£267,571
Net profit	£139,041	£222,008	£604,733	£446,994	£351,083	£335,872	£309,167
Depreciation res., &c.	£72,500	£104,441	£248,922	£32,530	£7,500	£40,000	£76,000
Preference dividend	£34,650	£40,871	£40,871	£40,751	£40,870	£40,870	£40,870
Ordinary dividend	£30,950	£174,766	£312,500	£372,898	£250,000	£251,140	£193,841
Carried forward	(5%)	(15%)	(25%)	(15%)	(10%)	(10%)	(7½%)
	+ 941	+ 1,930	+ 4,440	+ 696	+ 2,712	+ 862	+ 4,455

As will be observed, the dividend has been reduced from 10 to 7½ per cent. The report states that, "During the early part of the year trade was satisfactory and reasonably remunerative. The promise of the first six months, however, was not maintained, and a period of acute depression was encountered during the latter half of the year, when it became impossible to earn profits, and output suffered a considerable reduction." The report, however, concludes in a more hopeful tone, that, "Conditions generally have since shown signs of some recovery." The balance-sheet will be found fully analysed on another page. Investments are down from £999,915 to £626,432, but stocks are up from £691,320 to £954,065.

General Mining Group.—The producing companies under the aegis of this group have now shrunk to four. Of these, writes our mining correspondent, by far the most prosperous is the Meyer and Charlton, whose life, so far as the original property is concerned, is now becoming somewhat short. By the acquisition of the bulk of the City and Suburban area the period of operations has, however, been expanded, although future earnings cannot be expected to rival those of the past. At 256,750 tons, value 12.3 dwts, the ore reserves, as at the end of last year, show a decline of 70,050 tons in quantity and of nearly 1 dwt. in value, as compared with the position a year previously, although 42 per cent. of the ore milled here during 1923 consisted of reclamation material. To maintain the dividend at 100 per cent. for 1922—when, of course, the earnings were reduced by the labour trouble—the carry forward had to be drawn upon to an appreciable extent; hence an expansion of nearly £50,000 to £260,000 in the last year's earnings did not permit any increase in the rate of distribution. The financial position is extremely strong, the surplus liquid assets at the date of the balance-sheet being equivalent to about 15s per share. There seems no particular reason for keeping so large a sum in hand. Thanks largely to reduction in working costs, the Aurora West was able to pay dividends totalling 15 per cent. upon its sealed-down capital—the first returns the shareholders have received. Unfortunately, the prospects cannot be regarded with any degree of confidence. Although the present ore reserve estimate includes several blocks formerly below the limit of payability, the total figures at only 130,100 tons, or no more than nine months' supply for the mill. The West Rand Consolidated is a company whose prospects depend mainly upon ability to operate upon a large scale—for both the property and the capital are big. Last year, 427,800 tons were crushed for a working profit of £45,800, or about 2s per ton. After providing for debenture interest, £32,700 goes forward. This charge, by the way, was suspended for three years from September 1, 1920; two coupons have recently been paid. The ore reserve tonnage of 1,055,000 tons shows little change in quantity, but the value of 5.9 dwts is lower than before. The completion of certain development work should enable a better showing to be made in this year's statement. As to the fourth of the producing companies—the Van Ryn—its accounts are made up to June 30th. Work on the part of the New Goch and Roodepoort United was suspended during the past year. Shareholders in the former should have something to come; the latter is hopelessly in debt to the parent company. The Cinderella Consolidated continues in a state of suspended animation, but negotiations are proceeding with the East Rand Proprietary on the question of an amalgamation or a working agreement.

Oil Plots for Small Investors.—We have received a letter from the British Allied Estates, Limited, enclosing a copy of some printed matter concerning which the casual observer of these things will be mainly intrigued to decide the exact nature. It describes itself as "Oil-Lands News," and "Latest Edition" in bold type at the top helps to convey the impression that it is a newspaper. Other details, however, would suggest that it is perhaps distributed only as the owners think fit. The letter and the printed matter tell us all about an offer of oil plots. We readily admit that everyone has a right to sell oil plots. But the methods used to recommend these oil plots will not commend either the plots or the methods to cautious people. For an investment of £5 is linked up with a "yield of a fortune" in the covering letter. In the printed matter accompanying the letter the work of a master hand is discernible. "How a £5 speculation makes £6,000 in less than a year." To buy a plot "is a good, sound, straight business proposition, with a very small risk, and may make you a fortune." We are quite aware that our readers will smile as they read these lines. But we would remind them that this matter is being sent through the post all over the country; and that it falls into the hands of less experienced investors. Finally, the finishing touches are given in the intimation that "no individual can purchase more than ten plots." We wonder what happens to the applicant for eleven plots! On the letter the name of Sir Alexander Spearman is given as chairman of the British Allied Estates, Limited. Sir Alexander, however, informs us that he has severed his connection with the undertaking, and has requested those responsible not to use his name any further.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that the dry weather has allowed cultivation and sowing to proceed rapidly, although on the heavy soils harrowing and sowing could not be begun early in the day owing to the frosts. In the extreme North the frosts of the first half of the month were sufficiently severe to hold up cultivation. The land has worked exceedingly well, and good tilths have been obtained, heavy land working better than for many years. Spring work is consequently well in hand, and sowing is more forward than usual in many districts. In the South and East many farmers have finished drilling corn, but in the North little seeding has been done as yet. With the cold weather germination has been very slow, and hardly any spring corn was showing at the end of March. The preparation of the land for potatoes is well advanced, but in most counties very little has yet been planted, although in the chief potato-growing districts in the Eastern counties planting was in full swing at the date of the reports, and some first earlies have been got in in most parts of the country. The frosts and cold winds have affected winter corn adversely, and the crops generally do not look so well as a month ago. Over the greater part of the country lambing is now well advanced, except among hill flocks. The fall of lambs has been about average, and losses have not been heavy, except in a few districts where the lambs have suffered from the severe cold. There has been no young grass for the ewes, and many have consequently been short of milk, with the result that their lambs have not made very good progress. As a rule, however, the lambs are healthy. Hill sheep have lost condition during the cold weather of March, and lambing prospects are consequently not so favourable as a month ago. Outlying stock have required much hand-feeding, as pastures have been brown and bare. Where the amount of fodder supplied has not been ample cattle have gone back in condition, while sheep have not done well in districts where roots have been scarce. On the whole, however, both cattle and sheep are healthy. In spite of the long winter there are still fairly good supplies of hay in most districts, but roots are about finished. The supply of labour continues ample for requirements. There is less unemployment than a month ago, casual workers being taken on for seasonal work, potato planting especially providing additional work in some districts.

Oversea Correspondence.

UNITED STATES.—TRADE AND INDUSTRIAL CONDITIONS—ADVANCE IN RAILROAD SECURITIES—TAX REDUCTION OUTLOOK—SHIPPING LEGISLATION.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 4.

TRADE and industry in the United States are marked by irregularity, and business, as a whole, is only fairly active at present. Returns for the month of March show that there was some falling in the volume of business in various directions, as compared with February, or with March a year ago, notably in sales by mail-order houses, in pig-iron, and automobile production, car-loadings and bank clearings. Notwithstanding, trade and industry generally have not dropped very far behind the remarkable activity of the first quarter of 1923. Sales by two of the leading mail order houses last month totalled \$31,450,000, approximately, representing a gain of about 3 per cent. over February, but a decrease of nearly 4 per cent. from March of last year, while sales for the first quarter of this year, aggregating some \$92,425,000, show an increase of 7 per cent. over the like period in 1923. Car-loadings for the week ended March 22nd declined about 1 per cent. from a year ago, but for twelve weeks this year the increase is close to 3 per cent. The pig-iron output for March amounted to 3,461,132 tons, showing a gain of 12 per cent. over February, but a loss of 1.7 per cent. from that of March, 1923, while production for the first three months, 9,554,000 tons, is 2 per cent. below that of the corresponding period of last year. Estimates place the automobile output in March at 356,500 cars and trucks, a decrease of 10,900, or roughly 3 per cent. from February, but comparing with 355,030 in March of last year. The Easter season is later this year than it was in 1923, which accounts in a measure for the backward spring trade, notably in textiles and apparel lines. Bank clearings have shown irregularity during the first quarter. Moderate gains were recorded in January and February, but there was a slight decrease last month, as compared with a year ago. For the first quarter, total clearings show a gain of 2.8 per cent. over a year ago. Business failures in March numbered 1,652, an increase of 5 per cent. over February, but a decrease of 1.4 per cent. from March, 1923, and of 28 per cent. from March, 1922. Liabilities for last month totalled \$61,327,601.2, a decrease of 18 per cent. from February, and only 6,434.2 half of those for January, but 1.1 per cent. in excess of those of March, 1923. Failures for the first three months of this year numbered 5,455, showing a slight increase over the first quarter of 1923, but a decrease of 1 per cent. from the corresponding quarter of 1922. Agriculture, liabilities for the first three months, however, were \$259,070,323, breaking all records for that period, and were 70 per cent. larger than in the first quarter of 1922. One of the most encouraging features of the March economic general is the steady reduction in total liabilities, as compared with preceding months when there were numerous suspensions of banks in the North-West and elsewhere.

In the securities market the outstanding feature this week was the increased activity, at rising prices, of railroad shares, which for some time past have been comparatively neglected. Under speculative buying, and also steady accumulation by investors, sharp advances ranging from 1 to 4 or more points were recorded among the rails on different days, and at times that group became decidedly buoyant. The main factor responsible for this increased strength was the exceptionally large earnings which various carriers have reported for February. Returns thus far published indicated that the total net operating income of all Class I. railroads in that month will approximate \$60,000,000, as compared with about \$38,000,000 for the same month a year ago. Annual reports for 1923, which have been issued, also make unusually good exhibits, as a rule. The Pennsylvania Rail-

road system, for instance, showed gross earnings of \$721,397,408, an increase of 11.6 per cent. over 1922, and net income of \$51,538,078 after taxes and other charges. That sum was equivalent to \$5.16 a share earned on the company's capital stock, as against \$32,382,058, or \$3.34 a share, in 1922. As to the general railroad situation and outlook in this country, the views expressed by Samuel Rea, president of the Pennsylvania Railroad, in that company's annual report, published a few days ago, are interesting. With any certainty that the carriers will be given a chance to continue earning sufficient net returns to maintain sound credit, and freely to exercise their initiative and managerial skill, the public, he says, may be assured of a constantly higher plane of transportation service, and a continuance of the United States standard of giving "the most efficient and cheapest transportation service in the world, while paying the highest wages," and large amounts in taxes. However, such results, he warns, "cannot be continued under a policy of restrictive legislation and regulation, and returns even below the 5½ per cent. upon the investment in road and equipment fixed by law as reasonable, with provision for the recapture of one-half of any excess over 6 per cent., if a railroad system should exceed that return in any year. The exercise of this recapture provision on one year's results, and without any plan by which the deficiencies of prior or subsequent years can be made up, is also bound to prove unsatisfactory." The United States, Mr Rea declares, maintains a contradictory transportation policy, which business men and citizens, as a whole, apparently have not, as yet, fully appreciated. "On the one hand," he points out, "railroads have not been allowed freedom to earn a fair return on the investment in the railroads, equipment and facilities which their owners have provided for public use and benefit, while, on the other hand, hundreds of millions of dollars are appropriated for highways, waterways, and other improvements which have a relation to transportation, but their cost must be borne by the taxpayers, including the railroads. It is equally contradictory," he adds, "to find that, while the other provisions of the Federal Transportation Act of 1920 can be enforced, the 5½ per cent. return upon the value of the railroad property, fixed as a fair return for the railroads, has not been realised by over \$1,000,000,000 since the Act was passed."

The outlook for tax-reduction legislation by Congress is somewhat brighter. President Coolidge has strongly urged the speeding up of business, and leaders of both political parties in the Senate have given definite promises that some measure to lower taxes will be passed. Present indications are that the lower House will adopt a tax reduction Bill, which in pre-arranged features will closely follow the plan outlined by the Treasury Mellon, and supported by the Senate. However, even if the Senate passes such a Bill in the near future, that Bill and the one already passed by the House of Representatives, will have to be net, and by a conference committee of House and Senate, off a compromise Bill acceptable to both bodies. was less course, problematical how much time may be net rate, effect such an agreement, and it also remains to deduct whether or not the Bill as finally passed by Congress assuming that some tax-reduction measure will be net—will meet with the approval of President

Under the provisions of a Bill passed by the House of Representatives this week, the United States Shipping Board would be authorised to spend not more than \$25,000,000 for the conversion of Government-owned merchant vessels into Diesel-driven motor ships. This fund would be obtained partly from such money as may be appropriated for reconditioning, and the balance would come from the present construction loan fund. It is stipulated in the Bill that the Shipping Board must have a customer for the ships, the terms of the sale being set forth in the Bill, or a time charter for the ships of not less than five years, before the funds made available are used for the purpose indicated. The Board must also place the vessels in actual operation in foreign service. The conversion of ships into motor vessels has long been advocated by the Shipping Board. The Bill has not yet been passed by the Senate.

SPAIN.—THE DEFICIT—DEBT REPLACEMENT—CAPITAL ISSUES—EXCHANGE TROUBLE.

(FROM OUR CORRESPONDENT.)

MADRID, March 31.

THE financial year, which ended on March 31st, has recently been altered by the Government to finish on June 30th, undoubtedly with the object of finding the necessary time to prepare a new Budget. In the meantime, the information relating to the probable results of the present Budget is increasingly favourable, as, according to official statements, during the six months of Military Government the deficit has been reduced by 300 million pesetas, i.e., about one-third of the 1922-23 figure, which amounted to 930 millions on the wrong side. Morocco expenditure is the greatest unproductive burden which weighs upon the country, and has prevented, to a great extent, the balancing of the Budget; but this also shows an improvement in comparison with the two previous years, according to the following figures:—

	Nine Months.	Total Expenditure in Morocco.
1921-22 (April-December)	332,003,740	Pesetas.
1922-23	295,569,524	
1923-24	201,099,509	

If State finances look much better, foreign trade does not show any improvement. The official data is greatly in arrears, the latest figures being for September, 1923, but for the nine months up to September the adverse balance was 1,078 million pesetas. As the business outlook rather points to stagnation and increasing difficulties since September last, it is probable that our trade balance for the year will not be very short of last year's record of close on 1,600 millions.

In considering Spain's economic position one must bear in mind that it is not an industrial country, but an agricultural one, which is largely self-sufficient in the necessities of life. Spain has not to import wheat, meat, sugar; her main exports are wine, olive oil, fruits, and in the lesser amounts potatoes, rice, and vegetables. It has all the coal it wants (only having to buy the best qualities for special purposes), and very large mineral wealth, especially in iron ore. But in spite of these two essential factors, she has been unable yet to build great industries, and has to import all sorts of manufactures, even agricultural machinery. However, owing to the self-contained character of its economic structure, the foreign trade volume is small in relation to the national wealth; and favourable or adverse balance of trade, monetary depreciation, and other economic factors are of far less importance to the general internal welfare in Spain than in a country like England, whose food and very life are mainly dependent on foreign trade and world finance.

Large amounts of short term debt fell due in January and February last, and were renewed without difficulty. On January 1st Treasury Bonds for 1,254,893,000 pesetas matured, and were exchanged for new Treasury Bonds 5 per cent. at one year. On February 4th 1,095,406,500 pesetas fell due, and were replaced by two years Treasury Bonds, with 5 per cent. interest and a premium of 1 per cent. at maturity. After these operations the composition of the short term Debt is as follows:—

	Pesetas.	Due.
Treasury Bonds, 4½ % at 6 months....	356,202,000	April 15, 1924
Do 4½ % at 6 months	21,830,500	May 4, 1924
Do 5 % at 1 year.....	978,169,500	Nov. 4, 1924
Do 5 % at 1 year, without bonus.....	1,254,893,000	Jan. 1, 1925
Do 5 % at 3 years, 1 % bonus	1,095,406,500	Feb. 4, 1927
Total	3,746,501,500	

It is expected in financial circles that the coming maturities of April 15th and May 4th will be dealt with in similar manner, being replaced by four-years Treasury Bonds at 5 per cent., with a premium of 1 per cent. at maturity, so as to establish a gradation in the future maturity dates. Of course, no refunding into long term Debt is contemplated for the present, owing to the unfavourable position of the money market. When dealing with the coming renewals the Government will find itself in need of new funds to cover the Treasury requirements, so that there will probably be a fresh issue of bonds for about 300 million pesetas on the same terms.

In view of the absorption of the greatest part of the country's savings by the State, the following figures of capital issues in 1923, compared with previous years, are interesting:—

	Capital Issues.
In 1919 (nominal)	2,454,081,000
" 1920 "	1,825,622,000
" 1921 "	3,211,190,000
" 1922 "	940,237,000
" 1923 "	1,327,361,000

The year 1921 was the high-water mark, in respect of which last year's figure is only about 41 per cent., although 380 millions higher than in 1922, which was the worst year of the post-war period. Out of the total for 1923 the Government took, in Treasury Bond issues, 916.8 millions, i.e., 69 per cent., and Municipalities 61 millions, leaving only for private industry 349 millions, i.e., 26 per cent. The rate of interest was 4½ at 6 months and 5 per cent. a year for the State, 5.50 and 6 per cent. for local boards, and 6 per cent. nominal for nearly all industrials.

The recent trouble in peseta exchange was started here by absolutely false reports published in the foreign Press about great disasters in Morocco. This news was reported in the French newspapers to have been sent by radio from a small craft of unknown nationality outside Tangiers waters. Whatever the truth, the fact is that the pound rose from 33.77 pesetas in the middle of February to 35.22 on March 5th. After wild fluctuations the peseta then regained its level, the pound falling more than one point in one day, March 13th, from 34.40 to 33.31, and later on to 32.85. There came, naturally, the meddling intervention of the Government, who simply prohibited all time transactions and the buying of exchange unless it were to pay for goods imported. Only 5,000 pesetas can be paid on foreign letters of credit, and the same amount is the maximum that travellers can take with them in currency when leaving Spain. A commission has been appointed to authorise other exchange transactions, but has been unable to start real work, and finally the bankers have addressed a communication to the Government asking for a clear definition of the transactions that should be allowed as legitimate and necessary for business relations and intercourse with other countries, and it is expected that the confusion will be soon cleared up. But in the meantime exchange transactions within the country have been brought to a standstill, and practically nothing is done.

There is yet no explanation of the causes of this inroad on the peseta, as all the factors remain practically the same as before; we have no inflation; the deficit is getting better and the economic balance is about the same, so that only political factors add so-called technical opinions about the position of the country can account for it.

AUSTRIA.—DEFICITS COVERED—FINANCE AND TAXATION—INDUSTRIAL POSITION—STOCK MARKET SLUMP.

(FROM OUR CORRESPONDENT.)

VIENNA, April 1.

AFTER the resolutions passed in the recent session of the League of Nations, it can be taken for granted that the League's control will be extended after this year. The Social Democrats and the German party had pressed the Government to do its best to bring about the termination of the Commissioner-General's activity this year. Dr Seipel half-heartedly sounded the ground to this effect, and probably was very much relieved by the decision that the control shall for the present be maintained. Without the Commissioner-General the Government would have to endure much stronger attacks by the Social Democrats, and probably also the question regarding the payment of reparations would be much sooner broached if the completion of the Austrian reconstruction programme should be declared too early. At this moment Austria is passing through a very serious economic crisis, which is rendered still more acute by a crisis on the Stock Exchange, the reactions of which may endanger State finances. At such a time it may be felt as an advantage that the followers of the Social Democrat party should gradually become aware

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER
President
STEVENSON E. WARD

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits \$13,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

that their fate is closely connected with that of their employers.

In November and December, for the first time since the beginning of the reconstruction, it became possible to clear off the deficit, as is shown by the following items:—

	November, 1923.		December, 1923.	
	Estimate.	Actual.	Estimate.	Actual.
Revenue.....	486,859.7	608,841.3	494,728.3	688,735.4
Expenditure.....	596,265.6	564,058.6	578,018.9	652,301.2
Surplus	..	44,782.7	..	36,434.2

If it proves possible to maintain a surplus during coming months, the balance of the League of Nations' Loan might then be used not only for clearing off the deficit, but also for investments, especially for the construction of hydro-electric plants, and for the improvement of agriculture, which are the only means by which the present unfavourable balance of trade can be gradually improved.

It is some time since the general outlook of the economic situation was so dark as at the present time. General stagnation prevails not only in home trade, but also in export trade, and, in addition to this, the crisis, which has been hovering over the Stock Exchange for some months has, during the last two weeks, led to a serious slump. In view of the high deficit of the balance of trade (724 million goldkronen in 1923), the Government will try to cut down imports by issuing a new tariff bill. Higher tariffs will certainly hamper some imports; they will, however, not remedy the fact that production in Austria is very expensive. Owing to the pressure of the Socialists, the burdens on employers for social purposes, such as the different kinds of insurance funds, charity and sick funds, child maintenance, &c., have risen by leaps and bounds during the last two years, so that they now reach 26 to 30 per cent. of the wages actually paid. In spite of the fact that Austria is an impoverished country, the Social Democrats want it to lead the way in social reforms. Taxation has assumed such grotesque forms that an enterprise which would submit an honest tax record would be practi-

ally ruined. The income-tax for joint-stock companies, for instance, amounts in some cases to 89 per cent. of its earnings. For some time the present Finance Minister did not dare to take any regard of the position of industry and trade because he was afraid that the Socialists might reproach him with protecting capital. Now, however, under pressure of the heavy slump on the Stock Exchange, he is obliged to own that the Austrian companies must be placed in a position of paying higher dividends. The doubling of the stocks and shares turnover tax made last month was cancelled a fortnight later, and now the income-tax will be considerably reduced.

The result of the present negotiations for a new commercial treaty with Czecho-Slovakia will be of the greatest importance for the shaping of industrial conditions in Austria. The Austrian negotiators are endeavouring to obtain notable reductions in the Czecho-Slovakian Customs duties which, calculated in pre-war kronen, are about three to four times higher than those of the former Austro-Hungarian Monarchy. In the meantime, the situation of Austrian industry is becoming more and more serious. Some branches have already to sell under production costs in order to keep works going. The bi-annual fair held in March brought in remarkable orders, but only for a few branches of industry. The building activity has also fallen short of expectations, and the number of unemployed has again increased from 119,613 in February to 126,734 in March.

As already mentioned, the depression, which has for some months prevailed on the Vienna Stock Exchange, developed into a heavy slump during the last fortnight. Three factors were the direct cause of this turn: (1) The sudden rise in the French franc, (2) the doubling of the stocks and shares turnover tax, (3) the new Czecho-Slovakian foreign exchange regulations which render "arbitrage" between Vienna and Prague very difficult. In many cases quotations have fallen 50 per cent. as compared with the boom period. Although it can be said in general that the rumours spread by the Press about the losses are exaggerated, it is a matter of fact that the Vienna market has not for many years lost so much as during the last fortnight.

The money market last month was entirely under the influence of the speculation in French francs. Business was all the more brisk because orders from all the Succession States converged on the Vienna market. Speculators were, of course, badly hit by the rise in the French franc, but the Vienna banks greatly profited by the large amount of transactions. The English pound showed practically no fluctuation.

JUGOSLAVIA.—STATE FINANCE—MONEY MARKET—TRADE.

(FROM OUR CORRESPONDENT.)

BELGRADE, April 6.

THE passing of a regular Budget for 1924-25 on March 30th, after a long period of "twelfths," marks an important date in the consolidation of Yugoslav State finances, which have shown lately unmistakable signs of strengthening. State receipts continue to exceed expenditure, receipts for the period July-October, 1923, being 3,233 million, and expenditure 2,500 million dinars, giving a surplus of 665 million dinars. Further, the transfer of the last instalment of gold reserve from the late Austro-Hungarian to the Belgrade National Bank has increased the covering of the latter, which at the end of March amounted to 440 million gold dinars, as compared with 350 million a year ago. The minting of about 200 million dinars to replace small paper change is being contemplated by the Government. At the same time deflation is being vigorously pursued, and a steady contraction of the paper in circulation has been taking place ever since September, 1923. End-of-month returns for the last six months read:—September, 5,928 million; October, 5,880; November, 5,826; December, 6,790; January, 5,773; February, 5,697; March, 5,585 million paper dinars.

The lease for 50 years of the State domain of Belye has attracted considerable attention, and eight offers, three of which were foreign (one Anglo-Yugoslav), were made. Belye is an estate of 86,000 acres, which produces

cereals, sugar, cattle, wine, dairy produce, and fish, and possesses its own mills, sugar and other factories, slaughter-houses, railway, &c. If scientifically managed, Belye could yield a net profit of 300-500 million dinars per year. Since the State could never make a greater profit than 60-70 million, it has decided to lease it, in order to increase its revenue. The stabilisation of finances is also reflected in the firmness of the dinar, which improved after the conclusion of the Italian treaty from 370 to 350 to the £. At present it seems likely to stabilise around this figure for some time, because prices in the country (if we include freights and Customs) are very near world parity; unless a break in prices occurs, any large improvement in the currency would seriously affect export.

There are signs that the monetary shortage has passed its worst crisis. The rate of interest is now nearer 20-25 per cent. than 25-30 per cent., as it was six months ago. Negotiations with an American-Dutch-English group, conducted through Vienna, for a loan of £1,500,000 have failed, owing to the Government's refusal to give the required super-guarantee, and to sanction the rate of interest, which was 13 per cent. for the first year and subsequently 11 per cent. On the other hand, there is a steady influx of foreign money through Vienna and Prague, which is being invested in industry, and the State Mortgage Bank has succeeded in concluding its loan for building purposes with the Swiss Bankverein, and to increase the amount from 10 to 15 million Swiss francs. The rate of issue is 80 (the Swiss tax of 1 per cent. is paid by the Bankverein), interest is 7 per cent., and the loan is to be paid up by April 15th, while it is repayable within 12 years.

The money shortage is bringing about fundamental changes in the economic structure of the country. On the one hand, the small craftsman and artisan, the remnants of the feudal Turkish system, are unable to sustain the competition of large industry and beginning to die out. On the other hand, quite an advanced phase of capitalism, in the gradual concentration of big business and banks, is also taking place. The Jadranska (Adriatic) Bank is to fuse with the Podunavsko Drustvo (Danubian Company) into the Jadransko-Podunavska Banka with a joint capital of 120,000,000 dinars and a reserve of 32 million. Similar negotiations are taking place between several other banks, of which the most important are for the fusion of the Kreditna and Slavenska banks. In addition, the intended foundation by the State of an Agrarian Bank for providing credits for farmers and healthier financing of the villages, should be mentioned.

Trade statistics for 1923, as compared with those since the Armistice, throw interesting light on the development of Yugoslav commerce:—

Year.	Exports.		Imports.	
	Mil. Dinars.	Tons.	Mil. Dinars.	Tons.
1919	687	282,679	2,974	154,038
1920	1,321	915,186	3,419	418,673
1921	2,461	1,583,658	4,058	686,982
1922	3,691	2,313,881	6,331	1,093,982
1923	8,049	3,025,914	6,136*	782,000

* Nine months.

Export for 1923 shows an increase of 118 per cent. in value and 36.67 in tonnage over 1922.

NORWAY.—BANKING DIFFICULTIES—AUTUMN ELECTIONS—STOCKS AND EXCHANGES.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, April 10.

THE question that dominates the economic life of this country is the huge strike and lock-out, which has lasted for over seven weeks. There seem to be no signs of a settlement in view as yet; at any rate, work will be suspended till after Easter.

The liquidation of the financial difficulties of the banks is going on. Enormous sums have been written off since the process began in 1921, estimated at about 600 million kroner. Some of the biggest banks have been reduced to small dimensions, and in one case it is considered doubtful whether there will not have to be a winding up. As for the others, there is reason to believe that they will

be able to carry on in a modest, but safe way. These losses, coupled with a great augmentation of the State and municipal budgets and debts, certainly make the financial ship of the country struggle very hard to weather the storms, and the labour troubles which the country shares with the rest of the strike-smitten world do not make the voyage easier. But a sense of the need of economy and thrift no doubt has impressed the leaders of public affairs, as well as of a great deal of the public themselves, and this will go a long way to straighten matters.

Already signs are observed of the coming struggle for the power at the parliamentary elections next autumn. The Labour parties—which may be considered as numbering three—viz., the old Socialists, a Communist party of a somewhat nationalistic colour, and one absolutely subject to Moscow—are trying to unite so far as to show a common front at the campaign and at the elections; but so far they seem too hostile to one another for joint action.

The stock market, as might be expected, is dull, and though industrials—strange enough, considering the protracted strike—keep comparatively firm, the main level is lower. This is chiefly due to the reduction of bank values. The foreign exchange market shows little alteration; if anything, the krone has shown a little improvement lately as related to sterling and dollars.

The price-level for March is practically unaltered. The index of wholesale prices of the *Farmand* shows a gain of one point—viz., 260, as against 259 in February (1913 being 100).

UNION OF SOUTH AFRICA.—ALLUVIAL DIAMONDS AND MINED DIAMONDS—OLD MINES AND LEASE AREAS—RELATIONS OF UNION AND PROVINCIAL GOVERNMENTS.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, March 12.

MR P. ROSS FRAMES, who has succeeded Sir Thomas Cullinan as chairman of the Premier (Transvaal) Diamond Mining Company, devoted a considerable portion of his remarks at the annual meeting held last week to the increasing production of diamonds from the Congo and Angola, as well as from British Guiana. But regrettable as this may be from the South African diamond producers' standpoint, it is a state of things which cannot be prevented. It is otherwise with the growth in alluvial diamonds from the Cape, the Transvaal, and Orange Free State. At the De Beers meeting Mr Frames drew attention to the suicidal policy pursued by the Government of the Union "in proclaiming new diamond fields without due consideration or any reflection as to the effect on the diamond industry generally, and particularly on that very appreciable portion of the State's revenue derived from diamonds." Reiterating the same complaint at the Premier meeting, the chairman referred to the "anomaly that the Union Government was apparently competing against itself by constantly proclaiming new alluvial areas, notwithstanding its big interest in the Premier mine and the larger income in taxation from other mines." In January, he pointed out, the production of alluvial fields was valued at £171,622, being at the rate of something over £2,000,000 per annum. This is a substantial increase on the yield for 1923, which was returned at £1,657,839, representing about 12 per cent. of the total caratage. But as the value of alluvial stones was much higher, namely 135s 8d per carat, as against 48s 7d for mine stones, the alluvial production represented last year about 27½ per cent. of the value of the Union's production of diamonds. In 1914 the weight of alluvial stones was only about 5 per cent. of the total, and the value about 10 per cent.; in the boom year, 1920, alluvial production constituted about 9 per cent. of the total weight, and close upon 17 per cent. of the value.

Alluvial stones do not constitute so serious a competitor when markets are good, but the pinch is felt when the demand is restricted. From the Government's point of view it may be urged that it is necessary to obtain all the revenue possible from the export of stones. But too lavish proclamation of alluvial areas must tend to reduce the prices obtainable when the demand is "slow." The

interests of the Government and producers are largely identical, and there is evidently scope for a modified policy. The share of 60 per cent. accruing to the Government of the profits of the Premier mine since its inception has amounted to £6,114,093, while income-tax since 1915 has amounted to £132,336, dividend tax since 1917 £145,862, registration and export duty on diamonds £662,251, or a total paid to the Union Government of £7,052,542, besides £3,298 in employers' tax paid to the Provincial Government. Mr Frames was careful to say that he was not complaining of the Government's getting a fair share out of the mineral wealth of the country, which was a perfectly sound policy. Sir Thomas Cullinan, the founder of the company, has resigned from the board, to the regret of his colleagues, and severed his connection with the company. No explanation has been vouchsafed.

We seem to be approaching an era of resuscitation, if, indeed, we have not already reached it. Most important of a series of similar acquisitions and arrangements is the leasing of 542 claims from the Government by the Simmer and Jack Company. This will extend the life of "profitable mining operations from about two and a half years to 17 or 18 years, which may be further extended by acquiring additional ground from the Government," if desirable. It is rather curious that the area should ever have been relinquished. Though it may have been necessary to have placed the Simmer Deep Company (the former owners) in liquidation, a modest holding syndicate might, one would have thought, have been formed to retain the claims. Instead of that, the Simmer Company will have to pay a royalty of 5 per cent. of the profits to the Government, which will amount to a considerable sum over the lengthy period. It is expected that the Geldenhuis Deep will, in similar fashion, take over the old Jupiter area. The Jupiter's recovery was 5.2 dwt, which is about ½ dwt better than the recent results at the Geldenhuis, but it must not be forgotten that, with a view to combating the ever-advancing range of working costs, selective mining was indulged in for some considerable time before the mine was obliged to close down. It was recently reported in the Senate that the under-mentioned companies had applied for leases of ground in terms of section 1 of the Transvaal Precious Minerals Act:—

Applicant.	Farm on which Area Applied for is Situated.
(a) Simmer and Jack Proprietary Mines, Ltd.	Elandsfontein No. 6 and Elandsfontein No. 11.
(b) Village Deep, Limited.	Turffontein No. 19 and Klipriviersberg No. 25.
(c) Modderfontein East, Limited.	Welgedacht No. 2.
(d) Rose Deep, Limited.	Elandsfontein No. 11 and Driefontein No. 12.
(e) Geldenhuis Deep, Ltd.	Doornfontein No. 24.

The application of the Modder East is for 300 claims, but, apart from the Simmer and Jack referred to above, the areas in other instances have not transpired. There are also revivals in the West Rand area.

Owing to opposition of the Provincial Executives, chiefly that of Natal, and to the fear of losing adherents and votes, the Union Government has decided not to carry out the Baxter-Aiken report on Provincial finances, but has introduced a very modest, not to say emasculated, Financial Relations Bill, which will do but little to curb the extravagances of these minor Parliaments. Heavy deficits continue to be the order of the day, that of the Transvaal being £258,400, of which it is proposed to provide £200,000 by loan, and to endeavour to meet the balance by reduced expenditure. Revenue has fallen by £87,000, and expenditure has been reduced by £106,450. It has been decided to spend £20,000 on the repair and maintenance of the Main Reef road, the chief artery between Randfontein, Johannesburg, Benoni, and Springs, the present state of which one of the East Rand members described as "a disgrace to any civilised community."

NEW ZEALAND.—HIGHER WOOL PRICES—GENERAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH (N.Z.), February 11.

THE anticipated rise in the price of wool has been more than achieved throughout the season, and the prices for all varieties of wool remain high, and in some cases at a record level. Though wool is no longer the chief export of the Dominion, it still remains of tremendous importance, and the rise in its value means a great deal, not only to sheep farmers, but to the whole community. There are comparatively few farmers who do not have a few sheep at least, and there still remain great stations where the thousands and tens of thousands of sheep are the only assets. In greater or less degree, therefore, the farmers are reaping benefit all over the Dominion, and it is reported that in some cases past years' clips that have been in store are now being sold.

It is difficult to calculate in advance of official figures how much extra purchasing power will accrue to the Dominion through the rise in prices. In 1922 the export value of wool was £10,904,649, but the quantity exported in any year is difficult to estimate in advance, since variations in shipping and in weight of the wool make such estimates unreliable. During the present season there has been a great deal of dry weather, and in many districts a shortage of feed, so that the clips will probably be lighter. The extra prices may mean to the Dominion between two and three million pounds sterling, but it is probable that the indirect effects of the rise will be more important than the extra purchasing power brought into the country.

So far there has been no tendency for prices of the other exports to follow that of wool, and the very dry season has resulted in a diminution of production. A considerable shortage of wheat might have caused higher prices, but the guaranteed price has been extended to this season, and a rise averted in that way.

The chief exports in New Zealand at the present time are butter and cheese and their allied products. There has been a steady tendency during the last twenty years for dairying to gain at the expense of sheep-farming, and it is probable that that tendency will continue. During 1923 the total value of dairy produce exported was again considerably higher than that of wool, reaching £18,255,204, a figure considerably above that of 1922, though less than the year of boom prices, 1921.

The prices of butter, cheese, meat, hides and other pastoral products are for the most part stable, so that there is some danger of the higher wool values leading to an exaggeration of the optimism that always follows a rise in prices. During 1923 there was a considerable over-importation, particularly of such articles as motor-cars, where the agency system leads to regular importations under contract irrespective of the state of the market. In order to secure the agency of a well-known make of car, local firms must agree to take a minimum number of cars monthly over a period of perhaps years ahead. This is only one instance of the difficulty of adjusting imports and exports in an isolated country such as New Zealand. Where contracts enter more and more into commercial transactions, and buying has to be done by numbers of independent importers considerably in advance of the market, there is always a danger of miscalculating the probable demand. Especially is this the case where, as in New Zealand, that demand of the consumers depends directly and almost completely upon the export markets and the purchasing power which they make available. The trade figures for 1923 show a small balance of exports over imports of just over £2 millions, but this is inadequate to discharge the Dominion's obligations abroad, and it is clear that over-importation has taken place.

The heaping up of purchasing power during the boom and the subsequent over-importation resulting in stringency during 1921 are clear. Though the intervening quarterly figures for 1922 and 1923 show a contraction of advances (except for a seasonal drain at the end of the year) the trend of the advances in the later months of 1923 has undoubtedly been towards a loosening of credit and over-importation. The rise in the price of wool will probably be taken as justification for further imports, but

the amount of purchasing power which it will bring to the country is comparatively small, and there is real danger that the psychological effect will be harmful in the end by leading business men to modify the cautious policy that saved the Dominion from the worst effects of the slump.

Letters to the Editor.

DISCRIMINATION IN LENDING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I ask a question about your article, "Discrimination in Lending"? You seem to suggest that the consequences of the flotation in London of a loan like the recent Amsterdam loan are in some way different from the nervous movement of British investors into American securities alleged to have occurred last autumn. Do I misunderstand you? If not, what is the difference?

Did you welcome the so-called "flight from the pound" last autumn on the ground that it would stimulate our export trade? If not, should you not have done so on the principles you now enunciate?

Personally, I think that there is a good deal of muddle in circulation about the supposed advantages of the prevalent type of foreign investment, and I believe that the City Editor of the *Times* was more nearly right than you allow.—Yours faithfully,

J. M. KEYNES.

April 14th, 1924.

[We will deal with the points raised by Mr Keynes next week.—Ed., *Economist*.]

BELGIAN POLITICS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The discussions about Belgian politics in your columns are inconclusive, because they do not sufficiently take into account that the Belgian interior and exterior politics are dominated by the central fact that Belgium is composed of two nationalities—Walloon and Flemish, the latter of which, owing to the constitution of Belgium, cannot attain a sufficient expression of its personality.

Amongst the Flemish representatives in Parliament, there exists a strong majority which would desire the Government to pursue a policy of more justice toward Flemings in interior politics, and a more independent line of action in foreign policy. However, this majority of Flemish opinion is always swamped in Parliament by the coalition of the minority Francophile-Flemish elements with the Walloons. This situation has caused certain radical Flemings to consider our present constitution as an instrument of oppression for the Flemish people. They advocate a thorough change in our internal organisation in order to give Flanders and Wallonia separate Parliaments, as in the present circumstances a very small minority of de-nationalised Flemings, by voting together with the Walloons, will always succeed in rendering impossible the realisation of the aspirations of the Flemings by parliamentary methods.—Yours truly,

VAN VARENBERGH.

Antwerp, March 31st, 1924.

DEFLATION IN PRACTICE.*

IN this interesting and careful study Professor Rist examines the monetary experiences of the past few years in England, the United States, France, and Czechoslovakia, in order to ascertain how far *a priori* conceptions of the working of deflation are confirmed in practice. He reaches the conclusion that the mechanism by which the value of the monetary unit is re-established in a country which has suffered from inflation is more complicated than was commonly supposed.

The popular theory of deflation counts on the reduction of the means of payment to lower the internal level of prices, and on this lowering in turn to raise the rate of exchange.

Experience shows that things do not work in this way. Deflation by itself does not act upon the level of prices, or only acts upon

* "La Déflation en Pratique." By Professor Charles Rist. (Paris) Marcel Giard. 1924. 15fr.

it with extreme slowness. It is an illusion, therefore, to count upon this method to raise the rate of exchange.

On the contrary, it is the rate of exchange which to-day exercises the most immediate influence upon the internal level of prices. And it is itself in close relation with the financial situation, the equilibrium of the Budget, and the stoppage of inflation.

The statement that "deflation by itself does not act upon the level of prices, or only acts upon it with extreme slowness," is certainly arresting. From the later discussion, however, it seems that the author is here using the term "deflation" not in the sense which he distinguishes in the first chapter as "radical deflation" (signifying destruction of purchasing power with prohibition of putting it into circulation again), but in the sense of what he calls "moderate deflation," in which the Government repays advances made by the banks, which the latter are at liberty to put into circulation again. Obviously, in so far as the banks make use of this power, there is no reduction of the means of payment, and prices need not fall. Some might even assert that there was in such a case no deflation, but this is a matter of definition.

Professor Rist maintains that there is an essential contrast between the *modus operandi* of inflation and of deflation, even in its broadest application. The need for symmetry which is part of human nature, he writes, establishes unconsciously a sort of parallel between the mechanism of a rise of prices brought about by inflation and that of a fall of prices brought about by deflation. Because an increase of the circulation causes a rise, it is said that to bring about a fall a reduction of the circulation is required. There is, he admits, a symmetry between the two mechanisms, but it has to be somewhat differently formulated. He concludes that:—

A rise of prices is brought about more quickly by increasing monetary incomes than by diminishing goods. A fall of prices is brought about more quickly by increasing the supply of goods than by reducing monetary incomes.

In Professor Rist's view a rise in the rate of discount is particularly effective in bringing about a fall of prices, because by restricting credit it brings about a forced sale or liquidation of stocks, the effect of which upon prices is much greater than would be produced by the direct restriction of the means of payment. Similarly, a rise in the rate of exchange is effective in reducing prices by restricting exports. It is undoubtedly true that a rise in the rate of discount, following a period of speculative activity, may lead to a "shake out" of speculative holdings, or a forced liquidation, such as Professor Rist has in mind. But it is only likely to do so if prices are expected to fall, and it is by tending to bring about a fall of prices that a rise of the discount rate operates to cause such forced sales. In other words, by restricting credit and purchasing power, a rise of the Bank rate tends to cause a fall of prices, and this, in turn, causes forced liquidation of stocks. At times when there has been no unhealthy speculation a rise of the Bank rate, it appears to us, may be useful in checking an incipient upward movement of prices, and at such times there need ensue no forced selling of stocks. We are inclined to question Professor Rist's view that "the raising of the rate of discount is an exceptional measure which has no justification except in time of crisis." It seems to us that a wise use of the rate of discount may do much to prevent a crisis from developing at all.

With regard to the effects of a rise in the exchange, it seems to us that this works upon the level of prices, not only by restricting exports, but also by stimulating imports.

Among the four excellent chapters in which the author describes the financial policy and experience of the countries which he has under special examination, particular interest attaches to the one on France. The aim of French policy, he says, is "resolutely to withdraw the value of the franc from the artificial influence of the needs of the State." For this purpose it was arranged, following the procedure adopted in 1871, that the State was to repay every year to the Bank of France two milliards. Repayment, in fact, began in 1921, being rendered possible by the readiness with which surplus money at that time sought investment in National Defence Bonds, but had later to be suspended because the Government had no surplus to devote to the purpose. The fall of the exchange, Professor Rist maintains, has been due to the fear of inflation rather than to actual inflation, and the

fear of inflation has been caused entirely by the fact that the Budget does not balance. When equilibrium has been reached the problem will then be, as Professor Rist expresses it, to fix the "residuum" of inflation. That is to say, a definite devaluation will have to be undertaken, the value of the franc being fixed at a level not too high to enable the country to carry the burden of its debt.

SEABORNE TRADE IN WAR.*

MR FAYLE has now completed his history of seaborne trade during the war, dealing, in a third volume of nearly 500 pages, with the last two years of the struggle. The measures taken to counter the German submarine campaign are the main theme, and the author has handled a mass of details, uninteresting in themselves, with a good deal of literary skill. While confining himself mainly to the official documents on which the work purports to be based, he has, at the same time, maintained a wider outlook. Necessarily this is not impartial history: in parts it is not history at all—that is, it partakes more of the work of the annalist than of the historian—but, on the whole, the book is less official and inhuman than might have been the case.

Facts which during the war were camouflaged are now stated plainly. In Germany the work of the submarines "was exaggerated with calculated mendacity." Similarly, the returns and sailings officially issued in London were misleading. In reality the submarine campaign constituted at first a terrible menace, but by degrees the complicated problems involved in countering moves were tackled, and the convoy system, which ultimately brought about a great reduction in losses, was established, and extended to cover most of the routes of maritime communication. How these things were done is fully described here so far as the administrative side is concerned, other aspects having been dealt with under other parts of the scheme of the "official history."

The war machine expanded—a malignant growth, as events have shown—and as time went on the work (including that here described) was better co-ordinated, but there was also wasted effort. The national shipyards, for instance, under a military organiser whose administrative staff, we are told, grew to 600 in number, produced nothing, except immense expense. The Food Ministry involved other departments in great difficulties by mismanagement of bacon imports. Shipping, however, on the whole, was much better "controlled" than most activities, because it was less "controlled"—that is, management was left more in the hands of those who in the past had done the business and understood it.

Eventually nearly the whole mercantile shipping tonnage of the world came under Allied and American control, neutral tonnage having been, in the case of Holland, forcibly seized where not taken over by arrangement. The war was won, but it was war on the world's commerce. As Mr Fayle points out, "the growth of the world's tonnage during the period immediately succeeding the war easily outstripped the recovery of the world's commerce, in which alone it could find employment." We are still in this period, and suffering also from the economic insanity which is characteristic of the war-mind. "The health of international trade is still precarious," said Sir Alan Anderson in his presidential address to the Chamber of Shipping the other day, and he also referred to "the gradual return of nations to economic sanity." Sir Alan, as Mr Fayle's work reminds us, was a "controller" during the war. He knows both the war and the normal aspects of shipping. As a compendium of information valuable in the study of the disease from the

* "Seaborne Trade. Vol. III.: The Period of Unrestricted Submarine Warfare." By C. Ernest Fayle. (London) John Murray. 21s net.

effects of which the seaborne trade of the world is struggling slowly to recover, the three volumes now completed are welcome.

BRITISH TAXATION IN FOREIGN EYES.*

THIS is an excellent piece of work, which will be extremely valuable to foreign students of British taxation. It may also be recommended to English readers, for, though they will not find anything in it which cannot be found elsewhere, it brings together in convenient form a large amount of information which is scattered through many English books and official reports. Dr Limpens traces briefly the early history of the British income-tax, and, in greater detail, its development from 1914 to 1923. He traces also the development of opinion regarding it, as illustrated in Parliamentary debates, and in the reports of official commissions and committees. The second part of the book contains a very complete study of the administrative machinery by means of which the tax is assessed and collected. There follows a series of appendices containing copies of the chief "administrative documents" connected with the tax, i.e., the forms used by the Inland Revenue authorities, and statistics of the rates of tax from 1843 to 1923, and of the yield of the tax since 1798. Dr Limpens has done his work well. It is almost entirely a descriptive study, and he expresses few opinions of his own. But it is clear that he has a good deal of admiration for the methods of British public finance, and thinks that they might serve, to some extent, as a model for countries where a balanced Budget is a less common achievement.

* "L'impôt sur le Revenu en Angleterre." By A. Limpens. Brussels, Bruylant, and Paris, Rivière; 1923; pp. 192 + 50 appendices; 15s.)

THE REORGANISATION OF THE IRON INDUSTRY.*

THE volume before us explains the position of the British iron industry in relation to that of Germany and America before the war, describes the effects of the war upon the productive plant and organisation, and considers how far the industry may now be regarded as on a par with its foreign competitors. The author reaches the conclusion that the industry has been only very partially reorganised, and is still technically inefficient compared with its principal rivals:—

What has been achieved may be regarded as a remarkable success. But the reorganisation, the restoration of power to compete can only be looked upon as completely accomplished when the technical equality of the English iron industry with its principal competitors has been re-established. Up to the present this is not the case for the great majority of works. Individual exceptions make no difference. It is, therefore, only possible to repeat what has been said above: the future will have to decide whether the advantages of organisation which have been gained signify only a temporary relaxation of competition, or whether, with the help of scientific and technical efficiency, they will bring to the industry an assured future.

Few, we imagine, will question that the reorganisation of the industry was left unfinished in 1918 and is even now not yet complete.

During the war the industry made considerable strides in regard to plant and technique, thanks to the pressure of war requirements and the availability of funds to effect extensions. The Ministry of Munitions did everything possible to increase the output of material required for war purposes. But there could be no question of making a fresh start. It was mainly a matter of creating new steel furnaces, and this was done either by setting up steel-making plant besides blast furnaces which had hitherto possessed none (in which case there was a definite economy of manufacture), or by adding to existing steel plant. There was comparatively few cases of improvement in blast furnaces, or in those branches of the iron and steel industry which did not experience any particular pressure from the war demand. One important technical improvement to which Dr Niebuhr calls attention is the more extensive use of coking plant designed to recover bye-products, in place of the older

* "Die Reorganisation der Englischen Eisenindustrie." By Dr Niebuhr. (Berlin and Leipzig) Walter de Gruyter and Co. 1923.

bee-hive ovens. This was a consequence, of course, of the need for explosives. No less than 80 per cent. of furnace coke was produced in these more modern ovens in 1918, compared with 58 per cent. in 1913.

The activities of the Ministry of Munitions did not touch the question of business organisation. The movement towards concentration, which had, of course, made some headway before the war, gathered speed in 1916 and the following years, and reached a maximum in 1918-20. Dr Niebuhr brings together a lot of information carefully collected from published sources as to the nature and extent of the concentrations effected, and this section is perhaps the most valuable part of his book. Combination, in his opinion, has greatly strengthened the position of the concerns affected by it. Integration with raw material producers, which has led in many cases (e.g., in the case of Lysaght, or the Ebbw Vale Iron and Steel Company) to complete self-sufficiency, is bound to bring greater independence of market conditions and a cheapening of production. At the same time, the author considers, it will benefit the whole industrial and economic system, as the sources of supply of raw materials will be widened by the connection with foreign ore deposits.

RECENT ACCOUNTANCY LITERATURE.

AMONG works of reference useful to company secretaries may be mentioned the Eleventh Edition of "Reminders for Company Secretaries," by Herbert W. Jordan (London, Jordan and Sons, Limited, 1s). These Reminders have been compiled with a view to assisting secretaries of limited companies who find themselves in doubt as to the precise statutory obligations and other provisions which it is their duty to bear in mind. The book contains a conveniently arranged alphabetical summary of the principal statutory provisions sufficiently comprehensive to prevent the secretary who refers to them from overlooking any obligation imposed on him or his company. The title of another book is "Accountancy Simplified, and Your Financial Position Seen at a Glance," by Henry G. Purnell, corporate accountant, Dublin (London, Gee and Co. (Publishers), Limited, post free, 6s 3d). This work sets out a complete system of accounting to enable the owner of a small business to see his financial position at a glance monthly or weekly, with the minimum amount of work. The system is explained in detail with notes and charts, and should be in the hands of those employers who may be carrying on business hoping for the best, though really without knowing how they stand financially. Those who are considering the pros and cons of entering the accountancy profession will be interested in "Pupil to Practitioner; a Philosophical Discourse Concerning the Accountancy Profession," by Cyril H. Temple, F.S.A.A. (London, E. Marlborough and Co., Limited, 3s 6d net). This book contains chapters on: The period of articles; the period of service; the principal, the latter chapter being divided into several important heads discussing the duties of principals. Special attention is drawn to the additional work now offered to accountants by the enormous expansion and increase of taxation. The book is written in an easy, conversational style, and contains much good and sound advice.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, April 23. ACCOUNT, April 24.

Nobody in the Stock Exchange grumbles at business being slack during the short week that precedes Easter. The expected happens with a regularity that can be counted upon by those who want to get away to holiday haunts. Only the incidence of the carry-over caused the House to be tolerably well filled up to Thursday. In the anxiety to leave as little work as possible over until Tuesday, most members finished their contingents well in advance of the general carry-over. War Loan goes ex-dividend on Monday week, April 28th, but there has been a little selling of the stock, and the price is not at its recent best. The House waits with genuine inquisitiveness for official announcement as to how much stock has been converted into the newly-created 4½ per cents. National War Bonds of this year fell 2½ on Tuesday, upon expiry of the option-time fixed for converting them into War Fives. Newly-issued scrip stocks are noticeably good. A coming Kenya issue is rumoured, and New Zealand's next loan is anticipated after the Queensland 5½ per cent. lists are closed.

Neither the Reparations recommendations nor the visit of the Russian delegates had much effect in the foreign market. French bonds are good, Government, municipal, and railway descriptions following the rise in the franc value. Germans and Russians are unchanged; Greek bonds gained one to two points, and the new loans of Siam, Japan, Amsterdam, &c., have found their own circles of supporters. Home Rails are quietly steady. United of Havana and Antofagasta are higher. Argentines remain rather undecided. Americans, with Canadas, went back as exchange rose. Some of the Mexican nationals, like Mexican Government bonds, went up when it became known that coupons upon some of the latter were being paid in New York.

Rubber shares are in languid case, but demand has revived for tea shares. Prices advanced on the assumption that a Budget-reduction in the tea duty should prove a bull point for the companies. The oil market strengthened under the continued leadership of Lobitos. A substantial rise in Imperial Continental Gas followed the issue of the report, and British gas stocks are better on investment demand. The Eagle Star meeting left the shares unchanged, but other insurance shares have cordially responded to this week's excellent dividend declarations. Banking shares are also higher in most sections of this market. Sudan Plantations reacted sharply as the carry-over approached. Hudson's Bays have not moved. Textile and tobacco shares are quiet and uninteresting. Iron, coal and steel issues moved narrowly and irregularly. Nitrates declined a little. Catering and other shares that may be affected by the opening next week of the Wembley Exhibition are a shade stronger. The shipping market is hard, and there is a healthy demand for its fixed-interest stocks and shares. Wireless descriptions have drooped; cable descriptions continue to improve.

South Africans are out of favour on account of the uncertainty felt in regard to the issue of the elections next June. This has made people averse from doing anything, and Rhodesians are equally neglected. A dramatic slump in the price of tin caused tin shares to give way to a moderate extent, and it brought new business nearly to a standstill. Indians are unresponsive to the Mysore report. Canadians dwindled by reason of sales by tired bulls. Russians recovered partially after a drop, and other mining sections have failed to arouse public interest.

NEW ISSUES.

The new issues of the week and the current year have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded.....	£	£	£	£
4% Treasury Bonds by public tender, £500,000, average price £94 13s 8½d, and £1,350,000, average price £94 13s 7½d	42,294,526	..	..	..

1919	314,038,342	1918	1,393,381,441	

Edinburgh Corporation 4½ per Cent. Redeemable Stock.—This is an issue at 95 per cent. of £1,500,000 4½ per cent. redeemable stock, 1940-60. The stock will be redeemed at par on May 15, 1960, but the Corporation retains the option to redeem at par at any time after May 15, 1940, on three months' notice. The yield on the stock is £4 14s 9d per cent. flat, or £4 15s 9d per cent. allowing for redemption at the latest date. The proceeds are intended to provide for general purposes, but mainly to replace maturing loans raised for capital expenditure in connection with its electricity, tramways, gas, water and housing undertakings. The gross annual valuation of the City of Edinburgh for 1923-24 is £5,253,231, the assessable rental being £4,597,202. A rate of a penny in the pound produces £19,000. The net debt outstanding amounts to £8,901,267. The present issue of stock and the dividends thereon will rank *pari passu* with all the other loans of the Corporation borrowed under the provisions of various Acts, and will have the security of the whole revenues of the Corporation. The powers of the Corporation as to rating under their Acts are unrestricted. The Corporation also have power, under the Edinburgh Corporation Stock Act, 1894, to levy a guarantee rate, unlimited in amount, over all lands and heritages subject to assessment within the city. An excellent trustee investment.

Madras Electric Tramways (1904), Limited.—Authorised capital £200,000, of which £175,000 has been issued. This is an issue of £130,000 5½ per cent. (registered) debentures at 93 per cent. There is in existence first mortgage debenture stock for £50,940, but this will be redeemed out of the proceeds of the present issue. These debentures will be secured by a first mortgage to trustees of the power house, car sheds, works and offices, and all other freehold property of the company at Madras, and by a floating charge on the undertaking. In the event of the purchase of the undertaking by the Local Authority of Madras, the debentures will constitute a first charge on the proceeds of sale. The trust deed provides for the redemption of the debentures at par in 35 years from January 1, 1929, by means of a cumulative sinking fund of 1 per cent., commencing on that date. The company was formed in 1904, and profits are shown from 1914. Dividends on ordinary shares varied from 5 per cent., less tax, in 1914, to 8 per cent., tax free, plus a bonus of 2½ per cent. for 1923. Surplus assets available as security are given as £338,043, including the proceeds of the present issue. The property account alone stands at £328,595. This is an informative prospectus; the debentures are well secured.

Aero-Glydas, Limited.—Authorised capital £80,000, divided into 400,000 10 per cent. cumulative participating preference shares and 400,000 ordinary shares, all of 2s each. This is an issue of the cumulative participating preference shares at par. The company has been formed mainly to

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London. W.C. 2.

At this time last year our late chairman made special reference to the fact that our dividend of 17½ per cent. might be met with some criticism, in view of the fact that it was earned in the dis-

tribution of the food of the people. He pointed out that such dividend must be judged in relation to the capital really employed in the business, as distinct from the subscribed capital, and to the volume of business transacted. Further, my predecessor went on to say that our net profit in the year he was reviewing did not amount to 1 per cent. of our turnover, a disclosure which caused surprised comment in many quarters. I may say that I can repeat the statement on this occasion.

HOME TRADE.

In view of the special features with which I have had to deal, my explanation of the figures has been somewhat lengthy, and my remarks on the trading aspect must be curtailed correspondingly. The past year in the home trade has been characterised by a fortunate freedom from violent fluctuations in prices, while, as already mentioned, the tendency in some of our more important commodities has been upwards. Hence conditions, on the whole, may be said to have been favourable to our trading. The restoration of confidence in traders still proceeds, but with such severe depression in several industries, particularly in the North, the purchasing power of the people is still much impaired, and it looks as if we must wait some considerable time before this state of affairs will be remedied by a general trade revival. As regards the immediate future, I make no prophecy, but advise caution in your estimate of our possibilities in the current year. I have already alluded to the high prices ruling in certain classes of our goods at the date of the balance-sheet, and I have also referred to the absolute necessity of our carrying stocks, and thus exposing ourselves to the risk of markets. On the other hand, it is reassuring to reflect that our conservative financial policy has put us in a position strong enough, I hope, to meet eventualities.

FOREIGN TRADE.

With regard to foreign trade, I think it can be said without undue pessimism that the immediate future, as concerns the near Continent, is somewhat obscure.

The recent sensational movements of French exchange have rendered Continental trade very difficult. An unsettled and widely fluctuating exchange carries with it a feeling of mistrust and uncertainty, and it would be imprudent to look for any steady improvement until this much-discussed question is on a more stable basis. The Continent would probably buy from us on a greatly increased scale if confidence would be restored, by stability of exchange, even though a return to anything approaching par values is not attained.

Though the key to the situation has yet to be found, it is satisfactory to be able to tell you that we are doing an increasing trade with the near Continent, and I would like to mention our appreciation of the efforts made by our agents during a time of great difficulty.

I am glad to inform you that the close attention which we have been giving to our Colonial trade has already produced encouraging results. Our trade with the Colonies has grown considerably during the last year, and the prospects for the future are good. I am especially pleased to be able to say that our branch house in Singapore has done better than ever, and I look forward to that branch during the next few years becoming a more important factor in our business than it has been before.

BRITISH EMPIRE EXHIBITION.

Consideration of trade with our Colonies brings me to what I wish to say about the British Empire Exhibition. Before telling you of our own connection with this great project, I may, perhaps, say a few words concerning the light in which we have viewed it.

A year ago our late chairman mentioned on a similar occasion to this the fact that we were doing our utmost to foster relations with our Colonies, and the support with which we have met has greatly encouraged us. I think there is a closer sympathy in trade relationship within the Empire to-day than has existed ever before.

The idea of this great Exhibition appealed to us, therefore, as coming just at a time when it would do a maximum of good. Also I think it is worthy of attention that the criticism of the project, unlike much criticism, has proved to be creative rather than pernicious. I think there is no room for doubt, therefore, that from a propaganda point of view, as regards this country and our colonies, the Exhibition is a perfectly conceived instrument, and is placed into operation at a correctly estimated psychological moment.

The *pros* and *cons* of its own financial possibilities do not concern us at all, and we cannot consider here the loftier ideals of Empire which it symbolises. We are concerned with the best possible conduct of our business, and we decided that it was in this interest that we should be represented at Wembley.

We have procured a stand in a very excellent position close to the main entrance of the Palace of Industry, and there we hope we may have the pleasure of meeting many of our friends in this country and from overseas, and we shall welcome them at Cannon street also. We hope that our exhibit will be of a nature to interest not only the trade, but the general public.

I feel confident that I am voicing your unanimous feelings when I say that, even putting aside the material advantages we hope to procure, as the oldest house in the trade, it would have been wrong if we had not taken the step of being represented at the British Empire Exhibition.

TRIBUTE TO STAFF.

It only remains for me to express the warm thanks of the board to our staff in all its branches for their continued valuable help and loyalty, without which our personal efforts would be unavailing. I will now propose the following resolution:—"That the report and balance-sheet and profit and loss account for the year ended January 26, 1924, now laid before the meeting, be and the same are, approved and adopted, and that the payment of a dividend of 17½ per cent., less income-tax, on the ordinary shares of the company, as recommended by the directors, be, and the same is, hereby declared."

Mr R. J. Harford (deputy-chairman and managing director) seconded the resolution, which was carried unanimously.

The directors retiring in rotation (Mr W. F. Travers and Mr E. T. Dottridge, C.B.E.) having been re-elected, the election of Mr Frank Travers to the board was confirmed, and that gentleman briefly thanked the shareholders for this expression of their confidence in him.

A resolution was also passed authorising the directors to transfer £10,786 19s 9d, part of the sum standing to the credit of special reserve accounts, to a suspense account to form the nucleus of a pension fund.

THANKS TO CHAIRMAN AND DIRECTORS.

The auditors (Messrs Price, Waterhouse, and Co.) were re-appointed, and a cordial vote of thanks was passed to the chairman, directors, and staff.

Mr Whitmore replied on behalf of the staff, and expressed appreciation of the consideration shown at all times towards the staff by the directors of the company.

At the suggestion of Mr Beverley, the meeting passed a resolution expressing the sympathy of the shareholders with Lady Bowron in her bereavement.

The proceedings then terminated.

BRITISH ELECTRIC TRANSFORMER COMPANY, LIMITED.
CHAIRMAN OPTIMISTIC OF THE FUTURE.

The twenty-first annual meeting of the British Electric Transformer Company, Limited, was held, on the 15th inst., at Winchester House, London.

Mr A. F. Berry (chairman of the company) presided, and, in moving the adoption of the report, said that while the general charges had been decreased by about £2,900 only, the gross profit on trading had dropped by just over £44,000. This heavy fall was due to slackness of trade generally and the very low prices consequently ruling for their products. He remarked that there was still £44,419 left in the reserve account, which had been built up out of profits in the past; but for the reserve account they would be faced with a considerable loss to wipe off future profits before they could return to the dividend-paying stage. As it was, they had written off the past year's loss, still had a substantial reserve, and had started again to earn some profit.

In connection with the low prices that had been ruling, it should be remembered that the reductions which had been made had encouraged electricity supply undertakings to purchase plant and had helped them forward to better times. In turn, these customers of theirs would, it was hoped, with greater publicity, more uniform prices, and larger turnover, be spurred to greater efforts and so bring orders to the manufacturers in increasing quantities. Shareholders would have very tangible evidence this year of the increasing propaganda and publicity undertaken by the electrical industry at Wembley, where something like £1,000,000 was being expended to produce the greatest electrical show that they had ever engaged in. Shrewd observers had expressed a wonder whether specialist electrical manufacturers, among whom this company were prominent, would be able to cope fully with the demand which in due time must spring from all this development.

There was decided evidence of the improvement they foreshadowed last year for the present year's working. The second half of the year showed a loss of rather under one-tenth of that of the first half of 1923. Not only was the value of orders in hand at December 31, 1923, double that at December 31, 1922, and booked at better prices, but the orders received during the three and a-half months of this year were already practically equal in amount to those booked for the first seven months of 1923. They might hope again to see prosperous times return in spite of difficulties ahead.

Mr George Berry, the manager, seconded the motion, which was unanimously carried.

EAGLE, STAR, AND BRITISH DOMINIONS INSURANCE COMPANY, LIMITED.

TWENTY YEARS OF PROGRESS.

CONFIDENCE IN THE FUTURE.

The annual general meeting of the Eagle, Star, and British Dominions Insurance Company, Limited, was held, on the 14th instant, at the Moorgate offices of the company, 32 Moorgate, London.

Sir Edward M. Mountain, Bart., J.P. (chairman and managing director), presided.

The secretary (Mr John Gardiner, A.C.A.) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said the year under review had been a difficult one in the insurance world. Dealing with the various branches of the business conducted by the company, the life department, he said, continued to prosper, the life fund showing a further increase during the past year of £341,488. The sums assured under new policies amounted to £1,734,296, after deducting reassurances. The mortality rate had been favourable—the claims by death amounted to £551,044, a figure which was well within the expectation, and the lowest the company had experienced for many years. The yield on their life assurance and annuity invested funds was £4 14s 2d per cent., after deduction of income-tax. The quinquennial valuation of the Star and Sceptre closed funds, made on a very stringent basis, disclosed a divisible profit in the case of the Star fund of over £868,000, of which nine-tenths had been distributed among the with-profit policyholders. In the case of the Sceptre fund the divisible surplus was over £165,000, and nine-tenths had been distributed among the same class of policyholders.

BONUS ADDITIONS TO POLICYHOLDERS.

Bonus additions to policyholders of both these funds had been at a higher rate than on any previous occasion, and it was a matter of congratulation for all concerned that such satisfactory results should be shown at the end of the first quinquennium after the amalgamation with the present company. The records of the mortality of the Sceptre fund over a period of 40 years showed that in the general section the actual deaths over that period amounted to 3,882, whereas the number of deaths expected, according to the Institute of Actuaries Hm mortality tables, were 4,924, so that the actual deaths were barely 79 per cent. of the expected. In the temperance section there were 2,114 deaths, against an expected total, according to the same tables, of 4,195, or a little over 50 per cent. of the expected deaths. These figures, he thought, were remarkable.

In the life department the sum of £105,893 had been brought into account in respect of the balance of profits on securities realised. This item related solely to the Star and Sceptre funds. No credit, however, was taken for unrealised appreciation on securities, and he was pleased to inform the shareholders that at the close of the financial year there existed in each of those funds a substantial margin between the market and book values of the securities. This margin the directors regarded as a reserve against future depreciation and other contingencies and as a source of future profit. The outlook, therefore, for the policyholders in all their life funds, including the current series of policies, was very promising.

FIRE DEPARTMENT.

The premiums in the fire department amounted to £1,452,558, and the net claims to £900,408. The increase in the premium income amounted to £151,720. After carrying forward a full reserve of 40 per cent. of their fire premium, amounting to £581,025, there was a loss on the year's operations of £61,141. This loss was caused by the adverse results experienced by themselves, as well as by other companies operating in America and Canada. Up to three years ago their fire business in these countries had been profitable over a long period of years, and he was satisfied that the recent heavy fire wastage was caused by abnormal conditions. The accident business yielded a profit of £11,394.

GENERAL INSURANCE SECTION.

In the general insurance section, which included all their employers' liability outside of this country, the premiums amounted to £886,911 and claims to £388,062, and after providing a reserve of 40 per cent. of the premium income the sum of £71,700 was transferred to profit and loss account.

In the marine department, premiums (less reinsurances and commissions) amounted to £643,191; claims paid for 1923 and previous years, less reinsurance recoveries, salvages and refunds, amounted to £641,131. The board's practice in the past in dealing with this account was to carry forward in the marine fund a reserve equivalent to the sum required to wind up each year's account in accordance with their average experience. On this basis the fund carried forward in 1922 would have been amply sufficient. In the 1923 settlement many accounts that had been outstanding for some years had been finally adjusted, with the result that the

settlements considerably exceeded the average. While this experience was an exceptional one and not likely to recur, the directors thought it better further to strengthen the fund by the transfer to it of £150,000 from the general reserve fund. During prosperous years the department had made large profits, £800,000 of which, instead of being distributed, was carried forward to the general reserve fund. Their marine department was conducted with the utmost caution and skill, and, in the hands of their present underwriter, he thought they could look forward with confidence to the future.

BALANCE-SHEET.

Dealing with the balance-sheet, he said the directors had decided to utilise the sum of £300,000 from the general reserve fund, so as to eliminate from the accounts all possible bad and doubtful debts and possible losses on foreign exchanges.

In the former class was included an item of £100,000 due from Russian insurance companies. Apart from the nationalisation of Russian insurance by the Soviet Government, these companies were perfectly solvent, and there was no doubt that if the negotiations going on in London at the present time resulted favourably, the whole of this sum would be ultimately recovered. Meantime, however, it had been eliminated from the balance-sheet, thus rendering it all the stronger. For many years the company had been practically free from bad debts, and, as far as could be foreseen, this condition was likely to obtain in the future.

The question of the exchanges had been a very difficult one, as the company had considerable business for many years past in most European countries. As a consequence they had considerable balances outstanding, and as the fluctuations had been many and violent, the directors had decided this year to write down the whole of these balances to the market value at December 31st. Any improvement in the exchanges—and there had been considerable improvement in some directions since the beginning of the year—would be to their advantage.

DIVIDEND POLICY.

One of the problems before all insurance companies was the necessity to reduce expenses, which had increased so much in recent years owing to the enhanced cost of living. The directors were hopeful that considerable saving would be effected in this direction in the near future.

In reference to their dividend policy, the directors felt justified in declaring an interim dividend of 5 per cent., less tax, in respect of the first quarter of the current year, and they hoped to continue to pay that amount quarterly.

TWENTY YEARS' PROGRESS.

Reviewing their progress during the past 20 years, the company, he said, had an original capital of £200,000, of which £100,000 only was paid up, the premium income being approximately £100,000. It had practically no goodwill and no special reserve fund. To-day the company had a paid-up capital of £1,092,896 and uncalled capital of £1,905,529, and, after providing a full reserve in the marine account and in other departments the standard reserve of 40 per cent., it had a general reserve fund in addition of £1,350,000, and an established business producing a premium income of well over £4,000,000. The whole of the cost of creating their valuable goodwill, amounting to a large sum, had been written off previous profits, with the exception of one item—£475,240—which was a satisfactory income-producing asset. As would be seen by the report, which showed the resources of the company, their financial strength was impregnable, and, apart from life premiums and funds, they had against the other premium income of about £3,250,000 funds in hand of over £4,000,000. In other words, their available funds exceeded 125 per cent. of their premium income other than life, indicating financial strength of the highest order. With regard to the future, they had built up a very valuable business all over the world, the bulk of which had been very profitable in past years, and would be again in the future. He thought that with the conservative policy which it was the intention of the directors to pursue, the shareholders might look forward to the future with confidence.

Mr J. Douglas Watson, F.I.A., F.A.S. (deputy-chairman), seconded the resolution.

The Chairman, in reply to a question, said he had emphasised in his speech that the directors had had the expenses under their most careful consideration. Every step that could be taken would be taken to reduce their expenses at the earliest possible moment. He did not wish to give the impression, however, that efforts had not already been made to deal with that matter, and the result of those efforts would be shown for the first time this year.

The resolution was unanimously approved.

The dividends, as recommended by the board, were confirmed, and the retiring director (Mr Frank Rogerson) and the auditors (Messrs Edwin Guthrie and Co.) having been re-elected, a cordial vote of thanks was given to the chairman, directors, and staff, and the proceedings terminated.

PEKIN SYNDICATE, LIMITED.

COMPANY'S COLLIERY INTERESTS.

BANQUE INDUSTRIELLE DE CHINE LOSSES.

The ordinary general meeting of the members of the Pekin Syndicate, Limited, was held, on the 14th instant, at the Cannon street Hotel, Cannon street, London, Colonel Brinsley J. H. Fitzgerald, C.B. (the chairman), presiding.

The secretary (Mr Charles Price) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—Before dealing with the accounts, I should like to mention to you that your board have invited Major Nathan to fill the vacancy on the English side of your board. This seat on the board has been left open ever since the arrangement between the French and English shareholders was completed. This arrangement had, as I told you at the time, the entire approval of our Foreign Office. Major Nathan, I am happy to say, has accepted the invitation and is here to-day, and I will ask you to confirm his election. Before doing so, I will read a letter received by me from Mr Kenrick, your managing director:—

“Dear Colonel,—Thank you for your personally written letter, and for the very excellent news it contains. There is no one I should welcome more on the board than Major Nathan, who combines with a long and practical experience of the Chinese and their methods a great organising ability, as shown by the success he has made of the Kailan Mining Administration. Monsieur Jadot, although I only know him by reputation, will, I think, also be an acquisition; in fact, the arrangement you have made will greatly strengthen our position here.”

PROFIT AND LOSS ACCOUNT.

I will now turn to the report and accounts, which have been presented to you, and will ask you to consider them as read, but I think you will wish me to give you some particulars in regard to the more important items before formally moving their adoption.

Turning to the credit side of the profit and loss account, you will, no doubt, have noticed that for the period under review the profit of the collieries amounted to £100,621, and that from this amount the sum of £25,000 has been deducted and transferred to a reserve account for the redemption of capital expenditure on the coalfields, on which the life of your concession has still 43 years to run.

Interest on loans, deposit and current accounts, dividend on shares, and transfer fees, &c., amounted to £28,895. Therefore, taking into account the £25,000 transferred from profits to reserve account, the total receipts for the year are £120,516.

This year is, as you know, the first year that we have been able to show the earnings on the collieries as a distinct item. Therefore I would ask shareholders not to become too optimistic by comparing the receipts of the current year with those of preceding years, where the receipts from collieries were not shown.

At the same time the news from our collieries is not discouraging. The Li Feng section of our coalfield, to which I referred at a previous meeting, is fulfilling all our expectations, and on the adjoining section which we have been exploiting, the Wang Feng, we have quite lately struck what the telegram describes as good hard coal.

Neither the production of coal nor the demand offer any difficulties. Our great difficulty is transport, and we are taking steps to improve this. If we can succeed, our sales should show a big increase.

As to the immediate future I do not wish to be optimistic, but the figures up to the end of March would justify one in thinking that the results for the year ending June, 1924, will be, at least, quite as satisfactory as those for the year ended last June.

With regard to the debit side of the profit and loss account, I am pleased to be able to tell you that during the year under review the administrative expenditure has been reduced by £7,622.

The credit balance on profit and loss account of £79,029 has been carried to the balance-sheet, and, after deducting £33,849, being the difference in exchange in respect of adjustment of floating assets and liabilities in China, due to the fall in value of the Mexican dollar, there remains a net credit balance of £45,179 for the year.

The amount in respect of sundry creditors has been reduced from £46,041 last year to £27,057 this year. The amount under heading of sundry debtors has been reduced from £120,637 to £103,138.

BANQUE INDUSTRIELLE DE CHINE.

Turning to the debit side of the balance-sheet, you will observe that a general reserve account has been created amounting to £328,095. It will also be noticed that £200,000 has been transferred from the credit balance on profit and loss account to write down

the value of your company's shareholding and cash balances with the Banque Industrielle de Chine.

As I told you at a former meeting, your board have been for a long time anxious to show the shareholders, as far as it was possible, the actual losses incurred in connection with the Banque Industrielle, but I explained to you then why it was impossible to arrive at even an approximate estimate.

Things have, however, slowly developed, and we felt that the time had come when we could form an estimate as shown in the balance-sheet. Whether this estimate is correct or not depends very much on whether the French share of the Boxer indemnity is paid in gold dollars. As far as I can ascertain, the claim of the French Government that this should be so is perfectly fair and reasonable. We have, however, thought it right to create the general reserve account, to which I have already referred, in order to meet all possible contingencies.

At a former meeting I think I made it pretty clear to you that our losses in connection with the Banque Industrielle would be extremely heavy, and I went so far as to hint that there was a possibility of our losing everything. Therefore, all I can now say is that the result might have been worse.

In connection with this, and turning to the contingent liability of £12,500,000, I told you that the market value of the shares given as extra security for the repayment of the above sum was 4,000,000. Since then approximately one-quarter of these shares have been sold for very close on 3,000,000.

On the credit side of the balance-sheet the cash at bankers stands at £202,546, as against £57,308 last year, an increase of £145,238, and the railway loans in China have been reduced to £141,759 by the repayment of £30,110.

The next item, £133,732, the cost of the Honan Concession, has in this year's accounts been added to the amount of £677,142 capital expenditure on the coalfields as at June 30, 1922, and these two figures, together with £1,204 spent on the coalfields during the year ended June, 1923, make up the £812,078, the amount at which the coalfields have been capitalised by agreement with the Chinese Government.

As regards our interest in the Tientsin Wharf and Godown Company, I am pleased to say this company is making excellent progress. The net profits for the year ended June 30th last enabled the company, after liberal provision for depreciation, &c., to pay 10 per cent. and to place a substantial sum to special reserve.

The Fu Chung Corporation, in which we hold half the share capital, have made a substantial profit for the year ended March 31st last.

The agency agreement with the Yangtse Corporation, Limited, has been extended for a period, and this carries the option which we hold on a large block of shares.

BOARD'S POLICY.

I think I have dealt with practically all the points that affect the past, and I would like to say a few words about the future policy of your board.

I dare say most of you may have read some of the many articles that have lately appeared in the French and Belgian Press. In the ordinary course I would not take any notice of such wild and irresponsible statements as have appeared in these various articles, but there took place, simultaneously with the appearance of these articles, some very active dealings and big fluctuations in the prices of the shares of your company.

It was said in these articles that, as the result of negotiations, your board was to be entirely reconstructed, and that the control and management of the Pekin Syndicate was to be taken over by the Kailan Company and the Société Générale de Belgique. All this was absolutely untrue. The fact that Major Nathan, who now joins your board, was, and still is, connected with the Chinese Engineering and Mining Company does not in the least alter the position of the Pekin Syndicate.

Our company is in an absolutely independent position, but we are quite ready, provided we consider it is in our interests to do so, to consider any proposal for a joint working arrangement which we think may benefit both companies.

I do not wish to conclude without mentioning, as I have on previous occasions, the very great assistance the board have received from the staff in China, who have worked most satisfactorily during the past year. As regards the syndicate here, I want to say everything I can in gratitude of the work done by Mr Price and the London staff. I am glad to be able to tell you that Mr Price has now been promoted to secretary of the company, and nobody could work more loyally than he and his staff.

Comte de Segulier seconded the resolution, which, after the Chairman had replied to questions, was carried unanimously.

The Chairman then proposed the confirmation of the election of Major Nathan to a seat on the board, which was seconded by Comte de Segulier, and unanimously adopted.

Mr Paul Eugene Dutasta and Mr Jules Jadot having been elected directors, and the auditors having been reappointed, a vote of thanks to the chairman terminated the proceedings.

JOHN BARKER AND CO., LIMITED.

CONTINUED EXPANSION—20 PER CENT. DIVIDEND.

The thirty-first ordinary general meeting of John Barker and Co., Limited, was held, on the 14th instant, at the Town Hall, Kensington, London, Sir Sydney Martyn Skinner, J.P. (the chairman), presiding.

The secretary (Mr G. Wright Bellamy) read the notice convening the meeting and the auditors' report.

The Chairman, in the course of his speech, said: Ladies and gentlemen,—It is a great satisfaction to your directors to present for your approval a balance-sheet which speaks of a year of continued success and development. The year opened, indeed, quite auspiciously. February was a good month. It gave promise of a good season. Then, as many of you will remember, the weather underwent a drastic change. It was a most unseasonable spring—very cold, wet, and winter-like. Our buyers, purchasing in the markets of the world, made preparations which were cruelly spoilt by these conditions. However, a fine summer made amends, and the autumn fully restored the balance of things. The result of the year's trading is reflected in the figures set before you, a result which your directors feel will command your satisfaction. But for this early disappointment a record year would have presented features still more arresting and unprecedented.

The gross profit, with the interest received on the deposit account, shows an increase of £30,000. We thus arrive at the record sum of £402,000 as net profit, against our next best year—which was last year—of £362,000, or an increase of £40,000. With such a good showing shareholders may, perhaps, question why we do not recommend a larger dividend. The first aim of your directors has been, and always will be, the consolidation of the company's interests and finances. We believe in strengthening our resources by building up the already magnificent reserve fund to meet the needs of a continuing development, rather than paying away our surplus profits in heavier dividends. This is the fifth consecutive year in which we have declared a dividend of 20 per cent.

Subject to the confirmation of this meeting, it is proposed to pay a further 15 per cent. on the ordinary share capital, and to carry forward the sum of £211,780 to the credit of our next account, an increase of about £63,000 on the amount which was brought in last year.

FURTHER EXTENSIONS NECESSARY.

During the past year we have again carried out various structural and departmental alterations, which we believe have contributed to the comfort and convenience of those who have found it so much to their advantage to shop at Kensington. But the great volume of additional trade has made further extensions a matter of urgency. Many, many thousands more customers have been served during the past year. To meet this great public interest in the Barker group of businesses several important extensions are already in hand, and others are foreshadowed, which will lead to a still further improvement in the shopping facilities it is our duty to provide. The new store now being erected on the north side of the High street will, when finished, relieve to some extent the congestion at Barkers, and the administrative block to be put up in Ball street will lessen the pressure on the departments in the main building. But an extension of the furniture building is also vital. More room can be readily obtained here by building on the freehold site in Clarence mews at the rear of the present block. Equally pressing is the need for extension at Pontings to cope with the necessities of this rapidly growing business. Also at Derry and Toms alterations to certain shops are necessary. All the freehold land is in our possession necessary to open out these departments and provide a selling space for the convenience of the public, which would obviate the present very serious state of overcrowding.

The future of the Barker group of shops is a theme which your directors have very much at heart. We believe that we have every cause to be optimistic, and that our shareholders (and the public) share that optimism. The new emporia that is in contemplation will be a series of shops, linked up effectively, that shall be worthy of this great metropolis and of the Royal Borough in which it is situated. We have a great belief in the future of Kensington—a Kensington of broad, dignified thoroughfares and fine, commanding buildings. This, in our opinion, can only be brought about by the co-operation of the authorities and the business concerns involved, each taking large, far-sighted, and practical views in the development of the district.

Mr H. Tilbury (managing director), in seconding the resolution, spoke of the progress of Derry and Toms and Pontings, and the advantage which should be derived from the rebuilding and reorganisation operations.

The resolution was carried unanimously; the retiring director and auditors were reappointed, and the proceedings terminated with a cordial vote of thanks to the chairman, directors, and staff.

ROLLS-ROYCE, LIMITED.**LARGE AERO ENGINE ORDERS.**

The seventeenth annual meeting of Rolls-Royce, Limited, was held, on the 14th instant, at Derby, Lord Wargrave presiding.

The Chairman, in moving the adoption of the report and accounts, referred to the paralysing burden of taxation, and said he hoped this year would see the total abolition of the insidious and unfair corporation profits tax. Though the engineering industry had happily been free from labour troubles during the past year, rumblings of agitation were becoming louder. Matters might come to a head pretty soon, but he trusted that reason and common sense would prevail on both sides. Failure to settle might lead to stoppage of output, which was one factor that induced the directors to recommend that the dividend should not be increased beyond 8 per cent.

Turning to the accounts, the Chairman pointed out that the issued capital in ordinary shares was unchanged, and the amount owing by the company had increased by only £4,000. The consolidated reserve funds had increased by £60,000. No credit was taken for goodwill, though no company had a better right to include in the assets a considerable sum under that heading. The property of the company showed a net decrease after depreciation of £7,800, due to the depreciation figure being higher than the additions. Stock in trade and work in progress showed an increase of £179,000, accounted for by the satisfactory demand for the company's manufactures. The production of the new model entailed the absorption of cash by increase of stock, &c., and this was an important consideration which influenced the directors not to recommend increased dividends. Cash in hand thus showed a decrease of £123,000. The amount owing to the company had increased by £25,000, the profit of £156,700 was £7,500 higher, and, including the carry forward from last year, there was £165,000 available for disposal. The directors proposed a dividend of 8 per cent., absorbing £65,000, and to place £30,000 to income-tax account and £70,000 to the reserve fund, carrying forward £10,000.

INCREASE OF AERO BUSINESS.

Orders received and in prospect for aero engines and aero-engine parts promised to show a bigger turnover than last year. The Condor engine, 650 h.p., had passed the Air Ministry's air-worthy test, and these engines were already being made for the British Air Service. This was another instance of Mr F. Henry Royce's genius and the excellent work of his technical assistants and experimental and works staff and the men who carried out his ideas.

In addition to orders from his Majesty's Government, the company's foreign aero business continued to expand, and they were at present carrying out important contracts for the Dominions, foreign Governments, and for transport companies at home and abroad. These orders might be attributed to world-famed reliability of Rolls-Royce and engines which had been successfully used in many long-distance flights.

The sales and profits of the American company for last year were satisfactory, but until the end of 1922 there were heavy losses connected with the commercial slump in the United States, which necessitated the temporary closing of the works. The profits must be devoted for a considerable time to making good these initial losses. No credit was taken in the balance-sheet for the share holding in the American company.

WORKERS' WELFARE SCHEME.

Having thanked the managing director, Mr Claude Johnson, for his able management, which secured the confidence of their splendid staff and the success of the concern, the Chairman dealt with the position of the company's welfare scheme, and read a letter of appreciation from a number of the workers. This stated that there was still a lot of suspicion in the minds of many workers concerning any form of welfare emanating from employers. Though Rolls-Royce employees were no exception, the suspicion was gradually, but surely, giving place to confidence and approval. Volumes could be filled with expressions of thanks and gratitude from those in the sick and benevolent section who had received benefits. The sports and social sections were also both doing wonderful work under the scheme. The cost of a works outing to Wembley Exhibition was to be defrayed, this marking a great step along the road to creating and cementing that feeling of confidence between employer and employee which, more than anything else, helped to make strife impossible and unity probable. The share purchase scheme was originally regarded with much disapproval, but now there was heart-burning and regret among those who did not avail themselves of the opportunity to purchase while they had the means. The letter concluded, "the success of those firms is most assured whose employees are happy, contented, and interested in the welfare of those for whom they labour, and this condition may be obtained more readily by the application of

such a comprehensive scheme, with all its possibilities, as the Rolls-Royce welfare scheme."

The motion for the adoption of the report and accounts was seconded by Lord Herbert Scott and carried.

JUGRA LAND AND CAREY, LIMITED.**RESTRICTION POLICY AND ITS RESULTS.**

The fourth annual general meeting of shareholders was held in the Hall of the Institute of Accountants and Actuaries, 218 St. Vincent street, Glasgow, on Tuesday, April 15, 1924, at 12 o'clock, noon—Mr Dougal, in the absence of the chairman, presiding.

Mr Clarke, for the secretaries, having read the notice calling the meeting, and the auditors' docket, the Chairman said:—Gentlemen, I am very sorry that Mr Wishart, our chairman, is not quite well enough to be with us to-day, but he is making progress, and we look forward to having him back at an early date. I can assure you that he continues to take the greatest interest in all the affairs of the company, and that all along we have had the benefit of his advice and experience. In his absence I propose to read the speech he would have delivered.

Before proceeding with the business I should just like to say how much we regret to have to refer to the death of our esteemed colleague, Mr W. W. Campbell. He attended a meeting of directors no later than March 5th, and we were all very grieved to hear of his passing away on March 15th. We have recorded in the minute book an expression of the sense of loss the company has suffered, and of sympathy and condolence with his widow and family.

The report and statement of accounts have been in your hands for more than the statutory period, and with your permission we shall, as usual, hold these as read.

CONDITION OF THE PROPERTY.

The visiting agent's reports regarding the island continue to be of a most gratifying nature, and although he had to report a certain amount of disease on Paradise Estate, his report on that property cannot be considered as otherwise than good. Our thanks are again due to Mr French and his assistants for the thoroughly efficient manner in which the estate has been looked after. You will observe from the directors' report that we have made a slight change in regard to the position of cultivation. The change is made in order to make the statement agree with the figures used in the Federated Malay States, and is accounted for by the increase in the coconut area and the elimination from the planted areas of the acreage required for roads and buildings. Generally speaking, I am not in favour of eliminating road and building areas from the cultivated area, but in an estate of the size of Carey Island, roads, and buildings take up such a considerable acreage that their elimination is justified.

RUBBER.

You will observe from the accounts that the effect of restriction has been to increase the cost of production by over 3d per lb. In ordinary circumstances the output of rubber would have been over 3,000,000 lbs, but the drastic restriction has had the effect of relatively increasing the cost. On the other hand, rubber realised 3½d per lb more than for the previous year, and I think that the policy of restriction must be credited with a considerable portion of this increase. At the same time, I think it is evident that restriction enables the manufacturer to carry lower stocks, as he knows that there is practically no risk of any company exporting less than its exportable amount, and consequently he knows exactly what is available month by month. As you are aware the terms of restriction have been altered recently, and this alteration favours the younger producer. Our actual exportable output has not yet been fixed for the current year, but we expect to obtain a considerable increase, which should have the further favourable effect of reducing costs. That restriction has been of service to the rubber plantation industry is admitted, but at the same time it cannot be denied that British companies have suffered grave disadvantages of which our Dutch friends have taken full advantage. I trust that those in authority will keep clearly before them the possibility of the drawbacks outweighing the benefits.

COCONUTS AND COPRA.

As to the crop of coconuts, as was stated in the report, it was somewhat disappointing, due to unfavourable weather conditions. You would notice in the accounts that, although actually more coconuts were gathered, the weight of copra was somewhat less, meaning, of course, that it took more nuts to manufacture a ton of copra. It seems that as trees grow older, the nuts, though more plentiful, are smaller. Last year was a poor one for coconuts all over the Federated Malay States, and we can only hope that during the present year better weather conditions prevail.

THE FUTURE.

As to the immediate future, it is very difficult indeed to make any statement. As you are aware, the price of rubber is regu-

lated to a very large extent by the demand from America, besides being artificially stimulated by the present restriction, and although prices have suffered a very substantial decline during the past few months, I shall be surprised if the average price that we obtain for the year is not somewhat in advance of the present market price.

As to copra, the demand for this is mainly Continental, and there has been a slight set-back recently here also. A settlement of the various causes of European unrest would be likely, in my opinion, to keep the price of this commodity at a favourable figure.

Shareholders of this company may, I think, congratulate themselves on being in a comparatively fortunate position. The properties are very efficiently managed, and the large area, even with restriction of output, permits of reasonably cheap production.

I am glad to state that Mr French is leaving again for the Federated Malay States in June of this year.

I now beg to move that the report and accounts be adopted, and that a dividend of 4 per cent., less income-tax, be paid.

I shall ask Mr Macdonald to second this resolution, but before putting it to the meeting I shall be glad to answer, to the best of my ability, any questions any shareholder may care to ask.

Mr Macdonald seconded the adoption of the report, which was carried unanimously.

Mr George A. Macdonald was re-elected a director and Messrs Gibson and Anderson, C.A., were re-elected auditors.

WORLD AUXILIARY INSURANCE CORPORATION, LIMITED.**GOOD RESULTS OF THE YEAR.**

The fifth ordinary general meeting of the shareholders of the World Auxiliary Insurance Corporation, Limited, was held, on the 16th inst., at Winchester House, Old Broad street, London, Sir John D. Wimple, K.B.E. (chairman of the company), presiding.

The secretary (Mr Irving H. Cortazzi) having read the notice convening the meeting and the report of the auditors,

The Chairman said: The premiums written during 1923 in respect of the fire accident and general account amount to £157,689, showing an increase of £14,000 compared with 1922. The claims paid and outstanding amount to £94,090, and commission and expenses to £59,342, leaving a balance to be carried forward for unexpired risks of £72,058, or 45.7 per cent. of last year's premiums—a settlement which, I venture to suggest, is most satisfactory.

Taking the marine account next, the claims paid on 1923 account amount to £34,029, being 22.7 per cent. of the premiums written, and, after paying all claims on 1922 and previous years, and expenses, there remains a balance of £229,734. We have transferred from this sum £30,000, and placed it to the credit of profit and loss account, thus leaving the sum of £199,733 to be carried forward, or 133.4 per cent. of the year's income, an increase of 5.6 per cent. as compared with 1922.

Dealing with the profit and loss account, you will notice that the amount of interest and commission earned amounts to £25,029, and the profit on investments realised, transfer fees, and other miscellaneous receipts amount to £13,576, which, together with the amount brought forward and the £30,000 which I have referred to before as having been transferred from the marine account, gives an available total of £91,070.

After debiting sundry items we have made a reserve for Government taxation of £12,500, started an investment reserve account by transferring to it £10,000, and added a further £20,000 to our reserve fund, making that fund £40,000 in credit. These allocations having been made there remains a balance of £44,958, out of which we propose paying our first dividend of 5 per cent., free of tax, upon the paid-up capital of the company, which absorbs £15,000 and leaves £29,958 to be carried forward to the credit of next year's accounts, or over £7,000 more than that brought in.

It is always hard to forecast the future of underwriting, whether it may be fire or marine, and I will not attempt to make a forecast. I will say, however, that your directors feel that the company now has become firmly established, and in spite of the keen competition for business which exists ought to render a good account of itself in the future.

The Chairman concluded by moving the adoption of the report and accounts, and the resolution was adopted.

BIRMINGHAM DISTRICT POWER AND TRACTION COMPANY, LIMITED.**STRONG POSITION—INCREASED NET REVENUE.**

The fortieth ordinary general meeting of the Birmingham District Power and Traction Company, Limited, was held, on the 15th instant, at 88 Kingsway, London, Mr C. Shirreff Hilton (the chairman) presiding.

The Chairman said that the strong financial position of the company continued to be maintained. At December 31st last they had cash resources in liquid form of over £82,000, or £12,000 more

than the total renewals fund. The net traffic receipts, including interest and dividends on investments, showed an increase of £11,328. It was to be regretted that this increase was not the result of any additional traffic receipts from the tramway companies. On the other hand, it was a matter for congratulation that strict economies in the cost of operation had resulted in such a substantial increase in the net revenue. During the year the cars of the company and its subsidiaries carried over 48,000,000 passengers and ran nearly 4,000,000 car miles. These figures showed a substantial increase on those of last year, but would probably show a considerable reduction at the end of 1924, as the control of the tramways worked by the company and one of its subsidiaries in West Bromwich passed into other hands at the expiration of the lease.

As from March 31st last those lines would be worked by the Birmingham Corporation, and he was glad to say it had been possible to come to a satisfactory arrangement with regard to through running, so that the through services from the Black Country into the centre of Birmingham would not be broken. The directors recommended the payment of a dividend on the ordinary shares at the rate of 5 per cent. for the year, leaving £11,023 to be carried forward, against £3,959 brought in. It might seem unnecessary, having regard to the strong position of the company, to carry forward so large a sum, but the directors had in mind the claims made by the Inland Revenue authorities in respect of excess profits duty and corporation profits tax.

The good results shown in the balance-sheet had been achieved without any return on the large amount of capital invested in the Shropshire, Worcestershire, and Staffordshire Electric Power Company. During last year that company had continued to develop its business, and the directors confidently looked forward to receiving a satisfactory return on the quarter of a million of money which they had invested therein. The reports of the subsidiary tramway undertakings all showed fairly satisfactory results and in considering the future they had not been unmindful of the possibility of omnibus competition over the tramway lines. Undoubtedly, the motor omnibus had come to stay, and they were taking all the necessary steps to protect the interests of their Black Country undertaking from unnecessary and wasteful competition. The results of the Birmingham and Midland Motor Omnibus Company, Limited, of which their company owned the whole of the ordinary share capital, had not yet been published, but he was giving no secret away when he said that that company had maintained during 1923 the excellent position which it had made for itself in Birmingham and the Midland Counties.

The report and accounts were unanimously adopted.

FAIRBAIRN, LAWSON, COMBE, BARBOUR, LIMITED.**THE VITALITY OF THE BUSINESS.**

The twenty-fifth ordinary general meeting of Fairbairn, Lawson, Combe, Barbour, Limited, was held, on the 16th instant, at the Abercorn Rooms, Liverpool street Hotel, London. Mr J. Campbell Inglis (chairman) presided.

The Chairman said his task was not so easy or pleasant as it had been in recent years. It was the fact that on the three first occasions on which he addressed the shareholders, he had to deal with the adverse circumstances arising out of the Great War, but for 1918 the board were able to recommend the renewal of payment of dividends on the ordinary shares. For 1919 there was a substantial improvement in the amount of such dividend, while for 1920, 1921 and 1922 there was a succession of large dividends. In the past he had been careful to remind the share-

holders that the circumstances of those three years were abnormal. He had never concealed the fact that those years of great prosperity could not be regarded as standard years, and that the time must come when they had to tighten their belts and pass through some of those periods of stringency which must from time to time prevail in the engineering industry; the company was now in one of those periods. It was in anticipation of this that they were careful in boom times to make provision for the future.

When he addressed them a year ago he referred to the improved prospects in trade. At that time not only were inquiries brisker, but they were booking orders more freely than for a long time past, though not as freely as they wanted. That was in April, and for the first half of the year their expectations to a reasonable extent were fulfilled. But after that they had a renewed period of depression, and it was not until the opening of this year that there was a revival in the volume of orders referred to in the report. For the first three months of 1924 their orders compared very favourably in total with those for the first three months of 1923, though, of course, prices were not so favourable as they were a year ago. No efforts to secure new business would be spared, and every possible market received their attention. Discussion on the wages question would shortly be proceeding, and he could confirm what had been stated in the Press that the Engineering Employers' Federation had taken the initiative in asking the unions to meet them and discuss the present position of the engineering industry, and how unrest could be avoided and the stability of the industry maintained. The board remained confident in the vitality of the undertaking, and looked forward at no distant date to the return of prosperity.

The report and accounts were unanimously adopted.

GODFREY PHILLIPS, LIMITED.

IMPROVED RESULTS—GOOD PROSPECTS.

The fifteenth ordinary general meeting of Godfrey Phillips, Limited, was held, on the 16th inst., at Winchester House, London, Mr M. David Phillips presiding.

The Chairman, in moving the adoption of the report and accounts, said that, as against a debit balance at the end of 1921 of £89,260, and of £4,237 at the end of 1922, they had a credit balance of £33,148, after covering the debit balance and paying £18,000 in preference dividends. They had every reason to congratulate themselves on their improved position. Since the date of the balance-sheet a dividend on the preference shares of 4 per cent. actual, amounting to £8,000, had been paid, making with the three months' dividend accrued to March 31st last a further reduction of £5,000, reducing the arrears to £19,000.

With so much unrest and unemployment it seemed doubly dangerous to prophesy, but trade for the year so far showed a satisfactory increase on the corresponding period of last year, and the directors hoped and believed that next year the arrears would be still further reduced. Should their hopes be realised, it would not be long before they were in a position to deal with the arrears on the "B" preference shares.

With Budget day so close, it was natural that their customers should be speaking of the duty on tobacco, which stood at the high figure of 8s 2d per lb on the unmanufactured leaf, with a preference on leaf imported from the Dominions. An ounce of tobacco packed in a tin and selling at 1s the ounce had to pay 6d in duty, leaving 5d for tobacco, labour, and package, so that the profit of the manufacturer and retailer was an item on which there was no room for reduction. With the cheaper lines the position was not so good. With cigarettes the position was practically the same, and it was only the vast quantity sold which enabled a manufacturing profit to be possible at all. It was, therefore, to turn-over that manufacturers must look for their profits. A high duty necessitating high selling prices must discourage sales. The consumption for 1923 was 3½ million pounds less than 1922 and 10,000,000 pounds less than in 1921. It must be patent to everyone that without a reduction in the duty there could be no general reduction in price. The quantity of Empire tobacco available was small, compared with the total used, so that the preference on the duty on Empire tobaccos could only play a very small part in price reduction, but the company was doing all that was possible to meet the public in that direction. If the preference was continued, and, as the colonies hoped, increased, larger quantities of Empire leaf would become available, to the benefit of their fellow-countrymen abroad and customers at home.

Mr Arthur I. Phillips (general manager) seconded the resolution, and it was carried unanimously.

MISCELLANEOUS.

BENGAL IRON.—In a circular to shareholders dated April 15th, the company state that during the year ended March 31, 1924, the works have been fully employed, the blast furnaces have run well, the output of pig-iron having exceeded that of the previous year by fully 25 per cent. Four furnaces are at present in blast, while the fifth is being rebuilt on modern lines with larger capacity. The fourth battery of coke ovens, which was completed and put into operation in January this year, is operating most satisfactorily, and with the four batteries working the company is practically self-supporting as regards coke supplies. The new pipe foundry for the production of pipes of large diameter is nearing completion. Jitpur Colliery—comprising three shafts—is now equipped with steam and electric plant. Underground development work is in progress. The result of bores at this colliery and of the development work shows that the company has at moderate depths 24 million tons of good coal in this and the adjacent property of Noonodih. Adding to this the four million tons proved at Ramnagar, the company has, at the present rate of consumption, sufficient coal in its own properties to last for over 80 years, and this without taking into consideration quantities that may exist in deeper seams. The chairman visited the works, ore mines, and collieries during last cold weather, and was satisfied with the progress being made in all departments.

CITY OF SANTOS IMPROVEMENTS.—This company provides its shareholders with instructive comparative statistics in its annual report and accounts. The company's gasworks, tramways, water-works, electric light and power operations are shown separately year by year from 1914 to 1923, so that those interested are able to see what progress has been made over the past ten years. With regard to the year 1923, it is pointed out that the company's business continues to show satisfactory expansion, but Brazilian exchange has again adversely affected the results in sterling. The revenue in Santos has been converted into sterling at 5 13-32d, the average remittance rate of exchange for the year, as against 7½d in 1922, and the floating assets and liabilities in Brazil have been valued at 5 19-32d per milreis, the rate ruling at the end of the year 1923. The net revenue for the past year was £75,397, which, added to £10,053 brought forward from 1922, makes a total of £85,450, as compared with £68,923 in 1922. The ordinary dividend has been reduced from 5 per cent. for 1922 to 3½ per cent. for 1923.

said to be unremunerative. The export returns for March indicated a substantial drop on those of the previous month in regard to iron and steel manufactures, machinery, and vehicles. Imports of small tools and cutlery, however, were up. File makers are experiencing severe competition owing to existing output capacity being greatly in excess of the trade offering, and much of the work taken lately has been at prices which barely cover costs. Quietude is general in plate and cutlery, especially in business placed by shopkeepers. The demand for Sheffield razors has been stagnant ever since the Armistice was signed, nor are there any indications of early revival. Cutlery exports during the past three months were nearly level with those of the corresponding quarters of 1923 and 1922, but there was a moderate increase in shipments of hardware, tools and implements. The demand for fuel has eased a little with the improved labour position, but not much coal is available for the open market, and deliveries being on a heavy scale, the market remains in a very strong position. The call for house coal is less insistent, but fuel of good quality is in short supply. Quotations per ton at pits are:—Best hand-picked branch, 36s to 38s; Barnsley best silkstone, 34s to 35s; Yorkshire steams, 27s to 29s; Derbyshire ditto, 24s to 26s; 1½ in. ditto, 27s 6d; rough slacks, 12s 6d to 15s; smalls, 8s to 10s; coke round about 29s.

Our Glasgow correspondent writes as follows:—Pig-iron prices remain as they were a week ago, and the market has been rather quieter. The total shipments from Glasgow harbour last week amounted to 1,350 tons. Business in the iron and steel trade is being somewhat hindered by the possibilities of trouble in the labour world. Competition from the Continent is still negligible, but, unfortunately, notwithstanding this, the placing of new orders with the steel works is not what it should be. Makers are maintaining the agreed prices for home orders, but a few good orders have been booked for export at considerably below the home figures. Messrs Sir Wm. Arrol and Co., Limited, of Glasgow, have secured the order to supply and erect a bridge at Newport (Mon.), the contract price being £142,000. Some small contracts for structural work have been placed in this district, but very keen cutting is still the rule for this class of engineering work, and to secure business showing a margin of profit is said

to be the exception. The position as regards bar-iron makers and steel re-rollers is practically unchanged, orders being only for immediate requirements. Black sheet makers are still busy, chiefly on export work, and inquiries from various overseas markets for good specifications are above the average. Japan is showing more interest, but is not placing much tonnage here as makers cannot give delivery earlier than July for the very light gauges. Several thousand tons of heavier sheets have, however, been booked locally. Galvanised sheets are less in demand, and prices still show a sagging tendency.

Our Cardiff correspondent writes:—The news of the conclusion of an agreement between the M.I.C.U.M. and the coalowners in the Ruhr for the renewal of the contracts for the delivery of reparation coal, has deprived the Cardiff market of its principal sentimental support, and in spite of the approach of the Easter holidays, prices this week have been easier than at any time

* Half-year.

during the past six months. The pressure for prompt loading has been exhausted, and with the collieries producing a little in excess of the normal output, the supply of free coal has been daily increasing. Individual collieries are still fully stemmed, and these have been maintaining their quotations, but what little business has been passing has been taken up by less favourably positioned collieries at reduced prices. Buyers, however, are withholding their hands in the expectation that after the holidays they will be able to secure coals at still lower prices, for they are influenced by the view that current prices are determined less by costs of production—which must be increased under the terms of the wage settlement—than by the current demand. The fall in prices has been heaviest among the lower grades of small coals, and these, in some cases, are from 2s 6d to 3s per ton lower than they were a fortnight ago. The large steam coals are down to the extent of from 1s to 1s 6d per ton. The current approximate quotations are as follows:—Best Admiralties, 30s to 31s; second Admiralties, 28s 6d to 29s 6d; best drys, 28s to 29s; black veins, 30s to 31s; Western Valleys, 29s to 30s; Eastern Valleys, 27s to 29s; best bunker smalls, 20s to 21s 6d; ordinary cargo smalls, 17s to 18s; coking smalls, 21s 6d to 22s; anthracite big vein, large, 41s 6d to 45s; machine-made cobbles, 50s to 52s 6d; French nuts, 50s to 52s 6d; stove nuts, 47s 6d to 52s 6d; rubbly culm, 15s 6d to 16s; coke for export, 60s; inland blast-furnace coke at ovens, 30s to 35s; patent fuel, 29s to 32s; pitwood, ex ship, 25s 6d to 26s 6d. In the iron and steel trades business has been nominal, with prices unchanged.

METALS.

Tin opened firmer, with a good demand for all positions, but later a quieter tone ensued, and prices gave way on realisations. Standard cash changed

left to make calculations of their own, which are largely guesswork.

Another pre-war custom which needs reviving is that of announcing when the list of arrivals will be closed. We think the time has arrived when it could be safely announced by selling brokers that wool on vessels sighted at 4 p.m. eight days before the commencement of any series of sales would be included in that series. However many days of grace are allowed before closing the list of arrivals, the period should be made public, and now that B.A.W.R.A. wools will soon have all been disposed of there is no reason why a clear and definite statement should not be made. The long period between wools arriving in Coleman Street and the opportunity for them being included in the catalogues has been used against Coleman Street as a selling centre. It should be possible to revert to pre-war conditions as they relate to arrivals, wools being available for sale at the earliest possible moment.

Our Bradford correspondent, writing on Wednesday, says:—The market has presented a quiet appearance this week, and very little real business has been attempted in view of the holiday break. There seems to be a general tendency to mark time and await developments, and as there are no public wool sales in any part of the world, there is no outside influence to stimulate interest. The worst feature in this centre is the continued neglect of merino tops and yarns. Topmakers' quotations remain steady, but there is not enough business passing seriously to test the position. Holders feel, however, that the strong wool position is sufficient justification for them to maintain their prices, and they are apparently content to wait for prospective buyers to come into line. There is just a steady demand for crossbreds, and all quotations are firm at recent rates. Spinners of Botany yarns are badly off for orders, and difficulty is still experienced in getting particulars. Quotations in this section of the trade are very irregular, and some fair stocks of fine counts are beginning to accumulate. Activity in crossbred yarns is well maintained, demand both on home and export account having been very brisk in recent weeks. Most firms have enough orders on their books to keep their machinery employed for several months, and quotations remain very firm. It is manifest that a big potential market exists on the Continent, and anything that tends to stabilise exchanges and make for more settled conditions should react favourably on this market. There is not much change in the piece-goods trade. Buying on home account shows some expansion, but a marked improvement in the weather is needed in order to give this branch a fillip. Overseas demand is somewhat "spotty," but inquiries are fairly numerous.

THE COTTON TRADE.

MANCHESTER, April 15.

Trade developments in the market have been somewhat checked by the easier tendency and wide fluctuations in raw cotton rates. Many merchants seem to be afraid of depreciation in values. Cloth inquiry has continued extensive, but most of the demand is for early delivery. Shippers to India continue to give steady support in light bleaching and printing cloths. Rather more bids have been about in grey shirtings, but most of them have been too low. China has not been active, but something has been done in whites and fancies. News from Egypt continues rather better. Finishing cloths have been sold in fair quantities for the Continent and South

America. Manufacturers tend to strengthen their position. Quotations in American yarns have been well held, but spinners have had to shade prices to secure orders, and the turnover has been of moderate extent. Steady buying continues to take place in Egyptian counts, and full rates have to be paid for anything wanted.

HIDES, LEATHER, AND ALLIED TRADES.

(BY OUR CORRESPONDENT.)

As no hide sales were held this week in Bermondsey, owing to the Easter holidays, prices quoted last week hold good. The tone, however, seems slightly weaker, as provincial prices have here and there declined a fraction. Calf skins remain steady, and as the chrome calf outlook seems better, home tanners are rather more anxious to get supplies. Wool skins are as firm as ever, as fell-mongers seem eager to obtain them, owing to the good prices obtainable for pelts and wool. Business in foreign hides has fallen away this week, as tanners are looking for lower prices in the River Plate; drys are steady, with tanners of cheap sole and upper stock ready to snap up any bargains on offer.

Cables from the United States report the Chicago position as weak, with best heavy packers now selling at 12 cents.

Trade in sole leather is fairly well maintained, although the general opinion is that business has fallen away a little this week. This is, however, usually the case before a holiday, and does not mean trade generally has slumped. Prices remain firm, but it is rumoured there are bargains to be had in bends, owing to a quantity being thrown on the market originally meant for the export trade.

The demand for box and willow calf has been quite good this week, and holders are very firm on prices, several advances having been obtained. Semi-chrome kips are wanted at very low prices, and as rough East India kips are still dear carriers are rather in a quandary. Glacé kid, suede, and patent are all good sellers, with prices advancing.

The shoe section seems to be moderately employed, the chief demand being for ladies' shoes and sports goods. The export is well maintained, the Irish demand being exceptionally good.

VEGETABLE OILS AND OILSEEDS.

Markets settled down for the holiday, quiet, but fully steady. Of late values have fluctuated very little, and a good business has been done in satisfying home consumers' demands. Raw linseed oil is steady at £36 10s to £37 for April delivery, and at rather less for May onward to December. Although there is some demand for shipment, it is mostly for places outside Europe. Cotton oils are about unchanged, crude Egyptian quoting at £40, and soapmakers' grade of refined at £42, naked, ex Hull mill. Other vegetable oils are featureless.

NATIONAL PROVIDENT INSTITUTION

The Results for the Year 1923 show INCREASES in the Business transacted, the Premium Income received, and the Rate of Interest realised on Investments, and a DECREASE in the amount paid for Claims by Death.

Full particulars of the Office and the Policies it issues can be obtained from:—

48 Gracechurch Street, E.C.3.

In the oilseed section linseed is quiet, but steady, Plate offering freely at £17 15s for afloat and all positions to the end of May. Egyptian cottonseed, however, has further eased in the absence of buyers.

The exports of vegetable oils from Britain to places abroad in the January-March quarter were in advance of a year ago, those of refined being 8,977 tons, against 5,353 tons, and of unrefined 30,535 tons, against 21,247 tons in the corresponding quarter of last year. Although linseed oil exported was only 5,806 tons, against 6,813 tons and 17,684 tons in the corresponding period of last year and 1922, the exports of cotton, soya, and palm kernel oils showed a considerable advance, notably the last-named, of which 10,962 tons were shipped, against 4,208 tons in the same quarter of last year. The increase in soft oils for edible purposes has been due to the heavy Continental demand.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

The very severe weather that has been experienced in the European wood shipping centres has had the effect of greatly curtailing our imports of building woods, which decline has been accentuated by the labour troubles in the Norwegian wood industry. However, the opening of the middle European ports has already commenced, and for the next month ice will gradually give way to clear seas for the transport of fresh supplies.

This late opening of navigation has been somewhat of a relief to the trade, inasmuch as stocks of imported timber are still of a bulky character, and the "exceptional demand" for wood anticipated for so long has not been justified by results. Spot prices have kept fairly firm on the whole, but there have been many anxious sellers who either have not been able financially to hold the whole of their stocks or doubt that, as many expect, prices will improve before very long. As a matter of fact, not only are European shippers asking higher prices f.o.b. than in January, but freight rates have shown a decided improvement, yet so far spot prices have not been able to firm up in accordance with shippers' and shipowners' ideas.

It will be gathered, therefore, that the building woods market, left to function without official interference, has been in favour of consumers, as we suggested would be the case in a previous article in the *Economist*. The report of the Government Housing Committee, which predicts a possible consumption of 125,000 standards of wood for housing, must have some significance on the market, and no doubt the news of 50,000 new houses in prospect for this year (to say nothing of 2,500,000 new tenements within the next 15 years) will add to foreign wood exporters' confidence, as we believe the glowing reports in the Press of "great housing schemes" have done in the past, but provided the trade is left to work out its own salvation this should not have such an effect on prices as European shippers and other interested sellers might imagine. Our imports of sawn soft woods in 1923 reached over 1,400,000 standards—true, not all for building purposes, but principally for that work, and provided the Continental consuming countries, like last year, are not too pressing in their demands this season, this call for additional timber for housing should not be so seriously felt as many believe, especially in view of the expected greatly increased supplies from Russia and the very probable larger imports from middle Europe to supplement the very large quantities coming from Sweden and Finland.

As regards the Canadian spruce market the demand for the lower qualities for packing-case work has been greatly curtailed in this country by the cheaper white wood obtainable from Central Europe; even on the Lancashire coast Canadian shippers cannot "get in" at their present asking rates. In American pitch pine timber prices are firm; the demand has improved, but the troubles in the shipbuilding yards will restrict business for this and good quality Canadian spruce, Oregon pine, teak, and other timbers for that industry.

In the furniture wood section of the trade the import of mahogany logs has shown a decline as anticipated; this is expected to continue, and the market for this description is firm for nice squared logs of good dimensions. In other hewn hardwoods the imports have been much larger than last year; but of this small branch of the wood trade the demand generally is only fair. In the sawn wood department of the hardwood trade mahogany planks and boards have shown a slight increase this year compared with the first quarter of 1923, and would have been larger but for rising c.i.f. prices. Other descriptions of sawn hardwoods have arrived in increasing quantities, particularly the various classes from the United States (described by sellers and consumers as American lumber), as well as hardwoods from the East Indies.

Pitwood is a disturbed market at the moment whilst work at the collieries is so uncertain in the early future, and imports are very much lighter compared with a year ago.

In the native timber trade the position is fairly satisfactory for all first-class wood, oak, ash, sycamore, &c., the railway companies being in the market for good-class oak. The poor class of material is hard to sell. Native timber, however, must necessarily compete with the large supplies of American, Canadian, and European hardwoods, for which this market is very attractive.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Wednesday, April 16.

SUGAR.—British refined in moderate request, and prices reduced 1s per cwt, spot, and 1s to 2s forward. Messrs Tate and Lyle's cubes, quoted 62s 3d to 63s 3d; crushed, 60s 9d; granulated, fine and coarse

grain, 60s 1 1/2d; No. 1, 59s 10 1/2d; No. 2, also London and T.L., 59s 7 1/2d; ditto, May-June, 58s 6d; yellow crystals, spot, 55s 1 1/2d. Imported easier. White Java, spot, 57s 6d; May-June steamer, 24s 6d; June-July, 23s 9d; July-August, 23s 3d, c.i.f. London-American granulated, April-May, 30s 6d. Czecho granulated, spot, 58s 3d; May-June, 29s 9d, f.o.b. Hamburg. Terminal irregular. White, May, sold, 28s 1 1/2d to 28s 4 1/2d, 28s 3d, and 28s 10 1/2d; August, 25s 1 1/2d to 25s 4 1/2d and 25s 9d; October, 23s 6d; November, 22s 3d; and December, 22s 1 1/2d per cwt. Cuban receipts for the past week totalled 181,894 tons against 157,696 tons at same time last year. Exports: 91,880 tons against 108,318 tons. Stock: 840,366 tons against 727,174 tons. Centrals working, 162 against 137. Weather fine.

COFFEE.—Spot market steady, with moderate inquiries for suitable home trade qualities. Futures quiet. May quoted 90s 9d; July, 86s 9d per cwt.

COCOA.—Spot parcels moved off slowly at late rates. Accra, F/F quality, April-June shipment, quoted 33s per cwt, f.o.b.

TEA.—Private contract market firm, with a fair demand. SPICE.—Pepper generally steady. Black Singapore L.S., April-June, quoted at 4 1/2d; Lampong, August-October, 4 1/2d; Muntok, white, April-June, 8 1/2d; May-July, 8 1/2d. Zanzibar cloves, spot, 1rd to 1s per lb, as to quality. Tapioca in quiet request at late rates. Sago flour, February-April, quoted, 14s 9d; April-June, 14s. Dried coconut, fine cut, spot, 41s; medium, 44s per cwt. Ginger remains firm.

RICE remains quiet on European account, but shippers required late rates, and offer sparingly. Japanese peas, spot, quoted 22s 3d; and Madagascar butter beans, new crop, spot, 34s 6d to 35s 6d per cwt.

JUTE quiet, but prices steady. First grade, to Continent, quoted, March-April, £27 2s 6d; April-May sold at £27 10s; May-June, quoted £28; and August-September, £29 10s per ton. Hessians and twills quiet, unaltered.

HEMP.—Manila steady. J grade, April-June, quoted £39; K, £34; L, £33; and M, £28 10s. New Zealand, also African sisal, unaltered.

SEELLAC steady. T.N., spot, quoted 280s; May, 270s; August, 265s per cwt.

COPRA quiet, and tendency easier. F.M.S. Straits, February-April, to Rotterdam, quoted £27 2s 6d; March-May, £27; April-June, £26 16s 3d. Dutch E.L., February-April, £27; March-May, £26 17s 6d. Ceylon, April-May, £29; South Sea Islands, £26. Palm kernels steady, quiet. April-June, Liverpool, £18 17s 6d per ton.

RUBBER quietly steady. Plantation, standard crepe and sheet, spot, also April, sellers, is 0 1/2d; May, is 0 1/2d paid; June, is 0 1/2d; July-September, sold, is 1d to 1s 0 1/2d; and October-December, is 1 1/2d to 1s 1 1/2d per lb. Wild sorts dull.

FRUIT (DRIED).—The market in a general sense remained fairly steady, and a moderate demand was experienced. Of currants, Calamata, 1/2 cases, quoted 43s; Pyrgos, ditto, 44s; Amalia, 48s; Panariti, 50s; Gulf, 52s; Vostizza, 63s to 70s. Greek sultanas, 1/2 cases, 52s; Smyrna (boxes), 60s to 65s; ditto, fine and finest, 75s to 80s. Raisins: Valencia, 1/2 boxes, 48s; quarters, 50s to 54s; Cape, new crop, 48s to 52s. Figs, genuine natural, in bags, good, 35s; fine, 38s to 40s. A small business in dates is almost entirely confined to Siar. Hallowee, quoted 28s; Khredrowie, 20s; Siar, 16s 6d. All evaporated fruits remain in very small supply. Californian apricots, standards, quoted 80s; choice, 90s; extra choice, 108s. Peaches, choice, 53s; extra choice, 60s. Apple rings, 88s. French plums, 1/2 cases, 90/95, quoted 38s 6d; 81/86, 40s; 72/77, 46s; Oregon, 30/40, 72s; 40/50, 52s; 60/70, 42s cwt.

CANNED GOODS.—A firm tone prevailed in all directions, though buyers at the moment are not anxious, having now mostly filled in holiday requirements, but prices in most cases manifest a hardening tendency for later trade. Sardines, Portuguese quarter flats, quoted 3s to 3s 3d; clubs, 3 1/2d to 4s; 12 oz, 5s 6d to 7s 6d; 18 oz, 9s 6d to 11s 6d per dozen tins. Fine qualities are very scarce. Lobster, fancy halves, 135s. Crayfish, 96 1/2 lbs, 74s. Salmon, 1 lb flat reds, labelled, quoted 55s; ditto, tall, 43s 6d; 1 lb flat pink, 27s; ditto, tall, 26s 6d; cases of 96 1/2 lbs, 28s to 30s per case. Canned fruits: Singapore pines, 1 1/2 lbs, spot, 6s 9d for 48's; Californian apricots, 8s to 11s; ditto, peaches, 10s 6d to 13s; pears, 13s to 15s 6d; Italian tomatoes, 7s to 7s 3d per dozen tins.

OILSEEDS.—Linseed generally quiet. Indian: Calcutta, afloat, £20; March-April, £19 15s; April-May, sold, £19 7s 6d. Plate, afloat, sold, £17 15s; March-April, sold, £17 15s; April-May, £17 12s 6d. Rape seed firmer. Toria, March-April, £17 17s 6d; April-May, £17 15s; Jamba, March-April, £13 15s; and real bold Ferrozepore, April-May, £17 10s; May-June, £17 7s 6d. Cottonseed: Egyptian, quiet. Egyptian, black, April, £12. Sakellaridis, £12. Bombay, March-April, £10. Gingly seed quiet.

	Apr. 23, 1924.	Apr. 16, 1924.	Apr. 11, 1924.	Apr. 4, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills)	3½	3½	3½	3½	..

The Bank return showed a decrease of £621,000 in the note circulation, and an increase of £11,000 in the stock of gold and till money, making the Reserve £632,000 higher. Government securities expanded by £1,320,000, and Other declined by £350,000. Public deposits declined by £4,698,000, and Other deposits were thus £6,309,000 higher, standing at 108½ millions. Currency notes outstanding show an increase of £276,000 to £292,428,800, which includes £1,396,600 for notes called in but not yet cancelled. The fiduciary issue is £241,582,100, or £6,608,800 below the maximum.

THE STOCK MARKETS.

The volume of business in the Stock Exchange since the Easter holiday has not been up to expectations. Gilt-edged stocks have remained firm, and there has been some speculative demand for stocks and shares in the companies likely to benefit from the British Empire Exhibition, but elsewhere there has been little activity. French bonds have improved with the value of the franc, but the decline in the yen adversely affected Japanese bonds. Home Rails are a little better, and Metropolitans have again moved up. The oil market has been the principal feature among industrials on rumours of a working arrangement between the Shell, Burmah and Anglo-Persian companies. The mining market is languid, and has not attracted the attention of the public.

THE COMMODITY MARKETS.

Holiday influences have restricted trading in many directions in the commodity markets. In the cotton trade, although there was a good demand for piece goods, little business was actually transacted. Business is quiet in the wool trade. The wheat market is dull and inclined to droop. Linseed oil is easier. Hides are a shade weaker. The position in the pig-iron market remains without incident, and prices are unchanged. The same remark applies to manufactured iron and steel. Conditions are varied at Sheffield; while some firms are closed, others are busy. Tin is slightly lower, while copper is weak. Rubber met with increased attention, but demand dwindled away. Sugar is lower. Further information about markets and prices will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

After the holidays there was a sharp increase in activity on the foreign exchange market, which, especially on Wednesday and Thursday, was busier than for some weeks past, interest centring mainly round the rapid movements of the franc and the appreciation of sterling in New York. From 69.60 on the 17th and 19th, the Paris rate moved down rapidly on Tuesday and Wednesday, being at one time on Wednesday morning as low as 63.30, or not far short of half the rate of 120 quoted so short a time ago as March 10th. In the afternoon, however, there was a reaction on the falling off of American demand, and the closing rate on Thursday had reacted to 68.77½, with a slight recovery yesterday morning to 68.60. The main factor in this week's appreciation would seem to be optimism as to the progress of the Experts' proposals, a dangerous basis for an improvement which has already been carried much too far for the comfort of French export interests, and unless the Government is determined for political reasons to keep the rate at the present level, a further reaction may be expected. The Brussels rate has followed in the main the same course as that of Paris, moving from 81.25 on the 17th down to as low as 73.75 at one time on the 23rd, and up again to 80¾ yesterday morning. Forward quotations in Paris have widened slightly to 25c per month over spot from 20c a week ago. In Brussels they have moved from 5c above to 1c below.

The same growth of optimism is responsible to a large extent for the rapid improvement in the dollar, which moved from a closing rate of \$4.35½ on the 17th to as high as \$4.40½ for a short time on the 23rd, after which it has fallen away again quietly to \$4.37½ yesterday morning. Although the improvement in the middle of the week was at too rapid a pace to last, there would seem to be no reason why a somewhat quieter appreciation should not continue for at least a few more weeks to come. Forward quotations at ½ cent per month above spot are slightly wider than the ¼ quoted a week ago. Another currency which has moved rapidly during the week has been the yen, which, under the cumulative pressure of imports to make good the earthquake devastation and of the recent sharp restriction of import credits, has continued its fall from 15 10½d on the 17th to 15 9½d yesterday morning. The lira has remained comparatively steady, and shows even a slight depreciation, being quoted at 98½ yesterday, as compared with 97.70 on the 17th. The Amsterdam rate, following mainly on the dollar, jumped from 11.70½ on the 17th to 11.87 for a short time on the 23rd, since when it has reacted again to 11.76½. Switzerland, after moving in our favour, is back again at 24.69½, as compared with 24.75½ a week ago. Madrid, after a sharp improvement down to 30.90, has reacted again somewhat, but, at 31.52½, is still below last week's figure of 31.67½. In Central Europe the German mark remains steady at 19 billion, and Warsaw continues fixed at 40 million, pending the definite conversion into the new zloty currency. Vienna, following the dollar, has moved up a little from 308,500 to 310,000 kronen. Budapest, in anticipation of League of Nations control, has steadied considerably. Prague has depreciated slightly from 147½ to 148½. Belgrade remains steady, and Bucharest is slightly better at 837½. In Northern Europe, Christiania and Copenhagen both show improvement from 31.55½ to 31.47½ and from 26.27½ to 26.10½ respectively. Stockholm, however, has reacted from 16.52½ to 16.67½, and Helsingfors from 173½ to 175½. In the East, the rupee is somewhat dearer at 15 4½d, as compared with 15 4¼d. The silver market has been very quiet over the holidays, and prices have eased away owing to the recent improvement in sterling. Hong Kong stands at 25 4½d, as compared with 25 4¼d, Shanghai at 35 2½d as compared with 35 2¼d. In South America, Rio has fallen away a little from 6½d to 6 5-32d, while Buenos Ayres has moved down from 41 9-32d to 40d, and Monte Video from 43d to 42½d. Valparaiso, however, has appreciated from 40.50 to 39.10 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 19th:—

(000's omitted.)		Receipts.	
EXPENDITURE.		From Revenue	
Supply Services	7,600		17,395
Interest, &c., on Debt	4,974		
Sundries	554		
Reduction in Debt	4,019		
Increase in Balances	249		
	17,395		17,395

Revenue amounted to £17,395,800, against £20,813,200 in the corresponding period of the preceding year. Customs yielded £1,053,000, against £2,417,000, and Excise £6,301,000, against £8,908,000. Estate, &c., duties produced £1,290,000, against £860,000. Property and Income-tax yielded £3,163,000, against £2,144,000, and Super-tax £1,470,000, against £1,770,000. The week's operations reduced the National Debt by £4,018,700, and caused the following changes:—

(000's omitted.)		Receipts.	
EXPENDITURE.		From Revenue	
Unemployment Insurance	200		7,610
4% Treasury Bonds	1,378		200
Public Dept. Advances	2,350		37
	3,928		7,847

The floating debt was reduced by £5,305,000 to £758,930,500.

FINANCIAL YEAR, 1924-1925 (April 1 to April 19).

£		£	
Total Expenditure ..	52,341,478	Raised by Revenue ..	62,959,730
Net Repayments	13,079,311	Decrease in Balances	2,461,069
Total	65,420,789	Total	65,420,789

FINANCIAL YEAR, 1923-24.

£		£	
Total Expenditure ..	788,840,211	Raised by Revenue ..	837,169,284
Net Repayments	48,515,626	Decrease in Balances	186,553
Total	837,355,837	Total	837,355,837

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Law Union and Rock Insurance, Indo-European Telegraph, Nestlé and Anglo-Swiss Condensed Milk, Monte Video Water Works, and James W. Cook and Co. At the meeting of the Law Union and Rock Insurance, Mr C. G. Hamilton stated that there were very good prospects for the quinquennium. Mr H. L. M. Tritton, at the meeting of the Indo-European Telegraph Company, said their through route for international traffic was now open, and they were carrying good traffics.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a statistical article analysing the sources of our wheat supply.

THE REPARATION REPORT.

A FURTHER study of the report of the Reparation experts fully confirms the observation of President Coolidge that the production of this document is the most important event in international affairs since the Armistice. In spite of political differences and long-lived illusions, experience remains the greatest of teachers, and the world has moved a long way towards a common point of view as to what is and what is not practicable in this problem of reparations. The Dawes Report is built up on the lessons of the last five years, and embodies principles which are agreed between economists, and to which even politicians now give their adhesion. But we should be doing injustice to the experts if we implied that the report is merely a corollary of the past history of the reparation question. The report is a constructive piece of work of the highest order of merit, which has laid the whole world under a deep debt of gratitude to its authors. We have no desire to penetrate behind the secrecy of a unanimous report which is obviously the result of laborious discussions ending in the reconciliation of varying points of view. But one or two points are evident from the text itself. Thus, the report marks a considerable advance towards the French standpoint in the matter of specific guarantees, if we compare it with the discussions, let us say of the autumn of 1922, when the disposition on the part of Great Britain was to stress the point that the Allies should not interfere with German economic activity. In this specific development of the proposals, the report obviously owes a great deal to the continuous work that has been done for the last year or so by Belgian experts in the direction of working out the means of exploiting certain definite German assets. Elsewhere those who are familiar with the public work of Sir Josiah Stamp on public finance will have no difficulty in recognising his hand at many points of the report.

The outstanding feature of the scheme is that it makes no attempt to fix the ultimate sum payable by Germany. The Germans themselves are not decided as to whether to quarrel with this omission or not. To some extent it emerges from the limitation put upon the terms of reference by M. Poincaré, who objected

to the writing down of Germany's final debt. There is more, however, in the omission than this, for it emerges as a natural conclusion from the arguments brought forward in the report itself. If the experts had been asked to fix a sum they might conceivably have agreed upon a figure, but to the question, What is the most that Germany can ultimately pay without undermining the incentive to restore her economic life? the answer of the experts must have been, "We do not know." They have, therefore, produced a practical working programme for the next five years. They propose thereafter to apply a working index of Germany's capacity to pay, and both before and after the index comes into operation they provide that there shall be machinery set up which will prevent the payment abroad of sums so large as to imperil the stability of the German exchange and her new currency system. The problem has thus been approached as a practical business proposition, and as such differs profoundly both from the fanciful arrangements of the London Conference of 1921, and from the hand-to-mouth proceedings of the Reparation Commission in 1922, which could do no more than fix limited payments for a few months ahead.

When we come to detail, there is room for very considerable discussion on the merits of particular proposals. One point which is being considered with much heart-searching in France is the device for setting a limit to the amount of reparation to be paid according to the state of the exchanges which reflects the ability to make payments abroad. We do not think the difficulty of making foreign payments will be as serious a limitation as might at first sight appear; for if the scheme succeeds at all, it is certain to be followed by a considerable influx of capital into Germany, which at present is very short of circulating capital. This will come partly from foreigners who will resume investment in that country, and to a less extent possibly by the return of some of the capital held by Germans abroad—though the McKenna Report shows that this is not very great in amount, and enormously less than before the war. This influx is likely to continue through the period of restoration. It is a not unnatural suspicion in France that the Germans might wreck the scheme by an attempt to smash the exchanges, or, at all events, to make such large payments abroad on commercial account as to make it impossible to get payments for reparations over the exchange. But the situation is protected in this respect by the constitution of the Gold Bank, which will largely have in its hands the means of controlling finance and foreign trade, and on this bank the creditors of Germany have the means of checking a wrecking policy in regard to exchange. There is also the power in reserve of increasing payments in kind.

Another important criticism is that the scheme provides no control for the general German Budget, and only contains advice to the German Government on items of taxation and expenditure which lie outside the scheme itself. It will be remembered that the reparation revenue is made dependent on the mortgage on railways and on industry, and on certain payments out of the Budget to be covered by assigned revenues. It is argued that without general control the remaining items of the Budget may be handled in such a way as to prejudice the financial position of the Government. This is a criticism of substance, and the weakness of the position is brought out in one very important section of the report itself which deals with the relation of the Reich to the separate States. The Budgets of the latter are still in a chaotic state, and are not yet framed on a gold basis. The experts observe that the importance of the question may be seen from the fact that "the Reich Budget, after allowing for the subsidies, contains little more than one-third of the total expenditure, one-third being met by the States and one-third by the Communes." It would be quite possible for the Communal Budgets to be enjoying considerable prosperity at the same time that the Reich Budget is in serious difficulties." In this connection the experts observe that "if our recommendations are accepted in their entirety, self-interest alone may almost confidently be relied upon to force the German Government to make provident arrangements with the States, and it has already given us an assurance that the régime of increased subsidies has come to an end and will not be revived." It will be readily agreed that, if the new régime is to be established, the expenditure of the component States cannot be allowed

to become a constant drain on federal resources. In considering this problem, the experts are clearly right in insisting on the self-interest of Germany, and the world must recognise as one of the basic facts of the situation that the German people are determined not to go through another period of financial chaos such as that of the autumn of 1923. But the experts do not rely only upon German good-will, for they observe that, while it is desirable that the machinery of control which they propose should be of such a nature as not to involve the assumption of responsibility by the Commissioner for German administration, they also recognise that "this principle cannot be adhered to in case default in the plan arises." In other words, some further steps may conceivably have to be taken. In this connection it would perhaps ease the path to complete understanding with France on the whole subject if Great Britain would give an assurance that we would co-operate with France in any additional measures that might be needed in this connection. After all, such steps are authorised by the Treaty of Versailles, which specifically refers to the possibility of taking such economic and financial measures as may be necessary to enforce payment. The clause is a wide one, and includes measures even to the extent of economic blockade, though, in British opinion, it does not include military measures.

The question of the moment is whether any immediate progress can be made on the lines of the report without waiting for the final settlement of other questions, such as the division of Reparation receipts, inter-Allied debts and French security. On the question of the division there are several first charges on the schedule produced by the experts, notably the cost of occupation—though whether this includes the cost of the Ruhr occupation will be one of the first and most difficult decisions. But in any case the net payments for some time to come will be small. Great Britain took the line last August that she would not ask for any Reparation payments except the 14 milliard of gold marks which she is paying to America. But this is itself larger than her share of the net payments that Germany is ever likely to make, and certainly the interest upon it would be a very large proportion of Germany's early payments. On the other hand, we could not now ask France to start repaying her debt out of her own resources without imperilling her own budget situation. It is improbable that America will take any steps towards cancelling the debt of France and Italy for some time to come, and certainly not during a presidential campaign. The only possible immediate step seems to be a definite arrangement by England and America for a moratorium on the European external war debts. If M. Poincaré, however, speaks the mind of his country it seems that France is not willing to leave the problem in this unsettled state, and what, therefore, seems to be needed at the moment is to associate with this moratorium a formula indicating that the creditors of the European Allies will limit their requests after the end of the period of moratorium in accordance with some "prosperity index," or test of ability to pay. We adhere to our view that in return for a settlement both America and England should cancel their claims, but in view of the political position in the United States we think more headway might be made on the lines we have suggested.

On the security question the general lines are fairly clearly laid down, for there is little likelihood that this country would agree with any undertaking by France other than that indicated by the Mutual Guarantee in the League of Nations.

These larger questions are now beyond the power of negotiation. But we confess that the situation is not free from anxiety. It is possible that Germany would be more likely to accept the report before rather than after the elections, and the outlook would be greatly improved if the report were definitely accepted, not as a basis for discussion, but as an agreement in principle. M. Poincaré, however, seems to be in no great hurry, and there is a very real danger that once more the favourable opportunity may be missed. This is a moment when a very great responsibility rests upon the Press and those who create opinion in France and Germany, no less than on the respective Governments.

WEMBLEY.

THE British Empire Exhibition at Wembley, which the King opened with imposing ceremonial on Wednesday, is probably the biggest effort of its kind that the world has seen. It covers 220 acres, and on it has been spent £12,000,000, of which less than £2 millions has been spent by the Governments of the Empire and more than £10 millions by private bodies and concerns. Its amusement park alone, a mere adjunct of the real Exhibition, covers double the area occupied by the whole Exhibition of 1851. But Wembley's main claim to the world's attention does not rest upon a statistical comparison with the great exhibitions of the past, at Paris, Chicago, or San Francisco. Its unique interest rests on different grounds. It is the first attempt to present to the world a comprehensive picture in miniature of the resources, the productive power, the industry, the art and the skill of the many countries and peoples that go to build up the British Commonwealth of Nations. One may see there the products of one-quarter of the globe, and the uses to which they are put by the varied talents of hundreds of millions of British subjects. No one who is not devoid of business instinct, of the desire for enlightenment and instruction, and also of curiosity, will miss the opportunity of a visit.

In the huge task of preparation and organisation necessary to stage so great a show, it is inevitable that mistakes should be made, and targets exposed for the shafts of critics. Thus one hears glib, if irresponsible, gossip about methods of handling contracts and concessions, and many other matters; one hears also a rumbling of complaints from manufacturers and traders of the costliness of displaying their wares. This is not the time to probe into these complaints, or to assess the responsibility for such errors as may have been committed. The time for that is either past, or will come later. At the moment grumbles and cavillings are drowned in the universal wish to bring success to this great undertaking. It is, however, most desirable that we should regulate the extent of our hopes of success not in accordance with the fervour of enthusiastic sentiment, but by sober economic fact and human probability. To predict fantastic achievement is no more helpful than to cavil and belittle. In fact, the severest critics of the Exhibition will do it no more disservice than those who proclaim its magic potentialities for reviving trade and replacing old markets by new. There are those who still hug the illusion that we can make up for the loss of trade in European war-impooverished markets by a vastly increased trade with the Empire, and that Wembley will provide the impetus necessary. We do not doubt that there is room for an increase in the trade of Great Britain with the Dominions and colonies, and we yield to no one in our desire to see our trade not only with the Empire, but with the rest of the world increased. Nor do we wish in this connection to trespass at this moment upon controversial fiscal ground. But we would remind our readers of the abundant facts and figures which we have in recent times produced in these columns to show the remarkable steadiness in the direction of our overseas trade, and the immense difficulties in the way of diverting the natural trade stream. Kaleidoscopic changes in the orientation of external trade cannot be created either by Wembley or by any other instrument.

Not until these facts have been squarely faced can one reach a mental attitude suited to the task of gauging the potentialities of Wembley. These we believe to be considerable. Wembley will for the next six months be a meeting place of producers, traders, and manufacturers of the old country and her partners. Personal contact, first-hand information of needs, conditions, methods and powers of supply—these should surely bring tangible result. And that result need not be confined to the trade of different parts of the Empire with each other. One of the accepted beliefs of to-day is that advertisement pays. Thousands of business men from all countries in the world will come to Wembley, and there they will see a unique and arresting advertisement of the industrial and commercial possibilities of Britain and her sister nations. If modest business follows ordinary advertising, big busi-

ness should follow the greatest trade advertisement that the world has seen. Moreover, the conscientious visitor to Wembley, be he Briton, Colonial, or foreigner, will become familiar with resources and trade possibilities of which he has never heard; and this is a case where familiarity should breed, not contempt, but new ideas, new business plans, and new openings for enterprise. Thus it should be within the power of this great Exhibition to make some contribution towards the expansion not only of British Empire trade, but of world trade. There will no doubt be exhibitors who will not enjoy the immediate recoupment of their expenditure on display. But, in general, trade volume should derive ultimate benefit; and that is alone a sufficient reason why we join most heartily in the chorus of good wishes with which the Exhibition has started on its way.

The King, as usual, struck the right note in his speech at the opening ceremony, which the development of electrical science allowed millions of his subjects to hear. Referring to the famous Exhibition of 1851, and its aims, His Majesty said: "Our object here is not so ambitious, and for that very reason, perhaps, more hopeful of attainment." The Exhibition of 1851 aimed at nothing less than the establishment of peace among all nations, and was followed in a very short space by the Crimean War. The aim of Wembley is "the co-operation of brothers for the better development of the family estate," and that, to quote the Royal words, "can hardly fail to promote family affection." Again, in the King's closing words, the aims and possibilities of Wembley are succinctly and soberly summed up. "No nation or group of nations can isolate itself from the main stream of modern commerce, and if this Exhibition leads to a greater development of the material resources of the Empire, and to an expansion of its trade, it will at the same time be raising the economic life of the world from the disorganisation caused by the war."

THE MOTOR INDUSTRY AND McKENNA DUTIES.

WHEN Mr Baldwin raised the issue of Protection last autumn, and challenged the country to deliver judgment upon it, he ran the risk of destroying the results of all those efforts at piecemeal protection which previous Governments had achieved. The present Government has already declared that it does not propose to renew those provisions of the Safeguarding of Industries Act which expire in August next, and in some quarters the Chancellor of the Exchequer is expected on Tuesday to drop out of his Budget those McKenna duties on certain classes of imports which were imposed as a war measure in 1915, and continued annually since for other reasons. The industry chiefly affected by the abandonment of these duties is that of manufacturing private motor-cars, and we are warned by employees and trade unionists in Coventry that much unemployment must result from removing the duty of 33½ per cent. which is levied upon the imports of private motor cars, their chassis, components and accessories. The fears of Coventry may be well founded, though we find it difficult to believe for the reasons which we shall give that the abandonment of the duties will make much difference to the industry, one way or the other.

Although the McKenna duties were originally put on in the Finance Act of 1915, they had no protective effect upon the motor-car industry until the year 1921. The duties of one-third *ad valorem* were imposed upon private cars, clocks and watches, musical instruments, and cinema films, to check the imports of luxuries, and to save shipping space. Commercial vehicles and motor tyres were excluded from the operation of the duties because the country needed them for war purposes. It had no great need for private cars, and the firms which had been making them before the war were put on to munitions. After the Armistice and demobilisation, an immense demand set in for private motor cars which the British industry was quite unable to meet—partly because it had been disorganised by the war, partly because the demand was far beyond its utmost capacity to supply. The

McKenna duties, which their author had declared to be temporary, were retained by his successors, in order that the British motor industry might be assisted to get upon its feet. It cannot be claimed that the existence of these duties in 1919 and 1920 impeded at all the importation of foreign motor-cars. The public demanded cars so vigorously, and were willing to pay such high prices for them, that the duties became inoperative as a measure of protection. It may now be recalled that second-hand pre-war cars were selling in 1919 and 1920 at prices far in excess of their original cost, and that the theft, doping, and sale of motor-cars to uninquisitive purchasers rose almost to the rank of a recognised, though unlawful, industry.

It followed that from 1915 until the beginning of 1921 the McKenna duties upon private motor-cars, components, and accessories yielded revenue, but had little or no protective effect. In the two following years, however—those of 1921 and 1922—there was a protective operation of the duties which considerably assisted the industry of making private motor-cars. We distinguish between motor-cars and motor-cycles because, though the duties applied to imported motor-cycles, the British trade in them is so firmly established, both for home use and export, that imports of motor-cycles do not seriously compete with the British industry. By 1921 the manufacture of British motor-cars had become re-established, and imports were considerably checked by the McKenna duties. In 1920 23,807 complete foreign cars were imported and retained, while in 1921 the retained imports fell to 4,325 complete cars. The first stage of the duties was a check upon luxury imports, the second stage was a revenue tax, the third stage was the partial protection of a British industry.

This third stage, which may now be considered to be passing into a fourth stage, was of considerable interest. A great demand arose for small, highly-efficient cars, and the British makers developed rapidly a type of their own. The principal foreign competitors in this type (one French and three American) set up works in this country, and American makers also put up establishments in Canada, so that they might import cars and components under the Imperial preference provisions of the British Finance Acts. The fourth stage, upon which the industry has now entered, was reached. British makers began to compete severely with one another, especially in the market for popular low-power cars, and prices came down at the end of last year to a level which compared favourably with those ruling before the war. It was, one is disposed to believe, more the work of British manufacturers in perceiving and catering for a new class of motorist that gave them a predominance last year and early this year in the home market, than any direct effect of a tax on imported foreign cars. The chief foreign competitors for the custom of this new motoring class do not now import many complete cars; they bring in parts from France or from Canada and build them up into cars in their branch establishments in this country. That is what we have called the fourth stage in the operation of the duties, and it is one which an abandonment of the duties will be slow in affecting adversely. In 1922 retained imports were 12,992 cars, of which 7,122 came from Canada. In the course of last year, upwards of 80,000 new private motor-cars were licensed, of which about 65,000 were built or assembled here and 14,620 represented retained imports of complete cars, a large proportion again coming from Canada, and obtaining the benefit of preferential rates of duty. Of those built or assembled here, a considerable number contained foreign or Canadian parts imported by the Ford, Citroën, and General Motor companies.

We are disposed to think that the chief anxiety of British makers of the more popular types of cars is the problem of making a profit at present prices. The industry of making private motor-cars is at present very active, but not very profitable. Few of the companies concerned in motor-car manufacture are paying dividends to their shareholders. They have cut prices resolutely to get command of the new market, and have been looking to a continuance of the McKenna duties in order that they may be relieved of the stress of foreign competition while they try to get prices back to a more remunerative level. At present prices the best of the makers can compete with anybody, duties or no duties, but there may be diffi-

culty in advancing prices if the McKenna duties are wholly removed. In price competition with that remarkable product, the Ford car, British makers have no chance at all, duties or no duties. By importing a few vital parts and constructing their cars here, the Ford Company laughs at import duties. But, however useful the Ford may be in a rough country, the new type of British motorist does not like it; he or she wants a small high-speed economical engine and car, paying a small tax, and giving a long mileage per gallon of petrol. This type of car is now being turned out here in huge quantities at very low prices. If a removal of the duties threatened a serious and immediate falling off in the production of British cars, and unemployment in Coventry and elsewhere, we should be disposed to advocate that the remission should come by stages rather than by sudden total abolition. But so far as can be seen at present the duties are no longer protective, their protective work was done in 1921 and 1922, they are largely supererogatory, and should be allowed to disappear forthwith at a moment when the change can be made with a minimum of disturbance. The subject cannot be dismissed without mention of two facts. The first is that the motor-car is essentially a commodity in which the progress of science may be expected to produce relative cheapening. The second that this country is far behind the United States in the popular use of the automobile, and will only catch up to that level of popularisation in proportion to the lowering of the prices at which cars are obtainable.

THE CANADIAN BUDGET.

(BY OUR OTTAWA CORRESPONDENT.)

WITH Mr Fielding still incapacitated, it fell to Mr J. A. Robb, the acting Minister of Finance, to introduce, on April 10th, the Federal Budget for 1924-25. No Budget of recent years has been awaited with so much speculation and anxiety, and the results are in many respects surprising. The Budget is obviously dictated by political considerations, for it has been plain for some months that unless the King Government went, in this Budget, some way to meet the fiscal demands of the Progressives, its life might come to a summary end. Faced by this exigency, the Government, by the strange subterfuge of a policy of semi-segregation of the finances of the Canadian National Railways, claim that last year's financial operations yielded a surplus permitting a reduction of \$30,409,109 in the national debt. They propose to use some \$24,000,000 of the surplus for reduction of taxation; but the illusory character of such surplus can be demonstrated from the fact that to the charges of the Canadian National Railways there were added in the fiscal year 1923-24 two bond issues, one in August, 1923, for \$22,500,000, and another in February, 1924, for \$50,000,000. It is scarcely arguable that in the long run these sums will not be just as definite a charge upon the Canadian people as what Mr Robb calls the Net Public Debt, and it will be hard to convince the financial world that during 1923-24, instead of a surplus of \$30,000,000, there was not a real deficit of some \$42,000,000.

Mr Robb was unable to submit definitely accurate accounts for the year, but he estimated that when they were complete, the total revenue would reach about \$396,000,000. Which is an increase of \$1,500,000 over last year's revenues. The following are the main items:—

	Yield.	Increase.
Customs	121,800,000	3,700,000
Excise duties	38,200,000	2,500,000
Excise taxes	121,000,000	14,500,000
Income taxes	53,750,000	6,000,000
Business profits' taxes	4,650,000	8,381,000
Interest on investments ..	4,700,000	11,700,000

Mr Robb placed the ordinary expenditures as follows:—

	328,250,000
Ordinary Consolidated Fund expenditure	328,250,000
Capital expenditures, for Marine Department, and other public works	12,170,000
Demobilisation account	740,000
Special funds for discount and loan flotations ..	7,650,000
Railway loans	23,781,684
Loan to Government Merchant Marine	1,500,000
Other advances	1,121,987

He therefore placed the total charges at \$375,213,651, and claimed that the surplus of ordinary revenue over these was \$20,786,349. To this he added \$8,305,760 obtained by adjustment of book debts from the British Government and \$1,317,000 secured through the cancellation of sundry outstanding indebtedness, and announced that the net public debt since March 31st had been reduced by \$30,409,109.

If this calculation had any substantial basis there would be general rejoicing at the alleviation of taxation which he proposes. The main relief will come from a decrease in the general Sales Tax rate from 6 per cent. to 5 per cent. In addition, the exemption list for the Sales Tax is increased by the additions of cereal foods, macaroni and vermicelli, sago and rice, meats salted and cooked. On boots and shoes, including rubber footwear, biscuits, canned vegetables, canned fruits, jams and preserves, the Sales Tax is cut to 2½ per cent. Manufacturing establishments of various kinds, chiefly textiles, get a concession of exemptions for material consumed in the production of goods subject to the Sales Tax. Of the total loss of revenue of \$24,000,000 which Mr Robb allows for, the decreases in the Sales Tax will be responsible for \$19,000,000 or \$20,000,000.

The tariff reductions are sectional in character, and do not affect the general fabric of the protectionist system, but they realise the worst fears of certain manufacturers, especially those engaged in the production of farm implements. The duties on mowing machines, harvesters, &c., under the general tariff, are cut from 10 per cent. to 6 per cent., and under the preferential tariff from 7½ per cent. to nothing. On the average there is a reduction of about 1s 3d of the existing duties on all lines of farm implements. Shovels and spades now come in under the preferential tariff at a duty of 10 per cent. instead of 20 per cent. as before, and in this line there ought to be a good opening for British manufacturers to increase their exports. Fertilisers are also made completely free of duty, but, apart from these items, as Canada imports practically none of the larger farm implements from Britain, little benefit from these changes will accrue to British trade. By way of consolation to the agricultural implement manufacturers, they are given a small concession the way of free entry of, pig-iron, bar iron and bar steel when used in the manufacture of mowers, binders, and reapers in place of the present drawback of 99 per cent. Other materials utilised by them will be entitled to entry at 7½ per cent. under all tariffs, and will be exempt from the Sales Tax. Almost parallel cuts in the tariff are made to help fruit growers, dairymen, and poultry men to secure cheaper equipment; and the same principle has been applied to tariff schedules which affect the mining, lumbering and fishing industries. Under the preferential tariff the duties on rock drills are cut from 15 to 10 per cent., and on sawmill machinery to the same extent; in each of these cases the general rates are reduced to 20 per cent.

One interesting change is that the British preferential rates are extended to any territory administered under a mandate by a British country which already enjoys the benefit of the British Preferential Tariff. It is also provided that in computing the *ad valorem* rate of duty on tea purchased in bond in the U.K. the value for duty shall not include the amount of duty payable on tea for consumption in the U.K. There are no changes in the income or corporation taxes.

It is too early as yet to ascertain the considered verdict of the country, but the Budget seems certain to attain its main object, the placation of the Progressive party and the consolidation of a parliamentary majority behind the King Government. The tax reductions ought to fulfil the promise of the Speech from the Throne that the cost of the implements of production would be reduced, and people engaged in the basic national industries will welcome the concessions. The manufacturers, however, who are affected by the tariff changes are bitterly enraged, and others who for the moment have suffered no diminution of their protection fear that the triumphant agrarians will merely have their appetites whetted by the present taste of blood, and will next year force the Government to further changes. The expectation is that a number of protectionists on the Liberal side will join the Conservatives in opposing the Budget, but their loss will easily be

made good by the solid reinforcement of the Progressive party and the small group of independents. The volume of insurgency which the Ministry will have to face in Parliament will largely depend upon the actions of Sir Lomer Gouin, who resumed his seat in the House on Budget day. If he takes the field in person against the Budget the general prediction is that he will be followed by most of the members for industrial constituencies in Quebec, and the result will be a complete realignment in Canadian politics with a General Election on the fiscal issue at no distant date.

If the King Government had not embarked on flagrant subterfuges for the production of a fictitious surplus, and if they had taken the courageous step of introducing a system of Federal death duties to provide the revenues necessary for an honest balance of the national accounts their position would to-day be extremely strong. But so dubious is the outcome of the present manoeuvres, that Mr Robb made the strange omission of offering no forecast of the national balance-sheet for 1924-25. There are signs, that although the foreign trade returns continue to be very satisfactory, all is not well with the domestic situation, and the last week's return of bank clearings reveals the ominous fact that for every city which shows an increase as compared with the corresponding week of 1923 almost three show a decrease. If, however, a good crop and a betterment of internal trade come to the help of the Government, the fiscal concessions offered by the Budget to the farmers and others may prove very profitable from a political point of view, but if adverse winds blow up and a huge deficit has to be faced next year there will be a bitter day of reckoning with the electorate.

THE PROFITS OF LONDON STORES.

THE enterprise shown by our big London stores is bearing good fruit, as will be seen by perusing the figures of representative companies which we give below. We have been told the story of the humble reel of cotton ordered by telephone from a big London store and delivered by motor-car the following day a distance of 20 miles. Another store delivered a parcel of wool value eightpence a distance of 12 miles to a lady who was not on its books, and opened an account for this amount. This attention to detail and organisation must inevitably bring the big store into the province of one of the necessities of life.

In our first table we show the net profits of 15 selected London stores companies over a period of years:—

NET PROFITS (after Payment of Debenture Interest).							
Company.	1913.	1918.	1919.	1920.	1921.	1922.	1923.

Liberty and Co.	206,930	463,159	473,038	447,195	95,834	275,415	216,489
Maple and Co.	54,250	66,975	86,962	105,689	79,427	17,340	Dr 89,719
Mappin and Webb	112,396	305,895	355,735	358,821	326,722	304,655	316,718
Selfridges and Co.	37,194	74,578	107,396	80,856	7,289	67,831	69,116
Spencer, Turner	23,118	58,761	77,769	47,994	22,274	30,578	15,807
Thomas Wallis	70,632	155,568	263,566	269,989	152,231	240,295	229,064
William Whiteley	11,368,102	257,511	3,199,249	2,851,929	1,496,281	2,260,487	2,314,454

On the whole, a successful year for 1923 is reflected in these figures. Harrods leads the way in the group, both in total and in the amount of increase. Barkers continue its steady climb; it will be noticed that this company has not deviated from an upward course, even in the year following that of the boom period. Over a period of 10 years the company has made extraordinarily rapid strides. The gross profit, together with the interest received on the deposit account, shows an increase of £30,000. This gives £402,000 as net profit, against the next best year—£402,000 as net profit, against the next best year—which was last year—of £362,000. The sum of £211,780 is carried forward to the credit of next account, an increase of about £63,000 on the amount which was brought in.

Selfridges is able to show a distinct recovery, but Maples follows an irregular line. Whiteley's profits were

As Harrods is the biggest of all the undertakings in our list, a detailed analysis of its accounts may be useful as showing the trend of figures during the year. Net profit was £567,800, being an increase of £83,679. With the exception of the boom year 1919, this is the largest net profit earned in the history of the company. The profit earned in its first year as a company was £13,519. Stocks on hand, at £1,049,173, showed a decrease of £42,079.

The rate of turnover was the highest reached during the last 10 years. Deposits and current accounts amount to £956,635, as against £921,763 a year ago. On principle, we have in the past taken exception to the practice of combining the business of banking with that of a large commercial store, but we must admit that the directors have made good provision for the item of deposits according to the figures shown in the balance-sheet. Cash at hand and with bankers amounts to £585,912, while under investments, which total £1,806,832, we notice trustee stocks worth approximately £400,000.

The net profits of Whiteley's were £229,064, which with the balance brought forward from last year amounted to £489,646; the company set aside £6,000 to provide for corporation profits tax, and has added to reserve £30,000, bringing the total of this item up to a quarter of a million. Book debts are substantially lower, and the cash position is favourable. Investments now stand at the substantial figure of £297,000, chiefly Government stocks, and the market value of these securities is over £12,000 more than they stand at in the books. On the debit side the deposits and current accounts at £532,342 are about the same, and the amount owing to trade creditors less than last year. We are glad to find that liquid cash assets are higher, "cash" having increased from £104,140 to £126,877. A satisfactory feature of these accounts is the fact that investments are shown first at cost and then at market value.

In the case of Selfridge's, it is pointed out that depreciation, reserve fund, excess profits duty, and corporation profits tax have in 10 or 12 years absorbed £1,200,000. The directors have also during these years retired about £100,000 in debentures.

Our final table shows dividends together with share quotations and yields obtainable from representative shares in this group :—

Thomas Wills.	1	13	16½	14	10	10	10	1½	1½	7 12 6
Wm. Whiteley.	1	8	14	14	14	20	25	2½	3½	17 16 0

* Yield on 5½ % cum. pref. † 6 % cum. pref. ‡ Paid on 1s shares.
(a) Free of tax.

This is an instructive table. Harrod's, Barker's, and Whiteley's all show fairly generous yields on their ordinary shares. Selfridge's only place their preference shares before the public, but even here a yield of £4 16s per cent., free of tax, is a reasonably good industrial return on preference capital.

The current year should prove profitable for these undertakings. The British Empire Exhibition, bringing a large influx of people into London, will no doubt help to increase profits both immediately and in the future. The immediate result should be a stream of purchases made by visitors for use here and to take back with them. The future benefits should be the extension of overseas business to many people, who will learn to appreciate the excellent services rendered by these institutions.

INDIAN JUTE MILL PROFITS.

(BY A CORRESPONDENT.)

IN its ample supplies of jute, considered either as a raw material or in its manufactured form, Bengal is fortunate in the possession of one of the most unassailable and profitable monopolies to be found in any part of the world. While competition is often threatened, actually it never materialises. Outside Bengal and the neighbouring provinces, it seems, indeed, to be impossible to produce either jute, or an effective substitute for it. Consequently, while the supremacy of the Indian industry has been long maintained, it promises to endure, and even, as mills

multiply in and around the city of Calcutta, to be accentuated. Alike in its agricultural and manufacturing aspects, the advance of Indian jute production has been continuous. Under normal conditions, as it would not be difficult to adduce statistical evidence to prove, jute is, in proportion to acreage, the most valuable crop in India, one incidental, yet important, advantage being that jute exerts the minimum effect in impoverishing the soil. While the wheat tracts of the Punjab maintain a population varying from 63 to 500 per square mile, cotton in Bombay from 151 to 396, cotton in the Central Provinces from 93 to 193, the jute districts of Bengal maintain a population of from 580 to 1,086 to the square mile. Jute, raw and manufactured, represents, on the average, 55 per cent. of the exports of Indian merchandise from Calcutta to foreign countries, while of the total exports of Indian merchandise from the whole of India, the jute trade represents an average of 25 per cent. During the war the Calcutta mills supplied enormous quantities of jute materials, including about 1,400 million bags; chiefly sand-bags, and over 700 million yards of cloth to the Allied Governments. While war conditions thus enabled Calcutta producers to secure enormous profits and to strengthen their financial position in every respect, jute mills abroad, especially in Continental Europe, were, for various reasons, less advantageously circumstanced, their domestic handicaps being added to later, owing to financial exigencies in India, by the post-war imposition of an export tax on raw jute. It is safe to conjecture that, outside India, jute manufacture has more or less reached its maximum development, leaving India to supply additional requirements as and when international trade recovers, and brings, with its recovery, a revival of the world's demand for jute products.

It needs but a cursory investigation to establish that no country in the world is so favourably situated for the manufacture of all forms of jute products as Bengal, and no city is so favourably situated as Calcutta—raw material, labour, fuel, transport, and capital all being available in abundance, and combining to ensure production under the most favourable and profitable conditions. Comparative figures of Indian mill consumption of raw jute indicate the rapid extension of local manufacture. In thousands of bales, Calcutta mills in the quinquennium 1908-12 attained an average consumption of 4150, as against 4348 exported. Since 1913, however, Calcutta, *contra mundum*, has maintained an unchallenged supremacy, the figures for that year being 4499 utilised locally against 4193 exported, rising in 1915 to 5770, against 3107; in 1919 to 5227, compared with 3358; and in 1922 to 4747, as against 2902. The largest export of raw jute ever recorded was 894,000 tons in 1908-09. The pre-war export of Indian manufactured jute products may be summarised thus :—

Year.	Gunny Cloth.	Bags.
	Yards.	Number.
1887-88	13,604,204	73,866,774
1897-98	242,951,051	197,619,914
1912-13	1,021,816,869	311,707,646

The subsequent improvement in the position of the Calcutta mills, financially and technically, will be found to be clearly indicated in the figures we will now proceed to quote. We may take, in the first instance, the enormous relative growth in loom power. In 1877, according to the figures placed at our disposal, there were 2,948 sacking looms and 910 hessian looms, total 3,858. By 1885, aggregate of 6,700. Appended are the figures of expansion since 1905 :—

Year.	Sacking.	Hessian.	Total.
	9,786	11,409	21,195
1905	15,751	22,603	38,354
1915	17,452	28,111	45,563

Adding mills not reckoned in these figures, it is calculated that the aggregate number of looms now available for production is approximately 48,000. Official statistics for 1920-21 allude to 74 mills on the banks of the Hooghly, containing 41,292 looms and 863,339 spindles, giving employment to 285,881 workers. It is possible that the present check to construction of new mills is not altogether unfortunate, inasmuch as over-production has again and again in the history of Indian mills led to short-time work-

ing and the temporary disappearance of profits, and there was more than a possibility, in the immediate post-war period, that manufacturing facilities would be so expanded as to exceed any possible demand. It was in December, 1921, that the Calcutta mill-owners returned to a period of restricted output by working only four days a week, while paying full-time wages, and from the mills' point of view this arrangement has worked so satisfactorily that it is likely to remain operative until fundamental changes in world trade render it unprofitable. Dividends remain satisfactory, though, of course, no longer on the fabulous scale which made Calcutta temporarily in 1918-20 the Golconda of the East. As the chairman of the Indian Jute Mills' Association has observed, although last year was uneventful (surplus stocks, however, being liquidated, and raw jute remaining cheap), nevertheless the industry has reason to congratulate itself on the results. Profits are again on the upward trend, and though these are unlikely to return to recent levels, the vitality and general prospects of the industry have never, in a normal sense, been better. The following figures, taken from the files of *Capital*, indicate the profits of Indian jute mills in the last decade :—

Year.	Profits Before Paying Debenture Interest.
	Rs.
1913	2,45,97,553
1914	96,18,694
1915	4,21,48,960
1916	6,48,71,041
1917	4,23,92,573
1918	12,29,25,767
1919	11,64,53,696
1920	12,53,82,066
1921	4,95,86,331
1922	3,58,35,863
1923	4,95,33,808

If there is a weak spot in the industry, viewing the position from the broadest possible outlook, it is to be found in the present not very remunerative prices being obtained by the growers of the raw material, a position which is lending plausibility to the contention of political agitators that the growers, like the mills, should protect their interests by sowing, temporarily, less jute. The better way, as the Agricultural Department is showing cultivators, is, by using improved types of seed, and more up-to-date methods of cultivation, to obtain larger yields of jute per acre, and it is in this direction that most progress is now visible. As pointed out in the *Indian Textile Journal*, assuming that manufacturers and shippers require 80 lakhs of bales next season—and it is not an inflated estimate—the trade ought to make sure of the inducement to the ryot to maintain the raw outturn at the present level; full allowance being made for the fact that while the margin of real profit for the ryot is low, the purchasing power of the rupee is barely half what it was before 1914.

THE TRUST POSITION IN GERMANY.

WHILST in the United States the movement of industrial organisation during the three decades before the Great War was towards permanent combinations, i.e., consolidations, of both the "horizontal" and "vertical" types, the dominant tendency in Germany was towards terminable combinations of a "horizontal" kind. Vertical consolidations were, of course, of substantial importance there, chiefly in the iron and steel industries; but the characteristic feature of German industry before 1914 was the "Cartels," combinations of concerns engaged in the same branch of production and formed for a definite term of years (or subject to withdrawal of membership at will) and for prescribed purposes, the constituent concerns retaining complete independence in all other respects. These Cartels were very numerous—there are reported to have been between five and six hundred in existence in 1914, ranging from bodies whose avowed objects hardly extended beyond those of the most ordinary "trade associations" in the United Kingdom to such elaborate organisations as the *Stahlwerksverband*, with its fixed allocation of a standard production among its members, its central selling agency, and its consequential control of production and marketing.

This development had encountered little opposition, either from the State or from public opinion. Sporadic criticism of the general movement there had been, and occasional adverse comment on the proceedings of particular Cartels, but that was all. An exhaustive inquiry into the operation of the Cartels was held by an Imperial Commission in the years 1903-6, but its findings were in substance that the economic advantages of such industrial organisations—and particularly their ability so to regulate production as to mitigate trade fluctuations—more than outweighed any possible disadvantages, and gave no support to suggestions for any special legislation with a view to their control. Under the ordinary law of the Empire agreements establishing combinations or Cartels were repeatedly held to be valid in principle, though they might be illegal if abuse could be proved in any particular case. As far back as 1897, in the case of the Saxon Wood-pulp Cartel—which, it was admitted, had been formed "in order to prevent for the future a destructive competition between the Saxon wood-pulp manufacturers, and to make possible the attainment of higher prices than would be reached by unrestricted competition"—the Court observed that :—

"If in any branch of industry the prices of products sink too low, and if the thriving of the industry is thereby made impossible or endangered, then the crisis which occurs is destructive not only for individuals but also for the social economy in general, and it lies, therefore, in the interest of the whole community that unduly low prices in a branch of industry shall not permanently exist."

A specific application by the Government of the doctrine thus judicially enunciated was the Potash Sale Law of 1910, which, making compulsory a previous voluntary Cartel, forced all potash mine owners to enter a syndicate which should regulate their quotas for production and sale, and fixed home and foreign selling prices so as to prevent excessive competition and secure that the foreigner should pay higher prices than the domestic consumer—and not the other way round, as was not infrequently the case in other industries owing to the operations of the Cartels and particularly the system of export bounties which had been adopted in the iron and steel trades.

The first effect of the Great War was to stimulate the Cartel movement. When in Germany, as in all the other principal countries engaged, the Government was forced to call upon the whole industrial resources of the nation, and to regulate production and distribution alike, the most readily available machinery was that of the Cartels; where these existed their activities were widened, where they did not exist they were established at the instigation of the State, as was the case with trade associations in the United Kingdom and the United States. The economic confusion in Germany after the Armistice affected industrial organisation in two different ways. In the first place, the current set in motion during the war—of State regulation of production and distribution by and through the Cartels—was continued, partly of necessity and partly because it harmonised with the doctrines of the dominant political parties. The result was what many even of the strongest advocates of Cartel organisation regarded as an excessive and over-hasty development, actions on the part of some of the Cartels which gave rise to much adverse public criticism, and conflict between the various interests so organised. A consequence was the establishment in 1920 by the German Industrial Union (*Reichsverband der deutschen Industrie*) of the Central Cartel Bureau (*Kartellstelle*), whose primary purpose seems to be to act as a friendly guide to the Cartels, to warn any one of them from any course of action likely to have an adverse effect upon public opinion, and to adjust disputes between combinations of producers and consumers (whether of half-finished or finished goods). The second development after the war was that side by side with the extension of Cartels and the growth of "pools" or "community of interest" arrangements, consolidation, both vertical and horizontal, began to play a much more important part in German industry than it had hitherto done, both the holding company and the merger being adopted for the purpose. The loss by Germany of a very large part of her iron-ore deposits and coalfields, and (partly in consequence of this) the breakdown of the old pig-iron and steel Cartels made the great iron and steel works and the manufacturers of

finished products extremely anxious as to the security of their supplies, and so hastened the formation of vertical consolidations, which have resulted in the dominance of the iron and steel industry by seven groups—the Stinnes, Thyssen, Phoenix-Wolff-Rheinstahl-Van der Zypen, Haniel, Kloeckner, Krupp and Stumm interests, whose wide ramifications and range of production are set out in Messrs Thelwall and Kavanagh's latest report on *Economic and Financial Conditions in Germany*, 1923 (Appendix XIV., pp. 134-148; and also pp. 82-6). That report, like its two predecessors, contains much valuable information as to the nature and extent of the whole movement, which is manifest so far chiefly in the iron and steel, constructional and electrical engineering, non-ferrous metal, and chemical industries.

The attitude of the German Government and of public opinion gradually underwent a marked change, and for some time past there has been a movement towards some form of state regulation of the Cartels, whose unrestricted activities are not regarded with the same optimism as formerly. The first result is the decree against abuse of economic power (*Verordnung gegen Missbrauch wirtschaftlicher Machtstellungen*) which was promulgated by the Stresemann Government on November 2nd last, and came into operation on November 20th.

The new decree prescribes that all agreements (syndicates, cartels, conventions, &c.) seeking to regulate production, marketing, trade conditions, or prices must be in writing; unless so made they are not enforceable at law. If any agreement so made, or any arrangement for giving effect to it, is deemed contrary to the public interest, the Imperial Minister for Economic Affairs may move the Cartel Court which is constituted under the decree to declare the agreement void, in whole or in part, or to prohibit the particular method of giving effect to it; or he may make an order enabling any party to the agreement to withdraw from it without notice, or directing that any arrangements to give effect to it shall be notified to him before becoming operative. Similar orders may be made by the Court in any case, in lieu of annulment. Agreements shall be deemed to be against the public interest if—in a manner not warranted by sound economic principles (*in volkswirtschaftlich nicht gerechtfertigter Weise*)—they restrict production or sale, increase or maintain prices, limit freedom of buying or selling, or impose any unreasonable discrimination. If an agreement is declared void by the Court, or is the subject of any judicial or administrative order of the kind indicated above, the Minister may require the notification to him, before it is put into operation, of any agreement of the kind to which the decree relates, if made by the same parties or a majority of them, or if the persons responsible for carrying it out were similarly concerned in the agreement already dealt with, or if it relates to the same kinds of goods or services. Further, the decree empowers any party to an agreement to withdraw from it at any time, without notice, on sufficient ground (defined as unreasonable restriction of the individual's economic freedom in respect of production, marketing, or price-fixing), but subject to appeal by the other party to the Cartel Court within two weeks. There are also provisions whereby the Court, if it holds that the trade conditions imposed or methods of regulating prices adopted by any concern or combination of concerns are against the public interest, can, on the application of the Minister, issue a general declaration releasing from the relevant agreements persons adversely affected thereby. It should be added that the decree is apparently not applicable to agreements relating to export trade.

The preceding brief summary is probably sufficient to indicate the significance of the new enactment, the difficulties with which those charged with its administration will be confronted, and the many legal problems that it will present—there are already signs that the ingenuity of the legal advisers of Cartels, whose attitude is that they will do their best to assist the Government in a reasonable application of the Act, but remain strongly opposed to it in principle, will be exercised to the full in order to mitigate its effect. Its operation will be watched with the greatest interest by all who are concerned with what is perhaps the most difficult problem of the state in relation to industry.

Notes of the Week.

President Coolidge's Pronouncement.—On Tuesday last the President of the United States made a speech in New York which indicates the renewed interest which is now being taken on the other side of the Atlantic in European affairs. Starting from the proposition that the principle of service was the basis of financial no less than of moral health, President Coolidge indicated that the state of Europe was of vital import to America. The long delay in entering the war was due to lack of proper information, and to the mistaken belief that the issues involved did not concern her. When once she realised the true facts of the case, however, she did not hesitate to make her sacrifice for what she believed to be the cause of righteousness. There was a certain parallel in the present situation. The refusal to join the League of Nations must be regarded as final, but this did not imply the doctrine of isolation. Between the two lay the middle course of "frequent international conferences suited to particular needs." The first problem, however, was the definite solution of the reparations problem, and, for this, the Dawes report showed a broad comprehension of the requirements of the situation. If success were achieved, credit would be due to Mr Hughes, the originator of the scheme, to President Harding, and to the American members of the committee. But President Coolidge went further. Not only had America already lent assistance for the solution of the reparations tangle, but sound business reasons now justified the financing of peace in Europe. He therefore hoped that private American capital would support the loan for Germany. This would lay the foundations of an enduring peace, and, once carried through, should lead to a reconsideration of the problem of armaments. The Hague Tribunal and the World Court were useful auxiliaries, but could not alone guarantee peace. President Coolidge therefore stated that when a certain and definite settlement of German reparations had been firmly established, he would favour the calling of a new conference similar to the Washington Conference. Proposals of this nature from a statesman so reserved as the present President of the United States, especially when they form part of an electoral campaign, are of more than domestic interest. They indicate clearly that the whole weight of American official support is thrown on the side of the Experts' Report, that even the Republicans, who were formerly regarded as the exponents of "isolationism," are now taking an active interest in European affairs; and that some more permanent form of world government is needed than that of diplomatic negotiations supplemented by occasional international conferences.

Irish Boundary Deadlock.—Fears of a deadlock over the Irish boundary question seem to have been justified. The conference between the Ministers of Great Britain, the Irish Free State, and Northern Ireland, which has been sitting in order to endeavour to find some common ground, broke up on Thursday, when the laconic announcement was made that "no agreement was reached." The members of the conference are remaining in London for the present, but no mention is made of a resumption of discussions. If this deadlock persists, a serious position will arise, and the British Government will be faced with a very awkward problem. The failure of negotiations would presumably be followed by a demand from the Free State Government that the provisions of the Treaty should be acted upon and a Commission appointed to define the boundary. It is equally certain that, unless an entirely unexpected change occurs in the attitude of Sir James Craig and his colleagues, they will refuse either representation on the Commission or recognition of its decisions. The definite danger therefore arises that the British Government will be forced into a position in which it must either try to coerce Northern Ireland or become guilty in the eyes of the Free State of a breach of faith. It is the old Irish dilemma in a new form, and it will tax the powers of MacDonald and his Cabinet to find a way

out. But since the parties to the negotiations are still in London, hopes of some accommodation between them are perhaps not quite dead.

Irish Free State Budget.—Concerning the Irish Free State Budget, the provisions of which will be known by the time these words are in print, our Dublin correspondent, writing on Thursday, says:—To-morrow will see the introduction of the Irish Free State Budget for 1924-5 by Mr Ernest Blythe, Minister of Finance. The Dail meets for this purpose, and will adjourn forthwith for about a fortnight. The occasion is not very convenient, since Mr Cosgrave, the President, and Mr O'Higgins, the Vice-President, of the Executive Council, are both absent in London attending the Conference on the Ulster Boundary question. The selection of the date is supposed to have been dictated by the apparent convenience of anticipating the Budget statement of Mr Snowden at Westminster, for Mr. Blythe, with no surplus to dispose of, would find his task less easy if following the Chancellor of the Exchequer who may be conferring substantial benefits on his taxpayers. The estimates for the year 1924-5 show a deficit of over £8,500,000—which is roughly the amount payable during the year in respect of compensation for damage to property and personal injuries during the insurrectionary episodes of recent years—against which may be set off the sum of £3,394,512, the balance standing to credit in the Exchequer on April 1, 1924. It is, too, not unfair to recall that for the past two years the estimates substantially understated revenue and overstated expenditure—doubtless with the praiseworthy object of keeping on the safe side amidst factors unsuited to exact treatment. Thus the present estimates mark down the produce for 1924-5 of Customs and Excise by some 10 per cent. from the figure collected in 1923-4. There have been drastic economies, and public accountancy methods are being tightened up in every direction. The taxpayer will reap the reward of this strenuous cultivation of financial orthodoxy later on in improved figures on both sides of the account. Nothing is known of proposed alterations of taxation, but rumour talks of remissions of income-tax and beer duty to make our Irish rates conform with the British rates as reduced last year. Certainly, Mr Blythe some two months ago expressed the opinion publicly that a diminution in the rate of income-tax would probably lead to an increased yield. The Minister of Agriculture at about the same date stated that the Government was considering carefully how far it might be possible to make certain minor and experimental essays in protective duties which would not dislocate existing business nor injure the farming industry, which is experiencing a critical time. The idea is also in the air that it might be well to remit portion of the duties on tea and sugar—articles of universal consumption which cannot be produced in Ireland—and to levy an equivalent sum by duties charged on boots, clothing, furniture, and the like, articles also of universal consumption which are to some slight extent, and could be to a much larger extent, produced in Ireland. But the discussion of this has not yet gone far. Those who are interested in Irish economics are anxious that the necessary data should be made available; the new trade returns rendered accessible in accurate figures by the new Custom Houses, valuable as they are, require to be supplemented by a census of production such as we have not had for some 17 years. And the word census is a reminder that those who deal in Irish statistics have still to work on the census returns of 1911; in 1921 it was impossible to take the usual decennial census, and the omission has not yet been supplied.

The Trade Balance of the United States.—Mr Hoover, the secretary of the United States Department of Commerce, has issued an estimate of the final trade balance of the United States, including "invisible" items, for 1923. This he presents in tabular form, as follows:—

(In Millions of Dollars.)			
	Credit.	Debit.	Balance.
Merchandise	4,208	3,819	Credit 389
Current invisible items, interest, and dividends	567	150	Credit 417
Ocean freights	65	73	Debit 8
Governmental payments	19	19	Debit 19
Services to tourists	100	500	Debit 400
Charitable and missionary expenditures	60	70	Debit 10
Immigrants' remittances	792	1,162	Debit 370
Total current invisible items	5,000	4,981	Credit 19
Total current items			
Movement of capital (i.e., investments and debt payments)—			
New foreign loans, exclusive of refunding loans	32	377	Debit 345
Sale and purchase of outstanding securities	339	33	Credit 306
Foreign bonds paid off	23	..	Credit 23
Principal of interallied debt	91	..	Credit 91
U.S. currency	50	..	Credit 50
Total capital items	535	410	Credit 125
Gold and silver—			
Gold	29	323	Debit 294
Silver	72	74	Debit 2
Total gold and silver	101	397	Debit 296
Total balance all items			
			Debit 152

The merchandise figures are straightforward, the only point of interest being an allowance of \$30 on the import side for smuggled liquors. The estimate of a final balance of \$152 millions against the United States in 1923, compares with an estimate of \$752 millions against that country in 1922, so that 1923 showed a very marked improvement. As regards gold movements, it will be seen that last year imports exceeded exports by little short of \$300 millions. Mr Hoover's explanatory remarks on the movements of capital are worthy of quotation:—"During the year there were large movements of capital. In this movement of capital, foreigners apparently bought \$394,000,000 of our securities and \$50,000,000 of our currency, and paid \$91,000,000 on debts due to our Government, or an estimated total of \$535,000,000. On the other hand, our citizens bought foreign securities to the net extent estimated at \$410,000,000. In other words, during the year the net interchanges of capital show that we received, as estimated, \$125,000,000 more than we placed abroad." As regards the item for interest on foreign investments, Mr Hoover explains that this increased largely, owing chiefly to payments by the British Government on its debt. He continues:—"And although we did not maintain our position as the chief lending country of the world by the same volume of investment as the year before, that was due not to lack of capital on our part, but to the unsettled conditions abroad, making foreign investment less attractive to American investors." This is only the second time that an official estimate of this kind has been made for the United States, but we are glad to read of Mr Hoover's intention that it should be produced annually, and his hope that next year it will be issued at an earlier date.

Discrimination in Lending.—In last week's *Economist* Mr J. M. Keynes, commenting on an article on this subject which had appeared in our issue of the previous week, accused us of seeming to suggest that the consequences of the recent Amsterdam loan are in some way different from the "nervous movement of British investors into American securities alleged to have occurred last autumn." He proceeded to argue that if there is no difference, we ought to have welcomed the "flight from the pound" on the ground that it would stimulate our export trade. On the actual point of effect on export trade, we agree that nervous purchases of foreign securities, owing to political fears, are just as efficient as deliberate investments made on judicious grounds. But that is surely an insufficient reason for welcoming a flight from the pound. The flight that occurred last autumn was a discreditable exhibition, started by an unwise utterance and continued owing to baseless fears of what might happen if a Labour Government came into power. It was consequently disliked by all who are jealous for the credit of Britain, in spite of its incidental stimulus to our export trade. The difference between thus investing abroad in a panic, and so making capital for home purposes dearer than it need have been if people had reasoned sensibly, and subscribing out of our accumulated funds to well-secured foreign loans after

deliberate consideration of their merits as compared with investments at home, is surely so obvious that it is not only possible, but necessary to disapprove of one course and approve of the other.

Cost of Living.—The "cost of living" index of the Ministry of Labour recorded in March the largest fall seen in any month for over two years, the percentage increase over July, 1914, having been reduced by five points, namely, from 78 to 73. This fall has brought the figure a trifle below the level of a year ago. Monthly movements since the beginning of 1918 are shown below:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items. (Food, Rent, Clothing, Fuel, and Light, &c.)							
Month (beginning of)	1918.	1919.	1920.	1921.	1922.	1923.	1924.
January ..	85-90	120	125	125	92	78	77
February ..	90	120	130	151	88	77	79
March ..	90	115	130	141	86	76	78
April ..	90-95	110	132	133	82	74	73
May ..	95-100	105	141	128	81	70	..
June ..	100	105	150	119	80	69	..
July ..	100-105	105-110	152	119	84	69	..
August ..	110	115	155	122	81	71	..
September ..	110	115	161	120	79	73	..
October ..	115-120	120	164	110	78	75	..
November ..	120-125	125	176	103	80	75	..
December ..	120	125	169	99	80	77	..

For retail food alone the percentage increase over the July, 1914, level was 67 on April 1st, as compared with 76 a month ago. The decline was mainly due to seasonal reductions in the retail prices of butter, milk, and eggs. These were of a substantial nature, eggs, for instance, falling in price by about 1d and butter by 2½d per lb, on the average. Potatoes, on the other hand, became dearer, as is usual at this time of year.

Employment in March.—The decline in unemployment which has continued unchecked month by month since August, again made some progress in March. The current issue of the *Ministry of Labour Gazette* shows that the Trade Union percentage of unemployment at 7.8 has now reached the lowest level recorded since February, 1921. Monthly movements of this percentage over a period of years, with comparative pre-war figures, are shown below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.							
	1913.	1918.	1919.	1920.	1921.	1922.	1923.
End of—	%	%	%	%	%	%	%
January ..	2.2	1.0	2.4	2.9	6.9	16.8	13.7
February ..	2.0	0.9	2.8	1.6	8.5	16.3	13.1

* Excluding coal miners.

The unemployment percentage for all workers insured under the Unemployment Insurance Acts in Great Britain and Northern Ireland has at last fallen below 10 per cent., being quoted as 9.9 on March 24th, as compared with 10.7 at February 25th, and 11.5 a year ago. Labour demand is brisker in the coal mining, tinplate, steel sheet, carpet, jute, and coachbuilding industries, and most of the skilled sections of the building trades; while a very large number of branches of industry contributed slightly to the unemployment decline. The total number of registered unemployed fell notably from 1,156,000 at February 25th to 1,057,000 at March 31st—a reduction of nearly 100,000 in five weeks.

Chilean Finance and Trade.—A correspondent writes:—While no complete official figures have as yet been issued, it seems clear that the finances of Chile remain in an unsatisfactory condition. Whereas last summer the Executive was enabled to announce that the deficit in the

Budget "had been reduced to \$27,000,000 (paper)," and that "the 1924 Budget would balance," it now appears that the deficit for the year 1922-1923 amounted to \$47,500,000 (paper), and that this sum, added to the general deficit for the previous year of \$107,485,000 (paper), brought up the general deficit at the end of December last to approximately \$155,000,000 (paper), of which current liabilities represent \$110,000,000 (paper). Towards covering this deficit the Government has proposed the issue of bonds to the value of \$60,000,000. A disquieting factor in an otherwise not unpromising economic situation is the shortage of labour, especially in the nitrate and agricultural industries. In some districts this amounts to as much as 25 per cent. of the normal supply. But the lack of labour has created an unprecedented demand among landowners for agricultural machinery and implements, especially harrows, ploughs, and light tractors. Herein British manufacturers should benefit. It is satisfactory to learn that there is under consideration a proposal for the improvement of the statistical service of the country, especially that section relating to commerce. When plans have further matured, commercial statistics should become available in the form agreed upon in the Brussels Conference. Other legislation to be brought forward, and which may be passed into law this year, includes authority to establish a Central Bank, which will be the only financial institution permitted to issue foreign drafts, modification of the present stamp-tax law, and an ordinance affording further protection to certain native industries, such as iron and steel manufactures.

Swiss Finance and Trade.—The long and very interesting Report (to February, 1924) from the Commercial Secretary to the British Legation at Berne, just issued by the Overseas Trade Department, shows that 1923 was for Switzerland a year of recovery. Though the voters refused to extend the alcohol monopoly and the hours of labour, the Budget deficit for 1924, without the imposition of new taxes or increasing import duties, has been reduced by drastic reductions of subsidies, wages and salaries to 37.8 million francs. But fresh revenue, obtainable only by taxing luxuries, must be found, and "extraordinary expenditure" on railway electrification, unemployment relief, and agricultural and industrial subsidies, must cease. The Federal railway and postal receipts are greater, the expenditure less; the cost of fuel is lower, and electrification will reduce the consumption. The extended motor services on the Alpine routes—though precluding the completion of the Brieg-Dissentis railway, and possibly entailing the closing of its completed section—have carried 148,000 passengers without an accident, profited the postal revenues, and helping the isolated villages and mountain hotels. The flight of capital abroad in search of better returns—which the fear of a levy stimulated, but did not initiate—depreciated the Swiss franc relatively to the Dutch guilder, the dollar, and sterling, and adversely affected the money market and the rate of interest on capital. The stringency was increased by the withdrawal, on the occupation of the Ruhr, of German capital, to pay for increased imports from Great Britain and the United States. The National Bank counteracted it by increasing the rate of discount, selling dollars, and rediscounting Treasury bills, but this did not restore the conditions of 1922. Stock Exchange business was satisfactory; industrial and banking shares were higher, stocks and bonds generally lower. Before the war eight milliards of Swiss francs were invested abroad four milliards have been lost in Germany, Austria, Hungary, and Russia, and one by the depreciation of the French, Italian, and other exchanges; but Swiss capitalists, reversing the pre-war current, are obtaining a hold on industrial enterprises in Germany, and also in Austria, Hungary, and Roumania; a trade mission is investigating openings in Turkey, and "holding companies," international in composition, are being formed to participate in various enterprises elsewhere. From the 42 pages dealing with trade, we can only select a few salient facts. The trade balance in 1923 was more unfavourable, but the increased imports consisted largely of coal, raw materials, food (especially Canadian wheat), and timber and steel for the building boom. The exports of watches, silks (with some excep-

tions), chocolate, and condensed milk were larger, though the values of the two last were less; the exports of embroidered goods declined. Swiss finished goods find their chief market in England; their material comes mainly from the British Empire. The efficient British Chamber of Commerce in Switzerland merits greater support. The aluminium industry prospers. The Government favours the export of electric power under licence, but at prices not below those charged to the Swiss consumers. The hotels have been better filled, but their financial recovery is slow; the influx of Germans is ascribed to a rise in hotel charges in Germany. The new draft Customs tariff will shortly be ready for the legislature; the rates will probably be more modifiable by treaty, and lower, at least on coal and food. The number of unemployed has fallen from 56,000 to 27,000; but trade union membership is some 14 per cent. less than in 1921. House shortage is still generally acute in the large towns. Emigration has increased considerably, for the most part to Canada. The Report has two blemishes: it leaves the false impression that the Federal monopoly of alcohol has ceased to exist, and, like its predecessors, it calls German-Swiss towns by their French names.

English Electric.—Practically no change in profits is shown in the accounts for 1923 of the English Electric Company, Limited. The gross profit of £261,800 compares with £262,700 for 1922, while the net profit, after payment of interest on debentures and notes, of £112,400, compares with £111,400. The table below compares results since the company's inception at the end of 1918:—

	YEAR ENDED DECEMBER 31.				
	1919.	1920.	1921.	1922.	1923.
	£	£	£	£	£

Carried forward ..	45,302	46,236	55,599	68,983	69,714

A slight increase in the paid-up capital accounts for the larger amounts required for the 6 per cent. preference dividend and the dividend of 5 per cent. on the ordinary shares. The item in the balance-sheet for interests in subsidiary companies exceeds that of the previous year by £654,500. The report states that this mainly represents the effect of exchanging debentures in a subsidiary company for junior securities in the English Electric Company. During the year the directors, taking advantage of favourable financial conditions, redeemed £1,250,000 8 per cent. notes (maturing on January 1, 1927), by issuing 6 per cent. convertible debenture stock. The result has been an immediate reduction as from 1924 of not less than £41,100 per annum in debenture charges. The directors state that "the orders taken during the year under review were very considerably in excess of the previous year, although the general level of prices left much to be desired." An analysis of the balance-sheet will be found in a later column.

Birmingham Small Arms.—This year the directors of the Birmingham Small Arms Company, Limited, are able to show a more favourable position in the accounts of this undertaking for the 12 months ended January 31, 1924. Indeed, it may be that the corner has been successfully turned, for a clear profit of £125,060 is shown after payment of interest on the 6½ per cent. 12-year notes, this alone absorbing £125,260. A year ago the report pointed out that, as against a deficit of £356,000 for 1921-2, a loss of £46,204 was recorded. But these figures were arrived at without including any allowance for interest on the 12-year notes. This figure has been added to the deficits mentioned by the directors for the years 1921-2 and 1922-3 in the table which follows:—

	a 1914.	a 1917.	a 1918.	a 1919.	1920-21*	1921-22.	1922-23.	1923-24.
Net profit	£190,429	£427,976	£435,207	£373,091	£566,881	Dr. 469,168	Dr. 106,672	£125,060

* 18 months ending January 31, 1921. + Including £100,729 interest on short-term notes. Year ended January 31st. a Year ending July 31st.

The current report states that—"Our guarantee given to the bank in respect of the overdraft of the Aircraft Manufacturing Company, Limited (in liquidation), has been cancelled without any expense whatever falling on this company. With regard to the guarantee in respect to the overdraft of Peter Hooker, Limited (in liquidation), your directors repeat what they have said in previous years, viz., that in their opinion no charge in respect of this contingent liability is likely to fall upon this company." Once more we must draw attention to the item in the balance-sheet under assets of "Shares in and loans to subsidiary companies," £4,259,370. This entry is followed by the significant note that "these investments are brought forward on the same basis as in previous years." A year ago the note was a little longer, the words "and no adjustment in view of existing trade conditions has been made" being appended.

Babcock and Wilcox.—Prosperity continues to be maintained by the well-known engineering undertaking, Babcock and Wilcox, Limited. In the accounts for 1923, now issued, profits are just a little below those for 1922. The following table shows the progress made by this company since 1907:—

	Manufacturing Profits (Less Depreciation).	Net Profits.	To Reserve.	Pension Funds.	Divl. dends.	Ord. Rate.
1907	£318,261	£309,769	£125,000	£..	£172,000	%20
1908	311,046	301,615	125,000	..	172,000	20
1909	355,733	350,004	125,000	10,000	205,200	24
1910	366,240	362,360	125,000	10,000	221,800	26
1911	387,029	379,224	130,000	10,000	238,400	28
1912	438,300	426,147	150,000	10,000	271,600	16
1913	452,004	446,075	150,000	10,000	276,252	16
1914	421,017	402,947	150,000	10,000	247,950	14
1915	434,246	396,551	150,000	10,000	263,918	15
1916	521,991	438,323	150,000	10,000	263,963	15
1917	618,664	444,513	150,000	10,000	263,963	15
1918	541,264	438,986	150,000	10,000	263,963	15
1919	570,071	465,089	150,000	10,000	263,963	15
1920	683,201	497,468	150,000	10,000	358,765	16
1921	693,514	490,181	150,000	10,000	358,765	16
1922	974,428	787,601	200,000	10,000	444,718	20
1923	990,640	753,063	200,750	30,000	530,671	12

It may be recalled that last year a share bonus was declared by doubling the ordinary capital and giving shareholders two shares in the place of one previously held; thus the 12 per cent. dividend and bonus for the year to December 31 last is equivalent to 24 per cent. on the capital as it stood in the previous balance-sheet. In the balance-sheet investments, which are £1,973,481, compared with £1,958,172 at the end of the preceding year, are still taken "at cost." This probably means that the valuation is on a conservative basis, but it does not convey all the information that one would wish. One item of £1,534,837 embraces freehold land and leasehold property, plant, buildings, patents, and shares and debentures in subsidiary companies. A little more detailed information under these heads might be desirable. As a whole the balance-sheet, which will be found analysed in our usual column, shows the company's affairs to be in a remarkably prosperous condition.

Atlas Assurance Company.—The first report to be issued by one of the old fire insurance offices is that of the Atlas, which shows fire results for 1923 very similar to those of the previous year. In the fire department the premiums were £2,271,494, as compared with £2,136,188; the net claims 50.2 per cent. of the premiums, as against 50.4 per cent.; and the expenses 42.3 per cent., as against 43.4 per cent. After making provision for unexpired risks on the basis of 40 per cent. of the increase in premiums, the surplus was £115,842 (5.1 per cent.), as compared with a surplus for 1922 of £128,158 (6 per cent.). The employers' liability, accident, and general account yielded a surplus of £5,864 on premiums of £280,145. In the marine account the funds were increased from £97,877 to £141,217. Net interest receipts available for divi-

dends amounted to £121,542, against £115,662 for 1922, debenture interest being deducted in each case. The dividend of the past year of 13s a share, tax free, costs £143,000, and the credit balance at profit and loss, after provision for this dividend had been made, was £153,242, against £145,262 brought forward. A valuation of the assets and liabilities of the life department was made as at December 31st last. The total surplus was £121,056, of which £53,376 was applied to writing down securities, £21,183 applied to strengthening the valuation, £11,864 carried to profit and loss as the proprietors' percentage of premiums in lieu of profits, and £33,436 carried forward. The interim bonus payable on sums assured and existing bonus which become claims, was increased to 36s per £100 per annum.

Royal Exchange Assurance.—After several years of extreme moderation in dividends, this old corporation has made a substantial increase in its distribution to shareholders, though still keeping within the assured receipts from interest upon invested funds. For 1923 the dividend is 25 per cent., less tax, which will cost £133,537, against net interest receipts of £139,418; a year ago the total dividend was 18 per cent., less tax, costing £93,044. In the fire department the premiums were £1,414,548, against £1,480,013, and the claims 47.5 per cent., as compared with 46.1 per cent. The expenses and commission absorbed 46.5 per cent., against 46.6 per cent. After taking credit for the reduced liability for unexpired risks, the fire surplus was £110,528, or 7.8 per cent. of the premium income. In the marine department there has been an expansion in premiums after the severe cutting-down of recent years. For 1920 the marine premium income was £1,070,952, for 1921 £248,364, for 1922 £369,068, and for 1923 £517,806. The marine fund was raised to £750,249, against £724,479, by means of a net transfer from profit and loss of £40,000. The general accident account, with premiums of £726,985, yielded an underwriting surplus to profit and loss of £56,610. The profit and loss balance (general reserve fund) was increased during the year from £1,015,403 to £1,056,892, after providing £63,602 for income-tax and corporation tax. The increase in dividend is more than met out of the net interest earnings of the funds.

London and Lancashire Insurance Company.—This insurance company, conspicuous for several years in the skill of its management, has achieved during 1923 one of the most successful underwriting records in its history. In what may be called an average year for most offices, it has made exceptional profits. The total premium incomes in the fire, marine, and accident department amounted to £5,769,875, against £5,496,326 during 1922. In the fire department, thanks partly to a favourable experience in the United States, the premiums of £3,015,995 yielded an underwriting surplus of £404,906, or 13.4 per cent. of the premiums. In the marine department, with premiums of £1,209,124, the underwriting surplus was £150,970, or 12.4 per cent., and in the accident department, with premiums of £1,544,756, the underwriting surplus was £189,307, or 12.2 per cent. The total surpluses, apart from interest, and after providing for liabilities under unexpired risks, amounted to £48,887. Interest receipts, less tax and less debenture interest, amounted to £383,113. After providing £219,771 for income-tax on profits, and corporation tax, and the dividend for 1923, and increasing the reserves of the fire and accident accounts by £400,000 and £100,000 respectively, the balance of profit and loss carried forward was £1,091,055. The shareholders' dividend for the year of 13s a share, less tax, will cost £376,517, the whole of which is met out of the net revenue from interest on the reserve fund of £383,113. The interim dividend for the current year is to be increased by 1s a share, less tax.

The London Assurance.—In the fire department last year the premiums were £1,601,505, against £1,480,153 for 1922, the claims 46.4 per cent., against 51.4 per cent., and the expenses 45.5 per cent., against 45.3 per cent. Pro-

vision for the increase in unexpired risks cost £48,541, and the underwriting surplus was then £80,745 on 5 per cent. of the premiums, as compared with £82,399, or 5.6 per cent. in the previous year. The fire reserves were increased by £100,000 to £1,400,000. In the marine account the premiums were £944,601, against £869,279, and after increasing the reserves by £50,000 to £900,000, the sum of £160,771 (including £39,631 from interest) was transferred to profit and loss. A year ago the marine transfer to profit and loss was £163,236 (including £33,813 from interest). In the combined accident accounts the premiums were £286,235, and the reserves were increased by £49,143 to £204,923. The total transfers to profit and loss on account of underwriting were £167,469, and the total interest receipts available for dividends were £236,385, making together £403,854. After transferring £25,000 to contingencies account (making it £450,000) and £50,000 to general reserve (making it £1,300,000), and writing £25,000 off premises account, there was a balance at profit and loss of £251,385, against £249,745 brought forward. The dividend on the ordinary shares for the year is 10s 6d a share, less tax, which will cost £202,876 net, against £186,982 paid in dividend during 1923. Including the preference dividends of £15,000, the dividend payments on account of the past year will be £217,876, as compared with net available receipts from interest of £236,385.

Three Accident Insurance Companies.—The Ocean Accident (owned by the Commercial Union), the London Guarantee and Accident (owned by the Phoenix), and the General Accident Companies have all issued their reports. These companies do a very considerable "casualty" business, as it is called in the United States, and we see its effects upon their reports. At the annual meeting recently of the Employers' Liability Assurance Corporation, it was explained that the readjustment of premiums to experience had lagged behind the unfavourable claims ratios of most offices, but that the various State insurance departments were now revising the rates which it was permissible to charge for American workmen's compensation business. In respect of last year the Ocean had premiums in its accident department of £5,506,015, as compared with £5,133,482 for 1922. The claims paid and outstanding were 59 per cent. of the premiums, and the expenses and commissions were 36 per cent. After making provision for the increase in liabilities for unexpired risks on the basis of 40 per cent. of the increased premium income, the Ocean shows a surplus of £121,410, or little more than 2 per cent. of the premium income. The London Guarantee and Accident Company in its general insurance revenue account for last year had premiums of £4,469,631; the claims paid and outstanding were 57.4 per cent. of the premiums; and the expenses and commissions were 39 per cent. After provision for unexpired risks, there was an underwriting deficiency of £62,680, or 1.4 per cent. of the premiums. The General Accident Assurance Corporation shows premiums in the accident and general account of £4,184,209, as compared with £3,517,415 in 1922; the claims paid and outstanding were 57.3 per cent. of the premiums; and the expenses and commissions 33.3 per cent. The underwriting surplus, after the company's own adjustments for unexpired risks, was £235,755, or 5.6 per cent. of the premiums. If, however, the basis of 40 per cent. of the premiums be taken, the surplus works out at £117,258, or 2.8 per cent.

East Rand Proprietary.—It is somewhat curious that following the issue of what must, on the whole, be regarded as a disappointing report, the shares of this company should have been—and continue to be—the subject of speculative activity. This was at first attributed to unofficial information of improved developments. The directors, in their annual statement, mention the continuance of "promising values" in the Driefontein area, but add that these continue to be erratic. Hence the outcome of further work must be awaited before definite conclusions can be drawn. The quarterly report just to hand intimates that "good values are being exposed in limited areas in the Driefontein and Angelo sections." Last year no less than 45,000 feet of development were per-

formed, or more than double the toll of any recent period. Nevertheless, the ore reserves only expanded by 376,300 tons to 2,100,600 tons. This quantity, although considerable in itself, is, the consulting engineer remarks, "quite inadequate to provide for the present scale of milling operations." The point of this observation will be apparent when it is realised that 1½ million tons of ore were taken out of the mine during 1923. In other words, not very much more than one year's supply is available. The alternatives before the management are to decrease the scale of crushing or increase the scale of underground operations. They have chosen the latter. If results are satisfactory, well and good; in the contrary case there will be no possibility of materially prolonging the life of the mine. Last year a small working profit was made—£6,300, equal to 1d per ton. This compares with a loss of £92,600 in 1922 and a profit of £78,300 in 1921. It may be noted, however, that the whole of the additional development was last year charged against revenue, swelling the expenses by £93,300, or 1s 2d per ton. This procedure is difficult to understand in view of the fact that the company had a fund of £306,400 accumulated some years ago for the purpose of covering special development expenditure. In view of the position of the mine, the directors consider there is no necessity to continue the reserve in question; it has accordingly been transferred to the appropriation account. The latter now shows a credit of £461,700, mainly represented by cash assets. Such sum will not be available for distribution amongst the shareholders. The liability in respect of debentures not yet redeemed stands at £430,800, while on the termination of operations a large contribution will become payable under the Miners' Phthisis Act. The possibility of an arrangement with the Cinderella Consolidated, which owns an extensive adjoining property, was referred to in last week's "Note" on the General Mining group.

Consolidated Diamond Mines.—Our mining correspondent writes:—There has been a considerable amount of heart-burning in connection with the affairs of this enterprise, which took over the properties in South-West Africa formerly owned by German concerns, and subsequently acquired other interests. The latter, it may be worth while to point out, include practically all the shares in the South-West Electric Power Co., possessing a fully equipped plant at Lüderitzbucht, which supplies electric light and power to the mining companies and to the township. The Consolidated Company also owns the entire capital of the South-West Finance Corporation, formed to hold the royalty rights in respect of the Pomona area, with landed property and other assets. To this undertaking advances totalling £588,200 have been made by the Consolidated Company. In view of the improvement which took place in the diamond trade during the early part of 1923, it had been expected that the Consolidated Company would be able to make a maiden distribution in respect of that year; and the absence of any announcement occasioned much disappointment. The accounts now in the hands of the shareholders in this country show that the expectations above referred to were fairly well founded. As against an insignificant sum in 1922, the profits—after allowing for a heavy non-recurring taxation charge—came out at £270,700. It is true that of this amount £138,700 was required for debenture redemption sinking fund, but the balance would easily have provided 5 per cent. Possibly the key is to be found in the financial position. The latter appears strong, for after providing for liabilities the cash surplus comes out at £496,000. Included in the liquid assets, of course, is the loan of £588,200 to the South-West Finance Corporation. The sum in question, it is semi-officially stated, is lent out against first-class security; nevertheless, it presumably cannot at the moment be drawn upon by the Consolidated Company. Diamonds on hand, at cost of production, figure for £98,500, not included in the surplus above mentioned. Some surprise has been expressed by shareholders at the non-application of any portion of the debenture redemption fund. The position is this. Until the end of September, 1929, the holders of the bonds have the right to convert them into shares at par. This right is responsible for the considerable premium at which the de-

bentures are quoted. But according to the "Stock Exchange Official Intelligence," the debentures are redeemable at par in 1929 or earlier by means of a sinking fund to be created by setting aside out of the yearly profits a sum equal to 7½ per cent. of the debentures outstanding. It is obvious that people would not have paid 120 to 140 for these bonds if they considered there was any possibility of repayment at par in the near future. Obviously, need exists for an authoritative statement. By the way, the amount of the bonds outstanding is £1,849,900. Last year the company sold to the London Diamond Syndicate 400,700 carats, for which £1,461,100 was received. The directors state (under date March 5th) that negotiations for a renewal of the sales agreement are in train. Presumably they have been concluded ere this. Even should the company's contribution to the pool remain at the old level, there would seem to be every prospect of a dividend in respect of the current year.

A Quarter's Fishing.—The deep-sea fisheries during the first quarter of the year have been attended with a fair amount of success. The landings of wet fish by British-owned fishing vessels at ports in England and Wales, according to the returns of the Ministry of Agriculture and Fisheries, reached 2,098,269 cwts, comparing with 2,137,864 cwts in the corresponding period of last year, while the first-hand value (including shell fish) is returned at £3,305,519, against £3,441,861. The landings at Scottish ports were 1,563,280 cwts, against 938,761 cwts, and the values £1,052,757, against £806,487, thus recording much improved conditions in the Scottish fishing industry. In addition, foreign-owned vessels landed in Great Britain direct from the fishing grounds 432,831 cwts, against 393,859 cwts, the respective values being £319,643, against £344,855. It is interesting to record that these landings at Grimsby and Hull, in March, fell off considerably as compared with January and February, and to some extent affected the total for the whole of Great Britain. Nevertheless, the figures are regarded as still too high, and continue to exercise the minds of those engaged in the industry here. Imports of wet fish from abroad in the quarter amounted to 486,656 cwts, against 479,767 cwts in the January and March period last year. Norway alone contributed to the total 322,864 cwts, principally fresh herrings, which are now arriving in substantial quantities by special steamers at Hull and other ports for the purposes of the British curing industry, which annually exports the salted or smoked product on an extensive scale to Poland, Germany, and the Baltic States.

Japanese Trade and Finance.—Cabled advices from Tokyo regarding financial and trade conditions in Japan in the first half of the present month record the maintenance of high rates for short loans, the latest quotation being 7 to 7½ per cent. Causes contributing to this result were the settlement of import bills, collection of taxes, and the slow return of credits from the provinces. In addition, there is no sign of cessation of new issues of debentures, although borrowers are finding increasing difficulties in appealing to investors. Prices are still tending downwards, but in anticipation of increased exports this tendency has been checked to some extent. Building materials, for instance, after heavy falls, have become steady. Spot quotations of rice are steady. There has been some buying of cotton, while some business has been passing in raw silk. Stock markets are idle. On April 15th the note issue of the Bank of Japan was 1,203 million yen, as compared with 1,094 millions a year ago, while discounts and advances at 574 million yen compare with a figure of 266 millions on April 15, 1923.

THE forty-second annual meeting of the London Chamber of Commerce will be held at Skinners' Hall, Dowgate Hill, London, E.C., on Wednesday, April 30th, at 2.30 p.m. Lord Kysant, G.C.M.G. (president) will occupy the chair.

Oversea Correspondence.

UNITED STATES. — INDUSTRIAL INDICATORS — COMMODITY PRICES AGAIN DECLINE—RECORD COPPER SHIPMENTS—BUILDING COSTS.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 15.

FURTHER evidence of a slackening of activity is found in reports from various trades and industries. The United States Steel Corporation's statement of unfilled orders on its books at the end of March, for instance, showed a reduction of 130,094 tons during that month, bringing the total amount of unfinished business down to 4,782,807 tons, as against 4,912,807 tons at the close of February, 4,798,429 tons on January 31st of this year, and 7,403,332 tons on March 31st of 1923. Last month's decrease was the first since November, the volume of unfilled orders having been steadily increased, and showing a total gain of some 544,300 tons during the three months ending with February. The reduction proved somewhat larger than most interests had expected. Based on last month's reduction in unfilled orders, it is estimated that new forward business placed during March totalled about 1,165,000 tons, or in the neighbourhood of 45,000 tons daily on the average. The statistics indicate that incoming business last month was close to 90 per cent. of deliveries. The Corporation maintained an unusually high rate of operation, production at one time being nearly 99 per cent. of capacity, while the average output for the month was approximately 96 per cent. of capacity. The present volume of business on its books is sufficient to keep the corporation's plants well engaged for a number of months, irrespective of any additional orders. In the past few months, and especially in recent weeks, most of the orders placed have called for prompt delivery. Consumers, as a rule, have shown no disposition to buy far ahead, and this fact has made it difficult for steel producers to build up a "back-log of business." Present indications point to a further decrease in the corporation's unfilled orders during the current month, since demand for steel products has been diminishing lately.

Another indication of lessened activity in many directions, and possibly of lighter consumption, to some extent at least, is furnished by the latest figures of car-loadings for the entire country. For the week ending March 29th the number of cars loaded with revenue freight on all railroads was 907,548, or 28,726 less than in the corresponding week of 1923, and representing the fourth successive decrease in the weekly totals. As compared with a year ago, the larger part of the falling off was in coal, 154,680 cars of which were loaded, as against 181,648 in the same week of last year. Loadings of miscellaneous freight decreased 10,222 cars to a total of 329,171. On the other hand, cars loaded with merchandise freight aggregated 251,201, showing an increase of 478 over the preceding week, and of 15,898 over the like period of 1923. Notwithstanding the steady decrease during March, more cars were loaded with paying freight from January 1st to March 29th than in any like period on record.

Complete reports of February railroad earnings make a much better exhibit than preliminary returns indicated. The combined net operating income of the Class I. carriers amounted to \$71,191,600, equivalent to an annual return at the rate of 6.28 per cent. on their tentative property valuation. This is the largest February net operating income ever recorded, while, with only two exceptions, the rate of return shown on their valuation is the highest reported at any time since such percentages began to be recorded. Net operating income for April of last year was equal to a return at the annual rate of 6.50 per cent., and for May 6.33 per cent. The total for February of this year compares with \$51,281,000, or 4.38 per cent., in January, and with only \$39,274,900, or 3.76 per cent., in February of 1923. Gross earnings for February aggregated \$478,914,250, representing a gain of \$31,965,380, or 7.2 per cent. over the same month of 1923, while operating costs of \$374,699,900 showed a decrease of \$1,306,700, or three-tenths of 1 per cent. The

increase in net, therefore, was due not only to larger revenues, but also to smaller operating expenses. Better weather, as compared with a year ago, and the greatly improved condition of rolling stock, were important contributory factors.

March was the fourth month in succession during which the average level of commodity prices declined. Bradstreet's index number of \$12.6574 on April 1st showed a drop of 1.8 per cent. from that of March 1st, 5.7 per cent. from December 1, 1923, and 9.1 per cent. from the April 1st number a year ago. As compared with the low point touched on June 1st during the 1921 deflation, the present figure is 18.3 per cent. higher. The April 1st index number is the lowest recorded since October, 1922; it represents a decline of 39 per cent. from the peak reached on February 1, 1920, and an advance of 45 per cent. over August 1, 1914. An outstanding feature of the changes in March is that the downward trend of commodity prices was more general than in some of the preceding months. Only three groups of staples showed advances, while ten groups declined.

Statistics, recently published, showing the domestic and export movement of copper last month, have attracted more attention than usual. Shipments of the red metal by North and South American producers in March totalled 271,000,000 lbs, the largest in the history of the industry, surpassing the previous record of 234,000,000 lbs in February, and the third highest record of 224,000,000 lbs in November of last year. Shipments for the first quarter of 1924 aggregated 720,000,000 lbs, averaging 240,000,000 lbs a month—the largest movement for any three consecutive months ever recorded. Domestic shipments last month reached 160,000,000 lbs, a new record, and comparing with the previous highest of 149,000,000 lbs in March, 1923. March exports totalled 111,000,000 lbs, against 92,000,000 in February and 70,000,000 in January. Production by refineries amounted to 220,000,000 lbs, all of which came from ores, excepting 10,000,000 lbs from scrap copper and brass returned to furnaces. The March output of North and South American mines is figured at 190,000,000 lbs, approximately. Stocks of refined copper were reduced last month by some 51,000,000 lbs, the heaviest monthly decrease ever shown in peace time, and brought producers' stocks of refined copper down to 240,000,000 lbs on April 1st, the smallest total in six months. Germany and France took one-half of all the copper exported last month, shipments to Germany amounting to 30 per cent. and to France 20 per cent. of the total output.

Despite the abnormally high costs of labour and materials, there is no slackening of building activity throughout the United States. On the contrary, reports on building permits and expenditures thus far received make it practically certain that the totals for March and for the first quarter of this year will exceed those of any like periods in the country's history. In this connection, the National Industrial Conference Board has just completed a comprehensive survey showing that building costs in the United States, in the midst of what is described as this country's greatest construction boom, have doubled in the last ten years.

FRANCE.—ELECTRIC PROSPECTS—OVERSEAS TRADE —THE NEW TAXES: WHOLESALE PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, April 23.

THE point to which the question of applying the experts' plan has now been brought has had a distinctly favourable effect on the prospects of the Poincaré Ministry in the pending General Elections, and little is now heard of the predictions that were so generally made a few months ago to the effect that the contest would result in a marked trend to the Left. Owing to the serious modifications that have recently been made in the electoral machinery, all parties have on this occasion been remarkably slow in selecting their candidates, and only a small proportion of these have yet definitely taken the field. Now that the holidays are over, however, the electoral campaign may be regarded as definitely opened, and the next three weeks will be strenuous ones for all concerned. So far as can

be seen, the fight will lie between the Right and Right Centre, on the one hand, and the rest of the parties (ranging from what remains of the now divided Radical and Socialistic Radical party, to the Revolutionary Communists) on the other. M. Poincaré's effort more or less to ignore the Extreme Right, and secure a stronger hold on the more conservative section of the Radical and Radical Socialist Centre has apparently proved successful. The result is likely to show that he is now substantially stronger with the moderates who form the centre of the Chamber than the Bloc National was at the last election, and has gained much more in that direction than he has lost by dropping, to a great extent, that section of the Royalists who persist in running candidates of their own.

The French foreign trade returns for March are now available, and they disclose that the total exports during the month had a value of 4,354,695,000f, while the value of the total imports amounted only to 3,622,604,000f, or a balance in favour of this country of 732 million francs. This is the second month, it will be noted, in which French exports have shown a surplus over imports, the favourable balance for February having been 201,300,000f. The returns of French foreign trade had always previously shown an excess of imports over exports, the deficit in January having been over 188 millions and in December 750 millions. The total figures for the first three months of the present year, as compared with those for the corresponding period of 1923, are set forth as follows:—

	First Three Months of		Increase in 1924.
	1924.	1923.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	1,937,893,000	1,612,011,000	+ 325,882,000
Raw materials	7,023,725,000	4,324,065,000	+ 2,699,658,000
Manufactured goods	1,262,709,000	1,019,351,000	+ 243,358,000
Total	10,224,325,000	6,955,427,000	+ 3,268,898,000
Exports—			
Foodstuffs	1,101,041,000	687,314,000	+ 413,727,000
Raw materials	3,024,576,000	2,088,748,000	+ 935,828,000
Manufactured goods	6,381,842,000	3,411,383,000	+ 2,970,459,000
Postal parcels	465,548,000	373,703,000	+ 91,845,000
Total	10,972,807,000	6,561,148,000	+ 4,411,659,000

The totals for the three months show a net favourable balance of 748,482,000f. That these increases in value are not merely due to a fall in value of the franc is evident from the fact that exports of manufactured goods had an increased tonnage of 43 per cent., and of foodstuffs 30 per cent. Exports of raw materials, however, although nearly 936 millions greater in value, were over 7,000 tons less in weight.

Many of the new taxes, including those on cheques (stamps on which have been increased from 10 centimes to 20), auction sales (17½ per cent. to 19½ per cent.), and postal and telegraph rates, have already come into operation. It is significant, however, that the increased duties on tobacco (the price of the commonest quality of which has been increased from 1f 10c to 1f 50c per 40 grammes) and other articles of common consumption have not yet been brought into effect. The reason for this is undoubtedly the proximity of the General Elections, and it is expected that, in spite of the new Finance Act having become law a month ago, care will be taken not to obtrude the new taxes too prominently on the attention of the mass of the voters until the contest is over.

The return of the yield from taxation during March shows that the total revenue from all sources (exclusive of posts, telegraphs, and telephones, which department now possesses an autonomous budget) amounted to 2,110,642,950f, as compared with 1,980,335,500f during February. A statement issued by the Ministry of Finance expresses the opinion that although the revenue for March has benefited from the fact that the 20 per cent. increase of taxation came into effect as from March 24th, so far as certain indirect taxation is concerned, this made a difference only to the practically negligible amount of about 15,000,000f. The increased revenue arising from the new taxes, it is considered, will make itself visible only during the next seven months of the year. Out of the total revenue for the month, 1,960,639,100f was derived

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,407,811

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

from normal and permanent sources. Direct taxation yielded 388,368,700f during March (including 368,368,000f from income-tax, or 56,450,600f more than in March, 1923). The total yield from direct taxation during the first quarter of 1924 was 1,263,012,300f (of which over 1,193 million francs was from income-tax), or 262,081,700f more than during the corresponding period of 1923. The total yield from indirect taxation and monopolies during March was 1,555,063,000f, or 373,208,500f more than in March, 1923. Nearly one-half of this increased yield was from registration duties, which yielded 420½ millions, or over 157½ millions more than was expected. The tax on turnover, which produced over 302½ millions during the month, yielded over 77 millions more than Budget estimates, and nearly 85 millions more than in March last year. With the exception of the duties on salt and sugars, every category of impost more than came up to expectation, even the yield from Customs, for the first time for some months, being 13 millions more than had been anticipated (and 14 millions more than in March, 1923).

The Statistique Générale has now caught up on the delay that has recently characterised its monthly index figure statement, and has this week issued at the same time the figures for wholesale prices for both February and March. These (on a base of 100 in 1914) are summarised as follows:—

	Cate- gories.	End Mar. (Provisional.)	End Feb. (Corrected)	End Jan. (Corrected)
General Index Figure	45	510	555	505
Foodstuffs (as a whole)	20	455	484	441
Vegetable foods	8	434	441	399
Animal foods	8	430	444	437
Sugar, coffee, cocoa	4	563	682	550
Raw materials (as a whole) ..	25	558	617	560
Minerals and metals	7	488	592	525
Textiles	6	678	745	693
Sundries	12	529	555	500

(At the end of 1922 the index figure of wholesale prices, which was then calculated on the base of 100 as representing the mean for the period 1901-1910, was 418.4, which corresponds to 355 on the base of 100 in 1914, which has been the method adopted since the beginning of the present year.) The sharp rise in all wholesale commodity prices during February synchronised, of course, with the remarkable fall in the exchange value of the franc, which began at the end of January, when it stood at 93.33 to the pound. By the end of February the franc had dropped to 102.35, and by the middle of March to around 120, from which it spectacularly recovered in three or four days to 84.05 on March 19th and to 73.075 on April 1st. The index figures for the three months show that, whereas the franc at the end of March was, roughly speaking, 20 points stronger than it had been on January 31st, when the "raid" began, commodity prices at the end of March were, if anything, appreciably higher than they were when the fall of the franc commenced.

For the first time this month, the Statistique Générale has issued no index figures for retail prices at the same time as the wholesale price figures. Whether this is due to a complete change of system or to the fear that the disclosure of official index figures at this juncture may have a prejudicial effect on the prospects of the Government at the pending elections, it is impossible to say. What is certain, however, is that during the past few weeks profiteering has again been rampant in practically every category of trade throughout France, in regard to both imported products and those of purely French origin.

**GERMANY.—REPARATIONS—FINANCES—CURRENCY—
PRICES—INDUSTRY—FOREIGN TRADE—CROPS—
STOCKS.**

(FROM OUR CORRESPONDENT.)

BERLIN, April 22.

THE first optimism as to the Dawes report has been followed by a reaction, which is due more to political considerations than to defects discovered in the plan of payment itself, though in the latter respect also there is some criticism which seems to be well-founded. The last days' indications are that from the French side the smooth putting in force of the plan may hit upon difficulties, particularly in regard to the immediate economic evacuation of the Ruhr, or, as the French put it, the surrender of the existing—very tenuous and unpromising—pledges before the more substantial pledges provided by the experts yield substantial results. This means difficulty. Not only is the only substantial *quid pro quo* offered to Germany the complete stoppage of Franco-Belgian interference with industry, foreign trade, and transport, but also anything like an attempt to combine a modified Ruhr economic regulation with the system devised by the experts would certainly fail. Even if these apprehensions are not fulfilled, the effective putting in force of the plan by Germany cannot be considered assured. The Marx Cabinet, it is true, has accepted the plan, but the motive for this is partly psychological; to reject or even criticise a scheme of settlement which the whole world seemed resolved to approve of in advance was out of the question. The composition of the Reichstag which will be elected on May 4th is doubtful; but even if a Reichstag which in principle favours the Dawes plan is elected, the execution of the plan by normal legislative methods will probably—in view of party dissensions, and of the great power of pocket interests—not be easy.

The State-financial situation continues to be satisfactory, and early in May will be received large payments for property tax, which originally fell due this month. The deficit system seems now to have been finally overcome; the Government has considerable sums in hand, and it has not borrowed back the 100,000,000 Rentenmarks which it repaid, after its first borrowing, to the Rentenbank. This resource is therefore in reserve. In March gross receipts from taxation totalled 595,258,243 gold marks, of which 514,581,040 gold marks were direct taxes or taxes on business, and 76,227,085 gold marks Customs and Excise, against 418,029,549 gold marks and 63,057,920 gold marks respectively in February. Since the currency stabilisation the ratio of direct tax yields to indirect tax yields has naturally greatly increased. The last three decade reports show (the revenue here being the net taxation yield after deduction of expenditure directly paid by the Finance Bureaux):—March 11-20th, revenue 107,564,900 gold marks, expenditure 134,251,200 gold marks, surplus 63,313,700 gold marks; March 21-31st, revenue 179,124,000 gold marks, expenditure 189,338,000 gold marks, deficit 10,214,000 gold marks; April 1-10th, revenue 134,088,847 gold marks; expenditure 150,749,855 gold marks, deficit 16,661,008 gold marks. The total deficit between the currency reform date (November 15, 1923) and the end of the financial year (March 31st) was 726,300,000 billion paper marks, equal to (allowing for the paper mark instability, which continued until November 20th) 750,000,000 gold marks, but this deficit was wholly incurred in the first weeks after the reform, before the reform could take full effect. The sum raised by sale of Rentenmark Treasury bills up to April 10th was 163,823,886 Rentenmarks. The total gross taxation receipts in the past financial year was 1,862,171,854 billion paper marks, but, owing to the enormous disparity in the mark's value at different dates, this figure has no meaning. Railway finances are rapidly improving. As the result of longer working hours and of other measures, the number of employees has fallen from its post-war maximum of 1,080,000 to 750,000 men.

The Deutsche Golddiskont-Bank, Herr Schacht's creation, was formally founded on the 7th. The German private banks, which guaranteed to raise £5,000,000, or half the capital, have been called on to pay in 25 per cent. of their quota at once. The bank is entirely under the

management of the Reichsbank, and in addition to the Reichsbank President, Herr Schacht, among its directors is the Reichsbank Vice-President, Herr von Glasenapp. The new bank's discount rate, like the Reichsbank's, is 10 per cent. The bank announces that its programme is to finance imports of raw materials for production of exportable manufactures, but not to finance imports for home consumption. Interest-bearing deposits will for the present not be accepted. Credits will in general be given in English pounds, this being the bank's own currency.

The last Reichsbank report, for April 7th, shows a continuation of the credit demand in shape of paper-mark and Rentenmark bills, but a decline in advances. Paper-mark discounts totalled 710,520,211 billion paper marks; Rentenmark discounts 1,156,716,570 billion paper marks. In the week the total of all the Bank's discounts, loans, and advances rose by 88,800,000 billion to 1,999,900,000 billion marks. Note circulation was 683,700,000 billion marks. The Reichsbank's borrowing from the Rentenbank for purpose of financing industry, which doubled in March from 400 to 800 million Rentenmarks, remain unchanged at the latter figure. The Rentenbank's return for March 31st shows circulation of 1,985,675,000 Rentenmarks, against 1,579,371,000 Rentenmarks on February 29th. The Bank's loans to the Republic are:—non-interest-bearing, 200,000,000 marks (out of the maximum allowable 300,000,000 Rentenmarks); interest-bearing, 900,000,000 Rentenmarks, which is the maximum allowable. Apart from its 800,000,000 Rentenmarks loan to the Reichsbank, the Rentenbank has a claim for 200,000,000 Rentenmarks lent temporarily to the Railways and Posts.

The currency continues to hold well. Prices are, however, again rising, partly under the influence of the trade revival, partly owing to the sharp rent increases owing to the imposition of the Rents Tax, recently described; the tax in Prussia is 16 per cent. of the pre-war gold rent. Iron and steel prices have gone up. The Pig-Iron Syndicate last week raised prices by between 3 and 6 marks per metric ton; and bar iron, ex works, has reached 160 marks. Producers affirm that these prices still do not cover production cost; and as the franc rise has once more set French and Belgian gold prices over German, and so killed competition, a further rise in German prices would be likely were it not for the fact that an over-supply of steel and iron is expected within a short time. Already producers who a few weeks ago rejected orders are offering to deliver within six or eight weeks.

The death of Herr Stinnes has so far produced no visible effect. Stinnes' natural successor as big organiser and fuser, and perhaps as international bogey, is Herr Otto Wolff, of Cologne, who first became internationally known by his campaign against importation of English tin-plates, later by his comprehensive but since repudiated agreement with Soviet Russia. Unlike Stinnes and the other Western combiners of industry, who started as producers, Herr Wolff began as an iron and steel trader, first entering into relations with the important Phoenix concern, later becoming directly or indirectly associated with the Rhenish Steelworks, van der Zypen, the Reiherstieg Shipyard, the General Electricity Co., Kloeckner, Thyssen, and Krupp. Wolff now controls a whole network of trading concerns, and of producers of raw materials, of half-finished materials, and of finished goods, including machines, motors, boilers, and automobiles.

The official cost of living index for the 15th was 112, against a minimum this year of 103 on February 11th, the official wholesale index 124.1. The *Frankfurter Zeitung's* wholesale index figure for the 15th is 152.34, against a minimum this year of 143.06 on January 31st. Of the five groups in this index, only the textiles and leather group (with 207.83) is more than 100 per cent. above the pre-war figure. Unemployment continues to decline rapidly. Between March 15th and April 1st the number of publicly supported unemployed in unoccupied territory fell from 978,000 to 712,000, and is now only 40 per cent. of that of December, 1923. Bankruptcies are increasing slowly, having numbered 62 in March against a month's minimum of 7 in November last. Considering the dislocation of last year, the coal output is satisfactory. Ruhr production in March (omitting three regie mines) was 8,254,499 tons,

against 8,763,201 tons in March, 1923, and 8,939,855 tons in March, 1913. Scattered reports indicate that per capita production is in general increasing. Figures published by the *Frankfurter Zeitung* for two big engineering and electrical concerns show that the per capita productivity of actual manual labour is about the same as before the war, and that the unfavourable figures which often appear are attained by reckoning also the clerical and technical staffs, which have increased since 1913 far more than the manual staffs. Thus, in the Borsic locomotive works, the number of manual employees increased in 1913-22 from 2,740 to 3,271, but the number of non-manual employees increased from 1,003 to 2,306. The reason is that the Eight Hours Day restriction reduced the working hours of the so-called "unproductive" employees much more than it reduced the hours of the manual "productive" employees, so that the number of the former had to be disproportionately increased. The Scandinavian newspapers have begun an agitation against German so-called "social dumping," based on long hours, as successor to "exchange dumping." The leading Daimler and Benz motor-car concerns have entered into a semi-fusion, with the aim of standardisation and differentiation of production and exclusion of competition; both concerns have certain affiliations, and a fusion of the whole national motor-car industry, with the main aim of fighting American competition after the expected abolition of the present import-prohibition, is being talked of.

The passive foreign trade balances seem to have returned for good. After January, February shows a considerable import excess. Import value was 718,587,000 gold marks, against 568,162,000 gold marks in January; exports, 466,399,000 gold marks, against 431,021,000 gold marks. Food imports declined from 175,239,000 gold marks to 154,448,000 gold marks; raw materials imports increased from 237,470,000 gold marks to 359,051,000 gold marks. The chief change in exports was a decline from 367,454,000 gold marks to 333,871,000 gold marks in manufactured goods. As usual, owing to lack of data from occupied territory, these figures are defective. The Government has authorised the export of 4 million centners of sugar, of which 50 per cent. may be raw sugar, in 1924-25, as against a maximum allowable export of 2,600,000 centners in the current sugar year. The aim of this increase is to facilitate the financing of the sugar-beet crop.

Bad crops in the present year are feared as a result of abnormally prolonged cold weather. In Prussia, according to the official index, the condition of all winter crops on April 1st was materially below that of April, 1923, and the most important winter crop, rye, is much worse than in the bad year 1922. The Bourse to-day was weak; considerable French franc bear commitments for the end of April and May are known to exist, and money is extremely hard to get, as much as 90 per cent. being demanded by banks, although the borrower is now always required to accept the risk of currency depreciation. The banks last week raised their interest rate on deposits, subject to withdrawal notice, to 15 per cent. The issue of the Dawes report induced some foreign buying of industrials, mostly by Hollanders, but there is no sign of a general Bourse revival, and Western mining-metal stocks to-day fell heavily.

**BELGIUM.—THE RECOVERY OF THE FRANC —
EFFECT ON INDUSTRY AND SECURITIES.**

(FROM OUR CORRESPONDENT.)

BRUSSELS, April 22.

It was not expected that the reaction of the franc would have been as brutal as it has been during these last few weeks, and further accentuation is far from being desired. Evidently it was officially wished to exterminate the foreign gambler. But it must not be forgotten that a victory must not be paid for too dearly. For the mere sake of the moral satisfaction in bringing to justice those who attacked the franc, one must not menace the existence of Belgian industry in suddenly killing outright the

country's export trade, to say nothing of the worries resulting from disturbances to commercial exportations and importations necessarily consequent upon exchange fluctuations, which sent the pound sterling from 90f to 135-140f in a few weeks, and back again in less than a month to 80f.

There has been much talk in Belgian papers recently of possible large loans that Belgium had contracted abroad as an explanation of the franc's improvement. There would not appear to be so far any justification for such a presumption, in spite of the fact that many papers, English and American as well as Belgian, have gone so far as to mention figures such as 500 millions of dollars and one milliard of Swiss francs. Perhaps if a small—very small—loan is in course of negotiation in New York, its proportions will be far from the importance that is rumoured. It is possible, even, that it may never come to light, as it might probably be a credit from one bank to another, perhaps the mere renewal of certain existing credits now approaching maturity.

One may be mistaken, but I am of the opinion that the Belgian franc has simply followed the French franc because of that sympathy which exists between Belgium and her more powerful neighbour. It followed in the campaign of those desirous to bring about a serious fall; it followed during the rise. The fact that Belgium has the reputation abroad for more or less following France in her political standpoints may also have great bearing on the subject, for it was not Belgium, but France alone, that obtained foreign credits to fight the speculators and the fall of her franc. In both Brussels and Antwerp a very uneasy situation is created by the sudden rise of the Belgian exchange; in the capital principally to financiers, in Antwerp both to finance and commerce. Those who are called in Belgium "the optimists of the franc," and who foresaw and wished for its amelioration, probably find now that their ideas have been realised much too suddenly and much too artificially. Provoked by manoeuvre, the rise of the Belgian franc must not be considered as the outward sign of any improvement in the country's stability. It is just due to the improvement of the French franc, which it follows so closely on foreign markets; and this French franc improvement is quite possibly only encouraged by the French Government to further the ends of their Parliamentary elections. Shrewd indeed is he who can predict what the French franc will be worth in London at the end of May. If the French Government and their friends the Belgian Government feel themselves strong enough to dominate the exchange markets, and keep their master-ship definitely, they will have done well in routing those who planned the fall of the franc; but if later they find they are forced to abandon the market, and thereby deliver it again into the hands of the speculator, then they will have done as much harm to their respective countries as those who attacked the franc in March last.

On the Brussels Stock Exchange the major portion of industrial securities have fallen from 30 to 50 per cent. It is remarkable that the Brussels bourse has been able to stand up against such a blow; and that it has done so suggests that the position of things in Belgium is far from being as unhealthy as some would try to make out.

HOLLAND.—BORROWING POLICY—FLOATING DEBT —EFFECT OF GERMAN RAILWAY TARIFF CON- CESSIONS.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, April 18.

THE loan policy of the public bodies of Holland (State and municipalities) has been the subject of widespread discussion. This is especially the case in regard to the sterling loan of the municipality of Amsterdam, to the amount of £2,500,000, which has been placed on the London market at 96½ per cent. This has called forth some sharp criticism. In Holland it was urged that the municipality should have refrained from issuing a loan in London in view of the risk of a rise in the exchange rate of sterling. But, quite apart from this technical consideration, there is opposition to the idea of the municipalities (Rotterdam, for instance, has also arranged for a loan to be placed in New York) obtaining to an increasing degree from foreign countries the money which either cannot be obtained in Holland at all, or can only be obtained with difficulty. Men of solid judgment are said to be anxious that the municipalities, recognising that the tide has turned, and that money is no longer available in unlimited quantities for all kinds of purposes, should limit their activities in every direction, and should endeavour to make ends meet with the resources obtainable in the country itself, either from taxes or loans. This, of course, does not mean that the municipalities now do work that is wholly unnecessary, but merely that under present circumstances these activities might be somewhat narrowed.

In the meantime, the Dutch Government has issued an internal loan. Here, too, there was serious discussion of a foreign loan. It was reported that the Government was on principle unwilling to apply to New York. Experience has shown that the loans previously issued in New York again reverted to Holland by means of sales to Dutch subjects, so that the whole transaction was substantially equivalent to an internal loan, with the disadvantage of being in a foreign currency—a currency, moreover, which, compared with the Dutch guilder, is above gold parity. This reflux into Holland of the loans issued in America is due to the eagerness of many Dutch investors to buy dollar stocks. In order to avoid this, the Government preferred to deal with London, in case it should require a foreign loan. Eventually, however, the Dutch bankers made a very reasonable offer, which has been accepted. Consequently, on April 11th a Government 6 per cent. loan was issued in Holland, to the amount of 85 million florins, at the price of 97 per cent. Of this 85 millions, 25 was subscribed before the public issue by various public bodies, so that only 60 millions was actually offered to the public. Of this, 59 millions has been subscribed, so that the success of the loan, although not brilliant, is nevertheless satisfactory in view of the state of the money market, which is still somewhat strained.

The loan is intended to consolidate the floating debt. This floating debt consisted on April 7th of the following:

	Fl.
Treasury-bills	588,591,000
Silver treasury notes	31,647,939
Credit balance of national cheque service	106,558,196
Overdraft of Netherlands Bank	10,296,150
Total	737,093,285

From this amount the following deductions must be made:—

	Fl.
Advances to Colonies	124,967,406
„ „ Municipalities	76,790,423
„ „ Foreign Countries:—German Credit	106,204,356
„ „ „ French	24,200,000
„ „ „ Poland	13,300,000
„ „ „ Belgium	42,200,000
Disbursements to holders of accounts in national cheque service	95,203,215
Total	482,865,400

The balance, therefore, remaining as a floating debt, amounts to fl 254,227,885. This amount must again be reduced by 50 million florins, the profit balance which is owed to the Government by the company formed during the war for export purposes (the Netherlands Export Company), so that the final balance of the floating debt

amounts to about fl 204,000,000. Of this, 84 millions is now funded, so that there only remains 120 millions, which, as the Minister of Finance said recently, need not give any cause for uneasiness or fear of inflation. Of course there is still a good deal of temporary expenditure to be met; some of this, for instance, is connected with the fact that the above-mentioned loans to foreign countries, even if assumed to be perfectly safe, will not be repaid for a long time to come, while yet other expenditure will arise out of the present deficit on the budget. But no effort will be spared to retrench, and, moreover, the 1923 deficit has turned out to be only 30 million florins, instead of the original estimate of 50 millions.

The above-named amount of fl 106,204,356 in credit to Germany is a consequence of the Dutch-German Agreement, according to which Germany has the right to dispose of Dutch credit to the amount of fl 140,000,000. On April 7th, Germany had taken advantage of this arrangement to the extent of the above-named amount. In this connection it has aroused great indignation in Holland that the German railways have recently fixed special tariffs for the export of German goods to non-German countries through German ports. The special tariffs affect, amongst other goods, iron, steel, railway carriages, beer, linoleum, cement and piece goods. The reduction of freight resulting from these special tariffs ranges from 11 to 60 per cent., according to the goods. The tariffs to the Dutch frontier and to the Rhine ports have only benefited by the general reduction of tariffs which was effected, first, on January 20th to the amount of 8 per cent., and, secondly, on March 1st to the amount of 10 per cent. As a result of these special tariffs, there cannot but be a considerable diversion of traffic in favour of Hamburg and Bremen, to the detriment of Rotterdam and Amsterdam. Moreover, special tariffs have also been introduced for import into Germany and for transport through Germany, and also for import and export from and to overseas countries, exclusively for German seaports, for jute, cotton and cotton waste, wooden manufactured goods, rice, &c. These special tariffs give a reduction varying from 15 to 55 per cent., as a result of which all traffic through Holland is made practically impossible.

This very serious prejudice to Dutch trade will, perhaps, cease if the recommendations of the Dawes Commission are acted upon and if a bonded loan is thus levied upon the independent German railways. In that case it will be essential that there should be good practical administration. In the meantime, however, Holland is by no means pleased that Germany should have acted in this way, inasmuch as Holland has from the very beginning assisted in the economic reconstruction of Germany. Many Dutch are urging that sharp protests shall be made, and, if necessary, measures taken to combat this policy on the part of Germany.

ROUMANIA.—PARLIAMENTARY ACTIVITIES— PRIVATE EXPLOITATION OF PUBLIC ENTER- PRISES—BUCHAREST LOAN.

(FROM OUR CORRESPONDENT.)

BUCHAREST, April 16.

ALMOST the entire activities of Parliament during the past two months have been devoted to, first, the passage of a new rent law in another attempt to stave off by legislation the inevitable economic and social effects of a dearth of new construction; secondly, a series of bitter debates on foreign relations, brought about by the receipt of successive Notes from the Italian and Spanish Governments, which resulted in the Roumanian Sovereigns cancelling their projected official visits to Rome and Madrid; and, thirdly, the passage of a Bill for the so-called "Commercialisation of State Enterprises."

This law (assuming that it passes the Senate) seems likely to open up an interesting phase in Roumania's economic development, although the Opposition charges that it is merely an attempt to divert to certain financial institutions that are supposed to be supporting the present Government the exploitation of profitable public enterprises. Briefly, while the new law stipulates that the railways, the posts and telegraphs and the tobacco monopoly are to be "commercialised," private capital is not to be "let in" on these undertakings. In other

enterprises, however, that are at present owned or controlled by the State (notably mining and metallurgical, navigation, forestry, mineral waters, &c.) private capital is to be permitted to co-operate with the Treasury—and under the control of Government officials—in their exploitation.

This law is the natural development of the present Liberal Government's so-called "Prin Noi Insine" (Through Ourselves Alone) policy—i.e., the exploitation of the country's natural resources by Roumanian capital—or, at least, under Roumanian control—for the national well-being. An excellent policy, no doubt, except for the important fact that there is not available within the country itself the working capital necessary for the proper exploitation of these enterprises. The railways alone furnish an excellent example. If they could only be brought back to their pre-war condition Roumania would easily be able to produce and export twice the amount of grain and lumber she has so far been able to move in any post-war year. It is generally admitted that the re-conditioning of the entire transportation system of the country is vitally necessary before any real economic progress can be made, and, judged by the results achieved during the past five years, this re-conditioning cannot be accomplished for many years "through ourselves alone."

Parliament recently granted the municipality of Bucharest authority to contract a foreign loan of \$10,500,000, or its equivalent, to be used mainly for re-conditioning the public services of the capital, and it is announced that negotiations have been started for floating this in London.

UNION OF SOUTH AFRICA.—REVENUE—TAXES ON MINES—SOME LESSONS IN PROTECTION.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, April 2.

ACCORDING to the report of the Commissioner of Inland Revenue, Mr. A. P. McLoughlin, there was, for the year ending June 30, 1923, a net decrease in such revenue of £2,295,000, the largest declines being £1,760,230 in income-tax and £1,438,030 excess profits duty. The mining revenue collected for the year was £2,664,374, of which gold mining accounted for £1,769,600. Some 52 mines paid £835,000 under the Income-tax Act. From diamond mines the revenue was £536,570. In the years 1919-20 and 1920-21 the mining revenue approached five millions. A very handsome revenue was derived from State ownership of gold mines, namely, £934,700, inclusive of £191,000 from *bewaarplaatsen* receipts. Government Areas alone paid £737,839, or 53.4 per cent. of its profit. For the last calendar year, thus overlapping with some of the figures given above, the Union Treasury received from this one mine £1,044,809, or 54 per cent. of the profit, which brings up the total to £4,832,122 since the commencement of the lease. Brakpan Mines paid £79,210 on account of Government ownership revenue, but in its case, as in that of Springs, which paid £128,655, only a portion of the area was leased. New States and West Springs are in similar circumstance to Government Areas.

Mr Gawith, retiring president of the Pretoria Chamber of Commerce, again took occasion when presiding at the annual meeting to point out that "the cost of living in South Africa is far too high; the married man with a family earning £30 per month (and there are thousands) has a continuous and bitter struggle to make ends meet, much less save even a little for the rainy day." Wages cannot be increased, but the cost of living can be reduced, "cheaper living means cheaper farming and cheaper mining," absorbing our unemployed whites and increasing exports and railway traffics. The ensuing expansion would lift the cloud of depression which has so long settled over the country. But the ambition for local industries is leading to a policy of extreme protection, "which, if persisted in, will strangle the primary national industries by increasing their cost of production to an impossible extent. We are close to that position." Farmers must produce (for export) in competition with world's prices, but they have to pay a fancy price for many articles in daily use to promote and protect local industries which can never have a hope of becoming export members of the

family; many local industries are thus a drag and tax on the whole community.

Both the Government and public failed to grasp that traders in practice charged a profit on the Customs tariff imposed. "When a duty of 33½ per cent. is imposed, that duty is in reality more like 44 per cent.; and when it is considered that about £9,000,000 is collected in duty in the Union of South Africa each year, it is seen how it affects the public, who pay another £2,000,000 or £3,000,000 on that item of duty to the storekeeper. This is an aspect of the tariff seldom thought of or recognised. Practically every Budget increases the tariff. In 1902 the tariff was raised from 7½ per cent. to 10 per cent., subsequently increased by the Customs Union to the general tariff to 15 per cent.; since 1914 we have gradually crept up to about 20 per cent. Duties have been increased on boots, silks, linens, cotton and woollen goods, stationery, hardware, enamelware, &c., tea, sugar, spirits, and—most unwarrantable, unreasonable and unnecessary of all—flour. The family man is savaged with a vengeance." In addition to these, the last Budget increased the duty on condensed milk, matches, confectionery, medicines. So we go gaily on.....It is said that leather goods and boots, which now pay 33½ per cent., will be dealt with in the next Budget. Protection and corruption, it is said, are synonymous terms. It was sheer folly to allow local ambitions to blind them to economic facts. If a high tariff wall shuts in, it also shuts out. Local industries were protected on a basis of 100 per cent. white labour, while they employ only 33½ per cent. white labour, the rest coloured or native. With the exception of printing and bookbinding, very largely white, the whole community was being exploited for the benefit of the South African manufacturer.

Mr Gawith gave a striking illustration of what the tariff had done in respect of wheat or flour, which we have to import to make up the quantity we cannot produce. The policy of the Government has been to encourage importations of wheat instead of flour, as the following duties will show:—1913: Wheat, 1s per 100 lb; flour, 2s 3d, British; 1923: Wheat, 1s per 100 lb.; flour, 2s 11d, British. In addition to this, flour is charged with a dumping duty of about 1s per 100 lb. Total duty, flour, 3s 6d to 4s per 100 lb. Briefly, therefore, the farmer who grows the wheat has a protection of 1s per 100 lb. The miller, who only grinds the wheat, has a protection of 3s per 100 lb.

He compared the Government's policy to a man living in a mansion furnished on the instalment system with no money to meet recurring payments. Mr Gawith's remedy for what a prominent financier only yesterday characterised to me as "a wilting lack of expansion" is the drastic reduction of the oppressive and ever-growing tariff.

Letters to the Editor.

INTERNAL DEBT.

TO THE EDITOR OF "THE ECONOMIST."

SIR,—May I express a doubt whether, in your article "Debt," you have really disposed of the case of those who maintain that the internal debt in this country is a force tending to increase inequality of income? That case, stated very crudely, rests on the following grounds:

1. During the war the Government had to get command over a huge amount of resources in a very short time. The presumption is that the only available resources to meet this abnormal demand were distributed on an extremely steep graduated scale from zero among the poor to a large amount among the rich.
2. The above scale must have been much more steeply

graduated than is the ordinary tax system, out of which interest and Sinking Fund charges due to war debt are paid. Hence it would seem that the descendants of those who, during the war, had few available resources beyond absolute necessities for physical efficiency will have to pay a tribute to the descendants of those who held large resources during the war.

Against this you assert that interest on war debt "cannot even be said offhand to be paid mainly to the well-to-do." You then try to estimate how a large proportion of War Loan is distributed.

Assuming that your estimate is accurate, does it represent anything like the position when War Loan was originally subscribed? If so, it follows that the well-to-do, who had most resources to spare, lent least resources as compared with other classes. But it may be that present distribution of War Loan does not at all correspond with the way in which it was originally subscribed. As you say, "most of it now forms an integral part of the money machinery." Is it the case that much of it has changed hands through the money market and passed from the well-to-do to less wealthy investors? If so, have these changes of ownership removed the danger of the debt-increasing inequality in the ways suggested above?

Let us suppose that each original subscriber to the loan was taxed in such a way that that part of his tax payments which went to pay interest on debt was equal in value to the interest he received on War Loan in his possession. Then obviously future distribution would have been unaffected. But suppose a rich subscriber to have paid less than this proportion of taxes to interest receipts. Then obviously someone else must have paid more than this proportion. In every similar case a force is at work tending to alter the distribution of income between individuals. Now, suppose our subscriber, after a time, decides to sell his War Loan and reinvest the proceeds in some industrial shares which promise an even better return. That War Loan will come on the money market, and we will suppose that it is bought by a relatively poor man. Have these transactions done anything to correct the original tendency to mal-distribution of income arising out of the existence of the war debt? The rich man is certainly not a bit worse off, if we assume that his new investment is sound.

The following factor seems relevant. If, instead of raising a loan, the Government had secured its resources by a drastic tax levy, our rich subscriber would have had no piece of paper which he could sell in the money market and buy other income-yielding securities with the proceeds of his sale. Under the loan method of securing resources his future income and that of his descendants will, barring accidents, be greater than it would have been if a tax levy had been imposed on him. This is surely relevant to the concentration "of wealth in the hands of the well-to-do at the expense of the poorer members of the community."—Yours faithfully,

E. F. PENROSE.

Books and Publications.

EAST PERSIA.*

By the terms of the Anglo-Russian Agreement of 1907 Britain acquired a sphere of influence in a small corner of South-East Persia. The unsettled condition of this wild borderland led soon after to the dispatch of British troops to safeguard important commercial interests, and to endeavour to stop gun-running into Afghanistan. With the outbreak of the World War the Seistan area (on the Baluchistan frontier) acquired additional importance in view of German activities in the adjoining neutral zone of Persia, and arrangements were made for co-operation with the Russian troops who occupied Khorasan (in the north). Such, in brief, is the origin of the East Persian cordon, which General Dickson, who was Inspector-General of Communications in this area during the war, has now described for the British public in a book which gives a very clear and readable account of one of the most

interesting of the many "sideshows" of the Great War.

The building of a road from Duzdab, the terminus of the British Indian Railway from Baluchistan, to Askhabad, nearly 850 miles away in Russian Transcaspia, was no small task. The maintenance of communication with a small force through wild and, for the most part, barren country, along a line as far as that from Boulogne to Vienna, called for much administrative ability, while, as General Dickson remarks, "the position of a military force of a belligerent on the soil of a neutral in time of war is, from the point of view of international law, a delicate one." Moreover, a great part of the supplies had to be brought up from India, and, curiously enough, things like beer barrels not infrequently got mixed up with "technical" stores.

The Russian Revolution, of course, greatly complicated the task of the British troops in East Persia, but the collapse of the Tsarist régime and the disorganisation of the economic life of the country also removed our greatest trade rival in this part of the world. General Dickson considers that the prospects for Anglo-Indian traders are therefore bright. East Persia has a population of about two millions. The sheep of Khorasan produce wool of excellent quality, and Meshed rugs are world famous; while the mineral wealth of the country would seem to be considerable. The military operations have made this hitherto almost unknown region much more accessible, and although the figures of imports and exports are still far from big, they appear to be increasing; while the local inhabitants, we are told, would welcome any genuine trading activities which were free from all political taint.

RISK AND RISK-BEARING.*

In the essential parts the book is good and interesting, and the reader should not let himself be put off by the introductory chapters, which, with a display of scientific method, elaborate the obvious and emphasise the commonplace. Once the author has emerged from the realm of generalisations and platitudes, so pleasing to the latter-day classical economist, and has got to grips with the live problems of his subject, the book becomes intensely practical, interesting even in the detail of its illustrations and argument, and commendable for the sane common-sense which it shows in judging intricate questions. An analysis is given of the nature and forms of business cycles, followed by an excellent account of the various methods employed in forecasting their course; the results which can thus be attained are examined, and the unavoidable limitations of such attempts are stated. The chapter on "Risk and the Management of Capital" is again of an introductory, more general character, but does not suffer of the defects of the first part; even obvious propositions, such as, e.g., that speculation is not a form of gambling, but gambling a form of speculation, deserve the space given them by the author and the attention of the reader. The chapters on "The Security Markets," with its interesting account of the New York Stock Exchange and of its organisation, and on "Stock Speculation as a Business Enterprise," should prove of the greatest interest to business men, and even to private investors; still more so to the latter, the "Analysis of Securities," with its simple and clear explanation of how to go about the business. A discussion of "Speculation in Commodities" and of "Hedging," and three chapters on the various forms of insurance, conclude the most valuable part of the book. The penultimate chapter on the "Risks of Labour" is perhaps a tribute to certain dominant interests of the future, just as the introductory part is to certain mental predilections of the past.

The one important limitation of the book is that it deals with risk and speculation in more or less normal circumstances, i.e., where, in the main, they are entered into by the free choice of the principal. But the aftermath of war and peace on the European Continent has given us experience of conditions under which every single member of the community, in the absence of a sound currency measure of values, is forced into speculation, most disastrous if he remains unconscious of his

* "Risk and Risk-Bearing." By Charles O. Hardy, Professor of Economics, State University of Iowa. The University of Chicago Press, Chicago, Illinois.

* "East Persia. A Backwater of the Great War." By Brig.-Gen. W. E. R. Dickson. Arnold, 15s.

position. In such circumstances hedging of a kind which imperceptibly merges into speculation becomes imperative; in the water, with no firm ground under one's feet, one has to carry out movements which would be, to say the least, eccentric in the street. But where everybody is drawn into speculation, and yet a vast number of people remain more or less ignorant of their own situation, whilst others, though conscious, do not know how to save themselves, the chances of the professional speculator are very much increased, and the general picture of risk and risk-bearing differs profoundly from that drawn in Mr Hardy's book.

THE ECONOMICS OF OVERHEAD COSTS.*

This volume contains a bit of useful modern research work. The first two chapters lucidly set forth the gradual "discovery" of overhead costs and the scope of the problem. Overhead costs are costs that cannot be traced home to particular units of output in the same direct and obvious way in which, for example, leather can be traced to the shoes made from it. There is another test of overhead costs—namely, that an increase or decrease in output does not involve a proportionate increase or decrease of such costs.

Every manufacturer needs to know his unused productive capacity and "idle overhead"—the great industrial sin, which is simply the expense side of unused capacity. This suggestive study of overhead costs is largely a study of unused powers of production. It was long ago suggested that the larger installations of fixed capital would make long hours of work desirable, and that with increased use of machinery the motives to long hours of work would become greater as the only means by which a large proportion of fixed capital could be made profitable. But the effect of overhead costs on hours of labour is not so simple as was supposed; witness Lord Leverhulme's argument that a six-hour day with two shifts is more profitable than one eight-hour shift, if only the overhead costs are heavy enough. The substitution of machine for hand-labour has meant nothing less than the introduction of a new species of creature which has rapidly become the dominant personality in industry, especially in the physical work of manufacture and transport. Formerly the labourer was the central figure; he worked according to the laws of his being, and his tools worked as he required their services. Now, however, the machine is the central figure, and the labourer follows the laws of the machine's being, and works as it requires his services.

There are special chapters devoted to such questions as—How and Why Large Plants Bring Economy; Economies of Combination; What is a Business Unit?; Labour as an Overhead Cost, and many other important subjects, all discussed in an interesting way, which stimulates thought and may lead to the birth of useful ideas. We recommend this book to those interested in the principles of business efficiency, and who wish to master the economic laws governing our present complicated business organisation.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, May 7. ACCOUNT, May 8.

Stock Exchange members admit some disappointment at the volume of post-Easter business. There was certainly no marked increase of activity when the House re-assembled on Tuesday, but as the holiday effect wore off, so animation tended to revive, and amongst oil shares, in particular, an increased amount of public attention is apparent. Next week is again broken by the incidence of the May-day holiday on Thursday. The opening of the British Empire Exhibition led to speculative demand for stocks and shares in the companies that are most likely to benefit from the success of the undertaking.

The War Loan will be ex dividend when the market opens on Monday, but the price discounted in advance the deduction, and remained hard up to the close of business last night. Curiosity is agog to know the result of the Government's offer to convert two hundred million pounds of the existing 5 per cent. War Loan into a new 4½ per cent. conversion stock, on the basis of 103 of the latter for £100 of the former. The recently issued Colonials are stronger, and the new Edinburgh scrip, the price of which opened about ½ premium, quickly rose 10s.

Japanese bonds have given way, in consequence of the fall in the value of the yen caused by the strained diplomatic relations between Japan and the United States. The main feature in the foreign market, however, is the substantial recovery in French bonds, owing to the rise in the value of the franc. All classes of French issues have joined in the upward movement, which had an effect also upon Rio Tintos, De Beers, and other inter-bourse issues. Other foreign bonds are quiet. The new Siamese Sixes keep firm at ¾ premium.

Home Railway stocks benefited moderately from the brilliant Easter weather, and, as regards the Undergrounds, from the opening of the Wembley Exhibition. Rumour is again busy with guesses at what is likely to happen to Metropolitan Consolidated stock. San Paulos and United of Havana (on the increased dividend) went ahead amongst foreign rails, where Argentines have been somewhat listless. Nitrate rails are better; nitrate-producing shares attract a good deal of attention, but movements in prices are mostly small.

Rubber hardened up a trifle, causing some of the leading shares to gain a few pence. This week's dividends and reports are not very encouraging. The oil market, however, is the centre of attraction amongst industrials. An idea is abroad that some kind of working arrangement may be announced by the Shell, Burmah, and Anglo-Persian companies, the shares in all of which have gone ahead in consequence. Mexican Eagles rose to £1, on the belief that next month's dividend on the first preference shares will be duly paid. A number of other oil shares are better, and public interest appears to be widening. Banking and insurance shares are good—the latter particularly so, by reason of the excellent dividends and reports of the past week or two. Trust companies' stocks can scarcely be bought, but prices are advanced with steady regularity. Indo-China Steamship deferred fell £2 on the passing of the dividend, but a prompt recovery ensued. Tea shares are buoyant, thanks to dividend expectations. Budget hopes, and the American campaign for popularising tea. Brazilian Warrants drooped on the dividend announcement.

Textiles are steady, it being said in the market that Bolton and other Lancashire centres are experiencing a busy and a profitable time. Lyons have advanced on the opening of the Exhibition, which had a strengthening effect upon shares in

other catering, as well as stores shares. Marconis improved, because of the advertisement that the company received through the broadcasting of the King's speech last Wednesday. Margarine shares are heavy, the Maypole dividend announcement being anticipated with a little anxiety. Electricity supply shares continue dullish, while home gas stocks are unchanged. Imperial Continental Gas is better. Tokyo Electric bonds gave way abruptly, on the fall in yen already noticed. Tobacco shares are mildly better; iron and steel issues show trifling gains on balance.

No fresh vitality has stirred the languor of the Kafir market. A rise in De Beers was due to Paris purchases. Rhodesians have been a tepid market, and in the three important tin groups the changes on the week are unimportant. The Canadian section is stagnant, and mining shares as a whole fail to attract any particular public notice.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

1919.....	322,448,296	1918.....	1,393,381,441

City of Sydney.—Issue of £1,000,000 5 per cent. debentures. The Commonwealth Bank of Australia has been authorised to receive subscriptions at 97 1/2 per cent. for £1,000,000 5 per cent. debentures, 1939, of the City of Sydney. The principal is repayable in London at par on June 1, 1939. The proceeds of the loan will be used to provide funds for the purposes of covering existing loans. The loan is secured upon the rates and revenues of the city. The city of Sydney has a population within the Metropolitan area of 981,400. The unimproved capital value of lands is £36,026,193, and the average annual value £4,825,799. The Municipal Council has power to levy a rate up to 2s in the £ on the average annual value, and 3d in the £ on the unimproved capital value. Or, in the alternative, the rate may be 6d in the £ on the wholly unimproved capital value, the present rate being 4 1/2d per £. The total debt of the Council on December 31st last was £10,514,324. The revenue of the city last year amounted to £2,590,495 and the expenditure to £2,378,474, including annual interest and sinking fund payments. The annual sinking fund is £98,073, the accumulation at credit of the sinking fund to December 31st last being £1,326,695. An excellent investment, but, in view of the fact that it is not a trustee security, the yield is rather low. Nevertheless it was quickly oversubscribed.

The Dominion Tar and Chemical Company.—Authorised capital £750,000, of which £500,000 has been issued in shares of £1 each. Particulars have appeared in the Press to comply with Stock Exchange regulations, from which we take these details. The issued capital consists of 200,000 7 1/2 per cent. preference and 300,000 ordinary shares. Of the latter number 50,000 are in course of issue at par to the existing ordinary shareholders. The company is an offshoot of Burt, Boulton, and Haywood, Limited, and carries on its business in Canada. No debentures have been issued, and borrowing powers have not been exercised except for the purposes of a bank loan of \$220,000 against stock-in-trade. The 200,000 7 per cent. cumulative preference shares issued have been purchased at par by a firm who are to be paid 1s 7 1/2d per share. They have paid about 1s 3 1/2d per share of this amount for commissions and expenses. We notice that a table is given showing the dividends paid during the past 16 years on its capital, but most cautious investors will not regard this as a satisfactory substitute for actual profits earned.

Southend-on-Sea and District Gas Company.—Incorporated by special Act of Parliament. This is an offer for sale by tender of £45,000 5 per cent. perpetual debenture stock at a minimum price of 96 1/2 per cent. At this price the yield would be £5 3s 8d per cent. The authorised stock capital is £594,843, of which £218,243 remains to be issued. The authorised loan capital is £299,646, and £169,116 remains to be borrowed. The net revenue of the company for the year ended December 31, 1923, was £34,519, and as the interest on loan capital absorbs but £7,871, there is a fairly good margin left over for contingencies. The prospectus informs us that application will be made to the Stock Exchange to allow dealings. A reasonable investment in its class, but it will be interesting to know if the money can be obtained at just over 5 per cent.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

COMPANY'S ACTIVITIES RESUMED.

RECONSTRUCTION OF LINE.

The fifty-seventh ordinary general meeting of the Indo-European Telegraph Company, Limited, was held, on the 24th instant, at the offices, 18 Old Broad Street, London, Mr H. L. M. Tritton (chairman of the company) presiding.

The secretary (Mr John I. Bethell) read the notice convening the meeting and the auditors' report in connection with the 1922 accounts.

The Chairman, in moving the adoption of the report and accounts, said:—

Before I proceed to comment on the report I have to refer to the great loss this company has sustained by the death of Mr J. Herbert Tritton.

I cannot do better than repeat the notification which was issued to shareholders on November 1, 1923:—"The board of the company have to announce to the shareholders with the deepest regret the death of the chairman, Mr Joseph Herbert Tritton, on September 11, 1923.

Berg, who, as you are aware, was confirmed in his appointment as managing director as from August 3rd last, devotes himself with untiring energy to the business of the company, and his services are highly appreciated by his co-directors. In Mr Cook, the chief engineer, the company has a man who, in spite of great difficulties and dangers, has succeeded, with the loyal assistance of his staff, in bringing back the line to a state of efficiency, which at one time appeared an almost impossible task in the time at his disposal. I do not mean to imply that our line is as good as he or we should wish to make it; there is still a great deal of work to be done, and considerable sums of money to be spent on renewals and improvements, but I do desire to emphasize the fact that it is to-day carrying satisfactory traffics.

COMPANY'S EXHIBIT AT WEMBLEY.

There is one further item of interest which I would wish to mention. The company has a stand at the British Empire Exhibition, Wembley, in the Bengal Court of the Indian Section, where not only will demonstrations be given, with the latest type of apparatus, of through automatic working, but actual telegrams to and from India and the Far East will be dealt with—that is to say, received from the public for outward transmission and received homeward for delivery at the stand. I have no doubt you will all be visiting the Exhibition. I trust that you will take the opportunity of making yourselves familiar with our methods of working.

Sir William R. Brooke, K.C.I.E., seconded the resolution. Mr George Chauvin (managing director of Siemens Brothers and Co., Limited) said: I should like to refer for one moment, sir, to the remarks you made in reference to the late chairman. I knew him for a long period, and I have more than once attended the annual meetings of the company under his able and genial guidance. The loss which we have suffered by his death is, of course, a serious one. Looking at the general position of the company, and at what you have told us to-day, I think I may say that its affairs have been navigated through all sorts of difficulties and dangers with extreme good fortune, and no doubt the company has been guided by extreme ability. There are not many companies that can look on the war period, and the immediate period following the war, with such satisfaction as this one can. I have a very strong feeling of devotion to the Indo-European Telegraph Company. One portion of the line along the Black Sea was built by myself, and therefore I am not absolutely an outsider. I wish to congratulate you gentlemen on the other side of the table, and to point out to my fellow-shareholders that the position of the company is an excellent one, and we are indeed beholden to our board and to the able staff for their valuable work and continuous devotion.

The resolution was carried unanimously, and the formal business having been transacted, a vote of thanks to the chairman, directors, and staff terminated the proceedings.

LAW UNION AND ROCK INSURANCE COMPANY, LIMITED. GOOD RESULTS—INCREASED PROFIT. PROMISING QUINQUENNIAL PROSPECTS.

The annual general meeting of the Law Union and Rock Insurance Company, Limited, was held, on Thursday, the 24th instant, at the head office, 7 Chancery Lane, London, W.C., Mr Charles G. Hamilton (chairman of the company) presiding.

Mr James Stirling (secretary and actuary) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—Before I deal with our accounts

I must refer to the great loss this company and the directors have sustained by the death of our colleague, Mr Clayton.

Mr Clayton joined the board when the London and Lancashire acquired our shares. He was a very regular attendant at our meetings, a charming colleague, and his sound judgment and advice were always most valuable. We shall miss him greatly.

Coming to our accounts and dealing with our trading operations other than the life department, to which I will refer later, I am glad to say that the results of the past year were quite satisfactory.

FIRE AND ACCIDENT DEPARTMENTS.

In the fire department the figures are good. Our premium income was £461,748, an increase of £33,000 over the figures of 1922. The loss ratio was only 41.11 per cent., and the expense ratio 37.52 per cent. The corresponding figures for 1922 were 43.13 per cent. and 38.07 per cent. So there was an improvement under both headings. The fire reserves have been increased to £484,700—an amount larger than our premium income—and £102,315 was carried to profit and loss.

In the accident and general accounts the results were also satisfactory. The reserve fund has been increased by £30,000, and £3,072 carried to profit and loss. In this account also the reserve fund is larger than the premium income.

I have mentioned our experience in fire and accident and general insurance business, but I purposely do not refer to the general aspect of these businesses during 1923, because this phase will, doubtless, be dealt with exhaustively on a later occasion, when the affairs of the London and Lancashire and its allied companies—including ourselves—are reviewed.

The profit and loss account shows that, after payment of the usual dividend and interest on our debenture stock, and after payment of income-tax and corporation profits tax, the result of the year's trading has been to increase the undivided profit by nearly £29,000, and this without bringing into the account any profit in respect of our life business.

LIFE DEPARTMENT.

I will now refer to our life department. Here, too, the figures are quite satisfactory. The net new business amounted to £1,405,470, an amount which has only been exceeded in the abnormal boom years of 1919 and 1920. The net new premium income amounted to £47,853, and the total premium income was £626,967.

The expense ratio was 17.15 per cent.—a slight decrease on the ratio of the previous year.

The claims by death were only £446,021—a decrease of more than £64,000 on the figure of 1922, notwithstanding the fact that the amounts assured are an ever increasing sum.

The claims by death were well within the expectation. £186,923 was paid in respect of endowment policies maturing. These are, of course, definite expected liabilities, and every one of these maturing policies shows a profit to the company.

We have during the last year embarked on the policy of accepting approved lives without medical examination. The experience of offices who have conducted this class of business for many years seems to have been satisfactory, and the scheme no doubt appeals to some insurers who, while believing themselves to be quite good lives, dislike being medically examined.

This is the last year of the current quinquennium, and at the end of 1924 there will be an actuarial valuation of the life fund assets and liabilities. Now there are four factors in life assurance on which surpluses and consequently bonuses depend:—

1. That the mortality should not exceed the expectation.

2. That the net interest earned should exceed the rate at which the liabilities are calculated.

3. That the expense ratio should not be excessive, and

4. That there should be no substantial depreciation in the investments.

Now, in our case the answer to all these questions in respect of the current quinquennium up to date is very satisfactory. Our mortality has throughout been well within the expectation. The net rate of interest earned has exceeded 4½ per cent., while we calculate our liabilities on a 3 per cent. basis. Our expense ratio is reasonable, and is not increasing; and, finally, not only has there been no depreciation in our investments, as a whole, but a substantial appreciation.

BONUS PROSPECTS.

From these facts it is evident that, unless something very unforeseen happens, the outlook for the declaration of good bonuses at the end of this year is very promising. So I urge all who are contemplating insuring their lives not to delay, but to take out a Law Union and Rock with profit policy as soon as possible, so as to share in the prosperity which I am anticipating will be revealed at the end of 1924.

I do not think there is anything further that I need refer to in the accounts.

The results of the current year up to date are normal, so the outlook is satisfactory.

I now beg to move the adoption of the report.

Mr F. W. Pascoe Rutter seconded the motion, and it was carried unanimously.

The Chairman then proposed "That, in accordance with the recommendation of the directors in their report now adopted, a dividend of 8s per share, less income-tax, be paid to the shareholders for the financial year ending December 31, 1923, the dividend to be payable as usual by half-yearly instalments on May 31st and on November 30th next."

The Rt. Hon. the Earl of Strafford seconded the motion, which was unanimously approved.

The Rt. Hon. the Earl of Midleton, K.P., proposed that the retiring directors (Mr Charles G. Hamilton and Mr F. J. Coverdale) be re-elected, which was seconded by the Hon. E. C. G. Cadogan, and agreed to unanimously.

On the motion of Mr F. W. Mills, seconded by Mr Bernard Arnold, the auditors (Messrs W. B. Peat and Co.) were re-appointed.

The Chairman then proposed a vote of thanks to Mr Stirling, the staff and agents of the company, both at home and abroad.

The vote was seconded by Mr F. W. Pascoe Rutter, and unanimously accorded.

On the motion of Mr Francis Scott, seconded by Mr Busick E. Pemberton a cordial vote of thanks was given to the chairman, and the proceedings then terminated.

NESTLE AND ANGLO-SWISS CONDENSED MILK COMPANY. SATISFACTORY RESULTS OF THE YEAR. CONFIDENCE IN THE FUTURE.

The fifty-seventh annual general meeting of the above company took place on the 23rd inst., at Cham, Switzerland.

The chair was taken by Mr W. C. Escher, who, after referring sympathetically to the serious illness from which the company's esteemed president—Mr Gustav Aguet—was recovering, remarked that, as the report of the directors, which was already in the hands of the shareholders, was so exhaustive, his task was thereby considerably lightened.

TRADING CONDITIONS.

The results of the year could be looked upon as being satisfactory. These results were entirely derived from the company's trading, and contained no fortuitous nor exceptional profits, and the company therefore looked forward with confidence to the future. At the same time, he had to point out how, with the increase in competition and the tardy recovery of Europe from the effects of the war, they were working under conditions that were very different from those prevailing in pre-war times.

THE STAFF'S SERVICES.

The Chairman referred to the zeal and devotion displayed by the whole of the company's staff, and remarked that, during the past year, all the branches and depots in Europe, the United States, South America, and the Far East had been visited, and it was hoped to make a visit to Australia in the near future.

DIRECTORS' PRUDENT POLICY.

As mentioned in the report, the results of the year 1923 were arrived at after considerable amortisation had been provided in respect of the assets of the company, and of those companies in which they had important interests, including provision for losses suffered in the Japanese earthquake. The directors were confident that this prudent policy would enable them in a com-

paratively short period to build up their reserves again, and to contemplate with equanimity any difficult times that might eventuate in the future.

DIVIDEND AND PROSPECTS.

The available balance of the profit and loss account was sufficient to pay the cumulative preference dividend for the year 1922, to set aside the dividend for the first half-year of 1923, and to carry forward a balance of about 5,000,000 francs. It was hoped that if the results of the current year were equal to those of 1923, the company would again be able to make similar provision for its cumulative preference dividend, and that they would soon be in a position to consider the remuneration of the ordinary shareholders, while at the same time building up the reserves.

The meeting duly passed the resolutions contained in the notice convening the meeting.

Dividend warrants on the preference shares in respect of the year 1922 will be posted on the evening of April 30th to all shareholders registered on the company's books as at the date of closing the transfer registers, viz., April 9th.

JAMES W. COOK AND COMPANY, LIMITED. DIVIDEND OF 10 PER CENT. FOR THE YEAR.

The twenty-seventh annual general meeting of James W. Cook and Co., Limited, was held, on the 17th instant, at 130, Minorities, London, E., Mr W. J. Clarke (chairman and joint managing director) presiding.

The Secretary (Mr Alfred E. Pike) having read the notice convening the meeting and the auditors' report and certificate,

The Chairman proposed: "That the statement of accounts, the balance-sheet and the report of the directors for the year ended December 31, 1923, be and the same are hereby received and adopted, and that a dividend at the rate of 12 per cent. per annum for the half-year on the ordinary shares of the company, making 10 per cent. for the year, less income-tax, be now sanctioned and declared, and that the balance of £88,678 19s 8d be carried forward to the credit of the year 1924."

Mr E. L. W. Cook seconded the resolution, which was carried unanimously.

On the proposition of Mr F. Devitt, seconded by Mr H. Robottom, Messrs Lescher Stephens and Co. were re-elected auditors of the company.

Mr Grubb proposed a cordial vote of thanks to the chairman, directors and staff, which was seconded by Mr Hay, and unanimously accorded.

The proceedings then terminated.

MONTE VIDEO WATER WORKS COMPANY, LIMITED. CONTINUED STEADY EXPANSION.

The forty-fifth ordinary general meeting of the Monte Video Water Works Company, Limited, was held, on the 22nd instant, at the offices of the company, 52 Moorgate, London.

Mr James Anderson (the chairman of the company) presided, and, in moving the adoption of the report and accounts, said that the figures showed a continuance of the steady expansion of the business that had been manifest for many years past. The services had increased by 2,565 to a total of 45,650; the gross revenue had reached the record figure of £295,194—an increase of £14,200—and the net income for the year, taking currency at par, had amounted to £167,408—again a record in the history of the company. The net receipts would have left a large surplus over the amount required to pay the usual dividend of 8 per cent. but for the heavy loss of £33,800 which the company had had to bear in remitting those profits to this side. Even allowing for that, the surplus permitted the payment of 8 per cent., placing £20,000 to reserve, and adding £2,100 to the carry forward. That was highly satisfactory in a year which from many points of view had been unfavourable.

An important matter for the company was the growing necessity for a large addition to its plant. Some four years ago the board had drawn the attention of the Government to the necessity of augmenting the supply, but before they spent more money on capital account it had been necessary to make sure that another undertaking which threatened competition with their company was not likely to materialise. A year ago they had received assurances that there was not the least likelihood of any attempt being made to pipe the streets of the city in competition with themselves, and the board thereupon made application to the Government for leave to proceed at once with the most pressing part of the work, which was the laying down of a steel main of 36 in in diameter. Despite

the urgency, necessary permission had not yet been granted. The delay was occasioned through demands being made on the company for reductions in the tariff which, under present circumstances, it was not possible to concede. Negotiations were at a critical stage, and he would say no more than that he hoped that a settlement would soon be arrived at which would permit of their proceeding with the work with every confidence in the future of the undertaking.

Mr A. L. Isaac seconded the motion, and it was carried unanimously.

OIL OUTPUTS.

STEUA ROMANA (BRITISH), LIMITED, are advised that the approximate fields' gross production of the Steua Romana Company (Bucharest) for the month of March was 20,760 tons.

THE MEXICAN EAGLE OIL COMPANY, LIMITED.—The production for the week ended April 12, 1924, was 51,000 barrels, and for the week ended April 19, 1924, 44,000 barrels. About 14,000 barrels daily were shut in owing to a strike at Tampico Refinery. Well No. 12 Cacalilao came in during the week at 6,000 barrels daily, depth 1,555 feet. Wells Nos. 3 and 11 Cacalilao had a small showing of salt water, and are now together producing 2,500 barrels daily.

WEEKLY TRAFFIC RETURNS.

RAILWAYS OF GREAT BRITAIN AND IRELAND.

(For traffic for week ended April 12, 1924, see under "Reports and Notices.")

RIO DE JANEIRO CITY IMPROVEMENTS.—The sixty-second annual report for year 1923 shows that the total number of drainage rents stated in the last report as standing on the company's books on January 1, 1923, was 74,804. During the year 1923 1,251 additional rents were obtained from new houses drained, 162 which had fallen out of revenue were recovered, and 199 were deducted by the Fiscal Department for demolitions, fires, &c. The total number of drainage rents on the company's books on January 1, 1924, was therefore 76,018. The Rio managers report that the service has been carried out during the period under review to the complete satisfaction of the Government. The revenue for the year was paid by the Government with their usual punctuality. The balance of revenue

(m) Babcock and Wilcox.—Paid on a larger capital. The dividend of 20 per cent., free of income-tax, paid for 1922 absorbed £429,765.
 (s) Includes £9,000 relief to shareholders in respect of repayment of Dominion income-tax for year ended March 31, 1923.
 ‡ Half-year. † Tax free.

account is £120,076 19s 11d, which, added to £24,956 19s 8d brought forward from last year, makes a balance of £145,033 19s 7d. Out of this sum the directors paid an interim dividend in October last of 2s 6d per share, absorbing £29,819 7s 6d, and having transferred £25,000 to reserve account and £20,000 to exchange contingency account, they recommend a final dividend of 3s 6d per share, absorbing £41,747 2s 6d, making, with the interim already paid, 6 per cent. per annum (free of income-tax), leaving £28,467 9s 7d to be carried forward to the next account.

SPILLERS MILLING AND ASSOCIATED INDUSTRIES.—The accounts for the year ended January 31, 1924, show a profit, before providing for taxation, of £326,756, against £308,051 in the preceding year. The amount reserved for taxation is £108,000, against £105,000. The dividend for the year on the ordinary shares is unchanged at 12½ per cent., less tax, and a dividend of 8½ per cent., less tax, is to be paid on the co-partnership shares. The amount to be carried forward is £153,293. The report points out that some of the claims arising out of the war have been agreed, and the amount collected credited to profit and loss. There are, however, many other claims awaiting agreement. The company has acquired control of the Vancouver Terminal Grain Company, and the erection of a two million bushel elevator has been commenced. Negotiations in respect to other enterprises are in progress, and for the purpose of co-ordinating these concerns a new company has been registered under the name of Spillers Overseas Industries, Limited.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions during the week were favourable to agricultural pursuits, periods of forcing sunshine followed by light rains proved very beneficial to cereal crops. Spring seeding has now been completed in most parts of the country, and a good seed bed obtained. Spring oats already above ground are showing a healthy plant, but winter wheat and oats are generally backward in growth. Quiet conditions prevailed at market, holiday influences being apparent, and prices in most cases tended in buyers' favour. Very little trading occurred in English wheat, but prices were nominally steady at 10s 4d to 10s 8d for suitable milling grades per 112 lbs, free on rail. Imported dull and easier. No. 1 Northern Manitoba 47s 9d, Rosafe, 63½ lbs, 46s 3d, Barusso, 63½ lbs, 45s 6d, and Australian 48s 6d, all ex ship, per 490 lbs. Quiet conditions prevailed in the floating and forward cargo section, and with shippers inclined to press, values marked a decline for most descriptions. Sales include steamers of West Australian, April, at 47s 3d, South Australian, March bill of lading, 48s 6d, No. 1 Northern Manitoba, March 17th, 46s 6d, No. 1 and No. 2 ditto, April 11th, at 46s and 45s respectively. Rosafe, 64 lbs, afloat, 44s 9d, and Barusso, 63½

lbs, April, 43s 6d per 480 lbs. Maize cargoes were pressed for sale at lower prices, with buyers holding off. Shipments of wheat are well maintained, while further additions will shortly be made from Canada, where navigation is about to be resumed. Crop prospects are fairly satisfactory in most of the principal exporting countries. Flour quiet. London standard straight run quoted at 37s, patents 39s-40s, town households 35s per sack, delivered in. All English country straights 34s 6d per sack, free on rail at London stations. Imported: Manitoba patents range from 35s 6d-37s as to quality. Australian 35s to 36s per 280 lbs. Barley steady. English malting ranges from 11s 3d-12s 6d, with feeders 10s-10s 9d per 112 lbs, free on rail. Imported: Californian 48s-52s, as to sample. Chilean brewing 44s-46s, ex ship, per 448 lbs. No. 4 Canadian Western 41s 9d, ex ship, ditto landed 32s 9d. Karachi, ex ship, 31s 6d, ditto, landed, 32s 6d. Plate, ex ship, 31s 9d per 400 lbs. Maize dull. Plate, old, 40s 6d-41s 6d, landed, as to quality. Red Karachi, ex ship, 41s. Yellow Calcutta 41s 6d per 480 lbs. Oats: English quiet, and quoted 8s 6d-10s per 112 lbs, free on rail. Imported easier. Plate, f.a.q., ex ship, 19s 9d, ditto, landed, 20s 9d. No. 2 Canadian Western, 25s 3d, No. 3 ditto, 24s 3d. Canadian feed, landed, 23s 3d per 320 lbs.

Millers' affairs steady. Broad bran quoted at 8s 6d, ordinary 7s 9d-8s, middlings 8s 3d, fine ditto 9s 6d, bags included, ex mill. Light oats, 7s 3d, powdered oat husks, 7s 3d, feed oats, 9s 3d. Ground oats 12s 3d per cwt, free on rail. Oatmeal steady. London made flaked 16s 6d, rolled oats 16s, medium and fine cuts 16s, coarse and medium pinhead 16s, ordinary Scottish oatmeal 17s 6d, and American 16s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-1924.	1922-1923.	1921-1922.	1920-1921.

IRON, STEEL, AND COAL.

Our Glasgow correspondent writes:—The spring holiday in the Glasgow area was the occasion for general suspension of business over last week end. The news that the shipyard lockout was to come to an end was received with the greatest satisfaction in iron and steel circles, and the opinion is general that had common-sense not prevailed over stubbornness the consequences to the steel and kindred trades would have been very serious indeed. As a result of the settlement, merchants and manufacturers are looking for a revival of business, and a return of confidence is already evident in the market for steel plates and sections. The North British Locomotive Company received intimation last week that their tender for ten locomotives for Western Australia had been accepted, the value of the contract being £76,000. The demand for bar iron is falling off. This is attributable chiefly to the very low price at which steel bars can be bought. Business has been rather quiet all round since works resumed, steel makers having not much on their books to fall back on, although the orders placed with shipyards recently and the railway carriages placed with Motherwell firms are hopeful signs. Sheet makers are well employed, and fresh inquiries for home and export are numerous. In the galvanized section, corrugateds are keenly cut, prices as low as £17 5s being common for the cheaper export grades. The large contract for galvanized sheets for the Argentine Government has not yet been placed. Several makers in this country have tendered, but it is learned that quotations have now been asked from U.S.A. and Continental makers. This is a line, however, which British makers are more competent to deal with than their foreign rivals. There is a brisk demand for pig-iron for export and home trade, and prices are unaltered. The shipments of all grades from the Clyde last week were only about 900 tons.

Our Middlesbrough correspondent's report, dated April 24th, is as follows:—Pig-iron: Owing to the Easter holidays the usual pig-iron market was suspended on Tuesday last. Several of the local steel works are closed for the whole week, whilst others have been stopped for only two days. Generally, the position remains quiet, and prices are unchanged at 92s 6d for No. 3 Cleveland quiet, and 99s for East Coast Mixed Numbers Hematite. Manufactured iron and steel: Prices remain the same, viz., steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel

rails, £9. Iron ore: No new business is reported, but deliveries are fairly good against old contracts. The nominal quotation for best Bilbao Rubio is 24s per ton, c.i.f., Middlesbrough, on the usual bases and scales.

Our Sheffield correspondent writes:—The absence of anything like uniformity in the duration of the stoppage at the local works for the Easter holidays reflects the very mixed conditions which obtain. While some large firms are so busy that the holiday was limited to only two days, others, and probably the majority, set down for three, four, and even five days. In the absence of active business since our last report, it is not possible to gauge the trend of business, and so far as can be seen the position is much the same as a week ago, but with a firmer tendency of prices. The demand for raw and semi-materials continues poor, and makers of pig-iron, in the belief that costs of production are certain to rise, will not entertain forward contracts at current prices. The home demand for steel material is fairly good, and the overseas markets still constitute the weak spot of the situation. The trade prophets talk in a minor key, and predict a shrinkage of trade in a good many departments as the year advances, as there are no signs of increased buying from the Continent, South America, or the various British possessions. Whilst Continental competition is less keen in partly manufactured steel, it is becoming formidable in the more finished materials, and it should be remembered that a large proportion of the cheap steels imported into this country from Belgium and France is re-shipped abroad in the form of manufactured goods. In the tool section the local saw trade has completely recovered from a period of acute depression, and at the moment the demand exceeds output. Large quantities of the best quality circular saws are going abroad. Hand tools generally are selling freely, but there is severe competition from abroad in what are known as engineers' small tools. The cutlery, electro plate, and silver branches are in a very unsatisfactory condition, and the firms in these trades who can manage to earn their expenses are quite exceptional. Conditions in the coal trade continue to favour the producer, as there is very little fuel to be bought on the home market, and the current high prices are readily obtained from consumers who did not contract for supplies several months ago. Railway and works requirements are heavy, but the demand for house coal is lower. Prices are the same as were quoted last week. Quotations per ton at pits are:—Best hand-picked branch, 36s to 38s; Barnsley best Silkstones, 34s to 35s; Yorkshire hards, 27s to 28s; Tyne steams, 27s 6d; rough slacks, 12s 6d to 14s; smalls, 8s to 10s; cokes, 30s.

METALS.

Tin commenced the week with an easier tone, though dealings were on a fairly liberal scale. Subsequent movements were attended by slight irregularity, and values partially recovered under sustained buying orders. Standard cash sold at £247 to £246 15s to £247 10s, and three months £247 to £248 to £246 15s to £247 17s 6d. Eastern cables reported sale on the basis of £248 15s, c.i.f. Prices were again easier at Thursday's market, standard cash quoted at £246 to £246 5s, and three months sold at £248 10s to £245 10s to £246. The market closed the week with a quieter tone, standard cash being sold at £240 5s to £240 7s 6d, and three months £243 10s to £240 2s 6d. English ingots quoted at £241 to £242. Copper market firm on stimulating advices from United States, combined with a good demand. Standard cash sold at £64 10s, and three months £65 7s 6d to £65 12s 6d to £65 7s 6d. Values continued in good request at Thursday's session, while easier on balance. Standard cash sold at £64 2s 6d, and three months £65 5s to £65. Copper closed lower. Cash sold at £63 12s 6d, and three months £64 10s to £64 12s 6d to £64 10s. Electro, £69 10s to £70; best selected, £67 15s to £69; strong sheets, £68; wire bars, £70. Lead easier, and quoted at £30 15s to £29 10s, as to position. Spelter lower at £32 to £31 15s to £32 7s 6d, according to position. Aluminium, home trade, £125; export, £130. Antimony, English special brands, £52 to £52 10s.

THE COTTON TRADE.

MANCHESTER, April 24.

Holiday influences have prevailed in the market during the past week. On the resumption of business, however, quite a considerable demand in piece goods was met with, but the bulk of the offers have proved unworkable. Our customers abroad apparently do not realise the real strength of Lancashire producers, for when raw cotton declines 1d a pound, the bids are lowered proportionately, whereas spinners only drop their quotations ¼d a pound at the most. With regard to actual business, the inquiry for India has been persistent and rather more demand has been met with in grey shirtings. Sales, however, have been isolated. There have been rather fewer transactions in light cloths. Staple makes have been wanted for China at low prices. For the outlets generally a steady business has been done in all kinds of fancy materials. A quiet turnover has taken place in American yarns for home use. Spinners,

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There has been a general slackening in demand during the past week on account of the holidays, and the market to-day is quiet. The demand for merino tops is really insufficient to test values, but although users are apparently determined not to pay full rates, top-makers are not disposed to make any real concessions. They feel that the wool position is so sound that ultimately users will be obliged to come into line and pay prices in keeping with production costs. Crossbred tops continue to move steadily into consumption, and the lower qualities, in particular, are very firm. Generally speaking, however, there is no quotable change in prices on the week. The raw material position will again be tested next week, when the last of the B.A.W.R.A. wool will be offered at Liverpool. The following week the London auctions will be resumed, the offerings for the series amounting to only 93,500 bales—a small offering for this season of the year. No improvement can be recorded in the demand for Botany yarns, and as stocks are accumulating prices are very irregular. Sales are reported from time to time at very low prices, and the position is most unsatisfactory. The demand for crossbred yarns, however, is well maintained, both on home and export account, and prices are firm at recent rates. In the piece goods trade rather more activity is noticeable on home account, and deliveries are being taken up freely. There are fewer cheap stock lots on the market, and manufacturers are endeavouring to make prices more in harmony with the cost on replacement. The export trade is uncertain, and most of the business lacks bulk. All home-grown wools are firmly held at recent rates, and the finer sorts are becoming very scarce.

COLONIAL WOOL.
(FROM A CORRESPONDENT.)

The Importers' Committee and the selling brokers will now be getting busy arranging the programme for the next series of London sales. The first step will be the announcement of the quantity which is to be available for sale, and as we said a week ago, it is high time they began to state definitely when the list of arrivals will be closed. We see nothing to prevent the pre-war order obtaining, namely, cargo on vessels sighted at 4 p.m. eight days before the opening of a series of sales, being the last to be included in the catalogues. That worked well, and seldom were any wools on vessels sighted eight days previously excluded from the ensuing auctions. As far as we can gather, there is every likelihood of there being around 100,000 bales available, including 30,000 bales of South American, Falkland Island, and Puntas. This is a small quantity for a May series, but quite as much as one can expect under conditions such as obtain to-day. It is useless ignoring the fact that Australian, New Zealand, and South African wool growers are as a body now supporting the sale of their clips locally. This programme will very largely obtain in the future, notwithstanding the colossal profits made this season out of imports already sold. Speculation is bound to take place on even a bigger scale than we have seen during the past two or three years, when fortunes have been made out of growers. We know that very plausible arguments have been employed in persuading pastoralists to sell on the spot. The fish has been landed splendidly, but during a period of ten years growers selling in Coleman street would do infinitely better than selling on the spot. However, we have no desire but to state the case fairly and frankly. Last series scoured Queensland wools were sold which showed a gross profit of anything from 12d to 18d per lb, and as the wools were bought so recently as last December, it shows clearly that Brisbane must have been a very cheap market at the time, or else London has been very dear.

Shearing was due to begin in the middle of last March on several stations in Queensland, chiefly those belonging to the Milo Pastoral Company, and we may expect the first consignment of these wools to come to hand for the London July series. We do not anticipate the bulk of the clip for that series of sales, although there should be to hand a few hundred bales. We have no knowledge as to the character of the clip, but as decent rains fell about Christmas, as well as January and February, in all probability the clip will be rather lighter than usual, but the staple will be in all probability no more than average length. However, the wools are certain to meet with a good reception, and at the next series of sales in Brisbane, when 40,000 bales will be available, it is certain that there will be many new clip parcels available for sale. Queensland pastoralists are gradually shearing earlier, and autumn sheds are becoming fairly numerous. We are not looking forward to very much change in merino values, and a healthy, steady demand for wool looks like being maintained.

Since writing the above the Colonial Wool Merchants' Association has made the announcement that the list of arrivals has been closed.

THE STANDARD LIFE
ASSURANCE COMPANY

ESTABLISHED 1825.

TRIENNIAL INVESTIGATION

AS AT 15th NOVEMBER, 1923.

THE TRIENNIAL VALUATION HAS JUST BEEN CONCLUDED,
AND THE DIRECTORS HAVE DECLARED THE FOLLOWING

RESULTS:—

A Reversionary Bonus of 35/- PER CENT. per Annum for the Three Years.

An Interim Bonus of 35/- per Cent. per Annum for all Policies becoming Claims by Death or Maturity.

The Valuation made on a 2½ per Cent. basis, thus greatly strengthening the Reserves, and ensuring a continuance of good Bonus results for the future.

THE STANDARD has a new reduced non-profit table for good lives, specially suitable for DEATH DUTIES, MARRIAGE SETTLEMENTS, FAMILY PROVISION, &c.

Its Annuity Rates are particularly favourable.

Special Schemes for Children—THE EARLY THRIFT POLICY, THE PUBLIC SCHOOLS POLICY.

The BUSINESS MAN'S POLICY—a policy of great adaptability, with options.

The "ACME" POLICY, including Disability Benefits.

WRITE FOR A COPY OF THE LATEST REPORT AND AN EXPLANATORY LEAFLET OF ANY OF THE ABOVE SCHEMES.

APPLICATIONS FOR AGENCIES INVITED.

THE STANDARD LIFE ASSURANCE COMPANY

Head Office: 3, GEORGE STREET, EDINBURGH.
LONDON: 110, CANNON STREET, E.C.4, and 18a, PAZL MALL, E.W.1.

for the next series of sales which begin on May 6th. The net quantity available is 93,500 bales, which includes 15,000 bales of Puntas, &c., and 15,000 bales held over from the second series. It was also decided that the remaining series for the current year should open on September 16th and November 25th, making six series for the year.

VEGETABLE OILS AND OILSEEDS.

Linseed oil has had an easier tendency all the week, and has again fallen to £36 per ton naked, ex Hull mill, for spot and to August, the consumptive demand being small and seed prices lower. Cotton oils of all descriptions have been dull and inactive, and are offering at lower prices, crude Egyptian being quoted £39 10s, and soap makers' grade of refined, £41, naked, ex Hull mill. Other vegetable oils are quiet, and demand on limited lines. In the oilseed section Plate linseed has eased, and offers at £17 10s for seed afloat, and March-April loading, with the same figure paid for April-May and May-June. More attention is now being paid to Indian linseed, Calcutta to London having been done at £19 to £19 2s 6d for shipment April to June, while Hull has been a good buyer, paying £19 7s 6d for April shipment, and £19 5s for April-May. Egyptian cottonseed is steadier, but only a moderate business is passing. Soya beans, on passage to Hull, have been bought at £11 2s 6d.

HIDES, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Hides were a shade weaker at the sales held in Bermondsey on Thursday, best ox selling from 6½d to 8½d per lb, two classes showing a reduction of ½d on previous rates. Seconds, when sold, made 7d, also a drop of ½d per lb. Calf, on the other hand, were firmer, best selling from 7d to 15½d, advances being shown from ½d to ¾d per lb, both in first and second selections. Wools sold from 8s to 16s, and hogs from 5s to 21s. The imported hide market is also easier, fregorifics being quoted nominally at 7½d to 8½d for ox, and 7d for cows. A cable from the River Plate, however, reports that 45,000 Argentine steers have been sold on a basis of 7½d, and 8½d for Montevideo steers. Dry hides are quiet, with a weaker tone. This week's cables report the Chicago position as weak, with 1½ cents being taken for best heavy packer hides, and 9d for native cows.

Shoe manufacturers have hardly got into their stride since the holidays, but reports from the manufacturing centres are encouraging, as large sales have been made by retailers which will mean business later on. This week the Federated Associations of Boot and Shoe Manufacturers have issued a notice drawing attention to the increased cost of leather, particularly skins and lining leathers, and its effect on the production of boots and shoes. They state that buyers are informed that there must be a general revision of costings in order to maintain a due relation between manufacturers' costs and selling prices.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, April 25.

SUGAR.—The market for spot parcels developed a weaker tone, and with regard to British descriptions, a moderate clearance was effected at a general decline of 1s per cwt. Messrs Tate and Lyle's cubes now quoted 6½s 3d to 6½s 3d; crushed, 5½s 9d; granulated, fine and coarse grain, 5½s 1½d; No. 1, 5½s 10½d; No. 2, also London and T.L., 5½s 7½d; ditto, April, 5½s 6d; first half May, 5½s 6d; second half, ditto, 5½s, and June, 5½s; yellow crystals, spot, 5½s 1½d; caster, 5½s 3d to 6½s 4½d, according to quality. Imported kinds sold quietly at easier rates. White Java, spot, quoted 5½s; Czecho granulated, 5½s 10d to 5½s; White Java, May-June, steamer, 2½s; June-July,

OILSEEDS.—Linseed quiet and easier. Indian: Calcutta, afloat, £20; March-April, £19 7s 6d; April-May, sold, £19 2s 6d. Plate, afloat, sold, £17 12s 6d; March-April, sold, £17 10s; April-May, £17 10s to £17 5s to £17 7s 6d. Rape seed steady. Toria, March-April, £17 12s 6d; April-May, £17 10s; Jamba, May-June, £13 7s 6d; and real bold Ferropore, April-May, £17 7s 6d; May-June, £17 5s. Cottonseed: Egyptian, quiet. Egyptian, black, April, £13 2s 6d. Sakellaridis, £12. Bombay, April-May, £9 17s 6d. Gingelly seed neglected. Chinese, afloat, £25 12s 6d; March-April, £25 15s. Groundnuts quiet. Coromandel, machine-dried, May-June, £22 10s; Chinese, decorticated, f.a.q., May-June, £21 7s 6d; bold Bombay, March-April, £22 2s 6d. Soya beans quiet. Manchurian, afloat, £11 10s; April-May, £11 17s 6d. Castor seed firm. Bombay, April-May, £25 2s 6d per ton.

OILS.—Linseed quiet and easier. Spot, net, naked, 37s 3d; April, 36s 14d; May-August, 36s 14d; September-December, 35s 9d. Rape dull. Crude, spot, 47s 6d; refined, 50s 6d. Castor-oil firm. First pressure, spot, quoted 66s; second pressure, 64s; and pharmaceutical, 71s per cwt. Hull, with London 2s per cwt extra. Cotton steady. Crude Egyptian, spot, 41s; Bombay, 38s; common edible, 47s; decorticated, 49s. Chinawood quiet. Hankow, spot (barrels), 90s; April-May, 76s. Coconut steady. Ceylon, spot, 46s 6d; March-

April, 44s; Cochin, ditto, nominally 50s. Soya dull. Oriental, barrels, March-April, 40s 6d. Cod quiet. English, spot, 36s to 37s. Groundnuts quiet. English, crushed, naked, spot, 47s; decorticated, barrels, 56s. Turpentine easier. American, spot, 72s; May-June, 71s 6d; July-December, 69s 6d. Rosin steady. American, grade B, 13s 6d; C, 13s 6d; WG, 17s 6d; WV, 18s 6d per cwt. French WW, 17s per cwt. Petroleum steady. American, standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

dency of the market was hardly tested; 3 per cent. was still the usual quotation for three months' bank bills, though transactions were reported at 2½ per cent.

	May 2, 1924.	Apr. 23, 1924.	Apr. 16, 1924.	Apr. 11, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills)	3	3½	3½	3½	..

The Bank return showed a decrease, almost entirely due to expanded note circulation, of £763,000 in the Reserve. Movements in the securities were small and insignificant. Public deposits declined by 3 millions, and Other advanced by 2½ millions. Currency notes outstanding were reduced this week by £2,313,100 to £290,115,700, which includes £1,395,800 for notes called in but not yet cancelled. The fiduciary issue is £239,270,000, or £8,920,900 below the maximum.

THE STOCK MARKETS.

The Budget came as a pleasant surprise to the Stock Exchange, both the abolition of the Corporation Profits Tax and the absence of increased Death Duties and Super-tax being unexpected. The volume of business has not shown much expansion, but the tone all round is better. Gilt-edged stocks have improved, and the strength has spread to the Home Railway market. Industrials are better, especially those likely to be affected by the reduction in the tea and sugar duties, but motor shares were marked down on the proposed withdrawal of the McKenna duties. Mining shares are quiet.

THE COMMODITY MARKETS.

Sugar prices have been revised in accordance with the reduction in duty payments. Of British makes, Messrs Tate and Lyle's "white goods" were marked down 14s per cwt and "yellows" 11s 6d. Brisk support was noticeable in the tea market; prices moved from ½d to 1d upwards. Coffee prices were stable; the halving of the duty payment is not expected to have an appreciable effect on the demand. Wheat prices were maintained. Prices of pig-iron are rather easier, but no large sales are being effected; our Sheffield correspondent mentions that the outlook is believed to be improving. Tin was weaker, and copper prices moved in the buyers' favour. The hide market is a shade firmer. Vegetable oils are in slightly better demand. Inquiry in the cotton market at Manchester has been well maintained, but the actual business done has been less. From Bradford we receive similar information; a moderate amount of business has been done in a quiet way.

FOREIGN EXCHANGES.

After the temporary activity following the Easter holidays business on the foreign exchange market fell off again rapidly, and during the period under review has been quieter than for a long time past. The dollar has shown the quiet appreciation suggested a week ago. Having during the week been up to \$4.39½, it was quoted yesterday morning at \$4.39, as compared with the closing rate of \$4.37½ on the 25th. Up to the present little effect has been felt from the reduction in the Federal Reserve discount rate. Forward quotations are ½ cent narrower than a week ago at ½ cent per month above spot. The Paris rate has also been relatively steady, with little business, in spite of the heavy end of month settlements. From a closing rate of 69.65 on the 25th the quotation sank as low as 66.75 at one time on the 28th, from which, however, there was a sharp reaction to over 68. Since then the rate has been very steady round 68, but yesterday morning at 67.50 showed some signs of falling. Brussels, on the whole, has shown the same movements, except for a sharp temporary break to 82½ at one time on Thursday, and was quoted yesterday morning at 80½ centimes, as compared with 81.70 a week ago. The lira has, as usual, been steady, with a slight tendency to improve the rate of 97½ yesterday morning, comparing with 98½ on the 25th. Among neutral currencies, Amsterdam, after reaching just below 11.80 on Saturday, moved rather sharply

against us on Thursday down to 11.68½, and at 11.70½ yesterday was considerably below last week's figure of 11.74½. Switzerland at 24.67½ shows little movement from 24.66 on the 25th, and Madrid, after somewhat erratic movements, is 31.72½, as compared with 31.71½. Berlin, where the new gold discount bank is now in operation, shows an improvement from 19 to 18½ billion marks on the expectation of the acceptance of the expert's report. Warsaw, whose new bank of issue began operations on the 28th, remains at 40½ millions for Polish marks, while the new zloty currency (one zloty equals one gold franc) was quoted in London for the first time at the beginning of May at 22.70 to the £ sterling, or the same rate as the Lat, the currency of Latvia, which is also the equivalent of the gold franc. Reval, which has depreciated somewhat in the last few months, is now fairly steady again at about 1665. Helsingfors, after a slight recovery, is much the same at 175½. In Scandinavia Stockholm shows little change at 16.63½, but Christiania has depreciated again from 31.52 to 31.69½, while Copenhagen shows a recovery from 26.10 to 25.90½. In Central Europe, Vienna has followed the dollar to 311,000, Budapest remains unchanged at 370,000, Prague has moved from 148½ to 149½, after being rather higher, Belgrade remains fairly steady about 350, but Bucharest has moved up again from 835 to 845. In the East, the rupee has moved down slightly from 1s 4½d to 1s 4¼d. The yen, after rising as high as 1s 10½d on the 29th, has improved again to 1.9½d, as compared with 1s 9 13-32d a week ago. The silver market has been quiet, and though there has been Continental buying demand has not been strong enough to balance offerings from India and China, so that prices look rather weaker. Hong Kong has moved from 2s 4½d to 2s 4¼d, and Shanghai from 3s 2½d to 3s 2d. In South America, Rio has remained steady, the quotation of 6½d yesterday being the same as that of the 25th. Buenos Aires has continued rather weak, although the rate recovered on the following day from the sharp fall to 39½d on the 25th, and yesterday morning moved up to 41d. Monte Video shows little movement from 42½d on the 25th to 42½d on the 1st. Valparaiso has reacted slightly from 39.30 pesos to 39.40 pesos, after being higher.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 26th:—

EXPENDITURE.		REVENUE.	
	(000's omitted.)		(000's omitted.)
Supply Services	5,647	From Revenue	10,686
Interest, &c., on Debt	499	Taken from Exchequer Balances	252
Sinking Fund	1,734		
Sundries	126		
Reduction in Debt	2,532		
	10,938		10,938

Revenue amounted to £10,686,200, against £13,821,400 in preceding year. Customs yielded only £1,916,000, against £4,366,000, and Excise £732,000, against £1,833,000. Estate, &c., duties produced £1,850,000, against £1,370,000. Property and Income-tax yielded £1,909,000, against £2,362,000, and Super-tax £1,030,000, against £1,310,000. Special receipts amounted to £1,500,100, against £200,000. The week's operations reduced the National Debt by £2,931,700, and caused the following changes:—

EXPENDITURE.		REVENUE.	
	(000's omitted.)		(000's omitted.)
Unemployment Insurance	80	Treasury Bills	5,490
4% Treasury Bonds	828	Saving Certificates	100
Public Dept. Advances	1,750		
	2,658		5,590

The floating debt was reduced by £3,685,000 to £755,245,500.

FINANCIAL YEAR, 1924-1925 (April 1 to April 26).

EXPENDITURE.		REVENUE.	
	£		£
Total Expenditure ..	60,348,017	Raised by Revenue ..	73,645,922
Net Repayments	16,011,023	Decrease in Balances ..	2,713,118
Total	76,359,040	Total	76,359,040

ESTIMATES for YEAR 1924-25.

EXPENDITURE.		REVENUE.	
	£		£
Ordinary Expenditure ..	786,848,000	Ordinary Receipts ..	764,050,000
Special Expenditure ..	3,178,000	Special Receipts	30,000,000
Total	790,026,000	Total	794,050,000
		Surplus	4,024,000

THE WEEK IN PARLIAMENT.

TUESDAY, APRIL 29TH.—*Commons*: House reassembles after Easter recess. Mr Snowden opens the Budget.

WEDNESDAY, APRIL 30TH.—*Commons*: Budget debate. Discussion on position of agriculture.

THURSDAY, MAY 1ST.—*Commons*: Budget debate continued.

FRIDAY, MAY 2ND.—*Commons*: Proportional Representation Bill debated.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—P.L.M. Railway, Union Bank of Scotland, Royal Exchange Assurance, London Assurance, Ocean Accident and Guarantee Corporation, Phoenix Assurance, Licences and General Insurance, Army and Navy Co-operative Society, London Trust Company, English Electric, Anglo-American Oil, Consolidated Waterworks of Rosario, Booth's Distillery, Pullman Car, Birmingham Small Arms, Hope Brothers, Consolidated Mines Selection, and Mysore Gold Mining. The Duke of Atholl, K.T., at the annual meeting of the Union Bank of Scotland, criticised severely suggestions for the nationalisation of banking. Mr C. F. Campbell, at the London Assurance meeting, reported the formation of an American company, under the name of the Manhattan Fire and Marine Insurance Company.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

A FAIR WEATHER BUDGET.

MR SNOWDEN secured a great personal success in the presentation of the first Labour Budget to the House of Commons on Tuesday last. In some other spheres the Labour Government has had only a qualified success, but in the sphere of finance—one of the two most important branches of public affairs—the Chancellor of the Exchequer gave a display which challenges favourable comparison with that of any of his predecessors. Indeed, we think that he fully earned the very high compliment paid to him by Mr Asquith, who expressed extreme satisfaction "not only at the admirable lucidity and cogency—which I have rarely heard surpassed during a great many Budgets—of the introduction of this most complicated and difficult of all tasks, but also on the fact—so far as I can form a judgment—that the Budget proceeds upon thoroughly sound financial lines." Mr Snowden showed himself possessed of all the necessary technique for his task. He was heard perfectly in all parts of the House. He showed that he had the gift of exposition. He handled his complicated mass of figures without confusion, and he showed that he was master of the problems of public finance. The soundness of his proposals is shown by the fact that, with the exception of the two fiscal issues, his Budget has been very favourably received. His tax remissions are popular, industry being particularly pleased with the abolition of the Corporation Profits Tax and the Stock Exchange has shown its appreciation in a hardening of security prices. This friendly reception may perhaps owe something to a reaction from fear of the worse things that might have been done by a Labour Government; but, on the whole, we think this approval is due to the Budget on its merits.

It is unnecessary to recall to readers of the *Economist* the substance of the earlier part of the Budget speech, as it was mainly an exposition of facts and figures which were already public property, and had been published and commented on in our columns. The only uncertain items on the expenditure side were the amount to be provided

for debt charges, for which Mr Snowden assigned the amount suggested a fortnight ago in our forecast, namely, £350 millions, and the amount for other Consolidated Fund Services, which he put at nearly £35, instead of £30, millions. Estimated expenditure for the year, therefore, amounts to £790 millions. The prospective revenue on the existing basis of taxation, which is the Chancellor's chief secret to be revealed on Budget day, he estimated at £828 millions, compared with last year's receipts of £837 millions. Thus he had a surplus of £38 millions to dispose of. We are inclined to agree with those who think that this estimate is framed in a more sanguine spirit than has actuated Mr Snowden's immediate predecessors. The figures include £8 millions of receipts from excess profits duty. The experience of the last two years has made us a little sceptical of ever getting any more out of this tax. But the Inland Revenue Department knows the causes of recent disappointments, and we are not altogether inclined to jump lightly to the conclusion that these gentlemen are bitten with incurable optimism. However, this item is clearly a rather speculative one. Special receipts are entered at £30 millions; we expected to find a larger reduction here, but it is known that a large number of disposal contracts provided for regular payments over a period of years. If trade does well the receipts may be secured in full, but the story of disposals includes a very large number of contracts which have had to be modified in favour of purchasers. Something may be lost here in respect of doubtful or bad debts. Mr Snowden's assumption of a 2½ per cent. rise in Customs and Excise is also on the whole rather a sanguine one, but it may well be realised if trade continues on its present upward swing. The income-tax estimate, which assumes receipts of £265 millions against £269 millions last year, although the latter included considerable payments of arrears and a certain proportion of payments on the basis of 5s in the £, has been considerably criticised in some quarters as being too optimistic. But our figures of industrial profits show that the year which will be brought into the assessments is markedly better than the preceding one, thanks to the recovery in the volume of trade. It will be remembered that the various tax remissions made last year were expected to cause a shrinkage of an additional £13 millions of revenue in the current year. In our opinion, the Chancellor has strong arguments for his present figures, in view of the under-budgeting of recent years, but it seems clear that the revenue is more likely to be below than above the Budget figure. On the other hand, we are disposed to think that the expenditure estimates are equally likely to prove once more on the high side. In particular, the estimates for armament expenditure, while showing a fall of £7 millions compared with last year's estimates, are nevertheless £9 millions higher than the actual expenditure of last year. This applies to all three services, the Army figures being £1½ millions up, those of the Navy £3 millions up, and those of the Air Force nearly £5 millions up. The Civil Service Estimates are down by nearly £12 millions as compared with current expenditure, but most of this is covered by the automatic fall in pensions. We fully expect to see actual expenditure well below present estimates. Even, therefore, if the revenue falls short of expectations the anticipated surplus is likely to be achieved.

The House was, however, a little surprised that with the exception of a margin of £4 millions the Chancellor proposed to dispose of the whole of this surplus by tax remissions. By doing this he leaves himself very little margin to pay for the social legislation to which the Labour Party stands committed. On this point the Chancellor was not communicative, and contented himself with enunciating the excellent doctrine that the Government, which has had to present estimates prepared by its predecessors, expects and intends to make very substantial economies, and that in this way he will secure a margin for social expenditure. He also doubtless took into account the fact that the Parliamentary machine is not working very quickly, that it will take considerable time to prepare and carry through legislation, such as overhauling various forms of social insurance, removing the means limit on old-age pensions, and financing new education, housing and public health measures, and that under the most favourable conditions comparatively small ex-

penditure could possibly be incurred on these objects in the present financial year. We are inclined to accept this view, and to think that his anticipations will be realised for 1924-25. But the outlook of future years is more obscure. The remissions made this year will cost a further £10 millions to the Exchequer next year, and the item of "special receipts" will steadily dwindle. On the other hand, the plans of the Labour Party may involve quite large figures of new expenditure. These might quite easily amount to £30 or £40 millions next year. Mr Snowden left this problem alone. If trade continues to recover there will be considerable elasticity in the revenue, which will be assisted by the substantial remissions made in the last three Budgets; but if by any mischance matters take a turn in the wrong direction, the financial situation would be very difficult. It is for this reason that we must on the whole regard this as a fair weather Budget.

But if we grant Mr Snowden's implied assumption as to the future, we have very little quarrel with the actual remissions of taxation which he made. It is true that out of the relief granted £30 millions was in respect of indirect taxation and £4½ millions only in direct taxes. But we think that the Chancellor was to a considerable extent justified by the consideration that in the two preceding years the remissions made amounted to £54 millions of direct taxes and only £21 millions of indirect. Moreover, much the largest remission was in respect of the sugar duty, which is going to cost the Exchequer £17½ millions. This tax has a special claim for consideration, since sugar is to a very large extent a raw material of British manufactures, and consequently a very undesirable commodity from which to collect a large revenue. It is true that the net result leaves the proportion of direct taxes in the total tax revenue of the country much higher than before the war (at 60 per cent. against 48 per cent. in 1913), but, on the other hand, if we consider the incidence as between classes, it must not be forgotten that the income-tax net now reaches a number of persons, wage-earners and small salary receivers, who before the war escaped taxation.

From another point of view the remissions made are excellent. A Chancellor of the Exchequer is often tempted to placate as many interests as possible by making small reductions over a very large field. Mr Snowden adopted the much sounder principle of making several clean cuts and a number of very substantial cuts in duties which for that very reason are more likely to benefit the consumer than if he had adopted a policy of tinkering. Inhabited house duty, which is an irritating and bad tax, the burden of which is mostly felt by the lower middle classes, is to go altogether. The corporation profits tax, the small duty on sweetened mineral waters, the additional dried fruits duty, and last, but not least, the McKenna duties are to go altogether. It is in his handling of these tax remissions that we think Mr Snowden showed the real instincts of a real Finance Minister. Our only quarrel is in regard to the entertainments tax, which we think should have been maintained until the finances of the country are in smoother water. On the debt Mr Snowden said singularly little, but what he did say showed that he appreciates to the full the importance of maintaining British credit and the difficulty which he will have to face in dealing with a large volume of maturing debt. He leaves the sinking funds as he found them, a course obviously dictated by the fact that the Committee which he has appointed to explore the whole field of debt and taxation is now engaged in its deliberations. It happens that Mr Snowden's Budget success coincides with the publication of his previous views on taxation, to which we refer in a later article.

AN ANALYSIS OF THE ACCOUNTS.

THE financial statement which the Chancellor of the Exchequer has circulated in connection with the Budget adds little to our information regarding last year's accounts, except in so far as it enables a slightly fuller analysis to be made of the expenditure of 1923-24. From the figures there presented, it is, however, possible to compile tables which compare the estimates of this year's revenue and expenditure with the detailed experience of 1922-23. This we proceed to do in the following tables, which also com-

pare last year's Budget estimates with actual results. We begin with expenditure:—

(000's omitted.)				
Service.	Estimate, 1923-24.	Actual, 1923-24.	Estimate, 1924-25.	Estimate for 1924-25, More (+) or Less (-) than Actual Expenditure in 1923-24.
CONSOLIDATED FUND SERVICES.				
National Debt Services:—Interest, &c.	310,000	307,309	305,000	- 2,309
Sinking Funds, &c.	40,000	40,000	45,000	+ 5,000
Total National Debt Services	350,000	347,309	350,000	+ 2,691
Road Fund	12,650	14,090	15,000	+ 910
Payments to Local Taxation Accounts, &c.	10,348	13,662	13,150	- 512
Land Settlement	1,500	1,209	750	- 459
Payments to Northern Ireland	3,000	3,967	3,500	- 467
Other Consolidated Fund Services	2,972	2,803	2,440	- 363
Total Consolidated Fund Services	380,470	383,040	384,840	+ 1,800
SUPPLY SERVICES.				
Army (including Ordnance Factories), &c.	52,000	43,600	45,000	+ 1,400
Navy	58,000	52,600	55,800	+ 3,200
Air Force	12,011	9,600	14,511	+ 4,911
Civil Services	251,670	239,766	227,373	- 11,793
Customs and Excise & Inland Revenue	11,591	10,823	11,221	+ 398
Post Office Services	50,874	49,811	51,081	+ 1,270
Total Supply Services	436,146	405,800	405,186	- 614
Grand total	816,616	788,840	790,026	+ 1,186

The second line in the above table reveals Mr Snowden's non-interference with Mr Baldwin's sinking fund plan, under which the allowance rises to £45 millions this year and eventually to £50 millions. Another important point to notice about the above table is that 1924-25 estimates for the Army, Navy, and Air Force are over £9½ millions in excess of the amount actually expended on these services in the last financial year. In addition, the reduction in the figure for the Civil Services does not look large in view of the amount of automatic saving under the head of pensions.

We give next the details of the Chancellor's estimates of revenue yields on the basis of the previous year's taxation, compared with the estimates and actual receipts for 1923-24:—

(000's omitted.)				
	Estimate for 1923-24.	Actual Receipts in 1923-24.	Estimate for 1924-25 on Basis of Taxation of Preceding Year.	Estimate for 1924-25, More (+) or Less (-) than Actual Receipts in 1923-24.
Customs	£ 116,900	£ 119,958	£ 127,500	+ £ 7,542
Excise	143,850	147,970	140,000	- 7,970
	260,750	267,928	267,500	- 428
Motor Vehicle Duties	13,250	14,691	15,600	+ 909
Estate, &c., Duties	52,000	57,800	56,000	+ 1,800
Stamps	20,000	21,570	21,000	+ 570
Land Tax, House Duty, and Mineral Rights Duty	3,000	2,760	3,000	+ 240
Income-tax	261,000	265,331	265,000	+ 4,331
Super Tax	50,640	61,000	61,000	+ 360
Excess Profits Duty, &c.	12,000	nil	8,000	+ 8,000
Corporation Profits Tax	20,000	23,340	22,000	+ 1,340
Total receipts from taxes	426,000	435,441	436,000	+ 559
	700,000	718,060	719,100	+ 1,040
Postal Service	33,200	32,840	33,250	+ 410
Telegraph Service	5,250	5,570	5,500	- 70
Telephone Service	14,150	14,390	15,250	+ 860
Crown Lands	52,600	52,800	54,000	+ 1,200
Interest on sundry loans, &c.	900	920	900	- 20
Miscellaneous	12,500	12,507	12,250	- 257
Ordinary receipts	12,500	15,981	11,850	- 4,131
Special receipts	40,000	36,801	30,000	- 6,801
Total receipts from non-tax revenue	118,500	119,109	109,000	- 10,109
Total revenue	818,500	837,169	828,100	- 9,069

Since the income-tax will be collected in two instalments at the 4s 6d rate instead of one at 5s rate and one at the 4s 6d rate (as it was last year), the decline of £4 millions odd in the estimate under this head looks a trifle small. But there are also influences the other way, as is pointed out in the previous article. Of the anticipated surplus of £38 millions on last year's basis of taxation, Mr Snowden gives away £34 millions in tax remission, leaving himself with a surplus of only £4 millions, which will obviously need supplementing by retrenchment of prospective supplementary expenditure. The concessions that will cost £34 millions this year will cost nearly £48 millions

in a full year, as will be seen from the details set out below:—

ESTIMATED LOSS DUE TO THE PROPOSED ALTERATIONS IN TAXATION AND POST OFFICE TELEPHONE RATES.

	Estimated loss in 1924-25.	Estimated loss in a full year.
Customs:		
Tea	5,000,000	5,400,000
Cocoa	580,000	600,000
Coffee	180,000	200,000
Chicory	40,000	43,000
Sugar, molasses, glucose and saccharin	17,200,000	17,880,000
Raisins, figs and plums	200,000	250,000
Table waters and herb beer		
New import duties	2,500,000	2,750,000
Total Customs	25,700,000	27,123,000
Excise:		
Chicory		
Coffee substitutes		
Sugar, molasses, glucose, & saccharin	500,000	520,000
Table waters and herb beer	200,000	300,000
Entertainments	3,400,000	4,000,000
Total Excise	4,100,000	4,820,000
Total Customs and Excise	29,800,000	31,943,000
Motor vehicle duties		500,000
Inland Revenue—		
Corporation Profits Tax repealed	2,000,000	12,500,000
Inhabited House Duty repealed	1,750,000	2,000,000
Total Inland Revenue	3,750,000	14,500,000
Post Office	500,000	1,000,000
Total estimated loss	34,050,000	47,943,000

* The loss in these cases is negligible.

Out of the £34 millions of tax concession £23 millions go to foodstuffs. The loss on the repeal of the corporation profits tax does not become heavy until next year. The final balance-sheet for 1924-25 works out as follows:—

FINAL BALANCE-SHEET (after Alterations proposed by Mr Snowden). (In Million £.)

ESTIMATED REVENUE.		ESTIMATED EXPENDITURE.	
		CONSOLIDATED FUND SERVICES.	
Customs	101.8	National Debt Services	350.0
Excise	136.9	Payments to Northern Ireland	3.5
	237.7	Road Fund	15.0
Motor Vehicle Duties	15.6	Payments to Local Taxation Accounts, &c.	13.1
Estate, &c., Duties	56.0	Land Settlement	8
Stamps	21.0	Other Consolidated Fund Services	2.4
Land Tax, House Duty, and Mineral Rights Duty	1.2	Total Consolidated Fund Services	384.8
Income-tax	265.0	SUPPLY SERVICES.	
Super Tax	61.0	Army	45.0
Excess Profits Duty	8.0	Navy	55.8
Corporation Profits Tax	20.0	Air Force	14.6
Total receipts from taxes	685.5	Civil Services	227.6
Post Office	53.5	Customs and Excise and Revenue Departments	11.2
Crown Lands	9	Post Office Services	51.1
Interest on Sundry Loans	12.3	Total Supply Services	405.2
Miscellaneous	11.8	Total expenditure	790.0
Special receipts	30.0	Surplus	40
Total receipts from Non-Tax revenue	108.5		
Total revenue	794.0		

It is of interest to show over recent years and in the last pre-war year the amounts received from taxation and the amounts disbursed in those years for debt interest and for the supply services respectively. This we show in a final table:—

	(Million £'s.)		Supply Services (Excluding Post Office and Special Payments).	
	Tax Revenue.	Debt Interest.		
1913-14	162.3	19.1	135.6	
1920-21	1,031.7	341.7	682.6	
1921-22	856.7	322.4	557.6	
1922-23	774.8	302.0	406.6	
1923-24	718.0	307.3	355.0	
1924-25 (estimated)	685.5	305.0	354.0	

The figures for debt interest include amounts for payments in respect of the debt to the United States. In spite of shouldering the obligation to the United States, the debt interest charge has fallen by over £36 millions since 1920-21, in which period the expenditure on the supply services has dropped by £328 millions.

OUR INDEX NUMBER.

THE net change in wholesale prices of commodities in April was very small, our Index Number dropping by 3 points to 4637. There were fairly wide movements in some of the groups which neutralised one another; there was an increase, for example, of 50 points in textiles and a decrease of 41 points in subsidiary foodstuffs. Both these changes, however, were accounted for by movements in a few individual commodities, and in the main the month's record is one of moderate stability. The table below shows the position of the various groups:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	%
Basis (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	879	382	816	484	853	2865	118.6
" Dec., 1915	897	446	731	848	3634	2657	165.1
" Dec., 1917	1286	686	1684	839	1348	5845	265.8
" Nov., 1918	1280	782	1848	903	1389	6212	282.6
" Mar., 1920	1508	915	2974	1246	1709	8352	379.6
" Dec., 1920	1344	805	1284	1216	1275	5924	269.8
" Dec., 1921	921	638	1106	762	931	4357	198.0
" Dec., 1922	861	706	1184	705	807	4264	193.8
" Mar., 1923	824	752	1178	840	797	4392	199.6
" June, 1923	815	773	1177	773	761	4301	195.6
" July, 1923	819	756	1115	744	746	4182	190.1
" Sept., 1923	823	782	1214	732	745	4297	195.8
" Dec., 1923	853	815	1382	774	755	4580	208.2

" Feb., 1924	899	859	1308	819	783	4668	212.9
" Mar., 1924	897	843	1313	805	780	4640	210.9
" Apl., 1924	904	802	1364	788	778	4637	210.8

The increase in primary foodstuffs was due largely to a seasonal increase in the price of potatoes. Rice was also higher, but there was a drop in mutton and pork. The sharp decline in other foodstuffs is largely due to a substantial drop in sugar, to which a seasonal fall in butter and a decline in coffee have added a few points. We refer in a Note of the Week to the effect on the sugar market of reduction in the duty. Cotton is largely responsible for the increase in the textile group, both American and Egyptian cotton being substantially higher on balance, although the highest point was reached a few days before the end of the month. There was a further decline in silk, but the rise in flax continued, that commodity being now easily the highest above the basis figure. In the minerals section declines in non-ferrous metals are responsible for the decrease of 17 points, lead falling by 16 points and tin by 7 points. Iron and iron bars were a little higher, but steel rails were unchanged. In the miscellaneous group trifling reductions in oils and oilseeds were the only changes. The table below sets out the changes in each commodity's index number in comparison with that for the end of March, the figure 50 representing in each case the average prices during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For...	79½	—	Cotton, A....	160½	+ 10	Copper	53	— ½
English	82	+ 1½	Cotton, E....	160½	+ 19	Minerals	788	— 17
Flour	72	— 2	Yarn	165½	+ 3½			
Barley	88½	— 2	Cloth	146	+ 3½			
Oats	77½	+ 1	Wool, Eng....	159	+ 5	Baltic timber	103½	..
Potatoes	131	+ 15	Do Aust....	148	—	Amer. timber	89½	..
Rice	118½	+ 5½	Silk	102	— 8	Leather	59½	..
Beef	87½	+ 1	Flax	180	+ 11½	Petroleum....	108	..
Mutton	83	— 6	Hemp	54½	—	Oils	76½	— 1½
Pork	84½	— 9	Jute	90	—	Oilseed	81½	..
						Tallow	75	..
Cereals & meat	904	+ 6½	Textiles	1,364	+ 50½	Indigo	87	..
						Crystals	85½	..
Tea	150	+ 6	Pig-iron	99½	+ 2½	Rubber	12	..
Coffee	116½	— 5½	Steel rails	75	—			
Sugar, cane ..	203½	— 34	Iron bars	95	+ 4	Miscellaneous	778½	— 2
Sugar, beet ..	135	— 3	Coal, steam ..	143	—			
Butter	81	— 4½	House coal ..	94	— 16	Total	4,637	— 3
Tobacco	116½	—	Lead	132	— 7			
			Tin	95½	—			
Other foods ..	802½	— 41						

The decline in other foodstuffs and the increase in textiles bring these two groups, which for some time have been highest above the pre-war figure, fairly close to one another, as may be seen from the table appended, in which the index number for July, 1914, is taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec., 1920	233	229	209	261	230	230.9
Dec., 1921	159	180	180	164	168	169.6
June, 1922	174	192	184	149	160	171.1
Sept. "	151	194	181	150	148	163.3
Dec. "	149	200	193	152	146	166.2
June, 1923	141	220	191	167	137	167.7
Dec. "	148	231	225	167	136	178.6
Jan., 1924	157	241	219	170	139	181.8
Feb. "	155	244	212	176	142	182.0
Mar. "	155	240	213	173	141	181.0
Apr. "	156	228	221	170	141	180.8

The increase of 80.8 per cent. in total over the pre-war figure compares with 63.1 per cent. at the end of July last, and 73.1 per cent. at the end of April, 1923.

THE COAL MINING INDUSTRY IN 1923.

IN view of the inquiry which is now taking place into wages in the coal mining industry, the complete statistical returns for the past year, which are now available, are of considerable interest. The desirability of more publicity with regard to the situation of the various industries of this country has frequently been stressed here, and the ascertainments for the coal mining industry which are published quarterly by the Mines Department might very well be copied in other important industries.*

The outstanding feature of the coal mining industry in the year which has just passed is certainly the welcome increase in production, especially during the last few months, when the output was actually comparable to that of the record pre-war year, 1913. The following table gives a number of total figures which together throw considerable light on the general situation of the industry in 1923:—

	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.
Tonnage disposable	61,335,892	60,094,456	56,863,078	62,053,820
Wages	£35,441,768	£35,921,946	£37,733,759	£39,261,510
Stores and timber	£6,358,536	£6,571,958	£6,413,744	£6,732,766
Other costs	£7,331,354	£7,671,295	£7,896,861	£8,177,266
Royalties	£1,613,156	£1,599,007	£1,531,347	£1,573,676
Net costs	£50,663,203	£51,724,937	£53,566,626	£55,661,970
Commercial disposals	£58,156,716	£61,400,723	£56,463,071	£61,744,941
Credit balance	£7,493,513	£9,675,786	£2,896,445	£6,082,971

It will be observed that the total wages bill of the industry increased steadily from quarter to quarter. The item "other costs," which includes such things as management, salaries, insurances, repairs, office and general expenses, and depreciation also increased, but it is very difficult to decide from the returns as pub-

lished whether this figure is, or is not, excessive. The difference between net costs, i.e., total costs less proceeds of sale of miners' coal and commercial disposals, shows a balance on the right side for each quarter. It is, perhaps, hardly necessary to remind our readers that this surplus is not all profit, but that part of it is available for wages in an ensuing period. The general situation, however, is best appreciated by a perusal of the following table, which gives the various items calculated on a tonnage basis:—

	s	d	s	d	s	d	s	d
Wages	11	6-68	..	11	11-46	..	13	3-26
Stores & timber	2	0-88	..	2	2-25	..	2	3-07
Other costs	2	4-69	..	2	6-64	..	2	9-33
Royalties	0	6-31	..	0	6-38	..	0	6-47
Net costs	16	6-24	..	17	5-21	..	18	10-09
Commercial disposals	18	11-56	..	20	5-21	..	19	10-31
Credit balance ..	2	5-32	..	3	2-64	..	1	0-22

For the first three quarters of the year, when total production was declining, the wages cost per ton was increasing. The marked increase under this heading for the second half of the year is, of course, in part due to the higher rates paid in consequence of the large credit balance in the first half. With regard to stores and timber, the figures help to emphasise the extent to which the relative importance of these items depends upon the total output.

The average selling price of coal rose during the first six months, and has been on the whole remarkably stable in the second half of the year. The credit balance rose in the first half of the year; touched its lowest point in the third quarter, and rose again in the fourth quarter, thanks to the fall in cost of production.

In order to appreciate the general labour position, it is necessary to consider figures of output and earnings per man-shift worked:—

	LABOUR.			
Number of men employed ..	1,087,733	1,102,380	1,108,259	1,120,204
Number of manshifts worked ..	73,504,058	73,205,708	71,196,686	76,400,692
Number of manshifts lost ..	6,163,833	6,291,749	6,402,572	6,637,733
	Cwt	Cwt	Cwt	Cwt
Output per manshift worked ..	18-25	17-90	17-42	17-76
Earnings per manshift worked ..	9-7-72	9-9-77	10-7-20	10-3-33

The number of men employed has been steadily rising during the year, and was throughout considerably in excess of the 1913 figure. Earnings per man-shift worked rose during the first three quarters, but fell off again during the last three months of the year. It is interesting to note that the output per man-shift worked fell during the first three quarters and rose again slightly in the fourth quarter. In addition, the ratio between the number of manshifts lost—an item which gives some rough measure of the extent of absenteeism in the industry—and the total number of manshifts that might have been worked, rose during the first three quarters and fell off again during the last quarter. Whether a coincidence or not, it is thus certain that during the year under review, the output per man-shift varied inversely as the earnings, while absenteeism varied directly as the earnings.

In general, the returns for 1923 compare favourably with those of the other post-war years, and the industry appears to be settling down to increased production, which alone can lead at once to a cheapening of coal and to the increased prosperity of the industry itself. Employment has been on the whole very regular throughout the year, and we can only hope that means will be found to increase the individual output of each worker in the industry.

BRITISH FIRE OFFICES IN AMERICA.

So large a proportion of the premium income of the British fire insurance companies is derived from the United States, that America, for good or ill, plays a dominant part in their annual underwriting fortunes. The past year was, taken as a whole, reasonably favourable, and in contrast with 1922 which was generally unfavourable. The particulars which we give in this article of American fire business in 1923 are taken from the official

returns made by British fire offices and their numerous American subsidiaries to the State Insurance Departments. The business of British or American subsidiaries is combined with that of the leading company in each group, with one exception. Thus the figures of the Phoenix include those of the Norwich Union and of the subsidiaries of both. But the Royal group is distinguished from the allied Liverpool and London and Globe group for two reasons; first because both are so very large, and secondly because a combination of the figures would have concealed the interesting fact that the alliance has not prevented the Royal group from being much more successful than the "Globe" group in both 1923 and 1922. The official figures have been converted into sterling at 4s 2d to the dollar, a rate adopted last year when we gave the results for 1922. By maintaining a formal rate of exchange the results of one year may be directly compared with those of another. The underwriting surpluses or deficits have been determined after allowance has been made for liabilities under unexpired risks on the basis of 40 per cent. of the increase or decrease in the premium income. This brings the American results into line with the total results as issued by the fire insurance companies in this country.

Taken as a whole, the 21 British companies or groups have done fairly well, much better than in 1922. The total premium income was £33,939,869, an increase of £4,126,224. The claims paid and outstanding amounted to £16,288,291 (48.1 per cent. of the premiums), as compared with £15,801,076 (53 per cent.). Expenses and commissions were £14,644,484 (43.1 per cent.), as against £13,195,313 (44.2 per cent.). The apparent surplus of premiums over outgoings was thus £3,007,094, as compared with £817,256 in 1922. But in order to ascertain the actual underwriting profit or loss we must allow 40 per cent. of the increase in premiums each year as a reserve against the increased liabilities. This adjustment brings out the profit for 1923 as £1,356,525, or 4 per cent. of the premiums, against a fractional loss for 1922 of £15,212. Fire insurance business on the grand scale is conducted on fine margins, and 4 per cent. on the average was compatible with a substantially higher rate of profit for those companies which were more fortunate or better managed than their competitors. It was also compatible with losses in some instances.

If we take the individual companies or groups in the table given below, we see that 15 showed surpluses and six showed deficits. The largest amount of profit was made by the Royal group with £393,049, or 7 per cent. of the premiums. The highest rate of profit was made by the London and Lancashire with £181,613, or 11.3 per cent. of its premiums. The London Assurance ran the London and Lancashire close with its profit of £106,373, or 11 per cent. It is of interest to compare the 7 per cent. profit of the Royal group with the 2.9 per cent. profit of the allied group of the Liverpool and London and Globe; these two groups differ rather widely both in their claims and expense ratios to premiums. The North British and Mercantile has done fairly well with a surplus of £243,650 (6.1 per cent.), and though the rate of profit of the Commercial Union group is not high (3.9 per cent.), its huge business has brought to it the substantial surplus of £209,058.

Some of the deficits call for a little comment. The British Dominions had a very high loss ratio of 61.4 per cent., especially when one observes that its premium income increased during the year by over 37 per cent. This high loss ratio resulted in a small apparent surplus of £31,406, which was turned by the provision for increased liabilities into an underwriting deficiency of £109,971 (8.4 per cent.). The premiums of the Employers' Liability were for the most part new—the business for the year showed an increase of 184 per cent.—and the apparent surplus of £58,936 was turned into a deficit of £15,967 (5.5 per cent.) by the liabilities for unexpired risks. The Prudential in similar fashion more than doubled its premium income in the year, and the apparent surplus of £62,640 became a deficit of £5,216 (1.7 per cent.). The State Company, a small and reputable Liverpool office, was crushed by its expense ratio of 55 per cent., and showed a deficiency of £22,322 (15.3 per cent.); in 1922 the American expenses of this

office ran up to the impossible figure of 71 per cent. of the premiums, and the deficiency was £25,189 (26 per cent.). The average expense rate of all the companies of 43.1 per cent. of the premiums is already higher than most of them like, and is a very material factor in reducing the margin of profit. With this rate of expenditure it is necessary for the claims ratio to be kept well below 50 per cent. if a respectable profit is to be earned at all.

VEGETABLE OIL PRODUCTION IN EUROPE.

GREAT BRITAIN easily holds the first place among the oilseed crushing countries of Europe, in that it deals with in its mills considerably more oilseeds, nuts, and kernels in the aggregate than either France, Germany, or Holland. What, however, is equally notable is the large and increasing extent to which vegetable oils, both edible and non-edible, are entering into consumption. In the four countries named no less a quantity of oilseeds, &c., than three and a-half million tons imported from abroad went into the mills, and gave a production of vegetable oils of approximately a million and a-quarter tons, a very considerable proportion of which went into the manufacture of margarine and compound or imitation lard. Moreover, there were large imports of crude oils, such as palm, coconut, and soya oils from non-European countries which, with local supplies, went to the making of soap, &c., while the linseed oil crushed from seed in European mills contributed one of the principal raw materials of the paint, varnish, oilcloth, and linoleum manufactures. The total, however, does not represent the entire consumption, for there was an excess of about 30,000 tons of imports over the exports. Although the quantity of oilseeds, &c., re-exported or transhipped by each of the four countries is small, the position is best elucidated by the figures of the net imports, or the quantities retained for the production of oil, and these, according to the latest figures available, are as under over a series of years:—

	1920.	1921.	1922.	1923.
	Tons.	Tons.	Tons.	Tons.
Great Britain ..	1,343,892	1,296,799	1,327,810	1,571,115
France	643,591	564,048	780,817	909,646
Holland	238,757	415,342	482,139	478,719
Germany	..	454,590	856,896	556,727
	2,226,240	2,730,779	3,447,662	3,516,207

Imports into other countries in Europe are small by comparison, Denmark, for example, crushing soya beans at mills at Esbjerg and Horsens. It is curious to note how different countries seem to specialise in particular kinds of oil-bearing materials. In Great Britain oilseeds, principally cottonseed and linseed, represent 65 per cent., and nuts and kernels something under 35 per cent. In France the position is reversed, what are understood here as "nuts and kernels" comprising 75 per cent., and linseed, cottonseed, rapeseed, and soya beans less than 20 per cent. In Holland the proportions are 66 per cent. nuts and kernels, and 34 per cent. oilseeds, while in Germany they

* For 1923, vide Cmd. 1949, 1972, 2043 and 2111.

appear to be about equal. Notwithstanding the higher oil yield of such articles as copra, ground nuts and palm kernels more largely utilised on the Continent, the production of oil in Great Britain exceeds that of any other of the countries in Europe, the total for this country last year being 463,950 tons (see *Economist*, February 16th), while that for France now revealed is 349,602 tons, Germany 218,553 tons, and Holland 198,315 tons, the basis being the usually accepted commercial yield. Except in the case of Holland, which does a large export trade in refined oils and margarine, the home production is supplemented by an excess of imported oil over exports. So that in Great Britain, France, and Germany the actual consumption of vegetable oils for all purposes is somewhat greater than that produced in the mills. In France the vegetable oil position is shown as follows:—

	1920. Tons.	1921. Tons.	1922. Tons.	1923. Tons.
Home production	244,853	202,383	297,439	349,602
Imports....gross	113,470	76,293	78,509	83,286
Exports, including re-exports	358,323	278,676	375,948	432,888
Net remaining.	299,533	198,399	321,882	364,728

In the case of Holland the figures are:—

	1920. Tons.	1921. Tons.	1922. Tons.	1923. Tons.
Home production	100,494	161,695	204,739	198,315
Imports....gross	96,248	98,048	47,367	61,138
Exports, including re-exports	196,742	259,743	252,106	259,453
Net remaining..	103,392	117,388	188,262	99,764

A similar, though incomplete analysis, gives the position of Germany as under:—

	1920. Tons.	1921. Tons.	1922. Tons.	1923. Tons.
Home production..	..	231,312	360,413	218,553
Imports, gross	..	98,432	134,042	98,910
	..	329,744	494,455	317,463

The figures for last year are, however, not exhaustive, full returns of imports of oilseeds and oils not being available owing to the occupation of a large number of Customs houses by the French and Belgians. Those engaged in the trade incline to the view that the imports last year were not only equal but most probably in excess of those of 1922. Germany does not appear to have been in a position to export vegetable oils since the war, owing to the great scarcity in that country of oils and fats of all kinds. At least two-thirds of the German production consists of oil crushed or extracted from copra and palm kernels. The figures of production from imported oilseeds, &c., require to be supplemented by that from home-grown oilseeds, the average yield from which before the war was about 30,000 tons and in 1922 was put at 39,300 tons. A recent report by the American Agricultural Commissioner in Berlin showed that the German supplies of vegetable oils and animal fats taken together in 1922 were only 70 per cent. of the average of 1912-13, and assuming a reduction of the population from 68,000,000 to 60,000,000 indicated a per capita supply of 80 per cent. of pre-war. The American Commissioner comments on the enormous decrease in the German consumption of animal fats and the substitution of vegetable oils in their place. According to figures given by the German Department of Agriculture, the consumption of butter in 1922 was only 9.70 pounds per head of the population, against 15.2 pounds per head before the war, while on the other hand the consumption of margarine and vegetable cooking fats increased to 14.7 pounds per head, as compared with only 7.3 pounds nine years before. The Commissioner attributes the change over partly to the shortage of butter supplies and the lower purchasing power of the German people. A similar phenomenon was witnessed in this country until the shortage of butter was overcome and imports reached pre-war level, though there is reason to believe that the consumption of margarine is still above what it was ten years ago.

It is, however, a very interesting fact that the oil and fat trade is more than ever dominated by the demand for edible purposes. Regarding the immediate future, Messrs Frank Fehr and Co., in their annual report, suggest that a survey of the statistical position indicates that there will not be a shortage during the present year. Last year, they point out, the production of oilseeds, &c., in the world

was in advance of the previous year, and it is felt that this year should show a further increase, principally in linseed, cottonseed, and copra. At the same time, we have apparently to contemplate a steadily increasing consumption of vegetable oils. Continental conditions, it is hoped, will improve, but the progress towards normal trade again, it is felt, must necessarily be slow. The same authority remarks that in considering the level of prices of oils and fats we need to bear in mind that, while the average price of all food commodities had advanced in December last, as against July, 1914, from 100 to 178, the average price of oils and fats had advanced only as from 100 to 138. Butter moved in the same period from 100 to 185, and lard from 100 to 130. The rise in vegetable oils and fats is therefore small when compared with the average of all other food commodities, and particularly when compared with butter. Since July, 1914, the principal advance has been in fluid oils, viz., linseed oil, cotton oil, soya oil, and whale oil, which have risen 60 to 70 per cent. While copra had advanced 20 per cent., and palm kernels only 8 per cent., coconut oil and palm kernel oil moved up 27 and 20 per cent. respectively. Apart from the Western European countries, Russia before the war had an annual production of over 400,000 tons of vegetable oils, but it is uncertain as to how much is being produced to-day. Spain, Italy, and Greece are, of course, the principal countries producing olive oil.

MR SNOWDEN AND THE CHANCELLOR.

"My desire," said Job, in one of his effective debating speeches, "is that the Almighty would answer me and that mine adversary had written a book." The Leaders of the Opposition, whether or not they have Job's skill in catching the ear of the Almighty, have had a better fortune than his in the literary output of their adversary and the commercial enterprise of his publisher. For not only has the first Labour Chancellor written a book to set forth the finance of Socialism, but Messrs Cassell* with wicked irony have republished it in all its revolutionary fulness on the very morrow of his Gladstonian Budget. We can imagine the enthusiasm with which his opponents of the right and his dissatisfied supporters of the extreme left will open the new volume to search for the deadly parallel and the embarrassing quotation, and who can grudge them the amusement to be extracted from this innocent old-fashioned sport? It is a game that every journalist learns to play in his professional youth, and Mr Snowden in the hour of his very real success will not grudge us the enjoyment of playing off the aspirations of the prophet against the performance of the statesman.

The chapter in Mr Snowden's book which expounded and anticipated the financial policy of the Labour Government carries the ominous title of "The Instrument of Taxation," suggesting, to our nervous ear, the mechanism of the torture chamber and Budgets designed for punitive rather than for fiscal purposes. If that is Mr Snowden's ultimate objective, he has certainly concealed it in his first Budget, and, to be just, he does not avow it in his book. He declares that:—

Though the aim of Labour is ultimately to absorb by taxation all unearned incomes, no Labour Government would be justified in levying taxation for penal purposes. Taxation can only be justified when the revenue derived thereby is spent by the State in a way which will confer greater social benefits than have been derived from the private expenditure of the income.

Happily for all of us who have any invested capital, the Chancellor has not so far tried his hand at "absorbing all unearned incomes," but he has certainly kept to his promise that Labour will not levy taxes for penal purposes. The wildest critic could not claim that a Budget which puts no new taxes on to anybody is a penal instrument, and in this respect the Chancellor undoubtedly follows the line marked out by himself in the freedom of opposition. On the question of expenditure he is perhaps less consistent, for in his days of authorship he had little

* "Labour and the New World." By the Rt Hon Philip Snowden. First published 1921. Revised edition April, 1924. Messrs Cassell and Co., Limited. 5s net.

fear of bloated Budgets or respect for an over-all reduction in spending:—

The first duty, he said, of a Labour Government will be to ruthlessly prune the estimates of the various departments, eliminating all expenditure which was not giving an adequate return. But there would be no reduction, but probably a considerable increase, in the total national expenditure under a Labour Government.

With this alarming prophecy, the Budget speech and the Budget figures make a very pleasant comparison, for the impression left on the mind when reading the speech is of a Chancellor orthodox and zealous in his desire for retrenchment; so zealous, in fact, that his critics accuse him of having framed his Budget with the secret resolve to improve his anticipated surplus by undisclosed schemes of economy.

On the National Debt, Mr Snowden's speech was music to the ear of the orthodox believer, and no part of it was better received than his summary of the reductions already made, or his obvious approval of the conservative policy of his predecessors. Here the Chancellor is supported by the authority of the author, who does not measure language in denouncing an enormous debt:—

The most urgent of the problems in connection with national finance is the reduction of the National Debt.....So long as this burden of interest remains any Chancellor of the Exchequer will be severely handicapped in raising revenue for the improvement and extension of public services which are not directly remunerative. The existence of this debt is a monument to the criminal folly or cowardice of our statesmen.

So far speech and book agree, but when we come to the proper method of making the reduction the book far outstrips the speech, for Mr Snowden in 1921 was an enthusiastic advocate of the Capital Levy, which happily finds no place in his 1924 programme. He believed then (and perhaps he still believes) that the only suggestion for reduction of debt, which is imperatively necessary, is a special Capital Levy, and that we cannot be content to extinguish the debt by the slow process of a sinking fund. He appears to have had in mind when he wrote the book a 14 per cent. levy, which would produce a sum of £3,000,000,000, so let us hope that the conversion from his old belief is permanent, not temporary, and that his remedy of 1921 is for ever discarded.

On the subject of indirect taxes, Mr Snowden is consistency itself, and here his Budget closely follows his book:—

The abolition of the breakfast table taxes, says the book, was an ideal of progressive politicians in pre-war days, and not even the financial embarrassment caused by war expenditure must stand in the way of giving this much-needed relief to a class upon whom this burden falls with great weight.....The duties upon liquor and tobacco stand in a different category.

It must be very gratifying to Mr Snowden to-day to feel that he has done more than any Chancellor of this century to bring about the free breakfast table, and that here, at any rate, he has been able in his first Budget to fulfil the promises and the policy of his book. Even on tobacco he follows his own lead, and the overburdened but non-complaining smoker of pipe tobacco must go on paying the old exorbitant prices without hope of relief or expectation of sympathy. Here, doubtless, we must be content to shoulder the burden, but when we come to Mr Snowden's views on death duties we are filled with foreboding, and can only pray for death before the Chancellor shall have caught up with the author. Inheritance, in Mr Snowden's book, is treated as contrary to all democratic principles, and the right of passing on accumulated wealth must be drastically limited or abolished, for it is nothing less than the right of the dead to "continue to rule the living." It creates a class that is able to live "not on the accumulations of ancestors, but by the exercise of a legal right to appropriate the product of contemporary labour." The sufficient reward of labour is the joy derived "from activity, adventure, enterprise, and the honour which comes from success." Let us humbly return thanks for the discrepancy in this department between the book and the Budget.

The followers of the Duke of Northumberland who read this book of Mr Snowden's will doubtless refuse to be reassured by the comparatively harmless nature of his Budget, but will find in the contradictions and differences fresh proof of the Machiavellian character of Labour politics. They will think of Mr Snowden as some wild

beast lurking in the thicket, waiting to pounce on a victim lulled by delay into a foolish security. Others, perhaps, will figure him as one who has had his dangerous talons extracted by the skilful chiropody of his permanent officials. We feel disposed to leave the problem unsettled and simply congratulate him on having produced at least one sound and workmanlike Budget.

Notes of the Week.

Stock Exchange and the Budget.—A Stock Exchange correspondent writes:—Stock Exchange markets, philosophically prepared for trouble in the Budget, were taken by surprise at the Chancellor of the Exchequer's moderation in the matter of increased taxation. The great bull point was the abolition of the corporation tax. Nobody seemed to have thought of this as likely, and the immediate effect was to bring about a general advance amongst the industrial sections. The particular markets affected by the reductions in the tea and sugar duties were aflame with buoyancy from the start of business. Tea, catering and brewing issues promptly responded. The few cinematograph shares that are dealt in were put up automatically. Then other industrials joined in the rise. Iron, coal, steel, shipping, hotel, stores gained ground. Motor shares went back because of the proposal to withdraw the protective duties in three months' time. Sharp rises in tobacco shares were the sequel to the Chancellor's statement that the revenue from the tobacco tax substantially exceeded the previous estimates. The home railway market developed strength as a reflex of that which ruled in gilt-edged securities. The principal factor resulting from the Budget became apparent in the prompt way in which investment stocks and shares hardened all round. With 150 million pounds of 5 per cent. War Loan converted into the new 4½ per cent. stock, it was immediately recognised that this meant a real step towards raising national credit on to a basis which is likely to reach 4½ per cent. or less. Consols, Victory bonds, and a few other stocks yield under 4½ per cent. on the money already, and anticipation looks for the new 4½ per cent. conversion to start off on the basis of 98 ex dividend, when dealings begin in about a month's time. Investment is much quicker to notice such tendencies nowadays than it was when the tide set in the opposite direction at the time of the 4½ per cent. War Loan's issue in the earlier years of the war. Six per cent. preference shares are in such request that in all the best companies the yields range from 5½ to 5¾ per cent. In some cases, the shares, especially those of the 5 per cent. variety, give no more than 5¼ per cent., and are none too easy to buy. Preferred stocks have moved in the same direction, and trust companies' deferred issues are 2 to 20 points higher since the Budget. Foreign Government bonds are affected by the same influence, but the curious point, so far, is that Stock Exchange business shows little signs of expansion. Members of the House found, upon comparing notes on the eve of their May Day holiday, that they had done little more business than usual, but consoled themselves with the idea that the real effect of the Budget will be apparent next week. The Chancellor's optimism is readily forgiven for the greater cheerfulness that these have infused into the markets. His hopes in regard to increased activity in trade are accepted as being pious politics. No allowance is thought necessary for the chance of such a trade revival as might cause a stream of sales in the stock markets in order to finance industrial undertakings. The public appetite for new stock is keen; any issue that offers a fair rate of interest upon security of sound character is readily taken, and there is no present indication of a reversal of the tendency which has been the main feature of Stock Exchange markets for several years past—with occasional spasms of apprehension lest the selling should start in earnest. The result of the Budget relieved anxiety in several directions, and encouraged hopes in others. It may be that one Stock Exchange member echoed the unspoken thoughts of many brokers and jobbers in saying that a Labour Budget ought to have been much worse.

The Liberal-Labour Quarrel.—The mental refreshment of the Easter recess, the platform duel between the Prime Minister and Mr Lloyd George, and the introduction of a Budget which commends itself to both progressive sections have alike failed to bring the Liberal-Labour quarrel any nearer to settlement. This quarrel has, in fact, reached a more bitter stage, and it is exceedingly unfortunate that the breach between the two parties is being discussed and handled, not from the point of view of differences regarding great national problems, but from that of party dignity and *amour propre*. In effect, the Labour party say, "We will not be bullied by the Liberals," while the Liberals reply, "We, who put you into office, and are responsible for maintaining you there, refuse to be insulted and ignored." We have in these columns expressed our view that Mr Macdonald's marked failure to establish a system of consultation with the Liberal officials is a profound mistake; and it is a mistake that becomes more glaring and ludicrous when the two parties are obviously in unison over the Budget. Then, again, P.R. is surely just one of those projects on which consultations should obviously take place. Unhappily, the exacerbation of the party squabble is in one respect a real danger to the national interest. It lessens Mr MacDonald's prestige and security of office just when a strengthening of his Parliamentary position would give him a much-needed addition to his authority in dealing with the Reparations problem on behalf of Great Britain. This consideration alone ought to be sufficient to induce the leaders to spurn the littleness of party bickering.

The Return to the Gold Standard.—Sir Felix Schuster's speech on Wednesday to the Liverpool Chamber of Commerce contained some observations of exceptional interest. He made, for example, an interesting observation on the transfer to the Bank of England after the Armistice of gold previously held by the big joint stock banks. This centralisation of reserves was, of course, known in the City, and has been commented upon in our columns. But we have generally assumed the figure to have been under £30 millions. Sir Felix estimated it as between £35 and £40 millions, and he justly claimed credit for the banks by pointing out that the transfer was made, not on the basis of bullion value, but on the assumption that the gold pound was equivalent to the pound sterling, whereas, in fact, the gold value of the pound sterling had at that date already considerably depreciated. The most striking point in his speech, however, was the assertion of his belief and his reasons for thinking that a return of the £ sterling to parity with the dollar may be possible before very long. Sir Felix calls attention to the large gold reserve which this country holds—£153 millions, against £38½ millions before the war—and to the fact that this is not likely to be required again for use as circulation in the country. He thinks that the currency notes, which have come to stay, could now be transferred to the care of the Bank of England, and that while the prohibition on the export of gold should not be rashly or hastily withdrawn, licences might gradually be granted more freely until the free flow both in and out is once more restored. "It may take a year or two before this takes place, or even more, but I am convinced that the time has come to work in this direction; nor do I see that any great demands can be made upon us except from the United States, and it is not likely that such demands will be made from that country with its overflowing stock of gold. The cordial and confidential relations which are known to exist between the Bank of England and the Federal Reserve Board could be depended on to work in such a way as to prevent movements that might be injurious to either country." Sir Felix rightly realises that the psychology of credit which is liable to cause great movements of capital from one country to another is largely responsible for recent movements of the exchange. An improvement in the European situation, combined with the knowledge that a policy of this kind was being pursued, should cure the recent flight of capitals and make it much less likely that such violent movements, involving undue difficulties in the management of the gold reserve, would occur in the future. These are weighty arguments, but it must be recognised that there are difficulties in changing the balance of capital

movements. Mr Hoover's estimate of the United States trade balance, which he published last week, shows that in 1923, which included one period when the sterling was appreciating and another when it was depreciating considerably, there was a net movement *into* the United States of 125 million dollars, in spite of the large foreign loans raised in the New York market. As the £ approaches par this condition is likely to continue, for there is a large field in which the return to capital invested in the United States is greater than on this side of the Atlantic, both in regard to long and short term borrowing. The reduction of the re-discount rate of the Federal Reserve Board this week from 4½ per cent. to 4 per cent. is, however, a step in the direction hoped for by Sir Felix Schuster, since it will tend to equalise interest rates in the two countries.

The Mines Inquiry.—The Court appointed by the Government (Lord Buckmaster, Mr Roscoe Brunner, and Mr A. G. Cameron) to inquire into miners' wages has been meeting day by day since Thursday of last week, and is, at any rate, in a position to appreciate the extreme complexity of the problem. Statistics, calculations, algebraic and arithmetical formulae, and arguments have rained upon it from both sides. When it is realised that there are well over a million men employed in the mining industry, and that, apparently, everyone of them is entered separately and has his earnings entered separately (with the deductions for materials, &c., that often make so important a difference in the actual amount of those earnings taken home) in the owners' books, it is no wonder that the problems of accountancy are baffling to the outsider. The miners' case, as stated by Messrs Herbert Smith, A. J. Cook, and T. Richards, is based upon the dangerous character of the industry (on an average five men are killed on every working day in the year), on its normal hardships, on the poverty of the miners in many areas, and on the general admission, made by the Sankey Commission, that, in 1914, miners' average earnings were too low. Mr Smith put their case in a nutshell when he reminded the Court that in 1923 profits were round about 2s per ton, whereas earnings were below the 1914 standard. The owners' reply, as given by Messrs Evan Williams and W. A. Lee, is that wages are fixed by what the industry can bear; that profits are not really so high as they state; that the seven-hours day has increased costs of production. Into the details of offers and claims it is not necessary to enter; the miners' present claim, which has been varied in some important particulars since the handing-in of notices three months ago, may be summarised as follows:—A minimum wage equal to real wages in 1914, plus the 2s a head allowed under the Sankey agreement; standard profits, instead of being fixed in ratio to standard wages (£17 to £100 of standard wages, and £17 to £83 of wages above the standard), to be a uniform rate per ton corresponding to the pre-war profits per ton; subsidiary enterprises run by coal owners to be taken into account in determining the profits of the industry. The miners estimate pre-war profits per ton at 9.9d; the owners say that this figure should be 11.38d—a discrepancy typical of those that run through the whole gamut of matters in dispute. Under the miners' terms, according to Mr Evan Williams, not one in four of the collieries now being worked could hearing of evidence, has now retired to consider it. It is hoped that their report may be available before the end of next week, since the temporary agreement expires on May 14th. A meeting of the Miners' Executive has, in fact, been fixed for Friday. Meantime, the Secretary for Mines, Mr Shinwell (to whose handling the fact that another most useful line of inquiry. He is trying to get to the bottom of the big gap between the price of coal consumer. The first replies to the questions he submitted to the Coal Merchants' Federation were anything but illuminating, and, as he said, not calculated to reassure the public; on Friday a reply was put in to one average net profits (certified by accountants) for 1922 were 9.08d per ton, for 1922-3 9.03d per ton.

Irish Free State and the Boundary Crisis.—By far the most important element in the general situation, telegraphs our Dublin correspondent, is the development of the N.E. Ulster boundary controversy last week. The deadlock in the preliminary talks at the conference was announced this week. Some of the influential journals in Great Britain have been clamouring editorially for the violation of the Anglo-Irish Treaty—if and in so far as its provisions, if carried into effect, might annoy "Ulster." By "Ulster," of course, Northern Ireland or N.E. Ulster is meant, for three out of the nine counties of Ulster proper are included in the Irish Free State. The British Government announces that it will abide by the Treaty in the letter and in the spirit. But its correct attitude does not wholly allay the suspicion excited by the journalistic clamour for international ill-faith. If the Treaty were suffered to go, the Free State, whose stability has been hardly achieved through blood and tears, would almost certainly go also, and the last state of Anglo-Irish relations, with all their complicated and far-reaching reactions on Imperial and international affairs, would be worse than the first. The Earl of Birkenhead, one of the signatories of the Treaty, has added fuel to the flames by announcing that the position of "Ulster" is theoretically that of a Dominion, which it quite obviously is not, and by alleging that two out of the five Irish signatories—two who have since died, and whose version of the transactions is not available—assented expressly or implicitly to his construction of Article 12 of the Treaty, which is wholly repudiated by their surviving colleagues. Public feeling is not unnaturally depressed, and whether it be attributable to this cause, or whether it be attributable to the trouble of some weeks back with the Army, or to a combination of the two, it is significant that the new National Loan, which a while back was quoted at 99, was yesterday quoted at 92 ex div., while there has been an equally extensive shrinkage in the public investments in the P.O. Savings Bank, and in the purchase of National Savings Certificates. These are signs which cannot be ignored. The Irish Free State Budget for 1924-5 was in the hands of readers of the *Economist* last week at the same time as the preliminary speculations as to its provisions in this column. Unfortunately the Minister of Finance did not feel himself able to remit even 6d off the 5s income-tax, though there was a substantial reduction of super tax in the higher level of incomes, which unfortunately will not benefit a large number of taxpayers. On the other hand, while remitting 3d per pound off the tea duty, he ventured on certain minor experimental essays in protective duties, such as 2s 6d per pair on imported boots and varying duties on imported confectionery, bottles, soap, and candles and commercial motor bodies. The varying dates (some as late as July 1st) at which the several new duties are to come into operation are so deferred as almost to invite merchants to accumulate large stocks in advance. If they are as prompt to avail themselves of this chance as they are to increase the price of the dutiable articles before the duty has become operative, it is to be feared that while the consumer may be hit the national revenue at least will reap but little benefit in the current year. Indeed, the public has been solemnly assured by the tea trade that the remission of the tea duty will probably lead to an increased price owing to the probable increase in demand, but it is noteworthy that no boot merchant has announced a fall in his prices, for the parallel reason that the duty will lead to a smaller demand. One fact is clear, and that is that the Government must produce promptly its legislation for the restriction of profiteering. Otherwise the remissions may never reach the consumer, and the new duties may be passed on to the public at an increased level.

Recovery in Mexico.—Two important steps have been taken this week towards the restoration of order in Mexico. The American Bankers' Committee has announced that payment of interest will shortly be resumed on portions of four of the most important of the 28 loans comprised in the settlement negotiated in 1922—the Five per Cent. External Loan of 1899 (deposit receipts 1 to 200), the Six per Cent. Treasury Bonds of 1913 (deposit receipts 4,001 to 4,200) the City of Mexico Five per Cent. Loan of 1899 (deposit receipts 1 to 900), and the National Rail-

ways Four per Cent. Guaranteed 70-year General Mortgage (all the bonds deposited up to January 16, 1924). The bonds, with the cash warrants payable during the five years (ending with 1928) covered by the scheme, and other documents as provided for by it, are now ready for return to the holders, and the interest up to and including January 1, 1924, will be paid on presentation of the warrants to the respective agents of the loans. Warrants maturing subsequently should not be presented till the Committee announces receipt of half the minimum sum for the current year which the Mexican Government has undertaken to provide. Notice will be given when further bonds of these or other series are ready for return. We recently noted that payments were to begin in New York on some of the least important of the loans, all of them held in America; the present announcement of impending payments on the most important will be welcomed by holders in Europe. On what principle the selection is made we do not know, the delays have been semi-officially attributed to difficulties in printing the various warrants; at any rate, payment is going to begin. The second step is the appointment of Sir Thomas Hohler, K.C.M.G., whose varied diplomatic experience includes that gained as Chargé d'Affaires in the Mexican capital for various periods during the first seven years of the revolution, and subsequently as Councillor of the British Embassy at Washington, to report on the state of the country. A report is needed; the New York papers and the information possessed by various British companies operating in the country tend, on the whole, to an optimism which is not shared by the British Government, nor is it supported by well-informed private advices from Mexico. We share the hope of the *Times* that Sir Thomas Hohler, or some other British diplomat, may be sent, with a Canadian colleague, to attempt a settlement of the existing differences between the British and Mexican Governments. Canadian enterprise in Mexico is sufficiently varied and important to justify special representation for Canada.

The Situation in the Milling World.—The conference of the Milling Federation on April 30th, writes a correspondent, was of a confidential character, but the situation in the milling world is confessedly critical, and the Federation is not acting up to what is expected of its high record when it takes early cognisance of difficulties that may be of the utmost gravity two months hence. The Federation has been conducted with a skill altogether exceptional since the close of control. Mr Humphries, for the employers, Mr Bevin, for the operatives, have had a liaison officer of remarkable efficiency in Captain Leonard Green, the secretary, and there has been set up at King's road, Chelsea, the headquarters of the Federation, a tone in most happy contrast to that in all too many trades and at all too many industrial conferences. A really high sense of duty to the public whose "staff of life" is involved prevails, and anything like a "lightning strike" is as unthinkable at Chelsea as, shall we say, any bad case of "sneaking" or delation at a public school. It is now two clear months to the end of the milling year, and for that end of the existing contracts all classes of workers in British mills have "denounced" such contracts, giving therefor twelve reasons. One of these is a gross anomaly, and may be, one supposes, written off as remedied for July 1st. It is difficult to understand how youths of 18 and on, doing work of equal character and for the same hours, have come to be paid 3s per week less than young women similarly employed. These be mysteries. The mere economist would have expected the plan to have resulted in youths displacing female workers in these branches of the mill, but apparently this has not happened. The matter, however, is one of curiosity rather than of practical importance. The eleven remaining reasons are of great interest. They strike one as singularly well presented, and while it would be a breach of confidence to cite actual terms which may constitute the basis of careful negotiation, it may at once be stated that intellectually they are revolutionary, and show with absolute clearness that the settlement of the future when it comes will be on new lines of thought. The milling operatives begin, for instance, by repudiating the Index Number. The spirit with which the skilled workers indispensable to the modern ultra-complex mill

throw their agis over the unskilled is very striking, but it raises issues of privilege which may be grave. At present the farmer's unskilled man who loads the sack of wheat up to go to the mill gets 25s to 30s a week, but the miller's unskilled man who receives it at the mill and carries up to the mixing floor or the conditioning room gets 40s to 50s. He is, it seems, apprehensive of an influx of brother young men workers, but the skilled operatives undertake to safeguard him against this as also against any reduction of payment within the mill to its mere market value. Both masters and operatives are united in excellent schemes whereby unskilled youths may acquire technical education. The operatives' case is presented so fully and so argumentatively, in a good sense seeing that to argue originally must be made clear, that one feels a certain reaction on turning to the question of hours. A working week of 48 hours hurts no man, and British impoverishment since 1914 allows of no slackness to-day. Yet it appears from the record that the mill workers at first obtained an hour off, that 47 hours fell to 44, and that there is now a cry for a 42-hour week. Saturday for pleasure is the demand. With respect to wages, a 10s per week advance is insisted upon not only for skilled mechanics, but also for the hands simply engaged in transport. Youths' and girls' salaries are to rise *pro rata*. The men repudiate the idea that wages in the mills affect the price of bread, however indirectly, and their insight into working has evidently convinced them that, as a whole, mills are uneconomically managed. Against this one must set common knowledge of the chief controllers of the leading mills being among the very ablest business men in London, Liverpool, Hull, Leeds, Swansea, Cardiff, and elsewhere. *Quousque tandem?* That is not to be answered now. The opening of a new debate between Capital and Labour is, however, to be noted, and its opening, moreover, on new lines. The fact that the wrestlers enter the arena with no unworthy gesture is at least a matter for very real satisfaction. But a grave element is that millers' profits have been declining for about a couple of years, and are now virtually nil. Futures for wheat are lower than spot prices, and the wheat in mills has been bought at prices likely, one fears, to absorb all profits on the grist.

Shortage of Juvenile Cotton Operatives.—Our Manchester correspondent writes:—Now that there are signs of improvement in the Lancashire cotton industry more attention is being centred on the shortage of operatives, and it is feared if a definite revival shows itself a considerable amount of machinery will have to stand idle owing to the inadequate supply of workpeople. The situation has been discussed this week at the annual conference of the Textile Institute in Manchester, and three papers were read, one from the point of view of the spinning employer, one from the attitude of the worker, and the other from the standpoint of the manufacturer. It was pointed out that in Bolton at the present time there was a shortage of nearly 300 little piecers. If all the spindles were started in Ashton-under-Lyne, 10 per cent. would be found understaffed. In the Oldham area there are 16,596,000 mule spindles. To work them efficiently would require approximately eight thousand minders, eight thousand big piecers, and eight thousand little piecers. The number of minders available was about 8,683, but the total number of piecers was only 7,081. With regard to possible remedies, it was urged that no further attempt should be made to raise the age at which children could enter the mills. Many reasons have been given for the shortage. It was said that mill life was not attractive enough, that the rooms were hot, that they were not clean enough, that the work was hard, and that the moral atmosphere was not good. Another speaker stated that the shortage of juvenile labour in the whole of the cotton industry amounted to 21,000 persons.

Sugar and the Budget.—The announcement that the duty on sugar is to be reduced from 2½d per lb to 1½d was immediately followed by a rush of orders in Mincing Lane, the market on Wednesday showing considerable animation. New York on Tuesday advanced the price of raw sugar, and this was followed by a rise here, white sugar futures advancing rather smartly, although afterwards the

market both here and in New York seemed inclined to fluctuate. The British refiners at once adjusted their terms to meet the cut in the duty, and white refined sugar was put down 14s per cwt, with yellow crystals marked down 11s 6d per cwt. There has been very little sugar purchased during the past month or two; thus it was not at all surprising to see a rush to buy. There were eager inquiries for prompt deliveries, which suggested that stocks stood in urgent need of replenishment. White sugar futures immediately after the reduction in the duty became known were firm and dearer, with May done at 29s 6d, August at 26s 9d, and December at 22s 6d. There is considerable difference of opinion regarding the future of sugar. Supply and demand this season will be so closely balanced, that there is very little room for any expansion in the consumption without bringing about a rise in values. A well-known American authority estimates the production at 19,886,000 tons, and possible consumption 19,808,000 tons. The stocks brought forward were very small; thus there is a very slender margin to work upon, although later on there is bound to be a big expansion in the European beet crops, which would do much to offset the stringency in cane supplies. The supplies of raw sugar here are very moderate, and it remains to be seen whether the reduction in the selling price to the public will stimulate the demand to any appreciable extent. Cuban stocks now stand at a little over 900,000 tons, and there is no doubt that the statistical position of the commodity all over the world is very healthy from the producers' point of view. The consumptive demand in the United States has been checked by the high level of prices there, and this up to quite recently has had effect in this country and on the Continent. Altogether a very interesting position looks like developing; meantime, Mincing Lane is experiencing a very busy time.

The U.S. Oil Position.—The rise in crude oil prices in the United States from the middle of December last to the beginning of April has been practically unbroken, and has reflected the prevailing sentiment that the decline in production would continue for some time, while the rate of increase in consumption recorded last year would be repeated in the course of this year. The weather, however, has largely upset the oil industry's calculations. A long-drawn out winter kept back the opening of the "gasoline season." The gasoline markets are, in fact, distinctly easier, and prices have been shaded. The belated statistics for the month of February, which have only just reached this country, now show clearly to what extent the restoration of the balance between supply and demand was checked by the unseasonal decline in consumption. The following are the figures of the American Petroleum Institute:—

(In Barrels of 42 U.S. Gallons.)			
	January.	February.	
Domestic crude oil production	56,455,000	55,027,000	
Imports (all oils)	7,651,292	8,070,345	
Total production and imports	64,106,292	63,097,345	
Indicated domestic consumption	51,782,569	38,932,747	
Exports (all oils)	8,423,948	9,389,476	
Bunker oil (vessels in foreign trade)	3,159,496	3,144,597	
Surplus (being excess of production and imports over consumption and exports)	63,366,013	51,466,820	
	740,279	11,630,525	

The small surplus created in January was in some measure due to the abnormally low imports, which are subject each month to wide fluctuations. Even so, the enormous surplus created in February is above even the average monthly surplus created in 1923, which was 8,133,335 barrels, and is entirely due to the remarkable drop in consumption. It will be seen that domestic consumption was 24.8 per cent. lower, and the total consumption, plus exports, 18.5 per cent. lower than in January. This must supply and demand which January had seen almost restored. Whether the summer consumption will make up for lost time may be considered doubtful, in view of the slowing down of American trade generally, and the disturbing effects of a Presidential year, and it must be regarded as positively unlikely that crude oil production

will continue to decline. Already the higher prices for crude have led to such an intensive drilling campaign that the output of the mid-Continent field has been rising, and for the week ended April 12th is reported by the American Petroleum Institute to have increased by 19,700 barrels a day. As drilling is many months ahead of production, a further gradual increase in supply is to be anticipated, although nothing like the flush production from the Californian fields last year is in sight. In these circumstances, some reaction in crude oil prices is probable.

Peace Efforts in Honduras.—Three weeks ago President Coolidge tendered the friendly assistance of the United States in effecting a settlement between the contending factions respectively supporting the three candidates for the Presidency of Honduras, none of whom had obtained the majority of votes constitutionally necessary for election. He has now invited the four other Central American Governments, who had already offered mediation, to take part in a peace conference at Amapala with representatives of the rival factions. We believe that difficulties have arisen as to the appointment of these latter; meanwhile Tegucigalpa, the capital, was captured by revolutionists last Monday, after air raids, which killed many native women and children and endangered the lives of American residents through bombs aimed at the prison. All the factions, as we have previously noted, favour the settlement of the external debt arranged last year, and, as this can only be effected with the aid of American financiers, the conference, when it is able to meet, will probably be successful.

A Bank Amalgamation.—Provisional arrangements, for which Treasury sanction has been obtained, have been made for the absorption of the Guernsey Commercial Banking Company, Limited, by the Westminster Bank, Limited, as from January 1st last, subject to the consent of the Guernsey Bank shareholders in general meeting. The arrangement between the two banks contemplates that the shareholders in the Guernsey Commercial Banking Company, Limited, will receive in exchange for their 8,000 shares of £25 each (£5 paid up) 48,000 £1 fully-paid shares of the Westminster Bank, Limited (being at the rate of six Westminster Bank shares for each Guernsey Bank share, with half-year's dividend to June 30th, payable August 1st next), and, in addition, £160,000 (nominal) inscribed 5 per cent. War Loan Stock, 1929-47 (which is equivalent to £20 stock for each share held), carrying the half-year's interest due June 1st. The present members of the board of the Guernsey Bank will, after the amalgamation, act as the local board of the Westminster Bank, which will also continue to have the services of the present manager, sub-manager, and the staff. The Westminster Bank has been the London agent of the Guernsey Bank, and the arrangement, therefore, makes permanent a connection which has long existed.

London Life Association.—This mutual life office, which pays no commission for the introduction of business, nevertheless secured 1,304 new assurances last year, amounting to £1,625,006, an increase of £55,000 over the figures for 1922. The total premium income (including that of the Clergy Mutual) was £1,132,202, an increase of £91,223, and the expenses were 5.45 per cent. of the premiums, as compared with 5.82 per cent. in the previous year. The net yield from interest on the funds was 4.7s 5d per cent. As the result of the annual valuation, the percentage rates of reduction of premium have been increased by two, instead of by the usual one, and will range from the equivalent of 131 per cent. in the First Series to 52 per cent. in the Eighteenth Series. Participating policies under the reversionary bonus system get their invariable addition of 35s per cent. on sums assured and existing bonuses, a rate of bonus which has been declared every year since the system was introduced in 1914. The funds increased during the year by £548,646 to £12,874,932. The market values of the Stock Exchange securities on December 31st are stated to have exceeded the book values by £402,408.

Phoenix Assurance Company.—The accounts of this company for last year (which include those of the Norwich Union Fire and the London Guarantee and Accident companies) show that substantial profits were earned in the fire and marine departments. The fire premiums were £5,478,432, as compared with £4,747,557, and the claims paid and outstanding were 47.8 per cent. of the premiums, as against 57.3 per cent. Expenses were £40.5 per cent., against £42.2 per cent. After providing for the increase in unexpired risks there was a surplus transferred to profit and loss of £348,859 (6.4 per cent.), as compared with £18,337 in 1922. In the marine department the net premiums were £1,257,277, against £1,438,838. The account for 1922 was closed with a profit of £140,007, which was carried to profit and loss. The net premiums in the accident department were £6,157,389, as compared with £5,374,329. Claims paid and outstanding amounted to 58.1 per cent., as against 55.6 per cent., and the expenses were 38 per cent., against 40.2 per cent. After making provision for the increase in liabilities for unexpired risks on the basis of 40 per cent. of the premiums, there was an underwriting deficiency of £70,740, against a surplus for 1922 of £156,506. Net interest receipts (less debenture interest) were £419,144, and the net underwriting profits carried to profit and loss were £433,127. The sum of £156,628 was received as a refund on balance of income and other British taxes. Colonial and foreign taxes absorbed £252,330, and £250,000 was written off the cost of businesses acquired (leaving a balance of £222,000). The dividend of 12s a share, less tax, will cost £467,325.

Equitable Life Assurance Society.—This old society's list of death claims under whole life with-profit policies is of much interest. It is set out in full in the report for last year, and shows that the original sums assured were £130,980, in addition to which bonuses were paid of £123,250. Bonus additions of £22,688 previously commuted raised the total sums assured and bonuses to £276,918, so that on the average every £1,000 of original assurance was increased by bonuses to £2,114. The new assurances last year amounted to £605,269, against £600,386 for 1922. The premium income was £302,691 as compared with £296,140, and the expenses (the society pays no commission) were 6.9 per cent. of the premiums. The life funds increased by £173,651 to £5,555,045.

Scottish Union and National Insurance.—Steady progress has been maintained by this company, which celebrates its centenary this year with a special bonus to shareholders. In the fire department the net premiums were £1,121,269, against £1,091,095 in 1922. Claims were 48.5 per cent. of the premiums, against 53.9 per cent., and expenses took 40.6 per cent., against 38.1 per cent. After making the usual 40 per cent. provision for unexpired risks—the company reserves 50 per cent. in its accounts—the fire surplus was £109,266, or 9.8 per cent., as compared with £85,733, or 7.9 per cent. The total underwriting surpluses (exclusive of interest) carried to profit and loss were £151,289, and net interest receipts were £117,949, after deducting tax and interest paid on "accident" bonds. Imperial, Colonial, and foreign taxes took £118,914. The dividend will absorb £92,250, and the centenary bonus £23,250, as compared with £88,500 expended in dividends last year.

Caledonian Insurance Company.—In its fire department, which is the principal branch, this company has shown good results for last year. The net premiums were £880,853, as compared with £767,951, and the claims were 49.8 per cent. of the premiums, as against 61 per cent. Expenses were slightly lower at 38.7 per cent., against 38.9 per cent. The result, after providing for unexpired liabilities, was a surplus of £86,805, or 9.8 per cent. of the premiums, as compared with £31,988, or 4.1 per cent. in 1922. In the accident and general departments the premiums of £313,091 yielded £29,000 to profit and loss. The total transfers from underwriting accounts to profit and loss were £120,805, and the allocations—£27,264 for outstanding taxes, £30,000 to reserves of the general insurance account, and £30,284 to general

reserve fund. The earnings from interest amounted to £65,336, and the dividend of 12s a share on the old shares, less tax, will cost £49,568, against £35,652 paid in dividend last year.

Northern Assurance Company.—In the fire department of this company last year the premiums were £2,533,300, as compared with £2,384,138 in 1922. The claims were 54.83 per cent. of the premiums, as against 55.7 per cent., and the total expenses were 41.45 per cent., as against 42.9 per cent. The company's fire account shows a surplus of £19,613, after reserving 50 per cent. of the premiums for unexpired risks; the reserve of 40 per cent. adopted by most of the fire offices brings out a surplus of £34,528 (1.4 per cent.), as compared with £110,967 (4.9 per cent.) in 1922. The marine premiums for 1923 were £1,511,726, the claims £478,091, and the expenses £65,088, the balance of £968,547 being carried forward. The marine account for 1922 yielded an underwriting profit of £147,301, which was transferred to profit and loss. An interim valuation of the assets and liabilities in the life department was made as at December 31st last, instead of waiting for the usual five-year period to close. At the last two valuations as at December 31, 1920 and 1915, no bonuses were declared owing to the depreciation in securities. The valuation showed a surplus of £376,502, and the directors recommend a reversionary bonus of £2 15s per cent. per annum for each of the three years 1921, 1922, and 1923 on original sums assured. The prospective bonus on policies which become claims in 1924 and 1925 will be at the rate of £2 per cent. per annum. The next valuation will be as at December 31, 1925; the bonuses now to be declared are stated to be at a special rate, which is not to be regarded by policyholders as normal. The dividend for the year on the ordinary shares entitled to participate will be 17s a share, less tax; the cost of the ordinary and preference dividends provided for in the accounts is £260,938, as against net interest receipts, less debenture interest, of £248,155.

State Assurance Company.—The accounts of this Liverpool company for last year show considerable changes, due to the acquisition of the British Equitable Company. In the fire department the premiums were £598,111, against £474,343 for 1922; the claims 51.8 per cent. of the premiums, against 48.6 per cent., and the expenses 44.8 per cent., against 44.5 per cent. After providing for unexpired risks on the usual 40 per cent. basis, there was an underwriting deficiency of £29,584 (5 per cent.), as compared with a surplus for 1922 of £22,492 (4.7 per cent.). The British Equitable fire fund of £79,736 was brought into account, and by this means £35,000 added to the fire reserves and £20,151 carried to profit and loss. British Equitable funds of £15,979 were brought into the accident account, and of £21,179 into the marine account. The life accounts are those of the British Equitable Company; the valuation showed a surplus which allows a reversionary bonus of £1 12s per cent. per annum for five years to be added to participating whole life and endowment policies. Interest receipts applicable to dividends were £32,795; income and corporation taxes took £14,595, and £20,000 was written off the cost of business acquired. The balance of profit and loss was then £59,396. The total dividend, less tax, will cost £30,750, against interest earnings of £32,795.

London and Lancashire Insurance: A Correction.—We regret that owing to a printer's error in our note on this company in last week's issue (p. 872) we gave the total underwriting surpluses as £48,887. This figure should have been £748,887.

Cornish Tin Results.—Our mining correspondent writes: Following close on the heels of our historical survey of the Cornish tin-mining industry come the annual reports of several of the more important companies. Of these, two resumed production last year—the South Crofty in May and the East Pool towards the end of the autumn. Although the revenue of the first-named company had to bear the charges for the whole period, a net profit of

£8,150 resulted. Out of this a dividend of 3d per 5s share was paid, absorbing £5,040; an interim distribution of like amount has lately been disbursed. The tin recovered totalled 406 tons (of oxide), having a value of £47,200, or £115 11s per ton; the arsenic, 390 tons, value £28,500, or £63 2s per ton. Wolfram—of which the company has a large stock severely written down—remained at an unprofitable price, but should recover when the absorption of the war accumulations has been completed. The company has repaid the £30,000 borrowed under Treasury guarantee, and is proceeding slowly to build up its cash reserve—a factor which proved of such great assistance in the difficulties of the past. At the annual meeting the manager made it clear that the future of the mine depends mainly upon the new lodes, which have so far given encouraging results. The East Pool and Agar shaft falling in some years ago, those behind the enterprise—with courage and foresight—arranged for the sinking of a new shaft in fresh ground, an issue of preference shares being made for this purpose. Work is proceeding with part of the old mill, which should be in full commission ere long; but a scheme is afoot for a modification of the treatment plant with a view to securing a higher extraction—for which there is room. At the meeting it was announced that the remaining 90,000 preference shares had been issued, the premium on the whole 100,000 allotted since the end of 1922 averaging about 100 per cent. It is calculated that the company's earnings, on the basis of existing conditions, should represent approximately £60,000 per annum. Of this, the fixed dividend on the preference shares would absorb £10,000, the balance being divisible equally between the two classes of shares. The preference capital stands at £100,000, and the ordinary at £150,000; an interim dividend of 5 per cent. has recently been paid on the former. Developments on the famous Rogers lode in new ground and on a lode named the Moreing have proved of highly favourable character, the former so far averaging 84 lbs black tin and 97 lbs arsenic per ton, while the latter at the deepest level—1,227 feet—averages 99 lbs tin and 17 lbs arsenic. The available reserves represent about a year and a half's supply. There is some three years' ore in the old workings, whose unwavering is to be left until such time as it may be convenient. The property of the Tolgus Mines adjoins that of the East Pool, and has been proved to contain the continuation of one of the lodes from that mine; it is thought several others will also be found—possibly junctioning in depth. At present the company is only in the shaft-sinking stage; owing to the wetness of the ground the Francois cementation process is used. The erection of a central reduction plant for these two companies is projected. With a fresh board and additional resources the Gwinear Tin Mines have resumed operations. New areas acquired include the celebrated Ding Dong mine, near Penzance, upon which large dumps have accumulated. Arrangements have been made for the experimental treatment of these residues by a new process, which will, it is claimed, give an extraction of 85 per cent. Results will be awaited with interest.

Consolidated Mines Selection.—At Tuesday's meeting of this Kaffir finance undertaking the chairman added considerably to the summarised information given in the report for 1923. The latter showed a net profit of £87,050, as compared with £57,900 in 1922. The expansion arose from additional receipts, more particularly under the heading of dividends, and a substantial reduction in the outgoings, which amounted to only £11,000 in place of £26,300. Payment of 17½ per cent., as against 12½ per cent., leaves the slightly reduced balance of £17,800 to go forward. Through the Anglo-American Corporation of South Africa, to which the company in 1922 sold its South African holdings, the C.M.S. Company is largely interested in the Brakpan, Springs, West Springs, and Consolidated Diamond undertakings. The two first-named should further increase their dividends this year, the scale of operations being in process of renewed expansion. Their development position is strong. The West Springs has just started crushing, but can scarcely be expected to distribute any profits in the near future. The position of the Diamond Company was discussed at some length in a "Note" last week. As to the

Anglo-American Corporation, it paid 10 per cent. for 1923, or 2½ per cent. more than in respect of the preceding year. Of the miscellaneous assets held by the C.M.S. Company, the only one referred to in the report is the Itabira Mines, in regard to which, it is stated, negotiations are proceeding. This company, it may be recalled, owns enormous hematite iron ore deposits in Brazil; transport and finance are the difficulties in the way of exploitation. It is calculated three C.M.S. shares are equivalent to two Anglo-Americans; hence, at the relative prices, the former are the cheaper purchase. The return on the basis of last year's dividend is the attractive one of 11 per cent.

Waihi Gold.—Thanks to the treatment of a somewhat increased tonnage for a higher yield, this notable New Zealand enterprise last year secured a larger profit than in 1922. The surplus has been mainly utilised in restoring the £15,000 taken from mine development account and in writing back £11,100 of the £50,000 taken from dividend equalisation account; but after payment of another 1s per share, tax free, making a total of 2s as before, the slightly enhanced balance of £16,100 goes forward. The financial position continues strong, the gilt-edged investments having a value of £319,400, or more than the equivalent of the issued capital. The optimistic views in regard to the future of the mine, founded upon the Government geologist's report issued about 18 months ago, have not been verified by events so far; but the exploratory work has opened up almost sufficient ore to maintain the reserves.

The fourth Liberal Summer School is to be held at Oxford from July 30th to August 6th. Particulars can be obtained from 16 Princess street, Manchester.

UNITED STATES.—PREFERENTIAL RAIL RATES—COTTON CONSUMPTION—LIVING COSTS—EMPLOYMENT.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 22.

SECTION 28 of the Merchant Marine Act, which allows preferential rail rates to be given to goods and commodities, excepting grain, imported or exported in American ships, will not become effective until May 20th. The Inter-State Commerce Commission originally set that date for putting the section into operation, after the Shipping Board had certified that sufficient American vessels were in service in various overseas trades, which it specified, to warrant application of the preferential rate provision. As a result of hearings on the matter, the Commerce Commission has postponed enforcement of the section until June 20th. In the decision, from which one member dissented, the Commission pointed out that the statute in question does not confer upon it any power to review the findings of the Shipping Board as to the adequacy of American shipping facilities, or to determine the facts on that point independently or otherwise than as certified to it by the Board. The Commission explained, however, that under Section 28 it was authorised to fix a reasonable effective date, so as to enable the railroads to comply with its provisions and those of the Inter-State Commerce Act in an orderly manner, and "to avoid violations of the law by bringing their tariffs into conformity with Section 28, in so far as that may be done, while observing the mandates of the Inter-State Commerce Act." The Commission expects that this additional period will be utilised by the rail carriers to adjust their schedules so that the rates which will be adopted in compliance with the section will conflict as little as possible with the outstanding provisions of the Commerce Act, and minimise the disturbance and controversy as to the application of the respective statutes. The Commission's order granting this extension was based on representations made by shippers and allied interests, as well as by railroads, that

the application of Section 28, by creating preferential rates, would result in discriminations against various ports and between certain goods and commodities, and cause a great deal of confusion. Those who attended the hearings asked for an extension of at least six months in which to readjust railroad rates and to prepare their trades and industries for the proposed change. Whether they will be able to accomplish this in the comparatively brief additional period now allowed by the Commission remains to be seen. It is quite possible that developments before June 20th may completely change the situation and outlook. Legislation, for instance, is pending in Congress which, if enacted, would postpone enforcement of Section 28 until June 1, 1925, or would give the Inter-State Commerce Commission authority to use its discretion in applying that provision of the Merchant Marine Act. As previously mentioned, the Commission, under the existing law, must apply the section, or suspend its operation whenever the Shipping Board certifies to the adequacy or inadequacy of American shipping facilities.

As was quite clearly foreshadowed by the steadily increasing curtailment of cotton goods production since the first of the year, there was a further heavy decrease in cotton consumption during March. The census figures show that only 483,928 bales were consumed in that month, as against 507,876 bales in February and 624,264 bales in March of last year. The falling off as compared with the latter month, when the peak of consumption up to the present was recorded, is very striking, the decrease amounting to more than 22 per cent. For the eight months of the current cotton year the total consumption has been 4,078,920 bales, representing a drop of 8½ per cent. from that of the corresponding period of the preceding year. Exports of cotton last month, amounting to 332,146 bales, were 31 per cent. less than in February, but nearly 4½ per cent. larger than in March of 1923, while for the eight months the exports totalled 4,691,770 bales, an increase of 15 per cent. over a year ago. Consumption this year thus far about equals exports for the like period of the preceding year, while this year's exports have exceeded last year's consumption by 250,000 bales. The aggregate of exports and consumption this year is 8,770,690 bales, according to the census figures, showing a gain of 3 per cent. over the previous year. Combined stocks of cotton in manufacturing establishments and in warehouses at the end of March, excluding linters, amounted to 3,481,810 bales, as against 4,063,281 bales at the close of February and 4,413,534 bales on March 31, 1923. At the end of last month the number of spindles active was 32,392,171, the smallest total recorded since July, 1922. No improvement is reported in the cotton goods trade and industry in this country.

Last month the cost of living in the United States showed a decrease, as compared with the figures for February, although the reduction was slight, namely, four-tenths of 1 per cent. The cost of filling the family market basket was somewhat less than in February, while rents continued to soar, and are now 85 per cent. higher than in the pre-war month of July, 1914, an increase of nearly 3 per cent. having taken place since the 1923 holiday period. The net result, however, taking into consideration the latest reductions in clothing, fuel, and light, shows that there has been some lowering of household expenses as a whole. The National Industrial Conference Board's survey, just completed, indicates that food prices have declined 4.6 per cent. since last November, fuel has been reduced 3.1 per cent. in the same period, but rents

have advanced as indicated. The combined net decrease for all items, between November and last month, was 1.3 per cent. Monthly statistics compiled by the same authority from 23 major industries reveal an upward tendency in employment. The latest survey, covering some 850,000 workers in 1,700 manufacturing plants throughout the United States, shows that the downward trend of employment this year has been checked, a slight gain—one-half of 1 per cent.—having occurred between January and February. Thirteen of the 23 industries shared in this gain, while in eight employment decreased, and in one it remained unchanged. Average earnings increased slightly during February, and hours of work declined somewhat. For all workers, average hourly earnings rose from 55.9 cents to 56.2 cents. The net conclusion reached is that while the pay envelopes of the country show a slight bulge, the hours of work are a little less than at the opening of the year.

FRANCE. — THE ELECTIONS — REPARATIONS — WEALTH PER HEAD — PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, April 30.

THE time for sending in nominations of candidates for the French General Elections (on May 11th) expired last night, and it became known this morning that there are no fewer than 2,754 candidates in the field for the 584 seats to be filled, or practically five candidates for each seat. The candidates are divided into 428 lists (which in some of the larger constituencies comprise as many as 12 to 14 names each), so that the electors in the 95 constituencies will have an average of between four and five lists of names to select from. The complexity of the present system of voting may be gathered from the fact that in Paris each voter will have before him in his own constituency a total of 80 candidates from which to choose the dozen or so to whom, and to whom alone, he can give his votes. The stipulation that no party shall put forward a fewer number of candidates than there are seats to be filled was laid down by the Chamber recently in order to prevent the multiplication of individual candidatures, but its result, in practical application, has been largely to increase both the number of aspirants to Parliamentary honours and the perplexities of the elector. There are over a dozen distinct parties in the field, including two mutually antagonistic Communist parties and two similarly disunited Socialist groups. So far as can be seen, however, the conflict is resolving itself into one between the supporters of M. Poincaré on the one hand and the probably much smaller number of adherents of all the other parties on the other. As the Poincaré party is undoubtedly by far the largest single party in the country, little doubt is really felt as to the result of the contest, and very few people now venture to predict (as was common a few months ago) that the elections would reveal a marked trend towards the Left.

One outcome of the contest is likely to be a universal condemnation of the bogus system of proportional representation which is now in vogue. Under the old system of *scrutin d'arrondissement*, the worst of the evils inherent in the majority principle of election were checked by the stipulation that no candidate could secure election (except after a second ballot) unless he obtained an absolute majority of the votes cast. The present system, as the result of the recent modifications, has for all practical purposes abolished the proportional element, except in name, and has given an enormous additional advantage to the list which, although not securing an absolute majority of the votes, yet receives a larger number than are given to any other party. The most curious feature of the new system is that the voter who "plumps" for any given candidate will actually commit the mistake, as the system works out, of making a present of the rest of his votes to his opponents!

For the time being, the reparation problem may be regarded as in a state of latent activity only. Opinion here is distinctly inclined to accept the report of the experts as probably the best solution that can be arrived at, and is content to await the slow working out of the details of its application that is now proceeding. Meanwhile, some exceptionally interesting figures setting forth the manner

in which the various methods that have been suggested for settling the reparation question would affect the average wealth per head of the inhabitants of the various countries interested, have been worked out by Signor Mario Alberti, one of the members of the Experts' Committee. Signor Alberti, who is one of the directors of the Credito Italiano, bases his work on the idea that the estimates of losses incurred through the war which have been submitted to the Reparation Commission by the interested Powers, constitute rather an inventory of the losses submitted—such as would be presented by a claimant to an insurance company—than a statement of the effect the war had upon the effective wealth of the various nations. He considers, in fact, that the effect of the war on average wealth per head cannot be measured in its relation to the increase in the public debt, as the increase in the latter represents less a destruction of wealth than a modification in the distribution of the national income. Further, the degree to which the war has modified the wealth per head of the people must depend to a substantial extent on the amount ultimately received by the various countries in the form of reparation payments from Germany. The total amount originally fixed, for instance, was 132 milliards of gold marks. This, as everybody knows, is unlikely ever to be paid. The French share of this sum would be 68.62 milliards of gold marks. In his Note to the British Government on August 20th last, M. Poincaré fixed at 26 milliards of gold marks the value of the actual loss incurred to the people of France through the war, exclusive of their loss of investments in Russia and other countries. The Belgian reparations have similarly been fixed at a minimum of five milliards gold marks, and those of Italy at 6.3 milliards, while Great Britain has fixed hers at the amount of her debt towards the United States, or 14.2 milliards. Basing on these and other elements of the kind, Signor Alberti has drawn up the following table, showing (in dollars) the wealth per head of the inhabitants of the various nations before the war, and setting forth how the respective amounts would be modified according to whether one or another of the various solutions of the reparation problem is applied, and whether the problem of the inter-Allied debts is included in the settlement:—

	Wealth per Head Prior to the War.	Wealth per Head in Each Country.		
		Less War Losses and Foreign and Inter-Allied Debts.	Less Foreign and Inter-Allied Debts, but Plus Modified Reparation Payments.	Less Foreign and Inter-Allied Debts, but Plus Full Reparations of 132 Milliards Gold Marks.
United States....	\$ 2,000	\$ 3,600 (1)	\$ 3,600	\$ 3,600
Great Britain....	1,550	1,431	1,487	1,573
France.....	1,657	1,211	1,370	1,626
Italy.....	630	487	517	597
Belgium.....	1,240	966 (2)	766	436

(1) The National City Bank of New York estimates that from 1912 to 1920 American wealth increased 100 per cent. (2) Germany's losses are based on estimates of the value of the territory taken from her and other cessations, deliveries, &c.

The figures drawn up by Signor Alberti set forth in a striking manner the wide disparity of interests which exists between the various Allies. They also show that for Great Britain, France and Belgium the most advantageous settlement would be that which would follow the carrying out of the Versailles Treaty. The following table shows the effect that would follow respectively from (1) the maintenance of the inter-Allied debts, or (2) from their annulment (in this case no account being taken of the various internal debts):—

	Pre-War Wealth per Head of Population.	Increase or Decrease of Wealth per Head	
		If all Inter-Allied Debts are Maintained and Full Reparations are Paid.	If all Inter-Allied Debts are Annulled and German Reparation Payments are Reduced to 35.3 Milliards g.m.
United States....	\$ 2,000	\$ 3,701	\$ 3,597
Great Britain....	1,550	1,690	1,528
France.....	1,657	1,726	1,637
Italy.....	630	567	630
Belgium.....	1,240	1,596	1,467
Germany.....		436	836

Signor Alberti is Italian, therefore it is excusable that he should emphasise the fact that Italy's debts to her Allies considerably exceed the amount due to her from Germany. She would obviously prefer the annulment of the inter-

Allied debts, to the execution of the Treaty of Versailles.

The Statistique Générale has now issued the index figures for retail prices for the months of February and March, which show that, as usual, retail commodity prices during those months did not immediately respond to the sharp rise in wholesale prices that occurred during the same period under pressure of the drop in the purchasing power of the franc. The index figure covers the retail prices of thirteen articles of food, and is calculated on the basis of 100, as representing the prices that ruled in July, 1914. The figure for Paris is returned at 384 for February, and 392 for March, as compared with 376 in January. The index figures returned in respect of the expenditure of a working-class family of four persons, as established by the local commissions, shows that the cost of foodstuffs during the first quarter of the present year has been substantially higher in most of the great towns than in the capital. The figure for Marseilles (middle of March) is returned as 476, for Toulouse (March) as 459, for Lille (October, 1923) 446, for Nancy (February last) 381, for Grenoble (January) 426, and Bordeaux (December) 397, as compared with the mean of 378 for Paris during the first three months of the present year. So far as the cost of food is concerned, Lyons (with 371 on March 1st) and Rouen (365 in January) alone come below the Paris figure for this category of necessities. Toulouse also figures as the dearest of the great towns for lighting and heating, the index figure under this heading being returned as 474, against 356 in Paris. The dearest city in France for the working classes, so far as the cost of living in general is concerned (food, heating, lighting, rent, clothing, &c.) is apparently Lille, the great textile centre, the figure for which is returned as 445, as compared with 365 in Paris.

GERMANY.—REICHSTAG ELECTIONS—REPARATIONS — FRANC CRISIS — FINANCES — STOCKS — BUSINESS.

(FROM OUR CORRESPONDENT.)

BERLIN, April 29.

THE Reichstag Elections, which take place on May 4th, have practically become a test whether the Marx Cabinet's already declared favourable attitude towards the Experts Commission's report is to be translated into fact or not. Utterances by the Chancellor and by other members of the Cabinet emphasise this, holding out the inducement of national liberation as compensation for the sacrifices required. While therefore inviting votes for the three parties represented in the Cabinet, the Centre, People's Party, and German Democratic Party, the Government speakers practically recommend the Social Democrats because this party also stands for settlement on the basis of the Dawes report, and because there is practically no chance of the three Cabinet Coalition parties gaining a majority in the Reichstag. The Cabinet has taken the field against (apart from some small unfriendly parties among the 23 groups which claim that rank) the German Nationals, the new German-Populist-Freedom Party (General Ludendorff and his friends), and, at the extreme Left, the Communists. The peril from the two Right parties is considerable; Government speakers even talk of the possibility of their getting an absolute majority, a result which would certainly wreck the chance of a Reparations settlement, and perhaps provoke an open conflict with the Allies. "The destruction of Germany" is the result predicted by the Chancellor. Even without this, the possibility, after the Elections, of an alliance between the Right and the Communists must be admitted.

At best—even if a favourable Reichstag is elected—it is believed that the Dawes Reparations plan will be an object of prolonged negotiations, firstly between the Ally Governments, later or simultaneously between them and Germany. The prospect of a Report which because it was almost unanimously well taken would therefore be speedily realised—at least on paper in the shape of the necessary German legislation—has faded. The attitude here, however, remains favourable, outside of those parties which were from the first certain to have rejected any plan of solution. This applies to the two Right parties. Representatives of Labour on the railways have expressed them-

selves against the proposed system of management, and complained that the design of certain German interests (in particular the Stinnes group) to de-nationalise the railways is now to be realised through the intervention of foreigners. The Minister of Industry declares that the Report underestimates Germany's weakening as compared with before the war, and overestimates the prosperity of industry and agriculture. Absolutely necessary, added Dr Hamm, is the maintenance of Germany's sovereignty in the currency and railway rate questions. The Transfer Committee and the index of prosperity continue to be criticised. Against one item in the latter, the combination of exports and imports, it is argued that an increased volume of trade in a given year might be caused by bad conditions, e.g., a failure of crops, which would certainly increase imports and might compel the forcing of exports in payment. It is certainly true that a mere increase of imports, taken alone, would on the one hand check the Transfer Committee's ability to convert German internal payments into foreign currency, and thereby ultimately in certain conditions, tend to reduce her payments, while in estimating her ability to pay it must be taken as a favourable factor.

The menace of the franc bear commitments of financiers, manufacturers, and mere speculators for the end of April and May obscures all other questions. The losses to be suffered are large and spread all over the country. Reports of trouble among the small banks come in every day, and talk of a general financial crisis of a very severe kind is heard. The franc crisis is partly the cause of a credit crisis and an abnormal collapse of stock quotations; and this has placed in a difficult position certain interests which did not themselves deal in francs. Money is extremely hard to get. Companies and firms owning properties worth millions of marks are stated not to be able to raise sums as small as 50,000 or 100,000 marks; and forced realisations of stocks, which are now at around one-third of their quotations immediately after the November currency stabilisation, would cause very heavy losses, and bring quotations still lower. The position of the big banks as lenders on badly depreciated securities is not pleasant. The bank's plan to intervene on the Bourse had no effect. The *Boersen Zeitung* predicts that if the Bourse position does not improve even big banks will get into difficulties. The franc bear commitments were in the end almost all purely speculative, though, for obvious reasons, among which was the Exchange Regulation law, most of them took the form of deals in commodities. Thus, lead and chemicals were bought against franc payment at the end of April, May or June, in the expectation that the franc's exchange would be 150 or even more to sterling. In nearly all cases these, and other purchases of goods for francs, were mere difference transactions, delivery not being counted on. Also metals were bought for future payment in francs, and simultaneously sold for pounds. That Germans, who knew from their own experience that nearly every heavy exchange fall is followed by at least a partial recovery, should have entered upon these speculations at a time when the franc had already very heavily fallen, only shows that speculators will not learn. It has been judicially decided that operations of the above kind, including sham dealings in wares, for payment in exchange, violate the Exchange Regulations, and therefore may be repudiated by the losing party at the cost possibly of a small fine for the violation; but the financial newspapers declare with reason that such repudiations would probably only make the crisis worse, and shake again the already shaken faith in business stability and honesty.

The Reichsbank director, Dr Schacht, has protested against attempts to discredit the Rentenmark, denying a report that it was shown in the Reichswirtschaftsrat that this currency is depreciated 40 per cent. at home. The real meaning was that the Rentenmark, while in home buying power equal to a gold mark, may perhaps buy 40 per cent. less than a gold mark in peace time, this owing to the general rise in gold prices. This opinion, in light of the German price indexes, is reasonable. Prices are rising very slowly. The Reichsbank has again protested against the unduly high interest (here including commissions) charged by the banks for credit, and has threatened to withhold its own credit from offenders.

These protests have little effect. The Reichsbank's statement for April 15th shows that the measures already taken to restrict credit have had some effect. The total of outstanding discounts and advances rose by only 31.6 trillions (against 88.8 trillions in the preceding week) to 2,031.5 trillions. The main credits given were to agriculture. Outstanding discounts and advances on December 31st last totalled 591.1 trillions. Note circulation declined by 5,396,463 billions. The Reichsbank's borrowings from the Rentenbank for the purpose of giving credit to industry remain unchanged at 800,000,000 Rentenmarks.

The Finance Ministry's returns for the ten days April 11th-20th shows a surplus of 19,280,700 gold marks, revenue being 100,742,700 gold marks, and expenditure 81,461,900 gold marks. This more than wipes out the deficit of the first April ten days' term. Berlin Municipality, which is to be followed by other local governments, has reimposed the tax on profits from sale of houses where the house was bought after December 31, 1919. The motive in fixing the limitary date, as newspapers declare, is that thereby mainly foreigners will pay the tax. Since the currency stabilisation houses have slightly risen in value, though not sufficiently to compensate for the loss of rents and the deficits suffered by buyers in the last five years, and though past losses, suffered entirely owing to Governmental abolition of rents, make it practically impossible for any persons to sell at a real profit, the municipality demands 30 per cent. of the excess of the sale price over the purchase price. It is over a year since the unfair exactions and breaches of law and treaty practised by Germany against foreigners were given prominence in the English Press, and in late 1922 Parliament was promised that measures had been taken. Since then conditions have not improved. The system practised is the same; instead of mulcting "foreigners" as such, the laws and ordinances fix dates which are chosen solely in order to catch foreigners and to exempt Germans. The new federal law protecting tenants refuses protection to persons who settled in Germany after 1914, and in order to make sure that no German shall suffer, special protection is given to Germans who arrived after that date as war refugees. There are numerous other recent abuses of the same kind. The Press declares that no foreigner has a right to make any profits in Germany, because these profits are always due to the past currency instability; a special tax, from which those Germans who profited in the same way are exempted, is at once devised. The fact that many foreigners (the Experts' Report is only the last proof) have been ruined by German currency depreciation is not considered a reason why they should be compensated. It is remarkable that while countries which have entirely free hands do not practise these extortions, Germany, which is supposed to be tied hand and foot by the Versailles Treaty, practises them without even receiving a protest. The newspapers are now agitating against allowing foreigners in business in Germany to borrow on security of mortgages, &c., pointing out that State banking institutions always reject foreigners' appeals for credit, and demanding that foreigners be forbidden by law to borrow. There is no reason why a foreigner doing business in Germany or owning property there should not be allowed credit if he can find a credit-giver.

POLAND.—THE NEW BANK OF ISSUE—NEW CURRENCY SYSTEM—INCREASED REVENUES—TRADE BALANCE.

(FROM OUR CORRESPONDENT.)

WARSAW, April 18.

WHEN, a few months ago, it was announced that Mr Grabski intended to create the new bank of issue without resorting to the aid of foreign capital, the plan was considered by many as fantastic. It was pointed out that during recent years Poland has been suffering from a severe capital famine, which made the development of industrial and commercial undertakings impossible. How, then, could the Government expect to find in the home market a capital of 100 million gold francs, at a moment when the resources of the country were strained to the utmost by new and very heavy taxes? Mr Grabski, himself, did not believe that subscriptions would yield more than

60 per cent. of the capital, and expected that the Government would be obliged to cover the remaining 40 per cent. The results of the subscription surpass the most optimistic estimates. 82 million gold francs have been subscribed by private capitalists; the remaining 18 millions were taken over by the Ministry of Finance, which is ceding a part of it to the Upper Silesian mining industry. The share of the Government will not exceed 10 per cent. This favourable result is due to the fact that the foundation of the Polish Bank (Bank Polski) was treated by the whole population, not as a purely commercial undertaking, but as a national affair, and the number of subscribers exceeds 50,000.

On April 28th the first zloty will be issued by the Polish Bank, and the mark will shortly disappear from circulation. The original plan of introducing a double standard similar to that existing in Prussia has been abandoned. From June 1st the mark will be exchanged against zlotys, and after several weeks the zloty alone will remain in circulation. Until July 1st it will be possible to make all payments in both currencies, one zloty being equal to 1,800,000 marks. In the autumn, metal coins will be put into circulation. The gold zlotys are, as far as their fineness and weight are concerned, equal to gold francs. The other coins are different. The fineness of silver coins has been fixed at 0.750, and not, as in France, at 0.835 and 0.900. The question if it is desirable to introduce silver coins into the Polish monetary system was much debated here. It was pointed out that nickel coins, which have replaced in Belgium the silver francs, are much cheaper, and that the coinage of silver is a useless luxury. Mr Grabski, however, was of the opinion that the coinage of silver is necessary for giving a convincing proof to the large masses of the population that the régime of inflation has ceased. The Polish coins are to be minted partly abroad and partly in Warsaw.

Since February 1st the Government has been balancing its Budget without resorting to the printing press. During the first quarter tax revenue has increased very rapidly, as compared with the same period in 1922 and 1923. This may be seen from the figures below:—

	FIRST QUARTER.—(000's omitted.)		
	1922.	1923.	1924.
Total revenues	120,455	40,065	194,985
Direct taxes	53,435	8,141	102,155
Indirect taxes—			
Customs duties	8,992	7,931	26,385
Stamp duties	8,023	6,971	12,399
Monopolies	19,750	1,919	15,962

The revenues of the State were in 1924 nearly five times greater than in 1923. In comparison with 1922, the increase surpasses 60 per cent. This increase is due, in the first instance, to direct taxes, while indirect taxes, as compared with 1922, reveal a comparatively smaller improvement. The bulk of the increase is due to the capital levy.

The foreign trade statistics for 1923 show that Poland's trade balance gave an excess of exports over imports of 79 million gold francs. This is a very great improvement in comparison with 1922, as may be seen from the figures below (in million of gold francs):—

	Imports.	Exports.	Excess of Imports (—) or Exports (+).
1922	844.5	655.2	— 189.3
1923	1,116.5	1,195.6	+ 79.1

Polish foreign trade was composed in 1923 of the following groups:—

	Imports.		Exports.	
	Million Gold Francs.	% of Total.	Million Gold Francs.	% of Total.
Live animals	1.7	0.15	1.5	0.13
Food	157.4	14.13	107.5	8.29
Raw materials	366.7	32.83	421.6	35.86
Semi-manufactured goods	74.6	6.67	232.2	19.44
Manufactured goods	516.0	46.21	432.7	36.29
Not specified	0.1	0.01	0.1	..
	1,116.5	100.00	1,195.6	100.00

Among imports and exports manufactured goods rank first and raw materials second. The exports of food are smaller than the imports. The most important items in Polish exports are:—Coal (327.1 million gold francs), textiles (150.7), metal goods (119.7), timber, raw and half-manufactured (114.7), oil and oil products (75.1), sugar

(52.3 zinc (45.6), yarn (33.4). Among the imported articles, metal goods (234.8 million gold francs) rank first, cotton (146.7) second, wool (82.7) third. Poland imported in 1923 textile goods for 53.1, hides and skins for 45.7, and yarn for 40.6 gold francs.

DENMARK.—THE ELECTIONS—A SOCIALIST GOVERNMENT—THE TRADE BALANCE—PRICES.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, April 20.

ECONOMIC and financial conditions during the past month have to some extent been affected by the general election. This resulted in serious loss to the Moderate party, to which the Neergaard Government belonged, and the election therefore entails a change of Cabinet. Immediately after the election, Mr Neergaard handed in his resignation, and the King sent for Mr Stauning, the chairman of the Socialist party, who declared himself willing to form the first Socialist Cabinet in Denmark. The composition of the new "Folketing" (the House of Commons) is as follows:—Socialists 55, Radicals 20, Moderates 44, Conservatives 28, Independent 1, and Slesvig party 1. Accordingly, the Radicals and Socialists have a majority of at least one vote. In the former Folketing, Moderates and the Conservatives numbered 79, against 66 Socialists and Radicals. Mr Stauning will make it his first task to endeavour to bring about an improvement of the exchange situation. Later on he will appoint a committee to make an investigation of the entire tax system. At this moment it has not been decided who is to take over the individual portfolios, but this will presumably be settled soon after the holidays.

Generally speaking, the tone of the exchange market has been more favourable lately, and the speculative element has been somewhat suppressed. This may be due partly to the concentration of the entire exchange trade into a few hands as a consequence of the establishment of a foreign exchange administration, the "Valuta Central," which has authorised a number of banks and bankers to deal in foreign exchange. In accordance with the Act, the Minister of Commerce has issued a notice requiring any person, company, or other concern who on March 31st was a holder of foreign exchange—including bonds and credit balances in foreign exchange, whether held direct or through the intermediary of banks or bankers—to give information to the "Valuta Central" as to the amounts or credit balances held at home or abroad. Exemption from the obligation to report is accorded to holdings and credit balances which, on the basis of the rate in force on March 31st last, did not amount to 5,000 kr.

The statistical department has recently published the summary figures of Denmark's foreign trade in February. From this it appears that the deficit of the balance of merchandise trade was appreciably less than that of the previous month, which likewise showed an improvement as compared with 1923. In January the imports aggregated 165,000,000 kr, and the exports of Danish and foreign goods 147,000,000 kr, the deficit being 18,000,000 kr only. In February imports increased to 169,000,000 kr, while at the same time exports increased to 167,000,000 kr, the deficit being only 2,000,000 kr, an amount which is easily covered by means of other items in the financial balance. The quantity statistics show that the exports of bacon amounted to 30,700,000 kilos in January-February, as against 26,600,000 kilos for the corresponding two months period last year. At the same time, the exports of butter increased from 15,500,000 kilos to 20,400,000 kilos. The United Kingdom imported nearly the entire quantity of bacon and 14,500,000 kilos butter, as against 11,800,000 kilos during the corresponding two months last year. In January-February imports of coal totalled 560,128 tons, which was about 45,000 tons more than during the corresponding period of 1923. Nearly all these imports emanated from the United Kingdom.

A summary of the unemployment during 1923 is now available, and this covers, for the twelve months of the year, an average total number of 257,000 workers. It appears that the number of unemployed, which early in 1923 was more than 57,000, was reduced to 19,000 in July, through the usual decrease during the spring and summer months, and that at the end of the year the num-

1-4, GREAT TOWER STREET — LONDON, E.C.3

ber was about 50,000. The average number of unemployed workmen for the entire year was 32,000-33,000, or 12.7 per cent. In 1922 the percentage was 19.3. At April 15th the number of unemployed was 34,000, or 3,000 less than last year at the same time.

The wholesale price index of the *Finanstidende* shows a rise during the first three months of the year from 210 to 228 points. Of this, however, the rise during January amounts to as much as 13 points, and the subsequent rises have been 4 points during February and 1 point during March.

Letters to the Editor.

DISCRIMINATION IN LENDING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I thank you for your explanations about foreign investment in this week's *Economist*. I had thought from your article of a fortnight ago that there might perhaps be some philosophy of foreign investment in relation to the national interest behind your conclusions. I gather, however, that you were merely approving of all flights of capital from this country which are in the interest of the individual investor, and that your only reason for discriminating between investments in American securities last autumn and investments in such as Dutch, Japanese, Czechoslovak, Indian, Queensland, Brazilian, &c., securities this spring and summer is that the former were unwise, being made hastily and without the midwifery of issue houses and underwriters, whereas the latter are wise and considered. Myself I differ doubly. I doubt if the general interest and the interest of individuals always coincide in this matter. I also doubt whether, assuming an individual is going to invest abroad, all dollar investments have been inferior in recent months (having regard to relative rates of interest and relative security) to the mixed bag mentioned above.

May not convention have more to do with these matters than it should? May we not be investing abroad in greater quantity than is in the public interest, and at lower rates in proportion to the risk than is in the interest of the individual investor? I did not welcome the movement towards dollar securities last autumn, and I do not welcome all the foreign investments currently offered to us now.—Yours faithfully,

J. M. KEYNES.

King's College, Cambridge, April 29th, 1924.

[We may, perhaps, leave the risk premium on foreign investments to look after itself, but we should very much like to know from Mr Keynes on what standard he would decide how much foreign investment in any year is "in the public interest."—ED. *Economist*.]

Books and Publications.

PAPER MONEY AND THE EXCHANGES.*

THIS is a readable and essentially sound explanation in short compass of the problem of currency and exchange depreciation which has latterly so exercised the mind of France, as also of other countries. The author traces with admirable clearness the causes of the recent exchange depreciation in France, and its effects upon the general level of prices, upon foreign trade, the stock markets, and the public finances. In discussing how to stop the fall of the franc he insists upon the necessity for reducing expenditure with a view to balancing both the ordinary budget and the budget of recoverable expenditure. Curiously

* *La Monnaie de Papier et le Change*. By Georges Lachapelle (Paris) G. Roustan, 1924. 2f 50c.

enough, he does not consider the possibility of making both ends meet by increasing taxation. He would abolish the attempt to control the exchanges artificially, and would enlighten the public in France and abroad as to the true state of public finances. The existing haze which the Government cultivates by the publication of "more or less optimistic and more or less exact but often contradictory figures," merely plays, he thinks, into the hands of the bears. He also has some salutary remarks about the "fatal errors" contained in the financial clauses of the Treaty of Versailles, and in the scale of payments drawn up in May, 1921; and urges the desirability of a definite and complete settlement of the problem of Reparations.

STOLEN BONDS.*

THIS little book is described as a "legal and financial novel." The author, who was formerly an official in the postal service in British India, has interested himself in the question of the protection given by the laws of different countries to the owners of lost or stolen securities, and has in this volume blended the fruit of his researches with his earlier experience in the Post Office. To those desiring the stimulus of a detective yarn, the book can, we fear, hardly be recommended. The weary stockbroker, with his feet upon the mantelpiece, will need stronger meat than the account of an investigation into a missing postal bag, and cannot fail to be exasperated at finding in the middle of the story a lengthy explanation (given to the detective by a banker) of the legal position in various countries. But those who are seriously interested in the problems connected with stolen bonds will find a good deal to think about.

* *Le Grand Vol des Titres.* By S. Goodman. (Paris) Marcel Giard, 1924. 5 fr.

EUROPE AND EMIGRATION.*

THIS book is more than a translation of the articles which appeared last summer in the *Svenska Dagbladet* from the editor's pen. The author's pre-occupation is with the future of the white race as a whole, so that it is natural that he should wish to present his views in their most complete form in English, the language of the two peoples who respectively possess the colonial experience and the financial strength necessary if Dr Key's views are to prevail. Considering, as he does, that reparations are never likely to be paid, that the reparation discussions are a continuing source of trouble, that Russia can only import rather less than she can borrow fresh abroad, and that economic nationalism is disastrous and increasing, the author naturally seeks a solution in emigration. Even in England, which he recognises to be more independent than the Continent, he takes the view (p. 70) that "it is only too likely that this superfluous stock of labour cannot hope for work in the future, even if the economic conditions were to return to a pre-war level." Granted such assumptions as these, and having regard to the different density of the white and other populations on either side of the Pacific, the suggestion for the colonisation of Mexico and South America by white men follows naturally, and if, as M. Clemenceau said, and as Dr Key for different reasons seems to agree, there are 20 million too many Germans in the world, the nationality of the colonists to be sought is clearly indicated, and the white nations interested in the Pacific will have an inducement to support the plan. An interesting introduction to a difficult subject.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, May 7. ACCOUNT, May 8.

It is unnecessary to say that the Budget made the principal factor which has operated in Stock Exchange markets this week. The House had been looking for increased taxation in the shape of additional death duties, and possibly super-tax. It had not expected abolition of the corporation profits tax. The Chancellor's speech came, therefore, as a pleasant surprise, and markets were quick to respond to the hopefulness engendered by his optimism. Business was not greatly quickened, but a better feeling spread throughout the markets. All investment stocks are thought likely to harden when the Budget has become fully digested.

The War Loan and other British Government stocks are better, and attract a good deal of money. The new Queensland loan is now being dealt in. The price opened at 1 premium went back a trifle on a volume of sales by stags, and started to go ahead again after the Budget speech. A new Kenya loan is expected to come out about the same time as a fresh New Zealand issue. Several new trade facilities stocks are to make their appearance in the near future.

Mexican Government bonds have advanced, on the news that coupons on certain of the issues can be exchanged for cash and scrip. Brazilian bonds, after being down, strengthened towards the end of the week, and Chileans are mostly higher. The later-issued Foreign Government 6 per cent. stocks are being absorbed, and the market in French issues has for its principal feature a rise in the French Government-guaranteed railway bonds.

Underground Railway stocks experienced a drop in the early part of the week, to recover, however, in sympathy with the other Home Railways, which enjoyed reflection of strength from the Consol market. Argentine railways are a decidedly better market, in consequence of the improvement in exchange. San Paulo rose 5 points, as the persistent buyers failed to secure all they wanted, and Leopoldinas advanced with San Paulo. Mexican Rails are a little better, and nitrates hold their strength, nitrate-producing shares also being firm, without attracting a great deal of public attention.

The rubber market is quiescent. Oil shares gained ground, on the cheerfulness imparted by the Budget provisions and the abolition of the corporation tax. Industrials all round are better, with the solitary exception of motor shares, in whose case the proposed withdrawal of the McKenna duties from August 1st had a depressing effect. Reduction of the tea and sugar duties caused a number of rises. Tobacco shares spurted, by reason of the inference that the companies must be doing extremely well, considering the way in which the revenue derived from the tobacco tax has exceeded the last Chancellor's estimates. Banking and insurance shares are good, and the tea-market enjoyed a boomlet on its own account. Mr. Snowden's hopefulness in regard to the outlook for trade caused rises in shipping shares and small improvements in a good many iron and steel descriptions.

The Kaffir Circus continues to be very quiet, but assurances from the Nationalist Party in South Africa to the effect that, if returned to power, they will not take drastic measures against the mining industry, have served to keep prices tolerably steady. Rhodesians are moving within narrow limits. Selling from Canada caused declines in a number of Canadian mining shares, but the falls were partially wiped out on averaging purchases. Russian mining shares are weak, owing to the attitude adopted by the Soviet Government. The price of tin offers no fresh encouragement to speculation in tin-mining shares, the market in which is stagnant. The diamond group keeps fairly firm, and amongst copper shares so little business passes that prices fluctuate scarcely at all. Mining shares have no especial reason to be influenced by the Budget, though Kaffirs draw adventitious aid from the cheeriness imported into other markets by Mr. Snowden's performance.

South Essex Waterworks Company.—Incorporated 1861. Authorised stock capital £835,700, of which £566,437 has been issued. The authorised loan capital is £414,396, of which £258,846 remains to be borrowed. This is an offer for sale by tender of £57,237 ordinary stock, the minimum price of issue being par. For the company's last financial year ended December 31st, the net revenue was £62,492. Interest on debenture stock amounted to £8,163, and dividend on preference stock £13,925. This left an available balance of £40,404 for ordinary stockholders. Dividends on ordinary stock, including that now offered, will amount to £24,129, if the maximum rate of dividend—6 per cent.—is to be maintained. Based on last year's figures, this can be accomplished, and a comfortable margin will remain for contingencies. The company supplies water in a district extending to 150 square miles, and one boundary is within eight miles of the City of London. A good utility investment.

Mutamba Sugar Factory, Limited.—Authorised capital £80,000, divided into 800,000 shares of 2s each, of which 500,000 shares have been issued and are fully paid. The 300,000 shares remaining will be issued in part payment of the land and cane plantations now being acquired. This is an offer for subscription of £30,000 7 per cent. profit-sharing debentures at par, being part of an authorised issue of £60,000. Of the balance, £20,000 debentures will be issued in part payment of the land and cane plantations now being acquired, and £10,000 will be held in reserve for future issue. The interesting feature about these debentures is the fact that in addition to carrying interest at the fixed rate of 7 per cent. per annum, they will participate *pari passu* in one quarter of the profits of the company. The company was formed in May, 1922, and owns a sugar factory in Portuguese East Africa. An attractive table is supplied, which shows that if profits are £38,000 in 1926, additional interest on debentures will be 19 per cent. Cautious investors will notice that we have interposed the word "if."

Caroni Sugar Estates (Trinidad), Limited.—Authorised capital £450,000, divided into 400,000 7½ per cent. cumulative preference shares of £1 each, and 1,000,000 ordinary shares of 1s each. This is an issue of 400,000 7½ per cent. preference shares at par, and 400,000 ordinary shares at 2s per share. Ordinary shares alone are not offered, but applicants for preference shares have the right to apply for ordinary shares. The company has been formed to acquire sugar estates in Trinidad, together with factories and plant. The purchase price has been fixed at £413,506. If this is payable in cash, it is not clearly stated. Assets are valued at £457,712. The prospectus points out that "these assets, together with the available working capital, amount to over £480,000, i.e., more than 24s for each preference share now offered for subscription at par. The italicised words are printed in block type in the prospectus. But as the subscribers for preference shares will, we presume, subscribe for the ordinary shares, the greater part of the 4s cover vanishes. Indeed, this appears to be a case where preference share-holders are in actual fact merely ordinary shareholders. But with this important drawback. The preference shareholders of this company have not the right to vote at general meetings of the company except when dividends are in arrears and in a few other cases. Moreover, the position of subscribers may be materially altered if the option given in contract 3 outlined in the prospectus is carried out. The company have granted an option to a concern to subscribe at par for the unissued ordinary shares (we presume 600,000). Thus control vanishes. A little information is afforded us about the Trinidad Estates Company, Limited, from which the new company is acquiring the assets. This latter undertaking has a total capital of £250,000, divided into 7,000 5 per cent. cumulative preferred ordinary shares of £5 each, and 43,000 ordinary shares of £5 each, of which 5,790 and 35,000 respectively are issued. Apparently this undertaking prospered as a result of

the war. Profits are given from 1914. For that year these were £36,491 for 9,046 tons of sugar made. For 1920 8,966 tons of sugar were made, and profits advanced to £297,427. Next year Government control was abolished; 8,256 tons of sugar were made and a loss of £136,627 was sustained. In the following year the output was 9,112 tons of sugar, and profits were £11,231. Frankly as an investment proposition the company does not attract us.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

MEXICAN EAGLE OIL.—Dividend of 7s for each 10 shares (less tax) on the first preference share capital, payable in London on April 30th.

BANCO NACIONAL ULTRAMARINO.—The payment of the third and final dividend for the year ending Dec. 31, 1923, of 16 per cent., i.e. escudos 14940 per share of 30 per cent. for the year, free of Portuguese taxes. Coupon No. 87 of bearer shares will be paid at the London office of the Banco Nacional Ultramarino 9 Bishopsgate, E.C. 2, at the current rate of exchange of the day, less income-tax at the rate of 4s in the £.

P.L.M. RAILWAY COMPANY.

(Compagnie des Chemins de Fer de Paris à Lyon et à La Méditerranée.)

Extract from the Report of the Board of Directors presented at the Ordinary General Meeting held on April 11, 1924.

GENTLEMEN,
You are met in ordinary general meeting, in conformity with the Statutes, to hear the results of our operations during the year 1923 and to fix the dividend.

During the period under review, traffic has progressively increased.

Passenger receipts show an expansion of 11 per cent., as against 4.4 per cent. the previous year, while the average annual increase in the 10 years immediately preceding the war was only 3 per cent. Goods traffic, measured in metric tons, has increased by 19 per cent., as against 7 per cent. in 1922. In the 10 years immediately preceding the war the average annual increase was from 3 to 3.5 per cent., and the greatest expansion, recorded in 1912, did not exceed 7 per cent.

Goods receipts, however, do not show a proportionate growth; last year's expansion is only 7.7 per cent., of which 7.4 per cent. occurred in the case of slow-train traffic. This result is a consequence of the reductions in traffic effected in the course of the two years 1922 and 1923.

So great an expansion in traffic has naturally brought with it, in the conduct of the service, difficulties which were otherwise increased by our co-operation in the occupation of Rhineland. At the request of the Government more than 3,000 members of the P.L.M. staff of all grades have, in effect, left in order to secure the working of the lines in the Trèves region. The honour belongs to the large French railroads of having made possible the re-organisation and maintenance of transport in the occupied territories.

Side by side with the expansion in traffic the 1923 accounts show a heavy addition to expenses. Prices of fuels and raw materials, which had fallen heavily in 1921 and 1922, by comparison with the peak point of the spring of 1920, rose again in the course of last year. This increase is reflected by our working expenses, and, owing to the movements in our markets, the effect of the rise will weigh still more heavily on the 1924 accounts. Thus, the increase shown by our receipts is still insufficient to cover our expenses, and the deficit, which was 253 millions in 1922, amounts to nearly 195 millions for 1923.

And yet the new régime for the railways had been planned in order to assure the financial stability of the lines grouped together to this purpose

COMPANY MEETINGS, &c.

ROYAL EXCHANGE ASSURANCE.

SUCCESSFUL RESULTS OF THE YEAR.
DIVIDEND INCREASED TO 25 PER CENT.
PROGRESS OF VARIOUS DEPARTMENTS.

The annual general court of the Royal Exchange Assurance was held, on the 30th ultimo, at the head office of the corporation in the Royal Exchange, London.

Mr Vivian Hugh Smith (the governor) presided.

The secretary (Mr Percy F. H. Hodge) having read the notice convening the meeting and the report of the auditors,

The Governor said:—

Gentlemen.—The report and accounts have been circulated and you now have copies in front of you, so I assume that you will take them as read.

LOSSES ON THE DIRECTORATE.

I deeply regret to have to announce that the corporation has sustained by death two heavy losses. Mr Charles Seymour Grenfell, who had been our sub-governor since 1904, died early this year, and Mr George Forbes Malcolmson, our deputy-governor, in the middle of last year.

Mr Grenfell had been a director since 1871 and he succeeded his father, who in his turn followed Mr Seymour Grenfell's grandfather, as a director of this corporation, so that there has been a direct connection between his family and this office since 1789, that is for 135 years.

Mr Malcolmson, who was elected the deputy-governor in 1907, was appointed a director in 1864, thus occupying a seat on the court for 59 years, the longest period of any director in the history of the corporation.

Both these gentlemen gave unstintingly of their best to the service of the corporation; their interest in its affairs was whole-hearted and unflinching, and their loss is deeply regretted by their colleagues on the board of directors and also by the officials and staff.

You will be interested to hear that the connection of Mr Malcolmson's family with the corporation has been continued by the election of his son, Mr Norman Malcolmson, to the court.

To succeed these gentlemen in the governorships, Sir Charles Eric Hambro, K.B.E., and Mr Charles L. Dalziel were elected sub-governor and deputy-governor respectively.

PREMIUM INCOME AND ASSETS OF COMBINED COMPANIES.

I will now comment briefly on the results of the various departments, but before doing so I should like to draw your attention to the statement of the premium income and assets of the Royal Exchange Assurance and its affiliated companies, which is this year published for the first time.

It will be seen from this statement, which is appended to the report, that the total premium incomes of both the fire and accident departments exceeded £1,500,000, while the total assets of the combined companies closely approached 12½ million pounds. The accounts now being submitted to you are those of the Royal Exchange alone. You will probably remember that, as I have informed you on previous occasions, the dividends declared in respect of the shares in our associated companies are included in the accounts in the revenue from interest.

LIFE DEPARTMENT.

Despite the condition of industry during the past year it is gratifying to see that in the life department the new sums assured at £1,877,000 considerably exceeded the new business in the previous year, while the total premium income at nearly £595,000 showed an increase of some £30,000 over that of 1922.

The rate of interest earned on the life fund was at the very satisfactory figure of £5 19s 4d per cent. gross, while the mortality profit during the past year was greater than we had anticipated. There is thus a very considerable reduction in the amount of the total claims paid and outstanding, which amounted to £296,000. The experience of the life department so far is such that we may look forward to a satisfactory position at the end of the present quinquennium, which closes on December 31, 1925.

Those stockholders who are thinking of increasing their existing life insurance may like to know that we have recently revised our non-profit rates, and that they now compare most favourably with those of other first-class offices and are well worthy of their consideration.

The life fund increases steadily, and at nearly £5,260,000 it shows an increase of over £400,000 on the figures of the preceding year.

In the annuity department also an increase in the new business is shown, and the fund now stands at £778,000, being more than £30,000 higher than in 1922; while the capital redemption fund shows an addition of over £20,000.

In the trustee and executor department there is a considerable expansion in the fees received. You will notice that £8,756 has been transferred to profit and loss, which is more than £6,000 over the balance transferred in 1922. It is evident from the growth of the department that it is supplying a public want, and that the manner in which it is being conducted meets with approval.

FIRE DEPARTMENT.

Gentlemen, I think we may congratulate ourselves on the results of our fire department, in which our largest business is done. Although the net premium income showed a reduction of £66,000, we have been able to transfer, including interest, the sum of £137,000 to profit and loss account. This is nearly 10 per cent. of the premium income. You will remember that last year we carried slightly over £200,000 to the profit and loss account, but, as I pointed out in my remarks at our last general meeting, this included £70,000 received from the Enemy Debt Clearing House, which, of course, is not a recurring item. Making an allowance for this figure, the profit is practically the same as in 1922, although it is made on a reduced premium income. I should like, if you will allow me, to congratulate the management of our fire department on this satisfactory result.

In connection with the marine department, the revenue figures are still being affected by the winding-up of previous years, when the premium income was more than double that now being written. The liabilities on past years have been estimated as carefully and as closely as possible, but the directors have decided to transfer back to the account the sum of £60,000 to provide for any unexpected shortage, should one occur.

MARINE BUSINESS.

The marine fund is now nearly 150 per cent. of the premium income, the position thus being, I think you will consider, very satisfactory.

The outlook for marine insurance business in the near future, however, is unsatisfactory, extensive competition having forced the rates down to a basis on which I am afraid it will be difficult to make profits. The corporation is fortunate in having in its underwriter one whose experience will prove invaluable in these difficult times, and the proprietors may rest assured that the business will continue to be written on sound and conservative lines.

Our management of the marine business of the Prudential Assurance Company still continues on the most cordial terms.

ACCIDENT DEPARTMENT.

Now, gentlemen, I should like to draw your attention particularly to the results of our accident department, as we are this year celebrating the 25th anniversary of its foundation. To have built up a premium income of nearly three-quarters of a million after such a short life, and to be able to carry a sum equal to 10 per cent. of the premium income to profit and loss account as we do this year, is, I think you will agree with me, a distinct achievement.

When I add that more than £700,000 has been transferred to profit and loss account during this period of 25 years, I am sure you will agree that this reflects the greatest credit on the management.

As I have pointed out, these figures are only those of the Royal Exchange, and do not include the results of the Car and General or the Local Government Guarantee Society, the former of which also has a somewhat similar premium income to that of our own accident department. Both these companies have shown satisfactory results during the past year.

PROFIT AND LOSS ACCOUNT.

Now that I have referred to the departments individually, I will turn to the profit and loss account, which shows how the various transfers which I have mentioned have been dealt with.

In addition to the transfers, amounting to £238,500, from the departmental accounts, we have net interest of £81,000, as against £73,000 last year, so that there is a total of £319,500 to be dealt

With. You will see that the dividend paid to the proprietors was £98,000 last year, while general expenses and income-tax amounted to a further £120,000. As I have already told you, the marine fund has been strengthened by a transfer of £60,000 from profit and loss, which leaves the balance of the profit and loss account at nearly £1,057,000, being an increase of over £40,000 on the balance at the end of the previous year.

If we turn to the balance-sheet you will see that the total assets of the corporation have increased £400,000 during the year. The balance-sheet takes its usual form, with the exception that the staff pension fund has been separated from our other miscellaneous reserve funds in order to take advantage of the provisions of the Finance Act of 1921, under which a considerable relief of income-tax should be obtained for the corporation.

DIVIDEND INCREASED.

I should like now to allude to the dividend which we recommend should be paid in respect of last year. In 1922 we paid 18 per cent. This year our interim dividend was increased by 1 per cent. to 8 per cent., and we now recommend to the court that a final dividend of 17 per cent. be paid, making 25 per cent. for the year. This is a substantial increase of 7 per cent. for the year, and it calls, I think, for some special comment on my part. Your directors decided to make this recommendation not because the trading results for 1923 have been exceptionally good, but because they consider that the reserves, which have been greatly strengthened during the last few years, now justify a more generous distribution to the proprietors. I should like particularly to point out to you that the amount necessary to pay this increased dividend is within the amount we bring into account for interest, and does not encroach on the trading profits of the Royal Exchange or its allied companies.

Gentlemen, I think you will agree that in these difficult times the accounts we have been considering are both satisfactory and encouraging, and I gladly testify that such good figures would have been impossible without the hearty co-operation of the various officials at the head office, the branch managers throughout the world, the staff generally, and our large army of agents both at home and abroad. I should like, therefore, in your name to thank all those who by their loyalty and zeal have helped to bring about such an excellent result.

CHANGE IN DIRECTORS' QUALIFICATION HOLDING.

In addition to the triennial election of directors, which under our regulations takes place this year, you will be asked at this meeting to pass a resolution authorising a reduction in the amount of stock required to be held by a director. When our first charter was granted in 1720 it was laid down that no person who did not hold at least £1,000 of stock should be elected a director, and this has remained unaltered until to-day. In our early days this was an entirely reasonable amount, but at its present price the qualification now represents an investment of nearly £5,500. I am sure you will agree that such a sum is out of proportion to the usual qualification required, and in certain cases it might well prevent the election to the court of a person who was eminently fitted to occupy the position, but who was disinclined to incur so considerable an outlay. It is, therefore, suggested that the holding of stock should be reduced to £500, and a resolution to this effect will be submitted later.

Before putting to the meeting the formal resolution that the printed report and accounts in your hands be adopted I will ask any proprietor who wishes to do so to put any questions, which I shall be happy to answer to the best of my ability.

No proprietor rising to address the meeting,

The Governor said: I beg to submit: "That the printed report and accounts for the year 1923 be adopted," and I will ask Sir Charles Eric Hambro to second that.

Sir Charles Eric Hambro, K.B.E. (the sub-governor), seconded the resolution, which was unanimously carried; and the proposed further dividend of 17 per cent., less income-tax, making 25 per cent., less income-tax, on the capital stock for the year 1923 was also agreed to.

On the motion of the Governor, seconded by Mr Charles L. Dalziel (deputy-governor), a resolution was adopted that the words "£1,000 stock" in regulation No. 9 be cancelled, and the words "£500 stock" be substituted therefor.

The Governor then formally announced the retirement from office of the court of directors, and a resolution was passed re-electing them for the coming three years.

Mr F. E. Marshall, in moving the election of Sir Nicholas E. Waterhouse as auditor for 1924, said that although he was not the oldest member of the corporation he had the pleasure and pride of holding some of the original stock, which had been handed down to him.

Dr T. Duncan Smyth seconded the motion, which was carried.

The court then adjourned.

THE UNION BANK OF SCOTLAND, LIMITED.
SATISFACTORY RESULTS OF YEAR'S BUSINESS.

The annual meeting of shareholders was held, on the 30th ultimo, in Glasgow, his Grace the Duke of Atholl, K.T., chairman of the bank, presiding.

The Chairman, in submitting the directors' report, said: The period covered by our accounts has again been one of a depressing nature, but on balance we can say that trade conditions show some slight improvement. The unemployment figures, which one regrets to see so high, are lower than they were a year ago, but, unfortunately, there is not yet that confidence which is a necessity for any real trade revival. During the past few months we have had a number of industrial disputes, and a continuance of these is bound to prove disastrous, not only to the trade of the country, but to the workers themselves. A number of our important industries, such as shipbuilding and the iron and steel trade, have had an unprofitable year, and if there is any further material increase in production costs we may actually lose definitely, and beyond hope of recovery, a substantial portion of our trade.

I do not think that it is realised by the public generally the extent to which employers, in order to keep their staffs together and provide employment, have been taking work at prices that yield them less than no return on their capital. If there is to be no outlook for these employers they will, however public spirited, be forced to face the question of whether it would not be better to scrap their works and go out of active business. That would be disastrous, but it is a problem which undoubtedly faces a number of employers to-day. As a bank, we have no politics, but I do feel that the facts I have referred to should be considered very seriously by politicians of all parties and by trade union leaders. If this country proceeds recklessly on the path leading to higher costs, with resultant loss of foreign trade, it will be faced with the fact that it cannot indefinitely satisfy the needs of the relatively large population contained in these islands.

Turning to the nation's finances it is satisfactory to note that during the past year there has been a further substantial reduction in the floating debt, and, although the path is a difficult one and progress may be slow, we seem to be going on sound lines in gradually reducing the heavy burden of national indebtedness. The money market is still in an artificial condition, and special operations make it difficult to take a reasoned view.

NATIONALISATION OF BANKING.

From time to time I observe that suggestions are made that banking should be nationalised, and that it is essential this should be carried out as the first step towards larger measures. I must say I cannot conceive of any sphere of business activity where nationalisation could be worse for the country as a whole than in banking. I should be the last person to criticise the Civil Servant, for whom I have the highest respect and admiration, but the taking of responsibility for rapid decisions which is so essential in banking at every branch bank in the country, in varying degrees it is true, is scarcely in keeping with the traditions or training of Government officials. Then as regards policy, is the money deposited with the banks to be used by Governments for any schemes which they may choose, or is the test to be, as is so largely the case at present, the capacity, character, and personality of the individual borrower? If the nationalisation of all banking is to come, it must surely come as the last stage after all other forms of individual effort have been nationalised. Individual effort is the mainspring of our foreign trade, and, if we are to exist without foreign trade, we must as a deliberate policy agree to have in these islands only a tithe of our present population—in other words, we can only keep alive such numbers as we can feed and clothe without importing.

YEAR'S RESULTS.

If you will now turn to our balance-sheet, you will observe that we have had satisfactory results, propose to pay the same dividend, and have once more increased our reserve fund, bringing it up to one and a-quarter millions as against the paid-up capital of one million pounds. We have increased the allocations to property accounts, and we suggest that the sum of £25,000 should again be set aside in respect of the bank's liability for pensions. We have very materially increased the amount to be carried forward, as we feel that in these uncertain times this is a desirable step to take.

Mr Peter Rintoul, C.A., in moving the adoption of the report and accounts, dealt at length with the balance-sheet figures.

The resolution was carried, and the formal business having been transacted, at an extraordinary general meeting held subsequently it was resolved to alter the number and denomination of the bank's shares from 100,000 shares of £50 each (£10 per share paid up) to 1,000,000 shares of £5 each (£1 per share paid up), and this will come up for confirmation at the meeting called for the purpose on May 21st.

THE LONDON ASSURANCE.

DIVIDEND INCREASED—FUNDS EXCEED TEN MILLIONS.

The annual general court of the London Assurance was held, on the 30th ultimo, at the offices of the corporation, 1 King William street, London.

Mr Colin Frederick Campbell (the governor), in the course of his speech, said:—The life department of our business has again had a satisfactory year, and the fund has been increased by £278,000, and now stands at £3,659,000. The increase in the fund during the past three years has amounted to over £700,000. The new life business shows a considerable advance on the figures of 1922, and the mortality has also been favourable. The market value of the securities in this fund has been maintained, and the rate of interest earned was £5 9s 10d per cent., against £5 13s 9d per cent.

We have now had three favourable years in this quinquennium, and we hope that the next two will not in any way spoil the present satisfactory outlook.

FIRE ACCOUNT.

Turning next to the fire account, I am able to report a distinct improvement. The net premium income, which last year fell a little below one million and a half, now exceeds £1,500,000, and the profit on the account is considerably higher than was experienced a year ago. We have been able to add £100,000 to the fire fund, which now stands at £1,400,000, included in which is an additional reserve of £759,000, after setting aside 40 per cent. of the premium income for unexpired risks. £89,700 has been transferred from this account to profit and loss account. All branches of the business contributed to the increase of premium and profit, although the improvement abroad was more marked than was the case at home.

Outside competition for home business continues to be very keen, but the companies are taking what steps they deem to be necessary to protect their interests.

As regards our business in the United States, we are indebted to the energy of our managers there for the gratifying results which have been obtained.

In the foreign field depreciated exchanges have seriously reduced the volume of our foreign agency profit, and it is, I think, a matter for congratulation that the results have been so satisfactory. We are satisfied that our business abroad is steadily developing, and Mr Durham, one of our joint fire managers, again visited several of the foreign fields last year.

MANHATTAN FIRE AND MARINE INSURANCE COMPANY.

Before passing from this department of our business I have to inform you of an important step that we took at the end of last year in the establishment of an American company under the name of the Manhattan Fire and Marine Insurance Company, with a share capital of \$400,000 and a surplus of \$600,000. We have had this step under consideration for a long time, and we came to a final decision in the matter at the end of last year. Most British companies operating in the United States have found it desirable to organise an American subsidiary, and we felt the time had come for us to take a similar step. Powers have been taken to transact both fire and marine business, but it is not our present intention that the Manhattan Company shall enter the marine field.

The marine account is once again an exceedingly good one, and is even better than that of 1922. As a result we have again added £50,000 to the marine fund, bringing it up to £900,000, and have transferred £160,700 to profit and loss account.

The competition for Hull business, which was so pronounced in 1922, continued until August of last year, when underwriters generally made a determined attempt to stop any further reductions. The situation had become so serious that it was obvious to all concerned that, unless something was done to check reductions in both rates and values, the prospects of making future Hull business pay were becoming more and more remote. A general understanding was eventually arrived at to refuse further concessions in terms for renewals, and this verbal agreement was well maintained, and accomplished the purpose for which it was conceived until quite recently, when, owing to the strenuous competition already referred to, the market composed of underwriters who were not parties to the agreement became broadened to such an extent that it has most regrettably been found necessary to abandon the understanding already mentioned.

During the summer we entered into an arrangement with the Automobile Insurance Company of Hartford, Connecticut, an American company of high repute, to represent them and to underwrite for them in the London market. This arrangement is very similar to that we made a few years ago with the London Guarantee and Accident Insurance Company, which has resulted in profitable business to both parties, and I am hopeful that we may be equally fortunate while acting for the Automobile Company.

The accident insurance and the employers' liability insurance accounts call for no special comment, but I am glad to be able to

report a considerable increase in the premium income of the general accident insurance account. We are quite satisfied with the steady progress being made in this department of our business, and as you will observe the funds are being steadily built up.

PROFIT AND LOSS ACCOUNT.

If you will turn now to the profit and loss account, the interest and dividends received have amounted to £130,000, or about £17,000 in excess of the sum received last year. The transfers from the different accounts, with the balance brought in, bring the total up to £662,700. When considering the amount of interest and dividends received in relation to the sum paid to the shareholders in dividends, you will bear in mind the substantial sums received from interest and dividends which appear at credit of the fire, marine, and accident accounts in addition to the £130,000 shown in the profit and loss account.

On the other side of the profit and loss account the principal items are the amounts paid in dividends, totalling £202,000, and the transfers of £25,000 to contingencies account, £50,000 to general reserve, and £25,000 to premises. You will also notice that this year we have thought it necessary to provide £70,000 for income-tax and corporation profits tax, leaving in the account the slightly increased balance of £251,300.

The directors again propose to increase the dividend, and in so doing to alter the method of distribution. Hitherto our dividends have been paid free of tax, but the directors propose in future to declare the dividend gross. We recommend, therefore, that the dividend in respect of the year 1923 shall be 10s 6d per share, less tax, which represents an increase net of 2½ per cent., while income-tax remains at 4s 6d in the £, or, in other words, a return of 42 per cent. gross. In making this change we think we are conforming to what is becoming the more usual practice, as the shareholders are better able to realise exactly what the income-tax deducted from the dividend amounts to. Nevertheless, we should not have made the change now had we not been in a position at the same time to increase the amount of the dividend, so that the net result to the shareholders will be distinctly more than a year ago.

BALANCE-SHEET FIGURES.

Finally, we come to the balance-sheet, the figures of which do not call for any special comment, except that you will notice that the total funds now exceed ten millions. The investments are worth substantially more than the figures at which they appear in the balance-sheet, and the contingencies account is, therefore, an entirely free reserve.

I sometimes hear it said that the London Assurance, with its record of over 200 years, is rather old-fashioned, but I cannot resist pointing out that the total assets, which are now 10 millions, were in 1914, 10 years ago, only five millions, and this increase has been secured by a steady growth of business and not by a series of amalgamations.

The figures of the "British Law" are merged with those of the London Assurance, but this is not the case with the figures of the "Vulcan Boiler," and as the Manhattan Company did not commence operations until this year, there are no figures belonging to that company included in the present accounts.

The British Law Company controls a large volume of valuable home business, and our thanks are due both to the directors of the company in London and to the local directors throughout the country for their continual efforts both to retain and to increase this important business. I can only hope that the greatly increased strength given to the company through its association with the London Assurance renders their task less difficult than it might otherwise be.

The Vulcan Boiler Company transacts a highly organised and technical business of a special kind, and the success of this company is largely due to the personal attention given to its affairs by the Chairman and the board of directors, supported as they are by a very efficient staff specially trained for this particular business.

The balance-sheet of the Reinsurance Company deserves some notice, as it is a particularly good one, and this company is now establishing itself in the market as a sound concern possessed of substantial reserves.

THE FUTURE.

As regards the business of insurance as a whole, I do not know that on this occasion I can say very much. We are still faced with severe competition in all departments, so that we have to rely increasingly on the efficiency of our management and staff to produce a profit at the end of a year.

There has been, to some extent, a revival in trade, and given a continuance of this revival our task should be relatively easier, but until the political situation in foreign countries becomes more normal, I cannot hold out much hope of any material increase in the general business we are able to do.

The absorbing interest this morning is, of course, the Budget,

and probably a great many of you, like myself, have only had time to hurriedly read the main provisions.

I am extremely glad, however, to see that the corporation profits tax is to be finally done away with—(hear, hear)—as, in addition to the fact that the corporation will benefit materially, I have always thought that the tax as a means of raising revenue was an inequitable and unfair one.

The report and accounts were unanimously adopted.

PHOENIX ASSURANCE COMPANY, LIMITED.

GOOD RESULTS—STRONG FINANCIAL POSITION.

The annual meeting of the Phoenix Assurance Company, Limited, was held, on the 30th ultimo, at Phoenix House, King William street, London, Sir Gerald H. Ryan, Bt., presiding.

The Chairman, in the course of his remarks, said: I recall that I have repeatedly impressed upon you two things: first, that a widespread and comprehensive business is the best safeguard against those passing fluctuations which the history of insurance proves to be an inherent feature of the business, and next, that with a business subject to such vicissitudes the wise and prudent course is to strengthen your reserves wherever you can. The record of 1923 abundantly confirms these views.

The income from fire premiums has increased from £4,747,557 to £5,478,432, partly the result of an expansion of our business in the United States. The loss rate works out at 47.8 per cent. of the premiums, compared with 57.8 per cent. in 1922 and 55.4 per cent. in 1921. We have to set aside an additional amount of no less than £292,000, being 40 per cent. of the increase in our income, as a reserve for unexpired liability.

With our expenses kept at the rate of 40.5 per cent.—quite a moderate ratio for these times—a profit balance is shown of £348,859, or about 6½ per cent. of the premiums. Unfortunately, however, a considerable share of the sum of £252,329 paid away for colonial and foreign taxes would have to be deducted before the true outcome of the fire business is arrived at, and this would reduce the percentage of profit to about 4 per cent. of the premiums. We have a large and sound business in this department, and for these unfavourable times I do not think we have much to complain of.

The premiums in this department amounted to £1,257,277, as compared with £1,438,838, the decrease being due partly to a fall

in the rates at which risks are being accepted under pressure of competition, and partly to a wise restriction of the business. The 1922 account has been closed with a profit of £140,007, which works out at nearly 10 per cent. of the premiums of that year. This is a much higher profit than we have shown for the last few years, and reflects much credit on our underwriters. I think I ought to sound a note of warning that our shareholders should not expect such a handsome contribution from our marine account in the current year.

ACCIDENT DEPARTMENT.

In the accident department our premiums have advanced from £5,374,328 to £6,157,389, and are again this year the largest contribution to the company's premium revenue. The chief expansion has taken place in the United States, where our desire is rather to control or restrict than to expand our business under present conditions. The claims were at the rather high level of 58.1 per cent. of the premiums, expenses were somewhat less than normal at 38 per cent., and as a result we find that we require a sum of £70,740 out of profit and loss to maintain our full reserve of 40 per cent. of the total premiums. This is the first time, for many years at least, that we have had to draw upon our profits to make good our reserves in the accident branch. In many individual branches of our business we have done well, but in the United States we have suffered, in company with other offices, in our experience of workmen's compensation business.

Our life department's progress can be regarded with complete satisfaction. New policies were completed for £1,863,399, and claim payments were well within the expected amount. The funds increased from £11,718,965 to £12,136,921, and yielded a net rate of interest of £4 12s 6d per cent., as compared with 3 per cent., assumed in the calculations of our liabilities. The assets have increased in value concurrently with the rise in the quotations of high-class securities, but this increase is not brought into account, and there is a large margin of value untouched. A valuation of the non-participating fund has been made, and a profit of £15,000 carried to profit and loss.

PROFIT AND LOSS ACCOUNT

As regards the profit and loss account, it will be seen that the interest on shareholders' funds amounted to £511,414, dividends paid amounted to £444,712, and adding interest on debenture stocks, namely, £92,270, we get a total of £536,982. We can therefore say that our dividend is practically secured by our free

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves exceed £13,000,000

HEAD OFFICE:
62, OLD BROAD STREET,
LONDON, E.C.2.

BRANCHES OF THE BRITISH BANK OF SOUTH AMERICA, LIMITED.

BRANCHES OF THE COMMERCIAL BANK OF SPANISH AMERICA, LIMITED.

income, quite apart from trading results. This is a very strong and most satisfactory position for an insurance company to be in. So long as this continues we need not be unduly concerned about any wayward experience in our fire, marine or accident departments. A recovery of £156,628 from over-payments of excess profit duty and other taxes in past years, fortunately increases the sum we have at disposal this year to £337,628, and thus enables us to write £250,000 off the "Cost of business acquired," and to deal with the item of office premises account and commutation of pensions by writing £25,000 off in each case.

I think I have now touched upon the salient features in our accounts, and there is but little left for me to say. One important advantage we can properly claim is that our financial position is stronger than ever at the end of 1923. Not only have we written off £300,000 out of profits, but we have also a considerable surplus of value in our marketable securities. This increment is a concealed further reserve, and makes our position unassailable.

As to the mortgages and properties, I am happy to say that they are well secured and of good value.

The report was unanimously adopted.

LICENSES AND GENERAL INSURANCE COMPANY, LIMITED. GOOD RESULTS—INCREASED DIVIDEND.

The ordinary general meeting of the Licenses and General Insurance Company, Limited, was held, on the 1st instant, at the head office, Moorgate, London, Mr A. W. Ruggles-Brise presiding.

The general manager and secretary (Mr Victor Thomson) read the notice convening the meeting and the report of the auditors.

The Chairman said that the figures now presented, if not fully attaining the board's expectation, showed even better than might have been anticipated. He felt sure that shareholders would agree that it was a matter for congratulation that the directors were able to record an advance in retained premium income of no less than £18,461, that the claims were over all no more than normal, that the invested funds had increased by £25,930, and that the total assets of the company, which now stood at £614,958, had been so substantially added to in the sum of £47,663.

FIRE DEPARTMENT.

That the increase of income recorded was mainly found in the fire department must prove satisfactory in enabling them for the first time since their entry into the general field to show six figures of net fire premium income in the sum of £100,231 recorded. The ratio of losses followed very closely the previous year's experience, after allowing for claims in suspense, in an actual percentage of 49 per cent., and the consistent maintenance of such a level would be a happy achievement, and one for which they would strive.

He had to record a very slight improvement in personal accident business. The account for employers' liability showed a reduction in premium of a little over £2,000, undoubtedly due to trade conditions, and, consequently, much reduced sums paid in wages. In the general account there was a small reduction in income of £6,000, but it was interesting to note that the number of proposals dealt with in this particular section, and, indeed, by the company as a whole, was in excess of the number handled in the previous year, and when the trade of the country improved, there was no doubt that this particular account would reflect such improvement.

As regarded the licence department—the original reason for their existence—there was not a very great deal to say, but it had not been an uninteresting year. It had been proved to the directors that there were aspects of licence insurance and of licence claims which might even be new to them, for they had had some extremely delicate and interesting problems placed before them by their brewery connections. This was a class of business in which they specialised, and they intended, by such a happy interpretation of the needs of the trade, to continue to retain consistently the fullest respect of this great industry.

The marine section of the business continued normal and gave the directors no concern.

With regard to management expenses, it was still their desire to attain a lower ratio by combining economy—or rather wise spending—with efficiency; but progress had been a little retarded by continued high costs and by the added expenditure following their occupation of the new head office premises, and as a consequence the total expenditure had increased by some £6,000. The ratio, however, remained constant at 28 per cent.

THE DIVIDEND.

The directors recommend a final dividend of 8½ per cent., free of tax, making, with the interim dividend, 13½ per cent., free of tax, for the year. This was an increase of 1 per cent. over the previous year. It would be welcomed as an indication of progress and as reflecting also the increase attained in the total interest

earned on the funds, this dividend being provided, in accordance with their previous principles, within the margin of such interest earnings. By the continuance of this policy, while the increase in dividend might be a gradual one, it should also acquire some merit of stability, and, so far as the directors could see, the dividend should not, in the ordinary course of events, be subject to retrogression—a state of affairs they hoped to avoid by discouraging any too rapid increase of distribution.

As to reserves, they had continued this year their principle of maintaining that of unexpired risks at the full 45 per cent., which had been their practice so far, and which was generally accepted to be slightly in advance of requirements; and, having made most conservative provision for all outstanding claims, they were able to show a total reserve to policyholders equalling 101.7 per cent. of the premium income. Too much attention could not be paid to the virtue of reserves in an insurance company, and he could not think that the shareholders would grumble in any way at the pursuance of a course of action which demanded the fullest maintenance of that strong arm.

The report and accounts were unanimously adopted.

OCEAN ACCIDENT AND GUARANTEE CORPORATION, LIMITED. CONSIDERABLE INCREASE IN PREMIUM INCOME.

The 53rd annual general meeting of the Ocean Accident and Guarantee Corporation, Limited, was held, on the 29th ultimo, at the offices of the corporation, 36 to 44 Moorgate, London, Mr E. Roger Owen (the chairman) presiding.

The Chairman, in moving the adoption of the report, said: The assets stand at £8,048,905, as against £7,663,254, an increase of £385,651. For the first time in the corporation's history the revenue for the year has exceeded £6,000,000, the actual figure being £6,078,383, an increase of £383,836. The total premium income, after deduction of reinsurances and bonus to assured, amounted to £5,777,601, an increase over 1922 of £362,060. The claims paid, including provision for all outstanding losses, amounted to £3,391,183, representing a loss ratio of 58.7 of the premium income, against 56.5 in 1922. Commission to agents and expenses of management (exclusive of taxes) accounted for £1,995,579, being 34.5 per cent. of the premium income, against 36.2 per cent. in 1922. In taxes we paid during 1923 £266,040, a sum equal to 4.6 per cent. of our premiums. This is a charge that continues to represent a heavy burden upon our undertaking.

A DIFFICULT YEAR.

The year 1923, having regard to adverse economic conditions, was a difficult one for casualty insurance companies, and consequently it is satisfactory to be able to report a considerable increase in our premium income, especially as the increase represents expansion in practically all of the countries in which the corporation is doing business. The loss ratio has increased by 2 per cent. This is due to adverse experience of workmen's compensation business in America, which we in common with the other offices interested in that business have suffered. Rates in the majority of the States have hitherto been inadequate, but a determined effort is now being made to improve them, and while this may not result in immediate profits, it is a favourable feature, which, added to a continuance of the most careful underwriting on our part, gives us reason for looking for better results in the future. No stone is being left unturned in the direction of improving the results of this important section of our business.

In the United Kingdom, also, workmen's compensation business plays a large part in our figures, and 1923 has seen some important developments in connection with this section of our business. The new "Workmen's Compensation Act, 1923," came into force on January 1, 1924. The Act extends the liability of employers very materially, and without entering into a detailed comparison between the present and previous benefits, a striking feature is the increase in the maximum compensation, payable in the case of a fatal accident, from £300 to a sum which may be in excess of £600 according to the number of dependents left by the deceased workman.

During the three years ending 1923 our income in this department has shown a very substantial decline from £712,737 in 1921 to £467,785 in 1923, and this despite the fact that at the end of 1923 we were insuring nearly 1,000 more employers than in 1922.

TRADE AND INDUSTRIAL CONDITIONS.

These premium figures tell an eloquent but sad story of British industry and trade generally during the past two years. A slight improvement is noticeable this year, but in view of the industrial unrest which unhappily still exists it is not possible to say whether this will be maintained. Needless to say, we sincerely hope it will be. Diminished values and shortage of stocks again had the effect during 1923 of limiting expansion in our income in the fire, burglary, and some other departments in the United King-

dom, although in each case at the end of the year we had many more policies on our books than at the beginning.

The increase in the use of motor-vehicles, both for private and commercial purposes, led to a satisfactory expansion of our income in this important department. A gratifying increase was also registered in the engineering department, which insures and inspects boilers, lifts, cranes, and electrical plant of all kinds, &c.

We have a great and very complete world-wide organisation, however, to maintain at the high pitch of efficiency which we have adopted as the "Ocean" standard of service to our agents and policyholders, and this must be kept unimpaired.

THE FUTURE.

As to the future, I do not care to prophesy, but you will be interested to know that our income again shows an increase to the end of March, 1924, and this increase is not drawn from any one country, but applies to every branch of our business throughout the world.

Of course, it is too early to draw any conclusions from this, but I can safely say it is certain that the fully equipped organisation of the "Ocean" and the "Columbia Casualty" will enable us to reap the maximum of advantage following in the train of improvement in the business conditions of the countries where we are established.

The report was unanimously adopted.

CONSOLIDATED WATER WORKS COMPANY OF ROSARIO, LIMITED.

STEADY AND SATISFACTORY PROGRESS.

The twenty-ninth ordinary general meeting of the Consolidated Water Works Company of Rosario, Limited, was held on the 29th ultimo, at the offices of the company, 52 Moorgate, London, Mr James Anderson (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the business of the company continued to make steady and satisfactory progress. The number of services in operation had increased by 1,710, or about 6 per cent. The extension of the business reflected in the income, gross revenue showing an increase of £7,933 and the net £4,068. The only unsatisfactory feature in the accounts was the loss in the remittance of profits to this side, which amounted to £9,349. That was a matter over which the board had no control, and their only consolation was that their profits were otherwise so satisfactory that they were able to meet that loss, pay their usual dividend and also add to the reserve and carry-forward.

All through the war years they were able to maintain the 8 per cent. dividend, and this year they were able to do a bit better by paying the final part of the dividend tax free. That was equal to a bonus of nearly 1½ per cent., and they had thought it better to give the shareholders the benefit in that form rather than by giving a cash bonus or increasing the dividend. The business was looking very well just now, and they hoped they might be able to again resume their original practice of paying dividends tax free, but that would depend on circumstances, and on the profits they had at their disposal. The amount at credit of reserve fund for redemption of capital at the close of last year was £144,845, and of that there was represented on the other side of the balance-sheet investments to the value of £97,516, so that it would be seen that they were short invested by the sum of £47,329.

The reason for that was that the business of late years had been calling for capital expenditure, and times were very unfavourable for raising fresh capital. The money, therefore, that should have been employed in adding to investments held for capital redemption had been employed in the business temporarily. The directors were of opinion that the time had now come when that matter should be put right, and they proposed doing so by the issue of £100,000 of share capital, for which the directors were asking powers that day. As to the prospects for the current year, the Chairman observed that the outlook was quite satisfactory.

The report was unanimously adopted.

ENGLISH ELECTRIC COMPANY, LIMITED. INCREASED AMOUNT OF ORDERS.

The fifth ordinary general meeting of the shareholders of the English Electric Company, Limited, was held, on the 30th ultimo, at the Connaught Rooms, Great Queen street, London, Sir Charles E. Ellis, G.B.E., K.C.B., chairman of the company, presiding.

The secretary, Mr E. D. Johnson, A.C.A., having read the notice convening the meeting and the report of the auditors, the chairman said, in moving the adoption of the report and accounts, that in spite of the admittedly difficult trading conditions of the year under review, the net profit of £261,793 was practically equal to that shown in the previous year. In all the circumstances this result was one on which they had every reason to

congratulate themselves. The board, during last year, had been able to refund the whole of the issue of £1,250,000 8 per cent. short-date notes for an equal number of 6 per cent. 40-year convertible debentures. This operation had the very gratifying result of reducing their fixed debenture charges by no less than £41,449 per annum.

The orders received during the year under review were much in excess of those for the previous year, and contracts were obtained from all parts of the world. Their satisfactory progress in water-power development had been more than maintained. Over 200,000 h.p. of water turbines, with the appropriate generating plant, were sold during the year, and they secured orders for the largest units ever manufactured in this country, both for high and low falls.

"English Electric" motors and control equipment were thoroughly established on the Midi Railway of France. A very large order for electric locomotives for the Japanese Government Railways was delivered partly before and partly after the earthquake, and it was a tribute to their many friends in Japan that in spite of the appalling disaster which overtook that country, the majority of the locomotives were installed and ready for operation. Work on the equipments for the electrification of the Great Indian Peninsula Railway was well on towards completion. Their largest traction contract for the year at home was for the electrification of the South-Eastern section of the Southern Railway; that order comprised 508 motors, each of 300 h.p., and 19 1,500 k.w. rotary converters.

The whole of the active productive units of the company were working full time, and this happy state of affairs was likely to continue for some time to come. The future was by no means free from anxiety. The competition of countries with depreciated currencies and lower production costs was acting continuously as an obstacle to a really fair price being obtained.

ARMY AND NAVY CO-OPERATIVE SOCIETY, LIMITED. RECORD OF PROGRESS—INCREASED DIVIDEND.

The annual general meeting of the Army and Navy Co-operative Society, Limited, was held, on the 30th ultimo, at Caxton Hall, Westminster, London.

The Right Hon. Lord Ebury, D.S.O., M.C., the chairman of the company, who presided, said: Ladies and gentlemen,—I think you will readily agree that the results disclosed show a very marked improvement—so much so that they may almost be said to speak for themselves. These results have determined your directors to recommend an increase in the dividend amounting to £41,000. They admit also of the provision of the £9,264 required to maintain our debenture redemption fund policy, and after reserving the sum of £7,000 for corporation profits tax there remains £32,995 to be carried forward, as against £16,972 in 1923. I venture to hope that you will regard this as a satisfactory record of progress. You are no doubt aware that the trading conditions prevailing in the past year have been anything but favourable—very much less favourable than the results would appear to indicate. Trade in the early part of the year was very dull generally owing to unseasonable weather. In January last the country experienced a railway strike, and in December there was the General Election—which, by the way, creates a far greater disturbance in this kind of business than people realise—and, coming as it did during the busiest season, it naturally had an adverse effect upon our results. Notwithstanding these considerations the society's policy of improvement of its facilities and expansion of its membership has resulted in a considerable increase in its London business.

I feel you will be interested to know that the honorary membership scheme has brought the society no fewer than 45,000 potential customers—and your directors hope that this extended association will provide the society with a fresh and richer vein of custom. The extensive alterations which have been in progress inside the premises have, I regret to say, necessarily rendered shopping conditions anything but ideal.

BUSINESS IN THE EAST.

Dealing with the net profit there is an increase for the year of £61,805, and after taking into account the amount brought forward from 1923, and deducting the interim dividend of £41,000, we have left for disposal a sum of £171,359, or an increase of £63,886 upon the amount available in the previous year's balance-sheet. I am very glad to be able to state that reports from Bombay show a marked increase in the volume of business done, and signs are not lacking that in Calcutta the same condition will shortly prevail. The society's financial secretary and general manager has just returned from a visit to both depots, and you will I know be glad to hear that he confirms my reports as to the value and condition of our assets out there. He also reports most hopefully as to future prospects, and he has testified to the spirit of loyalty and goodwill prevailing amongst our staff in India. The improvement in business and the outlook is in large measure due

to their efforts and their determination to further the society's interests, which I feel confident you, together with myself as controller of Indian branches and my colleagues on the board, will be only too glad gratefully to acknowledge. You will have gathered from the reference in my speech of last year to Indian trading conditions, that the society's business in the East had been passing through very difficult times; that altered conditions presented fresh problems towards the solution of which the earnest consideration of your board was being directed, I am glad to be able to tell you with confidence that our efforts show every indication of proving successful, and notwithstanding the fact that conditions there remain exceedingly depressed and difficult, we have high hopes that the corner has been turned.

HOME PROSPECTS.

In regard to home prospects, you will no doubt share my hopeful confidence concerning the future of the society having regard to the story told by the progressively satisfactory balance-sheet which has been placed before you. We are continuing to make progress—and when our alterations are complete we may reasonably hope that the improved facilities and the solid advantages we provide in the matter of quality and value will ensure prosperity for the society. But this is always subject to the provision that means may be found to allay the spirit of social unrest which from time to time menaces the interest of trade in this country and the welfare of all concerned in it, whether as investors, producers or distributors—both employers and employed. In recent years conditions in British industry have become increasingly influenced by political and legislative considerations. Influences are at work which are very detrimental to trade prosperity, and which are a source of grave anxiety to responsible persons engaged in it. I do not propose to discourse upon the complex and various factors which constitute the social and economic problems with which we are faced to-day, nor is it within my province to allocate responsibility for the existing state of affairs or to suggest remedies, but after reflecting upon those problems, I invariably arrive at the same two conclusions: firstly, that until some constitutional method of settling trade disputes is made a condition precedent to direct action by either side, the trouble will continue and the much-needed impetus to the trade of the country will be retarded, and, secondly, we need to create a less bitter atmosphere and a more charitable spirit of goodwill.

The report and accounts were adopted after some discussion.

LONDON TRUST COMPANY, LIMITED.

SHARE BONUS DISTRIBUTION.

The 35th annual general meeting of the London Trust Company was held, on the 29th ultimo, at Winchester House, London, Mr William Douro Hoare, C.B.E., presiding.

The Chairman said that the trust had had another satisfactory year, and the revenue account showed an increase in the dividend receipts. After allowing for the fixed charges for interest, preferred dividend, and expenses there was a balance of £56,470, as compared with £45,641 in the previous year, an increase of nearly £11,000. The board recommended the payment of a dividend on the deferred stock of 12 per cent., the same as last year, and that £45,000 be placed to the general reserve account, as compared with £10,000 last year, leaving a balance to be carried forward of £27,036, against £50,441 brought in.

The value of the investments exceeded the amount at which they stood in the balance-sheet, and the reserve accounts were intact. The investments showed an improvement in value as compared with last year, which was satisfactory. The directors were of opinion that the position the company had now attained justified them in recommending that a portion of the general reserve account should be capitalised. Stockholders would receive an allotment of one £10 share in respect of very £25 deferred stock held on that date. The allotment letters relating to these shares would after June 2nd next be exchangeable for certificates of the relative amount of preferred and deferred stocks, viz., £3 preferred stock and £7 deferred stock in respect of each share, and these amounts of stock would be added to stockholders' accounts and rank for dividend as from April 1st last. To those stockholders interested in the trust since its inception it would come as a compensation for the losses sustained prior to the reconstruction in 1907, and allowing for the enhanced value of the stock the bonus would make up for the capital lost at the time of the reconstruction.

After the new shares had been divided into the respective amounts of stock the trust's issued capital would stand at £1,050,000, in £570,000 5 per cent. cumulative preferred stock and £480,000 deferred stock. He could not forecast the future, so was unable to foretell what the dividend on the deferred stock would be next year, but provided there was no serious falling off in the revenue he hoped they would be able to recommend the payment

of 12 per cent. Allowing for the increased stocks issued it would take next year £11,500 more to meet the dividend on the preferred stock and maintain the dividend on the deferred stock at 12 per cent.

The report was unanimously adopted.

MYSORE GOLD MINING COMPANY, LIMITED. LARGE REDUCTION IN COSTS.

The forty-fourth ordinary general meeting of the Mysore Gold Mining Company, Limited, was held, on the 28th ult., at Cannon street Hotel, London, the Hon. Lionel Holland (chairman of the company) presiding.

The assistant secretary (Mr W. H. Skilton) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said that what they might term the campaign of intensive economy, commenced in 1921, had fully justified itself by the results now shown. The company crushed during the past 12 months 20,500 tons less than they did in the preceding 12 months. Their total fine gold output was less by about 3,000 ounces. Their revenue receipts were down by over £26,000. Nevertheless, their profit for the year exceeded their last year's profit. There was a reduction approaching £40,000 in the revenue expenditure. The outstanding feature of the year's accounts was the quite remarkable reduction in costs realised following upon a substantial saving already effected during the preceding year. Although the tonnage stoped was materially larger than that of the year before, their actual mining costs decreased by over £18,000.

The profit, including the balance carried forward from the last accounts and the dividend from the Kolar Power and Brickmaking Companies, totalled over £207,000. The interim dividend paid out last October absorbed £45,750. They were left with a disposable balance of £107,426, as against £93,282 in 1922. Out of this balance the directors had declared for distribution a dividend of 1s 6d per share, making the total dividend for the year 2s 3d per share—equivalent to a dividend at the rate of 22½ per cent. The balance-sheet figures were evidence of a healthy financial position. Although the year's operations at depth had as yet given no definite assurance of result, the mine at the deepest levels reached was beginning to give signs of renewed vitality and animation. Forty years ago their great mine was on the point of being shut down, but thanks to the insistent optimism of Sir Charles Tennant and Messrs John Taylor the workings were carried deeper, and within two years the Champion lode was proved at depth, and the company since then had distributed in dividends alone over £9,000,000. This had been the history, again and again repeated, of the Kolar field. Another reason for optimism was the encouraging developments which had been made in the adjoining Champion Reef property.

Mr Henry Taylor seconded the resolution, which was unanimously adopted.

CONSOLIDATED MINES SELECTION COMPANY, LIMITED. SUCCESSFUL RESULTS AND PROSPECTS.

The twenty-eighth ordinary general meeting of shareholders of the Consolidated Mines Selection Company, Limited, was held, on the 29th ultimo, at Winchester House, Old Broad street, London, Mr Walter McDermott (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the profit for the year was £87,048, and they recommended a dividend of 17½ per cent. Although the sale of their former South African interests to the Anglo-American Corporation had changed the form of their shareholdings, the basis of their assets and the prospects of their future dividends depended upon the same mining interests as they formerly held direct.

The accounts of the Anglo-American Corporation were of prime interest to the shareholders, and he thought they would be satisfied with the general position shown. The year's earnings allowed of the payment of a 10 per cent. dividend, and the placing of £200,000 to reserve, with a substantial balance forward. Besides the large interest of the corporation in the group of gold mines, the strong position secured by the corporation in the mining and marketing of diamonds had made that industry a very important element in all estimates on the position and prospects of the corporation. The demand for diamonds remained better and steadier than people expected, so that there was every reason to believe that the capital invested in this side of the corporation's investments would secure a good return during the present year.

As regarded the Brakpan Mines, Limited, two dividends were paid for 1923 at the rate of 20 per cent. and 22½ per cent. The quantity of ore crushed was a record figure, giving a working

Gross profit of £611,448, including premium on gold. The working costs were 6s per ton less, and there was a large increase in ore reserves, while the amount of development done was very large. As regarded the future, there was the encouraging feature of the long distance still to be opened on down to the West Springs Mine, where good development had been made. The first quarter of this year showed an aggregate return of 221,500 tons milled for a yield of £400,319, including premium on gold, and the consulting engineer anticipated crushing about 900,000 tons in 1924. Further good development could be safely counted on.

The Springs Mine had made a very good showing, and had paid two dividends during the year of 12½ per cent. and 17½ per cent. respectively.

The resolution was carried unanimously.

HOPE BROTHERS, LIMITED. SOUND AND SATISFACTORY POSITION.

The twenty-fourth annual general meeting of Hope Brothers, Limited, was held, on the 30th ultimo, at the Cannon street Hotel, London.

The secretary (Mr F. L. Brayne, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

Mr. T. Edward Goodyear (the chairman) presided, and, in moving the adoption of the report, said that the past year was a difficult one for business, and the continued unsettlement in industrial affairs and the cold and unseasonable weather of the spring and early summer had had a detrimental effect on their trade. He thought it would be agreed, however, that the report submitted was a satisfactory one. In the early part of the year they were able to dispose of the remaining shares which were offered to the shareholders in 1920, and which were not then subscribed. This had enabled the company to finance its increased business with less assistance from their bankers than had been possible for some years. A small premium was obtained on these shares which, with a further sum from profit and loss, making in all £20,000, the directors proposed to apply to the reduction of goodwill account. With the provision of this capital the directors had felt justified in acquiring further premises for the extension of their business, and branches would be opened at Plymouth and at Cardiff as soon as the necessary alterations were completed.

This year they celebrated the completion of 50 years since the business was founded by Mr Peacock in a small shop on Ludgate-hill. At the present time, including the branches shortly to be opened at Plymouth and Cardiff, they had 37 branches, in addition to two thoroughly well-equipped and up-to-date factories. The company had never been in a sounder or more satisfactory position than it was to-day. The balance-sheet showed an absolutely healthy position; their cash resources were adequate, their stock was clean and well purchased, and their premises and plant were worth far more than the valuation in the balance-sheet. The revenue account also showed a satisfactory result. During the past six years they had not only paid an average dividend of 10 per cent. per annum, but had set aside for reserves and in reduction of goodwill account upwards of £10,000, and provided more than £20,000 for the benefit of the staff.

The formal business having been transacted, the report was unanimously adopted.

ANGLO-AMERICAN OIL COMPANY, LIMITED. SATISFACTORY RESULTS AND GOOD PROSPECTS.

The thirty-seventh annual general meeting of the Anglo-American Oil Company, Limited, was held, on the 30th ultimo, at 36 Queen Anne's gate, Westminster, London, S.W. 1, Mr F. E. Powell (the chairman) presiding.

The secretary (Mr A. H. Hewett) having read the notice convening the meeting,

The Chairman, in the course of his speech, said that during the early part of 1923 there were indications of considerable trade revival, but that this had not continued. In spite, however, of the lessened activity, the results of the year's business show that the total was considerably larger than the previous year, and the trading profits were also larger. Lubricating oil trade also continues to improve. Owing to a heavy fall in American exchange, which at the close of 1922 registered 4.63½, while at the end of December, 1923, had fallen to 4.32, there was considerable debit to the profit and loss account on account of the sterling liability for the American gold notes still outstanding.

PROFIT AND DISTRIBUTION.

The value of the inventory of products on hand, owing to lower values, is somewhat less than the previous year. The directors have made the usual provision for depreciation on plant, equipment, and the tanker fleet amounting to £756,641. They have also

made provision for income-tax and corporation tax of £419,786, and for interest and premium on gold notes and loss of exchange amounting to £369,605. This then leaves a net profit of £621,888.

The directors proposed that a final dividend of 2s 6d per share be paid, which will make, with the interim dividend of 1s per share paid in December, 1923, a total dividend for the year of 3s 6d per share, free of tax.

The general reserve fund and surplus fund stands at £2,531,000, which is larger than a year ago. Since the date of the balance-sheet the trading conditions have improved, and unless some unforeseen circumstance arises the balance of the year gives every indication of satisfactory profit.

The full amount required for the sinking fund for the gold notes, viz., \$2,500,000, was paid over to the trustees in New York during the past year, and a further instalment of \$1,250,000 has been paid this year. The final payment on these notes is due April, 1925.

INTEREST ON PREFERENCE SHARES.

The directors took authority at a subsequent extraordinary general meeting (subject to confirmation to be obtained at a confirmatory meeting to be held on May 15th) for a modification of the interest on preference shares when issued. This is to be fixed by the directors at a figure to be decided later, but at not exceeding 8 per cent. per annum. This action is being taken simply to clear up a condition that might have forced the company to pay 8 per cent. when the shares could be floated at a lower rate of interest. The Chairman stated, however, that there was no necessity for, and, therefore, they had no intention of issuing, any preference shares at present.

IRISH-AMERICAN OIL COMPANY.

The new company formed in the Irish Free State last year—the Irish-American Oil Company, Limited—has proved quite satisfactory, and from the company's holdings in that company a dividend of 10 per cent. in 1923 has been received, which will appear in the 1924 accounts.

The Chairman then concluded by moving the adoption of the report and accounts. Mr James Hamilton (vice-chairman) seconded the motion, which was carried unanimously.

BOOTH'S DISTILLERY, LIMITED. CONTINUED EXPANSION.

The twenty-seventh ordinary general meeting of the members of Booth's Distillery, Limited, was held on the 1st instant, at the registered offices of the company, 55 Cowcross street, London, Sir Charles Cottier (the chairman) presiding.

The secretary (Mr W. F. Wildsmith) read the notice convening the meeting, and Mr Holroyd read the report of the auditors (Messrs Holroyd, Northcott and Co.).

The Chairman, in moving the adoption of the report and accounts, said: I think you will be in accord with me in my opinion that the balance-sheet may be considered satisfactory. The board in December last secured the old-established and well-known grain distillery at Wandsworth of Messrs John Watney and Co., where the business, which has been carried on for upwards of 80 years, is being continued and extended. Your directors feel that in making this acquisition they have effectively secured the company's supplies of grain spirit both present and future—spirit which the whole industry will freely admit stands high for its purity and general excellence. The board, from their experience of Mr Bertram Watney's high competency as a distiller and his general devotion to duty, consider themselves fortunate in securing

that gentleman's services in the firm of John Watney and Co., Limited, at Wandsworth, of which firm he has been duly appointed managing director. The purchase marks a further step forward in the security and advancement of Booth's.

It is intended at an early date to change the name of Booth's Distillery, Limited, to Booth's Distilleries, Limited, which will more fittingly express the comprehensiveness of your company's business, as now carried on in Cowcross-street, at Wandsworth, in Scotland, and elsewhere.

Taxation still continues to bear very heavily in the burden it imposes upon our particular trade, and it should be a matter for grave consideration by any Chancellor of the Exchequer whether such taxation should not be moderated. No industry can hope to thrive and extend when the burden enforced contravenes all economic laws. It is interesting in this respect to note that the amount paid by way of excise duties by the total trade in the revenue year ending March 31, 1921, amounted to the vast sum of £177,301,526; in 1922 the sum fell to £137,342,126. If by reason, on the one hand, of oppressive taxation, or, on the other hand, of fanatical legislation, this large revenue were seriously jeopardised, I see no source from which we can replace this vital credit.

The report and statement of accounts were unanimously adopted.

BIRMINGHAM SMALL ARMS COMPANY, LIMITED.

MCKENNA DUTIES AND BRITISH INDUSTRY.

The annual general meeting of the Birmingham Small Arms Company was held, on the 29th ultimo, at the company's works, Small Heath, Birmingham.

Sir Hallowell Rogers, chairman, in moving the adoption of the report, said the present year's accounts showed a credit balance of over a quarter of a million, without leaving the accounts of any subsidiary company in debit. This good showing—sufficient for a 5 per cent. dividend on the ordinary shares—had been made possible by the increased turnover in each of the separate undertakings.

The more successful trading of the company turned mostly on the progress of the Daimler Company and the B.S.A. Cycle Company. Both had increased their sales in 1923 over their 1922 record, and the Cycle Company had done more. It had beaten its best past sales by more than two and a-half times, and both companies had in the current year, as indeed had all their undertakings, a marked increase in trade over the previous year.

Sir Hallowell Rogers continued: "Thus, if I could take last year's record and our present trading, as shown by the returns for all the subsidiaries to date, and judge the future by the past, it would be difficult to put a limit to legitimate optimism. But can the future be so easily forecasted? While we meet here the House of Commons is listening to the first Budget brought in by a Labour Government. Is capital to be further penalised? Is industry to bear fresh burdens? Are the McKenna duties to cease? The future depends upon the answers to these questions.

"If the Americans, the Italians, and the French—who either by mass production or by depreciated currencies have the advantage over us of lower manufacturing costs—are allowed to compete freely in this market, where wage-charges, taxation, and rates are higher, the blow to British industry, and especially to those making the more popularly priced cars, must be severe. It may well be less injurious to us than to others, because our cars have qualities that foreign makers have not yet incorporated, and because the scale of our manufacture enables us better than most to meet any price-cutting that may result. Indeed, our whole re-organisation of the last two years has prepared us in a sense for the danger. But it is not an attractive prospect, and if it comes it must, temporarily at least, check our progress."

Sir Edward Manville, M.P., seconded the resolution, which was carried unanimously.

PULLMAN CAR COMPANY, LIMITED.

DEVELOPMENT OF THE SERVICES.

The ordinary general meeting of the Pullman Car Company, Limited, was held on the 29th ultimo, Sir Davison Dalziel, Bart., chairman and managing director, presiding.

The Chairman, in moving the adoption of the report and accounts, stated that the Harrogate-Pullman—as this train was known—had given the fullest satisfaction to the very large number of passengers who patronised it. It had been their ambition to make their service in every respect one of the most attractive means of transport in this country, and he thought he was justified in saying that their efforts in this direction had been crowned with complete success. This train ran through all the dull months of the winter with very satisfactory results, so much so, indeed, that it would gratify them to know that it had been decided to extend its activities as from June and next to Bradford.

Apart from that, he had satisfaction in announcing further developments of the company's services. It had been decided by the London and North-Eastern Railway Company, as from June and next, to run a new entire Pullman, Limited, train on exactly similar lines to the Leeds-Harrogate-Newcastle train between Sheffield, Nottingham, and London.

He did not believe that in these difficult times it was wise to give way to too much optimism. At the same time, he thought he was justified in forming a very hopeful opinion of the company's operations. They were out to help the development of railway traffic, and their co-operation was gradually proving itself to be of growing value to the railway companies. He was, therefore, very hopeful that before long he would be in a position to announce to them that several of the negotiations he was now carrying on for the further development of their services had been brought to a satisfactory conclusion, and that further important complete Pullman trains would be running to various parts of the country.

There were possible satisfactory results which might arise from the contract their company had entered into with the International Sleeping Car Company for the development of Pullman day services on the Continent. Such of these services as might be introduced would be put into traffic under the International Sleeping Car Company itself, but their company would have a partnership interest in the result. He hoped that before their next annual meeting he might be able to announce some important developments in this direction.

Their relations with the railway companies remained good, and the tendency was to increase the activities of the company on the lines with which they were on working terms.

The report and accounts were unanimously adopted.

* Half-year.

† Tax free.

(t) Three years.

premium income was £490,208 as compared with £498,875. The life and annuity funds increased from £4,471,952 to £4,582,536, and earned on the average £4 7s 9d per cent. interest after deducting tax. In the fire department with premiums of £256,038 the claims were 48.6 per cent. of the premiums. The underwriting surplus was £1,410. In the marine account the premiums were £607,997, and the claims on 1923 and previous years amounted to £744,706. Expenses were £70,702; the marine funds were reduced from £948,623 to £741,212. Interest receipts available for dividend amounted to £46,959. A dividend of 25 per cent., less tax, is declared.

MUTUAL PROPERTY INSURANCE CO.—The directors state in their twenty-fifth annual report that the accounts are now presented in detail, with departmental revenue accounts, actuary's valuation, and auditor's certificate, the latter showing that a continuous audit is in operation. The paid-up capital now stands at £61,545, against £61,296 for last year. The total assets have been increased by £54,280, from £241,970 to £296,259. With regard to the house purchase department the total premiums collected amounted to £82,712, as compared with £69,657 for the previous year, an increase of £13,054. These premiums do not include payments made by policyholders who have obtained loans and commenced repayment, as, under the company's equitable system the premium ceases and all further payments are credited to loan account when a policy on which a loan has been made is five years in force. During the year advances to the amount of £103,910 were completed, the company being in a position to meet all loan applications from available funds. The total advances made now amount to £376,035. The profit and loss account balance is £3,576, and the directors recommend a dividend on the paid-up capital of the company at the rate of 5 per cent. per annum, less tax.

NORTH BRITISH AND MERCANTILE.—The following are the results for the year 1923:—Net premiums—fire, £3,002,031, an increase of £155,678. Railway Passengers Assurance Company, £95,541, an increase of £14,175. Ocean Marine Company, £373,880, an increase of £34,346. Fine Art and General Insurance Company, £327,870, a decrease of £6,884. Profit, exclusive of interest, Fire £344,588, Railway Passengers £122,855, Fine Art and General £44,541. The whole balance of the 1922 account of the Ocean Marine has been carried to the reserve for claims of 1922 and previous years. It is not thought desirable to make any estimate at present of the profit which is believed to have been earned on this account in 1919 and subsequent years. Total interest of the fire account and three subsidiaries, £373,694. New life

policies were issued insuring net £2,925,763, and £227,158 was received for the purchase of annuities. On the combined profit and loss account, after providing for preference and ordinary dividends (£318,575) and income and corporation taxes (£102,585), a balance is carried forward of £3,680,635, an increase of £339,648. The directors recommend a dividend for the year 1923 of 14s per share, less tax, payable half on May 15th and half on November 15th. The dividend for the previous year was 13s per share, less tax.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Liberal soaking rains together with a mild temperature has improved agricultural prospects in this country, cereal crops and grass lands now presenting a very healthy appearance. Wheat in particular is a strong plant, though late sown is rather thin and patchy in some districts. Spring sowings are completed, and plants are well above ground in the principal growing areas. Supplies of native wheat continue in small compass, and prices firm at 10s 6d to 10s 9d for best samples for 112 lbs free on rail. Imported descriptions were in fair request, and trend of values in sellers' favour. No. 1 Northern Manitoba quoted 48s 6d, No. 3 ditto 46s 6d, Rosafe, 63½ lbs, 47s 6d, Barusso, 63½ lbs, 46s 6d, and Australian 49s per 49½ lbs, ex ship terms. In the floating and forward cargo section a firmer tone prevailed, sellers being more reserved in face of improved inquiries, particularly on Continental account. Steamers of Australian, April 12th bill of lading, sold 48s 6d to Mediterranean, ditto, March 27th, 47s 3d, Rosafe, 63½ lbs, April, 44s 4½d, Baril, 64 lbs, afloat, 44s 7½d, to Continent. Rosafe, 64 lbs, afloat, 44s 6d, Barusso, 63½ lbs, June, 42s 4½d, and Baril, 63½ lbs, April, 44s 1½d, to United Kingdom. Crop prospects in the principal exporting countries continue favourable. Of maize cargoes only a quiet demand was in evidence, but prices were firm owing to dearer freight rates from the Argentine for early loading. Steamers of Dan-Gal-Foxanian, April, sold at 39s 6d, and yellow La Plata, May 10th, 34s 7½d per 48½ lbs. Flour firm. London

standard straight run quoted at 37s, patents 39s to 40s, town households 35s per sack, delivered in. All English country straights 34s 6d per sack, free on rail at London stations. Imported Manitoba patents range from 35s to 37s 6d, as to quality, Australian 35s to 35s 6d per 280 lbs, ex store. Barley firm. English malting ranges from 11s 3d to 12s 6d, with feeders 10s to 10s 9d per 112 lbs, free on rail. Imported, Californian 48s to 42s, as to sample, Chilean brewing 44s to 46s, ex ship, per 448 lbs. No. 4 Canadian western 31s 6d, ex ship, ditto, landed, 32s 9d, Karachi, ex ship, 31s 6d, ditto, landed, 33s 3d, Plate, ex ship, 32s 6d, landed 34s 3d, Persian, ex ship, 28s 6d per 400 lbs. Maize firm. Plate, old, 40s 6d, landed, new, ex ship, 40s, yellow African 41s, landed, per 480 lbs. Oats—English steady at 8s 6d to 10s per 112 lbs, free on rail. Imported firmer. Plate f.a.q., ex ship, 20s 3d, ditto, landed, 21s 3d, No. 2 Canadian western 25s 9d, No. 3 ditto, 24s 6d, Canadian feed, landed, 23s 9d, per 320 lbs. Millers' offals firm. Broad bran quoted 8s 9d, ordinary 8s 3d, middlings 8s 9d, fine 9s 9d, bags included, ex mill. Light oats 7s 3d, powdered oat husks 7s 3d, feed oats 9s 3d, ground oats 12s 3d per cwt, free on rail. Oatmeal steady. London made flaked 16s 6d, rolled oats 16s, medium and fine 16s, coarse and medium pinhead 16s, ordinary Scottish oatmeal 17s 6d, American 16s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1923-24, 1922-23, 1921-22, and 1920-21:—

	1923-24.	1922-23.	1921-22.	1920-21.
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to April 26	86,701	315,445	213,913	379,580
34 weeks to April 26	10,811,634	14,508,489	14,172,732	10,351,922
Average price of English wheat per cwt.	10 8	10 3	12 2½	20 2

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1920 to 1923:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1924.	Cwts.	Cwts.	Cwts.	8 d	8 d	8 d

1923	315,445	84,415	30,386	10 3	8 7	10 0

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated May 1st, is as follows:—Pig-iron: Prices are rather easier for the moment, and the market for pig-iron is quiet. No large sales of makers' pig-iron seem to have been effected recently. The price of No. 3 Cleveland G.M.B. is 92s per ton. Hematite is also a quiet market, but some sales have been put through lately. There is no immediate prospect, however, of more furnaces going in. The price of mixed numbers E.C. hematite is 99s per ton. Manufactured iron and steel: There is no change to report. Works can just keep going, but short of full output. Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: No demand yet. Consumers have sufficient ore, and will not buy for forward meantime.

Our Sheffield correspondent:—While buying of pig-iron and semi-steel continues quiet the outlook is believed to be improving, as a demand from abroad has sprung up, and doubtless there would be a substantial general revival if it were not for the clouds on the labour horizon. An encouraging event is the re-starting of the plate mills at the Parkgate works, which have been standing for some considerable time, owing to the depression in shipbuilding. Iron prices are firm, with the exception of instances where makers have offered a low quotation in preference to putting material into stock. Higher rates in the near future are foreshadowed. Bookings of open-hearth steel have been unsatisfactory for six or seven weeks, with the result that makers have little or nothing to cover future outputs, but there has been no reduction of melting plant. There is scarcely any sale for billets. The receipt of orders for railway steel material does not keep pace with execution, as overseas orders are on a small scale, and output facilities are double what they were before the war. Tools are in good demand. Nothing favourable can be said of plate and cutlery, and local industry as a whole is unremunerative. The coal market is less brisk than of late, although the best classes of manufacturing fuel find a ready market. Very little coke has been bought during the last fortnight. Previously users had stocked heavily as a safeguard against a stoppage of the coal industry. Durham foundry coke is quoted at 42s 6d at ovens, and blast furnace coke at 24s. Quotations per ton at pits are:—Best hand-picked branch, 36s to 38s; Barnsley best Silkestone, 45s to 35s; best Yorkshire steams, 27s; Tyne ditto, 26s; rough slacks, 12s 6d to 14s; smalls, 8s to 10s.

Our Glasgow correspondent writes:—There is a steady demand for pig-iron from Continental buyers, but in general the quantities are not large. Home consumers are taking increasing supplies at recent prices, which are held firm. The shipments from the Clyde last week amounted to about 1,600 tons. There is an improvement

in the tone of the iron and steel markets. The news this week that Messrs The Fairfield Shipbuilding and Engineering Company are to build and engine a light cruiser and that Messrs Beardmore have been given the contract for the engines for another cruiser has produced a buoyant feeling in the trades concerned. The value of these contracts is now understood to be approximately one and a-half millions. With the exception of an odd line here and there Continental competition is hardly felt in this district. Specifications for sections and light plates usually keenly sought by Belgian works have been placed with local makers. Consumers are still ordering only in small quantities, and some steel works having large capacity are working considerably under their full output. Bar iron makers and re-rollers keep going with home orders at current prices. Keen cutting is the order of the day for export business in all branches. For black and galvanised sheets the demand is moderate, with prices slightly on the downward grade. Japan has not bought any thin sheets for several weeks, but, in view of the large weekly shipments still going from the United Kingdom and the known heavy requirements, it is expected that real business in this line will come over shortly. Recent inquiries for large tonnages have evidently been for the purpose of testing the market.

METALS.

Tin commenced the week with a firmer tone, but subsequently became irregular and easier on pressure to sell and lower advices from the East. Standard, cash, sold at £241 15s to £244 to £238, and three months £243 to £244 5s to £236 5s. Eastern cables reported sales on the basis of £242 10s, c.i.f. At Thursday's session values moved in an upward direction, though closing below top points. Standard, cash, sold at £237 5s, and three months £240 to £236 2s 6d to £237. Rates were again firmer at the close. Standard, cash, sold at £237 10s-£238 10s, and three months £237 10s to £238 10s to £238, while finally registered at £238 15s. English ingots quoted at £240 to £241. Copper was in good demand throughout the week, and despite occasional irregularity prices on balance moved in buyers' favour. Standard, cash, sold at £63 7s 6d to £63 15s to £63 3s 9d, and three months £64 7s 6d to £64 13s 9d to £64 2s 6d. Values opened fully steady on Thursday, but subsequently eased slightly while in good demand. Standard, cash, sold at £63 3s 9d to £63 2s 6d, and three months £64 5s to £64. At final session rates ruled rather firmer. Standard, cash, sold at £63 7s 5d to £63 2s 6d, and three months at £64 to £64 5s. Electro's £68 15s to £69 5s, strong sheets £96, wire bars £69 5s, and best selected £67 5s to £68 10s per ton. Lead easier, and quoted at £30 7s 6d-£29, 4s to position. Spelter lower at £30 11s 3d-£30 13s 9d, according to position. Aluminium, home trade, £125; export, £130. Antimony, English, special brands, £52 to £52 10s.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—A moderate amount of business is being done in a quiet way, but there is no real activity in any section of the trade at present. Apparently, users are determined to wait for the raw material position to be tested before adding to their commitments, and the course of events in the immediate future will be largely governed by what takes place at the auctions which open in London next Tuesday. The last of the B.A.W.R.A. wool is being sold in Liverpool to-day and to-morrow, so that it has taken just over three years to dispose of the huge surplus of Government-bought wool, the sale of which was entrusted to B.A.W.R.A. From now the world will be entirely dependent on the seasonal production. Recent sales of fine crossbred and merino tops in this centre have shown that sellers are willing to make a slight concession with the object of influencing actual business. Average 64's tops are quoted at 5s 9d, and average 70's can be picked up at about 5s 11d. An actual selling price for 56's super is about 50d, with 48's carded at 29½d to 30d, and 46's 28d to 28½d. New business in crossbred yarns is not so plentiful, recent rates having apparently checked demand to some extent. Spinners are well booked ahead, however, and machinery is well employed. The demand for botanics is still disappointing, and price-cutting is having a bad effect upon the market. Generally speaking, quotations are nominally unchanged, but the actual price of fine count yarns is entirely governed by the position of the seller. Export orders are more restricted, currency difficulties in Germany interfering with the normal course of trade. The piece-goods trade is steady, but the Far Eastern markets are not developing as was expected.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Since last writing the London selling brokers have issued a detailed list of the quantity of wool available for the sales which begin next Tuesday. The total available is 115,000 bales, Australia being represented by about 43,000 bales, New Zealand 46,500 bales, South Africa 6,200 bales, the balance being made up of South American wools from various quarters. The total is larger than the majority expected, and if one reckons the 44,700 bales of B.A.W.R.A. wools sold at Liverpool on Thursday and Friday of this week, it will be seen that there is practically 160,000 bales of wool to be absorbed by the trade in the short space of three weeks. The task should not be too great, although we frankly admit that

the wool available is fully as much as the trade can comfortably deal with at the present. Everything will depend upon the course of the auctions as to whether the last two selling days are abandoned, and the wools carried forward to the July auctions, when presumably the quantity available will be less than is the case to-day. It is to be hoped that the Continent will be a vigorous buyer, and so strengthen the hands of the home trade. America occupies a most unusual position in the wool trade, for instead of being a buyer, she has lately been a large exporter. A reliable authority estimates that something like 50,000 bales have been shipped to England and Europe for resale during the past seven months. The quantity seems to us to be rather too much, but 10,000 bales is neither here nor there. The very fact of America being an exporter is significant, and clearly shows that holders across the Atlantic are seizing the opportunity to sell their stocks at a profit in Europe rather than carry them forward indefinitely and run risks. Just at present it seems as if buyers at home and on the Continent are finding their financial resources heavily taxed by large direct imports, and that is the reason why the trade will have every reason to feel satisfied if last sales' values are maintained. We are expecting no important change, and it will be a most satisfactory series if merinos and crossbreds continue to sell readily at last sales standard of values. We think this should be seen, for there is nothing to indicate any setback. Some seem to think that we might see a slight ease in merinos and fine crossbreds, largely due to the poor time being experienced by West Breders, topmakers. We frankly admit that these wools are dear. The opposition to the rates being demanded by manufacturers is bitter and sustained. It is also useless trying to disguise the fact that where merino tops have been lately sold, even big topmakers have had to shade their quotations considerably. There is also a fair amount of financial pressure in Bradford, due to drafts having to be met on direct arrivals, and this is bound to continue for the next two months. All the same, so long as there is a turnover, we think values are not going to vary a great deal. Hence, the ensuing series is likely to demonstrate a very sound wool situation.

THE COTTON TRADE.

MANCHESTER, May 1.

Although inquiry in the market during the week has been well maintained, business has not been active, and on the whole the tone has been quieter. There is a feeling in many quarters that values may be on a lower level in the near future, but in this connection everything depends upon the progress of the new crop in the United States. India has provided an extensive inquiry in piece goods, and a fair turnover has taken place in grey staples, light bleaching descriptions and printing and finishing cloths without individual contracts being at all important. Operations for China have been patchy, and fancies have attracted more attention than standard makes. Not more than a sorting up trade has been done for most of the minor outlets, but a slightly improved demand has been experienced in goods suitable for home consumption. Manufacturers continue to present a stiffer front to customers. American yarn quotations have been firmly held, but only a moderate business has been done. The prices ruling in coarse counts are unsatisfactory, but producers of medium and fine numbers continue to do better. Egyptian yarn quotations have been stiff, with a healthy undercurrent of demand.

VEGETABLE OILS

Market conditions on the whole have improved, and generally steady. Raw linseed oil has fluctuated only very slightly for some time past, and the result has been to bring in a good demand from consuming industries, principally in this country. The Continent appears to be pretty well supplied with this commodity from its own mills, and America has not felt the pinch of supplies on the eastern seaboard sufficient to cause a demand for the English product such as there was a year ago. Nevertheless, there is a demand, though not very large, from Northern Europe and South America. Current value for raw oil is about £36 10s per ton naked, ex Hull mill, spot to August. Cotton oils are steadier under the influence of an improved demand, crude Egyptian now

offering at £39 15s, and soapmakers' grade of refined at £41 naked, ex Hull mill. Edible oils generally are in only moderate demand on home account, but find a good market abroad.

HIDE, LEATHER, AND ALLIED TRADES.

BY OUR OWN CORRESPONDENT.

The hide market seems a shade firmer, as prices of best ox hides at the Bermondsey sales on Thursday slightly advanced 1d to 1d in three classes. Prices ranged from 6 1/2d for lights to 8 1/2d for heavies, seconds making from 5 1/2d to 7d per lb. Best cows sold from 6 1/2d to 6 3/4d, and best kips at 6 1/2d. Calf, on the other hand, were slightly weaker, best selling from 7d for heavy to 15d for lights. Wools sold from 8s to 16s, and hogs from 8s to 21s each. Tanners have been more interested in S.A. frigorific hides, and sales up to 150,000 are reported, the prices paid by home tanners ranging from 7 1/2d to 8 1/2d. All classes of wet salted hides are going into consumption, and as high as 10d has been paid for Liebig ox. Dry River Plate hides are weaker, and dry African hides hang fire, as buyers are waiting for a decline.

There is a much improved business passing in sole leather, and regular deliveries of bends, both dry and wet salted, have gone to the various boot trade centres. Consumers are evidently of the opinion that the market is firm, as they have shown a disposition to book forward at current rates, a policy tanners do not seem to adopt. Inquiries for leather have also come to hand in volume from overseas markets, the Continent taking much interest in certain classes.

There is also a great improvement in uppers leathers, and quite a good business has been done in calf and side leathers, so much so that some tanners are already increasing their input of skins. Prices are very firm all round, and willow calf has lately advanced by 2d to 3d per foot. Patent leather is also very firm, and a well-known German make has advanced by 2d per foot. Both black and coloured kid is selling better, and here again sellers are obtaining higher prices for the prime selections. In fancy goods quite a fair business has passed in snake and lizard skins for women's wear, price apparently being no object. All sorts of light leather are being inquired for from Continental buyers, Germans raiding the market for chamois and similar materials.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, May 2.

SUGAR.—Prices of spot parcels were revised in accordance with reduction in duty payments. Of British makes, Messrs. Tate and Lyle's white goods were marked down 14s per cwt, and yellows 11s 6d. Cubes now quoted 47s 3d to 48s 3d, as to quality; crushed, 45s 9d; nibs, 48s 6d; granulated, fine and coarse grain, 45s 1 1/2d; No. 1, 44s 10 1/2d; No. 2, also London and T.L., 44s 7 1/2d; ditto, first half May, 44s 6d; second half May, 44s; yellow crystals, spot, 42s 7 1/2d; caster, finest, 47s 4 1/2d; A. 46s 7 1/2d; B. 45s 3d. Lyle's golden syrup, in tins, reduced 12s cwt; casks, 11s 6d, with Tate's refined syrup in metal drums and casks, 6s 6d lower. Imported kinds were offered at proportionate declines. White Java, spot, 42s 6d to 42s 7 1/2d, as to sample; ditto, May-June steamer, sellers, 24s 9d; June-July, 23s 9d; July-August, 23s, c.f. and i., London. Czecho, granulated, spot, 43s 9d; ditto, May-June shipment, 29s 6d; November-December, 22s 9d, f.o.b., Hamburg. Dutch, granulated, spot, 43s 6d to 43s 9d. American granulated, May, 29s 9d, c.f. and i., London. White Mauritius, spot, 42s 3d. Numerous inquiries circulated, with considerable stress laid upon immediate delivery, and which is the sequel to stocks having been worked down to a disappearing level in anticipation of some substantial reduction in the duty. Certain quantities in bond are now eagerly sought after in order to replenish empty cupboards, while it is quite an open question in the near future as to what extent dealers will operate in the matter of replacement. Some interest is afforded by the fast approaching consuming season, with prospects of the fruit crop roseate. Raw refining kinds steady, quiet. Cuban, basis 96 per cent., May shipment, quoted 23s 9d, c.f. and i., U.K. Madras cane-jaggery, May-June, steamer, sold, 16s 9d, c.f. and i., London. White terminal market disclosed moderate activity, but proved unsettled. May delivery sold, 29s 6d to 28s 3d; August, 26s 9d to 26s 4 1/2d, 26s 6d, 25s 7 1/2d; December, 22s 4 1/2d to 22s 1 1/2d.

COFFEE.—Spot market disclosed general stability for all mild descriptions, and which continue in demand both on home and export account. The halving of the duty payment is not calculated to lead to any appreciable increase in consumption, which has remained quite stationary for some years past. Of East India, Mysore, bold, sold, 12s 9d to 150s 6d; Costa Rica, bold, 12s 4d to 143s 1d; Maragopipe, 195s.

COCOA.—Business during the period under review proceeded on quiet lines, but sellers required steady prices. Accra, F/F grade, April-June sellers, 32s 3d; June-August, 31s 6d, f.o.b. terms.

TEA.—Indian auctions of 20,000 packages met with brisk support, especially teas for price, and in the main a firm tone governed the market, being 1d to 1d up. Pekoe, sold, 1s 3 1/2d to 1s 6 1/2d; broken orange, 1s 5d to 1s 1 1/2d. Ceylon sales of 18,220 packages also aroused active support at a full range. Broken orange pekoe, sold, 1s 6 1/2d to 2s 3d per lb, in bond. In auction, 9,200 packages Java and Sumatra were catagued, and soon disposed of to a brisk demand, at 1 1/2d to 1d per lb advance. Pekoe, sold, 1s 2 1/2d to 1s 4 1/2d; broken ditto, 9 1/2d to 1s 4 1/2d; pekoe souchong, 1s 1 1/2d to 1s 3 1/2d; orange pekoe, 1s 3 1/2d to 1s 6 1/2d; and broken orange, 1s 2 1/2d to 1s 8 1/2d per lb, in bond.

RICE. remained dull, and trend of values weaker in forward positions. Two stars Rangoon, spot, quoted 16s; afloat, 14s 9d; and May-June, 15s, c.f. and i., London. Spanish quietly steady. Japanese peas, spot, 22s 6d cwt.

SPICE.—Pepper quiet, and prices barely steady. Black Singapore, L.S., April-June, quoted 4 1/2d; Lampong, August-October, buyers, 4 1/2d; Muntok, spot, 8 1/2d; May-July, buyers, 8d for L.S. Zanzibar cloves, spot, 11d to 1s, as to quality, per lb. Tapioca dull. Singapore flake, April-June, Havre, sellers, 26s 9d; Penang seed, May-June, London, 20s. Sago flour, March-May, 14s 9d. Desiccated coconut dull. Fine cut, spot, 40s; medium, 41s; halves, March-April, 38s; April-May, 37s 6d cwt. Ginger steadily held on spot, but slow of sale.

JUTE.—Sparingly offered, and with fair inquiries in force, a firm tone predominated. First grade, April-May, continent, sold, £26 15s; ditto, May-June, £26 12s 6d; new crop, August-September, £27 7s 6d per ton. Hessians unaltered.

HEMP.—Manila steadier, and a moderate demand prevailed. J grade, April-June, quoted £37 10s; K, ditto, £32 10s; L, £31 10s; M, £27 10s; K, March-May, sold, £32 15s per ton. New Zealand and African sisal unchanged.

SHELLAC.—Market quiet. T.N., spot, 25s; May, 24s; August, 24s 5s per cwt.

COPRA.—Buyers were rather reticent, and with sellers more inclined to meet the market, prices took a downward turn. F.M.S. Straits, February-April, Rotterdam, sellers, £27 2s 6d; March-May, sold, £26 17s 6d; April-June, £26 13s 9d; May-July, £26 12s 6d. Dutch East Indies, February-April, done, £26 17s 6d; March-May, sellers, £26 15s; April-June, £26 10s, value. Ceylon, April-May, nominally, £29; South Sea Islands, £26. F.M. Straits, May-June, to Marseilles, £26 5s. Palm kernels easier. February-April, Liverpool sold, £19 1s 3d; March-May, £18 15s; April-June, £18 13s 9d to £18 12s 6d per ton.

RUBBER. steady, and business proved of moderate dimensions. Standard plantation crepe and sheet, spot, also May, sold, 1s 0 1/2d to 1s 0 1/2d; June, 1s 0 1/2d; July-September, 1s 0 1/2d; October-December, 1s 0 1/2d to 1s 1d. To New York, standard estate sheet, April-May, quoted 1s 0 1/2d; May-June, sellers, 1s 0 1/2d, and first crepe, May-June, sold 1s 0 1/2d per lb, c.f. and i. terms. Wild descriptions unaltered, with business on a retail scale.

FRUIT.—Dried—Business during the week was on a moderate scale, and a steady condition of affairs resulted. Of currants, Calamata, 1-cases, quoted, 43s; Pyrgos, ditto, 44s to 45s; Amalia, 48s; Patras, 50s; Gulph, 52s; Panariti, 56s; Vostizza, 63s to 70s. Raisins: Cape, new crop, quoted 48s to 52s. Sultanias, Greek, 1-cases, 52s; Smyrna boxes, 50s to 60s; ditto, fine, 67s; finest, 72s to 80s. Figs, genuine naturals, in bags, good, 35s; fine, 38s. Dates steady, but at the same time slow of sale with business mainly restricted to Siar. Evaporated fruits: Californian apricots, standards, quoted, 80s; choice, 90s; extra choice, 108s. Peaches, choice, 48s; extra choice, 53s; fancy, 58s. Apple rings, 78s to 82s. Oregon plums, 30/40, quoted, 72s; 40/50, at 52s; 60/70, 42s cwt. French, 1-cases, 90/100, quoted, 38s

centual, 71s per cwt, Hull, with London 2s per cwt extra. Cotton dull. Crude Egyptian, spot, 41s; Bombay, 38s; common edible, 46s; deodorised 49s. Chinawood quiet. Hankow, spot (barrels), 86s; April-May, 74s. Cocoon quiet. Ceylon, spot, 46s 6d; March-April, 44s; Cochin, ditto, nominally 50s. Soya dull. Oriental, barrels, March-April, 40s 6d. Cod quiet. English, spot, 36s to 37s, Groundnuts quiet. English, crushed, naked, spot, 47s; deodorised, barrels, 56s. Turpentine after being easier improved on a better demand. American, spot, 74s 9d; May-June, 73s 6d; July-December, 69s 3d. Rosin steady for pale grades. American, grade B, 13s 6d; G, 13s 6d; W, 17s 6d; WW, 18s 6d per cwt. French WW, 17s per cwt. Petroleum steady. American, standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

TALLOW.—Messrs Colchesters and Woolner write on April 30th as follows:—The tallow market was flat during the week, and prices were 2s lower to-day. Supplies are coming to hand in excess of requirements, and prices have been falling fast without the demand showing improvement. Shipments of tallow from Australasia during March amounted to 3,600 tons, against 5,400 tons during the corresponding month last year. At auction to-day 978 casks tallow were offered, and 216 were sold. Quotations are:—Australasian mutton: Fine, 46s; good to fair, 45s to 44s; dull to dark, 38s 6d to 37s 6d; hard, 46s. Australian beef: Fine, 46s; good to fair, 43s to 40s;

dull to dark, 38s to 37s; sweet, 46s 6d. Present shipment from Australasia: Good mixed, 43s. Present shipment from South America, 41s to 39s 3d. The market letter is lower—tallow, 2s; stuff, 2s. Town tallow, 39s 6d per cwt. Rough fat, per 8 lbs, 34d; melted stuff, 30s 6d per cwt. Quotations are:—Town, 39s 6d, net cash, naked, ex works. Country: Frail casks, 40s; home melted, shipping casks, net, f.o.b., good coloured, 41s; fair to dull, 40s to 39s. Bone fat: White, none; pale, none; benzine, 36s; melted stuff, 36s, f.o.b.

THE EXCESS INSURANCE CO., LTD.

Registered Office: WATERLOO HOUSE, 25, BIRCHIN LANE, LONDON, E.C.3.

CAPITAL, FULLY PAID UP £500,000
GENERAL RESERVE FUND (including Reserve for Taxes) £200,000
RESERVE FOR UNEXPIRED LIABILITY £585,186

Directors: CUTHBERT E. HEATH (Chairman); ARTHUR BURNS; MONTAGUE EVANS.
Auditors: TURQUAND, YOUNGS, & CO., 19, Coleman Street, London, E.C.2. **Secretary:** F. E. JOHNSON.
Underwriting Office: 10, ROYAL EXCHANGE, LONDON, E.C.3.
MOTOR CAR AND PERSONAL ACCIDENT DEPARTMENT: 1, ROYAL EXCHANGE AVENUE, LONDON, E.C.3.
Underwriter: E. MERRICK TYLOR.

DIRECTORS' REPORT.

In presenting the 31st Annual Report, the Directors greatly regret to report to the Shareholders the loss sustained by the Company in the death of their late colleague, Mr. George Heath, who was one of the original Directors.
 The 1921 Underwriting Account is now closed with an Underwriting Profit of £80,049 3s. 5d. This sum is carried to Profit and Loss Account, and represents 11 per cent. of the Premium Income for that year.
 On the 1922 Underwriting Account there is a balance in hand of £172,781 7s. equal to 30 per cent. of the Premium income, the whole of which is carried forward to meet Third Year Settlements. This should be ample for the purpose and leave a satisfactory profit, the whole of the Premium Income for the 1923 Underwriting Account is £599,655 18s. 1d., showing a slight increase on the Premiums for the previous year. The Claims settled amount to £197,076 5s. 1d., equal to 31 per cent. This percentage is somewhat higher than the First Year Settlements for the previous year, but there is no reason to suppose that the ultimate results of the year's trading will not show a satisfactory result. As mentioned in last year's Report, the question of taxation is still having the most careful consideration of your Directors. Taxes to the amount of £208,787 17s. have been paid during the year. £200,000 of this sum has been met out of the Reserve Fund as foreshadowed in last year's Report. Our dispute as to the correctness of these Taxes is not yet settled, and your Directors have strong ground for hoping that there will eventually be a considerable sum to be returned to the Company.
 The Directors will propose to the Shareholders that Mr. A. J. L. Circuit be appointed a Director of the Company to fill the vacancy on the Board.
 It is proposed to pay a final Dividend of 2½ per cent., free of Tax, which, together with the interim Dividend of 5 per cent., free of Tax, paid in June last, makes a total of 7½ per cent., free of Tax, for the year. This is the same dividend as last year.
 The Auditors, Messrs. Turquand, Youngs, & Company, retire, but offer themselves for re-election.

C. E. HEATH (Chairman),
 ARTHUR BURNS,
 MONTAGUE EVANS. *Directors.*

AUDITORS' REPORT.

We report to the Shareholders that we have obtained all the information and explanations we have required. We have examined the foregoing Accounts with the books and vouchers of the Company and with the Returns from the Agencies abroad, and assuming the sufficiency of the amount standing to the credit of the Underwriting Accounts to meet outstanding liabilities, viz., £585,186, we are of opinion that the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs, according to the best of our information and the explanations given to us, and as shown by the books of the Company.

C. E. HEATH (Chairman),

THE MONEY MARKET.

MONEY was very plentiful early in the week, and then not quite so abundant, presumably because the Ways and Means advances borrowed from the Bank of England for the May dividends had been partly or wholly repaid. Discount rates were easy, and then rather steadier, with three months' bank bills quoted at 2½-3 per cent.

	May 9, 1924.	May 2, 1924.	Apr. 23, 1924.	Apr. 16, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	5 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills)	3	3	3	3	..

The Bank return showed a decrease of £399,000 in the note circulation, an increase of £52,000 in the stock of gold, making the Reserve £451,000 higher. Government securities expanded by £1,395,000, and Other dwindled by £785,000. Public deposits were half-a-million lower, and there was thus an increase of 1½ million in Other. There was a reduction of £765,400 to £289,350,300 in currency notes outstanding this week, which includes £1,395,000 for notes called in but not yet cancelled. The fiduciary issue is £238,505,300, or £9,685,600 below the maximum.

The statement of the average weekly balances of the clearing banks for April, printed in full on a later page, shows a small increase in deposits and a decline in acceptances, as may be seen from the following table, which compares the monthly aggregates of the nine English banks:—

	Dec., 1922.	June, 1923.	Dec., 1923.	Feb., 1924.	Mar., 1924.	Apr., 1924.
Capital and reserves.....	116.0	116.3	116.3	117.8	118.7	119.0
Acceptances	72.8	73.8	92.1	102.5	99.2	95.2
Deposits (incl. undiv. profits, &c.) ..	1,684.7	1,637.7	1,673.1	1,627.2	1,603.2	1,614.7
Total Liabilities	1,873.5	1,827.8	1,885.5	1,853.0	1,821.1	1,828.9
Coin, notes, balance at bank, and cheques in course of collection	253.0	240.7	254.2	233.9	230.2	236.7
Money at call	106.0	113.3	111.3	92.2	93.5	97.6
Investments	384.5	355.5	363.8	366.5	361.7	357.1
Discounts	238.3	270.8	276.3	261.4	224.0	224.6
Loans and advances	732.7	746.9	756.5	770.4	785.5	790.6
Cover for accept., promises, &c.	99.0	100.6	123.4	129.5	126.2	122.3
Total assets	1,873.5	1,827.8	1,885.5	1,853.0	1,821.1	1,828.9

The expansion in advances has continued, and cash and money at call have together risen by £10½ millions, but investments have been reduced by £4½ millions, while bills discounted are practically unchanged.

THE STOCK MARKETS.

The settlement this week proved to be a satisfactory one from the point of view of the investment markets, the Budget statement having induced a good deal of business. There appears to be some hesitancy in gilt-edged prices, but declines are of small importance. The foreign market has been more active than of late, and prices, with the exception of the French group, have improved. Changes in the Home Railway market are slight, but Argentine and Mexican rails are better. Attention in the oil market has been monopolised by the animation in British Controlled; rubber shares have been weak. The tendency in the industrial market generally is good, shipping, hotel, stores, insurance, and banking shares showing a fair number of rises. Kaffirs have given way, and other mining shares have shown a tendency to droop.

THE COMMODITY MARKETS.

The sugar market generally is in a quiet state, with signs of weakness here and there; there is a persistent downward movement in the American market on account of higher estimates of the Cuban crop, coupled with slackness of demand. There was a fair amount of business done in coffee, and prices were steady. Brisk competition was noticeable at the Indian tea auctions, and prices were occasionally dearer, especially for common qualities. Wheat was better on the week, although weak towards the close. Raw cotton rates do not show much change, but here and there spinners and manufacturers have been rather more disposed to grant price concessions. Our Cardiff correspondent reports that coal prices continue to sag, foreign demand being inactive. The pig-iron market is quiet, although the general undertone is good, and there is a fair business doing in steel, "the steady French and Belgian exchanges assisting to keep foreign steel out of our markets." Tin prices gave way under selling pressure, and copper was easier. There has been a fair amount of activity in linseed oil, while the seed itself is dearer.

FOREIGN EXCHANGES.

Until Wednesday business in the Foreign Exchange market was particularly dull, dealers apparently hesitating in view of the approaching French Elections. In particular, the Paris rate was very steady between 67 and 68. On Wednesday morning, however, the rate had been pushed down to 66.60 through heavy overnight purchases in New York. But during the afternoon there was a sudden swing round in the opposite direction, and on Thursday the quotation was at one time as high as 74.10, recovering at the close to 71.25. On Friday morning the rate was very erratic at 73.50. Various causes—the German Elections, the Labour troubles in the Ruhr, and rumoured attacks by the Turks on the French in Syria—are suggested as explanations for this reaction; but the surprising feature is the apparent absence, up to the present, of intervention by the Bank of France. There has been much criticism of the policy of allowing so rapid a recovery in the value of the franc instead of stabilising at least for the time at a higher level, but it was certainly to have been expected that the rate would have been held, if possible, at least until after the French Elections to take place on Sunday. Brussels has followed the same course, the rate moving up from 81.50 on the 2nd to as high as 90½ at one time on the 8th, and being quoted yesterday morning at 89½. Forward rates in Paris show a growing uneasiness, having widened rapidly to 65 centimes per month over spot, while in Brussels they have moved to 12 centimes over spot. The lira, departing from its recent steadiness, has been carried upwards a little in sympathy, moving from 97½ on the 2nd to 98½ yesterday morning. Sterling also has suffered from the reaction of opinion in America, the rate, which closed at \$4.38½ on the 2nd and reached as high as \$4.39½ at one time on the 7th, being down at one time to \$4.35½ at one time on the 8th and closing at \$4.37½. Yesterday morning, however, it was quoted lower again at \$4.36½. There would seem no particular reason for this movement beyond a sentimental reaction, but it should not be forgotten that American price-levels still show a tendency to fall more rapidly than our own. Forward quotations have widened from ½ cent to ½ cent per month over spot. In spite of the election results and the Ruhr troubles the German mark has remained remarkably steady, having moved up only on Thursday from 18½ to 18½ billions, at which rate it is still quoted. In sympathy with the dollar, the Dutch rate has moved against us on the week from 11.70 to 11.68, and Switzerland from 24.69 to 24.55½, while Stockholm has appreciated from 16.62 to 16.49½, Copenhagen from 25.90 to 25.66½, and Christiania from 31.70 to 31.36. Madrid, after a marked recovery from 31.72 to 31.56½, has climbed up again slowly to 31.71½. Among the Northern States, Helsingfors at 175 shows little movement, Revel has improved slightly from 1,665 to 1,657, Riga has appreciated with the dollar to about 22.70. Warsaw, since the 7th, has discarded the mark quotation in favour of the new zlotz (equal to one gold franc), which was given yesterday morning at 22.75. In Central and Eastern Europe Vienna has moved with the dollar from 310,500 to 309,500; Prague, after depreciating slightly, has improved to 148½, Belgrade has remained very steady, while Bucharest has moved up slightly to 855. Budapest, at 350,000, shows a slight appreciation in anticipation of assistance through the League of Nations loan. Athens, at about 200, shows a further improvement. In the East the rupee is slightly more expensive at 1s 4½d, as compared with 1s 4 47-64d, while the yen shows a further recovery from 1s 9½d to 1s 10 1-32d. The silver market has been quiet, sales from America being absorbed by some bear covering from China. On the whole, there would seem to be a growing undertone of confidence. Hong Kong is unchanged at 2s 4½d, Shanghai, after being higher, is ½d lower at 3s 2d. In South America, Rio has fallen away a little from 6½d to 6 5-32d, but Buenos Aires has recovered from 41 to 41½, after also being rather higher, and Monte Video has moved from 42½d to 42½d. Valparaiso has further appreciated from 39.40 to 38.60 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 3rd:—

EXPENDITURE.	(000's omitted.)	REVENUE.	£
Supply Services	6,659	From Revenue	13,766
Interest, &c., on Debt	8,997	Amount borrowed	2,235
Sundries	100		
Increase in Balances	245		
	16,001		16,001

Revenue amounted to £13,766,500, against £14,560,900 in the corresponding period. Customs yielded £1,647,000 and Excise £1,720,000, against £2,705,000 and £1,485,000 respectively. Estate duties brought in £500,000 more than a year ago at £1,420,000. Property and Income-tax receipts were higher by about £250,000 at £3,592,000, but Super-tax receipts were lower by £320,000 at £1,110,000. Special receipts yielded £1,800,000, against £2,256,200. The week's operations increased the National Debt by £2,235,000, and caused the following changes:—

(000's omitted.)			
		£	
Treasury Bills	+ 704	Public Dept. Advances	— 2,850
Bank of England Advances .	+ 4,750	Saving Certificates	— 150
		Sundries	— 219
	+ 5,454		— 3,219

The floating debt was increased by £2,585,000 to £757,830,500.

FINANCIAL YEAR, 1924-1925 (April 1 to May 3).

THE WEEK IN PARLIAMENT.

Monday, May 5th.—Commons: Prevention of Evictions Bill, report stage. West Indian Islands (Telegraph) Bill, committee stage. Second readings of War Charges (Validity) Bill and Protection of Birds Bill. Discussion on procedure for vote of censure on McKenna Duties repeal.

Tuesday, May 6th.—Commons: Budget resolutions; tea, cocoa, and sugar duties discussed.

Wednesday, May 7th.—Lords: Statement by Lord Arnold on Transjordan. Committee stage of Agricultural Returns Bill. Bulgaria Reparations and agricultural wages discussed.

Commons: Third reading of West Indian Islands (Telegraph) Bill. Second reading of County Courts Bill. First reading of Bill to amend the Education (Scotland) Superannuation Act, 1922. Debate on National Expenditure.

Thursday, May 8th.—Lords: Discussion on Indian affairs.

Commons: Navy Estimates.

Friday, May 9th.—Scottish Home Rule Bill talked out.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Friends' Provident and Century Life Office, London and Lancashire Insurance, Norwich Union Fire Insurance, Equitable Life Assurance, Northern Assurance, State Assurance, Scottish Union and National Insurance, Spillers Milling and Associated Industries, Rio de Janeiro City Improvements, Salar del Carmen Nitrate, Brazilian Warrant, Champion Reef Gold Mines, Ooregum Gold Mining of India, Nundydroog Mines, and Schweppes. The chairman of Friends' Provident and Century Life Office gave valuable advice to the public by pointing out the inadequate use they made of life assurance protection. He drew attention to the discrepancies between life assurance effected *per capita* in the United Kingdom and in the United States, and said that his office had inaugurated

the "Ten Years' Option Policy" as the happy medium between the very short-term endowment and the old-fashioned whole-life assurance. The chairman of the London and Lancashire Insurance pointed out that the bulk of their profits was derived entirely from abroad, and that if an insurance company were confined to home business there would be very poor prospects of progress. The chairman at the meeting of the Equitable Life Assurance Society reported an appreciable increase in funds and a premium income of over £300,000. At the meeting of the State Assurance the chairman said that the directors were considering the equalisation of the half-yearly dividend payments. The chairman at the meeting of the Scottish Union and National Insurance pointed out that income-tax amounted to £113,000, or no less than 37 per cent. on their paid-up capital.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE GERMAN ELECTIONS.

ACCORDING to the latest figures, which may be accepted as substantially correct, the parties have been returned in the following strength to the new Reichstag:—

Freedom Party (Fascisti).....	32
Nationalists	96
Land Unions	9
German People's Party (Industrialists)	44
Zentrum (Catholics)	65
Democrats (Radicals)	28
Social Democrats	100
Communists	62
Minor groups—	
Bavarian People's Party	16
Bavarian Peasants	10
Hanoverian Autonomists	5
German Socials	4
	35

In these results there are no very great surprises, for, while the two anti-Parliamentary parties on the extreme right and left wings have gained even more seats than had been prophesied, both the losses of the Social Democrats and the gains of the Nationalists are rather smaller than had been expected. In fact, the Nationalists can only claim the Presidency of the Reichstag, as the largest party, if they are allowed to count the nine representatives of the Land Unions as belonging to them. This concession, however, will probably be made, since the psychological effect of the elections has undoubtedly been to place the Nationalists in the ascendant; and it is already clear that their attitude towards the Report of the Dawes Commission will determine its reception in Germany. One hopeful feature in the situation is the marked decrease of violence in the tone of the Nationalists during the progress of the elections—an illustration of the familiar phenomenon that political parties become more moderate, or at any rate more reserved, as they approach nearer to the assumption of responsibility. The agitation in the *Kreuzzeitung* and other organs of the party against any watering down of the party programme, which has been started since the results of the polling were declared, is not necessarily a bad sign. It may mean that the party organisation is moving towards acceptance of the Dawes Report, and that the more violent elements feel that they are losing ground. More serious is the hostility which the Nationalists are still displaying towards the other *Bourgeois* parties, and particularly towards the People's Party, which stands immediately to their left. Their denunciations of Herr Stresemann's foreign policy are as strong as ever; yet any genuine acceptance of the Dawes Report would mean the virtual endorsement of the policy pursued by the late Foreign Minister, and unless the Nationalists can secure the co-operation, not only of the People's Party, but of the Catholic Zentrum, they cannot obtain a working Parliamentary majority even if they are called to office.

Some light is thrown upon their official attitude by a cautious statement of their leader, Herr Hergt, in the *Lokal-Anzeiger*. He lays down a "point of honour" and a principle. The point of honour is that "in no event will a Government influenced by the German Nationalists ever lend itself to cover with its signature undertakings if, after strict honest examination, it is convinced that they cannot be fulfilled." The principle is that the party "do not at once answer the Report of the Experts with a flat 'unacceptable,' but do oppose to it reservations which [they] absolutely cannot renounce."

It is already certain, then, that the new German Government will not be able to accept the Report unreservedly, whether the Nationalists are in power or in opposition, and this cannot but cause anxiety to people of good-will who wish for a settlement of the Reparations problem in the common interest of all the countries concerned. The Nationalists seem inclined to assume that their advent to power would strike terror into the Allied peoples and force their Governments to beat a retreat all along the line. The danger of this fallacy is obvious to anybody who has studied the temperament and policy of M. Poincaré. It would give him reason in his present attitude of reserve, even if it did not stiffen his demand for the retention of guarantees to a point which would make it incompatible with the Experts' postulate that the economic unity of the German Reich is to be restored. The hopeful factors on the other side are the moderation of the French Press in its comments upon the German election results, and the evident anxiety of the Belgian and Italian Governments to prevent the opportunity offered by the Dawes Report from falling through.

For the moment, the initiative lies with Germany, and there is an important unsolved question as to the size of the majority in the Reichstag which an acceptance of the Dawes Report would require. If the Report involves amendments to the constitution of the Reich, these can only be passed by a two-thirds majority, and the Constitution is undoubtedly affected by the experts' railway scheme. "The railway experts," the Dawes Report states, "arrived with considerable reluctance at the conclusion that it would be useless to expect anything approaching the full measure of improvement which is possible, so long as the railways remain in the control of the [German] Government.....We accept their conclusions, and we recommend the conversion of the German railways into a joint-stock company." The new German Government will have to examine this recommendation in the light of Articles 89-96 of the Weimar Constitution, under which all railways serving public communication are to be administered by the Reich, or, at any rate, to be subject to its supervision. "The Reich shall acquire..... all sovereign prerogatives in connection with the railway system. In case of dispute, the Supreme Court of Judicature shall decide the extent of such rights. The National Government shall, with the consent of the Reichrat, issue all regulations concerning building, running, and traffic of the railways."

In themselves these articles are categorical, but they are overridden by Article 178, which provides that "the conditions of the Peace Treaty signed at Versailles on June 28, 1919, are not affected by this constitution." Article 178 was added to the text of the constitution in order to meet the objections of the Supreme Council to Article 61, which assumed (contrary to Article 80 of the Versailles Treaty) that the Austrian Republic was to be incorporated in the Reich. Does it also cover the discrepancy between the text of the constitution and the recommendations of the Experts in regard to the German railways? That depends upon whether the execution of the Experts' recommendations falls within the scope of the Versailles Treaty. In Clause 18 of Annex II. to the Reparations Chapter of the Treaty, it is provided that "the measures which the Allied and Associated Powers shall have the right to take, in case of voluntary default by Germany, and which Germany agrees not to regard as acts of war, may include economic and financial prohibitions and reprisals, and in general such other measures as the respective Governments may determine to be necessary in the circumstances." If the fate of the Dawes Report in the Reichstag were to turn upon the difference between a two-thirds majority and a bare majority, a strong Government anxious to accept the Report as it

stands might make effective use of these overriding provisions.

However, the actual political situation in Germany makes it improbable that the issue will be decided by nice points of constitutional law. To strain the interpretation of the Treaty of Versailles in favour of the rights of the Allied Powers would be an invidious line for any German Government to take, and the Nationalists, whether in power or in opposition, would hardly consent to it. Their main contention against the Report has been that it constitutes "a second Versailles Treaty," encroaching further than the Peace Treaty upon Germany's independence. If they change their attitude now, this will hardly be on constitutional grounds, but after consideration, at close quarters, of what the alternative means for Germany's future. Considering how dark that alternative is, it is not unreasonable to expect that the Nationalists, in their new position of responsibility, will go to great lengths in order to avoid it.

THE REPEAL OF THE MOTOR DUTIES.

It is a universal experience that when a protected industry is in danger of losing its privileged position its members raise a chorus of exaggerated lamentation. But we cannot recall an instance of employers talking quite such nonsense as that which we have heard from the motor manufacturers in the last few days. Mr Morris has recently had such brilliant success in the large scale production of the most popular of our low-priced cars, that his views will naturally be listened to by a very large public, and he will therefore excuse us if we single him out for special mention. In a letter to the *Daily Mail* of Tuesday last he writes:—

Removal of the McKenna duties will, in any case, mean loss of employment for approximately 1,000,000 workmen in this country. I base this figure on the fact that, although 300,000 workmen are directly engaged in the production of British motor-cars in the factories from which they emanate, 4,000,000 men are engaged in the production of the materials from which motor-cars are made. This is taking the whole of the processes involved in the making of motor-cars from the absolute raw material as mined or grown. I have already cut down my production schedule 25 per cent., and other British manufacturers will have to do the same, or take even more drastic measures. This means ultimate loss of employment for at least 1,000,000 British workmen in the various trades of the country.

Mr Morris does not say that all the labour engaged in producing his cars from the mine or field upwards is British. It obviously is not. But he implies as much in the last sentence. Let us recall a few facts. The total number of males in insured trades (practically all the wage-earners in the country except domestic servants and agricultural labourers) is eight and a-half millions. The suggestion is that nearly half of these are directly or indirectly dependent on the production of motor-cars in this country! Again, the number of private cars manufactured in this country last year was about 65,000. Let us put it at 100,000 this year. Let us take them at the average export value of cars, namely, £300, which gives £30 millions as the gross value of the output at the assumed rate of production in 1924, against £20 millions in 1923. (The *Motor Trader*, on a more elaborate computation, puts the retail sales value of private cars produced in this country in 1923 at £24 millions.) If every penny of this were taken by labour, earning an average of £125 a year—and Mr Morris would hardly put it lower—the maximum number of workers who would be employed, *directly or indirectly*, in the manufacture of pleasure cars would be 240,000 to-day and 160,000 last year. Every reader will realise that our assumptions have ridiculously exaggerated the figure. We are afraid Mr Morris has gravely over-estimated the credulity of the British public.

Let us examine the available statistics a little more closely. At the outset we are faced with the difficulty of knowing how many people are engaged in this industry. The only direct evidence bearing on this question is the statement in the *Labour Gazette* of the numbers of insured persons engaged in the "construction and repair of motor vehicles and aircraft." According to this authority, the number, both male and female, in these employments in July, 1923, was 194,420; the numbers unemployed in

March of this year were 14,843. We can think of no means of estimating how many of these were employed in the garages and cycle repair shops throughout the kingdom, but the number must be very large. It is also to be observed that the category includes not only the manufacture of the humble "push-bike," and of aeroplanes, but the production of motor-cycles, commercial vehicles, and motor-omnibuses. It is not at all easy to ascertain what proportion of the trade is engaged in the production of cycles, and cars other than private motor cars, but some idea of the importance of the various branches may be gathered from the statistics of licensed vehicles. The figures for the quarter ending in February of this year are below the full total, owing to the fact that at the end of February very considerable numbers of cars licensed on a quarterly basis are laid up for the winter. We will, therefore, quote the figures for the quarter ending November 30, 1923. The number of licensed vehicles of different classes may be estimated from the figures of the Ministry of Transport as follows:—

Cars taxed on horsepower	384,000
Motor hackneys (cabs and omnibuses)	86,000
Motor-cycles	430,000
Commercial goods vehicles	181,000
Tramcars	14,000
Road locomotives	2,250

The first of these items, and part of the second, are affected by the McKenna duties, motor-omnibuses being exempt from but taxi-cabs subject to duty. The motor-cycle trade, it is true, is also a protected one, but it is admitted even by the trade—and the fact is amply confirmed by statistics—that the British motor-cycle is well able to hold its own on equal terms not only on the home market, but in the overseas markets of the world. With these considerations in mind, it would be difficult to place at more than fifty or sixty thousand the number directly engaged in the manufacture of private cars. The *Labour Gazette* figure excludes those engaged in the production of accessories. The only indication we can give of what proportion this bears to the total is that the value of accessories produced, and engineering work, by outside firms at the time of the census of production of 1907 was about one-fourth of the total value of the output of the motor industry. We cannot get to closer grips with this problem of numbers without a fairly complete census of production, the absence of which is the most serious handicap in discussing all such economic questions. We are, however, convinced that our readers will not be seriously misled if they have in mind the figure of 100,000 as the number of people directly or indirectly engaged in the production of private motor-cars in this country. It might conceivably prove this year to be as high as 125,000. It is a proportion of this number whose employment is at stake.

This is, however, a sufficiently large and important body of workpeople to make it incumbent upon those who desire the removal of the duty to indicate what they conceive to be the probable effect upon employment. The argument falls under the two heads of the effect upon the employment of those directly engaged, and secondly, the

effect upon alternative employments. We will deal with the second point first.

For the purpose of the argument we will assume that a certain amount of unemployment is caused in the motor industry through a reduction in the production of British cars on account of low prices and an increased importation of cheaper foreign cars. But such imports must be paid for, and the increased importation will result in the increased export of British goods or services. We need not go over this ground again, as it is very familiar to our readers. We need only repeat that the export which in such circumstances would occur will be one in which we have natural competitive advantages, and that, therefore, in the long run the nation will be richer, and not poorer, by this diversion of trade. It is, of course, easy for the Protectionist to point to the people who may be unemployed, and to ask who will be the people who will be drawn into employment. Naturally, it is only possible to answer this question in general terms by pointing to figures such as those which show that at times when our imports of manufactures are high our exports are also high. In this particular case, however, it is easy to put our finger on the first industry that will feel the benefit. It would be the shipping trade, if, as Mr Morris' argument implies, at least 25,000 additional foreign cars will come into this country as a result of the repeal of the duty. On his assumption, the number would, in fact, probably be much more, since it has to be assumed that prices would be lower than at present, and that this cheapness would stimulate the volume of purchases; 25,000 complete cars, most of them coming across the Atlantic, represents no mean addition to the shipping business of the year.

It is also clear that cheaper cars mean more motoring and more employment in repair work, petrol supplies, and all the trades ancillary to the use of cars. In this connection it is worth noting how very far behind some other countries we are in the use of cars. The latest figures we have on this point are for the year 1921, but they are worth recalling:—

	Population.	Number of Cars.	Number of Persons per Car.
United States	105,683,108	9,211,295	11
Canada	8,370,000	403,111	31
Australia	5,000,000	78,000	64
Great Britain and Ireland	46,080,000	420,000	110
France	41,500,000	202,500	205
Germany	55,000,000	75,000	733

These figures are taken from the Industrial Year Book of 1922, and are given on the authority of the National Automobile Chamber of Commerce. The figures appear to exclude omnibuses, but include commercial vehicles. We assume, however, on the authority named, that care has been taken to make the figures comparative. It is obvious that the proportion of cars in Great Britain is capable of very great extension indeed, and if in a few years the number of private cars is doubled under the stimulus of low prices, the workers engaged in their maintenance must very greatly increase.

But there are many reasons for thinking that the repeal of the McKenna Duties will not reduce the number of

British cars sold at all. In the first place, the market is a rising one; the numbers of cars sold are increasing fast, and prices are tending to rise. Mr Morris, for instance, gave notice several weeks ago that he would not guarantee his present advertised prices, while the price of a popular Canadian car was raised last month. Then, again, the chief imported cars are being assembled here, and an increasing quantity of the work in foreign cars sold in the British market is being actually done here. The three chief lines are Fords, General Motors Products (Buick, Chevrolet and Oakland) and Citroën cars. It is said that the Ford car as sold in England to-day only pays about £3 of tax, as only £10 or so of its material is foreign. It is certain that the employment afforded by these British activities of foreign firms will continue. The Ford car sold here is different from the American Ford (e.g., it has a right-hand drive, &c.), and the tendency of American firms to exploit their products in British factories is one which is based upon very fundamental influences, the effects of which may be seen in the case of non-protected as well as protected products. Among the many illustrations of this fact which might be cited is the case of the Goodrich company, which has recently acquired a factory in Lancashire for the manufacture of tyres, &c., hitherto made in the United States. The chief reason for this movement of American industry is, of course, the high costs, particularly labour costs, in the United States.

Another point which should be remembered is that the exchange situation is against foreign importers. The franc, for instance, at the moment, is too dear in proportion to French wages; yet the new Minister of Finance is determined to keep up its price. Again, the British pleasure car is in any case a different product from the imported car, and sells on its quality. We may give an example near home of its ability to hold its own on equal terms with imported cars. In the Irish Free State British cars pay 22 per cent. duty, i.e., the same as Canadian cars. In January the Free State imported 357 touring cars from Great Britain, 24 cars from France, and 9 cars from other countries. The British figure doubtless includes re-exported cars of Canadian and other origin, but the total re-exported by Great Britain in that month to all destinations only amounted to 190 cars. Clearly, therefore, the bulk of Ireland's imports were British made. The streets and the motor showrooms of Dublin confirm the impression that the British maker is keeping his end up against the Canadian car even on equal terms, and with the French and American with only an 11 per cent. advantage.

These are some of the reasons that make us confident that British motor manufacturers are unduly fainthearted, but that, in fact, they will do what so many other British trades have done before them, and prove that British enterprise can hold its own against the world.

There remains one other argument to which we must briefly refer. The motor industry was so completely diverted to war work during the war that there was an argument of considerable force for the Government continuing special measures to assist them during the period of change-over. In this connection it is worth recalling that in 1918 a Committee of the Ministry of Reconstruction, on which there were eight representatives of the British motoring trade, included among its recommendations that "the British motor industry should be assisted by the imposition of an import duty on foreign motor vehicles and parts for a period of at least three years after peace. The committee claim that the industry is an 'essential' industry from the national point of view, and, having regard to the great dislocation suffered by the industry and the loss of its goodwill abroad during the war, such a measure of temporary assistance is desirable in order to enable it to recover its position and to extend its scope." The trade has, in fact, had five and a-half years of protection in which to set its house in order. We may add that the duties cannot now be defended on the ground of fostering what is called an "infant industry" by means of protection. In the first place the argument is only valid for countries which have to create a skilled labour supply, accumulate machinery, and acquire technical staffs, &c. It has hardly any force in a highly developed country where the kind of economic

equipment in question already exists. Secondly, the motor trade has had its protected "infancy" in recent years, and has not only amply secured the physical conditions mentioned, but has also a large and rising market and an established "goodwill." And finally, experience of other countries shows that no infant industry ever admits that it has grown up, though it often acquires sufficient political power to bring great pressure to bear upon Governments. The motor trade is now trying to do this here by raising the fear of unemployment. We have endeavoured to show, on the other hand, that conditions are as favourable as they are ever likely to be for taking off duties without involving a big transfer of employment.

Whether the Government has done wisely in maintaining the duty until the particular date of August 1st is a question on which much might be said on both sides. Mr Morris now declares that if the duties are to go they had better have gone at once rather than create a period of uncertainty. On the other hand, the trade is getting such benefit as the duty confers for the greater part of the present season, and Mr Snowden has done his best to consider the interests of those dealers who have purchased imported cars or parts under the duty. He can hardly have failed to consult the trade on this question of date.

In conclusion, a word may be said as to the financial position of the trade. This, as will be seen from the review of the reports of several motoring companies in another column, is by no means satisfactory. The survey which we make is very far from complete, since many of the makers of the best known cars are not public companies publishing reports, and it is, therefore, not possible to generalise about the trade as a whole. But the position of the companies whose figures we analyse may be briefly summarised by saying that while nearly all of them are now making a profit on their trading account, they still have a serious financial position to liquidate as a result of over-capitalisation or bad finance during the boom. These difficulties they share in common with a large number of trades of the country, and it can hardly be argued that they constitute a ground for giving the trade a special protection.

THE FINANCIAL SITUATION IN AUSTRIA.

(FROM A CORRESPONDENT.)

FINANCIAL Vienna is in a sad mood. When Dr Seipel in 1922 signed the Geneva Protocol, the State had succeeded in mulcting the ordinary citizen of 14,000 times his pre-war kronen holdings. Everybody dreamed in millions, and nobody knew what he really had. Banks and industry had their affairs hopelessly muddled. The banks had practically lost all their former reserves, but made money fast on the depreciating exchange. Industry was selling out its products on increasing kronen prices, but without making provision either for the renewal of machinery or the replenishment of stock. In the world of finance a host of people had appeared who by living entirely on the inflation, quickly amassed great fortunes. The repudiation of the State debt of 40 milliard kronen odd had greatly impoverished its holders. Capital left the country as fast as it could, and money rates reached fantastic heights. On the stock exchange the old gilt-edged securities had disappeared, and the industrial shares lay almost forgotten since speculation on the exchange extracted all the money available. The wages of the workers lagged far behind the rapidly rising price-level. Taxes were paid months after assessment. The relationship between capital and labour was as bad as it possibly could be, and there was a gulf of hatred and contempt between the rich and the poor.

In 1922 the krona to all intents and purposes became stabilised once more, and, by the Geneva Protocols, Austria in return for the League of Nations loan, undertook to stabilise its budget under the supervision of a commissioner-general. In Vienna itself the establishment of the League of Nations scheme had somewhat unexpected results. The Protocols imposed upon Austria complete reorganisation of the old methods of taxation; the Commission of Experts made it clear that the burden would be heavy, and it could only be borne by greatly

reducing the standard of living, coupled with the strictest official and private economy. It would have been prudent to realise that under these circumstances the dividend-earning capacity of trade and industry would be further diminished. Further, the krona now having been stabilised, it would have been imperative to order a revaluation of all companies' balance-sheets, so as to show assets and liabilities—at present a hopeless muddle of paper and gold crown items—in their real values. But nothing of this kind happened. Instead of this, somebody started on the stock exchange the cry "Back to pre-war valuations." It was pointed out that shares which were priced in 1913 at ten or twelve pounds, could now be picked up for a few shillings; it was said that such a thing was ridiculous considering the actual prices of machinery, stocks and goods. The papers joined in, and the whole of Austria took up the scent. The old exchange speculators, deprived of their old hunting-grounds, partly emigrated to Berlin or turned their activities towards industrial shares. The impoverished middle-class sought speculation on the stock exchange as its last resort to make up for the loss of its income. The State, which had to pay relatively great sums of money to the civil servants which it began dismissing under the reconstruction scheme, further indirectly supported this development, which, after a slight setback in January, 1923, rapidly increased in strength under the effects of the breakdown of German industry after the Ruhr invasion. Within six months the stock exchange index rose from 502 to 1,479.

In the meantime, the State and the Municipality of Vienna, acting under pressure from within and without, made great attempts to bring order into their balance-sheets. In the first half-year, 1923, State taxation per head was raised from 31.56 gold crowns to 45.32, reached 55.1 by the end of the year, and will stand at 60 in 1925. It is impossible to estimate the exact rise in the additional burden thrown upon the taxpayer by the rise in the municipal rates of Vienna, but it may be mentioned that the Town Council still keeps in force all the levies which it imposed to safeguard itself against the depreciation of the krona.

Vienna has greatly increased the salaries of its employees, who receive now about three times more than the civil servants, has repaired roads and trams, and is erecting magnificent buildings for the workers. The latter action, at least, has done much to alleviate the lot of the workers.

It is more difficult to justify the actions of the Government. The task before it was clear: it had to balance its budgets according to the provisions of the Treaty. It could not increase its debt, but nevertheless it decided to embark upon a policy of large investment, chiefly in water-power stations, which are bound to benefit Austria ultimately; but it may well be doubted whether they and other expenditure, chiefly in the so-called *gemischtwirtschaftliche Betriebe* (joint enterprises between State, Labour, and private individuals), could not have been postponed or wiped out altogether. Much has also been said by Dr Zimmermann about the expenditure on civil servants and State contributions to the railways. As facts went, however, despite this expenditure, Austria has more than complied with the conditions of the Protocol, and the year 1923 shows a deficit of only half the sum allowed by the reform plan. In achieving this the Government almost entirely resorted to an increase in taxation. It was only natural that "capital" was to become the chief source of revenue. Religious and racial feeling against the new rich and the animosity of the Socialists against the "accumulation" of capital made the taxation of capital naturally the line of least resistance.

It has already been mentioned that, despite the stabilisation of the krona, no revaluation of company balance-sheets was ordered. Shares were still issued in the old denominations of 400 to 600 kronen apiece, only to be sold at once in the market at ten to a hundred times these values by the lucky issuing syndicates. The difference the State now declared as taxable profits, and in order to "protect the investor" it gave the Minister of Finance authority to fix the price of issue for the syndicate. The stock exchange index, now also under the influence of foreign investments, rose from 1479 to 2586, and the Minister of Finance did his level best to fix the price of new issues "in accordance with the market valuation."

Dr Zimmermann excepted, there were but few who predicted the inevitable crash, once the public would feel the necessity of getting some return on its investments, which hardly paid more than a few hundred or thousand kronen at the best. The note inflation had been stopped, but was, in fact, replaced by a credit inflation. There is no outside evidence that the English, American, and French bankers on the boards of the Viennese banks tried to restrain their colleagues. At the end of 1923 daily money rates in Vienna fluctuated round about 25 per cent. to 30 per cent., while the yield on investments can hardly be said to have exceeded 2 per cent. per annum on the average. Despite the influx of foreign monies capital was still scarce, since all the money was bound up in the stock exchange, where it was also artificially directed by the fact that banks refused to grant more than 8 per cent. to 9 per cent. per annum on ordinary investments.

It is obvious that an equilibrium would have to be found in any case. As a matter of fact, in 1924 the value of shares began gradually to decrease. Unfortunately, however, Vienna had also started to speculate on the depreciation of the franc. The commitments were by no means too heavy for the market—if it had been otherwise sound. It was not. When the franc was stabilised stock exchange values came down with a crash; in the course of time 68 banks had sprung up in Vienna, all speculating on the exchange or buying shares. In a few days they were drained of their resources. It is the declared policy of the big Viennese banks—which have not for a moment ceased to meet every demand upon them—that none of these distressed institutions will fail.

For the British investor the position is this: There can be no doubt as to the absolute security of the Austrian loan, the interest on which is many times covered by the revenue from Customs and tobacco. The security of the krona also stands unimpaired, since under the present management inflation will be impossible, and the open and secret reserves of the Nationalbank can be trusted to withstand any strain likely to be expected in the future. The foreign speculator in Austria will, of course, have to take his risks. Given a gradual relief from the pressure of the Customs barrier of the Succession States, the internal position of Austrian industry can be regarded as inherently sound. The relation between capital and labour has much improved of late, and many works report great increase in the efficiency of their workers. On the other hand, high taxes will have to be borne for a long time to come. What is, however, urgently needed is a speedy and immediate reorganisation of all balance-sheets on the lines of the German Aufwertungsgesetz. Before this is done it will be impossible to gauge the exact incidence of taxation, to redistribute its burden, and to readjust expenditure.

MR SNOWDEN AND IMPERIAL PREFERENCE.

THOUGH the Chancellor of the Exchequer has so far refused to be drawn into a general discussion upon Imperial Preference—on the ground that special facilities are to be provided for a debate—he has not concealed his own views. It is clear that he declines to give effect to the basic principle of the late Mr. Joseph Chamberlain—that if we want to give preference to the Dominions we must put taxes on food. That principle was adopted circumspectly at the Imperial Economic Conference of last year, when it was agreed by Mr Baldwin's Government to put, if the House of Commons consented, additional taxes on certain food products, so that a preference by remission of duties might be given to Dominion products. Mr Snowden will have no truck with the Tariff Reformers' notion of making the consumers of this country pay, directly or indirectly, a subsidy to producers in the Dominions. So far is he from putting on taxes in order to give a preference to Empire products, that in his Budget he has lowered the duties on several dutiable foods, and, in proportion, lowered the amount by the preferential rebate which has since 1919 been allowed to those foods when imported from the Empire. The Imperial Preference resolution which was adopted in 1919 declared that a preference by rebate of duties—usually of one-sixth—

should be granted to Empire products in respect of all duties then levied or afterwards to be levied. That system of preferential rebate has been followed ever since, and Mr Snowden does not propose to disturb it during the lifetime of the present Government.

In his speech introducing the Budget on April 29th, the Chancellor declared that the Labour Party had "never believed that the interests of the Empire would be best served in the long run by a system of tariff preference," and had expressed these views by their votes on several occasions. He refused to give support to the last Government's proposals at the Economic Conference, which are to be submitted to the House of Commons for "free and unfettered decision." Nevertheless, he added, "So long as we remain in office we do not propose, in all the circumstances, to ask Parliament to abolish the preferences now accorded, which, we suggest, should remain on their present statutory basis. But we wish it to be clearly understood that we reserve full liberty to propose to Parliament whenever we deem it expedient, in the general or financial interest, the reduction or the abolition of the duties on all the commodities to which preference now applies." Mr Snowden then proceeded to propose substantial reductions of duty on tea, cocoa, and coffee, chicory, sugar and dried fruits, to all of which the statutory Imperial preference of one-sixth of the duty applies. It is obvious that one-sixth of the new rates of duties will give the Dominions, India, and the West Indies much smaller preferential rebates than did one-sixth of the previous rates of duties. And it was this reduction in the preference—in amount, though not in proportion—which brought down upon Mr Snowden the wrath of the whole-hearted advocates of Imperial Preference by tariff duties. They charged him with maintaining the preference in principle while whittling it away in fact. Which was exactly what he had done; he declined to permit the existence of a preferential rebate to prevent him from reducing the rates of duty—and hence the cost to the consumer in this country—upon tea, coffee, cocoa, sugar, and dried fruits.

So far the battle waged by the Unionist Tariff Reformers against Mr Snowden has not given much satisfaction to the Tariff Reformers. They have attacked him this week on the tea, cocoa, coffee, and sugar resolutions, and came off rather badly. The duty on non-Empire tea of 8d a lb is to be reduced to 4d a lb, and the corresponding duty on Empire tea of 6½d (a remission of one-sixth) is to be reduced to 3½d a lb. An amendment moved by Sir Henry Croft proposed to make the duty on Empire tea 2d a lb, while leaving that on non-Empire tea at Mr Snowden's 4d. The purpose of this amendment was to make the preferential rebate on Indian and Ceylon tea one-half instead of the statutory one-sixth (in money, 2d a lb instead of 1½d last year and ¾d this year). Mr Snowden's reply was devastating. He pointed out that since 88 per cent. of the tea imported into this country comes from India and Ceylon, there is no effective preference to the Imperial producer. The consumer here gets the reduction of duty, whatever it may be, and that the Croft amendment would take five millions from the Exchequer without benefitting the India or Ceylon grower by one farthing. There was, he explained, so little that was Imperial or preferential about the one-sixth rebate on the tea duty, that the India and Ceylon tea growers were quite indifferent about it, and would like to see it wiped out. As everyone knows, the tea grown in India and Ceylon, by its own qualities, drove China tea out of the British popular market years before Imperial preference had ever become fashionable.

After a gentle skirmish over coffee and cocoa, the Unionists plucked up heart to tackle Mr Snowden over sugar. Here the circumstances are the exact opposite to those of tea. Tea already comes from the Empire to so overwhelming an extent that the preference does not operate in aid of the Imperial growers; it is a direct factor in the price to the British consumer. On the other hand, the sources from which we buy sugar are overwhelmingly foreign, and the preferential rebate in duty on Empire sugar goes partly to the Empire growers and partly, we suspect, to the big wholesale importers. The consumer in this country pays the full foreign rate of duty for Empire supplies. The preferential one-sixth on the standard rate of duty on the pre-Budget scale was 4s 3½d a cwt; on Mr Snow-

den's new reduced scale it will be 1s 11½d per cwt. The purpose of the Unionist amendment moved by Sir William Mitchell-Thompson was to continue the amount in money of the preference at 4s 3½d per cwt. The former Parliamentary Secretary of the Board of Trade made an excellent speech (he was at one time a grower of sugar), but he could not escape from the fact that his proposal—unlike the tea amendment—would be of no benefit to the British consumer. It would give somebody—the West Indian planter, or perhaps the middleman—a handsome subsidy at the cost of the British Exchequer. Mr Snowden's case was that the rebate would go to the West Indian planter, who did not need a subsidy at the cost of the taxpayers of this country. He produced figures to rebut the contention of the Opposition that the preference in operation since 1919 had increased the production of Empire sugar. Both sides hurled figures at one another's heads, as Tariff combatants always do, and neither side accepted the other side's figures; they never do in Tariff controversies. Mr Snowden's conclusion—which must have been the conclusion of his skilled and impartial advisers—was that the preferential duty had done nothing meritorious except to increase the profits of the West Indian planters. "It has," he concluded, "not encouraged Empire production, but, on the contrary, if these figures mean anything at all, it has had the disastrous effect of reducing the production of Empire sugar by 25 per cent." Mr Snowden's figures certainly were striking, though we scarcely think that the preference had anything to do with them, one way or another. In 1919-20, when Imperial preference began to operate, the West Indian production of sugar was 191,000 tons. In 1922-23, after five years of preference, the West Indian production had fallen to 159,000 tons.

THE SECURITY OF A LLOYD'S POLICY.—I.

LLOYD'S, in its essence, is an association of men who gather in a market-place and do business together in various kinds of insurance. The brokers who bring the business from outside may be either individuals, or firms, or limited companies, but the underwriters—the men who constitute the market by accepting the risk—accept it as individuals, and as individuals only. They do not, indeed, as they did within living memory, sign their own names on the policies with their own right hands, and most of them, being "written for" by an agent, have no detailed knowledge of the risks they write; but, for all that, they have the same personal individual liability to the policy-holders that their predecessors accepted in Mr Lloyd's coffee house, and in the old jargon of their trade they are "contented to bear and do take upon them each for his own part and not one for another." Whatever changes have been made in the scheme of Lloyd's business, and whatever safeguards it has been necessary to provide for the due fulfilment of the policy, this unescapable individual liability to the full extent of all the man's resources remains the foundation-stone of the business. Without it Lloyd's would have little or nothing to offer to the insuring public, but with it Lloyd's, as a place of free judgment and individual underwriting, provides the business world with a market that nothing but this system can supply. And while everyone but a fanatic will admit that there are limits to the usefulness of this kind of market, no one but a fanatic would deny that, within its proper sphere, it has a real value.

But if the principle of individual liability is inherent in every Lloyd's policy, and essential to the maintenance of a free market, it is obvious that under modern conditions you cannot have a big insurance market in which every member is at liberty to accept whatever risks he likes and to any extent that may seem good to him without regard to his resources and his ability to pay. To Mr Lloyd in his coffee-house it probably mattered very little whether an underwriting customer met the claims on a policy or not, and we can imagine that, as the proprietor of the house, he was more concerned to see that he himself was paid for the drinks than that the policy-holder was paid for the losses. But to the present Corporation of Lloyd's, and to the committee which manages it, it is

a matter of supreme importance that the men who sign the policies should pay their claims, and for years past the vital work of the committee has been to safeguard the credit of the members without destroying the freedom of their market. No one would claim that the problem has been a simple one, but—apart altogether from contentious questions about the proper scope of Lloyd's underwriting—it may fairly be claimed that the problem has been tackled bravely and successfully.

What, then, are the safeguards that the committee have provided for the security of Lloyd's policy-holders and the solvency of the members? They are numerous and varied, and, briefly, without over-elaboration, may be described as follows:—

(1) Every applicant for underwriting membership of Lloyd's must submit to the committee, through an existing member, a full statement of his resources, and prove to them that he is a man of sufficient wealth to take on the liability which will arise from a business of the size that he will engage in. He must also deposit with the committee securities which will be held in trust, and will be available only in the event of his insolvency. These securities are never less than £5,000 per man, and in proportion to the size of the account that he is permitted to write, they rise sharply in amount. The total of these securities held in trust by the committee is believed to amount to over £10,000,000.

(2) All premiums received by the underwriting member are held in trust, and may not be distributed to him until the profit has been earned. They constitute a trust fund for the settlement of claims and expenses, and on most accounts the balance of profits is not struck or distributed until the end of the third year. Thus the premiums of 1918 are not distributed as profit till the beginning of 1921, and the premiums of 1919 till the beginning of 1922.

(3) The members provide and deposit with the committee policies written by their fellow members guaranteeing their solvency. No member is allowed to accept a greater risk than £200 on the solvency of any one other member, so that a guarantee policy of £10,000 must carry the signature of at least 50 members. This is intended to prevent the effects of one insolvency, if it should occur, from affecting too seriously another underwriting member.

(4) As regards business other than marine, the securities provided must by law amount to at least one hundred per cent. of the last year's premium income.

Apartment from the official audit, which will be dealt with later, these in rough outline are the securities demanded. But it has been felt that effective as the individual safeguards undoubtedly are, situations might arise in which the Corporation would want to supplement from its own corporate funds the resources of some individual member. Until the year 1911 the Corporation had no power to use its funds for this purpose, but in that year an Act of Parliament dealing with Lloyd's was passed, empowering the committee "where in the opinion of the society or the committee it is to the interest of the society so to do," to use the corporate funds in paying claims on Lloyd's policies. This Act was an empowering Act only; it involved no departure from the principle of individual liability; it simply said that if ever a member should fail so badly as to exhaust all his individual securities and guarantees and still leave a deficiency, the society may in its discretion decide to pay his claims. The law, in fact, having prescribed the defences that must be set up, gave permission for another last line of defence that in case of need may be set up. That in simple language is the legal position, and the recent lawsuit, in which the question of corporate liability bulked so largely, turned not on whether the Corporation has a general liability to policy-holders, but on whether it had in regard to a particular claimant undertaken to exercise its power of paying claims.

But all these securities and safeguards, valuable as they are in themselves, derive their greatest value and their full strength from being linked up to the central safeguard—the audit. The history of this audit is connected so closely with the history of Lloyd's in the past sixteen years that it may be said to have done more than anything else to shape the growth and development of the society and to alter the outlook of its members. Until the year 1908 there was no official audit of Lloyd's underwriters'

CABLE ADDRESS: BANKTRUST, PARIS

books, and members were free to have their accounts certified or not, as they saw fit. But in or about 1908 the committee instituted the official audit by inviting members to submit certificates, and publishing a list of those whose certificates had been accepted. This was tantamount to an order that the accounts of all underwriters should be audited, for no broker would do business with an underwriter whose name was not on the list of the chosen, and since the audit was begun no member ever has continued to underwrite without obtaining from one of the officially recognised firms of auditors a certificate in accordance with the committee's requirements. In the early days those requirements were comparatively simple, and all that an underwriter had to show was that, judged by his own past results, he had in hand sufficient funds to meet claims on all outstanding policies. Steadily and surely in the past sixteen years the demands of the audit have grown more exacting. No longer is the member allowed to be tested by his own results, for now the committee supply the auditors with elaborate instructions as to the funds every member must hold in respect of every class of business that he undertakes. For the insurance of cargoes his resources must reach a given percentage of his premium income for each unclosed year; for the insurance of hulls for time he must reach another and a much higher one, because the liability is slower in running off. For general non-marine business he must have in hand a given percentage for each year; for special insurances, such as motor-cars, which at present are considered unprofitable, he must have a much larger percentage. The audit, in fact, is based on an assessment of unexpired liability corresponding to the allowance which fire companies put aside each year for the liability not run off. It is an assessment that grows more stringent year by year as the committee raises the height of the fence that underwriters have to clear.

BRITISH MOTOR MANUFACTURING COMPANIES.

IN view of the Chancellor's proposal to terminate the McKenna duties in August, our annual review of companies representative of the British motor manufacturing industry acquires peculiar interest. Unfortunately, the figures we give are not fully representative of the British motor trade, as many concerns, including the most successful firm in the country, are not public companies, and their figures cannot therefore be included. In order to present such results as are available in a comprehensive manner, we have compiled a table, which shows at a glance the financial anxieties which have beset many of our motor manufacturing concerns in the last few years. It will be recalled that for various reasons, including some serious labour disputes, the motor industry was too slow in getting back into its stride to take full advantage of the great demand for cars in 1919 and 1920. But it—or at all events a large part of it—was in time to take part in the orgy of capital inflation of those years.

The following statement shows net profits or net losses of a number of companies during the past three

years. We also append particulars concerning the distribution of the available balance:—

	Net Profits after Payment of Debenture Interest.			Distribution of Available Balance.
	1921.	1922.	1923.	
Austin	Dr 618,731	£ 78,564	205,459	Debit balance forward reduced from £1,805,337 to £1,599,578. Prof. div. paid absorbing £24,044. £131,027 carried forward, against £30,010 brought in.
Birmingham Small Arms	1921-22. Dr 469,168	1922-23. Dr 168,671	1923-24. 125,061	Debit balance forward reduced from £321,879 to £266,514. £20,000 to reserve. Ord. div. and bonus unchanged at 13%, absorbing £65,107. Carry forward £19,315, against £17,137.
Crossley	Dr 294,965	Dr 97,584	1922-23. 56,366	£60,000 to reserves. Prof. div. £19,990. Ord. div. unchanged at 10% £29,288. £72,838 carried forward, against £58,088.
Dennis Bros. ...	73,449	73,677	87,285	Debit of £998,710 carried forward, against debit of £993,908. Prof. div. £22,500. £74,500 put to reserve. £11,402 carried forward, against £7,953.
Humber	103,999	108,249	123,928	Ord. div. unchanged 8%, £65,026. To reserves, £90,000. Carried forward £10,093, against £8,410. Ord. div. reduced from 10% to 5%, absorbing £39,812. £50,000 taken from reserve. £23,688 carried forward, against £50,252.
Leyland Motors	Dr 789,873	Dr 298,392	Dr 4,803	Interim dividend of 3½% paid on pref. ord. shares, absorbing £284,043. £170,373 carried forward, against £132,237.
Napier	79,099	Dr 76,571	98,449	Debit of £4,427 carried forward, against a credit balance of £3,434.
Rolls-Royce....	107,326	119,208	156,708	Credit balance increased from £4 to £54,136.
Rover	102,320	146,754	Dr 36,758	Debit balance forward reduced from £73,261 to £71,956.
S.T.D.	151,382	56,017	102,178	
Swift of Coventry	Dr 87,735	10,124	Dr 7,861	
Vauxhall	Dr 221,759	Dr 76,710	54,132	
Willys Overland	Dr 96,486	11,014	1,305	
Crossley				

† Two years. (t) Nine months to Sept. 30, 1923.

The figures in this table are not without redeeming features. Rolls-Royce, Humber, and Rover are in a good position—the latter company notwithstanding its debit, which represents to a considerable extent a non-recurring expense. Dennis is of special interest, not so much on account of big profits, but because of the fact that it is an undertaking engaged in making commercial vehicles. We need hardly remind our readers that makers of commercial vehicles have not had the benefit of a protective tariff to nurse them through troubled times; some other companies, however, engaged in making commercial motors have not been so successful. The Austin Company, we are glad to see, is turning the corner. The report states that "The company's productions continue to grow in favour, the sales from September 30, 1923, to date, being in excess of the programme laid down." This undertaking, it may be recalled, quickly got to work after the Armistice, and did actually carry out an excellent programme of mass production. The difficulties of Sir Herbert Austin appear to have been in the field of finance rather than in that of engineering. The fact remains, however, that at the end of the third year a profit of £205,459 is shown, as against earnings of £78,564 for 1922 and a loss of £818,173 for 1921. The B.S.A. undertaking has many activities, and it would be difficult to adduce any conclusion from its accounts as to the present state of its motor business. Crossley Motors have also turned the corner, and a loss of £97,584 has been converted into a profit of £55,366; there is still, however, a debit balance of £266,514 to be reckoned with. Dennis Brothers we refer to later. Humber have made excellent progress, but this is a company also making motor-cycles—a section of the industry in which this country plays a leading part. This part of its business may perhaps be largely responsible for the satisfactory state of the accounts. The position of Leyland Motors is certainly not a happy one. Profits are given as £132,253. From this falls to be deducted interest on loans, including bank interest, £80,200. Another item, "Depreciation on buildings, plant, and machinery, £62,395," is brought forward. After balancing various items, a loss for the year under review of £4,803 is recorded. A total debit balance of £998,710 is shown. In this case it is evident that some measure of capital reorganisation will be brought forward, for the company has an excellent reputation for its productions. Napier accounts show an improvement in the position of the company, and we are glad to learn from the report that there has been an increase in sales, both of cars and "Aero" engines. Rolls-Royce presents its reports

and accounts in keeping with the reputation enjoyed by its cars. Rover has had to make a payment of £25,000, as "compensation paid to the late managing director." This internal trouble, to which some reference has been made in the Press, has doubtless interfered with the year's work as well as costing the company a considerable sum of money. But for this setback a different story might have been shown. S.T.D. and Vauxhall both present improved results, but Swift and Willys Overland take a turn for the worse.

Our next table shows the principal liabilities and assets of a number of the leading motor manufacturing concerns over the past three years:—

Name of Company.	Principal Liabilities.			Principal Assets.

These balance-sheets in many cases reflect the financial difficulties of the firms concerned. We have already mentioned Austin's deficit of £1½ millions, but there are other items under assets on which we should like further information. "Expenses of issue, &c.," which appear as £189,926, investments at cost £212,441, and goodwill £284,122, are among these. We have referred to the figures of the B.S.A. in a previous issue. Dennis Brothers present an excellent balance-sheet, but one item might be elucidated—viz., the first, which represents purchase of business and goodwill in 1913, £102,597. It may be that the whole item is goodwill. Indeed, no one could complain if it were. But the wording is ambiguous. The Humber company omits to state how its Government securities, returned as worth £272,842, are valued. Leyland Motors follow the sound practice of showing the previous year's figures for comparative purposes. We confess that we should like to see the item, "Bank overdraft, trade and other creditors," totalling £1,433,665, separated into two items at least. Napier turned by Rolls-Royce which call for no comment beyond the fact that prosperity is reflected on both sides of the accounts. The Rover Company's balance-sheet has always appealed to us on account of its lucidity.

The S.T.D. is a holding company which we trust next year will present us with a "composite" balance-sheet showing exactly what assets are owned by the company—

The Vauxhall figures are not very informative; we notice a bank overdraft of £139,082, to secure which £200,000 mortgage debentures were issued and pledged to the bank.

Our final table shows a comparison of share prices and yields over the past three years:—

Name.	Share.	End April, 1922.		End April, 1923.		End April, 1924.	
		Price.	Yield.	Price.	Yield.	Price.	Yield.

† £1 shares.

This is certainly not a very attractive table. It will only show a general resumption of ordinary dividends as the deficits bequeathed from 1920 and 1921 are wiped out during the next two or three years. But perhaps the quickest road back to prosperity will prove to be by a process—of which there are already signs throughout the trade—of amalgamation and concentration on the more successful models.

AN IMPRESSION OF WEMBLEY.

(By A CASUAL VISITOR.)

I WENT to Wembley one day this week, and went, I confess, through a sense of duty and with forebodings of disappointment. By a cautious mind the broadcast advertisements of its wonders had been discounted; while the still small voice of grumbling and complaint lingered in a critical ear. I left Wembley with the determination to return as often as possible. When I return I shall go, as before, through a sense of duty (for no thinking man is doing duty to himself if he fails to study the marvels there collected), but also with a knowledge that the performance of this duty will be attended by a growing fascination.

To those who have not yet seen the Exhibition, and particularly residents afar off who are planning their visit, one or two impressions of a first visit may be useful. First and foremost, it is a profound mistake to suppose that you are going to see one great, compact, homogeneous exhibition. It is not an exhibition, but a whole host of exhibitions, many of them on the colossal scale, almost all of them worthy individually of as much time as the average visitor can give to the whole of Wembley. Take, for instance, the Palace of Engineering. One may easily stroll for an hour through its avenues and bays before discovering—in a wing, huge in itself, but small in relation to the whole building—a comprehensive show of the British motor industry. I did so myself, and the incident struck me as a measure and an illustration of the vastness of Wembley. Every British industry is holding its own great exhibition. Every Dominion (except the new Irish Free State), India, every Crown colony and protectorate, reveals separately its resources and industry, its life, its people, and its activities. Here a variety and a wealth of interest is presented which defy exhaustive study in a hundred visits. The visitor of one day can but gather a bewildering mass of sketchy recollections. At one moment he is marvelling at the unlimited preparedness of British engineering to provide the motive force for any industry in the world; at the next he is learning the story of cotton from the plantation to Lancashire and from Lancashire to the weaver; at the next descending the shaft of a coal mine to examine the work and conditions of the miner, realistically presented, or viewing on the figures of live mannequins the fashion designs with which Bradford challenges Paris. Then he may set out on a world tour. From the rolling wheat fields of Canada he may pass in a few moments to the vineyards of Australia, to the tea estates of India, and the rubber lands of Ceylon or Malaya, strolling by the way through African villages; and back in one moment he may come to the Palace of Arts, which

THE MERCANTILE BANK OF INDIA, LTD.

Capital Authorised ... £3,000,000
Paid-Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,407,811

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS. The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application. Fixed Deposit Rates will be quoted upon application. On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

one visitor aptly described as "the National Gallery and the Royal Academy combined, with some of the British Museum thrown in." Then, on a scale with the rest, there are the tremendous provisions of amenity and amusement. That is a bare and sketchy idea of the scope of the adventure.

Of the myriad changes of colour, scene and atmosphere no ordinary pen can paint a picture. But this, at all events, can be said. On the whole, the task of presenting to the public, as well as to the man of special knowledge, the picture of economic facts has been handled with a most impressive wealth of resource and imagination. The knowledge to be derived from Wembley would fill a thousand text-books. Every exhibit is a text-book in itself. Yet it is true of many of the chief exhibits to say that the dullness of the text-book is completely removed by vivid and ingenious methods of appeal. One or two instances stand out in the memory. The function of the building of His Majesty's Government is obviously to epitomise the links of Britain with the Empire and the rest of the world. No sooner is the visitor inside the building than this theme is ingeniously presented to him. Only a few steps inside, and he looks down on a representation of the world, the countries standing up out of the blue sea, across which British ships scurry from London and Liverpool to all the distant ports on the Seven Seas. The same imaginative method runs through other exhibits in this building. Again in Canada and Australia one sees the scenery, the people, the products, and the activities in a picture. In the case of Canada, the wheat is taken before our eyes from the fields to storage, to the train, along the railway, into the elevator, on to the ship, and on board ship out of the harbour of Montreal.

To see Wembley in one day is to emulate the feat of the globe-trotter who "did" Rome between two trains. If I can give to intending visitors any hint that will save them from the mental and physical weariness entailed by a one-day rush, I shall be repaid for my pains. The best advice I can give is this:—Limit your aim at the first visit to taking a bird's-eye view and making a careful plan for a series of visits in which you may see thoroughly the things that interest you most; reserving several visits for a more rapid survey of the rest. There are many methods of making a plan. You may, for instance, allot a visit to one Dominion, one great industry, or perhaps one continent. Or you may take a raw material and trace it through its history and stages of use. In this matter a careful study of the official guide will assist. But if I might, as one who has suffered, make a humble suggestion to the Exhibition authorities, it is that they should ponder over methods of showing more clearly to the visitor how he can make the best use of his time, without waste of effort. Something more than the present facilities would seem to be needed. For Wembley is a great and bewildering city.

One last impression. Surely the great British industries should tell the world more clearly and loudly (I had almost said more boastfully) of the wonders of the wares they show at Wembley. Here is probably the greatest show of industrial power and resource that has ever been concentrated in one picture before the public gaze. The world—not merely the British Commonwealth of Nations—should be told of it. Personally, I can only say to all who are not intending to visit Wembley, that they will never know what they have missed, and plead with those who are coming to extend the proposed length of their

visit. It is worth while. Those who associate Wembley only with mistakes, complaints, and grumbles should go there at once, and criticism of detail will be swallowed up in admiration for the whole.

Notes of the Week.

The Anglo-Belgian Conversations.—Although nothing of importance has been officially divulged regarding the conversations which took place last week-end at Chequers between Mr MacDonald and M. Theunis, the visit of the Belgian Prime Minister is a hopeful and significant event, on which Mr MacDonald is to be congratulated. On too many previous occasions British Ministers have shown a disposition to disregard the views of any other Government except France when approaching the problem of a Reparations settlement. In establishing personal contact with the Belgian Premier, Mr MacDonald has taken a step which is essential to the thorough explanation of the avenues towards a settlement on the basis of the Dawes Report. Nor can the visit have wounded French susceptibilities, since M. Theunis visited the Quai D'Orsay on his way to London, and the gist of the Chequers conversations were promptly communicated to M. Poincaré. In their methods of "feeling the way" the British Foreign Office appears on this occasion to be deserving of all commendation. Interviewed on his return by a *Times* correspondent, M. Theunis said: "The indispensable goodwill is evident. We are returning with a favourable impression." M. Hymans, who accompanied him, is also reported as saying: "There will be an Inter-Allied Conference on the day when there is a certainty of being able to arrive at an agreement. Judging from the conversations I have had with Ministers, it seems to me that such a conference is nearer than may be thought." In view of the German elections, the French Press has reason for its deprecation of undue haste on the part of the Allies, and, although the importance of the time factor must not be overlooked, it is all to the good that the oft-repeated mistake of plunging into a conference without thorough preparation of the ground beforehand shows no signs of being repeated.

The Irish Boundary Question.—The Irish Boundary Conference having failed to reach agreement, the Free State Government has requested the British Government to constitute the Boundary Commission as provided for by the Treaty. The Free State has appointed its Commissioner, the British Government, as Mr Thomas told the House of Commons on Monday, is taking steps to appoint a qualified person as chairman, but the Premier of Northern Ireland has refused to appoint a representative. This would appear to take the Irish position a serious stage nearer to a crisis. Commenting on the position, our Dublin correspondent writes:—The Boundary question is still the predominant element overshadowing all others in the public mind. The Prime Minister of Northern Ireland has definitely refused to appoint a Commissioner pursuant to the terms of Article XII.—the Article which alone enabled it to avoid becoming part of the Irish Free State. Suggestions reach Dublin from England that under the circumstances the British Government can call upon the Governor-General of Northern Ireland to make the necessary appointment. In any case it has been made clear that the refusal to nominate will not be suffered to hold up the Commission. A good deal of nonsense is talked by partisans and propagandists to the effect that Article XII. is *ultra vires*. The doctrine of *ultra vires* is well known in British law, but it has no possible conceivable application to the legislative acts of a Sovereign Parliament. The Act of 1920 created a Northern Ireland consisting of six counties; the Act of 1922 which gave to the Anglo-Irish Treaty the force of law, provides for the readjustment of the boundaries of Northern Ireland by the award of a Commission consist-

ing of representatives of the Irish Free State, of Northern Ireland, and of Great Britain—the latter to act as chairman. The later Act—in accordance with a thousand precedents—alters and amends the former. Its validity is not open to question. An influential section of the British Press insists that there should be exacted a public admission that only a very limited interpretation will be placed upon the terms of Article XII., and that this should be a condition precedent to its establishment—it also argues that the very limited interpretation is the true one. It would be on stronger ground if it advocated preliminary agreement after discussion by trained jurists as to the true interpretation—but nothing is farther from its desire. The advocates of this view—that boundary revision is to be restricted to shifting the line from one side of a culvert to the other, or from the centre of the bed to the bank of a stream, or to preventing its separating a farmer's house from his barn—overlook not only the words of the Treaty and Act, but also its scheme, scope and obvious purpose. The Commissioners "shall determine in accordance with the wishes of the inhabitants so far as may be compatible with economic and geographic conditions," &c. And Article XIV. provided that if Northern Ireland did not "contract out" under Article XII. it should retain its Parliament and powers under the Act of 1920, and should preserve its boundary unchanged. If the Boundary Commission related solely to petty changes for administrative convenience, why is it omitted in Article XIV. after insertion in Article XII.? The true significance of the distinction is that if the line were merely to be an internal boundary of the Irish Free State, it might fairly remain unchanged. But if, by reason of Northern Ireland contracting out, it became an international boundary, different considerations would apply, and the line should be redrawn so as to group, as far as practicable, the people in the areas contiguous to it under the Governments of their respective choice. It is for the Commissioners to devise their own tests and methods of ascertainment, and they are in no way bound to proceed by county units.

The New Irish Duties.—Our Dublin correspondent writes:—The comment in this column last week on the advisability of the Government producing its Bill for the control or regulation of prices with special regard to the effects of its tariff experiments found an echo in a question in the Dail this week; but President Cosgrave's reply gave little cause for hope that such a Bill, though long promised, would be produced soon or that he thought it would be an effective Bill when it did make its appearance. The deferred dates for the imposition of some of the new Customs duties is, as might have been expected, leading to a tolerably profuse filling up of stocks to forestall the duties. The Minister of Finance has agreed to remit two-thirds of the duty on tinned fruit, which under the manufactured sugar or confectionery tax was very hard hit. The tax on imported boots is at 15 per cent. *ad valorem*—roughly 2s 6d on the poor man's boots per pair. On the whole, the public approves of the experimental attempt to use Irish fiscal independence to create or encourage Irish industry. There are many critics, but it is very generally admitted that the problem in Ireland is of a wholly different character from what it is in Great Britain. The revenue continues to come in well, though there is a temporary drop in Excise receipts, as compared with the corresponding figure for last year. The Monthly Trade and Shipping Statistics for the Free State show the February figures for imports at £5,274,097, as against £4,741,509 for the preceding month, and exports at £3,833,064, as against £3,691,617 for the preceding month, re-exports being £72,160 and £64,791 respectively. Of the imports, all but about £750,000 come from Great Britain and Northern Ireland, and of the exports less than £100,000 worth goes elsewhere.

Great Britain and Iraq.—A correspondent writes:—The Protocol and Agreements subsidiary to the Treaty of 1922, which is now before the Iraq Parliament, have been

published as a White Paper (Cmd. 2012, 9d). In Baghdad, according to the letter from its correspondent published in the *Times* last Wednesday, they have stimulated the anti-Treaty agitation, which is promoted, as in India, largely by young barristers, and has culminated in the attempted murder, on April 20th, of two pro-Treaty members of the Parliament, who are also powerful sheikhs. The crime, and its possible consequences, have alarmed the Moderates, and even most of the agitators, but the Agreements, though they have been greatly mis-interpreted, may temporarily strain the financial capacity of the Kingdom. The Financial Agreement limits British financial aid to the provision either of an Imperial garrison or, alternatively, of native forces under British officers, and to a vote by the Imperial Parliament of half the salaries of the British High Commissioner and his staff. It provides for the purchase by the Iraq Government of the irrigation works, roads, bridges, telegraphs, and telephones for Rs. 94.09.540, payable, with 5 per cent. annual interest, by a 20-year terminable annuity, and for the transfer to it of the working of the railway system, which, until the Treaty and Agreements are terminated by Iraq independence, will remain the property of the British Government. Any profits are to be used for capital expenditure, so that the Iraq Government gets at best a deferred profit, and may make a loss. The Port of Basra is to be transferred to a Port Trust on terms to be arranged hereafter. Iraq agrees to devote 25 per cent. of its annual revenue to increasing its own army, so far as its financial capacity permits, according to a specified scheme; the British Government provides the equipment (including aeroplanes), for which Iraq pays. As the native army is strengthened, the British is to be progressively reduced; the native army is subject to British inspection and control. The two armies act in co-operation, and only with the approval of the British Government, and in joint operations a British officer commands both. The British forces are legally protected against defamation or incitement to mutiny, and their British members have certain immunities from arrest and trial by native courts, which are customary when a foreign army occupies friendly territory, but have been grossly misinterpreted by the Nationalist agitators. Similarly, according to the *Times* correspondent, the provisions enabling the British Government to acquire land for military purposes are attacked as a preparation for British or Indian military colonies—though British colonists could not stand the climate, nor Indian colonists the Arab dislike of their race. A judicial Agreement provides for the trial of cases in which British and other foreigners (including certain Asiatics) are concerned by predominantly British courts, and the Agreement as to the engagement and pay of British officers and officials (many of whom are being engaged for long periods by the Iraq Government) specifies terms which, though not too liberal considering the climate and the necessity of proficiency in Arabic, may offer further ground for Nationalist attack. That Iraq, left to itself, would be invaded by the Turks and the Wahabi followers of Ibn Saud, does not trouble the Nationalists, nor do they realise the certainty that the expenditure entailed by the Agreements will be repaid many times over through the peaceful development of the country. The Treaty and the Agreements last only till 1928, and may terminate earlier by the entry of Iraq into the League of Nations. But the Protocol contemplates a fresh agreement thereafter, and the Nationalists believe that in Iraq, as in Egypt, Great Britain intends to remain. We were kept in Egypt by the pressure of Russia and France on Abdül Hamid; we may have to stay in Iraq to save it from the Turks. To most British readers, however, the present documents will exhibit chiefly our readiness to withdraw from Iraq as soon as it can stand alone.

Shipping Freights Index.—Reaction in the demand for "tramp" tonnage on "earthquake account," resulting in easier rates throughout the Orient, and particularly from Australia, was sharply reflected in our freight index

for April, which fell by 4 per cent. to 136.37. The movements of the various groups are shown below:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100
Average, 1913.....	110.03	113.09	123.37	106.29	117.38	127.89	116.34
February, 1920.....	814.31	529.89	757.52	744.81	587.02	712.16	690.95
December, 1920.....	268.90	277.17	244.10	256.79	286.72	347.18	280.14
December, 1921.....	160.08	164.07	163.72	144.43	141.25	166.47	156.67
December, 1922.....	137.09	135.15	129.19	123.61	136.08	159.34	136.57
July, 1923.....	132.42	107.20	118.67	123.44	126.10	114.83	120.28
August ".....	124.79	109.11	114.33	117.77	118.44	124.63	119.88
September ".....	129.83	112.36	116.28	117.77	118.44	124.63	119.88
October ".....	135.66	125.46	114.03	119.38	124.40	136.05	125.49
November ".....	141.24	135.32	114.64	122.68	124.49	137.89	129.38
December ".....	134.03	132.72	120.09	124.35	125.07	144.21	130.08
January, 1924.....	130.69	137.49	128.33	124.88	139.45	156.68	136.25
February ".....	138.11	146.26	145.36	129.28	142.17	162.91	144.01
March ".....	143.72	147.62	145.92	132.08	135.20	147.77	142.05
April ".....	141.67	146.28	142.35	127.36	128.79	131.75	136.37

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec.		Index No.	Inc. or Dec.
Home trade.....	124.40	+ 386	S. America—outwards ..	102.36	- 569
Bay—outwards	148.62	+ 275	homewards	183.34	- 145
homewards	154.94	- 434	India—outwards	126.32	—
Mediterranean—outwards ..	163.46	- 226	homewards	128.40	- 944
homewards	134.29	- 227	Far East, &c.	128.79	- 641
North America	146.28	- 134	Australia	131.75	- 1602

It will be noted that changes in direction of the curves of our commodity and freight indices have once more coincided; the relatively greater reaction in the freight index since February, while affording the useful reminder that world-trade recovery must not yet be taken as completely assured, need not be regarded at present as indicating more than a limited setback to the better conditions which "tramp" shipping has recently enjoyed. As in the two previous months, the dominant market in April was the Plate, whose grain shipments absorbed again a large volume of tonnage at rates well maintained. North American demand for cargo space showed signs of broadening, with no material net change on the index for the group. In Europe traffic remained fairly active, but a slightly ampler supply of tonnage caused freights to shade downwards. Coal freights to South America were weaker, but elsewhere little changed. The East and Australia required little space beyond that provided by the regular "liners," and rates for whole cargoes were heavily depressed. Recent tendencies illustrate the need

for (though not the practicability of) a system of variable "weights" in freight indices. Thus last month, while the bulk of the distant fixtures concluded were from the Plate at rates 82 per cent. above the pre-war base period (the net rise for the Western Hemisphere, as a whole, being roughly 43 per cent.), the average figure for the Orient, 29 per cent. approximately, carried a comparatively small weight of actual business. It should be borne in mind that our freight index is intended to act as a pointer to changes in sea-borne trade as a world whole, and that while the index should reflect accurately enough the gross revenue of "tramp" shipping over, say, half-yearly periods, no freight index yet constructed can safely be taken as precisely indicating the comparative profits earned by this class of vessel for any one country's mercantile marine in any one month. The relation of the index to the average for 1913 may be seen from the following table:—

	(1913 = 100.)			
Month.	1921.	1922.	1923.	1924.
January	194.59	131.60	114.05	117.11
February	164.54	135.76	112.73	123.78
March	162.17	135.53	115.23	122.09
April	147.48	129.46	115.45	117.22
May	158.42	125.12	114.55	..
June	165.73	117.45	106.82	..
July	169.87	114.52	103.39	..
August	170.60	113.16	100.16	..
September	154.47	110.37	103.04	..
October	141.85	114.42	107.86	..
November	136.47	119.43	111.21	..
December	134.66	117.39	111.81	..
Mean for year	158.40	122.02	109.69	..

The figure for April is 7 per cent. above the average for 1923, and 4 per cent. below that for 1922.

International Shipping Conference.—A conference of shipowners representative of all the principal maritime countries, and similar to a gathering held three years ago, will take place in London during the greater part of next week. The earlier meeting, being the first of its kind, was admittedly an experiment, but proved serviceable, and so the present reassembly has been arranged by the Chamber of Shipping of the United Kingdom and Liverpool Steamship Owners' Association. Delegates from France, Belgium, Italy, the United States, Spain, Denmark, Japan, Norway, Sweden, Holland, Germany, Canada and Australia are expected, as well as from the Baltic and White Sea Conference and other shipping associations. A number of subjects discussed at the previous conference will come up again for further consideration, and considerable progress will be reported in some instances. Thus the Hague Rules, which before were approved, are now, as revised and scheduled to the Sea Carriage Bill, within sight of the Statute Book in this country, and awaiting similar treatment elsewhere. Certain draft international conventions have not advanced much in the interval, and only a beginning has been made in doing away with multiple taxation of shipping profits by overlapping national action. Certain technical matters, such as deck cargoes, load line and lifeboats, have been inquired into by international committees appointed by the first conference, and reports will be presented. An important report is also expected from a British Committee which has been studying port facilities in this country in view of recent critical comments by Scandinavian shipowners. International questions which have called for action since the previous gathering, and will now figure on the agenda, include flag discrimination (the subject of a convention recently signed at Geneva), immunity from liability of State-owned ships, and Rules of General Average. Other matters expected to receive attention are uniform tonnage, measurement of ships, fumigation of ships for rat destruction, and compulsory insurance of passengers. The course of events in relation to a number of these problems has been noted from time to time in the *Economist*. They are all matters requiring treatment on the broadest international basis, and the importance of the gathering should be considerable.

Another Bank Amalgamation.—It was announced at the end of last week that, "owing to the death of the late Earl of Jersey, arrangements have, with the approval of the Treasury, been completed, subject to the sanction of

the Court of Chancery, as required by the will of Lord Jersey, for the acquisition by Messrs. Glyn, Mills, Currie, Holt and Co. of the business of Messrs. Child and Co." This amalgamation appears to be a thoroughly suitable alliance in every way. Messrs. Glyn, Mills, Currie, Holt and Co. are the largest private firm of bankers, having been established in 1753, and registered in 1885 as a company with unlimited liability. The business of Messrs. Child and Co. was acquired as from January 1, 1923. The bank is a member of the London Clearing House, and at December 31st last had deposits of £27½ millions. Messrs. Child have the distinction of being the oldest private bank, the date of establishment being somewhere in the sixteenth century. In July last—the date of the latest balance-sheet—deposits figured at £2,717,100, so that the combined balance-sheet should show total deposits of over £30 millions.

Bawra Accounts.—The accounts of the British Australian Wool Realisation Association, Limited, for the year 1923 show that sales of wool during the year amounted to £4,587,100, as against £7,185,400 in 1922 and £6,424,000 in 1921, while £314,000 was received as interest, £108,500 as commission on sales from the British Government, and £108,800 as sundry receipts. Freight, storage, port dues, &c., absorbed £280,500, as against £639,500 twelve months ago, and after payment of administration expenses, £143,000, the cost of exchange on London remittances, £105,000, and other items, and making a provision of £500,000 for contingencies, there was a surplus for the year of £1,322,500, which compares with £1,210,900 for 1922. Stocks of wool on hand, valued as at the date of acquisition (cost, less 40 per cent.), were reduced during the year from £3,718,000 to £968,400. The value of the assets acquired by the Association as at December 31, 1920, less liabilities, amounted to £22 millions, the consideration for which was the distribution to nominees of the Commonwealth of Australia Central Wool Committee of 11,848,036 fully-paid shares of £1 each and priority certificates £9,902,267, and the retirement of small interests and fractional payments, £249,697. On July 30, 1921, 47.5 per cent. of the priority certificates were repaid, and the balance were redeemed during 1922. In May last a resolution was passed at a meeting held in Melbourne to reduce the 10s shares to 1s shares by returning 9s per share to the holders. The balance-sheet now shows a capital of £592,400, but there is also an item of £5,331,600, representing the amount payable to shareholders on February 12, 1924. The exceptionally liquid position of the balance-sheet has been maintained. The bank balances stand at £5,213,400, British Government securities at £2,105,700, and Victorian Government securities at £1,783,100. Debtors figure at £229,300, and creditors at £408,500. In an interesting *résumé* of the history of wool control in the *Times* of April 29th, three days before the last bale belonging to the British Government was sold, Sir Arthur Goldfinch, Director-General of Raw Materials from 1917 to 1921, and Governing-Director of Bawra from 1921 to 1924, gave some striking statistics. Under the wool scheme 9,895,000 bales of Colonial wool were handled, selling for about £380 millions, and yielding about £70 millions profit, divided between the British Treasury and the Dominions. The aggregate sales of British wool were about £40 millions, the net profit being £5 millions. From first to last the accounts were handled on strict commercial lines, interest and every other appropriate charge being debited. Administrative charges, incidentally, on these large transactions have not exceeded ½ per cent. of the sale price, or, say, under 2d in the £.

The Decline in Base Metals.—The base metals this week have shown marked weakness, the exception possibly being copper, but even this commodity gave way in unison with the others. Copper, however, is well spoken of, and once the forced liquidation in metals generally comes to an end, there should be a smart upward reaction based on a better European demand, restricted production, and reduced stocks. Tin has been subject to further pressure, accompanied by bear selling, and the undertone at one time was extremely weak. On Thursday, three

months' standard tin sold down to £221 10s, or more than £75 per ton under the high level ruling in the first half of March. There was a smart rally from this—the lowest level of the present year—but the market is still very sensitive. The world's visible supply is down 3,329 tons on the month at 16,293 tons; stocks everywhere are light; and obviously the Eastern pooled supplies will not be released at the low level seen this week, as the tin actually cost more. Once the liquidation is over there is bound to be a recovery, as the statistical position must count when trade buying again appears. The selling has been overdone, just as the previous rise was overdone, and if the fall went on much more the Cornish tin-mining industry would find things difficult. Production in other directions would also be curtailed. The market received active support at the lower level, with America again buying, and the undertone was much harder in the late trade. Lead has been sold down, and the talk of supplies being short this month circulated some time back has not materialised into anything more substantial. As a matter of fact the market is well supplied, and the American news is all against producers. Trade users here have been buying actively at the lower level, and a large business has been done this week. Late in the week foreign lead for August shipment was sold down to below £27. The market for zinc has been depressed, and Continental smelters have been offering spelter here. Values dropped below £30, with the pressure against May and June, but there was more business doing for galvanisers and other users at the lower level. All non-ferrous prices have now been greatly reduced, and well-informed metal opinion regards all markets as oversold. Thus there should be an upward reaction in the near future, although confidence has been badly shaken by recent events.

White Star Line.—The report of the Oceanic Steam Navigation Company, Limited, for the year 1923 states that the period "has been one of exceptional difficulty, and the result of the year's working is much less favourable than previous years." This impression had, of course, already been conveyed by the reduction in the dividend from 12½ to 5 per cent., but it is disappointing to find that the actual decrease in profits has been deliberately cloaked in the accounts. In the 1922 accounts the profit for the year was stated before allowing for depreciation, which amounted to £512,700. The 1923 accounts merely state that after providing for depreciation, and including the balance brought forward, the profit was £610,704. Comparison is thus completely vitiated. We have, however, added a line to the comparative table of results:—

	Profit.	Interest, &c.	Depreciation.	Reserve, &c.	Dividend.	Balance.
1908	£ 306,242	103,605	410,882	..	75,000 (10 %)	-283,245
1909	620,345	118,890	366,932	..	150,000 (20 %)	-5,477
1910	1,070,374	105,222	370,016	360,626	225,000 (30 %)	+ 8,410
1911	1,102,756	137,580	414,141	..	450,000 (60 %)	+ 101,035
1912	919,033	146,040	527,649	100,000	225,000 (30 %)	-73,656
1913	1,121,268	166,445	437,168	..	487,500 (65 %)	+ 30,155
1914	887,548	255,151	398,967	..	262,500 (35 %)	-29,070
1915	1,168,385	256,904	628,712	500,000	487,500 (65 %)	+ 95,169

1921	1,630,037	346,510	438,967	25,000	750,000 (15 %)	+ 69,560
1922	1,448,899	349,090	512,723	..	625,000 (18 %)	+ 37,914
1923	548,153	236,613	?	..	250,000 (15 %)	+ 61,580

* After allowing for depreciation.

Income-tax and corporation profits tax require only £125,500, as against £221,500 a year ago, and there is a saving of £11,600 in debenture interest and of £7,500 in general interest. The balance-sheet, which is analysed in a later column, shows a reduction of £181,600 in debentures outstanding, and of £509,400 in trade bills and bank overdraft, but creditors are £319,300 higher. Trade investments have been increased by £201,400, but general investments are £249,000 lower, and the book value of the fleet shows a decline of £131,100. The directors remark that the Australian service has proved disappointing, conditions affecting exports from Australia having been unsatisfactory, and "this has been accentuated by an over supply of tonnage consequent upon a lack of co-operation on the part of steamship companies engaged in the trade. The other services in which the company is

engaged have given fair results, and it is to be noted with satisfaction that freights in several directions have improved slightly during the last few months, but there is nothing in the immediate outlook to justify any sanguine expectations."

Pease and Partners.—A substantial improvement in results is disclosed in the report for the year ended March 31st last of Pease and Partners. The directors describe the year as one of great fluctuation in prices and variation in demand for the company's products. "The abnormal prices for coal and coke resulting from the developments in the Ruhr raised the price of fuel to such an extent that it was impossible during the greater part of the year to manufacture iron and steel profitably." Nevertheless, gross profits rose from £323,100 to £421,600, and net profits from £185,000 to £275,400. The following table shows the company's financial history since 1908:—

April 30.	Gross Profit.	Net Profit.	Dividends paid.	Rate.		Special Expenditure.	Reserve, &c.	Carry Forward.
				Ord.	Def.			
1908	£ 288,624	£ 216,779	£ 125,000	12½	12½	£ 47,291	£ 35,000	£ 25,437
1909	160,389	97,782	80,000	8	8	34,278	Dr. 16,000	24,940
1910	207,759	135,417	100,000	10	10	23,917	12,372	32,060
1911	233,833	158,033	90,000	8	8	27,351	30,000	41,753
1912	18,850	90,365	92,000	8	4	34,662	Dr. 20,000	25,458

* March 31st.

A sum of £200,000, being surplus provision made for excess profits duty, a final settlement of which has now been made, is added to the net profit, and with the balance brought forward the amount available is £475,400. Discount on the issue of 5 per cent. debenture stock absorbs £112,500, depreciation reserve account is credited with £75,000, and £50,000 is placed to reserve for liability under the Workmen's Compensation Act. Special expenditure at the collieries, mines, and ironworks absorbs £59,300, and the ordinary dividend is raised from 6 per cent. to 8 per cent., in both cases free of income-tax, leaving a slightly larger carry forward. The balance-sheet shows overdraft at bankers for £526,300, while creditors have been reduced by £131,800, and unpaid purchase moneys by £298,800. The property item has expanded by £487,700 to £3,450,600, while stock-in-trade has risen by £266,100 to £452,400. Investments in subsidiary companies, including loans, which are taken at cost, less depreciation written off or provided, stand at £1,098,600, against £1,490,500 a year ago. Cash at £3,700 compares with £64,700 a year ago. An analysis of the balance-sheet will be found in a later column.

Bryant and May.—Another prosperous year is revealed in the accounts of Bryant and May, Limited, for the year ended March 31, 1924. The following table gives results for the past seven years:—

YEAR ENDED MARCH 31ST.							
	1918.	1919.	1920.	1921.	1922.	1923.	1924.
Net profits	£ 127,233	£ 149,556	£ 226,692	£ 215,324	£ 223,135	£ 323,521	£ 345,674
Reserves, &c.	25,000	25,000	45,000	45,000	45,000	102,500	110,000

† Free of tax.

Shareholders obtain an extra ½ per cent. this year, the dividend figure moving up to 12½ from 12, while the employees' proportion of profits has increased from £38,620 to £41,895. This co-partnership scheme appears to be working well. The number of £1 partnership shares issued to employees during the year was 10,300, bringing the total of partnership shares up to 27,543. The report states, "Notwithstanding very heavy imports of matches from foreign countries, particularly those with depreciated exchanges, your company's sales have been maintained at a high level." It is also mentioned that

"The Colonial and other factories in which your company is interested continue, on the whole, to show satisfactory results."

Edward Lloyd.—Even if profits are not up to the standard set in 1919, shareholders have no reason to be dissatisfied with the accounts for 1923 of Edward Lloyd, Limited, the well-known paper and wood pulp manufacturers. The following table giving the results for 1913, which are included for purposes of comparison, and the past seven years, shows how the company has fared:—

	1913.	1917.	1918.	1919.	1920.	2 Years 1921-22.	1923.
Trading profit	£ 152,363	£ 151,536	£ 177,941	£ 225,033	£ 119,876	£ 194,219	£ 186,639
Brought forward	23,629	37,195	39,923	52,690	10,977	21,364	19,654
Management exps., &c.	175,992	188,731	217,864	275,723	130,853	215,683	215,293
	9,869	24,183	40,549	5,121	7,201	11,530	7,149

Rate	(11½ %)	(11½ %)	(11½ %)	(13½ %)	(5 %)	(7½ % for 1922)	(10 %)
Carry forward	41,498	39,923	52,690	130,977	21,464	19,654	33,894

The gradual process of recovery from "boom" conditions can be better understood perhaps if a comparison is made of some balance-sheet items with previous figures. In 1920 stocks were valued at £1,406,882. A year ago these were priced at £583,596, while in the accounts now issued the figure is given as £565,968. Cash has increased from £85,901 in 1920 to £128,593. Property and plant total £1,462,346, as against £1,042,326 then. Investments have improved from £603,076 to £812,587 in the period, and book debts are steady at round about £377,000.

Commercial Union Assurance Company.—This company, which has passed the seven million mark, both in its fire and accident premiums, added considerably to its resources during the past year. The fire premiums were £7,084,093, as compared with £6,742,172, and the claims were 51.5 per cent. of the premiums, as against 49.1 per cent. Expenses were lower, at 39.1 per cent., as compared with 40.6 per cent. The fire underwriting surplus, after making the usual allowance for unexpired risks, was £525,283, or 7.4 per cent., as against £442,856, or 6.6 per cent., in 1922. The sum of £350,000 was carried to profit and loss. In the marine department the premiums were £424,557, as against £388,388, and the claims, £218,268, against £208,514; £100,000 was transferred to profit and loss, as compared with £50,000 in the previous year. In the accident department the premiums of £7,047,450 increased by £427,485. The claims were 56.5 per cent. of the premiums, as against 55.1 per cent. in 1922, and the expenses were 38.9 per cent. against 40.5 per cent. After allowing a 40 per cent. reserve for unexpired risks, the accident surplus was £149,736 (2.1 per cent.), as compared with £408,785 (6.2 per cent.) in the previous year; £100,000 was carried to profit and loss. The total underwriting transfers to profit and loss were £572,262, and net interest receipts were £743,080. Against these amounts income and corporation taxes took £434,942. The dividend for the year is 13s a share, tax free, costing £767,000.

Liverpool and London and Globe Insurance Company.—Though now allied with the Royal, this insurance company continues its separate existence and accounts. In the fire department the premiums of £4,761,038 increased by £531,018. Claims amounted to 49.7 per cent. of the premiums, as against 60 per cent., and the expenses to 40.8 per cent., as against 42.4 per cent. The fire underwriting result was a surplus of £238,154 (5 per cent.), as compared with a deficiency of £32,821 in 1922. The combined accident premiums were £3,862,665, an increase of £450,032, and the net result was a profit of £79,148, against £133,220 a year before. In the marine department, with premiums of £340,712, against £353,688, there was a profit of £43,185, against a deficiency of £54,457 for 1922. The total transfers for insurance accounts to profit and loss were £381,686, and the net interest receipts, less debenture interest, were £364,720. The dividend for the year cost £369,411. A

valuation of the life department for the five years ended December 31st last permitted a reversionary bonus of £1 15s per cent. per annum to be declared in the participating class, the same rate as has been declared since the participating class was instituted in 1875. The intermediate bonus on claims during the current five years has been fixed at the same rate. The sum of £313,361, undivided life profits, was carried forward. The funds, exclusive of capital, amounted on December 31st to £16,319,014.

Alliance Assurance Company.—The Alliance celebrates its centenary this year with a special bonus to its shareholders, and, incidentally, has produced a very favourable report on the operations of the past year. The comparatively small fire business is of high quality. The fire premiums for 1923 were £1,877,392, as compared with £1,908,611, and the ratio of claims to premiums was 41.5 per cent., as against 46.8 per cent. Expenses were unchanged at 43.9 per cent. The result, after allowing for unexpired risks, was an underwriting surplus of £285,934, or 15.2 per cent. of the premiums, as compared with £196,754 in 1922, or 10.3 per cent. of the premiums. The marine account, with premiums of £494,752, yielded £49,324 as an underwriting profit, and the marine fund at the end of the year was £1,013,439. The accident, employers' liability, and miscellaneous branches, with a premium income of £602,226, yielded £94,014 net to profit and loss, and in the life assurance account the shareholders' portion of the quinquennial profit was £170,469. The actual net transfers from the insurance accounts to profit and loss amounted to £693,938. The sum of £279,065 was repaid by the Economic Life Fund, and £77,331 net came from excess profits duty refunded. On the other side of the account, £250,000 was written off the cost of the shares of the National Boiler and General Company, leaving £486,797. The dividend of 14s a share, less tax, and the centenary bonus of 6s a share, less tax, will cost £542,500, as compared with net receipts from interest of £324,884. The valuation of the life department for the five years ended December 31st last showed an available surplus of £1,412,956, exclusive of interim bonuses amounting to £107,409. The policyholders' share was £970,011; this permitted a compound reversionary bonus to be declared to Alliance new series policies at the rate of 34s per cent. per annum (as against 30s before the war), and higher bonuses to the three closed series. The sum of £272,476 of the valuation surplus was carried forward. The funds, exclusive of capital, amounted to £25,788,000.

North British and Mercantile Insurance Company.—This company has an excellent habit of setting out clearly the business which it transacts itself and that done by its subsidiary companies. The underwriting results and interest earnings are shown in each case, so that misunderstanding is scarcely possible. For the feeble brethren a consolidated profit and loss account is provided as a key. In the fire department the premiums last year were £3,902,031, as against £3,746,353 for 1922, and the claims were 49.6 per cent. of the premiums, as compared with 49 per cent. in 1922. Expenses were 39.9 per cent., against 41.1 per cent. The result was an underwriting surplus of £344,588 (8.8 per cent.), against £282,471 (7.5 per cent.). In the accident department (Railway Passengers Company) the premiums were £895,541, against £881,366, and the underwriting profit was £122,856, as compared with £131,690. In the marine department (Ocean Marine Company) the premiums were £373,889, as against £339,544, and the whole balance of the 1922 account, £89,912, was carried to reserve. The Fine Art and General Company, with premiums of £327,870, as compared with £334,754, showed an underwriting profit of £44,542. The total underwriting profits of the year, after providing for unexpired risks, were £511,986, and interest yielded £373,694. Income and corporation taxes took £102,585, £58,000 was carried to the contingency fund, and the loss on investments realised was £39,922. The ordinary and preference dividends will cost £325,145, leaving £2,138,574 to be carried forward in the profit and loss account.

Yorkshire Insurance Company.—This company also reaches its centenary this year, and celebrates it both by an increase in dividend to its shareholders and by granting a bonus of 10 per cent. on salaries to the members of its whole-time staff. In the fire department the premiums were £872,957, as compared with £834,455, and the underwriting surplus was £37,715 (4.3 per cent.), as against £41,479 (4.9 per cent.), after providing for reserves against unexpired risks. The accident department, with premiums of £866,749, yielded an underwriting profit of £87,171, and the marine department, with premiums of £442,966, contributed £20,000 to profit and loss, including interest of £17,161. The dividend of 16s, tax free, on the £1 shares, and 8s, tax free, on the £5 shares (10s paid), costs £105,928, against net receipts from interest of £91,809. In addition to providing £30,000 as a centenary bonus to the staff, £50,000 was carried to the superannuation and guarantee fund. The funds, including £132,410 of capital paid up, amounted to £7,246,178.

Central Mining.—The showing made by the 1923 report of this, the premier Kafir finance undertaking, proves fully up to market expectations; indeed, the results constitute a record. The balance dividend of 6s, plus 6s bonus, makes a total for the year of 20s, tax free, on the £8 shares. For 1919 the distributions aggregated 18s per share; this is the nearest approach to the present amount. Commenting upon the statement for 1922, we inferred the increase in the profits—despite the labour troubles—to arise from realisations. This time it may be attributed mainly to the enhanced dividends received from the concerns in which the corporation is interested and to the reduced allowances necessary for depreciation. Appended is a comparison of the accounts covering the past three years:—

	1921.	1922.	1923.
Shares, investments, &c.	£ 5,736,470	£ 6,244,850	£ 7,151,780

Brought forward	90,300	92,850	95,210

* After deduction of directors' percentage.

In the main the fresh expansion in the portfolio occurs chiefly in the gilt-edged securities, but moderate additions have been made to the holdings in gold and diamond mining companies, also in land companies and properties. A departure is the segregation of the "oil, coal, industrial, and sundry interests," which in the 1922 balance-sheet figured for £932,100, into "oil and coal, £371,800," "banking, industrial, and sundry, £824,800." It will be noted that an increase is shown in the two entries combined. The holdings have been taken at or under market prices ruling at the end of December last; unquoted interests, representing about 25 per cent. of the total, have been "conservatively valued." The directors report that "practically all branches of the business were productive of revenue last year." Apparently the principal new acquisitions comprise shares in a company formed for the purpose of investigation and development in Canada, the Rand Mines and the Mond Nickel Company participating, and shares in the Kassala Cotton Company. On the basis of last year's dividends, Central Mining shares yield 9½ per cent., tax free. The price of 11 compares with 7½ when attention was directed in these columns to the strength of the position two years ago.

Anglo-American Group Results.—Our mining correspondent writes:—In connection with the operating subsidiaries of this group, there are the interesting points that two of them—the Brakpan and the Springs—last year put up records, while a third Far Eastern Rand under-

taking, the West Springs, has just lately commenced crushing. With the Brakpan, the treatment of a substantially increased tonnage at a reduced cost ratio much more than offset the effects of a moderate decline both in the average gold yield per ton and in the gold premium. An interesting table in the report of the consulting engineer illustrates the incidence of this factor during the past five years. In 1923 the premium value represented 4s 7d per oz, comparing with the maximum of 27s in 1920, when no less than 63 per cent. of the working profit was thus accounted for. Additional plant, raising the capacity to 80,000 tons monthly, has just been installed. It should be pointed out that a corresponding growth in the profits must not be expected, as during the past few years "over-mining" has been carried out for the purpose of providing funds towards the development and equipment of the "Lease" area. Hence the decrease in the value of the ore reserves. The performance of a largely increased development footage was accompanied by a fresh expansion in the payable percentage, and in the average value. Much attention was given last year to the Eastern or virgin area of the company's property, the results being of a reassuring character. For the current year, an increase to 900,000 in the tonnage milled, with an average yield of 32s to 33s, is foreshadowed. The realisation of this forecast should permit some increase in the rate of dividend. Appended is a contrast of the salient results for each of the past three years:—

	1921.	1922.	1923.
Ore crushed	659,800 tons	549,750 ..	786,100
Yield per ton*	34/	37/4 ..	34/9
Cost per ton	27/2	23/10 ..	21/5
Profit per ton	6/10	13/6 ..	13/4
Working profit	£ 490,250	£ 439,840 ..	£ 611,450
Dividends	255,000	170,000 ..	433,500
Rate per cent.	30	20 ..	42½
Carried forward	59,300	41,430 ..	43,300
Ore reserves	2,423,200 tons	2,459,300 ..	2,552,830
Value	8/61	8/23 ..	8/00

	1921.	1922.	1923.
Ore crushed	484,750 tons	424,090 ..	648,600
Yield per ton*	37/2	38/ ..	39/5
Cost per ton	29/8	24/2 ..	22/6
Profit per ton	7/6	13/10 ..	16/11
Working profit	£ 397,800	£ 406,640 ..	£ 621,840
Dividends	197,600	213,110 ..	438,980
Rate per cent.	15	15 ..	30
Carried forward	73,400	45,900 ..	44,150
Ore reserves	3,066,200 tons	3,146,220 ..	3,255,350
Value	8/92	8/79 ..	8/91

* At standard value. † Including a special clean-up. Except that the ore reserves display an increase in value as well as in quantity, the general features of the Springs Mines position bear so close a resemblance to those of the Brakpan that detailed reference is scarcely necessary. The Union Government's participation in the profits is estimated at £128,700, or 20.7 per cent. There still remain 24,200 shares to be taken up at £3 by the guarantors; the proceeds of 13,000 are earmarked for debenture redemption, and will clear off the bulk of the £47,800 bonds outstanding. As regards the West Springs, developments have shown a progressive improvement; the ore reserves at the end of last year were computed at 2,099,500 tons value 7½ dwt over a stoping width of 63 ins. The funds raised by the working capital shares and the debenture issue have been exhausted, and a loan is shown in the balance-sheet. It is intimated that arrangements have been made with the parent company for further financing to the extent of a total of £300,000. Dividend prospects depend largely upon whether the lender will accept shares or debentures in liquidation. The Daggafontein continues in a state of suspended animation, conditions being unfavourable to the execution of any scheme of reorganisation. Nevertheless, interest and other charges last year increased the general expenditure account by £43,200 to £206,600, or £187,600 net. Loan and interest now stand at £540,800. The Anglo-American Corporation of South Africa has large interests in the four undertakings above named; also in the Consolidated Diamond Mines, the Angola Diamonds, the Transvaal Coal Corporation, and owns shares in the associated Rand Selection Corporation and the New Era Consolidated. Last year's profit of £511,300 compares with £325,200 in 1922, and 10 per cent. has been paid in place of 7½ per cent. Of the profit and loss credit £200,000 is allocated to reserve; hence the expansion in the surplus

cash assets to £804,450. By the way, it would be an improvement if the appropriation accounts were drawn up in such a manner as to reflect the year's transactions in full. The Rand Selection Corporation—the bulk of whose shares have been acquired by the Anglo-American Corporation, largely through an exchange—for 1923 paid 30 per cent., as against 22½ per cent. in respect of 1922.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, Northumberland avenue, W.C. 2, on Tuesday, May 13, 1924, at 8.30 p.m., when a paper on "Australia and the Pacific" will be read by Sir Hugh Denison, K.B.E. The Right Hon. Lord Denman, G.C.M.G., K.C.V.O., will preside.

UNITED STATES.—FOREIGN TRADE—PRODUCTION OF DYES — COAL INDUSTRY DEPRESSED — SOLDIER BONUS LEGISLATION.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 25.

THE exports of the United States during March, according to preliminary official returns, were valued at \$341,000,000, as compared with \$366,134,434 in February, and slightly less than in March a year ago. The decrease of some \$26,000,000 from February was due chiefly to the decline of about \$29,000,000 in the value of raw cotton exported last month, while the failure of export trade to show an increase over the total value for March of 1923 is explained by the smaller shipments of foods, principally grains, and by the falling off in exports of cotton goods. The value of March imports was \$319,000,000, approximately, as against \$332,539,705 in February and \$397,928,382 in March of last year. The excess of exports over imports last month was the smallest since June of 1923, amounting to only \$22,000,000 in round figures, as compared with an export excess of \$33,594,729 in the preceding month, \$99,689,435 in January, and an excess of imports to the value of \$56,551,718 in March of 1923. The balance of foreign trade has undergone some interesting and striking changes during the past twelve months. The excess of imports, which began to appear in March of last year, rapidly decreased in succeeding months until the excess for June amounted to only about \$1,200,000. The trade balance turned in favour of this country in the following month, July, when exports exceeded imports by more than \$15,500,000, and the export excess showed a pretty steady increase thereafter, reaching \$138,700,000 last December. So far in the current calendar year there has been a rapid decrease in the excess of exports. Total exports for the nine months of the present fiscal year, on the other hand, amounting to \$3,324,263,974, were \$672,771,994 greater in value than imports, whereas in the corresponding period of the previous fiscal year the excess of exports was valued at only \$270,991,245. Higher prices that prevailed in the past nine months accounted largely for the wide difference.

The report recently issued by the United States Tariff Commission on the domestic production of coal-tar dyes contains valuable information regarding the industry in this country, and testifies to the heavy loss in that direction suffered by Germany as a result of the war. The total output of such dyes in the United States last year, according to the Commission's figures, was 92,000,000 pounds, valued at \$50,000,000—the greatest production in the history of the domestic industry. The 1923 output was 42 per cent. larger than that of 1922, and exceeded

even that of 1920, when this country had a big home trade in dyes and exported large quantities. There has been a tremendous increase in production here in the past ten years, the output in 1914 having totalled only 6,619,729 pounds, valued at \$2,470,096. Indigo headed the list in the production of dyes, totalling about 28,000,000 pounds, as compared with 15,850,752 pounds in 1922. Sulphur black ranked second with an output of approximately 16,000,000, against 12,877,649 in the preceding year. Many new domestic dyes were manufactured here for the first time last year, including fast colours, for the dyeing of silk, wool, and cotton. The domestic industry, however, is still deficient to some extent in the production of a number of vat and other dyes, which are now imported. Before the war about nine-tenths of the dyes consumed in this country was imported, whereas more than nine-tenths of the domestic consumption is now produced in the United States. Exports of coal-tar dyes last year totalled 17,924,200 pounds, valued at \$5,565,267, as against 8,344,187 pounds, having a value of \$3,996,443, in 1922.

Among the principal industries, textiles, especially cotton goods, continue depressed, and curtailment of production is increasing in both New England and southern manufacturing centres. Reports of marked depression come also from the coal, and especially the bituminous mining districts, where many thousands of workers are unemployed. Production of soft coal has dropped to the lowest point since 1921. In the week ended April 12th, production of bituminous coal fell to a new low level. The total output, according to the United States Geological Survey, was 6,742,000 net tons, representing a decrease of 84,000 tons from the previous week, and of 3,659,000 tons, or 35 per cent., from the corresponding week of last year. From the average daily production of 1,800,000 in the latter part of February, the output has declined to 1,124,000 tons daily. Total production of soft coal in March is estimated at 39,909,000 net tons, a decrease of 5,816,000 tons, or nearly 13 per cent., from February. The anthracite output of 8,114,000 net tons was 6 per cent. larger than in February, but the present rate of production is about 10 per cent. less than it was a year ago.

Trade and industry in many directions show a further slackening of activity. The decline from a year ago, however, is not pronounced; bank clearings, in fact, indicate that a larger volume of business is passing. Statistics of production, employment, car loadings, and retail trade, and other items usually figuring in calculations, show that there is an exceptionally free movement of goods into consumption, and that stocks of merchandise are not accumulating. With respect to the slowing down in various industries, it would perhaps be well to bear in mind that in most cases curtailment of production is merely a reduction from high records, and therefore does not warrant undue pessimism. Much of the hesitancy now seen in many lines of trade in making any extensive commitments for the future is no doubt due largely to the unfavourable political conditions in Washington, the uncertainties of a presidential campaign, the numerous Congressional investigations, and the unsatisfactory character of some Bills that have been passed, or seem likely to be enacted, in Congress. Such factors will probably continue to have a restraining influence upon business generally for some time, although the political situation and outlook should become clearer after the party conventions are held in June. As to legislation in Congress, present indications are that one of the pending measures, which is attracting widespread interest—namely, the soldier bonus proposal—will be passed. The Senate has adopted a bonus Bill embodying a 20-year insurance plan, instead of cash payments, and a similar measure has already been passed by the House of Representatives. The two Bills are now being considered by a conference committee, and a compromise Bill is likely to be adopted by both branches of Congress. Whether or not it will be vetoed by President Coolidge, and, in that event, repassed over his veto, remains to be seen. Both Bills are evidently political expedients. Since the cash bonus plan has been abandoned, less apprehension is now felt over the proposed legislation, because there is no likelihood of a big Government bond issue. The latter fact is mainly responsible for this week's activity and strength of Liberty loan bonds, most of which established new high records for this year.

FRANCE—THE NEW REICHSTAG—FRENCH ELECTION PROSPECTS—GOVERNMENT ECONOMIES—STATE MONOPOLIES.

(FROM OUR CORRESPONDENT.)

PARIS, May 7.

THE result of the German General Elections has had a somewhat disappointing effect on a certain section of French public opinion, as it had been expected that the Ultra-Nationalist Party would have secured a much greater measure of success. The increase in the seats won by both the Extreme Left and the Extreme Right, however, has been sufficiently large to act as a stimulus to the French Nationalists to spare no effort to emphasise, for election purposes, the danger in which any cleavage in the unity of French opinion, as the outcome of next Sunday's voting, would involve this country, in face of an apparently more recalcitrant Germany than ever. At the same time, there is an inclination to welcome the fact that the German Ultra-Nationalists have gained ground. It is better, it is argued, for France to be faced with a German Government that makes no pretence to be willing to pay Reparations, than with one that is neither sincere in its desire to pay nor strong enough openly to resist.

At the time of writing the outcome of next Sunday's French elections is difficult to forecast. An enormous amount of capital is being made by the Bloc des Gauches and their Socialist and Communist semi-allies out of the present Government's alleged failure to repress profiteering and to reduce the cost of living. It is questionable, however, whether there is any real discontent on this score. Commodity prices are undoubtedly vastly higher than before the war, but so, on the other hand, are working-class incomes. The great majority of French working people, there is good reason to believe, are in a more favourable position to-day, so far as real wages are concerned, than they were before the war, in spite of the enormous rise in the price of everything. Unemployment is non-existent; strikes are very few and far between; trades unionism is weaker as a fighting force than it was 40 years ago, although the skeleton outlines of most of the unions remain; and there appears to be, at bottom, on the part of the average working man, a distinct readiness to recognise the community of interest of capital and labour. Notwithstanding the outcry in the newspapers of the Left as to the high price of commodities and the scandalously high rate of profit that rules in many industries, both wholesale and retail, it is significant that there is no sign of any organised popular movement of protest, such as would appear to be inevitable in this country if the present régime of high prices were not compensated for by correspondingly high wages. A great deal of Socialism and Communism is undoubtedly being preached throughout the country at present, but the barking of the French Communists and Socialists is far less a menace to established order than is that of their British comrades, because undoubtedly less inspired by regrettable economic conditions, and also because the average Frenchman and Frenchwoman has the ineradicable instinct to save, whatever his or her wage may be, and is thus unconsciously transformed into a possessor, and a defender of the existing social system.

The first fruits of the operation of the Government's policy of economies, under the system of the much-discussed *décrets-lois* (by which it is hoped to effect a saving of 1,000 million francs a year in the expenditure of the various Government departments), have taken the form of the promulgation by the *Journal Officiel* of three decrees, one of which suppresses a large number of services connected with the Ministry for the Liberated Regions. The new head of this department is M. Louis Marin, who is the author of the able and comprehensive report and recommendations concerning the reform of the French Government departments on which M. Poincaré based the plan which is now being carried out. It is characteristic that M. Marin has first applied the reforms of which he is the author to his own Ministry. Part of the measures that have now been brought into operation are due to the fact that the work of this Ministry is now progressively coming to an end. The Offices of Reconstitution Industrielle and of Reconstitution Agricole have already been wound up, and other sections have been drastically simplified. Other

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

Head Office
10 FLEET ST. LONDON E.C.4

ESTABLISHED 1836 General Manager W. A. WORKMAN, F.I.A.

similar decrees concerning the Ministries for War, Marine, Public Works and Justice are expected to be promulgated very shortly. The reform of the judicial service, which is to involve a sweeping reduction in the number of provincial tribunals, and the doubling up of many of the minor judicial posts, is also reported to be approaching completion.

The movement against the continuance of State monopolies appears to be steadily growing in strength. Among the resolutions passed by the general meeting of French Chambers of Commerce, which took place yesterday, and at which 140 chambers were represented, was one insisting that the present deplorable condition of the French telephone service has proved that the State is powerless to exploit it on an industrial and commercial basis, and urging the Government to bring in a Bill as soon as possible retroceding the undertaking to French private industry. The indications suggest that, except in the unlikely event of a sweeping Socialist victory on Sunday, the French telephone services will shortly, following the lead recently set in connection with the match monopoly, return to private hands. One of the difficulties facing both supporters and opponents of the remaining State monopolies, when considering their real situation, is the impossibility, owing to the extraordinarily complicated methods adopted by the Government in its account keeping, of arriving at the exact facts. Thus a recent critic, writing in regard to the tobacco monopoly, remarks that "the real situation of the undertaking, in the commercial sense of the word, is unknown to the administration. The statistics that are published annually show that profits have been made, but apparently the administration is not familiar with commercial accounting. It ignores the capital invested in its undertaking, takes no account of the first cost of establishing the industry, and includes nothing in its accounts for sinking fund or reserve, because it can always replace its plant by means of new credits and utilise it gratis as long as it will last. The most serious fact, perhaps, is that since 1913 the administration of the tobacco monopoly has never made known the cost price of its product. The yield from it is therefore impossible to ascertain, and Parliament is unable to exercise over this part of public expenditure the right of control which is its essential mission."

It should be noted that, in last week's issue—through an error in copying, an obvious blunder was made in setting forth the tabular results of the interesting estimates drawn up by Signor Alberti in regard to the effect of the various proposals for the settling of the Reparations problem, so far as the wealth per head of the population of the principal belligerent countries is concerned.* The correct figures put forward by Signor Alberti are as follows:—

	Wealth per Head in Each Country.			
	Before the War.	Less War Losses and External Debts.	Less Foreign Debt, but Plus Reduced Reparations.	Less Foreign Debt, but Plus Full Reparations of 132 Millions.
United States.....	\$ 2,000	\$ 3,600	\$ 3,600	\$ 3,600
Great Britain.....	1,550	1,431	1,487	1,573
France.....	1,977	1,211	1,370	1,626
Italy.....	630	487	517	597
Belgium.....	1,494	1,274	1,397	1,598
Germany.....	1,240	966	766	436

* The method adopted in compiling these estimates was criticised in the *Economist* of February 2nd.

GERMANY.—NEW REICHSTAG — FINANCES — CURRENCY AND BANKS—FOREIGN TRADE— INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, May 6.

ALTHOUGH final reports from some centres have yet to come in, the general result of the elections and the party composition of the new Reichstag are approximately known. As expected, the extremists on both wings have gained largely, at the expense of the four moderate parties which constructed Cabinets and dominated policy during the last five years; and further, also as expected, the new Reichstag looks even less practicable than the old, having more parties in it, and not showing any possibility of creating a strong and lasting Government coalition. The Reichstag will probably contain 471 members, divided into 13 parties, the other parties of the 23 which competed not getting even one seat.

The Finance Ministry's report for the third decade of April shows revenue 217,300,000 gold marks, expenditure 240,000,000 gold marks, deficit 22,700,000 gold marks, but as the expenditure contained 24,100,000 gold marks for buying back Gold Loan, there was no real deficit. In all April revenue was 452,100,000 gold marks, and expenditure 472,100,000 gold marks, the latter figure including 76,000,000 gold marks spent on buying back of Gold Loan. Revenue fell behind that of March, which was 526,800,000 gold marks. February revenue was 340,100,000 gold marks. In January-March inclusive there was a surplus of 240,100,000 gold marks, but as 339,500,000 gold marks were spent on buying back Gold Loan, the accounts show a deficit of 99,400,000 gold marks. These figures must be considered satisfactory. The Federal Debt on March 31st was as follows:—

	Millions of Gold Marks.
I. Paper mark debts	0.0
II. Stable debts:	
A. In dollars:	
Dollar Treasury bills	210.0
6% repayable 1935	281.9
Do do 1932	250.1
	742.0
B. In Rentenmarks:	
Rentenmark interest-bearing	200.0
Do non-interest-bearing	900.0
Do Treasury bills	147.8
	1,247.8
Total	1,989.8

The Rentenmark liabilities are all Floating Debt. The total debt, including 2.2 million gold marks' worth of paper-mark debts, on December 31st last was 2283.7 million gold marks. Railway and post receipts are increasing. Railway receipts in March were 301.1 million gold marks, against 258.4 million gold marks in February, and 231.4 million gold marks in January. Posts and Telegraphs in March yielded 153.0 millions, against 115.1 millions. The Prussian Finance Ministry announces an impending reduction of annual expenditure by 274,000,000 gold marks, mainly by means of cutting down the number of officials.

The credit strain somewhat relaxed last week, but it is still severe. The Prussian State Bank (*Seehandlung*), which, though seldom heard of, plays a dominant rôle in the money market, has raised its rate from 8½ to 12½ per cent. per annum for deposits at one day's notice of withdrawal. The Reichsbank is still severely restricting credit, the rule being to give no firm higher discount credits than it had on April 7th, and the Bank is trying to reduce existing large credits in order to set money free for firms which have hitherto made small demands. Owing to the operations of the new Gold Discount Bank, the supply of exchange has increased. There have been considerable offers of foreign credit, for long terms, at a rate of about 25 per cent., and for even longer terms at 16 to 18 per cent., but little or none of this business has been done, as Germans hesitate to agree to such high rates for long terms. The franc commitments problem is not cleared up, and there are daily reports of banking and other failures or compositions. Even municipal savings banks have got into trouble through forbidden ex-

change speculations. The total currency in circulation on March 31st is returned at 2,824,300,000 gold marks, or 46.54 per cent. of the 6,070,000,000 gold marks circulating in 1913. Of the former total, 717,500,000 gold marks was in the shape of paper marks, including 26,600,000 gold marks of State railway emergency issues. This 717,500,000 gold marks of paper marks is *de facto* stable, but its stability is not guaranteed. The circulation of coins was 25,500,000 gold marks. New silver one and two mark coins have appeared. The circulation of technically stable (*wertbeständig*) money consisted of 1,760,300,000 Rentenmarks, 146,600,000 gold marks of gold-loan currency, 123,600,000 gold marks of railway emergency money, and 50,400,000 gold marks of gold-loan emergency. The last money must be distinguished from the "gold-loan currency." The gold-loan currency is actual loan scrip, the gold-loan emergency currency being notes issued on security of gold loan. The Reichsbank's return for April 23rd shows a decline of 4,214,207 billion paper marks in circulation. The total of outstanding discounts and advances increased during the week by only 18,700,000 billion paper marks, against 31,600,000 billions and 88,800,000 billions in the two preceding weeks. As a result of the taking up of shares in the Gold Discount Bank, the item "Securities" in the Reichsbank's report rose by 91,350,395 billion paper marks to 91,910,549 billions. This increase represents the £5,000,000 borrowed in London; and it reappears among "Other Liabilities," which increased by 96,754,070 billions to 287,208,038 billions. Through sale of gold in New York for payment of liabilities dating from war times the gold reserve declined by 17,991,000 gold marks to 441,815,000 gold marks. The first monthly statement, for April 30th, of the Gold Discount Bank balances at £10,050,001. The assets chiefly consist of £5,644,307 claims on abroad, £585,189 bills and cheques, and £3,806,000 (German) capital not yet paid up; liabilities are: capital £10,000,000, deposits £36,657, other liabilities £13,344. The Bank has so far no reserve, and it has issued no notes. The Dresdner Bank's annual report for 1923 shows net profits of 9,408,934 billion paper marks. No dividend is declared. In the balance-sheet the items: securities, interests in other banks and syndicates, and buildings, are each written down to 1 billion paper marks. The Reichsbank's director, Dr Schacht, assures your correspondent that rumours of possible difficulties in the big and old established banks as a result of the new depreciation of securities are unfounded. Owing to the high interest rates prevailing, the capital market is dull. In April 99 new share companies with capital of 16,828,000 gold marks were founded, against 179 companies, capital 35,896,000 gold marks, in March. Total increases of capitalisation were 3,564,000 gold marks, against 4,943,000 gold marks.

Foreign trade totals for March differ little from those of February, the passive balance being repeated:—

Imports.				
(In 1,000's of Gold Marks.)				
	March.	February.	Jan.-Mar.

Gold and silver	760	1,440	3,352	
Totals	456,559	466,198	1,353,732	

Imports of wheat and rye increased, and of flour and fodder stuffs decreased. Imports of cotton, wool, and hides also decreased, and ore imports fell to about 1 per cent. of the monthly average of 1922, more iron ore being exported than imported. Imports of textiles increased, exports decreased. Exports of iron and steel goods and of rolling mill products increased slightly, but remained little more than half the monthly average of 1922. The export of machinery was 20,600 metric tons, the monthly average

of 1922 being 39,900 tons. Weight totals are:—Imports, March, 2,481,900 metric tons, against 2,749,600 metric tons in February; exports, 860,400 tons, against 793,300 tons.

Unemployment is still declining rapidly. The number of fully unemployed in unoccupied territory fell from 703,000 on April 1st to 476,000 on the 15th, and is now under a third of that of December last. In Berlin the number of fully unemployed has fallen to 98,328, which is about the pre-war average. The Prussian Trade Ministry's monthly report is favourable, but it repeats, as usual, that credit stringency retards the industrial recovery. Coal production in all Germany in March totalled 10,825,484 metric tons, against 7,783,994 tons in March, 1923, and 11,364,020 tons in the same area in March, 1913. The Roheisenverband has raised foundry pig prices by between two and nine gold marks per metric ton, according to district, declaring that the former prices involved a loss of 10 per cent. The bar-iron market is dullish, and this is considered to foreshadow a decline in the present activity of all sorts of iron and steel. New contracts have been made for import of Canadian (Wabana) iron ore.

GREECE.—AN EXCHANGE PANIC—THE REFUGEE LOAN—COST OF LIVING—RELATIONS WITH RUSSIA.

(FROM OUR CORRESPONDENT.)

ATHENS, April 22.

THE confirmation by the people through the plebiscite of the establishment of the republican régime, and the unconditional adherence to that decision by the Royalist parties, have produced an atmosphere of confidence. For the first time since 1915 political passions have shown signs of appeasement. The dawn of internal peace seems to have at last come. The psychological effect of this change on the exchange market has been great. Early in the last week offers of exchange began to pour into the market from everywhere. In one or two days this movement took the form of a panic like that of last year. Fortunately, this time the National Bank, in virtue of the law authorising it to issue banknotes for the purchase of foreign exchange, swept from the market all the exchange offered. In this way, on the one hand, a collapse of the rates, with its ensuing disastrous effects, was avoided, while on the other, the Bank's stock of exchange was considerably strengthened. The pressure brought to bear upon the Bank by holders of foreign bills was so intense that it was with great difficulty that the Bank succeeded in keeping the rates from sinking to very low levels. For the moment, exchange on London went down to 215 drachmæ. Had the Bank abstained from buying, as it did in May, 1923, exchange on London would have sunk as low as 150 drachmæ in a day or two. In view of this tendency of the market, it is believed by responsible persons that, unless unforeseen events should happen, offers will continue to come in in large numbers, replenishing the coffers of the Bank, whose stock is now more than £5,500,000, and is expected to reach £10,000,000. The policy followed by the Government and the Bank has not only saved the country from a new crisis, but has also enabled the Bank, by reinforcing its stock of foreign exchange, to control the market, and, other circumstances remaining unchanged, to obtain a stabilisation of the rates, the usefulness of which is now duly appreciated. It should be remembered, moreover, that with the currencies of the other Balkan countries greatly depreciated as they are at present, Greek export trade and industry are already handicapped. A further sudden rise of the drachma would, therefore, deal them a very severe blow. This is especially true of tobacco.

The Chairman of the Refugee Settlement Commission and the Governor of the National Bank are leaving Athens shortly for London, where they will confer with the Governor of the Bank of England upon the possibility of a second advance against the Refugee loan, which is intended to be issued on the London and New York markets in autumn. It is reported to-day in the Press that Mr Diomède, during his stay in London, will carry on negotia-

tions with a group of British capitalists for the installation of electric power stations. This is one of the very many utility works of which the country is badly in need.

The index number for the cost of living in Athens for the month of March has reached the record figure of 1,359.2, as against 100 in 1914 (the basis year).

Following upon the example of Great Britain, Greece is about to resume normal diplomatic relations with the Soviet. Greece was before the war a good customer of Russia, especially for cereals. On the other hand, the Greek merchant marine was carrying Russian products to various Western ports, while of nearly a million Greeks formerly settled in Russia, a great number still remain there. Therefore, the resumption of friendly relations, to be followed by a commercial agreement, on the lines of that concluded between Great Britain and Russia, is expected to benefit both countries.

HUNGARY.—THE RECONSTRUCTION LAW—FINANCE MINISTER'S STATEMENT.

(FROM OUR CORRESPONDENT.)

BUDAPEST, April 24.

THE speech of Baron Koranyi, the Finance Minister, made on April 16th, a few days before the passing of the Reconstruction Law, gave a thorough account of the position of Hungary. He began by saying that those outside Hungary really are better acquainted with that position than Hungarians themselves, owing to the fact that they are uninfluenced by the sufferings of the last four years, as also by the hostile propaganda which has been so rife. In 1919 Hungary's agricultural produce had been reduced 35 per cent., and her industrial output by 50 per cent. Finance Ministers were in a deplorable position; all that they could do was endeavour to lay the basis of a sounder condition. A foreign loan could not be compassed owing chiefly to the Reparations question and the seclusion of Hungary. A loan was the only chance for Hungary, because that alone could cause the danger of inflation to be avoided, and bring about stabilisation. Without stabilisation, taxation was useless for reasons that are obvious. The capitalists were intent upon a solution of the Reparations question through the League of Nations, the League being the best security for the safety of their capital. Control could be accepted in peace and confidence, especially where the Controller is an American responsible to the League.

Mentioning figures, he said that the present internal loan was expected to bring in 1,000 milliards of paper crowns; such a sum as 4,000 milliards, the amount of the foreign loan, could only be raised internally at the expense of the ruin of all industry. Taxation would be raised to 50 gold crowns per head, whereas in Austria it is 76. The result of a loan would be the stabilisation of the crown and the placing of credit on a sound basis. He ended with the statement of his belief that the responsibility for the law could be tranquilly undertaken.

AUSTRALIA.—BRITISH TENDERS REJECTED— ECONOMIC CONDITIONS—CONVERSION LOAN RESULT—IMPORTS AND EXCHANGE—THE NEW SEASON.

(FROM OUR CORRESPONDENT.)

MELBOURNE, April 3.

THE Commonwealth Government has finally decided that, notwithstanding the wide difference between the lowest English and the lowest Australian tender for fourteen railway locomotives, the contract is to go to the Australian tenderer at £136,200. The lowest British tender is that of Armstrong, Whitworth, and Co., at £83,099. Duty would have been about £22,067 extra. The subject was in suspense for some time, pending the return of Mr Bruce, and, in the meantime, the Protectionists were conducting an agitation, fearing that the supposed Free Trade leanings of the country section of the Government would lead to the British tender being accepted. In announcing the award to the local manufacturers, Mr Bruce stated, with regard to manufacturing industries generally, that if they are to progress, it is imperative that they should be

financed, managed, and controlled upon the most economic and efficient basis, and that "efficiency in methods, management, and labour must be the essential basis for the establishment of Australia's secondary industries, and will prove the best safeguard of Australia's Protectionist policy." The decision has been welcomed in Protectionist circles, but criticism from another point of view is that, apart from the burden of extra cost, it was unfair that British manufacturers should have been invited to tender for such a result. The practice of most of the State Governments is to purchase or manufacture engines locally, and the Victorian Railway Department has announced that tenders are invited from overseas only "when important departures from existing standards are contemplated, and sample locomotives are required, as patterns."

The incident, however, has tended to emphasise the divergence of feeling between country and town interests, and while the country party is somewhat restive at the effects of the high tariff, the political difficulties of separate action render any opposition of little effect under present circumstances, as dissension between country and town anti-Labour parties plays into the hands of the Labour Party. The increased concentration of population in the cities has tended to weaken the influence of the country, especially as the heavy Government expenditure of loan money tends to produce activity in trade and employment of a sort independent, for the time being, of the state of country production. At the present moment, however, against the extremely high prices obtainable for wool, the prices for wheat and butter are not much above pre-war levels, and the frozen meat export industry is depressed. A slackening in external borrowing and in Government expenditure would therefore necessitate a considerable readjustment in Australian affairs, together with a reduction in the scale of imports as a whole.

The result of the Commonwealth War Gratuity Conversion Loan is that cash applications from the public amount to £6,710,000, and conversions of war gratuity bonds, £3,590,000, together, £10,300,000, out of £12,780,000 to be dealt with, leaving a difference of £2,480,000 to be provided for out of revenue. These figures do not include £6,000,000 due to the banks for advances made to enable part of the war gratuity to be paid to soldiers in cash about three years ago, this portion of the gratuity being now provided for by an increase in the note issue.

The new season is making a favourable start, owing to the rainfall during the last few weeks, which will go a long way to promote a good lambing, and will also enable the farmers to plough early. The autumn production of butter is much heavier than a year ago, and owing to the lower prices obtainable in London, the Australian market has declined, the Melbourne quotation for choicest being 140s per cwt, against 215s twelve months ago.

Letters to the Editor.

THE STATE ASSURANCE COMPANY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—We are very much concerned to notice in your comments on this company's accounts appearing in your issue of May 3rd, the statement that:—

"After providing for unexpired risks on the usual 40 per cent. basis there was an underwriting deficiency of £29,584 (5 per cent.)."

We are quite at a loss to understand how this figure is arrived at, as full provision has been made for the increased liability arising out of the incorporation of the figures of the British Equitable, out of the reserves brought into the account for that purpose. The accounts for 1923 show the losses of the State as well as of the British Equitable, not only in respect of contracts entered into in 1923, but also in respect of contracts of the previous year, which had still to be run off in 1923. The reserves of the two companies at the beginning and end

of the year are stated separately hereunder for your information:—

	Beginning of Year.					End of Year.			
40 per Cent.—	£	s	d			£	s	d	
State	189,737	6	6			188,809	10	11	
British Equitable	52,019	7	8			50,434	15	10	
	241,756	14	2			239,244	6	9	
Additional—									
State	45,000	0	0			45,000	0	0	
British Equitable..	27,716	5	5			30,000	0	0	
	314,472	19	7			314,244	6	9	

As the remark alluded to above coming from a journal of high standing such as the *Economist* is calculated to have a very prejudicial effect, we hope you will be able to find space in your next issue to correct the unfortunate impression conveyed.—Yours faithfully,

ALBERT H. HEAL, Manager.

Liverpool, May 3rd, 1924.

[If the combination of the reserves of the British Equitable with those of the State Assurance Company had been set forth as clearly in the published accounts as it is in Mr Heal's letter, no difficulty of interpretation would have arisen. The fire premiums were £598,111 in 1923, as against £474,343 in 1922. The claims paid and outstanding were £399,951, and the expenses £268,237. Following the recognised practice, we took 40 per cent. of the increase in premiums as representing the increase in liabilities for unexpired risks, and brought out an underwriting deficiency of £29,584. Mr Heal now makes it clear that with the British Equitable reserves brought in the liabilities under unexpired risks decreased during the year by £2,513, instead of increasing as we had judged from the accounts as published. We accept, of course, Mr Heal's detailed figures, and bring out with their aid an underwriting surplus for the year 1923 of £22,436 (3.7 per cent.), instead of a deficiency. We are obliged to Mr Heal for giving us this opportunity of getting the figures for the State Company accurately presented.—Ed., *Economist*.]

Books and Publications.

THROUGH FRENCH SPECTACLES.*

WHETHER we can see ourselves as others see us depends, perhaps, as much upon ourselves as upon the others. Where the eye of the observer is as highly trained to notice and his pen as skilled to present the results of observation, as is the case with M. Andre Siegfried, there is much to be learned. Those who remember his illuminating earlier volume, "Le Canada," will need no further recommendation for his new book. He looked at England just before the 1923 General Election, and the best proof of the accuracy of his general judgments is to be found in the fact that he had so little difficulty in fitting in an additional section, describing its results and commenting upon the new Government. The one substantial correction which he does find himself compelled to make refers to his passage on the declining influence of the House of Commons. He notes that the existence of three parties and the fact of a minority Government is likely to redress the overweening influence of the Executive, and give back to the deliberative Chamber not only its prestige and its hold over public interest, but a large measure of its power.

His discussion of our financial situation is acute and candid; when he turns to inspect the economic bases of prosperity he is equally perspicuous. He notes the extraordinarily different problems presented in the aftermath of war to England and to France. France, essentially dependent upon its agriculture, is anxious about a declining population; England, on the contrary, asks how a steadily increasing one can be supported. Are the conditions that have made that increase possible, that have enabled the country between 1820 and 1914 to triple its people, to continue—and, if not? "If the rest of the world refuses to go on doing what it has done throughout a century, supplying raw materials to England and buying manufactures from it, then it is no longer a question of

* "Angleterre d'Aujourd'hui." Andre Siegfried. (Paris) Cres & Cie.

a temporary crisis, but of the beginning of an economic decadence—a decadence that will be terrible, so narrow is the margin, for England, that separates prosperity from very existence. The threat is tragic, for, if realised, this great nation must sink to a fifth-rate Power." M. Siegfried, indeed, sees looming a fearsome analogy between the position of this country and of Vienna. In that fear he finds the explanation of the nervousness that has, apparently, struck him among leading men of all classes. In it, too, he discerns the explanation of the phenomenon strange to a Frenchman—the desire, as he puts it, to "lift up Germany." "The Englishman's power of forgetting is enormous." On the morrow of the war he is ready, even anxious, to resume his former trading relations with his one-time enemy. He sees that there is in this no sort of sympathy for Germany. The "semi-mystical" feeling about peace which he notes in England has, he thinks, its roots in self-interest. A further explanation is the Englishman's incapacity to put himself in anyone else's place. There is sincere friendship for France, but no real understanding of a point of view arising out of a set of circumstances totally different from those in which the Englishman himself is involved.

THE AGRARIAN REVOLUTION IN ROUMANIA.*

IN the future history of our days of social and political changes, one of the most important chapters will be that dealing with the Great Agrarian Revolution in Eastern Europe, which is now rapidly changing the social and economic organisation of the countries involved in the movement. Throughout Eastern Europe, with its predominantly agricultural economy, the agrarian problem has played an outstanding part in political life for many decades, and the way in which the Gordian knot has been cut, without shattering the whole social system, as has been the case in Russia, is certainly bound to be a matter of interest to the historian, the economist, and the politician alike. In his book, which reads like a novel, Mr Evans gives an interesting account of the solution adopted in Roumania. A considerable part of the book is devoted to the history of the agrarian problem and of the legal and economic condition of the peasantry in the various provinces of the now united Greater Roumania, which for centuries have been subject to foreign domination. These conditions were naturally quite different in Bukovina, Transylvania, and Bessarabia, which owed allegiance to Austria, Hungary, and Russia respectively, on the one hand, and in the Old Kingdom, on the other, and these differences necessitated some slight variations in the actual execution of the reforms in the several provinces. The essential feature of the reform, which was certainly revolutionary in character and partly in origin, in so far as it was inspired by the Russian precedent, was that the area of land required for the settlement of peasant farmers and the all-round increase in the peasants' holdings, whenever these were below a certain minimum, was obtained by means of the expropriation of large estates belonging to private individuals or corporate bodies. This principle was applied throughout Roumania, though the quotas left to the former owners, as well as the minimum sizes of peasants' holdings and the methods of application of the laws, varied according to the province. Up to the present the net result of the reform was that the percentage of land in estates exceeding the maximum size of small holding, fixed at 142 to 270 acres, according to locality, was reduced from 48 to 14 per cent. in the Old Kingdom, from 25 to 15 per cent. in Bukovina, from 26 to 14 per cent. in Transylvania, and from 40 per cent. to zero in Bessarabia, where expropriation was most ruthlessly applied. Former latifundia have completely disappeared, while about 11 million acres have been made available for the settlement of the peasants and, in the greater part, already transferred to the new owners. As to the ultimate effects of the reform, both social and economic, Mr Evans is very cautious in drawing definite conclusions from the available data for the last few years, although these would appear to suggest that, on the whole, the change has been for the better, since agriculture and cattle-breeding are showing signs of rapid recovery. Seeing

that, before the reform, by far the greater part of large estates was leased to peasants and worked by their primitive methods, the fact that the expropriation has not brought about a decline in production is not surprising. Much more important is another problem, which is that of how far the new agrarian régime will contribute to raising the technical standards of Roumanian farming. Since expropriation cannot be repeated, the improvement of technique will be the only means of meeting the pressure of growing population and maintaining the position of the country as exporter. This raises the question of progressive farming on a moderately large scale, which, in a country like Roumania, whose technical standards of cultivation are notoriously low, possesses a high educational and economic value. While the reform leaves some scope for such farming, as far as the necessary area is concerned, except in Bessarabia, it is to be feared that with regard to its financial position, its prospects are very gloomy indeed, since the depreciation of currency, which reduced the landowners' compensation to very nearly zero, left the owners of moderately large estates no capital to invest in their cultivation. This point would appear to have missed the eye of the author, who considers the results of monetary depreciation only in so far as they bear on the peasant's balance of immediate profit and loss.

In reading Mr Evans's book, interesting and full of suggestion as it is, the student of economics cannot help feeling, however, that the economics of the Roumanian countryside and, especially, the condition and prospects of the co-operative movement, might have been less summarily treated, in view of the insight their analysis would enable the reader to acquire into the future of peasant Roumania. Objection may also be raised to the parallel drawn between the recent progress of farming in Roumania and Hungary, which does not appear very convincing in view of the great difference in the economic conditions and political developments in the two countries. These remarks are, however, by no means intended to detract from the value of Mr Evans's work, which may be emphatically recommended to all those interested in the subject.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, May 21.	ACCOUNT, May 22.
--------------------	---------------------

The mid-May settlement which concluded on Thursday proved to be a satisfactory one from the point of view of the investment markets, the Budget statement having induced a good deal of business. Rises in Stock Exchange prices over the fortnight were due to a substantial increase in business, and not simply to a mechanical marking-up process. Speculative departments came off less well, and in mining shares the volume of orders from the public has diminished to a marked extent. The public are taking little interest in South African or tin shares. Towards the end of the week the Franco-Turkish developments exerted a rather depressing effect.

New Zealand allotments of the new 4½ per cent. loan offered at 95 appeared on Thursday morning, and, the lists having closed on the previous day, the Bank of England has again done remarkably well in the promptitude with which its work as issuing-house was discharged. The price drooped at first

* By Ilor L. Evans, Fellow of St John's College, Cambridge University Press, 1924. IX. 197 pp. Price 12s 6d.

to $\frac{1}{2}$ discount, but soon went to $\frac{1}{4}$ premium. On the new Queensland scrip the premium, at $\frac{1}{4}$, is not quite so good as it was. More large borrowers are expected to appear in the immediate future. This knowledge, added to the friction between France and Turkey, plus a little hesitation caused by the result of the German elections, tends to keep back prices in the gilt-edged list, although the declines are of small importance, and there is an exceedingly large turnover of War stock every day.

The foreign market is busier than it has been of late. Daily rises in Brazilian bonds followed publication of a Presidential message. A string of Chilean prices is better to the extent of 1 to 2 points. The Chinese Eights came into demand and put on several points. Argentines are good, and a few improvements in Mexicans came about as a result of notification that further bonds are being included in the distribution of cash and certificates. The French group is, of course, heavy. New issues, Austrian, Japanese, Siamese, &c., continue to be steadily taken by the speculative investor. Austrian Sixes, it may be observed, now stand at 4 points above their issue price.

The Home Railway market attracts a moderate amount of attention, but changes on the week are comparatively slight. Mexican Rails are a little harder. Antofagasta advanced on hopes of an increased dividend. The Argentine railway market is distinguished chiefly by gains in the pre-ordinary stocks, the supply of which is now scanty. Brazilian Railway stocks are better. Suez Canal shares are substantially higher.

Rubber shares weakened as the price of the produce went below 1s per lb. The feature in the oil market has been lively animation, largely professional, in British Controlled shares. It is estimated that at least a million changed hands on Wednesday. The prices of both preferred and common are materially better on the week. The Swedish Match Company issued its allotments of new shares on Thursday, and the price of the latter rose to 7s premium. Shipping shares are firm, on the Royal Mail dividend maintaining its previous 6 per cent. distribution. Increased insurance dividends are responsible for a fair number of rises throughout the group, and banking shares keep hard, although the tendency to improve is checked by the modest range of return offered at the current prices by the London banking shares. Hotels, stores, and catering shares stand generally higher. The boomlet in tea shares continues, and good rises have accrued to a score or more of shares in this department.

The iron and steel market is somewhat irregular. A good Peace and Partners dividend served to create a favourable impression. On the other hand, Vickers are lower, though the debentures, now that the underwriters' sales have ceased, recovered to 5s premium. Electricity and gas issues are marking time. Sudan Plantations rose, on the notification of a new issue of shares: one new share at $3\frac{1}{2}$ is to be issued for every three shares at present held. Textiles are generally firm, because of the impression that the trade is prospering, and the tobacco market, after another display of strength on the Budget figures, subsided a trifle as profit-takers took advantage of the rise. Trust companies' stocks mount hand-over-fist.

South Africans gave way on a little selling by people who fear the result of the forthcoming Transvaal elections. Chartered have been a better market ex the 5s return of capital; Globe and Phoenix are also a good spot. A violent rise in Selukwes followed upon the posting of a good development cable, but other Canadians tend to droop. Mining Corporation of Canada shares being lower, on the report showing that the expected dividend is not declared. Base metal prices afford no assistance to the shares in companies which deal with tin, copper, &c., and Russians are weak, owing to the disappointment felt with the failure of the Soviet Government to negotiate on reasonable lines. The diamond share market remains listless, and the disposition of the mining markets as a whole is heavy. Two or three Mexicans relieved, with a show of strength, the monotonous dullness of mining descriptions as a whole.

The Stock Exchange Derby Sweepstake, comprising 100,000 tickets of £1 each, of which 10 per cent. is to be allocated to charity, was closed yesterday, the whole of the tickets having been taken up. The first prize is £50,000.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Swedish Match Company.—Incorporated in Sweden. Share capital 900,000 "A" shares and 900,000 "B" shares of 100 Swedish crowns each. The "A" shares have been issued and 900,000 "B" shares are being issued. This is an offer for sale in London of 271,500 "B" shares at £7 4s per share. At the exchange of 16.66 crowns to the £1, 100 Swedish crowns are worth £6. As from January 1, 1925, these shares will rank *pari passu* with the existing "A" shares, in all respects other than voting, but will not participate in dividends declared in respect of 1924. In lieu thereof, holders will receive a stated amount (approximately 7 per cent.) until the date for fusion arrives. In the past the company has paid dividends annually in April or May, but it is the intention in future to pay interim dividends. The company has outstanding the following funded debt:—20,000,000 Swedish crowns 7 per cent. mortgage debentures, repayable in whole or in part at the company's option, between 1932 and 1946, and 12,800,000 Swedish crowns (balance of 15,000,000 issued) 7½ per cent. mortgage debentures, repayable by annual instalments by 1931. The company also guarantees jointly and severally with two of its subsidiaries the principal and interest in respect of £15,000,000 6½ per cent. bonds of the International Match Corporation of America. The prospectus states that the company controls 20 match factories in Sweden, and 42 match factories outside Sweden. The production of the Swedish factories represents over one-fifth of the cent. is exported, and of this, 80 per cent. is shipped or financed through London. The proceeds of the shares now being offered here and in Sweden will be used for the erection of factories in India, and for the extension of existing and the acquisition of additional interests in Europe and other countries. The expenditure of the Indian factories is estimated to result in a saving of Rs. 8,600,000 per annum. Profits are given from 1910. Dividends, which are paid without deduction of Swedish taxes, have averaged over 12 per cent. since 1918, and it is anticipated that this rate of dividend will be maintained on the exchange 16.66 crowns to £1, the yield on the issue price of £7 4s is 10 per cent. A good foreign industrial offer.

Falmouth Water Works Company.—Incorporated by special Act of Parliament. Authorised capital £74,994, of which £52,994 has been issued. The authorised loan is 17,750, all of which has been issued. The authorised loan is an offer for sale by tender, at the minimum price of par., of £7,000 ordinary stock. The new capital is required for the purpose of adjusting the capital account, which showed an over-spent balance at December 31, 1923, of £6,116. This had been utilised for extensions of shipping in the harbour. The capital now offered for sale is the first of its class to be issued, and the stock ranks for a maximum dividend of 6 per cent. per annum. The original

stock has received the maximum dividend for the last six years. Investors should notice that this stock has a maximum and not a minimum dividend of 6 per cent. This is, of course, not unusual.

New Zealand Government 4½ per Cent. Inscribed Stock, 1944.—Issue of £5,000,000 at £95 per cent. The principal is repayable at par on March 1, 1944. Of the proceeds, the sum of £3,000,000 is required for the construction of and additions to railways, rolling stock, telegraph extensions, and other public works. As the total expenditure on public works is estimated at £4,000,000 for the current year, the Government will provide the remaining £1,000,000 from last year's surplus. The prospectus states that the gross public debt of the Dominion at March 31, 1924, was £221,600,000, against £218,953,324 on March 31, 1923. The increase is due to considerable amounts lent for state advances account out of the accumulated surplus. The accrued sinking funds on March 31, 1923, amounted to £11,879,257. Against the public debt are tangible assets approximating to £222,000,000. Assets consist of about £150,000,000, which are interest-earning, £52,000,000 which are not directly interest-bearing, and £20,000,000 indirectly productive, such as roads, &c. Redemptions of debt carried out during the year ended March 31, 1924, amounted to over £4,100,000, of which £1,660,000 was provided out of surplus revenue, £3,280,000 from other accounts, and £200,000 from sinking funds released. New Zealand Government stock issued and payable in London, and the interest, the property of persons not domiciled in New Zealand, are not subject to New Zealand taxation. A good trustee investment.

Brighton Corporation.—This is an issue of £450,000 4½ per cent. redeemable stock, 1940-1960. With the sanction of the Ministry of Health. It is authorised by the provisions of the Public Health Acts Amendment Act, 1890, the Stock Regulations, 1891 to 1921, and a consent order of the Minister of Health dated April 29, 1924. Interest is payable half-yearly, January 1st and July 1st, the first full half-year's interest being payable January 1, 1925. The stock is redeemable at par on July 1, 1960, or at the option of the corporation on or after July 1, 1940, on giving three calendar months' notice to the stockholders unless it shall have been previously cancelled by purchase in the open market or by agreement with the holders. The stock will be inscribed in the books kept by Westminster Bank, Limited, 41 Lothbury, London, E.C. 2, and will be transferable free of stamp duty. It will be charged upon all the revenues of the corporation. The proceeds of the issue will be applied for the purposes of the corporation's housing schemes, electricity and waterworks undertakings, street improvements, and other public works. The population of the Borough of Brighton is 135,000, and the present rateable value £971,269. Total average rates for 1923-24 were 10s 9d in the £, and a rate of 1d in the £ will produce £3,850. The total outstanding debt at March 31, 1924, was £2,428,115, of which £1,843,733 was in respect of reproductive undertakings. Finally, from an advertisement we learn that the corporation is negotiating for the sale of the stock at the price of £95 per cent. These details are advertised in compliance with the regulations of the Committee of the London Stock Exchange, in connection with an application for leave to deal in this stock. They are for information only. Thus we are introduced to a prospectusless corporation issue.

COMPANY MEETINGS, &c.

THE LONDON AND LANCASHIRE INSURANCE COMPANY, LIMITED.

RECORD OF PROGRESS IN 1923.
SUCCESSFUL RESULTS IN ALL DEPARTMENTS.
INSURANCE COMPANIES' PROFITS.

The sixty-second ordinary general meeting of the above company was held at London, on the 7th instant, Mr F. W. Pascoe Rutter, governor, presiding over a full attendance of shareholders.

In moving the adoption of the report and accounts, Mr Rutter said:—

My Lords and Gentlemen,

Before commencing the proceedings to-day, it is my sad duty to refer to the death, only six weeks ago, of our deputy-chairman, Mr John Henry Clayton. He had enjoyed a remarkable life of business activity and physical well-being. Having completed his three-quarters of a century, a warning note was struck, and his end came suddenly, but, possibly, as he would have desired it, for he fell in harness.

His last work for this company, on the day before he died, was his usual annual examination of our securities, which he always appreciated, and which formed the basis of the auditors' certificate. We have all sustained a great loss, and I am bereft of a very dear friend. I beg you to rise and stand with me for a moment, as a testimony of our deep respect to his revered memory.

I presume that, as usual, you will take the report and accounts as read.

I will, then, first direct your attention for a moment to the report, in which we state that Lord FitzAlan has joined the board. He was formerly a director of the "Law Union and Rock," and when we found that the freedom from his State appointment enabled him to resume his business ties, we welcomed his joining us.

Whilst, as a rule, it is not wise to take things as a matter of course, you have come to regard a good account in the case of the "London and Lancashire" as a moral certainty, and, considering the circumstances in various parts of the world, there can be no doubt in any of your minds that the report and accounts which you have before you are eminently satisfactory; indeed, better than any of us had expected.

There are some features of the account which are particularly pleasing, and these I will point out to you as we go along.

UNDERWRITING RESULTS.

Our fire premiums, having passed the three million mark, show an increase of £111,586, and the surplus on the account, exclusive of interest, and before deducting Imperial taxation, is £404,771.

The accident premiums are over a million and a-half, showing an increase of £97,237, and the surplus, arrived at similarly, in this case is £188,922.

The marine premiums are a little over £1,200,000, showing an increase of £64,725, and the surplus, deducted in the same way, is £151,081.

In summarising these three accounts, you will be struck by the uniformity of their progress and their profit. The percentage of increase in income ranges in each separate case from 4 per cent. to 6 per cent., and the percentage of net profit is almost exactly identical, approximating 9 per cent. for each separate department. Considering the circumstances, that ranks with our most brilliant achievements.

FIRE.

In the fire arena we have not, candidly, found much to disturb us, beyond the lack of vitality in the home field.

You will notice that, in allocating the profits of our underwriting accounts, we have transferred £400,000 to fortify the additional reserve in the fire account, thus bringing the total fire reserves to £2,606,500. This is still less than the premium income, and you will fully appreciate the desirability of being thoroughly protected in this department.

ACCIDENT.

In the accident field our advanced income comes entirely from abroad, and the profits are less than in 1922, but that was quite an abnormal year, the best which we have ever had. The additional reserve in this account has been increased by £100,000.

MARINE.

Our marine operations have turned out quite satisfactorily. You are aware that we have a nicely-balanced business, controlled by our underwriters in London and Liverpool respectively, and, as they have both well contributed to the result, I consider they deserve our congratulations.

ALL-ROUND PROSPERITY.

From this brief summary of our underwriting results during the past year, you will have easily gathered that each of our great departments has prospered, and as we know also that the life business has been equally flourishing, you have thus the evidence that each of our four profit-producing factors has contributed.

And it must be a satisfaction to the shareholders who have followed our fortunes so intimately for many years past, that, in the first place, we have attained a position of such well-balanced stability, and that, secondly, and even more important, our new management has so amply justified itself. This could not be absolutely established in the first year or two, but time is passing, and, in my judgment, the excellence of our account for 1923 is a true index to the assiduous and thorough work of the managers since their appointment.

HOME VERSUS FOREIGN BUSINESS.

Now, that record looks like progress. And it is progress. It indicates a turn in the tide of premium income which had, ever since the end of the war, set against us. But, consider for a moment what that progress means and where it comes from. Entirely from abroad, and almost entirely from the United States. At home, there is practically no advance whatever. And can it be wondered at when we look around us and see how the industrial activities of the country are being thwarted and crippled by the continued unrest.

Now permit me to enlighten you a little further as to our profits—how and where they are made. An insurance company is really quite typical of the British Empire itself. We live on a small island, or couple of islands; we have insufficient resources for our own population; and we are thus greatly dependent upon our influence over, and contact with, the distant quarters of the world, through the medium of our overseas trade. And so, if an insurance company were confined to its business in this country, it would be, comparatively, a small thing, with a very poor prospect of progress.

We generally make fair profits in the United Kingdom, but the bulk of our profits, certainly in 1923, comes from abroad. Not only from the Dominions and Dependencies constituting the British Empire, but quite as much, if not more, from our operations in foreign countries, which have no connection whatever with this country.

UNITED STATES OF AMERICA.

Last year it happened that one of our most productive sources of profit was the United States of America—that great country where we have for so many years cultivated and retained the most amicable associations, and where, by very able management, we have built up a prosperous business. That experience of ours in the States was, however, exceptional, even for us. So far together twenty-five or thirty of the most prominent companies operating in that great field, their profits did not exceed 4 per cent., whereas in our own case they were more than double that ratio.

I would like to emphasise, therefore, this important fact which cannot be too widely known—that if a British insurance company, such as this, is able to produce a handsome account, it is not now because of the prosperity and progress of our own country, but rather, in spite of the discouraging conditions at home, and because of our efforts to compensate therefor by our persistent activities abroad.

INSURANCE COMPANIES' PROFITS.

Figures such as we have to-day reported are apt to give to those who have not been intimately acquainted with our affairs the idea that the profits of insurance companies are excessive, which, if it were true, would mean that the premiums charged to the public are too high. That is not an unfair assumption—for anybody who is not conversant with the real facts.

I have, however, had summarised the actual experience of 20 of the very best insurance companies in this country, and have taken ten typical years, viz., the five years before the war—1910 to 1914—a period subsequent to that devastating year of San Francisco—and the last five years 1919 to 1923, including for 1923 the 16 companies which have so far reported. Thus, we avoid, not only San

Francisco, but the abnormal years of the war, which constituted no true criterion.

Now then, totalling those ten years for all those companies representative of the best insurance administration in this or any other country, we find that, after deducting all charges of every kind, and taxation, there remains a net residue, available to the companies for their own use and benefit, of actually not more than 4.78 per cent.

The natural reflection from this is: how then have insurance companies, taken as a whole, become reputed for such regular prosperity? Mainly because of their wise finance; putting by year after year their profits from the actual working; and the growing interest thereon has afforded the means for the growing dividends. I am thoroughly convinced of the wisdom of approximately restricting the dividends to the interest earned—a sound policy which has been emphasised more than once during the past month or two in the financial columns of our premier journals.

DIVIDEND.

You will have seen from the report that we propose to increase the interim dividend, on account of the current year's business, by another 1s a share, which will bring up the interim dividend equal to the final dividend, making 14s per annum in all. This may mean a temporary draft upon our underwriting profits, but we anticipate that the difference will be fully covered by the accruing life profits, to be presented this time next year.

INVESTMENTS.

The value of our investments remains, as I informed you last year, much in excess of the values as stated in the accounts. There was some moderate falling-off towards the end of the year, when trade seemed to be getting more brisk, but that diminution has since been recovered. This appreciation in market values which has taken place during the last two years or so constitutes a valuable buffer, or first line of defence, in case anything unusual happens. But one must not overlook the unfortunate fact that the increase in security values is mainly due to the chronic state of unemployment which has existed for the past four years. The result of that is that vast sums of money, instead of being used in enterprise and the development of British trade, have perforce had to be locked up in investments, especially in "gilt-edged" securities, always easily saleable when required.

If only we could see, and ourselves get the benefit of, a real trade revival, we would cheerfully welcome a drop in market values, which would incidentally enable us to invest any surplus profits we may make in higher-yielding securities.

Now, it is my pleasure to move:

"That the report, accounts, and balance-sheet be received, adopted, and entered on the minutes."

And I will ask Mr Hamilton to second that. You may have seen the announcement that Mr Hamilton was appointed to be deputy-chairman in place of Mr Clayton, and I think you may feel very pleased and confident in regard to this appointment, which was made by a unanimous and cordial vote of the board.

Then, before putting the resolution, I shall be glad to respond to any inquiries or remarks which may be offered in connection with the accounts.

The deputy-chairman (Mr Charles G. Hamilton) seconded the motion, which was supported by Mr John Hedges and carried unanimously.

The retiring directors were re-elected; Viscount FitzAlan of Derwent, P.C., G.C.V.O., was elected a director on the head office board, and Messrs Harwood, Banner, and Son were reappointed auditors.

Thanks were voted to the boards of directors in the United Kingdom and the Overseas Dominions, to the United States trustees, and to the representatives and agents of the company at home and abroad.

VOTE OF THANKS TO MANAGERS, OFFICERS, AND STAFFS.

Lord Middleton moved, and Mr W. B. Duckworth seconded, a vote of thanks to the managers and the officers and staffs of the company for their zeal in its service.

Mr F. W. Mills, one of the managers, in replying, said, no one could describe 1923 as having been an easy year, and it was becoming each year increasingly difficult to attain—let alone improve upon—the standard set by previous results. The company had, however, an excellent and untiring staff, each member of which was doing his utmost to pull his weight in the boat.

THANKS TO GOVERNOR, DEPUTY-CHAIRMAN, AND DIRECTORS.

A vote of thanks to the governor, the deputy-chairman, and directors, proposed by Mr J. D. Nimmo, and seconded by Mr B. E. Pemberton, was carried with great cordiality.

Mr Rutter, in reply, thanked the shareholders for the compliment, and said the main thing, particularly for an insurance company, was management and the work done by the staff. He could speak emphatically for the keenness of his colleagues and their constant interest and watchfulness over the company's affairs, and of the harmony with which they worked together.

The proceedings then terminated.

SCOTTISH UNION AND NATIONAL INSURANCE COMPANY.
COMPANY'S HUNDREDDTH YEAR.
STRONG FINANCIAL POSITION.

The annual general meeting of the Scottish Union and National Insurance Company was held, on the 7th instant, in Edinburgh, the Earl of Mar and Kellie presiding.

The Chairman, after referring to the loss which the directors and the company had sustained through the death of Sir Thomas Mason, said:—

In presenting to you the report upon the operations of the company for the 99th year of its existence the directors do so with confidence, and in the hope and belief that it will be regarded with satisfaction by the shareholders. The year 1923 was, in some respects, a difficult and disappointing one, but I think you will agree that the figures now before you indicate that much of the trouble has been satisfactorily overcome.

LIFE DEPARTMENT.

In the life department the new business secured has shown a pronounced forward movement, there being 272 more policies issued than in the previous year, and the net sums assured showing an increase of over £200,000. This increase we attribute in no small measure to the resumption of the bonus a year ago, and to the excellent bonus prospects for the future revealed by the investigation made at the end of 1922. The total premiums received in the life account at £608,000 show a decrease of £34,000, but this decrease is more than accounted for by rupee premiums being brought into account at the rate of 1s 4d, against the rates of 2s at which they were entered in those years when the Indian exchange was so adverse to sterling. The life funds, however, continue to grow rapidly by an addition during the year of £177,000, and they now amount as shown in the account to well over £9,000,000.

FIRE ACCOUNT.

The fire account reveals an increase in premium income of £30,000, and in interest of £22,000. This latter increase is due to the transfer of £500,000 to the fire funds a year ago. The claims show a decrease of £32,000, notwithstanding an aggregate loss of about £20,000 in a conflagration amongst dwelling-houses in Berkeley, California, in September last, when the company's loss was exceedingly heavy on a class of business which is generally regarded by underwriters as gilt-edged. Commission and other expenses, unfortunately, show an increase of £27,000. This, to us, is a matter of disappointment, but the increase is due partly to conditions in the United States of America and Canada, where, by legislation of local tariff organisations, the rate of remuneration to agents has been steadily on the increase. Expenditure other than commission has the constant care and attention of the management. A transfer from the fire account to the profit and loss account of £156,000 is better than a year ago by nearly £43,000.

ACCIDENT, EMPLOYERS' LIABILITY, AND MISCELLANEOUS ACCOUNTS.
The accident, employers' liability, and miscellaneous accounts call for little comment. They, in the aggregate, show a profit of £5,000 less than in 1922. I would here remind the shareholders, however, of the amendment to the Workmen's Compensation Act, which came into force at January 1st last. The liabilities upon employers have been substantially increased, and what the result of this section of our business may be in the immediate future it is impossible to forecast. It has been arranged with the department of the Government concerned that the rates of premium for workmen's compensation business will automatically be adjusted in relation to the claims experience, and it is safe to predict that in future years the margin of profit to the insurance companies will be of the most meagre description.

The sinking fund account had, during 1923, to meet some substantial payments in respect of policies maturing, hence the reduction of £13,000 in the amount of the fund.

MARINE BUSINESS.

A year ago I ventured to predict that in respect of marine business a diminution in profits was to be anticipated, and this you will have observed is confirmed in the reduction of these from £30,000 to £20,000. The account, generally however, is one which continues to give us great satisfaction.

PROFIT AND LOSS ACCOUNT.

I would now ask you to turn with me to the profit and loss account on page 13 of the print. Beginning with the balance brought forward of £426,000 you will find the interest is nearly £66,000, or £3,000 more than in 1922. The profit realised is £205,000, against £311,000 a year ago, but no doubt you will have observed that in 1922 we benefited by the profits of the life department, which will not again appear in this account until after the next investigation into the life results. Comparing like with like, the £205,000 in the present account as against corresponding items of profit in the 1922 account shows there is really an improvement of £28,000. We have now been able to close our account for the bad debts con-

sequent upon the war, and out of £30,000 provided we have, last year and this, been able to bring back to our credit no less than £22,000, £20,000 last year and £2,000 this. On the other side of the profit and loss account there is the dividend paid to shareholders, the interest paid on bonds, and the provision of nearly £119,000 for taxes, Imperial, colonial, and foreign.

STAFF BENEVOLENT FUND.

I would now draw your attention to a new item. The directors find it necessary to consider cases of hardship which arise from time to time. These are of widows and children of members of the staff who have died, and the board have resolved to establish a fund, the revenue of which can be utilised for meeting such cases and others calling for special consideration. Hence the provision of £20,000 now set aside as the "staff benevolent fund." The balance of the profit and loss account, you will notice, now amounts to over £470,000, or £44,000 greater than at the beginning of the year. On page four of the report you will have observed how it is proposed to deal with this balance, and which, I venture to hope, will have your complete approval.

As to the balance-sheet itself I do not know that there is any occasion for special comment, but as indicating the financial position of the company, I would like here to point out to the shareholders that, leaving out the paid-up capital of the company, the funds specially earmarked for life and capital redemption policy-holders and the benevolent fund, the various reserves of the com-

pany now represent about 150 per cent. of the year's premiums, a measure of strength exceeded by very few companies in the country.

BURDEN OF TAXATION.

It will probably be of interest to the shareholders if I also mention that in respect of the funds in which they are particularly interested the income-tax, paid or provided for in the accounts now being dealt with, payable to the British Government, amounts to nearly £113,000. This sum represents no less than 37 per cent. on the paid-up capital of the company. We are pleased in a sense to think that the prosperity of the company imposes such large obligations upon us, but, on the other hand, you will recognise what such a large sum means as an inroad upon the balance available for distribution amongst the shareholders.

COMPANY'S HUNDREDDTH YEAR.

And now I come to the fact that we are now running the last year in the company's centenary, a position of which we are naturally very proud. You will have observed that in addition to paying a bonus to the shareholders we propose to distribute a handsome bonus amongst the officials and staff, to whom, for the results now before you, we are much indebted, and I have no doubt the action of the directors will meet with your cordial approval.

May I, in closing, express the hope that the shareholders will do all in their power to help us to make this, our hundredth year, a year of great progress and prosperity. In this we are anticipating with confidence the equally whole-hearted support of our directors, officials, and staff throughout the world.

FRIENDS' PROVIDENT AND CENTURY LIFE OFFICE.

CONTINUED EXPANSION OF BUSINESS.

PUBLIC AND LIFE ASSURANCE PROTECTION.

The annual general meeting of the Friends' Provident and Century Life Office was held, on the 7th instant, at the Connaught Rooms, London.

Mr Alfred Holmes (the chairman) said: During the four years now expired of the current quinquennium the new life business has averaged about £1,200,000 per annum, and for the quinquennium the net total should be about £6,000,000, as compared with £1,250,000 for the previous complete five-year period 1913 to 1917. The annual new business is therefore now nearly five times the figure to which we were accustomed only a few years ago.

The annuity purchase money received, viz., £54,000, is substantial, and recent experience has shown the value which our members place upon the benefits offered by the office to annuitants.

The sinking fund assurances issued during the year amount to £281,000, being £139,000 in excess of those for 1922.

The members are accustomed each year to learn that the mortality experience has been favourable, and 1923 was no exception in this respect, the amount of the claims being 66 per cent. of that expected by the table of mortality used in the valuation.

REVENUE ACCOUNTS.

The life premium income has advanced by £24,000, and now amounts to £400,000, an increase of £118,000 during the last four years. During the same period the annual interest income, after deduction of tax, has increased by £49,000, the excess for 1923 over 1922 being £23,000. The net rate of interest is £4 11s, being an increase during the four years of 9s 6d per cent., of which 4s 4d per cent. was secured during 1923. Unremitting attention is given to the distribution and oversight of the investments. During the past year considerable sums becoming available for investment were placed in Stock Exchange securities yielding on the average 5½ per cent., while a further sum of £90,000 was placed in mortgages in Canada, at an average rate of 7 per cent. These mortgages continue to give excellent results.

Commission and expenses of management were in amount almost identical with those items in 1922, but on the larger premium income the ratio was reduced by 1.90 per cent. to 18.75 per cent. This ratio, in the opinion of the directors, is distinctly moderate considering the rapid development of business.

The increase in the funds of £252,000 is the largest actual advance made in any single year in the history of the office.

ACCIDENT INSURANCE.

Members will note with interest from the report the commencement by the office of accident insurance and the appearance for the first time of an accident account. This new departure has arisen out of the demand by the public for special benefits in the case of physical injury by accident or disablement by disease, in addition to the benefits normally included in a life policy. Under the provisions of the Assurance Companies Act, 1909, the premiums relating to these special benefits must be dealt with in the ac-

counts separately from the life fund, and, therefore, an accident account has necessarily been opened.

CENTURY INSURANCE COMPANY.

We will now make some review of the progress achieved by our associated company, the "Century."

The life and annuity account is practically closed to new business, and the premium income therefore will gradually diminish. The mortality experience in 1923, whilst not so good as in 1922, was quite favourable. The fund increased by £54,000.

In the fire department the premium income increased by £44,000, i.e., by over 20 per cent. The loss ratio of 56.2 per cent. and the expenses of 36 per cent. were 2.3 per cent. and 2.6 per cent. less respectively than in 1922. The gross profit was £23,000, of which nearly £18,000 was applied to increase the reserve for unexpired risks, and the balance of £5,000 was transferred to profit and loss.

The marine premiums received, at nearly £88,000, are only £6,000 more than in 1922. The conditions of marine underwriting are still generally regarded as unsatisfactory, but the members will observe that after providing for all claims and expenses, the marine fund increased during 1923 by nearly £26,000. After transferring £5,000 to profit and loss account, the fund remaining, of £74,000, is equal to 85 per cent. of the year's premiums, as compared with a ratio of 65 per cent. in 1922. The 1923 account has opened in a promising manner with first year's settlements of 15.7 per cent., as compared with 25.6 per cent. for the 1922 account.

The accident and general account, which also includes employers' liability, showed an increase in premiums of £12,000. The loss ratio of the account was 43.6 per cent., which compared with 41.2 per cent. for 1922, while the expenses were reduced by 1.5 per cent. to 38.1 per cent. With the exception of the year 1912 the profit of £16,000 is the highest in the history of the company.

PROFIT AND LOSS.

The profit and loss account balance of £59,000, brought forward from 1922, has been augmented by the profits transferred from the accounts already dealt with, also by £10,000 net interest not otherwise allocated, such interest being £4,000 more than the corresponding item in 1922. After making provision for British, foreign, and Colonial taxes, and transferring £70,000 to strengthen the fire fund, a balance of £34,000 remains to be carried forward.

The net profit of the "Century" in the year was £44,000. The funds at the close of 1923 amounted to £2,236,000, being an increase of £138,000 over 1922.

We will now turn to the balance-sheet of the Friends' Provident and Century Life Office. The value of the Stock Exchange securities at the end of 1923 was again considerably in excess of the book value, and the margin had appreciably increased during

1923. The Stock Exchange securities now form about 43 per cent. of the total investments.

At the close of the current year, 1924, the valuation of assets and liabilities for the five years then ending will fall to be made, and from the preliminary investigation undertaken, it is evident that, subject to financial conditions remaining reasonably stable in the meantime, a large surplus will be shown which will justify a division of profits on a liberal scale.

During the past year or two it has become evident that the position of life offices has become so favourable that life assurance has become pre-eminently the most profitable first-class investment.

LIFE ASSURANCE PROTECTION.

It is regrettable that so far the public have taken inadequate advantage of this state of affairs, and this will become evident if a comparison be made of the life assurance effected *per capita* in the United Kingdom with that in the United States or in some of the great self-governing Dominions of the Empire. Further, I venture to suggest that even those who effect substantial assurances do not always exercise an entirely wise discrimination in deciding upon the type of policy to effect. We deal almost every day with life proposals from men with families and of ages between 25 and 40, whose idea of provision for their dependents appears to be limited to the effecting of an endowment assurance for a term of 15 or 20 years. In consequence of the relatively high rate of premium for a short-term endowment assurance, the total sum which can be spared from the family budget provides not more than one-third or one-half of the sum assured which would be provided under a whole-life assurance; and the sum payable in the event of death represents an utterly inadequate protection.

In reality, the wife and children in such instances are involved by the well-intentioned head of the family in a speculative risk—the premium in excess of that required for whole-life assurance being wholly lost in the event of the death of the breadwinner during the selected term; and this just at the time when the dependents can least afford any financial loss. Furthermore, the sum assured, when paid to the survivor at the end of the term, often comes at a period of life when his earning capacity is the greatest, and when he has least need of such a payment. It may also have transpired that by the time the endowment assurance matures the assured has become ineligible for further assurance, while he may have as great need of continued assurance as in the earlier years.

TEN YEARS' OPTION POLICY.

The exaggerated extent to which short-term endowment assurances are effected is no doubt a revulsion of sentiment from the old-fashioned whole-life assurance with premiums payable throughout life, with the consequent weariness and oftentimes financial inconvenience of paying premiums in extreme old age. The most advantageous type of policy for the average person is no doubt a mean between the two extremes, and we have endeavoured to contribute towards pointing to a better way by devising a contract known as the "ten years' option policy."

There is an alternative scheme which, although somewhat more costly at the outset than the ten years' option policy, is deserving of attention, viz., whole-life assurance with payments limited in number.

However, whether the policy effected be a short-term endowment assurance or one of the types of assurance which I venture to consider preferable for the average person, in all instances the investment is one which cannot be equalled in any other direction.

I have now completed the review of the year 1923. On the whole, the results have been satisfactory, and the profits are substantial.

The resolution was seconded by Mr R. H. Marsh (deputy-chairman) and carried unanimously.

Sir Nicholas Waterhouse said: In rising to thank you, gentlemen, for re-electing me as auditor, I would like to assure you that the principles underlying your balance-sheet are sound and conservative. The fact that your investments, as standing in the balance-sheet are lower than the market price, instead of the middle price, speaks for itself.

EQUITABLE LIFE ASSURANCE SOCIETY.

PREMIUM INCOME EXCEEDS £300,000.

The 162nd annual general meeting of the Equitable Life Assurance Society was held, on the 7th instant, at the registered office, Mansion House street, London, Sir Evan Spicer (the president) presiding.

The actuary and manager (Mr W. Palin Elderton) having read the notice convening the meeting and the report of the auditor,

The President, in moving the adoption of the report and accounts, having paid a tribute to the late Sir Thomas Devitt, said:

YEAR'S RESULTS.

Gentlemen,—I may now turn to the more ordinary matters of the accounts, and you will see that the new business has been kept at the high figure which we reached in 1922, and that the claims continue to be light. The funds show an appreciable increase, and the premium income has exceeded £300,000. If you compare this figure with the premium income we were receiving ten years ago, you will find that it was then only £210,000, so that the increase has been over 43 per cent. It is largely owing to this increase that the ratio which expenses bear to the premium income has remained the same. As a result of the war expenses have necessarily increased, and in our case they have been further increased because, as you know, we have opened two branches. Although these branches have only been opened for a few years, we are satisfied that the innovation was a good one. Our new business has been helped, our premium income has been increased, and the extra expense has not disturbed the ratio of expenses to income.

As you will see from the report, the only changes in our important holdings in the Reversionary Interest Society and the Equitable Reversionary Interest Society have been due to small purchases of debenture stock. We already held the whole of the ordinary shares or stock of these societies, and, as stated in the report, they are showing satisfactory results.

NEW OFFICES.

There is one other item in the report to which I feel sure you will expect me to refer in some detail. It is the new offices of the society. On the back of the annual report you will find a note of the offices which the society has occupied. We began in Nicholas lane 162 years ago, and we went from there to Blackfriars, to a house formerly known as the Swan Tavern, where we remained for nearly 100 years. The Chairman here mentioned that on November 6, 1869, he was present at these temporary offices to see the procession when Queen Victoria opened Blackfriars Bridge, and it was on that occasion that he met his wife for the first time. He felt that he should express his indebtedness to the Equitable for the introduction! We came here in 1870, paying £22,000 for a 60 years' lease (and rental of £100), and we could still stay on for about five years, but we recently had the opportunity of buying, on what we are sure was a satisfactory basis, freehold offices at 19 Coleman street. Just before the war we purchased a site elsewhere, but circumstances have changed. The site

The Anglo-South American Bank Ltd.

Head Office: 62, Old Broad Street, London, E.C. 2.

Authorised Capital . . . £10,000,000	Issued and Paid-up . . . £4,367,330
Subscribed Capital . . . £8,734,660	Reserve Fund . . . £4,000,000

The Bank, in addition to having 6 branches in SPAIN, has, with its
APPROPRIATE INSTITUTIONS
THE BRITISH BANK OF SOUTH AMERICA, LTD., and
THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.
85 offices in the principal countries of LATIN AMERICA.

AUXILIARIES:
ANGLO SOUTH AMERICAN TRUST COMPANY, NEW YORK
(Incorporated under laws of State of New York) and
BANQUE ANGLO-SUD AMERICAINE, Soc. Anon., PARIS.

in question has improved considerably in value, and will in a few years' time, we are informed, give us a satisfactory profit. This site is, as mentioned by my predecessor in 1915, situated at the corner of Moorgate and Lothbury.

The choice before us lay between waiting for that site to become vacant and then arranging for rebuilding, which would have been a large undertaking, or buying what seemed to us an entirely satisfactory freehold site in Coleman street, which we could occupy at once, and have immediately the greater comfort and convenience which permanent offices give. We shall, of course, be on the ground-floor in our new offices.

We shall be in a quiet street, where people may perhaps see our name more readily than they do here, where they seem to have to look at it at the peril of their lives, or, at any rate, with the uncomfortable interference of excessive traffic. I can see little advantage to a life office in being in a busy, noisy thoroughfare. I can see a great many advantages in being in a quiet street, provided the street is well chosen, and it is, perhaps, appropriate that so old an office as the Equitable should find its permanent abode in so old a street as Coleman street. These offices will be convenient in another way. They will enable us to house the two **reversionary companies** and yet obtain a substantial rental from the top floors which are let.

After next month I hope we shall have said good-bye to Mansion House street. From the office point of view it will not be a wrench to do so. We have only been here a little over 50 years, which is not a very large proportion of 162 years.

I will not detain you any longer. All I need say in conclusion is that the report shows that we have been doing very well, and everything points to a most satisfactory position when we make our next quinquennial valuation at the end of 1926.

Mr H. Leslie M. Tritton (one of the vice-presidents) seconded the resolution, and it was carried unanimously.

THE STATE ASSURANCE COMPANY, LIMITED. RESULTS OF QUINQUENNIAL INVESTIGATION. DIVIDEND OF 40 PER CENT.

The thirty third annual meeting of the State Assurance Company, Limited, was held on Monday, May 5, 1924, at the Law Association Rooms, Liverpool.

Sir Charles H. Morton, J.P. (chairman of the company), who presided, said: Gentlemen,—When I had the pleasure of addressing you a year ago I announced that we had entered into an agreement with the directors of the British Equitable Assurance Company, Limited, with a view to the acquisition of a majority of the shares of that company, and, thereby, the control of an organisation which we believed to be capable of development, with mutual advantage. The company had been established 70 years, and was engaged in the transaction of life and annuity, fire, accident, and marine business. The accumulated funds for the satisfaction of claims under life and endowment policies of assurance amounted at that time to £1,479,286, the capital redemption fund to £26,136, and the fire, accident, and marine reserves amounted to £117,000. These funds have since been increased. The transaction has been carried through without imposing any burden upon our capital account.

QUINQUENNIAL BONUS.

I am glad to say that the quinquennial investigation into the affairs of the life department reveals a sufficient surplus over liabilities to justify the distribution of the satisfactory bonus of £1 12s per cent. per annum upon the sum assured under participating policies. Moreover, the share of the surplus to which we as shareholders are entitled has been brought into our account for the year.

FIRE-RESULTS.

Proceeding to the consolidated accounts, the combined fire revenue for the year amounts to £598,110. The losses by fire, less recoveries under reinsurance, absorb £309,950. After deducting commission and expenses, and making the usual provision of 40 per cent. for unexpired risks at the close of the year, there remains a profit of £20,151.

ACCIDENT AND GENERAL DEPARTMENT.

In the accident and general department the premiums, after deduction of reinsurance, amount to £116,162, and the losses, less recoveries, to £51,692. Deducting commissions and expenses, and making the usual provision for unexpired risks at the close of the year, there is a profit of £11,181.

MARINE BUSINESS.

The marine premiums, less reinsurances, amount to £46,657, and the claims paid and outstanding to £50,403. This year provision is made to cover all outstanding or expected claims up to December 31st, which is the practice we have adopted all along in our fire and accident accounts. The underwriting operations for 1922 show a small profit, and the settlements so far made in 1923

account induce us to hope for a similar result when that year comes to be closed.

PROFIT AND LOSS ACCOUNT.

Proceeding to the profit and loss account, the balance brought forward, after deduction of the final dividend and directors' fees, amounted to £37,651. To this falls to be added from the fire department £20,151, from the accident and general department £11,181, and from the life department £6,425. Interest, dividends, and rents amount to £32,795, and transfer fees to £27, leaving a balance to credit of £108,231. Out of this the directors have written off £20,000 from the cost of businesses acquired, and after deducting income-tax and corporation profits tax of £14,595, and debiting various items of depreciation and other charges, there remains for disposal the sum of £69,005. An interim dividend was paid in October last amounting to £9,609, so that the net sum at the credit of the profit and loss account is £59,395.

The funds of the company, including capital, amount to the not inconsiderable sum of £2,670,105. They are represented by securities enumerated on the other side of the statement. Those securities are all good.

I thank the directors of the British Equitable Assurance Company and also the members of the London and other boards of the State Assurance Company, and the United States Trustees, for the benefit of their services during the year. To the company's officers and agents, at home and abroad, I also offer a warm expression of thanks.

EQUALISATION OF HALF-YEARLY PAYMENTS.

Coming to the dividend, which you will observe is more than covered by the combined interest of £32,795, I ought to tell you that it has been suggested to us that steps should be taken with a view to the equalisation of our half-yearly payments, and the directors have this under consideration. If the conditions appear to justify the maintenance of the present annual rate, the necessary adjustment may be made with the interim payment due in October next. For the moment, I content myself with submitting to you the recommendation of the board.

On the motion of the Chairman, seconded by the deputy-chairman, Mr A. W. Willmer, the report and accounts were formally adopted, and a dividend of 27½ per cent. (making 40 per cent. for the year) was declared on the paid-up capital of the company.

NORWICH UNION FIRE INSURANCE SOCIETY. "NEVER IN A MORE SOLID POSITION."

The annual general meeting of the Norwich Union Fire Insurance Society, Limited, was held, on the 5th instant, at the head office, Surrey street, Norwich, Sir Gerald H. Ryan, Bart. (the chairman), presiding.

The secretary (Mr C. R. Bignold) having read the advertisement convening the meeting, and the annual report of the directors and the accounts being taken as read,

The Chairman, in moving the adoption of the report and accounts, said: Our income in the fire and accident departments is well maintained, indeed is higher than in 1922, and we show a larger profit in the fire department than last year. Against this we have to put a diminished contribution to profit from our accident department, to which item I shall call your closer attention later on. Taken as a whole, our results enable us to pay our full dividend and add over £50,000 to our balance of profit and loss.

FIRE DEPARTMENT.

Taking the several departments in the accustomed order, it is gratifying to find that in the fire department our premium revenue recovered from the falling off that took place in 1922, and amounted to £2,115,068. It is well to point out that the fluctuations in this respect do not necessarily denote any change in the productive power of our organisation, but often depend solely on the market price and volume of the commodities in which our manufacturers and importers deal. Trade being slack, market values low, and stocks not abundant, there will naturally be a reduction in the insurable value of commercial commodities which is reflected in the aggregate insurance carried. We have no reason to think that our connections have shown any diminution of zeal or energy, but they cannot, of course, contend successfully against adverse conditions.

The loss rate is quite favourable at 50.55 per cent., and normally there should be a satisfactory margin of profit, but the drawback of heavy foreign and colonial taxes, and the necessity for providing the unexpired-liability reserve for an increase of income, reduce the profit to about 4 per cent., or say, £89,000 net. We have done and can do much better than this, but our experience is the common experience of nearly all our friendly competitors, and the moral is that we are passing through lean years. But the horizon is brighter in several respects.

Our American business is steadily improving, and we are entering upon a more hopeful stage in regard to Canadian Insurance

affairs, which have been far from satisfactory lately, and we are therefore not at all despondent.

ACCIDENT AND WORKMEN'S COMPENSATION.

In our accident department there has been a moderate increase in our premium revenue, accompanied by a reduction in our profits from £83,613 to £33,688. The decline in our profits is mainly to be accounted for by the unfavourable experience we have suffered in workmen's compensation business in the United States. There the conditions have been unsatisfactory for all companies. During the last three years the current premiums have been inadequate to meet the liability owing to changes in labour conditions and remuneration. It is admitted that the ruling rates are too low to enable companies to make both ends meet, and revisions have been authorised by several States which will come into force during the present year. Thanks to this, our results should show an improvement, but we do not indulge the hope that an early return to a prosperous state in this class of business will be quickly established.

In our marine department there has been a slight reduction in the premium income, the figures being £345,602, against £386,673. We do not regard this as an unsatisfactory feature. Looking at the difficulties of the time, our marine profit of £28,213, which compares with £30,797 in the previous year, is quite satisfactory. The board wish to express their appreciation of the skill and judgment shown by their underwriters in this emergency.

PROFIT AND LOSS ACCOUNT.

There is but little on which I need detain you in the profit and loss account. Our free interest, to which we always look mainly for our dividend, amounted to £164,918 against £166,837 last year, and our dividend payments with debenture interest came to £209,438. We therefore had to draw upon trading profits to the extent of £44,520, but as our total profits are shown to be £197,201 there was plenty to spare. Even reducing the trading profits by the amount we had to find for foreign and home taxes, there was still rather more than £100,000 left in the profit account. As a final result, we are able to pay our dividends with £57,000 to spare, which has been added to the balance carried forward. Thus, at the end of the year our financial position was somewhat stronger than at the beginning.

Summing up these scattered views and comments, I think I may confidently say that the old Norwich Union Fire Office has never been in a more solid position. We have ample funds, computed on a very cautious and strict basis, to provide for all our departmental obligations, large additional reserve funds, and a considerable margin of value in the prices at which we take our securities in the balance-sheet.

The vice-chairman, Mr J. H. F. Walter, seconded the resolution, which was carried.

NORTHERN ASSURANCE COMPANY, LIMITED. PROFIT IN ALL DEPARTMENTS.

The annual general meeting of the Northern Assurance Company, Limited, was held, on the 7th instant, at Aberdeen, Mr Alfred Martineau presiding.

The Chairman referred to the death of Mr L. E. Chalmers, of the London board, and to the election of the Right Hon. James Fitzalan Hope, P.C., M.P., to fill a previous vacancy thereon; also to the sad loss which the company had sustained through the deaths last year of its joint general managers, Mr J. Robertson and Mr H. S. Gayford; to the appointment of Mr W. Eneas Mackay as general manager, and Mr K. K. Peters as assistant general manager, and to the acquisition of the shares of the London and Scottish Assurance Corporation, Limited. This purchase had necessitated the issue of 51,500 new "Northern" ordinary shares, the dividend on which, however, appears to be more than provided by the interest on the proprietors' funds of the "London and Scottish."

RESULTS OF THE YEAR.

An underwriting profit was shown in all departments totalling £308,280, while interest receipts amounted to £284,603, an increase of £15,000 over the previous year. The fire premiums at £2,533,300 showed an increased of £149,162, necessitating an additional unearned premium reserve of £74,500, and the profit for the year amounted to £19,613. It had to be borne in mind that the "Northern" reserves 50 per cent. of the fire and accident premiums to provide for unexpired risks, as against the common practice of other companies to reserve only 40 per cent. of the premiums.

INCREASED ACCIDENT PREMIUMS.

The accident premiums (£974,202) had increased by £66,763, a profit of £141,367 resulting, to which the "White Cross," "Provident Accident" and "National Guarantee" had contributed satisfactorily.

Marine premiums amounted to £1,511,726, a decrease of about £100,000 on 1922, and the surplus of £147,301 had been transferred to profit and loss.

LIFE POSITION.

Sums assured on new life policies were £807,169, an increase of nearly £80,000 over 1922. A special interim investigation into the position of the participation branch had been made as at December 31, 1923, and a reversionary bonus declared at the rate of £2 15s per cent. upon the original sums assured for each year's premium due in the three years 1921, 1922 and 1923. The prospective bonus to be paid on claims arising during the next two years would be increased to £2 per cent., against 30s per cent. declared in 1921, while it was the intention of the directors to make the next investigation as at December 31, 1925, with a view to declaring a reversionary bonus for the last two years of the quinquennium. The Chairman pointed out that the present distribution must be taken as an exceptional one, and that policyholders must not regard the rates of bonus now declared as normal.

PROFIT AND LOSS ACCOUNT.

The profit and loss account opened with a credit of £246,939, whilst on account of the operations of the past year £562,983 had been added, making a total of £809,922, out of which debenture interest, preference dividend and interim ordinary dividend had been paid. Income-tax and provision for corporation profits tax absorbed £65,046. A final dividend of 9s per share, less tax, was declared on the 350,000 ordinary shares of the company entitled to participate, and a corresponding payment of 7s 1.97d per share, less tax, on the preference shares, the same as for 1922. £20,000 was voted to the staff pension fund, and the carry forward amounted to £375,103, as against £246,939 last year.

The report and accounts were unanimously adopted.

SPILLERS MILLING AND ASSOCIATED INDUSTRIES, LIMITED. SUCCESSFUL RESULTS—DIVIDEND MAINTAINED. DEVELOPMENT SCHEME FOR WESTERN CANADA.

The thirty-seventh annual ordinary general meeting of Spillers Milling and Associated Industries, Limited, was held, on the 3rd instant, at Cardiff, Sir William Edgar Nicholls presiding.

The Chairman, in moving the adoption of the report and accounts, said that the balance of profit and loss account, subject to income-tax and corporation profits duty, was £326,755 15s 10d, compared with £308,051 9s 9d last year. Adding the amount brought forward from last year there was a disposable balance of £479,460 6s 5d. From this figure it was necessary to deduct the amount to be reserved for taxation purposes, £108,000. Ordinary and preference dividends already paid amounted to £78,312 5s, thus leaving a balance of £293,148 1s 5d. He was extremely gratified that this balance enabled the directors to recommend a repetition to the ordinary shareholders of the dividend paid last year, viz., a final dividend of 10 per cent., making 12½ per cent. for the whole year. The amount required for this payment, less tax, was £139,589 13s 4d, and after payment of dividend at the rate of 8½ per cent. on the co-partnership shares the carry forward would be slightly higher at £153,292 15s 8d, against £152,704 10s 7d.

BALANCE-SHEET ITEMS.

The issued share capital of the associated companies was now £6,276,550. This appeared in the balance-sheet at £4,484,804. Of this latter figure £2,891,502 represented the amount at which the capital of the milling companies stood in the company's books.

The book value of the flour mills, including plants, silos, and warehouses, was only £989,000, which might be compared with the cost of erecting the whole of the associated milling companies' plants to-day, estimated at £2,750,000.

Excluded from these figures was the investment in the British Oak Insurance Company, Limited, which was shown in the balance-sheet at the actual invested amount of £230,700, i.e., 922,800 shares of £1 each, 5s paid.

In regard to general investments the total amount invested taken at or below market value at the close of the year was over £375,000 higher than last year, viz., £1,345,785, of which practically £800,000 was in British or Colonial Government securities. Of the other investments and loans totalling £546,251, their realisable value was well in excess of the figure stated.

CANADIAN ENTERPRISES.

With regard to the proposed Canadian enterprises, shortly after the annual meeting last year a definite proposition had been submitted to the company, and since last June the directors had availed themselves of every channel of information. Three of the directors, with other officials, had spent many weeks in Canada making personal inspection and inquiries, and the board had arrived at the decision, after the most exhaustive consideration, that the policy of extending the company's activities to Western Canada was one which should be adopted. Two factors which contributed to this decision were the intense competition in the flour milling industry in this country, and the progressive development in the

production of wheat in Western Canada, such wheat being generally recognised as the best in the world.

The increase in the production of wheat in the three Western provinces had been steady and continuous, and showed every prospect of so continuing for some time to come. This was clearly demonstrated by the fact that the production of wheat in Canada for 1923 was more than double that in 1913, and the exports of wheat had increased in similar proportion.

To provide bread for the 46 millions of population in the United Kingdom it was to Canada, the granary of the Empire, we must look.

The scheme for development in Western Canada included several enterprises. The only definite agreement arrived at was that in regard to the Wheat Elevator Proposition at Vancouver. By this agreement the company obtained a controlling interest in the Vancouver Terminal Grain Company, Limited, who were now erecting a two million bushel elevator at Vancouver.

Other portions of the scheme had not yet been definitely arranged, and the shareholders would therefore be informed by means of official statements in the Press. Should, however, all the interests which the board were considering be acquired, it was probable at some later date that a portion of the unissued capital of the company would have to be issued.

COMPETITION IN FLOUR MILLING TRADE.

Highly competitive conditions in the flour milling trade had continued throughout the year. This competition was still of a shortsighted character, and consisted largely in each miller dumping his surplus outside his economic area. Unless some co-ordinated effort was made by the trade, others must inevitably join the ranks of those who had already dropped out of the business.

Under present conditions the return on capital invested in the milling trade was not anything like a reasonable one, as the figures of the associated companies showed that the margin of profit was only 1.23 per cent. on turnover, which was obviously altogether insufficient.

The continued serious unemployment in the country might be mitigated by a settlement of the Continental war debts question. This alone, however, would not enable the manufacturers of this country to reach their economic outputs. The leaders of industry were seriously discouraged by heavy taxes, and there could be little question but that unemployment was largely due to the strangling grip of these liabilities of industry.

CO-PARTNERSHIP SCHEME.

He expressed his very genuine regret that the company's proposals in regard to co-partnership for the workpeople had as yet come to nothing. Last year the scheme had been approved, and one of the conditions of the scheme was that the men should be called upon to give one month's notice to terminate service instead of the usual week. This provision was considered by the joint committee of the employers and employees in the milling industry, and the latter would not agree to any alteration of the terms of employment. The company had, therefore, no alternative but to refrain from pursuing the scheme for the time being.

In conclusion, the Chairman offered to every member of the staff, both from the directors and also on behalf of the shareholders, their grateful thanks for their valuable services during the year.

The report and accounts were adopted, and a resolution confirming the policy of the company's extension to Western Canada was carried.

The retiring directors and auditors were re-elected.

RIO DE JANEIRO CITY IMPROVEMENTS COMPANY, LIMITED. STRONG FINANCIAL POSITION.

The sixty-second ordinary general meeting of the Rio de Janeiro City Improvements Company, Limited, was held, on the 5th instant, at Winchester House, London.

The secretary (Mr Henry Haggett) having read the notice convening the meeting and the report of the auditors,

Lord Hunsdon (the chairman), in moving the adoption of the report and the declaration of a final dividend of 3s 6d per share, making 6 per cent. for the year, free of income-tax, congratulated the shareholders on the very strong financial position disclosed by the balance-sheet, which, he said, was entirely due to the self-denying support which the shareholders had consistently given to the conservative policy of the board. The average gross dividend paid to the shareholders since the inception of the company in 1862 had been only £4 19s per annum, which was obviously a very low price for the Government to have paid for the efficient and useful work performed by the company. They had made no less than five issues of debentures in the 27 years ended in 1908, but during the last 15 years they had made no issue at all, although during that period they had spent no less than £569,000 on constructing up new houses with their system and other capital expenditure. In spite, however, of this heavy capital expenditure they

showed as on December 31st last investments and cash of a value of £353,000, after deducting the sinking fund of £104,700 on the other side of the balance-sheet. Contract obligations in regard to the revision of drainage installations were liable to form a considerable charge, though the directors were not in a position at present to estimate this liability with accuracy, nor could they say how soon this expenditure might become necessary. Then, again, a thorough revision of their pumping stations would certainly have to be undertaken, as in an important matter like drainage they should not be dependent on one supply for their motive power, which was almost the case at present. The item of £16,000 interest arose from investments held against liabilities, and when those liabilities were met the cash and investments corresponding to them would cease to bear interest. Therefore, they had obviously no right to regard this interest as a permanent source of revenue. It seemed to the board, in view of the uncertainties of the future, that it would be wiser to use this interest in helping to form a reserve against those uncertainties. They had, therefore, placed £20,000 to exchange contingency account, and they had chosen that name for the account because exchange was the most uncertain factor in their future profits. The new Brazilian income-tax of 8 per cent. on profits might reduce their profits in future, but they would obtain small relief from the abolition of the British corporation profits tax of 2½ per cent. on profits.

The resolution was carried unanimously.

BRAZILIAN WARRANT COMPANY, LIMITED. COTTON CULTIVATION IN BRAZIL.

The annual general meeting of the Brazilian Warrant Company, Limited, was held, on the 6th instant, at Winchester House, London, the Earl of Bessborough presiding.

The Chairman first referred to the visit he had paid to Brazil since his appointment in succession to the late Colonel C. E. Johnston, remarking that he had been able to make the personal acquaintance of the staff of the company in Santos, Rio and Sao Paulo. He also had the honour of an audience with the President of the Republic.

In the balance-sheet the reserve had been increased by £100,000 out of the profits of the year, and the fund was now back to the total of £250,000, at which it figured on December 31, 1919. The investments in subsidiary and connected companies stood at the same figure as last year, and British Government and other Stock Exchange securities at £914,642 were almost £100,000 up. They stood at cost price, which was below market valuation at December 31st last. The profit for the year was £209,627, as against £231,320 in 1922, the reduction being accounted for in part by the lower value of the milreis. After payment of the dividends recommended they would carry forward £63,233, compared with £63,605 brought in.

Mr Edward Greene (managing director) said that 1923 had been for the company a very busy year. At the last meeting he referred at length to the part they had been called upon to play in realising, on behalf of the Brazilian Government and the London bankers, the large stocks of coffee which served as security for the Brazilian Coffee Security Loan of 1922. Practically speaking, that great operation had now been successfully completed and the 4,500,000 bags of coffee disposed of. He was proud to inform the shareholders that the company had carried through their duties to the satisfaction of those who employed them.

Another article was coming into prominence in Brazil—namely, cotton. The first words which Mr Montagu, head of the British Financial Mission to Brazil, publicly uttered on his return to this country were: "Brazil can produce crops of great importance to the world in cotton." With the present high prices ruling for cotton and the desire of cotton spinners in this country to enlarge the sources of supply there was no doubt that there existed enormous possibilities for Brazil in the cultivation of cotton, and these were being carefully watched by the board.

The report and accounts were unanimously adopted, and final dividends were declared, making a total distribution for the year of 7 per cent. on the cumulative preference shares and 7½ per cent. on the ordinary shares.

SALAR DEL CARMEN NITRATE SYNDICATE, LIMITED. ENCOURAGING PROSPECTS FOR THE INDUSTRY.

The twenty-seventh annual general meeting of the Salar Del Carmen Nitrate Syndicate, Limited, was held, on the 8th instant, at Winchester House, Old Broad street, London.

Mr H. W. Sillem presided, and, in moving the adoption of the report, said that taking into consideration the unsettled economic conditions which continued to exist throughout the greater part of the world, the position of the nitrate industry might rightly be described as encouraging. It was estimated that the total nitrate consumption in the twelve months ending June 30th next would be

about 2,180,000 tons, as compared with 2,150,000 tons in 1923, 1,550,000 in 1922, and 1,430,000 in 1921.

The highest pre-war record was 2,630,000 tons, in the year ended June 30, 1914, but they then had the German market available, which absorbed about 850,000 tons annually. The United States had, to some extent, made up for the loss of the German market, but it had not, by any means, replaced it. Pre-war consumption in the States was approximately 550,000 tons; during the current year it was estimated to amount to about 600,000 tons, so that taking the two markets together there was a net loss on balance of 500,000 tons.

This sense of satisfaction was all the more justified when one considered the many economic difficulties which were the legacy of the war. Unquestionably slackness and depression had existed during the last two or three years, yet, in spite of it, the nitrate industry had done exceedingly well. They had reason, therefore, not only for present satisfaction, but for future encouragement. They might reasonably look for a progressive demand for nitrate of soda, especially if some of the troubles which had afflicted Europe since 1914 were soon to be dealt with on the lines of the Experts' recommendations. It was sincerely to be hoped from every point of view that a settlement of this matter would be speedily arrived at.

In that event French, Belgian, and Italian exchanges might be expected to become steadier, and German currency would no doubt be more stable. As a consequence, they ought to see important market developments, particularly in the case of Germany, because agriculturists there much preferred Chilean nitrate to synthetic sulphate of ammonia and cyanamide. There was room for immense expansion in the United States market, and both China and India might become important buyers in the course of a few years. With regard to synthetic nitrogen in its various forms, the German output in the year ended April 30, 1924, was considerably reduced as compared with the previous year. Demand in Germany for nitrogen products had been greater than the supply, but dealers in Chilean nitrate of soda could do very little business with the German buyers, owing to the difficulty of converting the Rentenmark into sterling.

Referring to the accounts, the Chairman said that the net profit for the year amounted to £78,053, and the directors recommended a final dividend of 25 per cent., making a total distribution of 30 per cent.

The report was unanimously adopted.

CHAMPION REEF GOLD MINES OF INDIA, LIMITED. IMPORTANT ORE DISCOVERIES.

The ordinary general meeting of the Champion Reef Gold Mines of India, Limited, was held, on the 6th instant, at the Cannon street Hotel, London, Major the Hon. A. T. J. Fraser, D.S.O. (chairman of the company) presiding.

The secretary (Mr F. H. Williams) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The year under review has been one of great importance for the company. In the first place, it was signalised by two very bad rock-bursts in May and June, which delayed work very considerably. On the other hand, we have this year definitely proved the existence in the lower levels of the mine of ore bodies whose presence last year were only indicated.

Turning to the accounts, you will see that our balance-sheet is a very simple statement, and requires little comment. Sundry creditors, chiefly outstanding from the last few months' work, are rather more than balanced by stocks of gold in hand—won during a similar period and since realised. Sundry debtors are higher than usual at £55,000, but all except £1,000 or so is represented by gold sold and, since paid for. The net capital expenditure incurred amounts to just on £17,000. This is chiefly for plant, but a certain amount represents development dead-work—that is to say, necessary work done off the reef. You will see that our liquid assets amount to over £165,000. Last year they stood at £209,000. In this connection I would remind you that last year I pointed out to you that, though our financial position was then strong, the bulk of the capital expenditure, especially on development, was then still ahead of us. In view of that fact, I consider the present figure by no means unsatisfactory.

In the income and expenditure account you will see that we have made a loss on the year of £37,000 odd, and this, in the profit and loss account, turns our credit balance of £10,658, with which we started the year, into a debit of £21,289. In view of the necessary reduction in tonnage milled, which we made about March last year, we had scarcely anticipated making anything but a loss, but had it not been for the heavy rock-bursts last year, we should just about have made both ends meet. I am glad to say that, since the end of November, we have been working at a profit—a small

one, certainly, but still a profit—and doing good development footage at the same time.

As foreshadowed last year, our working costs per ton have increased considerably. This was expected, owing to the reduced tonnage. Other reasons were the welcome increase in development footage, and the much-to-be-regretted rock-bursts. These three factors conceal a very real saving effected in nearly all departments. The development footage amounts to 9,600, and the management estimates that another 3,000 would have been done, but for the rock-bursts.

You will have seen in the report that excellent results have been obtained both north and south of Carmichael's shaft, in the lower levels of the mine. I am glad to say that, since the end of the year, both these ore-chutes have continued to open up extremely well. Now, gentlemen, I do not want you to go away with the idea that all is plain sailing. It is probable that in the immediate future we shall be able to take a small tonnage per month from the top of the new chute north of Carmichael's, but this will not represent more than a small proportion of the monthly tonnage milled. As regards the more important chute south of Carmichael's, it is clear that it will be necessary to sink a subsidiary shaft from the 51st level to the present bottom of the mine before we can stoop with safety from this section. For the time being, therefore (until, in fact, this shaft has been put through), we are not likely to increase our output of gold to any very considerable extent. With the exception of this shaft, however, we have not any serious expenditure, outside of normal working costs, to provide for, always excepting more trouble from rock-bursts.

As you have already heard, we are now working at a small profit on ore from stopes in higher levels, assisted by development rock only from the new discoveries at depth. It has recently been decided that the monthly tonnage can now be safely increased by about 750 tons, and it is probable that a further increase of the same amount can be made in six months' time. It can, therefore, safely be said that, although we have not yet reached the stage of paying dividends, that stage cannot be very long postponed.

The report and accounts were unanimously adopted, and the usual formal business transacted.

OOREGUM GOLD MINING COMPANY OF INDIA, LIMITED. RECORD GOLD RECOVERY.

The ordinary general meeting of the Ooregum Gold Mining Company of India, Limited, was held, on the 5th instant, at the Cannon street Hotel, London, the Hon. Lionel Holland (chairman of the company) presiding.

The Chairman, in the course of his speech, said: You will see from the balance-sheet that capital expenditure during the past 12 months absorbed £126,861. Of this amount £74,873 was for work on the circular and auxiliary shafts, all of which, in accordance with the policy that was approved when this work was started, we have charged against revenue. Then we have allowed £20,000 for depreciation of the buildings and machinery account, and have allocated, in addition, £35,000 out of revenue to deep-mining equipment.

The work of sinking the new circular shaft from the surface to the 52nd level is completed this month, and the sinking of the auxiliary shaft on down from that level, or rather from the 50th level, to the 66th level will be finished, unless something unforeseen occurs, by next July.

In accordance with the policy that I indicated in my remarks last year, we increased the tonnage stoped and milled during the 12 months and the total production of fine gold, in order to meet the extraordinary expenditure that I have referred to and at the same time maintain the rate of dividend. The fine gold recovered and sold creates a new record in the company's history—108,233 ounces—an increase of 6,387 ounces on last year's return. Our revenue, then, from sales of gold and other minor sources, as you will have seen from the income and expenditure account before you, amounts to £477,160, which is larger than last year's revenue by over £18,000, while our revenue expenditure is materially reduced—by over £45,000.

Our profit for the year, then, including the balance carried forward from last year, as shown by the profit and loss account, is £278,194, as compared with £210,954 last year. We paid an interim dividend last October on the preference and ordinary shares that absorbed £39,057. After meeting this payment, and the allocations to depreciation and special expenditure that I have referred to, a disposable balance of £61,860 remains. The directors now recommend a final dividend of 1s 3d per share on both the preference and ordinary shares, making the total dividend for the year 3s per share on the preference and 2s per share on the ordinary shares, or a dividend at the rate of 30 per cent. and 20 per cent. respectively—the same as the preceding year.

There are just a couple of entries in the balance-sheet to which I should refer. We have spent during the year on exploration in

India—that is, in continuing the work of proving the copper deposits in our large area under option at Kharsawan—a sum of about £8,000. This expenditure has produced as yet no conclusive result. A lode of copper, of good value, has been disclosed, but the discovery is not by itself sufficient at present to render the mine a commercial proposition.

The other entry is our investment in the Anglo-Canadian Explorers, Limited, which is shown at £15,000. We hold 20,000 shares out of that company's total issued share capital of something under 150,000 shares of £1 each. The Anglo-Canadian Explorers Company is interested, as you are aware, in gold mining options in Northern Ontario.

The Anglo-Canadian Explorers Company has carried out a good deal of work, with the object of proving properties that have been offered to it, which, on a preliminary examination, seemed of promise. Some of these have been given up on further investigation, but if, as a result of its activities, it can find but one mine of real commercial value in the field, it will, of course, be well rewarded.

I think we may regard with a good deal of hopefulness the issue of our investment in this mining venture in Canada.

Mr Henry Taylor seconded the motion, which was carried unanimously.

NUNDYDROOG MINES, LIMITED.

DECREASED WORKING COSTS—INCREASED DIVIDEND.

The annual general meeting of the Nundydroog Mines, Limited, was held, on the 9th instant, at Cannon street Hotel, London, Mr V. H. Smith presiding.

The secretary (Mr W. L. Bayley, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the total production for the period under review was 65,606 ozs of fine gold of a value of £301,107, to which must be added £697 in respect of sales of silver, and £199, an adjustment of the 1922 gold sales account, the total amount being £302,003. It had again been found advantageous to sell in India the whole of the production of gold, as not only had higher prices been obtained there during the year, but shipping and insurance charges were thereby saved. The average price realised by gold sales was £4 11s 9d per fine oz, whereas in the previous year £4 14s 2½d had been obtained.

The profit and loss account showed that the total credits came to £91,265, and the debits to £62,268, leaving a credit balance of £28,997, out of which a further dividend of 9d per share, less income-tax, was paid on April 15th. With the interim dividend of 6d per share paid in September, the total distribution for the year was 1s 3d per share, equal to 12½ per cent., an increase of 2½ per cent. over that for the previous 12 months. The average working costs had amounted to £1 3s 5d per ton, mine development 9s 3d per ton, and accumulated tailings 4d per ton, making together £1 13s per ton, which showed the substantial reduction of 4s 5d per ton, when the whole of the company's expenditure was taken into account, and compared, on the same basis, with 1922.

That favourable position was attributable to the larger tonnage milled, to a drop in prices of certain materials and stores, to the elimination of steam plant, and to the unremitting efforts of all concerned to reduce working costs in every direction to the lowest level consistent with efficiency. Important alterations and improvements had been made at the reduction plant, bringing about excellent working results—the final residual value of the ore for the year 1923 being 5.45 grains of gold per ton. The total extraction of gold from the ore had averaged 97.74 per cent., which must be considered a highly satisfactory record. The further substantial reductions in costs were largely due to the energy and ability of Messrs John Taylor and Sons, the managers. The success achieved in that direction was very gratifying, and was a welcome offset for the lower selling price of the gold produced during the year.

The report and accounts were unanimously adopted.

SCHWEPPE, LIMITED.

RECORD PROFITS.

The twenty-seventh annual general meeting of Schweppe, Limited, was held, on the 8th instant, at Marble Arch House, 1 Connaught place, London, Sir Ivor Philipps, K.C.B., D.S.O. (the chairman) presiding.

The secretary (Mr W. McMillan) having read the notice convening the meeting, and the report of the auditors,

The Chairman said the accounts showed that the company had again made the largest profit in their history, a result which re-

flected great credit on all concerned with the administration and management of its affairs. Since the last annual meeting certain foreign and colonial rights in the goodwill and trade marks of the company had been sold to a new company called Schweppe (Colonial and Foreign), Limited, for the consideration of 100,000 deferred shares of £1 each fully paid in that company.

The whole of the issued capital of Schweppe (Colonial and Foreign), Limited, was held by the parent company. It was too early yet to give any idea as to the benefit the parent company would derive from this subsidiary, but Schweppe (Colonial and Foreign), Limited, had already formed a company to trade in Belgium under the name of Schweppe (Belgium), Limited. This company only started operations on January 1st, and the result so far satisfied the board that the business was likely in time to be a profitable one. Schweppe (Colonial and Foreign), Limited, had other schemes in view for developing business in other countries. The gross profit for the year showed an increase of £45,000, while the net profit of £132,000 showed an increase of £31,000 over that of last year. The directors recommend that the preference and ordinary shareholders should receive their full dividend, as in previous years, and that the deferred shareholders should receive 7 per cent. in place of 5 per cent. last year. This was the first occasion since the company was formed 27 years ago that the deferred shareholders had received their full dividend, and he thought the directors were entitled to congratulate themselves on the successful result when it was borne in mind that this dividend could be paid without in any way injuring the financial stability of the company. The value of all the shares was increasing year by year by the careful and sound system of finance which they had adopted. He was glad to see that in this year's Budget it was proposed to remove the remaining half of the mineral water tax on sweet waters, and that they were also to be relieved of the remaining half of the corporation profits tax on all profits made after July 1st this year. If the present Budget proposals passed into law the Board had decided to give a reduction to the trade in excess of the benefit derived from the remission of the mineral water tax on sweet waters, and it was hoped that the trade would be able to reduce the selling price of their goods to the public, and by that means increase sales.

Mr C. Williamson Milne (deputy-chairman) seconded the resolution, which was carried unanimously.

GOLD.

The Bank of England gold reserve against its note issue on the 30th ultimo amounted to £126,295,715, as compared with £126,291,545 on the previous Wednesday. The larger portion of the fair amount of gold available this week has been taken for the East. Gold valued at \$5,350,000 has arrived in New York—\$3,500,000 from London and \$1,850,000 from Germany.

SILVER.

Since we last addressed you, the market has been disposed to be quiet. Most of the support has come from bear covering on Eastern account. Fresh purchases for India or China are not practicable owing to the prices being so much above parity with both quarters. America has sold almost daily, but supplies from elsewhere are "scanty." The undertone, notwithstanding want of animation on the part of buyers, is fairly good.

INDIAN CURRENCY RETURNS.

Notes in circulation	April 15.	April 22.	April 30.
Silver coin and bullion in India ..	18,285	18,223	18,135

Bills of exchange	1,000	1,000	1,000

No silver coinage was reported during the week ending 30th ultimo. The stock in Shanghai on the 3rd instant consisted of about 35,300,000 ounce in sycee, 46,000,000 dollars, and 4,760 silver bars, as compared with about 35,400,000 ounces in sycee, 46,000,000 dollars, and 3,050 silver bars on the 26th ultimo.

NOTICES.

We regret that owing to a printer's error in our Banking Supplement, the notes in circulation of the Bank of Taiwan were given on page 68 as £35,425,911. The correct figure is £35,245,911.

The board of the Mercantile Bank of India, Limited, have appointed Mr J. M. Ryre, one of their members, to be deputy-chairman of the bank.

The National Provincial Bank, Limited, announce that Mr J. Denny Bright, one of the joint managers of the City office, 15 Bishopsgate, E.C., is retiring from active service on the 31st inst., having completed 43 years' service in the bank.

Barclays Bank (Overseas), Limited, announce that for the convenience of visitors they have opened a branch at Aix-les-Bains in the Place Carnot, for the season. They also announce that they have opened a new branch at 30 Sloane square, S.W. 1, under the management of Mr W. Errington Smith.

possible with steam traction, in the conditions existing on the railway. With this end in view the board have set aside the sum of £100,000 on account of the new expenditure involved.

TEA AND RUBBER.

BUKIT SEMBANG RUBBER.—The total revenue for the year 1923 was £61,560, and the total revenue expenditure £45,860, resulting in a profit of £15,693, which, added to the balance of profit brought forward, amounts to £41,596, out of which the directors propose to pay a dividend of 6 per cent., less income-tax, which will absorb £15,403, and to carry forward the balance of £26,192, subject to income-tax and corporation profits tax. During the year the Straits Government expropriated 1,150 acres of the company's land, of which 947 acres were planted with rubber, awarding compensation, which amounted, less expenses, to £65,027 19s 5d, or at the rate of £71 per planted acre. Arrangements have since been made to lease some 700 acres of this area from the Government until required by the Admiralty. The company's property now consists of 6,097 acres, of which 4,840 acres are planted. Since the close of the year the company has taken an interest of £57,785 in the Bukit Pulau Rubber Estate, formed to acquire the Kim Kim Rubber Estate in South Johore. The property consists of over 6,000 acres, of which some 3,000 acres are planted, the price paid by Bukit Pulau Rubber Estate, Limited, being £35 per planted acre. The directors have good reason to believe that this investment will prove remunerative.

WINDSOR (F.M.S.) RUBBER ESTATE, LIMITED.—The directors report and statement of accounts for the year ended December 31, 1923. The figures compared with 1922 are as follows:—

	1922.	1923.
Profit	£7,309	£6,566
Tax refund	£4,904	£1,310
Balance brought in	£9,447	£8,811
Dividend recommended	15 per cent.	Final 7½ per cent. (making 12½ per cent. for the year).

Corporation profits tax	£475	£279
Carry forward	£8,811	£6,096
Crop	418,178 lbs.	396,950 lbs.

SUNGRI BATU (MALAYA) RUBBER ESTATES, LIM.—The directors' report and statement of accounts for the year ended December 31, 1923. The figures compared with 1922 are as follows:—

	1922.	1923.
Profit	£1,289	£3,780
Excess Profits Duty Refund	£8,765	£6,495
Balance brought in	£6,495	£10,240
Dividend recommended	7½ per cent.	7½ per cent.
Corporation Profits Tax	£122	£184
Carry forward	£10,240	£7,648
Crop	384,289 lbs.	337,148 lbs.

MISCELLANEOUS.

CLAYTON AND SHUTTLEWORTH.—The annual report for 1923 has now been issued, together with an explanatory note from the directors to shareholders, giving particulars of a contract into which they have entered (subject to the approval of shareholders) with Babcock and Wilcox, Limited, whereby the latter company will acquire the "Clayton" boiler works, and certain other departments. The balance-sheet shows a loss of £40,000 on trading for 1923. The position has been seriously aggravated by losses abroad, due to war and revolution, a loss of £442,000 (more than half the paid-up capital) having had to be borne under this head, in spite of a cutting down of foreign commitments to the extent of £800,000 by the present management, on taking charge a short time previously to the outbreak of the Balkan War. They have, therefore, dealt with a most difficult position by entering into a working agreement with Babcock and Wilcox, Limited, under which the latter will acquire and operate an important section of the Clayton Works. Clayton and Shuttleworth, Limited, retain their goodwill and all trade connections, and will continue their business without interruption or dislocation, and they likewise retain their threshing machine works and machine shops ready to take advantage of a revival of demand in their standard products whenever it arises. Babcock and Wilcox, Limited, are to pay £250,000 cash for the works they will take over, together with a further substantial sum for stocks. The proceeds will enable the company's indebtedness arising primarily from the loss of foreign debts to be substantially reduced in such manner as best to strengthen its future.

JOSEPH NATHAN AND CO.—The proprietors of Glaxo have issued their accounts for the year ended September 30, 1923. The available profit is £11,486, against £20,763 in preceding year. The balance brought in is £48,287, against £86,075. Consequently the available balance is reduced from £106,838 to £59,773. The dividend is being paid on the 7 per cent. "A" cumulative preference, and £28,213 goes forward to next account. No dividend is being paid on the 8 per cent. cumulative participating preferred ordinary shares or on the ordinary shares. With regard to assets, these total £1,498,207, against £1,705,248 in preceding year. Stocks of goods are now at £340,544, against £524,623. Cash is at £73,076, against £47,982. Debtors stand at £257,563, against £337,394. With regard to liabilities, creditors stand at £143,540, against £264,805. Advances from bankers stand at £209,214, against £320,204.

KASSALA COTTON.—The first annual report, together with balance-sheet and profit and loss account for the period from November 30, 1922, to December 31, 1923, points out that under the terms of its concession the company's management of cultivation in the Gash delta does not begin until July 1, 1924. The period covered by the report has been devoted to the study of local irrigation problems, to organisation and to development work, including the improve-

ment of existing water channels, the excavation of a new canal and the clearing of new areas. The first cotton crop to be grown under the company's auspices is due to be sown this autumn, and to be picked during the early months of 1925. Consequently there can be no earnings from this source until the year 1925. The approximate area under cultivation in the Gash delta in the season 1923-4 is estimated to have been 9,000 acres. Under the concession agreement this area is taken over by the company, and the directors anticipate that it will be added to considerably during the coming season as the result of the development work now in hand. Satisfactory progress has been made in the building by the Sudan Government Railways Department of the railway line from Haiya (on the Atbara-Port Sudan line) to Kassala. It is expected that railroad will reach the Kassala terminus by the end of the present month. After payment of debenture interest the debit balance to profit and loss is £17,278.

LAUTARO NITRATE.—The following figures have been received by cable from the local board in Valparaiso:—The balance of profit and loss brought forward from 1922 was £100,714; profits obtained from the sales of nitrate and iodine, and dividends in 1923, £230,292, making together £331,006. From which the following have to be deducted:—Loss on 40,000 tons in Nitrate Pool and compensation paid to Nitrate Pool, £128,631; general expenses, interest, commissions, and depreciation, £47,434; shutting down expenses at Oficinas Lautaro and Ballena, £7,564, leaving a net profit of £147,377, which the directors propose to carry forward to 1924. The first interim dividend for the year 1924 of 5 per cent., or 5s per share, on the issued capital of £2,500,000, was paid on March 1st last. The company acquired in the second half of last year 1,500,000 shares of the Lastenia Nitrate Company, on which we received a dividend in October, 1923, of £75,000, which sum is included in our 1923 profits. The local board advise having purchased the oficina "Alianza" of Taltal, now named oficina "Caupolican," with plant, grounds and stocks, for the sum of £60,000, and after effecting certain repairs, the oficina should be in a position to start producing. The directors consider this purchase very advantageous as the company possesses nitrate grounds in the immediate neighbourhood, and it is hoped to produce nitrate on equal terms with our existing oficinas. The 40,000 tons of nitrate which the company held in the Nitrate Pool formed in 1921 during the world crisis, have now been liquidated, and the loss on this nitrate has been written off the 1923 figures of profit, consequently there will be no further writings off under this heading. The payments of compensation to the Pool also terminated in March last. The oficinas "Ballena" and "Lautaro" restarted manufacture in April and May respectively last year and have continued working.

SCHWEPPES.—This company has had a better year. The net profit for 1922 was £101,334. This has been increased to £132,883 for 1923. The ordinary dividend is again 7 per cent., the deferred dividend is 7 per cent. against 5 per cent. for 1922. The sum of £32,781 is carried forward, against £27,308 brought in. The directors have set aside £60,000 to reserve fund, making total reserve £80,000. The sum of £20,000 is applied in reduction of goodwill, which now stands at £680,000. The reserve fund is thus brought back to £60,000. Total assets are £1,747,266. Properties are at £345,166. Plant is at £43,137. Horses, vans, and motors are at £25,790. Stocks stand at £176,543. Investments at cost or under stand at £12,879. Investment in and loan to subsidiary company, £128,885. Cash amounts to £122,540. Debtors amount to £201,179. Creditors amount to £146,906.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

With favourable climatic conditions cereal crops in the United Kingdom continue to make steady progress, and show a fine healthy plant, though a higher temperature and more sunshine would be welcome. The ground is now being prepared for root planting, which is expected to be carried out under ideal conditions, the soil being in good tilth. English wheat continues to be sparingly offered, and rates tend firmer in sympathy with imported varieties. Best grades rule at about 10s 10d to 11s 2d per 112 lbs, free on rail, with inferior descriptions at 10s 4d to 10s 6d. Imported descriptions opened firmer on higher forward offers, and a fair business transpired, but closed quieter. No. 1 Northern Manitoba quoted 48s 6d, No. 2 ditto 47s 6d, No. 3 ditto 46s 3d, Rosaf, 63½ lbs, 48s, Barusso, 63 lbs, 47s, and Australian 49s 9d, all per 490 lbs, ex ship. In the floating and forward cargo section prices hardened in view of a better demand both from home trade and on Continent account, and a fair number of cargoes were disposed of, including No. 1, also No. 2 Northern Manitoba due out to load 11th inst. at 46s 3d and 45s 3d respectively, choice white Karachi, June 15, 46s, Barusso, 63½ lbs, May, 43s 9d, white Western Pacific, shipping/shipped, 47s, and several sellers of Australian, afloat, at 48s to 49s, according to position, all per 480 lbs. Flour prices were and a fair business resulted. London standard straight run quoted 38s, patents 40s to 41s, town households 36s per sack, delivered in. Imported steady, with a moderate demand. Manitoba patents range from 35s 6d to 37s 6d, and Australian 35s 3d to 35s 9d, ex store, per 280 lbs. Maize cargoes were more firmly held, owing to

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated May 8th, is as follows:—Pig-iron: The market remains quiet, and this is likely to continue for a time. The undertone, however, is quite good, and it would not take much buying to send prices up, as stocks of pig-iron are very light. The present quotations are:—No. 3 Cleveland G.M.B., 92s per ton; East Coast hematite mixed numbers, 99s per ton. Manufactured iron and steel: There is a fair business doing in steel. The steady French and Belgian exchanges help to keep foreign steel out of our markets. Steel ship plates, £10 5s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9. Iron ore: Still no revival in the demand for imported iron ore. Business practically limited to a few prompt cargoes. Best Bilbao Rubio is nominally 23s 6d per ton, c.i.f., Tees.

Our Sheffield correspondent writes:—Extreme quietude prevails in the market for pig-iron, steel billets, and scrap, but prices are no lower, and makers of pig-iron do not want forward business at the quotations now current, owing to the belief that costs are going up. The absence of orders for billets cannot be attributed to foreign competition, as prices of Continental material are almost prohibitive, and no business is passing for them. Deliveries under old contracts, however, continue to arrive. Several departments of local trade, particularly tools and other finished products, are now as busy as in normal times, and the output of saws and cold-rolled strip is scarcely equal to the demand. There is also a better inquiry for files and tools used by contractors and quarrymen. Engineers' requirements continue quiet, although tending towards improvement. The revival in the above lines is mainly in the home market, and is less marked in sales overseas. The crucible steel industry is rather more active, but is far below normal. Dealers in ferro-alloys used for steel making report business to be in a stagnant condition, and competition has brought the prices of some of these materials down to the pre-war level. The coal trade is quieter in all departments, but especially in house coal. The demand for the latter from London and the South of England has dropped off considerably, nor is the enquiry for manufacturing fuel so brisk as it has been. Prices are distinctly easier. Gas coke is strong, but other classes of coke weaker in the home market. Current quotations per ton at pits are:—Best hand-picked branch, 34s to 36s; Barnsley, best Silkestone, 32s to 33s; Yorkshire hards, 25s to 27s; Derbyshire ditto, 24s to 25s; Tyne ditto, 24s to 25s; rough slacks, 11s 6d to 12s 6d; smalls, 7s 6d to 9s.

Our Glasgow correspondent writes as follows:—The improvement in the iron and steel trade foreshadowed last week is distinctly evident in several branches. Although plate orders for shipbuilders are not forthcoming in sufficient quantity to keep the larger works in full operation, there is a much better general demand, arising from the structural, wagon building, and general engineering contracts recently secured. Among the contracts placed locally is one for the L. and N.E. Railway Company for extensive reconstruction work at Berwick Station, amounting to several hundred thousand pounds. No alteration in steel prices is noted this week, and little is being heard of foreign competition, but some isolated purchases have been made by merchants of odd lots of bars and sheets at about £1 per ton below local prices. Bar iron makers are fairly steadily employed, and re-rollers are busy on chiefly export work. Makers of sheets are finding business for forward delivery more difficult to secure, and very keen cuts have been made against export inquiries, which are very numerous. Prices for home trade remain at the association rates. Galvanised corrugated sheets are in moderate demand, and makers are offering special terms to clear stocks. There is a good demand for hematite pig-iron, the value of which is maintained around 100s per ton. Other grades are in steady request at late rates. For the week ending Saturday last the shipments from Glasgow Harbour totalled 2,754 tons.

Our Cardiff correspondent writes:—There has been no improvement this week in the position on the Cardiff coal market. The May Day demonstrations on Monday were responsible for a decrease in output of from 100,000 to 150,000 tons, but the loss of even that large quantity had, no hardening effect on prices, which have continued to sag. Foreign demand is inactive, and unless the industrial trouble in the Ruhr is prolonged, there is no

prospect of an early improvement. Moreover, the collieries are faced with the certainty of an increase in costs under the report of the Court of Inquiry appointed by the Ministry of Labour to inquire into the wages dispute. Under these circumstances, it has been decided to revive the group committees of colliery sales agents, which were formed during the depression of 1922. The functions of these committees are consultative with a view to the avoidance of unnecessary underselling. They are to meet once a week, and if possible agree on the lowest price at which business shall be taken, but as they are on a voluntary basis, they have no effective power, and production will continue unregulated. Co-operation is not difficult in the case of those groups that are financially associated, but where this tie does not exist, colliery salesmen, and particularly those of the larger and more efficient colliery properties, are primarily concerned with the regularity of work at their own pits, and this conflict of interest prevents any agreement in regard to the enforcement of minimum prices. Towards the end of the week, the lock-out in the Ruhr had a steady effect on market quotations, but even if the dispute between the Rhenish Westphalia mineowners and miners over the seven-hour question is prolonged, the South Wales coalfield will be the last to profit from it. The weakness of the coal market is accompanied by a still greater relative weakness in the outward freight market, where this week the rates for some of the French ports have fallen to levels even lower than those ruling in 1913-14.

The following are the current approximate quotations:—Best Admiralties, 27s 6d to 28s; second Admiralties, 26s 6d to 27s; best dries, 26s 6d to 27s; black veins, 26s 6d to 27s; Western Valleys, 26s to 26s 6d; Eastern Valleys, 25s to 26s; best bunker smalls, 18s to 18s 6d; ordinary cargo smalls, 16s to 17s; coking smalls, 18s to 18s 6d; anthracite big vein large, 41s 6d to 42s; machine-made cobbles, 47s 6d to 50s; French nuts, 40s to 52s 6d; stove nuts, 47s 6d to 50s; rubbly culm, 15s to 15s 6d; inland blast furnace coke at ovens, 30s to 35s; coke for export, 57s 6d; patent fuel, 29s to 30s; pitwood, ex ship, 24s 6d to 26s. The situation is easier also in the iron and steel trade. The minimum prices of tinplates and steel bars are being maintained, but current market values are a shade lower than they were a week ago. The output remains high.

CUMBERLAND IRON.

(BY OUR WORKINGTON CORRESPONDENT.)

There is rather a better feeling in the Cumberland and North Lancashire hematite pig-iron market than for several months past, makers being inclined to believe that the worst is over, and that within the next few weeks some signs of recovery will be witnessed. Certainly this week there is more inquiry than has been noted since the labour disputes following upon the coming in of a Labour Government first started, and if confidence can be established among consumers, it is more than likely that the old hand-to-mouth methods of buying may be deserted, and that production may begin to get back to normal level. At present the position is that only ten furnaces are in full blast between Workington and Carnforth, and that some 25,000 tons of iron are lying in stock in the Furness district. Demand is barely sufficient to keep the furnaces going, the local absorption having fallen considerably since the steelworks at Barrow ceased activity; it is only this week that the rail mill at Workington resumed operations. What Midland and local consumers require will not maintain more than ten furnaces in draught. Until Scotch and South Wales steel makers are in the market again, and until the Continent is also a buyer, the relighting of additional furnaces will not become necessary. Prices have little if anything to do with the stagnation in trade. In any event, they are as low as circumstances will permit, and Bessemer mixed numbers continue to be quoted at £5 12s 6d per ton delivered at Glasgow and Sheffield, and £5 17s 6d at Birmingham. There is a quiet but steady demand from the Midlands for low-phosphorus iron. Manganese alloys are dull, with ferro at £17 per ton, f.o.b., and spiegel at £9 per ton. The steel trade is sluggish, new business being hard to come by. The rail mill at Workington will be busy until Whitsuntide only, because customers are asking for delivery on orders booked several months ago. Native hematite ore is mostly for local consumption, East Coast. Superior sorts are 22s to 24s per ton, and ordinary kinds from 17s to 18s per ton. There is a considerable diminution in the volume of business reaching Cumberland coal owners from Irish merchants, and trade, after two months' feverish activity, is likely to have a quiet time this summer. There is still an accumulation of orders to clear off, and so, meantime, prices are firm, with best round for shipment 28s to 30s f.o.b.; house nuts 27s 6d and washed nuts 26s 6d. Best steam is 30s delivered, and best house in the local landsale market 38s 2d at pit. Coke is a substantial make for the smelters of ordinary iron at 25s to 26s 6d, according to carbon content.

METALS.

The market for tin displayed quieter features, and values gave way under selling pressure, combined with lower Eastern cables and a slow consumptive demand. Standard, cash, sold from £237 10s to £276, and three months £239 10s to £224 5s. Sales in the East occurred at £242 10s to £236 10s. Copper displayed slight irregularity, but prices on balance slightly easier, while business was on a fair scale, standard, cash, fluctuating between £63 10s and £62 17s 6d, with three months £64 5s to £63 12s 6d. Best selected, £67 5s to £68 10s; strong sheets, £96; electro,

£69 to £69 10s; and wire bars, £69 10s. Lead in slow demand, and prices easier, good soft foreign pig quoted at £28 15s to £27 12s 6d, and English at £30 5s. Spelter also weaker on liberal offerings, though a fair business was effected. Quotations £30 8s 9d to £30 12s 6d, as to position. Aluminium firm. Home trade quoted at £125, export £130 ton. Antimony quiet. English specials £49 10s to £50. Quicksilver quiet, and spot quoted £13 10s to £13 15s per bottle. At Friday's market a much firmer tone prevailed for tin. Cash sold £225 10s, three months £227 15s. Copper easier, cash sold £62 12s 6d, three months £63 11s 3d.

MANCHESTER, May 8.

A quieter feeling has continued to prevail throughout the market. Raw cotton rates do not show much change, but here and there spinners and manufacturers have been rather more disposed to grant slight price concessions when firm offers have been made. Leading buyers of cloth have provided to meet their requirements for the next few months, and there is a tendency to look on until the outlook is clearer, there being some expectation of lower values. A miscellaneous business has been done for India, chiefly in light fabrics. Only scattered sales have been mentioned for China, mostly in fancies. The Near Eastern outlets have given very little support, but a few more orders have been booked for South America. Fine goods continue to be sold for the Continent. Quotations in home American yarns have been rather more irregular, and a limited trade has been done. Egyptian spinnings have been very stiff, with a fair amount of business passing.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—After the activity shown by home and Continental buyers at the Liverpool sales last week, it was hoped that competition in London this week would be equally keen, and that trade in the consuming centres would receive an impetus from the raw material market. Unfortunately, the auctions in Coleman Street Wool Exchange this week have been overweighed with speculators' offerings on which high reserve limits have been placed, and the withdrawal of many of these lots has rather detracted from the value of the sales as an indication of the true position. However, full confidence is still expressed in the future of wool values, and some members of the trade believe that prices will be higher later in the year, especially if financial conditions on the Continent become easier. The large if not the merinos nor in crossbreds is business really brisk, and it is not possible to obtain any advance on quotations ruling a week ago. The trade is apparently marking time and waiting for the final verdict from the London sale room. Botany spinners are at sixes and sevens as regards prices, and some firms are accepting ridiculously low prices for fine counts. This undercutting is always in evidence during a period of depression, and sales are made regardless of the cost of replacement on to-day's wool values. There is also less doing in crossbred yarns, the financial conditions in Germany hampering the export trade, but spinners have plenty of work in hand, and their quotations are practically unchanged. There is some improvement in the demand for piece goods on home account, but the export demand is irregular and orders mostly lack bulk.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The event of the week is the opening of the third series of sales of colonial wool in London. As we anticipated, the market is intact, and it is to be sincerely hoped that it will remain so to the end of the current series, because both home and Continental markets need a strong tonic. The home trade during the past month has lapsed into quietness such as has not been witnessed since last September, due, we think, to the halting attitude of wholesale fabric buyers, whose strong opposition against to-day's values has certainly influenced manufacturers who buy yarns and spinners who buy combed wool. However, the very fact that the B.A.W.R.A. sales at Liverpool last Thursday and Friday were so pronouncedly strong paved the way for a sound opening in London on Tuesday, and we are glad that values are steady. Conditions in the manufacturing section favour a steady market without any further upward movement of values, and we certainly think that none is desirable. It is necessary for the general welfare of the trade that the shortage of wool should not be any more seriously felt than is the case at the present time, and that there should be an improvement in trade among manufacturers. We have said for weeks that the present is a testing period. If the current auctions go through without any setback in values, it will be the strongest argument that spinners and manufacturers can have to enforce their demand.

The usual large number of home and Continental buyers were present at the opening, but apparently America is going to be another blank. The position of the American textile trade, and the wool section in particular, is nothing less than farcical, when Boston, boasting of being the biggest market for wool in the world, finds itself unable to give any support to the primary distributing centre of the world, and, moreover, must export wool in order to realise profits which cannot be made in a highly protected country. We say frankly and candidly the anomaly is too pronounced to be passed without comment. Even from the mere point of view of sentiment, it seems unsatisfactory that America should not be in the market as a buyer of wool, and though profits may be made by the present reselling policy, it is not likely that the industry will benefit as a whole by what is being done. The sooner America takes her place in the London wool market, the better will the majority here be satisfied.

SPRINGS MINES, LIMITED.

(Incorporated in the Transvaal.)

REPORT OF THE DIRECTORS for the Year ended 31st December, 1923. To be submitted at the Fifteenth Ordinary General Meeting of Shareholders, to be held in the Board Room, "The Corner House," Johannesburg, on Monday, the 26th May, 1924, at 12 noon.

To the Shareholders, SPRINGS MINES, LIMITED.

Gentlemen,—Your Directors beg to submit their Report and the Audited Financial Statements for the year ended 31st December, 1923, accompanied by the Reports of the Consulting Engineers and the Mine Manager.

CAPITAL.—Of the shares to be issued under the provisions of the Mineral Lease Agreement, 79,264 remained unissued at the end of the year 1922. During the year 1923 your Company was called upon by the Guarantors to issue 55,059 of these shares at £3 per share, and the proceeds were dealt with in terms of the provisions of the Lease Agreement. The unexpended portion is retained for Capital Expenditure. There remain 24,205 ordinary £1 shares to be taken up by the Guarantors at £3 each, of which 11,191 are earmarked for capital purposes and 13,014 for Debenture redemption.

The Capital of the Company, therefore, is now as follows:—
Registered ... £1,500,000
Issued ... 1,475,795

DEBENTURES.—Owing to the amount of Debentures purchased being in excess of the amount required to fulfil the Company's obligation under the Redemption Clause of the Trust Deed, holders were notified that no drawing of Debentures for redemption would take place during 1923. At the end of the year the balance still to be purchased or drawn for redemption was £48,710.

PROPERTY.—No change has taken place during the year in your Company's holdings, which are as follows:—
Mynacht No. 68, in extent 1,675.693 acres, equal to 1,140.09 claims.
Railway Area (leased from the Government) ... 20.63 "
Discoverer's Rights ... 171.60 "

3,567.92 claims.

Twenty freehold stands in Springs Township, on which are erected quarters for the Company's Employees.

OPERATIONS.—Technical matters are dealt with in the Reports of the Consulting Engineers and Mine Manager.

FINANCE.—From the Working Expenditure and Revenue Accounts it will be seen that the profit from operations for the year, based on the standard value of gold, amounted to ... £548,936 2 4
Add—Premium on Gold ... 72,900 11 2

Deduct—Debenture Interest and Donations ... £616,594 16 0
Add—Dividends on Shareholdings, Interest and Commission, and Sundry Revenue ... 4,776 17 11

Leaving a Net Balance of Revenue over Expenditure for the year of ... £921,871 13 11
Add—Balance to credit of Appropriation Account at 31st December, 1922 ... £45,904 1 1

Unexpended Balance of Reserve for Re-organisation of Plant and Equipment written back ... 27,000 0 0
72,904 1 1

Making a total available Credit of ... £694,275 15 0
Against which the following amounts have been appropriated:—
Government Taxes ... £68,218 3 10
Government Participation in Profits ... 129,155 10 2
Stores Depreciation ... 13,771 6 4
Dividend No. 8 ... 180,717 0 0
Dividend No. 9 ... 258,264 2 6

650,126 2 10
Leaving a Balance unappropriated at 31st December, 1923, of ... £44,149 12 2

The net Capital Expenditure for the year amounted to £60,958 10s 4d, made up as follows:—
Shaft Sinking and Equipment, as per Schedule attached to Balance Sheet ... £66,826 17 4
Less—Shares and Interests in other concerns realised ... 5,868 7 0

£60,958 10 4

The liability to West Springs, Limited, under the Agreement renewed in 1922, amounted at 31st December, 1923, to £952 10s 8d.

The net premium realised on gold sales was £72,900 11s 2d. Advantageous arrangements have been made under which a considerable portion of the Company's output is sold f.o.b. Durban.

The Union Government's participation in the profits of the Company, in terms of the Mineral Lease, is estimated at £128,655 8s 2d. This sum is equivalent to 20.705 per cent. of the profits of the Company for the year.

Stores and materials on hand at the end of the year, in excess of standard stock, were valued at £15,150 1s, of which £4,859 13s 6d represented stores and materials in stock in connection with capital construction work in progress on the Lease Area. The balance of £10,290 7s 6d representing current stock, shows a reduction of £22,025 4s 4d as compared with the corresponding figure at 31st December, 1922. An amount of £13,771 6s 4d has been appropriated to bring down stores on hand at 31st December, 1923, to current prices.

Expenditure on development for the year amounted to £158,728 3s 2d which has been charged to Working Expenditure and Revenue Account.

DIVIDENDS.—Two dividends were declared during the year, namely, No. 8 of 12½ per cent. and No. 9 of 17½ per cent. The former was distributed in respect of an issued capital of 1,445,736 shares, absorbing £180,717, whilst the latter was in respect of an issued capital of 1,475,795 shares, absorbing £258,264 2s 6d.

You are requested to confirm the action of the Board in this matter.

DIRECTORATE.—During the year Mr. A. F. Lyall resigned his seat on the directorate, and Sir F. D. P. Chaplin, G.B.E., K.C.M.G., was appointed to fill the vacancy thus caused. You will be asked to confirm this appointment.

In terms of the Articles of Association, Sir Ernest Oppenheimer and Mr. W. L. Honold retire from the Board by rotation, but are eligible and offer themselves for re-election.

AUDITORS.—You are requested to fix the remuneration for the past audit, and to appoint Auditors for the ensuing year. The Auditors, Messrs A. E. Page and F. W. Diamond, retire, but are eligible and offer themselves for re-election.

THE MONEY MARKET.

Money was scarce in the middle of the week, and on Tuesday the market narrowly escaped borrowing from Bank of England. The figures of the Bank return explained this stringency, with private deposits ten pence lower at £102½ millions. On Thursday, however, funds were rather more plentiful, though the discount market remained firm, with three months' bank bills at 4½, and only placed a shade below, 3 per cent.

Business in bills was described, as it so often is, as more stagnant and uninteresting than it has ever been before.

	May 16, 1924.	May 9, 1924.	May 2, 1924.	Apr. 23, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '2)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '2)
Discounts Call	2	2	2	2	1 (Jly. 5, '2)
Houses (Notice	2½	2½	2½	2½	1½ (Jly. 5, '2)
Market rate 3 months' bills)	3	3	3	3	2½

The Bank return showed a decrease of £675,000 in the note circulation, and an increase of £10 millions in the stock of gold and till-money, making the Reserve £685,000 higher. Repayment of Ways and Means advances, and other liquidation, had reduced Government and Other securities by £2½ millions, and £1 million respectively. At the same time, no less than £7½ millions had been added to the Public deposits, presumably with a view to the War Loan interest payment on June 1, and the Treasury deposits were thus more than £10 millions lower. There was a reduction of £971,500 in currency notes outstanding this week to £288,378,800, which includes £1,393,500 for notes called in but not yet cancelled. The fiduciary issue is £237,535,300, or £10,655,600 below the maximum.

THE STOCK MARKETS.

The opening of dealings in the new 4½ per cent. Conversion Loan at round about 97½ had no effect upon other gilt-edged stocks, which have been fairly steady. Business suffered to some extent from the fall in the franc which followed the defeat of M. Poincaré at the French elections, but with the franc's recovery there was some improvement. Foreign bonds have been fairly good, but the Home Railway market has not attracted any particular attention. Rubber shares were weak on the further decline in the price of the raw material, and the cut in the price of crude oil had a similar effect upon oil shares. Tea shares have maintained their activity, but industrial shares as a whole have been uninteresting. Mining shares have been steady.

THE COMMODITY MARKETS.

Sugar prices were again marked down; at the low range of prices steady buying took place. Coffee was steady, and brisk competition prevailed at tea auction. Rubber prices moved with some irregularity. Wheat parcels were in fair request. Quieter conditions continued to prevail throughout the cotton trade, and buyers were inclined to adopt a waiting policy. In the wool trade a better tone towards the end of the week was noticeable. The Cardiff coal market suffered both from the threat of a strike of coal trimmers and from the uncertain course of negotiations in London over the wages agreement. Business in pig-iron is quiet, but our Middlesbrough correspondent reports that a "slow but steady improvement may be expected." There is a rather better inquiry and more business in shipbuilding steel. Tin open firm, but finished weak. Copper was easier on substantial offerings. Further details and prices relating to the commodity markets will be found on later pages from special trade correspondents.

FOREIGN EXCHANGES.

In the foreign exchange market interest has again the greater part been concentrated on the Paris. From the closing quotation of 73.20 on the 9th, there was some recovery on Saturday, but the election on Monday brought up the rate at one time to as high as 78.10, while on the following day there was a fall to 80.15, from which at the close it recovered to 73.5. By Wednesday evening it was down again to 73.5 after keeping low on Thursday morning, jumped up during the afternoon to 76.25. Yesterday morning the rate was quoted at 76.05. The unexpected election

resulting in the fall of Poincaré has accounted in part for this uncertainty, but the market this week has been much puzzled by the spasmodic appearance and withdrawal of support. Whether this erratic action is intended to confuse the speculator, or whether it is an indication of difficulty in the continuance of the policy of intervention, it is impossible at present to say. That some confusion of counsels exists is obvious. Forward rates, after being wider, are now quoted at 50 centimes per month above spot. Brussels, as usual, has followed Paris fairly closely, having moved during the week from 89 to 90.75, after being considerably higher. Forward rates are 10 centimes per month over spot. The lira has also depreciated rather more than recently from 97.95 to 98.25. The dollar rate, in spite of the adverse influence of the franc, has shown considerable power of resistance, and yesterday morning's quotation of \$4.36½ compares fairly favourably with the \$4.37 a week ago. At the same time, it should be remembered that preparations for the pressure of autumn purchases are likely to make themselves felt in the not distant future. Forward rates are ½ cent narrower at ½ cent per month above spot. Among neutral countries, Amsterdam, with the dollar, has moved somewhat against us from 11.67½ to 11.66, while Switzerland has risen slightly from 24.59 to 24.61. Spain, on the other hand, moved against us, from 16.48½ to 16.43½; in Scandinavia, Stockholm, with the dollar, has moved against us from 16.48½ to 16.43½; while Christiania has reacted from 31.32½ to 31.52½, and Copenhagen from 25.71 to 25.80½. Helsingfors has appreciated slightly to 173½. Reval, where conditions are still difficult, has moved up again a little, to 1,670. In Central Europe Berlin remains quoted at 18½ billions, but the credit strain and the probabilities of further delays in the Reparation settlement make the outlook for the Rentenmark increasingly uncertain. Warsaw, at 22.70 zloty, has moved against us with the dollar, but Vienna has exceptionally depreciated a little, on fears of the economic position resulting from the recent crisis, from 307.500 to 310.000. Prague, at 148½, shows a slight appreciation. Belgrade is very steady at 353, but Bucharest, for reasons not yet clear, has moved up sharply from 860 to 885. In the East, the rupee is much the same at 15 4½d; the yen, after being higher, is 10 10½d, as compared with 10 10 3/4d a week ago. In spite of the absence of demand from India and China, the silver market has been strong on Continental buying, and the undertone remains firm. Hong Kong has moved down a little, from 25 4½d to 25 4½d, Shanghai from 35 3½d to 35 2½d. In South America, Rio, at 6 3-32d, is 1-32d lower, Buenos Ayres is 41 1-32d, as compared with 41d, after being up to 41½d; Monte Video, after also being higher, is unchanged at 43d, while Valparaiso has depreciated a little, from 38.60 to 39.10.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 10th:—

EXPENDITURE.		REVENUE RECEIPTS.	
(000's omitted.)	£	(000's omitted.)	£
Supply Services	6,250	From Revenue	11,254
Interest, &c. on Debt	887	Decrease in Balances	833
Sinking Fund	550		
Sundries	20		
Reduction of Debt	4,380		
	12,087		12,087

Revenue was about £600,000 lower than in the corresponding period at £11,254,000. Nothing came in from Special Receipts, as compared with £1,500,000. Property and Income-tax yielded £2,092,000, and Super-tax £1,450,000, against £2,198,000 and £1,090,000 respectively. Customs at £2,650,000, shows a reduction of £245,000, but Excise yielded an increased revenue of £664,000 at £1,765,000. Estate duties yielded £890,000, against £860,000 in the corresponding period. The week's operations reduced the National Debt by £4,380,300, and caused the following changes:—

(000's omitted.)		(000's omitted.)	
	£		£
Treasury Bills	3,716	Bank of England Advances	4,500
4% Treasury Bonds	1,894	Public Dept. Advances	3,800
		Saving Certificates	60
		Sundries	1,140
	5,610		9,490

The floating debt was reduced by £5,080,000 to £752,750,500.

FINANCIAL YEAR, 1924-1925 (April 1 to May 10).

THE WEEK IN PARLIAMENT.

MONDAY, MAY 12TH.—*Commons*: Budget Resolutions concluded. Finance Bill brought in. Discussions on relief for Albania, and Poor Law Reform. Question of privilege raised.

TUESDAY, MAY 13TH.—*Commons*: Debate on McKenna Duties. Government majority of 65 against Mr Baldwin's motion. *Lords*: Second reading of Companies Amendment (Co-partnership) Bill. Third reading of Trade Facilities Bill and Industrial Courts Amendment Bill.

WEDNESDAY, MAY 14TH.—*Commons*: Premier's statement on the airship service. Increased guarantee for Wembley passed. Labour conditions in India debated. *Lords*: Debates on the position in Persia, London street accidents, and housing policy.

THURSDAY, MAY 15TH.—*Commons*: Home Office vote. *Lords*: Criminal Responsibility (Trials) Bill debated and rejected. Agricultural Returns Bill passes report stage. Royal assent to Trade Facilities Act and Poor Law Emergency Provisions and Continuance (Scotland) Act.

FRIDAY, MAY 16TH.—Nationalisation of Mines and Minerals Bill rejected.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Liverpool and London and Globe Insurance, Alliance Assurance, London Life Association, Yorkshire Insurance, United British Insurance, Scottish Equitable Life Assurance Society, Incorporated Accountants, Edward Lloyd, Anglo-American Debenture Corporation, La Guaira Harbour Corporation, Melbourne City Properties Trust, Electric Supply Corporation, and Bryant and May. The chairman at the meeting of the Liverpool and London and Globe Insurance Company dealt with criticisms of insurance companies' profits and suggestions for the nationalisation of all kinds of industry. At the centenary meeting of the Yorkshire Insurance Company the chairman gave an interesting record of the company's progress. The chairman at the meeting of the Alliance Assurance Company announced that, in order to mark the centenary, it was proposed to pay a bonus dividend to shareholders and a generous bonus to staff and employees. At the United British Insurance Company meeting the chairman said that every department showed an increase on the figures of last year save the marine department, which the board wished should be decreased. The chairman at the meeting of the London Life Association spoke of the good record of the reduction-of-premium system for with-profit policyholders.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE NEW SITUATION IN EUROPE.

THE experts' report on Reparations issued last month has been described not altogether without reason as the most important political event since the Armistice. An even more important one occurred last Sunday, when the French electors sprung a surprise on Europe by rejecting the supporters of the Bloc National, and returning a substantial anti-Poincaré majority. What the effect will be in terms of ministries and coalitions it is difficult to say, for the French party system does not present such simple lines of division as in this country. Doubts are expressed as to whether the opposition will show the same cohesion in government as it has done in attack during the elections. There are even those in London who wonder whether, after all, we may not see M. Poincaré in office once more at the head of a new coalition of parties. Indeed, it is very doubtful whether the new Government will be built up from a combination of the radical groups with the left of the bloc national or of the radicals with the socialists. But the drift of events during the week does not seem to be in M. Poincaré's direction. According to present plans, the present Government will go out of office on June 1st, and all discussions between England and France are for the time in suspense.

There is perhaps only one conclusion that can be drawn from the elections with absolute certainty, and that is that the Paris Press, which always tends to keep its eyes too closely fixed on the Government, and to rely on the news gleaned from official sources, has once more completely failed to keep its finger on the pulse of provincial France. In the present state of uncertainty it is not possible to look ahead. It will perhaps be more profitable to our readers to give the impressions formed by skilled observers of France and Germany. A French economist, representing what we should call a liberal standpoint, writes as follows:—

The meaning of the French elections is plain; France is that at long last we must have peace. The majority which has come into power is not a new one, but was created by M. Waldeck Rousseau. It was continuously in power after 1902. It had just been re-elected when the war broke out. Only the exceptional circumstances of the war, combined with a new and absurd electoral system, substituted for it the majority of the Right, which for four years has directed affairs, and of which Monsieur Poincaré has been the ablest representative. As an illustration of the anomaly of the situation, it is sufficient to recall that M. Leon Daudet, who does not command 10,000 supporters in France, has been able to exercise over the Government an undeniable influence. The result is that the whole of France (including many of his partisans) has levelled at M. Poincaré is that he has never known how to bring any matter to an issue. Even his occupation of the Ruhr did not lead to anything after a year of resistance had ceased. The problem of France's integrity is as unsettled as it was two years ago. It is at the last moment, after twelve months of falling intrigues, that any attempt has been made to balance the Budget. Even the reports of the experts have up to the present only seemed to afford a pretext for delay instead of for a definite solution. In a word, the Prime Minister, with the irresolution characteristic of his temperament, has never been able to bring himself to put an end to the many uncertainties of the situation. The late which the elections have just given to the new majority is to create stability, to put an end to uncertainty, and above all, to solve the perpetual problem of reparations.

The new Government will have the good fortune of making the experts' plan ready to hand. The difference between the new and the old Cabinet is the spirit in which the plan will be applied. To subordinate the question of reparations to positive results, to regard the financial and moral support of England and the United States as a necessary instrument of success than military occupation, and to commercialise at the earliest possible moment the Inter-Allied debt, will be its leading ideas. Clearly the success of this method and its continuation greatly depends upon England. The elections should have convinced English opinion that France repudiates all idea of

imperialism. On the other hand, it is necessary that France should feel secure that England as well as herself is determined that Reparations should be paid to the full extent that the experts have believed possible. On the basis of this mutual confidence, the Ministry of the Left will be able to treat the problem of Reparations on purely economic grounds. It will be sufficient for it to be assured that in case of refusal Germany will find herself faced with a united Franco-British policy. But there must be no misunderstanding. The Ministry of the Left will be as concerned to carry out a practical Reparations scheme as will be to show that it is reasonable in its methods and its aims. The outgoing Government has often seemed to take more pleasure in talking about Reparations than in obtaining them. The new majority will take the opposite line. Its prestige is at stake on this issue, and its whole preoccupation on this question, as on others, will be to secure positive results.

Further, it will be compelled by urgent necessity to straighten out the financial situation. Doubts have been expressed about the policy of a Government of the Left on financial questions. Undoubtedly it will be strongly pressed to embark upon certain kinds of social expenditure, but we can be certain that it will shield itself at least as determined as its predecessor, if not more so, to rehabilitate French finance. On monetary policy it will certainly be opposed to inflation. The rise of prices supplied to the recently elected members one of their most powerful electoral arguments. They will shun like a plague any action which might still further increase it. To the exchanges, the Chamber will be disposed to stabilise the franc rather than to raise its value. At the present moment, even in official circles, the number of supporters of stabilisation is much greater than is commonly supposed. The advocates of a return of the franc to par are often actuated by the desire to resist inflationist tendencies rather than by the conviction that the return to par is possible. Moreover, most of the economists and financiers in the new Chamber have already pronounced against attempt to return to par. Their influence will be thrown into the scale on the side of stabilisation.

There remains the question of Budget equilibrium. The new Chamber is in danger of being tempted to increase social expenditure, on the other side it will be much easier for it than for the old Chamber to reduce military expenditure and even expenditure on the devastated regions—since the deputies for these regions are for the most part in Opposition and not in the Majority. As to the receipts of the Budget, it will naturally seek to raise revenue by other ways than the Bloc Nationale would have done. The place of whittling away the income-tax, which the late Government desired to do, it will enforce it and strengthen its administration. It will retain State monopolies instead of handing them out to private enterprise. Some of its members will demand a capital levy, but it is very unlikely that the Government will attempt this. Under present circumstances, the two or three milliards of taxation which may be raised will be more readily secured by direct taxation or by securing definite contributions from Germany, than by the dangerous expedient of a capital levy. In the new Chamber will find its principal task—a matter of urgent necessity—in the restoration of international confidence in both the financial and political policy of France. Statesmen like MM. Heriot, Painlevé, Briand have the sagacity to perceive the conditions needed to restore this confidence. Let us hope that they will have the energy necessary to realise it.

This statement may be supplemented by the view of an observer representing a similar political position in German politics. He writes as follows:—

“Whether the result of the French Elections is to a realisation by the French people of the state of foreign affairs, or whether it is merely the result of a revolt against their Government on home issues, clearly setting the stage for a reasonable solution of the Reparation problem. The policy of President Millerand in many respects was the policy of ‘big business’ as represented by the Comité des Forges, has certainly received a rebuff. So has the policy of M. Poincaré, was at the bottom a purely political policy, quite unable to use big interests, but not desiring to be dominated by them. It was the greatest obstacle to a reasonable settlement not merely because of M. Poincaré’s obstinate

adherence to the retention of the Ruhr as ‘political collateral’ until other equivalent collaterals were forthcoming, though he must have known that this retention cut the ground from under all financial proposals for substituting really valuable pledges; but also because it provided German Nationalists with the best argument against an acceptance of any far-going Reparation proposal. ‘France,’ they said, ‘is out for the destruction of Germany. She does not want Reparation payments. She uses her claims merely to get the sympathy of the world in general and some cash besides. She will never accept such terms as can be fulfilled, for she always wants to be in a position to use the non-fulfilment of agreed terms as a proof of Germany’s bad faith and as a pretext for a lengthened occupation or a new encroachment of German sovereignty.’ This reasoning, by no means quite unfounded, has had a good deal of weight with successive German Governments, and prevented them from making clear-cut far-going proposals. It has been used as the strongest argument against Germany’s accepting the Dawes Report.

“There is hope that for the time being, at least, this line of reasoning has become obsolete, and that a Government may be formed in France willing to achieve French security by a settlement producing goodwill, and no longer by a policy of seeking peace and permanent national safety in the systematic propagation of unrest. Given such a Government in France, it is up to the German people and its Government to do their part in the policy of reconstruction. Is that possible after the German Elections?”

“The Coalition Government in power in Germany was a minority Government, consisting of the Centre party, the People’s party, and the Democrats. They appealed to the country on no clear issue, as far as home affairs were concerned, but they had one plank in their election programme on which no misunderstanding was possible. They stood for the acceptance of the Dawes Report. On that issue they had a huge majority in the old house, for as the Socialists were for its acceptance, the Nationalists and their stray allies—including even the Communists—could scarcely have numbered one hundred members among 459. A two-thirds majority necessary for certain fundamental changes in legislation could easily be secured.

“The new house will consist of 471 members. The Government can count on 137 seats, the Socialists on 100. This would give them a clear majority of just three votes. The Nationalistic opposition, consisting of the German National party (96), the German Freedom party (32), and several small groups they can rely on, may have about 150 seats, to which perhaps some Bavarian votes may be added. If the Communists, who got 62 votes, were willing to go in for constructive policies, instead of waiting and preparing for world revolution, there would be an anti-Nationalist majority of over 300 against 150-160 in the House. Now, it might be feasible that the Communists would support the Government in an anti-militaristic policy; it is, however, out of question at present that they would systematically support such Government legislation as must be passed by a two-thirds majority.

“On the other hand, even before the result of the French elections was known, the Nationalists have been trying to veer round, and have announced their willingness to discuss the Dawes Report in a reasonable frame of mind, and even to accept it, with certain reservations, provided they got a chance of forming a Government. They say they are the victors, and insist that to the victor the spoils must go. They do not longer deny parliamentarism; they wish to profit by it. They dreamt of a bourgeois coalition which they would lead. But even if the present Government parties were all willing to enter it (which is very doubtful) they would not get a clear majority without their satellites. And they would certainly embroil themselves with the Freedom party, who are rather nationalistic Bolsheviks than Conservatives.

“So the parliamentary situation is very involved indeed, the more so as nobody knows what the small groups really mean to do. But it is by no means critical as far as the Reparation settlement is concerned, if it is handled firmly. Two-thirds of the Reichstag are willing to accept a settlement; if the moderate wing of the Nationalists were included the percentage is even higher. Notwithstanding the effect of the many humiliations Germany has had to

go through, and the influence of inflation, Nationalism has by no means become the dominant factor in German politics. If it had not been for Communism, the situation would be quite easy. As it is, there are very great parliamentary troubles ahead for the German Government. But if France is really willing to settle the Reparation problems on a reasonable basis, the necessary majority will be found in Germany, whether in this Parliament or in a new Parliament or by way of a referendum.”

If these two views succeed in France and Germany, the future is bright with hope. But time is short. The present M.I.C.U.M. agreements expire on June 15th, and have only been carried on since April by very exceptional measures. Rhineland industry cannot go on paying Reparations without getting something back from Berlin; but the German Government cannot pay without breaking the Rentenmark and upsetting the basis of the Dawes report. It is urgently necessary that some temporary arrangement should be made to tide over these difficulties for the first few weeks after the new French Government comes into power, and give time for the necessary negotiations for bringing the Dawes Report into effect.

THE NEW MINERS' WAGE AGREEMENT.

In the report of Lord Buckmaster's Court of Inquiry, appointed to investigate the wage position in the mining industry, and the points in dispute between the coal owners and the miners, when the negotiations were interrupted on March 28th last, it was suggested that “the resumption of negotiations between the parties with a view to a modification of the terms of the agreement of 1921 appears to offer an immediate and practical means of effecting a new wages agreement.” This opinion was probably based on the narrowness of the differences between the coal owners and the miners when the Miners' Federation submitted the issue to a ballot vote of the industry. At that time there was disagreement only on two or three fundamental points, but even in regard to those points the differences were comparatively small. They were chiefly these: The owners were prepared to increase the minimum wage from 20 per cent. on the standard to 32½ per cent. on the standard, but the workmen demanded a minimum of 35 per cent.; the owners were willing to reduce their standard profits from 17 per cent. to 15 per cent. on the standard wage, but the workmen asked them to be satisfied with a standard profit of only 14 per cent.; while in regard to the distribution of the surplus remaining after the deduction of standard wages, costs other than standard wages, and standard profits, the owners were agreeable to a 13 per cent. share to capital, and 87 per cent. share to labour, as against the workmen's claim that labour should receive 88 per cent., and capital only 12 per cent.

At the Court of Inquiry the workmen's representatives abandoned their provisional offers of March 28th, and submitted a demand for a wage equal in purchasing power to that of 1914, plus the 2s per shift flat rate conceded by Justice Sankey, in 1919. When the negotiations were resumed the Miners' Federation practically adhered to the claims for which they had fought ineffectively before the Court of Inquiry, but they ultimately came to grips with the problem on the basis of the terms which were offered before they took the ballot vote of their members, and on Thursday afternoon they entered into a provisional agreement with the owners to cover another period of two years.

Under the new agreement nearly all the advantages rest with the workmen. Their minimum wage is increased from 20 per cent. to 33½ per cent. on the standard wages, they concede a standard profit of 15 per cent., compared with 17 per cent. of the standard wage under the old agreement, and will take 88 per cent. of the surplus and the owners 12 per cent., as against 83 per cent. and 17 per cent. respectively. The new agreement also improves the position of the lowest paid day wage workmen. It was the position of these men that supplied the chief driving force to the agitation that ended in the termination of the agreement of 1921. It is now provided that

in no district shall the wages of any adult able-bodied day wage workman fall below a figure of 40 per cent. above the standard wages of the lowest-paid class of day wage workmen in the district, and in addition the amounts of the existing maximum subsistence wages and allowances are to be increased by one-eighth. Moreover, certain disabling conditions governing the payment of these subsistence wages have been removed.

The only important gain to the coal owners is an increased security against the loss of deficiencies in standard profits due to the payment of the minimum wage when the proceeds were not large enough to allow of the payment of that wage and of the retention by the owners of the whole of their standard profits. Under the old agreement, the owners could not recover these deficiencies when the proceeds under any periodical audit were equal, or in excess of, the amount required to pay the standard wages, costs other than standard wages, and the standard profits. The right of the owners to be recouped in respect of these deficiencies is now fully conceded by the workmen. The recovery of the total deficiency from the surplus of one audit, however, might have the effect of preventing the workmen benefiting immediately from an improvement in trade and the consequent increase in the proceeds of the industry. To meet the workmen on this point, the owners have agreed to take only one-third of the surplus proceeds for recoupment purposes, and to the distribution of the remaining two-thirds in the proportion of 88 per cent. to labour and 12 per cent. to capital.

While the agreement has thus settled the wage question, it not only fails to solve the economic difficulties of the industry, but is likely to accentuate them under the prevailing conditions of trade. Its incidence will be very unequal. In those coalfields where the general wage rate today is considerably above the minimum, the wage concessions to the workmen will have no immediate appreciable effect. The higher minimum in those districts will only affect the cost of production and the competitive power of the coal owners when the present favourable trade conditions will have disappeared. In South Wales, North Wales, Lancashire, and in some of the smaller coalfields, the agreement will involve an immediate increase in the cost of labour. No coalfield will probably suffer more in this respect than that of North Wales. The audit in that coalfield in January and February certified a general wage rate actually below that of the minimum in the old agreement. The new minimum will raise the general percentage on the 1915 standard rates in South Wales from 28 per cent. to about 33 per cent., and it is estimated that this increase will mean a difference in labour cost of at least from 1s 6d to 2s per ton. Then, again, since February prices in South Wales have fallen heavily, and the volume of trade has declined. It is thus a financial impossibility for that district as a whole to meet the cost of the agreement out of the present rate of revenue, and the only hope of a solvent position is an increase in price to the consumer, or a decrease in costs of production other than wages. The event alone will show to what extent it will be possible for the coal owners to attain these objects. Eventually the industry will doubtless adjust itself to the new conditions, but the immediate prospect is that of the curtailment of work at the most unremunerative of the collieries and increased unemployment in the coalfield. For the moment, however, the country will heave a sigh of relief at the removal of any immediate danger of a disastrous strike.

THE DIRECTION OF OVERSEAS TRADE.

April trade returns contain the usual quarterly statistics showing the countries of origin of imports and the destination of exports and re-exports, for the first six months of the current year. Total imports during the quarter, at £301.7 millions, showed an increase of 5.5 millions, as compared with the corresponding period of last year. Last year's figures, however, are those of the Kingdom, including those of the Irish Free State. 1924 figures are put on the same basis as those of 1923, deducting British exports to the Irish Free State

and adding Irish imports from other countries (estimating the March figures), the total imports for the first quarter of this year become £293 millions, an increase of less than £20 millions over last year. In the table below we show the first quarter's trade of the United Kingdom, the second column being the official figure for Great Britain and Northern Ireland for the three months of 1924, and the third column the adjusted figures, which compare faithfully with the official 1923 totals:—

	JANUARY to MARCH.		1924	
	1923.	1924.	(Adjusted).	1923.
Imports	273.6	301.7	293.0	293.0
British exports	185.4	193.3	182.7	182.7
Re-exports	28.7	39.2	36.9	36.9
Total exports	214.1	232.5	219.6	219.6
Excess of imports	59.5	69.2	73.4	73.4

Thus the apparent substantial increase shown in British exports in the quarter is entirely due to the inclusion of exports to the Irish Free State, the adjusted figure showing a small decline.

Turning to the figures of the direction of trade, we find that towards the increase in imports into this country the Continent of Europe contributed less than £4 millions:—

	JANUARY to MARCH (000's omitted).				1924			
	1914.	1922.	1923.	1924.	1914.	1922.	1923.	1924.
France	12,454	12,280	15,159	16,761	8,464	14,037	14,948	274
Italy	2,294	2,627	3,527	4,107	3,979	6,863	4,839	330
Switzerland	2,819	5,728	6,050	4,444	1,063	2,292	1,827	621
Spain	4,099	5,927	6,479	5,710	2,431	3,785	3,739	993
Portugal	811	1,581	1,437	1,775	1,498	1,815	1,968	317
Belgium	5,947	6,025	6,947	9,169	3,415	7,252	6,317	359
Germany	20,054	5,475	8,643	6,731	9,383	5,410	8,540	1,014
Czechoslovakia	1,286	1,851	2,123	2,123	208	133	328	328
Austria	1,902	361	419	556	1,108	314	236	556
Hungary	109	205	88	88	26	46	81	88
Greece	346	784	1,146	486	1,633	1,114	841	280
Romania	871	453	495	848	832	265	616	302
Turkey (European)	358	225	346	394	807	725	541	787
Russia	6,748	543	900	2,263	3,371	714	647	309
Sweden	2,430	3,328	3,892	3,959	1,804	2,293	3,071	222
Norway	1,868	2,644	2,991	2,203	1,718	3,364	2,299	374
Denmark	6,037	8,055	10,456	10,374	5,565	5,338	4,990	490
Netherlands	6,760	9,960	10,752	12,585	1,840	12,190	10,316	339
Finland	879	1,305	1,469	247	753	753	753	397
Total	75,818	68,278	82,002	85,945	44,261	66,079	65,077	746

There are no very striking changes in this table on the import side in comparison with 1923. Eleven out of 19 countries show small increases in the value of goods sent to us, the most prominent being Russia, our imports from that country being valued at £2,263,300, as against £899,700 in the first quarter of 1923. Imports from Germany show a decline of nearly £2 millions, but those from Belgium have risen by nearly £2,200,000. Our imports from Scandinavia show very little change, but Holland has sent us nearly £2 millions' worth more.

Our exports to the Continent have dwindled in value by a million and a half, although there is a small increase in the case of a dozen countries. Exports to France have dropped by over £2½ millions, to Spain by nearly a million, and to Holland by a million and a half. It will be observed that while exports to Europe are 43 per cent. higher than in 1914, imports from Europe have increased by only 13 per cent.

In the next table we show imports from and exports to other foreign countries:—

	JANUARY to MARCH (000's omitted).				1924			
	1914.	1922.	1923.	1924.	1914.	1922.	1923.	1924.
United States	43,443	53,967	59,458	64,788	10,261	13,248	16,242	63
Cuba	960	2,806	1,469	2,713	488	276	577	62
Mexico	438	2,220	1,055	1,175	278	540	577	62
Argentina	8,337	13,743	18,596	17,836	5,209	6,079	7,310	49
Brazil	3,016	3,291	1,865	2,478	2,164	2,226	3,020	29
Chile	1,095	816	1,446	2,097	1,404	1,294	1,955	72
Peru	676	1,609	1,594	1,356	402	366	712	72
Uruguay	477	838	1,491	1,950	592	704	739	62
Japan	1,062	1,394	2,189	1,718	2,650	794	5,941	136
China	567	1,681	3,710	3,043	4,944	6,908	4,294	34
Turkey (Asia)	1,007	97	295	350	1,331	25	105	33
Egypt	7,428	11,107	12,475	2,582	2,582	3,811	3,811	29
Other countries	2,861	5,839	7,744	10,096	6,729	4,714	4,575	106
Total	71,757	88,911	111,949	122,735	39,038	44,385	49,284	350

Our imports from the United States show an increase of over £5 millions, while British exports to that country

have declined by £2 millions. Re-exports to America are nearly a million lower, and the visible adverse balance has therefore increased from £34.8 millions in the first quarter of 1923 to £43 millions. Other important increases on the import side are shown by Cuba and Egypt, and from each of the South American countries enumerated we have imported more. Our takings from both Japan and China have declined, but our exports to these two countries show some expansion, the increase of over £2 millions in the case of Japan being accounted for by imports of materials for reconstruction. Our exports to South America are on a lower scale than they were a year ago.

Our next table shows trade in the Dominions, including the Irish Free State:—

	JANUARY to MARCH (000's omitted).				1924			
	1914.	1922.	1923.	1924.	1914.	1922.	1923.	1924.
Canada	4,854	8,903	9,765	10,877	4,964	5,973	6,658	6,544
Australia	12,405	15,013	19,123	14,701	9,384	15,510	15,561	14,194
New Zealand	6,745	12,002	11,580	13,981	2,373	3,978	5,350	4,683
India and Ceylon	12,368	14,739	21,534	22,260	20,015	26,185	24,398	23,531
South Africa	4,278	5,953	4,525	6,209	5,785	6,942	6,510	7,914
Egypt	1,708	9,494	3,501	2,937	3,963	2,959	2,099	2,099
West Africa	3,986	1,953	2,358	2,602	1,343	2,043	1,768	1,935
Straits Settlements	500	621	920	976	602	733	626	611
West Indies	1,197	1,197	1,197	1,197	1,197	1,197	1,197	1,197
Irish Free State	2,575	5,060	6,321	7,273	3,754	7,222	6,973	7,704
Other possessions	49,420	76,521	79,627	93,013	50,288	75,619	71,008	80,217
Total	101,414	141,414	141,414	141,414	101,414	141,414	141,414	141,414

The increase in the totals is, of course, accounted for by the inclusion of the Irish figures. The Australian totals are noteworthy, our imports from Australia showing a sharp decline. Imports from the other large Dominions show some expansion, South Africa being prominent with an increase of £1½ millions. The same country took slightly more from us than at this time last year, but in other directions our exports to the Dominions are lower.

The final table gives re-exports to the principal countries:—

	RE-EXPORTS—JANUARY to MARCH.							
	1914.	1918.	1919.	1920.	1921.	1922.	1923.	1924.
France	3,155	4,336	6,679	15,982	2,359	5,409	5,153	5,313
Italy	269	1,048	1,065	1,863	461	430	438	724
Belgium	2,410	2	1,285	6,611	1,773	2,931	2,468	3,041
Germany	5,669	9	399	5,450	5,747	4,708	4,061	9,370
Russia	2,580	73	1,489	1,489	14	123	159	677
Sweden	195	5	269	1,194	406	276	368	397
Norway	150	29	207	335	167	800	149	158
Denmark	128	5	738	1,119	265	251	776	349
Netherlands	1,330	237	3,118	4,097	2,057	1,959	1,254	2,095
United States	8,642	1,322	2,340	24,916	6,115	6,382	8,357	7,497
Japan	53	239	307	706	236	118	70	60
Other countries	1,871	494	820	4,350	3,764	2,081	2,259	2,866
Total to foreign countries	26,052	7,886	17,300	69,041	23,364	24,872	25,112	32,347
British possessions	3,310	1,236	1,329	6,059	3,481	3,914	3,595	6,896
Total	29,362	9,122	18,629	75,100	26,845	28,786	28,707	39,243

The feature of this table is the increase in re-exports to Germany from £4.1 to £9.4 millions. An examination of the March returns shows that towards this increase of £5.3 millions, coffee accounted for £227,000, cotton for £326,000, wool for £1,631,000, and hides and leather for £170,000. Re-exports to the Dominions include, for the first time, re-exports to the Irish Free State amounting to £3,207,000. The total for Australia is £1,335,300, and for Canada £657,100, these comparing with £919,900 and £809,800 a year ago respectively.

THE SECURITY OF A LLOYD'S POLICY.—II.

We described in outline last week the elaborate system of safeguards and securities which protect the credit of a Lloyd's underwriter and the interests of his assured. To anyone reading that description, the question may well have occurred: "If the safeguards are so elaborate and the underwriter's solvency is so hedged about with deposits and guarantees and audits, how do you account for the scandal of a failed underwriter which has been notorious in banking circles for the last six months, and only ten days ago came before a court of law?" That is a perfectly fair question to which there is a short and simple answer—fraud. By the fraud and folly of an

underwriting member the defences set up by the committee were dodged, and the members of an underwriting syndicate were brought to insolvency.

Some years ago a man of the name of Harrison, who had been employed at Lloyd's in a not very exalted capacity, was able to pass the tests for membership and induce four men to join a syndicate for which he was to underwrite. From no point of view was he a good underwriter, and there can never have been a prospect of his making much money for his names. But if he had been a reasonably modest or reasonably honest man, there was no reason why he should not have had the moderate degree of success to which his abilities were suited. Unfortunately, Harrison was neither modest nor honest. Carried away by a post-war optimism, he conceived (wrongly) that he had a genius for finance and business, and he surmised (correctly) that if he restricted himself to the ordinary procedure of underwriting the scope of his genius would be confined and hampered by an unsympathetic committee. So he started the simple but ingenious plan of keeping two sets of books, one for his legitimate, if unskilful, underwriting of ordinary risks, and another for the more spectacular risks out of which he proposed to make his own and his names' fortunes. Those risks were the guaranteeing of bills, bills which arose out of the motor trade and the purchase of cars on a system of easy payments borrowed from the ex-poriums of the Tottenham Court-road. Tom, Dick, or Harry bought a car that he could not afford, and had it delivered to him in England or Africa or wherever he happened to live, against a promise to pay; and that promise Harrison, without knowledge, experience, or organisation, guaranteed to make good. It seemed an excellent plan for the purchasers, who got cars without paying ready money for them; for the motor salesmen, who found their work made easy; for the discounters of the bills, who had the security of a Lloyd's policy; but for Harrison and his names it was madness and folly.

This was the business that Harrison recorded in a separate set of books, which were concealed from his accountants and never came within the purview of the audit. At best credit insurance and insurance connected with deferred payments is a difficult thing to run successfully, and from what can be gathered of Harrison's temperament, it is difficult to believe that anyone less suited to it ever lived. But for some time, by the help of his system of double book-keeping, and by exercising a certain economy of truth, he kept his head above water, until in March of last year he seems to have realised that some desperate steps would have to be taken if he was to avoid the unpleasant experience of laying the facts before the committee, who would, he knew, force him to give up underwriting. Unhappily, instead of going to the committee, he went for advice to an outsider, with whom he devised an easy way of raising the wind. Why not get accommodation bills accepted by a few of those gentlemen whose name is always at your disposal for a consideration, guarantee the bills with a policy signed by his own syndicate, discount them on the strength of the policy, and make use of the proceeds? That was the scheme that Harrison adopted, and for six months it appears to have worked and kept him in funds. All sorts of bills were put out with Harrison's certificate attached to them; all sorts of interest rates were charged by discounters, and an appalling liability was built up like a snowball, with no chance of its ever being met out of the syndicate's funds. Beyond a six months' respite, it is not clear what good Harrison could get from the scheme, for catastrophe was certain; and in October it came. The position could no longer be concealed, and the Committee of Lloyd's realised that by the treachery of a member who had signed and issued policies that he knew must every one bring a total loss to his syndicate, the credit of Lloyd's had been deliberately, and on a great scale, abused. So they had to grapple with the effects of a scheme that had been begotten in sin and conceived in iniquity, and had ended in a first-class scandal.

In view of these facts one cannot avoid making comparisons between the careers of Harrison and of men whose recklessness has ruined insurance companies in the past. The cause of disaster in both cases the same

—abuse of trust and power. But between the crash of the insurance company and the crash of the underwriter there is one all-important distinction, for whereas the creditors of the company are left to whistle for their money and content themselves with such dividends as might be paid out of the company's depleted resources, the underwriters' creditors had an enormous advantage in the anxiety of Lloyd's Committee and Lloyd's members to protect the good name of a Lloyd's policy.

On an examination of the accounts it was decided to treat the claims arising on Harrison's policy in different ways. On the normal business, the business which had been revealed in the audit, and which was covered by the securities and assets, all claims should be paid in full, and they are in fact being settled as they come along exactly as though no trouble had occurred. On the bill claims some discrimination was necessary, for while it was obviously desirable that bona-fide holders of the bills should be paid, it was equally desirable that people who had benefited, or had hoped to benefit, from what they knew or suspected to be a conspiracy, should not benefit. The first step to be taken was the provision of funds, which were obtained partly by a contribution of a very large sum (about £100,000) from the resources of the Corporation itself, and partly by a still larger contribution from individual members of Lloyd's, who had no liability on Harrison's policies, but agreed to contribute for the sake of the credit of the society. From these two sources about a quarter of a million sterling was obtained and devoted to the payment of Harrison's guarantee policies. Settlement was in the discretion of the committee, and to all bona-fide holders an offer was made of the full sum advanced without interest. In this way every bona-fide policyholder had an opportunity of receiving the whole of hisbursements, and only those who rejected the offer had lost anything of what they originally laid out. The recent action against the Corporation of Lloyd's was brought by a company whose director had floated the accommodation bills with Harrison, and now claimed that the Corporation, through the committee, had accepted liability on the policies. The action failed on the ground that it was not an honest claim, but had originated in fraud.

The net result of this deplorable affair is that after an orgy of reckless underwriting and fraudulent business on the part of one member, recklessness and fraud that no reasonable man could have anticipated or suspected, the holders of Lloyd's policies have been paid by the voluntary action of the remaining members about a quarter of a million of money, for which the members had no liability, and for which they received no consideration. It would be difficult, in fact impossible, to find any other case of the members of a society taking upon themselves a burden of this kind simply because they valued the good name of the society to which they belong, and it is only right that in the face of much misunderstanding the action of the members of Lloyd's should be understood and appreciated. Given a clear understanding and appreciation of what has happened, Lloyd's as a society should stand higher to-day than ever before. There is no general corporate liability, and, but for an unfortunately worded pamphlet, on which the recent case against the Corporation was based, there never would have been any suggestion of a specific corporate liability; but there is a strong corporate feeling, the value of which has been abundantly proved in this affair.

Have any steps been taken to prevent the recurrence of such a scandal in the future? Steps have been taken and if ever another black sheep of the Harrison type should creep into the fold he will not be able to play the Harrison tricks. Since the beginning of this year, all Lloyd's policies have been signed at a central bureau, and each of them bears an official seal they have no claim on underwriters' trust funds and securities. By this means all the premiums automatically come within the purview of the auditors, and it will never be possible again for a member to conceal from them the extent of his business. The audit itself, for other reasons, will be most difficult to evade, and if any rascal manages in years to come to find his way into underwriting membership, he will find it a matter of the greatest difficulty to abuse, as Harrison abused the general credit of the community.

THE RUBBER TRADE IN AMERICA.

(FROM A CORRESPONDENT.)

NEW YORK, May 12.

IN a contribution on this subject in the *Economist* of March 8th an attempt was made to summarise the conditions which apparently justified a more optimistic outlook for the industry. That article was written about three weeks earlier, and even before it appeared the situation here showed signs of changing in an important respect, which has since developed to proportions calling for reconsideration of the whole subject, at all events for some months to come.

Apart from the facts which seemed directly favourable for rubber, it was pointed out that the general business sentiment had changed to one of confidence, both as regards the industrial outlook and the European political situation. Domestic politics were regarded as being on an unusually settled basis, and it was anticipated that the normal uncertainties of a presidential election year were this time likely to be absent, or at least considerably modified. Unfortunately the domestic political situation has undergone a complete change, and now seems to have entered a period of bitter controversy, complicated by many cross-currents.

Of course, it would be quite out of place to speak of politics in any party sense, but it should be clearly understood that the high reputation of President Coolidge for personal integrity and wise leadership remains unchallenged. Nevertheless, skilfully directed public clamour has succeeded in forcing the resignation of two prominent members of his Cabinet, the results of which are likely to become more pronounced as the campaign proceeds. Moreover, there is much public dissatisfaction with the present Congress, and the President's own party supporters are accused of deliberately running counter to his well-known views on two important matters. They have obstructed the passing of the plan for reducing tariff (a relief to the taxpayers of some \$300,000,000 per annum), and on the other hand have insisted on passing the so-called soldiers' bonus, which, it is conservatively estimated, will involve an expenditure of at least \$3,000,000,000. Another measure now before Congress, known as the McNary-Haugen Bill, ostensibly designed to benefit the farming interests, contains provisions of a reaching and highly controversial nature which undoubtedly excite much discussion throughout the campaign.

These matters have already had marked effects on business in general and finance in particular; caution is the watchword impressed on all; hand-to-mouth buying is extended to all businesses, even to the public for necessities; no one wants to carry stocks of manufactured goods or raw materials; the Stock Exchange seeks to establish new low levels each week, and almost every branch of industry is disappointed over what was expected to have been a favourable year.

About the first business to feel the effect of any pronounced change in conditions or sentiment is motor manufacturing, which, of course, quickly extends to rubber. From recent investigations it appears that about 75 per cent. of the cars sold here are bought on the instalment plan, while a large proportion are only disposed of on condition that the dealer accepts a used car in part payment. Now, mainly as a result of the circumstances outlined above, it has been found that many buyers of last year's record car output have been unable to pay their instalments and have had to return their purchases. To add to the dealers' difficulties, they now find that, deceived by what only recently looked like a strong demand, they are over-stocked, and there has been a notable slackening in public demand. Consequently the motor manufacturers have had to curtail, instead of increasing, production, and this situation has, of course, reacted on the tyre manufacturers.

It is always difficult to obtain reliable information as to what is actually doing in rubber factories, but it is certain that many are reducing output, some are simply postponement of rubber deliveries already contracted for, while others have resold their purchases. These factors are nothing like so pronounced as they were about a year ago, but the situation will bear close watching. The important fact remains that nothing so far has occurred to make consumers question the wisdom of hand-to-mouth buying, and the consequent dullness in market transactions does more to keep prices depressed than any real change in fundamental conditions of supply and demand. It is still believed that consumption here will be on about the same basis as in 1923, and unless the Dutch production continues to increase, or consumption in the rest of the world is substantially less, it is estimated that the visible stocks will be materially depleted by the end of the year.

Two somewhat unfavourable points in the outlook should perhaps be noted. Though the winter has been an unusually open one, the spring has so far been wet and cold, and this has had an appreciable effect in reducing normal tyre consumption. Again, it was believed that the London speculative position for a rise had been almost entirely liquidated, but unfortunately subsequent events seem to show that this was too optimistic a view. It is, of course, impossible to say to what extent the "bull" position is still open, but certainly this market at all events does not at the present time appear to have the sustaining influence of any "bear" interest—quite an unusual condition here as the majority of trading is generally on the short side. That this market is "long" is shown by the fact that future positions still command a premium, which is now only maintained by the desire of those liquidating spot and nearby rubber to postpone their interest to a later date in the hope of then recouping their loss.

It has been frequently remarked that producers have never apparently appreciated the importance of marketing and distribution as a principal factor in affecting prices. Absurd methods of selling have been introduced, and it is well known in the trade that the whole system has long been in urgent need of reform in many respects. It is certainly not flattering to the intelligence of British business men to see an industry of such great potential value so conducted as to produce the minimum results for those engaged in it. It would be laughable, if the results were not so serious, to see the extent to which the value of the whole year's crop is sometimes affected by some obscure individual with an insignificant market interest, and practical experience of this affords a good indication of the manipulative power which can be exercised by the larger houses.

In this connection it might be instructive for producers, and others, to read the story disclosed in the examination in bankruptcy of a former large market operator, which appeared in the Press early in February. There were liabilities of upwards of £400,000, and a previous large failure had involved the debtor in a suspended discharge for three years because of "rash and hazardous speculation." Though this fact was well known in Mincing lane, and in spite of his having had no practical experience in the trade, he was welcomed in the market with open arms, and for about two years may be said, with little exaggeration, to have dominated prices by the boldness and magnitude of his operations, partly for outsiders' account and partly for himself. If, to the Press report, could be added a short history of his market transactions, a startling example of the manner in which the trade is permitted to be conducted would be shown.

This market was recently amused to learn that Mincing lane was disturbed over the rather superficial suggestion that a buyers' combination should be organised, under Government auspices, to protect American consumers from the powers of the wicked foreigner who grows rubber and "controls" prices. To any experienced member of the trade the idea was grotesque, to be opposed by no one so strenuously as the consumer himself! Yet the suggestion was considered sufficiently seriously in London to cause the revival of the old story of a central selling agency, in which the Dutch producers were to be asked to join. No one here gives much attention to this proposal, for it appears obvious that such an agency cannot now be expected to provide an effective method for dealing with rubber's periodical troubles. Even if furnished with very large financial facilities in order to maintain market prices during particular periods, it is regarded

as almost inevitable that such an organisation would quickly become top-heavy, and, in any event, would be a target for the rest of the world to "gun for." The trade undoubtedly needs drastic reforms, new methods, and, above all, bigger people to guide it towards greater stability and prosperity, but it is difficult to believe that these can be provided by any such combination of sellers as appears to be contemplated.

LIGHT RAILWAYS.

(BY A CORRESPONDENT.)

THE subject of light railways is again coming forward after several years' interval, and on this occasion not so much in the interests of the countryside, nor because a system of rural communications is many years overdue, but rather as a possible means of reducing unemployment. Our home experience of light railways is undeniably discouraging, and the results attained are not conducive to further expenditure in that direction. The reason for this is that a light railway as understood in this country is of standard gauge, namely, 4 feet 8½ inches, and is too costly, and has a capacity greatly in excess of requirements. Nothing exists between road transport on the one hand, and the standard gauge railway on the other.

As long ago as 1875* the Belgian Government felt the need of some form of cheaper transport than could be provided with the standard gauge railway, and an Act was passed to encourage the construction of a secondary system, but nothing was accomplished until 1881, when the Government decided that an experiment must be made from which true deductions as to the value of a secondary system might be formed, not only as a public benefit, but as a financial proposition. Success† was immediate, so much so that from the small beginnings of 1881 the secondary system had expanded by 1908 to over 4,000 kilometres, or practically the same extent of line as had been reached by the standard gauge.‡ The local benefit resulting made the county and district authorities keen advocates of the principle, and capital was forthcoming from those sources for more lines than the Government considered it expedient to construct. It was not the intention § to allow the light railways to absorb the standard gauge traffic because of their lower rates, and it was found that rates had to be raised when competition between the two became effective; to avoid this the Government disallowed the construction of many systems proposed by county and district authorities. They realised the fact that the proper function of a secondary system of light railways is to act as a feeder to standard gauge, and in no way as a competitor.

It must be apparent to any observer that a light railway capable of carrying such rolling stock as we see passing along our main lines is not essential for the limited requirements of a countryside, and the question arises what gauge would be best for the purpose. It has been ascertained that the metre gauge adopted in France and in Belgium for many local lines is unnecessary, and that a 2 feet 6 inches gauge would be equally suitable and far cheaper. A single line light railway of this gauge constructed with adequate passing places, is capable of carrying, as has been proved in practice, over 2,000 tons daily in each direction.

Two assumptions seem always to be made which would appear to preclude even the consideration of narrow gauge railways. One of these is that it is taken for granted that any railway of a gauge less than 4 feet 8½ inches must necessarily be laid on the public roadway. In Belgium the secondary system was in its original inception laid along the roads, but with the development of the area, and the consequent increase of traffic, it was found expedient frequently to withdraw from the roadway, and in many cases the site of the hedge and ditch was utilised. In

considering whether a light railway shall be of standard or narrow gauge, the question of road use only arises in that where there exists an ample margin a narrow gauge line could be laid thereon. Surely this fact should not rule out consideration, but rather invite it.

It has been asserted that at one station on the London and North-Eastern Railway over 1,000 cart-loads carrying agricultural produce enter the station yard daily at certain seasons. A county road surveyor expressed the opinion that the transfer of agricultural produce from road to rails would, over a considerable area of his charge, effect a saving of over £100 a mile yearly for maintenance costs. It can be readily seen, therefore, why the Belgian county and district authorities were so anxious for the development of the secondary system, because any such saving would amount to more than a normal interest on the capital invested in the railway.

The second argument commonly brought forward against light railways is the break of gauge; that is, where two railways effect junction, but over which waggons are not interchangeable. This is anathema to a purely transport expert, and when such a proposal is placed before a body of railway men it receives instant condemnation, but a decision on the question of the adoption or otherwise of a secondary system is not one for transport experts only, or even chiefly, but for the economist and commercial man. Sir Charles Owens, in giving evidence on behalf of the railway companies before the Royal Commission on Railways just before the war, stated that on the London and South-Western Railway it took over 100 average consignments to fill a standard waggon. That means that over 100 individual consignments have necessarily to be handled, checked, weighed and otherwise dealt with by the station staff before one 10-ton waggon receives its economic load. That, again, means that each of those individual consignments has to bear a considerable charge over and above actual transportation. The number of times this same waggon has to stop en route to pick up its 100 lots is also a factor. This is what now occurs without a break of gauge, but with the break of gauge consignments will join the many others already in the narrow gauge waggon, and when delivery is made to the standard gauge for the long haul, the 100 lots are consigned in one lot as one waggon load, and the rate will be lessened considerably. As things now are with through-running vehicles, each farmer consigns individually, but with the break of gauge co-operation in receipt and dispatch will be almost automatic.

An argument used against this is that it is unreasonable to assume that farmers in any given area will consign to one and the same destination. It is true that as things now stand they may not do so, but with the assistance of the light railway organisation, which would be in touch with markets all over the country, and with the help of the local Farmers' Union, together with the incentive of a considerable reduction in rates, every inducement will be given to dispatch produce to a common destination. Under any circumstances, the system must be an improvement on that outlined by Sir Charles Owens, whose 100 lots are picked up all along the railway consigned to widely divergent destinations, and hailing from various areas incapable of combining into any system of co-operation.

Another consideration is that it is more economic for a railway company to run fully loaded waggons a long distance than partially loaded waggons which have to pick up their load en route, as was shown in the case, *Mansion House Association v. L. and S.W.R.*, and it might be found that a small consignment costs more for part of the distance than a larger lot for the whole journey. Hence the much-criticised low rates charged on foreign produce running from port to destination in full truck loads. The same low rates must by law be granted to farmers were they in a position to consign in a similar manner. This the break of gauge would effect. In fact, it would appear, after careful consideration, that in the secondary system lies the germ of real agricultural co-operation. It was found in Belgium that increased prosperity in the country districts through the improved transport added considerably to the direct taxation returns, and that ultimately the return derived from the light railway receipts was but a fraction of the real financial increment.

INDIAN GOLD MINING RESULTS.

(BY OUR MINING CORRESPONDENT.)

As a whole, the outcome of operations last year on the part of the British-owned group of gold-mining companies at Kolar was satisfactory to the shareholders, although in one or two cases it is necessary to look below the surface in order to grasp the true inwardness of the figures. The Champion Reef disappointed those who had been expecting its re-entry into the dividend list; but of the four others, three improved upon their 1922 dividends, while with the remaining company the rate remained at the reduced level of 1922. Features—more or less general—on the working side are the extended or exclusive use of electrical power, and the endeavour to effect economies in costs; on the financial side, the addition to interests already held in other fields by some of the companies. The Mysore now owns 20,000 shares in the Anglo-Canadian Explorers, a company testing properties in Ontario and elsewhere; it has also some shares in the Indian Mines Development Syndicate, which is prospecting in Burmah, and in a syndicate operating in Sumatra. The Nundydroog holds 45,000 shares and £75,000 bonds (entered in the balance-sheet at a total of £30,000) in the Indian and General Mining Trust, and is also interested in the Anglo-Canadian Explorers. The Ooregum owns 20,000 shares in the last-named undertaking, also a participation in the Indian Mines and other undertakings, and a prospecting licence over an extensive copper area in the State of Kharsawan, India.

The desirability of looking ahead is indicated by the fact that the gold output of the Kolar field is decreasing, albeit very gradually. This is shown by the following statistics for recent periods:—

	Ozs.		Ozs.
1920	442,470	1922	387,500
1921	390,850	1923	382,000
First quarter, 1923			Ozs.
" " 1924			96,560
			95,290

Last year's entire output was sold in India, the price, although lower than in 1922, being above that ruling elsewhere.

The following tabulation contrasts the salient features of the results of the past three years:—

	1921.	1922.	1923.
BALAGHAT.			
Tons of ore milled.....	38,750	42,550	45,550
Mill yield per ton.....dwts	12	11½	14½
Working profit.....£	36,530	36,340	43,570
Dividends	20,280	18,920	24,380
Rate per (ordinary) share	1/3	1/	1/6
Carried forward*.....£	4,820	4,160	5,860
Ore reserve tonnage	80,290	116,140	115,606
CHAMPION REEF.			
Tons of ore milled.....	..	142,240	113,640
Mill yield per ton.....dwts	..	6½	6½
Working profit.....£	..	10,050	137,420
Carried forward	..	10,660	121,290
Ore reserve tonnage	..	209,040	222,640
MYSOORE.			
Tons of ore milled.....	202,290	218,080	197,140
Mill yield per ton.....dwts	8½	6½	10½
Working profit.....£	207,800	186,720	197,900
Dividends	152,500	122,000	137,250
Rate per share	2/6	2/	2/3
Carried forward*.....£	17,340	17,030	15,930
Ore reserve tonnage	837,000	712,000	643,530
NUNDYDROOG.			
Tons of ore milled.....	105,680	115,090	125,290
Mill yield per ton.....dwts	10½	9½	9½
Working profit.....£	105,420	68,320	81,190
Dividends	42,400	28,300	35,380
Rate per share	1/6	1/	1/3
Carried forward*.....£	16,720	8,850	7,770
Ore reserve tonnage	175,200	191,300	208,400
OOREGUM.			
Tons of ore milled.....	154,000	155,000	168,500
Mill yield per ton.....dwts	11½	11½	11½
Working profit.....£	246,400	205,080	270,080
Dividends	93,170	84,150	84,150
Rate per (ordinary) share	2/3	2/	2/
Carried forward*.....£	17,180	16,340	16,760
Ore reserve tonnage	419,240	420,770	397,840

* Subject to corporation profits tax and directors' percentage. † Loss.

No explanation is given of the sharp advance in the average yield secured by the Balaghat company. A similar feature, by the way, occurs in the Mysore statistics. Development having failed to result in any discovery of importance, a programme has been drawn up for the exploration of the northern section of the mine "below

where valuable shoots of ore were previously worked at the shallower levels." Meantime, the output is to be slightly restricted. A marked improvement is reported in the Champion Reef mine, and a further small increase is to be made in the capacity of the treatment plant. The financial position is strong, but the company has considerable capital expenditure still to face. It was reconstructed, of course, in 1921, since when the financial year has been brought into line with that of the other companies of the group.

Progressive decrease continues in the Mysore ore reserves. No fresh ore shoot was opened up last year, but encouragement is derived from the conditions at some of the deepest points, and from the fact that in the adjoining Champion Reef mine good ore has been found at a depth of 1,000 feet below the bottom level of the Mysore. The net liquid assets on December 31st exceeded £500,000. As regards the Nundydroog, the features are the substantial reduction (4s 5d per ton) effected in the working costs (to 33s), and a small increase in the ore reserves. The former feature is mainly the fruit of the important alterations effected in the treatment works, and the entire elimination of steam power. In the position of the Ooregum, an important factor is the policy followed for several years past of somewhat forcing the output for the purpose of providing for capital expenditure. Hence the disparity between earnings and distributions. Last year's special appropriations totalled £135,000, as against £75,000 in 1922. The programme being within measurable distance of completion, the production will be gradually brought back "to a scale consistent with the present-day reduced capital costs."

Appended is a comparison of market prices a year ago and now, and the return to the investor on the basis of the 1923 dividends:—

	Price of 10s Share.		
	May, 1923.	May, 1924.	Yield per Cent.
Balsghat Pref.	13/-	12/-	20½
Do Ordinary	8/-	6/6	23
Mysore	10/-	12/6	18
Nundydroog	8/6	8/6	14½
Ooregum Pref.	20/-	22/-	13½
Do Ordinary	13/-	14/-	14½

The exceptionally high yield afforded by the shares of the Mysore Company does not appear to be accounted for by any exceptional degree of risk.

Notes of the Week.

The Government's Housing Policy.—In matters of housing policy the Government has, to borrow a metaphor from the knitting needle, dropped one and made one stitch this week. The dropped stitch was the killing in Committee of Mr Gardner's Rent Restriction Bill, to which the attitude of the Government had been one of irresponsible but benevolent neutrality. The new stitch is made by the declaration from Mr Wheatley of the general lines of his housing subsidy proposals. The financial aspect of the proposals is summarised in the following statement (*Hansard*, May 14th, p. 1384):—

- (i.) The Government will propose a subsidy of £9 a house for 40 years for houses to be provided for letting, on the understanding that local authorities will be prepared to provide a further subsidy of £4 10s a house for 40 years.
- (ii.) The aim of the present scheme is to secure rents in each locality equivalent to the rents now prevailing there for working-class houses built before the war.
- (iii.) Until these rents can be reached local authorities will charge such rents as will be remunerative after allowance has been made for the total subsidies of £13 10s a year for 40 years mentioned in (i.).
- (iv.) If in any district the rents to be aimed at, as described in (ii.), can be secured for a smaller total subsidy than £13 10s for 40 years, the local authority's contribution shall be reduced accordingly until wiped out.

Mr Wheatley propounds a 15-year programme to build 2,500,000 houses. Should this aim be achieved, the burden on the taxpayer will mount up apparently to £22½ millions and the ratepayers' burden to £11½ millions per annum, at which levels they will remain over a long period of years. A proposal of this magnitude is obviously one that must be examined very thoroughly; for it is of the

utmost importance that the State should not be committed to another great and costly blunder in the matter of housing. At the first glance it appears entirely undesirable to commit the country to a 15-years' programme, entailing burdens that will not cease for 55 years, that is, until the last of the houses under the 15-years' programme has run through its period of 40 years of subsidy. While the proposals are disconcerting in their financial aspect, they appear to hold out no hope that they will cause more houses to be built than will be built under existing arrangements. Their effect would be simply to subsidise rents for new houses, which will in any case be built, and from this point of view they are open to serious economic objection. Mr Wheatley's plan appears to us also to have this grave disadvantage, that for the whole period of the subsidy the building trade is to be maintained as a sheltered industry. His proposals, if carried into effect, would indirectly subsidise an unsatisfactory output, whereas the crux of the problem lies in obtaining both from employers and employed in the building trade full value for money spent. The whole housing problem is so intricate that Mr Wheatley's outline and the Government Bill to be based upon them will call for long and careful consideration. But we cannot say that first impressions of Mr Wheatley's statement are reassuring.

The Motor Duties Debate.—We devoted so much space last week to the presentation of what in our opinion is an overwhelming case for the removal of the import duties on motor-cars, that we do not propose to follow in any detail the debate in the House of Commons on Tuesday which preceded the rejection of Mr Baldwin's condemnatory motion by a majority of 65. One feature of the discussion was Mr Snowden's exposure of the "colossal humbug" of the raging propaganda of some of the manufacturers, whose plaint the Conservative Party espoused, and his refusal to bend before the storm. Another was the mildness of Mr Baldwin's indictment, and his objection to allowing his motion to be described as a vote of censure. The Government emerged with flying colours from an ordeal which had been advertised as a great embarrassment. Only a mere handful of Liberals failed to support the Government in their determination to redeem the Free Trade pledge given to the electorate in December. So there will expire, on August 1st, a series of duties never intended for peace time, which would certainly never have been imposed by the Parliament of 1915 had they been proposed with a protectionist purpose. Mr Baldwin attempted to lift the discussion out of the sphere of the Free Trade versus Protection controversy, and Mr Snowden's pertinent question, "Have the Party opposite abandoned the idea of a general tariff?" received no answer in the House. Mr Snowden may, however, read his answer in a letter by Mr Amery in the *Times* on Thursday. This gentleman, at any rate, has not allowed his enthusiasm for Protection to be damped by the last General Election. In pleading for the revival of the policy and spirit of the late Mr Joseph Chamberlain, he amiably refers to Free Trade as "this detestable and ridiculous superstition"—a phrase which may be filed for future reference. Mr Snowden's Budget he finds to be marked by "pedantic vindictiveness and incredible folly," while Free Traders, in his judgment, are "wholly outside any possible mandate they may have received," when they work on Free Trade lines. Mr Amery is an ex-Minister, and in the inner counsels of his Party. He has, moreover, this week been delivering speeches backing and defending Mr Baldwin's leadership of that Party. In view of these facts, Free Traders must, in the absence of a repudiation of Mr Amery by Mr Baldwin, work on the assumption that in the matter of tariffs the Conservative Party are not even yet content to bow to the oft-repeated verdict of the country.

The Roumanian Royal Visit.—On Monday last the King and Queen of Roumania came to London on their first official visit to this country. Their arrival was the occasion of one of those popular demonstrations compounded of cordiality and curiosity which are so dear to the heart of the Londoner, while their reception in the City on the

following day was no less enthusiastic. Memories of Roumania's participation in the Great War, and of the agony of her people under the systematic exploitation of the German occupation, combined with the fact that Queen Marie is herself an Englishwoman to ensure a cordial reception. Of greater significance, however, is the fact that the Royal visit has brought once more into prominence the importance of the Black Sea and the Near East. Modern Roumania is a country nearly as large as the British Isles, with a population of over seventeen millions. Her situation at the mouth of the Danube, together with her proximity to Soviet Russia, gives her a geographical position of the greatest political importance. A member of the Little Entente, Roumania has not imitated her Czechoslovak ally by concluding an alliance with France, despite the overtures which have recently been renewed by that country. Indeed, only a few months ago the bait of a loan of 100 million francs held out by Paris was definitely declined at Bucarest. Now that Yugoslavia has concluded an alliance with Italy, Roumania remains the only State of the Little Entente with no definite political commitments to a Great Power, while negotiations recently carried on at Vienna with Soviet representatives broke down completely over the question of Bessarabia. Modern Roumania, however, is a "satiated State," and the prime need is for an economic policy which will enable the vast natural resources of the country to be properly exploited. It is from this angle that the recent royal visit to London should be regarded, for although it is understood that there have been no definite proposals on either side, whether of an economic or of a political character, Great Britain cannot but be interested in a country of great potentialities, where the need of the moment is above all things the co-operation of foreign capital. This aspect was stressed by King Ferdinand in his speech at the Guildhall, on Tuesday—

We are fully aware of the fact that our economic independence requires a close co-operation with foreign capital and trade, and that by such a co-operation with Great Britain we could obtain from our economic independence the greatest benefit.....

The presence of M. Duca, the Foreign Minister, who paid a short visit to London a week ago, and returned with their Majesties this week, was the occasion of discussions with political leaders in this country, and may well have led to the establishment of a better understanding here from the Roumanian point of view. Economic ties are, of course, of long standing between the two countries, for, before the war, at any rate, London was the principal market for Roumanian cereals, while the rich oilfields of the country have naturally not escaped the attention of British finance. Recently an English firm has co-operated in the equipment of a factory for explosives in Sighisoara, while negotiations for the development by British interests of the iron and steel industry of Transylvania, especially at the important centre of Reshita, are believed to be progressing favourably. Of almost equal significance, perhaps, is the fact that a British firm recently obtained the contract for 60 aeroplanes for the Roumanian army. But what has been accomplished hitherto is as nothing to what might be done to develop Anglo-Roumanian economic relations, provided always that a formula could be arrived at which would permit of the active co-operation of British capital on terms consistent with the dignity of both parties. The advent of the King of Roumania and his consort at this juncture on a "courtesy visit" to the British Court will, we hope, be followed up by a further exploration of the economic and political factors which would in King Ferdinand's words "help to the economic recovery of Europe with the riches with which a merciful providence has blessed our country."

Germany's New Standard.—Some weeks ago, in describing the new Discount Bank for Foreign Trade which Herr Schacht has organised in Germany, we called attention to the important fact that its operations would be conducted on a sterling basis. This fact has attracted attention in the United States, and has given rise this week to a statement by the Advisory Council of the Federal Reserve Board. This document, after setting forth the desire of America to assist in financial reconstruction, emphasises the desirability of Germany going on to a gold basis, and not attaching its currency to sterling. It is urged that gold

is the only practicable way in the long run for restoring exchange stability, and it suggests that if Germany goes on to a gold basis it will render it easier for Great Britain to restore her exchange to par and return to the gold standard. Whereas if Germany and possibly other European countries adopt arrangements for retaining a parity in sterling, it may delay the date when these currencies get back to par with the dollar. There is force in this argument, and it is noteworthy that the experts, in putting forward their plan for a bank of issue, have in mind a gold standard, and not a sterling one, for Germany. At the same time, it would mean that there would be disadvantages for Germany in having considerable exchange fluctuations in terms of sterling, which is the dominating currency in her external transactions. The ideal, though difficult, solution is clearly to devise a plan by which Germany and England could concert joint measures with the United States for restoring the gold standard at the same time in the two countries.

Overseas Trade in April.—It was in April, 1923, that the Irish Free State trade figures were separated from the returns for Great Britain, so that for the first time for a year the Board of Trade returns afford the opportunity for a true comparison with a year ago, although the comparison of the four months' figures is still vitiated. A summary of the value figures for April and the first four months of this year and last reads as follows:—

MONTH OF APRIL.				
	1923.	1924.	Increase or Decrease in March, 1924.	
	£	£	£	%
Imports	86,448,012	86,165,549	— 282,463	— 0.3
British exports	62,871,102	62,866,926	— 4,176	—
Re-exports	12,428,500	11,770,921	— 657,579	— 5.3
Total exports	75,299,602	74,637,847	— 661,755	— 0.9
Excess of imports over total exports	11,148,410	11,527,702	+ 379,292	+ 3.4

FOUR MONTHS ENDED APRIL 30TH.				
	1923.	1924.	Increase or Decrease in 1924.	
	£	£	£	%
Imports	360,122,744	387,858,339	+ 27,735,595	+ 7.7
British exports	248,240,604	256,179,682	+ 7,939,078	+ 3.2
Re-exports	41,135,426	51,013,423	+ 9,877,997	+ 24.0
Total exports	289,376,030	307,193,105	+ 17,817,075	+ 6.2
Excess of imports over total exports	70,746,714	80,665,234	+ 9,918,520	+ 14.0

The figures for last month are very similar to those of a year ago, British exports having almost exactly the same value for the two Aprils. Among British exports, however, there are three items in which the change, as compared with April, 1923, is striking. Coal exports are down by over £2½ millions, a drop in value which represents a falling off of 1.8 million tons. In the four months the drop in coal exports has reached 4.7 million tons, Germany having taken from us only about one-half of the 6.3 million tons taken in the similar period of last year. Then, again, exports of ships and boats reached a value of only £137,037 last month, as compared with over £4 millions in April, 1923. Towards making up this drop of £6½ millions in exports of coal and ships, exports of cotton manufactures make the largest contribution, while a majority of the classes of British manufactured exports are also higher. The rise in cotton goods exported is £3.3 millions, as compared with April, 1923. Exported cotton yarns rose from 10.9 to 16.1 million lbs, and exported piece goods from 316 to 377 million square yards. On the four months yarn exports are 6.7 million lbs up, and piece goods exports by 84 million square yards. In the cotton piece goods figures the recovery of exports to Germany is a feature. Germany took 10.1 million square yards in April, and 25.7 million square yards in the four months, as compared with 1.4 millions in April, and 9.1 millions respectively in April and the four months of 1923. Germany, it should be noted, also figures prominently in the re-export figures. From an article on a previous page it will be seen that our total re-exports to Germany in the first quarter of this year were more than double those of the first quarter of last year, and

the April figures suggest that the larger scale is continuing. A notable point about the April returns is that, while exports are slightly higher than in March, imports are £17½ millions lower. Presumably, since imports are on the same level as in April, 1923, the March total was swollen by arrears owing to the February strike of the dockers. On the merchandise figures the import balance for the past four months is £9.9 millions higher than in the corresponding period of last year. But most of this is wiped out by an increase of £8.3 millions in the excess of bullion and specie exports over imports. Detailed comparative value figures for imports and exports will be found in the commercial section of this issue.

Iron, Steel, and Coal Production in April.—As forecast in these columns when considering the iron and steel production for March, the figures issued by the National Federation of Iron and Steel Manufacturers show that production, both of pig-iron and steel, declined considerably in April. Pig-iron production amounted to 618,400 tons, compared with 668,600 tons in March and 652,200 tons in April last year, while the production of steel ingots and castings amounted to 711,500 tons, compared with 816,900 tons in March and 749,400 tons in April, 1923. The reduced output of pig-iron is partly due to there being one less day in April than in March, but also to the fact that the eight furnaces which went out of blast during March, and therefore contributed some production to the total in that month, remained idle throughout the whole of April, the number of furnaces in blast being 194 at the end of April as at the end of March, compared with 202 at the end of February. The decline in steel production is partly the result of the Easter holidays. Imports of iron and steel amounted to 198,900 tons, the highest figure since September, 1921, and included 32,000 tons of pig-iron, 63,700 tons of blooms, billets and slabs, and 26,200 tons of sheet and tinplate bars. Exports of iron and steel amounted to 336,800 tons, a rise of nearly 50,000 tons compared with the previous month, the biggest items consisting of galvanised sheets (59,000 tons) and tinplates and sheets (49,500 tons). The output of coal in the four weeks ending April 26th averaged 5,210,000 tons, compared with an average of 5,763,000 tons in the previous four weeks, the decline also being due to the Easter holidays. Exports of coal again decreased, and amounted to 5,062,900 tons, the lowest figure since July, 1922. Of the total, 1,281,000 tons went to France, 651,800 tons to Italy, 517,600 tons to Germany, 283,000 tons to Argentina, 281,100 tons to Sweden, 252,700 tons to Denmark, and 203,600 tons to Belgium. Exports of metallurgical coke further fell to 116,700 tons, compared with 131,700 tons in March, and 264,300 tons in January; of the total, 31,300 tons went to Germany and 25,100 tons to Sweden.

The International Shipping Conference.—The representative shipowners from all the principal maritime countries who have been meeting in London during the week, and discussing matters of business, have, in talking over their own affairs, dealt at the same time with various questions of considerable public interest. Indeed, stress was laid by the chairman, Sir Alan Anderson, upon the fact that the interests of shipowners and of the public are the same. Very sensibly he pointed out that only by convincing the public of that can shipowners hope to have their proposals universally adopted. Most of their proposals are universal in scope, for shipping is nothing if not international. The problems of the industry, even those arising out of the ordinary everyday routine, need to be considered in relation to the conditions prevailing not in any one but in every country, and many of the difficulties of shipowners result from the existence of divergent regulations in the ports to which their ships trade. Since meeting in a similar conference three years ago, the shipowners, through international committees which they set up, have, with the help of technical advisers, worked out a scheme of new regulations on various matters connected with the safety of life at sea, such as sub-division of passenger ships, loadline, deck cargoes, boats and wireless telegraphy. These, they propose, should be made to apply everywhere with a view to attaining a high standard of safety, plus uniformity. Accord-

ingly the conference resolved to urge the maritime governments to hold a diplomatic conference as a step towards giving effect to the shipowners' proposals. In the matter of taxation of shipping profits, relative positions are somewhat different. Shipowners strongly object to the unanimity with which Governments tax foreign shipping at ports of call on assumed profits that, if made anywhere, are made on the high seas. The competition in taxation of this kind, which has developed in post-war years—a competition in which the governments of our own Dominions are keen participants—is mainly the reflex result of British fiscal policy and practice, but the United States opened the door to reciprocal exemption. Our own Government responded, and shipowners desire "the conclusion of a series of reciprocal arrangements for the mutual exemption of shipping profits from taxation which will embrace all the maritime countries." As Sir Ernest Glover pointed out, the taxation is really futile in operation. In theory it falls on the shipowner, but actually it goes back on the producer of the goods. Residence, he urged, is the only proper basis, meaning by that the country where the ship is controlled. On another question of wide concern, namely, flag discrimination, the shipowners' conference emphasised the fact that other business men have the same interests as they themselves. "To abolish and prevent policies or acts of flag discrimination," ran part of their resolution, "is primarily the interest of merchants and manufacturers representing international trade in general." Some other problems, such, for instance, as those of attaining uniformity in the tonnage measurement of ships (on which port charges are levied) and of revising the York-Antwerp Rules with a view to simplifying and cheapening those curious anachronisms known as general average adjustments, were more limited in their interest to the particular section of the business community whose purposes the conference was intended to serve. These also were dealt with, however, from the international standpoint, and therefore on a broad basis. The proceedings were marked by unanimity and an evident desire to attain practical results. In that last respect the gathering, there can be little doubt, quite justified itself. One item on the agenda which belonged to a different category from the rest should be mentioned. Advantage was taken of the presence of the foreign delegates to render some account of the special inquiry which has been in progress into the facilities at British ports in consequence of criticisms by Scandinavian shipowners. Sir Frederick Lewis, chairman of the committee of investigation, made a general statement, but the report itself was not circulated. Its issue is anticipated within a few days, and any comment may therefore be reserved till necessary information is available.

Lancashire Cotton Goods in America.—Our Manchester correspondent writes:—During the last twelve months there has been a substantial increase in the shipments of cotton-piece goods from this country to the United States. Manufacturers in America are somewhat alarmed at the situation, and in some quarters appeals are being made for a higher tariff. It is pointed out that in 1919 the imports of cotton cloth into the United States were only 48,000,000 square yards, but by 1922 they had reached 95,000,000 square yards and in 1923 175,000,000 square yards. Lancashire manufacturers are of opinion that this big advance is due to the increased prosperity of the United States and the larger demand for fancy goods of high quality that so far have not been produced in America, the bulk of the business being in warp satens, voiles, shadow stripes, cambrics, and similar fabrics. It is a remarkable fact that, despite the steady extension of spinning and weaving machinery in the United States, that country seems unable to develop its foreign trade, and in the nine months ended March last the exports of cotton cloth were less than 312,000,000 square yards. Even at a time like the present, when Lancashire is doing a much smaller export business in quantity than in pre-war years, the shipments in any month are larger than the total for nine months of the United States.

Turkey and Her Creditors.—The Angora Government has now exhibited its utter disregard alike of its obligations to its foreign bondholders, and of its inevitable need of foreign financial aid. Since the war it has appropriated the revenues formerly collected in its remaining Asiatic dominions for the Debt Council, though for some time it acknowledged its liability for them by giving receipts; and it has suppressed the Council's agencies except in and about Constantinople. As France and Great Britain have respectively retained, for the present at any rate, the revenues formerly collected by the Council in Syria, Palestine and Iraq, the only revenues still coming in to the Debt Council since the war have been those from Constantinople and the immediate neighbourhood. About three weeks ago these revenues also were appropriated by the Angora Government, which also notified the Debt Council that the expenditure of that body must for the future form part of the Turkish Budget, and decreased the amount by 60 per cent., so that, even after all possible reductions have been made, there will not be enough left to pay the Council's staff. The Turkish Press has for some time been demanding an alteration in the composition and status of the Debt Council, and the Turkish Government proposes to subordinate this body to itself. Its action flagrantly violates the pledges to the bondholders, given in 1881 by the Decree of Muharram, and the promises that existing obligations would be respected made by the Turkish delegates at Lausanne. It affects not only the Unified Debt, now about £36,400,000, and the Lottery Loan (held chiefly in France) of about £10,000,000, but also the eleven loans secured primarily on the surplus of the revenues administered by the Debt Council, together amounting to nearly £55,000,000. These are not quoted in London, with one exception, the Ottoman Bank 4 per cent. loan of 1908, of about £4,500,000. And even of the Unified Debt by far the largest amount is held on the continent of Europe. For the moment the bondholders can only protest vigorously through their respective Governments; and possibly the Turkish action accounts for the delay in the ratification by Great Britain of the Treaty of Lausanne. That action, which contrasts sharply with the honesty of pre-war Turkish Governments since 1881, will bring its own punishment in the inability of Turkey to obtain further financial aid. But that result is probably not realised at Angora. The British loss, however, is far less than that which falls on the bondholders in Germany and France. Germany bought Turkish support in the war, and French subjects helped Turkey to recover. Both countries now have their reward.

Recommendations of the Indian Tariff Board with Regard to Iron and Steel.—In view of the report of the Indian Fiscal Commission of 1921-22, and the subsequent resolution of the Legislative Assembly adopted on February 16, 1923, "that this Assembly recommends the Governor-General in Council that he accepts in principle the proposition that the fiscal policy of the Government of India may legitimately be directed towards fostering the development of industries in India," it came as no surprise that the Tariff Board, which was set up on July 10th, also as a result of the resolution of February 16th, should report in favour of protection. In accordance with the recommendation of the Fiscal Commission, the Board considered first the question of extending protection to the manufacture of steel in India. Hitherto tariffs had been imposed for purely revenue purposes, though the financial needs of India have rendered it necessary to increase these to rather substantial proportions in recent years. On the ground that duties on railway material, machinery, and iron and steel would be likely to impede the development of the country, duties on these articles have been less than on most other commodities; in 1894 an import duty of 1 per cent. *ad valorem* was first imposed on iron and steel; in 1916 this was raised to 2½ per cent., and in 1922 to 10 per cent. The Tata Company, which is the only company at present manufacturing steel in India, though others are contemplated, asked that an all-round duty of 33½ per cent. *ad valorem* should be imposed on all kinds of steel manufactured by the company at Jamshedpur. The report of the Tariff Board, though frankly protectionist, is not uncritical, and the Board's refusal to accept the statement of the Tata Company's principal witness,

that "rolled steel was likely to enter India at a price without duty of rupees 150 per ton, and that 'the company could sell at a reasonable profit at or about rupees 200 per ton,' without very close investigation, and the results of their investigation make very interesting reading. At the same time the report contains some rather remarkable statements, such as, "If the end in view is to secure to the domestic manufacturer a reasonable price, the causes which have enabled the foreign manufacturer to send his steel into India at lower prices are really irrelevant," while the Board is also "satisfied that the rate on ordinary shares cannot be put at a lower figure than 10 per cent." The result of their investigations was to satisfy the Board that India possessed great natural advantages for the manufacture of steel, but that unless protection were given there was no hope that the steel industry would develop for many years to come, and might even cease altogether. The Board therefore recommend that to bridge the differences between the price at which steel is likely to enter India without a duty, and the price which gives the Indian manufacturer a fair return on his capital, protective duties should be imposed, and, in the case of rails, bounties also granted. The duties proposed for the principal products, compared with those previously in force, are as follows:—

	Price at which Steel is likely to enter India without Duty.		Present Tariff.		Proposed Tariff.	
	Rs. per Ton.		Rs. per Ton.		Rs. per Ton.	
Bars	140		13.8 to 15		40	
Angles, beams, channels....	145		15		30	
Rails, 30 lbs and over	140		14		14 plus bounty.	
Plates, ordinary	150		15		30	
Sheets, black	200		17.8 to 40		30	
Sheets, galvanised	300		30 to 42.8		45	

The effect of the proposals is practically to double the present duty, the *ad valorem* incidence being now generally 20 per cent. instead of 10. The apparent exception in the case of sheets, where the specific duty approximates to an *ad valorem* duty of 15 per cent., compared with a previous duty of 10 per cent., is due to the fact that the tariff valuation on which the levies were imposed has been unduly high. In the case of medium and heavy rails, the recommendation is to convert the present *ad valorem* duty into a specific duty of rupees 14 per ton, and to grant bounties for the next three years as follows:—

	Rupees per Ton.
1924-1925	32
1925-1926	26
1926-1927	20

In the case of wrought iron, duties of rupees 20 per ton are proposed on angles and channels, and rupees 35 per ton on common bars, the necessity for imposing duties, although wrought iron is not manufactured in India, being explained by the fact that the commoner qualities of wrought iron would be likely to displace steel if there were an appreciable difference in the price. The proposals are limited to a period of three years because of the uncertainty of the future course of world prices, and the probability of a fall in the cost of production. The Board indicates that a fresh inquiry will probably be necessary in 1926 or 1927.

Russian Manganese Ore.—A Moscow correspondent writes:—Attention has been drawn in the *Economist* for April 19th to the threatened shortage of manganese ore, but specific mention was not made of the Russian production. In the Soviet Federation the most important mines are at Tchiatoury, in Transcaucasia; at Nikopol, in the Ekaterinoslav Government (where new reserves have recently been discovered), and in the Urals; the small production of the last is, however, absorbed by the Urals metal industry. The important Tchiatoury mines (75 per cent. of pre-war Russian production and 38 per cent. of pre-war world production) are situated in Georgia, in the Government of Kutais, 42 versts from Tcharopans station. It is estimated that the ore reserves amount to 100 million tons of manganese. It is characteristic that in spite of the world importance of Tchiatoury, no important mining enterprise was founded in this region, and it was not until 1902 that two German companies (Gelsen-

kirchen and the Caucasian Mining Company) commenced work in the district; the activity of the first of these companies was confined to the purchase of land, of ore in the hands of groups of artisans, and the export of ore to Germany. In 1913, 967 thousand tons of manganese ore were produced in the Tchiatoury mines, and 246 thousand tons in Nikopol; in 1922 the Tchiatoury production was practically nil, and Nikopol 4,900 tons. Since the revolution the monopoly of the Tchiatoury export has been placed in the hands of the Tchemo Company, which in September, 1922, made an agreement for foreign sales with the firm of Pfeissing. The export is done through Poti and Batoum, and is stated in 1923 to have amounted to 36 million poods—this included the export of all former stocks. In 1913 manganese ore was sold f.o.b. Batoum at about 20 kopecks a pood. At present the estimated value of a pood of washed manganese ore (50 per cent.) is 65-70 kopecks f.o.b. Poti, which allows a considerable margin of profit over the American price. A recent article in the *Economist* suggests that a manganese union should be created, with the help of British and American capital, for placing manganese on the American and European markets, and that capital should be attracted for the construction of hydro-electrical stations in the Caucasus for use in the manganese industry. It remains to be seen what precise suggestions will be made in London in this connection, and the arrangements it is proposed to make with the former concessionaires.

Crop Prospects.—The monthly report of the Ministry of Agriculture and Fisheries states that all winter corn is still backward, but there has been a great improvement since the warmer weather arrived. The crops now appear healthy, having regained colour, and are growing well. Wheat is a very fair plant where sown early, but some crops on heavy land and late-sown crops generally are thin and patchy. On the whole, however, little re-sowing of wheat land has been done. Black winter oats are usually a good plant, but many of the white winters have been ploughed up. Autumn-sown barley is variable, but is mostly fair, and beans are generally an even plant, except in some parts of the south-eastern and east-midland counties, where there are a fair number of thin and patchy crops. The sowing of spring corn was practically completed at the end of April in all parts of the country. Drilling was done with the land in splendid condition. The seed has germinated well, and so far the young crops have come up evenly, and are strong and healthy. The planting of potatoes was well forward at the end of April, though the rains of the last few days caused some delay. Early crops are backward, and few were showing through at the date of the reports. In south-west Cornwall some of the earlies were cut by frosts. The preparation of the land for root-sowing is more forward than usual, and a good breadth of man-golds has been sown, with the land in good tilth. With the warmer weather of the last ten days of April, seeds have improved considerably, and now look fairly well. The crops are still backward, and owing to the shortage of grass have often been grazed by sheep to a later date than usual. Owing to the severe cold there were heavy losses of lambs in the North of England and in some parts of Wales, but elsewhere the season has been fairly satisfactory.

Industrial Preference Shares.—Investment and speculative business has fallen away this week, owing, according to the generally-accepted Stock Exchange explanation, to the defeat of the French Premier and the consequent uncertainty into which the foreign political outlook is further plunged. The issue of the French elections would not perhaps have had this effect by itself, but, being accompanied by a fall in the value of the franc, it caused a feeling of nervousness, particularly as further selling set in from Paris of such representative inter-bourse stocks and shares as those of the French Government, Rio Tintos, Shell Transport, De Beers, and a few South African gold shares. On the top of the hesitation produced in the mind of investment by the unexpected events in France, new issues have been offering stock at prices that look tolerably high. It might be supposed

that such a policy would throw into favourable relief the temptations of existing securities, but experience has shown that the opposite effect is produced, and that the offer of a new stock at a high level tends to induce caution in the mind of the prospective buyer. The trustee finds it difficult to get anything to pay him a level 5 per cent. on the money, and the new 4½ per cent. Conversion stock, dealings in which started last Monday at 97½, declined a trifle on the refusal of the public to accept the newcomer on a basis of yield which works out to £4 12s per cent. on the money. Many people still hold that the 5 per cent. War Loan at 100½ must be regarded as the cheapest stock of its kind in the market. The investor with modest sums to put by asks for safe preference shares that shall yield 6 per cent. on capital spent in them, and this rate is not always available from the best class. Even amongst preference shares, a wide diversity of character prevails. It will be of service to set out a list, issued by a Stock Exchange firm, giving details of a number of preference shares in well-known industrial companies, and showing what is to be obtained in this group:—

PREFERENCE SHARES.

Company.	Rate.	Dividend Payable.	Approx. Price.	Yield.
Aerated Bread	6½	June Dec.	23/	£ s d 5 13 0

* Tax free.

The above list does not, of course, pretend to be more than representative, but it affords a useful guide to the yield on his money that is offered to the investor to-day, and it will be found, in the majority of cases, that shares enumerated in the above list can be obtained by the buyer. It is perhaps scarcely necessary to add that the security varies according to the rate of return which the shares offer, and that those which pay the most on the money afford, as a rule, less security than others from which more modest yields are available.

Fine Cotton Spinners.—A further substantial increase in profits is shown in the report for the year ended March 31st last of the Fine Cotton Spinners' and Doublers' Association, the total, including amounts recovered in respect of excess profits duty and enemy debts, but after charging £180,000 for depreciation, being £1,038,600, which compares with £943,500 for 1922-23, when the same amount was charged for depreciation. After payment of debenture interest, and preference and preferred ordinary dividend, the distribution on the ordinary shares is raised to 14 per cent. The following table summarises results since 1906:—

Year Ending March 31.	Profit.	Deb. Interest.	Pref. Dividend.	Pref. Ord. Dividend.	To Reserve &c.	Ord. Dividend.	Ord. Div. Rate.	Carry Forward.
1906	£ 402,442	£ 110,000	£ 125,000	£ ..	£ 40,000	£ 80,000	% 8	£ 15,507

1923	943,460	110,000	150,000	47,000	165,000	459,375	14½	210,331
1924	1,038,574	110,000	150,000	47,000	160,000	514,500	14	267,406

* Including £12,358 for expenses of new issue of shares.

The reserve for equalisation of dividends is credited with £100,000, and £50,000 goes to pension fund, the same as last year, while £10,000, as against £15,000, is transferred to the welfare fund. The balance-sheet shows an increase of £466,900 in creditors, while investments have risen by £160,600, and stock-in-trade by £380,700. The report of the auditors contains some interesting items. It states that "with regard to the association's investments in France, the companies registered under the French laws have received from the French Government considerable sums in respect of reparations during the period of reconstruction. The company registered in England has, as yet, received a sum of only £50,000. The position of the association with regard to excess profits duty is now practically determined. Of the amount recovered, £100,000 has been credited to profit and loss account, and after providing for income-tax and for expenditure on reparations to which the association is already committed, the balance of the amount recovered is retained in reserve pending a final settlement of the reparations question, and is included amongst sundry creditors."

Armstrong, Whitworth, and Co.—It is a great pity that such a highly respectable and sound undertaking as Sir W. G. Armstrong, Whitworth and Co., Limited, should not set a better example to less fortunate companies, in the matter of publishing detailed accounts. Even if it overlook the absence of a separate profit and loss account, we still have to grope in the dark for figures. The directors do not trouble to state the rate of dividend on the ordinary shares, but merely give the total amount paid to preference and ordinary shareholders together. Here is a summary of results since 1910:—

	Profit.	Interest and Expenses.	Pref. & Ord. Div.	Ord. Div. Rate.	To Reserve &c.	Carried Forward.
1910	£ 597,637	£ 119,772	£ 361,000	10	£ 50,000	£ 184,997
1911	627,227	119,401	441,250	12½	50,000	201,573
1912	798,547	123,020	443,250	12½	100,000	335,850
1913	856,673	167,626	568,122	12½	133,059	323,716
1914	940,195	138,309	591,563	12½	200,000	334,038
1915	1,055,620	303,272	615,000	12½	100,000	461,387
1916-19 ..	4,053,605	?	2,465,093	12½	1,000,000	1,049,899
1920	675,180	?	803,750	10	..	921,329
1921	666,060	227,172	528,125	5	..	832,092
1922	691,895	224,345	528,125	5	..	771,516
1923	655,652	?	528,125	5	..	679,768

Three years ago the amount of debenture interest was not stated, and comparison is therefore vitiated. The £1,000,000 of three-year notes guaranteed by the Belgian Government have now matured, but cash and bills are down from £1,093,766 to £706,623; creditors have increased from £3,027,491 to £3,594,130; property and plant are up from £14,170,583 to £14,899,697; total assets are over £600,000 lower at £20,722,642. The report states that the directors regret that the dispute with the boilermakers, which lasted till the end of November, seriously affected the profits of the company, not only by reducing the output of work, but also by leaving a larger part of the standing charges to be borne by other orders. There is an increased amount of work in most of the departments, and this has resulted in the employment of a larger number of men, but prices are still very

low, and it is becoming more and more difficult to secure new work with any margin of profit. On the other hand, the civil engineering department has obtained satisfactory contracts in different parts of the world, and the prospects of some of the allied companies are more encouraging.

Slubbers' Report.—The report for the year ended March 31st last of the British Cotton and Wool Dyers' Association, Limited, shows a decline in gross profits of £42,000. The net profit, after allowing £65,800 for repairs and renewals, as against £79,400 a year ago, and after payment of interest charges, &c., is £175,200, as compared with £201,500 for the previous year. The financial record of the company for the past six years and for 1913-14 is set out in the following table:—

	1913-14.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
Gross profits	£110,419	£240,719	£300,221	£270,803	£258,318	£316,144	£276,185
Renewals, &c.	31,163	84,007	106,136	130,648	71,449	79,412	65,788
Expenses	13,810	21,558	7,994	17,146	12,228	12,185	10,165
Balance	65,446	135,154	186,091	123,009	174,641	226,547	200,234
Brought forward ..	19,488	43,813	38,160	33,753	21,599	22,928	37,132
Total available ..	84,934	178,967	224,251	156,762	196,240	249,475	237,366
Interest	31,156	25,000	25,000	25,000	25,000	25,000	25,000
Depreciation fund ..	25,000	25,000	33,644	25,000	25,000	25,000	25,000
Reserve, &c.	50,000	50,000	68,541	25,000	60,000	70,000	65,000
Ordinary dividend ..	16,051	38,708	58,052	58,052	58,052	67,093	77,417
(5 %)	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)
Carried forward	12,727	40,459	39,003	23,700	28,176	42,532	44,949

The depreciation fund is raised to £215,000 by a further allocation of £25,000, the reserve is credited with £50,000 as before, £5,000 goes to investment contingency fund, raising it to £35,000, and £10,000 is transferred to employees' benefit fund, as against £20,000 a year ago. The dividend on the ordinary capital, which has been increased by £193,500, capitalised from the reserve fund, is maintained at 10 per cent., but the bonus of 5 per cent. paid last year is not repeated. In his usual separate report upon the balance-sheet, the auditor remarks that "the financial position of the association, so far as liquid assets are concerned, was, on March 31st last, in a satisfactory state; these assets then amounted to the substantial sum of £617,132, against which trade and loan creditors' claims existed for £162,293." The balance-sheet, which is analysed in a later column, shows no striking changes. The reserve, owing to the transfer mentioned above, is £143,500 lower, and stands at £31,500. The property item has been increased by £74,400, but debtors and cash are £33,000 and £39,600 lower respectively.

Brunner, Mond, and Co.—The report of Brunner, Mond, and Co., Limited, for the year ended March 31st last shows some reaction in profits after the previous year's sharp increase. Both gross and net profits were about £100,000 lower than in the preceding year, but some £525,000 higher than in 1921-22. The report is silent as to the past year's trading. There was a saving of over £3,000 in administration expenses, but the allowance for bad and doubtful debts is £900 higher at £6,000. The following table gives a summary of financial results in recent years:—

	1913-14.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.
Paid-up capital	£4,031,870	£4,063,940	£4,070,378	£11,077,841	£13,647,041	£13,649,651	£13,697,591
Reserves	1,388,000	603,906	2,817,680	3,032,680	2,802,785	3,002,785	3,276,985
Gross profits, investment receipts, &c.	851,290	1,199,040	1,319,389	1,182,271	1,220,310	1,845,412	1,745,327

(27½ %)	(10 %)	(11½ %)	(8 %)	(8 %)	(8 %)	(11 %)	(10½ %)
Balance	110,920	138,400	126,241	141,308	93,293	91,911	86,481

Investment and loan revenue produced £619,800 last year, as compared with £632,200 in 1922-23, and rents brought in £37,800, against £44,100. The special allocations include £150,000 to Suspense Account, against £225,000 a year ago, and £88,015 to general reserve,

against £62,215. The ordinary dividend, reduced from 11 to 10½ per cent., is paid on a slightly larger capital. Twelve months ago the report mentioned a proposal to issue, from time to time, to the staff and workpeople, ordinary shares not exceeding 100,000. The latest balance-sheet shows that £22,200 had been received by March 31st on account of such shares allotted on April 7th last. There are no striking changes in the debit side of the balance-sheet, but on the credit side debtors have declined by £1,638,900, while investments and associated company balances have increased by £1,140,100. Additions to the property item during the year amount to £450,400, and cash has been increased by £537,400, but stocks show a reduction of £212,500.

Crosses and Winkworth.—About a year ago we published in these columns a short review of the report and accounts of Crosses and Winkworth Consolidated Mills, Limited. We then pointed out that, "from a loss of £539,323 for 1922 to a profit of £274,148 for the year ended March 28, 1923, is the striking change shown in the accounts issued by Crosses and Winkworth. It should be noticed, however, that their figure of earnings, amounting to £274,148, includes a 'transfer from reserve for contingencies.' A year ago 'reserve for contingencies, including taxation,' was £363,235." Last year the item disappeared, but we noticed that its place was taken by a reserve for excess profits duty shown as £125,000. In the auditors' report it was stated that "the profit and loss account includes £100,000, taken from 'cotton stock reserves for depreciation.'" Thus exactly what the trading profit was during that year was not made clear. But still, the payment of the 10 per cent. half-year dividend on the cumulative preference shares, which absorbed £150,000, was recommended, leaving £155,076 "balance available for liability to income-tax and carry forward." Profits for the year ended March 26, 1924, according to the report and accounts just to hand, amount to £139,254. This sum, added to the amount brought forward, totals £294,331. Depreciation is estimated at £130,000, and a balance is stated to be available of £164,331, but subject to a liability to income-tax "not yet ascertained." The directors state that they regret profits "on the year do not permit of any payment on account of arrears of preference dividend." We are also informed that Sir Edward Mackay Edgar and Sir John Esplen have retired from the board. The balance-sheet is a document which students of finance will regard with mixed feelings, and at the meeting to be held at Bolton on Wednesday, it is to be hoped that shareholders or directors will unravel the year's transactions, which are reflected in the changes shown in the balance-sheet. Total assets have increased from £6,322,284 to £7,505,187. This is mainly accounted for by fresh acquisitions of shares. A year ago shares and stock held totalled £381,500. Now we find this item £1,903,642. The increase consists of 972,000 £1 ordinary shares in John Bright and Bros., Limited. These are valued or taken at £1,534,725. But there are two facts that must raise doubt in the investor's mind as to whether this is a reasonable valuation. The first is that the debenture stock of John Bright and Bros. is quoted at about 76 per cent. The second is a laconic remark in the present report, which observes that "No dividend has been received from Crosses and Heaton's Associated Mills, Limited, or John Bright and Brothers, Limited." As the whole of the ordinary shares in John Bright and Bros. are held by this company, there is no quotation by which to check the value inserted in the balance-sheet. The balance-sheet will be found analysed in our usual column.

Royal Insurance Company.—With its very large fire business the underwriting profits of the Royal tend to yield good average results rather than exceptional rates in proportion to the premium income. During last year the fire premiums were £6,709,350, as compared with £6,427,122, the claims paid and outstanding were 48.9 per cent. of the premiums, as against 53.2 per cent., and the expenses were 40.9 per cent., against 40.8 per cent. The surplus, after providing for unexpired liabilities, was

£563,578, or 8.4 per cent., as compared with £382,480, or 5.9 per cent., in 1922. In the marine account the year 1922 was closed with a profit of £112,148 on premiums of £1,031,681. For 1923 the marine premiums were £1,023,019, the first year's claims £246,513, and the expenses £204,901. The accident, employers' liability, and general insurance accounts yielded £4,255,476 in premiums. The claims, paid and outstanding, amounted to 48 per cent. of the premiums and the expenses to 40.9 per cent. After provision had been made for unexpired risks the surplus was £136,865, or 3.2 per cent. of the premiums. Interest receipts, less income-tax and debenture interest, were £968,443, and the transfers from the underwriting departments to profit and loss amounted to £775,726. A sum of £200,000 was brought in from the general contingencies fund, and £400,000 carried to the fire fund. Provision for income and corporation taxes absorbed £170,000. The dividend of 25s a share, less tax, will take £1,081,973, as compared with £955,053 for 1922. The balance carried forward was then £824,549, as against £710,621 brought in. The total funds of the company amount to £30,732,675.

San Insurance Office.—This, the oldest of the fire insurance companies, has had a very good year. The fire premiums last year were £2,304,940, as compared with £2,202,438 in 1922. The claims were 43.39 per cent. of the premiums, against 49.3 per cent., and the expenses were 42.85 per cent., against 43.8 per cent. After making the necessary reserve for unexpired risks, there was an underwriting surplus of £357,582 (15.5 per cent.), as compared with £155,071 (7 per cent.) in 1922. In the marine department, with premiums of £219,828, the surplus was £27,773. The employers' liability account yielded a surplus of £23,810, and the personal accident account a surplus of £3,356, but there was an underwriting deficiency in the burglary and general account of £26,573. The total net transfers to profit and loss on account of underwriting were thus £385,948, and interest receipts were £162,693. The total dividend of 19s a share, less tax, will absorb £175,275, income-tax on profits took £55,804, £40,000 was reserved for outstanding taxes, £70,000 was carried to reserve in the burglary and general account and £40,000 transferred to pension fund. The balance at profit and loss was then £527,254, as compared with £486,838 a year before, and the total funds £4,762,722.

Arizona Copper.—It is desirable that shareholders in this Edinburgh undertaking should realise that the greater proportion of recent distributions has been provided by appropriations from reserve. The report for the year ended March 31st last showed receipts (dividends on holdings in the Phelps Dodge Corporation and sundries) £52,000, less £16,500 expenses. To the surplus of £35,500 was added £110,000 transferred from reserve. The dividends of 2s per share, tax free, of which 1s has been paid as interim, will absorb £152,000, leaving the reduced balance of £9,750 to go forward. In the half-year ended March 31, 1923—to which date the accounts were made up in view of the change in the position—a profit of £22,400 was realised; £50,000 was added from reserve. Payment of a dividend of 1s per share, tax free, needed rather more than this total. The transfers from reserve represent the balances set free by the settlement of taxation questions with the Inland Revenue. This business has now been practically concluded. The appended report of the Phelps Dodge concern shows an output of 147½ million lbs of copper, nearly 6½ million lbs of lead, 610,700 lbs of zinc, over 2,000,000 ozs of silver and 25,850 ozs of gold, the company operating at 60 per cent. of its capacity. The dividends again totalled 4 per cent. Last year's Western taxation totalled no less than \$1,627,000, giving ample ground for the complaint as to the increased burden under this heading. The president's statement includes a useful summary of the copper position. His conclusion is: "With Western European countries able to purchase the copper they require and must have for their logical industrial development, there will not be any too much copper in the present known deposits to supply the demand at prices which will permit of a reasonable return on the capital invested."

Prizes for a Peace Plan.—Prizes, ranging from £1,000 to £10 are offered by the British Peace Award Committee for the best short answer to the question, "How can peace and prosperity be restored in Great Britain and in Europe through international co-operation?" The competition is open to all British citizens, and details of the conditions under which plans may be submitted are obtainable from Dr Albert Mansbridge, 13 John street, Adelphi. June 28th is the closing day for the submission of plans.

Transvaal Gold Output.—Gold production in the Transvaal has been improving for some time past. A very satisfactory showing is made by the output figures of the first four months of the present year as compared with those for the corresponding periods of preceding years. The output during the month of April amounted to 768,923 ounces of fine gold, which compares with 795,671 ounces produced during March. The production in April, 1923, was 743,651 ounces. The following table shows the output for every month since 1918:—

	1918.	1919.	1920.	1921.	1922.	1923.	1924.
January..	Fine Ozs. 714,182	Fine Ozs. 676,059	Fine Ozs. 670,503	Fine Ozs. 651,593	Fine Ozs. 639,728	Fine Ozs. 764,469	Fine Ozs. 736,768
February..	659,759	636,728	625,330	558,137	639,728	704,970	760,617
March ..	695,281	712,379	707,036	671,123	761,586	795,671	795,671
April	717,000	694,944	686,979	681,382	511,338	743,651	768,923
Total (4 months)	2,787,222	2,720,110	2,689,848	2,562,235	1,511,069	2,974,676	3,121,979
May	741,317	704,956	699,041	687,776	689,786	786,564	786,564
June	727,696	702,379	715,957	678,490	675,697	755,309	755,309
July	736,199	725,497	736,099	689,555	730,635	746,306	746,306
August	740,810	706,669	702,083	711,526	752,490	769,371	769,371
September	708,205	698,558	688,113	681,026	747,089	739,504	739,504
October ..	679,765	723,722	662,472	707,825	778,159	793,842	793,842
November	658,701	677,970	633,737	704,236	764,476	780,639	780,639
December	641,245	650,191	632,215	681,847	790,712	778,849	778,849
Total (12 months)	8,420,560	8,330,091	8,153,625	8,114,516	7,020,110	9,133,060	9,133,060

The following table shows the number of natives employed at the end of last month by members of the Witwatersrand Native Labour Association and Contractors:—

	Sept., 1923.	Oct., 1923.	Nov., 1923.	Dec., 1923.	Jan., 1924.	Feb., 1924.	Mar., 1924.	Apr., 1924.
Gold mines	174,406	177,047	177,674	177,779	181,659	182,056	176,483	173,023
Coal mines	16,225	16,216	16,246	16,149	16,109	15,968	15,763	15,800
Diamond	3,134	2,911	2,997	3,239	3,482	3,419	3,170	2,762
Total	193,765	196,174	196,917	197,160	201,205	201,438	195,416	191,584

It will be noted that the number of natives employed at the gold mines again shows a decline.

At the meeting of the Royal Statistical Society, on the 20th instant, in the Hall of the Royal Society of Arts, John street, Adelphi, W.C. 2, at 5.15 p.m., Major Greenwood, F.R.C.P., will read a paper on "The Mortality Statistics of Sweden and of England and Wales: an Essay in International Comparison."

Oversea Correspondence.

UNITED STATES.—REDUCTION IN NEW YORK REDISCOUNT RATE—HIGH EARNINGS OF STEEL CORPORATION—PREFERENTIAL SHIPPING RATES—TAX-REDUCTION LEGISLATION.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 6.

THE most important financial event of the past week was the lowering of the New York Federal Reserve Bank's rediscount rate from 4½ to 4 per cent. The reduction came as a surprise. Bankers generally believed the rate would be cut later on, probably before midsummer, but few expected such action at this time. The change is variously interpreted. In some quarters it is taken to foreshadow a period of business depression; in others an era of quickening activity. Neither view is warranted by experience. Any change in the Bank rate is invariably the result rather than the cause of trade movement and credit demand. It merely reflects seasonal expansion or contraction of money requirements. Therefore, it cannot be regarded as a new factor in the general situation, and whatever influence it may have upon trade

and finance is likely to be more sentimental than otherwise. In the present instance the reduction was made in order to bring the Federal Reserve rate in the New York district into line with open market quotations, which lately declined to pre-war levels. Since the early part of this year money has rapidly been piling up in New York City. From all sections of the country local banks have been receiving heavy deposits, on which they have paid interest based on the prevailing rediscount rate. As the result of banks' efforts to keep their funds employed by investing in Liberty bonds, Treasury certificates, and bankers' acceptances, prices of those securities have advanced sharply, thus narrowing the margin between the interest paid by banks on deposits and the return or yield received for money loaned. Factors immediately responsible for the heavy surplus of funds at this centre were the steady influx of gold, and the releasing of money, due to the slowing down of business. In its latest monthly report the New York Federal Reserve Bank shows that more than \$34,000,000 of gold was imported during March, bringing the total for the first quarter of this year up to \$112,966,000. The bank's statement last week plainly testified to the plethora of idle funds here. It showed total gold reserves of \$1,018,932,000, as against \$991,574,000 the week before, and \$1,081,640 a year ago. Total holdings of bills discounted dropped to \$47,861,000 from the preceding week's aggregate of \$61,938,000, and a total of \$211,574,000 for the corresponding week of 1923. Bills purchased in the open market disclosed a moderate increase, amounting to \$27,165,000, as compared with \$25,728,000, but were only about one-half of the total for the same week of last year, when such purchases reached \$54,373,000. The total of United States securities held by the local Federal Reserve Bank, which represented the employment of funds not required for commercial uses, totalled \$65,547,000, as against \$57,481,000 the week previous, and only \$3,739,000 for the corresponding week of 1923. The New York bank's ratio of reserves to note and deposit liabilities very clearly reflects present conditions; last week the ratio stood at 91.3 per cent., the highest level recorded since the United States entered the war, and comparing with 74.9 per cent. in the statement of condition for the week ended February 14, 1923, which was the last report before the advance in the rediscount rate on February 23rd of last year to $\frac{1}{2}$ per cent.—the rate that obtained until Thursday of last week.

The recent report of the United States Steel Corporation for the first three months of this year attracted more than usual attention, because net earnings were the largest recorded for any peace-time quarter in its history. After Federal taxes, the total for the quarter ended March 31st reached \$50,075,445, as compared with \$49,958,980 for the preceding three months, and \$34,780,069 for the corresponding quarter of 1923. In commenting on the steel situation and outlook, Judge Gary, chairman of the board, expressed the opinion that business would increase immediately after the Presidential election next autumn, and probably a month or so before. He stated that new business around May 1st was about 20 per cent. less in volume than it was about two months ago, but called attention to the fact that the corporation's business is diversified, as compared with some other steel manufacturers, and that frequently depression in some lines does not apply to many others.

A further postponement of the operation of the section of the Merchant Marine Act which grants preferential rail rates on goods carried to and from the United States in ships of American registry seems likely. The Interstate Commerce Commission, as previously mentioned, deferred enforcement of this provision one month until June 20th. The House of Representatives Committee on Merchant Marine has now recommended that May 1st of next year be made the effective date, and has decided to report favourably the Bill introduced for that purpose, although, as originally drawn, the measure would have postponed operation of this troublesome statute until July 1, 1925. There is good prospect of the Bill being passed by the House, but it is apt to encounter some opposition in the Senate, where there appears to be objection to legislative postponement of the application of the preferential rate clause. Should Congress fail to enact the necessary legis-

lation, it seems not improbable that some way will be found to delay enforcement of the section. The action of the House Committee was evidently the result of vigorous protests from shipping, commercial, and railroad interests throughout the country against its application, and such protests have become even more emphatic in the past week or two. Washington advices indicate that President Coolidge and other administration officials strongly favour a postponement for one year, and believe that the matter of applying the section should, in the meantime, be given further consideration by the executive and legislative branches of the Government.

The outlook for tax-reduction legislation by Congress, in a form acceptable to the Administration and to the great majority of financial and business interests, is anything but bright at present. The Senate has made many changes in the Bill which it has under consideration. The House amendment, which proposed to tax gains from the sale of stock dividends, held for more than two years, at regular income rates, was eliminated, a rate of $12\frac{1}{2}$ per cent. being adopted. The Senate also rejected the Treasury recommendation limiting capital losses to $12\frac{1}{2}$ per cent. It adopted a 14 per cent. tax on corporations instead of the existing $12\frac{1}{2}$ per cent., and repealed the capital stock tax of \$1 per \$1,000. The tax of 2 cents on drafts, cheques, and promissory notes was restored. Automobile truck chassis sold for \$1,000 or less by manufacturers were exempted from tax, but a tax of 3 per cent. was imposed upon those costing more than that figure, while the tax on other automobiles was lowered from 10 to 5 per cent., and that on tyres and accessories was fixed at $2\frac{1}{2}$ per cent. The Senate adopted the Mellon proposal to cut taxes on earned incomes 25 per cent., but reduced from \$20,000 to \$10,000 the maximum amount on which reductions should be made. This week a coalition of Democrats and Radical Republicans in the Senate unexpectedly defeated the Mellon tax plan by adopting the Democratic substitute for higher surtaxes, as well as the Democratic normal tax substitute. Just what further changes may be made in the Bill before it is finally passed by the Senate, or what kind of a compromise tax-reduction measure may be agreed to by the conference committee of both branches of Congress, cannot be predicted. But there seems little likelihood that the main provisions of the Mellon tax plan, which received such popular support when it was originally proposed, will be found in the Bill which Congress finally passes. From Washington advices, it is evident that President Coolidge regards some of the amendments which the Senate has adopted as very undesirable.

FRANCE.—THE ELECTION SURPRISE—REVENUE RETURNS—COAL PRODUCTION—PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, May 14.

THE result of last Sunday's General Elections came not only as an unqualified surprise to every foreign observer in Paris, but also to the political parties concerned. It was generally regarded as an open question whether M. Poincaré would return with the same or with a slightly diminished or perhaps with even a slightly increased majority; but his overwhelming defeat was foreseen by nobody.

Now that the shouting is over, and the Poincaré Ministry has announced its intention to make way for its successors at the end of May, it is beginning to be realised that, in spite of the change in the personnel of the Government, it is very unlikely that the new Cabinet will be inclined to modify to any substantial extent the foreign policy which this country has pursued since the war.

The principal planks in the platform on which the anti-Poincaréists appealed to the country were the high cost of living, the 20 per cent. increase in taxation, the threatened suppression of State monopolies, the unpopularity of the tax on turnover, and the resumption of diplomatic relations with the Vatican. A large number of votes were undoubtedly obtained from the large army of minor Government servants, under the guise of a protest against the dictatorial nature of the *décrets lois*, but really

by playing on the alarm that has been created among this class of the electorate at the prospect that large numbers of them will lose their posts under the scheme by which it is hoped to save 1,000 millions a year by drastically cutting down expenditure on the public services. It is difficult to realise how the new majority will be able to find the means to fulfil any appreciable portion of their election pledges, except in so far as, like Mr Snowden, they are able eventually to benefit from the measures put into force by their predecessors. If the tax on turnover, which is admittedly, and in the nature of things, extremely unpopular with the trading classes, be abolished, it will be necessary to find from other sources some 4,000 millions a year, which is the amount the tax is now yielding. Any substantial reduction in indirect taxation would have to be compensated for by large increases in the income-tax, which already, according to French experts, approximates fairly closely to English rates, (although, as a matter of fact, the French working man as a rule flatly refuses to pay this impost). Taken all round, it is apparent that the task of the new Government will be no easier than that of their predecessors, while they will have the additional handicap of having behind them a far less homogeneous body of supporters.

The revenue returns for April show that the total yield from taxation of all kinds during the month was 2,196,400,100f, of which 1,831,115,600f was from "ordinary and permanent" sources, the balance consisting of money received from "exceptional" sources, and including 161,987,200f from the outstanding amount still due in respect of the special tax on war profits. The total yield from indirect taxation and State monopolies was 1,870,907,000f, which is the largest amount ever received from these sources in the history of the country, over 198½ millions in excess of the amount received from them in January last (which was until April the record month), and 420 millions more than the amount received in April, 1923. The total yield from these sources for the month was 292 millions in excess of Budget estimates, and nearly 100 millions more than was expected from registrations, and over 85 millions more than was anticipated from duties on securities. The tax on turnover produced the record yield of 345,871,000f during the month, or 65½ millions more than the estimate. The total yield from taxation of all kinds during the first four months of the year was 8,057,700,200f, of which 6,432,639,000f was derived from indirect taxation and monopolies, 1,576,354,300f from direct taxation, and 48,706,900f from the State domains. The figures indicate that the Government's efforts to place the nation's finances on a sounder footing are meeting with success. The record figures for April are, of course, partly due to the facts that (1) the new *double décime*, which came into effect on March 23rd, has begun to be applied to the greater part of the indirect taxes on monopolies (although the 20 per cent. increase in the price of ordinary tobacco has not yet come into effect); and (2) that the recent high commodity prices have had an appreciable effect in increasing the yield from *ad valorem* duties.

The production figures of the French collieries are the highest that have been registered since the war, and indicate that the total output of coal during March was 3,772,734 tons. The production of metallurgical coke from the plants attached to the collieries, which totalled 131,994 tons in January, 1923, rose to 196,939 tons in January, 1924, to 200,782 tons in February, and to 222,979 tons in March. The average daily output of coal in 1913, from the collieries within the then French frontiers, was 136,147 tons. In January, 1924, including the coal received from the recently recovered Lorraine pits, the average daily output was 144,680 tons, the figures for February being 145,955 tons, and for March 145,105 tons. The work of reconstituting the devastated mines in the Pas de Calais field is proceeding with such success that the average daily output for that area, which amounted to 60,239 tons in January, 1923, amounted in March last to 145,105 tons, reducing the deficit for the whole basin, as compared with the 1913 figures, to one of 10,076 tons per day. As the daily average from the mines in the centre and the south of France amounted in March to 47,433 tons, or 2,538 tons more than in 1913, the present average daily yield from pre-war France is only 7,493 tons less than in 1913, notwithstanding the damage done

to the northern mines. This deficit is more than compensated for by the daily average output from the Lorraine mines, which now amounts to 16,451 tons. The total number of miners employed in the French collieries in March, 1924, was 290,375, as compared with 242,566 in January, 1923, and 203,208 in 1913.

The French index number for wholesale prices at the end of April, which has just been issued by the Statistique Générale, indicates a further drop of 51 points in commodity prices, as compared with that for March, which was 45 points below that for February. The detailed figures, which are based on that of 100 as representing prices in 1914, are as follows:—

	End of Month of		
	April.	March.	Feb.
General index figure (45 categories)	459 ..	510 ..	555 ..
Foodstuffs (20 categories)	423 ..	455 ..	484 ..
Vegetable foods (8 categories)	392 ..	434 ..	441 ..
Animal foods (8 categories)	424 ..	430 ..	444 ..
Sugar, coffee, cocoa (4 categories)	491 ..	563 ..	682 ..
Raw materials (25 categories)	491 ..	558 ..	617 ..
Minerals and metals (7 categories)	431 ..	488 ..	592 ..
Textiles (6 categories)	594 ..	678 ..	745 ..
Sundries (12 categories)	466 ..	529 ..	555 ..

As will be seen, the fall is much more substantial in regard to raw materials, where the drop during the month was equivalent to 67 points, than in regard to foodstuffs, in respect of which the figure is only 32 points lower. The reason for this difference is to be found in the recent remarkable recovery in the exchange value of the franc. The drop of 84 points in the figure for textiles is especially notable. The index figure for retail food prices in Paris at the end of April (which is based on 100 as representing prices in July, 1914) is returned as 380, as compared with 392 at the end of March and 384 at the end of February.

GERMANY.—POLITICS—FOREIGN MARK INTERESTS—PRICES AND WAGES—INDUSTRY—STOCKS—CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, May 13.

THE political results of the Reichstag Election are not yet clear. The German-Nationals, having gained 5,764,628 votes, are, if their Agrarian allies are counted with them, the strongest party, the Socialist vote being 5,991,547. If the Populist-Freedom Party is added, which would probably only be the case if the German-Nationals remained in opposition, the Socialists would be very largely outnumbered. The Communists, who gained 3,728,089 votes, naturally cannot be counted as possible Socialist allies. The Socialists do not seem anxious to take office in coalition with other parties. At present, indications point towards the German-Nationals taking the lead. The result of the French elections has gratified opinion on the whole, it being thought that a Left French Cabinet may come more easily to an agreement with England; but there are sceptics who affirm that French diplomacy is governed by traditional influences, and who therefore hold that Franco-German relations will not be improved by a change of government in Paris. On the Bourse to-day the French elections had little effect, but stocks were somewhat firmer.

Some interest has been awakened by the Reichsbank President, Dr Schacht's statement to a South American newspaper that compensating foreigners for their mark losses will in no case be considered. This decision, said Dr Schacht, is "on imperative grounds of justice..... the first claim for compensation belongs to the millions of Germans who, through the paper mark collapse, lost their all." Dr Schacht referred to the "gigantic profits reaped by citizens of the same foreign countries from the 'selling-out of Germany'" (buying German goods cheaply). It is certain that neither Germans nor foreigners will be compensated; and that even if the resources for compensation existed it would not be practicable to attain "imperative justice," because in most cases it is impossible to determine whether an individual person won or lost through the currency depreciation—e.g., often the person who lost his all through depreciation of war loans got it back, or more than got it back, by paying his own debts in worthless money. Certain points, however, call for notice. The first is that there is no evidence of "gigantic

profits" by foreigners from Germany's "selling out." During the currency depreciation period Germany sold goods to high-exchange countries, not at her own low gold prices, but at the highest gold prices that could be asked for without risking the loss of orders, and an elaborate official machinery was called into existence for this. To low-exchange countries Germany simultaneously sold at low gold prices (invoicing in paper marks at more or less home paper mark prices), and thereby undersold high-exchange countries' exporters. While the very large losses of foreigners from mark and mark-security operations are a fact and have often been approximately estimated by Germans and foreigners (e.g., the McKenna report), the gains of foreigners are problematical, and on the whole account between Germany and abroad seem to be of little importance. Further, the German State expropriation of loans and the expropriation of mark-currency values was at home only a transfer of wealth from one German pocket to another, whereas the expropriation of foreigners was a transfer of foreign wealth into the German collective pocket. Probably the best thing would be for foreigners to forget their losses, remembering that what happened with German currency is only what has happened with other European currencies in varying degrees; but the German Government will not allow foreigners to forget. While denying them, as is inevitable and even right, compensation for currency losses, it loses no chance of expropriating their currency gains, even when these are small. The whole German fiscal system, particularly that of the states and municipalities, is based on the theory that no foreigner has a right to make profits in or in connection with Germany, and this theory is almost daily expressed by men in authority. A foreigner who, having seen his German loan-stock or German marks dwindle in gold value to one-tenth, tries to save the remainder by buying some German real value, is told, if the value bought rises somewhat as a result of the currency stabilisation, that he is a currency profiteer, and at once laws or local statutes are passed which, while ingeniously exempting Germans by various devices, expropriate the foreigner a second time. The whole German system here is unscrupulous; and it escapes international protest only because the subterfuges practised are so refined that they elude even the attention of the victims, and are discovered only when German newspapers begin to boast about the skill with which foreigners are plucked. It should be said that all Germans do not approve of these methods; the trade journals often expose and oppose them, and last week a German resident abroad published here a detailed complaint of the damage which is being done to Germany's reputation for good faith.

The Reichsbank's return for April 30th shows a moderate increase of discounts and loans by 23.7 trillion paper marks to 2,165.3 trillion paper marks, but circulation increased by the large sum of 102.9 trillions to 776.9 trillions, and deposits underwent considerable declines. The Rentenbank's return for April 30th shows little change, the chief being the reduction of temporary credits to the Reichsbank for the opening of Rentenmark accounts from 200 million to 100 million Rentenmarks. Credits to industry via the Reichsbank remain at 800 million Rentenmarks. Cash held by the Rentenbank rose from 5.4 million Rentenmarks to 63.5 million Rentenmarks, owing to receipt of the first interest on the mortgage and bond securities. The circulation of Rentenmarks fell during the month from 1,985.6 millions to 1,951.6 millions. The Gold Discount Bank issues weekly returns. That for May 7th balances at £10,119,336. The total of unpaid capital has fallen to £3,750,000. The bank's liabilities, other than for £10,000,000 capital, total only £119,336. Credits to business increased during the week by £413,503 to £998,695. The bank is pursuing a cautious policy in regard to granting credits for imports, but its operations have materially mitigated the strain in the exchange market.

General prices are still slowly rising. The official wholesale index for May 6th is 125.2, against 124.6 a week earlier; the official cost-of-living index for May 7th is 115, against 114 a week earlier. The *Frankfurter Zeitung's* index for May 1st is 151.89, against 152.34 on April 15th. The highest point of this index since the mark stabilisation was,

on November 29th, 164.96; the lowest, on January 17th, 145.47. On May 1st manufactured goods were 144.09, textiles and leather 210.47, food 148.87, minerals 142.23, miscellaneous commodities 133.59. The average wage in March, since when there has been little change, was, in eight leading industries, for skilled workers, 28.16 gold marks a week, equal in buying power to 26.27 gold marks before the war; in concerns where hours have been prolonged beyond eight under the new law, the average was 29.56 gold marks and 27.57 gold marks respectively, the real wage being 75 and 78.7 per cent. respectively of the pre-war figure.

The credit strain continues to affect industry, but the recovery proceeds. The textiles branch, which led the recovery, may, however, soon have to face a new crisis owing to the too high prices. Inquiry indicates that, apart from the general factor of greatly increased raw material prices, the textiles manufacturers, counting on the increased public buying-power which followed currency reform, are exploiting the public need for goods; among other things, keeping to the practice, learned during mark-depreciation times, of calculating in round numbers and of adding "depreciation risk supplements," though in the pricing of other branches depreciation risk no longer plays any rôle.

Imports of raw cotton, wool, and jute reached a high point in February, but are still considerable; imports of raw flax and hemp continued to rise in March; imports of most kinds of manufactured or partly manufactured textiles—in particular, cotton and woollen yarn—rose very much in March. The wool industry is fully occupied. Conditions in the iron and steel branches are so far satisfactory; prices of the heavy iron sorts rose slightly in April; the demand for pig-iron was strong, for wire and thin sheets also active, but for thick sheets weak. As for months past, the railway rolling-stock manufacturers complain of getting insufficient orders.

Last week, after a recovery in the former week, stock averages fell below their low record of April 25th. The main influences were the shortage of money and the unsettled home political situation. The *Frankfurter Zeitung's* index of dividend-payers was 408.51 on May 9th, against 446.68 on May 2nd, and 421.26 on April 25th. Stocks on the 9th were under 50 per cent. of the 824.50 of January 4th.

Home Loans to-day quoted, War Loan, 78; Fours, 435; Three and a-Half per Cents., 215; Threes, 876; Colonial Fours, 1,425; Prussian Threes, 270; Dollar Treasury Bills quoted 78.30, having fallen from 92½ on March 31d; while Gold Loan quoted at par (4,200). The difference is an anomaly, because the 6 per cent. Dollar Bills are redeemable on April 15, 1926, at 120, in gold or cheques on New York, while the 5 per cent. Gold Loan is redeemable in 1932 in paper marks.

Crop conditions are bad. On May 1st (on the basis of two "good," three "middling," and four "low") the winter wheat condition was 3.1, against 2.7 a year ago; winter rye, 3.4, against 2.9; winter barley, 3.3, against 2.8. Owing to frost-damage, 5.5 per cent. of the wheat area has been reploughed, against 0.8 per cent. last year; 9.5 per cent. of rye, against 0.7 per cent.; and 7.1 per cent. of barley, against 0.7 per cent.

German emigrants in 1923 numbered 115,416, against 36,527 in 1922, and 25,843 in 1913.

AUSTRIA.—FINANCIAL CRISIS—PUBLIC FINANCE—BALANCE OF TRADE.

(FROM OUR CORRESPONDENT.)

VIENNA, May 1.

DURING the month of April the events on the Vienna market and their economic consequences have put the political events completely in the background. The Vienna Stock Exchange has suffered one of the most serious crises which has befallen this market. The slump which began in the middle of March has grown to such an extent that not only have some firms got into difficulties, but small investors have lost a considerable part of their fortunes. As a contrast to former crises, the present depression is not so much due to rash over-speculation by the public as to a rather natural result of last year's sudden boom; most of the new bankers and small banks

which came into existence during the inflation period had acquired large blocks of securities, hoping that the "writing-up Bill," repeatedly promised by the Government would cause a further rise; they were then taken aback when the Government dropped the Bill. (The "writing-up Bill" was a Bill by which companies would have the right to revalue their assets on a gold basis and rearrange their capital to correspond to the gold value.) Further, the impossibility of placing new issues and of reducing the onerous rates for money had a paralysing effect on the market, which was finally completely upset by the unfortunate result of the bear speculations in francs. The big banks have now decided to form a syndicate to intervene to avert a *débacle*, and thus prevent a further unjustified fall of values. In this way this syndicate, in which also the Government, with the consent of the Commissioner-General of the League of Nations, Dr Zimmermann, has taken a participation succeeded in controlling the slump to some extent, but it did not prevent the failure of several firms, and some of the smaller banks suffering serious losses; one of them may have to wind up its affairs. The fact that the big banks were sufficiently strong to support the market, and the assistance given by the Government and the Commissioner-General have effected a certain return of confidence, inasmuch as the compulsory registration of the forward liabilities in francs has proved that their size has been much exaggerated. The settlement of the franc liabilities will be done by a clearing office, purposely formed by the National Bank, and this gives a guarantee that no further difficulties will arise from this source. The general situation, however, still remains uncertain, as it is not yet clear whether the worst is really over.

Some instances may be quoted to show the enormous fall of values caused by the recent slump:—

	Market Price—	
	in Summer, 1923.	April 30, 1924.
	Kronen.	Kronen.
Credit-Anstalt shares	359,000 ..	185,000
D.D.S.G. shares	2,700,000 ..	1,100,000
Nordbahn ..	25,300,000 ..	12,000,000
Staatsbahn ..	1,100,000 ..	513,000
Leykam (paper) shares	1,200,000 ..	275,000
Alpine shares.....	890,000 ..	502,000

As a consequence of the economic depression which set in in January, the number of insolvencies has greatly increased as compared with last year; during the period from January 1 to the middle of April there were 69 bankruptcies (as against five during the same period last year) and 493 arrangements with creditors (as against 46 last year). Dealers in leather articles, in textiles and ready-made clothing and provision dealers are chiefly affected. The number of unemployed has slightly decreased, from 126,734 in March to 106,264 in April, owing to the usual revival of the building activity in spring.

The differences between the Government and the Commissioner-General regarding the State employees' problem continue; whilst the latter thinks that a further reduction of the number of State employees is possible, the Government and public opinion are unwilling to take further measures. At the same time the necessity of increasing the salaries of State officials (at present ridiculously low) becomes more and more urgent. Under the pressure of public opinion the Government have, therefore, decided to prepare a readjustment of the salaries and also temporarily to stop the dismissal of officials. In consequence of this the Austrian Commissioner for Public Economy, Dr Hornik (whose main business it was to apply the "axe" against the officials) has retired.

The returns of public revenue have been very satisfactory during the last three months. According to the League of Nations' programme the deficit must not exceed 51.1 milliard paper kronen per month during the third period of reconstruction, i.e., from January 1 to June 30, 1924. As the actual deficit amounted to 79.1 milliard in January, 70 milliard in February, 43 milliard in March, and 32 milliard in April, and the Treasury's estimate for May shows a deficit of only 10 milliard, the average monthly deficit for the first five months amounts to only 39 milliard, i.e., an average per month of 12.1 milliard less than estimated.

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up	\$25,000,000
Surplus	\$25,000,000
Undivided Profits	\$13,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

But as against these good results the adverse balance of trade makes an increasingly gloomy prospect, the deficit for the two first months of this year amounts to 189.5 million gold kronen, as against 99.8 million for the same period last year. It is true that the large excess of imports is partly due to the laying in stores of goods from France owing to the depreciation of the French franc during January and February, so that an improvement of the balance of trade may be hoped for the next months.

CANADA.—THE BUDGET AND TARIFFS—TRADE RETURNS—CROP AND BUSINESS CONDITIONS—IMMIGRATION AND POPULATION—PRICE LEVELS—ABOLITION OF McKENNA DUTIES.

(FROM OUR CORRESPONDENT.)

OTTAWA, April 26.

THE Budget debate, which was interrupted by the Easter recess, has now been resumed at Ottawa, and is unlikely to terminate till the middle of May. The early glow of approbation with which the Progressives and low tariff Liberals greeted the Budget has now abated with the discovery that by a subterfuge the Government have probably increased the totality of protection available to Canadian manufacturers. In the original measure of 1907 the price standards connected with the dumping clauses were very loosely defined, but in 1914 the Borden Government effected some stabilisation by an amendment which provided that the dumping duty would not apply "when the difference between the fair market value and the selling price to the importer in Canada does not exceed 5 per cent. of their fair market value." Especially at a time when there is great difficulty in finding profitable markets, this 5 per cent. differential margin was made extensive use of by British and American exporters, and was a welcome source of relief to the Canadian consumer; but for these very reasons it became an object of great distaste to Canadian manufacturers. Before the late Budget was produced the manufacturers had promised

wholehearted hostility to the King Ministry, if any serious tariff reductions were made, and apparently one of those secret bargains, which are very common in the history of protectionist countries, was struck. At any rate, the 5 per cent. differential was summarily wiped out by an administrative order (Circular No. 321-C of the Department of Customs), which bears the date of April 8th, just two days before the Budget speech was delivered. The vital passage in the order reads as follows:—"From and after April 15, 1924, special or dumping duty shall apply without exemption allowance, under the provisions of section 6 of the Tariff Act, except in respect to goods *bona fide* purchased before April 15, 1924, provided such goods are entered for consumption on or before June 1, 1924." The effect of the change is patent. Formerly British or American goods priced at \$100 for domestic sale could be offered for Canadian import at \$95.10 without incurring the dumping penalties, but henceforth a cut of a single cent will bring the latter into operation. In many lines of goods, especially textiles, there will result an increase of 3 or 4 per cent. in the protection available to local manufacturers, and the sudden abatement of the desperate campaign against the Budget which the Canadian Manufacturers' Association was expected to stage is now intelligible. They have passed some *pro-forma* resolutions of protest, but they have shown no signs of deploying for a pitched battle with the Government. On the other hand, the Progressives, who were at one time ready to give almost unanimous support to the Budget, are now in a very critical mood, and think they have been the victims of a hoax. However, they are very anxious to avert an early election, and although a large element of the party will now vote against the Budget, a sufficient number of the Progressive Party will support it to give the Government a good majority.

Close study of the public accounts reveals that during 1923-24 there was a net addition of \$42,090,690 to the public obligations; this sum compares very favourably with the \$1 million dollars which were added in 1921-22, but is a retrogression compared with 1922-23 when the addition was only 31 millions. Since the earnings of the national railways have lately been showing a sharp downward curve, and the revenues show a parallel tendency on a lesser scale, the prospect of a termination for national deficits is not bright. However, the foreign trade returns for the year are not unsatisfactory. During the last fiscal year ending March 31, 1924, Canada imported goods to the value of \$893,335,491, an increase of 91 million dollars; and exported \$1,045,056,000, an increase of 110 million dollars. For March itself there was a decrease of 5 million dollars in imports, and an increase of 16 millions in exports.

The promise of an early spring has not been maintained. Fine weather at the beginning of April was followed by fierce blizzards and snowstorms both in the East and West. The moisture thus produced will be good for the crops, but in many areas the farmers find the land too wet for cultivation; very little seeding has been done so far in the West, and within another fortnight the limit which makes seeding of wheat a risky enterprise in face of autumn frosts will be reached.

General business is not in a very prosperous condition, and retail merchants declare that their spring trade has been the dulllest experienced for many years. The southward exodus has materially lessened the population in many towns and country districts, and storekeepers have felt the loss of customers. There is a fairly steady stream of immigration pouring into Canada, but a considerable number of the immigrants merely intend to use Canada as a backdoor to enter the United States. At any rate, the American Consul at Toronto recently stated that to his office there had come from Britishers who could not qualify as *bona-fide* Canadians, and thereby escape the quota rule, sufficient applications for passports to fill up the old British quota for July, which was about 15,400. This situation means that many British emigrants are simply making use of Canada as a convenient backdoor to enter the U.S. Moreover, it happens that the new U.S. immigration law increases the British quota by about 48,000 souls, and the fear is now expressed that Canada will thereby lose this number of potential British settlers, and be compelled more and more to rely for the

increase of population which she so badly needs upon foreign blood. Meanwhile the loss of population is a constant subject of discussion. In the calendar year 1923 there entered Canada from all sources 137,320 people, and the American immigration officials collected head-tax from 182,369 Canadians. But this official loss of 45,049 people does not represent anything like the total loss, and measures that will check it are hard to devise. But under the circumstances there should be a careful reconsideration of the immigration policies now pursued for the transplantation of Britain's surplus population to Canada, or a great deal of public money may be wasted for the benefit of the United States.

The price levels are practically stationary. In March the number for exports fell from 151.19 to 150.30, due mainly to declines in the price of dairy products, wood pulp and silver. The number for exports rose from 165.92 to 166.04 as a result chiefly of increases in the values of wool, tin, and coke. The combined index number was 158.17.

The announcement that the MacDonald Government has decided to abolish the McKenna duties is not received with any enthusiasm in certain industrial towns like the border cities, and Oshawa, in Ontario, where the advantage conferred by them had resulted in the expansion of the branches of American corporations located there. The fear is expressed that as the market for motors in the United States shows some signs of saturation, great firms like the Ford Company and General Motors, Limited, when the special preference available to Canadian-made motors disappears, will prefer to reserve all their export orders for their American plants and cut down their Canadian production. There is, however, little concern expressed in Canada about the fate of the preferences offered at the last Imperial Conference by the Baldwin Government, for they offered scant material benefits to Canada.

INDIA.—LORD LYTTON'S TRIUMPH—POSSIBLE FURTHER REFORMS—COAL AND STEEL PRODUCTION.

(FROM OUR CORRESPONDENT.)

CALCUTTA, April 17.

THE irreverent journalist who described the Swarajist Party, in its present plight, as "all dressed up in *khaddar* and nowhere to go," has epitomised the political situation with complete accuracy. Outside the Central Provinces, where the transferred departments have reverted to official control, Swarajist effort has been theatrical, but ineffective. In the case of the Government of India's Budget, "certification" was expected, and provoked no resentment. In Bengal, however, it was both intended and expected to destroy "Dyarchy" wholly and finally. Lord Lytton has risen appreciably in public estimation, and won the reluctant admiration even of his opponents, as a result of his skill and *finesse* in defeating this wrecking policy, the frustration of which, as already hinted, has so bewildered the Gandhi evangelists as to leave them temporarily unpossessed of any definite plan of action. A reversion to the original and unsuccessful policy of boycotting the Reformed Legislatures is, at this stage, neither likely, nor, indeed, practicable. On the other hand, the alternative policy adopted last December of electing a party pledged to paralyse the Constitution by the process of "obstruction" has failed likewise, so much so that it is confidently forecast that when a supplementary estimate is brought forward at the next session of the Bengal Legislature restoring the Ministers' salaries, the former rejection of this item will be cancelled. The triumph is the more noteworthy because it has been based, as far as Lord Lytton was concerned, on a rigid adherence to the spirit, as well as the letter, of the Reformed Constitution, which, in the event, has been discovered to confer greater power upon the Legislature than extremist critics had understood.

It remains to be seen whether an outlet from the political impasse will appear as a result of the inquiry into the working of the Reforms Act promised by the Government of India. For my own part, I would suggest three steps: (a) Provincial Governors to be encouraged to exercise their discretion in transferring further departments to Indian control, as allowed under the present Act; (b) a definite promise of general and complete provincial autonomy not later than 1929, in which year an inquiry with a view to further reforms is already provided for; (c) the inquiry in 1929 to be, in consequence, confined to the investigation of possible reforms in the Government of India, which meanwhile would have its hands full in supervising the transition from Dyarchy to full provincial autonomy. It is obvious that simultaneous reforms in the provincial and central governments would be attended with considerable difficulties. It is equally clear that the result of the impending inquiry cannot be to leave the present distribution of authority unchanged. In such circumstances the above proposals probably represent the maximum advance immediately possible without imperiling India's political stability or hindering its steady economic progress. Reliance on the tactical triumph gained by Lord Lytton would be shortsighted, and might, indeed, revive a latent belief that Constitutional action must inevitably be fruitless, a risk the greater because Swarajist imitation and admiration of the methods of the Irish Sinn Feiners are almost slavish. This is indicated by the course of events. Taking the defeat of the Indian Moderates at the last election as corresponding to the elimination of the old Irish Nationalist Party from the Imperial Parliament, it is not fanciful to discern in "Swarajist obstruction" conduct analogous to the refusal of the Sinn Feiners to take their seats at Westminster. An Indian extremist, perhaps reluctantly, will be apt to argue: "Non-co-operation having failed, obstruction by Constitutional means likewise having failed, there remains, as was the case in Ireland, only the final weapon, *viz.*, force." I merely suggest a possible outlook.

It is highly improbable that there will be any strong opposition to the new import duties on steel which the Government of India will submit to the Legislative Assembly at the May session. Protests will, of course, be registered on behalf of importing interests and consumers generally, but as their chief political champions have fled to London to escape the hot weather, apparently the objections will be perfunctory. The official-cum-Swarajist-cum-Independent alliance on this issue is irresistible, and renders opposition futile. The present duty is 10 per cent., and it has been suggested that an additional 5 per cent. would satisfy the Tata interests provided the yield of the additional duty was devoted to bounties. But to judge from the official invitation issued this week to a number of industries to lay their views before the Tariff Board, the aim of the Government of India is to apply Protection as intensively and extensively as their powers permit.

The coal industry is to be the subject of another inquiry, deficient transport facilities, as usual, forming the provocation—a regularly recurring complaint applicable to almost every industry in India in varying degrees, but to coal most of all. Partly, but not wholly, as a result of this constant inability to send away coal as produced, out of 146 coal companies only 63 are paying dividends. An incidental technical consequence is wasteful mining, lack of funds entailing old-fashioned methods of working. A complication of an inter-imperial character is the heavy importation of subsidised coal from South Africa, the suggestion here being that India should impose an import duty equal to the bounty. As, however, both the cost of producing Indian coal, and its price, have risen about 150 per cent. since 1913, the desirability of rendering coal still dearer by import duties can be viewed by consumers only with dismay. So poor in quality is much Indian coal that 75 per cent. of the Bombay mills now rely on electricity or oil, the remainder, as far as possible, using Natal coal. Other industrial centres, however, are less fortunately situated.

ARGENTINA.—POLITICS—PUBLIC FINANCE—THE GENERAL OUTLOOK—CROP SURPLUSES.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, April 3.

PERPLEXING in a sense though the depreciation of the Argentine dollar must appear, viewed from outside the Republic, it is nevertheless correct to maintain that improvement in the general condition of Argentine affairs is not only constant, but promises to be cumulative. If the sterling quotation remains in the neighbourhood of 42d, many Anglo-Argentine enterprises will be defrauded in their hopes as regards the rate at which they expected to receive remitted profits, but it is not too much to say that improved local movement in business promises to compensate for the loss in exchange. The slight rise in the value of Argentine currency which marked February and the first fortnight of March could not, in the very nature of things, presage anything like the return to par rates so freely predicted by various leaders of important undertakings when addressing their shareholders at the annual general meetings. The wish was father to the thought, and, more remarkable still, the belief that Argentina would in a few months or so be able to remit to Great Britain at or near par frequently accompanied an expression of approval at the decision of this Republic to maintain its prohibition of gold exports. Only by repealing the prohibitive measures can exchange be adjusted, but one hastens to add that the possibilities of such repeal are slight, notwithstanding that the recent addition to the strength of the Socialist Party in the Chamber of Deputies—where they now number some 30 in all—will certainly bring the matter more to the fore during the next session of Congress. The success of this party at the recent polls has been remarkable. It has secured all the available seats vacant for the city of Buenos Aires—thirteen—leaving the Radicals the half-dozen minority vacancies secured to them under the system of proportional representation. At the same time, paradoxical though the statement may appear, this does not mean that the Argentine general public is gradually becoming permeated by the doctrines of Karl Marx and his successors. The inertia and lack of interest in their legislative duties which marked the majority of the Deputies during the last sessions of Congress was so patent as to throw into high relief the assiduous Labour and legislative efforts of the few Socialist members. Their conduct in debate, the manner in which their subjects were prepared, their ability to quote chapter and verse, figures and precedents, made their opponents look foolish to the point of ludicrousness on more than one occasion. In a word, they were, despite their reduced numbers, a most effective opposition, and this year should see a still more striking exhibition, which public opinion undoubtedly hopes will eventually end in forcing the sluggards to bestir themselves for the public benefit. One of the main planks in the Socialist programme is this self-same question of re-opening the Conversion Office and permitting the export of gold, this party holding that the depreciation of the Argentine currency connotes dear living, given the immense sums that this country must pay for its imports and for the service of its foreign debts. Indeed, one is safe in saying that the coming sessions will be marked by the introduction of many important financial measures. Further modification of the Customs dues, the introduction of the tax on incomes, and the early presentation of balanced Budget estimates for the year 1925, are all unofficially promised, though it must be remembered that all can be held up indefinitely by Congressional inertia.

In anticipation, Dr Molina, the Minister of Finance, has published two highly important statements or reports, one dealing with the floating debt and the other with the results of the Treasury's financial year, which was officially closed on March 31st. The former stands at

\$778,444,000 paper, which amount is less by \$96,201,000 paper than the total for December 31, 1923. Consolidation of \$40,000,000 U.S. accounts for the bulk of the reduction. In the matter of the 1923-24 Treasury accounts, the Ministerial statement shows a deficit of \$35,345,000 paper, but—and this is the important point—this is based on actual receipts and expenditure, takes no account on the credit side of the sums due to the National Treasury in the shape of loans made to the Public Works Department, and does not include as a fictitious asset the appropriations authorised by Congress, for which no actual funds were or are available. In a word, it is an honest balance-sheet of the Republic's current finances for the year, and, conjointly with the floating debt statement, has made a highly favourable impression in financial and commercial circles here. Provided that total, or even partial, consolidation of the short-date loans can be satisfactorily arranged, and the balance of Argentina's payments brought within some measure of control, prospects are decidedly bright.

Collaborative evidence is also afforded by the recently published banking statistics giving the totals for February 29th, the last previous publication by the Ministry of Finance being those covering the position on September 30, 1923. In the interval there has been a slight drop in deposits, just a million dollars paper, while cash in hand shows a drop of \$19,000,000 gold and \$223,000,000 paper. Discounts and advances, on the contrary, rise by \$1,200,000 gold and \$266,000,000 paper, all these changes being directly traceable to the rearrangement of the affairs of a local institution which has lost \$197,000,000 paper in deposits between the dates named. And while it is perhaps hazardous to say that all danger is past, the general impression is that the Argentine banking position has come very well out of what might easily have proved a most serious set-back to credit and the movement of trade in general. That there is greater firmness in the local money market to-day is true, 7 per cent. for single name advances and 5½ to 7 per cent. for the discount of lists of commercial acceptances being readily obtained; but with the profitable position of producers before one, and the decided revival in the import trade beyond all dispute, a slight check on what people are already beginning to refer to as a coming boom is eminently desirable. If the Government do manage to pass their measures for local consolidation by insisting on the banks holding a certain amount of national bonds against their deposits, this stringency will certainly be still more pronounced, but, one repeats, it will even so connote a far more healthy position than would a continuance of the recent glut of funds—dangerous at any time, and doubly so when the country is preparing for a new period of productive activity with the proceeds of an exceptionally large and well sold harvest, figuratively speaking, in its pocket. Latest estimates of exportable surpluses are: Wheat, 4,800,000 tons; maize, 5,500,000 tons; linseed, 1,250,000 tons. Of these, 1,650,000 tons of wheat, 150,000 tons of maize, and 565,000 tons of linseed have been shipped, leaving available for shipment 3,150,000 tons of wheat, 5,350,000 tons of maize, and 685,000 tons of linseed.

Letters to the Editor.

SHORTER HOURS AND NATIONAL PRODUCTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have re-read with great interest Professor Bowley's article in the *Nation* of April 19th, and his comments on the views expressed in the *Economist* as to the rate of national production in 1923 as compared with 1913.

The issue raised, i.e., how far in industry generally the reduction in hours in the last decade has been counteracted by other tendencies, is, in the lamentable absence of a census of production, extremely difficult to determine. In some industries it is maintained that a reduction in hours has been accompanied by a corresponding reduction in output; in others, that this has not been the case. The problem to be dealt with is, therefore, the rela-

tive number and importance of those industries which fall in the first group or in the second.

It appears to me that the tendencies counteracting the effects of a reduction in hours may be roughly divided into three groups:—

1. Increased effort.
2. Better organisation and management in the widest sense of the term.
3. Mechanical development.

The point to be decided is how far any or all of these lines of advance (regardless of whether they are the result of normal progress and research, or whether they have been stimulated by shorter hours and other post-war conditions) have made good in general output the reduction in hours.

Professor Bowley says: "Where machinery..... is little used, as in building and an infinity of small industries..... in railway and road transport, it is very difficult to believe that output per hour has seriously increased."

On the ground that I speak from experience of an organisation which, though employing about 10,000 people, belongs to one of the "small industries," that in it there is a large proportion of people engaged on entirely hand work, and also that distribution and transport are an important part of our functions, I should like to make the following comments:—

No. 1.—*Comparison of effort per Hour between 1913 and 1923.*

In this period our hours have been reduced from 47 to 44. It is difficult to submit actual statistical evidence, but I attach one or two figures which show, what I believe is our general experience, that effort under certain circumstances has increased output almost in proportion to the reduction in hours. These circumstances are—

- (a) That the output of each operative is dependent on his or her own individual effort, and is not governed by any mechanical process.
- (b) That payment by results on an individual piece-rate system operates.
- (c) Confidence that if workers "open out" and produce to the maximum of their ability piece rates will not be cut.

Although the tendencies to increase output have been roughly divided into three groups, it is almost impossible in practice to find examples of the isolated effect of any one of them by itself unaffected by either of the other two. I have tried to find instances where No. 1 predominates, but even in the most conspicuous cases it will be noticed that the other two groups have a very marked effect.

There is one further point to be noted in this connection. In some cases the present output has involved increased effort rather than caused it; it has been the result of and consequent upon improved organisation rather than an original cause, but a necessary condition for the increased output to be forthcoming.

No. 2.—*Better Organisation and Management.*

Under this I include such things as more careful routine, planning of work, vocational selection and scientific training of new employees, motion study, time study, &c. As with No. 1, it is difficult to give an example unaffected by either of the other two tendencies.

No. 3.—*Mechanical Development.*

During the last 10 years in this direction, rather than either of the others, I should say that progress will have varied most widely from industry to industry. It has been obviously much more marked, for instance, in automobile engineering than in textiles. In regard to cocoa and chocolate, as an example of the usually unclassified trades, I should say that mechanical development during the last decade has been at least equivalent to 10 per cent. In the output figures I attach I have again tried to find examples where mechanical development has played a predominant part.

Examination of the following figures shows very varying rates of increase in hourly output, and one would hesitate to say what the average for this firm as a whole has been. It is also necessary to take into account a certain increase, necessarily involved by closer organisation, in non-direct producing wages. But allowing for this, I am

fully convinced that the three tendencies enumerated have, over the last ten years, more than counterbalanced the reduction in hours.

Operation.	General Increase per Employee per Hour, 1913-23.	1. Due to Increased Effort.	2. Due to Improved Organisation.	3. Due to Mechanical Development.
Distribution by road transport.....	27	15	12	18
Cocoa process.....	47	15	12	20
Chocolate process.....	39	15	18	6
Chocolate wrapping.....	27	10	12	5
Chocolate (hand).....	27	12	12	3
Chocolate (machine).....	15	5	5	5

Finally, may I say a word on the subject of remedies. For increased effort (which, in my opinion, necessarily entails individual payment by results, &c.), for better organisation (time and motion study, &c.), and even, in some trades, for the adoption of improved mechanical processes, a new attitude on the part of several trade unions is necessary. The problem of increasing the national income is therefore by no means one for capital alone to face; almost equal responsibility rests with organised labour, particularly where craft lines of demarcation are most pronounced.—Yours truly,

L. J. CADBURY.

Bournville, May 7th, 1924.

WEMBLEY AND ROME.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your Casual Visitor to Wembley is mistaken in thinking that it was a globe-trotter who did Rome between two trains. It was that distinguished scholar, William Johnson (afterwards Cory), accompanied by a pupil who has since been Prime Minister. They had six hours at their disposal, and to save time employed neither guide nor guide-book. When they got home, Mr Johnson consulted Baedeker, and was unable to discover that they had missed anything. This, of course, was in the 'sixties.

The only thing that Mr Johnson thought remarkable about the feat was that they visited the grave of Keats twice.—Your obedient servant,

HUMPHREY PAUL.

Reform Club, Pall Mall, S.W. 1, May 10th, 1924.

HOME RAILWAY DECREASES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Having regard to the large decreases up to date on the three heavy groups, it seems time for shareholders to attempt to stir up directors to make some move to bring down working expenses, and as coal is an important item, it seems to me it would be a step in this direction if the railway companies would devote half of their old reserves (which amount to 60 million pounds) to purchasing coal areas, with powers to sell to the outside public. They could doubtless earn 10 per cent. on this venture. In this way not only would the railway companies effect large savings, but a considerable impetus would be given to trade all round by a substantial reduction in the exorbitant price of coal—a monstrous swindle, and drain on our pockets.

HOLDING COMPANIES.*

THE term "holding company" describes a company whose function it is to hold the shares or stock of one or more concerns with the intention of controlling their operations. A holding company is thus clearly distinguishable from the ordinary trust or investment company; the latter holds investments chiefly as an investor in order that it may receive the dividends. A holding or parent company acquires the whole or a controlling interest in the share capital of one or more distinct businesses, thus for practical purposes effectually amalgamating them and consolidating their interests, while at the same time each of the separate undertakings continues its own sphere of

operations and retains its existence as a separate entity. These separate concerns are known as subsidiary or constituent undertakings.

Holding companies were almost unknown in this country until recent years. Some present-day examples are British-American Tobacco Company, Limited, Courtaulds, Limited, Underground Electric Railways Company of London, Limited, and many others. The property of some of these holding companies runs into many millions sterling, and this book is particularly concerned with the important question of the proper method of presenting the figures in the annual balance-sheet issued to shareholders. The subject is full of difficulties. In this country it is usual to publish only the holding company's balance-sheet and profit and loss account, showing the interest in subsidiary companies as an investment, and this is all that is legally necessary for the directors to publish. But it is certain that this legal balance-sheet, unaccompanied by any further particulars concerning the general position of the allied undertakings, really does not give the shareholders the information to which they are fairly entitled. Sir Gilbert Garnsey writes with special knowledge of the subject, and he thinks—and we agree with his view—that the legal balance-sheet should be supplemented either by an aggregated statement of the assets and liabilities of all the undertakings, including the holding company, or by a statement of the total assets and liabilities of all the subsidiary enterprises, whichever may seem the most appropriate in each particular case; and clear examples of the various forms are presented. The shareholders would then be able to see the financial position of the parent company in its relationship to shareholders and creditors, and also the combined results as a single organisation.

Large sums representing nothing but goodwill are often included in the cost of shares acquired by holding companies, but it is seldom that any reference to goodwill is found in a holding company's balance-sheet. Goodwill is nothing but the present value of expected future super-profit—namely, annual profit expected to be earned over and above the normal reward of the necessary services of management and material capital, and the cost of goodwill should be suitably written down out of that future super-profit as it is received. Sir Gilbert Garnsey is content, however, to suggest that a note should appear in the holding company's balance-sheet against the shares in subsidiary companies stating that the figure includes goodwill to an amount specified. This work presents a particularly clear and valuable study of the subject, and it should be in the hands of all interested in this type of undertaking.

NATIONALISM IN INDIA.*

THIS book is profoundly interesting, full of information and anecdote, and decidedly discouraging. After sixteen years of experience as an official in Southern India, Mr Gwynn came home, and was sent out in 1922 by the *Manchester Guardian* to travel in the most actively Nationalist districts, and ascertain the feelings of their people. He deals very fully with the many features and elements of the Swaraj movement, with native business opinion in Bombay and popular sentiment among the Mahrattas and in Gujerat, with the agitation in Bardoli, Mr Ghandi's special field of action, and Ahmedabad, his headquarters; with the discordant elements in the Punjab, the United Provinces, and Oudh; with the native Christians, of whom the younger generation is now violently Nationalist; and (rather cursorily) with Bengal, whose population has recently become tougher and has developed a Nationalism of its own; and with Mohammedan opinion everywhere. Invariably among the educated classes and the townspeople, and also in large rural areas, he finds acute resentment against British rule and im-

* "Indian Politics." By J. T. Gwynn. Introduction by Lord Meston, K.C.S.I. (London) Nisbet and Co., Limited, 1924. 12s 6d net.

patience with the alleged inadequacy of the reforms. Since 1922, of course, the situation has developed, though not for the better, except so far as Mohammedan feeling, which jealousy of the Hindus renders less acutely Nationalist, may have been modified by recent developments in Turkey and possibly in Iraq; but the prospect is not encouraging, and the damage done to education by the withdrawal of pupils from the Government schools to Swaraj schools, where students waste part of their time in counteracting British industry by spinning and weaving, is very grave indeed. India, he concludes, would be saved by a British "change of heart," suppressing the sentiment of racial inequality; but though provincial autonomy and the Indianisation of the services would satisfy the Moderates and many "Non-Co-operators," it would be ineffective unless the army, of whose feelings little is known, could be also nationalised—a dangerous course both for Britain and for India; while "Indianising" the Services, with native control of the police, is regarded even by many Indians as a change for the worse. Yet India, with her many divergent components, social, racial, religious, and political, cannot at present stand alone. He expects an interval of passive resentment, followed by renewed and more vigorous agitation; and he propounds a plan for so using the respite as to avert a catastrophe. The book leaves the reader with a sense of the tremendous responsibility which will be incurred by any official or non-official Englishman who aids by speech or action in widening the breach between Great Britain and India.

ARBITRATION IN THE NEW WORLD.*

THIS handsome volume contains 228 arbitration treaties or arbitral clauses of other treaties signed by or between American Powers and duly ratified from 1822 to 1910 inclusive. The translations have either been specially made or carefully revised, and there are many useful footnotes. The editor, who is attached to the Latin-American division of the U.S. State Department, invites criticism and further information, especially as to whether some of the treaties were actually ratified; but even should some correction be required, the book will be of the highest value to publicists and students, especially those concerned with the obscure history of Spanish-America.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET, May 21. | ACCOUNT, May 22.

Dealings started this week in the new 4½ per cent. Conversion stock, which is the outcome of the offer made at the beginning of last month by the Government to holders of 5 per cent. War Loan that they should exchange £100 of their stock for £103 of the new issue. The price of the 4½ per cent. Conversion opened at 97½, declined a trifle, and then rallied. Its advent has had no effect upon other securities in this market, the prices of which continue to maintain a tolerable steadiness, although there has not been a rush during the past few days to buy investment securities.

The New Zealand 4½ per cent. stock offered at 95, and promptly subscribed, is quoted just over par. The North Wales Power 4½ per cent. debenture, which came out at the comparatively high price of 95½, was subscribed in advance of the full time to which the lists could remain open. Money is available in fairly large amounts for investment, but business in this direction suffered a check by reason of the result of the French elections, the resignation of Monsieur Poincaré, and the consequent fall in the value of the franc. As the French exchange recovered, so the temper of Stock Exchange markets improved. Most members of the House will admit, however, that less interest has been shown in stocks and shares than in the drawing for the £100,000 Stock Exchange Derby Sweepstake, the results of which were announced on Thursday morning.

Foreign bonds make a good market, with rises in Argentine, Brazilian, Siamese, Chilean, Japanese, and a fair number of foreign municipal bonds. Chinese 8 per cents. of both issues have advanced substantially. French bonds moved upwards, after a dip on the drop in the French exchange. Russians are lower, and interest in Germans remains dormant. A new Czechoslovak loan is expected.

Home Railway stocks fail to attract any particular amount of public attention, Metropolitans being the only stock in the list to show noticeable improvement on the week. Other stocks are moving languidly. The traffic returns are too discouraging to cause buying of the stocks. Pre-ordinary descriptions keep very steady. Various Brazilian rails are better, while Argentines have shown a sagging tendency for lack of interest. The Nitrate market is tolerably hard, but dealers confess that the public are paying no particular attention to their list, in spite of the cheerful prospects which the industry carries.

Another drop in the price of raw rubber caused weakness throughout the share price-list, though without bringing in many sellers. The Rubber Trust dividend of 7½ per cent. is regarded as fairly satisfactory. The names are published of the committee which is to formulate a scheme for the inauguration of a central selling agency, but the slump in the price of rubber is causing widespread uneasiness and perplexity. In the Oil market, the lively gamble in British controlled shares of both classes was resumed, taking prices higher, but a cut in the price of crude oil rather damped the list as a whole. Lobitos suffered a sharp fall on Thursday. The Tea market has been again booming, although here and there a tendency is noticeable to take profits. The Eastern Assam is paying 50 per cent. dividend for the year, the same rate as that for 1922, but is distributing a bonus of share for share. The defeat of Mr. Baldwin's motion, that it is inexpedient to remove the McKenna duties, led to depression in the motor share market. Tobacco shares are uninteresting.

Crosses and Winkworth preference fell back, on the report, and textiles as a whole are not very bright, business in the shares running on strictly retail lines. Insurance, banking and trust companies' issues forge steadily ahead. The Shipping market is firm. Vickers gave way, on the announcement that there will be no dividend on the ordinary shares for last year. This exercised an unfavourable effect upon the iron and steel group as a whole. Exhibition shares, including those in hotel, catering and stores companies, remain in favour, and gas stocks are better, while the electrical market

shows scarcely a change. Marconis remain dull, in contrast to the strength shown by cable stocks and shares.

The Kafir market has resigned itself to the probability of doing little business until the Transvaal elections in June are out of the way. Prices are moderately steady. There is no outstanding feature. Canadian mines went better, upon an advance in Huronian Belts. Mexicans hardened a trifle, upon a mild inquiry for some of the principal shares. No recovery worth mentioning has occurred amongst the tin share markets. Diamond and copper shares have leaned, as usual, upon Paris, the prices moving up and down in sympathy with the fluctuations in exchange.

NEW ISSUES.

Eastbourne Corporation.—Issue of £250,000 4½ per cent. redeemable stock, 1945-1960. This loan is with the sanction of the Ministry of Health, and is authorised by the provisions of Parliament. Interest is payable half-yearly June 1st and December 1st. The stock is redeemable at par on March 31, 1960, or at the option of the corporation on or after March 31, 1945, on giving three calendar months' notice. The stock will be registered in the books kept by the Borough Treasurer, Town Hall, Eastbourne, who has been appointed registrar of this stock. It will be transferable by deed, free of stamp duty, and will be charged upon all the revenues of the corporation. The proceeds of the proposed issue of stock will be applied to meet new capital expenditure for the extension of the electricity undertaking, new parks and pleasure grounds, sewage works, street improvements, housing, &c. The population of the county borough of Eastbourne was 62,030 at the last census, and the present rateable value is £516,245. The total rates for the current financial year to March 31, 1925, are 9s in the £. A rate of one penny in the £ will produce £2,100. The outstanding debt at March 31, 1924, after allowing for sinking fund in hand, was £720,104. The corporation is negotiating the sale of the stock at the price of £95 per cent. These details are taken from a newspaper advertisement headed: "This statement is advertised in compliance with the regulations of the Committee of the Stock Exchange, London, in connection with an application for leave to deal in the stock mentioned below, and is for information only, and is not an invitation to subscribe for stock." But when shall we see the prospectus?

North Wales Power Co., Limited.—Authorised share capital £1,000,000, of which £705,185 has been issued. The total authorised loan capital is £1,979,530, of which £279,530 has already been issued in the form of 8 per cent. "B" debentures. This is an issue of 4½ per cent. guaranteed debenture stock at 95½, being part of an issue of £1,700,000. Principal and interest are guaranteed by his Majesty's Government under the Trade Facilities Acts. The stock will be repayable over the years 1930 to 1953 by the operation of a cumulative sinking fund to be applied in purchasing stock at or under par, or redeeming at par stock chasing stock at or under par, or redeeming at par stock selected by drawings. Power is reserved to the company to redeem the stock outstanding at par, on or after May 1, 1934, subject to three months' notice. Stock not previously

redeemed will be repaid at par on November 1, 1953. The company, formerly known as the North Wales Power and Traction Company, Limited, was incorporated in 1903, and operated under statutory powers in England or Wales. Its area of distribution is now approximately 4,000 square miles. The revenue of the company is not shown in the prospectus, but this, perhaps, is only of secondary importance in the case of an issue which has secured the protection of the Trade Facilities Acts. An excellent investment.

Beira Town Sites, Limited.—Authorised capital £50,000 divided into 200,000 shares of 5s each, all of which have been issued, of which 148,028 are fully paid and 51,972 are 6d paid. Permission is being applied for to deal on the London Stock Exchange in the 148,028 fully paid shares of the company. The following details are taken from the public press in connection with this application. The company was formed in 1903, and acquired a tract of land of an area of 335 hectares or 836 acres at Beira adjoining the port. Through the land run two good main roads, along one of which two light railways have been laid by the Government. Fully paid shares to the nominal value of £37,000 were allotted in consideration for the transfer of the land and the payment of £1,000 in cash to the company under an agreement dated October 13, 1903. The company sold none of its land until 1921. Since that date 30 acres have been sold for £17,075 (which sum represents 34 per cent. of the capital of the company), leaving still in its hands over 800 acres. Of the 30 acres sold, 17 1-3 acres have been sold for £10,500 since the beginning of last December. When the uncalled balance on the partly-paid shares is called and paid up, the company will have additional cash funds to the amount of £11,600 representing 23 per cent. of the capital. But we have no prospectus to guide us further.

The Devon and Cornwall Farmers' Bacon Factory, Limited.—Estimated capital £25,000, in shares of £1 each. This is a proposed co-operative society, controlled by agriculturists, for establishing a bacon-curing and pig by-product factory. "All profits accruing to the society after payment of general expenses and other outgoings will belong to its farmer members." It is estimated that the cost of the factory will absorb £16,500, and that £8,500 will be needed for working capital. The £1 shares will carry interest at the rate of 6 per cent., and members are invited to subscribe up to a limit of 200 shares each. There are many interesting details in the prospectus, and the scheme proposed is ingenious. The organiser of this undertaking, in a letter to the *Economist*, states that "This society is being formed in accordance with a scheme of mine, having for its object the establishment of Farmers' Co-operative Bacon Factories to serve certain wide areas in England and Wales, in which the pig population is large enough to afford the factories the supplies they require." He adds that "it is anticipated that these farmers' factories, whilst maintaining their individuality, will be federated into one body, marketing their produce and purchasing their requirements collectively." We wish the organiser success in his task.

The Hesse Gas Company.—Authorised stock capital £50,000, of which £30,000 has been issued. Of the borrowed capital, £15,000 has been issued, as against £25,000 authorised. The stock capital includes £13,994 6 per cent. preference stock. The net revenue of the undertaking for its last financial year was £6,412, which was sufficient to cover the debenture interest, dividend on the preference stock, and to provide a dividend at the rate of £10 16s per cent. This is an offer for sale by tender of £10,000 additional capital stock at the minimum price of £137 10s per £100. This stock ranks for a standard dividend of 8 per cent., subject to the sliding scale. The minimum price is based on the dividend of £10 16s per cent. already mentioned. The sliding scale might work, it is pointed out, so that stockholders became entitled to a dividend of £13 8s per cent. For a public utility undertaking, the offer must be regarded as not without the speculative element.

The Blue Bird Motor Company (1924), Limited.—Capital £175,000, divided into 160,000 8 per cent. cumulative participating preference shares of £1 each and 300,000 ordinary shares of 1s each. This is an issue of 160,000 8 per cent. cumulative participating preference shares and 64,000 ordinary shares, at par. Subscribers of preference shares are entitled to have two ordinary shares for five preference shares allotted. The company has been formed to acquire the Blue Bird Motor Company, which carries on the business of hiring out motor cars and supplying petrol and oil. Assets are valued at £50,500, payable as to £11,800 in ordinary shares, and the balance in preference shares or cash, at the option of the directors. Those responsible for drawing up the prospectus apparently do not appreciate the necessity for showing what past profits have been. The undertaking was established in 1913, yet no profits are given. In the absence of such information, the appeal to the public is based upon "expectations." Catering for the needs of motor users in this country is clearly a rapidly growing business. This company believes that it will attract a large trade by cutting the price of petrol. Whether this can be kept up in competition

Finally, the directors had decided to increase the rate of interim bonus until further notice. This, under ordinary tables, is to be

at the same rate as the bonus now declared. Thus they would place the policyholders of the company in a not less favourable position than if an annual valuation were made and a bonus declared.

HUNDRED YEARS OF PROGRESS.

Briefly detailing the development of the company in its hundred years' existence, he said that the figures for each quarter-century of their history were interesting. In 1849 the income was £77,000 and the funds were £290,000; in 1874, income £128,000, funds £580,000; in 1899, income £256,000, funds £1,102,000; in 1924, income £3,109,000, funds £7,113,000. As the income increased and with it a corresponding liability, so had the funds. A point that had always had the careful consideration of the company—and during the last quarter of a century representing the greatest growth of the company—the reserves had kept pace with the liability, broadly speaking. He did not include the life department fund, which is calculated on a scientific actuarial basis.

Sir George Duncombe, Bart., seconded; the resolution was carried unanimously.

LONDON LIFE ASSOCIATION, LIMITED. WITH-PROFIT POLICIES.

The annual general meeting of the London Life Association, Limited, and of the Clergy Mutual Assurance Society was held, on the 14th instant, at 81, King William Street, London, Mr Reginald B. Jacob (the president) presiding.

The actuary and manager (Mr Harold M. Trouncer, M.A., F.I.A.), having read the notice convening the meeting and the report of the auditors,

The president, in the course of his speech, alluded to the increase of the total funds by £548,000, the strong reserves, the very satisfactory new assurances of £1,625,000, being an increase of £55,000, and the reduction in the expense ratio to £5 9s per cent. He then passed on to the consideration of the results of the year as affecting with-profit policyholders, and proceeded to deal first with the reduction-of-premium system of the London Life.

REDUCTION-OF-PREMIUM SYSTEM.

He said: I would remind you that this is the main system on which the prosperity and popularity of the London Life were built up. It is no exaggeration to say that the elasticity of this provides one of the greatest safeguards that any office possesses. Let me emphasise this point. Rates of reduction are declared for the year only, and, if urgent necessity demanded it, they could be decreased in the future (except where they have reached 100 per cent.). Our predecessors were, however, wise in not declaring rates of reduction without making provision in the valuation for their continuance throughout the life of every policy concerned. As a consequence, when the Great War broke out we held as a reserve for the continuance of the then current rates of reduction no less than £2,670,000. For many years a steady policy of strengthening reserves had been carried out, and we actually had in view the prospect of larger annual increases in the rates of reduction when we were suddenly faced with the financial problems of the war. We could, of course, have met the depreciation in the value of securities by decreasing rates of reduction. That would have been a strong measure, but would it have been fair to our older members? We thought not, and we decided that we would do nothing dramatic, but rather endeavour to help our members by maintaining the gradual increase in rates of reduction and use part of the reserves, which our predecessors had built up, to meet the emergency of the moment. I look back with pride on our history during the war. We were not only successful in increasing the rates of reduction, but during the last few years we have gradually replaced the reserves, and you will notice in the report that we have once more been able to make provision in the valuation for the continuance of the full rates of reduction declared. Our position is now stronger than ever, and it is with great pleasure that the directors have been able to declare an increase of two, instead of one, in the rates of reduction. From what I have said you will understand that the larger increase in the rates is in no sense to make up for any deficiency in past years; it is carrying out what was looked forward to before the war.

REVERSIONARY BONUS SYSTEM.

I am glad to say that the reversionary bonus system of the London Life furnishes another example of the benefits of continuity. In each year since it was started in 1914 a compound reversionary bonus of 35s per cent. of the sums assured and existing bonuses has been declared. This is, indeed, no mean achievement, especially when the lowness of the premiums charged is taken into account. This system was started in troublous times, and we watched its development with anxiety, but it has now grown to manhood, and we are proud of its strength and success.

Turning to the consideration of the position of the members

of the Clergy Mutual, I do so with very great pleasure. Their future prospects are well assured, and the directors hope that the substantial increases in the rates of bonus which they have been able to declare will be appreciated. From the time the two companies became associated the directors had full confidence in the future prospects of the Clergy Mutual, but it is one thing to be confident of the future and another to justify that confidence. Happily, success has come sooner than we anticipated. The problem was not only the declaration of bonuses, but of making as sure as we reasonably could of being able to continue to declare bonuses and gradually to increase the rates. By the system of valuation which we adopted we made, as we believed, adequate provision for the declaration each year of the same rates of bonus during the continuance of every policy. Time has justified our expectation, and we are able this year to declare a reversionary bonus on whole-life policies of 34s per cent. of the sums assured for all ages up to 65 (increasing for each age over 65, as set out in the report), and on endowment assurances a reversionary bonus of 38s per cent. of the sum assured. At the same time, the basis of the valuation is a strong one, and we do not regard the declarations of bonuses as having yet attained the maximum.

The report and accounts of the respective institutions were unanimously adopted, and a cordial vote of thanks was passed to the president and directors.

ALLIANCE ASSURANCE COMPANY, LIMITED.

CENTENARY YEAR—BONUS TO SHAREHOLDERS AND STAFF.

The annual general court of the Alliance Assurance Company, Limited, was held, on the 14th instant, at the head office, Bartholomew Lane, London.

Mr Charles Edward Barnett, chairman of the company, presided.

The secretary (Mr Sidney T. Smith) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that in the life department the new net business during 1923 amounted to £2,058,620, at annual premiums of £78,345 and single premiums of £24,993. The claims by death were exceptionally light, and generally the year was a very profitable one in this department. The results of the 20th quinquennial valuation, made at the close of the year, showed that the position of the department was stronger than ever before in the history of the company. Notwithstanding the increased reserves made, the available surplus amounted to the large sum of £1,412,956. After transferring the shareholders' proportion—namely, £170,469—to the profit and loss account and allotting bonuses to the policyholders at substantially higher rates than in the past, there was a balance of £272,467 to be carried forward to the next valuation.

In the fire department there had been some falling off in income, accounted for by the fall in the value of commodities and the still unsatisfactory condition of trade. The loss ratio had been very satisfactory, and there had been a slight reduction in the ratio of expenditure. The additional reserve had been strengthened by £136,853, making it £1,650,000, and £272,828, which included the interest earned on the fire fund, had been carried to profit and loss account.

The premium income in the marine department showed a reduction, due to caution in restricting acceptances until the outlook for marine insurance became more promising. At the beginning of the year there was a balance on 1921 account of £181,162, which had been reduced by further payments during the year to £124,324; £75,000 of this had been set aside as a provision for further claims for that year, and £49,324 had been transferred to profit and loss account, together with £47,301, interest on the marine insurance fund. At present it was difficult to estimate the results for 1922 and 1923, but the directors had no reason to expect that they would be unfavourable.

ACCIDENT PREMIUM INCOME A RECORD.

The premium income of the combined accident accounts was £602,225—the highest figure recorded since the department was inaugurated in 1907—and, having regard to the industrial conditions existing throughout the year, the increase of over £26,000 might be considered satisfactory. The income from employers' liability business had again declined, but he hoped that the low-water mark had been passed, and that, with reviving trade, the volume of business in this section would recover. The other classes of business transacted in the accident department—such as motor-car, burglary, fidelity guarantee, &c.—were being steadily developed, and as a result of the year's working a satisfactory profit had been made.

PROFIT AND LOSS ACCOUNT.

With regard to the profit and loss account, they had brought in from the various underwriting accounts the following sums, derived from profit and interest on the funds:—Fire, £472,828; marine, £96,626; miscellaneous, £55,377; employers' liability, £98,636. The shareholders' proportion of the quinquennial profit

of the Alliance life department amounted to £170,469. The quinquennial valuation of the economic fund showed a surplus sufficient to provide the usual bonus, at the rate of £1 6s per cent., to the participating policyholders, and to repay the amount advanced by the Alliance in 1918. A sum of £250,000 had been applied in writing down the cost of the shares of the National Boiler and General Insurance Company, which would now stand in the books at £486,797. The business of that company was progressing satisfactorily, and the directors were satisfied that the acquisition would prove of permanent value to the Alliance. The balance carried forward on profit and loss account amounted to £1,463,561, as compared with £1,025,422 a year ago. To mark the centenary it was proposed to pay a bonus dividend to the shareholders, and also a generous bonus to the staff and employees of the company.

The total assets of the company amounted to £27,862,027, and each of the Stock Exchange securities stood in the books at or below the market value on December 31st last. He was happy to say that the market values were now considerably higher than the book values.

The report and accounts were unanimously adopted, and a final dividend, making 14s per share for the year 1923, was declared, together with a special bonus dividend of 6s per share, both less income-tax.

UNITED BRITISH INSURANCE COMPANY, LIMITED. GRATIFYING INCREASE OF BUSINESS.

The ordinary general meeting of the United British Insurance Company, Limited, was held, on the 14th instant, at the Caxton Hall, London, S.W., Mr C. H. Dodd (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, referred first to the change which had taken place in the directorate since the last meeting. Dealing with the accounts of the various departments of the business, the Chairman said that the premium in the fire insurance account had risen from £262,000 to £271,000, which was a fairly substantial increase considering present conditions. The loss ratio had fallen from 64.7 per cent. to 58.6 per cent., commission and expenses were slightly down, and, after making the usual reserve of 40 per cent. for unexpired risks, the sum of £3,381 was transferred to profit and loss account. That was not such a large figure as in the previous year, but for that year there had been a very big fall in income over the preceding year, and a lesser sum had had to be carried then to reserve. The main feature of the account was that the ratio of claims was considerably lower than the year before.

RESULTS OF VARIOUS DEPARTMENTS.

Premiums in the employers' liability insurance account showed an increase of about £500; the ratio of claims was 39.5 per cent., as against 37.7 per cent., but savings had been made in commission and expenses of management, and, after making the usual reserves, there was a transfer to profit and loss account of £1,284, as against £977 last year. The account, though small, was showing steady and continuous progress. The motor and general insurance account also showed better figures, the premiums being £99,000, as against £96,000. The claims ratio was, however, rather more than last year at 51.5 per cent., as against 48.2 per cent. Savings in commission and management had been effected, and the result was a transfer to profit and loss account of £4,081, as against £4,724 last year. The premiums in the marine account were considerably lower than last year, in accordance with the expressed wish and desire of the directors, who had felt that in present conditions the safest

thing to do was to write a small but safe account and not to attempt to go out for premium income. The board had thought it wise to make no transfer to profit and loss account. The life insurance and annuity account showed steady increase; the total funds were now £41,000, against £36,000 last year. That account was necessarily slow of growth, but in due course would, no doubt, increase to big proportions. The balance-sheet was very much the same as a year ago. The funds were lower, but that was accounted for by the fall in the marine premium income.

PROFIT AND LOSS ACCOUNTS.

The profit and loss account showed that they had a balance from the previous year of £76,284. In addition to the transfers from the various accounts to which he had referred, they had received the sum of £49,892 in interest, dividends, rents, &c., and also £52,651 as refund of overpaid excess profits duty. On the other side of the accounts, dividend for 1922 had absorbed £51,625, there was an addition to tax reserve fund of £60,000, a loss on exchange of £2,495, and a small transfer of £700 to the accident fund, to which he had already referred. That left a balance of £78,231; out of that an interim dividend of 7½ per cent. had already been paid, and the board now recommended a final dividend of 7½ per cent., making 15 per cent. for the year. That would enable them to carry forward the sum of £32,106, as against £24,659 last year.

The board would like to have maintained or even to have increased the dividend paid in the previous year, but they had come to the conclusion that, in all the circumstances, it was wiser to keep the dividend within the amount received by way of interest and dividends on the invested funds of the company, and not to encroach in any way upon the earnings of the different accounts. He felt sure that shareholders would agree with the board that, in view of the present conditions, a conservative policy was the best.

As a fact, the figures disclosed were, in the circumstances, very satisfactory; save in the case of the marine department, which the board wished should be decreased, every department showed an increase on the figures of last year, and it was very encouraging to feel that the company had been able to hold its own in the face of the very severe competition now to be faced for all classes of business. It was gratifying to be able to say, also, that since the close of the year both the motor and the accident branches had shown quite a substantial increase over last year's figures.

Mr W. Rees Jeffreys seconded the motion, which, after some discussion, was carried.

The remaining formal business was then transacted.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY. A VERY PROSPEROUS YEAR.

The ninety-third annual meeting of the Scottish Equitable Life Assurance Society was held, on the 8th instant, in Edinburgh.

The Chairman (Mr D. A. Stevenson), in moving the adoption of the annual report, said:—The total business shown cannot be considered anything but satisfactory, exceeding, as it does, the amount for the corresponding year of last quinquennium by nearly £400,000, or an increase of 40 per cent. on what was then a record new business for the society. The quality also of our new business has been good, inasmuch as it has, unlike that of many of our competitors, been subjected to the same severe tests before being placed on the books, as has always been the case with the business of the society.

The average rate of interest realised upon our investments, after deduction of tax, remains practically steady at very nearly 4½ per cent., and thus provides a margin for accumulation of profit

The Anglo-South American Bank Ltd.

Head Office: 62, Old Broad Street, London, E.C. 2.

Authorised Capital . £10,000,000	Issued and Paid-up . £4,367,330
Subscribed Capital . £8,734,660	Reserve Fund . £4,000,000

The Bank, in addition to having 6 branches in SPAIN, has, with its
AFFILIATED INSTITUTIONS
THE BRITISH BANK OF SOUTH AMERICA, LTD., and
THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.
55 offices in the principal countries of LATIN AMERICA.

AUXILIARIES:
ANGLO SOUTH AMERICAN TRUST COMPANY, NEW YORK
(Incorporated under laws of State of New York) and
BANQUE ANGLO-SUD AMERICAINE, Soc. Anon., PARIS.

of nearly $\frac{1}{2}$ per cent. over the rate employed in the valuation of our liabilities.

The life assurance fund for the first time in our history passes the seven million mark. The greater part of these seven millions continues to be invested in the safest of all securities—those of the British Government. The market value of the society's assets is largely in excess of the amount at which they stand in the accounts.

Our payments to members whose policies have matured during their lifetime are this year exceptionally large—viz., £230,140, or not far short of 40 per cent. of the total claims. You will find if you inspect the figures of other offices that this is a remarkable feature and one that shows the popularity of the society's endowment policies. Many of those receiving these payments have shown their satisfaction and confidence in the society by again taking out a policy to replace the maturing one.

The younger members of the society who have been wise enough to avail themselves of the benefits given by our "Perfect Policy" will not require in later life to go through the trouble of arranging a new policy or run the risk of their health being then unsatisfactory, since under that scheme the maturing endowment is replaced automatically by another policy payable at death, and no further premiums are required. The great advantages of this scheme should be brought under the notice of their friends by all the members of the society.

The report was adopted.

EDWARD LLOYD, LIMITED. GREAT NEW DEVELOPMENTS. RECORD OUTPUT.

The thirty-fourth ordinary general meeting of Edward Lloyd, Limited, was held on the 15th inst., at the head office of the company, 4-7 Salisbury court, Fleet street, London, Mr Frank Lloyd, the chairman and governing director, presiding.

DIRECTORS' REPORT.

The report of the directors for the year ending December 31, 1923, states that:—

The profits for the year, after allowing for depreciation, bad and doubtful debts, income-tax, estimated Corporation Profits Tax, and contingencies, amount to	£	s	d
195,038	10	7	
Making, with the balance brought forward from December 31, 1922	10,653	15	11

A total of	215,292	12	6
Deducting—			

Interest on pension account, directors' and auditors' fees, head office and transfer office expenses	7,149	5	5
	208,143	7	1

Dividend on the preference shares for the year to December 31, 1923 £47,250 0 0			
Interim dividend on the ordinary shares for the year 1923 at the rate of 9d per share (free of income-tax), paid October 1, 1923 45,000 0 0			
	92,250	0	0

There remains a balance as per balance-sheet of ...	115,893	7	1
---	---------	---	---

The directors now recommend the declaration of a final dividend for the year 1923 on the ordinary shares at the rate of 1s 3d per share (free of income-tax), making 10 per cent. for the year

The directors also recommend that the sum of £10,000 be placed to pension account	10,000	0	0
Carrying forward to the next account	30,893	7	1
	115,893	7	1

The profits for the year, after making provision for company expenses, show a decrease of £20,421 19s 11d, as compared with 1919, the only year since the termination of the war which can be considered as approximating to normal conditions, 1921 and 1922 having been seriously disturbed by the writing down of the stocks.

The Secretary (Mr T. Gerald Denison) having read the notice convening the meeting and the report of the auditors, The Chairman, in moving the adoption of the report and accounts, said:—

As you will have seen in the report, the profits for the year show a decrease of £20,421 19s 11d as compared with 1919, the last year which can be considered a normal one.

As I anticipated, we obtained a record output of paper, exceeding the previous year's production by no less than 13,244 tons.

But for the losses we sustained by reason of the failure of Becker and Co., Limited, in October last, which have all been written off, we should have done even better than in 1919 whilst the prospects for this year are very encouraging.

THE PREFERENCE ON NEWSPRINT.

The preference on newsprint so generously granted to this country by Australia and New Zealand materially assisted the British newsprint industry during the period of reconstruction, and helped to reduce unemployment at a time when it was very acute. Prices of raw materials now seem to be approaching an economic basis, and I feel confident that in the near future British newsprint makers will be able to bring their prices for export down to a competitive level. We have to thank our friends in Australia and New Zealand, with whom we have had such pleasant relations for so many years, for the confidence they have shown in the early recovery of the British manufacturers from the difficulties of the post-war period.

EXTENSIONS AT KEMSLEY.

The important extensions to which I referred at the last annual meeting are now nearly completed, and it is hoped that the first of the two new wide machines will be put into operation in the course of ten days, and that the second will follow some three weeks later. This new mill embodies many interesting new features which will enable us to achieve even greater economy and efficiency than hitherto. Whilst this great development has been in progress at Kemsley we have introduced many improvements to the machines at Sittingbourne Mill, bringing them up to date in every respect, and we are now erecting a new power house with a 6,000 k.w. turbo generator, and a new boiler house with all the latest methods of economic steam production and utilisation. We are scrapping three of the narrow paper machines and two ranges of steam boilers, all of which have done good service in the past and have now been written completely off our books.

THE ACCOUNTS.

A careful examination of the balance-sheet will show an even stronger financial position than last year. Stocks and book debts have decreased by £242,614 2s 11d. Cash in hand has increased by £42,691 19s 10d, whilst creditors, credit balances, and bills payable have increased by £115,325 0s 4d. Investments show an increase of £76,011 14s 2d, now amounting to £812,587 6s 8d, a large part of which will be required for the extensions now in hand, and for the garden village we have planned for the accommodation of the employees at Kemsley. No less than £310,456 5s 7d was expended at Kemsley and Sittingbourne during the year.

THANKS TO THE STAFF AND EMPLOYEES.

I am glad to have this opportunity of expressing our best thanks to the staff and employees at Sittingbourne and in Norway for the loyal and efficient way in which they have worked during the year. It is specially gratifying to find that, in spite of the tremendous amount of additional work the new extensions at Kemsley have thrown on our staff, there has not been the least sign of any falling off in efficiency in the Sittingbourne Mill, so clearly proved by the record output and improved quality of our product.

Mr F. N. Lloyd seconded the motion, which was unanimously adopted, and a final dividend of 1s 3d per share (free of income-tax) was declared on the ordinary shares, making, with the interim dividend already paid, 10 per cent. for the year 1923. The sum of £10,000 was also placed to pension account.

The retiring directors, Mr Harry Lloyd and Mr Herbert W. Clarke, were re-elected, and Messrs Turquand, Youngs, and Co. were reappointed auditors.

The meeting concluded with a vote of thanks to the chairman, directors, and staff.

ELECTRIC SUPPLY CORPORATION, LIMITED. IMPROVED RESULTS—DEBENTURE ISSUE REDEEMED.

The twenty-second annual general meeting of the Electric Supply Corporation, Limited, was held, on the 12th instant, at Winchester House, Old Broad-street, London. Mr John G. B. Stone (chairman of the corporation) presided.

The Chairman, in moving the adoption of the report and accounts, said: During the year under review the directors decided that it would be a benefit to the company to take advantage of the favourable money market and make an issue of preference shares for the purpose of redeeming the debenture issue. These debentures had to be paid off in 1920, and we could not, of course, foretell what conditions might then obtain. The operation was facilitated by our having purchased some of our debentures, from time to time, at a considerable discount, and we were enabled to provide out of this discount the whole of the 5 per

cent. premium payable to the debenture-holders and also transfer a sum of £2,300 to general reserve.

As the result of this operation we now present to you a balance-sheet free from any debenture debt. The company is in the strong position of having large borrowing powers, which can be used, should the necessity arise, at any future time.

The gross earnings have been increased by $11\frac{1}{2}$ per cent. This was due to the sale of 7,402,218 units, against 6,187,274 units sold in the previous year, an increase of 20 per cent. The bulk of this increase was due to improved trade conditions in Dumbarton. The profit, including dividends on investments, amounts to £38,879, against a figure of £29,563 in 1922.

On July 5, 1923, the company obtained the Exmouth Electricity Special Order, 1923, which, in effect, transfers the Order of 1900 from the Urban District Council of Exmouth to the company. Under this special order the company obtained powers to increase their rates.

Capital account shows an increased expenditure of £15,676, chiefly on mains, but we are now beginning to spend money on additions to our generating plant.

The improved result shown in the revenue account is largely due to the fact that, though our revenue has increased, our working expenses show a reduction of some £450. Interest on investments shows a slight reduction from £6,383 to £6,000. The explanation is that in this figure last year we included interest on that portion of our debenture stock which we had purchased but not cancelled.

The balance-sheet sets forth the new state of affairs which I have already dealt with. Our repairs and renewals fund remains at the old figure of £10,000. The new depreciation fund, which stands at £10,000, will be increased, I hope, by to-day's resolution, bringing it up to £20,000, and in the same way we are to see the nucleus of a general reserve fund brought up to £5,000.

The report was unanimously adopted.

LA GUAIRA HARBOUR CORPORATION, LIMITED.

IMPROVED RESULTS AND PROSPECTS.

The ordinary general meeting of the La Guaira Harbour Corporation, Limited, was held in the 14th instant, at Winchester House, London, Mr J. G. B. Stone, the chairman, presiding.

The Chairman said the earnings, £36,684, showed an increase of £12,090, and with interest and sundries the total profit was £37,567. Deducting first debenture interest and taxation, £13,371 net remained, whereas in 1922 they were short of the first debenture interest by £3,281. The profit admitted of a distribution of £2 6s per cent. to the second mortgage stockholders; this distribution had to be made before any payment on account of the deferred interest warrants could be made. He desired to refer to the benefits derived from the collection of dues by measurement instead of by weight. Since the date from which the Venezuelan Government granted permission to collect these dues, April, 1921, they had added to their receipts a total of £14,238, the amount for 1923 being £6,210. An interesting and favourable feature was the increase in the number of tourist steamers calling at the port. In the current year to the end of March the receipts had increased by £5,377, and the net profit for the three months more than half covered the sum required for London charges and first debenture interest.

Mr J. H. Wall, the general manager, said that certain points should be borne in mind in connection with the company's business. The excessively salt air and spray eat away metal in an incredibly short time, while woodwork, such as piles and that used in warehouse construction, &c., was eaten away by marine worms and white ants. Large expenditure on maintenance was therefore absolutely necessary. Wooden piles were being gradually replaced by reinforced concrete, galvanised roofs by asbestos, cement and concrete wherever it could be used in place of metal and timber.

In the early history of the company the percentage of foreign tonnage to the whole was about 80, whereas in late years the coasting tonnage had gradually grown to about 50 per cent. As the dues in the coasting trade were 50 per cent. lower than those in the foreign, and as the tonnage in the foreign trade had remained more or less stationary, the receipts per ton handled had been adversely affected, and the ratio of expenses to receipts had grown correspondingly higher.

In the course of discussion, Mr T. H. Evans (managing director) said that the gross receipts in the current year to the end of April amounted to £37,223, being an increase of £7,114, while the net receipts for the four months were £19,000, an increase of £5,107.

The report and accounts were unanimously adopted.

INCORPORATED ACCOUNTANTS. CONTINUED PROGRESS OF THE SOCIETY.

The thirty-ninth annual general meeting of the Society of Incorporated Accountants and Auditors was held, on the 13th instant, at Cordwainers' Hall, London.

Mr George Stanhope Pitt (President) occupied the chair, and, in the course of his address, referred to the continued progress of the society. He said that 339 new members were added during the year, bringing the membership at the close of 1923 to 3,876. At the present moment it was over 4,000. During the year 1,500 candidates presented themselves for the examinations, of whom 918 passed.

The President offered his congratulations to Sir Charles Wilson, LL.D., of Leeds, and Mr Thomas Keens, of Luton, members of the council, upon their election as members of the House of Commons, and said he believed that professional accountants could render particularly useful service in Parliament at the present time. He also referred to the appointment of Sir James Martin, Past President, as a member of the Treasury Committee on Accounting Methods of Government Departments, and to his work as chairman of a committee of the Association of British Chambers of Commerce appointed to consider whether the losses sustained by the trading community in connection with bankruptcy and other insolvency were swollen by fraudulent, hazardous and speculative trading; upon which the Committee reported in the affirmative. This report was brought to the notice of the Board of Trade, and had subsequently been embodied in a Bill now before Parliament.

In referring to domestic matters of the society, Mr Pitt submitted proposals by the council for the acquisition of appropriate premises for the society's headquarters, which he regarded as important, having regard to the continued expansion of the society. Dealing with overseas matters affecting the profession, the President stated that a Bill had been introduced into the Parliament of the Union of South Africa to provide for the incorporation of the South African Society of Accountants and generally to regulate the profession in the Union. There were, however, certain features of the Bill which, in the opinion of the council, were open to criticism.

The question of a measure of statutory registration for the accountancy profession in this country had been consistently advocated by the society, and this policy met with his unqualified approval.

He looked forward with confidence to the future of the profession, and particularly to the expansion of the Society of Incorporated Accountants and Auditors.

The report and accounts were unanimously adopted.

MELBOURNE CITY PROPERTIES TRUST, LIMITED. INCREASED DIVIDEND.

The seventeenth annual general meeting of the Melbourne City Properties Trust, Limited, was held, on the 15th instant, at 20 Coleman street, London.

Mr G. S. Pawle, who presided, said that the profits for the past year showed an expansion of nearly £7,000, enabling the directors to increase the dividend from 10 per cent. to 12½ per cent. Owing to the proportion of income-tax paid locally by the company, only 2s 3½d was deducted for income-tax payable on this side. The prosperity of the company was mainly bound up with the success of the Carlton and United Breweries. The property held by the Trust was originally a debenture debt of

KANSALLIS-OSAKE-PANKKI

(National Joint Stock Bank).

ESTABLISHED 1869.

£500,000 at 4½ per cent. on McCracken's City Brewery, Melbourne, so the net income of approximately £20,000 this year was still £2,500 below the sum they should receive from their original investment. The Carlton and United Breweries, now on a firm and progressive basis, was in a position to earn steadily increased dividends, provided business in Australia continued to expand.

FURTHER EXPANSION.

It was fortunate that the presence in Melbourne of their esteemed chairman, Mr R. H. Caird, coincided with a movement for a further expansion of business in connection with the Carlton and United Breweries, including the purchase of an old-established brewery and twenty-one freehold hotels at Geelong. To finance this purchase a further issue of £100,000 participating preference capital was expected to be made, allotted *pro rata* to existing shareholders. The company's proportion would probably be £14,500, and it was suggested that these shares would probably be issued at a premium of 5s. They carried a preference dividend of 7½ per cent., and shared equally with the ordinary shares in any further profits. The company was paying 15 per cent. on its entire issued capital and carried large sums to reserve! it had no debenture debt. The directors proposed to take up any portion of shares allotted to the company.

With regard to the general aspect of affairs in Australia, wool was bringing in big prices and the season generally was promising, so one might expect to see a continuance of the prosperity with which Australia had been blessed, provided that the demands of labour were not excessive and the tendency to borrow on the London market was not indulged in to an undue extent.

The report and accounts were unanimously adopted.

ANGLO-AMERICAN DEBENTURE CORPORATION, LIMITED. RECORD REVENUE—DIVIDEND INCREASED.

The thirty-fourth ordinary general meeting of the Anglo-American Debenture Corporation, Limited, was held, on the 15th instant, at Winchester House, London.

Mr Richard S. Guinness (the chairman), having paid a tribute to the late Sir Vesey Holt, said: It was largely due to his efforts that the directors were able to-day to place the ordinary stock of the corporation upon a 10 per cent. dividend basis, and at the same time to show the investment account intact and the reserves so strong. They had also to deplore the death of Mr L. E. Chalmers, whose sound judgment and expert knowledge had been of great assistance to the board. The directors had invited him (Mr Guinness) to take the chair, and he was glad to say that Sir Reginald MacLeod had accepted the responsibilities of deputy-chairman. They had co-opted Mr Martin D. V. Holt (son of the late chairman and a partner in Messrs. Glyn, Mills, Currie, Holt, and Co.) to a seat on the board.

Dealing with the accounts, the Chairman said that the interest and dividends received during the past year totalled £106,000, which was about £9,000 more than in the preceding year, and represented the largest revenue that the corporation had received in any one year. The directors had come to the decision that they could recommend an increase in the dividend from 9 to 10 per cent., and after transferring £10,000 to reserve account they were able to increase the amount carried forward by about £5,000 to £15,821. Before recommending this increase the directors had carefully considered the revenue which was likely to be received during the current year, and, provided conditions did not change materially, a conservative estimate showed that the present revenue should be maintained. With regard to the holdings of the corporation, four-fifths were represented by investments bearing a fixed rate of interest. During the year several changes had taken place, and the balance resulting therefrom, together with the underwriting commissions earned, had been utilised to write down the book cost of the investments, which now stood at a lower figure than their market value. The improvement in the valuation during the last few years, and the fact that there now no longer existed any depreciation, were, he thought, confirmation of the statement made from time to time by the late Sir Vesey Holt that, in view of the abnormal conditions caused by the war, the directors had viewed the depreciation which had existed as being only temporary.

The report and accounts were unanimously adopted.

BRYANT AND MAY, LIMITED.

"EXCELLENT RESULTS OF YEAR'S TRADING."

The fortieth annual ordinary general meeting of Bryant and May, Limited, was held, on the 14th instant, at Fairfield Works, Bow, London, Mr William Alexander Smith (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that he could again congratulate the shareholders upon the excellent results of the year's trading. It was beyond all question the most profitable year ever enjoyed by the shareholders in the company. A further considerable amount of £40,000 had been carried to reserve account, bringing it up to £300,000. In the previous year £74,480 had been divided equally between the shareholders, and this year the amount so divided was no less than £83,790. Since the last meeting he had had an opportunity of visiting the company's timber plantations in Scotland, and had been amazed at the splendid start which had been made.

Outside of the company, Mr Paton's strenuous work for the welfare of his fellow workers had been lately recognised by his having been invited to become the president of the United Kingdom Commercial Travellers' Association, and preside at their annual conference next month, and to take the chair at the Commercial Travellers' Schools festival dinner in December next. The schools were excellently managed, and largely supported by voluntary contributions, and he suggested that it would be a nice thing if Mr Paton's purse at the forthcoming dinner were made a record one.

Mr George W. Paton (deputy-chairman and managing director), in seconding the resolution, said that the splendid results shown were largely due to the friendly relations with their workpeople and to the co-partnership and other schemes. Last year he had mentioned that the pressing problem of the industrial system was unemployment, and that that was aggravated by disputes for which no settlement could be found until a strike or lock-out had brought about a crisis from which both sides lost financially, and otherwise, and, in most cases, the general public suffered also. The only cure for that state of affairs was a partnership between capital and labour. Before co-partnership was introduced into their company they had had a very big turnover in labour. To-day that was a thing of the past, with the result that the wastage from learners and inexperienced workers was practically eliminated, and the quality of their product was correspondingly improved. On the other side, their relations with the unions representing the workpeople had not only been maintained, but improved and strengthened. Their exhibit at the British Empire Exhibition was attracting a great deal of attention, and they had received many distinguished visitors.

The report and accounts were unanimously adopted.

OIL OUTPUTS.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED.—A cablegram has been received from Burma reporting that the production of crude oil by this company and the Rangoon Oil Company, Limited, for the month of April amounted to 53,997 barrels. The large decrease is mainly due to several derricks at Singu having been seriously damaged by a cyclone which occurred there on April 7, 1924.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during April amounted to 154,286 barrels, or approximately 23,041 tons, including St. Helen's Petroleum Company, Limited, 30,087 barrels (approximately 5,712 tons); Kern Trinidad Oilfields, Limited, 7,761 barrels (approximately 1,109 tons); Kern Romana, Limited, 2,646 barrels (approximately 378 tons); Kern Mex Oilfields, S.A., 57,008 barrels (approximately 8,144 tons).

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, May 7, 1924, amounted to 964 tons.

(a) Increased capital. (c) It is also proposed to sub-divide existing £5 shares into 5 shares of £1 each, and to distribute a bonus of share for share. (d) 15 months, tax free. (e) Tax free. (f) Increased capital.

NOTE: INDUSTRY.—The directors have now received particulars of the results of the Constituent and Associated Companies for the year 1923, which will enable them to declare a dividend on the ordinary shares as at July 1st, payable on that date, on account of the year ended December 31, 1923, of 8 per cent., less income tax at 4s 7d in the £. They will, in due course, recommend this distribution as final for 1923, and submit proposals for dealing with the balance by way of increasing the special investment reserve account from £400,000 to £500,000, and an addition of £140,000 to the balance brought forward, making the total sum to be carried forward £650,000.

TEA AND RUBBER.

LINGGI PLANTATIONS.—The net profit has risen from £29,099 for 1922 to £46,351 for 1923, but the dividend is unchanged at 7½ per cent. The carry forward is increased from £20,775 to £29,926. The output (restricted) for year amounted to 2,235,315 lbs compared with 2,256,547 lbs for 1922.

MISCELLANEOUS.

ANGLO-CHILIAN NITRATE.—The net profit has increased from £19,721 for 1922 to £151,718 for 1923. The dividend on the share capital is again 15 per cent., free of income-tax. The sum of £86,702 goes forward, subject to corporation profits tax for 1923. The comparative figures of railway traffic for the last four years are as follows:—

	1920.	1921.	1922.	1923.
Traffic carried	Tons. 373,503	Tons. 221,896	Tons. 238,494	Tons. 301,653
Passengers carried	39,298	23,822	16,285	25,601
Train miles run	205,061	131,323	119,720	160,927

BRITISH THOMSON-HOUSTON COMPANY.—The net profit for 1923, after payment of interest on debentures and loans, is £332,492, against £375,079 for 1922. The sum of £185,440 is appropriated for depreciations, &c., against £162,511. The ordinary dividend for 1923 is 6 per cent., less tax, against 6 per cent., free of income-tax, for 1922. The sum of £210,863 is carried forward, against £236,671 brought in. We learn from the report that the buildings and machinery at all the works of the company have been maintained in good condition throughout the year. The expenditure for additions during the year amounted to £227,000. Further works at Coventry have been acquired.

BUCHANAN-DEWAR, LIMITED.—This important Scotch whisky undertaking has had a good year. The profit and loss account for year ended March 31, 1924, shows a credit balance of £1,102,657, against £958,740 on March 31, 1923. For the year ended March 31, 1923, the ordinary dividend was 30 per cent., free of income-tax. For the year just terminated the dividend is 17½ per cent., free of income-tax, which was paid on an increased capital. It can be best illustrated by stating that for 1922-23 the ordinary dividend absorbed £564,762, whereas in the year just closed it absorbed £700,000. The reserve fund is again strengthened to the extent of £150,000. The carry forward is increased from £96,589 to £98,516. Turning to the balance-sheet we find total assets have jumped from £7,744,012 to £10,134,992. A new item comes in, i.e., advances to constituent companies, amounting to £4,519,728, but sundry debtors and loans last year stood at £2,768,021, whereas sundry debtors stand at £650,554 in the latest balance-sheet. Cash has dropped from £72,019 to £61,638. War and conversion loans remain at £800,000. With regard to liabilities, ordinary shares issued amount to £4,000,000. Preference shares issued total £4,767,038. Reserve fund is at £600,000, against £450,000 in previous balance-sheet. Creditors stand at £6,183.

CALLENDER'S CABLE AND CONSTRUCTION.—This company has enjoyed a prosperous year, the results for 1923 showing a net profit, after payment of debenture interest, of £220,086, which, it is pointed out, is a record, against £207,788 for 1922. The ordinary dividend is again 15 per cent. The carry forward is increased from £226,901 at end of 1922 to £315,087 at end of 1923. We gather from the report that the factories of the company have been well employed during the year, and cost of production has been lessened. Overseas business has improved, and the new branch in China is making headway. Labour conditions at Erith and Leigh are satisfactory. Total assets are £2,700,620. Cash is at £163,857. Investments are at £427,081. Stocks are at £274,143. Nothing is in the balance-sheet for goodwill.

HARRODS (BUENOS AIRES) LIMITED.—We are officially informed that funding certificates for the gross amount at the rate of 16 per cent., being two years' arrears of dividends accrued to August 31, 1923, upon the £2,350,000 8 per cent. cumulative preference shares, will be issued (as early as possible in June) to the holders of preference shares, whose names are registered in the share registers of Harrods (Buenos Aires), Limited, on May 1, 1924.

MAYPOLE DAIRY COMPANY.—The net trading profit has fallen from £472,600 for 1922 to £438,429 for 1923. The directors state that this reduction is mainly due to the continued and severe competition, and consequent reduced margin of profit obtainable on the speciality goods in which the company is principally interested. The dividend on the deferred shares has been reduced from 25 per cent. to 12½ per cent., but the carry forward has been increased from £3,426 to £49,577. The sum of £10,000 has again been put to reserve. The board have considered it necessary to provide out of the company's reserve funds a sum of £250,000 for the purpose of writing off losses incurred in their West African business. This has reduced the suspense reserve fund from £750,786 to £500,786. Total assets are reduced from £5,033,830 to £4,072,334. Cash is down from £336,306 to £118,572. Investments in Government securities have been reduced from £501,201 to £280,761. Stocks have risen from £571,027 to £722,115. Goodwill and trade marks remain at £422,000.

R AND J. HILL.—The balance from profit and loss account for the year ended March 31, 1924, after charging debenture interest and providing for corporation profits tax for the year, is £32,718, which, with the amount brought forward, £5,212, gives a total to be dealt with of £37,930; after providing for dividends on the preference share capital accrued to date, and depreciation of plant, machinery, &c., there is left a balance of £30,321, which the directors recommend should be appropriated as follows:—Dividend of 10 per cent. on ordinary shares £13,097, to reserve fund £5,000, to contingency fund £5,000, carrying forward to next account £7,224. It is pointed out that the sales of the company's productions show a very satisfactory increase, in spite of the demand for better grade goods being restricted by prevailing conditions.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

A spell of warm, showery weather has improved agricultural prospects in the United Kingdom, but more sunshine is needed for cereal crops, which are still backward in growth. Supplies of native wheat continue on a limited scale, and prices remain firm, best samples ruling at 10s 8d to 11s 2d per 112 lbs free on rail. Imported descriptions move off quietly, but holders somewhat reserved, and required full rates. No. 1 Northern Manitoba quoted 47s 6d, No. 2 ditto 46s 9d, No. 3 ditto 45s 6d, Rosaf 63½ lbs 47s 6d, Barusso 63½ lbs 46s 9d to 47s, and Australian 49s 6d, all ex ship, per 496 lbs. In the floating and forward cargo section a generally firm tone prevailed, with sellers exercising reserve, but buyers showed little inclination to operate, and only limited sales occurred, including Barusso 63½ lbs July shipment to France at 42s 4½d and Australian early June at 47s 10d to Ireland per 480 lbs. Maize cargoes were more firmly held on improved inquiries, and a fair business transpired in Plate April 30th bill of lading sold 39s 9d, ditto May 16th shipment 36s, April-May 35s 3d, May-June 33s to 35s 6d, as to size, per standard straight run quoted 38s, patents 40s to 41s, town house-holds 36s per sack delivered in. Of imported, Manitoba patents range from 35s to 37s 6d, Australian patents 35s 3d to 35s 6d, soft Pacific 35s, ex store, per 280 lbs. Flour, steady. London standard straight run quoted at 38s, patents 40s-41s, town house-holds 36s per sack delivered. Imported: Californian 47s 6d-52s, from 35s 6d-38s and Australian 35s 3d-35s 9d per 280 lbs, ex store, barley, steady. English quoted at 11s 3d-12s 6d for malting and seed per 112 lbs free on rail. Imported: Californian 47s 6d-52s, Chilean brewing 43s-49s per 44½ lbs, ex ship. No. 4 Canadian 31s 6d, landed 33s, Plate, ex ship 32s 6d, landed 34s 3d per 496 lbs. Maize, firmer. Plate new ex ship to arrive 41s, Hickory King 46s, landed, Karachi landed 42s per 480 lbs. Oats, quiet. Plate f.a.q. ex ship 21s 9d, landed 22s 9d, No. 2 Canadian Western 25s 9d, No. 3 ditto 24s 9d, No. 2 Canadian feed landed 23s 9d per 320 lbs. English ranges from 9s 3d-10s 3d per 112 lbs, free on rail. Millers' offals, unaltered. Broad bran quoted 8s 6d-9s, ordinary 7s 3d-7s 6d, middlings 8s 6d-8s 9d, fine ditto 10s, bags included, ex mill; light oats 6s, powdered oat husks 7s 3d, feed oatmeal 9s 3d, ground oats 12s 3d all per cwt, free on rail. Oatmeal, steady. London-made flaked 16s 6d, rolled oats, 16s, medium and fine cut 16s, coarse and medium pinhead, 16s, ordinary Scottish oatmeal 17s 6d, American 16s-16s 6d per cwt.

year. Makers of pig-iron and steel billets have had very lean times of late, and the finished branches, although distinctly busier, have to deal with such a multitude of small orders that profitable working is out of the question. Very little confidence in the future is abroad, and the uncertainty militates against giving out orders except to cover immediate requirements. The Board of Trade returns for April show a substantial increase on the month in the export of iron and steel products, chiefly due to large shipments of pig-iron to the Continent and an improved demand for tin-plates. Motor exports were better, whereas the figures relating to engineering and locomotives continue on the down grade. Wire drawers are nearly on full time, and a considerable tonnage of wire rope is being shipped abroad and consumed in British coal mines. Conditions are sluggish in the tool steel branch, although it has emerged from the acute slump of last year. Continued progress is reported in hand tools used in numerous trades, but the orders are individually small, and involve time, labour and expense in dealing with them, altogether disproportionate to their aggregate value. The plate and cutlery branches continue in a very unsatisfactory state, and the position compares unfavourably with last year. Except cheap lines, sales are at a low ebb. The weakness in the coal market previously reported has developed further, and prices are on the down grade. The demand for house coal has dropped so much that fuel of this kind can now be bought freely for manufacturing purposes. The demand and consumption of coke has also fallen off considerably. Steam coal is holding its own fairly well. The export demand is quiet. Current quotations per ton at pits are:—Best hand-picked branch, 34s to 35s; Barnsley best silkstone, 31s to 32s; Yorkshire hards, 25s to 26s; Derbyshire ditto, 23s; Blyth steams, 23s 6d; Durham steams, 25s 6d; rough slacks, 12s to 13s; smalls, 8s to 9s; coke, 24s to 29s.

Our Glasgow correspondent writes as follows:—Business in the iron and steel market continues dull, the reluctance of buyers to purchase forward being more pronounced than ever. This tendency may be accounted for by persistent rumours of cheap Continental material coming on the market. We have definite knowledge, however, that anything like competition to any con-

siderable degree from abroad is extremely unlikely to be heard of for a long time. Numbers of specifications for bars, light plates and sheets are being received from Eastern European markets which customarily draw their supplies from Belgian and German sources. This is further proof that the Continent is not a serious competitor. Inquiries are in the hands of local firms for two large constructional schemes for the South Indian Railway Company, and among contracts placed this week is a passenger steamer for Clyde service; a large steel building secured by Messrs. Alex. Findlay and Co., Motherwell, for an Indian railway and an extensive structural steel contract for Hong Kong. Bar iron works here have not followed the example of English makers by increasing the price by 10s per ton, and Scotch bars are selling at the old rates. Steel bars are in brisk request for home consumption, but export orders can only be secured at cut prices. Demand for black sheets is poor, and business is being taken at cut prices. Some good lines have been booked for Canada. Japanese light sheets, owing to adverse exchange conditions and financial difficulties, are still absent from the British market. One or two fishing inquiries have been received, but serious business is unobtainable. Galvanised sheets are in very moderate request, and prices this week are still further depressed. Shipments have been fairly large, but as regards new business, conditions are very

NATIONAL PROVIDENT INSTITUTION

The Results for the Year 1923 show INCREASES in the Business transacted, the Premium Income received, and the Rate of Interest realised on Investments, and a DECREASE in the amount paid for Claims by Death.

Full particulars of the Office and the Policies it issues can be obtained from:—

48 Gracechurch Street, E.C.3.

slightly improved on those existing a week ago. Owing to a wages dispute, about 1,500 men are idle in the Blochairn works of the Steel Company of Scotland, Limited. The trouble is confined to the employees of this firm, and is not likely to last for any length of time. Pig-iron prices remain unchanged, and the Clyde shipments last week amounted to 1,473 tons.

Our Cardiff correspondent writes:—The Cardiff coal market this week has suffered both from the threat of a strike of coal trimmers and from the uncertain course of the negotiations in London over the wages agreement. Happily, the threatened strike was averted, and terms have now been provisionally arranged for a new agreement for the regulation of wages over the next two years. These events gave a more hopeful tone to the market towards the end of the week. The volume of business, however, was comparatively small, but prices, though unstable, were generally well maintained. The position in the iron and steel market was unaltered, and manufacturers are continuing to realise prices just above the minimum figures.

METALS.

Tin opened the week with a firmer tone, due to higher cables from the East, and a good demand for distant positions. Subsequent selling pressure and lower foreign advices led to irregularity and weakness. Dealings comprised standard cash at £230 to £223 to £225 15s, and three months, £228 5s to £229 5s to £222 to £224 15s. Eastern cables reported sales on the basis of £225 5s, c.i.f. Values suffered a sharp relapse on selling pressure on Thursday, though offers were only moderately absorbed. Standard cash quoted at £219 10s to £219 15s, with business in three months at £223 to £218 17s 6d. The downward movement was continued at final market. Standard, cash, sold at £212 to £215 10s, and three months fluctuating between £211 to £210 10s to £215, while finally at £214 5s. English ingots quoted at £216 to £217. Copper ruled easier on liberal offerings, which, however, were well absorbed. Standard cash sold at £62 7s 6d to £61 10s to £61 17s 6d, and three months £63 10s to £62 10s to £62 12s 6d. At Thursday's market rates were again the turn easier. Standard cash sold at £61 5s to £61 2s 6d, and three months £62 10s to £62 2s 6d to £62 5s. Copper continued in active demand on following day, with rates again tending in buyers' favour. Cash sold at £60 16s 3d, and three months £62 to £61 10s to £61 17s 6d. Electros, £66 10s to £67 10s; strong sheets, £65 to £66 5s; wire bars, £67 10s per ton. Lead firmer, and quoted at £29 10s to £28 10s, as to position. Spelter dealer at £30 17s 6d to £31 2s 6d, according to position. Aluminium home trade, £125; export, £130. Antimony, English special brands, £49 10s to £50.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Some uneasiness was caused last week by the reports on the opening of the London wool sales, but the improvement recorded in Coleman street during the last two days has helped very materially to bring about a better tone here. It is realised that the withdrawals are due to high reserves placed on second-hand lots by the owners, and the prices required cannot be made to-day in the existing state of the market for tops and yarns. However, faith in the future of wool values is still unshaken, and as the Continent is expected to be a big buyer as soon as the financial situation becomes a bit clearer, most holders are prepared to await developments rather than make any real sacrifice. Business in tops has been too restricted to afford a really useful guide to prices, but sales made this week have been on a slightly lower level. Warp 64's tops are now quoted at 70d to 71d, and a decline of about 1d is seen in super and ordinary 60's at 64d and 61d respectively. In crossbreds, practically all qualities from 56's downward show a slight ease on the week, 56's average being quoted at 46d, 50's average at 35d to 36d, 46's carded at 27d to 28d, and 40's prepared at 27d. There is no real change in the yarn trade. Spinners of Botany yarns are finding great difficulty in doing business, and keen competition is resulting in extreme price-cutting. So much is this in evidence that it is almost impossible to say what fine counts are worth to-day, everything depending on the position of the seller. A moderate turnover is being done in crossbreds, though it is not easy to make current quotations. Hosiery requirements are fairly large, but the export trade is being interfered with on account of the financial difficulties in Germany due to the restrictions on the purchase of sterling.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The current series of wool sales have gone on long enough to show clearly the standing of the raw material. There is a general feeling of disappointment at the poor show of life and activity, though it is quite easy to exaggerate this aspect of the sales. One has been so accustomed to seeing red hot markets for the past six months, with values all the time rapidly advancing, that when there is a halt many think prices and markets are going to fall to pieces. Such a thing is not likely to happen. It is the heavy withdrawals of dearly bought, second-hand wools which is responsible for the quieter aspect seen in connection with the sales. One must admit being disappointed with the competition of France, Belgium, and Germany. Had there been as much buying done by the sections named as we have seen since last October, the majority of second-hand offerings would have found buyers. Freight, exchange, insurance, and sale charges are so heavy that

at least 3d above first cost is needed for the owner to get out whole, and while in many cases something above first cost has been bid, yet another 1d to 2d has been needed to enable the bulk of the wools to be moved into users' hands. On the wool sold, particularly fine crossbreds and merinos, the prices paid are about as high as those ruling in March, only the numerous lots taken in give a false impression of the actual standing of the raw material. French buyers last week were waiting to see the election results, and when they became fully known last Tuesday on the resumption of the auctions, it seemed to confirm them in their attitude to go slow, and act with considerable reserve. That is actually what happened, and we expect the current series to finish next Tuesday with values all round 5 per cent. under the close of the March auctions. The decision of the Association of London Selling Wool Brokers to close the series a day earlier is the right thing. It will give the home trade in particular the opportunity of digesting large direct imports.

Values have not materially altered this week compared with the opening. Naturally, selling brokers and importers are a little disappointed at the quieter turn of events, but it is really wonderful the faith which is expressed in the future of values. That the market to-day needs a tonic goes without saying, but we are certain that the world's consumption of wool to-day is larger than twelve months ago, and any reasonable settlement of the differences between France and Germany would immediately release big amounts of sterling, and lead to an improvement of trading conditions. At the moment the Continent holds the key to the situation, and any free movement of trade in Europe would certainly be good for the entire industry. Apparently, the United States is passing through a difficult period, largely the result of the forthcoming Presidential election, there being the same opposition across the Atlantic to high textile prices as in this country. All the same, we cannot see where cheaper wool is coming from, and any marked falling off in values would only bring into operation on a still larger scale speculative buying, which is not needed at present.

THE COTTON TRADE.

ABRIDGED PROSPECTUS.

OBJECTS.—The Company has been formed for the purposes expressed in its Memorandum of Association, and in particular:—(a) To acquire and take over as a going concern, free of all liabilities, as from 21st May, 1924, the well-known and important business of the Blue Bird Motor Co., Ltd., carried on at Ebury Mews, Ebury Mews East, Eaton Mews South, Kersley Mews, and at 330 to 340, King's Road, London, S.W. (b) To complete the erection at 330 to 340, King's Road, London, S.W., of one of the largest and most up-to-date garages in the world, now in course of construction from plans prepared by Mr. Robert Sharp, Licet.R.I.B.A., and (c) To further develop the business by concentrating it at 330 to 340, King's Road, London, S.W., by the provision of a very complete and luxurious Motor Hire Service of Rolls-Royce and Daimler Cars and the extension of facilities for the supply of Blue Bird Co.'s Petrol.

The Blue Bird Motor Co., Ltd., was established in 1913, and its name signifies all that is best in respect of Motor Hire Service and the supply of Petrol and Oil.
HIRE SERVICE.—The existing fleet of Daimler Cars, well known and in great demand as one of the best-equipped Motor Hire Services, will be increased by an additional service of Rolls-Royce Cars.
 The efficiency of its Motor Hire Service is further endorsed by the fact that, in open competition, the Company has secured an order from the British Empire Exhibition Authorities to provide cars required for the conveyance of officials and guests to and from the Exhibition grounds at Wembley.

The rapid development of the business has urged the provision of a more modern and spacious garage, which is now being erected at a cost of about £60,000, and, when completed, will be one of the largest and best equipped structures of its kind in the world. It will embody the latest and most modern ideas in every branch of Motor Service and be carefully adapted to the most exacting motorist's requirements.

"Service" will continue to be the foremost feature of the Company's policy, and in conformity therewith, the new garage will provide a day and night Service in all departments. There will be facilities for reading, writing, resting, etc., other notable features including extensive repair shops, showrooms for new cars, a large motor-cycle depot, separate lounges and clubrooms for ladies, owner-drivers and visiting chauffeurs.

On each of the three floors provision will be made for repairs to the private car, the commercial motor and the motor-cycle, and large steel turntables will be installed to economise time in the parking of cars. The enormous area of the ground floor will be free from pillars or stanchions, and electrically operated Air Compressors will supply pressure to about 60 automatic tyre inflation points.

The site covers an area of nearly three-quarters of an acre, and the garage will have a total floor space on the three floors of about 2½ acres. It has a commanding frontage of 170 feet to one of the main arterial roads of London, the Portsmouth Road being the outlet to the South-West of England and extremely popular with London motorists, thousands of cars passing daily. It is admirably situated to cater for the extensive motoring requirements of Chelsea, Kensington and the West End.

PETROL.—Blue Bird Co.'s petrol is now selling at 1¼ per gallon, as compared with 1/11 per gallon charged elsewhere, and is claimed by the Directors to be equal in quality to the best on the market, such claim being supported by many thousands of users.

The Company's Petrol Service Station was opened in March, 1923, and the policy of providing supplies of high-grade Petrol and Oil at popular and yet remunerative prices has been reported on extensively and most favourably in the trade and general Press.

The Vendor Company is in a position to make definite arrangements for continuity of supplies to this Company, ensuring the maintenance of its completely independent position in the Petrol industry, and, at the request of large numbers of the motoring public, the Directors are now considering the advisability of acquiring additional sites and opening further Stations for the supply of Petrol and Oil in the Metropolis and Provincial Centres.

VALUERS' REPORT.—The following is a copy of the report of Messrs. Leopold Farmer & Sons, the well-known Surveyors and Valuers, on the value of the assets to be acquired by the Company:—

46, Gresham Street, Bank, London, E.C.2.
 12th May, 1924.
 To the Directors, THE BLUE BIRD MOTOR CO. (1924) LTD.,
 King's Road, Chelsea, S.W.

Dear Sirs,—Acting on your instructions we have valued the assets of The Blue Bird Motor Co., Ltd., and beg to report as follows:—
 The Petrol Service is situated in King's Road, Chelsea, which is the main road. It is complete with the most up-to-date plant for petrol and oil storage and supply, having a storage capacity of about 11,000 gallons. The whole site on which the Petrol Service Station is situated has a frontage of about 169 feet to the King's Road, a return frontage of about 125 feet to Vale Avenue, and a frontage of about 50 feet to Beaufort Street, the whole site area being nearly three-quarters of an acre. This property is held under an agreement to grant to you a term of 80 years from 24th June, 1922, and that document provides for granting this holding when the site is covered and ready for occupation, previous to 25th March, 1925, and that the rent is not to exceed £350 per annum. We consider that you have here a very valuable site, on which steps are now being taken to erect a most up-to-date motor garage with every possible convenience for the expeditious handling of operations of great magnitude. The rental of the whole site is exceptionally moderate, and there is a considerable value in your holding. The existing Petrol Station, fronting on to the King's Road, is planned so that a large number of vehicles can be filled at the same time, the size of the Station now being 110 feet long by 40 feet wide, with separate entrance and exit.

Included with the assets is a fleet of motor vehicles, comprising 35 Daimler cars, all in good running order and condition, also the plant and machinery, fixtures and fittings, stock of petrol, oil, tyres, spares, etc., and we consider the present value of the assets, as a going concern, namely Plant and Machinery, Fixtures and Fittings, Stock, Office Furniture and Utensils of Trade, to be £50,500 (Fifty thousand five hundred pounds). We were very considerably impressed with the whole undertaking, and there appears to be a very big future for an organisation such as the Blue Bird Motor Co. (1924), Ltd.

Yours faithfully, LEOPOLD FARMER & SONS.

RESULTS AND ESTIMATED PROFITS.—The Blue Bird Motor Co., Ltd. (the Vendor to and Promoter of this Company), was established under Mr. R. Brandon Trye's able management, the business has grown at £50,000, no sum whatever being included for goodwill, which, in a business of this nature, is obviously of considerable value.

On the basis of the above results the Directors estimate that the yearly net profit from the Motor Hire Service Department alone should not be less than £10,000.

The profits now being earned at the Petrol Service Station of the Vendor Company are very considerable, and attention is drawn to the following:—(1) The present net profits on Petrol and Oil are considerably more than 1d. per gallon, and the Directors feel confident not only of maintaining this rate of profit, but of exceeding same. (2) Orders and enquiries from new customers reach the Vendor Company daily, and the Directors estimate that this Company's yearly turnover of Petrol and Oil should be at least 50,000,000 gallons.

But on a basis of a yearly minimum turnover of only 10,000,000 gallons the net profits at the low rate of 1d. per gallon from this Department alone should be at least £40,000 per annum.

Having regard to the above, the Directors have no hesitation in putting forward the following estimated net profits as being in every respect conservative, being confident that the actual profits will exceed the estimates:—

From the Sale of Petrol and Oil	£40,000
From the Motor Hire Service	10,000
From Rents, Lock-up Garages, Flats, General	8,500
From Repairs, Sales of Motor Cars, Insurance, etc.	10,000
Estimated Net Profits	£68,500

THE MONEY MARKET.

THERE was still a decided scarcity of money, as seemed to be inevitable in view of the big transfer last week from Other to Public deposits, and on Wednesday a considerable amount was borrowed from the Bank of England. In these conditions, the Glasgow Corporation was fortunate in being able to place £500,000 three months' bills at 2½ per cent. Business in discounts remained stagnant, with the rate for three months' bank bills between 3 and 3½ per cent.

	May 23, 1924.	May 16, 1924.	May 9, 1924.	May 2, 1924.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount/Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate 3 months' bills)	3½	3	3	3	..

The Bank return showed an increase of £22,000 in the Reserve, notes having returned from circulation to rather more than this extent. A decrease of nearly a million in Other deposits was balanced by an increase of over a million in Public, and small movements in the securities also offset one another, Other being noticeably half-a-million lower, in spite of borrowings by the market. There was a reduction of £1,979,100 to £286,399,700 in currency notes outstanding this week, which includes £1,392,200 for notes called in but not yet cancelled. The fiduciary issue is £235,557,500, or £12,633,400 below the maximum.

THE STOCK MARKETS.

The bulk of Stock Exchange business this week has been concentrated in the markets for gilt-edged and investment securities, the demand for such stocks being only slightly affected by the flood of new issues, which were for the most part rapidly absorbed. The amount of speculative business is very small at present. Among foreign stocks, Chinese 8 per cents. rose swiftly. The Home Railway market lacks attention, while Argentines are steady. The rubber share section remains in the doldrums, while in the oil market the activity of British Controlled was the main feature. Banking, insurance, and cable shares are well supported. The iron and steel group remain under the unfavourable influence produced by the passing of the Vickers' dividend. Labour trouble on the Rand has damped the South African mining market.

THE COMMODITY MARKETS.

There has been a slight improvement this week on the Cardiff coal market, buyers showing more inclination to conclude contracts in the belief that prices have touched bottom. Continental inquiry for Cleveland iron has fallen off, but steel producers have been assisted by the placing of several shipbuilding orders. The Manchester cotton market is without pronounced movement, and some rather depressing features have developed in the wool market. Tin suffered a sharp decline, but partially recovered the loss. Copper received good support. Wheat closed the week firm. The sugar market is steady—moderate demands were in evidence for tea and coffee. Conditions are easier in the vegetable oil market. Detailed reports from our trade correspondents will be found on later pages.

FOREIGN EXCHANGES.

In the foreign exchange market, apart from the erratic movements of the franc, the week has shown no outstanding features, business being quiet but fairly steady. The Paris rate has continued its recent puzzling course, moving up and down in jerks as the result of apparently quite spasmodic official intervention. Although the new Government, as foreshadowed, would seem to offer very satisfactory promise of careful finance, its opponents would seem to carry their dislike to the point of crying down the franc and doing their best to create general uncertainty. From 75.35 at the close of the 16th there was a sharp jump up at the beginning of the present week, as high as 83.20 being reached at one time on Tuesday. At this point came intervention, bringing down the quotation to a closing price of 81.40 on the same day and 78.70 at the close of Wednesday. A new reaction on Thursday brought up the rate to 79.35, and yesterday morning it was quoted at 80.70. Brussels on its higher level has followed much the same course, being quoted at one time as high as 96½ and standing yesterday morning at 94½, as compared with 89.62½ a week ago. Forward rates in Paris are about the same at 50 centimes per month above spot; in Brussels at about 11 centimes above spot they are 1 centime wider. After showing signs of appreciation on very optimistic budget reports the franc relapsed again a little, and at 98½ yesterday morning is exactly the same as a week ago. In sympathy to some

extent with the franc, and under pressure perhaps of the beginning of autumn requirements, the dollar rate moved down quietly from \$4.36½ on the 16th to \$4.35½ on the 22nd. Yesterday morning, however, there was a sharper drop to \$4.34. Forward rates are again slightly narrower at ¼ to ⅜ cent per month above spot. In sympathy with the dollar, the Dutch rate has gone against us from 11.66½ to 11.61, Stockholm from 16.46½ to 16.35½, while Vienna is rather lower at 308,000, and Warsaw has also moved down to 22.65. Most of the neutral currencies show a similar movement, Switzerland from 24.62 to 24.54½, Christiania from 31.42½ to 31.27½, and Copenhagen from 25.81 to 25.75½. Madrid, however, at 31.56½, as compared with 31.53, is higher than last week, and Finland, after being higher, is unchanged at 174. Berlin has fallen ¼ to 18½ billion marks. Prague has gone against us from 148½ to 147½. Bucharest, however, apparently on the possibility of a crisis in internal politics, has moved up from 880 to 915. In the East the rupee is slightly dearer at 1s 4½d, as compared with 1s 4 55-64d; the yen, after a temporary relapse, stands at 1s 10½d, as compared with 1s 10 7-8d. On a growing Continental demand and some bear covering in India and China, the silver market has been firm with rising prices, and it would seem probable that a further increase may be expected. Hong Kong has appreciated from 2s 4½d to 2s 4 8-8d, after being 2s 4½d, Shanghai from 3s 3½d to 3s 3 1-2d. In South America, Rio has relapsed from 6½d to 5 27-32d, while Buenos Aires has appreciated from 40½d to 41½d, and Montevideo from 43d to 43 7-8d, Valparaiso falling back a little from 39.10 to 39.20 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 17th:—

(000's omitted.)		
EXPENDITURE.	\$	RECEIPTS.
Supply Services	7,000	From Revenue
Interest, &c., on Debt	3,966	13,488
Sinking Fund	100	
Road Fund	774	
Reduction of Debt	1,539	
Added to Exchequer Balances ..	229	
	13,488	13,488

Revenue, at £13,488,000 was about £2,000,000 lower than in the corresponding week last year. Excise was practically responsible for this decline, the yield amounting to £5,170,000, against £7,167,000. Customs produced £1,552,000, against £2,180,000. Property and Income-tax yielded £1,318,000, against £2,071,000, and Super-tax £1,840,000, against £770,000. Special Receipts amounted to £500,000, against £5,922 a year ago. The week's operations reduced the National Debt by £1,540,000, and caused the following changes:—

(000's omitted.)		
	£	£
Treasury Bills	+ 4,940	Bank of England Advances . — 250
4% Treasury Bonds	+ 2,840	Public Dept. Advances — 9,300
Saving Certificates	+ 50	
Unemployment Insurance....	+ 180	
	+ 8,010	— 9,550

The floating debt was reduced by £4,630,000 to £748,120,500.

THE WEEK IN PARLIAMENT.

MONDAY, MAY 19TH.—*Commons*: Money resolution for increase of pre-war pensions debated and withdrawn. Second reading of the Administration of Justice Bill.

TUESDAY, MAY 20TH.—*Lords*: Second readings of London County Council (Tramways and Improvements) Bill,

and Prevention of Evictions Bill. Agricultural Returns Bill and National Health Insurance (Cost of Medical Benefit) Bill read a third time and passed. *Commons*: Second readings of Unemployment Insurance (No. 2) Bill, and Protection of Animals Bill.

WEDNESDAY, MAY 21ST.—*Lords*: Statements on Airship Policy, and Ottoman Public Debt. *Commons*: Second Reading of Auxiliary Air Force and Air Force Reserve Bill. Debate on British export trade.

THURSDAY, MAY 22ND.—*Lords*: Second reading of School Teachers (Superannuation) Bill. Debate on proposal for a new London bridge. *Commons*: Debate on unemployment.

FRIDAY, MAY 23RD.—*Commons*: Second reading of Blind Persons Act (1920) Amendment Bill.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Central Mining and Investment Corporation, Gresham Fire and Accident Insurance Co., Motor Union Insurance, Hambro's Bank, Lanadron Rubber Estates, Kepong (Malay) Rubber Estates, Cluny Rubber Estates, Ledbury Rubber Estates, Pernambang Rubber Estates, Calcutta Electric Supply, Buchanan-Dewar, Callander's Cable and Construction, and Whiteaway, Laidlaw. Sir Lionel Phillips at the meeting of Central Mining and Investment Corporation gave an exhaustive review of the position and prospects of the mining industry in South Africa. The chairman of Whiteaway, Laidlaw reviewed general trading conditions in the East. At the meeting of Calcutta Electric Supply Corporation the chairman reported a record sale of current. At the meeting of Lanadron Rubber Estates the chairman urged the necessity of adhering to the Stevenson Scheme. The chairman at the meeting of Kepong (Malay) Rubber Estates announced the acquisition of new properties.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a review of Indian trade in 1923-24.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

UNEMPLOYMENT POLICY.

IN spite of the steady absorption of workless into industry over the past two years, the problem of unemployment remains the whirlpool which threatens to engulf successive Governments. The continuance of large-scale unemployment drove Mr Baldwin to his ill-considered proposal of protection as a "remedy," and so to his downfall. The Labour Government, profiting by this folly, stepped into his shoes, but they are now confronted with menacing attacks from those who with cruel effect contrast glittering promises of the platform with meagre performances in office. Mr Shaw says that he cannot produce rabbits out of a hat; critics reply that when mountains have been in labour, something better than a mouse is expected. The mouse in this case represents little more than the taking over and extension of the Trade Facilities Act. Such criticisms are perfectly sound as far as they go. But the deduction is not so much that the Government should be doing something heroic, but that politicians should not hold out false hopes. The Government is learning that there is no short cut to the abolition of unemployment, and the Liberal party naturally refused to vote against the Government for not doing the impossible, though its spokesmen added some trenchant criticisms to Thursday's debate.

While the Labour Government has thus disappointed its adherents by its failure to produce schemes for the encouragement of trade and the reduction of unemploy-

ment, its proposals for the relief of those who are unemployed have equally failed to secure general approval. The Unemployment Insurance (No. 2) Bill, which passed its second reading in the House of Commons on Tuesday, thanks to promises of amendment in committee, calls for serious criticism from many angles. Briefly summarised, the main proposals of this Bill are as follows:—

(1) To make uncovenanted benefit a legal right and an integral part of the permanent scheme. (2) To raise the rates of benefit. (3) To change the provisions disqualifying workers from benefit in cases of stoppage through trade disputes. (4) To reduce the age for entry into the unemployment insurance scheme from 16 to 14. (5) To increase the allowance for children of unemployed. (6) To remove the remaining gap in benefit periods. On broad lines we think that these proposals should be tested by the application of three main principles. In the first place, it is desirable that the overlapping between insurance benefit and poor law relief should be removed. Secondly, any scheme is disastrous which destroys or impairs the incentive to work. Thirdly, any scheme must be financially sound. As regards the third condition, we have the assurance of the Minister of Labour that, "so far as it is possible to compute, the present contribution will not only bear the expense of the scheme, but will actually pay off the deficit which now exists." This statement is based on the report of the Government Actuary, whose calculations in one important respect would appear to have a margin of safety, for they are framed on the assumption of the Minister of Labour that the registered unemployed will average 1,100,000 up to the end of the present benefit year (October 15th), 1,000,000 from then up to the end of March, 1925, and 800,000 thereafter. It is surely not unreasonable to hope that trade recovery will be sufficiently good to produce much better figures than this. For the moment, therefore, we may consider the Bill to pass the third of our tests, although it should be noticed in passing that the Government Actuary finds "unsusceptible of calculation" the cost of removing the disqualification in the case of workers affected by trade disputes—a measure which on other grounds requires very careful scrutiny.

As regards the first principle, namely, that overlapping with the Poor Law should be obviated, some increase in the rates of benefit is required. The Bill proposes to raise the rate in the case of a man from 15s to 18s, and of a woman from 12s to 15s, while the allowance for children is raised from 1s to 2s. This benefit is to be given for the existing contributions until the debt to the Treasury is repaid, after which the combined premium will fall from the present 2s 1½d per week per adult male to 1s 6d. From the same point of view the bridging over of the gap is not open to objection, for hitherto the incidence of the gap has merely transferred the beneficiaries at the end of a benefit period on to the books of the Poor Law authorities. Nevertheless, we regret that in this Bill, which is a far-reaching attempt to overhaul the whole system, the flat rate of benefit is maintained for the whole country, and that no effort is made to differentiate benefits and contributions in accordance with variations in wages and living costs in different parts of the country. The present opportunity should have been taken to attempt some equalisation of the real value of benefits and the real burden of contributions under varying conditions. The effect of the present system is that if the flat rate of benefit is suitable in country districts and for unskilled labour, it is inadequate for other workers. On the other hand, to raise the rate to a suitable figure for skilled London workers would undoubtedly destroy the economic equilibrium elsewhere.

The second principle is, however, the most difficult of all to apply. From this point of view the making of uncovenanted benefit a permanent statutory right is likely to prove a retrograde step by weakening the incentive to work. The first interest of the nation is efficient and economical production, and industrial policy should be centred on this objective. Everyone must recognise that there is serious danger that lax administration of the insurance system may make things too easy for men to get along without making a real effort to get work or to adapt themselves to changing demands. It is from this end that the problem ought to be approached, and in this connection we would recall the important suggestions

made by Sir Wm. Beveridge in his recent pamphlet on "Insurance for All and Everything":—

The conditions upon which unemployment benefit can be drawn should change progressively with the length of time for which it has been drawn. For a limited period only—whether 15 or 25, or more weeks in a year—benefit should be available on conditions at least as favourable as those now in force; the workman should be allowed to hold out for work in his own trade and district without forfeiting his claim to benefit. After that time it becomes reasonable to say that his chance of finding work on those terms appears so small that he must acquiesce in other terms; he may be required to take suitable work outside his proper trade, or to move more readily to another district. Finally, a point may be reached when demoralisation through idleness has begun or is threatened; it becomes reasonable to give further benefit only on condition of some form of training either mental or physical, of further education either general or technical, which may help to improve the unemployed man's physique or intelligence, and which will at any rate give him something to do with his day. Some such progressive change of benefit conditions is the proper alternative to reducing the pay to an obviously inadequate pittance or to breaking it by meaningless "gaps."

Third, unemployment benefit must end at last, and leave the recipient to the infirmary, the asylum, or the labour colony. It can be justified only as a means of tiding over temporary unemployment, not as a pension for life.

The conditions in the Bill on which uncovenanted benefit will be payable are altogether too vague and general to form the basis of such a policy.

On the proposal to reduce the age of entry to 14 we find ourselves in serious opposition to the Government Bill. We are not forgetting the money which Mr Shaw proposes to draw from the insurance fund to pay for instructional classes when we say that this age reduction will tend to decrease the number of cases in which a child's education is continued after 14. The Bill in this respect is working on exactly the wrong lines, and in theory we greatly prefer the suggestion made during the debate that the school age should be raised to 15. As Mr Fisher said in the House of Commons on Tuesday, "If children from the age of 14 onwards are insured, and are capable of receiving insurance benefit, that consideration will certainly weigh in the balance on the industrial side and against the educational side." The fact that juveniles will not qualify for benefit until after the payment of 30 contributions goes only a little way towards removing the objection. If the Bill goes through in its present form the State will regard children of 14 as regular members of the industrial community. The tendency should be the other way. The juvenile influx into the labour market will increase, and will aggravate the unemployment problem. Worst of all, the payment of benefits to these children (even on the 5s and 4s scale proposed by the Bill) will impair the incentive to learn a trade at a low initial wage. All this is deplorable, and we trust that the clauses affecting the age of entry will be drastically amended in committee. As they stand they are entirely unacceptable.

There are, therefore, reasons why some of the provisions of this Bill should be submitted to drastic revision. But it will be a thousand pities if the criticism, which will inevitably come from both Conservatives and Liberals, is purely destructive, or if any section seeks to make of unemployment insurance a party question. For, whatever the political future may hold in store, all parties must recognise that it is imperative in the national interest that social insurance should be a success. Not only has special insurance come to stay; it is also bound to be developed. Big national issues depend upon whether it is wisely developed on sound lines; and in this task all parties should be willing to co-operate in a non-partisan spirit.

THE PRESENT ECONOMIC POSITION IN GERMANY.

(BY A CORRESPONDENT.)

THE outstanding feature in the economic life of Germany during the last five months has, of course, been the stabilisation of the mark, which was effected in November. Following the long period of inflation which, by the middle of last year at any rate, had become so excessive as to make normal production absolutely impossible, the establishment of a stable exchange has necessitated a readjustment of values, and above all of the mental attitude of the people to the new conditions. This process appears to have been accomplished with less difficulty than

might have been expected. A fall in the general price level has not taken place: the volume of production was, until week or so ago, almost certainly as great as it has been at any time since the war, and in one or two industries there has actually been a small boom. The ease with which stabilisation has been accomplished is not easy to explain, though it seems reasonably certain that a final solution of the underlying difficulties has been postponed, rather than already achieved.

In view of the statement made by the Finance Minister, Dr Luther (quoted in the *Economist* of March 29th last, p. 685), that the national income of Germany is to-day only 25 milliard gold marks, as against 37½ milliards before the war, the present writer has made a number of inquiries in well-informed quarters in Berlin as to the probable present volume of production in the country. It will be noted that Dr Luther's estimate only represents 66 per cent. of the pre-war gold income, or, after allowance is made for the depreciation of gold itself, a total production less than half that of the pre-war territory of the country. If this estimate relates to the 1923 position, it is probably not far wide of the mark, but very considerable changes have taken place since then. The fine mechanical trades are now very near their pre-war level and toys, chemicals, and textiles are not far behind. Coal-mining and agriculture, though better than last year, appear still to be under two-thirds of pre-war, while steel and electrical products are probably both over 70 per cent. of the 1913 level. It is, of course, impossible to dogmatise on a subject of this kind, but everything seems to show that, before the recent outbreak of industrial strife in the Ruhr, production was in the neighbourhood of 70 per cent. of the pre-war figure, while an adjustment for territorial losses would bring the total production of modern Germany up to somewhere about 78 per cent. of the 1913 production of the same territory.

The strong position of the fine mechanical trades (optical glass, &c.) is explained by the fact that Germany still enjoys what is very nearly a world monopoly in this industry. The relative strength of toys and chemicals is also due to the export trade. In textiles a small boom has recently taken place on account of an increase in home demand, which can only be explained by considering the present position of the German working classes.

The real remuneration of labour is, of course, the principal source of home demand. In spite of the rapid readjustments of wage rates during the period of inflation, real wages at that time were exceedingly low, and barely sufficed to provide such absolute necessities as food. Last year, therefore, it was almost impossible for the working classes to purchase articles of clothing and apparel. At the present time, on the other hand, though wages are still very low when compared with those ruling in pre-war Germany or in other countries to-day—the present earnings throughout the whole country vary from a minimum of about 20 gold marks a week to a maximum of some 45 gold marks—they are nevertheless considerably in excess of those in force six months ago. The people have become accustomed to a lower standard of living in matters of food, and therefore have a small margin available for the purchase of clothes and boots. This fact thus offers us an explanation of the small boom in certain industries following immediately upon the stabilisation of the currency.

The above considerations should not, however, be allowed to conceal the fact that labour is very underpaid at the present moment. Money wages (in gold marks), as we have seen, are actually below the pre-war figures, while the general level of prices is from 45 to 50 per cent. above the pre-war level. It follows that the real wages of labour in Germany to-day cannot be more than about 60 per cent. of those ruling in 1913. In the first days of stabilisation—which, be it remembered, followed an insane process of currency devaluation—the new wage rates were regarded with considerable favour by the working classes. As time goes on, however, the real nature of the situation is becoming slowly apparent, and the very improvement in wages is itself tending to stress the hopeless inadequacy of the present remuneration of labour.

The employers, for their part, appear to be in a very arrogant mood. They are, indeed, the spiritual heirs of

the old military caste, and at the present moment are fully conscious of the superiority of their position in matters of bargaining. The working classes are without proper leaders, and seem to have lost faith in the Socialist slogan which made such an appeal five years ago. Workers' councils have almost always proved themselves docile instruments in the hands of the capitalists, and the trade unions are to-day practically penniless. For the moment, then, with the exception of the rather special case of the Ruhr area, there seems to be no immediate prospect of labour unrest on a large scale, but, unless the capitalists adopt a more conciliatory attitude, it seems probable that the day of reckoning will come—and perhaps sooner than many people at present expect.

Even assuming that the Rentenmark remains stable, the financial outlook for the near future is far from bright. In consequence of the long period of inflation, the circulating capital of the country has been steadily reduced. As a result, it is at present by no means easy to obtain accommodation from the banks, and, in any case, from 25 to 30 per cent. per annum is the normal rate which is paid. Under circumstances such as these, it is therefore very difficult for all save the strongest and largest firms to finance production in a satisfactory manner. This important factor in cost of production will, of course, only be successfully reduced when the people acquire sufficient confidence in the currency to resume savings. In the absence of assistance from abroad, the process of obtaining a sufficient surplus of production over consumption will certainly take a considerable time. At present the habit of saving is only being resumed very slowly, and the demoralising effects of windfall profits from speculation during the period of inflation are still making themselves felt. The very complete manner in which German bears of francs were recently caught out has, however, certainly served as a very sharp lesson to certain sections of the German public. Incidentally, it has proved an important contributory factor in bringing about the bankruptcy of several unsound concerns.

In this connection it must not be forgotten that one of the most important results of the inflationist period was to increase beyond all reason the number of middlemen of every conceivable kind. There are in Germany to-day somewhere about 3,000 so-called banks, or, to give them their proper English term, "bucket shops," which perform no useful function whatsoever. The sooner these are cleared away the better for the economic health of the country. Accordingly, one of the most hopeful signs in present-day Germany is the growth in the number of bankruptcies. The "new rich" are now perhaps more "new" than "rich," and the decline in the ostentatious display of wealth in Berlin to-day, as compared with that of, say, 18 months ago, is very noticeable.

The advent of stabilisation has done very little to facilitate reconstruction work, though a large number of repairs and extensions to existing works which should have been carried out long ago are now being taken in hand. It is, unfortunately, impossible to obtain adequate statistics for work of this kind, but it seems probable that, for the most part, only repairs of the most urgent kind are actually being undertaken. Thus, for example, something is being done to improve the surface of Berlin streets, which had been very sadly neglected hitherto.

The housing problem is certainly acute, but it is important to remember that the total population of the country in 1919 was actually less than that of the same territory in 1914 (59.9 millions on October 1, 1919, as against 61 millions on August 1, 1914). Since the war there has been no adequate housing programme, while the following official statistics show the extent to which building was affected by the chaos of last year:—

	1922.	1923.
Houses	40,309	5,960
Factories	4,607	3,062

Although these statistics are not complete, since they do not take account of extensions and repairs, they, nevertheless, show what was undoubtedly the main tendency during the last year.

It is quite impossible to attempt any forecast of events in Germany until it is clear whether the new currency will be maintained. If the Rentenmark were now to collapse the consequences would certainly be exceedingly serious. If, on the other hand, the new atmosphere of qualified

confidence in the currency, which is based very largely upon the hope of the restoration of the economic unity of Germany in accordance with the terms of the Experts' Report, can be maintained, it seems reasonably certain that Germany will gradually return to normal. Progress, however, is bound to be slow, and the situation is almost certain to be complicated by the outbreak of serious strife in the world of labour. Without the influx of foreign capital, however, reconstruction work has very little chance of being taken in hand on a large scale in the near future.

The German people themselves are in a very nervous state, and until the Reparations tangle is finally cleared up this mentality is likely to continue. In any case, however, the advantages of the work of industrial reconstruction (railway rolling stock, electrification, &c.) which was actually accomplished between the Armistice and the invasion of the Ruhr can hardly be regarded as adequate compensation for the serious disorganisation of the national economy which has resulted from the devaluation of the currency.

SITUATION IN THE COAL EXPORT TRADE.

A GREAT and disquieting change has taken place in the coal export trade of the United Kingdom during the past few months. The total quantity exported as cargo to foreign destinations in April was the smallest in any month since June, 1922. It amounted to only 5,062,941 tons, compared with a monthly average last year of 6,625,000 tons, and with a maximum month's trade in that year of 7,684,405 tons. In the average f.o.b. price of the total quantity exported there has been nothing like a corresponding reduction; on the contrary, the price variations since last August have been very small. They have ranged between 24s 5d and 25s. Values declined steadily between August and December, 1923, from 25s 3d to 24s 5d. Last February the general tendency was towards a still lower level, but that tendency was checked by the exceptional stimulus to demand that arose out of fears of a stoppage of work on the expiration, on April 17th, of the notices of the miners to terminate the general wage agreement. In March the average f.o.b. price was 24s 7½d, and in April 25s. Still, with the exception of that in the short month of February last, the total f.o.b. revenue of the foreign cargo and bunker export trade of the United Kingdom in April was the lowest in any month since December, 1922, and was nearly £2½ millions less than the average monthly export revenue in 1923.

This reaction in quantity and value is due chiefly to the resumption of work in the Ruhr, but partly to the very slow progress of the recovery of the more distant world export markets. The prosperity of the coal export trade of the United Kingdom in 1923 was wholly artificial. It began with the occupation of the Ruhr in January, and ended with the collapse of the passive resistance of the German colliery owners and workmen in the autumn. It was not until after the M.I.C.U.M. Agreement had been entered into that the increasing deliveries of Reparation coal to France, Belgium, Italy, and Luxemburg relieved those countries of their dependence on British supplies, but since last November these deliveries have been greatly increased. During 1923 the total quantity delivered to France and Luxemburg of coal, coke, and patent fuel was only just over 5 million tons, or about 420,000 tons per month, and the extent of the improvement which has since taken place may be gathered from the fact that in April last the total quantity of coal, coke, and patent fuel delivered by Germany to France and Luxemburg exceeded 1,300,000 tons. That is in excess even of the monthly rate of delivery provided for under the Spa Agreement of July, 1920. But while the supply of these Reparation coals has been increasing at the rate represented by these statistics, the production of coal on the Continent has also been expanding. In Holland and Belgium the output of coal to-day is appreciably greater than it was in 1913; in the Rhenish Westphalia coalfield the output has been restored to approximately 90 per cent. of the pre-war figure; while even in France the production of the Nord and Pas-de-Calais coalfields is again practically equal to that of 1913.

Under these conditions a diminution in the demand for British coals was inevitable. Last year we exported to Germany, France, Belgium, Holland, and Italy 54.5 million tons, compared with 37.8 millions tons in 1922 and 35.4 million tons in 1913. These exports showed an increase of 54 per cent. on those in 1913, but to all the other markets our exports were 35 per cent. less than they were in that year. The reaction from that abnormal distribution has been as violent as it has been unavoidable. In the first four months of the current year our shipments to Germany, France, Italy, Netherlands, and Belgium were 5,572,000 tons less than they were in the corresponding period of 1923. Proportionately, that represents a rate of contraction equivalent to the total increase in our exports to those countries last year compared with 1913. The actual position, however, is worse than that, for in April the exports to these five countries were 2,200,000 tons less than they were in April, 1923, and it is certain that the decrease in the June quarter of the present year will be a great deal more than that in the March quarter. In the more distant markets the returns show a slight improvement compared with the volume of trade in the early part of 1923. This improvement has been more marked in the South American market than in any other, but the total volume of the extra European trade is considerably less than it was in pre-war years, and at the present rate of progress that pre-war volume of trade will not be recovered for another couple of years.

In the light of all these facts, a pessimistic view is taken of the course of the export trade in the immediate future. With the West Coast of Africa, British South Africa, and the East Coast of Africa our coal export trade to-day is only about one-tenth what it was twenty years ago; with the Indian Continent only a little more than one-half; with the Far East only a little over one-third; and with Central America and the United States Pacific ports less than one-tenth. These markets are now supplied chiefly from native or nearer sources of supply, and the capacity of those competing sources is increasing and not diminishing. The demand for bunkering purposes is also a relatively declining quantity. It was estimated by the late Lord Rhondda that of the total quantity of coal exported from the United Kingdom in pre-war days, at least 50 per cent. was for navigation purposes, and probably two-thirds of the total quantity exported from the Bristol Channel ports. The navies of the world were then coal-driven; they are now oil-driven; and the use of liquid fuel in the mercantile marine is also increasing rapidly. In 1913 very little of this fuel was supplied to merchant vessels at home ports, but in 1923 220 million gallons of oil were supplied as bunkers at British home ports, and in the first four months of the current year over 79 million gallons. It is this increased consumption of oil fuel for marine navigation purposes that accounts for the fact that, notwithstanding the great increase in the world tonnage, the quantity of coal supplied as bunkers at home ports for the use of vessels engaged in the foreign trade has this year averaged only 1,436,000 tons, compared with a monthly average in 1913 of 1,750,000 tons.

These facts will show the extent of the contraction that has taken place in the scope of our foreign markets. But there are other unfavourable factors. The world markets have become more competitive, and the competition even among British coals has become more acute. The diminished bunker demand for South Wales coals is driving those coals to foreign industrial markets, while the great decrease in the Continental demand for English or Scottish coals and the relatively lower cost of the production of those coals, are increasing the rivalry of the Scottish, Newcastle, and Humber exporters with those of the Bristol Channel in the more distant markets. The Bristol Channel ports still claim the lion's share of the foreign coal trade of the United Kingdom. Thus, in April last, its proportion of the total foreign cargo exports was 44 per cent., compared with 40 per cent. in 1913; that of the North-Eastern ports 35 per cent., compared with 31 per cent.; of the Humber ports 5 per cent., compared with 12 per cent.; and of the Scottish ports 13 per cent., compared with 14 per cent. Under the new wages agreement, however, the competitive position of the Bristol Channel ports will be injured by the greater comparative increase in the cost of production. Prices have already fallen to a level that has

compelled the indefinite suspension of work at a number of pits, but the increased wages to be paid under the new agreement will represent an additional labour cost of anything from 1s 3d to 1s 8d, and this means that for large coals the owners must get from 2s to 3s per ton more to maintain the same rate of profit. No one can see how the attainment of that higher price will be possible under the prevailing depressed conditions of trade. A severe system of output regulation could secure a remunerative price for a smaller quantity of coal, but the colliery companies are at present opposed to such artificial regulation, and it is certain that the antagonism of the workmen to such a proposal would precipitate another crisis in the industry. Considered as a whole, the position in the coal export trade of the country is nearly as bad as it was during the acute depression of June, 1922.

THE STANDARDISATION OF RUBBER ACCOUNTS.

FROM time to time we have dealt in these columns with the standardisation of accounts and accounting presentation. On each occasion we have been forced to confine our remarks to standardisation of the accounts of rubber companies; the conclusions drawn have been the particular conclusions arising from a study of the problem as it affects the rubber industry only. This is not because the standardisation movement is directed towards the full publication of the results of rubber companies alone; it is a circumstance which arises from the fact that in no other industry has any attempt been made to consider the matter seriously. No effort has been made in any class of joint stock enterprise—except that concerned with rubber production—to introduce a standardised balance-sheet which can be adopted by every company within the class. It is the only industry in which any movement has been set afoot for providing the shareholder with a complete knowledge of production costs of his company, and it is the only business in which an honest attempt has been made to overcome the abuses to which condensation of accounts lends itself. It is on account of these circumstances that any reference to the progress of the standardisation movement must necessarily be confined to rubber accounts. The latest company report bearing upon the subject is of particular importance in that it raises a new issue. It is the report and speech of the fourth annual general meeting of the Straits Rubber Company, Limited. Some few months ago the directors circularised the shareholders asking them to express an opinion on the practice of publishing the cost of production in full and the prices realised for rubber. In the words of the chairman, the result of the referendum "clearly indicates that the shareholders approve the policy adopted by the directors (i.e., of non-publication), and that being so, there is nothing more to be said." Considerable publicity was given to this report a few weeks ago, particularly in the form of a conclusion to the effect that an overwhelming majority had been obtained against standardisation of rubber accounts. We were inclined to the belief that this conclusion was arrived at before the text of the chairman's speech had become public property, for with the text in front of us we were unable to subscribe to the opinion that the vote could be regarded as indicative of the general feeling of rubber shareholders. In view of the fact that the original conclusions have not been modified in that section of the Press which set them afoot, we feel constrained to comment upon the actual results of the referendum.

In response to the directors' circular, only 26.4 per cent. of the shareholders voted. The balance of 73.6 per cent. consisted of 21.6 of independent shareholders and 52 per cent. of directors or shareholders controlled by the directors. Of the 26.4 per cent. who voted we find that 14.7 per cent. were in favour of leaving the matter to the discretion of the directors, and that 7.4 per cent. were definitely opposed to publication. The fact that the remainder who voted in favour of publication amounted to no more than 4.3 per cent. does not induce us to the conclusion that the result may be taken as an overwhelm-

BREWERY PROFITS.

THE chief event of 1923 in the brewery industry was the change in the beer duty made in the Budget. The duty of 100s per standard barrel was not altered, but a rebate of 20s was granted on each bulk barrel of 1,024 degrees or over, the rebate being graded down in the case of beers of less gravity. Messrs White, Tomkins, and Courage, writing in their annual review, state that:—"The estimated cost of the rebate was £13,000,000 in the current year and £16,600,000 in a full year. Being of opinion 'that the trade might fairly be asked to bear part of the cost' to the Exchequer, the difference between the rebate of 20s and 24s, the equivalent of a penny per pint in the barrel, was left to be borne by the trade." Retail prices were lowered on the morning following the Budget statement, and the pre-Budget gravities were, on the whole, not decreased.

According to the United Kingdom Alliance, an association not friendly to brewing concerns, the reduction in the price of beer, which came into operation in April, stopped the existing decline in consumption and increased the demand. The following table, supplied to us by the United Kingdom Alliance, gives figures for beer production in Great Britain during 1922 and 1923:—

	(000's omitted.) Standard Barrels.		Bulk Barrels.	
	1922.	1923.	1922.	1923.
March quarter	4,215 ..	4,007 ..	5,376 ..	5,092 ..
June quarter	5,097 ..	5,075 ..	6,625 ..	6,509 ..
September quarter	4,968 ..	5,528 ..	6,491 ..	7,203 ..
December quarter	4,486 ..	4,885 ..	5,724 ..	6,185 ..
	18,766 ..	19,495 ..	24,216 ..	24,989 ..

This table shows that while there was a decline of 400,000 selling barrels in the first half-year, there was an increase of over 1,100,000 barrels in the rest of the year.

We have already dealt with the recent results of a number of representative brewery concerns (see the *Economist*, November 10, 1923, page 823). But as brewery accounts are issued at such varied intervals and dates, we have analysed the accounts of a second group. In the table which follows we show net profits, after payment of debenture interest, and amounts carried forward for past three years, of 14 other leading London and provincial breweries:—

Name of Company.	Net Profit, after Payment of Debenture Interest.		Carried Forward.		
	1921.	1922.	1921.	1922.	1923.
Samuel Allsopp and Sons	57,825	57,791	90,141	19,394	19,394
Bea's	31,866	34,568	39,348	33,211	33,211
Boddington's	70,731	68,539	68,276	7,284	6,125
Bristol United	69,369	65,539	55,031	35,077	37,631
Cannon	157,040	178,517	205,781	67,448	71,216
City of London	144,244	168,815	175,611	34,374	37,754
Huggins and Co.	32,464	34,973	46,011	29,051	32,973
Ind. Coope	176,232	176,638	189,994	106,345	104,482
James Shipstone	77,142	77,168	103,898	22,504	22,578
Leaux	70,887	5,970	94,329	4,792	55,247
Newcastle	43,835	30,793	34,589	73,303	52,395
P. Philips	76,557	80,794	85,571	63,202	68,827
Style and Winch	81,661	83,833	83,663	38,093	50,029
Peter Walker & Robert Cain	..	417,545	392,235	..	20,545

The Cannon Brewery's year has been an excellent one. On the £25 deferred ordinary shares a dividend of 16 per cent., free of tax, and a bonus of £4 per share, also free of tax, were declared. It is only fair to add, perhaps, that this dividend and bonus represents but 8 per cent. on the company's deferred ordinary capital before it was reduced. The City of London, after paying a 20 per cent. dividend on its ordinary shares, added £20,000 to reserves and carried £48,830 forward, as against £37,754 brought into the accounts. In passing we should like to say that these accounts are concise but clear. Ind. Coope, and Co. distributed 15 per cent. on its ordinary capital, and placed £50,000 to reserves. Samuel Allsopp and Sons show considerably increased profits. Peter Walker (Warrington) and Robert Cain and Sons, Limited, was formed in September, 1921, to acquire, firstly, the brewery business of Robert Cain and Sons, Limited, which included the share capital of Harding and Parrington, Limited, and, secondly, the ordinary share capital of a brewery company known as Peter Walker and

ing majority against standardisation. Taken in conjunction with the analysis of the votes against the proposals, we are inclined to suggest that the result cannot be regarded as an expression of opinion on the question except in so far as it affects the Straits Rubber Company alone. The suggestion which gained currency as the result of the earlier Press comments, to the effect that it is indicative of the opinion of all shareholders in the industry, rather savours of prenotation.

It must not be thought that we have any fault to find with the action of the Straits Rubber directorate. In view of the fact that a majority of the shares were already under the control of the board, there was really no obligation on the directors to consult the outside shareholders. That they did so only provides a further instance of the efficient and wholehearted interest which the board of that company always displays towards those who place their property under their charge. The example of the Straits Rubber Company's directors is one that might well be followed by the boards of companies in which the interests of the outside shareholders are greater than those of the board. Further, we do not suggest that the directors' original circular was couched in any terms which would influence the recipients in one direction or the other. As a matter of fact, we believe that a real attempt was made to ascertain the views of the independent shareholders upon the postulates of the Rubber Shareholders' Association itself. Our reason for hesitating to regard the result as an indication of the opinion of rubber shareholders generally is that so large a majority did not vote at all, and that so small a percentage as 7.4 voted unequivocally against the proposals. The percentage of shareholders who were either apathetic or who were so undecided as to leave the matter to the discretion of the directors, is sufficiently high to show that the importance of the referendum was under-estimated. Until this apathy is dispelled, then the conclusions to be drawn from a poll are apt to be misleading. It is the lethargy of the shareholder with which the Rubber Shareholders' Association is confronted. The members of that association need not be disheartened by the result of this referendum. It should only serve to instil additional enthusiasm in the movement, and to lead the present members to recruit more rubber shareholders to the association. Until a majority of shareholders have joined the association and apprised themselves of the abuses to which their apathy contributes, then the "overwhelming" results in individual cases should be accepted cautiously and not taken as rebuffs. The average unsympathetic shareholder in rubber companies may afford to rely upon the discretion of efficient directors of such well-managed companies as the Straits Rubber Company; his lack of interest is dangerous in the case of the badly controlled concern. He must be made aware of the evils accompanying the abuses of the Commercial Agency system which exist in many rubber companies to-day. This one aspect alone, which permits the partners in the agent firm to control the board of the rubber company itself, is sufficient to cause all rubber shareholders to take an active interest in their property—were they aware of the dangers which lurk in its trail. The Rubber Shareholders' Association has done much to enlighten proprietors on the system which permits directors to receive two classes of remuneration—agency commission as partners in the commercial agency firm and salaries as directors of the company for which they act only one class of which is usually known to the shareholders and published in the accounts. The Association has also made strenuous efforts to apprise the rubber shareholder of the way in which estate managers have to regard the Eastern house of the agents as their real employers instead of the principal company. It has also endeavoured to acquaint the member of the manner in which long-term contracts for commercial agency are arranged without his knowledge. It must continue in its difficult task until the majority of shareholders have been aroused and made to understand the necessity for displaying a constant interest in their property. When it has succeeded then any referendum must be taken as a general indication of the wishes of the investors in the industry. The results which attend any such polls will be awaited with the greatest interest by all concerned in this most important branch of our imperial trade.

Son (Warrington and Burton), Limited. The profits recorded above for the undertaking are not very large when it is considered that assets amount to £6,535,193. This, however, was a boom-time flotation. The ordinary shares receive a distribution of 9 per cent., as against 10 a year ago, which leaves £25,470 to be carried forward—the latter sum being slightly larger than the £20,544 brought into the accounts.

In our next table we analyse the chief assets and liabilities over the past three years:—

Shareholders will notice with satisfaction that in the above figures capital is practically stationary, while reserves in most cases are on the upward trend. Even Meux's Brewery, which a year ago took its last thousands from the reserve to pay arrears of dividends, has this year, after making a substantial profit, re-opened reserve account with an allocation of £25,000. The Cannon Brewery has added to properties, having purchased 80 licensed houses during the year. It may be recalled that Ind. Coope, and Co. was reconstructed under an arrangement sanctioned by the court in 1912; this company holds all the issued capital of the Leeds and Batley Breweries, and has a controlling interest in Bindley and Co., Robinson's Brewery, and B. Grant and Co. The chairman of Ind. Coope, and Co., at the general meeting, after pointing out that properties showed an increase of £99,000, accounted for by the fresh purchases, &c., proceeded to state that sundry debtors were less by £64,000, "due almost entirely to the decreased selling price of 24s per barrel brought about by the last Budget." He went on: "Cash and War Bonds are practically identical with last year. You will notice that stocks on hand show a considerable decrease. At the close of the financial year 1921-22 there were some rather heavy commitments for materials, which have since been liquidated, and we are carrying considerably smaller stocks this year, which, together with the reduced duty on stocks of beer, accounts for the difference." Investors will duly appreciate the desire of the board of directors

to increase reserves, and notice that total reserves now amount to £450,000. Sir William Peat, chairman of Allsopp's, pointed out that "until 1916, they were unable to make the interest on the debenture stock, and it was frequently said that 'Allsopp's' as a concern could never do more than pay the interest and sinking fund on its prior liens, a condition of things circumstances had shown to be inaccurate, because they had not only paid all the interest charges and all their redemption on the prior lien stock, but had also paid what might be called fair dividends to the preference stockholders and to the ordinary stockholders. The first dividend they paid on the ordinary stock was in 1919. Further, their cash and their reserves had all been created during the 10 years which had elapsed since the present board took office." A striking record of guardianship.

In the balance-sheet of Peter Walker and Robert Cain the reserve is given as £20,000. Fortunately, however, this is one of the more enlightened holding companies which publish in addition a consolidated balance-sheet. In this, total items on the assets side amount to £11,963,983, while reserves are given as £530,000. We are still, however, somewhat in the dark as to the true state of affairs, for the main item of £10,568,585, representing freeholds, goodwill, and investments, like the corresponding item in most of these companies' accounts, is stated to be "less depreciation and reserves" of an unknown amount. An item, "Company formation," £328,480, has been cleared off during the year.

Our final table shows present dividends, prices, and yields compared with a year ago:—

† Free of income-tax.

It is perhaps only natural that yields on brewery stocks and shares should be big. The uncertainty of the future and the aversion to purchase by a section of the community combine to keep the market within limits. It must not be overlooked, however, that those who hold shares in brewery undertakings belong to the conservative part of the people, and are *bonâ fide* investors without inclinations to speculate. Many shares only change hands when an estate is to be divided. On the other hand, occasional small bargains are effected at low prices. Thus it often happens that the marked dealings in these securities are not a true index to their value. This has been the case in the brewery share market for some years past.

LINOLEUM AND COMPETITION.

THE linoleum and oilcloth industry has been basking in great prosperity for the past two or three years. Most of the companies engaged in it have paid enormous dividends, and those with wise managements have taken the precaution to place handsome sums to reserve. Directors endowed with foresight and caution are quick to realise that spells of abounding prosperity cannot be relied on permanently, and may be followed at no distant date by spells of equally pronounced adversity. It is then that sums set aside for the rainy day prove extremely useful in the fight against foreign competition or other adverse factors that may have developed.

Hitherto, it must be admitted, the linoleum trade has not had much to complain of in the way of adversity. The war, of course, disorganised it considerably, but right up to the outbreak of the great struggle its record for

forty years was one of virtually unchecked progress. Here are the export figures for the last fifty years, and the imports for the past twenty years:—

BRITAIN'S OVERSEA TRADE IN LINOLEUM AND OILCLOTH.

	Exports.			Gross Imports.		
	Thous. Sq. Yds.	Thous. £	Shillings per Sq. Yd.	Thous. Sq. Yds.	Thous. £	Shillings per Sq. Yd.
1874-78 ..	6,036	358	1.2	..	..	..
1879-83 ..	7,818	476	1.2	..	..	..
1884-88 ..	12,996	674	1.0	..	..	..
1889-93 ..	17,495	771	0.9	..	..	..
1894-98 ..	22,838	921	0.8	..	..	..
1899-03 ..	28,899	1,356	0.9	..	..	..
1904-08 ..	43,266	1,974	0.9	1,568	94	1.2
1909-13 ..	51,989	2,595	1.0	1,371	90	1.3
1914-18 ..	27,968	1,800	1.3	561	26	0.9
1919-23 ..	30,528	4,874	3.2	2,463	271	2.2

It will be seen that for the forty years to 1913 each lustrum witnessed a substantial growth of exports. In that period our sales abroad rose from 6 million square yards to very nearly 52 million square yards per annum. The value, despite a fall in the value per yard continuing for the first 25 years, rose from little more than a quarter of a million to over 2½ millions sterling per annum.

It must not, however, be assumed that all this was achieved without any spur from foreign competition. In the early years of this century, it will be noticed, about 1½ million square yards were landed here annually. This came principally from Belgium and Germany. The latter country then made a cheaper and somewhat inferior grade of inlaid linoleum, which was apt to be preferred here if the price of the superior English article were too much above it. This acted as a very efficient check on price manipulation by our manufacturers, and was altogether favourable to the industry's healthy development. It was met without serious trouble on our part, and did not hinder the steady growth of the trade.

We should do well, however, to bear in mind continually the imminence of foreign competition. The figures for the five years to 1923 show that it has begun to increase again—though this time it comes from a different source. But the averaging for five years obscures the seriousness of the movement. Let us examine the individual years.

In 1920 the Board of Trade reclassified both exports and imports. This enables us to give one table dealing with linoleum and cork carpet, and another covering oilcloth of all kinds. A glance at that for linoleum and cork carpet will at once show where the red light gleamed for the trade:—

LINOLEUM AND CORK CARPET.

	British Exports.			Gross Imports.		
	Thous. Sq. Yds.	Thous. £	Shillings per Sq. Yd.	Thous. Sq. Yds.	Thous. £	Shillings per Sq. Yd.
1920..	18,477	3,939	4.2	228	30	2.6
1921..	13,082	2,695	4.1	370	44	2.4
1922..	18,649	3,122	3.3	869	86	2.0
1923..	20,899	3,106	3.0	4,228	416	2.0

There is nothing in the exports to cause particular uneasiness, but it is far different with the imports. In the short space of three years landings of foreign linoleum and cork carpet have been swollen from a quarter of a million square yards to no less than 4½ million square yards, values going up from £30,000 to £416,000. Each year registered an increase, but it was reserved for last year to show the enormous jump of 400 per cent. Note, too, the difference in prices. Those of exports have been steadily falling, but even at 3s per square yard they still are 50 per cent. dearer than imports at 2s per square yard.

Some difference of price is doubtless justified by the superior quality of British goods. But the excess here shown appears to be too great. In the absence of some remedial measures taken by our manufacturers, imports might be expected to become even more troublesome to them.

INTERNATIONAL BANKING
IN ALL ITS BRANCHES
**BANKERS TRUST
COMPANY**
16, WALL STREET, NEW YORK
PARIS OFFICE
3 & 5, PLACE VENDOME
CABLE ADDRESS: BANKTRUST, PARIS

The threat comes mainly from the United States, as the following comparison proves:—

GROSS IMPORTS OF LINOLEUM AND CORK CARPET.

	Thousand Square Yards.			Thousand £.		
	From U.S.A.	Other Countries.	Total.	From U.S.A.	Other Countries.	Total.
1920.....	193	35	228	28	2	30
1921.....	354	16	370	38	6	44
1922.....	804	65	869	75	11	86
1923.....	3,916	312	4,228	365	51	416

In all these years, receipts from the United States consisted mainly of linoleum that was not inlaid, and in 1922 they were entirely of this material. In 1923 we received from that source only £75 worth of inlaid linoleum. Of cork carpet the United States sent us about £4,000 worth in 1921, but none in the two subsequent years.

It is not in cork carpet or inlaid linoleum, then, that our makers have to fear competition, but in linoleum other than inlaid. This is the vulnerable point for them; and, happily, there are grounds for believing that they are now adequately attending to the threat. These grounds are to be found in the Board of Trade returns for the first four months of 1924, thus:—

slightly less than 15 rod—of course, when differences of quality are taken into account. The slight rise in average value of imports last year, too, seems to indicate that our competitors have reached their limit of price-cutting. If so, the position of British producers in this section of the industry is probably very favourable. Their competitive power is likely to prove quite strong enough for the strain it may have to bear during the next few years.

To sum up, it is manifest that an industry which during the forty years preceding the great war raised the volume of its overseas trade nearly ninefold has done extremely well. The reduction since the disastrous struggle is but natural, and will probably only be remedied after the general settlement of world relations. Competition from abroad is less serious than in many other industries; but it is there, and is ever ready to grow rapidly if our own firms allow themselves to become supine. The price of success is eternal vigilance, and so long as our manufacturers remember this they should be safe.

Notes of the Week.

Irish Boundary Problem.—Our Dublin correspondent writes:—The suspense as to the boundary question continues. The Irish Free State still takes its stand upon the Treaty, and Northern Ireland having refused to appoint a Commissioner in pursuance of Article XII., throws out hints that if Article XII. were abandoned, something, a rather indefinite something, might be arranged by consent between itself and the Free State. Now this is not very promising or helpful, inasmuch as the Free State would have to begin by abandoning its vantage ground of the Treaty which is assured to it by the covenanted faith of Great Britain, and would be inferentially accepting Northern Ireland as having an equal status, contractually and constitutionally, with itself—and it would have no guarantee that these sacrifices would result in any concession from the intransigence of the North, nor that if Sir James Craig made any such concession he could carry his organised extremists with him. This last is no remote contingency. The advocates of "Ulster" are extremely frank, save in utterances for publication, as to the impossibility of controlling their wild men, and the argument is freely used for purposes of negotiation. Is it any wonder that the Free State adheres to its unassailable position under the Treaty? In an interview with an American paper Sir James Craig is reported to have suggested an interchange of border districts, and that, if this were agreed to, he would request the British Government to forgo its claim to a financial contribution from the Irish Free State under Article V. The suggestion does not seem to have been repeated elsewhere, nor in such a form is it very helpful. Dublin believes that Belfast has always misunderstood Anglo-Irish financial relations, and in its zeal for a Unionist triumph over the Liberal policy of Home Rule, made a very bad bargain for itself in accepting the financial arrangements—by which it is now bound—of the Act of 1920. Successful as he has been so far in obtaining subsidies from the British Treasury, Sir James Craig is not, in the Dublin view, competent to promise financial concessions by the Treasury to the Irish Free State. Nor, in point of fact, does Dublin believe that when the accounts contemplated by Article V. are taken there will prove to be any serious contribution to be made by the Free State—but that is another day's argument. Impartial folk will realise the difficulty of expecting the Free State, in the face of a challenge to its rights under the Treaty, to forgo those rights for the purpose of entering into another negotiation with a view to another settlement as to which there is no guarantee that it may not be wrecked on the same rock as the first. Secure in its position, the Free State Government is most anxious that no possible incident should occur that might lead to the matter being removed from the plane of reason to that of violence. It is not unlikely that, emulating the example of France in July, 1914—when she did not want war, and feared frontier "incidents" as a means thereto—the Government may order a withdrawal of all its uniformed men to some distance behind the border. This

would be at once a sensible precaution, a gesture of peacefulness, and a guarantee of good faith. There is some resentment felt here at the attitude and suggestions of some of the more august and some of the more pretentious organs of the British Press which have espoused the cause of Northern Ireland. The refusal of audience to every publicist who seeks to explain the basis, in reason or in law, of the Free State case is held to be inconsistent with fair play and the honourable traditions of British journalism. Fortunately the British Government has stated quite clearly that the Treaty, which, by the way, Great Britain ratified as a Treaty, will be honoured in the spirit and in the letter. But if the wreckers were to have their way, it is as well to realise that hell might be let loose once more in Ireland. A notable event of the week has been the supersession of the Dublin Corporation by administrative decree, and three Commissioners have been nominated to manage the affairs of the Municipality.

The Turkish Debt.—The repudiation of the Decree of Muharrem on the ground that it was not confirmed at Lausanne completes the series of breaches of faith with the bondholders committed by the Angora Government. Unfortunately, Great Britain is not free from blame. Sir Adam Block's Special Report on the Ottoman Public Debt gives its history as follows. In 1875, the External Debt exceeded £200 millions sterling, and the sum required for interest and sinking fund was over £12,000,000. In October of that year Turkey reduced the last-named amount by 50 per cent., and in April, 1876, suspended payment altogether, in consequence of the risings which led to the war with Russia. That war made the outlook so bad that the bondholders formed defence committees, and put their case before the Congress at Berlin. Eventually Turkey was induced to establish an Administration, under Sir Hamilton Lang, of the revenues from stamps, fisheries, spirits, silk tithe, salt, and tobacco. The results were so satisfactory that in 1881 Turkey ceded these revenues, with some slight modifications, to a Debt Council of seven members, respectively representing the British, French, German, Austrian, and Turkish bondholders, the Galata bankers, and the Turkish Government. The nominal capital of the loans placed under the Council's control was reduced by 44 per cent.—from £T.191,000,000 to £T.106,000,000; the Council's administration was carefully made independent of Turkish control, and the Turkish Government was required to accept the Council's annual budget and incorporate it in its own. The arrangement was enacted by the Decree of Muharrem (December 20, 1881). Till 1903 the ceded revenues produced only about 1 per cent. on the capital, instead of the 4 per cent. originally expected; but in that year the "Décret-Annexe" reduced the sinking fund, rearranged the capital of the loans controlled by the council, and cut down that of the Unified Debt, the most important of them, by 58 per cent. This and the Lottery Loan ("Lots Turcs") were made a first charge on the ceded revenues; of the surplus one-fourth went to an additional sinking fund, and three-fourths to the Turkish Government, which used its share as security, in whole or in part, for other loans amounting to about £T.54,000,000. The council's administration set a good example to Turkey, whose share of the surplus, at first trifling, reached, in 1911-12, £T.1,671,404. Since 1919, however, the Angora Government has withheld the ceded revenues bit by bit from the council, and taken over its agencies; the spirit revenue has been annihilated, perhaps not permanently, by prohibition; the tobacco revenue has been modified without its consent; and various other revenues have been withheld either by the Angora authorities or by the mandatory Powers in Iraq, Palestine, and Syria. At the end of the fiscal year 1922-23 it retained only the ceded revenues collected in and near Constantinople, about £T.3,960,000. After deducting expenses, the net revenue was approximately £T.1,810,000 paper, or about one-tenth of the annuity of the Unified Debt and Lottery Bonds. Now these revenues also have been withheld, and the Angora Government will not allow payment on account till it is settled what currency it is to be made in, and will

not resume payment of interest till the readjustment of the capital between Turkey and the Balkan States. And it appears from Lord Arnold's speech in the House of Lords on Wednesday that the Debt revenues collected in Iraq and Palestine since the British occupation will be permanently withheld likewise.

Cost of Living.—Another fall, this time of two points, is recorded in the *Ministry of Labour Gazette's* cost of living index number during April. The figure for May 1st is 71 per cent. above the level of July, 1914, or one point higher than a year ago. There has been a drop of six points in the present calendar year. How the index figure has moved month by month over a series of years is shown below:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items.
(Food, Rent, Clothing, Fuel, and Light, &c.)

Month (beginning of)	1918.	1919.	1920.	1921.	1922.	1923.	1924.
January ..	85-90	120	125	165	92	78	77
February ..	90	120	130	151	88	77	79
March ..	90	115	130	141	86	76	78
April ..	90-95	110	132	133	82	74	73
May ..	95-100	105	141	128	81	70	71
June ..	100	105	150	119	80	69	..
July ..	100-105	105-110	152	119	84	69	..
August ..	110	115	155	122	81	71	..
September ..	110	115	161	120	79	73	..
October ..	115-120	120	164	110	78	75	..
November ..	120-125	125	176	103	80	75	..
December ..	120	125	169	99	80	77	..

For food alone the advance on the pre-war level is now 63 per cent., as compared with 67 per cent. a month earlier. The April decline in food prices is attributable to the effect of the Budget, tea falling 4d per lb and sugar about 1½d per lb. These falls were partially balanced by a rise of 2d per 7 lbs in potatoes.

Employment in April.—There was a slight further improvement in April in the demand for labour. According to the *Ministry of Labour Gazette*, the percentage unemployed among workers covered by the Unemployment Insurance Acts fell from 9.9 on March 24th to 9.7 on April 28th. The trade union percentage (mainly skilled workers) also fell from 7.8 per cent. at the end of March to 7.5 per cent. at the end of April. This compares with 11.3 a year ago and 17 per cent. in April, 1922. Monthly movements of the trade union percentage over a number of years are shown below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1918.	1919.	1920.	1921.	1922.	1923.	1924.

December ..	2.6	1.2	3.2	6.0	16.5	14.0	9.7	..

* Excluding coal miners.

The total number of registered unemployed dropped only slightly, from 1,057,000 to 1,052,000.

A Swiss View of World Trade.—The "Financial and Commercial Review" for 1923 of the Swiss Bank Corporation, though belated, contains some extremely interesting figures, together with some penetrating observations on world trade. Thus, after observing several favourable factors, and noting that stocks of raw material and manufactured goods have to a large extent been absorbed, the report observes, "A gratifying reduction of unemployment in countries such as England, Switzerland, &c., is balanced by a large increase in Germany, as appears from the table given below, showing the

number of unemployed in various countries at the end of the last three years:—

	1921.	1922.	1923.
Great Britain	1,726,000 ..	1,358,000 ..	1,137,000
Switzerland	80,692 ..	73,892 ..	39,673
Holland (a)	65,570 ..	49,800 ..	52,000
Germany	263,383 ..	276,871 ..	1,793,448
Austria (b)	16,713 ..	117,891 ..	75,775
Czecho-Slovakia	78,312 ..	437,841 ..	197,644 (Oct.)
Sweden	132,000 ..	45,900 ..	13,800 (Nov.)
Belgium	19,659 ..	14,302 ..	10,516

(a) Members of trade unions employed. (b) Number in receipt of benefit.

The figures given above would rather suggest that there has been a more even distribution of unemployment in Europe, as a result of the partial distribution of the dumping, rendered possible by the depreciation of exchanges. Speaking of the labour situation generally, the report calls attention to the fact of the reduced output of labour throughout Europe, largely caused by lower hours of work. On this the report observes: "Although figures are difficult to obtain, it would seem that there has been a definite improvement in the efficiency of labour in the last year or two, but the pre-war standard has not yet been reached." We have space for only one other quotation. The report speaks of the consumption of non-ferrous metals as a good index of the economic situation, and quotes the following figures:—

WORLD CONSUMPTION OF NON-FERROUS METALS.
(metric tons; 00's omitted.)

	Lead.				Copper.			
	1913.	1921.	1922.	1923.	1913.	1921.	1922.	1923.*

* Estimated.

Thus, while a consumption of most of these is 'approaching or exceeding the pre-war level, the distribution has greatly changed, Europe only producing and consuming about two-thirds of the pre-war quantity, whereas America's consumption has in every case immensely expanded. This is true of the other Continents, with the exception of Australia, which has been affected by particular difficulties.

The Public Trustee.—The report of the Public Trustee for the year ended March 31st last shows a surplus on the year's working of £29,300, which compares with a surplus of £74,500 for the previous year and a deficit of £41,300 for 1921-22. The drop in the surplus is due principally to the reduction of fees in January of last year. The aggregate value of new business, including accretions to old trusts, during the year was £15,463,100, as compared with £15,332,300 for the previous year. The number of new cases accepted during the year has increased to 1,013, as compared with 955 for the previous year. The probates and the ordinary trusteeships each showed an increase. The average value of the probates accepted during the year was £15,170, and of the trusts £9,983, as compared with £17,286 and £11,891 respectively during the previous year. The number of cases under administration at the end of the year was 15,899, having an estimated value of approximately £175,760,000, apart from large quantities of settled land which have not at present been valued. Three claims for breach of trust, amounting to £11,600, have been met out of revenue during the year, but two of these arose out of transactions in 1913 and 1917 respectively, and the third, involving only £11, was due to a misunderstanding. The

stocks and shares of the trust funds under administration at the head office and Manchester branch amounted to £158,669,500 at March 31st last, as against £152,126,700 12 months ago. The former total includes British Funds, £55,777,600; British Corporation stocks, £12,065,100; Colonial Government and Colonial and Foreign Corporation stocks, £17,810,300; foreign stocks, £4,451,500; Home Railways, £21,836,200; Colonial railways, £7,520,700; foreign railways, £6,625,400; and commercial and industrial, £15,058,200. With regard to the question of fees, the Public Trustee says that under normal circumstances he would have recommended an immediate further reduction, "but the bonus has just risen owing to recent rises in the cost of living index figures; the index figure itself is the subject of much discussion, and may possibly be subjected to a systematic review, and economic conditions generally are by no means stable. I have, therefore, though with considerable reluctance, deferred my recommendations until I can forecast my future expenditure with rather more accuracy."

Investment Stocks on Offer.—The success which continues to attend upon the issue of gilt-edged stocks will no doubt encourage the advent of others of the same class. Up to the present, moreover, the lists of existing securities show no weakening in their prices. On the contrary, a number of Colonials have improved during the past few days. The market for Home Railway prior-charge stocks is also stronger. This is seen in the manner in which supplies of stock are snapped up week by week. Industrial debentures and good-class preference shares shrink into insignificance so far as the supply of them is concerned. A number of the preference shares quoted in the catalogue which we gave last Saturday in the *Economist* (page 1004) have risen in price; the difficulty with others is not so much with prices, but with the amount of supply available. Consols, Local Loans, India 3½ per Cent., 3 per Cent. and 2½ per Cent., the L.C.C., and Irish stocks are taken for Stock Exchange purposes as being virtually irredeemable. Consols can be repaid, of course, at any time now at the option of the Government, but the stock would have to be redeemed at 100, and, as the interest is only 2½ per cent., it is not likely that the Treasury will hasten to repay, at 100, a Government security bearing so low a rate of interest. It is the same with Local Loans, where the redemption date is 1912 or after. The three India Government stocks mentioned have definite redemption dates followed by the words "or after," and the 3½ per Cent. Conversion stock is repayable in 1961 or after. Repayment or redemption can only be effected at 100 in these cases, which is the natural reason for the Stock Exchange opinion that the stocks are, to all intents and purposes, irredeemable until such time as money shall become a drug in the market, and the aftermath of war shall be forgotten. Continuing the list of stocks actually on offer, we may set out the following selections taken from lists of Stock Exchange jobbers. The proviso must be added that, while all these securities were obtainable when the lists were made up, it cannot be guaranteed that stock will still be on offer next week. The interest yield should be studied, of course, in relation to the final column which allows for the repayment of the stocks, in every case at 100, and at the earlier of the dates mentioned where two are given:—

Description.	Dividends Due.	Date of Redemption.	Price.	Yield.	
				Interest Only.	With Redemption.
War 5%.....	1 J. & D.	1929-47	101½d	£ s d	£ s d
War 3½%.....	1 M. & S.	1928	97½	4 19 0	4 16 0

Water Board "B" 3%.....	1 M. & S.	1934-2003	66½	4 10 6	4 12 0

Colonial stocks available for trustee investment will receive a useful addition when the new Australian Fives come to be dealt in, provided that stock can be bought at 100 or under. How narrow is the existing area can be

observed by reference to the small number of trustee stocks offered in this group:—

Description.	Dividends Due.	Date of Redemption.	Price.	Yield.	
				Interest Only.	Allowing for Redemption.
New South Wales 4½%.....	1 J. & J.	1935-45	96½	£ s d	£ s d
New Zealand 4½%.....	1 M. & S.	1944	95½	4 14 6	4 17 0
New Zealand 4%.....	1st Div. 14s, Sept. 1, 1924			4 14 0	4 17 0
Nigeria 4%.....	1 J. & J.	1933-43	91½	4 9 0	4 16 0
Queensland 3%.....	15 A. & O.	1963	87	4 12 0	4 15 0
South Africa 4%.....	1 J. & J.	1922-47	73½	4 3 6	5 1 0
Victoria 3%.....	1 M. & S.	1943-63	89½	4 10 0	4 12 6
West Australia 4½%.....	1 J. & J.	1929-49	75	4 1 0	4 16 0
	1 J. & J.	1935-65	96	4 15 0	4 16 0

A few others there are, besides the above, but this list is representative and tolerably full. Home Railway debenture stocks afford a trustee 4½ per cent. on the money, the choice at his disposal being very limited. The guaranteed yield a few pence higher, and trustee preference stocks give barely 4½ per cent. on money invested at today's prices. It seems a little surprising that the recent fairly heavy issues, which are known to be forerunners of further borrowings, should have had no unfavourable influence over the prices of existing securities. This shows that the 5 per Cent. War Loan is no longer accepted as setting the standard of yield for investment. Its place has been taken by the new 4½ per Cent. Conversion stock, 1940-44, which, at 98½, yields £4 11s 9d per cent., and the price of which is not unlikely, given continuance of cheap money and sluggish trade, to touch three figures.

Finance in Finland.—A correspondent writes:—Owing to the demand for foreign currency occasioned by an excess of imports over exports—a consequence of the hindrances to the export of timber products during an exceptionally severe winter—the Bank of Finland's "valuta" reserve had fallen on March 31st to 552.9 million marks. The bank has, however, at its disposal in addition to the reserve fund a cash credit of 244.8 million marks. It is anticipated, therefore, that the bank will have no difficulty in meeting the requirements of the spring imports. In an interesting paper, the economist, Dr E. Nevanlinna, has adduced some remarkable figures in connection with the recent history of Finnish national finance. The total expenditure of the Finnish State is 75 per cent. higher (60 per cent. per head of the population) than was that of the Grand Duchy of Finland in association with the Russian Empire. Comparing the period 1913-1924 with 1902-1913, Dr Nevanlinna shows that the increase in ordinary expenditure was higher in the earlier than in the later period, whilst the increase in total expenditure was smaller. The extraordinary budget is now twice as large as in 1913. State functionaries are now paid at a lower rate in pre-war marks than before the war, the State benefiting from the change in the value of Finnish currency at the expense of its servants. Thus many departments of the public service are administered at less cost in pre-war marks than in 1913. Of the eighteen commercial banks, ten have declared higher dividends and two lower dividends than for 1922. The sums distributed in dividends amount to 143.6 million marks, as against 124.5 millions for 1922. Three banks have declared no dividend, and one is paying a dividend of 18 per cent. The average dividend is 7.98 per cent., as against 6.92 per cent. for 1922. The Finland Steamship Company, Limited, in spite of the fall in freights and other adverse factors which unfavourably affected the working of the line in 1923, has declared a dividend of 10 per cent. The gross traffic surplus amounted to 17.3 million marks (against 20.0 millions for 1922). The company's fleet at the end of 1923 consisted of 31 steamers, totalling 33,889 gross reg. tons. Companies in liquidation.—The general trade depression has adversely affected not a few important commercial enterprises, and more than one well-known firm has gone into liquidation. The Leppäkoski Company, a carefully managed concern, found itself in difficulties some months ago as the result of the low prices ruling on the paper market. The Nordiska Föreningsbanken, which had given the firm credit, filed a petition in bankruptcy, but this has now been withdrawn, the company having agreed on March 10th to a conditional proposal made by the bank. The Laskela Mills Company are to take over

the mills, &c., at Leppäkoski at an agreed price of 14 million marks, and the bank is to assume responsibility for all the debts of the Leppäkoski Company on conditions acceptable to the bank.

Financial Conditions in Peru.—A correspondent writes:—The somewhat difficult financial situation from which Peru has been suffering of late, in common with several other Latin-American States, appears to have cleared. While foreign capital is still shy, the situation of the Treasury has sensibly improved, and administration funds appear to be more abundant. What threatened to become a regrettable controversy between the Peruvian Treasury and the Guaranty Trust Company, of New York, has been explained away as due to "a misunderstanding," and settled, at least temporarily, to mutual satisfaction. But something further is doubtless likely to be heard of the matter when Congress comes to discuss the alleged claim of the American company to hold something like "an option in perpetuity upon the financial resources of the Peruvian Government." There seems to be no doubt that some such claim (arising out of a small loan of \$2,500,000, bearing an interest of 8 per cent., and raised for certain harbour improvement works in Peru, which had been underwritten by the Guaranty Company) created consternation in native economic circles, necessitating, indeed, prompt action upon the part of the Peruvian State Department in the form of a protest against what was described as "an unwarranted and irregular action by the Guaranty Trust Company in warning other financial houses off the field." Under the terms of the contract with the Peruvian Government, the well-known United States financial institution was thought to claim an option on any future loan that the Peruvian Government would attempt to negotiate. A small loan seems to have become necessary now, in order to wipe out the deficit on the 1922 Budget; but this may be raised almost as easily at home as abroad. The general trade situation in Peru has also become more favourable. The improvement to be noted in 1923, showing a trade balance of £P9,818,680, appears likely to be at least equalled during the current year, notwithstanding the unpromising commencement occasioned by the shortage of water in the cotton districts and the temporary closing of a number of sugar mills. Unfortunately, in the distribution of Peru's foreign trade, Great Britain can claim no more than 20 per cent. of the imports against 41 per cent. provided by the United States. But in regard to exports the figures are less unfavourable, Great Britain claiming 33 per cent., against 40 per cent. by the United States.

Universal Cotton Standards.—Our Manchester correspondent writes:—Last July important conferences took place in Washington on the question of universal standards for raw cotton, and ultimately the United States Government and the cotton exchanges of the world reached an agreement. It was decided that the new standards should come into operation on August 1st, the beginning of the 1924-25 season. This week further conferences have been held in Manchester and Liverpool which have been attended by Dr Henry Taylor, the chief of the United States Bureau of the Department of Agriculture, and other officials of that Department. It is understood that some difficulties have arisen with regard to the boxes of samples on which disputes on the question of grade have to be settled. It is not an easy matter to provide the cotton exchanges in the United States and throughout Europe with identical samples. On Wednesday last Dr Taylor was entertained to luncheon by the Manchester Cotton Association, and in his address he pointed out that the success of the new standards depended upon them being made up properly and upon the sets of standards that went to one exchange being identical with the sets that went to the others. He admitted there had been some criticism, but America did not intend to be partisan, and their desire was to inspire confidence in the standards arranged. It is anticipated that the differences which exist will be amicably arranged. It may be pointed out that there is still considerable antagonism between the Liverpool Cotton Association and the Manchester Cotton

Association, and in the discussions on this important question the jealousies which exist between those two important industrial centres are rather pronounced. On raw cotton questions Liverpool has had all her own way for a long number of years, but Manchester is now determined to exercise her rights as a port and an important market for raw cotton.

The Rise in Silver Prices.—The Continental buying of silver, writes a correspondent, that was noted last month has this week made further progress, and bars at mid-week moved well over 34d. This is the best seen in the London market for silver since 1922, and well-informed opinion in bullion circles anticipates that the rise, which is somewhat overdue, will make further progress. At the opening of the year, ready bars stood at 33 11-16d per oz., and changes during the first quarter of the year were very moderate, the figure reaching 34d during February, but falling back to a little below this by the end of March. Last month the market was somewhat uncertain, with a lot of Eastern selling, but this month there has been a steady upward movement, which lifted the spot price up to 34½d by the 21st. The improved tone is due to quite active Continental buying, coupled with a demand to cover short sales from Eastern operators, especially in China. It is reported that two or three countries, including Austria, are employing silver again for their subsidiary coinage, and this is quite a good move for the producers, who thought that the market would suffer through the changes brought about by the expiration of the buying under the Pittman Act in America. There was at one time a very heavy selling movement from the Continent, this metal being obtained from melted down coins, but this has now stopped, and the bulk of the silver has been absorbed. The U.S. production last year was on the full side at 72½ million fine ounces, against 56½ million in 1922, and this has no doubt helped to keep the market down. There is a fairly big Eastern bear account open at the present time, and this will have to be adjusted if the rise goes on under the stimulus of further buying for coinage purposes. It has been reported that Germany is a buyer of silver, but there is no record of any important business for that destination coming through London recently. India has not been doing much lately owing to the big stocks carried there, and China has been more of a seller than a buyer, but the change of sentiment, if it lasts, may bring along further Eastern business, and this would certainly create an interesting position. Silver after the war terminated had an extraordinary rise, which lifted prices up to 89½d per oz in 1920; but the market fell to 30½d in 1921, and last year moved between 33 11-16d and 30½d. Coinage business has been absent for a very long time, and further buying under this heading may be expected. The United States has been selling fair quantities recently, and incoming supplies are on quite a full scale, but actual supplies in London at the present time are only moderate, with certain commitments to be met from them. Brokers have had quite a busy week of it, and the importance of the Continental business will be revealed when the Board of Trade figures are issued for the current month.

British Overseas Bank.—In December the system of dual control by a "governing council" and a "board of directors" was abolished by the British Overseas Bank in favour of a board of directors of not less than seven or more than 15 directors. With a view to a further simplification of working, it is now proposed to reduce the number of interests in the bank, and some of the "B" shareholding are to be acquired by the remaining holders. Under this arrangement the Union Bank of Scotland, Williams, Deacon's Bank, and the Prudential Assurance Company, who have all been shareholders since the inception of the bank, will acquire the share interests of the Anglo-South American Bank, Dominion Bank, Glyn Mills and Co., Charles Hoare and Co., Imperial Ottoman Bank, and Northern Banking Company. All these banks had "B" shares, ownership of which will now be vested in the three institutions named above, and in them only. By reducing the present holders of the "B" shares to three it is proposed to remove all restrictions on the transfer of the "B" shares, and the special provisions

relating to the appointment of directors by the "B" shareholders will be rescinded. The existing rights of the "A" shares will therefore be unaffected, that is, they will still be entitled to a cumulative dividend of 6 per cent. per annum, with rights as to surplus profits after the "B" shares have received non-cumulative dividends of 6 per cent. It is difficult for the outsider to judge of the merits of such a proposal, which is largely a matter of domestic politics. Simplification of control, however, cannot but add to the efficient working of any concern, and especially of a bank.

Vickers' Report.—The passing of the dividend for 1923 on the ordinary shares of Vickers, Limited, is partly explained by the accounts, which show a drop in net profits from £683,204 to £499,555. After payment of preference dividends there is a balance of £98,727, as compared with £284,739 at this time last year. This is added to the amount brought forward, giving £802,634 to be carried to the next accounts. For 1921 and 1922 a dividend of 5 per cent. was paid, absorbing over £450,000. The profit and loss account is again omitted, but the report itself is more explanatory than those issued by the majority of the large industrial companies. Last year, it points out, was one of keen competition and low prices, and while the company's works were mostly free from labour troubles, the boiler-makers' dispute caused serious disorganisation in the shipyard at Barrow, with the inevitable effect of disorganising other departments. Substantial orders by the railway companies at the end of 1923 improved prospects, and since the turn of the year the company has obtained an order for one of the new 10,000 ton cruisers with its machinery, as well as a repeat order for a liner from the Orient Company, and a ship from Furness, Withy and Co., Limited. "The outlook is at present rather better for the company than at any time during the last few years." The following table summarises the balance-sheets since 1912. No accounts were issued for 1916, 1917, and 1918:—

Dec. 31.	Ordinary Capital.	Prof. Capital.	Reserves	Property, Plant, &c.	Subsidy Cos.	Stock-in-Trade.	Cash and Bills.
1912.....	3,700,000	1,500,000	Nil	3,757,020	4,095,502	1,120,739	264,396
1913.....	4,440,000	1,500,000	1,070,000	4,096,481	4,029,413	1,656,701	269,689
1914.....	5,549,262	1,500,000	1,764,000	4,243,326	4,706,097	914,899	792,828
1915.....	5,549,784	1,500,000	2,064,261	5,724,487	5,448,734	785,003	875,426
1916.....	12,311,548	8,351,640	6,669,159	7,314,095	17,236,517	3,911,685	3,361,958
1917.....	12,315,483	8,363,943	6,495,871	7,570,660	18,076,591	3,481,572	700,388
1918.....	12,315,483	8,363,943	6,495,871	7,570,660	18,076,591	3,481,572	700,388
1919.....	12,315,483	8,363,943	6,495,871	7,570,660	18,076,591	3,481,572	700,388
1920.....	12,315,483	8,363,943	6,495,871	7,570,660	18,076,591	3,481,572	700,388
1921.....	12,315,483	8,363,943	6,495,871	7,570,660	18,076,591	3,481,572	700,388
1922.....	12,315,483	8,363,943	6,495,871	7,570,660	18,076,591	3,481,572	700,388
1923.....	12,315,483	8,363,943	6,495,871	7,570,660	18,076,591	3,481,572	700,388

The sharp decrease in reserves is explained by the following paragraph from the report: "The directors had hoped that by now trade conditions would have so far settled down as to allow of a review of the company's assets, and a definite allocation from the company's very ample reserves against items that might appear doubtful in the light of post-war experience. Conditions, however, are still so far from normal that it is not possible to do this with regard to lands, buildings, plant, &c., the reserve against which remains at £3,200,000; but the directors have decided to write off altogether in a few cases, and in others make specific reserves against, certain investments in subsidiary and connected companies, chiefly in respect of works taken over during the war period, against doubtful debts owing to the company, and against possible liabilities and unsettled claims. Time may show that a substantial proportion of these reserves may not be required." The amount thus appropriated is £1,742,594. This has been written off premium on shares reserve account, and the balance of £300,000 has been added to general reserve. No reference is made in the report to settlement of accounts with Government Departments. These were expected to be completed during 1923. The reserves against unsettled claims spoken of in the paragraph quoted may refer to these matters, and perhaps afford some explanation of the passing of the ordinary dividend.

R.M.S.P. Profits.—The accounts of the Royal Mail Steam Packet Company for the year 1923 show a further recovery in profits. The directors' report says that "the general conditions of the various overseas trades in which the company's vessels are engaged show signs of im-

provement, and in many instances freight rates have become more stable, with consequent better results reflected in the earnings of the vessels concerned, although business continues to be restricted on account of adverse economic conditions." The profit and loss account, unfortunately, only shows the balance of profit, "including dividends on shares in allied and other companies, less depreciation of fleet, &c." This amounts to £779,100, as compared with £725,300 a year ago. Including rents and transfer fees, the total profit is £819,400, as against £771,800 for 1922. The following table summarises results since 1905:—

	Profit.	Deb. Int., &c.	To Inacc. Fund.	To Reserve Fund, &c.	Prof. Div.	Ord. Div.	Rate.	Carried Forward.
1905.....	57,558	13,750	35,000	..	9,000	..	%	£ 2,076
1906.....	96,845	17,566	47,000	..	23,815	..	%	16,340
1907.....	138,146	33,588	58,000	..	30,000	25,500	2 1/2	16,398
1908.....	135,206	43,982	33,500	20,000	30,000	18,000	2	2,979

1922.....	771,752	281,651	..	168,500	300,000	..	6	125,528
1923.....	819,442	280,936	..	233,500	300,000	..	6	130,534

No allocation is made to reserve out of profits, but the insurance fund in the balance-sheet shows an increase of £80,400, as compared with this time last year. An increase of £2 millions in the preference capital accounts for the larger amounts required for dividend in the past two years. The balance-sheet is in the usual shipping company style, with an item of over £19 millions (out of total assets of less than £22½ millions) comprising the fleet, and investments in allied steamship companies. It is true that debtors are shown separately, and there are a number of small items shown separately, but cash balance, bills receivable, and accrued interest on investments are given as one item of over half a million. It is high time that the mysteries of the balance-sheets of some of our great shipping companies were cleared up. An analysis of the balance-sheet appears in a later column. Sundry creditors, it should be mentioned, include a loan of £350,000 from bankers. The report states that two mail and passenger motor vessels of approximately 22,000 tons gross register each are under construction by Messrs Harland and Wolff at Belfast.

Guardian Assurance Company.—The business of this company is not large measured by present-day standards, but it is good in quality, and shows profitable results for last year. The fire premiums were £898,324, as compared with £964,199 in 1922; the claims were 48.03 per cent. of the premiums, against 54 per cent., and the expenses 44.49 per cent., as against 42.9 per cent. The net result, after providing for unexpired risks, was a profit of £99,228, or 11 per cent. of the premiums. After increasing the general reserve fund in the fire account by £61,000 to £721,000, £88,102, including interest, was carried to profit and loss. In the accident, burglary, and general department the premiums were £475,238, against £475,765 in 1922. The claims were 40.96 per cent. of the premiums, against 43.8 per cent., and the expenses 44.01 per cent., against 42.5 per cent. There was a trading profit of £71,094, or 14.9 per cent. of the premiums. The general reserve in this account was increased by £20,000 to £160,000, and £71,758, including interest, transferred to profit and loss. In the marine department the account of 1922 was closed by transferring £14,000 to suspense account, and £18,870, including interest, transferred to profit and loss. There was a loss on exchange of £12,500. The trading accounts yielded in underwriting profits less loss on exchange, a total of £180,618, and, in addition, the interest receipts were £127,069. Taxes on profits took £50,029. The dividend of 7s a share, less tax, on the ordinary and staff shares and the preference dividend will absorb £145,306, leaving £114,958 to be carried forward, as against £104,934 a year before. The total funds on December 31st last amounted to £8,725,912.

Eagle Oil Transport.—The intimation in January last of a revision of the chartering agreement in favour of the Mexican Eagle Oil Company had prepared the way for a drop in the profits of the Eagle Oil Transport Company for the year 1923. The report shows a decline of nearly £320,000 in gross profits, and of over £300,000 in net profits. The ordinary shareholders having, for the present, waived their right to any dividend, the sum of £750,000 has been set aside for depreciation, as against £617,800 a year ago, and the carry forward is increased by £26,200. The following table shows results for the past five years:—

	1919.	1920.	1921.	1922.	1923.
Issued share capital	£2,240,000	£4,000,000	£5,000,000	£5,000,000	£5,000,000
7 1/2 per cent. notes	..	..	3,000,000	3,000,000	2,458,300
Gross profits	349,523	530,844	1,066,440	1,502,363	1,183,473
Net profits	323,592	473,201	944,316	1,237,277	936,240
Reserve and deprec.	153,232	250,244	536,042	692,838	750,000
Preference dividend	160,000	160,000	160,000	160,000	160,000
Ordinary dividend	19,200	51,224	172,756	300,000	nil
Rate	(8 %)	(8 %)	(8 %)	(10 %)	..
Carried forward	8,840	11,734	75,517	84,440	26,240

The balance-sheet, which is analysed in a later column, shows that £541,700 of the 12-year 7 per cent. notes have been purchased and cancelled, while the report states that the amount set aside for repairs during the year has shown an excess over actual expenditure, and "repair and other reserve accounts" show an increase of £167,200 at £508,500. Total reserve and depreciation funds amount to £3,153,400, while the property item (fleet and investments in subsidiary companies combined as one entry, in the unsatisfactory manner now almost universal with shipping companies) amounts to £10,016,100, out of the total assets of £11,718,800. The tonnage of the fleet is given as 436,558 deadweight tons. This represents an increase in the year of 16,340 tons, two vessels which were under construction at the date of the last accounts having now been delivered.

Roumanian Oil Companies' Compensation.—A correspondent writes:—A circular has been issued by the Phoenix Oil and Transport Company which raises an important question. It states that certain of the companies in which the Phoenix Oil holds a controlling interest have received from the British Government a total sum of £75,568 on account of their claims for damage sustained in Roumania during the war. If payment can be made to certain companies, it can, and should, be made to all the rest. The Roumanian Consolidated Oilfields, of the Phoenix group, has a claim for about £500,000, the Steaua Romana, in which British capital is heavily interested, one for over £1,000,000, the Astra Romana, of the Royal Dutch-Shell group, one for £1,700,000, and the Romano-Americana, of the Standard Oil group, one for £2,000,000. The amounts of all these claims have been agreed between the companies and a commission appointed by the Reparations Commission. The total amounts to about £10,000,000. The French Government advanced money on account of similar claims to all French companies involved, but the British Government took up the unaccommodating attitude that it would set off the claims of British oil companies against the debt due to Great Britain from Roumania. This meant, in view of financial conditions in Roumania, that the settlement of these undisputed claims would be indefinitely postponed, and neither the Coalition nor the Conservative Government gave any hope to the oil companies that this attitude would be modified. It is to be hoped that the Labour Government will see its duty differently, but why, at this stage, have these Phoenix companies been singled out for favour and out of what funds has the payment been made? These are questions which should clearly be asked in the House of Commons.

Southern Pacific Report.—The report for the year 1923 of the Southern Pacific Co. shows that an expansion of 9.4 per cent. in railway operating revenue was accompanied by an increase of 7.6 per cent. in operating

expenses, which resulted in an increase in railway operating revenue of 16.24 per cent. Gross income increased by 21.1 per cent. Results for the past two years are compared in the following table:—

	1922.	1923.	Inc. or Dec.
Operating revenue	\$262,519,169	\$287,204,635	+ 24,685,465 + 9.40
Operating expenses	\$193,664,456	\$207,166,588	+ 13,502,132 + 6.97
Net operating revenue	\$68,854,713	\$80,038,047	+ 11,183,333 + 16.24
Railway tax, &c.	\$18,986,949	\$20,365,328	+ 1,378,379 + 7.58
Operating income	\$46,222,847	\$54,228,024	+ 8,005,177 + 17.32

The report states that "conditions affecting railway operations were more nearly normal in 1923 than in any year since 1917, barring the higher costs of labour and materials, and the rise in living cost above pre-war standards. A volume of traffic close to the highest in the company's history was handled expeditiously and without substantial equipment shortage, there were no major disturbances incident to labour conditions or other causes, yet the net railway operating income, while comparing satisfactorily with recent years, represents the very modest return of but 4.81 per cent. upon the book investment in road and equipment." This figure, however, compares with 4.29 per cent. for 1922 and 3.36 per cent. for 1921. The volume of freight traffic handled by the company showed an increase of 20 per cent. over 1922, but revenue from freight increased by only 10 per cent. owing to the 10 per cent. reduction in rates which came into force in July, 1922. There was an increase of 7.4 per cent. in revenue passengers carried one mile, and passenger revenue increased by 5.4 per cent. Failure of passenger revenue to increase correspondingly with the number of passengers carried one mile is due to the ratio of increase being greater in long haul excursion travel than in the number of local short haul passengers—the latter being carried in increasing volume by motor vehicles. Maintenance expenses increased by 7.78 per cent. and transportation expenses by 6.60 per cent., although there was an economy in fuel to the extent of \$605,000. Deductions from gross income were \$158,100 less than in the preceding year, but non-operating income increased by \$3,789,050. Net income was consequently \$11,952,300 higher at \$44,552,500. The 6 per cent. dividend absorbs \$20,663,100, the same as for 1922, and the balance at the credit of profit and loss account is increased by \$11,542,900. The report mentions that in May, 1923, complete and final settlement was made with the Interstate Commerce Commission of the company's claims under the guaranty provision of the Transportation Act of 1920, the company receiving in such settlement a balance due of \$4,738,900.

Rubber Plantations Investment.—Again we have to record a marked improvement in the figures of the Rubber Plantations Investment Trust, Limited. It will be recalled that in November last 2,831 shares were issued at a premium of 5s 9d per share, thus bringing the total capital of the company up to £2,000,000. The following table gives the results of the past seven years:—

	1917-18.	1918-19.	1919-20.	1920-21.	1921.	1922.	1923.
Dividends, Int., &c.	£44,299	£29,652	£58,384	£46,632	£11,020	£13,963	£27,316

* £121,233, less £104,641 transferred to reserve. + £57,125, less £525 in donations to war charities.

Assets now total £2,866,411, as against £2,750,158 a year ago. Properties and interests are now given as £1,162,874, as against £1,564,424, but investments have increased from £750,460 to £1,367,664. These changes are on account of the company selling some part interest

for shares in undertakings. The directors' report is, as usual, an informative statement of affairs. The report states that the restricted rubber crop for the eight months to August 31, 1923, was 537,632 lbs; the f.o.b. cost (including depreciation 0.66d) was 7.70d per lb, as compared with 7.12d per lb for the previous year. The average net price realised, including the estimated value of the unsold portion of the crop, was 1s 1.90d per lb, as against 1s 0.66d per lb for the 1922 crop.

Rezende.—Our mining correspondent writes:—The report for 1923 of this Rhodesian proposition, due to be presented at the meeting called for yesterday in Salisbury, S.R., shows a distinctly improved ore reserve position. The tonnage immediately available at the end of the year was placed at 181,200, as compared with 148,400 twelve months previously, the grade being a shade off at 9.7 dwts. Even now, however, the reserves do not represent much more than two years' supply, so that the situation in this respect can scarcely be described as strong. At £63,400 the net profit is up by £8,300. This is due partly to some increase in the gross receipts, despite a further decline in the gold premium, and partly to decrease in the expenditure, notwithstanding the treatment of a larger tonnage of ore and of enhanced requirements for taxation. After providing for dividends totalling 40 per cent, the balance carried forward is virtually unchanged at £12,800. The expansion in the available tonnage would appear to be irrespective of the proving of a large ore body west of the circular shaft on the 7th and 8th levels. This discovery, the consulting engineers report, "will materially increase the ore reserves when further development warrants its inclusion." The option on a property known as the Elgin has been abandoned and the outlay written off.

Oversea Correspondence.

UNITED STATES.—TAX REDUCTION—IMMIGRATION BILL—SHRINKAGE IN STEEL ORDERS—COMMODITY PRICES—PREFERENTIAL SHIP-RAIL RATES ABANDONED.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 13.

FURTHER changes made in the tax-reduction Bill by Radical and Democratic members of the Senate lessen the prospect of such legislation being enacted which will be satisfactory to the Administration and the public generally. Many of the substitute rates and provisions adopted by the upper branch of Congress are known to be regarded by President Coolidge and Administration Republicans as decidedly objectionable. Among the features considered most undesirable is the increase in the maximum surtax rate of 40 per cent., as compared with 37½ per cent. carried in the House Bill and 25 per cent. proposed in the original Mellon plan. Another amendment strongly objected to provides that income-tax returns upon which taxes have been determined by the Commissioner of Internal Revenue shall constitute public records, and shall be open to examination and inspection, as are other public records under the same rules and regulations as govern the examination of public documents generally; furthermore, that all claims for abatement or refund of taxes, including the decisions thereon, shall likewise be subject to public inspection under similar rules. Such publicity would be an abandonment of a policy that has characterised all income-tax legislation in the United States up to the present, and, as one authority points out, would "open the way to a train of abuses, affecting individuals and business organisations, from which the income-tax system has been free." Many other amendments have been adopted in both the Senate and House measures, so that in their main features the two Bills differ radically from the plan advocated by President Coolidge, Secretary Mellon, and others. The Bills as passed by the Senate and House of Representatives will shortly be considered by a conference committee with a view to agreeing on a compromise

tax-reduction Bill. Unless some very drastic revisions are made in conference—which now seems wholly unlikely—the Bill as finally passed will bear little resemblance to the plan urged by the Administration. In that event, it would not be surprising if the President vetoes the measure, rather than approve legislation which not only falls far short of giving adequate relief from excessive taxation, but also, according to estimates by experts, would result in a big deficit, and possibly cause an increase in taxation.

The new Immigration Bill as agreed upon by the Conference Committee of the House and Senate fixes the admissible quota at 2 per cent., computed upon the basis of the number of the foreign-born population in the United States under the census of 1890. That arrangement is to continue only until July 1, 1927, after which admissions will be limited to a total of 150,000 aliens annually under the so-called method of national origin. The Bill contains provisions admitting, outside of the quota, wives of American citizens, unmarried children thereof under 13 years of age, professors, ministers, students in accredited schools, and returning aliens, all of whom must be provided with certificates. Provision is made for the selection of immigrants at the source, and for immigration visas by American consuls abroad, and the law gives preference within the quotas to parents of American citizens and to skilled farm labourers, although in no case exceeding 50 per cent. of a nation's quota. The Conference Committee, at the suggestion of President Coolidge, postponed the date of Japanese exclusion from July 1st next to March 1, 1925, with the understanding that in the meantime an arrangement would be negotiated with Japan to abrogate the "gentlemen's agreement." The House, however, refused to accept the amendment fixing March 1, 1925, as the effective date, and had the Bill recommitted to the Conference. What the final outcome will be is problematical at the moment.

Although the financial district was prepared to learn that unfilled tonnage of the United States Steel Corporation had decreased heavily during April, the actual falling off, reported by the corporation, of 574,360 tons in the volume of forward business on its books April 30th, as compared with March 31st, was much greater than had been expected. It was the largest monthly shrinkage recorded since the big decline in the latter part of 1920 and early in 1921. Unfilled orders on hand at the end of last month, namely, 4,208,447 tons, were the smallest total reported for any month since February, 1922, when the aggregate was 4,141,069 tons. On April 30th of last year the total was 7,288,509 tons. Production reached a new high record early in April, but steel mills operated on a diminishing scale of activity later in the month. From the marked reduction in unfinished orders it is evident that the slackening of demand for new products was more extensive than had been supposed, and that there were substantial cancellations of contracts.

Commodity prices, on the average, continued to decline in April, although the reaction was less extensive than in any of the preceding four months, excepting one. Bradstreet's index number at May 1st was \$12.5568, representing a decrease of eight-tenths of 1 per cent. from that of April 1st, of 6.5 per cent. from the last high point on December 1, 1923, and of 8.1 per cent. from May 1st of last year. As compared with the low level of June 1, 1921, the latest number shows a gain of 18.2 per cent., but a drop of 39.8 per cent. from the peak index figure of February 1, 1920, and an advance of 43 per cent. over August 1, 1914. Seven groups of commodities sagged, while five rose, and one remained unchanged.

According to statistics prepared by the Bureau of Railway Economics, the combined net operating income of Class I. railroads of the United States for March amounted to \$80,239,885. This total compares with \$84,124,812 in March of last year, and represents the month's proportion of an annual return at the rate of 5.27 per cent. on a tentative property valuation of \$19,744,000,000, as against 5.84 per cent. in March, 1923, on a somewhat smaller valuation. In February of this year the carriers' net operating income was equivalent to a return at the annual rate of 6.28 per cent. Gross earnings in March totalled \$505,124,921, a decrease of

\$30,701,470, or 5.7 per cent. from the corresponding month of 1923, while operating expenses of \$390,273,909 were \$27,653,080, or 6.6 per cent. less. The shrinkage in net operating income, therefore, was due largely to the falling off in gross earnings, although most of that loss was offset by the decrease in operating costs. For the first three months of this year the railroads had a net operating income of \$202,776,047, equivalent to an annual return of 4.61 per cent. on their own valuation of property investment, which is much higher than the tentative valuation fixed by the Interstate Commerce Commission, as against \$184,603,374, or 4.56 per cent. for the same period of 1923.

As previously foreshadowed in this correspondence, section 28 of the Merchant Marine Act, under which preferential rail rates are allowed on merchandise and commodities, excepting grain, shipped to or from the United States in American vessels, will not be enforced on June 20th. The Shipping Board at a meeting last week withdrew its original resolution, which certified to the Interstate Commerce Commission that adequate American tonnage was in operation in certain specified trades and routes to warrant the putting into effect of section 28, limiting the application of export and import rail rates to cargoes transported in American ships. The Board indicates that the withdrawal of its certification was due largely to protests, from all over the country, at the recent Congressional hearing, to the effect that enforcement of the preferential rate clause on such short notice would disorganise trade and transportation, unsettle well-established trade practices, discriminate against some ports of the United States, and unduly favour others. In many quarters it is considered highly improbable that any further effort will be made to put that provision of the Merchant Marine Act into operation. Other ways may be found to aid American shipping, but even should adequate tonnage become available, the establishment of American flag preferences would unquestionably lead to undesirable complications.

FRANCE.—POLITICS AND THE FINANCIAL SITUATION—MINISTERIAL CHANGES—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, May 21.

As the end of the month, and the day on which the new majority will be called upon to assume power approaches, it is becoming more and more evident that the disappearance of the Poincaré Cabinet and its replacement by one in which MM. Herriot and Painlevé will almost certainly be the most prominent figures, will lead to little real modification of either the home or foreign policy of France. The series of unofficial declarations that have already been made by the politicians mentioned fully confirm this view, and the renewal this week of the exchange crisis has given only a further opportunity for emphasising it. The financial situation, as to-day's developments have shown, still dominates all parties, and it is now practically admitted by the leaders of the new majority that they will find it impossible to carry out the alluring promises they made in their election speeches substantially to reduce the burden of taxation imposed upon them by the Chamber their supporters are now to replace. The semi-official communiqué issued this evening at the conclusion of the conference which MM. Herriot and Painlevé had this morning with the President of the Republic, in the presence of M. Poincaré and his Finance Minister, M. François-Marsal, states that the first-named two leaders "affirmed their conviction that a strict balancing of the Budget by no matter what Government comes into power is imperative." The new majority promised in their election addresses (1) the suppression of the 20 per cent. increase in taxation recently imposed (which will render it necessary to find elsewhere the 4,000,000,000 which this measure is estimated to produce, (2) the suppression of the tax on turnover (estimated also as likely to yield 4,000,000,000 during 1924), (3) the allocation of additional remuneration to public servants, which it is estimated would require the raising of a further sum of 1,500,000,000 a year from taxation, and (4) the abolition

of income-tax on working men's earnings, which represents a sum it is difficult to estimate. As a matter of fact, few working men in the large towns pay income-tax as it is, in spite of the law. To sanction this failure by legal enactment would probably eventually result in the entire abolition of this form of taxation for all classes. The carrying out of these promises would obviously render the balancing of the Budget impossible.

Another factor which is tending to clarify the situation is that the Socialist Party in the new Chamber is apparently tending more and more towards a definite refusal to accept portfolios in any Cabinet that may be formed by their election-allies, the Radicals and Socialistic Radicals, and that the so-called Bloc des Gauches is likely to cease to exist as a practical entity as soon as it actually becomes a question of forming a Cabinet. The position in the Chamber of the Radical Socialists, who triumphed at the recent elections, is obviously approximating more and more closely every day to that of the Labour Party in the British House of Commons, with the important difference that at the Palais Bourbon the largest individual Party appears much more likely to find support from the Right, in the event of a conflict with its Socialist allies, than would the Labour Party at Westminster if it fell out with its Liberal comrades. The one outstanding fact of the elections is the failure of the modified system of proportional representation to give the desired results. Analysis of the figures shows that whereas the Bloc National lost and the Bloc des Gauches gained barely 3 per cent. of the votes cast, as compared with the previous elections, they lost and gained respectively no less than 33 per cent. of the seats that were transferred.

Another development that may probably be expected to occur in the near future is the inclusion of one or more members of the defeated Poincaré Cabinet in the new Government. Even before the elections M. Loucheur was freely spoken of as likely to be offered and as prepared to accept a portfolio in any Radical Socialist Government that might come into office, and this view has been strengthened by recent events. An order which the retiring Minister of Commerce has issued to-day prohibiting foreigners from having access to the Bourse de Commerce or belonging to the French sugar trade syndicate is regarded as likely to further the chance of his inclusion in the new Government, while his known leanings towards closer industrial co-operation between France and Germany also renders him more acceptable to the new majority than certain of his present colleagues would be.

The French trade returns for the month of April show that the total exports had a value of 4,027,041,000f, while imports were only 3,292,151,000f, there being therefore a surplus of no less than 734,890,000f in favour of this country. The total volume of foreign trade for the first four months of 1924 now shows a balance in favour of this country of 1,483,372,000f, on a total volume of exports and imports amounting to 28,516,324,000f. The figures show an increase of 67 per cent. in the value of the exports, as compared with the corresponding period of 1923, and of 42 per cent. in imports. The increase is most strikingly marked in regard to manufactured goods, which show an increase during the four months of 88 per cent., as compared with the figures for January-April last year. The detailed comparative figures are as follows:—

	First Four Months of		Increase in 1924.
	1923.	1924.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	2,188,980,000	2,606,502,000	+ 417,522,000
Raw materials	5,948,979,000	9,187,410,000	+ 3,238,431,000
Manufactured goods	1,367,051,000	1,722,564,000	+ 355,513,000
Total	9,505,010,000	13,516,476,000	+ 4,011,466,000
Exports—			
Foodstuffs	963,710,000	1,448,189,000	+ 484,479,000
Raw materials	2,835,522,000	4,096,602,000	+ 1,261,080,000
Manufactured goods	4,681,743,000	8,834,932,000	+ 4,153,189,000
Postal parcels	521,695,000	620,125,000	+ 98,430,000
Total	9,002,670,000	14,999,848,000	+ 5,997,178,000

The figures for April, taken alone, show an appreciable falling off, amounting roughly to about 330 millions, in the value of both exports and imports, as compared with those for March, although exports were considerably

larger than during February. The effect of the high exchange rate was less than might have been supposed, but was apparently responsible for a drop of 232 million francs in the value of the imports of raw materials and of 92 millions in foodstuffs. The weight of imported raw materials, however, was larger by 135,000 tons than in March, while the tonnage of imported foodstuffs fell off by 6,000 tons, and that of manufactured goods by about 27,000 tons.

GERMANY.—POLITICS—REPARATIONS—FINANCES—CURRENCY AND PRICES—INDUSTRY—BOURSE.
(FROM OUR CORRESPONDENT.)

BERLIN, May 20.

THE Cabinet question is not yet cleared up. The Marx coalition parties have rejected the German-Nationals' demand that the Cabinet resign, and seem to reject also in principle the claim that the largest Reichstag party should be given a first chance to form a Cabinet when an existing coalition of parties is numerically stronger. No progress has been made towards taking the German-Nationals into the coalition, though this solution remains possible, but the Nationals show a desire to exclude the Democrats. The only alternative seems to be the maintenance of the present Cabinet, which might perhaps count upon the support of the Left parties in essential questions. Meantime, the Cabinet continues to prepare measures embodying recommendations of the Dawes Report. From Conservative industrial quarters, and to some extent from non-party experts, the Dawes scheme is being increasingly attacked. A "German Industrial Union" (*Deutsche industrielle Vereinigung*) of predominantly Nationalist colour has been organised *ad hoc*, and at its meeting yesterday sharp attacks were made on the main items of the Dawes scheme, and also upon the *Reichsverband des deutschen Industrie*, for accepting the scheme in principle. Some of the criticism might be justified, but the statements of the chief speaker that "the motive power is American capital.....the chief idea is to exclude an independent German economy from international production and trade" indicate a desire for agitation rather than for amendment of the recommendations. The former Prussian Minister of Railways, Baron von Rheinbaben, now a member of the Reichstag (German People's party), writes that the Report must be accepted as a basis, but suggests certain guarantees. The final Election returns show the chief parties as follows:—Socialists, 100; German-Nationals, 96; Centre, 65; Communists, 62; People's party, 44; Populist-Freedom party, 32; Democrats, 28; Bavarian People's party, 16. The Hanoverian Separatists were last week locally defeated on the issue of founding a separate State from Prussia.

The financial situation continues to be satisfactory. Revenue received in April totalled 523,784,558 gold marks, against 595,258,243 gold marks in March. The larger March revenue was due to certain special taxes—e.g., property tax yielded in March 111 millions, in April only 23 millions. Of the total in April, 429 millions came from direct taxes and taxes on business and 92½ millions from Customs and Excise; in March the corresponding figures were 514½ millions and 76 millions. The sales tax, apparently owing to the trade revival, yielded 156½ millions in April against 118½ millions in March, while the yield of the Bourse tax, owing to the stagnation and the fall in quotations, declined by nearly a third. Railway receipts in March were 301 millions against 258½ millions in February, and 231½ millions in January; receipts from posts, telegraphs, and telephones in March were 153 millions against 115 millions in February. A report on the Debt (omitting paper mark debts, which have practically no gold value) shows outstanding on May 14th 50 million dollars in dollar Treasury bills, 140 million gold marks in Treasury bills of 1923 (so-called "Gold Loan"), 30 million gold marks in 6 per cent. Treasury bills (1932), 77 million gold marks of compensation bills, and 1,100 million Rentenmark debt to the Rentenbank. Since November 15th the Government has been able to redeem out of revenue 360 million gold marks of gold loan and 370 millions of 6 per cent. Treasury bills, so that the net increase of debt is much less than the 1,100 millions

borrowed from the Rentenbank. A report, originally prepared for the Dawes Committee, shows gold revenue from taxation and gold value of receipts from floating debt operations in the four past financial years (April to March) as:—

	(Millions of Gold Marks.)		
	Taxation.	Floating Debt.	Real Burden of Taxation.
1920.....	3,178.1	6,053.6	4,090.8
1921.....	2,927.4	3,675.8	5,235.7
1922.....	1,488.1	2,442.3	3,529.1
1923.....	2,411.4	6,538.3	2,912.5

That nominal receipts were higher in 1923 than in 1922, when the mark decline was much slower, is due to the stable currency of the last four months, December-March, of the last financial year. Taxation yield fell from 150 million gold marks in April, 1923, to 14½ millions in October, and thereafter rose to 595 millions in March, 1924. As shown by the table, the real burden of taxation, calculated on the basis of the gold mark cost of living, was in all four years higher than the nominal gold burden, the disparity being greatest in 1922, and smallest, owing to the great rise in gold prices which accompanied the adoption of gold mark calculation, in 1923. The Prussian Budget for 1924-25 balances at 2,309,000,000 gold marks. A memorandum of the Prussian Council of State doubts whether the promised equilibrium will be attained, on the ground that the State's share of the federal income-tax and the yields of the land and rents taxes will be smaller than is estimated.

Money last week was much more plentiful, interest rates fell; at times more short-time money was offered than the market would absorb. Long-term credit is still difficult to obtain. The Gold Discount Bank's discounts increased in the week ending May 15th from £998,695 to £2,280,378. The official cost of living index number on May 14th was 116.

The condition of industry is not quite so promising, and some judges see signs of a reaction. The Ruhr coal-owners have accepted the recent arbitration court decision, but protested against the recognition in principle of the seven hours day; the miners have rejected the decision, which, however, the Government has power to declare binding. About 425,000 miners are idle. In Berlin last week unemployment continued to decline; but stoppages of or reductions of production are reported from various quarters, in some cases owing to difficulty in selling, in others owing to shortage of coal or materials, and in many cases owing to lack of working capital. Ruhr coal production in April was (omitting three *regie* mines) 8,124,319 metric tons, against 7,297,741 tons in April, 1922, and 9,707,784 tons in April, 1913. The boot and shoe industry reports good home business, but a continuing decline, due to high prices, of exports. The textiles branch is kept well occupied, and has home orders sufficient to last until the end of the year, but, except in stockings, for which English orders have been received, export activity is small. Despite the great home production, large quantities of high-quality textiles are being imported. Trade papers predict a crisis in textiles as soon as the home market is saturated; and the large imports of finished textiles and of textiles raw materials without any correspondingly large export is considered a threat to the exchange market.

No settlement has yet been arrived at in regard to the franc bear commitments of the metal industry, and some anxiety is felt as to developments at the end of the month. The estimate of the amount of francs due for delivery at the end of May is 50,000,000f, with still higher engagements for the end of June. The amount to be raised to rescue the losers was £300,000, but difficulties have so far been met in raising it. The French elections, coming together with easier money, operated on stocks as a bull factor, and all last week saw heavy buying, a big rise in averages, and in single stocks rises of as high as 80 per cent. The *Frankfurter Zeitung's* index number for dividend-payers on May 16th was 512.52, against 408.51 a week earlier, and 824.50 on January 4th. A good annual report by the Deutsche Erdöl Company, which, however, declared no dividend, encouraged stock buyers, and foreigners bought considerably. Buying from England was reported, but nothing further has been heard of the English Syndicate which was alleged to have put up

£1,000,000 for purchasing German stocks. The *Frankfurter Zeitung* thinks that the bull movement last week was merely a temporary fluctuation, and holds that a lasting rise will not take place until the May-end liquidations are over, and until the credit supply has materially improved. Yesterday the Berlin Bourse was weak on profit-taking and owing to the Becker failure, and to-day was again weak on reports of further impending industrial failures.

ITALY.—BANKING AFFAIRS—STOCK EXCHANGE BOOM.

(FROM OUR CORRESPONDENT.)

TURIN, May 12.

BANKING affairs have been prominent during the past month. In mid-April a sudden burst of buying sent up the prices of Credito Italiano's shares from about 900 lire to 1,100 lire and more. It appears that a competition in buying had been started between the board of directors of the bank and a group of industrial Turinese magnates. A generation of rivals of the late German industrial leader, Herr Stinnes, is growing up in Italy. The Turinese leaders are Senator Agnelli, chief of the Fiat motor-car company, Signor Gualino, head of a gigantic artificial silk concern, with 600 million lire capitalisation, and Signor Abegg, a leading cotton man. They complained of credit difficulties, and strove to obtain the majority of the shares in Credito Italiano, so as to be able to control this great fountain of credit, with over 4,000 million lire deposits and current accounts. Five years ago, Credito Italiano and Banca Commerciale Italiana were made the object of a similar attack. On that occasion the banks saved their independence by the device of two financial holding companies, to which were entrusted the majority of shares of the banks, and which were ultimately controlled by bank directors. Signor Nitti, then Premier, induced, by moral pressure and promise of credit facilities, the two attacking groups to sell their shares at a profit to the holding companies. It appears that the Banca Commerciale Italiana has never lost control of its holding company, so that directors are sure of a majority in the shareholders' annual meetings. Not so with the Credito Italiano directors, who, having persuaded themselves that all peril of losing control of their bank was past, let their shares be freely negotiated on the market, with the result that in the first ten days of April directors awoke to the painful truth that the Turinese group had almost gained control of a majority of shares. At this point began a fierce struggle between bank directors and would-be conquerors of the bank; of which few particulars are known. The ultimate result was that the Government, by a decree of April 15, suspended the right of buyers of banking shares to call on sellers for immediate surrender of shares sold for end-of-month settlement. This right, called "*diritto di sconto*," was invented in 1907 to oblige speculative bears, who had sold securities for end-of-month settlement in the hope of covering themselves before settlement at a lower price, to buy precipitately the securities of which immediate surrender was called. In the present case, however, buyers of Credito Italiano shares who hoped to get, in virtue of the "*diritto di sconto*," immediate possession of bought shares, were prevented, by the suspension of the same right, from obtaining material possession before May 2nd. In the meantime, directors of the Credito Italiano called for an extraordinary meeting of shareholders at April 28th. At this meeting the old directors easily persuaded the assembly to vote an increase of capital from 300 to 400 million lire, of which 50 were to be offered to shareholders and 50 were left at the disposal of the board of directors. It seems that the Turinese group, when they saw that their manœuvre had failed, sold their shares with a good profit to a reconstituted holding company, and received a new promise of credit facilities. All is well which ends well, but this strange episode of a banking fight gives an instructive glimpse into methods of obtaining credit facilities. Credito Italiano is a most conservative and trusted bank, and we can be sure that credit facilities will be given to the Turinese group with the utmost care for the interest

BANK ESTABLISHED IN 1864.

SKANDINAVISKA KREDITAKTIEBOLAGET

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

of depositors. In future, bank directors will take great care not to let a similar attack develop.

While this drama was being acted in Milan and Turin, another banking drama was recited before the Senate acting as the High Court of Justice. Two Senators and many banking men, all connected with the late Banca Italiana di Sconto, were tried before the High Court of Justice under the accusation of having issued in 1921 a false balance-sheet, with the purpose of distributing to shareholders and among themselves profits not truly gained. By virtue of the Statute of the Kingdom, when a Senator is accused of some criminal offence, he and all his accomplices are not sent to ordinary Courts of Justice, but appear before the Senate as High Court of Justice. Senator Marconi, who was president of the Banca Italiana di Sconto, did not appear, because he was found, in the preliminary stage of the proceeding, entirely innocent and unaware of balance-sheet malpractices conducted in his absence. After a week of abundant eloquence proceedings were suspended, as the High Court of Justice resolved to call an investigation into the true state of the Banca Italiana di Sconto at December 31, 1921, so as to ascertain whether the Banca was truly in default, or whether, with a little courage, the bank could have been saved. The affair has thus, from being a trial of the men responsible for the fateful end of the Banca di Sconto, been turned into an investigation against past Ministers (Bonomi and Belotti), who dared not save the bank.

Amid these banking turmoils Italian Stock Exchanges continue to be highly optimistic. The campaign for the so-called valorisation of securities in consequence of the depreciation of the lira is as yet in full swing. For a week, towards the end of April, it appeared as if the upward movement had come to stay; banks endeavoured to restrict prolongations, and increased very strongly the charges for speculative accounts up to 7, 7½, and even 8 per cent., but all in vain. Money is too abundant, and is anxiously seeking investment. *Bonâ fide* investors are sending up prices of 5 and 3.50 per cent. Consols, the first reaching 99 and the second 87. What a long way from the prices of 67 and 62 quoted in 1920! The Treasury is planning, it is said, an issue of nine-year bonds at 4½ per cent., and they will find an easy market.

General commodity prices and the cost of living are being maintained at a high level.

SPAIN.—EXCHANGE RESTRICTIONS—FLOATING DEBT—THE PAST YEAR'S ACCOUNTS—RAILWAY RECEIPTS—PRICES—SUGAR BEET.

(FROM OUR CORRESPONDENT.)

MADRID, May 5.

THE emergency restrictions enforced in March last have been given definite shape by the Royal Decree of April 9th, and will be applied by three Exchange Commissions in Madrid, Barcelona, and Bilbao, each composed of one representative of the Bank of Spain, another of the Spanish banks, and a third of the agents of the respective bourses. These regulations are drastic, but no hope is entertained in financial circles as to their practical results. On the contrary, it is urged that the Government should attack the roots of the evil by fostering exports and definitely balancing the Budget. Notwithstanding, the peseta improved its position in April, the rate for sterling falling

from 33.35 to 31.14, and closing at 31.94. The dollar fell from 7.72 to 7.10, ending the month at 7.27.

As was anticipated in my last letter, the Government have offered for subscription 700 millions pesetas in four-years 5 per cent. Treasury bonds, with 1 per cent. bonus payable at maturity, at par. The 396,202,000 pesetas $\frac{4}{5}$ per cent. six months' bonds, which matured on April 15th, had the right of conversion into the new issue, and, for the most part, have been so converted, only the negligible sum of 798,500 pesetas being presented for repayment. Therefore the call for fresh money amounted to 304,595,500, and was covered over eight times, the total subscribed being 2,488 millions. Of course, this great total was arrived at owing to the competition between banks which inflated the subscription so as to get the amount wanted; but, anyhow, the result is good for the credit of the State. The 21,830,500 pesetas Treasury bonds, $\frac{4}{5}$ per cent., which fell due on May 4th, have been repaid, without being allowed the right of conversion. The volume of the short-term debt has been increased by 282,766,000 pesetas as the net result of these operations.

The liquidation of the Budget for the year ended on March 31st reflected the improvement that was anticipated, the deficit being reduced to 669.20 millions. The following are the previous years' figures:—

Year	1919-20	1920-21	1921-22	1922-23	1923-24
Deficit.	482,413,000	872,753,000	1,101,440,000	920,325,000	669,199,000
	pesetas.				

For the first quarter of the present year the more important railway lines show appreciable traffic increases, as follows:—

	Receipts.	Increase.
	Pesetas.	Pesetas.
North of Spain	74,265,000	2,676,000
Madrid, Zaragoza and Alicante ..	59,136,000	2,521,000
Andalucía	14,032,000	1,231,000
South of Spain	2,115,000	333,000
Madrid, Cáceres and Portugal	3,173,000	56,000
Plasencia Astorga Oeste	2,370,000	246,000
Total	155,091,000	7,063,000

It is expected that the two largest companies will distribute this year the same dividend as last year—i.e., the North of Spain, 24 pesetas, less tax, and the M.Z.A., 22 pesetas, free of taxes. The shares of both have been during the month the bright spot in our bourses, rising from 317.25 to 344.75 the North, and from 317.50 to 344 the M.Z.A., on the favourable outlook, for the companies, of the discussions that are in progress by the special commission appointed by the Government to settle the railway question.

The following are the latest index numbers statistics:—

	Foodstuffs.	Industrial Produce.	Total.
1923—October	168	174	171
November	171	176	174
December	173	178	176
Whole year	168	176	172
1924—January	176	179	178
February	180	181	180

The rise in prices which started during the last quarter of 1923 was more pronounced in the first two months of 1924, specially in foodstuffs, and is becoming an urgent problem for the Government. There are indications that the level of wages, which has been fairly steady for some time past, is beginning to be disturbed. The coal miners of Asturias have demanded an increase of 20 per cent. in their wages.

The area contracted to be sown with sugar beet this year exceeds previous records, as the price fixed of 85 pesetas per ton is very remunerative, and, provided there is no misfortune with this crop, it may yield over 2,000,000 tons of beet, which would give 250,000 tons of sugar. As the consumption last year was 201,000 tons, there should be a considerable surplus. The present stock of about 85,000 tons will cover the requirements until the new sugar comes in.

SWITZERLAND.—UNEMPLOYMENT DECLINES—ECONOMIC CONDITIONS—OVERSEAS TRADE.

(FROM OUR CORRESPONDENT.)

GENEVA, May 13.

THE Swiss Federal Council has decided to stop, as from April 1, 1924, the grant of subsidies to relief work for the unemployed. It has also decided to put an end to the relief action on behalf of the partially unemployed, as well as to the grant of subsidies to private industries, and to relieve employers from their obligations under the law for relief of unemployed. The Cantons are, however, entitled to maintain unemployment relief to partially unemployed, but only for a period which shall not exceed 120 days a year. The motives of this decision may be found in the fact that unemployment has very much decreased during recent months, and that the economic situation of the country has decidedly improved in the course of the first quarter of the present year.

From December 31, 1923, to March 31, 1924, the total of wholly and partially unemployed decreased from 39,673 to 29,544, a net reduction of 10,129 in three months. The aggregate number of totally and partially unemployed registered on the official records had slowly risen from March, 1920, to March, 1922, when it reached its maximum; it then fell as follows:—

End of March,	1920	Unemployed.
" " 1921	4,246	
" " 1922	131,971	
" " 1923	129,414	
" " 1924	64,688	
	29,544	

The number of persons employed in trade and industry was 1,087,953 male and female in 1921, but had decreased by nearly 100,000 between that date and the present, 1924.

At the end of 1923 Switzerland had spent a total sum of £19,669,440 for unemployment relief, £11,059,360 being spent by the Federal Government, £7,914,680 by the Cantons and Communes, and £695,400 by the employers. £13,366,200 were spent on public works undertaken with the sole purpose of occupying the unemployed, £4,400,960 was paid to the unemployed in the form of unemployment allowances, £304,680 was used for special courses of education, and training for out-of-work workers, and £597,600 was paid in the various unemployment insurance funds. This represents an average expenditure of £4,917,360 a year, or nearly £1 5s per head of population.

Apart from the decrease in unemployment, and the revival of the building trade, and of agriculture in consequence of the coming of the fine weather, other signs of a general improvement may be found in the accounts of the Federal services, and in the foreign trade returns for the first quarter of 1924.

The receipts of the Federal Post Office reached a total of £1,028,800, as against £972,335 during the corresponding period of 1923, leaving a net profit of £36,000 compared with a deficit of £41,200 in 1923; these good results have encouraged the postal administration to reduce from 25 to 20 centimes, as from May 15th, the postage on foreign post cards, and from 40 to 30 centimes, as from October 1st, the postage on foreign letters. The accounts of the telegraph and telephone service show a net profit of £269,320, compared with £215,670 last year, the receipts being £578,672 for these first three months, as against £526,292 in 1923. During the first quarter of the present year the Swiss Federal railways transported 2,108,408 passengers more, but 222,784 tons of goods less than during the corresponding period of 1923. Despite a reduction in the transport taxes for passengers, the receipts reached £3,194,720, as against £3,068,452 in 1923, the net profit being this year of £805,520, that is, £182,222 more than for the first quarter of 1923.

As for the quarterly foreign trade returns, they are very gratifying indeed, as they clearly show that there is a definite move towards a trade revival. Imports reached a value of £23,509,200 (£87,730,000f), compared with £21,201,520 (£30,038,000f) in 1923, while the value of exports reached £21,561,560 (£39,039,000f), as against £17,653,040 (£41,326,000f) during the first quarter of 1923. Nearly all export items show an increase, and this

increase is particularly important in the chocolate, condensed milk, cotton goods, silk goods, machines and vehicles, aluminium and watchmaking industries. The Swiss export trade is now benefiting from a slight reduction in production and transport costs, and also from the rise of the French and German exchanges.

CANADA.—BUDGET DEBATE—FISCAL MANŒUVRES—PROTECTIONIST ALARMS—LABOUR AMENDMENT—DECLINE IN REVENUES—BANK ACT REVISION—SEEDING CONDITIONS—PRICES—TRADE CONDITIONS—IMMIGRATION.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 12.

IT is nearly five weeks since the Federal Budget was introduced, and the tide of fiscal oratory is still flowing at Ottawa. In view of the possibility that the fortunes of the Government, especially if the sharp decline now visible in the revenues continues, may dictate a general election this autumn, members wish to lose no opportunity of securing evidence for their electors that they have battled valiantly for fiscal truth and righteousness. The debate will probably last another week, as only one important leader has spoken, and before it ends probably one half of the Commons will have unfolded their fiscal views. From the controversy there has been a singular absence of the heat which was anticipated, and most of the speakers confined themselves to hackneyed arguments. But behind the scenes the curious battle for the body and soul of the King Government has been proceeding, and there have been some illuminating manœuvres. The Government, while posing to the West as zealots for tariff reduction, had made sedulous efforts to soothe the ruffled feelings of the manufacturers, and in some supplementary Budget resolutions they offered a number of concessions intended for the relief of manufacturers who had been affected by the tariff changes. As a result, the Massey-Harris Company, the chief agricultural implement firm, issued a statement to the effect that it accepts the Budget, and will be able to continue operations under it. This statement has aroused great wrath among the other manufacturers, especially firms like the Steel Company of Canada, who sold large quantities of material to the implement firms, and may lose this trade to American competitors, and there are signs of a cleavage of interest among the industrialists which may have important consequences. It will be politically impossible to bring back to their old level the implement duties, and it will henceforth be to the interest of the implement firms to keep the duties on iron, steel, and other primary commodities at as low a level as possible. The Government naturally welcomed this statement, and have made the most of it.

On the other hand, whatever early enthusiasm the Progressives had felt for the Budget vanished with the discovery of the very valuable concessions which the Government had made to the manufacturers by the removal of the 5 per cent. dumping differential, and the subterfuge by which it was achieved destroyed their faith in the Government's honesty of purpose. They strongly attacked the dumping change in the debate, and many of them bluntly intimated that unless it was cancelled they would vote against the Budget. Faced with the disappearance of their promised majority, the Government took fright, and on May 7th the Minister of Customs announced that the operation of the circular would be suspended pending inquiry by a Board which is to be constituted to report upon taxation problems. This promise, however, does not satisfy the Progressives, for they fear the reinstatement of the circular as soon as Parliament is prorogued, and are demanding a definite pledge that no further change be made without the authority of Parliament. If this pledge is not given, a certain element of the party will vote against the Government as a protest.

As long as the dumping concession stood there was nothing much in the Budget to disturb seriously the main body of protectionist manufacturers, but they now take serious alarm at the continued tendency of the Government to capitulate to Progressive demands, and they are bringing severe pressure to bear upon the representatives of industrial constituencies. Up to date three Liberal mem-

THE MERCANTILE BANK OF INDIA, LTD.

Capital Authorised ... £3,000,000
Paid-Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,407,811

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

bers, one from Quebec and two from Ontario, have announced their opposition to the Budget, and at least one other will follow their example. A number of French-Canadian Liberals who have spoken have warned the Government sternly that the Liberal party must go no further in the direction of Free Trade, and one of them inveighed forcibly against the evil effects of the British preference, but if Sir Lomer Gouin remains inactive there will be no serious mutiny among the French-Canadian Liberals. But the industrial elements in Quebec have begun to transfer definitely their allegiance to the Conservative party on the ground that the Liberals have ceased to be reliable champions of Protection, and a realignment of forces is now inevitable.

The Conservatives intended to introduce an amendment reaffirming the merits of Protectionism for Canada, but the rules only permit one amendment to the Budget, and they were forestalled by a Labourite, who moved an amendment demanding a reduction in the duties on all the necessities of life, and the imposition of special taxes on unearned income and of inheritance and land value taxes. All these reforms are embodied in the Progressive platform, but for some mysterious reason the Progressive leader declines to support this amendment, although a third of his party will probably support it. In the end the Government will probably secure a large majority for their Budget, but their manœuvres have lost them the confidence both of the low tariff and high tariff forces. They had provided for a decline of some 2½ million dollars per month in revenue, but in April the decline on Customs and Excise revenues alone was over 3½ millions, and the returns from the new sales tax schedules are very disappointing.

The Banking and Commerce Committee at Ottawa have begun to reinvestigate the Bank Act, in view of the disclosures made in connection with the Home Bank. A representative of the Treasury at Washington will give evidence on the system of bank inspection in the U.S. A whole series of amendments to the Bank Act will be proposed, and the expectation is that some form of independent inspection will be recommended. The Federal Senate has before it a motion calling for a committee to investigate the financial and other practices followed by the management of the Canadian National Railways. One senator made very serious charges of graft and mismanagement, and there are subterranean rumours which ought to be dispelled, if untrue.

The latest index number of wholesale prices compiled by the Dominion Bureau of Statistics shows the most substantial decline for many months, the April figure being 151.1, as compared with 154.3 for March. Of 226 commodities, 71 showed a decline in price, 14 an increase, and 141 were stationary. The chief decline was under the head "animals and their products," where the index fell from 127.3 to 120.3. Wood, wood products, and paper fell from 173.5 to 170.4. Building material showed a slight drop in price, as did non-ferrous metals and chemicals. Grain prices remained stable.

Business and trade are reported as disappointingly quiet, and in many quarters there is a disposition to blame the Budget proposals for a disturbing effect. With the reopening of navigation up the St. Lawrence, very large shipments of British goods have been received for distribution, and local manufacturers are loud in their complaints that their own products are being displaced. It is claimed that never in the history of Canada have so many British commercial travellers been abroad in the land.

A steady influx of immigrants continues, but unless they are ready and able to tackle farm work, great difficulty is found in securing employment for many of them. There is an abnormal amount of unemployment in Toronto and Hamilton, and the council of the former city has made strong demands upon Ottawa for a change in immigration policies to check the influx of skilled labourers from Britain. However, the agricultural districts are receiving and absorbing a stream of very valuable settlers; of these a certain number are British, but there are useful contingents of Swedes, Danes, Germans, Dutch, and other European races who have been bred to farm work.

British coal exporters are evidently going to make a determined attempt to capture the Canadian market. Last week a large shipment of Scotch anthracite was unloaded at Montreal, and Welsh colliery interests are also sending big consignments. They claim to be able to meet the American prices and make a profit.

NEW ZEALAND.—BANKING FIGURES AND TRADE IMPROVEMENT.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, N.Z., April 12.

THE close of the financial year brings with it important indications of the economic well-being of the Dominion, not only in the publication of the financial returns, but even more in the banking returns which are published at the end of every quarter. Like banking returns in other countries, the figures leave a great deal unsaid, and the bare totals which are required by banking law do not really throw much light upon many important aspects of the banking situation. If we could know the extent of the bank balances in London in particular, we should be in a much better position to gauge the situation. Those balances depend largely upon the relation between imports and exports. Normally, in the March quarter, heavy exportations build up considerable balances in London, which are reduced later in the year to pay for heavy importations. This seasonal movement of the balances would, in countries with a free exchange system, be reflected in movements of the exchange rates; but in New Zealand the rates of exchange do not normally move in accordance with the balance, but are fixed for long periods at a time, and are only altered when the inconvenience of an abnormal situation calls for emergency measures.

Ordinarily the banks prefer to bear the fluctuations of exchange themselves, so that their London balances act in the now popular phrase as a "shock-absorber." The supply of credit in the Dominion is regulated not so much by the rates charged for it, as by what amounts to a system of rationing. Advised from London, the banks determine not so much the price as the quantity of credit they will issue from time to time. Having been caught with greatly extended advances by the recent slump, the banks are apparently being cautious, and refusing to commit themselves too far in the present revival.

The quarterly figures just published show on the surface a very favourable banking situation. The short table printed below indicates the recovery that has been achieved since 1921:—

Quarter.	Advances.		Deposits.		Excess	
	Miln. £.		Miln. £.		Miln. £.	
1920—March.....	32		51		19	
June	35		55		20	
September	39		53		14	
December	47		49		2	
1921—March.....	52		47		5	
June	54		46		8	
September	48		43		5	
December	48		41		7	
1922—March.....	46		40		6	
June	46		41		5	
September	43		42		1	
December	43		41		2	
1923—March.....	43		43		1	
June	42		46		4	
September	43		44		1	
December	46		43		3	
1924—March.....	44		47		3	

There are several points that may be noticed in this table besides the piling up of deposits during the boom, and the strain on advances caused by heavy importation and

domestic difficulties in the slump. There is first of all quite a definite, though not a regular, seasonal fluctuation, which may be roughly summarised as a piling up of deposits in the early part of the year, and a strain on advances in the latter quarters, which are periods of heavy importation. The favourable position of the present quarter's returns must therefore be discounted somewhat. That of discounting must be increased by reason of the fact that a far larger proportion of the wool clip was this year sold in New Zealand, so that the receipts were available earlier than usual and have gone to swell the deposit returns.

Moreover, March is always a quarter of light importations and somewhat interrupted domestic trade, so that advances in normal times are not as heavy then as at other periods. What has happened obviously is that advances have been reduced partly because the Christmas trade has realised on some of the goods for which advances were so heavy in the December quarter, and that part of the extra wool prices have gone also to pay off advances, while part have gone to swell deposits. If, however, subsequent quarters should show a continuance of heavy importations such as developed in September and December, 1923, the strain on the bank credits may well be renewed. The end of 1924 will, in fact, be a critical period for the Dominion. Importations based upon the present expectations of export prices and consequent prosperity are likely to come in considerable volume; at the same time the disturbed and uncertain prospects for export prices make one look with a certain degree of apprehension towards the next season, while the expiration of the moratorium will leave any unsound or doubtful enterprises without the shelter of legal protection. If next season's prices should after all be higher than this season's, and if, in the meantime, the Dominion goes carefully and does not fall into the mistake of over-importation once again, there need be no difficulties; but the dangers are hidden while the fair prospects are advertised in the usual interpretation of such indications as the bank returns.

Letters to the Editor.

REPEAL OF THE MOTOR DUTIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—You have given a very full statement of the arguments in favour of the repeal of the motor duties, but as the objections have not been so fully dealt with in your article, perhaps you would allow me as briefly as possible to expose the other side of the question.

We may agree that imports must be paid for by corresponding exports of goods or services. Following your argument, even if we were to import the whole of our requirements in motor-cars, our natural competitive advantages would enable us to make corresponding exports, which would leave us better off than before. Incidentally, one may remark that a good many of our customers take very good care that these natural competitive advantages shall not assert themselves in our international trade. We may deal with the point raised, however, on broader grounds. The workpeople who will be displaced by the repeal of the duties will immediately become entitled to doles as unemployed, and under the system by which unemployment pay is granted, will not be expected to turn their hands to trades in which they have no experience. The productive capacity of the country will, therefore, be lowered to that degree; and it needs little analysis to show that the surplus production available for export varies with the increase or diminution of that productive capacity. This is as true of manufactured products as of the crops. A bountiful crop means a large export. A deficient crop may reduce the export to nil. The result of the decreased production in this country would, therefore, inevitably be a lowering in the volume of export, necessitating a corresponding lowering in the volume of import, and that lowering of imports might take the form of very necessary food and raw materials.

The assumption that production will be maintained by employment passing from one form to another, breaks

down under present conditions; in other words, unprotected industry postulates unprotected labour as a means of carrying out the process of transferring labour from one form of activity to another, and the present moment certainly seems a most unfavourable one for leaving to natural causes the process of labour finding its own level and converting itself to the necessities of the hour. The principles on which unemployment relief is paid do, as a matter of fact, create immobility of labour. For example, there are nearly one in eight persons receiving unemployment relief under the heading of "hotel, boarding-house, and club services," though everyone knows that the demand for domestic servants would easily absorb more than all the unemployment in this section. The dole has rendered this labour immobile. Obviously any increase of the dole means a very considerable deduction from the national wealth, apart from the decrease in productivity, which must more than counterbalance any saving that may be effected by buying cheap cars from abroad.

You also raise the point about the exchange situation at present being against foreign importers, but this is not a permanent condition, and is already changing; indeed, it is one of the principal reasons why it is necessary to make some effort to create more stable conditions for our industry. Your journal is certainly an advocate of a stable monetary standard. It is only logical that we should do our best to preserve British industry from suffering the worst effects of the unstable foreign exchanges, which make future calculations almost impossible and thus add very materially to the cost of production, through the necessity of writing off a certain proportion of profit to cover risks of this kind, i.e., losses due to the widely fluctuating prices at which foreign houses can market their cars here.

Your optimistic forecast, that the repeal of the motor duties is not likely to reduce the number of British cars, is neither accepted by the trade nor confirmed by your own review of the trade. As you yourself point out, nearly all the motor firms have a serious financial position to liquidate. The members of that industry may have been ill-advised to rely upon the permanence of the duty, but they would certainly never have embarked upon their present plans had a warning been put in definite form. Not only must we now contemplate the dissipation of much of the capital that has been invested in the industry in order to make way for foreign importations, but we must be prepared for a further emigration of skilled employees which has been such a serious feature of the last few years in other trades, especially in Scotland. The effect in many industrial districts is known to the writer from personal observation. The loss of valuable workmen is by no means a negligible set off against any hypothetical profits that may be made through the admission of untaxed imports.

In conclusion, I would point out that the Free Trade principle breaks down when the British manufacturer, who is subject to the heaviest taxation in the world, has to compete with countries where the taxation is half the amount or less, countries which can market their goods freely here without any contribution to the Imperial Exchequer, not even their own obligations to ourselves, and which have none of the numerous internal obligations which our own manufacturers have to bear. The British buyer of such goods is thus neatly able to assist in evading the national responsibilities. Even gifts from our foreign friends which should destroy our economic life would be dearly bought!—Yours faithfully,

May 12th, 1924. FREDERICK WIGGLESWORTH.

[We do not share the view that the repeal of these duties will mean the import of more cars, but less food. But Mr Wigglesworth raises too many points to be dealt with in a footnote.—Ed. *Economist*.]

SECURITY OF A LLOYD'S POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with interest your articles on "The Security of a Lloyd's Policy."

You are certainly right in saying that, "given a clear understanding and appreciation of what has happened" (i.e., during the recent action), "Lloyd's as a society should stand higher to-day than ever before."

Rubber Plantations Investment Trust, Ltd.

Paid-up Capital and Reserves over £2,500,000.

DEBENTURE TRUSTEESHIPS UNDERTAKEN.
1-4, GREAT TOWER STREET - LONDON, E.C.3.

The only unfavourable criticism I have met with was that a new committee might not be inclined to follow the precedent of the present and past committees.

This is a criticism deserving attention. It is a fact, not previously dwelt upon, that it is the committee, not the members, of Lloyd's who decide whether the deficiencies of a failed underwriter are to be made good out of corporate funds.

This power was placed in the hands of the committee by the members in 1921, and made a bye-law.

The decision of the committee to make good all honest claims for losses incurred by reason of the Harrison failure was emphatically approved by the members, who voluntarily put up a large sum to emphasise that approval, but everything was in the hands of the committee alone.

Your articles do not make this point quite clear, and it is a most important one.

The resolution established a settled principle that it is not left to the caprice of the members whether the corporate funds are to be used for this purpose or not.

Some official pronouncement to this effect would, I think, be advisable. The action taken by the committee in this Harrison affair has been received with such general approval that it is inconceivable that in future any different course would be adopted. To do so would be tantamount to sailing under false colours. Lloyd's should make it clear, by nailing those colours to the mast, that they cannot be hauled down.—Yours truly,

SIDNEY BOULTON.
Canford Cliffs Hotel, Dorsetshire,
May 20th, 1924.

P.S.—Perhaps enough has been said on this matter. "What the public wants" is not columns of stuff, but a short summary of what actually emerges from this miserable case. I suggest this: Many years ago Lloyd's decided that neither Lloyd's nor their policy-holders should suffer through members defaulting. Certain measures were taken to this end, which proved effectual, and in 1921 the committee were empowered to use the corporate funds to meet unforeseen contingencies. Harrison succeeded in evading the vigilance of the committee, and his defalcations amounted to nearly half a million. Owing to the precautions referred to all genuine losses have been promptly paid. Some others have been kicked out of court as being fraudulent. Lloyd's policy-holders will realise that over and above the individual liability of the underwriter, Lloyd's recognise a corporate responsibility that is not limited to the extent of the corporate funds. Therefore, Lloyd's to-day stands higher than ever before.—S. A. B.

DEPRECIATED EXCHANGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—You were good enough to publish a letter from me on this subject in your issue of March 5, 1921, in which I endeavoured to demonstrate that the foreign trade of countries suffering from depreciated or appreciated currencies was not fundamentally affected by this cause. The Government was then about to introduce the Safeguarding of Industries Bill, which shortly afterwards passed easily through Parliament. Thereby the Board of Trade was empowered to levy an import duty of 33½ per cent. on any foreign article offered for sale in this country "at prices which by reason of depreciation in the value in relation to sterling of the currency of the country in which the goods are manufactured are below the price at which similar goods can be profitably manufactured in the United Kingdom."

As my letter provoked no comment in your columns, I was left to doubt whether my argument was unanswerable or beneath criticism. To-day the belief is common that exports are stimulated from a country with a depreciated currency, and it has been offered as a truism time and again by chairmen of limited companies to their share-

holders as an excellent excuse for bad results. However, an ounce of fact is worth a ton of theory. Three years have passed. I am not aware that a single order has been made under this clause, yet where is the deluge of underselling imports?

Here are the figures of Germany, our greatest rival, with a currency depreciated to almost nil:—

"STATESMAN'S YEAR-BOOK," 1924, p. 948.

GERMANY'S EXPORTS. VOLUME.			
	Double Cwts.		Double Cwts.
1913	737,142,752	1922	215,647,647
1920	198,377,710	1923	127,266,180
1921	138,042,809		

GERMANY'S TRADE with the UNITED KINGDOM.

(In Terms of the Gold Mark of 1913.)

Exports to U.K. Imports from U.K.

	£	£
1910.....	61,825,590	37,020,568
1911.....	65,280,739	39,283,683
1912.....	70,048,152	40,362,767
1913.....	80,411,057	40,677,030
1914.....	46,928,000	23,075,000

1920.....	30,251,806	21,706,660
1921.....	20,513,801	17,861,350
1922.....	26,523,377	32,110,750
1923.....	35,000,916	42,570,066

Down to 1914 Germany's exports to us exceeded our imports to her by £144,078,490. From 1919 our imports to Germany exceeded her exports to us by £15,658,885. What is the inference?—Yours, &c.,

Manchester, May 19th, 1924. ALFRED E. LEAF.

BURDENS ON AUSTRIAN EMPLOYERS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the number of your gazette of April 19th, which was unfortunately delayed in transit, your Austrian correspondent erroneously asserts that the burden on employers for social purposes has reached 26 to 30 per cent. of the wages actually paid.

The amount paid by the employers for sick insurance is 6,000 kronen, for unemployment insurance 7,500 kronen, and for employment bureau 180 kronen per week. The child maintenance is included in the above sums.

On the whole the contribution by the employers to the social welfare insurance of their workers amounts to 13,680 kronen per week. These payments are made on behalf of the best-paid workers, who, as a rule, earn on an average 400,000 kronen a week (£1 5s). The contribution, therefore, by the employer amounts to 3.4 per cent. of the wage paid. This amount is reduced in the case of higher-paid workers. To this must be added the insurance against accidents, which is graded according to the amount of risk involved in the different factories in which the workers work, and which amounts on the average to 2.5 per cent. of the wage paid.

In Austria, a worker is entitled to one week's leave on full pay for every year he has worked uninterruptedly in the same factory, and two weeks' leave after five consecutive years. This amounts to 2 per cent. on the average, because the great unemployment in the last years has interrupted generally the continuance of employment.

According to Section 1154b of the Civil Code, a worker is entitled to be paid by his employer for the first week he is sick. On an average, it can be supposed that a worker is only sick once every two years. This, therefore, reduces the amount due for "sick allowance" to 1 per cent.

These different sums amount to, roughly, 9 per cent. of the wage paid, to which the employer is liable.

Employers count the so-called "care tax" in addition to their social burdens. This is wrong. The care tax is levied, in truth at the rate of 4½ per cent. of the wage sum from each employer, but it is no social burden in the proper meaning of the word. Its deceiving name is due to its original introduction by the municipality of Vienna, in order to liquidate the expenses of care purposes. To-day it is a tax levied by all separate States and Communes in order to cover the general expenses of administration. It is, therefore, a tax like every other tax. But if the care tax is even put among the social burdens, these amount on the whole only to 13½ per cent.

of the wage, therefore only half the sum quoted by your correspondent.

Asking you, in justice to the social administration of Austria, to give publicity to this letter, in order to avoid any misunderstanding, which, through the possible mis-information of your Austrian correspondent, may have been made public through the offices of your esteemed paper, I beg to remain, dear Sir, yours faithfully,

D. ALLAY,

First Secretary of the Chamber
Vienna, May 16th, 1924. of Labour in Vienna.

Books and Publications.

SOCIAL INSURANCE.*

FRANCE does not possess any such arrangements for compulsory insurance as have existed for more than a generation in Germany, and for the past 12 years in this country. In 1921, however, M. Millerand, then Commissioner-General of the Republic at Strasburg, prepared a scheme based upon the legislation in force in the restored provinces. A Bill was introduced into the Chamber, and was submitted to a committee for detailed examination and report. The scheme provided for compulsory insurance against sickness, invalidity, maternity, death (funeral benefit), and old age, and was to be financed by equal contributions of 5 per cent. of the employee's wages from the employer and the employee.

The main object of this volume appears to be to provide the material necessary for understanding and criticising the scheme. After two introductory chapters discussing the principles and methods of insurance, and the various forms of social insurance, the author gives a very full analysis of the scheme of 1921 as introduced into the and in shorter compass an account of the principal schemes of social insurance abroad—omitting, however, in all cases unemployment insurance, which is to be dealt with in a subsequent volume. He then gives a detailed analysis of the scheme of 1921 as introduced into the Chamber, and of the amendments made by the Committee, and winds up with a criticism of the whole project. While the scheme "presents the beautiful harmony of a work of art," it is essentially an adaptation of the legislation of Alsace-Lorraine (which is only a modification of the German law), and does not take account of the French national temperament. He questions the financial soundness of the scheme, and expresses the view that the economic repercussions of a proposal which would impose a charge equivalent to 10 per cent. of wages would be much greater than is expected. The scheme he considers is much too massive to be applied all at once; it will have to be broken up and applied piecemeal.

A SOLDIER WITHOUT ARMS.*

To those who knew him, Dr Clifford's journey through life was an epic of the triumph of will over adverse circumstances. At nine years of age he went to a spinning factory as jacker-on, "to work at times not ten hours a day, but often sixteen, and sometimes twenty, and occasionally beginning on Friday morning at 5 o'clock and not ceasing to work until 6 o'clock on Saturday night." He preached his first sermon when fifteen and a-half, and passing from Leicester to London, he continued his studies at University College, where he took four first-class degrees in five years. Immersed in many of the great educational and social movements of his time, Dr Clifford was closely associated with many great contemporaries. The reader will find in these pages unpublished letters and reminiscences of Gladstone, Morley, Stead, Bannerman, Parker, Spurgeon, and other leaders of thought and action; personal recollections of many political campaigns and social reforms; religious controversies, together with many piquant incidents from diaries and letters. His courage, vitality, and devotion to duty made his life an inspiration to those who came under his influence, and won the respect even of those

* "Dr John Clifford, C.H.: Life, Letters, and Reminiscences." By Sir James Marchant. (London) Cassell. 12s 6d.

who differed from him on the political and social questions into which he threw himself with so much zeal. In that frail body the spirit of Cromwell, his hero and mentor, abode. A book which the old might read to the young, and both derive profit therefrom.

A SHIPPING DIGEST.*

THE digest which has now been issued of the cases in the first ten volumes of the "Lloyd's List Law Reports" will be very useful to subscribers to that series, though covering only the period down to Hilary Sittings, 1922. Issued without any kind of preface or explanatory note, except an intimation that no prize cases are included, the digest appears, on examination, to be very well done. Summaries of the decisions contained in the volumes of reports are arranged under an alphabetical series of headings, and there are many added cross references which will be useful. These summaries or headnotes are new, for the reports themselves are deficient in not being provided with the headnotes usual in other similar publications. Such notes, giving concisely the main points of each case, require, of course, very skilled preparation, but they are valuable to the point of necessity as a means of gathering readily the substance of that which is laid down at large in the full judgments. The more, therefore, that the digest is found to deserve welcome, the greater is the emphasis laid on the defect—which continues in current issues—of the reports themselves. A reviewer is thus handicapped in expressing appreciation of the work of the compilers of the digest. Nevertheless, praise is due to them. Apart from the full reports, the digest presents in a conveniently condensed form the shipping, insurance, and commercial decisions of the Courts during the period to which it relates, and a successor to the present volume, bringing the summary more nearly up to date, may perhaps be looked for in due course.

* Digest of vols. 1-10 of "Lloyd's List Law Reports," edited by C. W. Muir and R. U. Davis, Barristers-at-Law. (London) Lloyd's, 1924.

THE STATESMAN'S YEAR-BOOK.*

THIS is the 61st issue of the *Statesman's Year-Book*. Special attention has been given to recent constitutional changes in various countries. It will be recalled that new Constitutions have been adopted in China, Egypt, and Russia, and that fundamental innovations have been introduced into the Constitutions of Greece, Italy, Spain, and Turkey. These changes are all set out in detail in the *Year-Book*. The section relating to the last-named country has been brought up to date to accord with the arrangements made in the Treaty of Lausanne, the territorial changes of which are also indicated in a first map accompanying the volume; and it has been found possible to collect together some statistics concerning Ireland.

The introductory tables contain, as usual, a number of world surveys, including comparative statistics in regard to taxation, revenue and expenditure, and debt charges; a conspectus of the League of Nations; and a list of the more important recent Treaties, and also of the more important international organisations.

STOCK EXCHANGE NEWS. SETTLING DAYS.

TICKET, ACCOUNT,
June 11. June 12.

The bulk of the business transacted in the Stock Exchange this week has been in gilt-edged and investment securities. The rapidity with which sound stocks are absorbed is counteracted to some extent by the outpouring of new issues, which is a welcome enough factor in the Consol market, having regard to the pronounced appetite of the public for high-class stocks in the present absence of signs of a healthy trade revival. A slight tightness in money caused a little hesitation to develop in the middle of the week, but this was regarded as likely to be temporary only. Abundance of capital is available for investment, and the public are wisely intent upon safety, speculation being relegated to a very secondary position.

Notwithstanding the appearance of a substantial Australian 5 per cent. issue at 100, a price which evoked gentle criticism, Colonials are on the rise, and a number of improvements have occurred this week. The War Loan has changed hands frequently at 101. It looks as though some proprietors are investing in advance the interest cheques which they will receive next Saturday. The new 4½ per cent. Conversion, business in which started at 97½, rose above 98. A feature is a substantial rise in many Government and Indian Railway securities, a score or more of these stocks gaining from 1 to 3 points. Home Railway trustee securities are in active request; a number of prices show rises on the week.

The subscription lists of the new Czecho-Slovakian Loan were closed promptly, and on this the existing issue rose to 99. French bonds are better. Chileans remain a good market, and at rising prices. The swift rise in Chinese 8 per cent. bonds, of both classes, sustained a check on a mild rush to sell, and part of the previous advance was lost. Mexican Government bonds weakened, in consequence of fears in regard to the ability of the country to maintain regular payments of the coupons. Brazilians have been irregular. A dramatic rise in Riga 4½ per cents. suggests that negotiations are again afoot for dealing with the overdue interest on the bonds of the city.

The Home Railway market suffers from want of public interest, and the carry-over last Tuesday showed that the open account is now reduced to negligible proportions. Prices are dull and the market is languid. Holders of Grand Trunk Pacific Debenture stock are becoming restless at the continued silence in regard to what is happening in connection with their security. Mexican Railways are heavy, and Brazilians went back. Argentines keep tolerably steady. The Antofagasta dividend, making 7 per cent. for the year, is the lower of the two market estimates, and the price eased off at first, to rally later. The stiffening in United of Havana has dividend expectations for its impulse. Nitrates have been neglected during the week now ended.

Rubber dropped to 9½d per lb before it recovered to 10d, and the share market is in a more or less parlous condition. The oil market has been distinguished by the activity in British Controlled shares, prices being higher on the week. A rather better tone crept into the market as a whole, on hopes that the recent cut in crude oil will prove to be short-lived. Tea shares are tolerably good, in consequence of another batch of excellent dividends. Animation, however, is not quite so marked as it has been lately, and the Lungla dividend disappointed the market. The iron and steel group remains under the unfavourable influence produced by the passing of the dividend on Vickers ordinary shares.

COMPANY MEETINGS, &c.

CENTRAL MINING AND INVESTMENT CORPORATION, LIMITED.

SUCCESSFUL RESULTS OF YEAR'S TRADE.

INCREASED PROFIT AND DIVIDEND.

RESIGNATION OF SIR LIONEL PHILLIPS, BART.

SIR SOTHERN HOLLAND THE NEW CHAIRMAN.

The nineteenth ordinary general meeting of the Central Mining and Investment Corporation, Limited, was held on the 21st instant, at No. 1 London Wall Buildings, London, Sir Lionel Phillips, Bart. (the chairman), presiding.

The assistant secretary (Mr R. A. Macqueen) having read the notice convening the meeting, and also the auditors' report,

The Chairman addressed the meeting as follows:—Gentlemen,—Every speaker of experience endeavours to get upon good terms with his audience as soon as possible. Acting upon that excellent principle, I will make the most telling point in my address at once—namely, that the profits for 1923 exceeded those of the previous year by £156,000. That announcement, coupled with the recommendation that you should sanction an increased dividend and add £150,000 to the reserve fund, might satisfy all requirements, especially as the audited accounts now before you are so clear, but the time-honoured custom of making some analysis of the accounts and comparing the results with those of the preceding year (which I do not think is a good one, as it relieves indolent shareholders of the labour of making calculations for themselves) impels me to detain you a little longer.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, we find an increase in liabilities of £920,000 to creditors and credit balances, and of £42,000 in respect of the increased distribution now recommended. Against this we have in gilt-edged securities an increase of £490,000 and in loans of £492,000, or a total of £982,000. On the other hand, there is a decrease in debtors of £30,

organised for the output of a large tonnage, and the reduction of that tonnage has exactly the same effect upon them as a reduction of output in a very large factory. In view of the general outlook having improved, this mine was encouraged to acquire further deep level areas, partly from the Government and partly from other holders, and in consequence it has been decided to sink a third deep level vertical shaft in the south-western portion of the property in order to expedite development in that section of the mine. The ore reserves now amount to over 9,000,000 tons, having a value of 6.4 dwts. The development position is, therefore, satisfactory. It is difficult to envisage what 9,000,000 tons mean in space. Let me give you an illustration. A ton of basket ore in the solid occupies twelve cubic feet. Try to picture a block of buildings two miles long, 100 feet high and 100 feet deep, and you would still be a little short of the cubical space occupied by the 9,000,000 tons. That gives some idea of where the money goes in development. In a mine the ore reserves are not in a solid block, like the block of houses, but adjoin tunnels, galleries, winzes and raises scattered over an enormous area.

DURBAN ROODEPOORT DEEP.

Durban Roodepoort Deep, Limited.—There is perhaps a greater change for the better in this mine than in any other under our administration. Alterations in the plant enable a bigger tonnage to be dealt with; thus, last year was a record in that respect. Working costs, compared with 1921, are less by 7s 8d per ton. The circular shaft now sunk to the final depth at present contemplated is connected up with the workings on the 17th level. Ventilation and working conditions have benefited greatly, and an additional compressor has been installed, which will permit the substitution of jack-hammers for hammer-boys in almost every case and materially decrease the number of natives required. I believe that further reductions in working costs are to be expected. One hundred and twenty-nine claims purchased from the Princess Estate and Gold Mining Company, Limited, are now in process of de-watering and will add considerably to the life of the mine.

MODDERFONTEIN B.

Modderfontein B, Limited.—This mine has had a very satisfactory year from the standpoint of the extent of its operations and working profit. A very extensive programme has been carried out and a considerable tonnage developed, but the value of the ore is less than that of the present ore reserves. In recent months there has been an improving tendency both in the value and percentage of payability of the ore exposed, and it is hoped that some of the considerable areas still unexplored will yield good results. The value of the gold contents of the ore sent to the mill will gradually be lowered to conform with the value of the present ore reserves. Some slight reduction in the grade of ore milled may, therefore, be expected during the present year.

MODDERFONTEIN EAST.

Modderfontein East, Limited.—At this mine the outlook has greatly improved, which is mainly due to working conditions. Indeed, the outlook is such that we felt justified in recommending the board of this company to raise a large amount of working capital in order to provide their own crushing plant. I feel no hesitation in saying that, under present conditions, the outlook of the mine fully justifies the course decided upon. The area of the property is very large and a good deal of low-grade ore has been developed. In that respect this mine differs considerably from some of its neighbours, where, as a rule, the deposit is either quite rich or almost barren. But in addition to the low-grade ore there is a section of the mine which has always produced high-grade ore, and this section has, on the whole, continued to give satisfactory indications during the year, and, in a portion of the property in which development has until quite recently exposed ore of a medium grade only, another considerable patch of high-grade ore, the extent of which cannot yet be determined, has been encountered. This is certainly an encouraging feature, and I think the outlook for this company, with its reduced capital, and plant capable of crushing 50,000 tons per month, is quite promising.

NEW MODDERFONTEIN.

New Modderfontein, Limited.—I need say very little about this mine, which maintains its almost unique reputation, and its great ore reserves. It has been decided to sink a new circular shaft in the south-west corner of the property, where development will then be actively prosecuted. Sand filling will be resorted to in some of the wide stopes in order to guard against a possible contingency of caving and consequent loss of valuable ore. These steps will no doubt have the desired effect. I do not think it is necessary to detain you longer on the subject of the gold mines.

DIAMOND INDUSTRY.

As stated in our report, the demand for diamonds improved last year and evinced power to absorb increased production. During the first few months of the present year business continued on a

satisfactory scale, but inquiry has slackened somewhat during the last few weeks. The diamond trade differs in many respects from any other trade and requires careful watching and handling at all times. The highly efficient organisation which deals with it to-day has been built up gradually over more than thirty years, and during that period has always adapted itself to the varying nature and volume of demand and supply. Throughout there has been close co-operation and a good understanding between the trade and the producers. It was at a critical period in 1888 that the pioneers of South African mining concluded the fusion of the great Kimberley mines and laid the foundation for the steady progress and prosperity of the diamond industry. The discovery of new fields led, after some years, to conferences of producers, and arrangements were eventually made which proved eminently suitable for a good many years. More recently further new diamond fields were discovered and new interests created. These constitute fresh problems which I am confident will be successfully solved if they are faced courageously and approached in the light of long experience gained in dealing with similar problems. Holding in view the increased buying power of the world, and the successful achievements of the past, there should be no doubt that appropriate steps will again be taken to safeguard the interests of the producers, the trade, and the respective Governments concerned.

TRANSVAAL CONSOLIDATED PLATINUM DISCOVERY.

Before passing from South African affairs, there are two subjects to which I should like to refer. During my last visit to South Africa I took the opportunity of proceeding to the Waterberg district, where a discovery of platinum has been made. I refer to this matter because of the interest awakened by the new discovery in South Africa. The Transvaal Consolidated Land and Exploration Company, Limited, has a substantial participation in the Transvaal Platinum, Limited, formed to exploit the discovery on one of its leased farms. The work upon their property was being done by hand, and, therefore, was necessarily slow, but in a lateral distance of about 1,200 feet some very interesting and rich samples have been found. Indeed, the general impression I formed, without, of course, being able to look into the ground, was that that particular property had quite a good chance of being successful. Platinum has hitherto been won from alluvial deposits; it has, I believe, been located in reefs, but never consistently or sufficient in quantity to be worked at a profit. The area I have just referred to seems to be an exception. The formation in which the metal occurs is extremely strong, and traverses the country for something like a hundred miles. On your behalf we have acquired options on a considerable number of farms, but prospecting by crosscuts has not, up to the present, given any encouraging results on these latter areas. Considering the extent of country in which the vein is found, it is, of course, impossible to form any idea of the potentialities.

COTTON CULTIVATION.

I have just referred to the Transvaal Consolidated Land and Exploration Company in its connection with the platinum enterprise. I may now refer to its very extensive holding in land. Cotton-growing unquestionably affords a field for further expansion in a good many localities in South Africa, and I took the opportunity of visiting a number of places where cotton is being grown. There are no doubt some areas in which its culture is proceeding where the prospects, for climatic reasons, are not too favourable, but there are others, and notably the low country from Zululand up to the boundary of the Union in the north, where conditions appear to be quite promising. In that region I saw some flourishing cotton fields. I may say that the Transvaal Consolidated Land and Exploration Company, in which we hold a considerable interest, possesses a good deal of land in the region referred to. I was told that along the banks of the Orange River cotton is being successfully produced, but the length of my stay did not allow me to travel so far.

OIL.

The improvement in the outlook for the Trinidad Leaseholds has been very marked. Production for the financial year which is approaching completion will be the highest in the history of the company, and the quantity of oil purchased from other companies is also likely to exceed the previous record. The larger quantities handled had their natural effect on profits, and the outlook is very promising.

We continue to hold a very optimistic view of the future of the North Venezuelan Petroleum Company. Notwithstanding the fact that mechanical difficulties necessitated the cessation of drilling in the first test well before oil in commercial quantities was reached, the information obtained during drilling operations is regarded by the experts as very encouraging: the oil obtained from the small shows encountered was of a high quality, similar to the best so far found in Venezuela. It is hoped that during the present year wells

will be completed in two areas, about 18 miles apart, between which exists an almost continuous structure with favourable indications. Owing to the nearness of deep water, the transport of oil will not present the difficulties which restrict the rapid development of the oilfields in the Maracaibo basin.

Shareholders will have seen that an important step has been taken by the board of Messrs Williams, Foster, and Co. and Pascoe, Grenfell, and Sons, Limited, in the amalgamation of their interests with those of Messrs Vivian and Sons, Limited. Under this arrangement it is proposed to form a new company, which will pursue a progressive policy under strong management. It has long been felt that some such step was necessary in the interests of the copper trade of this country in order to meet growing competition in overseas markets. We look forward with confidence to the benefits which will accrue from the added strength thus secured.

BERNHARD SCHOLLE AND CO.

With regard to our connection with Messrs. Bernhard Scholle and Co., Limited, I may say that the relations are of a very cordial character. Our representative on their board acts as chairman of the company; he keeps closely in touch with its current affairs and takes an active share in discussions of policy. The directors of the company are pursuing the conservative policy of building up reserves, thus strengthening the present position and providing for expansion.

MOND NICKEL COMPANY.

You will see in the report the announcement that we have associated ourselves with the Mond Nickel Company, Limited, in the investigation of mineral prospects in Canada. I have watched for a good many years the growth of mining enterprise in that country, and have felt it was a sphere which we should not ignore. We were offered a property which seemed to have prospects, and, in consequence, our consulting engineer paid a visit to that country. The business in question came to nothing because we considered the terms too unfavourable. When the opportunity occurred, however, to join with a company of the highest standing, having in Canada a skilled staff, we decided to embrace it, and we have added an eminent engineer of our own to the organisation. Certain propositions are under consideration, but, pending negotiations, there is nothing that I can advantageously tell you of possibilities to-day.

SOUTH AFRICA.

Passing from immediate business matters, I should like to make some general remarks upon affairs in South Africa, whence I returned quite recently, but, as a general election is impending there, and as it is impossible to avoid subjects upon which political parties differ, it is perhaps wise to curb my inclinations. I can only hope that the true welfare and progress of the Union may dictate the policy of the future Government, and that some of the ideas and theories enunciated may find no place in enactments—legislative or administrative—because I am quite sure they would in practice produce consequences of a disastrous nature. There I must leave the matter.

TRADE QUESTIONS.

In the world at large some of the well-proven laws of economy are still being flagrantly violated. But an awakening consciousness is visible (a) that debts are debts and will not settle themselves, and (b) that "outrunning the constable," pleasant pastime as it may be, cannot proceed indefinitely. I do not wish to labour that subject to-day, but think a few observations may be profitably made upon trade questions. Do the fierce champions of Free Trade or Protection, for instance, realise that there is no virtue in either label? Trade, in the big sense, is so complex that no fixed principle can govern all cases. Problems in chemistry or metallurgy are resolved by experiment. Trade problems are susceptible of similar treatment. Cheapness may be dear, and dearness cheap. Potent arguments can be adduced in support of either Free Trade or Protection, but the extreme divergence of opinion is good ground for suspecting the accuracy of either theory. I would not venture into this thorny subject upon theoretical grounds only, but I have witnessed in a new country the establishment of two great industries which in turn were the sole source of wealth. In the early days of the diamond mines and the gold mines, money for their development was supplied from the outside, but the time came in both instances when each industry had to depend solely upon its own production. There were no other industries or sources of wealth to sustain the population. On more than one occasion I had calculations made to discover the amount remaining after paying for stores supplied from overseas and despatching the dividends due to non-resident shareholders. The residue, in each case, divided among the white population alone, was insufficient to sustain it. These are simple facts. There were no auxiliary trades, distributing industries, or other sources of support. How did the people live? Upon the fertilising value of past production, doing duty over and over again. That is the conclusion I came to, and its correctness has

never been challenged. It has led me to the conviction that anything produced from the ground in one's own country is infinitely more valuable than what is commonly regarded as wealth produced in any other way. Production from the surface of the soil, or below it, has a value to the country transcendently greater than its market price. Is it not possible that, in spite of all the literature upon economics, the subject still holds secrets which have not been disclosed? Besides, we live in a world of change, and the laws of economy which may fit one set of conditions may be, and must be, unfitted to another.

FACTORS TO BE CONSIDERED.

The extreme Free Trader would admit all commodities free of duty. He stands for cheapness, and argues that money saved by importing commodities cheaper than home industries can supply them releases money to be spent otherwise. It is obvious that no country could sustain its people and find work for them if all its commodities were imported. The extreme Protectionist would set up a tariff wall against all articles that can be made at home, even though the country was not well suited to sustain the particular industry, and the cost to the consumer would be greater. Are they not both wrong? Is there not a sound central course which expert investigation could find? Without attempting to decide whether the McKenna duties are sound or unsound economically, their abolition apparently without full inquiry must be condemned. Such procedure is not business. The real test as to whether a home industry is worth creating or defending depends upon its scope. By this I mean the amount of employment it can give, the amount generally it is able to spend in the homeland, and the sale price of its product in relation to the total working cost. The study of these factors and the comparison of the cost of home production versus importation enables a rational basis to be arrived at. £1,000 earned in a foreign business and brought home adds £1,000 to the wealth of the nation. But the £1,000 earned entailed the payment of wages, as well as outlay and profit on raw materials, and may indeed have resulted from a turnover of many thousands. Those items remain abroad, and benefit the people there. Spent at home, they would stimulate trade, and add something to the £1,000 of final profit. Scientific tariffs presuppose a careful review of all the conditions involved. That capable and honourable men could frame them is indubitable; and the well-known danger of corruption need not be apprehended if party politics were rigidly banned. That is asking a good deal, of course, but the prospective benefits would be so great that any party securing them would be in high favour. Last year I endeavoured to expose the fallacy that, in the present-day standard of civilisation, a dividing line can be drawn between the essential and the non-essential. I am touching upon the trade question to-day, because it behoves us all to contribute our mite on such vital subjects.

I regret to announce the retirement from the board of Mr T. J. Milner, who was associated with us for so long, and of one of our French directors, Monsieur Le Vicomte G. de Breteuil.

CHAIRMAN'S RETIREMENT.

Now, gentlemen, I have come to the end of my address, but I have a personal communication to make to you this morning. It is now ten years, or rather over, since I accepted the chair of the Central Mining and Investment Corporation, and the time has flown in a most wonderful manner. It has been a strenuous time, I agree, but it has been also absorbingly interesting, and I must admit also that there have been anxious moments, and there have been unpleasant moments. In a reorganisation of any concern one has to take a very cold-blooded view of everyone, and to subordinate even one's personal friendly feelings to a sense of duty. Thanks also to the staunch and skilful support of my colleagues here, and good fortune also in our judgment, the corporation has prospered well, and is in a sound and growing position. I feel that the time has arrived to-day when I can with confidence relinquish my office, and I propose to do so at the end of this year. Perhaps I should make this statement—which is a fact—that I am a considerable holder, and intend to remain one, in the shares of the Central Mining and Investment Corporation. I cannot claim, gentlemen, that I am retiring because of decrepitude, but I am conscious of the fact that by the time I leave at the end of this year I shall be in my seventieth year, and I do not suppose that the scythe of Time, kind as it has been to me up to the present, will go on everlastingly failing to cut off a little bit of my vitality. I have another reason also, and that is, that I really do feel that I should now have a little more leisure to attend to my own affairs and to pursue my own tastes than has been possible while I have been chairman of this corporation. I do not suppose you know that, beyond journeys to South Africa and back, I have never had a holiday—except for one month, I think, some years ago, when I was not very well—since I have been in this chair, and it will be very strange to me to find myself at liberty. Well, I am rather like the old mule with the harness on; I do not

know how I shall feel when it is thrown off. However, I think I can face the future with some equanimity. It will be a great wrench to me to part with my friends here in London wall, with whom I have worked on such kindly terms, and I have no doubt that I shall at times miss the trammels of a fixed occupation. Well, so much for the personal side.

SIR SOTHERN HOLLAND THE NEW CHAIRMAN.

The Central Mining and Investment Corporation will be left in a most favourable condition, and, I am satisfied, in very safe hands. Sir Sothern Holland will succeed me in the chair, and I should like to say much about him, but I will not offend his modesty by saying anything that might bring a blush to his cheeks. There are, however, one or two things which you, as shareholders, will be pleased to hear from me. I have had experience of him. He is capable, he is sound, and he is cautious. He is strictly honourable from every standpoint. He is pleasant in manner and persuasive in discussions, and he is equally pleasant in dealing with subordinates as he is in dealing with people who are his equals or even superiors. We have another executive director here, who has been with the company since its inception, in Mr Heim, who is enormously industrious, is absolutely thorough in everything that he undertakes, and has, above and beyond that, real business talent. I am satisfied, therefore, that you have two very good men there. We have also a very old associate with us as an ordinary director in Mr Ffennell, and Colonel Pollen also, who is of real assistance when it comes to discussing new questions and throwing new light upon subjects as they arise. That is an invaluable thing—to have a man with a critical mind capable of putting his finger on weak spots, perhaps, in something new that comes before us. Then we have in France two distinguished gentlemen on our board—M. Maurice de Verneuil and M. Octave Homberg. I am sorry that their engagements prevent their being present to-day. I regret that our business in connection with France has been far less extensive in these days than it was in days gone by, but we need not despair about a revival in time.

EFFICIENT ORGANISATION IN SOUTH AFRICA.

In South Africa we have two very capable directors, one of whom happens to be my own son, so that I can say very little about him. The other is Sir Evelyn Wallers. I am, therefore, sure that the organisation there, with which I am closely acquainted, is good. In addition to the directorate, we have in our service a staff here and in South Africa of which I am really proud. I do not think we can better it. The service they render, from the managers at the top to the junior clerk, is always given with good will and with a desire to further the interests for which they are engaged, and I hope they will accept from me an expression of my heartfelt regret in parting with them.

When I leave the chair my successor, Sir Sothern Holland, will find that his time, now much occupied, will be taken up with a lot of things which may not be regarded always as being strictly business. You have to see people; you have to hear all kinds of propositions which are put before you, but which take up a lot of time, and are frequently not worth the labour you have to give to them. Still, that is part of the duty of a chairman. I feel, therefore, that he will not be able to do the amount of detail work which he has done hitherto, and on that account we have now arranged to secure another ordinary director, in the first instance, who is a man of outstanding ability, and as I hope he will be here some time before I leave, the transition should be able to take place smoothly.

THE RESOLUTION.

It now only remains for me to wish the shareholders every success in the future and to move the following resolution:—

"That the report and accounts for the year ended December 31, 1923, as printed and circulated among the shareholders, be and they are hereby received, approved and adopted; and that the payment of a final dividend of 6s per share and a bonus of 6s per share, both free of income-tax, to shareholders registered on the books of the company at the close of business on May 14, 1924, and to holders of Coupon No. 24 attached to share warrants, in respect of the year ended December 31, 1923, be and the same is hereby sanctioned."

I will call upon Sir Sothern Holland to second the resolution.

TRIBUTE TO THE CHAIRMAN

Sir R. Sothern Holland, Bart.: Gentlemen, in rising to second the motion before the meeting, I make no excuse for asking your indulgence while referring to the loss which the corporation will sustain by the retirement of our chairman. To speak of the work of Sir Lionel Phillips on behalf of shareholders would be to review the history of the Central Mining and Investment Corporation from its inception, and, indeed, from the very earliest days of Messrs Wernher, Beit and Co., from which it received its origin. That great firm was composed of men of marked distinction, whose success in the mining and business world is so

well known to the people of South Africa, and to those associated with that country. To mention only some of the former leaders of this corporation, the names of Wernher, Beit, Eckstein and Phillips stand out as men who played a big part in the creation of South Africa's greatest industry. Your corporation is now about to lose the services of the last of these founders of our business, and this loss certainly makes those of us who are left to conduct the affairs of this corporation conscious of the responsibilities and the traditions which we inherit. Fortunately, the traditions which have grown up, and the sense of service which has characterised the lives of our former leaders, are so deeply rooted in the personnel and the organisation in all its branches that shareholders may rest assured that their interests will continue to be served by a singleness of purpose and a close application to business.

Sir Lionel Phillips first went to South Africa in the year 1875, with the intention of proceeding to the diamond mines at Kimberley. It was not long before his ability and energy brought him to the front, and he was for some years engaged in managing important mining interests there. In 1884 he became managing director of the Griqualand West Diamond Mining Company, and later joined the firm of Messrs H. Eckstein and Co., the local partners of Messrs Wernher, Beit and Co., of London. Without attempting to trace his strenuous and successful career, I need only say that from those early days in a mining camp, working long hours in shirt-sleeves under a baking sun, up to the present day, Sir Lionel has laboured and devoted his life to the development and welfare of South Africa's mining industry. What a store of knowledge and experience he has gathered during those years is best known to those of us who have been privileged to work under his leadership.

DETAILS OF AN EVENTFUL CAREER.

I understand that there is some prospect, when Sir Lionel has more leisure, of a larger circle being brought into closer touch with his life by the publication of his memoirs. For instance, it would be interesting to read of the emotions and experiences of a man under sentence of death, told in his own words after having escaped the ordeal. This forms one remarkable incident in his eventful career.

At a later date Sir Lionel fell the victim in the streets of Johannesburg to the bullet of a man who entertained some imaginary grievance against the mining industry. After a severe operation the need for convalescence brought Sir Lionel to England, and the date of his home-coming coincided with the outbreak of war, and led to his assuming the chairmanship of this corporation in 1915.

At this time, owing to industrial disturbances on the Rand, the business of all mining houses had suffered unparalleled difficulties, with the result that the corporation's reserve fund and the profits of the year had been absorbed in order to meet the heavy depreciation of assets. Sir Lionel took two important steps. He announced that he and certain of his colleagues had decided to surrender a founder's share of 25 per cent. of the profits after 5 per cent. had been paid. He then brought about the reduction of the capital of the corporation by cancelling £4 per share of the paid-up capital which had been lost or which was unrepresented by available assets. Shareholders have since derived benefit from this sound policy, which has contributed to our shares approximating more closely to their intrinsic worth. At the time of which I speak the shares of the corporation stood in the market at under £6, while to-day they are quoted at over £11, and, generally speaking, are firmly held. Our reserve fund stands to-day at £1,000,000; moreover, our assets are very conservatively valued. This is a record of which we are justly proud, and Sir Lionel must derive great satisfaction from the fact that an improvement so marked occurred during the tenure of his chairmanship.

I speak on this occasion with feelings of personal emotion, as it foreshadows not only parting with a distinguished colleague, but it must mean the loss of daily touch with a close and valued friend. Sir Lionel, I voice the feelings of all my colleagues when I say how very much we shall miss you.

MR M. W. HENTY ON THE BOARD.

Before concluding, I wish to take shareholders into our confidence regarding our intention of strengthening the board. We have been fortunate in securing the services of a very able business man in Mr M. W. Henty, who formerly was a member of the firm of Messrs Topham, Jones, and Railton, Limited, and who is at present a managing director of Messrs Vivian and Sons, Limited. As Sir Lionel intimated to you in his address, this firm has recently amalgamated its interests with those of Messrs Williams, Foster, and Co., and the prolonged negotiations which have resulted in this amalgamation have afforded us ample opportunity of getting to know Mr Henty and of appreciating his strong personality and high business qualities. Mr Henty will join our board after the incorporation of the new copper company, which we expect will take place within the next three months.

I now beg to second the adoption of the report of the directors and of the statement of accounts.

SIR OTTO BEIT'S SUPPORT.

Sir Otto Beit: Gentlemen, on occasions like this it is usual to give preference to pure matters of business of the company, but the chairman's announcement of his intention to retire at the end of this year is one of such importance that I am sure you will allow me, following Sir Sothern Holland, to say a few words about it in its personal aspect from the shareholders' point of view, as distinguished from that of his colleagues. As Sir Lionel has told us, it is now over ten years that he has guided our destinies, but those ten years have included those most difficult years of war, and, having been here in this building throughout the whole time, I know personally what it must have meant to carry on. It was, indeed, difficult. During those ten years Sir Lionel, I can assure you, has given us of his ability and of his time in a way which is quite beyond praise, and which we can only appreciate most thoroughly. There are indeed few men who, in their experience, have gone through vicissitudes such as our chairman has had to go through. I also should like to recall that occasion when, owing to his close—very close—connection with the mining industry, he was in real danger of his life. I want to assure Sir Lionel that his friends are not likely to forget the dastardly attack upon his life in 1913, when he was already a director of this company.

Now, of the successful operations of the corporation under Sir Lionel's chairmanship I do not think I need say very much. I think that facts—and, perhaps, also dividends—speak for themselves; but to Sir Lionel himself I should like to say that we want him to know that, although we understand and appreciate the motive which prompts him to lay down his office at the end of the year, we deeply and sincerely regret his decision, and we can only hope that, although he will not be here to guide his colleagues, he will not lose touch altogether with them and with us, but will remain a kind adviser in the future.

For the future itself I have no fear whatever. We have, as Sir Lionel has himself told you, a very able board of business men, and I, as a very substantial shareholder myself, am for my part perfectly satisfied to leave the administration in their hands. Now, Sir Lionel, may you still be spared to enjoy many years of life and good health, and may you find contentment in the knowledge of the work you have done. Perhaps some other shareholder would like to say a few words in this connection.

OTHER TRIBUTES.

Mr F. Eckstein: As a former colleague and as an old friend, I would like, with your permission, Mr Chairman, just to say a few words. First, I wish to associate myself with every word which Sir Otto Beit has expressed in such felicitous terms. We shall all miss seeing you presiding at our annual meetings, and we shall all miss hearing your masterly address on these occasions. In relinquishing this position at this juncture, however, you will do so with the supreme satisfaction—and perhaps the greatest reward that you could have is in the knowledge—that you leave the corporation in an absolutely sound, healthy, and prosperous condition. I should like to add—just as Sir Otto Beit has said—that I, for one, have the fullest confidence that, under the chairmanship of Sir Sothern Holland, the business of the corporation will be conducted, as hitherto, on safe and sound lines. You and I, sir, have worked together for more years than I like to recall, as we were a good deal younger when we first became associated. During all those years there has always been among all our associates, of whom, alas! most have gone—and it is exactly 12 years to-day that our good friend Sir Julius Wernher died—throughout all this time there has existed the most perfect harmony and the most absolute trust. On your retirement, in bidding you "Good-bye," we wish you—and I am sure everybody in this room joins me in wishing you—a happy and prolonged evening to your life.

Mr L. Breitmeyer: I will not keep you, gentlemen, but I wish to say a few words. I am a very old friend of Sir Lionel. I think we first met in Kimberley in 1876, and we worked together there, and later, as partners in the old firm of Wernher, Beit, and Co., and even to-day we are working together, as Sir Lionel is a partner in my firm. I echo the sentiments just expressed by Sir Otto Beit and by Mr Eckstein. That is all I have to say.

Mr F. J. Dormer: Mr Chairman, all this is very sudden, and I may say it is very sad. I am delighted to hear the assurances that have been given by various speakers that your retirement, while it must be felt, will not lessen the careful administration which has hitherto been the keynote of success.

SHAREHOLDERS' APPRECIATION.

There is only one thing that I should like to add to what has been said, Mr Chairman, and that is that I think there ought to be some substantial tribute from the shareholders. I do not mean a substantial tribute in the sense in which you are frowning upon me at the moment, sir, but a substantial acknowledgment of our appreciation of the tremendous work you have done for this company

and the great success with which your efforts have been attended. I beg, therefore, to propose that your portrait be painted at the expense of the corporation—that is, at the expense of the shareholders—by any painter who may be selected by yourself or by your friends, and that it be presented to you as a token of our sincere appreciation of the very great and good work which you have done both for this company and for South Africa.

Mr R. W. Ffennell: As one of the original directors of this corporation, I should like to add one word to the many and well-deserved tributes which have already been paid to our chairman. We are losing an active, fearless, and big-hearted leader; but Sir Lionel Phillips, while he can look back with satisfaction to the past, can also, as he has told you, look forward with the greatest confidence to the future. He knows, among other things, that his successor in the chair will receive the same unswerving and loyal assistance from his colleagues that he himself has received. He knows that his own son in South Africa is following in his footsteps. He knows, and we all know, that the omens of success are good for this great corporation, whose destinies he has guided for so many years.

The Chairman having expressed thanks for the kind references made to him, and no questions having been asked, the motion was put to the meeting and unanimously carried.

CHAIRMAN'S PORTRAIT TO BE PAINTED.

Mr Dormer then proposed that the portrait of the chairman be painted and presented to him on behalf of the shareholders, with every indication of their appreciation of his valuable services to the company, and also that a replica of the portrait should be painted to be placed in the board room.

Mr J. L. Bergson seconded the proposition, which was carried amid applause.

The Chairman, in thanking the shareholders, said that he appreciated very much indeed what they had decided to do.

The Chairman then announced that the dividend warrants would be posted that evening, and would be payable on the following day (22nd instant).

On the proposition of the Chairman, seconded by Sir Otto Beit, the retiring directors, Mr F. R. Phillips and M. Octave Homberg, were re-elected.

Mr J. L. Bergson proposed the reappointment of Messrs Cooper Brothers and Co. as auditors of the corporation, which was seconded by Mr W. Dereham and passed unanimously.

The proceedings then terminated.

HAMBROS BANK, LIMITED.

CONTINUED EXPANSION—DIVIDEND 18 PER CENT.

The twelfth annual ordinary general meeting of Hambros Bank, Limited, was held on the 22nd instant, at the registered office, 43 Bishopsgate, London, Sir Everard Hambro, K.C.V.O. (the chairman), presiding.

The secretary (Mr J. H. Roscoe) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—Before proceeding with the business I should like to say how much we regret the death of our esteemed colleague, Mr H. Hunter. He attended a meeting of directors on December 20th last, and we were all very grieved to hear of his death on December 31st. We have recorded in the minute book an expression of the sense of the loss the bank has sustained and of sympathy with his relatives.

You will find laid on the table the directors' report and the statement of accounts for the year ending March 31st last, and I will assume that, according to our usual custom, we may take them as read.
